SS ED 430W Teaching Social Studies in the Elementary Grades (3) Principles underlying use of social studies in the elementary school; practical demonstration of desirable methods.
Effective: Spring 2014
Prerequisite: Concurrent: CI 495A OR CI 495B ; MTHED 420 SCIED 458

SS ED 470 Issues in Social Studies Education (1-6) Concentration on particular issues, trends, and developments in the social studies.
Effective: Winter 1978
Prerequisite:

SS ED 496 Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Fall 1983

SS ED 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Fall 1983

SS ED 498 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Fall 1992

SS ED 530 Instructional Practices in the Social Studies (3) Social studies innovations in the classroom, new programs, new materials, new methods, and evaluation.
Effective: Winter 1978
Prerequisite:

SS ED 532 Curriculum Models in Social Studies Education (3) Study of past and proposed curricula in elementary and secondary social studies. Various means of judging curricula will be offered.
Effective: Spring 1985
Prerequisite:

SS ED 533 Research in the Teaching of Social Studies (3) Procedures and methods of research for the teaching of social studies, strategies of investigation, and review of research literature.
Effective: Fall 1983
Prerequisite:

SS ED 590 Colloquium (1-3) Graduate seminar for new doctoral students in social studies education.
Effective: Summer 1998
Prerequisite:

SS ED 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Spring 1987

SS ED 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.
Effective: Spring 1987

Last Import from UCM: May 24, 2014 3:00 AM

The Pennsylvania State University
Social Thought (SOCTH)

SOCTH 501 Seminar in Social Thought (3) Selected topics in the historical development of the tradition in social thought, and a discussion of contemporary issues and debates. Effective: Spring 1996

Last Import from UCM: May 24, 2014 3:00 AM
Socio-Ecolog Medicin (SOEM)

SOEM 711 **Socio-Ecological Medicine** (3) An introductory course encompassing topics such as public health, socio-ecological medicine, global health, health systems, medical anthropology, and culturally-sensitive medicine. Effective: Summer 2013

Prerequisite:

Last Import from UCM: May 24, 2014 3:00 AM
Sociology (SOC)

SOC 400W Senior Research Seminar (3) Major concepts and principles of sociology through reading, data analysis, and writing. Capstone course for senior Sociology majors.
Effective: Fall 2001
Prerequisite:

SOC 403 Advanced Social Psychology (3) Analysis of the major theoretical approaches and research findings of contemporary social psychology.
Effective: Fall 1983
Prerequisite:

SOC 404 Social Influence and Small Groups (3) The study of social influence, leadership and status, and social cohesion and commitment processes in small groups.
Effective: Spring 2007
Prerequisite:

SOC 405 Sociological Theory (3) Overview of the development of sociological theory; current issues and controversies.
Effective: Spring 2001
Prerequisite:

SOC 406 (CRIMJ 406, CRIM 406) Sociology of Deviance (3) Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group’s normative expectations.
Effective: Spring 2008
Prerequisite:

SOC 408 Urban Ecology (3) Spatial and temporal aspects of urban structure; urban growth, neighborhoods, racial and ethnic groups, mental illness; cross-cultural perspectives.
Effective: Fall 1983
Prerequisite:

SOC 409 (US) (AF AM 409) Racial and Ethnic Inequality in America (3) The impact of inequality and discrimination on individual and group identity among various racial and ethnic groups.
Effective: Fall 2012
Prerequisite:

SOC 411 (US) (HD FS 416) Racial and Ethnic Diversity and the American Family (3) This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States.
Effective: Spring 2005
Prerequisite:

SOC 412 (CRIMJ 412, CRIM 412) Crime, Social Control, and the Legal System (3) Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.
Effective: Spring 2008
Prerequisite:

SOC 413 (CRIM 413, CRIMJ 413) Advanced Criminological Theory (3) This course provides an in-depth look at theories of crime and examines influential empirical studies designed to test these theories.
Effective: Spring 2008
Prerequisite:

SOC 414 (CRIMJ 414, CRIM 414) Criminal Careers and the Organization of Crime (3) Research on and theory of criminal careers and crime organizations, emphasizing recruitment and disengagement; offender characteristics and life-styles; policy implications.
Effective: Spring 2008
Prerequisite:

SOC 416 (US) (EDTHP 416) Sociology of Education (3) The theoretical, conceptual, and descriptive contributions of sociology to education.
Effective: Spring 2006
Prerequisite:

SOC 419 (US) Race and Public Policy (3) Seminar format course in which sociological theory and research are applied to current race policy issues.
Effective: Spring 2006
Prerequisite:

SOC 420 (EM SC 420, S T S 420) Energy and Modern Society (3) Technology and economics of energy resources, production, and consumption; environmental factors, exhaustion, new technology.
Effective: Spring 2001
Prerequisite:

SOC 422 World Population Diversity (3) Survey of world diversity in national population growth/composition; the impacts of demographic change on the economic/social life of nations/people.
Effective: Spring 2001
Prerequisite:

SOC 423 Social Demography (3) Social demographic perspectives on fertility, mortality, morbidity, migration, population...
density, demographic transitions, social mobility, family, the aged, and minorities.

Effective: Spring 2001
Prerequisite:

SOC 424 Social Change (3) Critical review of classical and recent theories of social change, emphasizing the transformations occurring in the modern world.
Effective: Fall 1983
Prerequisite:

SOC 424H Social Change (3) Critical review of classical and recent theories of social change, emphasizing the transformations occurring in the modern world.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014
Prerequisite:

SOC 425 Social Conflict (3) An analysis of the variables affecting intergroup and international conflict and cooperation.
Effective: Fall 2007
Prerequisite:

SOC 428 Homelessness in America (3) Survey of social science research on homelessness in the contemporary United States.
Effective: Spring 2001
Prerequisite:

SOC 429 Social Stratification (3) Structure and dynamics of class, caste, and status systems; class differentials and social mobility; current theoretical and methodological issues.
Effective: Winter 1978
Prerequisite:

SOC 430 Family in Cross-Cultural Perspective (3) Sociological analysis of family systems in various cultures and subcultures.
Effective: Spring 2001
Prerequisite:

SOC 431 (HD FS 431) Family Disorganization: Stress Points in the Contemporary Family (3) Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.
Effective: Spring 1994
Prerequisite:

SOC 432 Social Movements (3) Why and how people mobilize to promote or retard social change. Factors predicting success or failure of social movements.
Effective: Fall 1983
Prerequisite:

SOC 435 (HD FS 434) Perspectives on Aging (3) An analysis of the demographic, social, and cultural factors affecting the aged population in American society.
Effective: Fall 2007
Prerequisite:

Effective: Spring 2007
Prerequisite:

SOC 445 U.S. Immigration (3) This class examines theories of U.S. immigration and immigrant adaptation, effects of immigration, and policy.
Effective: Spring 2012
Prerequisite:

SOC 446 Political Sociology (3) Sociological analysis of types of political organization and their relations with other elements of social life.
Effective: Winter 1978
Prerequisite:

SOC 448 Environmental Sociology (3) Examination of the relationship between the physical environment and society.
Effective: Fall 2007
Prerequisite:

SOC 449 Environmental Movements (3) Comparative exploration of environmental movements within the context of classical and new social movement theory.
Effective: Fall 2007
Prerequisite:

SOC 450 Justice and the Environment (3) Considers notions of justice in relation to environmental philosophy, environmental movements, and general environmental concerns.
Effective: Fall 2007
Prerequisite:

SOC 454 (US) The City in Postindustrial Society (3) Postindustrial social organization in the United States and Europe; consequences for metropolitan social stratification, community power, and environmental quality.
Effective: Spring 2006
Prerequisite:
SOC 455 Work and Occupations (3) Work and occupational life in modern society; work in the past, present, and future.
Effective: Fall 1983
Prerequisite:

SOC 456 (WMNST 456) Gender, Occupations, and Professions (3) The role of gender in shaping contemporary North American patterns of employment, occupational roles, and statuses.
Effective: Spring 2013
Prerequisite:

SOC 457 (US;IL) (ANTH 457, J ST 457) Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement.
Effective: Summer 2006
Prerequisite:

SOC 461 (US;IL) (RL ST 461) Sociology of Religion (3) Contemporary religion in the global perspective: beliefs, structure, and function of major religious traditions, denominations, and cults.
Effective: Fall 2013
Prerequisite:

SOC 467 (CRIM 467, CRIMJ 467) Law and Society (3) Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials.
Effective: Spring 2008
Prerequisite:

SOC 468 Mood-Altering Substances in Society (3) Perspectives of cultures throughout the world toward mood-altering substances are reviewed in light of public policy, benefits, and problems.
Effective: Fall 2007

SOC 469 Techniques in Small Group Facilitation (1-4 per semester/maximum of 12) This course is the training course for students working as facilitators with the World in Conversation Project.
Effective: Fall 2013
Prerequisite:

SOC 470 Intermediate Social Statistics (4) Descriptive and inferential statistics in social research: central tendency and variation, normal distribution, measures of association, confidence intervals, hypothesis testing.
Effective: Fall 2001
Prerequisite:

SOC 471 Qualitative Research Methods in Sociology (3) Theory, methods, and practice of qualitative data collection, including observation, participant observation, interviewing; supervised projects in natural settings.
Effective: Spring 2001
Prerequisite:

SOC 481H Senior Honors Seminar in Sociology (1) Supervised experience in planning and writing the honors thesis.
Effective: Spring 1999
Prerequisite:

SOC 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Summer 1994

SOC 494H Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Fall 2007

SOC 495 Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Effective: Spring 2000
Prerequisite:

SOC 496 Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Fall 1983

SOC 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Fall 1983

SOC 499 (IL) Foreign Study--Sociology (2-6) Study, in selected foreign countries, of groups, institutions, and social problems.
Effective: Summer 2005
Prerequisite:

SOC 500 Introduction to Graduate Study in Sociology (1) Required of all incoming graduate students in sociology.
Effective: Fall 1983

The Pennsylvania State University
SOC 501 Proseminar in Sociology (3 per semester/maximum of 6) An in-depth introduction to the major specialty areas of Sociology.
Effective: Summer 1998
Prerequisite:

SOC 502 Theories of Society I (3) Review and analysis of trends and controversies in sociological theory from late eighteenth-century beginnings through the nineteenth century.
Effective: Fall 1983

SOC 503 Theories of Society II (3) Review and analysis of trends and controversies in sociological theory in the twentieth century.
Effective: Fall 1983

SOC 512 (CLJ 512) Criminological Theories (3) Survey of theoretical and substantive issues in deviance and criminology, with emphasis on critical review of theories.
Effective: Fall 2005

SOC 513 Sociological Research Methods (3) Critical review of methodological issues; research designs; analysis and interpretation of findings.
Effective: Fall 1983

SOC 515 (CLJ 515) Research Methods in Criminology and Deviance (3) Review of methodological issues; design and conduct of research; analysis and interpretation of findings; ethical and policy issues.
Effective: Spring 1996

Effective: Fall 2007

SOC 519 (PL SC 519) Survey Methods II: Analysis of Survey Data (3) Intermediate course on the statistical analysis of survey data: topics include weighting, complex surveys, missing data, and contextual analysis.
Effective: Spring 2008
Prerequisite:

SOC 521 Family Demography (3) Current family demographic research on nuptiality, divorce, household composition, female employment, migration, and fertility.
Effective: Spring 1985

SOC 522 Demography of the Life Course (3) The theoretical bases, critical concepts, and methods of life course analysis in the study of demographic transitions.
Effective: Spring 1994
Prerequisite:

SOC 523 Internal and International Migration (3) Examination of theories, frameworks, and policies related to internal and international migration causes and consequences in developed and developing nations.
Effective: Spring 1997
Prerequisite:

SOC 524 The Demography of Human Fertility (3) Overview of major issues and methodological approaches in the demographic study of human fertility in developing and developed countries.
Effective: Fall 2000

SOC 525 Immigration, Assimilation, and Inequality (3) Examine theories, research, and policies on the incorporation of immigrants and their descendents.
Effective: Summer 2011

SOC 526 (H P A 526) Health Disparities (3) This course provides an overview of social factors that lead to demographic disparities in health.
Effective: Summer 2012

SOC 527 (AFR 527) Migration, Urbanization, and Policy in the Developing World (3) This course examines the dynamics of migration and urbanization processes, as well as their policy implications, in non-industrialized regions of the world.
Effective: Summer 2012

SOC 528 Homelessness in America (3) Survey of social science research on homelessness in the contemporary United States.
Effective: Fall 2000
SOC 529 **Seminar in Race and Ethnicity** (3) Reviews the status of U.S. racial and ethnic minority groups; analyzes factors influencing inequality and inter-group relations.
Effective: Summer 2012

SOC 530 **Sociology of Family** (3) An in-depth introduction to the sociological study of the family.
Effective: Spring 2002

SOC 531 (HD FS 531) **Family Disorganization: Stress Points in the Contemporary Family** (3) Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.
Effective: Summer 1994

SOC 532 **Global Health and Mortality** (3) Major issues in international health from a demographic perspective; special attention to the Global South and to data quality.
Effective: Summer 2013
Prerequisite:

SOC 533 **Sociology of Religion Seminar** (3) A survey of the sociology of religion designed to help students conduct and critique social science research.
Effective: Summer 2013

SOC 534 (EDTHP 534, SOC 534) **Childhood and Education in Sociological and International Comparative Perspective** (3) The course objective is to use an international comparative lens and sociological perspective to examine the social, cultural, political and economic forces that shape childhood and the role education plays in the process.
Effective: Spring 2013

SOC 535 **Sociology of Aging** (3) Current research and methodological issues in the sociological study of aging.
Effective: Fall 1983

SOC 537 (HD FS 537) **Biosocial Perspectives on the Family** (3) The implications of knowledge from behavioral endocrinology, behavior genetics, and evolutionary psychology for understanding family relationships and child development.
Effective: Summer 2002

SOC 538 (EDTHP 538) **Sociology of Education** (3) Provides students with an overview of dominant sociological theoretical perspectives on schools, schooling, and education in modern society.
Effective: Summer 2007

SOC 544 **Current Issues in Complex Organizations** (3) Critical survey of recent developments in sociological study of organizations and the theory of bureaucracy, including reciprocal effects on environments.
Effective: Spring 2011

SOC 546 **Seminar in Political Sociology** (3) Analysis of issues and problems in political sociology. Topical emphasis varies.
Effective: Fall 1983
Prerequisite:

SOC 551 **Social Stratification and Social Change** (3) Origin and development of stratification systems and inequality among and within societies; social mobility; change in stratification systems.
Effective: Fall 1983

SOC 553 (CI ED 553, EDTHP 553, HI ED 553) **Education Mobility in Comparative Perspective** (3) Role of education in social mobility, using quantitative, qualitative, and historical methods; focuses comparatively on Britain, East Asia, South America.
Effective: Summer 2002

SOC 557 (EDTHP 557, HI ED 557) **Sociology of Higher Education** (3) Reviews theory and current sociology research on student access, achievement, and governance in postsecondary education, with applications to policy analysis.
Effective: Fall 2000
Prerequisite:

SOC 560 **Urban Sociology** (3) Examination of the structure and dynamics of North American cities and of residents' experiences in such settings.
Effective: Fall 2000

SOC 573 **Demographic Techniques** (3) Models and measures of vital processes (fertility, mortality, migration) and their effects on growth and age structure of human populations.
Effective: Fall 2001
Prerequisite:
SOC 574 Statistical Methods for Social Research (3) Basic concepts of statistics; linear regression; computer software; analysis of social surveys; causal inferences from nonexperimental data. Effective: Fall 1983
Prerequisite:

SOC 575 Statistical Models for Nonexperimental Research (3) Causal models for quantitative and qualitative data; path analysis and structural equations; logistic regression; duration models. Effective: Spring 1989
Prerequisite:

SOC 576 Applied Mathematical Demography (3) Survey of mathematical models used in the study of population: models of growth, survivorship, fertility, migration, stability, kinship, projection. Effective: Fall 1986
Prerequisite:

Prerequisite:

SOC 578 Multilevel Regression Models (3) Covers multilevel regression models for the analysis of nested or hierarchical data, including both contextual and longitudinal applications. Effective: Summer 2006
Prerequisite:

SOC 579 (ANTH 579) Spatial Demography (3) This graduate course will expose students to spatial analysis tools and analytical methods applied to demographic research. Effective: Spring 2008
Prerequisite:

SOC 584 (PSY 584) Attitude Formation and Change (3) Theory and method in research on attitude formation and change with emphasis on critical analysis. Effective: Spring 2007
Prerequisite:

SOC 590 Colloquium (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers. Effective: Spring 1987

SOC 591 (CLJ 591) Teaching Sociology/Crime, Law, and Justice (1) Preparation for teaching sociology and/or crime, law, and justice at the college level. Effective: Fall 2000

SOC 592 Writing for Publication in the Social Sciences (3) Systematic, collective review of unpublished student manuscripts with an eye toward revision for publication. Effective: Spring 2007
Prerequisite:

SOC 595A (PL SC 595A) Survey Research Practicum (1-6 per semester/maximum of 6) Practicum in Survey Research data collection or management. Effective: Summer 2011
Prerequisite:

SOC 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses. Effective: Spring 1987

SOC 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term. Effective: Spring 1987

SOC 597D Immigration, Family, Health (3) Drawing on a demographic perspective, this course will examine theories and research on the intersection of immigration, family and health. Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SOC 600 Thesis Research (1-15) No description. Effective: Fall 1983

SOC 601 Ph.D. Dissertation Full-Time (0) No description. Effective: Fall 1983
SOC 602 Supervised Experience in College Teaching (1-3 per semester/maximum of 6) Students will teach introductory level courses as required by staffing and students' needs. Effective: Fall 1983

SOC 603 Foreign Academic Experience (1-12) Foreign study and/or research constituting progress toward the degree at a foreign university. Effective: Summer 2005

SOC 610 Thesis Research Off Campus (1-15) No description. Effective: Fall 1983

SOC 611 Ph.D. Dissertation Part-Time (0) No description. Effective: Fall 1983

Last Import from UCM: May 24, 2014 3:00 AM
Software Engineering (SWENG)

SWENG 400 Introduction to Software Engineering Studio (3) Provides an introduction to the principles of software engineering and includes complementary instruction in one programming language. Effective: Summer 1999
Prerequisite:

SWENG 411 Software Engineering (3) Software engineering principles including life cycle, dependability, process modeling, project management, requires specification, design analysis, implementation, testing, and maintenance. Effective: Spring 2008
Prerequisite: SWENG 311

SWENG 421 Software Architecture (3) The analysis and design of software systems using canonical design patterns. Effective: Summer 2008
Prerequisite:

SWENG 431 Software Verification, Validation, and Testing (3) Introduction to methods of software verification, validation, and testing; mathematical foundations of testing, reliability models; statistical testing. Effective: Spring 2008
Prerequisite:

SWENG 452W Embedded Real Time Systems (3) The design and implementation of real time systems. Effective: Summer 2008
Prerequisite:

SWENG 465 Web Services (3) This course introduces the students to a contemporary computing paradigm called "service-oriented computing." Effective: Spring 2011
Prerequisite:

SWENG 480 Software Engineering Design (3) Concepts of engineering ethics, economy, and project management, senior capstone project selection, and technical communication skills. Effective: Spring 2009
Prerequisite:

SWENG 481 Software Engineering Project (3) Capstone group design projects in software engineering. Effective: Spring 2008
Prerequisite:

SWENG 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis. Effective: Summer 2010

SWENG 495 Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required. Effective: Spring 2008
Prerequisite:

SWENG 496 Independent Studies (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses. Effective: Summer 2010

SWENG 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Effective: Summer 1999

SWENG 497A Special Topics: Software Documentation (3) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Effective: Summer 2014 Ending: Summer 2014

SWENG 497B Special Topics: Tools and Processes for Software Engineers (3) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Effective: Summer 2014 Ending: Summer 2014

SWENG 499 (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction. Effective: Summer 2010

SWENG 500 Software Engineering Studio (3) The 500-level studio provides an opportunity for students to undertake a substantial software project. Effective: Summer 1999
SWENG 505 **Software Project Management** (3) Analysis and construction of project plans for the development of complex software products; how to manage change and cost control.
Effective: Fall 2003

SWENG 510 **Secure Software Engineering** (3) This course provides a foundation in software engineering techniques for developing secure software systems.
Effective: Spring 2013

SWENG 537 **Software System Design** (3) Best practices in the requirements, analysis, and design of large software systems including the Unified Modeling language and the Unified Process.
Effective: Spring 2008
Prerequisite:

SWENG 541 **Advanced Database Design Concepts** (3) Practical benefits of a Database Management System; three-stage process to create and implement a relational database to meet defined requirements.
Effective: Summer 2002
Prerequisite:

SWENG 545 **Data Mining** (3) Practical benefits of data mining will be presented; data warehousing, data cubes, and underlying algorithms used by data mining software.
Effective: Summer 2002
Prerequisite:

SWENG 552 **Bioinformatics** (3) Introduction to information processing problems in computational biology and a unified treatment of machine learning methods for solving these problems.
Effective: Summer 2002
Prerequisite:

SWENG 560 **Web Based Systems** (3) Autonomous intelligent software agent mechanisms, Java's database connectivity, and the emerging architectures for the development of Web based information systems.
Effective: Spring 2001
Prerequisite:

SWENG 568 **Enterprise Integration** (3) Advances in design, development, and deployment of control and management software for enterprise and production information systems.
Effective: Fall 2003

SWENG 569 **Service Oriented Architecture** (3) The principles of service oriented architecture; modeling, design and implementation of services; mapping business processes to services.
Effective: Spring 2009

SWENG 580 **Advanced Software Engineering** (3) Description of tools and techniques in the software development lifecycle; Mitigation and managing time-to-market and quality of large software systems.
Effective: Spring 2001
Prerequisite:

SWENG 581 **Software Testing** (3) This course provides a rigorous formal framework and practical information on this the testing of software throughout its life cycle.
Effective: Summer 2005
Prerequisite:

SWENG 582 **Real-Time Software Design and Analysis** (3) A holistic, systems-based approach to design and analysis of real-time systems; design and implementation of a small real-time system.
Effective: Summer 2002
Prerequisite:

SWENG 584 **Genetic Algorithms** (3) Application of genetic algorithms to problems in engineering and science including combinatorial optimization, multi-criteria optimization, biology, chemistry, and neural networks.
Effective: Summer 2002
Prerequisite:

SWENG 585 **Pattern Oriented Design** (3) This class examines well-known heuristics, principles and patterns in the design and construction of reusable frameworks, packages and components.
Effective: Spring 2006
Prerequisite:

SWENG 586 **Requirements Engineering** (3) Theory and applications of requirements elicitation, analysis, modeling, validation, testing, and writing for hardware and software systems.
Effective: Summer 2008

SWENG 587 **Software Systems Architecture** (3) Software systems architecture; architectural design principles/patterns; documentation/evaluation of software architectures; reuse of architectural assets through frameworks/software product lines.
Effective: Summer 2008
SWENG 588 **Program Understanding** (3) Techniques for the analysis and visualization of large software systems to assess the quality of the design and architecture.  
Effective: Spring 2009

SWENG 590 **Colloquium** (1-3) Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.  
Effective: Summer 1999

SWENG 594 **Research Topics** (1-15) Supervised student activities on research projects identified on an individual or small-group basis.  
Effective: Summer 1999

SWENG 594A **Masters Research Paper** (3) Supervised student activities on research projects identified on an individual or small-group basis.  
Effective: Summer 2014 Ending: Summer 2014

SWENG 594A **Masters Research Paper** (3) Supervised student activities on research projects identified on an individual or small-group basis.  
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SWENG 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Summer 1999

SWENG 596A **Architecture Software - Intensive Systems** (3) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Summer 2014 Ending: Summer 2014

SWENG 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.  
Effective: Summer 1999

SWENG 826 **Applied Human-Computer Interaction** (3) Evaluate and design interactive products that support how people work and communicate from both a theoretical and practical perspective.  
Effective: Fall 2010

Last Import from UCM: May 24, 2014 3:00 AM
Soil Science (SOILS)

SOILS 401 Soil Composition and Physical Properties (3) Advanced study of mineralogical and physical properties of soils which affect soil-plant-water relationships. Effective: Summer 2013
Prerequisite:

SOILS 402 Soil Nutrient Behavior and Management (3) Chemical and biological behavior of soil nutrients; management for plant availability and fate in the environment. Laboratory emphasizes soil testing and soil-plant relationships. Effective: Summer 2013
Prerequisite:

SOILS 403 Soil Morphology Practicum (2 per semester/maximum of 4) Students develop field skills to describe soil morphology, classify soils, and make land use interpretations. Effective: Summer 2013
Prerequisite:

SOILS 404 Urban Soils (3) This course introduces the student to natural and human-influenced soils. Effective: Summer 2013
Prerequisite:

SOILS 405 (GEOSC 405) Hydropedology (3) Soil and water interactions across scales, integrated studies of landscape-soil-water relationships, fundamental processes of water flow and chemical transport. Effective: Summer 2013
Prerequisite:

SOILS 412W Soil Ecology (3) Introduction to soil organisms; includes interactions between organisms, their processes, and metabolism with a major focus on microorganisms. Effective: Summer 2013
Prerequisite:

SOILS 416 Soil Genesis, Classification, and Mapping (4) Lecture and laboratory course on the genesis of soils, their classification, mapping, and interpretation for land use. Effective: Summer 2013
Prerequisite:

SOILS 419 (GEOSC 418) Soil Environmental Chemistry (3) Introduction to chemical constituents and processes occurring in soils. Topics include mineral weathering, soil solution chemistry and adsorption of solutes. Effective: Summer 2013
Prerequisite:

SOILS 420 Remediation of Contaminated Soils (3) Basic principles and technical aspects of remediation of contaminated soils. Effective: Summer 2013
Prerequisite:

SOILS 422 Natural Resources Conservation and Community Sustainability (3) Conservation, land-use, and community (soil, water, air, plants, animals, and humans) impacting quality of life and sense of place. Effective: Summer 2013
Prerequisite:

SOILS 450 Environmental Geographic Information Systems (3) Use of geographic information systems (GIS) and digital spatial databases to characterize landscapes for environmental assessment and management. Effective: Summer 2013
Prerequisite:

SOILS 489 Supervised Experience in College Teaching (1-3) Participate with instructors in teaching an undergraduate soil science course; assist with teaching and evaluation and with development of instructional materials. Effective: Summer 2013
Prerequisite:

SOILS 490 (AGRO 490) Colloquium (1) Continuing written and oral presentations developed by students in consultation with the course instructor. Effective: Summer 2013
Prerequisite:

SOILS 494 Senior Thesis (1-6) Supervised data collection and analysis on a topic of interest to the student culminating in a formal thesis. Effective: Summer 2013
Prerequisite:

SOILS 494H Senior Thesis (1-6) Supervised data collection and analysis on a topic of interest to the student culminating in a formal thesis.
Effective: Summer 2013
Prerequisite:

SOILS 495 **Internship** (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Effective: Summer 2013
Prerequisite:

SOILS 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 2013

SOILS 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Summer 2013

SOILS 499 (IL) **Foreign Studies** (1-12) Courses offered in foreign countries by individual or group instruction.
Effective: Summer 2013

SOILS 502 **Soils Properties and Functions** (3) Introduction to soil science for graduate students including fundamentals of and applications to plant production and environmental sustainability.
Effective: Summer 2013

SOILS 507 **Soil Physics** (3-4) Soil physical properties emphasizing water, heat, gas, and ion movement in unsaturated soils. Laboratory included with 4 credits.
Effective: Summer 2013
Prerequisite:

SOILS 510 **Geographic Information System Applications** (3) Soil data bases, image processing, and geographic information systems will be used to model and understand land and water resources.
Effective: Summer 2013
Prerequisite:

SOILS 512 **Environmental Soil Microbiology** (3) Biology and ecology of microorganisms in terrestrial environments; microbiological and molecular analysis methods; microbial processes in carbon and nitrogen cycling.
Effective: Summer 2013
Prerequisite:

SOILS 513 **Soil Environmental Chemistry** (3) Chemical constituents and processes occurring in soils. Discussion of soil components, reactions at the solid-solution interface, and soil chemical processes.
Effective: Summer 2013
Prerequisite:

SOILS 516 **Soil Genesis** (1 per semester, maximum of 4) Field trip to study the genesis, classification, and geomorphology of the major soils of the northeastern United States.
Effective: Summer 2013
Prerequisite:

SOILS 519 **Nature of Soil Minerals** (3) Constituent minerals of soils: modern methods for identification; relations to soil formation and agricultural practices.
Effective: Summer 2013

SOILS 571 **Ecosystem Nutrient Cycles** (3) Ecological theory and applications related to water, carbon, nitrogen, phosphorus, and cation cycling in managed and unmanaged terrestrial ecosystems.
Effective: Summer 2013

SOILS 590 **Colloquium** (1-3 per semester/maximum of 3) Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.
Effective: Spring 2014

SOILS 596 **Individual Studies** (1-9) Creative projects, including nontesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 2013

SOILS 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.
Effective: Summer 2013

SOILS 597A **Unsaturated Zone Hydrology** (3) Lecture, literature discussion and computer modeling course covering water and contaminant transport through unsaturated soils and porous material.
SOILS 597D  **Ecosystem Analytical Techniques** (3) The course gives an overview of the necessary actions to be taken to make sure that ecosystem analytical data of known quality objectives are obtained. The data quality objectives cover in the course include accuracy, bias, trueness, recovery, precision, sensitivity, instrument and method detection limits, decision limits, calibration lower range limits, homogeneity of variance and linearity tests, selectivity, specificity, measurability, reliability, validity, timeliness and control charts. Implementing a quality control program is one of the requirements to be in compliance with the U.S. Environmental Protection Agency's Good Laboratory Practice Standards (GLPS).
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SOILS 597E  **Ecosystem Laboratory Quality Control** (3) The course gives an overview of the necessary actions to be taken to make sure the ecosystem analytical data of known quality objectives are obtained. The data quality objectives covered in the course include accuracy, bias, trueness, recovery, precision, sensitivity, instrument and method detection limits, calibration lower range limits, homogeneity of variance and linearity tests, selectivity, specificity, measurability, reliability, validity, timeliness and control charts. Implementing a quality control program is one of the requirements to be in compliance with the U.S. Environmental Protection Agency's Good Laboratory Practice Standards (GLPS).
Effective: Summer 2014 Ending: Summer 2014

SOILS 597E (GEOSC 597E)  **Topics in Biogeochemistry** (2) This seminar addresses chemical interactions between the biosphere and the physical environment over Earth's history and as impacted by humans.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SOILS 597G (W F S 597G, FOR 597G)  **Research Integrity and Research Communications** (1) Instruction and practice in developing presentation skills for professional meetings. Includes SARI (Scholarship and Research Integrity) training, and introduction to related online courses offered through the Collaborative Institutional Training Initiative (CITI) program.

SOILS 600  **THESIS RESEARCH** (1-15) NO DESCRIPTION.
Effective: Summer 2013

SOILS 601  **PH.D. DISSERTATION FULL-TIME** (0) NO DESCRIPTION.
Effective: Summer 2013

SOILS 602  **SUPERVISED EXPERIENCE IN COLLEGE TEACHING** (1-3 PER SEMESTER, MAXIMUM OF 6) GRADUATE STUDENT INVOLVEMENT IN PREPARATION, PRESENTATION, AND EVALUATION OF COURSE MATERIALS FOR UNDERGRADUATE FORMAL COURSES.
Effective: Summer 2013

SOILS 610  **Thesis Research Off-Campus** (1-15) No description.
Effective: Summer 2013

SOILS 611  **PH.D. DISSERTATION PART-TIME** (0) NO DESCRIPTION.
Effective: Summer 2013

Last Import from UCM: May 24, 2014 3:00 AM
Spanish (SPAN)

SPAN 410 Advanced Oral Expression and Communication (3) Emphasis on achieving practical command of spoken Spanish and the comprehension of native speech. Use of journalistic materials.
Effective: Fall 1995
Prerequisite:

SPAN 412 Translation (3) Techniques of oral and written translation from Spanish to English and vice versa, particularly for business, literature, and social work.
Effective: Spring 2008
Prerequisite:

SPAN 413 Interpretation (3) Introduction to the art of interpretation, with particular attention to the professions for which it is most commonly required.
Effective: Summer 2012
Prerequisite:

SPAN 414 Spanish Phonology (3) Spanish phonetics and phonemics; systematic means of correcting pronunciation defects; other audio-lingual applications.
Effective: Spring 2013 Ending: Fall 2014
Prerequisite:

SPAN 415 Spanish Morphology and Syntax (3) The Spanish grammatical system; analysis of morphemic units and their organization into syntactic structures.
Effective: Spring 2013 Ending: Summer 2014
Prerequisite:

SPAN 418 The Evolution of Spanish (3) The emergence and development of the sounds and forms of Spanish.
Effective: Spring 2013
Prerequisite:

SPAN 420 Spanish for Business and International Trade (3) Introduction to the Spanish of international business and to the social and cultural norms of negotiation in Spanish-speaking countries.
Effective: Spring 2008
Prerequisite:

SPAN 439 Don Quijote (3) Thorough study of the masterpiece, including its sources, genesis, language, style, success, and influence.
Effective: Spring 2013
Prerequisite:

SPAN 440 Teaching of Romance Languages (3) Theories of second language acquisition. Current classroom practices in the teaching of Romance languages.
Effective: Spring 2001
Prerequisite:

SPAN 472 The Contemporary Spanish American Novel (3) The realist and social novel since 1910, together with the social background.
Effective: Spring 2013
Prerequisite:

SPAN 474 Many Mexicos (3) Overview of Mexican literature, culture and history from pre-colonial period to present.
Effective: Summer 2013
Prerequisite:

SPAN 476 Masterpieces of Spanish American Literature (3) Reading, analysis, and discussion of selected major works representative of Spanish American prose and poetry.
Effective: Spring 2013
Prerequisite:

SPAN 479 (GH;US) (LTNST 479) U.S. Latina/o Culture en Espanol (3) The history, culture, art, and social issues of Latinos in the United States.
Effective: Summer 2014
Prerequisite:

SPAN 488 War, Revolution, and the Struggles for Modernity: Spain 1898-1939 (3) This course, conducted in Spanish, examines Spanish literature from 1898 to 1939.
Effective: Summer 2014
Prerequisite:

SPAN 490 Masterpieces of Spanish Prose (3) Reading, analysis, and discussion of selected masterpieces of Spanish novels, short stories, etc.
Effective: Spring 2013
Prerequisite:

SPAN 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Summer 1994
SPAN 494H **Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Fall 2007

SPAN 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Fall 1983

SPAN 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Fall 1983

SPAN 497A **Contemporary Youth Cultures in Latin America** (3) Music bazaars, DJs and rave parties, and "barras de futbol," are only some of the manifestations associated with young people in Latin American literature, film, and music. In this course, we will compare different youth cultures in Latin America in terms of their productions and representations in the public sphere.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SPAN 497B **Language Variation Across the Spanish-Speaking World** (3) Esta o ehta? Yo digo o digo yo? We will discuss language variation across the Spanish-speaking world with a focus on phonology and morphosyntax. We will also discuss bilingualism and different varieties of Spanish spoken in the U.S., and will work with data sets to illustrate the methodologies used for studying language variation.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SPAN 497C **Latino Culture en Espanol** (3) This is an overview of literature and culture, in Spanish, created within the United States. We will read fiction, essays and film, but also consider poetry, travel accounts, visual art and performances, and cultural practice and sociological issues (like "quinceaneras" and and soccer leagues) in order to discuss some of the following themes particular to the Hispanic experience within the U.S.: immigration and transnationalism; the imaginary homeland; families and assimilation; conflicted identity; language and a sense of place.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SPAN 499 (IL) **Foreign Study--Spanish** (1-12) Contemporary Spanish life and civilization. Emphasis on post-Civil War period: literature, arts, and sociopolitical problems.
Effective: Summer 2005
Prerequisite:

SPAN 502 **Theory and Techniques of Teaching Spanish** (1-3) Audio-lingual orientation.
Effective: Winter 1978

SPAN 507 **Hispano-Romance Linguistics** (3 per semester/maximum of 9) History, development, and linguistic description of Old Spanish and related Romance languages of the Iberian Peninsula.
Effective: Fall 1983

SPAN 508 **Generative Syntax** (3) This course offers foundations of generative syntax. It addresses the advantage of a scientific model to explain human knowledge of language that also makes predictions about its representation in the mind.
Effective: Summer 2013

SPAN 509 **Functional Syntax** (3) This course covers foundations of functional syntax. It addresses the advantages of a scientific approach to explain human knowledge of language that makes predictions about its representation in the mind.
Effective: Summer 2013

SPAN 510 **Spanish Descriptive Linguistics: Phonology** (3) No description.
Effective: Winter 1978

SPAN 511 **Spanish Transformational-Generative Linguistics** (3) No description.
Effective: Winter 1978

SPAN 513 **Acquisition of Spanish as a Second Language** (3) Analysis of research on the acquisition of syntax, phonology, lexicon, discourse.
Effective: Spring 2002
Prerequisite:

SPAN 514 **Hispanic Dialectology** (3 per semester/maximum of 6) Early fragmentation among the peninsular dialects; their status today, Judeo-Spanish; descriptive analysis of modern Spanish American dialects.
Effective: Fall 1983

The Pennsylvania State University
SPAN 516 Medieval Spanish Literature (3 per semester/maximum of 9) Topics vary: juglaria and clerecia, emergence of lyric and brief narrative; history and didacticism; origins of novel; balladry; fifteenth-century innovations. Effective: Fall 1983

SPAN 528 Seventeenth-Century Spanish Literature (3 per semester/maximum of 9) Prose and poetry of major authors: works and trends of the late Golden Age and Baroque period. Effective: Fall 1983

SPAN 537 Golden Age Theatre (3 per semester/maximum of 6) Major works of Lope de Vega, Tirso de Molina, Calderon, and others. Effective: Fall 1983

SPAN 553 Writings of the “Generation of 1898” (3 per semester/maximum of 6) Novels, plays, short stories, essays, poetry of Valle-Inclan, Azorin, Benavente, Unamuno, Machado, Maeztu, and Baroja in the context of generation concept. Effective: Fall 1983

SPAN 560 The Contemporary Novel in Spain (3 per semester, maximum of 9) The novel since 1941: Cela, Laforet, Zunzunegui, Suarez Carreno, Matute, and others. Effective: Spring 2001

SPAN 566 Contemporary Spanish Poetry (3) Various currents in Spanish poetry from the generation of 1927: Lorca, Aleixandre, Salinas, Guillen, Alonso, Alberti, Hernandez, Otero, and others. Effective: Fall 1983

SPAN 568 Early Spanish American Literature (3 per semester/maximum of 9) Content varies; selected topics from colonial period, romanticism, and the nineteenth century before modernism. Effective: Fall 1983

SPAN 574 The Spanish American Novel (3 per semester/maximum of 9) Content varies; selected works from the late nineteenth century through the contemporary period. Effective: Fall 1983

SPAN 587 Stylistic and Literary Criticism (3) Major theories of literary criticism applied to Hispanic literature. Effective: Winter 1978

SPAN 588 Seminar in Hispanic Literature (3-12) Common and individual research in special problems in Spanish or Spanish American literature. Effective: Summer 1988

SPAN 589 (CMLIT 589, FR 589, GER 589) Technology in Foreign Language Education: An Overview (3) Approaches to the uses and research applications of multimedia and other educational technologies applied to the teaching of foreign languages. (also crosslisted with APLNG 589) Effective: Spring 2004

SPAN 596 Individual Studies (1-9) Creative projects, including nontesis research, which are supervised on an individual basis and which fall outside the scope of formal courses. Effective: Spring 1987

SPAN 596A Prosody Fld Research: Argentina (3) Design and implement an experiment designed to evaluate the importance of prosody in socially indexing identity within the Cordoba dialect (tonada cordobesa). Effective: Summer 2014 Ending: Summer 2014

SPAN 596B Language Contact, Code-Switching and Convergence in Spanish of the American Southwest (2) This course will provide an overview of the recent literature on Spanish of the American Southwest. The goal is to examine language contact, code-switching and convergence. Effective: Summer 2014 Ending: Summer 2014

SPAN 596C Codeswitching ERP (3) Examining code-switching in the brain using ERPs. Effective: Summer 2014 Ending: Summer 2014

SPAN 596D Subject Personal Pronoun Expression in Spanish (2) This course will provide an overview of the recent literature on subject personal pronoun expression in Spanish. Effective: Summer 2014 Ending: Summer 2014
SPAN 596E Field Work in San Basilio de Palenque (3) Develop an experiment investigating language processing in Spanish-Palenquero bilinguals.
Effective: Summer 2014 Ending: Summer 2014

SPAN 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.
Effective: Summer 1988

SPAN 597A The Uses of Mexico (3) This course is an introduction to Mexican culture and history, from pre-Columbian times to early 1960s. Two emphases (the "uses") will guide the course. The first will be in terms of teaching: how can I incorporate them into undergraduate courses? The second will be to design a broader approach to these texts, with implications for both teaching and future research, relying heavily on historical context.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SPAN 597B Brazil and Comparative Modernisms (3) This course will critically examine and intervene in recent debates surrounding "global" or "comparative modernisms" by taking Brazil as its primary focus of comparison.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SPAN 597C Going Back and Forth Between Two Languages (3) This course examines what happens when two languages interact in the mind of bilinguals.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SPAN 600 Thesis Research (1-15) No description.
Effective: Fall 1983

SPAN 601 Ph.D. Dissertation Full-Time (0) No description.
Effective: Fall 1983

SPAN 602 Supervised Experience in College Teaching (1-3 per semester/maximum of 6) Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.
Effective: Summer 1999

SPAN 603 Foreign Academic Experience (1-12) Foreign study and/or research constituting progress toward the degree at a foreign university.
Effective: Spring 2001

SPAN 610 Thesis Research Off Campus (1-15) No description.
Effective: Fall 1983

SPAN 611 Ph.D. Dissertation Part-Time (0) No description.
Effective: Fall 1983
Special Education (SPLED)

SPLED 400 Inclusive Special Ed Foundations: Legal, Characteristics, Collaboration, Assessment, and Management (4)
Legal issues, learner characteristics, collaboration skills, assessment, and behavior management related to educating students with disability in inclusive settings.
Effective: Summer 2011
Prerequisite:

SPLED 401 Motivating Exceptional Learners (4) Group and individual techniques to promote student task engagement and prosocial behavior.
Effective: Summer 2011
Prerequisite:

SPLED 402 Human Rights: Historical and Current Issues in Special Education (3) Litigation, legislation, regulation, and advocacy issues impacting on educational and related services for individuals with academic and/or physical disabilities.
Effective: Summer 2011
Prerequisite:

SPLED 403A Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing (3)
Evidence-based methods for design, delivery, and adaptation of instruction for elementary students with disabilities in reading, mathematics, and writing.
Effective: Summer 2011
Prerequisite:

SPLED 403B Evidence-Based Methods for Teaching Secondary Students with Disabilities in Inclusive Settings (3)
Evidence-based methods for designing, delivering, and adapting instruction for students with disabilities in inclusive secondary education settings.
Effective: Summer 2011
Prerequisite:

SPLED 404 Working with Families and Professionals in Special Education (3) Strategies for productive interactions between special educators and others such as colleagues, employers, parents, service providers, professionals, and students.
Effective: Summer 2011
Prerequisite:

SPLED 408 (EDPSY 408) Meeting Instructional Needs of English Language Learners with Special Needs (3) The course content and activities focus on instruction and assessment for English Language Learners with special needs.
Effective: Summer 2011
Prerequisite:

SPLED 409A Fundamental Literacy Skills for Students with Special Needs (3) Effective reading curriculum and teaching methods to teach students with special needs.
Effective: Summer 2011
Prerequisite: Concurrent: SPLED 495G

SPLED 409B Writing and Content Literacy for Students with Special Needs (3) Effective curriculum and materials for teaching writing and content literacy to students with special needs.
Effective: Summer 2011
Prerequisite: Concurrent: SPLED 495G

SPLED 409C Mathematics Instruction for Students with Special Needs (3) Research-based practices for teaching mathematics skills to students with special needs.
Effective: Summer 2011
Prerequisite: Concurrent: SPLED 495G

SPLED 411 Intervention for Students with Severe Disabilities (3) Assessment, teaching strategies, curricula, materials, and assistive techniques for use with individuals having severe disabilities (mental and physical).
Effective: Summer 2011
Prerequisite: Concurrent: a grade of C or better in SPLED 495E

SPLED 412 Instruction for Students with Mild Disabilities (4) Appropriate teaching strategies, curriculum sequences, and materials selection and evaluation for children with mild special needs.
Effective: Summer 2011
Prerequisite: Concurrent: a grade of C or better required in SPLED 454

SPLED 415 Early Special Education (3-4) Includes early identification methods, assessment, curricula, parent involvement, and program evaluation for exceptional preschoolers in mainstreamed or segregated settings.
Effective: Summer 2011
Prerequisite:

SPLED 418 Technologies for Persons with Disabilities (2) Sensory aids, communication systems, computer systems, expert systems, simulations, and other technologies for students who are academically or physically challenged.
Effective: Summer 2011
Prerequisite:

SPLED 419 Assistive Technology for General Education Teachers (2-3) Strategies to support use of assistive
technologies by students with disabilities in general education classrooms.
Effective: Summer 2012
Prerequisite:

SPLED 425 Foundations of Special Education, Etiologies, Law, and Implications for Practice (4) An introduction to exceptional individuals being served in special education programs across the life span.
Effective: Fall 2011
Prerequisite:

SPLED 430 Foundational Skills for Working with Students with Special Education Needs in General Education Classrooms (1) Introduction to working with students with special education needs in the general education classroom, including history and legal foundation.
Effective: Summer 2011
Prerequisite:

SPLED 431 Evidenced-Based Methods for Monitoring Student Progress and Making Instructional Decisions (2) Evidence-based methods for assessing student progress and making data-based instructional decisions.
Effective: Summer 2011
Prerequisite:

SPLED 432 Evidence-Based Practices for Inclusive Behavior Management (2) Managing and motivating learners with special needs in general education settings based upon principles of Applied Behavior Analysis.
Effective: Summer 2011
Prerequisite:

SPLED 433 Effective and Explicit Instruction for Students with Learning Difficulties (2) Evidence-based methods for designing, delivering, and adapting academic instruction for students with mild, moderate, and severe learning difficulties.
Effective: Summer 2011
Prerequisite:

SPLED 434A Evidence-Based Practices for Inclusive Elementary Classrooms (2) Evidence-based methods to effectively serve special needs students in elementary general education settings, including reading, writing, and mathematics instruction.
Effective: Summer 2011
Prerequisite:

SPLED 434B Evidence-Based Practices for Inclusive Secondary Classrooms (2) Evidence-based methods to effectively serve special needs students in secondary general education settings.
Effective: Summer 2011
Prerequisite:

SPLED 444 Inclusive Education and Assessment (6) Knowledge and skills needed to educate students with special needs in urban schools.
Effective: Summer 2011
Prerequisite: Concurrent: URBED 395W

SPLED 454 Assessment for Instruction (4) Orientation to evaluation of special students with emphasis on the creation, use, and interpretation of teacher-made assessment procedures.
Effective: Summer 2011
Prerequisite: Concurrent: a grade of C or better in SPLED 412

SPLED 460A Fundamentals of Reading Instruction in Special Education (3) Topics include the interactive nature of reading, recent findings of the National Reading Panel, explicit instruction principles and reading assessments.
Effective: Summer 2011

SPLED 460B Teaching and Assessing Reading Skills of Students with Special Needs (3) Topics include methods for assessing and teaching reading skills including fluency, word level decoding and comprehension.
Effective: Summer 2011
Prerequisite:

SPLED 460C Specialized Reading Applications in Special Education (3) Topics include methods for assessing and teaching reading skills in vocational competence, functional reading, reading for students with sensory impairment.
Effective: Summer 2011
Prerequisite:

SPLED 461 Introduction to Autism Spectrum Disorders: Issues and Concerns (3) Overview of issues, characteristics, and evidenced-based assessment strategies, and approaches for individuals with autism/PDD.
Effective: Spring 2013
Prerequisite:

SPLED 462 Autism and Applied Behavior Analysis (3) This course addresses principles of applied behavior analysis and empiricism related to instruction and special issues affecting individuals with autism.
Effective: Spring 2013
Prerequisite:

SPLED 463 Communication and Social Competence (3) Overview of deficits and strategies in speech, language, and communication across the Autism Spectrum Disorder.
Effective: Summer 2011
Prerequisite:
SPLED 464 **Assessment and Curriculum** (3) Overview of screening, diagnosis, and identification of skills in developmental domains and curricula for individuals with autism.
Effective: Summer 2011
Prerequisite:

SPLED 465 **Asperger Syndrome** (1) Characteristics, assessment, intervention, and curricula for individuals with Asperger syndrome. Emphasis will be given to social skill development.
Effective: Summer 2011

SPLED 495E **Experience with Exceptional Children** (3) Supervised activities with exceptional children in a variety of possible settings, e.g., schools, institutions, day care centers, vocational settings.
Effective: Summer 2011
Prerequisite: Concurrent: a grade of C or better in SPLED 411 SPLED 412

SPLED 495F **Practicum in Special Education** (15) Teaching experience with mildly/moderately disabled children in age appropriate settings, e.g., infant/preschools, schools, vocational/job sites.
Effective: Summer 2011
Prerequisite:

SPLED 495G **Experience with an Integrated Inclusion Classroom** (4) Supervised teaching in integrated general classrooms with activities in assessment, diagnosis, and direct intervention with students in need or with disabilities.
Effective: Summer 2011
Prerequisite: Concurrent: a grade of C or better required in SPLED 409

SPLED 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 2011

SPLED 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Summer 2011

SPLED 497A **Assistive Technology for Persons with Disabilities** (1) Sensory aids, communication systems, computer systems, expert systems, simulations, and other technologies for students who are academically or physically challenged.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SPLED 498 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Summer 2011

SPLED 500 **Seminar in Special Education** (1-9) Continuing series of professional seminars designed to provide a forum for discussion of current and classical research concerning exceptional children.
Effective: Summer 2011
Prerequisite:

SPLED 501 **Administration and Supervision of Educational Programs for Exceptional Children** (2-3) Problems connected with the instituting and organizing of classes for atypical children; the legal phases, finances, teaching personnel, pupil personnel, housing, equipment, courses of study, curriculum, etc.
Effective: Summer 2011
Prerequisite:

SPLED 502 **Educating Individuals with Autism Spectrum Disorders** (3) This seminar addresses evidence-based strategies related to individuals with ASD including characteristics, assessment, treatment approaches, and life-span programming.
Effective: Summer 2011

SPLED 503A **Applied Behavior Analysis for Special Education: Basic Principles I** (4) Topics include a history of applied behavior analysis; underlying assumptions; dimensions and characteristics of ABA; ethics; basic terminology and principles.
Effective: Summer 2011

SPLED 503B **Applied Behavior Analysis for Special Education: Basic Principles II** (4) Topics include functional assessment of behavior, ethics, methods to increase and decrease behavior, and generalization.
Effective: Summer 2011
Prerequisite:

SPLED 503C **Applied Behavior Analysis for Special Education: Extended Applications I** (4) Topics include assessment and intervention for challenging behavior, systems support, classroom applications of ABA, and review of ABA Certification Exam.
Effective: Summer 2011
Prerequisite:

SPLED 503D **Applied Behavior Analysis for Special Education: Extended Applications II** (3) In this course students learn...
additional techniques to promote meaningful behavior change using principles of behavior.

Effective: Fall 2012

Prerequisite:

SPLED 505 Single-Case Research (3) Overview of research methods associated with collecting and evaluating repeated measures on single cases.
Effective: Summer 2011

SPLED 510 Problems in the Education of the Mentally Retarded (2-4) Study of existing curriculums, instructional practices, educational programs; experimentation in curriculum building and materials construction.
Effective: Summer 2011

Prerequisite:

SPLED 511 Ethical Considerations for Special Education Populations (3) Discussion of ethical and legal standards in special education.
Effective: Summer 2012

SPLED 515 Infants and Toddlers with Special Needs (3) Comparison of typical and atypical development of infants and toddlers; applicable instructional strategies in education.
Effective: Summer 2011

Prerequisite:

SPLED 516 Assessment in Early Educational Intervention (2-3) Describes and illustrates models, methods, and materials for assessing infants and preschoolers with developmental delays and disabilities.
Effective: Summer 2011

Prerequisite:

SPLED 525 Teaching Learners with Disabilities in Inclusive Settings (3) Strategies for educating learners with disabilities in inclusive settings with an emphasis on instruction, accommodations, collaboration, and consultation.
Effective: Summer 2014

Prerequisite:

SPLED 530 Problems in the Education of the Learning Disabled (2-4) Review of the research and theoretical implications in the educational and behavioral management of learning disabled children.
Effective: Summer 2011

Prerequisite:

SPLED 540 Orientation to PhD Study in Special Education (3) Information and skills needed for successful completion of Ph.D. study in Special Education for those targeting academic careers.
Effective: Summer 2011

Prerequisite:

SPLED 550 Professional Seminar in Special Education (2) Professional competencies and ethical issues related to obtaining and retaining positions in higher education.
Effective: Summer 2011

Prerequisite:

SPLED 570 Problems in the Education of the Emotionally Disturbed (2-4) Current issues, methods, and problems associated with the education of the emotionally/behaviorally disturbed.
Effective: Summer 2011

Concurrent: SPLED 305 SPLED 401

SPLED 573 Introduction to Research in Special Education (3) A seminar to review and design research in special education.
Effective: Summer 2011

Prerequisite:

SPLED 575 Grant-Proposal Development in Special Education (3) Designed to facilitate development of grants and proposal writing techniques for submission and funding by student researchers.
Effective: Summer 2011

Prerequisite:

SPLED 594 Research Topics (1-15) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Summer 2011

SPLED 595 Internship (1-12) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. A specific title may be used in each instance and will be entered on the student's transcript. Multiple offerings may be accommodated by the use of suffixes A, B, etc.
Effective: Summer 2011

SPLED 595A Practicum (1-6) Supervised clinical experience on campus in University-managed diagnostic and remedial settings.
Effective: Summer 2011

Prerequisite:

SPLED 595B Field Experiences in Off-Campus Laboratories (1-10) Supervised off-campus field experiences in selected
laboratory settings with exceptional children.
Effective: Summer 2011
Prerequisite:
SPLED 595C Internship in Special Education Supervision (1-6) Internship in day/residential school setting under supervision of field supervisor and University faculty.
Effective: Summer 2011
Prerequisite:
SPLED 595D Internship in Special Education (2-10) Internship to take place in schools or educational situations where student is not regularly employed, under supervision of graduate faculty.
Effective: Summer 2011
Prerequisite:
SPLED 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 2011

SPLED 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.
Effective: Summer 2011

SPLED 600 Thesis Research (1-15) No description.
Effective: Summer 2011

SPLED 601 Ph.D. Dissertation Full-Time (0) No description.
Effective: Summer 2011

SPLED 602 Supervised Experience in College Teaching (1-3 per semester/maximum of 6) Experience in structuring and teaching a college course supervised by a graduate faculty member.
Effective: Summer 2011

SPLED 610 Thesis Research Off Campus (1-15) No description.
Effective: Summer 2011

SPLED 611 Ph.D. Dissertation Part-Time (0) No description.
Effective: Summer 2011

SPLED 867 Practicum in Applied Behavior Analysis (2-4 per semester/maximum of 10) Supervised experience in applied settings implementing behavior management techniques.
Effective: Fall 2012
Concurrent: SPLED 503A SPLED 503B SPLED 503C SPLED 503D

Last Import from UCM: May 24, 2014 3:00 AM
Special Grad Pgmr (SPEC)

SPEC 596 Individual Studies (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Fall 1993

SPEC 600 Thesis Research (1-15) No description.
Effective: Fall 1983

SPEC 601 Ph.D. Dissertation Full-Time (0) No description.
Effective: Fall 1983

SPEC 610 Thesis Research Off Campus (1-15) No description.
Effective: Fall 1983

SPEC 611 Ph.D. Dissertation Part-Time (0) No description.
Effective: Fall 1983

Last Import from UCM: May 24, 2014 3:00 AM
Statistics (STAT)

STAT 401 Experimental Methods (3) Random variables; probability density functions; estimation; statistical tests, t-tests; correlation; simple linear regression; one-way analysis of variance; randomized blocks.
Effective: Spring 1988
Prerequisite:

STAT 402 Statistical Analysis II (3) Two-sample problems, single and multifactor ANOVA, simple and multiple regression, categorical data.
Effective: Fall 2007
Prerequisite:

STAT 414 (MATH 414) Introduction to Probability Theory (3) Probability spaces, discrete and continuous random variables, transformations, expectations, generating functions, conditional distributions, law of large numbers, central limit theorems. Students may take only one course from STAT(MATH) 414 and 418.
Effective: Fall 2001
Prerequisite:

STAT 415 (MATH 415) Introduction to Mathematical Statistics (3) A theoretical treatment of statistical inference, including sufficiency, estimation, testing, regression, analysis of variance, and chi-square tests.
Effective: Fall 1989
Prerequisite:

Effective: Spring 1984
Prerequisite:

STAT 418 (MATH 418) Introduction to Probability and Stochastic Processes for Engineering (3) Introduction to probability axioms, combinatorics, random variables, limit laws, and stochastic processes. Students may take only one course from MATH(STAT) 414 and 418 for credit.
Effective: Fall 2011
Prerequisite:

STAT 440 Computational Statistics (3) Topics related to computing in statistics, including numerical linear algebra, optimization, simulation, numerical integration, and bootstrapping.
Effective: Spring 2006
Prerequisite:

STAT 460 Intermediate Applied Statistics (3) Review of hypothesis testing, goodness-of-fit tests, regression, correlation analysis, completely randomized designs, randomized complete block designs, latin squares.
Effective: Fall 2006
Prerequisite:

STAT 461 Analysis of Variance (3) Analysis of variance for single and multifactor designs; response surface methodology.
Effective: Fall 2007
Prerequisite:

STAT 462 Applied Regression Analysis (3) Introduction to linear and multiple regression; correlation; choice of models, stepwise regression, nonlinear regression.
Effective: Fall 2006
Prerequisite:

STAT 463 Applied Time Series Analysis (3) Identification of models for empirical data collected over time; use of models in forecasting.
Effective: Spring 2006
Prerequisite:

STAT 464 Applied Nonparametric Statistics (3) Tests based on nominal and ordinal data for both related and independent samples. Chi-square tests, correlation.
Effective: Fall 2006
Prerequisite:

STAT 466 Survey Sampling (3) Introduction to design and analysis of sample surveys, including questionnaire design, data collection, sampling methods, and ratio and regression estimation.
Effective: Spring 2006
Prerequisite:

STAT 470W Problem Solving and Communication in Applied Statistics (3) Provide problem solving and communication skills through development of writing ability, interaction with peers and the SCC, and oral presentations.
Effective: Spring 2000
Prerequisite:

STAT 480 Introduction to SAS (1) Introduction to SAS with emphasis on reading, manipulating and summarizing data.
Effective: Spring 2008
Prerequisite:
STAT 481 **Intermediate SAS for Data Management** (1) Intermediate SAS for data management.
Effective: Summer 2007
Prerequisite:

STAT 482 **Advanced Topics in SAS** (1) Advanced statistical procedures in SAS, including ANOVA, GLM, CORR, REG, MANOVA, FACTOR, DISCRIM, LOGISTIC, MIXED, GRAPH, EXPORT, and SQL. Credit can not be received for both STAT 482 and STAT 480/481/483.
Effective: Summer 2009
Prerequisite:

STAT 483 **Statistical Analysis System Programming** (3) Introduction, intermediate, and advanced topics in SAS. Credit can not be received for both STAT 483 and STAT 480/481/482.
Effective: Summer 2009
Prerequisite:

STAT 494 **Research Project** (1-12) Supervised student activities on research projects identified on an individual or small group basis.
Effective: Fall 2007
Prerequisite:

STAT 494H **Research Project** (1-12) Supervised student activities on research projects identified on an individual or small group basis.
Effective: Fall 2007
Prerequisite:

STAT 495 **Internship** (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships.
Effective: Fall 2007
Prerequisite:

STAT 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Fall 1983

STAT 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Fall 1983

STAT 497C **Topics in Stat Computing with R** (1) Topics: I) Basic background on R II) Manipulating data I III) Finding help IV) Simple univariate data V) importing data VI) Documenting your work VII) Repetitive tasks - loops and the apply () family IX) visual data X) Basic analysis (as much as possible we'll work with real data.)
Effective: Summer 2014 Ending: Summer 2014

STAT 499 (IL) **Foreign Studies** (1-12) Courses offered in foreign countries by individual or group instruction.
Effective: Summer 2005

STAT 500 **Applied Statistics** (3) Descriptive statistics, hypothesis testing, power, estimation, confidence intervals, regression, one- and 2-way ANOVA, Chi-square tests, diagnostics.
Effective: Spring 1999
Prerequisite:

STAT 501 **Regression Methods** (3) Analysis of research data through simple and multiple regression and correlation; polynomial models; indicator variables; step-wise, piece-wise, and logistic regression.
Effective: Fall 2006
Prerequisite:

STAT 502 **Analysis of Variance and Design of Experiments** (3) Analysis of variance and design concepts; factorial, nested, and unbalanced data; ANCOVA; blocked, Latin square, split-plot, repeated measures designs.
Effective: Fall 1995
Prerequisite:

STAT 503 **Design of Experiments** (3) Design principles; optimality; confounding in split-plot, repeated measures, fractional factorial, response surface, and balanced/partially balanced incomplete block designs.
Effective: Fall 1983
Prerequisite:

STAT 504 **Analysis of Discrete Data** (3) Models for frequency arrays; goodness-of-fit tests; two-, three-, and higher-way tables; latent and logistic models.
Effective: Fall 1983
Prerequisite:

The Pennsylvania State University
STAT 505 Applied Multivariate Statistical Analysis (3) Analysis of multivariate data; T2-tests; particle correlation; discrimination; MANOVA; cluster analysis; regression; growth curves; factor analysis; principal components; canonical correlations.
Effective: Spring 2003
Prerequisite:

STAT 506 Sampling Theory and Methods (3) Theory and application of sampling from finite populations.
Effective: Fall 1983
Prerequisite:

Effective: Spring 2005
Prerequisite:

STAT 509 Design and Analysis of Clinical Trials (3) An introduction to the design and statistical analysis of randomized and observational studies in biomedical research.
Effective: Fall 2004
Prerequisite:

STAT 510 Applied Time Series Analysis (3) Identification of models for empirical data collected over time. Use of models in forecasting.
Effective: Fall 1983
Prerequisite:

STAT 511 Regression Analysis and Modeling (3) Multiple regression methodology using matrix notation; linear, polynomial, and nonlinear models; indicator variables; AOV models; piece-wise regression, autocorrelation; residual analyses.
Effective: Fall 2006
Prerequisite:

STAT 512 Design and Analysis of Experiments (3) AOV, unbalanced, nested factors; CRD, RCBD, Latin squares, split-plot, and repeated measures; incomplete block, fractional factorial, response surface designs; confounding.
Effective: Spring 1984
Prerequisite:

STAT 513 Theory of Statistics I (3) Probability models, random variables, expectation, generating functions, distribution theory, limit theorems, parametric families, exponential families, sampling distributions.
Effective: Summer 1986
Prerequisite:

STAT 514 Theory of Statistics II (3) Sufficiency, completeness, likelihood, estimation, testing, decision theory, Bayesian inference, sequential procedures, multivariate distributions and inference, nonparametric inference.
Effective: Summer 1986
Prerequisite:

Effective: Spring 2013
Prerequisite:

STAT 517 (MATH 517) Probability Theory (3) Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.
Effective: Summer 2000
Prerequisite:

STAT 518 (MATH 518) Probability Theory (3) Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.
Effective: Fall 1983
Prerequisite:

STAT 519 (MATH 519) Topics in Stochastic Processes (3) Selected topics in stochastic processes, including Markov and Wiener processes; stochastic integrals, optimization, and control; optimal filtering.
Effective: Fall 1984
Prerequisite:

STAT 524 Ecometrics (3) Stochastic models and statistical methods in ecological problems; population dynamics, spatial patterns in populations of one, two, or more species.
Effective: Winter 1978
Prerequisite:

STAT 525 Survival Analysis I (3) Location estimation, 2- and K- sample problems, matched pairs, tests for association and covariance analysis when the data are censored.
Effective: Summer 1992
Prerequisite:

STAT 540 Statistical Computing (3) Computational foundations of statistics; algorithms for linear and nonlinear models, discrete algorithms in statistics, graphics, missing data, Monte Carlo techniques.
Effective: Fall 1983
Prerequisite:
STAT 544 Categorical Data Analysis I (3) Two-way tables; generalized linear models; logistic and conditional logistic models; loglinear models; fitting strategies; model selection; residual analysis.
Effective: Summer 1992
Prerequisite:

STAT 548 Statistical Distribution Theory (3) Analytical study of nonnormal models and methods in reliability theory, survival analysis, records evaluation, scale/scale-free analysis, and directional statistics.
Effective: Spring 1984
Prerequisite:

STAT 551 Linear Models I (3) A coordinate-free treatment of the theory of univariate linear models, including multiple regression and analysis of variance models.
Effective: Spring 1987
Prerequisite:

STAT 552 Linear Models II (3) Treatment of other normal models, including generalized linear, repeated measures, random effects, mixed, correlation, and some multivariate models.
Effective: Spring 1987
Prerequisite:

STAT 553 Asymptotic Tools (3) A rigorous but non-measure-theoretic introduction to statistical large-sample theory for Ph.D. students.
Effective: Summer 2004
Prerequisite:

Effective: Spring 2014

STAT 557 (IST 557) Data Mining I (3) This course introduces data mining and statistical/machine learning, and their applications in information retrieval, database management, and image analysis.
Effective: Summer 2009
Prerequisite:

STAT 558 (IST 558) Data Mining II (3) Advanced data mining techniques: temporal pattern mining, network mining, boosting, discriminative models, generative models, data warehouse, and choosing mining algorithms.
Effective: Summer 2010
Prerequisite:

STAT 561 Statistical Inference I (3) Classical optimal hypothesis test and confidence regions, Bayesian inference, Bayesian computation, large sample relationship between Bayesian and classical procedures.
Effective: Spring 2003
Prerequisite: Concurrent: STAT 517

STAT 562 Statistical Inference II (3) Basic limit theorems; asymptotically efficient estimators and tests; local asymptotic analysis; estimating equations and generalized linear models.
Effective: Spring 2003
Prerequisite:

STAT 565 Multivariate Analysis (3) Theoretical treatment of methods for analyzing multivariate data, including Hotelling's T2, MANOVA, discrimination, principal components, and canonical analysis.
Effective: Spring 1987
Prerequisite:

STAT 580 Statistical Consulting Practicum I (2) General principles of statistical consulting and statistical consulting experience. Preparation of reports, presentations, and communication aspects of consulting are discussed.
Effective: Spring 2005
Prerequisite:

STAT 581 Statistical Consulting Practicum II (1 per semester/maximum of 2) Statistical consulting experience including client meetings, development of recommendation reports, and discussion of consulting solutions.
Effective: Summer 2004
Prerequisite:

STAT 590 Colloquium (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
Effective: Spring 1987

STAT 596 Individual Studies (1-9) Creative projects, including nontesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Spring 1987

STAT 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.
Effective: Spring 1987

STAT 600 Thesis Research (1-15) No description.
Effective: Fall 1983

STAT 601 **Ph.D. Dissertation Full-Time** (0) No description.
Effective: Fall 1983

STAT 610 **Thesis Research Off Campus** (1-15) No description.
Effective: Fall 1983

STAT 611 **Ph.D. Dissertation Part-Time** (0) No description.
Effective: Fall 1983

STAT 800 **Applied Research Methods** (3) Investigates methods for assessing data collected from experimental and/or observational studies in various research setting.
Effective: Spring 2014

STAT 897 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.
Effective: Spring 2008

STAT 897D **Applied Data Mining and Statistical Learning** (3) Data Mining tools are exploring data with regression, PCA, discriminate analysis, cluster analysis, classification and regression trees (CART).
Effective: Summer 2014 Ending: Summer 2014
Prerequisite:

STAT 897D **Applied Data Mining and Statistical Learning** (3) Data Mining tools for exploring data with regression, PCA, discriminate analysis, cluster analysis, classification and regression trees (CART).
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014
Prerequisite:

Last Import from UCM: May 24, 2014 3:00 AM
Strctl Basis-Med Pr (SBMP)

SBMP 715 Structural Basis of Medical Practice (13) This integrated course will provide gross structure, organization, and function of human body with labs devoted to dissection of human body; clinical and radiological correlation. Effective: Summer 1997

Last Import from UCM: May 24, 2014 3:00 AM
Study Abroad (ABLAW)

ABLAW 900 Study Abroad (1-17) Law student attending international study abroad program.
Effective: Summer 2008

Last Import from UCM: May 24, 2014 3:00 AM
Study Abroad (STABO)

STABO 999 (IL) Study Abroad (1-12) See summer program brochure for description.
Effective: Summer 2005

Last Import from UCM: May 24, 2014 3:00 AM
Study Abroad (STABR)

STABR 997 Special Topics (1-12) Formal courses given on a topical or special interest subject which may be offered infrequently.
Effective: Summer 2010

STABR 999 (IL) Study Abroad (1-12) See summer program brochure for description.
Effective: Summer 2005

Last Import from UCM: May 24, 2014 3:00 AM
Summer Practicum (SP)

SP 714 Summer Practicum (1) The Penn State College of Medicine's summer practicum gives students the opportunity to gain direct experience in the care of patients in conducting biomedical research. The course is offered during the summer session between the first and second year of medical school.
Effective: Summer 2011
Prerequisite:

Last Import from UCM: May 24, 2014 3:00 AM
Supply Chain Mgmt (SCM)

SCM 400 Transport Planning (3) Advanced study of transport systems in supply chain networks.
Effective: Spring 2007
Prerequisite:

SCM 404 Demand Fulfillment (3) Analysis of demand fulfillment and the role of distribution operations management in the supply chain.
Effective: Spring 2011
Prerequisite:

SCM 405 Manufacturing and Services Strategies (3) Investigates manufacturing and services strategies in supply chain networks.
Effective: Spring 2011
Prerequisite:

SCM 406 Strategic Procurement (3) Analysis of strategic procurement in the supply chain.
Effective: Summer 2011
Prerequisite:

SCM 416 Warehousing and Terminal Management (3) Administration of warehouse and terminal functions in logistics systems, with analysis of customer service, forecasting, inventory, investment, design, and operation. Not available to baccalaureate business students in Smeal.
Effective: Spring 2007
Prerequisite:

SCM 421 Supply Chain Analytics (3) Models and Methodologies for supply chain analysis.
Effective: Spring 2011
Prerequisite:

Effective: Spring 2007
Prerequisite:

SCM 445 Operations Planning and Control (3) Aggregate production planning procedures, disaggregation methods in hierarchical production planning, master production scheduling, material requirements planning, lot-sizing, and capacity planning. Not available to baccalaureate business students in Smeal.
Effective: Fall 2012
Prerequisite:

SCM 450W Strategic Design and Management of Supply Chains (3) Strategic design and management of supply chains.
Effective: Fall 2011
Prerequisite:

SCM 455 Logistics Systems Analysis and Design (3) Customer service, inventory management, transportation, warehousing, purchasing, international logistics, site location planning and analysis, and total cost analysis.
Effective: Spring 2007
Prerequisite:

SCM 456 Supply Chain Risk Analysis (3) Business processes are modeled as a network of queues using discrete-event simulation and analyzed model outcomes using statistical methods.
Effective: Spring 2007
Prerequisite:

SCM 460 Purchasing and Materials Management (3) Purchasing policies, procedures, order specifications and agreements, supplier selection, and the role of purchasing in production planning and inventory management. Not available to baccalaureate business students in Smeal.
Effective: Spring 2007
Prerequisite:

SCM 465 Electronic Business Management (3) A problem-based exploration of the various electronic business tools and technologies required to efficiently manage a supply chain. Not available to baccalaureate business students in Smeal.
Effective: Spring 2007
Prerequisite:

SCM 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Spring 2007

SCM 494H Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Spring 2007

SCM 496 Independent Studies (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

The Pennsylvania State University
SCM 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
Effective: Spring 2007

SCM 497A Logistics Case Study Analysis (3) This course will introduce students to the case analysis method with an emphasis on logistics. Students will learn to a) identify the type of case and the most important questions to be addressed, b) identify required information, relevant data sources and appropriate analytical methods, and c) develop and make effective presentations of key case study findings and recommendations. The course will follow the basic approach to case analysis described in Ellet (2007), and will emphasize quantitative practice exercises done by groups of students.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014
Prerequisite:

SCM 498 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
Effective: Spring 2007

SCM 499 (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.
Effective: Summer 2007

SCM 530 Supply Chain Analysis (3) Methods and tools to support supply chain decision making with emphasis on forecasting, inventory analysis, and demand planning.
Effective: Summer 2007
Prerequisite:

SCM 540 Transportation in Supply Chains (2) Strategies and processes for design and implementation of transportation service links in supply chain networks.
Effective: Summer 2002
Prerequisite:

SCM 546 Strategic Procurement (2) Development of procurement and supply management strategies to support synchronized supply chains.
Effective: Summer 2002
Prerequisite:

SCM 556 Manufacturing Strategy (2) Development of service-sensitive manufacturing strategies to support synchronized supply chains.
Effective: Summer 2002
Prerequisite:

SCM 566 Demand Fulfillment (2) Demand fulfillment strategies, operations, and methods in supply chain networks.
Effective: Summer 2002
Prerequisite:

SCM 570 Supply Chain Modeling (2) Explore current modeling methods and software for design, analysis, execution and integration of supply chains.
Effective: Summer 2002
Prerequisite:

SCM 576 Logistics and Supply Chain Leadership (2) Current issues and best practices for selected supply chain leadership topics.
Effective: Summer 2002
Prerequisite:

SCM 594 Research Topics (1-15) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Summer 2007

SCM 595 Internship (1-9) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships.
Effective: Fall 2013

SCM 596 Individual Studies (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 2013

SCM 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.
Effective: Spring 2002

SCM 597B Six Sigma Blackbelt for MBA Students (2) A focused overview highlighting principles of six sigma
methodology including implementation of proven principles and techniques for business performance. Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SCM 800 Supply Chain Management (4) Introduction to the strategic framework, issues, and methods for integrating supply and demand management within and across companies. Effective: Summer 2007

SCM 810 Transportation and Distribution (4) Role of transportation and distribution operations in matching supply with demand; principles of transport industry analysis and competitive positioning. Effective: Summer 2007 Prerequisite:

SCM 815 Product Realization: Development, Manufacturing, and the Supply Chain (4) Integration of product development, production, and supply chain processes required to launch products from design concept to steady state manufacturing. Effective: Fall 2012

SCM 820 Strategic Procurement (4) Strategic planning for the source/buy process, including developing and managing supplier relationships, global issues, and e-procurement. Effective: Summer 2007 Prerequisite:

SCM 830 Supply Chain Analysis (2) Methods and tools to support supply chain decision making with emphasis on forecasting, inventory analysis, and demand planning. Effective: Summer 2007 Prerequisite:

SCM 840 Supply Chain Project Management (4) The fundamentals and tools of managing supply chain projects, with special emphasis given to related information technology projects. Effective: Summer 2007 Prerequisite:

SCM 846 Topics in Supply Chain Management (4) Emerging issues in supply chain management, from procurement through manufacturing, logistics, and sales. Effective: Summer 2014 Prerequisite:

SCM 850 Supply Chain Design and Strategy (4) Design and management of supply chain networks, emphasizing the alignment of supply chain networks with corporate competitive strategy. Effective: Summer 2007 Prerequisite:

SCM 860 Supply Chain Transformation and Innovation (4) Strategic supply chain transformation and innovation with emphasis on (re)configuration of key capabilities to achieve competitive advantages. Effective: Summer 2007 Prerequisite:

SCM 894 Research Topics (1-15) Supervised student activities on research projects identified on an individual or small-group basis. Effective: Summer 2007

SCM 896 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses. Effective: Summer 2007

SCM 897 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term. Effective: Summer 2007

SCM 897C Strategic Manufacturing and Service Operations (4) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term. Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SCM 898 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term. Effective: Summer 2007

Last Import from UCM: May 24, 2014 3:00 AM
Supply Chain and Information Systems (SC&IS)

SC&IS 505 Management Information Systems Research (1-3) Research problems and issues in supply chain and information systems.
Effective: Spring 2006

SC&IS 510 Introduction to Supply Chain and Information Systems (3) Introduction to the strategic framework, issues, and methods for integrating supply and demand management within and across companies.
Effective: Spring 2006

Effective: Spring 2006
Prerequisite:

SC&IS 519 (I E 519) Dynamic Programming (3) Theory and application of dynamic programming; Markov decision processes with emphasis on applications in engineering systems, supply chain and information systems.
Effective: Spring 2006
Prerequisite:

SC&IS 520 Principles of SC&IS I (3) Initial course on principles of supply chain and information systems with special emphasis on potential research topics.
Effective: Spring 2006
Prerequisite:

SC&IS 525 Supply Chain Optimization (3) Introduction to theory and practice of optimization methods and models for analyzing and improving the performance of supply chain environments.
Effective: Spring 2006
Prerequisite:

SC&IS 530 Principles of SC&IS II (3) Sequel on principles of supply chain and information systems with special emphasis on potential research topics.
Effective: Spring 2006
Prerequisite:

Effective: Spring 2006
Prerequisite:

SC&IS 540 Transportation and Distribution Management (3) Transportation and distribution systems in supply chains. Emphasis on role of system cost, price, service elements in total order management.
Effective: Spring 2006

SC&IS 545 Supply Chain Systems Simulation (3) Application of computer simulation to analysis and design of supply chain and information systems design; simulation experiments in SC&IS research.
Effective: Spring 2006
Prerequisite:

SC&IS 546 Procurement and Supply Management (3) Analysis, planning, and management of domestic and international procurement and supply activities.
Effective: Spring 2006

Effective: Spring 2006

Effective: Spring 2006
Prerequisite:

SC&IS 570 (I E 570) Supply Chain Engineering (3) Use of operations research models and methods for solving problems in supply chain systems.
Effective: Spring 2014
Prerequisite:

SC&IS 590 Colloquium (1-3) Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.
Effective: Summer 2004

SC&IS 594 Research Topics (1-15) Supervised student activities on research projects identified on an individual or
SC&IS 595 Internship (1-18) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.
Effective: Spring 2005

SC&IS 596 Individual Studies (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses. A specific title may be used in each instance and will be entered on the student's transcript.
Effective: Summer 2004

SC&IS 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.
Effective: Summer 2004

SC&IS 597P Supply Chain Practicum (2) Course designed to expose Ph.D. students to Supply Chain research in the context of industry.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SC&IS 598 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.
Effective: Spring 2005

SC&IS 599 (IL) Foreign Studies (1-2 per semester/maximum of 4) Courses offered in foreign countries by individual or group instruction.
Effective: Summer 2005

Effective: Spring 2004

SC&IS 601 Thesis Preparation No description.
Effective: Spring 2004

Effective: Spring 2004

SC&IS 611 Thesis Preparation No description.
Effective: Spring 2004

Last Import from UCM: May 24, 2014 3:00 AM
Surgery-Hy (SURG)

SURG 700 Surgical Core Clerkship (15) Fundamental surgical course for medical students designed to provide basic surgical information and clinical exposure.
Effective: Winter 1978
Prerequisite:

SURG 710 General Surgery Acting Internship (5) Four week General Surgery Acting Internship.
Effective: Spring 2009
Prerequisite:

SURG 711 Cardiotoracic Surgery Acting Internship (5) Acting Internship in Adult Cardiotoracic Surgery.
Effective: Spring 2009
Prerequisite:

SURG 712 Surgical Endocrinology Elective (5) An in-depth experience involving the medical and surgical management of endocrinological disorders.
Effective: Summer 2012
Prerequisite:

Effective: Spring 2009
Prerequisite:

SURG 714 Transplant Surgery Acting Internship (5) An in-depth experience in the preoperative evaluation, intra-operative procedures, and postoperative management of kidney, liver, and pancreas transplant patients.
Effective: Spring 2009
Prerequisite:

SURG 720 Plastic Surgery Acting Internship (5) Preceptorship with an active plastic surgical service at The Milton S. Hershey Medical Center or an affiliated hospital.
Effective: Spring 2009
Prerequisite:

SURG 722 Hand Surgery Acting Internship (5) Surgical Acting Internship experience in Hand Surgery.
Effective: Spring 2009
Prerequisite:

SURG 740 Urology Acting Internship (5) In-depth experience in evaluation and management of urologic problems.
Effective: Spring 2009
Prerequisite:

SURG 741 Intensive Respiratory Care -- Anesthesia (5) Students are taught to assess and manage acute respiratory insufficiency.
Effective: Spring 2009
Prerequisite:

SURG 745 (PED 745) Pediatric Cardiotoracic Surgery Elective (5) This fourth-year elective provides an introduction to the operative repair and peri-operative management of simple and complex congenital heart disease.
Effective: Summer 2009
Prerequisite:

SURG 770 Otolaryngology Acting Internship (5) A clinical experience devoted to disorders of the ears, nose, throat, and head and neck.
Effective: Fall 2008
Prerequisite:

SURG 771 Otolaryngology - Head and Neck Surgery Elective for Third Year Medical Students (2.5) This course provides exposure to basic concepts for diagnosis and management of ear, nose and throat problems in children and adults.
Effective: Summer 2009
Prerequisite:

SURG 780 Pediatric Surgery Acting Internship (5) Exposure to the surgical crises of the pediatric patient and their treatment.
Effective: Fall 2008
Prerequisite:

SURG 796 Surgery Individual Studies (5) Creative projects including nonthesis research, supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Spring 2009
Prerequisite:

SURG 796A Surgery Individual Studies for 3rd Year Medical Students (2.5) Surgery Individual Studies for 3rd Year Medical Students.
Effective: Spring 2010
Prerequisite:
SURG 797 **Surgery Special Topics** (5) Formal courses given on a topical or special interest subject which may be offered infrequently. 
**Effective:** Spring 2009

**Prerequisite:**

Last Import from UCM: May 24, 2014 3:00 AM
Systems Engineering (SYSEN)

SYSEN 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
Effective: Spring 1999

SYSEN 505 Technical Project Management (3) Analysis and construction of project plans for the development of complex engineering products taken from a variety of problem domains.
Effective: Fall 2003

SYSEN 507 Systems Thinking (3) The theory and practice of systems thinking. General systems theory; system dynamics, emergent properties, structure, feedback and leverage.
Effective: Spring 2009 Ending: Fall 2014

SYSEN 507 (EDSGN 507) Systems Thinking (3) The theory and practice of systems thinking. General systems theory; system dynamics, emergent properties, structure, feedback and leverage.
Effective: Spring 2015 Future: Spring 2015

SYSEN 509 Biostatistics (3) Multivariate Statistical methodology arising in the health care and biological sciences.
Effective: Summer 2005
Prerequisite:

SYSEN 510 Engineering Analysis I (3) The course includes applications of advanced engineering mathematics; the study of systems are described by ordinary/partial differential equations and methods of solutions.
Effective: Spring 2001
Prerequisite:

SYSEN 520 Systems Engineering (3) Fundamentals of Systems Engineering with focus on System methodology, design, and management; includes life cycle analysis, human factors, maintainability, serviceability/reliability.
Effective: Spring 2012
Prerequisite:

SYSEN 522 Systems Verification Validation & Testing (3) The theory and practice of verification, validation and testing of engineering systems.
Effective: Summer 2013

SYSEN 530 Systems Optimization (3) Theory/practice of linear programming will be developed including determination of optimum mix of products, levels of staffing, blending, network analysis, multi-period planning.
Effective: Spring 2001
Prerequisite:

SYSEN 531 Probability Models and Simulation (3) Provides background in modeling problems containing random components that must be accounted for in a reasonable solution.
Effective: Summer 2007

SYSEN 533 Deterministic Models and Simulation (3) Provides a background in simulation and the modeling of problems that contain differential equations as part of the system.
Effective: Summer 2007

SYSEN 536 Decision and Risk Analysis in Engineering (3) Analysis of engineering decisions under uncertainty; problem identification, formulation, judgment, resolution; mitigation, risk analysis, quantification and management.
Effective: Summer 2008

SYSEN 540 Intelligent System Applications (3) Mathematical foundations of intelligent control and systems; linear quadratic self-tuning regulation and model reference adaptive control.
Effective: Summer 2002
Prerequisite:

SYSEN 550 Creativity and Problem Solving I (3) Foundations of individual problem solving, including creativity, cognitive style and level, problem solving processes and techniques, the paradox of structure.
Effective: Spring 2006

SYSEN 552 Creativity and Problem Solving II (3) Theory and practical applications of group problem solving, including cognitive gap, coping behavior, agents of change, and managing cognitive diversity.
Effective: Summer 2005
Prerequisite:

SYSEN 554 Problem Solving Leadership (3) Models, processes, and techniques for solving complex problems, managing problem solving diversity, and facilitating change through problem solving in socio-technical systems.

The Pennsylvania State University
Effective: Summer 2007

Prerequisite:

SYSEN 555 Invention and Creative Design (3) This course focuses on the creative design process which leads to the development of new products, processes, and systems (i.e. invention).
Effective: Spring 2001

SYSEN 590 Colloquium (1-3) Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.
Effective: Spring 1999

SYSEN 594 Research Topics (1-15) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Spring 1999

SYSEN 594A Advanced Systems Engineering Studio (3) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

SYSEN 596 Individual Studies (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Spring 1999

SYSEN 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.
Effective: Spring 1999

SYSEN 597A Special Topics - Advanced Statistical Quality Control Techniques (3) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.
Effective: Summer 2014 Ending: Summer 2014

SYSEN 597B Special Topics - Six Sigma Capstone Project (3) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.
Effective: Summer 2014 Ending: Summer 2014

Last Import from UCM: May 24, 2014 3:00 AM
Taxation (TAX)

TAX 949 Basic Federal Income Taxation (3) This course examines the basic substantive provisions of the federal income tax law. Included are the following general topics: gross income, exclusions, deductions, depreciation, basis, tax accounting, and other provisions affecting situations encountered by attorneys in general practice.
Effective: Fall 2009

TAX 950 Advanced Federal Income Taxation (3) This course is designed to continue the examination of the basic substantive provisions for the federal income tax law begun in Basic Federal Income Taxation, including the following general topics: income splitting and assignment, realization and recognition of gain and loss, capital transactions, the investment credit, and other taxable entities.
Effective: Summer 2011
Prerequisite:

TAX 951 Comparative International Tax Law (3) This course treats the unique problems of Home country taxation of the foreign income and operations of resident persons and enterprises and Host country taxation of foreign persons and enterprises. Topics include the treatment of cross-border business and investment; sales, financing and e-commerce; the source of income; worldwide and territorial taxation; methods for the elimination of double taxation including foreign tax credits, exemption, and treaties; controlled foreign corporations; tax avoidance; and value added taxes. While stressing the law of the United States and the European Union, this course broadly examines the tax law of both developed and emerging economies to gain a better understanding of the impact of taxation internationally.
Effective: Summer 2013

TAX 952 Taxation of Executive Compensation and Benefits (2) This class will focus on the tax and ERISA aspects associated with executive compensation and nonqualified deferred compensation, including a variety of executive perquisites, equity programs and fringe benefits.
Effective: Spring 2014

TAX 960 Employee Benefits Law (2-3) This course introduces students to the law governing employer-provided benefit programs. It will begin with a look at the early development of welfare and pension plans offered through the workplace. The course will examine closely the landmark Employee Retirement Income Security Act of 1974 ("ERISA) and its subsequent amendments. Among topics to be covered will be defined benefit and defined contribution pension programs. This will include a survey of rules relating to pension taxation, vesting, funding, alienability, guaranty, and fiduciary duties. With respect to health insurance, the course will look at issues affecting both employee and retiree health programs, including collectively bargained ones. The course will also discuss the subjects of age discrimination in employee benefit programs as well as ERISA preemption.
Effective: Summer 2011

TAX 980 Partnership Taxation (2) This course examines the income tax consequences of the formation, operation, and liquidation of a partnership, the classification of an entity as a partnership, distributions by a partnership, and sales of partnership interests.
Effective: Fall 2007
Prerequisite:

TAX 988 State and Local Taxation (2) Beginning with historical and constitutional aspects, students will analyze in detail recent developments in state and local taxation and their impact on client representation. Attention will be concentrated on corporate, sales and use and other business taxes, death duties, and property taxes and exemptions.
Effective: Fall 1998

TAX 991 Corporate Tax (3) This course focuses primarily on income tax problems unique to corporations and the income tax problems arising from the shareholder-corporate relationship.
Effective: Fall 2009
Prerequisite:

TAX 992 International Tax (2) This course addresses U.S. taxation of the foreign income and operations of U.S. persons and enterprises.
Effective: Fall 2010
Prerequisite:

TAX 994 Tax Aspects of Mergers and Acquisitions (2) This course approaches corporate tax issues through the prism of the Federal income tax treatment of taxable and tax free mergers and acquisitions (M&A).
Effective: Summer 2008
Prerequisite:

TAX 997 Special Topics (1-9) Special topics in Tax Law field.
Effective: Spring 2008

Last Import from UCM: May 24, 2014 3:00 AM
Theatre (THEA)

THEA 400 Advanced Theatre Projects (1-6 per semester) Individual and group-directed study of in-depth projects involving reading, discussion, performance, and critical analysis by faculty.
Effective: Spring 1991
Prerequisite:

THEA 401Y (IL) Theatre History I: Ancient to 1700 (3) Survey of drama and theatre from primitive rites through the Renaissance.
Effective: Spring 2008
Prerequisite:

THEA 402 Theatre History II: From 1700 to Present (3) Survey of European drama and theatre from the eighteenth century through the modern period.
Effective: Spring 2012
Prerequisite:

THEA 405 (US) Theatre History: American Theatre (3) Survey of American drama and theatre from the colonial period to the present.
Effective: Spring 2008
Prerequisite:

THEA 407 (US) (WMNST 407) Women and Theatre (3) A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background.
Effective: Spring 2008
Prerequisite:

THEA 408 (US) History of American Musical Theatre (3) A survey of the history of American musical theatre presented in a social, cultural, and aesthetic prospective.
Effective: Spring 2008
Prerequisite:

THEA 410 Play Analysis (3) Advanced skills in textual analysis of plays and screenplays.
Effective: Spring 2008
Prerequisite:

THEA 412 (US;IL) (AF AM 412) African American Theatre (3) Exploration of the development of African American theatre from its roots in Africa through the diaspora, to the present time.
Effective: Spring 2013
Prerequisite:

THEA 420 Scene Study I (3 per semester/maximum of 9) Advanced monologue and scene study techniques. Principal focus on realism.
Effective: Spring 2013
Prerequisite:

THEA 423 Musical Theatre Performance III (2) Studio training in the unique performance skills, repertoire and business of professional musical theatre.
Effective: Spring 2006
Prerequisite:

THEA 424 Musical Theatre Performance IV (2) Studio training in the unique performance skills, repertoire and business of professional musical theatre.
Effective: Spring 2006
Prerequisite:

THEA 425A B.F.A. Acting Studio II (2) Scene Study
Effective: Summer 2005
Prerequisite: Concurrent: THEA 425C

Effective: Summer 2005
Prerequisite: Concurrent: THEA 425A

THEA 426 Children’s Theatre (3) Theories and practice of theatre for children.
Effective: Spring 2001
Prerequisite:

THEA 427A B.F.A. Acting Studio III (2) Continuation of THEA 425A
Effective: Summer 2005
Prerequisite: Concurrent: THEA 427C

THEA 427C B.F.A. Voice/Speech Studio III (2) Stage Dialect Studies
Effective: Summer 2005
Prerequisite: Concurrent: THEA 427A

THEA 429 Theatre Performance Practicum (1-3 per semester) Supervised experience in rehearsal and performance of significant roles.

The Pennsylvania State University
THEA 434 Introduction to Directing (3) Introduction to principles and procedures of play direction.
Effective: Fall 1983
Prerequisite:

THEA 436 Directorial Processes (3) Preparing a play for production including the scoring of the script, developing ground plan, casting, and staging projects in American realism.
Effective: Summer 2012
Prerequisite:

THEA 437 Artistic Staff for Production (1-6) To provide students with experience in choreography, dramaturgy, combat, staging, voice/speech, musical direction, assisting in direction, for major productions.
Effective: Spring 1991
Prerequisite:

THEA 440 Principles of Playwriting (3 per semester/maximum of 6) Structure, dramatic effect, characterization, and dialogue; the writing, reading, and criticism of original one-act plays.
Effective: Spring 2013
Prerequisite:

THEA 447 Make-Up Design for Production (1-6) Materials, research, preparation, design, execution of make-up for major University Theatre productions.
Effective: Summer 1989
Prerequisite:

THEA 450 Advanced Topics in Scene Design (3 per semester/maximum of 6) Design emphasis on a variety of production techniques, genre, and styles.
Effective: Spring 2006
Prerequisite:

THEA 451 Drafting, Drawing, and Painting for the Theatre (1) Drafting, freehand drawing including perspective methods and property development, rendering techniques, and painters' elevations.
Effective: Summer 1993
Prerequisite:

THEA 453 Advanced Scene Painting (1 per semester, maximum of 12) Practicum study in painting techniques currently in professional use. Exploration of tools, available paints, and texturing materials.
Effective: Spring 1991
Prerequisite:

THEA 454 Period Research for the Theatre (3) History of decor, styles, and movements in art and architecture.
Effective: Summer 1993
Prerequisite:

THEA 456 Scenic Projects for Production (1 per semester, maximum of 6) Special projects for production; painting, properties, design assistance.
Effective: Summer 1993
Prerequisite:

THEA 457 Scene Design for Production (1 per semester/maximum of 6) Design and execution of production projects.
Effective: Fall 1983
Prerequisite:

THEA 458 Digital Imaging for the Theatre (1) Introduction to imaging software and its application in theatrical design and production.
Effective: Summer 2005
Prerequisite:

THEA 459 Theatre Portfolio & Business Practices (2) Life as a professional theatre designer. Contracts, taxes, record-keeping, resumes, portfolios, interviewing, job hunting, and legal considerations.
Effective: Spring 2006
Prerequisite:

THEA 460 Advanced Topics in Costume Design (3 per semester/maximum of 6) Developing and executing a design concept in a variety of the performing arts.
Effective: Spring 2006
Prerequisite:

THEA 461 Advanced Topics in Costume Construction and Technology (3 per semester/maximum of 6) A specialized course in advanced costume construction techniques and theatrical costume technologies.
Effective: Spring 2006
Prerequisite:

THEA 464 History of Fashion (3) Survey of dress from Egyptian period to contemporary fashion.
Effective: Spring 2008
Prerequisite:

THEA 465 History of Fashion II (3) Survey of dress from 1800 to contemporary fashion.
Effective: Summer 2004
Prerequisite:

THEA 466 Costume Construction for Production (1 per semester/maximum of 6) Execution of production projects in construction and shop management.
Effective: Fall 1983
Prerequisite:

THEA 467 Costume Design for Production (1 per semester/maximum of 6) Design and execution of production design projects.
Effective: Fall 1983
Prerequisite:

THEA 470 Advanced Topics in Lighting Design (3 per semester/maximum of 6) Advanced Topics in Lighting Design will rotate through opera, dance, non-traditional spaces, architecture, advanced technology, and color theory.
Effective: Spring 2006
Prerequisite:

THEA 471 Stage Lighting Design II (3) Advanced training through lectures and laboratory experience with color, shape, and form as it relates to the specifics of illumination.
Effective: Summer 1993
Prerequisite:

THEA 472 Lighting Technology (3) An introduction to the basics of electricity, dimmer protocols, lightboard programming, lighting paperwork, and master electrician & assistant lighting design practices.
Effective: Summer 2005
Prerequisite:

THEA 477 Lighting Design for Production (1 per semester/maximum of 6) Design and execution of design projects.
Effective: Fall 1983
Prerequisite:

Effective: Summer 2005
Prerequisite:

THEA 481 Stage and Production Management (3) Production planning, scheduling, assignment of personnel, rehearsal procedures, and budgeting.
Effective: Fall 1983
Prerequisite:

THEA 482 Technical Production - Rigging (3) In-depth exploration of current rigging techniques used in entertainment.
Effective: Fall 2013

THEA 486 Sound Recording Techniques (3) Multi-track audio recording and post production techniques.
Effective: Spring 2011
Prerequisite:

THEA 485 Sound for Theatre Production (3 per semester/maximum of 6) Aesthetics of live and recorded sound; recording and editing techniques for the stage.
Effective: Fall 2012
Prerequisite:

THEA 487 Technical Projects for Production (1 per semester/maximum of 6) Execution of practical production projects.
Effective: Fall 1983
Prerequisite:

THEA 489 Theatre Production Practicum (1 per semester) Supervised experience in production techniques. For theatre majors only.
Effective: Summer 2012
Prerequisite:

THEA 494H Research Projects - Honors (1-12 per semester/maximum of 12) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Spring 2012

THEA 495 Internship Practicum (1-6 per semester/maximum of 12) Professional field experience in theatre performance, production, and management assignments.
Effective: Fall 1983
Prerequisite:
THEA 496 Independent Studies (1-18) Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Fall 1983

THEA 496H Independent Studies - Honors (1-18) Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Spring 2012

THEA 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Fall 1983

THEA 497A Professional Training Internship (1) Off-site professional training in specific program-related area.
Effective: Summer 2014 Ending: Summer 2014

THEA 497B Advanced Acting Studio for Musical Theatre (3) Acting studio for advanced Musical Theatre students.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014
Prerequisite:
THEA 497C Acting for Camera (3) Camera acting workshop for advanced actors.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

THEA 497F Theatre Workshop (2) Production project.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014
Prerequisite:
THEA 497J Comedy Writing Workshop (3) A writing workshop in the comedy genre.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

THEA 497K Writer's Room (3) Workshop for students writing the script for the School of Theatre/College of Communications sitcom.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

THEA 498 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
Effective: Summer 1994

THEA 499 (IL) Foreign Studies--Theatre Arts (1-12) Courses offered in foreign countries by individual or group instruction.
Effective: Summer 2005
Prerequisite:
THEA 500 Theatre Research: Sources and Procedure (3) Source materials and techniques as applied to theatre research; the form and content of theses and monographs.
Effective: Winter 1978

THEA 502 Creative Collaboration (3) Theory and process of creative collaboration between the theatre artistic and production staffs.
Effective: Summer 1993
Prerequisite:
THEA 505 Masterpieces in Production I (3) Dramatic structure, theatrical validity, production viability of great plays from Greek to eighteenth-century. Drama as blueprint for production.
Effective: Summer 1990

Effective: Fall 2004
Prerequisite:
THEA 507 Masterpieces in Production III (3) Dramatic structure, theatrical validity, production viability of major American plays from Tyler to the present. Drama as blueprint for production.
Effective: Spring 1990

THEA 508 Experiential Analysis of Italian Design Styles (3) Applications of Historical and Cultural Perspectives in Dramatic Production. Offered in Italy.
Effective: Fall 2009

THEA 509 Experiential Analysis of Eastern European Styles (3) Applications of Historical and Cultural Perspectives in
Effective: Spring 2004

THEA 524  **Acting V**  (2) Advanced scene study and class projects; development of individual student repertoires.
Effective: Spring 1996
Prerequisite:

THEA 526  **Acting for the Camera**  (2) Development of techniques and skills necessary for media performance: commercials, soap operas, television drama, etc.
Effective: Spring 1996
Prerequisite:

THEA 529  **Performance Monograph**  (1-2 per semester, maximum of 4) The development and presentation of M.F.A. monographs in acting, design/production, or directing.
Effective: Spring 1996
Prerequisite:

THEA 530  **Rehearsal Methods for the Director**  (3) Theory and practice in approaches, procedures, and techniques in mounting a play.
Effective: Spring 2014
Prerequisite:

THEA 531  **Directorial Styles and Approaches**  (2) Seminar in advanced theory and directorial practice. Designed for the advanced student of directing.
Effective: Fall 1999
Prerequisite:

THEA 532  **Directing Seminar**  (2) Career orientation: resume preparation, interviewing, unions, survey of directorial opportunities, and review of major contemporary directors and practices.
Effective: Fall 1999
Prerequisite:

THEA 537  **Artistic Staff for Performance in Production**  (1 per semester/maximum of 6) Practical experience in choreography, dramaturgy, combat, special staging, voice/speech work, musical direction, or assisting in stage direction for university theatre productions.
Effective: Spring 1990
Prerequisite:

THEA 539  **Projects in Directing**  (1-2) Approved directing projects for the M.F.A. directing student.
Effective: Spring 1990
Prerequisite:

THEA 543  **Projects in Playwriting**  (1-9) Preparation of the script for revision during and following production of the student's original play.
Effective: Fall 1983
Prerequisite:

THEA 550  **Scenic Design III**  (3 per semester/maximum of 9) Advanced design, concentration on conceptualization, visual communication skills, portfolio production.
Effective: Fall 1983
Prerequisite:

THEA 551  **Scenic Design IV**  (1-6) Advanced projects in scenic design.
Effective: Fall 1983
Prerequisite:

THEA 552  **Scene Design III**  (3) Design and project execution of plays and industrial installations.
Effective: Summer 1994
Prerequisite:

THEA 553  **Scene Design IV**  (3) Design of plays for proper theatre and mass media.
Effective: Summer 1994
Prerequisite:

THEA 559  **Portfolio Presentation**  (1 per semester, maximum of 2) Current practice in portfolio development and presentation to client and employer.
Effective: Spring 1994
Prerequisite:

THEA 560  **Costume Design III**  (3 per semester/maximum of 9) Advanced costume design with emphasis on total production concept.
Effective: Fall 1983
Prerequisite:

THEA 562  **Costume Design: Rendering Techniques**  (3) Exploration and development of various rendering techniques
THEA 568A Costume Design for Related Performance Arts (3) Exploration and development of costume design with application to the other arts (opera/dance/film).
Prerequisite: THEA 568A
Effective: Spring 1994

THEA 568B Costume Design: Production Concepts (3) Exploration and development of costume design for specific production concepts.
Prerequisite: THEA 568B
Effective: Spring 1994

THEA 569 Costume Construction: Crafts (3) Exploration and development of various crafts techniques with application to costume construction (i.e. masks, jewelry, armor, millinery, footwear, wigs).
Prerequisite: THEA 569
Effective: Spring 2010

THEA 570 Stage Lighting Design III (3) Advanced techniques in the art of theatrical lighting design.
Effective: Fall 1983
Prerequisite: THEA 570

THEA 571 Stage Lighting Design IV (3) Course addresses individual problems in the stage lighting design process concentrating on the development of skills necessary for processional examination.
Effective: Spring 1994
Prerequisite: THEA 571

THEA 580A Technical Production VII (3) Mechanical design for the theater; calculation for and specification of, DC motors and controls, sprockets, chain drives, gearboxes, gearing, shafts for the movement of scenery.
Effective: Summer 2011

THEA 580B Technical production VIII (3) Planning of the theater shop; emphasis on space design, renovation, upgrade, planning, outfitting, and safety; selection of tools and tool support systems.
Effective: Spring 1994
Prerequisite: THEA 580B

THEA 585 Theatre Planning (3) Processes and problems in planning and designing theatres: performance, audience, and technical requirements.
Effective: Winter 1978

THEA 589 Design/Production Monograph (1-4) The development and presentation of M.F.A. monographs in design/production.
Effective: Summer 1995

THEA 590 Colloquium (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
Effective: Spring 1987

THEA 595 Internship (1-3) Professional field experience in theatre performance, production, and management assignments.
Effective: Spring 1987
Prerequisite: THEA 595

THEA 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Spring 1987

THEA 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.
Effective: Spring 1987

Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014
Prerequisite: THEA 597A

THEA 597B The New York Experience (1) NYC experience of MFA Directing students.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014
Prerequisite: THEA 597B

THEA 600 Thesis Research (1-15) No description.
Effective: Fall 1983
THEA 602 Supervised Experience in College Teaching (1-3 per semester/maximum of 6) Teaching of theatre and film classes under senior faculty supervision.
Effective: Fall 1983

Effective: Fall 1983

THEA 811 International Studio Intensive (1-9) The course enhances the ability of the actor to meet the voice and speech demands for the performance of Shakespeare.
Effective: Fall 2007

THEA 811A International Production Studio Intensive (1 per semester/maximum of 9) Intensive studio application of processes and procedures within specific theatre disciplines as influenced by the work of international professionals.
Effective: Summer 2009
Prerequisite:

THEA 820A Acting I (4) Exercises, monologue, and scene study. Principal focus on realism.
Effective: Spring 2009
Prerequisite:

THEA 820B Movement for Actors I (2) Techniques and skills in physical expression, awareness, control, and stage movement.
Effective: Fall 2007
Prerequisite:

THEA 820C Voice and Speech I (2) Vocal techniques for the actor: articulation, voice control, support, and projection.
Effective: Fall 2007
Prerequisite:

THEA 821A Acting II (3) A continuation of THEA 520A.
Effective: Fall 2007
Prerequisite:

THEA 821B Movement for Actors II (2) A continuation of THEA 520B.
Effective: Fall 2007
Prerequisite:

THEA 821C Voice and Speech II (2) A continuation of THEA 520C.
Effective: Fall 2007
Prerequisite:

THEA 822A Acting III (3) This course will focus on the research and development of skills necessary to perform the plays of Shakespeare and his contemporaries.
Effective: Fall 2007
Prerequisite:

THEA 822B Movement for Actors III (2) Advanced techniques and skills in physical expression.
Effective: Fall 2007
Prerequisite:

THEA 822C Voice and Speech III (2) Advanced voice and speech training for the actor: articulation, resonance, and vocal technique related to verse and heightened language drama.
Effective: Fall 2007
Prerequisite:

THEA 823A Acting IV (3) Students prepare audition material for their New York Showcase for theatrical agents.
Effective: Fall 2007
Prerequisite:

THEA 823B Movement for Actors IV (2) Fundamentals of unarmed and armed stage combat with emphasis on enactment of safe and effective stage fights.
Effective: Fall 2007
Prerequisite:

THEA 823C Voice and Speech IV (2) A study of stage dialects.
Effective: Fall 2007
Prerequisite:

THEA 824 Acting for the Camera (6) This course introduces the actor to the skills necessary for successful performance in television, film, video and commercial venues.
Effective: Summer 2009
Prerequisite:

THEA 825A Acting Professionally/NYC Showcase (3) Development of audition repertoire; study of business topics; development, rehearsal and performance of NYC showcase.
Effective: Spring 2009
Prerequisite:

THEA 825C Professional Repertory Performance (3) Rehearsal and performance of theatre productions at Penn State
THEA 830 Interdisciplinary Theatrical Design Studio (3-6 per semester/maximum of 36) Advanced analysis, graphic, and presentation techniques for evolving and communicating design for the stage.
Effective: Fall 2009

THEA 857 Scenic Design for Production (1 per semester/maximum of 6) Design and execution of production design projects.
Effective: Summer 2010

THEA 861 Costume Design and Construction (1-6 per semester/maximum of 18) Advanced special projects for the graduate designer and costumer.
Effective: Spring 2010
Prerequisite:
THEA 863 Costume Construction: Draping (3) Exploration and development of various draping techniques with application to costume construction.
Effective: Spring 2010

THEA 865 Costume Construction: Period Reconstruction (3) Exploration and development of reproduction techniques relating to period clothing, and their application to costume construction.
Effective: Spring 2010

THEA 866 Costume Construction for Production (1 per semester/maximum of 6) Execution of production in construction and shop management.
Effective: Summer 2010

THEA 867 Costume Design for Production (1 per semester/maximum of 6) Design and execution of production design projects.
Effective: Summer 2010

THEA 877 Lighting Design for Production (1 per semester/maximum of 6) Design and execution of production design projects.
Effective: Spring 2010

THEA 887 Technical Projects for Production (1 per semester/maximum of 6) Execution of assigned technical projects for theatre production.
Effective: Summer 2010
Training and Development (TRDEV)

TRDEV 460 **Foundations in Training and Development** (3) Roles in training and development, relationships between training and development and other organizational structures, and the principles of training design. Effective: Spring 1986

TRDEV 465 **Performance Analysis** (3) This course involves the systematic analysis of employee performance in organizations to identify performance problems, diagnose causes, and specify solutions. Effective: Spring 2005 Ending: Fall 2014

TRDEV 503 **Performance Consulting** (3) Performance consulting strategies and techniques for working with organizations to systematically identify performance problems, diagnose causes, and specify solutions. Effective: Summer 2014

TRDEV 505 **Project Management in Training and Development** (3) Introduces skills for managing complex training and development projects, such as developing timelines, creating budgets, and allocating resources. Effective: Spring 2006

TRDEV 507 **Program Evaluation** (3) Evaluation of educational and other human services programs; preparation and presentation of the evaluation proposal. Effective: Summer 2002

TRDEV 518 **Systematic Instructional Design in Training** (3) Study of theory and practice of systematic instructional design. Application of instructional design principles to training problems in local organizations. Effective: Summer 2002

TRDEV 528 **Instructional Systems Design Applications** (3) Advanced instructional systems design theory, models, strategies, and consulting approaches. Effective: Summer 2014

TRDEV 530 **Multiplatform Delivery Skills** (3) Platform skills for training delivery, including voice, audio-visual aids, and personal presence, in face-to-face and virtual environments. Effective: Summer 2014

TRDEV 531 **Technology in Training** (3) Applications of various new instructional technologies to training problems. Effective: Summer 2002

TRDEV 532 **Web-Based Training** (3) Introduction to the design and development of websites for computer-based instruction in the workplace. Effective: Fall 2001

TRDEV 537 **Technologies in Learning and Development** (3) Design and application of various technologies utilized for instructional and human resource development in corporate and similar settings. Effective: Summer 2014

TRDEV 561 **Facilitation Theories and Practice** (3) Exploration of facilitation theories and their implications for practice. Effective: Summer 2014

TRDEV 563 **Strategic and Critical Human Resource Development** (3) An exploration of contemporary HRD strategies for designing processes and approaches to employee learning and performance that advance organizational goals. Effective: Summer 2014

TRDEV 565 **Implementing Training and Development Programs** (3) The critical analysis of theories, strategies, and techniques for planning and implementing TRDEV programs to enhance employee learning and performance.

The Pennsylvania State University
TRDEV 567 **Instructional Leadership Theories and Development** (3) Explores instructional leadership theory, development strategies and practice, and style, including students' leadership styles and development action planning.

TRDEV 583 **Issues in Training** (3) An issue seminar addressing topics such as an unprepared work force, diversity, recession, and issues generated by the class.

TRDEV 587 **Master's Paper** (1-6) The development of an original master's project (paper, production, or practicum) supervised and judged by an appropriate faculty committee.

TRDEV 588 **Research Designs Applied in Training** (3) Planning experimental, observation, survey and qualitative research designs for training setting needs such as needs assessments and evaluations.

TRDEV 590 **Colloquium** (3) The purpose of this colloquium is to critically explore current theory, research, and best practices in training and development.

TRDEV 595 **Internship** (1-18) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

TRDEV 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

TRDEV 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

TRDEV 597A **Emerging Technologies for Training & Development** (3) This course will focus on emerging technologies and their use/potential use in training and development. Topics will be driven by the 2013/2014 Horizon Reports and the current literature in emerging technologies, potentially including MOOCs, learning analytics, game-based learning, tablet computing, wearable technology, and social media. Integration and application of these technologies in training and development will be explored through weekly projects. Their potential disruption to learning will also be discussed.
**Trans Clinical Medic (TCM)**

TCM 706 **Transition to Clinical Medicine** (2) Introductory course that teaches the basic skills and knowledge a student needs to enter the clinical training years.

Effective: Summer 2007

Prerequisite:

Last Import from UCM: May 24, 2014 3:00 AM
Traveling Schl Prog (C I C)

C I C 597 Special Topics (1-15) Formal courses taken on a special interest subject which will be offered on a C I C institution by C I C traveling scholars; several different topics may be taken each semester.
Effective: Spring 1993
Prerequisite:

C I C 598 Special Topics (1-15) Formal courses taken on a special interest subject which will be offered on a C I C institution by C I C traveling scholars; several different topics may be taken each semester.
Effective: Spring 1993
Prerequisite:

Last Import from UCM: May 24, 2014 3:00 AM
Trial Team (TRTEM)

TRTEM 995A AAJ Trial Team (2) See Handbook for description.
Effective: Spring 2009

TRTEM 995B BLSA Trial Moot Court Team (2) See Handbook for description.
Effective: Spring 2005

TRTEM 995C Gourley Trial Competition Team (2) See Handbook for description.
Effective: Fall 1998

TRTEM 995D National Trial Moot Court Team (2) See Handbook for description.
Effective: Fall 1998

TRTEM 995E Miscellaneous Trial Moot Court Teams (2) See Handbook for description.
Effective: Fall 1998

TRTEM 997 BLSA Mock Trial Team (2) BLSA Mock Trial Team.
Effective: Spring 2011

Last Import from UCM: May 24, 2014 3:00 AM
Turfgrass (TURF)

TURF 425 Turfgrass Cultural Systems (3) A study of turfgrass maintenance practices and how their interrelationships can be utilized to develop management systems.
Effective: Summer 2013
Prerequisite:

TURF 434 Turfgrass Edaphology (3) Characterization of soil physical properties for the establishment and maintenance of sports turf; includes root-zone construction.
Effective: Summer 2013
Prerequisite:

TURF 435 Turfgrass Nutrition (4) Study of turfgrass nutrition and growth; emphasizing constructed and mineral soil fertility, nutrient uptake and function, and fertilizer use efficiency.
Effective: Summer 2013
Prerequisite:

TURF 436W Case Studies in Turfgrass Management (3) Case study and discussion considering integrated management of selected turfgrass sites; emphasis on problem analysis, principle application, and decision making.
Effective: Spring 2014
Prerequisite:

TURF 489 Supervised Experience in College Teaching (1-3) Participate with instructors in teaching and undergraduate turfgrass course. Assist with teaching an evaluation and with development of instructional materials.
Effective: Summer 2013
Prerequisite:

TURF 490 Colloquium (1) Oral presentations developed by students in consultation with the course instructor.
Effective: Summer 2013
Prerequisite:

TURF 495 Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Effective: Summer 2013
Prerequisite:

TURF 496 Independent Studies (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
Effective: Summer 2013

TURF 850 Turfgrass Physiology (3) Lectures, reading assignments, and problems designed to develop student competency in plant physiology as it relates to turfgrass management strategies.
Effective: Summer 2013

TURF 852 Turfgrass Health Management (3) Lectures and exercises designed to develop student competency in solving turfgrass pest problems, as well as disease resistance in turfgrass.
Effective: Summer 2013

TURF 853 (PPATH 853) Interpreting Turfgrass Science Literature (3) Introduction to turfgrass research publications, interpretation of the data, and discussion of the significance of the results.
Effective: Summer 2013
Underser Med&Dom Hlt (UMDH)

UMDH 700 Underserved Medicine and Domestic Health (5) Students will apply critical thinking and clinical reasoning to improve patient outcomes within the framework of underserved medicine.
Effective: Summer 2013
Prerequisite:

Last Import from UCM: May 24, 2014 3:00 AM
Urban & Reg Plan-CI (UR PL)

UR PL 595 Planning Internship (1-6) Internship with a planning agency, under supervision of a graduate faculty member. Effective: Spring 1987
Prerequisite:
UR PL 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses. Effective: Fall 1983

Last Import from UCM: May 24, 2014 3:00 AM
Veterinary Science (V SC)

Effective: Spring 1992 Ending: Summer 2014

V SC 611 Ph.D. Dissertation Part-Time (0) No description.
Effective: Spring 1992 Ending: Summer 2014

Last Import from UCM: May 24, 2014 3:00 AM
Veterinary and Biomedical Sciences (VB SC)

VB SC 402W (ENT 402W) **Biology of Animal Parasites** (3) An introduction to animal parasitology. Emphasis placed on host/parasite interactions, parasites of zoonotic importance, control programs and taxonomy.
Effective: Spring 2010
Prerequisite:

VB SC 403 **Principles of Animal Disease Control** (3) Principles of disease control based on knowledge of the multiple causes of animal disease.
Effective: Spring 2015 Future: Spring 2015
Prerequisite:

VB SC 405 **Laboratory Animal Science** (3) Principles involved in maintaining laboratory animals. Emphasis is on management, preventive medicine, and surgical considerations used in laboratory animal colonies.
Effective: Spring 2009
Prerequisite:

VB SC 407 **Dairy Herd Health Programs** (2) A discussion of health programs for dairy herds to assist in the control of infectious and metabolic diseases of dairy animals.
Effective: Fall 2007
Prerequisite:

VB SC 409 **Wildlife Diseases** (3) An introduction to wildlife diseases emphasizing their impact on wildlife, domestic animals and humans in today’s world.
Effective: Spring 2013
Prerequisite:

VB SC 418 **Bacterial Pathogenesis** (2) Study of molecular interactions between bacterial pathogens and their hosts.
Effective: Fall 2007
Prerequisite:

VB SC 420 **General Animal Pathology** (3) Nature and mechanisms of the disease process including degenerations, growth disturbances, inflammation, host-parasite relationships and neoplasia.
Effective: Fall 2007
Prerequisite:

VB SC 421 (BIOL 421) **Comparative Anatomy of Vertebrates** (4) The comparative anatomy of representative vertebrate animals, discussed from a descriptive and an evolutionary viewpoint.
Effective: Spring 2009
Prerequisite:

VB SC 423W **Pathology of Nutritional and Metabolic Diseases** (3) Overview of nutritional and metabolic diseases of animals integrating concepts from biochemical and physiologic aberrations to clinical applications.
Effective: Spring 2008
Prerequisite:

VB SC 425 (AN SC 425) **Principles of Avian Diseases** (3) Principles of pathogenesis and control of diseases in poultry and other avian populations. Case material used where appropriate.
Effective: Spring 2009
Prerequisite:

VB SC 430 **Principles of Toxicology** (3) Introduction to the biomedical aspects of toxicology with emphasis on the mechanisms and fate of chemical interaction with biological systems.
Effective: Fall 2007
Prerequisite:

VB SC 431 (E R M 431) **Environmental Toxicology** (3) Effects of pollutants on animal health at the chemical, physical, and cellular level.
Effective: Spring 2011
Prerequisite:

VB SC 432 (B M B 432, MICRB 432) **Advanced Immunology: Signaling in the Immune System** (3) The study of signaling pathways that regulate the immune response.
Effective: Fall 2007
Prerequisite:

VB SC 433 (B M B 433) **Molecular and Cellular Toxicology** (3) In-depth coverage of processes by which drugs/chemicals interact with biological systems and the experimental approaches used to study these interactions.
Effective: Fall 2007
Prerequisite:

VB SC 435 (MICRB 435, B M B 435) **Viral Pathogenesis** (2) A study of the molecular, immunological, and pathological aspects of viral diseases as well as laboratory methods of diagnosis.
Effective: Fall 2007
Prerequisite:

VB SC 444 **Epidemiology of Infectious Diseases** (3) An introduction to epidemiology of infectious diseases with emphasis on understanding epidemiologic concepts for identifying, preventing and controlling infectious diseases.
Effective: Fall 2007
Prerequisite:

VB SC 445 Molecular Epidemiology of Infectious Diseases (3) A discussion and practicum of the molecular laboratory techniques used to study molecular epidemiology of infectious diseases.
Effective: Fall 2007
Prerequisite:

VB SC 448W Current Topics in Immunology (3) Study of current approaches and questions driving research in immunology and infectious diseases.
Effective: Fall 2007
Prerequisite:

VB SC 451 Immuno-toxicology of Drugs and Chemicals (3) An in depth discussion of the effect of xenobiotics and drugs on host immune mechanisms.
Effective: Fall 2012
Prerequisite:

VB SC 494H Honors Thesis (1-6 per semester/maximum of 6) Independent study directed by a faculty supervisor that culminates in the production of a Veterinary and Biomedical Sciences honors thesis.
Effective: Summer 2013
Prerequisite:

VB SC 496 Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Fall 2007

VB SC 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
Effective: Fall 2007

VB SC 511 (BMMB 511, IBIOS 511) Molecular Immunology (2) The study of molecular and biochemical events that influence immune responses and define current questions in immunology.
Effective: Spring 2008
Prerequisite:

Effective: Fall 2012
Prerequisite:

VB SC 515 (BMMB 515) Macrophage Biology (2) The role of macrophages at the interface between innate and adaptive immunity.
Effective: Spring 2008
Prerequisite:

VB SC 518 (BMMB 518) T Cell Recognition and Development (2) An in-depth analysis of the mechanisms of T cell recognition, activation and development, and the acquired immune response.
Effective: Spring 2008
Prerequisite:

VB SC 520 Pathobiology (3) The course deals with the mechanism of disease. Topics are: homeostasis, vascular injury, inflammation, neoplasia, genetic disorders, and biochemical toxicology.
Effective: Fall 2009
Prerequisite:

VB SC 530 (IBIOS 530) Regulation of Gene Expression by Xenobiotics (3) The mechanisms by which foreign chemicals alter gene expression and the techniques used to examine this effect are examined.
Effective: Spring 2008
Prerequisite:

VB SC 532 (IBIOS 532) Developmental and Reproductive Toxicology (3) Effects of environmental chemicals, nutrients and drugs on embryo/fetal development and maternal/paternal toxicity.
Effective: Spring 2008
Prerequisite:

VB SC 534 Current Topics in Cancer Research (3) A discussion of current cancer research literature with the focus on primary research literature.
Effective: Summer 2011
Prerequisite:

VB SC 590 Colloquium (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
Effective: Fall 2007

VB SC 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
VB SC 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester. Effective: Fall 2008

VB SC 601 **Ph.D. Dissertation Full-Time** (0) No description. Effective: Fall 2007

VB SC 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Experience in preparing and conducting lectures/laboratories and assembling materials for laboratories. Effective: Fall 2007

VB SC 611 **Ph.D. Dissertation Part-Time** (0) No description. Effective: Fall 2014 Future: Fall 2014
Wildlife and Fisheries Science (W F S)

W F S 406 Ornithology Laboratory (1) Laboratory and field identification of Pennsylvania birds, avian ecology and behavior, field survey techniques.
Effective: Summer 2013 Ending: Summer 2014
Prerequisite:

W F S 406 Ornithology Laboratory (2) Laboratory and field identification of Pennsylvania birds, avian ecology and behavior, field survey techniques.
Effective: Fall 2014 Future: Fall 2014
Prerequisite:

W F S 407 Ornithology (3) Introduction to the biology, ecology, adaptations, and conservation of birds.
Effective: Summer 2013
Prerequisite:

W F S 408 Mammalogy (3) Identification, systematics, characteristics, adaptations, ecology, behavior, natural history and conservation, and socio-economic aspects of mammals.
Effective: Summer 2013
Prerequisite:

W F S 409 Mammalogy Laboratory (1) Laboratory and field identification of mammals, ecology and behavior of mammals, field survey techniques.
Effective: Summer 2013 Ending: Summer 2014
Prerequisite:

W F S 409 Mammalogy Laboratory (2) Laboratory and field identification of mammals, ecology and behavior of mammals, field survey techniques.
Effective: Fall 2014 Future: Fall 2014
Prerequisite:

W F S 410 General Fishery Science (3) Introduction to the study, management, and uses of fish populations; methods of investigation, culture, and harvest of fishes.
Effective: Summer 2013
Prerequisite:

W F S 422 Ecology of Fishes (3) Role of fishes in aquatic communities and general ecosystems. Environmental factors influencing fish as individuals, populations, and communities.
Effective: Summer 2013
Prerequisite:

W F S 430 (FOR 430) Conservation Biology (3) The application of biological principles to issues in the conservation of biodiversity.
Effective: Summer 2013
Prerequisite:

W F S 435 (E R M 435) Limnology (3) Biogeochemistry and natural history of freshwater ecosystems.
Effective: Summer 2013
Prerequisite:

W F S 436 (E R M 436) Limnological Methods (3) Application of current methodologies to evaluate the biological, chemical, and physical characteristics of aquatic ecosystems.
Effective: Summer 2013
Prerequisite:

W F S 440 Natural Resources Public Relations (3) The course prepares students to integrate public relations concepts with principles of natural resources management at the community level.
Effective: Summer 2013
Prerequisite:

Effective: Summer 2013
Prerequisite:

W F S 447W Wildlife Management (3) Management of renewable wildlife resources by applying ecological concepts, habitat evaluation, and decision-making; writing and editing reports are emphasized.
Effective: Summer 2013
Prerequisite:

W F S 450 (E R M 450) Wetland Conservation (3) Wetland types, classification, functions and values; hydrology, soils, and plants; introduction to wetland identification and delineation; wetland regulations.
Effective: Summer 2013
Prerequisite:

W F S 452 Ichthyology (2) Study of the structure, taxonomy, systematics, and natural history of freshwater and marine fishes.
Effective: Summer 2013

The Pennsylvania State University
Prerequisite:

W F S 453 **Ichthyology Laboratory** (2) Identification of fishes, major fish families, use of keys.
Effective: Summer 2013
Prerequisite:

W F S 454 **Field Ichthyology** (2) Introduction to collection and field identification of the fishes of Pennsylvania.
Effective: Summer 2013
Prerequisite:

W F S 460 **Wildlife Behavior** (3) Scholarly discussion and critique of history, concepts, and application of wildlife behavioral concepts to conservation issues.
Effective: Summer 2013
Prerequisite:

W F S 462 **Amphibians and Reptiles** (3) Critique of global evolution and conservation of amphibians and reptiles, focusing on Northeastern U.S. natural history and ecology.
Effective: Summer 2013
Prerequisite:

W F S 463 **Fishery Management** (3) Management of sport and commercial fisheries, including biological, political, social, and economic factors; regulations and other management techniques.
Effective: Summer 2013
Prerequisite:

W F S 495 **Wildlife/Fisheries Internship** (1-6) Supervised field experience related to the student's major.
Effective: Summer 2013
Prerequisite:

W F S 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 2013

W F S 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Summer 2013

W F S 497A **Animal Welfare** (3) Understanding animal welfare and promoting animal well-being in farmed, wild and captive animals, and implications for policy, legislation and conservation.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014
Prerequisite:

W F S 499 (IL) **Foreign Studies** (1-12 per semester/maximum of 12) Courses offered in foreign countries by individual or group instruction.
Effective: Summer 2013

W F S 500 **Professionalism in Natural Resources** (3) Scholarly discussion and critique of skills important to professionalism of students in natural resources, wood products, and related science-based disciplines.
Effective: Summer 2013
Prerequisite:

W F S 525 **Communications in Natural Resources** (3) Communications of research results through manuscripts for peer reviewed journals, presentations at professional meetings, and articles for the general public.
Effective: Summer 2013
Prerequisite:

W F S 530 **Conservation Ecology** (3) Discussion of the application of ecological principles to conservation and management of biological diversity, landscapes, and ecosystems.
Effective: Spring 2005
Prerequisite:

W F S 536 **Freshwater Field Ecology** (3) Organisms and physical/chemical factors that affect them in the aquatic environment; basic water chemistry; identification of aquatic organisms.
Effective: Summer 2013
Prerequisite:

W F S 542 **Systematics** (3) Principles and methods of classification, phylogeny, and speciation; taxonomic techniques; analysis of species; causal interpretation of animal diversity.
Effective: Summer 2013

W F S 551 **Wildlife Biometrics and Population Analysis** (3) Application of biometrics and mathematics to concepts and problems in wildlife ecology with emphasis on population analysis.
Effective: Summer 2013
Prerequisite:

W F S 552 **Systematics and Evolution of Fishes** (3) Detailed study of the systematics, evolution, identification, and natural history of fishes.
Effective: Summer 2013
Prerequisite:

W F S 560 **Population Estimation and Modeling** (4) Application of statistical models to estimating population parameters to test ecological theories.
Effective: Summer 2013
Prerequisite:

W F S 590 (FOR 590) **Colloquium** (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
Effective: Summer 2013

W F S 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Spring 1989

W F S 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.
Effective: Summer 2013

W F S 597B **Design of Ecological Field Studies** (2) Application of the scientific method and general principles of designing ecological field studies through discussion and critique of the primary literature.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014
Prerequisite:

W F S 597G (SOILS 597G, FOR 597G) **Research Integrity and Research Communications** (1) Instruction and practice in developing presentation skills for professional meetings. Includes SARI (Scholarship and Research Integrity) training, and introduction to related online courses offered through the Collaborative Institutional Training Initiative (CITI) program.

Effective: Summer 2013

W F S 601 **Ph.D. Dissertation Full-Time** (0) No description.
Effective: Summer 2013

W F S 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Provides an opportunity for supervised and graded teaching experience in wildlife courses.
Effective: Summer 2013

W F S 610 **Thesis Research Off Campus** (1-15) No description.
Effective: Summer 2013

W F S 611 **Ph.D. Dissertation Part-Time** (0) No Description.
Effective: Summer 2013

Last Import from UCM: May 24, 2014 3:00 AM
Women's Studies (WMNST)

WMNST 400 (US;IL) Debates in Contemporary Feminism (3) Consideration of feminist theories of women's experience in transforming understanding, reconceptualizing old problems, raising new ones, and expanding traditional disciplines. Effective: Spring 2013
Prerequisite:

WMNST 401 Doing Feminism: Theory and Practice (3) Advanced analysis of feminist theory and the nature of its integration (sometimes uneasily) within feminist movements and practices. Effective: Spring 2013
Prerequisite:

WMNST 407 (US) (THEA 407) Women and Theatre (3) A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background. Effective: Summer 2005
Prerequisite:

WMNST 416 (US;IL) (AF AM 416, S T S 416) Race, Gender and Science (3) The class will focus on race and gender as products of science, and how societal values shape scientific activity. Effective: Spring 2013
Prerequisite:

WMNST 420 (US;IL) (CED 420, R SOC 420) Women in Developing Countries (3) Analysis of women's work, experiences, and development policies and practices in Africa, Asia, and Latin America. Effective: Fall 2009 Ending: Summer 2014

WMNST 420 (US;IL) (CED 420) Women in Developing Countries (3) Analysis of women's work, experiences, and development policies and practices in Africa, Asia, and Latin America. Effective: Fall 2014 Future: Fall 2014

WMNST 421 (IL) (HIST 421) The History of European Women (3) European women's lives from the Middle Ages to the present. Effective: Spring 2013
Prerequisite:

Prerequisite:

WMNST 424 (US) (KINES 424) Women and Sport (3) An interdisciplinary approach to contemporary issues related to women and sport from historical, physiological, psychological, and sociological perspectives. Effective: Spring 2013
Prerequisite:

WMNST 426Y (US;IL) (GEOG 426Y) Gender Geographies (3) Description and explanation of the links between gender relations and spatial structures; gender and work, social services, and neighborhood activism. Effective: Fall 2013
Prerequisite:

WMNST 428 (US;IL) (PL SC 428) Gender and Politics (3) Gender in politics in the United States and around the world; major areas of women and politics research. Effective: Fall 2007
Prerequisite:

Prerequisite:

WMNST 438 (PHIL 438) Feminist Philosophy (3) Examines the central currents of feminist philosophy, selected problems and concepts regarding difference, gender and sex, identity, and political culture. Effective: Fall 2007
Prerequisite:

WMNST 452 (US) (NURS 452, BB H 452) Women's Health Issues (3) Exploration of major health issues concerning women today, with an emphasis on social, cultural, and medical influences. Effective: Fall 2013
Prerequisite:

WMNST 453 (US) (CRIMJ 453, CRIM 453) Women and the Criminal Justice System (3) This course focuses on the
experiences of women as offenders, victims, and professionals in the criminal justice system.
Effective: Spring 2013
Prerequisite:

WMNST 455 (US) (CAS 455) Gender Roles in Communication (3) Explores the literature on gender research in the discipline of human communication.
Effective: Summer 2005
Prerequisite:

WMNST 456 (SOC 456) Gender, Occupations, and Professions (3) The role of gender in shaping contemporary North American patterns of employment, occupational roles, and statuses.
Effective: Spring 2013
Prerequisite:

WMNST 457 (US;IL) (HIST 457, S T S 457) The History of Women in Science (3) Critical analysis of the roles women, gender, and minorities have played in the natural sciences.
Effective: Spring 2013
Prerequisite:

WMNST 458 (GS) (BB H 458) Critical Issues in Reproduction (3) Examination and analysis of the new reproductive technologies from the standpoint of medical ethics, feminism, and sociocultural influences.
Effective: Spring 2013
Prerequisite:

WMNST 462 (US) (ENGL 462) Reading Black, Reading Feminist (3) Female identity and its construction in textual representations of gender, class, color, and cultural difference in English-language literatures.
Effective: Summer 2005
Prerequisite:

WMNST 464 (US) (BE SC 464) Feminine/Masculine (3) Study of sex role learning; investigating feminine/masculine labeling; implications for contemporary society.
Effective: Spring 2008
Prerequisite:

WMNST 466 (US;IL) (HIST 466) Lesbian and Gay History (3) Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities.
Effective: Spring 2013
Prerequisite:

Effective: Spring 2007
Prerequisite:

WMNST 472 (LER 472) Work-Life Practices and Policies (3) Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved.
Effective: Spring 2008
Prerequisite:

WMNST 489 (ENGL 489) British Women Writers (3) A study of selected British women writers.
Effective: Spring 2008
Prerequisite:

WMNST 490 (US;IL) (ENGL 490) Women Writers and Their Worlds (3) American and British literature written from the perspective of women.
Effective: Summer 2005
Prerequisite:

WMNST 491 (AM ST 476, ENGL 492) American Women Writers (3) A study of selected American women writers.
Effective: Spring 2008
Prerequisite:

WMNST 492W Current Feminist Issues (3) Critical analysis of major contemporary feminist research and writing in the arts, humanities, social and natural sciences.
Effective: Spring 2002
Prerequisite:

WMNST 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Summer 1994

WMNST 494H Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.
Effective: Fall 2007

WMNST 495 Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Effective: Spring 1998
Prerequisite:
WMNST 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside scope of formal courses. 
Effective: Fall 1983

WMNST 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest. 
Effective: Summer 1984

WMNST 497A (HIST 497C, J ST 497A) **Gender and Autobiography in Modern Jewish History** (3) In this course we will read autobiographies critically and carefully in examining the tremendous changes wrought by modernity in the Jewish community. 
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

WMNST 499 (IL) **Foreign Studies** (1-12) Courses offered in foreign countries by individual or group instruction. 
Effective: Summer 2005

WMNST 501 **Feminist Perspectives on Research and Teaching Across the Disciplines** (3) Feminist approaches to methodological issues in research and teaching in the social sciences, humanities, and natural sciences. 
Effective: Spring 2002

WMNST 502 **Global Perspectives on Feminism** (3) Exploration of feminist issues in a global perspective, including debates in history, ethics, and political feminism. 
Effective: Fall 2001

WMNST 507 **Feminist Theory** (3) Development of feminist theory and its relationship to history in terms of critique of family, sexuality, and gender stratification. 
Effective: Spring 2002

WMNST 516 (HIST 516) **US Women's and Gender History** (3) A critical analysis of gender and theories of gender in selected American historical contexts. 
Effective: Fall 2012

WMNST 520 **Gender and Nationalism** (3) Impact of Western nationalism and colonialism on the organization of gender roles from the 18th century to the present. 
Effective: Fall 2001

WMNST 536 **Gender and Science** (3) Studies the foundations of feminist science studies as applied to biocultural practices of gender, biology, and reproductive technologies. 
Effective: Fall 2013

WMNST 537 (AFR 537) **Gender, Sexuality and Islam in Africa: Exploring Contemporary Feminist Scholarship** (3) A course about discourses of sexuality and gender in studies of Islam in Africa, with South Africa as a case study. 
Effective: Spring 2013

WMNST 538 (PHIL 538) **Feminist Philosophy Seminar** (3) Critically examines feminist approaches to ethics, epistemology, philosophy of science, metaphysics, social/political philosophy, and the history of philosophy. 
Effective: Summer 2005

WMNST 541 (ADTED 541) **Women and Minorities in Adult Education** (3) Seminar on women and minority adults as learners and leaders in various contexts of adult education. 
Effective: Spring 1998
Prerequisite:

WMNST 542 (C I 542) **Girls' Cultures and Popular Cultures** (3) This seminar explores educational implications in popular texts created for and by girls across time and cultures. 
Effective: Summer 2014

WMNST 594 **Research Topics** (1-15) Supervised student activities on research projects identified on an individual or small-group basis. 
Effective: Spring 1998

WMNST 595 **Internship** (1-18) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. 
Effective: Spring 1998

The Pennsylvania State University
WMNST 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 1987

WMNST 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.
Effective: Spring 1992

WMNST 597A Gender and the Body (3) The primary goal of this course is to provide students with an overview of the field of feminist body studies.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

WMNST 597B (A ED 597B) Including Difference (3) Including Difference invites a dynamic exchange regarding a broad spectrum of learners, designed to counteract marginalization, exclusion, and circumscribed opportunities.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

WMNST 597C (HRER 597B) Work-Life Practices and Policies (3) Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved.
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

WMNST 602 Supervised Experience in College Teaching (1-3 per semester, maximum of 6) Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.
Effective: Fall 1996
Wood Products (W P)

W P 412 Wood in Structures (3) Behavior and design of solid, laminated, and plywood wood beams, trusses, columns, and foundations. Wood construction details.
Effective: Summer 2013
Prerequisite:

W P 416 Wood Industries Management Development (3) Managerial concepts and issues important to forest products organizations will help prepare students to assume management-level positions.
Effective: Summer 2013
Prerequisite:

W P 417 Wood Products Manufacturing Systems and Processes (4) Description of systems and processes used in the manufacture of wood products.
Effective: Summer 2013
Prerequisite:

W P 418 Chemical Processing of Wood (4) Principles and practices of basic operations in converting wood and wood waste into useful chemicals and modified cellulose products.
Effective: Summer 2013
Prerequisite:

W P 438 Business Concepts for Wood Manufacturing (4) The course will cover manufacturing strategies and related financial measures in a wood production environment.
Effective: Summer 2013
Prerequisite:

W P 460 Wood Products Industrial Environmental Control (3) Wood products industrial environmental control technologies and strategies for pollution abatement.
Effective: Summer 2013
Prerequisite:

W P 495 Wood Products Internship (1-6) Supervised field experience related to the student's major.
Effective: Summer 2013
Prerequisite:

W P 496 Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 2013

W P 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Summer 2013

W P 499 (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.
Effective: Summer 2013

W P 511 Physical Properties of Wood and Fibers (3) Theories of moisture, diffusion, permeability, and heat transport; ultrastructure and thermal properties of wood and fibers.
Effective: Summer 2013
Prerequisite:

W P 513 Wood Chemistry (3) Treatment of the chemical components of wood, their distribution and reactions.
Effective: Spring 2014

W P 515 Wood Composite Processing Parameters (3) Wood composite manufacture in theory and practice including various synthesis parameters in relation to physical and mechanical properties.
Effective: Summer 2013
Prerequisite:

W P 530 Case Studies in Forest Products (3) Manufacturing, marketing, and management issue analysis from a global perspective in the forest products industries.
Effective: Summer 2013

W P 531 Mechanical Behavior of Wood (3) Time-dependent properties, theory of failure, rheologic properties, and theory of the mechanical behavior of wood and structural composites.
Effective: Summer 2013

W P 532 Theory of Adhesion (3) Theory of adhesion as it pertains to bonding of wood, paper-based laminates, fibers, and bonding of wood to dissimilar materials.
Effective: Summer 2013
W P 537 **International Wood Products Marketing and Trade** (3) Strategic analysis, environmental scanning, international trade policy implications, determinants of competitive strategy for firms, industries, and nations. Effective: Summer 2013

Prerequisite:

W P 560 **Wood Products Industrial Environmental Control** (3) Legislation, impacts, and management of air, water, and solid waste pollution in the wood products industry. Effective: Summer 2013

Prerequisite:

W P 590 **Colloquium** (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers. Effective: Spring 1993

W P 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses. Effective: Summer 2013

W P 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term. Effective: Summer 2013

W P 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Provides an opportunity for supervised and graded teaching experience in forest products courses. Effective: Summer 2013

Last Import from UCM: May 24, 2014 3:00 AM
Workforce Education and Development (WF ED)

WF ED 402 Supervision of Vocational Education (3) For administrators, supervisors, and teachers responsible for improvement of instruction through supervision or for students preparing for supervisory work.
Effective: Fall 2001

WF ED 405 (ENGR 405) Project Management for Professionals (3) Covers the essential concepts and skills needed to make effective contributions on projects, on time and within budget.
Effective: Spring 2014
Prerequisite:

WF ED 410 Leadership Competencies for Professionals (3) Designed to teach contemporary professional leadership competencies for workforce professionals who do not currently have supervisory responsibilities.
Effective: Summer 2011
Prerequisite:

WF ED 411 Occupational Safety and Health for Workforce Education and Development Professionals (3) This course assists participants in creating and supporting workplaces and educational environments free of occupational safety and health hazards.
Effective: Spring 2014
Prerequisite:

WF ED 413 Vocational Education for Special-Needs Learners (3) Introduction to program modifications, supplementary services, and resources required for special-needs learners in vocational and practical arts education programs.
Effective: Fall 2001

WF ED 424 (CN ED 424) Facilitating Career Development (3) This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work.
Effective: Summer 2012
Prerequisite:

WF ED 441 Conceptual and Legal Bases for Cooperative Vocational Education (2) History, conceptual and legal bases for a cooperative vocational education program.
Effective: Summer 1996
Prerequisite:

WF ED 442 Operating Cooperative Vocational Education Programs (2) Student and training station selection, training plan and related subject development, records and reporting systems, school-industry coordination.
Effective: Summer 1996
Prerequisite:

WF ED 445 Vocational Guidance (3) Problems and possibilities of vocational guidance; the field of guidance and guidance literature; methods of field work; school guidance techniques.
Effective: Summer 1996
Prerequisite:

WF ED 450 (US:IL) Cultural Diversity in the Workplace (3) Provides opportunities for students to explore different cultures and mores that are changing the dynamics of the workplace.
Effective: Fall 2006

WF ED 451 Lean-Sigma for Professionals (3) The course focuses on essential lean and six sigma concepts to improve processes in any industry.
Effective: Summer 2013
Prerequisite:

WF ED 471 Training in Industry and Business (3) Appraisal of training functions and development of competencies in work analysis, design, development, delivery, and evaluation of training.
Effective: Spring 2001
Prerequisite:

WF ED 495 Internship (1-6) Supervised off-campus, nongroup instruction including field experiences, practicums, or internships. Written and oral critique of activity required.
Effective: Summer 1996
Prerequisite:

WF ED 495A Cooperative Education Practicum (2) Validation of competencies learned in prerequisite courses during interaction with professional staff while functioning under the supervision of a certified cooperative coordinator.
Effective: Summer 1996
Prerequisite:

WF ED 495C Student Teaching (10) Supervised observation and practice teaching in approved vocational industrial schools/health occupations education settings.
Effective: Spring 1997
Prerequisite:
WF ED 495D **Instructional Internship in Industrial Training** (5) Supervised internship in industrial training. Interns will be expected to perform instructional duties in industrial environments.
Effective: Summer 1996
Prerequisite:

WF ED 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 1996

WF ED 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Summer 1996

WF ED 498 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Effective: Summer 1996

WF ED 508 **Workforce Education Management** (3) Introduction to theories and concepts of managing workforce education programs in the public and private sector.
Effective: Summer 1996

WF ED 518 **Curriculum and Instructional Leadership for Workforce Education** (3) Study of topics related to curriculum and instructional leadership in workforce education in the public and private sectors.
Effective: Summer 1996
Prerequisite:

WF ED 528 **Fiscal and Facilities Management for Vocational Administrators** (3) Sources of revenue, budget preparation, purchasing, and the management of physical facilities in vocational education.
Effective: Summer 1996
Prerequisite:

WF ED 529 **Ethical Issues in Workforce Education and Development** (3) A study of ethical issues in workforce education environments in industry and education.
Effective: Summer 2014

WF ED 538 **Administering Personnel Services in Vocational Education** (3) Planning and implementing staff development activities, student guidance services, admissions, student organizations, and placement.
Effective: Summer 1996
Prerequisite:

WF ED 540 **Data Analysis in Workforce Education and Development** (3) Provides opportunities to acquire and practice skills in descriptive and inferential statistics.
Effective: Spring 1996

WF ED 542 **Social and Economic Foundations of Workforce Education and Development** (3) Review of labor force, demographic and economic concepts, measures, and models.
Effective: Summer 1996

WF ED 543 **Evaluation of Investments in Workforce Education and Development** (3) Use of labor supply models to evaluate investments in workforce education and development.
Effective: Spring 2011

WF ED 544 **Analysis of Policies for Workforce Education and Development** (3) Explores models and methods for analyzing policies for workforce education.
Effective: Summer 1996
Prerequisite:

WF ED 545 **Economic and Demographic Modeling of Policies for Workforce Education and Development** (3) Use of economic and demographic models to plan and evaluate workforce education and development.
Effective: Summer 1996
Prerequisite:

WF ED 546 **Work Based Education** (3) Discussion of legislation and educational requirements for education based at the worksite including cooperative education, youth apprenticeship, and apprenticeship programs.
Effective: Summer 1996
Prerequisite:

WF ED 550 **Research in Workforce Education** (3) Research techniques in workforce education.
Effective: Summer 1996

WF ED 560 **Historical and Philosophical Foundations of Workforce Education** (3) An investigation of historical, philosophical, and professional foundations of workforce education.
WF ED 572 Organization Development For Industrial Trainers (3) An introduction to major concepts, skills and techniques required by industrial trainers to support and facilitate organization change.
Effective: Summer 1996
Prerequisite:

WF ED 573 Needs Assessment for Industrial Trainers (3) Acquire skills to identify training and development needs, distinguish problems with management versus training solutions, develop and evaluate training solutions.
Effective: Fall 2001

WF ED 574 Strategic Planning For Education For Work (3) Study of human capital as a component of education, industrial and business training strategic planning at economy, and organizational levels.
Effective: Summer 1996
Prerequisite:

Effective: Summer 1996
Prerequisite:

WF ED 578 Process Consultation in Organization Development (3) This course provides a foundation in process consultation. Process refers to how groups interact and how people get along.
Effective: Summer 2013

WF ED 582 Assessing Data: Organizational Diagnosis (3) This course familiarizes students with approaches to assessing and feeding back data in organization development (OD) and consulting services.
Effective: Summer 2013

WF ED 585 Appraising Organization Change and Development and Consulting (3) This course familiarizes students with approaches to evaluating organization development (OD) and consulting services.
Effective: Summer 2013

WF ED 588 Platform Skills for Human Resource Development Professionals (3) Platform skills focuses on theory and practice related to delivering well-crafted and effective training presentations.
Effective: Spring 2013

WF ED 590 Industrial Training Professional Seminars (1) Study of special topics relating to problems, practices, methodologies and special competency needs in industrial training.
Effective: Fall 2001

WF ED 595A Field Based Project in Industrial Training (2-5) Students identify a training and/or organization development problem in industry and/or business and carry out contract problem analysis and resolutions.
Effective: Fall 2001

WF ED 595B Workforce Education Administrative Internship (2-15) Supervised study with an administrator or researcher at a cooperating school, state governmental agency, or research institution.
Effective: Summer 1996

WF ED 595C Internship in Cooperative Vocational Education (1-10) Validation of teaching and co-op coordinator competencies learned in prerequisite courses during interaction with professional staff while functioning under the supervision of a certified cooperative coordinator.
Effective: Fall 1997
Prerequisite:

WF ED 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Effective: Summer 1996

WF ED 597 Special Topics (1-9) Formal courses given on a topic or special interest subject which may be offered infrequently.
Effective: Summer 1996

WF ED 597A Diffusion of Innovations (3) Diffusion of Innovations in Workforce Education and Development focuses on research and practice about getting new ideas adopted. Although this course is offered through the Workforce Education and Development program in Penn State's College of Education, the course is designed for graduate students from any discipline who are interested in managing change.
Effective: Summer 2014 Ending: Summer 2014
The purposes of Scholarly Inquiry in Workforce Education & Development (WF ED) are to help WF ED doctoral students: (a) initiate their programs of studies for doctoral degrees; (b) develop a working knowledge of the structure and processes of earning doctoral degrees at Penn State, in Penn State's College of Education, in the College's Department of Learning and Performance Systems, and in the Department's WF ED academic program; and (c) complete some of the requirements specified by the WF ED graduate faculty for the WF ED Doctoral Candidacy Examination, which is documented in an information packet that was prepared by the Professor-in-Charge of WF ED and is distributed when Scholarly Inquiry commences.

Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

WF ED 598 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Effective: Fall 2001

WF ED 600 Thesis Research (1-15) No description.
Effective: Summer 1996

WF ED 601 Ph.D. Dissertation Full-Time (0) No description.
Effective: Summer 1996

WF ED 602 Supervised Experience in College Teaching (1-3 per semester/maximum of 6) An opportunity for graduate students to teach a college level course under the supervision of an experience professor.
Effective: Summer 1996

Effective: Summer 1996

WF ED 611 Ph.D. Dissertation Part-Time (0) No description.
Effective: Summer 1996

WF ED 806 Program and Facilities Management for Career and Technical Educators (3) This course examines advanced learning laboratory organization and management processes to facilitate learning and skill development in a safe environment.
Effective: Spring 2014
Prerequisite:
WF ED 877 Training-Group Seminar (1) This course familiarizes students with self as an instrument of change and sensitizes individuals to their role in group dynamics.
Effective: Summer 2014

WF ED 880 Facilitating Groups and Teams (3) This course provides students with necessary skills to facilitate small groups and teams.
Effective: Summer 2013

WF ED 881 Marketing Organization Development (3) This course familiarizes students with the unique issues in marketing organization development (OD) and OD consulting services.
Effective: Summer 2013

WF ED 883 Organization Change and Development Interventions (3) This course focuses on organization change and development interventions, where an intervention means a change effort.
Effective: Summer 2013

WF ED 884 Appreciative Inquiry (3) This course provides a foundation in the theories, principles and techniques of Appreciative Inquiry (AI).
Effective: Summer 2013

WF ED 886 Laboratory in Organization Change and Development (3) Students will work in teams to carry out an OD intervention in a field setting.
Effective: Summer 2013

Long Course Descriptions

Accounting (ACCTG)

ACCTG 403 Auditing (3) Financial compliance, internal, and operational audits; standards and procedures; sampling; EDP auditing; professional issues; application of concepts through written responses.

ACCTG 403 Auditing (3)
Financial statement, regulatory and contract compliance, internal and operational audits, professional standards and ethical conduct; statistical and judgmental sampling; the audit-impact of information technology; audit risk and internal control structure evaluation; application of procedures in transaction cycles; audit reporting; professional issues.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACCTG 403W Auditing (3) Financial, compliance, internal, and operational audits; standards and procedures; sampling; EDP auditing; professional issues; application of concepts through written responses.

ACCTG 403W Auditing (3)
Financial statement, regulatory and contract compliance, internal and operational audits, professional standards and ethical conduct; statistical and judgmental sampling; the audit-impact of information technology; audit risk and internal control structure evaluation; application of procedures in transaction cycles; audit reporting; professional issues.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACCTG 404 Managerial Accounting: Economic Perspective (3) Accounting techniques as planning, control, and motivating devices in business and other organizations; accounting data for decision making and performance evaluation.

ACCTG 404 Managerial Accounting (3)
This course emphasizes the use of accounting information for internal purposes as opposed to the external disclosure focus of the financial accounting course. The cost covers the vocabulary and mechanics of cost accounting and the design of management accounting systems for planning and controlling operations, and for motivating personnel. The course integrates accounting with ideas from data analysis, decision analysis, finance, microeconomics, and operations management. The themes stressed throughout the course will be the notion that information is costly; the circumstances that necessitate cost allocation, the idea that different costs and different allocation schemes apply for different purposes; and fundamentals of incentive and compensation plans. Among the topics covered are cost behavior, cost-volume analysis, relevant costs, and the use of cost information for decision making. The course will rely on lectures and discussion of case studies.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACCTG 405 Principles of Taxation I (3) Elements of tax policy and tax-planning concepts for personal and business decision making; with emphasis on taxation of individuals.

ACCTG 405 Principles of Taxation (3)
Introduction to Taxation, is the first course that undergraduate accounting majors take that is devoted entirely to
taxation. Although the course is intended for accounting majors, the content is relevant to finance majors seeking elective courses. The objective of the course is to provide students with a basic understanding of the concepts, terminology, and decision-making skills specific to the discipline of taxation that are germane to the professional development of those preparing for a career in accounting. Although the course surveys the many forms of taxation that are found in industrialized societies, and the comparisons thereof, the main focus is on the federal income taxation of individuals. However, coverage is provided regarding the manner in which the taxation of individuals relates to corporate and partnership entities. ACCTG 405 is related to other accounting courses through its coverage of income concepts, and micro-economic principles. The former compares differences in the measurement of financial accounting income with the manner in which income is determined according to the tax laws. The latter emphasizes business decision-making principles that are important in the managerial portion of the accounting program. The course covers topics that illustrate fundamental tax strategies and how such enable taxpayers to achieve business and personal economic objectives. The assessment process in ACCTG 405 incorporates examinations, homework assignments, and individual and group projects. The exams are combinations of objective questions and open-ended problems. Exams are often given in the evening. Course learning aids include a text book, on-line tax research services, spreadsheet software, and a packet of handouts prepared by instructors to keep the classes updated on the many changes in the tax laws that occur each year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACCTG 406 Principles of Taxation II (3) Impact of federal tax structure on business decisions, research methodology, tax planning; ethical considerations of tax practice.

Principles of Taxation II (3)

ACCTG 422 Accounting Systems (3) Understanding flow and documentation of accounting information and internal controls in the context of accounting cycles.

ACCTG 422 Accounting Systems (3)

This course primarily investigates accounting transactions cycles-processes and procedures by which an organization's financial information is recorded, processed, reported, and disposed of. The processes covered in this course range from manual to fully automated and Web-enabled systems. The documentation and analysis of the accounting cycles for the revenue, expenditure, conversion, and managerial reporting areas are explored via flowcharts and narrative descriptions. The concepts of files, transaction updates, editing, and reporting in the automated accounting systems are explored. The course also covers internal controls in the manual and automated systems. Additional topics may include fraud examination, applicable laws and regulations, and computerized auditing.
ACCTG 426 Financial Statement Analysis (3) The exploration of conventional and advanced methods of analyzing financial statements, including the assessment of earnings quality.

The objective of this course is to explore conventional and advanced analytical methods of analyzing financial statements. Expanding on the material covered in the principles of accounting and principles of finance courses and using actual financial statements, students:

- review and apply the traditional methods for analyzing financial statements, such as ratio analysis, trend analysis, and common-size analysis,
- apply advanced tools for analyzing financial statements, such as financial distress prediction models and earning manipulation prediction models, and
- evaluate accounting policies and disclosures and their impact on the financial statements through the assessment of earnings quality.

ACCTG 431 Advanced Auditing (3) Examination of legal liability, EDP, statistical sampling, SEC reporting, internal control, and financial reporting in specialized industries.

ACCTG 432 Accounting Information Systems (3) Systems analysis tools and techniques; internal control concepts; development of computer control procedures.

ACCTG 440 Advanced Management Accounting (3) Management accounting topics such as decision models, quantitative techniques, variance analysis, and their use in accounting.
ACCTG 440 Advanced Management Accounting (3)

An in-depth examination of accounting techniques used within modern organizations. The course is designed for students interested in pursuing careers in corporate accounting or financial management.

The portfolio of managerial accounting procedures, including cost measurement and allocation, budgeting practices, transfer pricing, and variance analyses appropriate to an organization’s unique circumstances are derived. The student will learn to apply psychological and sociological theories of behavior to practical problems of control and to apply quantitative methods and models to managerial decision-making. Other topics covered by the course may include, financial management of working capital, long-term assets and liabilities; techniques for managing inventory; and strategic cost management including inter-organizational cost management.

The Pennsylvania State University
ACCTG 471 Intermediate Financial Accounting I (3) Theory and practice issues in income concepts and value measurement; GAAP; revenues, costs, assets, liabilities, and equities.

ACCTG 471 Intermediate Accounting I (3)
This course provides students with an understanding of generally accepted accounting principles and procedures so that they properly account for and present information in financial statements prepared for external users. The student should acquire a complete understanding of the accounting issues relating to cash, receivables, inventory, plant assets, natural resources, and intangibles. The student should be able to evaluate alternative accounting methods and choose the methods which will best convey the financial information related to the above areas. The student should be able to apply appropriate generally accepted accounting principles and procedures to account for transactions related to the above asset areas. The student should be able to demonstrate an understanding of the transaction analysis, recording, classification, summarization, and reporting procedures in the accounting cycle, and an understanding of the information contained in the financial statements. Finally, student should be able to demonstrate written communication skills required of accountants.

ACCTG 473 Advanced Financial Accounting (3)
This course explores four major topics: accounting for business combinations, introduction to derivatives and special purpose entities, accounting for foreign currency transactions and consolidating foreign subsidiaries, and ethics and policy issues for the profession.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACCTG 481 Financial Statement Analysis (3)
The proposed course in financial statement analysis is structured to improve the student's ability to extract and interpret information from actual financial statements and to expose the student to how financial statement information is integrated into equity valuation and credit analysis. The course would not only rely upon textbook-based and lecture-based learning, but also emphasize case-based learning.

The course will consist of two main sections. The first will deal with accounting and business analysis. This part will explore the types of financial information data typically available for publicly traded companies and introduce a model of the economic drivers of company performance. It would incorporate some technical accounting as well as some standards business economics/strategy concepts. Students will be forced to recast financial statements that they believe do not reflect the underlying economic state of the company. Financial reporting issues relating to revenue and expense recognition, leases and consolidations will be discussed.

The other section of the course will deal with firm valuation. Students would be exposed to some standard approaches to equity valuation and the analysis activities underlying these approaches. Aspects of valuation that would be covered in this section of the course are financial ratio analysis, forecasting, pro-forma statements, cost of capital and valuation methods.
The course will rely on lectures and extensive use of case studies.

ACCTG 483 Forensic Accounting (3) Study of investigative accounting, consulting and litigation support activities undertaken in forensic accounting engagements.

ACCTG 483 Forensic Accounting (3)
ACCTG 483 is the exploration of the broad discipline known as “forensic accounting,” which includes a variety of investigative accounting, valuation, damage assessment and litigation support services. Forensic accounting is an evolving discipline which is distinguished from assurance services in that it does not involve reporting on the fairness of financial statements. It generally involves the investigation and analysis of financial data for some specific purpose – obtaining an in-depth understanding of information that enables the forensic accountant to prove, disprove or at least confidently speculate about allegations related to the information and to report those findings objectively.

Forensic accountants are involved in presenting analyses that might be valuable for such things as settling legal disputes, calculating economic damages, valuing intellectual property, determining the extent of damage or loss due to fraud, or tracing elusive assets or revenue sources. A forensic accountant might also participate in pro-active engagements such as the development of systems and procedures to prevent fraud.

The first part of the course deals with the technical and ethical framework of forensic accounting and focuses on the understanding of forensic and investigative accounting including investigation methodology, the nature of fraud, fraud risk factors, financial statement fraud, litigation support and dispute resolution services and development of the skills needed in those professional activities. These skills include the ability to integrate knowledge of accounting, finance, economics, business law and other business disciplines in gathering, analyzing and evaluating evidence and drawing conclusions. The second part of the course focuses on forensic accounting investigation and analysis of financial information in connection with litigation, dispute resolution, estimation of economic damages, or other specific objectives, and the preparation of comprehensive, objective reports of findings and conclusions.

ACCT 561 Financial Statement Analysis II (3) The exploration of conventional and advanced methods of analyzing financial statements, including earnings quality and financial distress assessment.

ACCT 561 Financial Statement Analysis II (3)

The objective of this course is to explore conventional and advanced analytical methods of analyzing financial statements. Expanding on the material covered in a financial accounting or financial statement analysis course and using actual financial statements, students:

- review and apply the traditional methods for analyzing financial statements, such as ratio analysis, trend analysis, and common-size analysis
- apply advanced tools for analyzing financial statements, such as financial distress prediction models and earning manipulation prediction models
- evaluate accounting policies and disclosures and their impact on the financial statements through the assessment of earnings quality

Evaluation methods include case studies of actual companies and a comprehensive project to analyze the financial statements of a publicly-traded company. This course typically will be offered once a year.

ACCT 571 Strategic Tax Planning (3) Study of strategic aspects of tax for planning business operations, growth, expansion, capital transactions, and transfer of wealth.

ACCT 571 Strategic Tax Planning (3)

The objective of this course is to provide a framework for understanding the strategic impacts of tax-related decisions for new and existing businesses. Emphasis is placed on the managerial implications of tax planning and decisions with respect to operations, growth and expansion, capital transactions and the transfer of wealth. Six topics will be covered. These areas are as follows:

3. Business Operating Strategies - Study of the impact on the routine conduct of business of tax and accounting issues such as obtaining tax incentives, use of conduit entities and distributing cash and property.
6. Personal Wealth Planning - Explanation of the consequences of gift and estate taxes on the accumulation of family wealth.

ACCT 572 Financial Reporting I (3) Accounting theory and practice for reporting consolidations, foreign currency transactions, and preparing financial statements for governmental and NGOs.
ACCT 572 Financial Reporting I (3)

This course covers accounting theories and procedures as they pertain (a) to the preparation of financial statements for consolidated entities, (b) to the use of foreign currency and (c) to the financial reporting of activities of governmental and of not-for-profit entities. Contemporary reporting issues are reviewed and explored.

This course may utilize textbooks, lectures and/or cases. It is guided by financial reports. It explores the means of preparing certain financial statements and the ways of interpreting them. This course is recommended for students who did not take Advanced Accounting and/or Governmental Accounting at the undergraduate level.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2012
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACCT 573 Financial Reporting II (3)

Topics involving consolidated financial statements, special purpose entities, derivative financial instruments, and use of the Financial Accounting Research System (FARS).

ACCT 573 Financial Reporting II (3)

This course covers (a) advanced topics related to the preparation of consolidated financial statements, (b) accounting for derivative financial instruments, (c) accounting for off-balance sheet financing and special purpose entities, and (d) the use of the Financial Accounting Research System (FARS) to explore advanced financial reporting issues.

This course relies upon textbooks-based, lecture-based, and case-based learning. It is guided by financial reports. It explores the means of preparing certain financial statements and the ways of interpreting them. It is assumed that students taking this course have either completed ACCT 572 or have completed courses providing significant coverage of consolidations, foreign currency transactions, governmental accounting and not-for-profit accounting at either the undergraduate or graduate level.

ACCT 596 Individual Studies (1-9)

Creative projects, including research and design, that are supervised on an individual basis.
basi and which fall outside the scope of formal courses.

**Individual Studies (1-9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2002

_Note:_ Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACCT 597**  
Special Topics (1-9)  
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Special Topics (1-9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2002

_Note:_ Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**Acoustics (ACS)**

**ACS 402**  
Introduction to Acoustics (3)  
Basic principles of acoustics and perception of sound; fundamentals of applications: electroacoustic transducers, noise measurement and control, architectural and building acoustics, underwater sound. Offered for science and engineering majors.

**Introduction to Acoustics (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite:

_Note:_ Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACS 496**  
Independent Studies (1-18)  
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Independent Studies (1-18)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983

_Note:_ Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACS 497**  
Special Topics (1-9)  
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Special Topics (1-9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983

_Note:_ Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACS 498**  
Special Topics (1-9)  
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**Special Topics (1-9)**

General Education: None  
Diversity: None
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACS 501 Fundamentals of Acoustics I (2) Vibrational concepts of acoustics: natural frequency and modes, resonances of lumped parameter systems, strings, elastic rods, beams and membranes.

Fundamentals of Acoustics I (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1991
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACS 502 Fundamentals of Acoustics II (2) Acoustical wave phenomena: propagation, transmission, reflection and energy; periodic and transient waves; plane, spherical, and standing waves.

Fundamentals of Acoustics II (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1991
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACS 505 Experimental Techniques in Acoustics (2) Properties of acoustical and vibrational transducers, electronic and other instrumentation used in fundamental data measurement, acquisition and analysis.

Experimental Techniques in Acoustics (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1990
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACS 511 Underwater Sound Propagation (3) Theoretical and empirical treatment of sound propagation in the ocean, including effects of the environment, characteristics of targets, and transducers.

Underwater Sound Propagation (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Winter 1978

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Digital Signal Processing (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1984

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ACS 514 Electroacoustic Transducers (3) The theory, design, and calibration of passive, linear, reciprocal electroacoustic transducers for use in both air and water media.

Electroacoustic Transducers (3)
ACS 515 Acoustics in Fluid Media (3) Wave propagation in stationary and moving fluids; acoustic radiation and scattering; standing waves in ducts and cavities.

ACS 516 Acoustical Data Measurement and Analysis (3) Presents the engineering applications of recent developments in correlation and spectral analysis to acoustical measurement problems.

ACS 519 Sound-Structure Interaction (3) Acoustic radiation from and effects of fluid-loading on vibrating infinite and finite plates and shells. Acoustic transmission through and reflection from elastic plates and shells, acoustic excitation of elastic plates and coupling between panels and acoustic spaces.

ACS 521 (E MCH 521) Stress Waves in Solids (3) Recent advances in Ultrasonic Nondestructive Evaluation: waves; reflection and refraction; horizontal shear; multi-layer structures; stress; viscoelastic media; testing principles.

ACS 530 Flow-Induced Noise (3) Introduction to the basic and applied aspects of flow-induced noise created by subsonic flows of various complexities.
layers, including separated layers and transition zones, unsteady forces and noise due to flow over lifting surfaces, edge acoustic scattering mechanisms, axial-flow fan noise, rotor/flow interactions, turbulence ingestion, centrifugal blower noise, and noise generated by flow in pipes. The prerequisite for this course is a solid understanding of the fundamentals of acoustics, as demonstrated by successful completions of ACS 501 and 502. Students with a minor in Acoustics from accredited universities may also have the proper background to take this course. Although basic fluid mechanics is covered in the course, any previous courses or experience in this area will be beneficial. Homework problems will be assigned weekly and graded. Some of the homework may involve reading technical papers and providing a written synopsis. The average of all homework grades will constitute one-third of the final course grade. Another third will come from the mid-term exam and the final third from the final exam.

ACS 537 Noise Control Engineering I (3) As the first of three courses, this course provides an orientation to the program and covers fundamentals of noise control.

ACS 537 Noise Control Engineering I (3)

This course will introduce students to the application of acoustic and vibration fundamentals to the analysis and reduction of noise and vibration problems in industrial and residential settings. Topics will include: source-path-receiver model, human hearing and psychoacoustics, human response to noise and vibration, sound quality metrics and criteria for quantifying noise, acoustic standards related to noise and vibration control, instrumentation for measuring and analyzing noise and vibration, noise sources (distributed sources, impact sources, flow noise), absorption (materials, measurement, placement), control of sound in large and small rooms, partitions and barriers, mufflers, and vibration control techniques. Homework will combine problem solving with analysis of case studies. Group projects may be used to encourage collaborative approaches to problem solving.

ACS 573 (M E 573) Designing Quiet Structures (3) Course integrates structural dynamics, acoustics and optimization into unified method for designing quiet structures virtually for early product development.

ACS (M E) 573 Designing Quiet Structures (3)

During the past decade, several Mechanical & Nuclear Engineering faculty have been developing a broadly applicable methodology for the acoustic design of structures. The method integrates the disciplines of structural dynamics, acoustics and optimization into a unified approach that allows designers the possibility of including sound as a parameter in the early stages of product development. This course is designed as an introduction to this unique design method.

The format of the teaching style is a series of modular lectures each supplemented with an experiment (either numerical or physical) that students perform in teams. Because of the multidisciplinary nature of the course, the composition of the teams is balanced to ensure that at least one team member has a solid background in one of the three disciplines to be covered.

All of the experiments center on the problem of controlling the sound power spectrum of a structure via material tailoring, e.g., adding trim elements such as mass, stiffness, damping or dynamic absorbers. In particular, each team is asked to modify the acoustic signature of a selected structure to minimize its sound power radiation within a given frequency band. Optimization search routines identify the optimal location and size of the trim elements to give the best fit to the prescribed objective function.

Dedicated computer programs are available to students enrolled in this course.

The Pennsylvania State University
Students are evaluated through individual and group homework assignments, in-class participation and activities, and a group project report and presentation.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACS 590 Colloquium (1-3)** Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

**General Education:** None  
**Diversity:** None  
**Bachelor of Arts:** None  
**Effective:** Fall 2007  
**Prerequisite:**

**ACS 594 Research Topics (1-15)** Supervised student activities on research projects identified on an individual or small-group basis.

**General Education:** None  
**Diversity:** None  
**Bachelor of Arts:** None  
**Effective:** Summer 2005  

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACS 596 Individual Studies (1-9)** Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

**General Education:** None  
**Diversity:** None  
**Bachelor of Arts:** None  
**Effective:** Spring 1987  

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACS 597 Special Topics (1-9)** Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

**General Education:** None  
**Diversity:** None  
**Bachelor of Arts:** None  
**Effective:** Spring 1996  

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Adult Education (ADTED)

ADTED 456 Introduction to Family Literacy (3) Introduces family literacy concepts, models, and components supporting families; adult, child, and parent education, interactive literacy activities, and case management. 

ADTED 456 Introduction to Family Literacy (3)

This 3-credit course examines the concept of family literacy and different models and services that support families. Students will review the main parts of family literacy services and programs that support vulnerable families: adult education, early childhood education, parent education, interactive literacy activities, case management, and collaboration with partners who provide services to families (such as libraries, community centers, school districts, one-stop services, Head Start.) The course attends to issues such as racial/ethnic, cultural, and linguistic diversity among families, continuous program improvement, and professional development.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014 Future: Fall 2014
Prerequisite:
ADTED 456 Introduction to Family Literacy (3) Introduces family literacy concepts, models, and components supporting families; adult, child, and parent education, interactive literacy activities, and case management.

This 3-credit course examines the concept of family literacy and different models and services that support families. The course attends to issues such as racial/ethnic, cultural, and linguistic diversity among families, continuous program improvement, and professional development.

ADTED 457 Adult Literacy (3) Surveys adult basic and literacy education research, theory, programming, and instruction; highlights learners’ roles as parents, workers, and community members.

This 3-credit course explores adult literacy research, theory, programming, and instructional practices in the context of family literacy. The course examines the role of adult education as it pertains to adult learners’ needs and their roles as parents, workers, and community members. The course addresses a broad range of topics, including adult learning theories, considerations for English language learners, reading and numeracy, health literacy, workforce and corrections education, and transitioning adults to postsecondary education or training. Readings and activities will draw on theoretical and practical aspects of adult education and family literacy literature.

ADTED 458 Early Literacy Development (3) Focuses on young children’s language and literacy development, including
ADTED 458 Early Literacy Development (3)

This is a three-credit, post-baccalaureate course that focuses on young children’s language and literacy development. This course examines research related to how children acquire language, reading, and writing skills, as well as how family partnerships between the home and school can further support language and literacy development and children’s academic success. This course will cover a wide array of topics related to language and literacy development, including the influence of play and technology, the impact of read-alouds on literacy development, and the role of racial/ethnic and cultural diversity in learning. Students will examine early literacy development through a series of activities and readings.

ADTED 459 Interactive Literacy and Parental Involvement: Supporting Academic Success (3)

Interactive Literacy: Parents and Children is one of five 3-credit courses in the 15-credit Certificate in Family Literacy developed by the Goodling Institute for Research in Family Literacy in the College of Education in partnership with the National Center for Family Literacy (Louisville, KY). It is offered during the summer and fall semesters to about 20 students per class. The course is 15 weeks in length, entirely online, and cohort-based. Study materials are both web- and print-based. Students work in teams for most of their assignments although they are also expected to produce a portfolio of individual application activities. An Associate’s Degree or 60 baccalaureate credits at an accredited institution are required to enter the course. Technological requirements, registration, and other support are provided. The courses focuses on the component of family literacy in which the low-literate parents engage in language and literacy development activities with their young children (birth to age 8). During interactive literacy the teachers both model and supervise the literacy interactions. Students learn to use planned and intentional activities that are developmentally appropriate for the children. They also learn how to teach the parent the necessary interaction skills as well as how to debrief the parents afterwards. They also learn how to assess the literacy interactions between parents and their children.

ADTED 501 Foundations of Medical Education (3) This course provides an overview of medical education, and considers how it operates as a specific form of adult education.

The primary focus of this course is to explore the foundations of medical education by providing an overview of medical education, and considering how medical education operates as a specific form of adult education. It is especially relevant to educators working with adult learners in medical education, nursing education, or health education. More specifically, the course will focus on how insights from adult learning theory can contribute to the theory and practice of medical education in designing curriculum and developing an appropriate pedagogy in both classroom and clinical teaching contexts. It will examine recent and future trends in US medical education in light of the context of: the guidelines of the American Association of Medical Colleges (AAMC); the current health care system; and comparative trends in medical education in other countries. The course will examine research in medical education, and help students focus on the connections of research and educational philosophy/theory with developing their own teaching practice in medical education in classroom settings (face to face and online), and in clinical teaching settings. Finally, it will briefly explore trends in medical education assessment, and issues in continuing medical education.

Objectives are:

1. To provide an overview of the foundations of Medical Education as Adult Education
2. To consider the development of medical education in light of its history and recent trends in health care in both a U.S. and international context
3. To analyze and discuss adult learning theory as related to medical education in both classroom and clinical settings
4. To examine some of the research in medical education assessment strategies used in evaluating medical education
5. To develop a philosophy of medical education that guides the development of curriculum and pedagogy in different medical education settings
6. To develop specific strategies for medical education teaching practice for both classroom and clinical contexts

In addition to ongoing participation, evaluation is predominantly based on the following:

1. A paper where students discuss their philosophy of medical education and what it suggests for curriculum development in light of course readings and class discussion
3. A final paper or project exploring an issue in medical education in depth

ADTED 502 Program and Instructional Design in Medical Education (3) This course focuses on program planning and instructional design in a medical setting with an emphasis on teaching with simulation.

ADTED 502 Program and Instructional Design in Medical Education (3)

Participants of this course will explore a variety of program and curriculum planning and instructional design approaches to teaching in a medical setting, with a particular emphasis on the use of simulation as an instructional design. Program planning is informed by models from the adult education literature and curriculum planning informed by the field of medical education which will provide a framework for preparing participants in the assessing, planning, developing and
evaluating simulations as an instructional design. The course will provide participants with the both theoretical understanding and direct practical experience so they are able to effectively plan and develop effective simulations for teaching in a medical setting. In addition, this course is taught in six sessions (9-5pm) which is a suitable format for teaching the content and the work schedule of medical students/faculty who will be taking this course.

ADTED (CI ED) 508 Globalization and Lifelong Learning (3) Examination of globalization discourses and their relationships, implications and impacts on lifelong learning processes and contexts.

ADTED (CI ED) 508 Globalization and Lifelong Learning (3)
The course is designed to help students to critically examine the nature and impacts of globalization on lifelong learning. The main goal is to enhance the students’ ability to learn and work in a globalizing world and to challenge traditional perspectives about globalization and lifelong learning. As such, the course will adopt a critical perspective on globalization while helping the students to develop a reflective stance on the theory and practice of lifelong learning. A central focus of the course will be to develop a critical analysis that contributes to the building of a more active and socially responsible adult learner. Students will be evaluated using a number of assignments/projects. The major research paper, class presentation, two critiques of theories of lifelong learning, country profile of lifelong and a short reaction paper will count for 90% of the course grade. Class participation will be awarded 10%.

ADTED 509 (CI ED 509) Language, Literacy, Identity, and Culture in a Global Context (3) Examines the relationship between issues of language, identity and culture for adult learners in an increasingly global context.

ADTED (CI ED) 509 Language, Literacy, Identity, and Culture in a Global Context (3)

This core required course provides graduate students in the ADTED Ph.D. program a critical overview of the literature, theories, and scholarship examining the complexities inherent in an increasingly diverse global and post-colonial sphere. Explorations of historical, theoretical, postcolonial perspectives will be the focus, as will the daily portrayals of diverse peoples by the media. Participants in the course will be expected to familiarize themselves with the readings portraying the complexities of ethnicity, indigeneity, race, gender, and social class. Evaluation will focus primarily on writing a scholarly paper, preparing video materials that illustrate the issues, writing their personal educational histories, and participating in class.

ADTED 551 Qualitative Data Analysis (3) Students learn to analyze data qualitatively by engaging in, and continuously reflecting on the process.

ADTED 551 Qualitative Data Analysis (3)
The course is designed for graduate students wishing to gain competencies in qualitative data analysis. It is especially suitable for students needing guidance in completing the data analysis phase of their masters' or doctoral research. The course takes a thoroughly hands-on, inductive approach. Students learn the skills and principles of qualitative data analysis by engaging in, and reflecting on, the process. Texts will be consulted, as needed, but only as resources to assist in the students' on-going work, not as blue prints to follow. Using their own data, the instructor will guide students in selecting and using appropriate strategies and techniques for qualitatively analyzing data. Students will work in teams. Each work team will make periodic progress reports - in the form of oral class presentations. It is expected that students will actively participate in class discussions and in their work teams. Each student will also submit a diskette that contains samples of the work he or she has generated while using qualitative data analysis computer programs. Each student will also submit a final paper that articulates what he or she learned about the qualitative data analysis process.

ADTED 552 Participatory Action Research (3) Examines origins, historical development, main characteristics, methodological assumptions and models, practice of participatory action research adult education and community development.

ADTED 552 Participatory Action Research (3)
This course is designed to provide students with a critical overview of the theory and practice of participatory action research (PAR). The course begins with an examination of the meaning and nature of participatory action research. Related issues such as the major differences between PAR and the orthodox, traditional research paradigm will be discussed. This will be followed with a discussion of the historical roots of PAR and a critical examination of its epistemological assumptions and philosophical roots. The course will explore the various models of doing PAR with particular reference to the guidelines, phases, methods, and techniques. Finally, the course will critically examine a selected number of case studies from various regions. Students will be evaluated using a variety of assignments. The scholarly paper, a case study...
of PAR practice, annotated bibliography and three reaction papers will count for 90% of the course grade. Class participation will be awarded 10%.

**ADTED 560 Teaching Reading to College Students and Adults (3)**

Teaching Reading to College Students and Adults (3) Reading literacy for adults, including college reading, Adult Basic Education (ABE), and General Educational Development (GED) programs.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2014
Prerequisite:

**ADTED 561 Family Literacy (3)**

Open to graduate students who are interested in literacy, adult education, early childhood education, family studies, communication, and related fields, this 3-credit course provides a research-based study of family literacy. Family literacy comprises four components: Adult literacy instruction, early childhood education, parenting education, and parent-child interaction. Research about the four components and the program as implemented in the USA (primarily under the Goodling Even Start Act) and internationally will be studied in addition to the theoretical underpinnings of the concept of family literacy. Students will be required to conduct original or library research related to family literacy and present their findings both in class and in a written paper that could be publishable. Students may choose to do research related to the projects of the Goodling Institute for Research in Family Literacy in the College of Education; students’ papers may have the opportunity to be disseminated through the Institute. The research project, presentation, and paper will be counted as 50% of the course grade while the remaining 30% will be awarded to short reaction papers to the assigned readings.

**ADTED 562 (CI ED 562) Politics, Language and Pedagogy: Applying Paulo Freire today (3)**

The life and work of Paulo Freire will be the focus of this advanced graduate seminar. Freire was one of the foremost adult educators of our time. Graduate students participating in the course will read and reflect on his vision and how it evolved over time, critiques of Freire, the ways in which his ideas have been applied in diverse geographic and practice settings (e.g., education, community development), and implications for research, policy, and practice. Students will explore how elements related to Freire's work, such as conscientization, transformative action, and pedagogy for liberation, influence pedagogy and community action projects. Readings will include Freire's books, scholarship on Freire, and case studies of Freirean projects, among others.

ADTED 564 (CI ED 564) Social and Cultural Contexts of Learning and Work (3)
This course is designed to provide students with the knowledge and skills required to critically examine the concepts and meanings of learning and work and their relationship to community. The course focuses on formal, nonformal, informal, and incidental learning, with particular emphasis given to how different types of knowledge and different forms of learning are legitimized. The course will allow students to develop and understand the social context in which learning and work operate and how those concepts shape and impact the community. Students will write critiques of readings as well as a major literature review, participate in class discussion, and do a class presentation.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ADTED 597A Doctoral Pro-Seminar in Adult Education (3) This course provides both an orientation to the field of adult education as an area of study and an initial seminar for doctoral students to understand the process of graduate study in this program. It is intended for both practitioners who have experience in working with adult learners and people with little or no experience who have an interest in learning about the field. We will take a broad view of adult education and will accommodate the interest of persons concerned with non-formal education, informal learning, and formal learning in diverse settings. The principal aim is to develop a basic understanding of adult education in a global context as well as to begin preparing students for candidacy. The focus of the course will be on the socio-historical context of its methods, agencies, programs and issues.

Aerospace Engineering (AERSP)

AERSP 401A Spacecraft Design--Preliminary (3) Conceptual and preliminary design of a spacecraft, its constituent subsystems, and related systems, to satisfy a given set of specifications.

AERSP 401A Spacecraft Design - Preliminary (3)
AERSP 401A is the first of a two-semester sequence of senior capstone design courses. In this course, students will begin to learn the design process, complete a conceptual design, and to begin a preliminary design of a spacecraft, working in teams. This process is inherently multidisciplinary, requiring the use of engineering practices in such subjects as structures, dynamics, electrical and thermal systems, propulsion, controls, and information systems. In addition to the technical design content, this course seeks to enhance students' skills in verbal and written communications, ethical thinking, and the team approach to design, which is widely used in industry and government. Classes (115 minutes each, twice weekly) include lecture and time for team meetings. Students are evaluated on the technical merit of the designs (presented in written and oral reports), as well as their ability to function on a team.

AERSP 401B Spacecraft Design -- Detailed (2) Detailed design of the constituent subsystems and related support systems for a spacecraft.

AERSP 401B Spacecraft Design -- Detailed (2)
AERSP 401B is the second of a two-semester sequence of senior capstone design courses. In this course, students work in teams, continuing the design process begun in AERSP 401A. This process is inherently multidisciplinary, requiring the use of engineering practices in such subjects as structures, dynamics, electrical and thermal systems, propulsion, controls, and information systems. In addition to the technical design content, this course seeks to enhance students' skills in verbal and written communications, and the team approach to design, which is widely used in industry and government. Classes (115 minutes each, twice weekly) include lecture and time for team meetings.

AERSP 402A Aircraft Design--Preliminary (3) Conceptual and preliminary design of an aircraft, its constituent subsystems, and related systems, to satisfy a given set of specifications.

AERSP 402A Aircraft Design -- Preliminary (3)
AERSP 402A is the first of a two-semester sequence of senior capstone design courses. In this course, students will complete the preliminary design for an aircraft such that it satisfies the assigned specifications. Students completing this
A course will have the ability to design a system, component, or process to meet desired needs in aircraft systems; they will have the ability to function on multi-disciplinary teams; and they will have the ability to identify, formulate, and solve engineering problems. In addition, students will have the background to help determine what the ethical responsibilities are to themselves, to employers, and to society. Classes (115 minutes each, twice weekly) include lecture and time for team meetings.

AERSP 405 Experimental Methods and Projects (3) Experimental methods involving a variety of aerospace engineering topics; teams of students focus on advanced measurement techniques and project engineering.

AERSP 405 Experimental Methods and Projects (3)

This is a senior-level elective laboratory course that builds on AERSP 305W “Aerospace Technology Laboratory.” The first part of AERSP 405 addresses the engineering of typical data acquisition systems through a series of lectures and laboratory experiments. Data acquisition and processing are covered as they relate to a broad range of engineering experiments. Several sessions in the laboratory provide students with hands-on experience with data acquisition, followed by computer program exercises to complete the assignments. Initially the lectures are twice a week (75 minutes each). This activity comprises approximately 20% of the total course.

The major portion of the course introduces students to “real-world” projects in engineering and laboratory research. Students work in teams to identify, formulate, plan and solve engineering problems associated with a design or system, the completion of an experiment, or an extensive computational simulation requiring a team of students. Teams of 2 to 4 students are assigned, following student input on preferences from a list of proposed projects. Students learn, through practice, the methodology of team project engineering. The teams each develop goals for the semester’s project, performed following a careful work breakdown analysis with realistic time estimations and scheduling. Many of the projects involve the design and completion of an experiment. As part of the project, students will assemble, analyze and interpret relevant data, and prepare progress and final reports (written and oral). The reports should contain graphs that go with the text to provide the necessary data interpretation. The topics in the projects have application to a variety of research programs currently underway at Penn State. At the initiation of the project activity, lectures on principles of project planning including Gantt chart preparation, work breakdown structures and critical path considerations are presented. Common best practices for the preparation of project proposals, reports, presentations and general record keeping are discussed.

Overall meetings with the course instructor become bi-weekly once the projects are underway. Many of the projects also

The Pennsylvania State University
have knowledgeable graduate student or faculty consultants to assist with project planning and implementation. Project consultants conduct occasional individual review meetings with each team. Much of the project coordination work is undertaken within the regularly scheduled hours for the course. The class meetings include a combination of informal presentations by the students and, occasionally, the instructor on important technical issues. Considerable class time is spent discussing the goals and progress of individual tasks, and each student gives several brief oral presentations.

Bachelor of Arts: None
Effective: Summer 2012

Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 407 Aerodynamics of V/STOL Aircraft (3) Rotary wing aircraft; VTOL and STOL performance; propeller-wing combinations; jet flap; high lift devices.

AEROSPACE PROPULSION (3)

AERSP 412 Turbulent Flow (3) Homogeneous turbulence; spectral transfer of energy, viscous dissipation; turbulent shear flow: mixing-length theory, eddy viscosity, scaling laws, energy budget.

AERSP 413 Stability and Control of Aircraft (3) Static and dynamic stability and control of aircraft; open and closed loop systems.

AERSP 420 Principles of Flight Testing (3) In-flight and analytical studies of airplane performance, stability, and control; reduction of data; instrumentation; flight test techniques.
**AERSP 423 Introduction to Numerical Methods in Fluid Dynamics (3)**

Finite difference methods applied to solving viscous/inviscid fluid dynamics problems, error control, numerical stability.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**General Education:** None  
**Diversity:** None  
**Bachelor of Arts:** None  
**Effective:** Spring 2008  
**Prerequisite:**

**AERSP 424 Advanced Computer Programming (3)**

Engineering and scientific programming topics: object oriented programming, parallel programming, and various modern languages (e.g. C++, Java, and Ada).

**AERSP 424 Advanced Computer Programming (3)**

This course presents an advanced view of computer programming, mainly using Java, C++, and Ada95. The use of current operating systems (e.g. Linus and Unix) and compilers (e.g. gcc) will also be presented. Object Oriented Programming will also be discussed in detail. Object Oriented Programming is quite different than functional or procedural programming, and it is difficult to learn on your own. The differences and similarities between Java and C++ and Ada95 will also be discussed. Hands-on programming will be a key part of the course. This course is one of the Core Courses for the Graduate Minor in High Performance Computing, and will also be a technical elective in Aerospace Engineering.

**General Education:** None

**AERSP 430 Space Propulsion and Power Systems (3)**

Analysis and performance of chemical and nuclear rockets, electric propulsion systems. Introduction to solar, chemical, thermoelectric, and nuclear power sources.

**Space Propulsion and Power Systems (3)**

Introduction to solar, chemical, thermoelectric, and nuclear power sources.

**General Education:** None  
**Diversity:** None  
**Bachelor of Arts:** None  
**Effective:** Fall 2007  
**Prerequisite:**

**AERSP 440 Introduction to Software Engineering for Aerospace Engineers (3)**

Software engineering for safety- and mission-critical systems, including requirements, management, processes, designs, programming, validation/verification, and other aspects of software development.

**AERSP 440 Introduction to Software Engineering for Aerospace Engineers (3)**

This course is an introduction to software engineering. Software engineering includes all aspects of professional software production, and is especially important for safety-critical and mission-critical software. It includes documentation, management, processes, requirements, design models, computer programs, validation, verification, and other aspects of the development process.

Aerospace systems, including aircraft, spacecraft, onboard avionics, ground-based systems, flight simulators, and air transportation systems, rely heavily on software. Software is a major cost of all aerospace systems. For example, the
Boeing 777 has more than 1000 onboard processors and more than 4 million lines of software which is primarily written in Ada. The F/A-22 fighter has more than 2 million lines of software onboard, and much of this is Ada also.

Aerospace systems also demand a level of reliability far beyond that of most other systems, which means the software must be designed using rigorous mission-critical and safety-critical procedures, which makes the software quite unique compared to most other software. The FAA and DOD are both involved in certifying aircraft software, for example, through the DO-178B and DOD-2168 standards.

This course is required option in Aerospace Engineering (take one of AERSP 440, E E 305, or E E 210). If not taken to satisfy that requirement, it can be used as a technical elective.

AERSP 460 Aerospace Control Systems (3) Design and analysis of feedback control systems for aerospace applications; stability, root locus, time- and frequency-domain, state-space methods.

AERSP 460 Aerospace Control Systems (3)

This course is an introduction to the design and analysis of feedback control systems as applied to aerospace systems. The course covers control theory that is commonly used in the aerospace industry and presents practical applications of this theory to aerospace systems. The course does not emphasize rigorous mathematical derivation, but instead emphasizes the application of control theory. It provides a comprehensive overview of classical control theory and single-input/single-output (SISO) design methods. The course also presents an introduction to modern control theory and multi-input/multi-output (MIMO) design methods. Aerospace examples and applications are emphasized throughout the course.

The course builds upon a required junior-level course in system dynamics and controls (AERSP 304), which provides students with basic dynamic system theory and a brief introduction to feedback control. The course also supplements required senior-level courses in either aircraft or spacecraft dynamics (AERSP 413 and 450) which provides background on vehicle dynamics. AERSP 460 provides an additional level of depth in dynamics and control theory, and prepares students for entry-level work or graduate studies involving the design of automatic control systems for aircraft and spacecraft.

AERSP 470 Advanced Aerospace Structures (3) Design and analysis of aerospace structures. Plates and sandwich panels; composite materials; structural dynamics; aeroelasticity; damage tolerance.

AERSP 470 Advanced Aerospace Structures (3)

AERSP 470 covers important topics in aerospace structures beyond basic stress and deflection analysis of thin-walled beams. The objectives of the course are to help students: 1) appreciate the roles that structures and structural materials play in aerospace vehicles; 2) understand general design concepts for aerospace structures: vehicles, components, and materials; 3) develop the analysis tools and skills needed to analyze the static and dynamic performance of aerospace structures; and 4) gain experience identifying, formulating, and solving aerospace structural engineering problems.

AERSP 470 builds on structural, dynamics, and aerodynamics topics covered in PHYS 211, E MCH 011 & 013 (or 210), E MCH 215 & 216, AERSP 301, AERSP 306, and AERSP 304. It prepares students for entry-level work or graduate study in the
analysis and design of aerospace structures. It also provides students with the strong background needed to contribute effectively to multidisciplinary trade studies in vehicle design activities.

AERSP 417 begins with a review of the general features of flight vehicle structures and aerospace structural design concepts. Then, the deflection and stress responses of flat plates and sandwich panels under lateral and in-plane loading are addressed. About a third of the course is devoted to the behavior of advanced composite panels, and another third to structural dynamics and aeroelasticity. The course finishes with treatments of joining and damage tolerance, both key topics with respect to the design of aerospace structures.

AERSP 496 Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AERSP 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AERSP 497D Autonomous Underwater Vehicle (AUV) Design (1.5) Students taking this course will design and build an autonomous underwater vehicle (AUV) capable of carrying out simple tasks (e.g. find and mark or retrieve small objects) in water depths less than 30'. Component technologies include underwater proposers, vehicle attitude control, acoustic and optical sensing, ballast control for vehicle stability, beacon-based position estimation, simple manipulators, power system design and control.

AERSP 498 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AERSP 499 (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.

AERSP 504 Aerodynamics of V/STOL Aircraft (3) Jet wings, high lift devices, propellers and ducted propellers, circulation
Aerodynamics of V/STOL Aircraft (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite: 

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 505 Aero- and Hydroelasticity (3) Interaction of elastic systems having several degrees of freedom with fluid flows in various configurations.

Aero- and Hydroelasticity (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Winter 1978

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Rotorcraft Dynamics (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2007  
Prerequisite: 

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 507 Theory and Design of Turbomachinery (3) Theory and principles of machinery design: compressors, turbines, pumps, and rotating propulsors; opportunity to work out design examples.

Theory and Design of Turbomachinery (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Winter 1978

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 508 Foundations of Fluid Mechanics (3) Mathematical review, fluid properties, kinematics, conservation laws, constitutive relations, similarity principles, the boundary layer, inviscid flow, vorticity dynamics, wave motion.

Foundations of Fluid Mechanics (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1972

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 509 Dynamics of Ideal Fluids (3) Irrotational flow theory, two-dimensional and axisymmetric flows, airfoil theory, complex variables, unsteady phenomena; flow with vorticity, finite wing theory.

Dynamics of Ideal Fluids (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Winter 1978  
Prerequisite: 

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
check the specific course syllabus.

**AERSP 510 Compressible Flow (3)** Classification and solution of compressible flow problems, high-speed gasdynamics, unsteady motion, transonic and hypersonic flows, atmospheric reentry.

Compressible Flow (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Aerodynamically Induced Noise (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Winter 1978

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 514 Stability of Laminar Flows (3)** The stability of laminar motions in various geometries as influenced by boundary conditions and body forces of various kinds.

Stability of Laminar Flows (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Winter 1978

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 518 Dynamics and Control of Aerospace Vehicles (3)** Dynamical problems of aircraft and missiles, including launch, trajectory, optimization, orbiting, reentry, stability and control, and automatic control.

Dynamics and Control of Aerospace Vehicles (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1987

Prerequisite:  

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 524 (M E 524) Turbulence and Applications to CFD: DNS and LES (3)** First of two courses: Scalings, decompositions, turbulence equations; scale representations, Direct and Large-Eddy Simulation modeling; pseudo-spectral methods; 3 computer projects.

Turbulence and Applications to CFD: DNS and LES (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2011

Prerequisite:  

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 525 (M E 525) Turbulence and Applications to CFD: RANS (3)** Second in two courses: Scalings, decomposition, turbulence equations; Reynolds Averaged Navier Stokes (RANS) modeling; phenomenological models; 3 computer projects.

Turbulence and Applications to CFD: RANS (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 526 (M E 526) Computational Methods for Shear Layers (3) Study of numerical solution methods for steady and unsteady laminar or turbulent boundary-layer equations in two and three dimensions.

Computational Methods for Shear Layers (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 527 (M E 527) Computational Methods in Transonic Flow (3) Numerical solution of partial differential equations of mixed type, with emphasis on transonic flows and separating boundary layers.

Computational Methods in Transonic Flow (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 530 Aerothermochemistry of Advanced Propulsion Systems (3) Physics and chemistry needed to analyze high performance rocket propulsion systems including reacting high temperature radiating gas and plasma flows.

Aerothermochemistry of Advanced Propulsion Systems (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 535 (M E 535) Physics of Gases (3) An introduction to kinetic theory, statistical mechanics, quantum mechanics, atomic and molecular structure, chemical thermodynamics, and chemical kinetics of gases.

Physics of Gases (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 540 (NUC E 540) Theory of Plasma Waves (3) Solutions of the Boltzmann equation; waves in bounded and unbounded plasmas; radiation and scattering from plasmas.

Theory of Plasma Waves (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2012
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 550 Astrodynamics (3) Applications of classical celestial mechanics to space flight planning. Determination and construction of orbital parameters by approximation methods. Perturbation techniques.

AERSP 550 Astrodynamics (3)

The Pennsylvania State University
This course covers the mathematics and practices in orbital mechanics as applied to space mission analysis, design and operation. The major topics are: the n-body problem, the two-body problem, Keplerian orbits, the Kepler problem (position as a function of time), three-dimensional specifications of Keplerian orbits (orbital elements), Lambert's problem (determining the trajectory between two specified points with a given time of flight), impulsive transfers, the Hohmann transfer and its extension to other problems, the sphere of influence, the patched-conic approximation, the restricted three-body problem, linear orbit theory (relative motion between vehicles in neighboring orbits), gravitational modeling, perturbation methods (Encke's method and variation of elements), orbit determination, tracking kinematics, and time systems.

**AERSP 550 Astrodynamics (3)**

Applications of classical celestial mechanics to space flight planning. Determination and construction of orbital parameters by approximation methods. Perturbation techniques.

**AERSP 560 Finite Element Method in Fluid Mechanics and Heat Transfer (3)**

Application of finite element techniques to viscous/unsteady fluid flow/heat transfer problems.

**Foundations of Structural Dynamics and Vibration (3)**

Analysis of wind turbine performance, aeroacoustics, and loads; turbine selection for site-specific application.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 590 Colloquium (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Colloquium (1-3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1987

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Individual Studies (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1987

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 597A Experimental Methods and Projects (3) Experimental methods used in a variety of research areas in Aerospace Engineering. Team projects will be chosen to design experiments and fabricate modifications to existing apparatus, conduct the experiments, process and interpret the data, and assemble progress reports and a final report.

Experimental Methods and Projects (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 597D Autonomous Underwater Vehicle (AUV) Design (1.5) Design and construction of an autonomous underwater vehicle (AUV). Component technologies include underwater proposers, vehicle attitude control, acoustic and optical sensing, ballast control for vehicle stability, beacon-based position estimation, simple manipulators, power system design and control.

Autonomous Underwater Vehicle (AUV) Design (1.5)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014 Ending: Fall 2014 Future: Fall 2014

Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AERSP 597F Multifunctional Materials and Structures (3) "Smart Materials" for adaptive configurations related to
multifunctional structures with actuation and sensing capabilities; piezoelectric materials, shape-memory alloys (SMA), and electro- and magneto-theological (ER, MR) fluids; concepts of continuum mechanics, micro-mechanics, and thermodynamics to develop constitutive relationships to model mentioned structures; active systems for different regimes, and explores basic design features, fabrication and testing techniques of representative smart material configurations.

**Multifunctional Materials and Structures (3)**

General Education: None
Diversity: None
Bachelor of Arts: None

political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement
and segregation existed solely in the southern states, the entire country practiced both and black people suffered the
consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the
Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian
Leadership Conference; and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student
Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker,
Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the
1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on
Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers;
The emphasis on the southern struggle is on the local, ordinary people who achieved extraordinary things.

General Education: None
Diversity: US
Bachelor of Arts: None

AF AM 465 (US) (HIST 465) The Post-World War II Civil Rights Movement (3) The civil rights struggle and its impact upon
American politics.

AF AM (HIST) 465 The Post-World War II Civil Rights Movement (3) (US)

This course focuses on the post-World War II Civil Rights Movement. It begins with a discussion of the "Long Civil Rights
Movement," briefly looking at the roots of the movement in the labor movement and social struggles of the Great
Depression and World War II. We then turn to the impact of World War II on African Americans, the growing militancy
during the war, the struggles over segregation in the military, the growing role of blacks in the labor movement, and the
growing link between African Americans and the rising anti-imperial movements that accelerated after the war. We discuss
the role of African Americans in the Cold War and the struggles over the role of Communism and Socialism in the
emerging Civil Rights Movement. The course is broken down into key topics of the movement years: the rise of localized
grassroots movements all over the United States that were led by local people who sought to challenge school segregation,
political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement
and segregation existed solely in the southern states, the entire country practiced both and black people suffered the
consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the
Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian
Leadership Conference; and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student
Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker,
Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the
1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on
Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers;

AFR 532 Environment and Livelihoods in Africa (3) An enquiry into the relationships between the environment, resource control, resource conservation, rural livelihood systems and poverty in Africa.

The seminar examines the relationships among the environment, resource control, conservation and rural livelihoods in sub-Saharan Africa. Readings will allow students to develop a critical understanding of the ideology and epistemology of environmental management, resource control, rural development and poverty in sub-Saharan Africa. Students will be encouraged to interrogate modernist doctrines such as population-environment narratives, poverty-stewardship narratives and related environmental ideologies/narratives that embody sustainability and rural (under)development in sub-Saharan Africa. Through case study examples, students will use these conceptual foundations to trace the relationships between sustainability and poverty in a number of livelihood systems and resource control regimes. Some examples are resource (land/water) management between the state and nomadic pastoral systems; land reform and rural peasant livelihood systems; mining and rural livelihood systems; and national parks, trans-frontier parks and rural livelihood systems.

AAA S 530 Globalization in Africa (3) Students will examine globalization and its socioeconomic implications in Africa.

AAA S 530 Globalization in Africa (3)

The principal aim of this course is to examine how the post-Cold War episode of globalization has impacted the various aspects of Africa's socioeconomic development. The global socioeconomic system has undergone some notable changes over the last few decades. The bipolar configuration of global power has been radically altered, many former socialist countries have abandoned socialism in favor of the capitalist system, the welfare state has been weakened, and market-state relations have been radically reformulated. Liberalization of world trade and financial and investment systems has reorganized the global system of production and distribution. A homogenizing neo-liberal ideology has also risen to prominence. With these changes, the terms and conditions for Africa's integration into the global economic system have been modified. The continent's resources, especially oil have also attracted growing global attention. This course is designed to encourage students rigorously examine the implications of the new global order, which is widely known as globalization, on various aspects of Africa's socioeconomic development. Among the issues the course addresses are: state-society relations, state-building, governance and conflicts, human rights and investments on human development, land tenure systems and institutions of rural governance, and transformation of the subsistence peasantry.

**A B E (BRS) 500 Research Methods (3)**

The Pennsylvania State University
A B E/BRS 500 is a course designed to assist students entering and advancing in their research career to: better investigate and practice the art of scientific investigation; openly explore and discuss what it means to be a part of the scientific and research enterprise at a major academic setting; gain skills and experiences in critical evaluation and discourse; learn the process of developing and preparing a research proposal from initial concept to near-final written product; better understand the expectations for responsible and ethical conduct as a scientist/student/individual; and further develop their philosophies and capabilities as future scientists and professionals. During this course students will continually read, think, discuss, write, critique, re-read, re-think, re-write, and communicate with other students, faculty, and professionals. The course will provide a setting to allow them to further develop their personal, professional, academic, and scientific goals and capabilities.

A B E 559 Biological and Agricultural Systems Simulation (3) Continuous simulation modeling of biological and physical systems, numerical simulation techniques, validation and verification, difference measures, sensitivity analysis.

A B E 559 Biological and Agricultural Systems Simulation (3)
This course enables the student to better understand system behavior and prediction, with a focus on biological and physical systems. Using a diagramming-based model development package and standard spreadsheet programs, the student will be able to: identify a system, labeling components, boundaries, and environment; represent a system in mathematical terms; develop a working simulation model; evaluate a model through statistical means. The applications used within this course are oriented towards graduate students in the Colleges of Agricultural Sciences and Engineering. The course is offered every Fall semester, with an expected enrollment of 10 students. Grading is based on homework and in-class assignments, and a final project.

AEE 413 Program Planning and Instructional Development (3-4) A course in planning, developing, and organizing school-based curriculum, summer programs, advisory councils, and facilities for environmental/ agricultural education.

AEE 413 Program Planning and Instructional Development (3-4)

Organization and administration of secondary programs of education in and about agricultural/environmental sciences, including Ag In The Classroom (Elementary School Agriculture), marketing, summer programs, and state vocational finances. Topics will include discussion of instructional techniques for secondary educators in agriculture, with emphasis on classroom management, discipline and motivation, and teacher evaluation.

The course is arranged in 10 units (for students who have completed AEE 100 as an undergraduate certification requirement) or 15 units (for returning adult students seeking certification who have already completed an Agricultural/Environmental Science undergraduate degree). Thus, this is a variable credit offering designed to meet the needs of these two groups of students.

In each unit there are objectives that need to be met by the students. The students “click” on the objective to open the lessons. Within the lessons are research materials, articles, textbook references (all copyright permission), additional WWW links, and other supporting resources. At the end of the article is an opportunity for students to enter the Penn State Coursertalk electronic “chat” room to engage in discussions.

AEE 437 (AN SC 437) Equine Facilitated Therapy (3) Equine Facilitated Therapy uses equine-related activities to contribute positively to the wellbeing of people with disabilities.

AEE (AN SC) 437 Equine Facilitated Therapy (3)

The primary goal of this course is to acquaint the participant to equine facilitated therapy (therapeutic riding) and to introduce them to individuals who benefit/participate in such programs through lecture, audio-visual media, discussions, program visitation, independent research and via a practicum at a therapeutic riding program. Additionally, this course is designed to introduce the participant to various exceptional characteristics and conditions which may benefit from exposure/participation in equine facilitated therapy and other animal related therapy programs.

Communication Methods and Media (3)

General Education: None
AEE 450 Program Design and Delivery (3)
This course will help students develop a basic understanding of non-formal educational programs including Cooperative Extension and other non-credit granting educational opportunities where participation is typically voluntary. Students will learn how non-formal programs are planned, delivered and evaluated in community settings. In addition, students will select and critique existing extension programs developed for use in the United States and others in use around the world.

AEE 460 Foundations in Leadership Development (3)
This course is designed to provide students with a philosophical and theoretical framework of leadership by examining historical and contemporary theories, models and leadership styles within a social, political and global context. Students will explore leadership effectiveness and its relationship to issues of power, influence, persuasion, motivation and ethical decision-making. The overall objective of this course is to help students learn specific leadership competencies that will make them more effective leaders when addressing problems and seeking solutions in public and private domains.

AEE 465 Leadership Practices: Power, Influences, and Impact (3)
In this course, students will explore leadership roles as they relate to issues of purpose, social responsibility, political influences and legal constraints. It is designed to help students develop greater sensitivity to the variety of factors and forces impacting leadership processes and to acquire an increased understanding of key elements of successful leadership practices. The overall objective of this course is to help students learn specific leadership competencies that will make them more effective leaders when addressing problems and seeking solutions in public and/or private domains.

**AEE 511** Youth Leadership Development in the Agricultural and Life Sciences (3) This course will address youth leadership development theories and emphasize formal and nonformal youth programs in agricultural and life sciences.

**AEE 511 Youth Leadership Development in the Agricultural and Life Sciences (3)**

The course will provide learners with an understanding of how adolescents develop and emerge as leaders in their families, schools, organizations, and communities. The overall objective for this course is to provide future and current leaders of youth organizations in the agricultural, natural resource, and/or life sciences the knowledge, skills, and experiences to develop and enhance the leadership skills and behaviors of the youth in their organizations. This will be accomplished through a variety of educational methods and techniques. Exposure to theories of youth leadership development will be shared within the context of adolescent development, group dynamics, and opportunities for growth and self-development. A variety of youth organizations and their respective leadership based programs, curricula, and philosophies will be shared and analyzed. Assignments and evaluative-based activities will focus on investigating and comparing youth organizations, analyzing leadership-based resources, analyzing youth/adolescent development theory, and developing a proposal to secure extramural funding to support youth leadership development.

**AEE 515** Engagement Through Outreach Scholarship in Higher Education (3) To develop an understanding of outreach scholarship as a nonformal educational system and its relationship to relevant social systems.

**AEE 515. Engagement through Outreach Scholarship in Higher Education (3)**

Through this course, students will develop an understanding of outreach scholarship as a non-formal educational system and its relationship to relevant domestic and international social systems. Students will explore the historical and legislative history of how higher education evolved. Drawing from both contemporary as well as historical resources, students will understand the "land-grant" philosophy and outreach scholarship in higher education in order to define an engaged university. Using their definitions, students then critique outreach scholarship as it is carried out through specific institutions of higher education, both in the United States and around the world. Alternative institutional missions, organizational policies and procedures as well as organizational structures and financial arrangements will be explored to demonstrate how distinct approaches to outreach scholarship evolve and their perceived value within an institution. Within this framework, students explore today's definition for scholarship and appropriate standards for scholarly performance through outreach. Case studies, interviews, and guest lectures supplement the current and historical literature. Students carry out individual capstone projects in order to allow each of them to synthesize course content in terms of their own professional interests within an engaged university.

Given the visibility of outreach scholarship in higher education today and the fluidity of its definition, implementation, and perceived value within institutions, this course reflects contemporary thought in addition to its historical underpinnings.

Agronomy (AGRO)

AGRO 410W Physiology of Agricultural Crops (4) Study of the relation of plants to their environment and the physiology of crop plant growth.

AGRO 410W Physiology of Agricultural Crops (4)
AGRO 410W is a course in plant physiology that presents fundamental aspects of plant metabolism and demonstrates how they are affected by environmental conditions such as light, water availability, temperature, and mineral nutrition. It describes how plants use photosynthesis to accumulate and partition biomass and how this contributes to crop productivity. The roles of abiotic stress such as drought and temperature extremes on crop productivity also are discussed. The course objectives are to 1) learn how plants ‘work’ at the molecular, cellular, whole plant and population levels; 2) develop critical thinking skills by planning and conducting experiments related to the course topics and reviewing journal articles; and 3) develop and enhance communication skills through a variety of writing assignments. This course is appropriate for upper level undergraduates or beginning graduate students with interest in plant and agricultural science disciplines including, horticulture, agroecology, plant pathology, ecology, meteorology and entomology, and meshes with courses in these areas. Students will be evaluated by examinations/quizzes, writing
assignments and class participation. The course is offered annually and the optimal enrollment is 20 students.

AGRO 438 (AGECO 438) Principles of Weed Management (4) Weedy plant taxonomy, biology and ecology of weedy plant populations, and integration of biological, chemical, cultural and biological controls.

AGRO (AGECO) 438 Principles of Weed Management (4)

The study of weeds and their management is a challenging and demanding task that requires diverse abilities. The term weed is an anthropocentric construct meaning it is a human colored definition. We will study the biology and ecology of weedy plants drawing on examples from a wide range of plant systems; those systems include agricultural fields (agronomic and horticultural crops) and forests. Of course our knowledge of the biology and ecology of weedy plant populations will then be used to underpin and assess control tactics and their integration. The discipline has a history of equating management with herbicidal control and in fact some 80% of the pesticides used in U.S. agriculture are herbicides. However through novel farmer designed management systems, through a research community focused on alternative methods of management and through increased focus on invasive species, exciting breakthroughs are occurring in alternative methods of management and prevention. This course seeks to introduce you to the breadth of management approaches in use and under study. The specific objectives are for students to be familiar with: 1) the local weed flora, 2) fundamental aspects of weed biology and ecology relevant to managed landscapes, 3) the control methods used in managing weed populations, 4) how control measures can be integrated to accomplish acceptable levels of pest suppression, 5) operationalizing a weed management plan, 6) how herbicides enter and move to their site of action in plants, 7) classifying herbicides by their site of action, and 8) the distinction between herbicide concentration in soils and plant available herbicide concentration.

AGRO 460 (BIOTC 460) Advances and Applications of Plant Biotechnology (3) This course provides a comprehensive overview and current status of plant biotech research. The course provides knowledge of plant systems that fall in the category of GMOs.

AGRO (BIOTC) 460 Advances and Applications of Plant Biotechnology (3)

This course will provide a comprehensive overview and status of current plant biotech research. The focus is on providing knowledge of the biology of plant systems. Consequences of development of a transgenic plant either for food (crops) or
as a tool to understand molecular, genetic, and inheritance mechanisms of a trait will be discussed in detail. The course will deliver the current literature and understanding of mechanisms involved in herbicide resistance in transgenic plants. Specific topics that will be of interest to students from various disciplines include disease and insect resistance, quality traits, and secondary metabolites. Molecular biology of different pollination systems will be examined so that students will understand the concept of gene flow from transgenic to non-transgenic crops. Examples from recent developments on the beneficial use of transgenic plants as producers of modified compounds, starches, antibodies and their use in phytoremediation of toxic and organic pollutants will be discussed from the perspective of genetic and molecular plant systems. Gene expression of transgenic plant traits and the stability of an engineered crop will be discussed. Specific emphasis will be on different modes of inheritance that a transgenic plant can follow after its development and release into the environment. The course also prepares students for understanding the regulatory processes that are required for testing, moving, and environment release of transgenic crops. The laboratory component of the course will introduce students to the common technique of molecular biology that are used to detect expression in transgenic plants. Transgenic maize plants will be grown in a greenhouse and analyzed for expression of introduced genes.

AGRO 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

The Pennsylvania State University
AGRO 501 Graduate Student Dialogue (1) Orientation discussion group for incoming graduate students. Review departmental policies and learn about the diverse faculty programs in the department.

The objectives of this course are to (i) provide orientation on departmental policies and procedures to incoming graduate students, (ii) introduce students to the wide array of faculty research programs in the department, and (iii) build camaraderie among the cohort of students. This course is required of new graduate students in the department, yet inapplicable to '500-level major field' credit requirement. The course is graded pass/fail with emphasis on weekly classroom participation.

AGRO 510 Ecology of Agricultural Systems (3) Examination of ecological concepts and research on agroecosystem processes and dynamics via discussion and analysis of review and research papers.

This course covers agroecological components, processes, and dynamics. Emphasis is placed on learning via reading and discussing the recent agroecological research literature. Students also gain experience interpreting and critically analyzing scientific papers and theories. Students lead some of the class discussions on the assigned readings. They identify one or two articles that are relevant to their graduate research subject to read and discuss with the class. Students write review papers on the course themes and on agroecology research that is relevant to their graduate research topic. The course is offered in alternative years during spring semesters.

AGRO 518 Responses of Crop Plants to Environmental Stress (3) Physiological and ecological aspects of the response of crop plants to environmental stresses in establishment, persistence, and reproduction.

AGRO 555 Effective Scientific Communications (2) Instruction and practice in verbal communication of scientific information to technical and non-technical audiences through realistic exercises with invited audiences.

The overall course objective is discovery of methods to effectively communicate scientific information to both fellow scientists and the lay community. A majority of the course will be devoted to preparing students to deliver oral and poster presentations technically appropriate for their target audience. Specifically, students will learn to present information in oral and poster formats used for scientific meetings, seminars, and proposal hearings. Additional emphasis will be placed on techniques for handling questions from the audience. Students will also determine appropriate scientific paper titles, formats, and delivery methods.
formats, and realize how outlines facilitate organized technical writing. Students will improve their critical listening, thinking, and interpersonal skills by participating in weekly topical discussions as well as peer reviews. This course is unlike others in the Crop and Soil Sciences curriculum in that it teaches students how to communicate what they have learned during their research and academic endeavors. Enrollees will make two formal presentations based on their research, present their research as a scientific poster and conduct an exercise in writing a scientific journal article. Students will be evaluated on five criteria: participation, scientific poster presentation, technical oral presentation, non-technical oral presentation, and a scientific journal writing exercise.

AGRO 611 Ph.D. Dissertation Part-Time (0) No description.

AGRO 851 Applied Plant Population Biology (3) Lectures and exercises designed to develop student competency in plant selection to promote ecological diversity and genetically superior plants.

Even though the emphasis of this course will be on the applied aspects of plant population biology, students nevertheless require a fundamental understanding of the underlying science and theory on which to guide their land management decisions, with particular emphasis on plant materials. This course is designed to give potential superintendents and managers of large land holdings (such as golf courses, highway roadides, game lands, and military installations) the skills necessary for making sound ecological decisions regarding the choice and management of plant materials utilized in land restoration and revegetation. Emphasis will be made on the applied aspects of plant population biology.

AGRO 851 Applied Plant Population Biology (3)
American Studies (AM ST)

AM ST 400 Early America to 1765 (3) American society and culture in the colonial period.

AM ST 400 Early America to 1765 (3)

A study of early American history and culture from the Columbian encounter to the end of the colonial period in America. The course covers the results of contact between Native American civilizations and Europeans, forms of government and community that emerged in America, the formation of an American identity, and the creation of a distinctive, expanding American cultural landscape. The course satisfies the “area” requirement in history for undergraduate majors in American Studies, and is open to all majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

AM ST 401 Revolution and Early Republic, 1765-1815 (3) American society and culture during the period of the Revolution and the Early Republic.

AM ST 401 Revolution and Early Republic 1765-1815 (3)

American society and culture during the period of the Revolution and Early Republic. The course satisfies the “area” requirement in history for undergraduate majors in American Studies, and is open to all majors. An objective of the course is for students to understand the significance of this formative period on the emergence of the United States as a nation. Students will examine the mythology of the Revolution as well as its historical record. They will consider the development of social and political institutions in the early years of the new nation, including the creation of pivotal texts of the Declaration of Independence and Constitution.

AM ST 405 Cold War (3) Examination of social and cultural currents in American life from World War II to 1990.

AM ST 405 Cold War America (3)

Examination of social and cultural currents in American life after World War II to 1990. The course satisfies the “area” requirement in history for undergraduate majors in American Studies, and is open to all majors. Students will analyze the way that the confrontation between communist superpowers and the United States shaped politics, culture, and society. Among the events discussed are the nuclear bomb, space and arms race, Kennedy assassination, Watergate scandal, and
Korean and Vietnam wars. The cultural expression of the period in film, television, literature, music, and art will be analyzed.

AM ST 431 National Character (3) An examination of the characteristics of the American people and other national groups.

AM ST 431 National Character (3)

- An examination of the characteristics of the American people and other national groups. The course reviews techniques that have been used in scholarship to characterize national groups in the United States and cross-culturally, including data gathering in polls, surveys, and censuses; behavioral observations of cultural "personality"; racial and ethnic categorizations; geographical and historical causation. The course analyzes the changes in attitudes toward nationality and "peoplehood" in American history and culture. The course satisfies the "area" requirement in society for undergraduate majors in American Studies, and is open to all majors.

AM ST 435 Americans at Work (3) A study of occupational and organizational cultures in America.

AM ST 435 Americans at Work (3)

- A study of occupational and organizational cultures in America. The course examines historical and social changes in primary occupations of Americans, including agriculture, crafts and trades, mining and trapping, maritime, manufacturing, corporate, and service and information work. The role of unionism, individualism, and mobility in shaping attitudes toward work will be examined. Students will learn techniques of ethnography and historical analysis to interpret images of work in American society. Evaluation includes application of historical analysis and ethnographic observation of Americans at work in written essays, and two examinations.

AM ST 441 (US) (KINES 441) History of Sport in American Society (3) Background, establishment, and growth of sport in America from colonial times to the present.

Study of the background, establishment, and growth of sport in America from colonial times to the present, and the role of American sports in American culture and society. The course will examine the ways that sports have operated in the United States as the country has developed into a modern, mass society. Issues of national identity, commercialism, race, ethnicity, class, and gender will be discussed in relation to the popularity of sports. Another set of issues will center on language and media; students will employ methods of analysis such as ethnography and rhetorical criticism that emphasize the multiple layers of meaning inherent in sports culture.

AM ST 447 (US) (HIST 447) Recent American History (3) Contemporary economic, social, and political aspects of the United States and its role as a world power since 1945.

This course covers the history of the United States from the end of World War II to the present. Topics include but are not limited to the Marshall Plan, the Cold War, the Korean War, the rise of television, atomic power, the Eisenhower presidency, the Civil Rights and Women’s Movements, the Vietnam War and protests, the space race, Watergate, the Reagan presidency, the two Iraq Wars, the Dot-com revolution, 9-11 and the War on Terror, and the Obama presidency. While addressing major historical movements, the course will also explore the culture of the period –art, literature, music, sports, television, religion, and film. Even though the course covers a relatively short span of years, students will see that American society has undergone dramatic changes in this period as the result of social movements, immigration, wars, political scandal, and technological innovation. The course will close by speculating on the current direction of the United States in light of the serious challenges the nation faces.

AM ST 448 (ANTH 448) Ethnography of the United States (3) Ethnographic descriptions of various dimensions of life in the United States.

Ethnographic descriptions of various dimensions of life in the United States. The course covers uses of ethnography in American Studies toward an understanding of social and cultural communication and performance. The application of ethnography and concepts of cultural anthropology to complex societies such as the United States is discussed. The course teaches students to use ethnographic methods for research of American society and culture. Attention is given to the ethics and issues of ethnographic fieldwork. The course satisfies the "area" requirement in "society" for American Studies majors.

**AM ST 476 (ENGL 492, WOMST 492) American Women Writers (3)**

A study of selected women writers, this course provides the opportunity to study writing by American women from an historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will raise the question of the role that gender--as well as other differences such as race, class, and ethnicity--play in the selection of literary forms and the development of character, theme, symbol, and rhetorical strategy. It will also explore the dimensions American women have brought to the American literary tradition. The course satisfies the area requirement in culture for American Studies majors and is open to all majors meeting the prerequisite requirements.

**Developmental Neurobiology (2)**
ANAT 584 (PHARM 584) Human Anatomy and Development A: Gross Human Anatomy (1) Explore gross human anatomy providing orientation to organs and the overall relationship of organs and structures within the human body.

ANAT (PHARM) 584 Human Anatomy and Development A: Gross Human Anatomy (1)
This course will provide a concise but thorough description of the gross human anatomy. With the use of pre-dissected prosection or model representations of the human body, anatomic position, orientation (e.g., retroperitoneal, superficial, deep, ipsilateral), and identification of structures within major body cavities (thorax, abdomen) of the human body will be conducted. Evaluation of the musculoskeletal system will include structure of bones, classification of bones in the axial and appendicular skeleton, discussion of joints, skeletal muscles, and accessory structures related to muscle action including fascia. Evaluation of digestion system will include components involved with alimentary canal as well as accessory organs. Evaluation of the cardiovascular system will focus on the communication network, heart anatomy and blood flow through its chambers, pulmonary and systemic circulation, as well as relationship of arteries, veins, capillaries to the heart. Evaluation of the nervous system will identify and discuss major structures of the central nervous system including the brain and spinal cord, peripheral nervous system, and enteric nervous system. For each system, the focus will be knowledge necessary for understanding, utilizing, and appreciating the role of the human body in biomedical and translational research.

ANAT 585 (PHARM 585) Human Anatomy and Development B: Human Development (1) Explores human embryology and organogenesis beginning at the third week of gestation through parturition.

ANAT (PHARM) 585 Human Anatomy and Development B: Human Development (1)
This course will provide a concise but thorough description of embryology of the major systems in the human. It will provide an awareness of how genetics, environment, and maternal-fetal relationships impact on normal human development, and the importance of understanding embryology for biomedical and translational research. An emphasis will be placed on the role of molecular biology in normal embryology and human development. Primary literature will be consulted for a description of major signaling pathways and key signaling molecules associated with each system. Some discussion of abnormal development will be included.

ANAT 586 (PHARM 586) Human Anatomy and Development C: Stem Cell Biology and Regenerative Medicine (1) Exploration of stem cell biology and the role of stem cells in regenerative medicine.

ANAT (PHARM) 586 Human Anatomy and Development C: Stem Cell Biology and Regenerative Medicine (1)
This course will provide an evaluation of stem cell biology and regenerative medicine. In particular, discussions will focus on the five sources of embryonic stem cells (adult stem cells, amniotic fluid-derived stem cells, embryonic stem cells derived using in vitro fertilization technologies, somatic cell nuclear transfer cloning-derived stem cells, and stem cells derived by parthenogenetically-activating oocytes). In addition to providing detailed information on the biology underlying stem cells, group discussions will focus on ethical advantages and disadvantages for each of the five distinct types of stem cells. Work will then turn to current understanding of changes in transcriptome and proteome control of differentiation. As well, discussions will focus on attempts to use stem cells in regenerative medicine. This course will be designed as a mixture of didactic lectures with a particular focus on the current literature. This latter aspect of the course is essential in that much of our current understanding of stem cells has not yet made it into any common text books.
**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

The Pennsylvania State University
Animal Science (AN SC)

AN SC 405 Advanced Canine Nutrition and Management (3) Application of biological principles to the care and nutrition of dogs; interactive discussions of contemporary nutrition and management issues.

AN SC 405 Advanced Canine Nutrition and Management (3)

Animal Science 405, Advanced Canine Nutrition and Management, is a 3 credit senior-level course emphasizing the application of biological principles to the proper care and nutrition of dogs. Students scheduling this course must first complete a junior level course in companion animal care and nutrition. Course objectives are to a) develop an appreciation for the role and importance of the dog in contemporary society; b) develop skills in formulating sound management plans for the selection, breeding, feeding, training, and health care of the dog; and c) encourage independent student thought, written communication, and oral communication of topics related to the care and management of canines. AN SC 405 is one of several “capstone” advanced management courses offered by the Department of Dairy and Animal Science for students with intensive interest in various animal species.

AN SC 413 Transgenic Biology (3) The principles and concepts used to generate genetically engineered animals by pronuclear, knockout, and cloning methods; and applied biotechnology applications.

AN SC 413 Transgenic Biology (3)

The Transgenic Biology course is offered each spring semester for those students interested in learning the concepts, principles, and applications of genetic engineering in animals. The mouse is used as a model system, but the discussion encompasses large animals and commercial applications. Techniques covered are pronuclear, embryonic stem, and somatic-nuclear transfer generated animals. Content also includes the use of morpholinos and RNAi use to “knockdown” gene expression. Other systems discussed are Zebrafish and Xenopus as well as gene analysis by mutagenesis and gene trapping. The course objectives are (1) to provide the student with a working knowledge of the processes involved in functional analysis of gene expression using model animal systems and (2) to give the student understanding for the practical aspects of generating transgenic animals including microinjection, screening, breeding, and phenotypic analysis. Students are typically evaluated using several parameters including exams, presentations of current journal articles, abstracts of current journal articles, and a paper dealing with an aspect of transgenesis in the student’s field of interest.

General Education: None
Diversity: None
Bachelor of Arts: None
AN SC 415 Companion Animal Behavior (3) Detailed study of companion animal behavior; including individual, developmental, and environmental bases of behavior with applied demonstration and discussion.

AN SC 417 Horse Judging (2) Evaluation and selection of halter and performance horses, and presentation of oral reasons.

AN SC 418 Nutrient Management in Agricultural Systems (3) Comprehensive review of nutrient flow in animal agricultural systems, environmental regulations, and environmental stewardship practices.

AN SC 419W Applied Animal Welfare (3) Assessment of management practices impacting animal welfare; devoted to livestock species, companion animals, captive exotic species, and animals in research.

- Bachelor of Arts: None
- Effective: Summer 2013

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AN SC (VB SC 425) Principles of Avian Diseases (3)** Principles of pathogenesis and control of diseases in poultry and other avian populations. Case material used where appropriate.

**AN SC (VB SC) 425 Principles of Avian Diseases (3)**

This course discusses the major diseases of domestic poultry, with etiology, prevention, and treatment reviewed on each disease. Since many of these diseases also affect wild birds and pet birds these are also reviewed. Lastly, avian disease with zoonotic (human public health) potential are also discussed in the course. This course is required by those seeking a poultry minor.
Previous coursework in pathogenic microbiology is beneficial.

General Education: None

**AN SC 429 Advanced Beef Cattle Production (3)**

Application of scientific and business principles to practical production and management issues using case studies or selected live settings.

**AN SC 429 Advanced Beef Cattle Production (3)**

This course was developed to train students to critically evaluate management, facility, and husbandry practices of working beef cattle operations. Students visit owner facilities where they gather necessary information by interacting with the owners and inquiring about the owner’s practices. The students use knowledge gained through previous courses and material covered in class to make recommendations. The students work in teams to present to the owners possible solutions to their problems. Each team will present a 30 minute critical evaluation of each case study with the owners being present. Students interact and answer questions concerning their presentation from the owners, students, and faculty. Students are introduced to the NCBA and Cattle FAX which they can use to stay abreast of beef industry concerns after completion of the class. If available, a field trip to either national or Pennsylvania state agriculture offices will occur.

**AN SC 432 Techniques in Cattle Reproduction (1)**

Demonstration and practice in cattle artificial insemination technique and semen handling. Instruction in reproductive systems anatomy, estrous cycle and estrus synchronization programs.

**AN SC 432 Techniques in Cattle Reproduction (1)**
This course provides instruction in the technique of artificial insemination and the associated applications of this technology. A minimum level of expertise in this technique will be achieved through an understanding of cattle reproductive system anatomy, the estrus cycle and estrus synchronization programs. There will be a significant amount of time spent practicing artificial insemination technique in cows. This will be accompanied by instruction in semen handling and the proper use of the equipment used to store semen and to inseminate a cow. Evaluation will be based on proficiency in artificial insemination technique and semen handling in addition to a written exam. This course is offered during the fall semester by appointment.

AN SC 447 Applied Equine Behavior (3) Theory and application of behavior principles as they apply to horses in free-running and domestic situations.

AN SC 447 Applied Equine Behavior (3)

Applied Equine Behavior is an advanced course in equine science that examines the behavior of horses in free-running and domesticated situations. Outcome-based course objectives are as follows: 1) develop a working repertoire of behavior terminology and principles particularly as they apply to the horse; 2) apply critical thinking skills toward understanding and predicting behavior in horses under intensive management as it is modified from instinctive behavior seen in free running horses; 3) critically analyze and compare various training theories; 4) develop a new expertise in careful observation and analysis of behavior; 5) practice communication skills and increase information literacy, particularly in the study of behavior.

This course presupposes previous coursework in equine science or biology and complements other courses such as horse production and management, animal behavior/sociobiology, physiology, and genetics. Applied Equine Behavior is [will be]
a supporting course for the Animal Science Major. Students will be able to make full use of the University horse herd and available data recording and analysis instruments and software.

AN SC 451 Dairy Systems Analysis (1-2 per semester/maximum of 2) Students will evaluate all systems of a working dairy farm business.

AN SC 451 Dairy Systems Analysis (1-2 per semester/maximum of 2)

This course will provide an overview of all areas of dairy business management. This course is designed to complement the dairy production courses and is meant to train students to organize material in a farm evaluation format. Various instructors (within their areas of expertise) as well as industry experts and dairy producers will be utilized to provide students with current concepts in dairy management. Requirements of the course include working in teams to visit, evaluate and make a presentation about a dairy farm business including an action plan for improving the business.

AN SC 457 Equine Reproduction and Breeding Farm Management (3) Advanced aspects of equine reproduction will be covered, including collection of semen, processing it for shipment, and insemination of mares.

AN SC 457 Equine Reproduction and Breeding Farm Management (3)

Equine Reproduction and Breeding Farm Management is intended to expand on the knowledge of equine reproduction and breeding farm management acquired in other classes. The students will get hands on experience in artificial insemination of mares and semen collection of stallions.

Having completed the course, students will be able to:
A. Collect semen from a stallion.
B. Assess seminal characteristics and process the chilled semen to be sent to another farm.
C. Artificially inseminate a mare.
D. Apply scientific principles to make the decisions necessary to manage an equine breeding facility. The information covered will include but not be limited to reproductive management of the mare and stallion, foaling, and neonatology.

Evaluation will typically be based on written tests, research and presentation of a selected topic, and laboratory attendance and participation.

AN SC 467W Equine Nutrition and Feeding (3) Equine gastrointestinal anatomy and physiology; energy and nutrient requirements for body functions; applied interrelationships between nutrition, health, and performance.

AN SC 467W Equine Nutrition and Feeding (3)
AN SC 467W, Equine Nutrition and Feeding, is a 3 credit junior or senior-level course emphasizing the application of biological principles to the proper nutrition of horses. Students scheduling this course must first complete AN SC 301. Course objectives are that upon completion of the course, students should be able to a) Apply an understanding of form and function of the equine gastrointestinal tract to actual feeding management problems associated with athletic performance or health concerns; b) Describe the nutrient and energy requirements of horses in different physiologic states and apply these in diet evaluation and formulation; c) Communicate to clients, customers and peers important information about equine nutrition, enabling them to improve the health and performance of their horse without having to take a course on equine nutrition. Each student will complete a 3000 to 3500 word paper on how some aspect of nutrition might be applied to improve equine health or performance. The writing project will involve an oral presentation, multiple drafts and require students to review and provide feedback on each others’ work. Students will be evaluated via a series of assigned homework, exams, class participation, and the overall writing project.

AN SC 477 Riding Instructor Training (1) Management of equestrian riding lessons, teaching techniques, lesson plans, program planning, time management, and handling of mounted groups.

AN SC 477 Riding Instructor Training (1)
The Equine Riding Instructor Training course relates to teaching, equestrian skills, developing lesson plans, program planning, events coordination, staff management, time management, and handling of mounted groups from beginners to more advanced level riders. There are many opportunities for riding instructors in the equine industry throughout the United States. Career areas include breed associations, cooperative extension, and equine facilities/stables. This course will help give students the tools to be safer and better-prepared equine riding instructors. Successful completion of the course implies students will be able to: Conduct horse riding lessons at all horsemanship skill levels, understand safe horsemanship; manage large mounted equestrian groups; and develop appropriate lesson plans.

AN SC 500 Foundation Readings in Animal Science (1 per semester/maximum of 2) Scientific articles that have significantly impacted the animal sciences will be read and discussed.

AN SC 500 Foundation Readings in Animal Science (1 per semester/maximum of 2)

This course is intended for graduate students in the animal sciences. The Course Objectives are:
1. To discuss the attributes of a "classic" or foundation paper;
2. To discuss papers that, in hindsight, affected our thinking and practice in the animal sciences and industries;
3. To encourage students to gain insight into a variety of sub-disciplines within the animal sciences.

The class will meet for one period each week. Class format is a guided discussion. Selected guest instructors will be invited some weeks based upon the selected topic, and to add a broad perspective. The final grade will be based upon class participation (50%) and student performance on a final exam covering the class discussions (50%).

AN SC 502 Scientific Scholarship (2) Consideration of the scientific method and thinking relative to scholarship, grantsmanship, and the mechanism of grantsmanship.

Scientific Scholarship (2)

AN SC 506 (NUTR 506) Ruminology (3) Physiological, biochemical, and microbiological activities occurring within the rumen and the relation of rumen function to animal response.

ANTH 408 Anthropological Demography (3) Analysis of demographic studies in traditional and very small populations.

ANTH 408 Anthropological Demography (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines population-related problems from an anthropological perspective. Special emphasis is placed on ecological and economic approaches to the study of population dynamics in small-scale, preindustrial societies. This is an advanced undergraduate course that builds upon introductory anthropology and leads the student into more difficult demographic problems that are linked with economics, politics, religion and other cultural factors that shape population and population change. While the course is designed to introduce any of the basic analytical methods of demography, attention is focused primarily on fundamental theoretical issues concerning population growth, resources, fertility, mortality, age structure, and household demography in traditional societies. Data is drawn from ethnographic studies of living populations, from historical demography, and from paleodemography (the reconstruction of population patterns from skeletal samples). There will be three take-home problem sets. These will be a mixture of short essay questions and simple numerical exercises that can be solved on a pocket calculator or a spreadsheet. This course fulfills a 3 credit 400-level requirement for the Anthropology major and minor.
ANTH 410 Osteology (4) Introduction to the systematic study of the human skeleton from an evolutionary developmental biological perspective.

ANTH 410 Osteology (4)  
This course introduces students to the aspects of the human skeleton and dentition that are of anatomical, archaeological, forensic, and developmental significance. Topics include the identification of skeletal and dental structures; the distinction between normal and pathological bone; the estimation of age, sex, and stature from skeletons; bone metabolism; growth and development; and the functional aspects of musculoskeletal and dental systems. Up to one-half of the course is spent on bone identification and skeletal anatomy. Lectures are supplemented by labs that provide practical experience in the identification of individual bones and anatomical structures, age and sex estimation, and the differentiation of abnormal from normal bony structures. It is absolutely essential for students to attend labs to familiarize themselves with bone specimens and casts. At the close of this course, students are expected to be able to recognize human bones and be familiar with anatomical terms, the bony landmarks that define their shape, and the relation of those bones with various soft-tissue structures. Students will have a basic grasp of bone growth and development, as well as how to identify an individual’s general characteristics from the skeleton, such as age, sex, and prior life-history events including disease and trauma. The course fulfills a 400-level elective for the Anthropology (BA) major and minor, as well as the Archaeological Science and Biological Anthropology (BS) degree programs.

ANTH 411 Skeletal Forensic Anthropology (3) An introduction to anthropological forensic science with an emphasis on what can be learned from human skeletons and archaeological recovery methods.

ANTH 411 Skeletal Forensic Anthropology (3)  
This course is a survey of forensic anthropology focusing on human skeletal remains and archaeological recovery methods. Emphasis is placed on field methods used to collect human remains from surface and buried contexts; taphonomic processes; estimating age, sex, stature, and ancestry from human skeletons; recognizing signs of trauma and scavenger damage; and identifying individuals from skeletons. Lectures are accompanied by class discussions and complemented by practical lab sections closely tied to lecture materials. There will be two exams, a midterm and a final, and students are responsible for preparing a poster and presenting a semester-long research project. This course is related to existing ANTH 410, Human Osteology, and proposed course ANTH 413, Molecular Forensic Anthropology. It fulfills a 400-level requirement for the anthropology major or minor, as well as the university's Forensic Science major.

ANTH 412 Settlement Demography (3) Examination of the demography and ecology of human settlement systems in the preindustrial past.

ANTH 412 Settlement Demography (3)  
This seminar will examine the population dynamics of human settlement systems in preindustrial societies, living, historic, and prehistoric. The focus will be on subsistence-level agrarian settlements, but some attention will also be paid to settlement patterns in hunter-gatherers, in market economics, and in complex societies. After reviewing basic assumptions and problems of working with spatial data, the course will examine processes determining settlement size, composition, and location on the micro-level (i.e. that of individual households, farmsteads, hamlets, and villages) and then pass on to regional patterns of transport, migration, and defense. The processes of site colonization, settlement expansion and contraction, site abandonment, and re-colonization will all be considered in detail. Since human settlements are always non-randomly distributed across spatially-heterogeneous landscapes, some basic landscape ecology will be presented in the course. Some fundamentals of geostatistical analysis will also be taught, although the course is not intended to be a survey of quantitative geography or spatial analysis. Rather, it is designed to be a more specialized follow-up to ANTH 408 (Anthropological Demography); the new course builds upon the basic explored in
ANTH 408 by extending them into the spatial domain. During the last quarter of the semester, students will split into 2-3 teams, each of which will re-analyze settlement data from a region and time period of its choice for presentation to the rest of the class. The proposed course will provide 3 elective credits toward the undergraduate major and minor, and will be open to graduate students as well. The overall aim is to produce scholars who can think in creative ways about the dynamics of settlement systems in their own reading and research. The course should be of interest to archaeologists, anthropological demographers, ethnologists, and other students interested in human population science, especially as it relates to preindustrial society.

ANTH 413 Molecular Forensic Anthropology (3) An introduction to the field of the application of DNA methods to estimating forensically useful phenotypes.

ANTH 413 Molecular Forensic Anthropology (3)

This course is a survey of forensic anthropology focusing on human genetic methods. Emphasis is placed on laboratory methods for analyzing DNA variation, the genomic and geographical distributions of genetic variation, estimating genetic ancestry, sex, pigmentation, facial features, and other traits. Lectures are accompanied by class discussions and complemented by practical lab sections closely tied to lecture materials. There will be three exams and students are responsible for preparing a poster and presenting a semester-long research project. This course is related to existing ANTH 411, Skeletal Forensic Anthropology. It fulfills a 400-level requirement for the anthropology major or minor, as well as the university’s new Forensic Science major.

ANTH 421 Intro to Geospatial Science in Anthropology and Archaeology (3) This course is a practical, data driven, introduction to applications of Geospatial tools in anthropological and archaeological research.

ANTH 421 Intro to Geospatial Science in Anthropology and Archaeology (3)

As anthropologists, we are interested in humans, how humans interact with each other, and how that interaction is modulated by space and place. The purpose of this course is to introduce students to the basic concepts of spatial theory in anthropology, and the use of GIS (Geographic Information Systems) as a tool in anthropological and archaeological research designs. Students will gain familiarity with geospatial technologies, their use as a tool for data creation, storage and manipulation, and a broad array of data analyses. The course is relevant to anyone documenting or investigating spatial dimensions of human social behavior. Students will gain familiarity with GIS software, its use as a tool for data

The Pennsylvania State University
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ANTH 422 Meso-American Archaeology and Ethnography (3) Survey of ethnohistorical and ethnographic patterns of Meso-American society; origin and development of ancient civilization in Mexico, Guatemala, and Honduras.

ANTH 424 Andean Ethnology and Archaeology (3) Cultures of the Andes from earliest settlements to Inka Empire; includes discussion of life in modern Andean communities.

ANTH 424 Andean Ethnology and Archaeology (3)

(BA) This course meets the Bachelor of Arts degree requirements.

When the Spanish conquistadors arrived in the Andes in 1532, they were astonished by the complexity and grandeur of the Inca Empire, which stretched along western South America incorporating a multitude of different societies that occupied a seemingly inhospitable landscape with coastal deserts, rugged mountain chains, and dense jungles. This course traces out the history and development of Andean cultures from the earliest peopling of the continent to the rise and fall of the Inca Empire. Using archaeological, historical, and ethnographic sources, students will learn about the relationship between Andean societies and their environments and landscapes, as well as the economic, social, and political changes that transformed small egalitarian communities through time into large, stratified states. Through the course, students will not only gain a strong background in pre-Columbian Andean history but will also hone their skills in the use of different lines of evidence to reconstruct the past while learning to critically evaluate existing interpretations. All students are expected to participate actively in discussions. Lectures will be supplemented by illustrations (slides, handouts, videos), and students will learn how societal dynamics are expressed in material culture and in the organization of architecture and settlements. Grades will be based on the results of three exams, a short paper, and participation in discussions. The course complements existing courses at the same (400) level on the archaeology of Mesoamerica (ANTH 422) and North America (ANTH 423). It continues the discussion (at a higher level) of some of the themes covered in ANTH 008 (Incas, Aztecs, Mayas). It fulfills the archaeology credits requirement for the major and is one of the 400-level
courses that can be used for the minor. For students outside the major, it may be used to meet the Other Cultures or the Social Sciences requirement in Bachelor of Arts programs.

ANTH 426W Archaeological Laboratory Analysis (3) Scientific laboratory methods used in the analysis of ceramic and lithic artifacts.

ANTH 426W Archaeological Laboratory Analysis (3)

This course, Archaeological Laboratory Analysis, employs experiential learning to teach students how to ask and answer archaeological questions using real data. While students learn the fundamentals of interpretation in other courses using already processed computer (and internet) assembled data sets, this is not how archaeological data are analyzed. Archaeological data emerge from the ground covered with dirt and the analyst must learn how to identify and measure their important attributes, and interpret what they mean. This class will provide a hands-on learning experience where students learn how to examine and use physical remains to reconstruct and interpret human behavior.

Students in the Anthropology program currently learn this critical step on an ad hoc basis by working with faculty on individual research projects. This approach, while effective, is neither systematic nor comprehensive. This is a course on analytical systematics. It provides students with an introduction to problem formulation, artifact processing, artifact cataloging, attribute identification, artifact classification, analysis, data illustration and photography. At the same time, students will be introduced to two separate and distinct approaches to interpretation: 1) morphological diacratic analysis, and 2) direct experimentation and replication.

Students will be graded on the completion of nine laboratory exercises. These exercises will require that students identify the research question being addresses, the theoretical assumptions used in the analysis, the data sample, the analytical method(s) employed, and the conclusions reached. The exercises will also request that students identify personal insights and difficulties encountered during the analysis.

This course fills a vital position in training undergraduate majors by providing them with practical training in research design and data analysis. It also provides the logical link between our general courses in prehistory, our courses on archaeological theory, and our method courses on field methods of data recovery. All of these courses intersect in the archaeological laboratory where data interpretations are made and new information about the past takes shape. In addition to contributing to both the BA and BS undergraduate majors and minors, this course will also provide a framework for training graduate students who enter the program with minimal field and laboratory training in archaeology.

**ANTH 429 Paleoethnobotany (3)**

Introductory course in paleoethnobotany, the study of the interrelationships between people of the past, natural environment, and plant resources.

This course is a survey of the fast-developing field of paleoethnobotany-- also known as "archaeobotany" or "phytoarchaeology"-- that involves the extension of ethnobotany into the past, emphasizing archaeological plant remains and study of the historical dimensions, complex dynamics, and myriad interrelations between people and plant resources. The primary goals of the course are 1) to promote understanding of the vital interplay between the natural environment and human societies, with their diverse systems of belief and resource use, especially those of the past but with relevance to the present; and 2) to foster an appreciation for what modern paleoethnobotany involves as a subdiscipline or specialization in archaeology, related to both anthropology and the plant sciences.

The course begins by considering the history and nature of the field, including parallel developments in plant biology. The first half of the semester entails weekly sessions that focus attention on the plant organism, sources of archaeobotanical data, taphonomic issues, and the major classes of archaeobotanical materials. Fundamental issues involved in fieldwork, and the variety of laboratory concerns and methodologies specific to paleoethnobotany as whole and with regard to individual subareas are addressed. Individual laboratory sessions highlight the different preservation states that affect ancient plant materials, as well as methods of identification and analysis. In the second half of the semester, attention is focused on theory and application, issues central to and/or addressed by paleoethnobotany as a subdiscipline of archaeological anthropology.

The course follows a seminar style, with substantial participation by students, including individual presentations, laboratory study, and analysis. Learning is augmented and enhanced by use of various visual aids, along with modern comparative specimens and actual archaeological plant remains.

ANTH 429 will fulfill 3 credits of the additional courses in the Anthropology minor and majors. Anth 002 is a prerequisite.

**ANTH 431 Advanced Geospatial Science for Anthropologists and Archaeologists (3)**

This course is an intensive, data driven, treatment of the use of geographic information systems in anthropological and archaeological research.

**ANTH 431 Advanced Geospatial Science for Anthropologists and Archaeologists (3)**

As anthropologists, we investigate how humans evolved, behave, define groups, and interact socially. Examining how these processes are shaped by space and place is central to the anthropological enterprise. The use of geospatial science in anthropological and archaeological research is now commonplace. Geospatial technologies are now intimately involved in anthropological and archaeological research designs. The course objective is to expose students to advanced concepts and techniques of conducting geospatial science research in anthropological and archaeological contexts. The course is a continuation and development of the introductory geospatial science course and it will fulfill three credits of the requirement in both the major and minor in Anthropology. Students will develop an in depth understanding of...
anthropologically and archaeologically tailored geospatial project design and implementation. Students are expected to complete the work for the course in one of several computer labs across campus that has the appropriate software installed.

ANTH 432 Environmental Archaeology (3) Introductory course in Environmental Archaeology, with emphasis on method and theory in the subfields archaeobotany, pedoarchaeology, and zooarchaeology.

ANTH 432 Environmental Archaeology (3)
This class is a survey of the fast-developing field of environmental archaeology, or archaeobiology, which encompasses archaeology, the earth sciences, plant biology, and zoology. Environmental archaeologists apply techniques and insights obtained from these fields to questions concerning the relationships among humans, cultural systems, and the natural world, as reflected in the archaeological record. The general goal of the course is to promote understanding of the vital interplay between human societies, with their diverse systems of belief and cultural practices, and the natural environment, with emphasis on human interactions with biotic resources. Instruction is by lecture, supplemented by laboratory sessions emphasizing hands-on experience. Weekly topics are explored through selected readings and class discussions, augmented with laboratory assignments (practical exercises) variously focused on specific types or classes of archaeobiological materials.

ANTH 432 will fulfill 3 credits of the additional courses in the Anthropology minor and major, as well as the Archaeological Science major. Anth 002 is a prerequisite.

General Education: None

ANTH 433 Archaeological Ethics and Law (3) Introductory course that examines prominent ethical and legal issues in archaeology integral to modern applied research and practice.

ANTH 433 Archaeological Ethics and Law (3)
This course explores the ethical, legal, and practical dimensions of modern archaeology through a consideration of the following topics: archaeology as a profession; archaeological ethics; the relationship between archaeology and others (the public, ethnic groups, avocationals, collectors, etc.); international and national approaches to archaeological heritage management; the antiquities market; maritime law, underwater archaeology, and treasure hunting; cultural resource management in the United States; and archaeological outreach and education. Students are introduced to a variety of legal and ethical issues in archaeology that span local to international scales. Through lecture, discussion, and readings, students will consider the archeology and ethics of ownership and stewardship, including issues centered on intellectual property rights, representation, repatriation, and reburial of cultural properties. They will be able to identify the various stakeholders in contemporary archaeology, and assess their values and interests in issues such as the treatment, ownership, and disposition of human remains, heritage sites, submerged cultural resources, and antiquities. They will consider growing problems with illicit collecting and excavation, illegal trade, and global concerns centered on the international trafficking of antiquities, and will be variously exposed to relevant national and international legislation involving cultural patrimony and management of antiquities, including international treaties such as the 1970 UNESCO Convention on Cultural Property, and related pieces of US federal legislation. The 1990 Native American Graves Protection and Repatriation Act (NAGPRA) and the Archaeological and Historic Preservation Act (ARPA) of 1974 figure prominently in the course. In general, upon completion of the course students will come to have a stronger appreciation of archaeological ethics and "archaeopolitics"; they will have a good understanding of the U.S. Secretary of the Interior's standards (36CFR61) for professional archaeologists and will be able to assess and evaluate contemporary issues of archaeological ethics and law in the context of modern practice.

ANTH 435 (IL) Ancient Economy (3) The course examines the comparative organization and development of ancient economies in both the Old and New Worlds.

ANTH 435 Ancient Economy (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines the origin and development of ancient economy from its earliest beginnings to the advent of complex monetary economies that existed prior to the industrial revolution. It examines the common economic structures found in ancient foraging, pastoral, and agricultural societies and how those structures were modified and transformed as these societies were integrated into more complex monetary economies. The goal of the course is to develop a comprehensive understanding of ancient economies, the function and purpose of their economic structures, and how those structures of production and distribution were modified and retained within the modern economies that we live in today. While the economy is often approached as its own field of study, this course shows how and why the economy was embedded in social, political and religious institutions that were so prominent in the ancient past. The course will discuss the domestic and institutional economy, the origin and organization of ancient market systems, the development of urban centers and the economies that supported them, the role of merchants in ancient societies, and origins of many of our 21st century institutions including money, banking, insurance, and the organization of craft production before the industrial revolution. The class draws upon the rich literature in archaeology, history and ethnohistory that examines the structure of ancient societies. It employs a cross-cultural perspective to model ancient economies and to investigate how social forces influenced their development. A range of different historic and prehistoric societies are discussed each semester to illustrate the cross-cultural perspective. The societies discussed vary from semester to semester and include, but will not be limited to, the ancient Sumerian, Assyrian, Greek, Roman, Mongol, Aztec and Inka societies. Examples will be selected that include societies at different scales of complexity from simple hunting and gathering groups to pre-industrial states. The course fulfills the Social and Behavioral requirements in Liberal Arts. It also fulfills specific major and minor requirements for the BA in Anthropology, the BS in Archaeological Sciences, and the BS in Bioanthropology. The course is also relevant for students in CAMS, History, and Ancient History that are interested in a comparative study of New and Old World civilizations.

ANTH 441 (IL) From Stone Ax to Uzi: Tradition and Change in the New Guinea Highlands (3) This course explores cultural change and innovation among tribal peoples of Highland New Guinea from stone tool technology to globalization.

ANTH 441 From Stone Ax to Uzi: Tradition and Change in the New Guinea Highlands (3) (IL)

The indigenous peoples of Highland Papua New Guinea were unknown to the outside world until the 1930s and began to be seriously influenced by European contact only after the First World War. At first contact with Europeans, the million or so people living in the Highlands used a stone tool technology, had no knowledge of the wheel, and lived in small, politically and economically independent local groups. They presented a major population engaged in a way of life typical of human society in a technologically simpler past, and have been crucial in anthropology’s discussion of the general characteristics of human culture and institutions. The study of these cultures also provides an opportunity to explore the processes through which these peoples have assimilated thousands of years of technological, political, and economic innovation in a very brief period, while simultaneously maintaining and recreating their cultural identity, despite the impact of colonial rule and global influences. Apart from the specific history of these populations, the course will also give students insight into the processes of globalization and internationalization that necessarily effect changes in traditional cultures, and will require that they consider the advantages and disadvantages that accrue from these processes.

Among the topics this course will cover are traditional and current approaches to dispute settlement, economic changes that entail moving from subsistence agriculture as the basis of the economy to cash cropping for a global market, the ecological effects of extractive industries such as mining and how those effects are translated into social and cultural processes.
domains, the reorganization of gender roles, the incorporation of politically independent tribal units into a centralized, powerful state, and the demise of traditional religion with the conversion to Christianity.

Students will be evaluated on contributions to class discussion, essay exams, a term paper and a brief oral presentation based on that paper.

The course will provide support and depth for more general courses dealing with warfare, gender, religion, politics and economics and specific understandings for programs devoted to exploring cultural variation and modernization.

ANTH 444 Primitive Warfare (3) Critical overview of the ethnography and theory of primitive warfare.

ANTH 444 Primitive Warfare (3)

Anthropology 444 is concerned with the phenomenon of lethal group violence in tribal societies so called “primitive war”. Through lectures, readings, and research projects, this course reviews anthropological approaches to the study of primitive war, focusing both on ethnographic examples and on theoretical approaches. The course covers topics such as explanations, traditional and modern, for the existence of warfare; the primate background to human warfare; and the social causes and individual motives leading to warfare in tribal societies; as well as its consequences for those societies. Students become familiar with both general and particular manifestations of primitive warfare, and are exposed to individual ethnographic cases of primitive warfare as they motivate a variety of theoretical paradigms.

All students are expected to attend all lectures and to complete all weekly readings. At the last class meeting of each week, a rotation of students are assigned to organize and direct the class discussion of the week's readings in the light of the lectures earlier in the week. Performance in this activity constitutes 40% of the student's grade. Another 40% is earned in the research term paper each student must prepare. The final 20% of the grade is based on overall student contribution to class discussion, particularly during those weeks when the student is not a discussion leader. There is no final examination. This course can be used to fulfill major and minor requirements in Anthropology. Because warfare was and often still is a major activity in most tribal societies, this course provides an important complement to area-focused ethnography and archaeology courses such as ANTH 241 (Peoples and Cultures of Highland New Guinea), ANTH 422 (Mesoamerica), ANTH 423 (North America), ANTH 425 (American Southwest), ANTH 440 (Lowland South America), and ANTH 447 (Africa). This course is also relevant to topically focused course such as ANTH 450 (Comparative Social Organization), ANTH 451 (Economic Anthropology), ANTH 454 (Political Anthropology), and ANTH 456 (Cultural Ecology). On the graduate level, this course addresses central topics covered in ANTH 522-523 (Ecological Theory in Anthropology), ANTH 556 (Social Organization of Traditional Societies), and ANTH 559 (Behavioral Anthropology).

ANTH 445W Ethnographic Film (3) Comparisons of written and visual ethnography; critical assessment of ethnographic film; cross-cultural variation.

ANTH 445W Ethnographic Film (3)

Students will be presented with both written and filmed ethnographic material dealing with a number of cultural subsystems (e.g., kinship and family relations, religion, political systems) and with a number of different world cultures. The aim of the course is three-fold: 1) to convey through visual anthropology the complexity and inter-relations of cultural subsystems, which is often difficult to do in written sources; 2) to develop the skills of critical viewing of ethnographic film; and 3) to provide students with critiques of their written work that will enable them to learn and practice the skills of clear, organized and convincing writing. Towards these ends, students will be expected to read and view weekly assignments for selected topics, to write twelve critical essays that compare the written and filmed sources, and to evaluate the aims, effectiveness, and methods of the films. Essays will be graded for both content and form and will provide a basis for class discussion. Students will also be required to write a term paper focused on a particular ethnographic film of their choice (one not shown in class) supplemented by additional research. As an aid in the writing of the paper, at least one class period will be devoted to learning how to do library research in Anthropology.

This course will complement other courses in Anthropology such as ANTH 045 and ANTH 001. The course can be used to fulfill a requirement in both the major and minor in Anthropology, and will fulfill both a Writing Intensive requirement and a Bachelor of Arts social/behavioral science requirement. It will also provide students in other departments with the opportunity to study aspects of diverse, non-western cultures.

The Pennsylvania State University
ANTH 446 Mating and Marriage (3) An examination of human mating mainly from the viewpoint of behavioral ecology, centering on the species-typical institution of marriage.

ANTH 446 Mating and Marriage (3)
This course is an examination of human mating and marriage mainly (although not exclusively) from the viewpoint of evolutionary behavioral ecology. Its central concern is the species-typical and uniquely human institution of marriage. Why do all human societies recognize this peculiar institution, whose social and biological functions, apparently obvious, become mysterious on close examination? What, exactly, is marriage? What are its consistent characteristics and attributes—or does it have none? How are spouses chosen, and by whom? What does being married imply for the behavior of the spouses, and that of their children and other relatives? What are the evolutionary scenarios that might have led us to marriage? Although sexual behavior is clearly a key element in answering some of these questions, and receives considerable attention, this is not a course on human sexuality. Nor is it a course on kinship, even though kinship is also crucial to understanding marriage and also receives a good deal of attention. Rather, this course attempts to bring to bear on this central social institution bodies of knowledge from the biological and social sciences that may contribute to understanding how and why marriage arose as a universal feature of human societies, and how and why it is perpetuated in contemporary societies. We begin the semester with the posing of the central problem—what is marriage and why do we have it? For about half the course, we approach this question from an evolutionary, sociobiological point of view: We look into the biological background of human mating—its evolutionary history, its physiology, its behavioral ecology, etc. as we go through a semi-popular book on the subject by a biological anthropologist. Next we turn to more academic readings, old and new, that further elucidate the ecological constraints and fitness consequences of various behaviors relating to mating and mate choice, child rearing, etc., in terms of reproductive success, survivorship, etc. In the second half of the course, we take a more social anthropological point of view. We look at what anthropologists have written about marriage and marriage customs over the years. We try to relate the traditional social anthropology to more modern human behavioral ecology. Finally, in a research project report, each student examines some specifics of marriage as it is manifested in ethnographically known societies. In these reports we are particularly interested in how and by whom mates and spouses are chosen, and who contributes what to the raising of children.

ANTH 448 (AM ST 448) Ethnography of the United States (3) Ethnographic descriptions of various dimensions of life in the United States.

ANTH (AM ST) 448 Ethnography of the United States (3)
Ethnographic descriptions of various dimensions of life in the United States. The course covers uses of ethnography in American Studies toward an understanding of social and cultural communication and performance. The application of ethnography and concepts of cultural anthropology to complex societies such as the United States is discussed. The course teaches students to use ethnographic methods for research of American society and culture. Attention is given to the ethics and issues of ethnographic fieldwork. The course satisfies the "area" requirement in "society" for American Studies majors.

ANTH 450 Comparative Social Organization (3) Social structure and cultural change among nonliterate societies.

ANTH 450W Comparative Social Organization (3) Social structure and cultural change among nonliterate societies.

ANTH 453 Anthropology of Religion (3) Traditional and modern religions and historical and contemporary religious movements from an anthropological perspective.

ANTH 453 Anthropology of Religion (3)

( BA ) This course meets the Bachelor of Arts degree requirements.

This course will examine the origin, evolution and social function of religion from a cultural materialist perspective. It will begin with a general discussion of an anthropological approach to the study of religion, using numerous examples from different cultures for purposes of illustration. Following a discussion of several topics relevant to the anthropological study of religion --including magic, rituals, witchcraft and mythology-- the course will focus on the relationship between politics and religion: first discussing the role of religion as a mechanism of social and political control, and then examining the role of religion as a vehicle of sociopolitical change in the form of what anthropologists call revitalization movements. This course links to courses on the sociology, history, and philosophy of religion, to courses on intellectual history, and history of social sciences. Course evaluation will be based on 3 take-home essay examinations. Students will give the instructor 3 questions at indicated times; the instructor will return one question; the student will write an essay on the indicated question. Attendance is mandatory. This course will fulfill a 3 credit 400 level requirement for the Anthropology major and minor.

General Education: None
Diversity: None
Bachelor of Arts: Other Cultures and Social and Behavioral Sciences
Effective: Fall 2003

ANTH 455 Global Processes and Local Systems (3) Ethnographic, comparative, historic, evolutionary treatment of global economic, political, and cultural processes and their consequences for local systems.

ANTH 455 Global Processes and Local Systems (3)

( BA ) This course meets the Bachelor of Arts degree requirements.

Students will learn about global economic, political, and cultural processes and their consequences for local systems, how anthropologists do ethnography in the modern world of villages and factories; varieties of anthropological approaches and theories and how to assess them and how to critically assess ethnographic work.

Students will write a series of book reviews in which they critically analyze the works they read in the course. Each review will present the main argument of the work; the theoretical assumptions the argument entails; the evidence the author used, the methods the author used to develop the evidence; the relationships among theoretical assumptions, arguments, evidence, and methods; and conclusions. Each review will assess the validity and reliability of the findings and the relationships of findings, arguments, and assumptions to the conclusions. These reviews will direct the student's attention to the salient points of scientific ethnography and anthropological theory with specific examples. Grades for the reviews will be assigned on the basis of how well each component of the review is completed, short in-class writing assignments to test reading comprehension and orient discussion, and a synthetic essay.

ANTH 457 (US;IL) (J ST 457, SOC 457) Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement.

ANTH (J ST/SOC) 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL)

This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State’s Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields, promote intercultural understanding, and meet US and IL requirements. Materials will be interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research. The course will be offered approximately once a year.

ANTH 458 Ethnographic Field Methods (3) Course introduces students to ethnographic field methods, includes student projects and simple analyses that don’t require statistical sophistication.

ANTH 458 Ethnographic Field Methods (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed to introduce you to some (not all) ethnographic field methods. It will include actual projects you will have to carry out and other material that will make you a better ethnographer, such as how to pose questions that can be answered, how to select an appropriate sample for a project, how to take and use field notes. Because the emphasis is on field methods, we will do only simple analyses that don’t require any statistical sophistication (e.g., descriptive statistics, chi square tests).
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ANTH 459 Applied Anthropology (3) A survey of the development of applied anthropology and the current issues facing anthropologists working in non-academic settings.

ANTH 459 Applied Anthropology (3)

This course surveys the development of applied anthropology and the current issues that face anthropologists as they work in nonacademic settings.

Topics covered for 3 weeks each:
- The roots and place of applied research in contemporary anthropology doing applied research Development--defined and evaluated Applied anthropologizing and contemporary problems in North America career. In this class students will learn what it means to be an applied anthropologist and to do anthropology outside of the academic setting. We will learn the historical development of applied anthropology and some of the special tools (and methods) applied anthropologists use in their work. We will also focus on the area of development and the role anthropologists play in their role. The students will be presented with a range of topics including applied anthropology's role in development, its impact on local communities, and its relevance to global issues.
- The study of disease genetics is important for students preparing for graduate work in medicine and other health professions as well as for graduate studies in molecular and evolutionary genetics and related areas, including biological anthropology and bioethics. This course is relevant to requirements or appropriate electives for life science majors and graduate students (check with your academic advisor). Over the years, it has proven to be excellent preparation for subsequent graduate and professional work in these areas. The course is offered most years, in the fall semester.

Depending on enrollment and other factors, the course may include graded homework or other components, but evaluation is predominantly based on exams during the semester and a comprehensive final. This course is cross-listed as ANTH 460 and BIOL 460, but there is only one course, at the same time and place, for all students no matter how they register. In some years, a 4-credit Honors version is offered (ANTH 460H/BIOL 460H), that is identical to 460 but with an additional class period each week involving additional written and presentational assignments and term projects, along with the regular 460 exams, that combine to determine the final grade. Total enrollment is capped at about 100 students.

Effective: Summer 2002
Prerequisite:

ANTH 460 (BIOL 460) Human Genetics (3) The human genome, its variation, origins, and relation to disease and other traits.

ANTH (BIOL) 460 Human Genetics (3)

The course considers many examples derived from the study of the genetics of human disease, and includes most general areas of interest, including simple Mendelian disorders, and complex chronic diseases such as cancer and cardiovascular disease, and variable special topics including immunogenetics and the genetics of imprinting or other processes. The course usually also touches briefly on the nature of forensic genetics and the problem of making inferences from individual genotypes. Finally, the course considers the bioethical and societal issues involving contemporary human genetics. The study of disease genetics is important for students preparing for graduate work in medicine and other health professions as well as for graduate studies in molecular and evolutionary genetics and related areas, including biological anthropology and bioethics. This course is relevant to requirements or appropriate electives for life science majors and graduate students (check with your academic advisor). Over the years, it has proven to be excellent preparation for subsequent graduate and professional work in these areas. The course is offered most years, in the fall semester.

Effective: Fall 2012
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ANTH 460H (BIOL 460H) Human Genetics (4) Gene mapping in humans; molecular basis of genetic disease; genomic structure; immunogenetics; and genetic evidence for human evolutionary history.

ANTH (BIOL) 460H Human Genetics (4)

Students will explore interesting normal or pathological variation to understand first its biological nature, then its epidemiological distribution, genes and genetic mechanisms associated with the trait, phylogenetic origins or comparison, and the nature of relevant genotype-phenotype relationships. Alternatively, students may explore methods for identifying and characterizing gene action or structure, or historical subjects related to human variation and evolution. Ethical and societal aspects of these issues will be considered as well. Time will be taken for faculty or students to read and present current important papers appearing in the literature, relevant to the current course topics. As an Honors course, we will have the time, and the students the dedication, to pursue the chosen topic(s) in much greater and more rigorous detail than is possible in the usual lecture or even seminar course format of Human Genetics 460 which, while presenting material at a sophisticated level, will not have time to explore the more subtle, problematic, or challenging aspects. The students who enroll for this course will be given a description of the approach and the intended general topic, on a course web page or by email when the instructor learns they have registered. The nature of the course will be
described including semester-specific themes or focus that will apply (if any). Requisite background reading will be
identified so students will know what will be expected of them. Some prior reading will be assigned, so that we can begin
the semester with a common basis in background. Students will be evaluated on the quality of their project work,
including writing ability, presentation ability, and depth of thought. Several written assignments will be given and graded
for content and expression quality. Although students will take regular Human Genetics 460 lectures, they may be given
separate exams (corresponding to those given in the regular course) that will allow more freedom of expression than
multiple-choice exams or homework assignments. Depending on the workload in any semester, there may be a separate
written take home synthetic essay final exam. The Honors session each week will be highly interactive rather than passive,
and students will be graded on attendance, participation and whether they have done assigned work in advance of the
class. Students will be expected to have the stipulated background knowledge of biological anthropology, evolutionary
biology, statistics and genetics. This course should count as 4 credits toward additional courses in biological anthropology
required for the Anthropology major.

ANTH 461 Molecular Anthropology (3) Provides framework to understand current issues in biology, genetics, and
anthropology as they relate to the evolution of our species.

ANTH 461 Molecular Anthropology (3)
The aim of this course is to provide students with the framework to understand current issues in biology, genetics, and
anthropology as they relate to the evolution of our species. Basic methods in molecular biology, structure of the genome,
molecular evolution, and human population genetics will be covered in the first part of the course. Once these tools are in
place we will examine both classical and contemporary research reports on a number of topics, including the place of
humans among the apes; mitochondrial Eve, DNA in forensics; Neandertal DNA and other applications of ancient DNA;
reconstructing recent human evolution’ the biological meaning of race; disease gene mapping; recent technological
advances in genomics; skin, hair, and eye color genes; and the genetic future of our species. There will be three exams
that will each count for 25% of the grade. Attendance and participation are mandatory and will count for 25% of the final
grade. A portion of this participation grade is earned by presenting 10 min. summaries of particular readings. Each
student will be expected to summarize a scientific paper four times during the semester. These summaries are not
expected to be exhaustive reports on the material, but should reflect an effort on the part of the student to understand
and discuss the material and may require some background work.

ANTH 465H Fifteen Great Biology Papers (3) Reading and discussion of the most influential papers in the history of
biology that illustrate exceptional insight and elegant reasoning.

ANTH 465H Fifteen Great Biology Papers (3)
Thousands of papers are published annually in the life sciences, but only a few have lasting impact on their field. These
are usually characterized by elegant and thoughtful insight, and creative scientific thinking. For each of the fourteen
weeks of the semester we will read and discuss a landmark paper of this type. The 15th paper? That will be the student's
term project. The student will read one classic paper in the history of biological thought each week and discuss the paper
in class. During the last half of each class in last third of the semester, the students will present the classics they have
chosen for their term paper. The major topics covered in this course are: Weeks 1-4: Basic history of thought about origin
and nature of variation in living organisms Weeks 5-8: Landmarks in the philosophy of science Weeks 9-12: History and
development of ideas in evolutionary biology. Weeks 13-14: Foundations of 20th Century biology The objective of this
course is to give students an experience with and appreciation for (1) the history and origins of science, biology in
particular, (2) the nature of cogent critical thinking and expression, (3) the basis for fundamental ideas in biology today,
(4) a sense of the nature of papers that had great influence on the future of the field, and (5) experience scouting,
choosing, evaluating, and writing about papers of this nature. Evaluation will be based on class attendance and
participation, critical thinking ability and effort as manifest in class, and a term paper (graded also to include quality of
writing and research.) This course is generally related to all life science courses, and relevant to social and other sciences,
philosophy, and history. This course can fulfill elective credits for Anthropology majors and minors.
**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ANTH 466 The Skull (3)**

This course will provide a survey of what is known about the mammalian skull from many perspectives including evolution, development, anatomy, function, and variability of the skull. The course will consist of lectures and a laboratory component. Students will learn about the basic skull architecture and be introduced to various specializations of extinct and extant species. The section on evolution will cover the evolution of the skull from the earliest jawless vertebrates through human evolution. During the section on development, we will discuss the nature of the formation of bone embryologically. Other topics include the ways in which bone changes shape and size during prenatal and postnatal growth, how changes in growth can result in evolutionary change in morphology. The section on the function of bone will focus on biomechanical interpretations of the morphology of the skull. The lectures will focus on human anatomy but provide contrasts with other mammals (e.g., horse, dog, mouse). The last section on variability will survey the major groups of mammals highlighting similarities and differences in bony architecture and skull morphology. This portion of the course will be more laboratory-based with students examining specimens, taking measurements and leading discussions on hypotheses regarding why skull architecture is so different among mammals. The objective of this course is to provide the student with a broad survey of information relating to the mammalian skull. Through assigned readings and lectures, the student will become familiar with salient anatomical and osteological features, obvious differences in skull architecture and the various biological processes responsible for these differences. During the final laboratory part of the course, the students will bring their knowledge to an assigned problem and specimen in order to apply what they have learned to a scientific question. Students will be required to attend all lectures and laboratories. Periodic quizzes will be administered as well as an exam at midterm. A paper that focuses on the student’s laboratory experience will be required at the completion of the course.

**ANTH 468 Evolution and Development of Human Origins (3)**

Recently biology has undergone a revolution regarding our understanding of the mechanisms underlying the evolution and development of animal form. This knowledge has a profound impact on the way we conduct and interpret morphological analyses pertaining to human evolution. In this course we will explore basic principles underlying Darwinian natural selection and our understanding of the evolution of complex characters. Then we will delve into developmental genetics to explore how the gene regulation can alter spatial and temporal expression patterns during development. We will next conduct a survey the basic embryology of key morphological systems of interest to biological anthropologists including: the axial skeleton and somite formation, limb buds, musculoskeletal system, skull formation, and dental and skin appendage formation. We will also explore issues concerning skeletal plasticity, fossil analysis, and comparative genomics. Discussion particular case studies related to human and primate evolution and morphological variation will illustrate the principles discussed in this course.

**ANTH 470H Our Place in Nature (3)**

The title "Our Place in Nature" takes off from T.H. Huxley's famous book in 1863 that put humans in rather than outside of nature, and the idea of the course is to place humans in the context of organic evolution both specifically and as a kind of general "model" organism (for example, genomic, phylogenetic, and comparative perspectives will be included). We will take a theme (one or more related topics, depending on enrollment, timeliness, etc.), which students will be assigned to work on singly or in groups. We'll first read from the historical, comparative, and evolutionary literature to see how "Our Place in Nature", relative to that theme, was first argued. Then we will follow the literature in evolutionary, developmental and genetic biology to the present to see how our current understanding of the trait evolved. Current research, especially on developmental and genetic aspects of the trait, will be examined in depth. We'll pay special attention to research...
strategies, comparative and genomic approaches, and latent working assumptions that help or hinder our explanations. The sociocultural context will be considered throughout, including the implications for society of our changing scientific assessment of the trait.

As an Honors course, we will have the time, and the students the dedication, to pursue the chosen topic(s) in much greater and more rigorous detail than is possible in the usual lecture or even seminar course formats. The students who enroll for this course will be given a description of the approach and the intended general topic, on a course web page or by email when I learn they have registered. Requisite background reading will be identified so students will know what will be expected of them. Some prior reading will be assigned, so that we can begin the semester with a common basis in background. The course will assume the level of knowledge such as can be obtained in one of several recent "Evolution" texts, an understanding of modern genetics and genetic methodology, basic statistics, and a general work on the history and philosophy of science and evolutionary thinking (initially, probably J.A. Moore's Science as a Way of Knowing). This substantial background requirement is based on this being an upper-level class; for good students to get what good students deserve at a good university, we need to be able to start at a high level.

Evaluation will stress original synthetic thought and investigation rather than memorized factual recapitulation. Work groups will tackle particular problems, present them, and turn in written products. There will be a written take-home synthetic essay exam. There will be other written assignments summarizing assigned reading or topics to keep students on track. The class will generally be based on oral discussion and/or be run in Socratic Q&A format. Evaluation will include a major component related to attendance and to level and quality of in-class participation, acquired knowledge and quality of thought and communication. This course will build on, and incorporate, knowledge acquired in physical anthropology, evolutionary biology, statistics, and genetics courses and will count as 3 credits toward the additional courses in biological anthropology required for the Anthropology major.

ANTH 471H Biology, Evolution, and Society (3)
Exploration of the genetic theory of evolution and development, its history and application within Biology and beyond.

ANTH 471H Biology, Evolution, and Society (3)
This will be a reading, discussion, and exploration course that looks at the way theory about the nature of life and its origins and diversity have developed over time into today's evolutionary theory. The course will examine the Darwinian theory, and then new elements that recent biological research have revealed about the nature of biological traits themselves and how genes produce them. These points were not part of evolutionary theory itself, but are an important supplement that could not have been made before results from the last 20 years have been available. A theory can be called a cosmology when its assumptions go beyond hypotheses to be tested, to become assumptions that are no longer under test but are used to devise future research and that then set the directions of science. This includes, but isn't restricted to the kind of cosmology that deals with life space. We have to use theory to order our work and to anticipate what we have not yet found (for example, that newly discovered species will be related to other known species). But in the case of biology, a modern 'biocosmology' has developed steadily since Darwin, increasingly centered on molecular genetics and genes as the ultimate units of biological causation. Sometimes that theory has become so unquestioned as to impair research and even to be somewhat misleading. Elements of biological theory, such as natural selection, are powerful and general, and are being borrowed by physicists and astronomers (a reverse of the borrowing that occurred in the last century), to account for aspects of the physical universe in explicit evolutionary terms (including natural selection). For somewhat similar reasons, also having to do with the role of science in society, modern biocosmology has routinely been extended to apply to sociopolitical issues, such as economic and educational policy, science funding decisions, and views about socially delicate issues such as behavior, sexuality, talents and abilities, and much else. This course will discuss how the modern theory of life has arisen historically and the evidence and research methods that have been used to develop that theory. A view of biological theory as a broader cosmology leads to the additional consideration of the nature of biological causation as a statistical rather than purely deterministic phenomenon, and the kinds of research approaches that are used to understand biological problems. The latter include the engineering of organisms, the health sciences, and the nature, evolution, and biological basis of behavior. The objective of this course is to give students a broad understanding of the evolutionary and genetic theory of life and a broader view of the way that theory extends to areas not yet understood, as well as to its origins in and relevance to human society. Everyone is familiar with Darwin's basic theory that life is historical and evolves via natural selection, and that genes are the basis of it all. But these ideas are often only superficially understood—sometimes even by biologists—and many clearly central aspects of life have been left out of the Darwinian theory. That theory explains how organisms evolve, but not what evolves or how genes make those traits possible. These are topics in gene function and developmental mechanisms. Along with some modifications to Darwin's ideas, largely involving elements of chance and population structure and ecology, the genetic theory evolution can be augmented by a few simple organizing principles to explain the nature of traits and flesh out a more comprehensive understanding of life. These principles are in daily use in research but it will be helpful for students to have them organized into a synthetic framework placed explicitly within evolutionary theory itself. This course will be generally related to all life science courses, and relevant to social and other sciences, philosophy, and history. But it is not tied to any particular other course, and as a kind of overview of the governing notions of life at the onset of the 21st century, complements the education of anyone in these related fields. This course will be of interest to students who have or will take courses in astrobiology, developmental biology, evolutionary biology and/or population genetics, or anthropological genetics and human evolution. The grade will be based on attendance and participation. Reading and/or research of some kind will be assigned most weeks, with students responsible for oral reporting or writing brief
descriptions of what they have found. There will be a term paper or project, but no formal exams.

**ANTH 476W** Anthropology of Gender (3) Cross-cultural construction of gender and sex roles; theories of gender construction; case studies and practical effects.

**ANTH 476W Anthropology of Gender (3)**

Students will learn the current theoretical approaches in anthropology to the cultural construction of gender and sex roles. The first 2-3 weeks of the course will concentrate on exploring and understanding these theoretical approaches. The remaining weeks will focus on case studies of non-western gender systems, and on the practical effects of those systems, but students will also be encouraged to relate these systems to their own experience. Each meeting will be based on discussion of the readings assigned for that meeting and students will be expected to participate. During the period devoted to theoretical approaches, discussion will focus on the assumptions, advantages, and disadvantages of each approach. For the part of the course devoted to readings on individual societies, one reading each week will be the basis for a critical essay of approximately five pages. These essays will be expected to include: 1) an identification of the theoretical approach that informs the work, 2) a statement of the author’s arguments or questions, 3) a discussion of the methods used to provide data in support of the arguments or to answer questions, 4) a critique of the adequacy of data, and 5) a statement suggesting which additional elements might make for a better study. These essays will be graded for both content and form and students will have the option of rewriting essays (and improving their grade) after they receive comments. These essays will provide 60% of the course grade, while participation in discussions will provide another 15%.

A short research paper will also be required. The paper must focus on a question or hypothesis concerning gender, and a preliminary proposal that includes the focus of the paper, its relevance to the course, and a beginning bibliography is required. A first draft of the paper will be required two weeks before the end of the semester. The research paper will provide 25% of the course grade.

The course complements other courses in Anthropology that deal with sex differences, but will provide a perspective on gender that is not available elsewhere in the curriculum. The course can be used to fulfill a Behavioral Anthropology requirement in both the major and minor in Anthropology and a writing across the curriculum requirement. It will also provide students in other departments with the opportunity to study aspects of diverse, non-western cultures. The course is currently identified as one that may be taken to fulfill the requirements of the Women's Studies minor.

**ANTH 477** (US;IL) Language, Culture, and Society (3) Relationships among language, culture and society, with an anthropological emphasis.

**ANTH 477 Language, Culture, and Society (3) (US;IL)**

Anthropologists have long acknowledged the importance of language as a major adaptive tool of the human species and as our principal means of transmitting culture. Indeed, it is often difficult to separate language, culture and society because of their intrinsic interrelatedness: language requires a social environment, while culture requires an efficient and expressive means of communication. This course will explore the relationship of language, culture and society, within an anthropological context that distinguishes it from the standard approach of linguistics courses. Linguistic anthropologists have focused on language as a way to make inferences about larger anthropological issues such as world view, semantic fields, the relationship between speech and socialization and the interaction of linguistic and social communities. The course will include a section on the structure of languages, emphasizing the similarities and differences in human
languages and the expression of the general language code in particular languages. It will also deal with the origins of language and briefly explore language change, including contacts between members of different societies and the changes that those contacts entail. The major hypotheses concerning the relationship between language and culture will be assessed. Finally, a major part of the course will be devoted to the study of language and its social context, the ways in which speech is associated with social relations, how speech affects and is affected by social interaction. Students will gain an understanding of the importance of language in human adaptation and the transmission of culture and as a social marker both between and within social groups. Students will be evaluated through written exams, problem sets, contributions to class discussions and presentations. The course will provide 3 credits in the Major and Minor in Anthropology.

Research Design in Anthropological Fieldwork (3)

ANTH 521 Current Literature in Archaeology (1) Seminar designed to expand general knowledge of archaeology through exposure to current research and related issues in contemporary archaeology.

This seminar is designed to expand general knowledge of archaeology through exposure to current research and related issues in contemporary archaeology. We accomplish this by examining the best of recent journal literature. We may also occasionally read a chapter from an edited book. We will normally read and discuss one article per week, although we might increase that number in cases where articles have been followed by published debates. Articles should be selected from a list of approved journals that will be supplied in class. Each article must be approved in advance by the course professor. The presenter should follow the standard outline for article discussion that will also be supplied in class.

Faculty: Frances Hayashida, Kenneth Hirth, George Milner, Dean Snow, and David Webster

ANTH 541 Current Literature in Cultural Anthropology (1) This seminar is designed to expand general knowledge of cultural anthropology through exposure to current research/related issues in contemporary cultural anthropology.

ANTH 559 Human Ecology (3) Ecological anthropology, emphasizing the adaptive aspects of subsistence, including foraging and settlement pattern.

ANTH 559 Behavioral Anthropology (3)

The goal of this course is twofold: 1) to bring students to a level of competence in human ecology such that they can read the current scholarly literature in the field with an informed and critical intelligence; and formulate their own research questions in the field; and 2) to launch students in the practice of what most anthropologists do—research, teaching, and the presentation of professional papers in oral and written form.

Students are evaluated on their class performance in preparing and delivering presentations to the seminar on the assigned readings for each session (40%); and on their term papers (60%). This class is the higher level continuation of ANTH 456. It is required for graduate students in Cultural Anthropology and recommended for those in Archaeology and Biological Anthropology. It is offered every third semester

**ANTH 566 Infectious Diseases in Anthropological Populations (3)** Surveys infectious diseases in history and prehistory; introduces concepts from microbiology, immunology, and epidemiology, applies them to past human populations.

Throughout history, more people have died of infectious diseases than of any other causes. Such diseases are therefore of great importance in human ecology and demography. Yet anthropologists have paid scant attention to the implications of infectious diseases for human populations, especially populations in the past. This course attempts to correct that oversight.

The course is designed for graduate students and advanced undergraduates in anthropology and related fields (biology, population studies, health sciences). The primary focus will be the role of infectious diseases in human population ecology, but enough background will be provided on the biology of infectious diseases to make the course as self-contained as possible. Thus, we will review basic information about the biology of pathogen-host interactions, including some elementary microbiology and immunobiology. (Note that the course is not intended to replace introductory-level courses in those fields.)

We will also discuss the evolutionary arms race between the human host and its pathogens, especially in the evolution of pathogen virulence.

Once this basic background has been provided, the remainder of the course will deal with infectious diseases in past human populations. What was the role of infectious diseases in population regulation? How did human population structure affect infectious disease dynamics? How did infectious diseases contribute to the mortality "crises" that are known to have affected many preindustrial societies?

To address these questions, we will review recent insights based on mathematical models of the epidemic process. The focus will not be on the mathematics per se—indeed, students need not have any special mathematical background. But they will be expected to learn Stella, a computer language for dynamic modeling. (Stella was chosen because it is easy to learn, and yet allows construction of sophisticated models without requiring any attention to the underlying math.) Toward the middle of the semester, students will break into 2-4 groups, each of which will select a particular disease or class of diseases, develop some models of them using Stella, and present the results to the class as a whole. The entire class will then work together to explore and extend the models developed by the separate groups.

Grading will be based on the group presentations, in which all students are required to participate. Participation in general classroom discussion will also be taken into account. Since the class will combine formal lectures with a more seminar-like format, active student participation is essential for a good grade. This course will be offered once a year with an enrollment of 15.

**ANTH 575 Population, Food, and Traditional Farming (3)** This course explores the relationship between demographic processes (fertility, mortality, migration) and traditional farming, especially farming near the subsistence level.

**ANTH 575 Population, Food, and Traditional Farming (3)**

This course explores the complex relationship between demographic processes and traditional agriculture. It starts with
the premise that traditional agriculture, at least agriculture near the subsistence level, is primarily demographic in its motivation: the main purpose of a small-scale, preindustrial family farm is to create and support a family – i.e. produce children (fertility) and keep them alive (survival). This idea will be the starting point for re-examining existing theories about population and agriculture, and for formulating new models of the traditional farming household as a demographic enterprise.

Some of the topics to be addressed include: (1) the slippery concepts of ‘population pressure’, ‘over-population’, ‘population regulation’, ‘carrying capacity’, and ‘sustainability’; (2) some basic ecology and economics of subsistence production and consumption; (3) the debate over agricultural intensification; (4) the effects of under-nutrition on fertility and mortality; (5) the nature of the household labor force; (6) the household demographic life cycle and its economic implications; (7) seasonality and the allocation of household labor; (8) the demography of the ‘hungry season’ (9) risk management and food shortages; and (10) household wealth differentials and their demographic implications.

The first half of the course will be in lecture format, the second will be more like a seminar. At about the mid-point of the semester, students will split into groups of 2-4 (depending on class size). Each group will select an ethnographic/demographic/economic monograph on traditional agriculture from a list provided by the instructor, prepare and present a PowerPoint presentation on it, and lead an extended classroom discussion of it. Each presentation ought to take up at least two or three class periods. The course grade will be based on the presentation and on general seminar participation (approximately 80 percent presentation and 20 percent participation, including doing the required readings).

This course should appeal to graduate students and advanced undergraduates in anthropology, geography, crop and soil science, demography, rural sociology, agricultural economics, and behavioral ecology.

ANTH 579 (SOC 579) Spatial Demography (3)
This graduate course will expose students to spatial analysis tools and analytical methods applied to demographic research.

ANTH (SOC) 579 Spatial Demography (3)
The improved application of spatial data and methods to demographic research is a critical methodological challenge facing demographers today. This graduate seminar is designed to focus on substantive demographic research topics while exposing sociologists and demographers to challenges in, and opportunities for, using geographic information systems (GIS), spatial analysis, and spatial statistics in their own research. Substantive foci will include readings and discussions of spatial perspectives on topics such as racial/ethnic segregation, spatial mismatch/entrapment, poverty, crime/delinquency, migration, health inequalities, wellbeing, maternal and child health, environmental justice, and population and environment relations. Similarly, the seminar will highlight connections between spatial concepts and data availability (e.g., Modifiable Areal Unit Problem - MAUP; data privacy), other emerging methodological approaches to studying society (e.g., contextual modeling, multi-level modeling and the area of neighborhood effects) as well as the integration of different types of data (e.g. qualitative data and quantitative data). Throughout the course lectures and discussions will be complemented with lab sessions introducing spatial analysis methods and GIS and spatial analysis software. The lab sessions will include the use of among other software GeoDa, CrimeStat, R, and ArcGIS (including Geostatistical Analyst and Spatial Analyst extensions). These lab sessions will introduce many methodological and technical issues relevant to spatial analysis (e.g., error, data validation, data integration, cartography, exploratory spatial data analysis, spatial regression modeling, geographically weighted regression, point pattern analysis and geostatistics). Assignments for the courses include up to two writing assignments, up to four lab assignments, and a final project which will be presented as a short 15-minute presentation as well as submitted as a term paper. The writing assignments will include an annotated bibliography/brief literature review within a selected demographic theme area and a profile of a well-known demographer and their adoption of spatial thinking/perspectives/methods. The lab assignments will focus on building geospatial databases, basic spatial analysis, exploratory spatial data analysis, and spatial regression modeling. The courses will include other labs and assignments that will be completed for no grade; these are intended as mechanisms/opportunities for developing and enhancing familiarity with selected software, data resources, and analytic methods.

Applied Behavioral Analysis (ABA)

ABA 500 Experimental Analysis of Behavior (3) This course covers the scientific, conceptual, theoretical, and philosophical roots of the experimental analysis of behavior.

ABA 500 Experimental Analysis of Behavior (3)
This course is designed to serve as a foundation course for the Applied Behavior Analysis Masters Program by giving students the necessary scientific, conceptual, theoretical and philosophical background in the experimental analysis of behavior. The field of Applied Behavior Analysis, or the application of the principles of the experimental analysis of behavior to humans, was the result of decades of basic laboratory research with animals and humans. This course will provide students with a basic understanding of the field of behavior analysis, its roots and scientific and philosophical underpinnings. ABA 500 Experimental Analysis of Behavior is a required course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 20 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2003
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ABA 511 Behavior Modification (3) Provides an overview of principles and procedures and use of behavior modification with individuals in diverse settings.

ABA 511 Behavior Modification (3)
This course provides students with the principles and procedures of behavior modification. The course teaches students how to analyze, interpret, and develop programs for a wide range of clinical and educational populations. The course provides advanced discussion on the empirical and theoretical underpinning of behavior modification. This course is divided into six parts. Part 1 introduces behavior modification and its major areas of application. Part 2 covers the basic principles and procedures of behavior modification. Part 3 discusses motivation operations and ways in which to combine and apply principles. Part 4 presents detailed procedures for assessing, recording, and graphing behavior and methods for conducting functional assessments and behavioral research. Part 5 covers how the basic principles, procedures, and assessment and recording techniques are incorporated into effective programming strategies. Part 6 presents the history of behavior modification and discuss some of the ethical issues in the field. ABA 511 is a required course for graduate students of the Applied Behavior Analysis Masters Program.

General Education: None

The Pennsylvania State University
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ABA 522 Single Subject Research (3) This course aims to teach how to critique, design, and analyze single subject research.

**Single Subject Research (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2001  
Prerequisite:  

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ABA 533 Applied Analysis of Behavior (3) Overview of the application of behavior analysis in education, rehabilitation, medicine, business, counseling, and therapy across the age range.

**ABA 533 Applied Analysis of Behavior (3)**

This course will provide students with a basic understanding of the application of behavior analysis to a wide variety of human conditions. The characteristics and history of applied behavior analysis will be covered as well as the use of behavioral principles to increase and decrease behavior. The role of assessment and generalization and maintenance issues will be stressed. Some applications that are highlighted include self-control, token economies, systematic desensitization, and stimulus control and modeling. Populations covered include geriatrics, children, adults, and individuals with special needs.

ABA 533 is a required course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 20 students.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ABA 555 Behavioral Intervention in Autism (3) Overview of the use of Behavior Analysis in the education, assessment, and treatment of individuals with autism.

**ABA 555 Behavioral Intervention in Autism (3)**

Behavior analysis has had significant contributions to autism over the past 40 plus years. Its success in early intervention efforts has created a great need for individuals trained in behavior analysis with special knowledge of the unique aspects of autism. This course will provide students with the knowledge and skills needed to work with individuals with autism not only in early intervention efforts but across the entire spectrum of settings, age ranges, and developmental levels. Autism will be addressed in terms of assessment, education, and treatment. Some specific areas targeted that are characteristic of autism will include language, social skills, self-injury, sleep disorders, and self-stimulatory behavior. Some specific educational strategies emphasized will include discrete trial training, incidental teaching, prompting and fading. The students will gain a knowledge of the major issues related to the use of behavior analysis with individuals with autism including education issues such as due process and inclusion and legal and ethical issues surrounding the certification of behavior analysts. Students also will learn how to evaluate the various treatments and educational practices for autism. Competency-based methods of caregiver training will be covered.

ABA 555 is an elective course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 15 students.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ABA 566 Behavioral Pediatrics (3) Overview of behavioral pediatrics and discusses the role of Behavior Analysis within this field.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
ABA 566 Behavioral Pediatrics (3)

Behavior analysis has had significant contributions to the field of behavioral pediatrics. This course will provide an overview of behavioral pediatrics and discuss the role of the behavior analyst in pediatric healthcare. Pediatric problems commonly addressed by behavior analysts will be discussed in terms of both assessment and treatment. These pediatric problems will include pediatric feeding problems, disorders of elimination, gastrointestinal disorders, sleep problems, and childhood obesity. This course also will cover the integration of behavior analysis in the areas of adherence to medical procedures, pain management, medical rehabilitation, and brain injury rehabilitation. Behavioral approaches to health promotion and injury prevention will be discussed. The management of common childhood behavioral issues and competency-based methods of caregiver training will be covered. The course will explain the use of behavior analysis in a range of pediatric healthcare settings.

ABA 566 is an elective course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 10 students.

ABA 577 Behavioral Assessment and Treatment of Behavior Disorders (3)

Behavior analysis has had significant contributions to treating children with a wide variety of behavioral and emotional disorders. This course will provide students with the knowledge and skills needed to work with people with behavioral and emotional problems across all environments, age ranges, and developmental levels. Behavior disorders throughout the age ranges will be addressed. Students will be taught to use applied behavior analysis for the assessment, intervention, and understanding of these problems. The students will gain knowledge of the major issues related to the use of behavior analysis including legal and ethical issues. Students also will learn how to evaluate the various treatments for behavior and emotional problems.

ABA 577 is an elective course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 15 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ABA 588 Ethics and Legal Issues in Applied Behavior Analysis (3)

The purpose of ABA 588 Ethics and Legal Issues in Applied Behavior Analysis is

1) to teach the Ethical Principles of the American Psychological Association (adopted by the Association for Behavior Analysis). Students will be presented with the ethical codes, the application of the codes, and the possible dilemmas involved in following the codes. Students will be responsible for applying the ethical codes by evaluating ethical dilemmas.

2) to teach the legal issues related to applied research with humans. Federal and State treatment and Educational Laws and issues related to the practice of Applied Behavior Analysis will be covered. Actual cases covering a variety of populations, locations and issues will be presented. Students will learn how to identify and avoid litigious situations.

ABA 588 Ethics and Legal Issues in Applied Behavior Analysis is a required course for graduate students of the Applied Behavioral Analysis Masters program and a prerequisite for ABA 594A and ABA 595.

This class will be offered annually with an enrollment limit of 25 students. The frequency will be adjusted if enrollment trends suggest an adjustment is necessary.

Applied Linguistics (APLNG)

APLNG 410 Teaching American English Pronunciation (3) Study and application of principles of North American English phonetics and theories of teaching pronunciation.

APLNG 410 Teaching American English Pronunciation (3)

(BA) This course meets the Bachelor of Arts degree requirements

This course, for teachers who deal with speakers of other languages, integrates research and theory on the acquisition and development of pronunciation, as well as current pedagogy, to enable them to construct their own principled theory of teaching pronunciation. Students are introduced to the characteristics of the consonant and vowels systems of English. In addition, students are introduced to variations in the production of consonants and vowels by speakers of languages other than English. Students are expected to understand and to be able to describe the stress rhythm, and intonation of English as well as the adjustments that are made in connected speech. Students will learn how grammar and orthography influence the pronunciation of phonemes. Students will learn how to diagnose an individual’s difficulties in the production of North American English and will learn how to develop appropriate curriculum. By focusing on instructional strategies from fields as diverse as theater arts, psychology, and instructional technology, students will be able to individualize their instruction by providing alternative ways to better respond to second language speakers' learning styles and preferences. Moreover, this course requires students to develop and implement appropriate curriculum for both hypothetical, real tutorial, and whole class instruction.
The objectives of this course are for teachers 1) to develop a satisfactory understanding of the phonetics of North American English, including consonants, vowels, rhythm, stress, intonation and prominence, 2) to develop an understanding of the relationship between listening and pronunciation, as well as orthography and pronunciation, 3) to develop an ability to explain these phonetic concepts appropriate to students with varying learning styles using a variety of techniques such as kinesthetic and tactile reinforcement, 4) to develop an ability to diagnose speakers' particular pronunciation difficulties and to create instructional materials in response, 5) to develop a coherent philosophy of the teaching of pronunciation, and 6) to develop an ability to evaluate pronunciation textbooks and materials and supplement them when necessary.

APLNG 412 Teaching Second Language Writing (3) This course provides opportunities for exploring various perspectives on theory, research, and pedagogical applications in second language writing.

APLNG 412 Teaching Second Language Writing (3)

This course has been designed to provide opportunities to explore various perspectives on theory, research, and pedagogical applications in second language writing. Through readings, writing, class discussion, and development of practical applications, students may develop an understanding of how research and theory can inform their practice, as well as an awareness of how personal and professional factors come together to inform their own theory of second language writing. By engaging in instructional activities, such as evaluating writing, responding to writing, and developing materials, students may begin to develop an understanding of how to implement theory in practice aligned with understanding. The overriding objectives are for students to help develop self-awareness as a writer and a teacher of writing, develop their own philosophy of teaching composition in an additional language context and to develop curriculum that embodies this philosophy. Students will be evaluated on reading journals, tutoring in the Writing Center, literature review, materials development project and developing of materials. APLNG 412 is an elective course in the M.A. TESL program and/or PhD option in Applied Linguistics.

Bachelor of Arts: None
Effective: Summer 2003

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

APLNG 482Y (IL) Introduction to Applied Linguistics (3) Application of theories of language to psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition and teaching.

APLNG 482Y Introduction to Applied Linguistics (3) (IL)

This is a survey course concerned with the application of theories of language to issues in the areas of psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition, and second language teaching. Specifically, the course focuses on: a) how language influences the way people think and bring meaning to what they do, b) how language users match their utterances to specific functional purposes within specific social contexts, c) how the language practices of a particular culture are closely tied to the beliefs and conceptual principles by which people in the culture live, d) how language is used by speakers of different races, genders, and ethnic backgrounds, and e) how language is acquired, used, and perceived within bi/multilingual societies. Through reading, writing, and discussing the major issues in each of these areas students will come to understand how theories of language have influenced the way we think and bring meaning to what we do, the ways we communicate within different cultures and societies, and the way languages are learned and used.

APLNG 484 Discourse-Functional Grammar (3) Develop a working knowledge of the structure of English and apply such knowledge to research and/or classroom situations.

APLNG 484 Linguistic Structures for English as a Second Language (3)
This course is designed to enable prospective and practicing ESL/EFL teachers to understand the linguistic structures of the English language. Through the use of transformation grammar, students will interpret and analyze the basic grammatical structures of the English language. Students will apply their developing skills of linguistic analysis to recognize, and analyze, and remediate both oral and written grammatical errors in ESL/EFL instructional contexts. Students will understand the current theoretical issues related to pedagogical grammars and develop an appreciation for the practical and theoretical relevance of linguistics analysis for second language educators.

APLNG 491 Theory: Second Language Acquisition (3) An investigation into current issues in the theoretical bases of second language acquisition.

APLNG 491 Theory: Second Language Acquisition (3)
This course considers the relationship between second language acquisition (SLA) theory and language teaching. An examination of various aspects of first language (L1) and second language (L2) learning/acquisition processes provides a framework for consideration of basic questions in SLA research and interpretation of findings to date. Of particular interest is the relationship of this research to teaching materials and methods. The questions addressed include the following: What is SLA? What are the methods and aims of SLA Research? How are theories of SLA related to major theoretical models of human language and human learning? What have been or could be important interdisciplinary perspectives in SLA?

General Education: None

APLNG 493 (IL) Teaching English as a Second Language (3) Theory, research, and pedagogy that focus on the teaching of English to speakers of other languages in varied contexts.

APLNG 493 Teaching English as a Second Language (3) (IL)
This course focuses on the teaching of English to speakers of other languages. Specifically, the course explores the multidimensional nature of the teacher as a learner of teaching, the context of schools and schooling within which teaching occurs, and the activities and content of second language teaching and learning.

Throughout the semester, students will engage in a range of theoretical, pedagogical, and reflective activities that will enable them to: 1) understand their own beliefs and knowledge about language learning and language teaching and become aware of the impact of such knowledge and beliefs on their classroom practices, 2) recognize the highly situated and interpretative processes involved in language teaching and be able to reflect on, critically analyze, and evaluate their own teaching practices, 3) become sensitive to the complex social, cultural, political, and institutional factors that affect language teaching and students’ language learning, 4) come to recognize students' strengths and development as learners and language learners, 5) understand subject matter content from an instructional perspective and learn to anticipate areas that may require additional instructional support, 6) use their knowledge of theory to inform their instructional practices, 7) participate in professional collaborations with other teachers as they learn about language teachers, language teaching, and language learning.

APLNG 512 Language and Adult Lifespan Development (3) The effects of adult cognitive development and decline on the production and comprehension of language in mono- and multilinguals.

APLNG 512 Language and Adult Lifespan Development (3)
This graduate seminar is designed to provide a theoretical and practical introduction to research on adult lifespan development and language processing among multilinguals. It will be offered every other year as one of the course options in language in society, an area of concentration for both the MA TESL and PhD in APLNG degree programs in LALS. This course is also part of a LALS sequence in Language, Health, and Aging. While the main draw will be graduate students in LALS, the course may be of interest to graduate students in bio-behavioral health, gerontology, and human development and family studies. The expected total enrollment is 15. Topics covered in course readings and activities include: theories of adult lifespan development and cognition; language processing among monolingual young, middle-aged, and older adults; multilingualism and adult lifespan development, with particular attention to the effects of aging on bilingual processing, second language acquisition, and language attrition; and research methods proper to cross-sectional and longitudinal studies of language development over time. Over the course of the semester, students will also plan, prepare, and conduct a quantitative experiment or qualitative study on one of these topics. Through participation in a variety of activities, students will 1) become familiar with the research literature on language processing and adult lifespan development, with particular attention to multilingualism, 2) develop critical skills in interpreting and comparing cross-sectional and longitudinal research designs in adult development studies, 3) develop practical skills in...

**APLNG 570 Second Language Reading (3)**

This graduate seminar is designed to provide a theoretical and practical introduction to the assumptions underlying and principles embodying a variety of approaches to second language reading development and instruction. In addition, it seeks to explicate the role of second language reading in the larger context of second language development. It will be offered every other year as one of the course options in language learning and teaching, an area of concentration for both the MA TESL and PhD in APLNG degree programs in LALS. While the main draw will be graduate students in LALS, the course may be of interest to graduate students in the foreign language departments and linguistics. The expected total enrollment is 15. Topics addressed in course readings and activities include: 1) the epistemological underpinnings of the notion of second language literacies; 2) psycholinguistic, critical and sociocultural approaches towards second language reading; 3) variables affecting second language reading performance; 4) strategies and instruction to influence second language reading development; 5) assessment of second language learners' reading performance, and 6) critical evaluation of instructional materials for a variety of second language learning contexts. Through participation in a variety of activities, it is expected that students will: 1) develop an understanding of second language literacies, 2) develop critical understanding of the variables and processes involved in L2 reading, 3) develop a principled conception of L2 reading instruction, 4) integrate L2 reading into the broader disciplinary area of second language learning and L2 proficiency, and 5) develop practical skills of designing and evaluating L2 instructional materials. Evaluation of students includes the following components: 1) completion and discussion of required readings; 2) presentation of key instructional approaches; and 3) completion of a paper addressing a theoretical, instructional or research issue in second language reading.

**APLNG 571 'Foreign' Language Materials Development (3)**

This seminar seeks to develop a critical awareness of the processes of language teaching and learning materials development. It will include a range of commercially developed materials designed for what is commonly called an ‘FL’ setting, both past and present, from the perspectives of the author, instructor, and learner in terms of their stated goals, organizational framework, and the nature of the activities or experiences they provide. Theoretical discussions of various approaches to curriculum design and materials development will provide a basis for analysis. These will include structural, notional-functional and situational frameworks along with so-called ‘content-based’ and ‘task-based’ approaches. The cultural values implicit in the materials will be given particular focus. Is there representation of a Second Language culture or cultures? If so, how can it be characterized in terms of breadth and balance? How are learners expected to react vis-a-vis this representation?

Consideration will also be given to market forces and author incentives important for commercial materials development. What constitutes a “successful” series? What are the advantages and disadvantages of locally prepared as opposed to imported materials? What major changes have occurred in language materials development and dissemination in recent years? What interpretations can be found of various pedagogical terms currently in wide-spread use, e.g. communicative language teaching, interaction, learner-focused, process-oriented? How is computer-aided instruction (CAI) being implemented in various settings and why? What is the influence of high stakes public examinations on teaching and learning materials?

The culminating activity will be an individual or team project that either develops a set of materials for a defined setting or takes a critical look at materials currently in use.
APLNG 572 Communication in Second Language Classrooms (3) The study of communication in second language classrooms.

This course focuses on investigating and understanding the dynamics of communication in second/foreign language instructional settings. Students will examine different variables that influence the nature of communication in second/foreign language classrooms including: teachers' control over the patterns of classroom communication, students' perceptions of the patterns of classroom communication, students' knowledge and use of language, and students' use of language for learning and second language acquisition. Each variable will be evaluated for its theoretical and pedagogical contribution to communication, learning, and second language development.

In addition, through understanding the basic theoretical tenets of and actively participating in reflective teaching, students will examine, frame, and manage the dilemmas of classroom practice, become aware of and question the assumptions and values they bring to teaching, become attentive to the institutional and cultural contexts in which they teach, and recognize their responsibilities for their own professional development. Finally, students will be exposed to sociocultural perspectives on mediated language and literacy instruction and recognize their relevance for second language teaching, learning, and classroom communication.

Faculty: Karen E. Johnson

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

APLNG 573 Communicative Language Teaching (3) Cognitive, linguistic, and sociocultural foundations of communicative language teaching (CLT) as reflected in current international language teaching policies/practices.

This is a seminar to allow for in-depth analysis and individual research on a topic that has become central to discussion of second/foreign language teaching worldwide. An examination of primary theoretical sources in linguistic and SLA theory along with perspectives in sociocultural context in language teaching and curricular innovation provide the basis for an individual research project on some facet of CLT. Students will be encouraged to explore their own experiences and interests to ultimately determine the content of the seminar and the focus of their individual research. A diversity of national backgrounds including Asia, Europe, South and North America is expected to enhance discussion and learning. Students will develop scholarly research and writing skills as they are guided through drafts of project proposals and written reports. Class discussion will encourage learners to appreciate language teaching as a complex social phenomenon. SPCOM 573 meets the requirement for 500-level electives in the MATESL program. Also, it can be used to meet requirements for the College of the Liberal Arts multidisciplinary Ph.D. Minor in SLA.

The evaluation methods for the course are: participation and leadership in class discussion (25%), and final written research report (75%). The course will be offered once a year.

Faculty: Sandra Savignon

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

APLNG 574 World Englishes: Pluralizing Policy, Pedagogy, and Proficiency (3) This course explores the global spread of English, the diversification of its norms, and their pedagogical and policy implications.

This course analyzes how the English language aids globalization and how globalization changes English. English now features multiple grammatical systems and norms in diverse speech communities, adopts new modes of literacy and discourse practices, and enters into fluid relationships with other languages and cultures. These changes call for a reconceptualization of language standards, linguistic identities, literacy practices, and English language teaching. After studying the historical and geopolitical bases for the rise of English, the course explores the implications of contemporary forms of transnational relations, digital technology, and popular culture for diversifying the structure, norms, and usage of the English language.

The course aims to develop in students a sensitivity to the changing norms in English, provide pedagogical resources for teaching English according to local repertoires, examine strategies for facilitating intercultural communication, and
articulate policies on the role of English in a multilingual world. While students specializing in teaching English as a second language (TESL) will find this course useful to inform their teaching of English worldwide, doctoral candidates in applied linguistics will find it important to understand how the plural norms of English invite new research on issues such as language acquisition, discourse analysis, and sociolinguistic identities. The course will be of interest to students of English who are increasingly interested in the way World Englishes affect multilingual creative writing and composition practices. In addition, the course will be of interest to students in Education who have to address the diversification of English in the changing demography of students in national and international classrooms.

APLNG 578 Computational and Statistical Methods for Corpus Analysis (3) A hands-on introduction to the core and advanced computational and statistical methods for analyzing corpus data.

APLNG 578 Computational and Statistical Methods for Corpus Analysis (3)

This course will provide a hands-on introduction to the core and advanced computational and statistical methods for analyzing corpus data.

Topics to be covered include basic UNIX tools and python scripting for text processing; state-of-the-art computational tools for automatic and computer-assisted corpus compilation and annotation; computational tools for querying and analyzing raw and linguistically annotated corpora; and statistical methods used in interpreting information extracted from text corpora. Prior experience in computational and statistical analysis is not assumed. By the end of the course, students will be expected to have a good grasp of the computational and statistical techniques necessary for processing, annotating and analyzing corpus data, and to be able to implement these methods in their own corpus-based research projects.

This course will be highly applied, and there will be substantial opportunities for demonstrations, exercises, and discussions. Students will be evaluated on participation in in-class activities and discussions, completion of a series of lab assignments designed to help them practice the computational and statistical techniques introduced, and a final research project.

The Pennsylvania State University
This course serves as the methods component of the two-course sequence in corpus linguistics offered in the Department of Applied Linguistics.

APLNG 580 Proseminar in Applied Linguistics (1) This team-taught seminar introduces PhD students to the scholarly areas and research perspectives in Applied Linguistics represented by department faculty.

This team-taught pro-seminar is the cornerstone of the PhD program in Applied Linguistics. Its aims are to foster an intellectual community among incoming PhD students and department faculty and to provide the students with an overview of the scholarly expertise and research perspectives in Applied Linguistics represented by department faculty. The areas to be covered include: second and foreign language and literacy development and pedagogy; technology and language learning; language testing and assessment; language policy and planning; language uses in community, workplace, professional and academic settings from local, national, and international perspectives; language and identity; language and health; sociocultural theory; discourse and conversation analysis; and corpus linguistics.

This is a required course for those entering the PhD program in Applied Linguistics and will be offered every fall. The enrollment will depend on the number of admitted students to the PhD program with a maximum number of 10.

Through participation in discussions with individual faculty members, and readings when appropriate, it is expected that students will become familiar with 1) the scholarly expertise of the participating faculty members and 2) key concepts and research perspectives associated with their areas of specialization in the field of Applied Linguistics.

Evaluation of student learning includes completion and discussion of readings. The department's Director of Graduate Studies will be responsible for scheduling the weekly meetings, for collecting feedback from individual faculty members on student contributions/performance and for assigning grades to students.

APLNG 581 (CAS 581) Discourse Analysis (3) Overview of theories and approaches to the analysis of spoken and/or written discourse.

This course is designed to provide an overview of the various theories of and approaches to the analysis of spoken and written discourse, e.g., speech act theory, conversation analysis, pragmatics, contextual analysis, functional/cognitive grammar, grammar and interaction. These and other approaches are intended to serve as analytic tools and frameworks for students to ultimately design and carry out their own research projects within the course of the semester. Research projects may focus on any aspect of language use, such as language and grammar, language and interaction, language and culture, language socialization, language and cognition; projects may center on some phenomenon of English or may involve other languages, as long as the student is capable of conducting an in-depth analysis of the particular phenomenon under investigation in that language.

APLNG 583 Methods of Language Assessment (3) Introduces methodology for selecting, developing, applying, and analyzing tests and questionnaires for research and evaluation in communication and language education.

APLNG 583 Methods of Language Assessment (3)
This course introduces standard methodology for selecting, writing, and analyzing language tests and research questionnaires. Major focus will be given to reliability and validity issues and the study of current testing research paradigms. Course activities will include reading texts and articles, completing assigned exercises, writing and analyzing a testing/questionnaire instrument, and the preparation and presentation of a research paper reporting test development findings or addressing an approved assessment issue.

The course is aimed at promoting the skills necessary to be effective judges and developers of language tests. This will involve learning to conduct item analyses, to understand principles of classical and item response measurement theory, to appreciate current and past language assessment issues, to carry out appropriate statistical analyses by computer or calculator, and to produce assessment research of publishable quality. In addition, the course will provide introduction to issues in latent trait/item response theory, item banking, computer adaptive testing, and instructional program evaluation.

APLNG 584 Sociocultural Theory and Second Language Learning (3) The course is an introduction to research on second language learning from a sociocultural theoretic perspective.

APLNG 584 Sociocultural Theory and Second Language Learning (3)
The course is designed to be a graduate level introduction to research on second language learning and teaching informed by sociocultural theory of mind and cognitive development. The course will initially focus on the general principles of the theory as laid out in the writing of L. S. Vygotsky, his colleagues and modern interpreters of the theory. It will then consider in detail the research that has been carried out over the past 15 years on L2 learning and teaching from a sociocultural perspective. Topics to be covered include the following: a brief history of cultural psychology; mind as a mediated cultural construct; activity theory; the genetic method; internalization and appropriation; the zone of proximal development; inner and private speech (including gesture); collaborative learning, prolepsis, and scaffolding; the role of artifacts and social relationships in development; interface between sociocultural research and language pedagogy; language testing from a sociocultural perspective; regulation in a first and other languages; metacognition in a first and other languages; identity in a first and other languages; the relationship of sociocultural theory to other theories of second language acquisition. The course has two primary objectives: to provide students with a solid foundational and critical understanding of the principles of sociocultural theory and for them to carry out a research project on second language learning using the genetic method and sociocultural theory principles to interpret data. Given that second language acquisition has become a dominant paradigm within applied linguistics, developmental psychology, and educational psychology, the course is particularly relevant for students not only in the graduate program in Linguistics and Applied Language Studies (LALS), but also to those working in psychology and education, as well as those pursuing the applied linguistics concentration in the language departments. It also serves as a complement to the other courses in applied linguistics offer by LALS in that it exposes students to a very theoretical perspective from what is often encountered in graduate courses in applied linguistics. As such, it challenges them to think in different ways about mind, learning, development, teaching, and assessment. The requirements for the course are: completion of required readings; in-class presentation of one research study selected from the L2 literature; submission of two brief (4-5 pages maximum) critical analyses of two research studies drawn from the relevant research literature; completion of a significant research project (topic to be negotiated with the professor). Course to be offered every other year beginning 2003-04. Maximum enrollment 1

APLNG 592 Qualitative Research in Applied Linguistics (3:2) This course offers an introduction to qualitative research methods in applied linguistics.

APLNG 592 Introduction to Qualitative Research in Applied Linguistics (3)

This course is designed to acquaint students with the background, methods, and current status of qualitative research in the field of applied linguistics. The main goals of the course are: 1) to familiarize students with a range of contemporary qualitative approaches to second language research; 2) to develop students’ ability to select appropriate methods for particular research questions, 3) to develop critical awareness of issues related to validity and ethics in research design and writing; 4) to enhance students’ skill in the collection and analysis of qualitative data. The class will review a range of
approaches to qualitative research (e.g.), ethnography, conversation analysis, diary study, case study) as well as issues of ethics and quality in research design, implementation and presentation. Students will be evaluated on reading and discussion (20%), assignments (30%), book and article reviews (20%), and final project (30%). APLNG 592 is a required course for the Ph.D. in Applied Linguistics, one of two courses on research methods contributing to the core curriculum. In addition, this course will be beneficial to students in Applied Linguistics options in the foreign languages (French, Spanish, and German).

APLNG 593 Experimental Research on Language (3) Standard methodologies for planning, conducting, interpreting, and reporting research in Applied Linguistics.

APLNG 593 Research Design and Methodology in Applied Linguistics (3)

This course introduces standard methodologies for planning, conducting, interpreting, and reporting research in Applied Linguistics. Course activities will include reading texts and articles, completing assigned exercises, participating in group discussions, criticizing research articles, and conducting formal research projects. Students are encouraged, but not required, to focus the research project around their individual thesis or dissertation research and/or to target the research project for publication in a professional journal.

The course is aimed at promoting the skills necessary to being effective consumers and producers of research. This will involve learning to formulate research questions, to select appropriate research designs, to appropriate statistical analyses by computer and/or calculator, and to interpret and report the results of studies.

**APLNG 802** Focus on English: Teaching Form, Meaning, and Use (3) Develops an understanding of the various domains of the English language as relevant for adult English language learning and teaching.

**APLNG 802 Focus on English: Teaching Form, Meaning, and Use (3)**

This course explores various domains of the English language (phonological, lexical, grammatical, pragmatics) in relation to adult English language learning and teaching. Attention is paid to the various components (form, meaning, and function) of these domains and how each component works within larger stretches of discourse. Students will come to understand: language as communication, meaning-making, social practice; grammar as both structure, arrangement, rules and choices; and language teaching concerned with both language form and language use. The major topics covered include the sound system, lexicon, grammar, tense & aspect, modality, spoken & written texts, discourse & genre, and pragmatics. Students will engage in a variety of data analysis activities that assess their knowledge of the various domains of language and engage in practical activities that require them to apply these understandings to adult English language teaching. This course is one of four required courses that make up the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

**General Education:** None

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

APLNG 806 Focus on Classrooms: Planning and Support Language (3)

This course will guide candidates to analyze the interactional patterns and discourse of diverse instructional settings and the factors that impinge upon planning and supporting effective instruction for adult English language learners. Students will: a) examine their own beliefs and knowledge about language learning and language teaching and become aware of the impact of such knowledge and beliefs on instructional practices; b) recognize the highly situated nature of teachers' instructional decisions and practices and develop an awareness of instructional language & classroom discourse that supports English language development; c) devise, select, and/or adapt a wide range of curricular resources to meet the linguistic, social, cultural and educational needs and goals of English language learners; d) develop lesson plans, evaluate curricular units and write teaching objectives; e) connect instruction to local and global activities and problem-solving using the imagination, collaboration, computer and other technological resources. Students will observe several English language instructional settings, recognize instructional models and classroom interactional patterns, review and adapt textbooks, and develop their own materials using authentic language texts. A focus will be on writing clear teaching objectives and lesson plans and the use of new technologies to support adult English language learning. This course is one of four required courses in the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

APLNG 808 Focus on Instruction: Teaching and Assessing Language Learning (3) Develops a critical awareness of one's teaching practice and highlights instructional planning and classroom interactions with adult English language learners.

APLNG 808 Focus on Instruction: Teaching and Assessing Language (3)

This course facilitates the candidate's understanding of and ability to use effective teaching and assessment practices that support adult English language learning. Students will: a) recognize the highly situated and interpretative processes involved in English language learning and teaching and be able to reflect on, critically analyze, and evaluate their own instructional practices; b) understand subject matter content from an instructional perspective, learn to anticipate areas that may require additional instructional support, and carry out a range of appropriate instructional strategies and activities that support English language development; c) demonstrate an understanding of the central issues and current approaches to the teaching of English language speaking, listening, reading, writing, grammar, as well as approaches to language instruction that are content-based and focused on English for specific purposes; d) recognize the interconnectedness of teaching and assessment, assess students' knowledge using multiple forms of assessment, and address students' diverse needs, backgrounds, and English proficiency as they plan instruction. Major topics will include concepts surrounding second language assessment as well as classroom strategies to evaluate and monitor adult learners' English language learning. Also, students will explore the central issues and techniques for teaching oral communication (listening and speaking), literacy (reading and writing), and grammar. Students will complete a curricular development project, teach and videotape classroom lessons for mentor instructor feedback. A focus will be on guiding students to develop their own teaching practices appropriate to a group of adult English language learners in the specific context in which they live and work. This course is one of four required courses that make up the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

### Architectural Engineering (A E)

#### A E 401 Design of Steel and Wood Structures for Buildings (3)

A E 401 is a first course in structural steel and wood design taken by all undergraduate Architectural Engineering students in the 6th or 7th semester. It applies the principles of engineering mechanics to layout, analysis, design, and detailing of structural elements in steel and wood of simple buildings.

**A E 401 Design of Steel and Wood Structures for Buildings (3)**

A E 401 is a first course in structural steel and wood design taken by all undergraduate Architectural Engineering students in the 6th or 7th semester. It applies the principles of engineering mechanics to layout, analysis, design, and detailing of structural elements. The course covers the principles of structural design, structural safety, structural stability, steel as a material, methods of structural steel design, design of tension members, design of columns, design of beams (flexure, shear, deflection, bearing, web crippling, web yielding), combined stresses (beam columns), fasteners/connections. It also treats wood design, including material characteristics, beam design, column design, and fasteners. After completion of the course students will be able to design simple wood and steel structures.

- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Fall 2005
- Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

#### A E 402 Design of Concrete Structures for Buildings (3)

This course is designed to provide all Architectural Engineering students with an ability to analyze and design reinforced concrete and an understanding of the theoretical behavior of reinforced concrete members. The primary focus is on the analysis and design of one-way systems comprised of slabs, beams, and columns. Evaluation methods include, but are not limited to, exams and homework assignments. A prerequisite knowledge of structural analysis is necessary. It is a required course in the Architectural Engineering curriculum. Additionally, this course provides the necessary prerequisite knowledge for several upper level concrete courses in both Civil and Architectural Engineering.

- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Fall 2005
- Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

#### A E 403 Advanced Steel Design for Buildings (3)

A E 403 is designed for 4th year Architectural Engineering students in the structural option, to build on the design and analysis base developed in the first course in steel design. This course is intended to develop competency in analysis and design of multi-story steel buildings subjected to gravity, wind and earthquake loadings, including study of connections, framing systems, composite design and plastic design of steel members. The course prerequisites include determinate and indeterminate analysis and structural design of steel members. It will cover such topics as types of construction, the design process, loading and load cases, floor systems, floor vibration, moment rotation characteristics of connections, plastic analysis, multi-story frames, braced and unbraced frames, seismic design, leaning columns, drift, composite design and connections.

- General Education: None

---

The Pennsylvania State University
A E 404 Building Structural Systems in Steel and Concrete (3)

The course is designed for architectural engineering students in the Construction, Mechanical Systems and Lighting/Electrical options to gain an ability to design simple building members in steel and concrete using current professional standards, specifications and guidelines. Students will learn to combine these members into simple structural systems and compare the performance and load carrying characteristics of these systems. The course will also address general performance parameters of these materials, construction issues and key systems-integration issues for beams, columns, flooring and roofing systems, and lateral bracing systems constructed in steel and concrete. This course is considered to be the terminal course for non-structural option AE students, and is designed to provide a general understanding of design, construction and integration issues that affect these structural systems. This course may be taken by AE Structural Option students or Architecture students.

A E 421 Architectural Structural Systems I (3)

Architectural Structural Systems I (3)

A E 422 Architectural Structural Systems II (3) Continuation of A E 421, with emphasis on structural configuration and construction assemblies.

A E 424 Environmental Control Systems I (3) Fundamental principles and applications of environmental systems in buildings. This course is intended for Architecture students.
A E 430 Indeterminate Structures (3) Classical methods of analysis for beams, frames, arches, and secondary stresses as applied to buildings; introduction to modern methods.

**Indeterminate Structures (3)**

- Identification of the assumptions and weakness of the theory of reinforced concrete members.
- Detailed design of reinforced concrete beams and girders.
- Design of reinforced concrete slabs by the direct design method.
- Design of reinforced concrete slabs by the equivalent frame method.
- Analysis of reinforced concrete members subjected to torsion, to determine bending and torsional moments.
- Design of reinforced concrete columns, slender and non-slender.
- Design of reinforced concrete columns in biaxial bending.

This course is taught by a combination of lectures, solution of example problems, and design projects.

This is the last course in reinforced concrete design in the Architectural Engineering curriculum, and builds on previously learned skills in reinforced concrete design and analysis of statically determinate and statically indeterminate systems. Successful students will come away with sufficient understanding of the theoretical basis of concrete design to be able to learn any further aspect of concrete design on their own, and a set of specific critical skills needed by any structural designer involved with reinforced concrete structures. These skills include:

- Identification of the assumptions and weakness of the theory of reinforced concrete members.
- Detailed design of reinforced concrete beams and girders.
- Design of reinforced concrete slabs by the direct design method.
- Design of reinforced concrete slabs by the equivalent frame method.
- Analysis of reinforced concrete members subjected to torsion, to determine bending and torsional moments.
- Design of reinforced concrete columns, slender and non-slender.
- Design of reinforced concrete columns in biaxial bending.

This course is taught by a combination of lectures, solution of example problems, and design projects.

A E 432 Design of Masonry Structures (3) Analysis and design of unreinforced and reinforced masonry: non-bearing walls, bearing walls, shear walls, masonry building systems.

This course is intended to prepare students in Architectural Engineering and related disciplines such as Civil Engineering and Agricultural and Biological Engineering to design load-bearing and non load-bearing masonry structures. Although the emphasis will be on reinforced masonry, the design of unreinforced masonry will also be covered. The course will begin with a discussion of the materials used in masonry construction: clay units, concrete units, mortars, grout, and reinforcement. Since masonry is designed by allowable stress methods, a discussion of allowable stress design, as compared to load and resistance factor design, is necessary from the outset. The first design applications to be discussed will be non load-bearing walls, reinforced and unreinforced. This will be followed by a brief coverage of the topic of columns. The next topic will be load-bearing walls, reinforced and unreinforced. The discussions of load-bearing walls will describe two methods for their design: the use of a straight-line interaction formula and the construction of interaction diagrams. The analysis of systems of shear walls will be described in detail, followed by shear wall design. The design of particular building systems, both low-rise and mid-rise will either be covered by lectures, or by other exercises.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

A E 439 Modern Structural Systems (3) Analysis and design of building structures of unusual types.

Modern Structural Systems (3)

A E 457 HVAC Control Systems (3) Theory of automatic control. HVAC control applications. Control system components, control loops, development and documentation of control logic, control commissioning.

A E 457 HVAC Control Systems (3)

The objective of the course is to develop the knowledge and skills necessary to understand, design, document, and diagnose problems in HVAC control systems. The course builds on knowledge of HVAC system function and design obtained in prior courses in the curriculum and prepares students for advanced design courses and the capstone project. The course begins with an introduction to concepts and terminology of automatic control, followed by detailed study of
control system components: sensors, controlled devices, and controllers. Understanding of these fundamentals is then applied to the development and documentation of controls for common HVAC systems and the commissioning of control systems. Relevant standard and guideline documents are referenced as necessary.

A E 458 Advanced Architectural Acoustics and Noise Control (3) Advanced consideration of noise control in buildings; ventilating system noise and vibration; acoustic design variables.

A E 461 Architectural Illumination Systems & Design (3) Lighting units & photometry; lighting equipment; design criteria, calculation methods; the design process; energy codes.

This course will prepare students to design basic lighting systems by providing them with background information and experience to do the following:
1. Develop their knowledge of lamp, luminaire, and control types and evaluate their applicability to a particular design situation.
2. Establish fundamental design criteria for a variety of lighting applications.
3. Conduct appropriate and accurate analyses of lighting systems to assess system performance and evaluate its ability to meet design criteria.
4. Implement a completed design by specifying all of the components of the system and providing an appropriate system layout.

This is the first full-semester lighting course that students receive in the Architectural Engineering Department's Lighting/Electrical Option.

A E 464 Advanced Architectural Illumination Systems & Design (3) Flux transfer theory; advanced lighting and control systems; emergency lighting; daylighting; visual performance issues; psychological aspects of lighting.

This is the final undergraduate architectural lighting course in the Lighting/Electrical Systems Option. The course focuses on advanced topics related to lighting design such as luminous flux transfer and its application to lighting analysis procedures, advanced issues in photometry, advanced control systems, and advanced topics in lighting design. The light design topics include the psychological aspects of lighting, and design for complex spaces such as museums, stores, and video conferencing.

The course includes a weekly hands-on practicum experience, homework, exams and a design project.

A E 466 Computer Aided Lighting Design (3) Design and analysis for outdoor area; floodlighting; and interior applications,
including design criteria; economic analysis; modeling algorithms; and visualization.

A E 466 Computer Aided Lighting Design (3)
The goal of this course is to cultivate an understanding of good lighting design practice through a series of design and analysis problems. Course topics include design criteria, design practice, and the application of lighting hardware and analysis procedures for outdoor area lighting, economic analysis of lighting systems, interior lighting design and lighting system visualization.

Commercially available computer software is applied to approximately seven design projects, which students present in either PowerPoint or submit in a short report format. Students, faculty and outside professionals critique the project solutions. The critiques enhance the learning experience for all students through the evaluation of different lighting solutions applied to the same design problem.

A E 469 Photovoltaic Systems Design and Construction (3) Criteria and analysis methods pertaining to the design and construction of photovoltaic (PV) systems and their integration with buildings.

A E 469 Photovoltaic Systems Design and Construction (3)
This course provides students with a working understanding of the design and construction of photovoltaic (PV) systems and their applications in buildings, and is intended for students in Engineering and Energy Engineering. The course provides an overview of PV systems and common applications in residential and commercial buildings including the determination of solar irradiance and insolation based on latitude and climate as well as site survey and assessment methods for the positioning of PV systems. Technical topics include solar module components, DC-AC power inversion, energy storage systems, and system sizing and design. The integration of PV systems with building electrical and mechanical systems, including discussions of the pertinent building codes, utility interconnection, and the economic analysis of PV systems, is also included in this course. Upon the completion of the course, students will be able to calculate and account for the factors affecting the performance of PV systems in various climates and conditions, distinguish the features and performance variables of solar modules and inverters in the design of PV systems, calculate string sizing and inverter matching variables in the design of PV systems, communicate the critical design features of safe and efficient PV system integration with buildings and utilities, evaluate and quantify the factors affecting the successful installation and performance of PV systems in variable settings, and will develop inquiry skills needed to assess new products entering the solar energy marketplace. In addition to understanding the key issues with system design, students will be able to utilize this understanding to choose components properly and to design a basic grid-tied system for a chosen building. Students will also be able to conduct an economic analysis of PV systems in the context of residential and commercial building construction.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

A E 472 Building Construction Planning and Management (3) Construction organization and contracts; preconstruction services; estimating; scheduling; cash flow; site planning and preparation; building construction sequences; construction business presentations; value engineering.

The objective of A E 472 is to introduce students in the construction management option of the Architectural Engineering program to the process in which building construction contractors acquire building projects, and the range of services typically provided on these projects. Upon completion of this course, students will have a working understanding of the preconstruction process and methods of acquiring negotiated work in building construction. They will be capable of assembling estimates, schedules, cash-flow curves, and site plans for building projects, and will have a working knowledge of competitive presentation strategies and develop professional presentation skills.

The content of the course centers upon the process in which companies plan for and acquire projects as construction managers and general contractors. Specific topics include schematic estimating and scheduling, design coordination of structural, architectural, and mechanical systems, value engineering processes, and site planning. The financial aspects of construction work are also presented, including project financing, cash flow, and accounting. A significant portion of the course is also devoted to the development of strategic and competitive business presentation, including risk assessment, fee structure, team dynamics, and technical presentation skills.

The class relies heavily upon the application of all content by students in the context of a team project. The project involves the distribution of a "Request for Proposal" for which students prepare a competitive proposal for an actual building construction project planned on the Penn State University Campus. Class activities include the presentation of key issues followed by in-class or independent exercises to reinforce themes and strategies to be applied in the project proposal. Students are assessed on their performance on discussion quizzes on ANGEL, independent exercises, class participation, a team presentation, and exams.

For A E students, the prerequisite for the course is the successful completion of A E 372. For non-A E majors, students are admitted at the discretion of the instructor. A E 472 is a prerequisite course for A E 473.

Bachelor of Arts: None
Effective: Fall 2005
Prerequisite:

A E 473 Building Construction Management and Control (3) Building construction project planning; construction cost, schedule, quality and safety control systems; project cost accounting; change management; construction company management.

The goals of this course are for students to learn how to perform detailed construction planning, identify potential problems during construction, and manage changes throughout a construction project. By completing this course, students will better understand the role of the general contractor/construction manager in analyzing the construction aspects of a building project and designing the construction engineering and management systems to effectively execute the project.

The main course objectives include learning how to perform and implement detailed planning for a construction project together with monitoring the project progress and performance including detailed cost control. Other course objectives emphasize gaining knowledge of the key decisions that construction executives make when managing a construction company and identifying potential projects to pursue. Students will also be introduced to the management of changes which occur throughout a project and how to negotiate changes. Finally, ethical standards for a professional engineer and their impact on decisions within the construction industry are important course learning objectives.

The course is taught via a combination of teaching methods that rely on problem based learning through both in and out of class activities; lectures by faculty and industry experts; project case studies; student presentations; and team and individual assignments. Completion of A E 472 is a prerequisite for this course.

Engineering analysis of building systems; emphasis on analysis and design of building structural, mechanical, lighting/electrical, and construction related systems. Final written report, web-based project portfolio and verbal presentation are required.

A E 482 Comprehensive Architectural Engineering Senior Project II (4)
A E 482 is the second half of the capstone engineering design project for Architectural Engineering students. The course is taken by all undergraduate architectural engineering and serves as a direct follow up to A E 481W. Students perform detailed option specific work in conjunction with individual proposals written in A E 481W. Students are also required to demonstrate work in the breadth areas of architectural engineering. Evaluation methods include but are not limited to written reports, verbal and written assignments, faculty consultations, maintaining their capstone project electronic portfolio, a final comprehensive written report and a verbal presentation to a faculty jury.

A E 530 Computer Modeling of Building Structures (3) Theory and application of structural analysis using the direct stiffness method. Modeling assumptions, validation, interpretation of computer output.

A E 530 Computer Modeling of Building Structures (3)

This course addresses the theory and application of structural analysis using the direct stiffness method with matrix formulation, applying computer programs to the analysis of two- and three-dimensional structures. Topics include validation and interpretation of results from computer analyses, as well as practical analysis techniques and the design of building structures to satisfy building code requirements.

The course is designed to provide students with the ability to create computer models representative of actual building response and in line with prevalent modeling techniques implemented using commercial structural analysis software. Primary objectives include developing an understanding of the process used by computers to solve structural systems, with emphasis on the use of computer models in the analysis and design process to satisfy building code requirements.

This is a mandatory course for students in the structural option within the integrated undergraduate-graduate degree program in architectural engineering (B AE/M AE), and it is a valuable course for all structural engineering graduate students.

Students must have completed an undergraduate course in structural analysis of determinate and indeterminate systems. Since some homework problems require proportioning structural members to resist combined loading conditions, the course prerequisites include introductory courses on the design of steel and concrete members. Also required is the knowledge of elementary matrix algebra and exposure to advanced programming of electronic spreadsheets.

This course involves significant instruction in the AE Department computer laboratory, which is equipped with several commercial structural analysis software programs capable of handling large structural models.

A E 534 Analysis and Design of Steel Connections (3)

Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

This course covers the theory of steel connection analysis and design including member, bolt and weld limit states as described in the AISC Specification and the Manual of Steel Construction. With sound knowledge in the basics of steel connection limit states, specific shear, moment and bracing connections are studied in detail. Along with the fundamental theory applied to each connection type, use of the applicable design aids contained in the Manual of Steel Construction is covered. This course is expected to be particularly useful for students entering the structural design profession upon graduation or those engaged in steel connection research. This course is required of students enrolled in the MAE Structural Option in the Architectural Engineering Department. Additionally, this course is commonly taken by structural engineering graduate students in both the Architectural Engineering and Civil and Environmental Engineering Departments. Student evaluations are based on their performance on a mid-semester exam, a final exam, out of class assignments, projects, and presentations. This course will generally be offered each fall, with an anticipated enrollment of 25-35 students.

A E 543 Research Methods in Architectural Engineering (3) Research skills, critical thinking, academic writing, presentations, use of electronic media, and experimental design applied to AE research topics.

This is a course intended primarily for graduate students in Architectural Engineering. Other students interested in Architectural Engineering research may also take the course. The main objective of the course is to build research skills for students pursuing an M.S. or Ph.D. degree in Architectural Engineering. The research skills to be targeted are critical thinking, academic writing, presentation, oral communication, and use of electronic media, based on materials from architectural engineering projects and literature. These skills will be developed through a series of lectures and exercises to include architectural engineering research topics, such as novel building physical characteristics and occupant performance/environmental perceptions.

In addition to the three major targeted areas of research skills development, this course will begin and end with a focus on architectural engineering research topics. The introductory part of the course covers the topics and methods for the four focus areas within the Architectural Engineering program, while the closing portion emphasizes interdisciplinary research efforts and encourages students to thinking in that direction. For example, while experimental design is directly applicable to each individual focus area, the specific instrumentation is area (focus) dependent. Nevertheless, knowledge of different specific data collection methodologies from multiple Architectural Engineering options can enhance the understanding of integrated architectural engineering research topics. Overall, the communication established in all of the course assignments can be used to help develop new architectural engineering research ideas and polish existing ones, which will be helpful to students who are taking the course during their first or second semester in residence.

A E 551 Combined Heat and Power System Design for Buildings (3) Thermodynamic and thermo-economic analyses methods for determination of optimal, on-site, total energy systems for commercial buildings.

Building systems consume about 40% of the primary energy resources utilized in the United States each year and are responsible for a proportional fraction of air contaminants (NO, SO, fine particulates, CO) and greenhouse gas, CO2. A conventional energy supply mix for building (grid electricity, site fossil fuel heating) results in approximately 50% primary fuel energy utilization. Advances in scalable, low emissions, electric power generating devices are leading to incorporating on-site power production into the building design. The “waste heat” general is of such a quality that it can be utilized at the site in heating, hot water, absorption cooling, and dehumidification applications. The simultaneous utilization of a primary fuel to generate both the electrical and thermal components in Building Combined Heat and Power (BCHP) can result in total primary fuel utilization values of 85% or greater, electric power reliability increases and significantly reduced emissions, particularly greenhouse gases.

This course examines the underlying thermodynamic principles involved in BCHP, pollutant and greenhouse emission mechanisms and levels associated with both Separate Heat and Power (SHP) and BCHP designs for a given building site. Economic and regulatory principles that govern the application feasibility of a BCHP design for a given building.
configuration are examined. At the end of the course, students will have the skills and tools necessary to perform an assessment of the feasibility of a BCHP application to a given building site. Specific combinations of distributed, electric power generation equipment (micro-turbines, fuel cells, diesel engines, wind-power) and thermal “waste” utilization from these generating systems will be discussed and analyzed. Case studies are utilized to illustrate the evaluation processes.

Using the SHP design methods and principles (ducted air supply systems, hydronic heating and cooling systems, etc.) covered in A E 454 (Advanced HVAC) and central system methods covered in A E 557 (Centralized Cooling Production and Distribution Systems) or A E 558 (Centralized Heating Production and Distribution Systems) for commercial buildings, students will learn how to achieve and establish the same building performance objectives using Combined Heat and Power (CHP) technologies. Since the use of CHP for various building types requires reducing transients in thermal and electric load profiles, the relationship of the structural characteristics of the building (thermal mass) and the use of combinations of artificial lighting vs. day-lighting to the utilization of CHP is investigated.

A E 555 Building Automation and Control Systems (3) Advanced techniques in the theoretical analysis and practical design of the automatic comfort controls used in building thermal systems.

A E 555 Building Automation and Control Systems (3)

A E 555 complements and expands upon the material covered in the undergraduate HVAC control systems course. The objectives of this course are to provide students with an enhanced capability to design advanced building control systems and to ensure proper operation through the use of comprehensive design and analysis tools and evaluation methods. Particular emphasis will be placed on systems integration, fault detection, diagnosis and correction, optimization and performance monitoring. Reference materials for the course will be drawn from recent technical papers and conference proceedings and cover both model-based predictive control and data-driven modeling and control. Students will develop skills to stimulate building control system performance for a wide range of system designs and to implement advanced control strategies and sequences relevant to modern integrated building systems.

General Education: None

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A E 557 Centralized Cooling Production and Distribution Systems (3)** Central cooling plant and distribution components and systems; thermal, hydraulic, and economic modeling for planning and design.

**Centralized Heating Production and Distribution Systems (3)**

**A E 558 Centralized Heating Production and Distribution Systems (3)** Description and analysis of central heating plant and distribution components and systems; thermal and economic modeling for planning and design.

**A E 559 Computational Fluid Dynamics in Building Design (3)** Theory and applications of building environmental modeling with Computational Fluid Dynamics (CFD).

**A E 559 Computational Fluid Dynamics in Building Design (3)**

This course will be a primary interest to Architectural Engineering graduate students in the Mechanical Systems emphasis. Other students interested in the application of Computational Fluid Dynamics (CFD) to Architectural Engineering may schedule the course if they have satisfied the prerequisites. The main objective of this course is to build the knowledge necessary for successful simulations of building indoor and outdoor environments using CFD. The skills developed in the course build on the knowledge of fluid mechanics and building mechanical systems. The course will also add to the available pool of electives for students in the integrated BAE/MAE program.

The first part of the course covers general CFD topics on the solution of Navier-Stokes partial differential equations. Different concepts necessary for the solution of the partial differential equations expressing the conservation laws will be introduced along with a CFD software package. In this phase, the course focus will be on the derivation of different equations and their solutions. Analytical solutions will be derived when possible, while most of the problems will require use of numerical solutions. Several homework assignments will require development of small computer programs. The introduced CFD software package will prepare students for the second part of the course that is more applied.

The use of CFD in building design is different from its use for other engineering applications because of the domain size and specific boundary conditions such as diffuser airflow, wind, or solar radiation. Most of the time, appropriate boundary conditions distinguish successful from unsuccessful applications of CFD. To address the issues of quality control in CFD simulations, the American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) recently developed CFD guidelines that the course will follow from the beginning. The actual guidelines will be introduced to fortify everything learned during the course.

Evaluation will be based primarily on analytical homework assignments (30%), two projects (30%), a mid-semester quiz (20%), and a final examination (20%). This course will be offered each Spring, with an anticipated enrollment of 10 students.
A E 561 Science of Light Sources (3) In-depth scientific principles of light generation in modern electric light sources, and the resultant characteristics that influence their use for buildings.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

A E 562 Luminous Flux Transfer (3) Radiative transfer applied to lighting analysis; methods for computing direct and interreflected illumination; nearfield photometry.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

A E 563 Luminaire Optics (3) Optical design of reflectors and refractors for lighting systems; manufacturing methods.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

A E 564 Lighting Design for Visual Appearance (3) Color; the impact of light on materials, architectural spaces, and human perception.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

A E 565 Daylighting (3) Design concepts, solar position, sky luminance distribution models, integration of daylighting and electric lighting controls, physical modeling, computer analysis techniques.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

A E 569 Research Topics in Illumination Engineering (3) Seminar on prior and current research in illumination engineering which define current recommendations and design practice.
A E 570 Production Management in Construction (3)

A E 570 explores the use of production management to efficiently manage the delivery processes of capital facility projects. Students will learn about fundamental models of managing project processes and about tools to manage projects as production systems. The procurement, design, and construction processes that are used in capital facility projects are not usually through of in production process terms. Yet, doing so can develop a deeper understanding of the complexities of capital facility projects and enable project production to be efficiently managed. Production management emphasizes managing projects as complex wholes focusing on the relationships between the parties and tasks to optimize total process performance.

A E 570 analyzes the latest production thinking and management tools to manage capital facility projects. The learning objectives of this course are for students to:

a) recognize that capital facility projects are complex production systems and understand how principles of production relate to construction projects;
b) understand the principles and methods of new production management methods like lean construction;
c) be able to apply specific production management tools to specific problems identified on projects, especially those encountered on high performance sustainable building projects; and,
d) understand how to use the latest production management planning and control tools to improve the management of capital facilities projects.

A E 570 will be offered each spring with an anticipated enrollment of 25 students. This course uses classroom demonstration, case-based materials, in-class game simulation, and computer software to demonstrate key concepts and production tool applications. Assessment is conducted through out-of-class assignments, homework exercises, and a major project requiring appropriate tool to remedy the problem. The final grade for this course will be based on:

- Construction process analysis assignment - 15%
- Experiment design assignment - 25%
- Homework exercises and classroom participation - 25%
- Major project, including class presentation - 35%

Students entering this course are expected to have knowledge of the construction industry, project delivery processes, and construction means and methods.

A E 571 International Construction Management and Planning (3)

International Construction Management and Planning (3) Evaluation of international project environments and participants, modeling and planning international projects.

A E 572 Project Development and Delivery Planning (3)

The course explores the methods used by capital facility owners and developers to initiate a project. Many vital decisions are made and critical activities performed early in a project that have major bearing on how the project is completed. These include defining the project objectives, identifying constraints, recognizing stakeholders, and selecting financing and delivery methods. The course explores the latest project development and delivery techniques used to support these decisions. Students will learn how early development activities shape a project, and how building industry professionals
are helping to support these activities. Students will develop knowledge and perspective to help their decision-making
skills. As the course title implies, special focus will be on high performance delivery planning.

The learning objectives of the course are for students to:
1) Understand what occurs in the early stages of project formation as capital facility owners and developers initiate a
project;
2) Understand the methods owners and developers use to progress through the capital facility process;
3) Understand the different types of acquisition strategies, project delivery methods, and contractual systems to achieving
capital facility owner objectives; and,
4) Understand the decision-making needs of high performance sustainable building projects.

Offered in the Fall semester, the course uses case-based materials, hands-on computer simulation, and other classroom
demonstration. Case study projects assigned by the instructor, individual homework exercises, and a group project
requiring students to apply development techniques to a current downtown State College capital facility development site
from the assessment for the course.

Students entering this course are expected to know how the construction industry operates, including project delivery
methods, engineering economics, preconstruction, and construction means and methods.

ARCH 417 The Language of Boundaries in Architecture and the Landscape (3) This course examines the development and
ARCH 417 The Language of Boundaries in Architecture and the Landscape (3)

This course is composed of eight chronologically arranged units of study that examine the major developments in the human use of boundaries in the creation of architecture and landscapes—those actually constructed as well as those created through literature, myth, art, and film.

Human boundary behavior is complex. While we tend to describe space and time as 'transitive' (rational), our actual experience of them is intransitive. Because descriptive systems tend to disregard the role of time, they favor a constructed descriptive objectivity over subjective accuracy. Conflicts between representations and experiences reflect psychological and cultural conflicts expressed as symptoms and dysfunctions.

Both the lectures and supplemental films are directed at helping students understand, reflect upon, and critically think about the trans-cultural and ubiquitous quality of boundary behavior.

The thrust of the course is historical and critical rather than professional, and the intent of the course is to provide students with a comprehensive overview of the issues that surround the human use of boundaries. Because boundary issues are the result of humans' mental apprehension of the world, psychology, philosophy, critical studies, literature, and other humanities are intrinsically involved. But, because boundaries are a part of a way of conceiving the world mathematically, ideas from topology, number theory, and circuit logic are also key.

Each unit of study will be accompanied by exemplary films that illustrate some aspect of boundary behavior. The course includes approximately 12 important films for required study.

ARCH 431 Architectural Design V (6) Continuation of ARCH 331 and 332, with design and research in program option areas.

ARCH 431 Architectural Design V (6)

The fourth-year architecture studio emphasizes the development of skills in research, documentation, analysis and presentation of project-related physical and cultural information. The studio will investigate the implications of a rigorous predesign process in the design of architecture. The studio curriculum seeks to investigate the role of the architect in urban design, especially the design relationship between individual buildings, groups of buildings, exterior spaces, streets and streetscapes. Students will explore the synthesis of individual landmark buildings, building groups, urban landscape and service systems.

The studio explores the difference between the roles and responsibilities of public and private clients. In particular the implications of establishing levels of control within the built environments, such as design guidelines, circulation systems and utility networks.

Emphasis will be placed on the development of the following design skills:
- Cooperation and collaboration in research and design.
- Understanding the implications of existing patterns on subsequent design.
- Understanding attitudes toward contexts: cultural, physical, economic, personal, political, organizational (bureaucratic).
- Integration of scale: Development of logics (orders) for the use of the site and continuity of logic across scales of building.
- Developing culturally meaningful relationships between the ordering of land-use and space throughout related buildings.
- Design of exterior space using architectural relationships between multiple buildings
- Investigation of the implications of design controls on the single building.

ARCH 431A (IL) Architectural Design V--Foreign Study (6) A studio offered in Rome, Italy, which emphasizes urban planning and architectural design in an urban context.

ARCH 431A Architectural Design V--Foreign Study (6) (IL)
This studio course focuses attention on the urban design components of architectural design. Using the city of Rome and its unique position in the history of human development, the design projects are selected for their actuality in the current situation of Rome, Italy. The building sites are actual or expected project sites based on the current planning directives of the city planning offices. Students are asked to produce designs that respond to multifaceted programs that will usually include institutional, residential, and commercial activity in the same building/site.

The project will usually last the full semester with all phases of design included. Beginning with site planning and site design issues, the project runs through design concept and design development phases. The last two weeks are often focused on elevation studies and material details. A complete presentation of site, building, and details design is expected at the final presentation.

Studio course meetings with the instructors are scheduled three times per week. Approximately every three weeks, there are formal presentations often invited guest critics. A mid-term presentation is made at the design development conclusion phase. The final presentation is organized with guest critics at the end of the term.

Learning Objectives:
To achieve a complete urban architecture project design and presentation.
To understand the implications for architectural design of the city of Rome and its unique history.
To apply an interpretation of history to contemporary design problems.
To apply contemporary needs and requirements for architecture to a traditional city site.
To learn how to adapt design to a non-American culture and tradition of building.

ARCH 431A is the required foreign study architecture design studio taught in Rome, Italy. This course is available to Architecture majors only.

Prerequisite:
Concurrent: ARCH 499B and ARCH 499C

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ARCH 432 Architectural Design VI (6) A continuation of ARCH 431, this course explores in greater depth urban planning and architectural design in an urban context.

ARCH 432 Architectural Design VI (6)
ARCH 432 is a continuation of ARCH 431 with a focus on architecture in urban environments and urban/community planning issues of greater complexity. The class will collaborate in the research and documentation of the existing conditions of an urban site and the forces that influence it. This will include the study of precedents. The class will prepare a pre-design presentation, individual architecture projects, base models, and a book of the semester's work.

Based on the pre-design information, small student groups will develop a master plan for a large program. This exercise will include the preparation of the plan, supported by concept diagrams and models, land use diagrams, open space diagrams, landscape plans, pedestrian and vehicular circulation/parking/servicing diagrams, written and graphic site and building design guidelines, and a utilities diagram.

The architectural component of the master plan will be selected for development as the studio architectural design project. Each student will prepare an architectural project based on the general logic and concepts of the group plan.

Major topics addressed in the course include working collaboratively in teams, understanding fundamental ordering principles of cities and towns, understanding urban contexts, urban plans, land-use controls, and economic plans, the design of urban spaces, and the design of a single building or complex of buildings in an urban environment.

ARCH 432A Architectural Design VI--Foreign Study (6) (IL)
A continuation of ARCH 431A, this course explores urban planning and architectural design in an urban context in Rome, Italy. The design studio takes full advantage of the city of Rome and its unique position in the history of human development. Students will build on the knowledge of urban situations gained in ARCH 431A and apply that background to projects which utilize building sites based on the current planning directives of the city planning offices.

Students are asked to produce designs that respond to multifaceted programs that will usually include institutional,
residential, and commercial activity in the same building/site.

The project will usually last the full semester with all phases of design included. Beginning with site planning and site design issues, the project runs through design concept and design development phases. The last two weeks are often focused on elevation studies and material details. A complete presentation of site, building and detail design is expected at the final presentation.

ARCH 451 Architectural Professional Practice (3)

A study of architectural practice in today’s society: education, registration, office practice, codes, standards, construction industry, contracts, and legal documents.

ARCH 451 Architectural Professional Practice (3)

ARCH 451 is a required course in the BARCH curriculum. It is intended to prepare students for the professional practice of architecture. The course explores the historical influences and current trends that shape the relationship between the architect, client and builder in contemporary society. This course provides an overview of the changing roles of the architect through history as well as a detailed examination of the architectural profession in today’s rapidly changing world. ARCH 451 reviews internship, architectural licensing procedures and requirements, professional development (life-long learning), architectural practice including office organizational structures, the architect’s administrative role, construction cost control, professional organizations, the architect’s professional, legal and ethical responsibilities (including life-safety and accessibility), leadership in the profession and the community as well as alternative architectural / design related careers.

ARCH 480 Technical Systems Integration (3)

Presentations of buildings’ analyses from a multiplicity of viewpoints: architectural, spacial, environmental, mechanical, construction assembly.

ARCH 480 Technical Systems Integration (3)

This course is a synthesis of topics previously introduced in the AE sequence—such as structural, mechanical, electrical, and other systems related to a building’s technical performance. Students will practice the purposeful integration of all technical aspects of a building’s design, providing them with a working knowledge of matters related to energy efficiency, sustainability, lighting, and acoustics.

The focus of the course lies in questioning how technical requirements and design intentions should be integrated during the design process, so as to enhance the aesthetic and performance qualities of an architectural project. This course combines lectures, field trips, and technical assignments, along with analysis and implementation of energy, day lighting, electrical lighting, and acoustical concepts in the student’s design efforts.

In addition to the synthesis of building design and technical systems, this course will further develop the student’s knowledge of active/passive techniques for sustainable architecture. A focus on the collaborative workings/environment of the architectural practice helps students to translate systems integration strategies into graphic/digital representation, and reinforces the interdisciplinary nature of designing and constructing successful works of architecture.

ARCH 481 Digital Design Media (3)

Advanced course in digital modeling, rendering, animation and non-linear video for architectural investigations.

Digital Design Media (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2006
Prerequisite:
ARCH 491 Architectural Design Studio (6-12 per semester/maximum of 12) Problems in architectural planning and design; and/or programming, implementation methodologies and applications for various environmental design scales.

ARCH 491 Architectural Design VII-Thesis (6)
It is the goal of this program that, upon completion of the fifth year, each student will have the ability to pursue an architectural idea in a rigorous, in-depth manner and be able to express the knowledge of and implication of that idea through the completion and presentation of a “thoroughly considered building design project.” It is the intent of the fifth-year component of the Bachelor of Architecture program to foster the spirit of in-depth design inquiry and research, and to build upon and reiterate design awareness, skills, and methods introduced in previous years; and to introduce, discover and develop new ones. To these ends the primary educational vehicle is the use of a propositional thesis as a way of directing the study toward the linking of theory and building in a meaningful manner.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2015 Future: Spring 2015
Prerequisite:
Concurrent: ARCH 451

ARCH 492H Architectural Design Studio (6) Continuation of select ARCH 491 sections with concentration and specialization options.

ARCH 492H Architectural Design Studio (6) Continuation of select ARCH 491 sections with concentration and specialization options.

ARCH 492H Architectural Design Studio (6) Continuation of select ARCH 491 sections with concentration and specialization options.

ARCH 492H Architectural Design Studio (6) Continuation of select ARCH 491 sections with concentration and specialization options.
ARCH 495 Advanced Architectural and Related Design/Construction Work Experience II (1-3 per semester/maximum of 6)  
Supervised off-campus, non-group instruction including field experiences, practica, or architectural and related design/construction work experience.

A final presentation of activities will be evaluated by a faculty member in the Department of Architecture.

Number of credits will be determined based on the total number of hours of approved work experience under the direct supervision of a registered architect or other approved professional:
- 1 credit: 75-149 hours
- 2 credits: 150-239 hours
- 3 credits: 240+ hours

ARCH 496 Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARCH 496H Independent Study - Honors (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PARTI* (3) You will be working on your own projects, thinking architecture through germinal drawings and study models, long before form is defined. Monday evenings will be a time for speculation: the hand, the sketch, the diagram, the abstract model, the graphic function, montage & display, layers & series. In addressing your current proposals, you will blur the boundaries between ideas and objects. Our objective: to shorten the distance between thought and the documents that produce and reflect it, an iterative transformation that is a continuum, ideas into things, things into ideas.

PARTI* (3)
ARCH 497C Building Material Reclamation and Recycling (3) This course is a very hands-on, project-based seminar focusing on the theory and practice of building material salvage and recycling. Through active and applied learning, students will gain experience in handling, preserving and adding value to salvaged materials. The course will consist of a variety of small-scale design-build projects, where students will learn and practice the methods and techniques of reclamation and explore the design possibilities of reused material.

ARCH 497D Master Planning (3) Architects, landscape architects, and graphic designers will collaboratively design master plans to examine each discipline's construction of identity and time.

ARCH 497G Technology and the Imagination of Design (3) The subject of this seminar is the emergence of technology as a pivotal concept in contemporary design discourses. Through weekly reading, writing, and discussion, we will examine architectural responses - chiefly in technological discourses, design theories, and film - to the so-called computer revolution, cybernetics, information theory, and the linked transformations to the conceptions of nature, work, authorship, and the human. This course is recommended for research students preparing a thesis in Design Computing, or undergraduate students interested in developing a critical understanding of design technologies.

ARCH 498 Special Topics (1-15) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
ARCH 499 (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.

Foreign Studies (1-12)

ARCH 499A (IL) Rome Study--Architectural Design (6) Individual or group instruction conducted in Rome, Italy.

ARCH 499A Foreign Study - Architectural Design VI (6)
The semester abroad design work will focus on the difficult problem of creating new construction in the presence of an historic structure. This is an inevitable problem in the city of Rome where one can hardly avoid confronting historic or monumental buildings. However, as every place is preceded by a history, either natural, political or material, these issues are important outside of this context, the course aims to help students define critical strategies that will serve them beyond their semester abroad.

Fifteen weeks is a short time to experience a place as complex and interesting as Rome, Italy. For many students, it may be a chance of a lifetime to live in and study a place as challenging and full of opportunity as this. Students are expected to approach the semester with even more seriousness then they would a semester at home. A semester in this program is not a mere travel experience but an academic exploration of a foreign and historic environment Every activity of this studio is designed to these ends. Therefore, we have selected a very direct and limited building program, a site in the historic center, and exercises that require students to spend time in the field as well as in the studio.

ARCH 499B Architectural Analysis (3)
(IL)

Architecture is amplified and embodied in cities. Since most architecture is set in cities and the city is itself an architecture, it becomes necessary for us to evaluate the relationships that affect the making of buildings for cities and the organization of buildings into a meaningful whole. This course will explore the two meanings of the term "the architecture of cities." It will propose questions leading to an analytical de-composition of the situation of cities in general and Rome in particular.

The course is loosely divided into three sections. The first, Historical Overview, presents the evolution of early settlements focusing on the significance of built form. The second, Revolutions and Modernity, demonstrates the qualitative shift in emphasis that settlements undergo from the Enlightenment, through the Industrial Revolution, to the Information Revolution. The third section, the Current Debate, will present some contemporary issues and techniques proposed for the resolution of apparent problems of city architecture.

Since this course is given in a unique setting, it takes full advantage of Rome, its history and its problems, to highlight the universal design elements that are part of an analytical understanding, but also of a synthetic design understanding of cities.

This course is theory based and, as such, will provoke thinking, a taking apart mentally, more than a making of architecture. The studio design problem, also set in this city, is the operative dimension of thoughts generated here. In this class, students are expected to articulate thought and some clear graphic analysis concerning architecture. These thoughts, if manipulated with discipline and commitment, will become a source of illumination for design activity.

Learning Objectives:
* To learn the meaning of cities in Western culture
* To understand the significance of foundation and other rites concerning building the human environment.
* To understand the meaning of urban architecture
* To understand the reasons for the form of streets, buildings and open spaces in Western cities
* To achieve the analytical skills necessary to take apart the component systems and material elements of architecture

General Education: None

Concurrent: ARCH 431A or ARCH 432A and ARCH 499C

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ARCH 499C Urban Special Topics (3)
(IL)

The course is a presentation of the history of Rome through the medium of its maps. The well documented cartographic history of the city is presented along with the morphological changes that are evident in the city today. The material of Rome’s physical development is presented in two distinct ways. The first involves slide presentations of Roman maps and engraving images organized by specific routes (via consolari and others) into and out of the city. The second is by on-site walks through the same routes with the instructor.

The approximately twelve routes involve a lecture presentation usually given on Tuesdays, followed by an on-site walk usually given on Thursday. Students are then assigned their own route map of the same study area to generate over the weekend. These are graded and discussed in the following sessions.

Framework:
* Introduction: The definition of the Urbs through maps
* 14th-15th century: Limbourg, Taddeo di Bartolo
* 16th century: Bufalini, Duperac
* Renaissance planning and the expanding city
* 17th century: Maggi, Falda
* 18th century: Nolli
* 19th century: Catasto Piano
* 20th century: Lanciani, Sanjust

Themes:
* 14th-15th century: Derivation of the iconic map from Mappaemundi and city images in art
* 16th century: Images of pre-Sistine in-city and extension planning vs. Sixtus V’s city outside the city
* 17th century: Illustrating the Baroque point developments: Urban theater
* 18th century: The new orientation and precision measurement of the Age of Reason. Nolli and Piranesi: the contemporary vs. the archaeological city
* 19th century: Stasis and expansion: Nolli retreats and the master Plans for the new Capital city
* 20th century: Recapitulation and expansion: Lanciani’s new Forma Urbis and images of the boundless city
Learning Objectives:
* To learn the history of the development of one of the most important cities in the world.
* To learn the importance of mapping an way-finding in the understanding of architecture.
* To learn the reading of traces of the past morphological development of a city.
* To understand how cities are built, change, and grow over time.

ARCH 512 Critical Theory in Architecture (6)

ARCH 512 is composed of six chronologically arranged units of study that examine the major developments in the evolution of discursive practices that ground architecture theory, teaching, and practice.

Modern and post-Modern critical theories in architecture have borrowed from a number of tangent disciplines, such as Phenomenology, Positivism, Existentialism, Narratology, Structuralism, Deconstruction, Grounded Theory (social sciences),
Cognitive-Behaviorism, Neo-Kantianism, Psychoanalysis, Reception Theory, etc. Historical methodology, Archaeology, Anthropology Art History, and other disciplines have also had their impact. As a result, critical theory in architecture typically lacks uniform methodologies and stable definitions. In recent years, many disciplines have undergone attempts to consolidate discourse around the influence of language and culture within the historical context of evolving world ideologies and their effect on communication, material culture, and the physical environment. Architecture has responded to this general trend in a number of ways that invite cross-disciplinary comparisons and methodological adaptations.

The course will take advantage of featuring visiting scholars whose expertise in diverse areas of study will provide participants with direct contact with the widest possible range of theoretical perspectives. The strategy of the course will be a comparison and critical evaluation of what appear to be the most effective research methods within the pressing concerns of environment, population growth, material resource depletion, and international conflict. The aim will be to establish relevance as well as research competence and effective expression.

ARCH 542 Topics in Community and Urban Design (3) Community and urban design as an area of design inquiry and interdisciplinary practice.

ARCH 542. Topics in Community and Urban Design (3)

The intention of this course is to introduce students to the fundamental elements of community and urban design practice within the fields of architecture, landscape architecture, and planning. An investigation into the diverse traditions of design practice—technical, esthetic, and theoretical—will highlight the role that design plays in the urban and community context and also serve as a powerful medium for analyzing the confluence of the social, economic, political, and ecological dimensions that give form to cities and communities. An objective of the course will be to develop a critical perspective in architectural design vis-a-vis the restructuring of urban and community space.

Topics to be covered in the course include: history of the discipline, contemporary urban and community issues, methodologies and techniques in community action research and participatory design, and introduction to the case study method of analysis. It is expected that students will actively participate in class discussions, present a case study of a project related to the topics covered in the class, and submit a research paper on the selected case study.

ARCH 542 will be offered as a 3-credit course on an annual basis during the spring semester. Students with graduate
standing in architecture and landscape architecture will be given priority for enrollment. However, a limited number of other students may enroll pending consent of the instructor.

Faculty member proposing course: Michael Rios

ARCH 543 Topics in Digital Design (3) Inquiry into digital design paradigms of architecture and related disciplines; exploration design principles and operations supported in digital/virtual design environments.

ARCH 545 Pedagogical Practices in Architectural Education (3) Review and application of pedagogical topics in studio teaching. Comparative evaluation of accepted and experimental practices.

ARCH 550 Ethics in Architecture: Green to Post-Green (3) GREEN to POST-GREEN - Environmental thinking in the Twenty-First Century.
buildings and cities.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ARCH 550 Ethics in Architecture: Green to Post-Green (3)

ARCH 550 Ethics in Architecture (3)
The intention of this seminar will be to look at the legacy of sustainable design (providing the topical substance for a series of class presentations) and engage students in an interdisciplinary dialogue. The research and work assignment will require each student to write an essay and/or develop a design project, based on the cutting edge of creativity in an important field other than architecture. By pursuing this approach, students in the seminar will be expected to identify a major thinker in the arts, sciences, or humanities, research why this intellectual leader’s theories are significant, and then translate what they have learned into a written paper and/or design project.
The class discussions will relate information delivered by diverse speakers to the subjects of “environmental thinking,” origins of green architecture, examples of good and bad LEED qualified buildings, site-specific art, social and psychological concerns in urban planning, breakthroughs in science that impact on design and, as a fundamental mission of the entire course, the potential value of visionary ideas from other fields in shaping public policy for sustainable buildings and cities.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Art (ART)

ART 402 Portfolio Design and Professional Practices (3) This course emphasizes the development of presentation skills for digital artists in audience/client interactions.

ART 402 Portfolio Design and Professional Practices (3)

ART 402 PORTFOLIO DESIGN AND PROFESSIONAL PRACTICES (3) is the concluding experience for all students enrolled in the Digital Arts Certificate (DAC) program. The course provides opportunities for students to learn about the practical application of professional practices and portfolio development tools specific to careers that require knowledge of digital art and design principles and culminates in the development of a professional-quality creative portfolio. The course prepares the DAC student with the skills, knowledge, and ability to 1) communicate a critical understanding of his/her work through the articulation of goals, critique, and self-assessment; 2) identify, assess, and evaluate tools and information necessary to maintaining current and effective techniques for written and visual self-presentation; and 3) prepare and present online a professional-quality creative portfolio of digital art/design works and appropriate supporting documentation.

The course is taught fully online and comprises coursework supported by online presentations and guest talks, assigned readings, and other resources and reference materials relevant to the professional development of digital artists and designers. Course topics include: 1) the role of the portfolio, 2) selecting portfolio ingredients and how to adapt them for different audiences, 3) selecting/composing supporting documentation for the creative portfolio, 4) developing a professional-level online presentation of the digital portfolio, 5) locating and evaluating resources for the digital arts/design professional and 6) identifying professional practices relevant for individuals working in digital art and design. Students engage in both individual and team-based projects and interactions via activities such as asynchronous group discussions and guest talks delivered by streaming media.

Assessment is based on the quality of the student’s work and participation in individual and team-based projects and activities that include online discussions, peer-reviews, collaborative research, and the development of an online presentation for the creative portfolio. Students receive regular individual and group feedback throughout the course in the form of instructor and peer reviews and critiques. Formal assessment occurs at regular intervals in a manner that evaluates both individual and group components of assigned tasks and activities. Students are expected to positively contribute to the course through active engagement in online discussions, team-based work and activities, and peer reviews. Course assignments include creative and written components and provide multiple ways for students to engage in various forms of professional development, self-evaluation, and critique.

Students are required to have access to the Internet.

ART 409 (ART H 409) Museum Studies (3) An introduction to the professional activities that occur in art museums.

ART (ART H) 409 Museum Studies (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art
museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student's chosen field. Offered every spring, this course will have a maximum enrollment of 20 students. Grades are based on class participation, four out-of-class projects, and a final project. Extra credit is offered for an off-campus visit to a museum, among other options.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Summer 2004
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ART 411 (US) Seminar in Contemporary Art (3 per semester/maximum of 6) Trends in contemporary art investigated within the framework of studio visitations, museum tours, and through other related avenues of encounter.

ART 411 Seminar in Contemporary Art (3)

This seminar on contemporary art exposes students to artistic practices and to the advanced-level critical discourses accompanying them. It is relevant to all students interested in expanding their knowledge of contemporary art and essential to BFA students who are encouraged to take the course more than once. The only prerequisite for this course is ART 122W. The seminar's intimate format allows for discussions and a convivial examination of the pluralistic expressions of contemporary art while articulating it with theory and criticism.

From an international perspective, this seminar focuses on art since the 1960s. Besides more traditional artistic expressions such as painting, sculpture, photography, installation, performance and video, the course examines networked collaborations before and after the Internet, art and social activism, and a range of new media and new genre artistic practices. The conceptual issues these works raise include among others the dematerialization of the art object, issues of site-specificity and public art, and institutional critique. The course approaches these developments through artists' writings and essays in contemporary theory and criticism. Works of art are presented through videos, power points, films, performances, gallery visits, field trips, and discussions of related essays. Critical "reading" includes an extensive introduction to the work's historical contexts, readings from primary source materials, and the exploration of critical methods of analysis. From a cross-disciplinary perspective—including historical, esthetic and philosophical approaches—this course examines principles, assumptions, and tensions inherent in artist's works as well as in our responses to them.

Student evaluation is based on short written papers such as an exhibition review or an interview, participation in class discussions, and a creative project (ranging from a website to an installation, artist’s book, or a performance), which must reflect a general understanding of the issues addressed in the course. The course is offered at least once a year with the enrollment of 15 students.

ART 413 Performance Art (3) The development, production, and presentation of performance art works, and the study of performance art theory and history.

ART 413 Performance Art (3)

This course will consist of lectures, readings, demonstrations, critiques, and studio practices in performance art. The course will begin with introductory exercises aimed toward the use and understanding of objects, images, materials, and actions of the body as performance elements. Performance assignments will range from autobiographical works to those which will address political issues effecting art and the body today such as sexuality, ethnicity, health, ecology, the art market, government intervention, and others. Reading and discussion assignments will cover the theory and history of performance art in the twentieth-century.

Performance Art Paper: One week after the second performance project, students will be required to submit a paper that defines performance art. The paper should be typewritten, double-spaced, and three pages in length. In addition, it should contain a page for references that indicates at least five sources that have been used from the course reading list to support arguments.

**ART 415** Integrating Media: Convergence in Practice (4 per semester/maximum of 12) A studio course concentrating on the integration of new media technologies in contemporary art practice.

**ART 415 Integrating Media: Convergence in Practice (4)**

(BA) This course meets the Bachelor of Arts degree requirements.

This course will concentrate on the integration of technologies into contemporary studio art practice. Emphasis will be placed on the convergence of digital, interactive, and time-based experiences within current studio practice. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring. The course will culminate in a final large-scale collaborative media project, group show, installation, video screening, and/or class web presentation. This course will be offered fall and spring semesters.

Bachelor of Arts: Arts
Effective: Fall 2006

**Prerequisite:**

**ART 416** Advanced Web and Net Art: Multimedia Publishing (4 per semester/maximum of 12) A studio course concentrating on multimedia online "net art" practice and Web publishing.

**ART 416 Advanced Web and Net Art: Multimedia Publishing (4 per semester/maximum of 12)**

(BA) This course meets the Bachelor of Arts degree requirements.

This is a studio art class that focuses on creating, authoring, exhibiting, and discussion online art practice. "Net Art" has become an important form of new media art creation and exhibition. The course explores experimental uses of new media in the visual arts with emphasis on integrating net art and design practice in cyberspace with current studio practices in two, three, and four (time based) dimensional art. In addition to the actual creation of new media artworks, the course will engage students in research methods to advance their skills in new media art and design and help them to develop an understanding of the critical evaluation and assessment of new media artworks created specifically for the web. The course will also explore various methods and strategies for exhibiting and publishing artworks on the web and creating online portfolios.

The course will examine and explore the potentials of net-based art through lectures, readings, demonstrations, creative practice in studio, critiques, and actual web-published exhibitions. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring.

The course will culminate in an online exhibition and personal portfolio sites published on the web.

Effective: Spring 2008

**Prerequisite:**

**ART 417** Metal Art/Technology III (4 per semester/maximum of 12) Advanced exploration of current and emerging metal art technologies and processes as medium for conceptual, aesthetic, and functional artworks.

**ART 417 Metal Art/Technology III (4 per semester/maximum of 12)**

(BA) This course meets the Bachelor of Arts degree requirements.

This course will continue exploration of metal art technologies at an advanced level. This course will also cover technologies related to professional preparation, such as mass production options, presentation approaches, and interfacing with suppliers. The convergence of metal art technologies as source material (ART 217) and its further integration with emerging technologies (ART 317) will serve as the basis for students; creative works that intersect art, function, and technology. Through this advanced exploration of a wide range of metal art technologies, the student will be able to create new artworks not otherwise possible. These artworks will use the presented technologies to address concepts, aesthetics, and functions directly relevant to the visual arts.

Assigned projects will involve a wide variety of skills, techniques and processes at an advanced level that include the application of design principles, advanced metal forming techniques, research and construction of mechanical, kinetic, and electronic systems, and independently focused investigation. This project-based learning will be reinforced through slide lectures, demonstrations, readings, reflective writings, and critiques.

This labor-intensive studio relies upon cumulative learning experience through increasingly advanced projects. Competency is expected in numerous new skills and techniques, and creative innovation in the use and application of
these technologies is essential to the success of completed artworks. Projects and assignments will be based upon the advanced integration of concepts and ideas.

Bachelor of Arts: Arts
Effective: Spring 2005
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ART 419 Advanced New Media: Capstone (4 per semester/maximum of 8) A new media and digital arts capstone course concentrating on the integration of art and technology in advanced thesis projects.

ART 419 Advanced New Media: Capstone (4 per semester/maximum of 8)
This is an advanced senior level capstone experience for new media. The course concentrates on advanced media theory and discourse, the integration of new media technologies into contemporary studio art and design practice, and on the creation and documenting of senior thesis projects. The course will focus on the final preparation of professional portfolios. The course will follow a studio/seminar model.
Student thesis projects may cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, 2D, 3D, 4D media authoring, etc. in relation to their focus in new media art and design practice.

ART 431 Installation Art (4) Study and production of original visual statements through installation work as an art form.

Installation Art (4)
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ART 440 Advanced Printmaking (4 per semester/maximum of 12) Individual projects in one or more of the printmaking processes. Emphasis is on developing a portfolio of prints.

ART 446 Artists Books (4) Study and production of original visual statements through the book as an art form.

This course will consist of lectures, demonstrations, and studio practice in production of artists books. Lectures and demonstrations will include hand papermaking, signature binding, book design, new and alternative book forms, and container construction. Each student will produce six either unique or editioned books during the semester; each book will have a mock up, title, colophon page, and will be signed. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

ART 447 Photo Based Printmaking (4) Study and production of original visual statements through photographic based printmaking as an art form.

(BA) This course meets the Bachelor of Arts degree requirements.

This course will consist of lectures, demonstrations, and studio practice in production of graphically based art prints. Each student will produce original prints in each of the printing techniques presented.

Specific lectures, demonstrations, and projects will include photo based prints through: 1)Serigraphy, 2)Intaglio, 3)Gum Bichromate, 4)Cyanotype, 5)Van Dyke Brown, 6)Adobe Photoshop

A particular emphasis will be placed upon the use of the computer as a tool in the production of images. The digital negatives produced during the computer instruction in this course will be employed in all of the other printing processes.

ART 450 Advanced Painting (4 per semester/maximum of 12) Development of the artist through a series of commitments; each semester serves as a contractual agreement along professional lines.

The Pennsylvania State University
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ART 455** Advanced Painting Critique (4 per semester/maximum of 8) The painter in relation to his peers and his profession.

**Advanced Painting Critique (4 per semester/maximum of 8)**

General Education: None

**ART 465** Individual Approaches I (3) An advance studio where students are expected to explore personal themes and individual concepts in their art work.

**ART 465 Individual Approaches I (3)**

ART 465 is an advanced studio course concentrating on creating art within a series. Students will be asked to complete 4-6 pieces that stem from an individual idea. Medium is open and can be traditional or non-traditional. Students will be required to document and maintain a journal outlining the steps needed to complete each piece. Weekly formal and/or informal critiques will allow students constant feedback of their progress.

**ART 466W** Individual Approaches II (6) An advance studio/lecture addressing the preparation for potential employment and/or entrance into graduate studies.

**ART 466W Individual Approaches II (6)**

(BA) This course meets the Bachelor of Arts degree requirements.

ART 466W is the Visual Art Studies capstone experience where students are given the opportunity to experience the professional aspects of a practicing artist. In addition to completing the last 2-4 pieces toward their exit portfolio students will address vital activities surrounding applying for employment and graduate school. Students will create "packets" including resumes, cover letters, post cards, slides, and portfolio CDs that can be used directly out of school for various calls and job listings. In addition topics that will be addressed in depth are photo-documentation, and inventory of work through database maintenance. All of these issues will culminate with small group exhibitions which will be curated, installed, and promoted by the students.

**ART 468** The Intermediate Digital Medium (3) An advanced studio course using the computer as an artistic media.

**ART 468 The Intermediate Digital Medium (3)**

This course will provide the much needed advanced technological/digital component wherein computing will be discussed as a media, rather than a tool. Students will be engaged in the creation of graphic/moving/three-dimensional imagery and sound that explores themes and concepts introduced in class. While most of the course will center around the use of industry standard computers there will be some forays into hardware associated with production, sound, and projection of images.

**ART 469 Methods and Materials II (3 per semester/maximum of 9)** A studio course that focuses on specific media or techniques reflecting varied faculty expertise.

**ART 469 Methods and Materials II (3)**

This course provides students the opportunity to experience particular areas of visual art in which faculty members have gained significant expertise. Topics will vary as faculty members rotate responsibility for offering the course. The course may be about a specific method, material or theme in which a faculty member is involved. The course is in depth in nature, and students may gain an advanced understanding of a specific art form. Students are given the opportunity to explore several types of Art made by scheduling this course more than one semester. One of the goals of this course is to provide students with ways of visually communicating concepts and themes/issues.

**ART 476 (ART H 476) History and Theory of Digital Art (3)** History and theories of contemporary digital art emphasizing humanistic approaches to technology.

**ART (ART H) 476 History and Theory of Digital Art (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware.

Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such as Keith Obadike, whose on-line performances include an attempt to put his “blackness” up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on the internet) can critique commercial cooption of global culture: etoy.com, for example, is an international and collaborative artist’s group that satirizes global capital by camouflaging itself as a multinational corporation.

This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

**ART 481 Ceramic Materials and Glaze Calculation (3)** The study of raw materials and their use in formulating clays and glazes.

**ART 481 Ceramic Materials and Glaze Calculation (3)**

The purpose of this course is the study of raw materials and their use in formulating clays and glazes. Emphasis will be placed upon proper, safe handling of materials, accurate and effective combinations, and the correlation between chemical interactions and their aesthetic and functional outcomes. All explorations will be integrated into completed ceramic works of art comprising a new portfolio of work. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various ceramic materials and glaze calculation processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**ART 490 View Camera Photography (4)** Experience with diverse camera formats and applications; particular emphasis on view camera.

**ART 490 View Camera Photography (4)**

(BA) This course meets the Bachelor of Arts degree requirements.

ART 490 will provide students with experience in diverse camera formats and application with particular emphasis on view camera and its creative applications.

The course will give students background in the history of large format photography and understanding of its application in specialized fields such as architectural photography, portraiture, and landscape photography. Students will gain experience in view camera operation and the creation of large format photographs in a variety of different applications.

Grading will be based on a minimum of five projects that will account for 80% of the semester grade. The remaining 20% of the semester grade will be based on participation in class critiques. The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence.

ART 490 will be offered in the fall semester each year.

Art Education (A ED)

A ED 401 Curricula, Pedagogy, and Assessment in Art Education (3) Preparation of curricula, pedagogical, and assessment strategies for elementary/secondary school and museum art education programs.

Curricula, Pedagogy, and Assessment in Art Education (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite:

A ED 440 Cultural Institutions (3) Role of the educator and educational programming in museums and other cultural institutions.

A ED 440 Cultural Institutions (3)

A ED 440 is the final course before an extended internship in the Museums and Cultural Institutions option of the BS in Art Education. It provides students with the opportunity to study the roles of educators and educational programming in various types of cultural institutions and agencies, from art museums and historic houses to community arts centers and arts councils. It enables students to learn about professional and vocational opportunities and to prepare for a career in the arts and cultural education.

Through reading, discussion, and field trips, the course explores the implications of past coursework for educational programming in cultural institutions. By preparing and presenting a case study, students understand and assess the effectiveness of educational programming in one institution. By preparing their own educational materials, program, or installation, they learn how to apply what they have learned to a specific setting.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2003
Prerequisite:

A ED 488 Cultural Institutions Practicum (1-3) Supervised field experience in a museum or other cultural institution, including planning, implementation, and evaluation of an educational project.

A ED 488 Cultural Institutions Practicum (1-3)

This course provides 1 to 3 credit hours of field experience for students enrolled in the Museums and Cultural Institutions Option of the BS major in Art Education. The course will provide students with a structured and supervised experience working with an educator in one of a variety of possible educational settings in museums and other cultural institutions in the local community and nearby region, including the Palmer Museum of Art. The field experience will allow students to apply what they have learned in coursework in a practical setting, plan and implement an educational project or program, and prepare for their extended 15-credit internship in A ED 495.

The nature of the field experience will vary depending upon the institutional setting, upon whether the student is working alone or as part of a team, upon the needs of the institution and the nature of the educational project, and upon the number of credit hours earned. In some cases, the course may be extended over two semesters. The course may be taken as an independent study, or structured around a group of students engaged in a joint project. Each student will be supervised by an educator in the setting in which the field experience takes place, as well as by an instructor from the Art Education program at the University.

Each student will become familiar with the role of education in the particular institutional setting and participate in providing educational experiences for the people served by the institution. As his or her primary assignment, each student will carry out an educational project in the setting, either individually or as part of a team. These projects may include, but not be limited to, an educational program, a set of educational materials, a marketing campaign, or educational installation. Each project will include preparing a written plan, conducting formative evaluation to field test the plan, implementing the project, evaluating its effectiveness, and preparing and presenting a final written report.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

A ED 490 Capstone Course in Art Education (3) Synthesis of preservice art education coursework; introduction to professional practices and standards; completion of teaching and learning portfolio.

A ED 490 Capstone Course in Art Education (2)

The capstone course has four major objectives for student learning:

- Each student will synthesize the experiences and understandings developed through prior courses in the undergraduate art education program.
- Students will become aware of emerging trends in art education and reflect on implications of those trends for their future teaching and learning.
- Each student will complete, and publicly present, a teaching and learning portfolio that includes evidence of professional preparation, biographical information, samples of artwork and writings on art/visual culture, and reflective statements explaining the selection and significance of specific items.
- Students will gain understanding of the importance of professional standards and practices in art education.

Student learning will be evaluated through assessment of the preprofessional teaching portfolio, and through a combination of written assignments, individual and small group oral presentations, and active participation in class discussions. Students will collaborate on a final installation, performance or exhibition demonstrating their readiness for the final internship. Since this is the final course in the major prior to student teaching or the internship, attendance is very important and will count toward part of the final grade. Students need access to a computer lab.

The capstone course in the art education major should be taken in the final semester before student teaching or a final internship. Since one goal of the course is helping students synthesize what they have learned in their prior courses, successful completion of all of the required courses in the major is prerequisite to enrollment in the capstone course. Students will have been introduced to the teaching and learning portfolio in their introductory art education course and should have developed pieces for their pre-professional teaching portfolios in most of their earlier art education courses. Much of the work of the capstone course will, therefore, focus on reflection, refinement, and synthesis.

A ED 495 Internship in Art Experiences (15) Comprehensive instruction in craft, health, cultural, museum, studio, gallery or social agency. Students supervised by University personnel and arts personnel.

A ED 495A Art Education Student Teaching Practicum (7) The elementary student teaching practicum fulfills requirements for Pennsylvania certification to teach Art in both elementary and secondary schools.

A ED 495B Art Education Student Teaching Practicum (8) The secondary student teaching practicum fulfills requirements for Pennsylvania certification to teach Art in both elementary and secondary schools.
A ED 495C Art Education Student Teaching Practicum (7) The elementary student teaching practicum fulfills requirements for Pennsylvania certification to teach Art in both elementary and secondary schools.

A ED 495C Art Education Student Teaching Practicum (7)
The Centre Region-based elementary or middle-level field experience fulfills the student teaching requirement for Pennsylvania certification to teach art in elementary and secondary schools. It is offered each semester, and student teachers are placed through the School of Visual Arts at Penn State in cooperation with public schools in the Centre Region. An Art Education faculty Supervisor supervises students. Assignments, required seminars, and professional development activities meet the teaching prerequisites outlined by NCATE (National Council for Accreditation of Teacher Education) and the Standards for Pre-Service Teachers in Urban Education. Experiences and assignments provide evidence in each of the four domains for teacher preparation: Domain A - Planning and Preparing for Student Learning, Domain B - Teaching, Domain C - Analyzing Student Learning and Inquiring into Teaching, and Domain D - Fulfilling Professional Responsibilities. The work completed in this course (a digital and/or paper-based portfolio, and documented performance-based assessment of teaching as assessed by the university supervisor and mentor teachers/clinical instructors) will demonstrate fulfillment of the teaching/domain standards. The outcome of this work is to produce multiple experiences that support professional and personal development while preparing students for upcoming positions teaching art in multiple public and private contexts at both elementary and secondary levels. At the culmination of the student teaching semester, students will have both practical and theoretical understandings in addition to materials for application within the classroom.

A ED 495E Internship in Museums and Cultural Institutions (15) Twelve week, full time supervised internship in education in museums or other cultural institutions.

A ED 495E Internship in Museums and Cultural Institutions (15)
The internship at a museum or other cultural institution completes the requirements for the Museums and Cultural Institutions option for the BS in Art Education. It is generally scheduled full-time for a period of 12 consecutive weeks during a double summer session, although it may also be taken during the fall or spring semester. The internship enables interns to meet their own educational objectives through participation in a supervised experience that moves them out of...
The classroom into the workplace. Prospective interns are encouraged to select internship sites that offer educational experiences relevant to their professional goals and desired careers.

The internship incorporates guidelines consistent with the Standards and Guidelines for Museum Internships prepared by the New England Museum Association and published by the American Association of Museums (1993, 2000). A formal written internship agreement signed by the intern supervisor at the sponsoring museum or cultural institution, and by the prospective intern and university supervisor outlines the objectives of the internship, the intern's duties and responsibilities, the responsibilities of the museum and university supervisors, and the means by which the intern's work will be evaluated. Interns are integrated into the ongoing work and education programs of the museum and treated as staff members. They assume professional responsibilities and are expected to complete a project or some discrete portion of a major project that is being undertaken by the education department of the museum. Interns become acquainted with functions, programs and departments of the museum in addition to those to which they have been assigned in order to understand the relationship of their educational work to that of the museum, to the community, and to the museum field in general. Interns may participate in any workshops, lectures, professional courses, and staff training seminars that may occur at the museum during period of internship. They are also encouraged to seek professional employment after completion of the internship, and reasonable accommodation is made to allow them time to look for positions, prepare application materials, and attend interviews.

Interns submit a weekly journal of activities and reflections to the university supervisor, as well as a summary report at the end. The museum supervisor submits an evaluation documenting the intern's actual working/learning experiences and critically assessing these experiences. The final evaluation is based on this assessment, on the intern's weekly journal and final report, and on the university supervisor's onsite observations and interviews.

A ED 811 New Media and Pedagogy (3) Exploration of relationships between communication technologies and beliefs about the nature of knowledge and the nature of art.

A ED 811 New Media and Pedagogy (3)

Due, in part, to contemporary processes of globalization and the development of digital technologies and the Web—new issues, possibilities, and opportunities regarding media communities and art pedagogy emerge in the field of art education. This is the focus of this course. Course participants have the opportunity to explore the aesthetic communicative and pedagogical implications of intertextual Webs, hypertext and hypermedia, blogs, wikis, simulations, the body interfaced in virtual reality, threaded dialogue, WebQuests, online games, media communities, adaptive and assistive technologies, and media-rich essays.

Learning activities will be in the form of explorations and creation with the links and resources provided, and focused discussions about these explorations and how to teach this content at participants' teaching sites. Following 5 thematic explorations, course participants write a capstone essay to construct a speculative fiction of a teaching scenario based on the content of the course imagined in a future teaching site. The main priorities in Exploration 1 are to imagine possibilities of human-technology interfaces for creating and critiquing art. In Exploration 2, participants select a social networking tool from the course's resources to conduct a collaborative mini-project concerning self-representation online and power relational networks of social, physical, technological, and discursive inscriptions or conditions. Exploration 3, involves using the Internet as a primary medium for art creation and involves developing criteria to critique interactive Net art. The focus of Exploration 4 is free, downloadable authoring programs outside of a commercial economy, which enables the creation of interactive experiences without the need for specialized programming knowledge or database support. Exploration 5 involves participants creating a socially responsive visual culture WebQuest, which is an inquiry-oriented activity in which learners construct knowledge through interacting with, evaluating, and connecting diverse, and sometimes contradictory, resources on the Internet in order to form new insights that they share in a tangible form intended to make a difference in the world.

This is one of the required courses for the M.P.S. in Art Education. There is no prescribed sequence and no prerequisites for art education courses in the M.P.S. program.

A ED 812 Diversity, Visual Culture, and Pedagogy (3)

This course examines diversity, visual culture, and pedagogy in various settings: the artworld, popular media, and cultural settings such as schools and museums. Diversity pertains to gender, sexual identity, social class, ethnicity, ability, age, and other attributes that shape our identities. This course pays special attention to issues of power and privilege in relation to diversity and visual culture. It examines ways that various forms of visual culture, situated in various social contexts, teach us who we are, what is “normal” in our society, and how we might change oppressive social conditions that currently exist. As defined in the course, visual culture includes paintings, sculptures, prints, and other forms of fine art as well as advertisements, news images, scientific images, television programs, and films. It includes toys, comic books, children’s art—and more. Visual culture includes all manifestations of cultural life that are significant for their visual features. Pedagogy refers not only to formal methods of instruction, such as teaching and learning in classrooms. It also includes informal instruction through the arts, the media, popular forms of entertainment, and other social practices. Pedagogy includes being positioned by, or addressed in certain ways by various forms of visual culture. It includes the ways we actively interpret, use, and recreate forms of visual culture in our lives.

The Pennsylvania State University
Objectives of the course include understanding diversity as defined in relation to various forms of visual culture; understanding the complex interactions of ethnicity, class, gender, sexual identity, and other aspects of diversity in visual culture; understanding issues of power and privilege in relation to visual culture; and understanding pedagogical issues related to visual culture, including forms of address and interpretation, as well as pedagogical practices such as teaching and learning in classrooms. By the end of the course, participants should be able to critically examine social constructions of race, class, gender, sexual identity, and other aspects of diversity in visual culture through both written and visual analyses. Participants should also be able to develop and implement units of instruction related to visual culture, and reflect on their own and others’ teaching practices in schools and museums.

This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010

A ED 813 Public Pedagogy (3) Inquiry into the public pedagogy of contemporary visual culture for relevancy to museum and K-12 art education contexts.

A ED 813 Public Pedagogy (3)
This course prepares art teachers to become producers of a socially just world by becoming critical public art pedagogues who extend their teaching environment. As defined in the course, critical public pedagogy of art, as an educational and artistic practice, is a critical stance concerning socio-pervasive artifacts, processes, and interfaces that acculturate and assimilate values, beliefs, and sensitivities. Public pedagogy is the use of a public medium and/or space such as the Internet, films, television, magazines, shopping malls, and sports arenas to influence behaviors and beliefs. Public pedagogy enacts societal curricula that are easily consumed because of its ubiquitous nature. Awareness of consumption of public pedagogy is important because of its global reach. Educators need to be versed in how to facilitate investigations of public pedagogy and how to guide students to develop critical public pedagogical practices. From spheres of influence radiating from art to a multidirectional layered matrix of sensibility, this course explores contemporary art that addresses and enacts public pedagogy through (inter)actions of cultural interfaces such as humans, technologies, localities, and politics. Such artworks are performed networks of relations. Contemporary artists’ praxis involving intertextuality, palimpsest, remix, code-switching, double-coding, subversion, and hypersignification is explored through video, installation, performance, and other contemporary art forms.

Objectives of the course include understanding processes of consumption and production of public pedagogy, and understanding contemporary art practices. By the end of the course, participants should be able to develop and implement units of instruction related to contemporary art and public pedagogy, and reflect on their own and others’ teaching practices in schools and museums.

This is one of the required courses for the M.P.S. in Art Education. It is offered every other fall semester with a maximum enrollment of 15 students.

A ED 814 Informal Learning (3) Pedagogy and contexts for learning in museums and other cultural institutions.

A ED 814 Informal Learning (3)
The course introduces participants to theories and practices of informal learning, and to the possible contexts including museums, schools and other cultural institutions in which informal, free choice learning may occur. These provide a framework for participants to use in preparing, implementing, and evaluating a learning project or other intervention in their own institutions or communities. The course includes a strategic and policy analysis of the contexts in which free choice learning projects may occur, a review of the social and economic significance of informal, free choice learning in an information age and global economy, an introduction and critical discussion of constructivist theories of informal learning, a review of specific pedagogical practices that may be effective in implementing informal learning for school-age students, adults, and senior citizens, an introduction to tools for evaluating the effectiveness of these practices, and the development, implementation and assessment of an informal learning project or intervention by each participant using other participants as consultants in the process.

The Pennsylvania State University
This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

**A ED 815 Action Research in Art Education (3)**

Develop a reflective process to improve strategies, practices, and knowledge of the environments within which art education is practiced.

This course prepares M.P.S. in Art Education candidates to conduct action research in their teaching context as part of a community of practice by recognizing and sharing existing tacit knowledge about teaching and learning conceptualized in specific social and physical environments. Action research is a reflective and iterative inquiry process with the aim of improving strategies, practices, and knowledge of the environments within which one teaches. Course participants will learn how to conduct research that develops, leads to, implements, and assesses a genuinely well-informed social action in the midst of an emerging teaching and learning landscape.

The course uses a blend of Web technology, print, and other media to maximize flexibility without sacrificing professor and student interaction. Communication tools, including bulletin boards and e-mail, are used to foster a collaborative environment, providing participants with the opportunity to learn from one another about the unique schools and cultural institutions each comes from and as well as their varied professional experiences.

A ED 815 will be offered via World Campus as an online course will be offered every spring semester. Enrollment will be limited to 15 students.

**Art History (ART H)**

**ART H 401 (IL) Greek Art and Architecture (3-9)**

Developments in Greek art and architecture, tenth century B.C. to first century B.C.; emphasis on the importance of Greek sanctuaries.

**Greek Art and Architecture (3-9)**

This course focuses on the art and architecture of ancient Greece, from its early origins to the end of the Hellenistic period. The course examines the major artistic and architectural achievements of the Greeks, including their contributions to sculpture, painting, architecture, and design.

**ART H 402 (IL) The Illuminated Manuscript (3)**

Specific stylistic periods in manuscript painting from A.D. 500-1500 in Western Europe and Byzantium.

**The Illuminated Manuscript (3)**

This course explores the rich tradition of manuscript painting in Western Europe and Byzantium, focusing on the specific stylistic periods of the 6th to 15th centuries. The course examines the techniques and materials used in manuscript painting, as well as the cultural and historical context in which these works were created.

ART H 409 (ART 409) Museum Studies (3) An introduction to the professional activities that occur in art museums.

ART H (ART) 409 Museum Studies (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student's chosen field.

ART H 425 (IL) Topics in Northern Renaissance Art (3 per semester/maximum of 6) Focuses on a topic of interest in Netherlandish and/or German art between 1300 and 1600.

*ART H 425 Topics in Northern Renaissance Art (3)*

This course explores selected issues in the arts and material culture of the "Northern Renaissance"--work produced between c. 1300 and 1600 in the greater Netherlands, Germanic lands, France, and other European areas at a distance from the Mediterranean. May be taken up to two times for a total of 6 credits if the topics are different. Themes will vary to accommodate investigation in depth. Topics may include "Playfulness in Northern Renaissance Art," "Jan van Eyck and his Legacy," "Art and Réformation 1500-1575," and others. When appropriate, optional field trips to major museum exhibitions may be offered. Through critical reading, careful looking, and focused research, the student will develop a deeper understanding of the interplay of art, politics, culture, and economics. The goal is not only to impart intensive international and historical understanding, but to impart analogous tools for analysis of the role of the arts in one's own society.

ART H 426 (US;IL) Iconoclasm: Powerful Images and their Destruction (3) Iconoclasm: exploring the political, religious, and social motivations behind the destruction of powerful imagery throughout history.

*ART H 426 Iconoclasm: Powerful Images and their Destruction (3)*

This course meets the Bachelor of Arts degree requirements.

Images have been granted extraordinary powers in many human societies, and their purposeful destruction has been a recurrent feature of political, religious and social strife around the world. This course explores how and why humans have granted such power to images, and the subsequent reactions that have resulted in periodic outbreaks of iconoclasm. Topics include the historical specificity of image destruction, the role of art and its detractors in precipitating the Protestant Reformation, and the manipulation of iconoclasm in modern mass media. Victimized images covered may include the bronze bust of Sargon (3rd millennium BCE) and early Renaissance altarpieces through the statues of Saddam Hussein and beyond. We will read primary and secondary materials ranging from Biblical texts to letters to the editor in the New York Times. Through careful consideration of iconoclasts' historical contexts, we will explore art's ability to function as a societal lightning rod. This course has two major objectives: to introduce students to a subject matter that holds great relevance for our time, and to train them in the methods and ethics of scholarly research.

This course fulfills elective and 400-level requirements in Art History and General Education (US and IL), but it is intended also to complement concentrations in History, Visual Studies, Religion, and Communications. It would be offered every
two to three years. Evaluative criteria include analytical reading and discussion, written components such as critical essays and research projects, and analysis of relevant current events and their media coverage. Requires a classroom with digital audio-visual capability. Course may include museum visits or field trips where appropriate.

ART H 427 (IL) Topics in Global Artistic Communication (3 per semester/maximum of 6) Explores a specific time period in art history cross-culturally in Europe, Asia, Africa, and/or the Americas.

ART H 427 Topics in Global Artistic Communication (3 per semester/maximum of 6)

This course explores specific time periods and/or issues in global artistic exchange among several diverse cultures. The course may be taken up to two times, if the topics are different. One semester the topic might be "Ca. 1600: Global Artistic Exchange in an Era of Increased Contact." Each offering will include theoretical discussion of the goals and challenges of such intercultural study. It will then explore the artistic traditions and responses to foreign contact of diverse cultures. The course will consist of lectures, discussions, and, in many cases, visits to the Palmer Museum of Art for the study of objects in its collection. Through critical reading, listening and looking students will develop an appreciation for the range and diversity of cultural production, and the historical specificity of responses to contact with the unfamiliar. Themes touched upon may include ethnic or religious identity, gender, cultural resistance, rejection or embrace. Learning evaluation may depend upon a combination of class participation, analytical reading, essays or research papers, and examinations.

ART H 429 (IL) Studies in Baroque Art (3) Selected topics in the painting, sculpture, and architecture of seventeenth-century Italy, France, Flanders, Holland, and Spain.

ART H 429 Studies in Baroque Art (3)

This course addresses aspects of European art of the seventeenth century, a rich and complex period in which illusionism and powerful visual effects in the arts reached maturity. Baroque painters went beyond the realism of their Renaissance predecessors to explore both the sensuous aspects of the medium of oil painting and their own increasingly subjective vision. In all the visual arts Baroque masters explored space, mass, and form with a heretofore unheard of freedom and drama. Lectures and discussion in the course may focus on painting, sculpture and/or architecture, in Italy, Flanders, France, Holland, and/or Spain. The course may include selected artists such as Bernini, Borromini, Caravaggio, A. Gentile, Poussin, Rembrandt, Rubens, Velazquez, and/or Vermeer. The style and meaning of Baroque art may be studied within its political and cultural setting. For example, new approaches in the visual arts in Italy, and particularly in Rome, may be explored in relation to the rise of the counter reformation. The Spanish war in the Netherlands, and the Dutch struggle for freedom, may be connected with the art of Flanders and Holland. Attendant developments in other fields such as natural philosophy (science) and literature may be related to the visual arts. For example, the use of the camera obscura may be discussed with the art of Jan Vermeer and the poetry of Giambattista Marino may be related to the art of Nicolas Poussin. Aesthetic, critical, interpretive, and theoretical ideas of major artists and writers of the seventeenth century as well as of today's art and cultural historians may be considered. The emergence of new genres such as landscape and still-life may be examined, as well as the continuing themes of mythology, portraiture, and religion. Course objectives may include students' understanding of the national and regional development of styles and schools within seventeenth-century art, the particular approaches to style and meaning by major artists of the period, the analysis of symbolism and meaning within art works of the period; the interrelationship between the art of the period and other disciplines such as natural philosophy and literature, and particular ways in which seventeenth-century art relates to the politics of particular countries, regions, and patrons. This course may serve as an elective for undergraduate students interested in the visual arts and art history, and for graduate students seeking a deeper exposure to art history. Evaluation may be accomplished through a combination of exams, quizzes, term papers, special projects, and participation in class discussion. Special facilities include a darkened room with dimmable spot lighting, computer, computer projector, and a large projection screen.

ART H 440 (IL) (ASIA 440) Monuments of Asia (3-9 per semester/maximum of 9) An exploration of major Asian sites and monuments through a focus on their historical and cultural significance.

ART H (ASIA) 440 Monuments of Asia (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

In this course, major Asian monuments are introduced in their physical, historical and cultural contexts. Students are also exposed to various theoretical approaches through which these monuments will be studied. Some of the themes around which the course is structured include patronage, religious practice, cultural meaning, political relevance and the shifting meanings of monuments over time. Students will learn to understand and discuss ways of defining monuments, their formal character and lineage, historical and cultural contexts and their representation across space and time. Each semester monumental sites will be organized around a common theme such as, “Hindu and Buddhist Sites across Asia: Historical Significance and Contemporary Relevance,” “Patronage and Religion,” “Islam across Asia: Global Ideas and Local Contexts,” “Political and Symbolic Centers in Asia: Between Early Modernity and the Nation State” or “Early Modern Asia: Empire and the Built Environment.” Alternately, these topics will be incorporated within a multi-themed structure. The objective of the course is to expose students to the histories and cultures of Asia in a globalizing world. Another objective is to equip students with the methodological tools of art history as a discipline, even as they learn about specific monuments. The course will build on the foundation laid by survey courses in Art History, Architectural History and Asian Studies. Weekly readings will be assigned and discussed in class. The development of analytical and writing skills will be stressed, and grades will be based partly on essay exams and short response papers. In addition, students will write a research paper, to be completed by the end of semester.

ART H 442 (IL) Late Antique and Early Christian Art (3) Survey of the architecture, painting, and minor arts of Christian society from the beginning to the mid-sixth century.

Late Antique and Early Christian Art (3)

ART H 445 (IL) Oceanic Art (3) Survey of the arts of Oceania (Polynesia, Micronesia, Melanesia), including masks, sculpture, textiles, architecture and other art forms.

ART H 445 Oceanic Art (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is a one-semester survey of the sculpture, masks, textiles, architecture and other traditional art forms of the Pacific Ocean area known as Oceania, which is usually divided into the sub-areas of Polynesia, Micronesia and Melanesia. The material examined during the semester is organized according to ethnic groups and culture areas. Objects are discussed on the basis of style, style relationships, iconography and the uses to which they were put in their traditional

The Pennsylvania State University
religious, political or social contexts. The time period covered is primarily from the period of European contact up to the present, with occasional references to archaeological findings such as the Lapita culture’s (3,000 – 4,000 years ago) tracing of the movement of peoples into Polynesia. Lectures, films, reading assignments, quizzes, writing requirements (term paper) and exams will aid in providing students with an extensive introduction to the region’s cultural and artistic diversity.

Topics vary from “Arts of Eastern and Southern Africa” to “Arts of West Africa.”

**ART H (AFR) 446 Topics in African Art (3 per semester/maximum of 9) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Each time this course is taught, it will focus upon a specialized topic in African Art. Using “Art and Archaeology of Ancient Africa” as an example of one semester’s topic. This course is a one semester survey of some of the most important historical art traditions of sub-Sahara Africa. Topics to be covered will include prehistoric rock paintings; art from archaeological sites such as Djenne, Nok, Igbo Ukwu and Sanga; and ancient kingdoms such as Ife, Benin and Great Zimbabwe. The time period covered ranges from the first and second millennia BCE. for some of the early terracotta sculpture and rock paintings, to the 11th through 19th centuries CE. for the later ancient kingdoms. Students will learn how both artistic and archaeological evidence combine to help us reconstruct the religious, political and social contexts in which these early African art forms were used. Other possible topics for this course are “Arts of Eastern and Southern Africa,” “Arts of Central Africa,” and “Arts of West Africa.”

Selected topics in arts of the African Diaspora (South America, Caribbean, USA) including masquerades, textiles, architecture and other art forms.

**ART H (AFR) 447 Topics in the Art of the African Diaspora (3 per semester/maximum of 6) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course explores selected topics of the arts of the African Diaspora by examining the aesthetic, philosophical and religious patterns of the African descendants in South American countries such as Brazil, Surinam and Ecuador; the Caribbean and the United States. Some African cultural practices and art forms will be examined for background information and to establish a comparative basis. The major emphasis will be on such topics as examining the modes of transmission of African artistry to the Americas and exploring the significance of the preservation and trans-formation of artistic forms from the period of slavery to the present. Emphasis will be placed on the full range of art forms, including the sculptural and performance traditions as well as architecture, textile, basketry and pottery art forms. Two possible topics are “African Diaspora in the Americas” and “Brazil, Carnival, Samba and Candomble.”

ART H 458 (IL) Baroque Capitals of Europe (3) This course examines the architecture and urbanism of European capital cities from 1600-1800.

ART H 458 Roman Rococo Architecture and the Dawn of Neoclassicism (3)

Most scholars agree that the modern European capital was created in the seventeenth and eighteenth centuries. This course will examine what transformed the cities into centers of power, culture, and learning. We will look at new building types, the creation of civic institutions, and changes in the urban plan. The course will therefore provide an overview of the architecture and urbanism of the period and also explore the political and social contexts that made them possible. Topics include capitals of great political importance such as Paris and London as well as smaller centers like Turin and Nancy that underwent major urban and architectural transformations. The social function of buildings that mark these capitals, from poor houses to opera houses, will also be explored. Units covered may include Rome of Alexander VII, London Before and After the Great Fire, Convents and Capitals, and the City Destroyed and Rebuilt. Primary and secondary reading, ranging from Pepy's Diary to Habermas' examination of the public sphere will offer period accounts as well as conceptual frameworks for understanding the capital. The objective is to challenge students to think deeply about our urban environment and its debts to this earlier era. This course fulfills elective and 400-level requirements in Art History and General Education (IL), but it is also designed to complement concentrations in History, Music, and Architecture. It would be offered every two to three years. Students will be evaluated based on class participation, four exams, group presentations, and critical essays.

ART H 460 (IL) Art and Empire: Aztec, Inca and Spanish (3) This course is a comparative study of the artistic production used in Aztec, Inca and Spanish empires.

ART H 460 Art and Empire: Aztec, Inca and Spanish (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course compares the diverse visual culture of the pre-Columbian world's two most powerful empires, the Aztec and Inca, to ascertain how art, architecture and public ritual functioned as tools of hegemony. In the aftermath of the Spanish physical and “spiritual” conquests of the sixteenth century, colonists continued to exploit the central role played by Aztec and Inca imagery as a means to assert and maintain colonial control, co-opting preexisting channels of training and also imposing foreign sign systems. This course queries, how did the visual arts effectively communicate competing imperial ideologies, how was art production appropriated as a site of indigenous resistance, and how do these artifacts continue to construct communal identities, both past and present?
ART H 462 (IL) Studies in Latin American Art (3 per semester/maximum of 6) Specific studies of the visual and material culture created in Latin America from the colonial through the modern era.

ART H 462 Studies in Latin American Art (3 per semester/maximum of 6) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course analyzes the art and architecture created in Latin America from the first moments of European contact (1492) until the modern era. Each time it is taught, the class will refine its focus to study the artistic production of a specific time period (such as the early colonial period, the nineteenth century, or the modern period), a specific geographic expanse (such as the modern nation state of Mexico), or perhaps a distinct cultural group (indigenous artists). Core to this course is the study of the interaction of seemingly divergent social groups and the ways in which artistic production both reflects and reinforces the resulting cultural systems.

ART H 464 (IL) French Baroque Painting (3) Examination of seventeenth-century French painting, including Italian influences; the provincial, Classical, and official styles in France.

French Baroque Painting (3)

ART H 470 Contemporary Art (3 per semester/maximum of 9) A focused investigation of a special topic relating to art made after 1940.

Contemporary Art (3 per semester/maximum of 9)

Contemporary Women Artists (3)

ART H 476 (ART 476) History and Theory of Digital Art (3) History and theories of contemporary digital art emphasizing humanistic approaches to technology.
ART H (ART) 476 History and Theory of Digital Art (3)

This course meets the Bachelor of Arts degree requirements.

Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware.

Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such as Keith Obadike, whose on-line performances include an attempt to put his "blackness" up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on the internet) can critique commercial cooptation of global culture: etoy.com, for example, is an international and collaborative artist's group that satirizes global capital by camouflaging itself as a multinational corporation.

This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

**ART H 560 Methods of Research in Art History (3)** Preparation of graduate students for professional careers in academia and museum work, involving creation of publishable articles and grant writing.

**ART H 560 Methods of Research in Art History (3)**

In the academic world, and particularly in the humanities, the publication of articles and books is understood to be a marker of success and, along with teaching skills, the basis on which appointments are made and tenure granted. Essential to this body of production is the execution and placement of one's research undertakings, skills that the "Methods Seminar" is designed to hone.

No less valued by those who make appointments and offer promotion are the grants and fellowships that a candidate has won. Indeed, since research in art history involves travel to and residence at museum, library and archive sites—whether these be in North America or abroad—financial support is a necessity for most aspiring professionals and is regarded as evidence of external validation of their investigations. Training in "grant writing" is also covered in the seminar.

Even before field work is undertaken, the investigator must be aware of the "state of research," work normally undertaken at one's own university library. In this domain there are better and worse ways of taking notes. The seminar discusses these methods and goes beyond them to consider the optimum means by which such records are organized and
assembled prior to the delivery of papers and the production of articles. The nature of an oral presentation and a publishable paper are distinct activities and this difference needs to be learned. The more complex skills involved in the writing of articles, the securing of photographs and concomitant permissions, and the choice of the journal to which the “finished” piece should be submitted are dealt with at even greater length.

ART H 597A Idolatrous Worlds: Analyzing Materialized Sacrality in the Early Modern Atlantic Context (3) This course analyzes the concept of "idolatry" in the trans Atlantic early modern world as European powers conquered and then colonized great expenses of the American continents. We will examine the roll of images in these complex cultural encounters and their protracted aftermaths. To do so, we will read both primary and secondary source material from the Old World and the New to more fully appreciate how sacred images (crucifixes, Marian icons, etc.) were deployed and employed in the creation of a hybridized Latin America. To being, we will briefly trace Catholic understandings of the power, function, and appropriate veneration of sacred images, in both the western and eastern traditions, from early Christianity through the Counter Reformation. We will then examine how Pre-Columbian Amerindian cultures, such as the Aztecs and the Mayas, relied on visual artifacts in the context of various religious rites.

Asian Studies (ASIA)

ASIA 401 East Asian Studies (3-6) An interdisciplinary, variable content, lecture-discussion course on the history, culture, politics, and international relations of China, Japan, and Korea.

ASIA 404 (IL) (CMLIT 404) Topics in Asian Literature (3) Selected works from the major poetry, fiction, and drama of such countries as India, China, Japan.
**ASIA 404Y (IL) Topics in Asian Literature (3)** Selected works from the major poetry, fiction, and drama of such countries as India, China, Japan, taught with focus on written analysis and interpretation.

**ASIA (CMLIT) 404Y Topics in Studies of Asian Literatures (3)**

This course focuses on Asian literature in a comparative and international frame. Different iterations of this course will have different topics as well as different historical or geographic foci, but may include literatures from the countries of East Asia (China, Japan, Korea), Southeast Asia (Thailand, Vietnam, Laos, Indonesia, Cambodia), or South Asia (Bangladesh, India, Pakistan). The various course modules will incorporate writing to allow students to further explore their understanding of Asian literatures. Because the course is comparative, it will highlight relationships between and among literary traditions of Asia, or between Asia and the rest of the world, whether in the fields of poetry, drama, or fictional and non-fictional prose. The course will provide students with opportunities to develop writing skills necessary for academic scholarship in comparative literature and Asian Studies.

**ASIA 405 Seminar in Asian Studies (3-6 per semester/maximum of 6)**  
**(BA)** This course meets the Bachelor of Arts degree requirements.

This seminar focuses on advanced topics in the field of Asian Studies and is intended to function as a senior capstone course for majors, as well as an upper-level, research-intensive course for any student seeking to gain in-depth knowledge of a specific issue relevant to Asian culture.

The course will have very different focuses in different semesters, depending on the research expertise of the instructing professor. (Potential topics might include, for instance, an examination of human rights policy in Asia, an exploration of maritime empires in the premodern period, an historical archeology of the Islamicization of western Asia, a literary investigation of vernacular literatures, or an art historical examination of urbanization and the built environment in major Asian cities.) Regardless of focus, extensive topic-specific readings will be required, and the goal of the course will be to help students develop and polish advanced research skills in Asian Studies.

_The Pennsylvania State University_
ASIA 469 (IL) (PL SC 469) Government and Politics of South Asia (3) This course offers an overview of the politics of modern South Asia with specific focus on Afghanistan, India and Pakistan.

This course provides an overview of the politics of modern South Asia with particular attention to the experiences of Afghanistan, India and Pakistan. It examines theories of political and economic development and ethnic politics, the impact of the British colonial experience on South Asia, the rise of nationalism, and the emergence of independent nation states in the region. Three important themes are explored throughout the course: (1) the state of economic development in the three countries; (2) the relationship between identity politics and violence; and (3) the international relations of these countries, with particular attention to terrorism and nuclear policy. Course topics will be explored through readings from textbooks and assigned articles, articles from current news sources and, documentary films from the three countries. By the end of the course, students will have knowledge of the politics of Afghanistan, India and Pakistan and the political factors that have shaped their development over the past century. Students will acquire the tools necessary to evaluate critically the impact of war, the legacy of colonialism, and the challenge in building durable democratic institutions. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors.

ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3) Japanese history from 1580-1880.

Japan’s Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms.

Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

ASIA 475Y (IL) (HIST 475Y) The Making and Emergence of Modern India (3) India’s transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle.

This course covers India’s transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. It begins during the early modern period, when European travelers encountered the flourishing Mughal Empire, and moves into the dynamic moment following, when the East India Company was one of various competing forces, both locally and globally. It then examines the rise of British power, and the various responses to it from collaboration to mutiny; the multiple development of nationalisms and anticolonialisms, including secular.
socialist, Hindu and Muslim variations; the accompanying social reform visions, including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration. This course raises important questions about the nature of modernity and its relationship to global interconnectedness, the rise of capitalism and colonialism, industry and technology; while emphasizing South Asian social and cultural contributions and responses to these global shifts. By filling in the context of this part of the world to that global story, the course enables students to grapple with some of the major economic and geopolitical trends of the early 21st century.

ASIA 476 (IL) (HIST 476) Technology & Society in Modern Asia (3) Role of technology in modernization, national identity, and foreign relations of an Asian country from 19th century to present day.

ASIA (HIST) 476 Technology & Society in Modern Asia (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The countries of Asia are often seen (or imagined) in the West today in terms of their technological capabilities. This course will examine the role of technology in the modernization, national identities, and foreign relations of one or more countries of East, South, or Southeast Asia from the mid-19th century to the present day. Specific content will vary according to individual instructor, but topics may include the relationship between technological development and international relations, national power, leisure, domestic political and aesthetic movements, war, empire, and trade, as well as the impact of technology on interconnected images of self and other on the part of the peoples of Western and Asian countries.

The objectives of the course are not only to learn about the role of technology in modern East Asia, but also to encourage us to rethink the way we view other countries and the factors that go into those perceptions (as well as developing a new way of understanding of what contributes to the views other peoples hold of their own countries). Students will also consider the changing role that technology has played (and continues to play) in all modern societies.

ASIA 480 (IL) (HIST 480) Japan in the Age of Warriors (3) An overview of Japan from the 10th to 17th century, a period of political decentralization, cultural efflorescence, and social change.

ASIA (HIST) 480 Japan in the Age of Warriors (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

By the eighth century, Japan had become a centralized state centered on the reign of a sovereign, commonly known in English as an emperor. At the end of the ninth century, the emperor’s court relocated to the city of Heian (Kyoto), and soon thereafter, an elegant court culture developed in the capital. The courtly culture was based on civilian values and civilian rule. In the countryside, however, Japan was gradually becoming militarized. Local warlords began rising to prominence and vying with each other for power. One of them, Taira-no-Masakado, rebelled against the central government during the years 939-940, declaring himself “emperor” of several provinces in eastern Japan centered on Hitachi. Although the central government in Kyoto enlisted other warrior groups to put down Taira-no-Masakado’s rebellion, the process of militarization was underway. Buddhist temples also participated in this process, using their wealth and influence to assemble monastic armies on occasion.

This course examines Japanese history beginning approximately in the 10th century, at time when civilian high culture in the capital was approaching the height of its development. At the same time, the process of militarization of the countryside was beginning to undermine that civilian court culture. The course ends in approximately the seventeenth century with the establishment of a military government under the Tokugawa shoguns. This development was ostensibly the peak of warrior influence, with the samurai (=warrior) class entrenched by law as the elite group within society. However, just as the warriors began their rise to power in the tenth century, by the end of the seventeenth century they...
were rapidly losing influence and prestige to wealthy merchants as the forces of the market economy spread throughout Japanese society.

HIST 480 is a course in medieval Japanese history, broadly defined. Different instructors will emphasize different aspects of Japanese history and culture during this era. Approaches to teaching will also vary depending on the instructor. Class sessions can take the form of lectures or discussions. Assessment methods and learning activities may include debates, discussions, exams, research papers, book review papers, and other similar academic activities.

ASIA 481 (IL) (HIST 481) Modern Japan Since 1800 (3) The transformation of Japan from a relatively isolated, agricultural nation into a highly industrialized world power.

ASIA (HIST) 481 Modern Japan Since 1800 (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

In the late 19th century, Japan emerged from relative seclusion and grew, within the period of a few decades, into one of the world’s major powers. Japan’s remarkable transformation into an imperialist power ended suddenly with defeat by the Allied powers in August 1945. But the history of prewar and wartime Japanese nation-building and economic growth set the stage for postwar rebuilding. This course examines Japan’s development as a powerful modern state, imperialist aggressor, defeated nation, economic power-house, and pop culture super-power. Specific content will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government’s program of rapid modernization and Westernization, imperialist expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945–1952), Japan’s resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

ASIA 482 (CHNS 424, HIST 482) Confucius and the Great Books of Early China (3) This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China.

ASIA 482 (HIST 482, CHNS 424) Confucius and the Great Books of Early China (3)

This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period. As the first part of a two-seminar series of courses (HIST 484), it provides an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as “(Confucian) ritualists,” “statesmen,” “military strategists,” “rebels,” “recluses,” and “spiritual leaders.” Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

ASIA 484Y (IL) (HIST 484Y) History of Chinese Thought (3) A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present.

ASIA (HIST) 484Y History of Chinese Thought (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing China's philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular "Orientalist" myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

ASIA 485Y (IL) (HIST 485Y) China's Last Empire: The Qing Dynasty, 1644-1911 (3) China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China's internal diversity.

ASIA (HIST) 485Y China's Last Empire: The Qing Dynasty, 1644-1911 (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as "Chinese" but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of China starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynastic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of Western colonialism on China. Considerable time will also be focused on China's ethnic, religious and cultural differences in order to allow a deeper understanding of major issues and themes in late imperial Chinese history. Finally, the theme of China's international relations in Asia and the world and China's shifting place in the world will be a prominent thread of the course. Through a blend of primary and secondary sources, students in this class will need to think critically, read broadly and express their ideas clearly regarding the evolving challenges facing China's last empire.

ASIA 489 (IL) (HIST 489, PL SC 486) International Culture in East Asia (3) Study of the role of culture in East Asian regional and East-West international relations.

ASIA 489 (PL SC 486/HIST 489) International Culture in East Asia (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine the place of culture in international history through a comparative look at the role of cultural circulation and exchange in relations among China, Korea, and Japan (and between East Asia and the West) from the propagation of Buddhism in the first century A.D. to present-day circulation of popular music, movies, and comics. We will explore the international politics of culture and the politics of international culture, considering questions of what constitutes culture, whether it is ever entirely separate from politics, and how that separation has evolved over time. These larger themes of the course will be tackled by following the historical movement of concrete objects and people throughout the region. This is a course in international history; historical events, problems, and issues will be at the center of our weekly discussions. But it also seeks to explore aspects of international relations.

This course is intended to examine the role of cultural exchange in international relations. The goals of the class are not only to gain an understanding of the uses and impact of culture in international relations, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen student’s appreciation of the assigned readings, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. Evaluation will emphasize student performance on a day-to-day basis and as expressed in a final research project. A possible break down would be as follows:

This course is designed to respond to strong student interest in East Asian international history. This course will complement and extend popular survey and upper-level courses such as HIST 172/174/175/480/481/483/484/485/486.

ASIA (HIST) 493 Japan in the World (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.
This course will examine Japan’s foreign relations and changing position in the international community, from the rethinking of relations with the Western world in the early nineteenth century to its emergence as a pop culture superpower in the present day. The course will explore the structures of international relations, such as imperialism and international organizations, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. We will also consider the development of alternative methods of diplomacy, including cultural exchange and economic and technical assistance. Class work may include some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations.

Astrobiology (ABIOL)

**ABIOL 570 Astrobiology Field Experience (2)**

Geological field excursions to sites where the early evolution of life and the environment is revealed and to modern analogues.

**ABIOL 570 Astrobiology Field Experience (2)**

Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of life, the connections between the evolution of life and of environments, the potential for life and life's actual distribution in our solar system and beyond, and future of life on Earth and in space. This course is intended to expose students to a variety of rock units (paleosols, sedimentary rocks, glacier deposits, ore deposits, and igneous rocks) formed under a variety of environments during the period between 3 billion years and 400 million years ago in order to give them some ideas about the environments of the early Earth. Students will also be exposed to a variety of geochemical, paleontological, and geological methods to investigate these ancient rocks in order to obtain information about the biological and chemical environments of the early Earth.

The field excursion will be held for about two weeks during the Summer semester. It will be preceded by a short series of seminar-style meetings late in Spring semester to discuss the objectives of the excursion and to outline the major features of the field sites to be examined. Possible sites for the excursion will be selected from the Precambrian rocks in Ontario - Quebec, Canada, Michigan, Minnesota, Wisconsin, New York, Virginia, West Virginia, and Maryland and modern microbial ecosystems in the Bahamas and Green Lake (NY). One to three days will be spent at each of the major sites.

This is a required course for all students in Dual Title Degree Program in Astrobiology, but is open to any graduate student. This will also be a suitable course for undergraduate students, seniors preferred, with the permission of the instructor. There is no prerequisite. Grading will be based on a term paper submitted within one month after the excursion. The term paper will be based on literature review and field observations on a topic selected by each student.

**General Education:** None

**Diversity:** None

**Bachelor of Arts:** None

**Effective:** Summer 2004

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ABIOL 574 Planetary Habitability (3)**

Aspects of star and planet formation, habitable zones, biospheric evolution, life in extreme environments, planet and life detection.

**ABIOL 574 Planetary Habitability (3)**

This course introduces graduate students to the foundations of the field of Astrobiology. Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, microbiology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of habitable planets, origin of life, the connections between the evolution of life and of environments, the potential for life and life’s actual distribution in our solar system and beyond, and future of life on Earth and in space.

Students will expand their knowledge base beyond their discipline while considering such issues as the origins of stars and planets, environmental conditions of the prebiotic Earth, the origin of life on Earth, the nature of the universal "tree of life", the establishment of evolutionary patterns and rates, the causes of global glaciations and their use as analogues for life on planets or moons such as Europa, how life survives in extreme environments on Earth, what determines planetary habitability, how planets in other solar systems are detected, and how we might detect life on other planets.

This is a required course for all students in Dual-Title Degree Program in Astrobiology, but is open to any qualified undergraduate or graduate student. There is no specific prerequisite. Grading will be based on participation and performance on a midterm and final examination, problem sets, and laboratory exercises.

**General Education:** None

**Diversity:** None

**Bachelor of Arts:** None

**Effective:** Summer 2004

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ABIOL 590 Astrobiology Seminar (2)**

Student-led presentations and discussions of current and classic literatures relevant to the themes of Astrobiology.
ABIOL 590 Astrobiology Seminar (2)

Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of life, the connections between the evolution of life and of environments, the potential for life and life’s actual distribution in our solar system and beyond, and future of life on Earth and in space. This course is conducted as a seminar series led by the 16 principal investigators of the Penn State Astrobiology Research Center (PSARC) and their students. Classic literature relevant to the themes of Astrobiology will be introduced, but the main focus of discussions will be on new and important research developments made by the PSARC members and other astrobiologists.

The seminars will be given once a week, typically on Friday afternoons, during the Fall semester each year. At each seminar, a faculty member will present a ~30 minutes summary of important questions and current knowledge on the topic. This will be followed by summaries by two or three students on selected papers (~40 minutes) and by discussions involving all students and faculty (~50 minutes). This is a required course for all students in the Dual Title Degree program in Astrobiology, but is open to any undergraduate and graduate student. There is no prerequisite. Grading will be based on the degree of participation in discussions and on a short (10 page) term paper. The term paper may be based on the paper(s) discussed in the seminars or on students’ own research projects.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ASTRO 401 Fundamentals of Planetary Science and Astronomy (4) Overview of the techniques used and results from studies of the Solar System, stars, and galaxies.

ASTRO 401 Fundamentals of Planetary Science and Astronomy (3)

This course will focus in core content areas in planetary science and astronomy. Students will explore the fundamentals in robotic exploration of the Solar System, how astronomers map and navigate the night sky, our understanding of the nature and evolution of stars, and the nature and evolution of galaxies. Students will engage with real data from Solar System missions as well as ground-based and space-based telescopes. Through the use of many databases and data archives from missions and observatories, the students will become familiar with the census of astronomical objects in various categories.

A particular emphasis will be placed on examples of qualitative and quantitative problem solving in these content areas. In addition, students will explore how scientists communicate their results to the public, and they will get hands-on experience, such as planning and executing a planetarium show.
General Education: None

ASTRO 402 Astronomical Telescopes, Techniques, and Data Analysis (3)
Properties and use of optical telescopes, imaging and spectroscopy, multi-wavelength techniques, data analysis and statistics, practical research methods.

This course will provide practical experience and understanding of the telescopes and techniques by which astronomers obtain data and conduct research. The study of telescopes will include optical, infrared, radio, ultraviolet, X-ray, and gamma ray observations, and students will learn to set up and use optical telescopes. In-depth coverage of the instruments used for imaging and spectroscopic observations of a variety of astronomical objects will be provided. Applications will include topics in planets, stars, galaxies, and cosmology. Detailed examples of data analysis will be given, including the relevant statistical techniques. Finally, the process by which research in astronomy is conducted will be reviewed, from proposing observations, to obtaining them, to analyzing and interpreting them, to writing up the results.

This course is a requirement for students in the Planetary Science and Astronomy major and minor. It may be taken by any students with the needed pre-requisites, but cannot be counted towards the required 400 level courses for the Astronomy and Astrophysics major or minor.

ASTRO 410 Computational Astrophysics (3)
Applications of numerical methods and computer programming to astrophysics, including stellar physics and cosmology.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ASTRO 414 Stellar Structure and Evolution (3)
Theory of Stellar structure and evolution including energy generation and transport and an examination of stellar models.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ASTRO 420W Planets and Planetary System Formation (3)
Solar system properties, star formation, protoplanetary disks and planet formation, solar system model, extrasolar planets, and astrobiology.

The Pennsylvania State University
ASTRO 420W Planets and Planetary System Formation (3)

The course explores the wide variety of physical and chemical processes that govern the motions and properties of planets. Observations of the planets, moons, asteroids, comets and planetary rings in our Solar System are described. The properties of extrasolar planets are also emphasized. The process of planetary formation is discussed in the context of the solar system and in the context of extrasolar planets. The prospects of life and the effect of life on such planets will also be discussed.

It will be taken by roughly half of the juniors and seniors majoring in Astronomy and Astrophysics (about 10 people). The course will include writing papers on current issues of debate in the areas of solar system and extrasolar planets and will satisfy the "Writing Across the Curriculum" requirement.

General Education: None

ASTRO 451 Astronomical Techniques (3)
Practical methods of modern observational astronomy, detectors, filters, instrumentation for both ground-based and space observations, and data analysis.

ASTRO 451 Astronomical Techniques (3)

ASTRO 451 will introduce students to the techniques and technologies for modern observational astronomy, emphasizing the development of practical skills as well as understanding through computer-based investigations integrated with traditional lecture content. Beginning with a summary of probability theory, the students will be introduced to standard techniques of statistical analysis including hypothesis testing and the characterization of uncertainties. Subsequent lectures and computer exercises will discuss the physics and design of astronomical detectors, the principles of telescope and spectroscope design, and the data analysis methods used in processing astronomical datasets. Significant emphasis will be placed on estimation of signal-to-noise ratios for various observing scenarios. The effects of the Earth’s atmosphere, interstellar matter, and the expanding Universe on the propagation of astronomical signals will also be discussed.

**ASTRO 501** Fundamental Astronomy (3) Concepts, tools and techniques, and essential background in stellar, Galactic, extragalactic astronomy and cosmology.

**Fundamental Astronomy (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2008

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ASTRO 502** Fundamental Astrophysics (3) Fundamental tools and results of modern astrophysical theory. Gravitation; gas dynamics; radiation processes; radiative transfer; atomic structure and transitions.

**Fundamental Astrophysics (3)**
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ASTRO 504 Extragalactic Astronomy (3) Properties and evolution of galaxies including their stellar, interstellar, black hole and Dark Matter components.

Extragalactic Astronomy (3)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ASTRO 513 Observational Techniques in Astronomy (3) Theoretical and practical aspects of modern multiwavelength observational astrophysics including detector physics, imaging techniques, spectroscopic techniques, and data analysis principles.

Observational Techniques in Astronomy (3)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ASTRO 527 (PHYS 527) Computational Physics and Astrophysics (3) Introduction to numerical methods for modeling physical phenomena in condensed matter, atomic and high energy physics, gravitation, cosmology and astrophysics.

ASTRO (PHYS) 527 Computational Physics and Astrophysics (3)

This course provides an introduction to applications of numerical methods and computer programming to physics and astrophysics. Numerical calculations provide a powerful tool for understanding physical phenomena, complementing laboratory experiment and analytical mathematics. The main objectives of the course are: to survey of the computational methods used for modeling concrete physical and astrophysical systems; to assess the reliability of numerical results using convergence tests and error estimates; and to use scientific visualization as a tool for computer programming development and for physical understanding of numerical results.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ASTRO 530 Stellar Atmospheres (3) The structure, physics and observational manifestations of atmospheres of stars.

Stellar Atmospheres (3)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ASTRO 534 Stellar Structure and Evolution (3) Physics of stellar interiors, stellar structure, and evolutionary changes of stars from pre-main sequence through final states.

Stellar Structure and Evolution (3)
Effective: Fall 2008

Prerequisite:

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ASTRO 542 Interstellar Medium and Star Formation (3)** Theory and observation of the interstellar medium of our Galaxy and the process of star and planet formation.

**Interstellar Medium and Star Formation (3)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2012

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ASTRO 545 (PHYS 545) Cosmology (3)** Modern cosmology of the early universe, including inflation, the cosmic microwave background, nucleosynthesis, dark matter and energy.

**ASTRO (PHYS) 545 Cosmology (3)**

Cosmology is the scientific study of the universe as a whole: its physical contents, principal physical processes, and evolution through time. Modern cosmology, which began in the early 20th century, is undergoing a renaissance as a precision science as powerful ground- and space-based telescopes allow us to observe the formation of the first stars, galaxies and galaxy clusters; the echoes of the inflationary epoch as they are impressed upon the cosmic microwave background; and evidence for and clues to the nature of the mysterious dark energy, which is driving the accelerating expansion of the universe. This course will introduce students to the key observations and the theoretical framework through which we understand the physical cosmology of the early universe.

ASTRO 801 Planets, Stars, Galaxies, and the Universe (3) Overview of the structure, formation, and evolution of planets, stars, galaxies, and the universe.

ASTRO 801 Planets, Stars, Galaxies, and the Universe (3)

Observations by modern ground-based and space-based observations have fueled significant changes in our understanding of the Universe. The Solar System contains only 8 planets but has many thousands of Kuiper Belt Objects, including Pluto. Large area sky surveys have taken inventory of the stars in the Milky Way Galaxy and galaxies in the Universe and determined that only 4% of the mass of the universe is found in luminous objects. Besides the mysterious "dark matter," we know that the energy budget of the universe is dominated by "dark energy," which is causing the expansion of the Universe to accelerate. This course will provide science educators with a strong foundation in astronomy, allowing them to critically evaluate the evidence for the most recent advances in our understanding of the Solar System, our Galaxy, and the Universe.

Astronomers use observations of the light from distant sources to discover the nature of these objects and their environment. ASTRO 801 will lead students to an understanding of light and the instruments for its detection. They will see how careful analysis of these observational data and theoretical models are used to solve the mysteries of the Universe.

ASTRO 801 will combine digital video, audio, simulation models, and the wealth of astronomical imagery from NASA's Hubble, Chandra, and Spitzer Great Observatories. Students will use highly detailed planetarium software and simulated observing experiences to directly explore the night sky to make the same observations that research astronomers perform in their work. ASTRO 801 students will be granted licenses to use the courseware developed for this course in their own secondary classrooms.

The overarching goal of the course is to provide secondary science teachers with the necessary content background to convey the astronomy topics required by their mandated state standards. The ASTRO 801 students will be provided with materials for presenting the course content in their classrooms and will be granted license to use the courseware developed for this course in their own secondary classrooms.

Students will be required to complete weekly assignments. There are 12 lessons in ASTRO 801, plus a course introduction and orientation. Each lesson contains interactive exercises, links, animations, movies, and novel explanations of the basic scientific principles related to the objects in the Universe and their environments. Each lesson will conclude with an open book, on-line assessment, which will rely on a variety of types of exercises. These exercises will include brief math problems and short essay questions, some of which will require additional internet research to complete. Several simulated lab exercises will also be required, which will allow the students to enrich their understanding of the concepts through inquiry-based, active learning.

Students will also complete a capstone project, where they will use the content knowledge and skills to create material for

The Pennsylvania State University
their classroom. There will be several options for this project, but one example is that students will create a set of 3-5 laboratory exercises, including instructions, data sheets, and lists of materials that teach content from the course.

Bar Preparation (BPREP)

BPREP 900 Fundamental Skills for the Bar Examination (2) The course provides students with a substantive review of selected material routinely tested on the bar exam, primarily through problems and exercises in a bar exam format designed to familiarize students with the exam and techniques for answering multiple choice questions. Individualized feedback is provided every week to assist each student identify areas of strength and weakness. The goal is to enhance student ability to prepare for the bar exam and is intended to supplement, not replace, commercial bar preparation courses. This course is not focuses on any particular state, so all students will benefit regardless of where they are sitting for the bar exam. Students enrolled in BPREP 900 are not permitted to use laptops, phones or other devices during class. This course is not recommended for students ranked in the top third of their class. BPREP 900 is graded on a pass/fail basis but is not subject in any other respect to the Pass/Fail Option.

Biobehavioral Health (BB H)

BB H 402 (IL) African Health & Development (3) Course will address African health and development strategies in the context of health promotion programs.

BB H 402 African Health & Development (3) (IL)

This course is designed to address African health and development strategies in the context of health promotion programs. Students will analyze the cultural, educational, social, economic, political and environmental impact of health and development in Africa. Emphasis will be on development of health promotion strategies that locate program implementation and evaluation within their cultural contexts.

The objectives are to prepare students to:
1. discuss and debate the roles of culture, social contexts, gender, and political economic impact on health behaviors in Africa;
2. critique some of the theory and models used to inform public health programs in Africa;
3. examine the role of historical, spiritual, linguistic, and political impacts on health projects in different countries in Africa; and
4. analyze health priorities in Africa and their impacts on such global initiatives as the Millennium Development Goals;
5. discuss issues related to human rights, population identities in the world and examine their impact on health in Africa.

Attendance is required. Students will be expected to participate actively by critically reviewing assigned readings, engaging in class discussions, and preparing and delivering in-class presentations. Grading is based on attendance, participation, presentations, exams and a final research paper.

BB H 411W Research and Applications in Biobehavioral Health (3)

This is an upper-division course on research and applications in Biobehavioral Health and is the designated writing intensive (W) course for the major. The primary goals of this course are to provide the student the ability to effectively: 1) find, organize, integrate, and critique existing knowledge and research in biobehavioral health; 2) generate and analyze new data related to a specific domain though the conduct of original research; 3) interpret, evaluate, and communicate— to both scientific and lay audiences --the results of the original research; and 4) integrate these findings— with due concern for strengths and limitations of the research-- back into the body of knowledge on the biobehavioral health topic.

In this course the instructor will first introduce the student into a body of knowledge related to a domain involving health and health-related behaviors. Example domains may include areas such as, stress and health, drug/alcohol addictions and health, hormonal impacts on health, smoking cessation programs, obesity and health, sexual behaviors and health, etc. Students will go through the steps involved in original research (e.g., Introduction, Methods and Procedures, Results, Discussion, Summary, Abstract, Bibliography) and written assignments will be involved for each step. Depending on the instructor, the original research may involve laboratory work, collection of survey data, analyses of publically available data, or existing data sets based on faculty’s research program. Students will learn how to use available tools to descriptively summarize and analyze data using computer-assisted software.

This is a required course in the Biobehavioral Health major. The course is designed to give skills to acquire, integrate, and critique health-related information and to communicate to professional and non-professional audiences. The course is appropriate for students intending to obtain positions in health promotion and disease prevention and to students seeking to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

BB H 440 (US;IL) (H P A 440) Principles of Epidemiology (3) Theory of epidemiology and significant case studies; potential applications to health care.

BB H (H P A) 440 Principles of Epidemiology (3)

This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations.

The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors; 3) be able to interpret and critique epidemiological research reports on the identification of risk factors and casual factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful interventions; and 7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world.

This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.

**BB H 468 Neuroanatomical Bases for Disorders of Behavior and Health (3)**
An examination of the anatomical/cellular/molecular bases for human central nervous system disorders and their impacts on victims/families/caregivers.

BB H 468 Neuroanatomical Bases for Disorders of Behavior and Health (3)
This course will examine in detail and in depth the neuroanatomical and cellular/molecular/genetic bases for selected

The Pennsylvania State University
disorders of the human central nervous system (e.g. Parkinson’s, Alzheimer’s, stroke, etc.) and their impacts on the
victim, his/her daily life and his/her family and care givers. Damage to, or malfunctions of, any part of the central nervous
system causes specific and characteristic disruptions of normal processes, which manifest as abnormal and/or absent
behaviors. Current research on the anatomical, cellular, molecular, and genetic bases for the disorders and the
current/future trends in prevention/treatment of the disorders will be studied. Upon successful completion of the course,
the student should be able to: a) describe the physical signs, symptoms, causes, effects on the patient and his/her family
& care givers, prognoses, treatments, and support systems available to these patients, of the neurological disorders
covered in this course; b) describe the neuroanatomical, cellular, and molecular bases for these conditions; c) describe
the current research on these disorders and the new prevention/treatment approaches being developed. The evaluation
of students’ performances in the course will be typically based on multiple choice examinations and a library research
paper. This course will count toward fulfilling the BB H major requirement, “Take 15 credits in Biobehavioral Health.”

BB H 469 (BIOL 469) Neurobiology (3) Comprehensive examination of neuroanatomy and physiology designed to integrate
the principles of neurochemistry, neuroendocrinology and molecular biology.

BB H 470 (BIOL 470) Functional and Integrative Neuroscience (3) Neurobiological function in motivated behaviors, motor
and sensory function, learning and memory, development, sexual differentiation, and pathology.

BB H 490 Introduction to Internship Experience (3) Provide an integrative learning experience to develop professional
skills encountered in an internship experience and future careers in biobehavioral health.

BB H 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or

BB H 501 Biobehavioral Systems in Health and Development: Theory and Processes (3) Examination of theories and basic processes for understanding individuals as dynamic biobehavioral complex systems functioning through continual interactions.

BB H 501 Biobehavioral Systems in Health and Development: Theory and Processes (3)

Understanding the etiology of illness and the design of intervention strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. The second course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology is relevant to behavioral development and on what aspect of this area of biology is linked to behavior. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the course. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum in Biobehavioral Health. Evaluation of the theories section will be by written exam, oral presentation, and seminar participation. Evaluation of the cell biology, genetics, and neurobiology components will be by written exam for each component. This initial required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the first of a two-course sequence (BB H 501 and BB H 503). It will be required by all graduate majors in Biobehavioral Health. It will be available to students in other doctoral programs if it could be a part of a Biobehavioral Health minor for other students. This course will be offered every fall semester beginning with the first fall semester after approval and will enroll a maximum of twenty students.

**BB H 503 Biobehavioral Systems in Health and Development: Processes and Integration (3)**

Understanding the etiology of illness and the design of intervention strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course is the second course in a two-course sequence (BB H 501 and BB H 503) that is designed to provide first-year graduate students with a multidisciplinary understanding of the biobehavioral health perspective. This views humans as complex dynamic systems of integrated component processes that interact with the environment to influence development and health. The first course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. This course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology are relevant to behavioral development and what aspect of this area of biology is linked to behavior. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the two-course sequence. Evaluation of each of the five modules will be by written exam. This required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the second of a two-course sequence (BB H 501 and BB H 503). This course will be required by all graduate majors in Biobehavioral Health. It will be available to students in other doctoral programs. It could be a part of a Biobehavioral Health minor for other students. This course will be offered every spring semester beginning with the first spring semester after approval and will enroll a maximum of twenty students.

The Pennsylvania State University
Biochm Micrb & Molbi (BMMB)

This is a required course to be taken by all BMMB graduate students during their first fall semester. It will be team taught with a mixed textbook/literature approach. Material will be presented primarily in the form of lectures. The objective is to provide training in core concepts that will be essential for the students to pursue more specialized areas of study in Biomolecular Science. The course will prepare students for taking graduate electives in more specialized areas, it is not intended to be a comprehensive survey of all of the topics relevant to all of the program options in BMMB. Topics will include: acid/base theory, thermodynamics, chemical equilibrium, electron transfer, electrochemistry, and sizes and shapes of molecules, protein and nucleic acid structure, enzyme kinetics and catalysis, chromosome structure, DNA replication, cell cycle, recombination, transcription, RNA processing, and translation, intracellular compartmentalization and trafficking and cell signaling. Each student's mastery of the material will be evaluated by written examinations.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BMMB 502 Critical Analysis of the Biochemical, Microbial, and Molecular Biology Scientific Literature (1) A course focusing on critical reading, understanding and evaluation of primary literature in Biochemistry, Microbiology and Molecular Biology.

Critical Analysis of the Biochemical, Microbial, and Molecular Biology Scientific Literature (1)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BMMB 507 Seminar in Biochemistry, Microbiology, and Molecular Biology (2 per semester/maximum of 4) No description.

Seminar in Biochemistry, Microbiology, and Molecular Biology (2 per semester/maximum of 4)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BMMB 509 Ethics in Biomedical Science (1) Discussion of ethical issues relevant to scientific research in the biomedical sciences.

Ethics in Biomedical Science (1)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BMMB 510 Current Literature in Molecular Biology (1) Discussion and analysis of recent scientific papers that form the core of current literature in molecular biology and related disciplines.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
BMMB 511 (IBIOS 511, VB SC 511) Molecular Immunology (2) The study of molecular and biochemical events that influence immune responses and define current questions in immunology.

BMMB 511. (IBIOS 511, V SC 511) Molecular Immunology (2)

The goals of the course are to integrate the current questions of immunology with other disciplines, in particular cell biology and biochemistry, and to provide training in critical thinking and evaluation of data and experiments. The course will be approximately 2/3 lecture by the instructor and 1/3 student presentations of papers related to the material. In addition, written critical reviews of recently published papers and a short research proposal will be assigned.

By focusing on the mechanisms involved in immunity and disease, this course complements several existing courses on immunology, virology, and biochemistry. The prerequisites of MICRB 410 and B MB 400 assure that the students enrolling in the course have a general understanding of immunology and biochemistry. This course is projected as a requirement for the Molecular Medicine and Immunobiology Options in the IBIOS graduate program and is an elective for the Pathobiology and BMMB graduate programs. The course will be offered in the fall semester with an enrollment limit of 20 students.

Faculty member proposing course: Andrew Henderson

BMMB 515 (VB SC 515) Macrophage Biology (2) The role of macrophages at the interface between innate and adaptive immunity.

BMMB (VB SC) 515 Macrophage Biology (2)

The overall purpose of this course will be to provide second and third-year graduate students, the opportunity to study current concepts of macrophage biology. The course will be offered in the fall semester every other year. The class will meet once a week for two hours to review and discuss 3-4 papers on a chosen topic. For each class, the instructor will be responsible for choosing papers that reflect the most recent advances in the area of research to be covered and for providing background information on the topic. The students will be responsible for reading the papers prior to class and leading and/or participating in a critical discussion of the papers assigned for that week. This course will provide students with a detailed understanding of macrophage biology as well as a forum for developing skills in critical evaluation and discussion of current research. The materials covered in this course will build on information presented in MICRB 410 (Principles of Immunology), VB SC/B M B/MICRB 432 (Advances in Immunology: Signaling in the Immune System) and is designed to complement VB SC/BMMB/IBIOS 511 (Molecular Immunology).

BMMB (VB SC) 518 T Cell Recognition and Development (2) An in-depth analysis of the mechanisms of T cell recognition, activation and development, and the acquired immune response.

BMMB 518 (VB SC 518) T Cell Recognition and Development (2)

The goals of the course are to provide second and third-year graduate students, and in-depth analysis of T cell recognition and development. The course will be offered in the spring semester every other year. The class will meet once a week for two hours to review and discuss 3-4 papers on a chosen topic. For each class, the instructor will be responsible for choosing papers that reflect the most recent advances in the area of research to be covered and for providing background information on the topic. The students will be responsible for reading the papers prior to class and leading and/or participating in a critical discussion of the papers assigned for that week. This course will provide students with a detailed understanding of T cell recognition and development as well as a forum for developing skills in critical evaluation and discussion of current research. The materials covered in this course will build on information presented in MICRB 410 (Principles of Immunology), and VB SC/B M B/MICRB 432 (Advances in Immunology: Signaling in the Immune System).
BMMB 521 Microbial Biology I (4) Survey of cutting-edge aspects of microbial ecology, phylogenetics, physiology, molecular biology, pathogenesis and genomics.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BMMB 525 (CHEM 525) Analytical Separations (3) Fundamentals and applications of modern chromatographic separations.

Analytical Separations (3)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BMMB 531 Biomolecular Structure (2) Crystal structure determination and analysis of protein and nucleic acid three-dimensional structures.

This course is taught in two parts. In the first part, students will learn the fundamentals of X-ray crystallography of bio-molecules. Topics covered include: What X-rays are and how to produce and use them safely, how protein crystals are grown, how X-rays interact with crystals to yield 3-dimensional diffraction data, how to solve a crystal structure and how to refine the structure. Basic mathematics and physics involved in this technique will be discussed. The students will also learn how to analyze a published crystal structure and how a crystallography laboratory works. The second part will focus on understanding how protein and DNA structure relate to the function of these macromolecules. The students will visualize macromolecular structures in class using videos and using interactive molecular graphics software on their own to develop an understanding of three-dimensional structures. Particular topics include: fundamentals of protein structure, enzymes, signal transduction molecules, immune molecules, protein-DNA interactions, and other related topics.

BMMB 533 Protein Evolution (2) Consequences of evolution of protein-coding sequences: structures and functions.

BMMB 533 Protein Evolution (2)

Most biological functions are carried out by proteins, and evolutionary logic can be used to infer functions. This course will focus on evolution of protein-coding sequences, conformations and functions of proteins. Different species show varying characteristics of structure, metabolism, and regulatory control networks. Most of these differences are the product of the evolution of protein-coding sequences. DNA mutations can change amino acid sequences, protein structures and protein functions; and favorable mutations are selected, in ways that are integrated to form an organism adapted at both macroscopic and molecular levels.

The availability of large databanks of protein amino acid sequences, and protein three-dimensional structures, and the annotation of protein function in the entries in these databanks, has allowed investigation of evolutionary changes that impact proteins. One of the goals of the course will be to describe these databanks and the computational tools available.
to apply them in research in molecular biology. Many students will find these tools useful in their own research projects.

The evolutionary divergence of proteins has shown several types of effects.

In some cases, related proteins in different species retain similar functions, but show differences in amino acid sequence and structure. The nature of observed changes in sequence and structure will be described and the relationship between sequence changes and structural changes examined in several well-documented examples, including globins, and serine proteases.

In some cases, proteins diverge within a single species to form large families of related molecules with specialized functions. For example, the human genome encodes hundreds of odorant receptors.

The comparison of related proteins that have adopted novel functions reveals how cells can expand their functional repertoire. In most cases it is easier to adapt an existing structure to a new function than to create a new protein "from scratch". For example, the proteolytic enzymes of the chymotrypsin family are related to haptoglobin, an iron scavenger that has lost its enzymatic activity.

Beyond the description of individual proteins and individual protein families, there is the more general question of how changes in functions of individual proteins are integrated to create a smoothly-running cellular "operating system". The evolution of sequences encoding regulatory proteins to achieve this will be discussed.

Methods of bioinformatics to address these questions will be presented, with emphasis on study and comparison of structures with computer graphics.

**BMMB 538 (CHEM 538) Spectroscopic Methods in Bioinorganic Chemistry (3)**

Foundations in spectroscopic methods employed for the determination of the geometric and electronic structure of transition metal clusters in nature.

**Biochemical Reaction Mechanisms (3)**

Mechanisms of the most important biochemical reactions, with emphasis on enzyme catalysis.

**BMMB 541 Molecular Biology of Animal Development (3)**

This course emphasizes comparative molecular genetic analyses of developmental gene networks using vertebrate and Drosophila model systems.

This is a required course for graduate students in the IBIOS Cell and Developmental Biology Program. Approximately half of the class sessions will consist of lectures and class discussions related to lecture material. The other half will consist of primary literature presentations by the students and class discussion pursuant to these. The course will provide students with a broad overview of essential signaling pathways and gene regulatory networks that coordinate cellular activities to establish and maintain the complex communities of cells that comprise animal tissues.

**BMMB 542 Eukaryotic Cell Biology (3)**

This course covers current areas of cell biology research, focusing on processes affecting the cell as a whole.

This course in eukaryotic cell biology will provide a foundation for those students whose thesis research focuses on cell biology or the cellular aspects of development. The primary focus will be to understand how the cell functions as a unit. Areas to be covered include compartmentalization of the cell and transport between different sub-cellular compartments; the control of cell shape and how cell shape and polarity changes drive cell movement and tissue shape; the life cycle of cells; and the regulation of these processes by extracellular signals. We will also investigate current research techniques and tools that are used to investigate these processes.
BMMB 550 Computational Methods in Biochemistry and Molecular Biology (3) Apply maximum likelihood methods for data analysis and model testing in molecular biology, biochemistry and structural biology.

**Computational Methods in Biochemistry and Molecular Biology (3)**

BMMB 551 (IBIOS 551) Genomics (3) Structure and function of genomes including use of some current web-based tools and resources for studies and research in genomics.

**BMMB (IBIOS) 551 Genomics (3)**

IBIOS/BMMB 551 will deal with the structure and function of genomes including the use of some current web-based tools and resources for studies and research in genomics. The overall objective is to learn current information about the structure and function of genomes, to develop facility in the many web-based tools and resources for further studies and research in genomics, and to appreciate the power and limitations of current resources and knowledge. This course is designed as a basic course for any student in the life sciences who needs to exploit the developments and tools in genomics in their own research and who wants to broaden their understanding of the current knowledge and research in the life sciences that are increasingly drawing on genomics advances. The course will be taught by a team of faculty (members active in genomics research and will be video-conferenced. Students' grades will be based on take home exams or assignments that require their understanding of the concepts in genomics and the hands-on use of web-based analysis tools, as well as on class discussion participation. Students will be assigned one or more projects, tutorials, problem sets or essays to complete. Reading assignments will further help students explore the materials, do the assignments and participate in classroom discussions.

BMMB 554 (IBIOS 554) Foundations in Data Driven Life Sciences (3) Expanded overview of current developments and technique in computational biology and genomics.

**BMMB (IBIOS) 554 Foundations in Data Driven Life Sciences (3)**

The successful progression of data-driven biomedical research is obscured by a wide-range of logistical problems related to data handling and processing, a widespread disconnect between developers and consumers of biomedical analysis software, and lack of accessible, well-developed curricula and active learning opportunities necessary for the development of key data analysis skills in the next generation of researchers and clinicians. This course aims a filling these gaps. Topics include fundamental concepts that underpin analysis of sequence data, design of complex experiments, research transparency and reproducibility, as well as result disseminations practices relevant to presentations and publications.

BMMB 572 (CHEM 572) Nucleic Acids Chemistry (3) Biophysical and biochemical approaches for studying structure-function relationships in nucleic acids.

**BMMB (CHEM) 572 Nucleic Acids Chemistry (3)**

The goal of this course is to provide a foundation in biophysical approaches for studying the quantitative and structure-function relationships in nucleic acids systems, including DNA, RNA, and their interactions with proteins, salt, and water. Lectures include basic physical chemistry and statistical mechanics principles along with current literature in the biochemical sciences. At the end of the course, you should be able to meaningfully dissect molecular biological papers at the level of the physical chemistry of these processes. Current topics are introduced through reading and presenting papers from the literature.
BMMB 573 (CHEM 573) NMR Spectroscopy for Synthetic and Biological Chemistry (3) Nuclear magnetic resonance approaches for characterizing the structure and dynamics of synthetic compounds, natural products, and biological macromolecules.

NMR Spectroscopy for Synthetic and Biological Chemistry (3)

BMMB 852 Applied Bioinformatics (2) This course provides a foundation for students with biology backgrounds in the computational analysis and interpretation of biological data.

BMMB 852 Applied Bioinformatics (2)

The purpose of this course is to provide students with a foundation in the various applications of high-throughput sequencing including: chip-Seq, RNA-Seq, SNP calling, metagenomics, de-novo assembly and others. The course material will concentrate on presenting complete data analysis scenarios for each of these domains of applications and will introduce students to a wide variety of existing tools and techniques.

By the end of the course work students will understand common bioinformatics data formats and standards, become familiar with the practice of analyzing sequencing data from various instruments and will develop the computationally oriented thinking that is necessary to take on large-scale data analysis projects.

Bioengineering (BIOE)

The Pennsylvania State University
BIOE 401 Introduction to Bioengineering Research and Design (3)
Challenges and constraints of bioengineering research and design. Emphasis on immunoresponse, tissue mechanics, biological transport phenomena, and biomaterials.

In this course, students explore how engineering principles can be used to advance healthcare, develop cutting-edge bioengineering technologies, and develop a fundamental understanding of biology. Representative design problems include the application of bio-continuum mechanics, biology-surface interactions, bioelectrical phenomena, and bio-transport to the design of novel implantable blood vessels. Students will use analytical and computational techniques to explore these topics, and to develop their own design interests. Educational outcomes will include an understanding of the process of integrating biology and engineering to improve research and design, and an appreciation of the societal and ethical implications of new directions in bioengineering.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007 Ending: Summer 2014
Prerequisite: Concurrent: BIOE 404

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BIOE 402 Biomedical Instrumentation and Measurements (3)
Biomedical measurements, including consideration of techniques, equipment, and safety.

This course is designed to introduce students to the principles, applications, and design of instruments used in biomedical research and applications. The emphasis is on engineering design and analysis with supplemental discussion of relevant physiological principles. Students will learn to analyze and design systems through in-class examples, homework problems, and active participation. Grading is based on homework problems, quizzes and a final exam. Topics covered include: sensors, biopotential signal origin, filtering, amplifiers, electrodes and signal processing; pressure and flow measurement in the cardiovascular and respiratory systems, and medical imaging modalities.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008 Ending: Summer 2014
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BIOE 403 Biomedical Instrumentation Laboratory (1)
Biomedical measurements laboratory including measurement of bioptentials, experiments in medical imaging techniques, and use of cardiovascular and pulmonary system instrumentation.

Laboratory course to accompany BIOE 402, Medical Instrumentation. The class is comprised of studies in medical circuits and transducers for static and dynamic biological inputs, and includes measurement of actual biomedical signals. For preparation for industry or research, proper laboratory documentation techniques are taught along with basic skills for presenting data as a scientific journal paper. Students work together in teams to perform the experiments.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007 Ending: Summer 2014
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BIOE 404 Data Analysis and Experiment Design (1)
Statistical measures of data, and selection of experiment sample size to meet criteria.

Upon completion of this course students will be able to determine confidence limits and establish hypothesis tests for the difference in means of data sets using normal and t-test measures. Students will understand the application of single and multivariable analysis of variance (ANOVA) procedures, and hypothesis tests based on these procedures. Students will know how to select the number of subjects to test for a given specified accuracy of a statistical measure.

General Education: None
BIOE 406 Medical Imaging (3) Physical principles and clinical applications of medical imaging methods.

The course covers all four major diagnostic medical imaging modalities including x-ray, ultrasound, radioisotope imaging, and magnetic resonance imaging. Physical principles, instrumentation, diagnostic procedures, and biological effects of these modalities will be discussed. It requires background in physics and electrical circuits. It is a lecture course and graded by homework, a mid-term and a final exam. The prerequisite is Physics 212.

BIOE 409 Biofluid Mechanics (3) The fundamental relations in fluid mechanics and their application to biofluids including steady/unsteady flows, diseased states, devices and bioreheology.

This course is a first course in fluid mechanics, with application to biomedical problems. This course incorporates understanding of fluid properties of biological materials and applies the fundamental laws (mass, momentum, and energy) that govern fluid mechanics to solve biofluid applications such as those in the cardiovascular system, including diseased states. The course will enable students to use approximation methods and constraints in fluid mechanics to help model and solve biofluid examples. Bioreheology and cardiovascular prosthetics in the context of fluid mechanics will be discussed. The students will be able to understand and apply problem solving techniques to steady and unsteady biological flows and be exposed to wave propagation theory and oscillatory flow. Students will be exposed to biofluid devices and flow measurement techniques used to assess these devices. This course is required for students in the Bioengineering BS program for completion of either the mechanical engineering or the chemical engineering option.

BIOE 410 Biomedical Applications of Microfluidics (3) Study of fluid mechanics at small length scales. Low Reynolds number flow, electrokinetic flows, bioseparations in microfluidic devices.

Microfluidics is the study of flow phenomena at small length scales with characteristics channel dimensions typically less than the diameter of human hair. Small length scale effects become important as surface forces such as viscous drag and surface tension govern flow behavior rather than body forces (inertia) as seen in macroscale fluid mechanics. Miniaturization of fluid handling systems also allows the development of micro Total Analysis Systems (microTAS) or so called "lab on a chip" which combines biological sample preparation, separation and analysis in a single device. Topics explored in this class include: fundamental understanding and derivation of constitutive balances in fluid mechanics (e.g., Navier Stokes equation), exploration of electrokinetic flow phenomena for electrophoresis, fabrication techniques for microfluidics, overview of (microTAS) systems especially capillary electrophoresis and miniaturized polymerase chain reaction for biochips, and exploration of integrated microfluidics for personalized medicine and drug delivery.

BIOE 413 Bioengineering Transport Phenomena (3) An integrated study of the fundamentals of mass transport processes with emphasis on the analysis of physiological systems.
BIOE 413 Bioengineering Transport Phenomena (3)
This course provides an introduction to mass transport phenomena in biological systems. The course builds upon thermodynamic concepts of phase and chemical equilibrium to analyze ion transport and cell membrane potentials including Nernst potentials, Gibbs-Donnan equilibrium and osmotic pressure. In particular, the course provides fundamental understanding of the diffusion of gases, electrolytes and non-electrolytes in biological applications. Furthermore, the principles of oxygen transport in tissues are specifically described and analyzed using the Krogh Cylinder Modes and hemoglobin-oxygen binding relationships. The transport of substances across biological membranes is discussed and analyzed for various biological transport mechanisms including: passive diffusion, active transport and facilitated transport. Convective transport through porous media is introduced using Darcy’s Law and the Brinkman Equation. Finally, fundamental concepts of pharmacokinetic modeling are introduced and utilized for the analysis of drug transport and distribution within tissues. This is a lecture course, graded by means of quizzes and a final exam. A general knowledge of physiology and knowledge of continuum-mechanics, and thermodynamics is prerequisite.

BIOE 423 Reaction Kinetics of Biological Systems (3) Chemical kinetics and reaction equilibria with applications to the analysis of physiological function and the design of synthetic organs.

BIOE 423 Reaction Kinetics of Biological Systems (3)
Chemical reactions are the underlying mechanism for numerous biological processes such as energy metabolism, biosynthesis pathways, mass transport, and detoxification. This course will introduce the basic concepts in chemical equilibrium and reaction kinetics. The course will then apply these chemical kinetics and analytical approaches to understand the underlying mechanisms of selected biological and physiologic processes, which will include metabolic engineering, catalysis, bioreactors, and drug discoveries. Due to the analytical nature of this course, basic knowledge of thermodynamics, mathematics, differential equations are required.

Effective: Spring 2007 Ending: Summer 2014
Prerequisite:

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BIOE 440 Clinical Correlations (1) Engineering analysis applied to common disease states and therapies.

BIOE 440 Clinical Correlations (1)
This course applies analysis of physiologic systems and processes covered in other Bioengineering courses to the understanding of common diseases and their treatments. Each topic will include a basic description of the disease from a medical physiology perspective, identification of the applicable engineering principles, and application of those principles to understanding the disease process or therapy. Sample topics include heart failure, kidney failure and dialysis, diabetes, and surgical correction of vision.

BIOE 443 (MATSE 403) Biomedical Materials (3) Describe properties of materials and composites and their in vivo interactions.

BIOE 444 (MATSE 404) Surfaces and the Biological Response to Materials (3) Focus is on special properties of surface phenomena, especially as this pertains to water solvent effects in biology, receives special emphasis. Course materials are drawn from a selection of relevant library reserve texts.

BIOE 444 (MATSE 404) Surfaces and the Biological Response to Materials (3)

This course factors the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent in the biological response to materials. Contact activation of the blood plasma coagulation cascade, bioadhesion, and protein adsorption are used as example biological responses to material surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kind and intensity of biological responses to surface and interfacial energetics will be compared and contrasted through a process that will quantify important surface thermodynamic properties of materials. The hydrophobic effect and related phenomena, especially as this pertains to water solvent effects in biology, receives special emphasis. Course materials are drawn from a selection of relevant library reserve texts.

BIOE 445 Tissue Engineering: Concepts, Calculations and Applications (3) Introduction to interdisciplinary tissue engineering concepts, associated biochemical and biomechanical engineering calculations, and cardiovascular, musculoskeletal, and other tissue application examples.

BIOE 445 Tissue Engineering: Concepts, Calculations and Applications (3)

Tissue engineering is a field of research dedicated to the design and construction of living tissues for use in repairing or regenerating tissue structures and functions compromised by disease or trauma. This course provides an introduction to interdisciplinary tissue engineering concepts, associated biochemical and biomechanical engineering calculations, and cardiovascular, musculoskeletal, and other tissue application examples. Topics covered in this course will span the entire process of creating an engineered tissue, including, among other topics: techniques for cell isolation, recovery, and expansion; biodegradable polymer synthesis and degradation; scaffold design, fabrication, and cell seeding; bioreactors and engineered tissue mechanobiology. This is a lecture course, graded by means of quizzes on assigned readings.
General knowledge of cell structure and function, physiology, chemistry, mechanics of fluids and solids, and elementary differential equations are prerequisites.

Bioengineering Senior Design (3) Application of engineering and physiological principles to design of artificial organs and life supportive devices.

For preparation for the transition to industry, the course prepares students to work together as a team and effectively communicate scientific information. This course utilizes the student's knowledge in physiology and engineering which the student has accumulated to this point. Students develop teamwork, communication and leadership skills. The course begins with the students identifying a medical device or procedure which can be improved utilizing their engineering skills. A proposal is prepared and presented for design review. Students meet with the instructor on a regular basis for progress assessment. Notebooks are carefully maintained and critiqued. At the end of the semester, students demonstrate their project in a formal presentation and prepare a written report.

Honors Thesis (1-3 per semester/maximum of 6) Independent study research and design, leading towards honors thesis.

Independent study for students who are completing honors thesis in Bioengineering. Course is taken during last two semesters before graduation. Student must have a faculty advisor for the thesis project. This advisor is in charge of supervising the independent study and grading. At the end of the first semester, students write a proposal in NIH format documenting the aims, background, preliminary results, and plan for ongoing research. At the end of the second semester, student submits Honors thesis. The final grade is determined by quality of proposal or thesis and quality of laboratory work.

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOE 506** Medical Imaging (3) Medical diagnostic imaging techniques, including generation and detection of ultrasound, x-ray, and nuclear radiation; instrumentation and biological effects.

**Medical Imaging (3)**
BIOE 508 (MATSE 508) Biomedical Materials (3) Properties and methods of producing metallic, ceramic, and polymeric materials used for biomedical applications.

The topical content of this course will be grouped into 4 areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on the polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis),and the development of caries. The perspective placed on these topics will be that of materials science.

The selection of ceramics for hard tissue prosthesis will be described. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glass-ionomer cements will also be considered as ceramics. Hydroxyapatite, HAp-based composites and HAp-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described.

Dental and orthopaedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and stainless steel used in prosthetic applications will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particulate debris in the vicinity of an implant will be discussed in particular.

Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications, it is desirable that a polymeric material biodegrade while in others property retention is desirable. Because of the spectrum of applications for polymers, the topics to be covered will be limited with the intent to concentrate on hemocompatible polymers, acrylics used as bone cements, polyethylene used as bearing surfaces in prostheses, and dental resins and bonding materials. Other relevant polymers and their applications will be discussed.

BIOE 509 Mechanobiology (3) This course explores the molecular bases of cell mechanics and the role of mechanics in cell biology.

Mechanobiology (3)

The selection of ceramics for hard tissue prosthesis will be described. Orthopaedic and dental applications for ceramics will be discussed. BIOE 510 Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology (3) Introduction to BioMEMS and Bionanotechnology. Topics include: electromechanical and chemical biosensors, microfluidics microscale separations, and surface patterning for cellular engineering.

BIOE 510 Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology (3)

Microelectromechanical systems (MEMS) have been developed for a wide range of applications from automotive to medical devices. Nanoscale devices within MEMS have a particular usefulness in biological applications due to their small volumes, low energy sensing, and minimal force actuators. Increased efficacy of instruments and new areas of application are also emerging from specific and successful biomedical applications of MEMS (bioMEMS). Advanced development of nanotechnology and bioMEMS for biomedical and biotechnological applications requires basic foundations from biophysics, biochemistry, solid state devices, and polymer engineering.

The Pennsylvania State University
The objectives of this course are: to build a basic foundation for understanding of mechanisms on electrical, mechanical, chemical, and optical transducers in the context of biomedical applications; and, to teach critical thinking considering microengineering design and fabrication, material compatibility with biological systems, and cellular interaction at the interface. Finally current MEMS activities will be reviewed with emphasis on the examination of the viability of nanoscale devices and bioMEMS technology in particular biomedical applications.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014 Future: Fall 2014
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BIOE 510 Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology (3) Introduction to BioMEMS and Bionanotechnology. Topics include: electromechanical and chemical biosensors, microfluidics microscale separations, and surface patterning for cellular engineering.

BIOE 510 Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology (3)

Microelectromechanical systems (MEMS) have been developed for a wide range of applications from automotive to medical devices. Nanoscale devices within MEMS have a particular usefulness in biological applications due to their small volumes, low energy sensing, and minimal force actuators. Increased efficacy of instruments and new areas of application are also emerging from specific and successful biomedical applications of MEMS (bioMEMS). BIOE 512 Cell and Molecular Bioengineering (3) Graduate level cell and molecular biology course for engineers emphasizing molecular mechanisms.

BIOE 512 Cell and Molecular Bioengineering (3)

This course investigates the molecules and mechanisms underlying cellular function from an engineering perspective, utilizing physical, chemical and quantitative approaches. Material covered includes the structure and chemistry of biological molecules, enzyme kinetics, DNA replication and repair, gene expression, recombinant DNA technology, subcellular organization, cell motility, signaling and cell division. Applications in medicine, biotechnology, bionanotechnology and tissue engineering are addressed. This is a lecture course graded by means of exams, homework assignments, and a final paper. A general knowledge of physics, chemistry, and some physiology is required; the analytical approach of the course will also require an ability to work with mathematical equations and simple models. It is geared towards engineering students and is also suitable for physics, chemistry, and materials science graduate students. Previous molecular and cell biology knowledge is not required. Three credits, generally offered each fall semester. No formal prerequisites.

BIOE 513 Bioengineering Laboratory Techniques (3) Laboratory techniques in cell molecular biology, protein biochemistry and cell culture with an emphasis on engineering analysis and quantification.

BIOE 513 Bioengineering Laboratory Techniques (3)

BIOE 513 is a three-credit laboratory course for engineering graduate students designed to introduce laboratory techniques used in bioengineering/biomedical research. The course objectives are to build a basic foundation for understanding biological assays in the context of biomedical engineering applications and to introduce the student to the
integration of biology with design and fabrication of devices. Consideration is also given to compatibility between biological systems and medical devices, and cellular interactions at the interface between biology and engineering. Emphasis is placed on cell and molecular biology, protein biochemistry, bacterial transformations, and mammalian cell culture with particular attention to engineering analysis and quantification. This course requires a substantial amount of laboratory work outside of designated meeting periods.

BIOE 517 (MATSE 507) Biomaterials Surface Science (3) Special properties of surfaces as an important causative and mediating agent in the biological response to materials.

BIOE 517. (MATSC 517) Biomaterials Surface Science (3)

This course will factor the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent. Emphasis will be on biophysical mechanisms and the biological response to materials. Contact activation of blood plasma coagulation cascade, bioadhesion, and protein adsorption will be repeatedly used as example biological response to materials surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kinds of intensity of biological responses to surface and interfacial energetics will be compared and contrasted through a process that will quantify important surface thermodynamic properties of materials. The hydrophobic effect and related phenomena, especially as this pertains to water solvent effects in biology, will receive special emphasis. A general background in chemistry and/or biology is required, but prerequisites are purposefully limited, reflecting the interdisciplinary aspects of the subject and to draw students from different specializations.

**BIOE 520 Biophotonics (3)**

Biophotonics is a new frontier of interdisciplinary research techniques that combines light (i.e., photons) and engineering to investigate biological systems. BIOE 520 is a 3-credit course for graduate students in both engineering and the life sciences. This interdisciplinary course is designed to introduce students to the physical and engineering principles of non-invasive and quantitative biophotonics techniques for research applications in biomedical engineering, biophysics, chemistry, biochemistry, and biology. Students will learn the physical and engineering underpinnings of laser technology, fluorescence microscopy (both linear and non-linear), optical manipulation, and fluorescence spectroscopy for both single-molecular and ensemble studies of biomolecular assemblies. Emphasis will be on selected applications of biophotonics in quantitative biophysics and biomedical engineering analysis of biomolecules (proteins, DNA, RNA), and biomembranes in living cells and tissues. Biophotonics in nanotechnology, medicine and drug discovery will also be discussed. Comparison with complementary, large-scale imaging techniques (e.g., MRI, ultrasound, X-ray) will also be discussed to highlight advantages and disadvantages.

BIOE 520 is designed for active learners who are expected to participate fully in this course. Students will be able to discuss and derive the fundamental equations for each biophotonics technique with full knowledge of the assumption being made, experimental designs, experimental observables and their biological significance, and error analysis. A portion of the course will be dedicated to special applications of particular interest to the registered students. The course requires a substantial amount of mathematics, discussions of current literature, and active class participation. In addition to visiting relevant research laboratories in bioengineering and chemistry, students will be provided with typical experimental results (from the instructor's own laboratories in Bioengineering) for quantitative analysis.

Interested students should have taken, as a minimum, undergraduate courses in molecular and cell biology, mathematics, chemistry, optics, and quantum mechanics.

Grades will be based on: homework (30%), class presence and participation (20%), a semester paper and presentation (30%), and a final examination (20%). This course will be offered in the fall of every other academic year, with anticipated enrollment of 12-20 students from Bioengineering and various colleges, departments, and programs.

**BIOE 552 (I E 552) Mechanics of the Musculoskeletal System (3)**

Mechanics of the Musculoskeletal System is a 3-credit course designed to introduce students to the biomechanical principles, the anatomical structure of the musculoskeletal system including soft tissue, neuromuscular physiology, and motor control including muscle receptors. The second third covers various muscle models starting from basic mass/spring/dashpot viscoelastic models as in Hill's 3-element model and continuing on to Hatze's multi-element model, frequency analysis, control theory approaches. More complex models include static and dynamic aspects of tendon-pulley models and multiple muscle-tendon systems. The final third covers basic epidemiology as applied to musculoskeletal disorders and risk factors including instrumentation to measure them and various analysis tools (e.g., the PSU CTD Risk Index) to assess the not only the overall risk for injury but the reliability and validity of such assessments. Time permitting applications to hand tools and office environment with computer work stations are examined. Two exams and a modeling project are given. The course is typically offered Spring Semester.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOET 597B Bioethics: Ethical Issues and Bio-Power (3)** The primary emphasis in this course will be to expand the functional notions of life (bios) and ethics (ethos, ways we live together). We will include considerations of the historical formation of institutions (such as asylums, systems of justice, educational institutions, etc.), forms of authoritative knowledge, punishment, and above all, relations of powers that control human lives (bio-power). We will read major portions of these works by Michel Foucault: Madness and Civilization, The Order of Things, Discipline & Punish, and Power/Knowledge. A guiding question for our discussions will be, how might we understand human health in this expanded sense of bio-ethics? The course will be conducted interactively with text based discussions and participation by all seminar members.

**Biological Chem-Hy (BCHEM)**

**BCHEM 505** Biological Chemistry II (2) A continuation of BCHEM 502. Emphasis on interrelations of metabolic pathways, catabolic end products, and regulation.

**BCHEM 505 Biological Chemistry II (2)**
- Biological Chemistry II is a continuation of Biological Chemistry I. Metabolic pathways for lipids, amino acids, and carbohydrates are discussed with emphasis placed on regulation and integration with material covered in Biological Chemistry I. The objective is to provide students with the knowledge needed to understand the ramifications that change in one pathway may induce in another. This course is required of all graduate students in the biochemistry and molecular biology program. Because it is a required basic course, it is offered in the spring semester each year and it is taken by all first year students in the biochemistry program. Two exams will be given, a mid-term and a final.

- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Spring 2011

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BCHEM 510** Carcinogenesis and Chemoprevention (2) Mechanisms of cancer induction by environmental carcinogens and chemoprevention by natural and synthetic agents.

**BCHEM 510 Carcinogenesis and Chemoprevention (2)**
- The etiology of most human cancer remains obscure even though a vast body of literature describes risk factors for certain cancers and proposes various hypotheses for cancer etiology on the basis of epidemiological and experimental studies. Tobacco smoking is an established cause of several cancers, with lung cancer remaining the first target on the list. International studies have repeatedly confirmed that people (Chinese, Japanese) migrate from their country of origin to the U.S., adopt the pattern of certain cancers within a few generations (e.g., breast and prostate) of the latter country, which is indicative of the presence of chemical carcinogens in the environment and/or changes in lifestyles. Consequently, the search for carcinogens that exist in the human environment challenges both scientists and regulatory agencies. Chronic exposure to traces of chemical carcinogens in the diet, in polluted air, or in tobacco smoke can be important in the etiology of several human cancers in the presence of host factors that favor the multi-step process of carcinogenesis. Bioassays in laboratory animals can provide important information on the role of environmental agents in the induction of particular types of cancer. Biochemical studies can lead to insights into the nature of interactions of these environmental...
agents with macromolecules such as DNA that are necessary, but not always sufficient for carcinogenesis.

The search for optimal diets and for naturally occurring agents in routinely consumed foods that may inhibit cancer development, although challenging, constitutes a valuable and plausible approach to finding ways to control and prevent cancer. The prevention of cancer is the longstanding goal for most cancer researchers. There has been enormous gain in our understanding of carcinogenesis and cancer progression; such knowledge has provided new and promising opportunities to prevent cancer, e.g., to treat pre-cancer or inhibit carcinogenesis (a process often involving 20-30 years in human epithelial cancers), rather than waiting to treat cancer. In the early 1980’s, the U.S. National Cancer Institute recognized the promise of chemoprevention research. In summary, this course will provide a better understanding of the potential contribution of environmental carcinogens in the development of certain human cancers and will provide important information on cancer chemoprevention intervention strategies.

The course will cover topics that include exposure, metabolic activation, detoxification, and biomonitoring of chemical carcinogens in the human environment, carcinogen-induced DNA damage, mutagenesis and DNA repair, carcinogen-induced cellular and molecular alternations, tumorigenesis and organ specificity in laboratory animals, and factors modulating individual susceptibility to the deleterious effects of chemical carcinogens. Furthermore, this course will provide knowledge on various classes of cancer chemopreventive agents, their efficacy, safety, and mechanisms of action in preclinical studies.

Course Objectives: Upon completion of this course, the students will be able to:
1. Understand the potential risk associated with human exposure to chemical carcinogens detected in the environment.
2. Describe the current assays of biomonitoring of human exposure to chemical carcinogens.
3. Learn the process of metabolic activation and detoxification of chemical carcinogens.
4. Understand the stages of the multi-step carcinogenesis process.
5. Identify factors that govern individual susceptibility to the deleterious effects of chemical carcinogens.
6. Understand the concept of cancer chemoprevention.
7. Identify molecular and cellular targets for chemoprevention intervention at any time during the process of carcinogenesis.

Grading: Grading will be determined as follows:
1. Midterm Exam 30%
2. Research Paper* 30%
3. Class Participation 10%
4. Final Exam 30%
Total 100%

*Guidelines for Research Paper: The topic will be selected following approval of the faculty member in charge. The paper should include the goals (aims) of the research project, literature background, the significance of the research topic, knowledge to be gained, gaps in existing knowledge, and the potential to propose future studies.

BCHEM 521 Biochemistry: Structure/Function/Regulation of Biological Molecules (3) The fundamentals of biochemistry in evaluating the forces that govern inter- and intra-molecular interactions are studied.

An overriding theme in biochemistry is that macromolecules, which are polymers of simpler molecules, interact to form structurally large and functionally complex entities that give rise to discrete structures and functions. This course focuses on intermolecular forces between the monomers of macromolecules that govern tertiary structure, as well as interactions between macromolecules that that govern higher order structures. The course begins with proteins, covering the structural basis of protein functions and then moves on to simple enzyme kinetics and mechanisms. Next, the students will discover the forces that control the three dimensional structures of nucleic acids. Subsequently, the students will explore simple and complex carbohydrates and topics in glycobiology that include energy storage, framework skeleton, and specific molecular recognition. Lipid biochemistry will be examined next, in topics that include lipid chemistry, complex lipids, membrane biology, and transport systems. Finally, the analysis of higher order structures involving the interactions between protein, nucleic acids, lipids, and carbohydrates will be discussed. The course will describe various analytical, chemical, and biochemical techniques that biochemists use to interrogate biomolecular structure and interactions.

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

The Pennsylvania State University
BCHEM 522 Molecular Genetics: Genes to Genomes (3) This course focuses on concepts of molecular genetics and genomics, and DNA-protein interactions and their functions within macromolecular complexes.

This course focuses on the principles and concepts of molecular genetics and genomics and DNA-protein interactions and their functions within macromolecular complexes. Special emphasis is placed on the aspects of eukaryotic genome organization, chromatin and chromosome structural and epigenetic changes, and DNA-protein interactions that regulate expression of genetic information and change the process of inheritance in normal and disease models and affect genome stability. This course contains three major sections. Section I includes principles of recombinant DNA technologies used in the analysis of DNA sequences and genome structure. Section II covers genetic interactions and macromolecular assembly and provides links between the studies of molecular interactions and equilibrium with in vivo and genetic approaches. Section III covers genome stability, epigenetics, and medical applications involving mis-regulation of the molecular mechanisms involved in these processes. This part builds on material presented in the BMS 503 course of the core curriculum and provides students an in-depth understanding of the molecular mechanisms of genome alterations and their biomedical significance.

The objectives of this course are to provide students with the wherewithal to interpret and design experiments aimed at elucidating the mechanisms of enzyme catalyzed reactions. Selected mechanisms of enzyme catalyzed reactions will be surveyed using primary literature. The rationale for the chemical, kinetic, molecular biological, spectrophotometric, thermodynamic tools that are used to investigate these reactions will be discussed. Topics that will be discussed include (a) principles of enzyme catalysis, (b) electrostatic catalysis (c) acid/base catalysis, (d) phosphates (e) Schiff base formation, (f) cofactors that will be discussed include pyridyl pyrophosphate, thiamine, biotin, tetrahydrofolate, NAD, FAD, S-adenosyl methionine, and vitamin K and B12.

The Pennsylvania State University
BCHEM 584 Glycobiology A: Carbohydrate Chemistry (1) Graduate course for students interested in carbohydrates.

The proposed course is designed to give graduate students interested in studying carbohydrates the basics about their chemistry. Because of their structure and the ability of just two sugars to form a number of different bonds with each other, carbohydrate chemistry is significantly more complex than that of any of the other building blocks found in the body. With the development of new approaches for studying these compounds, the science of glycomics is coming into its own.

BCHEM 585 Glycobiology B: Glycoconjugates (1) Graduate course for students interested in carbohydrates.

The proposed course is designed to give graduate students interested in studying glycoconjugates the basics about their structure, functions that they serve, exposure to papers pertinent to the field, and the opportunity to integrate what they learn in class with what they read in assigned papers through class discussion.

BCHEM 586 Glycobiology C: Glycans in Health and Disease (1) Graduate course for students interested in carbohydrates.

Students will learn about the possible role(s) of glycans in health and disease and how that knowledge might be used to ameliorate certain diseases. Students will be expected to read papers and to integrate what they have learned in lecture with what they read when papers are discussed in class.

BCHEM 590 Colloquium (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Biology (BIOL)

BIOL 400 Teaching in Biology (1-3) This course will train biology teaching assistants to teach in the laboratory/recitation setting with emphasis on critical thinking skills. Enrollment will be limited to students of at least fifth semester standing that have been accepted as teaching assistants for biology.

BIOL 400 Teaching in Biology (1-3)

This course provides teaching assistants with the fundamentals they will need to be effective in the laboratory and/or recitation classroom. Students will learn the fundamental skills needed to; design lesson plans; facilitate class discussions; write effective quizzes; communicate learning expectations; grade fairly; and in the case of the laboratory setting, maintain a safe learning environment. Students enrolled in this course will also be serving as teaching assistants and consequently faculty who serve as course instructors and/or lab coordinators in the relevant course will provide the instruction. Through regular meetings the course instructors will help teaching assistants adjust to their duties and solve common problems that arise in the laboratory/recitation environment. Emphasis will be placed on how teaching assistants can facilitate active learning and help their students develop sound study skills. Students enrolled in this course will be evaluated on regular attendance, organization in and preparation for their teaching, and clarity in how they communicate with their students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006

BIOL 402W Biological Experimental Design (3) Discussion of experimental design, analysis and presentation, with a practicum providing for student design, analysis and presentation of biological experiments. Students may not take this course if they have taken BIOBD 350W.

BIOL 402W Biological Experimental Design (3)

This course emphasizes written and oral communication of scientific ideas. Students discuss papers from the literature, preparing written critiques of two. Critiques are reviewed in writing by the instructor and peers and may be revised twice. Peer reviews are graded in writing and may be revised once. Written proposals for biological research are required. Students must build arguments for methodological rationales, justify statistical approaches, and place their proposed research into a larger societal context. Proposals are reviewed by the instructor and three peer reviewers. Peer reviewers must prepare written critiques and present proposals to the class during an "NSF"-style panel review. Prior to the presentation, the instructor provides written and oral feedback to the author and the peer reviewer in a meeting at which strategies for presenting the proposal are discussed. Subsequent to the presentation, peer reviewers write summaries of the discussion and provide explicit guidance to authors. Proposals may be revised twice. Peer reviews and summaries are graded in writing and may be revised once. Thus, each student writes 2 critiques, 1 proposal, 2 peer reviews of critiques, 1 peer review of a proposal, and 1 summary of the panel discussion. Each assignment is graded in writing and is subject to revision. Students also are graded on their proposal presentations and on participation in panel discussions. These activities constitute 75% of the final grade.

Students must demonstrate competence in the use of SAS, a statistics package. Students must choose and apply appropriate statistical techniques to biological data. In addition to the program and its output, students write interpretations of the results. This activity constitutes 25% of the final grade.

Lectures are used to review statistics and "how tos" (e.g., proposal preparation). Case histories are used to address ethics, statistical decision-making, and design. Students are expected to challenge what they learn, and the notion that scientists must acknowledge and guard against bias in their work is emphasized. Intellectual honesty and the ability to give and receive constructive criticism are demanded.

This course is required in two of the six options in biology (ecology and general), and it can be taken by students in the other options. The course is required of students who have not fulfilled the WAC requirement at the 200-level (transfer students).

BIOL 411 Medical Embryology (3) Develops an understanding of human reproductive physiology, embryological processes, their time frames, and the development of major human body systems. The course emphasizes clinical correlations and the medical consequences of developmental abnormalities.

Medical Embryology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
BIOL 412 Ecology of Infectious Diseases (3) This course examines how ecological processes impact upon the epidemiology of infectious diseases.

The course will examine the population dynamics of disease and takes an ecological perspective on how pathogens and parasites flow through host populations to identify possible means of predicting and controlling pathogens. The approach is one of population dynamics, examining changes in disease patterns in time and space. We construct mathematical models to capture the patterns observed, make predictions and identify the means of reducing disease spread. This is an ecological approach, applying the techniques of population biology to an understanding of Parasitology to develop a different perspective on epidemiology. At the same time, the course brings aspects of evolutionary biology into the course and will examine some of the current issues in disease biology including disease emergence, bioterrorism, agro-terrorism and the role of humans as disease reservoirs for wildlife etc.

Upon completion of this course, students will obtain insight into the dynamics of disease spread. They will understand how to construct models and how to apply generic models to specific disease systems and make predictions about controlling disease. They will grasp some major concepts in Parasitology and population dynamics including the role of the disease basic reproductive number (RO), when diseases show a density dependent patterns of transmission or a frequency dependent pattern, non-linear dynamics and the processes that generate heterogeneities in exposure and susceptibility. The course will provide an excellent course for pre-Med students, biologists and students interested in ecology.

**BIOL 419 Ecological and Environmental Problem Solving (3)**  
Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and environmental problems.

**BIOL 419 Ecological and Environmental Problem Solving (3)**

The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems.

After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. Many of the class meetings will be held in computer laboratories where they will be actively engaged in working on applying these models. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited, unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating in individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology. This course will be one of several ecology courses that are available to students in the ecology and general option in the biology program along with the biology minor.

**BIOL 420 (GEOSC 420) Paleobotany (3)**  
Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical techniques and specimens.

**BIOL (GEOSC) 420 Paleobotany (3)**

Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands.

This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

**Biol 421** (VB SC 421) Comparative Anatomy of Vertebrates (4) The comparative anatomy of representative vertebrate animals discussed from a descriptive and an evolutionary viewpoint.

**Biol (VB SC) 421 Comparative Anatomy of Vertebrates (4)**

Upon completion of this course, students will understand the fundamentals of vertebrate anatomy and be able to employ comparisons between phylogenetically distinct vertebrate species to illustrate evolutionary adaptations and the relationship between structure and function. Unique adaptations such as those of ruminants and birds will be explored in addition to the more common fish, amphibians and mono-gastric mammals typically used to illustrate these principles. Laboratory activities utilizing specimens representative of higher and lower vertebrate species will emphasize structure identification and functional adaptations. Students will be evaluated by means of laboratory examinations which will focus on structure identification. Attendance in laboratory is mandatory and laboratory exercises to be completed at each laboratory period will be graded. Students that miss laboratory session due to an excused absence should arrange a make up assignment with the instructor. Unannounced quizzes will be presented in either lecture or laboratory sessions. Three lecture examinations and a comprehensive final examination will be given.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**Biol 422 Advanced Genetics (3)** Chromosomal mechanism of heredity; cytoplasmic and polygenic inheritance, chemical genetics, genomics, and experimental evolution.

**Biol 422 Advanced Genetics (3)**

This course will examine the genetics of chromosomes and how changes in gene arrangements shape the structure and function of genes in genomes. This will include an examination of how chromosomes organize genetic information, how chromosomes are transmitted, how the evolutionary process shapes genetic variation in the genome of populations of organisms and between different species.

Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**Biol (Ppath) 425 Biology of Fungi (4)**

This course is a hands-on survey of fungal diversity, covering a wide variety of topics in fungal biology: phylogenetics, morphology, ecology, evolution, population biology, fungi as food, fungi as sources of toxins, ethnomycology, fungi as agents of plant and animal disease, fungi as sources of pharmaceuticals, and industrial uses. All fungi will be discussed, from mushrooms and other fleshy fungi to molds to slime molds. The laboratory portion of the course will center mostly around handling and manipulating freshly collected and living fungi, and microscopic analysis of their major features. There will be approximately 4-5 required field trips to local forests during the laboratory period, to observe fungi in their natural habits and collect them for further analysis in the laboratory. Students will come out of the course with a broad base of knowledge about fungi and their diversity and the ability to handle them in the laboratory and observe them using the microscope.
BIOL 426 Developmental Neurobiology (3) Overview of basic developmental processes as they apply to the central nervous system.

This course will provide a general overview of developmental processes as they apply to the central nervous systems. From initial differentiation of neuronal tissue to the aging of human brain, this course will expose students to many hot topics in the current neuroscience research field, including synaptogenesis, axon guidance, neural stem cells, apoptosis, learning and memory, and Alzheimer's disease. Although one textbook will be assigned as the major reference book, many current research results will be integrated into the lectures so that students can grasp the most recent advancement related to each topic.

The course will be divided into four parts. Part I introduces the induction of neural tissue, the polarity and regionalization of the neural tissue, and the generation and function of neural stem cells. Cutting-edge research on neural stem cells will be discussed. Part II deals with various interactions within neuronal system, including neuron-glial interaction, cell adhesion and migration, axon growth and guidance, and target selection. Part III teaches synapse formation and maturation, neurotrophic factors and their distinct functions, and neuronal cell death. Part IV talks about learning and memory from developmental view, and also the memory disease - Alzheimer's disease. Current research on Alzheimer's disease will be discussed.

The lectures will be given in PowerPoint presentations. Classical models and front line research will be integrated to stimulate students' imaginative thinking. Students will be encouraged to read some current research paper and offer their own view on some particular subject, such as neural stem cells and learning and memory.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**Ecology of Lakes and Streams (3-4)**

General Education: None
Diversity: None
Bachelor of Arts: None
BIOL 436 Population Ecology and Global Climate Change (3)

In this course, students will be presented with a close look at the factors shaping the characteristics of populations and their dynamics in time and space, with emphasis on the responses of populations to climatic fluctuation and global climate change. The course begins with an introduction to the basic concepts necessary for understanding the responses of individuals, populations, and communities to climate change in the recent past (the past 2 centuries), present, and future. These concepts include: the science of climate change, how temperature trends are estimated, the data used in assessments reports by the Intergovernmental Panel on Climate Change, large-scale climate systems such as the North Atlantic Oscillation and the El Nino Southern Oscillation, the basic characteristics of populations, how population densities are estimated, and the types of population data used in studies of population responses to climate change. In this first section of the course, students are also introduced to natural selection and the concepts of adaptation and vulnerability, which sets the stage for distinguishing between adaptive ecological responses to climate change vs. susceptibilities to climate change.

After presenting these basic concepts, the course then moves on to examine single-species population dynamics. This section of the course teaches students about the different types of population growth, including unlimited growth, density-dependent population dynamics, and density-independent population dynamics. Here, we take a close look at case studies documenting population responses to large-scale climatic fluctuation, and case studies that demonstrate interactions between the opposing influences of density dependence and climate on population dynamics. This section of the course also introduces students to some of the analytical difficulties inherent in quantifying the contribution of climatic fluctuation to local population dynamics. This section finishes with lectures on the phenomenon of spatial synchrony in population dynamics and the implications of global climate change for widespread population decline and extinction risk.

The final section of the course focuses on multi-species dynamics. Lectures in this section introduce students to inter-specific competition through examination of case studies involving desert rodents and ants; then move on to predation, with case studies of wolf predation illustrating the different types of functional and numerical responses, predator-prey cycles, and cascading effects of predators on population dynamics at lower trophic levels including herbivores and plants; and parasite-host dynamics, including discussion of the role of parasites as specialized predators in host population dynamics. This section also includes discussions of population responses to large-scale climatic fluctuation, and case studies that demonstrate the role of parasites as specialized predators in host population dynamics.

BIOL 437 Histology (4)

Histology (4)

BIOL 438 Theoretical Population Ecology (3)

At the present time our program has no theoretical and quantitative upper level ecology course. This course is designed to be a highly-quantitative second ecology course. It emphasizes mathematical and theoretical approaches to ecological questions and reinforces the theory with practical, hands-on field and laboratory exercises in which students are required to erect and test hypothesis using appropriate experimental and statistical techniques. The course builds on concepts from introductory ecology and requires students to use tools acquired in biostatistics and calculus to solve ecological problems. It can act as an introduction to or as an extension of experimental design. Although it is not a writing intensive course, students will be required to use standard technical writing and public speaking skills throughout the course. The course covers topics that are relevant to, but not addressed in, evolution and evolutionary genetics. In addition, it offers an opportunity for mathematics students interested in applications of mathematics to biological problems to apply models covered in mathematical modeling to real situations.

Throughout the semester analytical and theoretical thinking will be emphasized, starting with simple descriptions of population phenomena and ending with development of mathematical models and the critical experiments needed to test
those models. The emphasis lies on empirical tests of ecological theory and applications of ecological theory to real-world problems. Students will be evaluated by means of essay exams covering theory, mathematical models, and the design of hypothetical experiments, in-class presentations of the primary ecological literature and applications of ecological theory to current environmental problems, and laboratory reports in which data collected during laboratory exercises will be analyzed and interpreted. Field exercises will be conducted on the campus of Penn State Erie and will take advantage of the rich natural environment on campus including numerous wetlands, streams, forests, and old fields.

This course will be available to all biology majors as elective credit at the 400 level. It also will be a core course requirement for any biology major taking the Ecology Option. It may function as a course for students seeking a minor in biology, particularly for mathematics majors.

BIOL 439 Practical Bioinformatics (3) Practical aspects of retrieving and analyzing biological information residing in common databases.

BIOL 439 Practical Bioinformatics (3)

This course focuses on practical aspects of biological databases and analyses of molecular data. Students will learn about vast resource available, how to access them, and retrieve only the desired information. Sequence comparison and alignment methods will be presented. We will discuss practical aspects of such algorithms as dot matrix plots, dynamic programming, BLAST, and FASTA. Different strategies of multiple alignments will be discussed as well. We will cover computational genomics and computational analysis of gene expression. Students will learn how to assemble short sequences into long contigs and how to infer biological information from raw sequence data. They will learn how to analyze protein sequences including secondary structure prediction, protein function prediction (based on motifs and functional domains), and structural modeling. The whole course will be well balanced between theoretical description of computational biology methods and practical aspects of bioinformatics (some sessions will meet in computer classrooms).

Upon completion of this course, students will have sufficient knowledge to retrieve a desired information from biological databases based on both text and sequence data. They will learn what public resources are available in term of databases and a software. They will know how to interpret results in biological context and how to adjust different parameters in the software to get exact desired results.

This course will be one of several courses that are available to students in the genetics and developmental biology and general options in the biology program along with the biology minor.

BIOL 443 Evo-devo: Evolution of Developmental Mechanisms (3) How evolution of animals and plants can be traced to changes in the regulation and/or interactions of genes controlling development.

BIOL 443 Evo-devo: Evolution of Developmental Mechanisms (3)

"Evo-devo" is a new, exciting and interdisciplinary field in biology that encompasses knowledge from developmental biology, comparative genomics, gene regulation and evolutionary theory. The key concept in "evo-devo" is that the evolution and diversification of animals and plants can be traced to changes in the regulation and/or interactions of genes controlling development. The first few weeks of the course will bring students up to date on what they need to know about evolution, development and molecular genetics to appreciate the interdisciplinary field of "evo-devo". As this is such a new field, subsequent classes will give students a taste of the excitement of current research through the use of case studies. There will be ten case studies, seven examples from animals and three examples from plants, covering a range of morphological novelties and concepts. Each case study will involve one or more lectures of background
information given by the instructor and one discussion class in which students will read, present and discuss reviews and/or primary research articles. Students will be given enough background information in the fields of evolution, development and molecular biology to enable them to understand and discuss primary literature in evo-devo. For many students this will be the first time they have read reviews and articles from the literature and this course will give them the capacity to move beyond textbook knowledge to knowledge of how science really works.

This course will be one of several courses that are available to students in the genetics and development, and general options in the biology program along with the biology minor.

BIOL 444 Field Ecology (3) This field course will explore the flora and fauna of the mid-Atlantic area.

BIOL 444 Field Ecology of the Central Appalachian Highlands (3)

This course is designed to take advantage of the teaching opportunities presented by the West Virginia highlands. The main advantage of using this area as an outdoor classroom derives from the fact that there are large changes in elevation and soils, and a tremendous variety of community types located in a small geographic area. In this area, students can observe ecological communities ranging from river, bottom forests at 1500 to 2000 feet in elevation to dry ridge slope forests at 3000 feet to the unique acid soil heath barrens community of the Dolly Sods Wilderness at 4000 feet. Since almost all of this area was extensively logged in the past, students will have the opportunity to observe the results of succession, and how the process of succession is affected by variation in topography, soil type and local climate. There are also several types of aquatic communities available for study, including large rivers, small high elevation streams and acidic wetlands. The course will use an integrated natural history approach to study the various ecological communities. This will include discussion of the effects of human activity and the topography and geology of the area in addition to study of terrestrial and aquatic flora and fauna. At terrestrial sites, we will, in part, follow the example of the US Forest Service’s Forests of the Central Appalachians Projects (http://www.spies.com/~gus/forests/) which uses forest walk inventories to document biodiversity. Therefore, the course would have a significant plant identification and taxonomy component. Each community can be studied as a separate unit and then compared to the adjacent communities at different elevations. By the end of the course, students should understand the relationship of geology, topography and soil type to the distribution of plant communities. They should also understand the relationship of plant communities and water chemistry to the distribution of aquatic insect and vertebrate and be able to use aquatic insects as water quality indicators. This course will be one of several field courses that are available to students in the ecology and general option in the biology program along with the biology minor.

BIOL 460 (ANTH 460) Human Genetics (3) The human genome, its variation, origins, and relation to disease and other traits.

BIOL (ANTH) 460 Human Genetics (3)
The course considers many examples derived from the study of the genetics of human disease, and includes most general areas of interest, including simple Mendelian disorders, and complex chronic diseases such as cancer and cardiovascular disease, and variable special topics including immunogenetics and the genetics of imprinting or other processes. The course usually also touches briefly on the nature of forensic genetics and the problem of making inferences from individual genotypes. Finally, the course considers the bioethical and societal issues involving contemporary human genetics. The study of disease genetics is important for students preparing for graduate work in medicine and other health professions as well as for graduate studies in molecular and evolutionary genetics and related areas, including biological anthropology and bioethics. This course is relevant to requirements or appropriate electives for life science majors and graduate students (check with your academic advisor). Over the years, it has been proven to be excellent preparation for subsequent graduate and professional work in these areas. The course is offered most years, in the fall semester. Depending on enrollment and other factors, the course may include graded homework or other components, but evaluation is predominantly based on exams during the semester and a comprehensive final. This course is cross-listed as ANTH 460 and BIOL 460, but there is only one course, at the same time and place, for all students no matter how they register. In some years, a 4-credit Honors version is offered (ANTH 460H/BIOL 460H), that is identical to 460 but with an additional class period each week involving additional written and presentational assignments and term projects, along with the regular 460 exams, that combine to determine the final grade.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2011
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BIOL 460H (ANTH 460H) Human Genetics (4) Gene mapping in humans; molecular basis of genetic disease; gnomic structure; immunogenetics; and genetic evidence for human evolutionary history.

BIOL (ANTH) 460H Human Genetics (4)

Students will explore interesting normal or pathological variation to understand first its biological nature, then its epidemiological distribution, genes and genetic mechanisms associated with the trait, phylogenetic origins or comparison, and the nature of relevant genotype-phenotype relationships. Alternatively, students may explore methods
for identifying and characterizing gene action or structure, or historical subjects related to human variation and evolution.

Ethical and societal aspects of these issues will be considered as well. Time will be taken for faculty or students to read and present current important papers appearing in the literature, relevant to the current course topics. As an Honors course, we will have the time, and the students the dedication, to pursue the chosen topic(s) in much greater and more rigorous detail than is possible in the usual lecture or even seminar course format of Human Genetics 460 which, while presenting material at a sophisticated level, will not have time to explore the more subtle, problematic, or challenging aspects. The students who enroll for this course will be given a description of the approach and the intended general topic, on a course web page or by email when the instructor learns they have registered. The nature of the course will be described including semester-specific themes or focus that will apply (if any). Requisite background reading will be identified so students will know what will be expected of them. Some prior reading will be assigned, so that we can begin the semester with a common basis in background. Students will be evaluated on the quality of their project work, including writing ability, presentation ability, and depth of thought. Several written assignments will be given and graded for content and expression quality. Although students will take regular Human Genetics 460 lectures, they may be given separate exams (corresponding to those given in the regular course) that will allow more freedom of expression than multiple-choice exams or homework assignments. Depending on the workload in any semester, there may be a separate written take home synthetic essay final exam. The Honors session each week will be highly interactive rather than passive, and students will be graded on attendance, participation and whether they have done assigned work in advance of the class. Students will be expected to have the stipulated background knowledge of biological anthropology, evolutionary biology, statistics and genetics. This course should count as 4 credits toward additional courses in biological anthropology required for the Anthropology major.

BIOL 461 Contemporary Issues in Science and Medicine (3) Current/classical issues relating to health, research, agriculture, environment, and biotechnology. Active exploration of the impact of science on society.

BIOL 461 Contemporary Issues in Science and Medicine (3)
The aim of this course is to provide students of the biological and biomedical sciences with a framework to recognize, examine, and resolve conflicts which may affect their professional conduct. Current and classical issues relating to human health, scientific and medical research, agriculture, the environment, and biotechnology will be explored. The history, controversies, and current issues related to each topic will be presented by the instructor through lecture, guest presentations, and multimedia presentations. Each topic will be explored by students through a variety of activities, including role playing, case studies (real and hypothetical), mock trials, small- and large-group discussions, writing exercises, and student research projects presented in oral and poster format. Some activities and discussions will involve the entire class simultaneously, while other activities will be structured for very small groups (2-3 students), small groups (5-6 students), or large groups (10-15 students). This course is especially relevant to any student majoring in Biology, as it allows and encourages them to relate information they have learned in other Biology courses to their own professional conduct. Although the course was specifically designed to cover issues that are relevant to students majoring in each of the Biology concentration areas (Genetics and Developmental Biology, Ecology, Plant Biology, and Vertebrate Physiology), it is also relevant to students in colleges other than Science, who may be enrolled in majors with some biological content or applications. This course is designed to be rigorous and very interactive.

BIOL 464 Sociobiology (3) The study of the adaptive function of social behavior, the comparative analysis of social organization, and the ecology of sociality.

Sociobiology (3)
Molecular Basis of Neurological Diseases (3)

Students taking this course will learn about neurological diseases in a biological molecular context.

Neurobiology (3)

Comprehensive examination of neuroanatomy and physiology designed to integrate the principles of neurochemistry, neuroendocrinology, and molecular biology.

Functional and Integrative Neurosciences (3)

Neurobiological function in motivated behaviors, motor and sensory functions, learning and memory development, sexual differentiation, and pathology.

Mammalian Physiology (3)

Mechanisms concerned with normal animal function, with special emphasis on humans.

Laboratory in Mammalian Physiology (2)

Laboratory experiments demonstrating fundamentals in physiology.
Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student’s literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student’s previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

Diversity: None
Bachelor of Arts: None
Effective: Fall 1983

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BIOL 497A History of Biology (3) History of Biology is a 3 credit lecture course designed to introduce students to the long history that led to our current biological knowledge. The course is organized around themes representing some of the most important concepts in biology, such as macromolecules, the cell, inheritance, evolution, metabolism, biodiversity, and ecosystems. Lectures illustrate the interplay between observations, theories, experiments, and techniques. The history of biology is placed within a broader historical and cultural context (scientists and institutions from many different periods and countries are studied).

History of Biology (3)

General Education: None

Effective: Spring 1993

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BIOL 498A Biology of Eco-Health (3) This three-week summer session course is taught entirely in Tanzania during the first summer session at Penn State. Students will examine topics related to human health, human-environment interactions, and conservation of natural resources. In addition to lectures and discussions, this exceptional opportunity allows students to participate in guided field studies contributing to long term datasets and research projects in both pastoral and agricultural ecosystems. The course will include guest lectures by local experts in biology, conservation, and health as well as visits to research institutions, national parks and a medical clinic/lab.

Bachelor of Arts: None
Effective: Spring 1995

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOL 519 Ecological and Environmental Problem Solving (4)** Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and environmental problems.

**BIOL 519 Ecological and Environmental Problem Solving (4)**

The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems.

After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. Many of the class meetings will be held in computer laboratories where they will be actively engaged in working on applying these models. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating an individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology.

Graduate students will additionally be required to attend a once a week case study, where we will focus on a paper from the recent literature that uses the techniques or theory learned that week in class. Additionally, graduates will develop models of their own, based on their own research, or on some other subject of interest. They will be expected to meet with me twice in a group and individually during office hours throughout the semester, to discuss the development of their projects. They will have to complete a written report on the motivation, model development, and results and
implications of their work. This work will take the form of a short manuscript (as if for publication to a representative journal in their field). They will also have to make a verbal presentation to the entire class on their project (15 minutes, as if attending a professional conference). The course will be offered once/year.

BIOL 592 Critical Evaluation of Literature in Biology (1) Weekly readings and critiques of recent papers from primary literature are used to teach independent thinking and effective scientific communication.

BIOL 592 Critical Evaluation of Literature in Biology (1)

This course teaches beginning graduate students how to evaluate new findings reported in primary literature in the biological sciences. Each week, a recently published paper is evaluated according to 8 basic criteria as follows:

1. Does the author adequately establish a context for the issues addressed in the paper? Are the issues addressed in the paper important in the field? Why or why not? 2. What is the hypothesis? Is it clearly stated? Is it operational (i.e. "falsifiable")? 3. Are the methods adequate to test the hypothesis? Why or why not? What are the controls? Are they adequate? 4. Are the data clearly presented? Are the results properly analyzed? Are statistical inferences stated appropriately? Do the data meet the assumptions of the statistical tests? 5. What conclusions are drawn from the results? Do the conclusions follow from the data? Have some conclusions been overlooked? Are there reasonable alternative interpretations of the data? Did the authors consider alternative hypotheses? 6. What could be done to improve the paper? Consider written format as well as the overall experimental design. For example, is the title appropriate? Does the abstract accurately summarize the results and conclusions? Does the paper use recent and appropriate references? 7. What is your overall opinion of the size of contribution that the paper makes to the body of knowledge in its field? Is this work creative? Does it provide new insights or a framework to understand previously disparate data? Defend your position. 8. What would be the next set of tests of the hypothesis or the next hypotheses to test? How should these hypotheses be examined experimentally? To what extent do you think this paper will stimulate further studies?

The goal of the course is to provide students with opportunities to sharpen their thinking in regard to what constitutes meaningful scientific experimentation, interpretation of results, and effective presentation of information in text, figures, and tables. Near the end of the course each student prepares a written critique of a paper, and meets individually with the faculty to discuss their critique. The course follows a format very similar to the Ph.D. candidacy exam for Biology, thus providing formal preparation for that exam.

Faculty: James Marden

Biomedical Sci-Hy (BMS)

BMS 501 Regulation of Cellular & Systemic Energy Metabolism (3) Teaches biochemical and signal transduction concepts while exploring the control of bioenergetic processes.

BMS 501 Regulations of Cellular & Systemic Energy Metabolism (3)

Energy is fundamental to life. The production, storage and utilization of energy by organisms are highly regulated processes that provide excellent examples of the principals that govern the control of cellular metabolism and hormonal signaling. In addition, future biomedical scientists must be prepared to study diseases associated with aberrant energy metabolism, such as diabetes, obesity, and malnutrition. Regulation of Cellular & Systemic Energy Metabolism is one of three thematic courses that comprise the fall semester. The course explores how energy is obtained, stored and utilized by cells, tissues and organisms. The biochemistry of energy metabolism is studied with a focus on mechanisms by which these pathways are controlled in order to maintain health and energy homeostasis. Principles of hormonal signaling and cellular signal transduction pathways are studied in the context of energy metabolism. In addition, knowledge of these subjects is applied to the study of pathologies involving abnormal energy metabolism, including diabetes, obesity and starvation. Course objectives include developing an understanding of metabolic pathways and the mechanisms by which they are regulated; understanding principals of receptor theory, signal transduction and hormonal control of cellular processes; and gaining an understanding and appreciation of diseases that involve abnormal energy metabolism. The course is taught in approximately four blocks, with review sessions and examinations following each block. Exams are designed to determine mastery of the subject matter and to evaluate the ability to solve problems and logically address research questions. The principles and skills learned through successful completion of the course help prepare students for advanced graduate courses and graduate research careers.

BMS 502 Cell and Systems Biology (3) Explores the cellular and intracellular organization of biology, assembly of cells into tissues, and further integration into biological systems.

BMS 502 Cell and Systems Biology (3)

This course will cover the cellular basis of physiological processes from a systemic perspective. The major emphasis will
focus on the cellular, molecular, and biochemical basis of normal and abnormal (pathological) tissue function. A special emphasis will be placed on common themes applicable to all tissue and the integration of molecular, cellular, tissue and organ systems. Introductory lectures will be followed by discussion of the primary literature that complements the lecture material. The course is designed to give students an appreciation of the cell and molecular mechanism underlying physiological processes as well as cell and molecular biology research techniques.

BMS 503 Flow of Cellular Information (3) Teaches concepts underlying the inheritance, transmission and translation of genetic information.

BMS 503 Flow of Cellular Information (3)

Medicine in the 21st century must incorporate an understanding of the genetic information that underlies all biological processes in every cell, tissue, and organism together with an appreciation of how genetic differences impact complex cellular pathways and individual traits or disorders. Further, with the culmination of the human genome project and high-throughput analysis this information can now be considered in the context of whole genomes and proteomes. This course provides students with a fundamental understanding of the basic processes that covert this genetic DNA information to produce RNA and proteins and the genetic principals that underlie transmission of this information at each cell division and to subsequent generations. This topic is of importance for all biomedical disciplines.

The course explores how DNA is inherited, replicated, transcribed, translated, mutated, repaired, and manipulated, and how this information is utilized by cells, tissues and organisms and in the context of genomes and populations. Central dogma (DNA to protein) is studied with a focus on mechanisms by which these processes are controlled. Other topics include non-coding RNAs and protein degradation. Course objectives include understanding the mechanisms of how these processes occur and how they are regulated; developing an appreciation for the genetic and molecular biology approaches that have allowed insight into these processes.

The flow of cellular information is one of three thematic courses that comprise the fall semester. The course is taught in approximately three blocks, with review sessions and examinations following each block. Exams are designed to determine mastery of the subject matter and to evaluate the ability to solve problems and logically address research questions. The principles and skills learned through successful completion of the course help prepare students for advanced graduate courses and graduate research careers.

BMS 504 Art of Scientific Communication I (1) Introduction to scientific analysis, writing, and oral presentation using primary literature sources.

BMS 504 Art of Scientific Communication I (1)

The overall goal of BMS 504, and the sequential course BMS505 taken in the Spring semester, is to develop the students into scientific communicators who, in written and oral formats, can convey scientific concepts and the experimental support for these concepts. This includes the development of the knowledge base and communication skills required for effective scientific exchange and engagement. BMS 504 meets 90 minutes, once a week for 11 weeks from the first week of class until the Thanksgiving Recess, and focuses on reading and analyzing articles from the primary literature with brief presentations by students. The intent of this schedule is to support the students in developing the skills necessary to analyze the primary literature, begin to present components of scientific articles in a group setting, and complete these goals in a time frame that does not compete with end-of-semester examinations. The first meeting is a presentation by a course director on Effective Powerpoint Presentations. The following 10 meetings allow two weeks to cover each of five topics. Each topic focuses on a high quality article selected from a portfolio created by the instructors of the Fall first-year Core Curriculum for the Biomedical Sciences (BMS) Graduate Program (BMS 501, 502, and 503). Topics vary from year to year. The first week of each topic examines the components of the chosen article (purpose and significance) and is led by one of the course directors. The second week includes short presentations by students on experimental design and data analysis from the articles and is facilitated by a content expert from one of the Core BMS Courses.

**BMS 520** Human Integrative Physiology (3) This course explores whole organ physiology emphasizing skeletal muscle and exercise physiology, cardiovascular, renal and urinary, respiratory, gastrointestinal, and endocrine.

**BMS 520 Human Integrative Physiology (3)**

Human Integrative Physiology considers the function of the mammalian organism with an emphasis on system physiology. This course builds upon the strong foundation of cellular processes, molecular interactions, and genetic regulation provided in BMS 501, 502, 503 and allows students to develop an appreciation of the integration of biological function. The course is organized into multiple sections that focus on different organ systems. Initially, the course reviews principles of excitable cells and discuss sensory transduction, the autonomic nervous system, and motor systems physiology. Next, students learn the structure and function of skeletal muscle physiology including muscle contraction, force generation, and movement. The course then focuses on the structure and regulation of the cardiovascular, renal, and respiratory systems. Subsequent sections cover gastrointestinal and endocrine systems by building upon the cellular and molecular processes covered in BMS 501, 502, and 503. Each section teaches the basic design of the system, explores the physiological principles of function, and examines how each system contributes to homeostasis and pathophysiological disease. Class material is covered through lectures and primary literature.

BMS 571 Graduate Clinical Rotation (1-3) This course allows graduate students at Hershey and University Park to gain experience in the clinical arena.

BMS 571 Graduate Clinical Rotation (1-3)

The Graduate Clinical Rotation is designed to allow graduate students at Hershey and at University Park to gain intensive experience in the clinical arena in the area of their thesis research. The site of the clinical rotation and specific responsibilities of the student are determined by the clinical mentor that is matched with the student. Clinical mentors will indicate their willingness to sponsor a student and will outline the associated opportunities and responsibilities of the specific clinical rotation. The specific rotation will be selected by the student and the thesis mentor to compliment the student's graduate studies.

Opportunities during the clinical rotation: The rotation typically will last 6 – 8 weeks and the student will be in the clinic and/or engaged in clinical activities for about 4h/week. During this rotation, students will have a range of opportunities including: attending Grand Rounds, attending Resident and Department Seminars and lectures, shadowing physicians, attending clinical research meetings, attending relevant case conferences, and, if appropriate, observing surgery. Students also may engage in a practical hands-on analysis of the subject matter (e.g., via an analysis of data, histology, fMRI, etc.) and they will be involved in the discussion of relevant cases and of potential treatment strategies.

Requirements: Course-specific policies and expectations for all students (i.e., for all students from Hershey and from the University Park Campus):
(1) Student Infectious Disease Summary: In January or early February, all students must contact Janice Mesarick (x-5998) in Student Health on the Hershey campus to complete an Infectious Disease Summary. Once complete, this form is to be sent to Ms. Catherine Caruso, MEd.
(2) Insurance Waiver: An insurance Waiver needs to be signed and returned to Catherine Caruso, MEd, Academic Placements Officer. The form can be located at the following site: http://www.hmc.psu.edu/facultyaffairs/shadowing/
(3) Confidentiality Agreement: A Confidentiality Agreement needs to be signed and returned to Catherine Caruso, MEd. The form can be located at the following site: http://hmc.psu.edu/facultyaffairs/shadowing

All 3 forms must be received by Ms. Catherine Caruso, MEd, Academic Placements Officer, Department of Psychiatry, H073 before the start of the Graduate Clinical Rotation.

(4) Orientation Meeting: All students are required to attend a 2 hour mandatory Orientation Meeting where issues will be discussed related to the course requirements, what to expect in the clinical setting, HIPAA regulations, what is and is not appropriate, how and when to interact with patients, how physicians collect data from patients, terminology, hierarchy, and differences in thinking styles between clinicians and scientists. Students will not be allowed to begin their rotation if they fail to attend this mandatory meeting.

Student Requirements:
(1) The specific opportunities/requirements of the Graduate Clinical Rotation will differ for each student depending upon the nature of the selected Clinical Rotation. The specific opportunities for Clinical Rotations will be listed by the clinician at the following site: http://psu.neurosciencefaculty.info/forum/index.php. Students will view this site, consult with his or her thesis mentor, and select a rotation that complements the student's graduate studies. Each activity will include exposure to the related clinical setting, attendance at relevant Grand Rounds, Resident and Departmental Seminars, and lectures, a practical hands-on analysis of the subject matter (e.g., via an analysis of data, histology, fMRI, etc.) and consideration of important treatment issues. Students will be required to spend at least 4 hours per week in this setting for at least 6 weeks.
(2) Weekly requirements: In addition to the requirements set forth by the Clinical Mentor, each student will be required to keep a journal describing their clinical activities and experiences. The contents of the journal are considered private and are for the benefit of the student only.
(3) Oral Presentation/Student Evaluation: Students will be evaluated in one 30 min. presentation given to other graduate students in their program regarding the material learned during their Clinical Rotation and its application to translational research. Specifically, students will describe a problem that they have identified in the clinic and their proposal for addressing that problem.
(4) Written Requirement: Students will prepare one NIH-like Background and Significance section and Specific Aims outlining a problem identified in the clinic, the background related to the problem and, in the Specific Aims, the proposed translational solution to address the problem.
(5) Student Evaluation: Students will have the opportunity to evaluate their Clinical Mentor and the specific Clinical Training Activity and students will have the opportunity to evaluate the course.

Clinical Mentor's Responsibilities:
(1) The Clinical Mentor must meet with the student at least once every 2 weeks during the rotation.
(2) The Clinical Mentor must be supportive of the student's inclusion as a trainee on the clinical team and should see to it that the student receives good counsel as to how to seek information in a patient care training environment.

The Pennsylvania State University
(3) The Clinical Mentor will be required to provide a reading list to the student.
(4) The Clinical Mentor is required to attend and evaluate the student's oral presentation.
(5) The Clinical Mentor must evaluate the student's written Background and Significance and Specific Aims.
(6) The Clinical Mentor should provide an "Exit Interview".

BMS 581 Molecular and Translational Approaches to Human Disease (3) This course teaches students the scientific process used to understand the molecular bases of diseases and the development of novel therapies.

BMS 581 Molecular and Translational Approaches to Human Disease (3)

The course utilizes clinically relevant diseases as specific examples of applying an integrated approach to elucidate a mechanistic understanding of disease pathophysiology and the development of novel therapies. Over the 15-week period of the course the students study five specific diseases or complications of diseases, each over a 3-week period. The diseases used represent areas of high impact on Western society or ones in which specific principles of mechanistic understanding or therapeutic development are clearly illustrated. The diseases also represent strengths of the research at the Penn State Hershey such as cancer, diabetes, cardiovascular disease, and infection and inflammation. The instructors use primary literature to demonstrate the scientific approach used to test specific hypotheses related to disease mechanism. At the end of the 3-week period, the students use team-based learning to develop experimental approaches to study novel aspects of the disease pathology or therapeutic development.

Biorenewable Systems (BRS)

BRS 411 Biobased Fiber Science (4) Theoretical and practical aspects of structure-property relationships for biobased industrial fibers, including fiber biological and chemical constitution and fiber-water relationships.

This course investigates fundamental aspects of biobased industrial fibers (also known as biofibers), and ties their underlying biological and chemical structure to macroscale properties. Bioproducts are defined as products created from biologically derived, renewable industrial feedstocks (wood, cotton, grasses, and bast fibers including jute, hemp, kenaf, etc.). The course begins with a look at the worldwide production of biofibers, and considers implications relating to sustainability. Elements of underlying biological and chemical structure are then investigated, including an introduction to relevant aspects of polymer science. The interaction of biofibers with water is a practical issue that bears great significance; this is the focus of the last third of the course. Students will learn principles of psychrometrics (water-temperature-environment relationships) including measurement of relative humidity and fiber moisture content. Final course subjects include industrial techniques for drying fibers, energy implications of these processes, and troubleshooting of biofiber industry issues relating to moisture.

BRS 422 Energy Analysis in Biorenewable Systems (3) Energy management, energy conversions, renewable energy alternatives, engineering economic analyses, national and international perspectives on energy resources.

This course focuses upon first understanding the various forms of energy in common use today and then analyzing the energy equivalents of various forms of energy. Forms of energy to be studied most extensively include electricity, fossil fuels, and renewable energy sources. Principles and applications of engineering economic analyses will be emphasized because these principles are needed to evaluate the feasibility of converting from one energy form to another. Specific application areas of emphasis include buildings, motors, and lights. For each application area, there will be discussion of the alternatives available for using energy in a more efficient and economical manner.

The infrastructure systems needed for providing electricity and natural gas to a specific location will be described as well as typical rate structures for the energy provided. Alternatives to the conventional energy systems will be identified and the course will conclude with discussion of energy strategies throughout the 21st century. Local, national, and international perspectives on energy resources will be infused throughout this course.

BRS 423 Deterioration and Protection of Bioproducts (3) Timber, wood, and bioproduct deterioration from fungi, insects, fire; treatment of bioproducts for in-service protection.

Deterioration and Protection of Bioproducts (3)

Diversity: None
Bachelor of Arts: None
Effective: Spring 2014
BRS 426 Safety and Health in Agricultural and Biorenewable Industries (3)

BRS 426 explores management aspects of occupational safety and health specifically as it pertains to both the agricultural and biorenewable systems industry sectors. Employers are increasingly demanding students have training in safety and health. Topics to be covered include principles of safety and health, hazard analysis, hazard prevention and control, human behavior and safety, training and education, safety and health regulations, agricultural emergencies and developing a written safety program.

BRS 428 Electric Power and Instrumentation (3)

Nearly every facet of our modern society relies on electricity and electronics. Whether engaged in product development, manufacturing, production, testing, or management, graduates of technical programs benefit from a fundamental understanding of electrical/electronic systems. This course prepares students to analyze electrical/electronic systems applicable to agricultural and biorenewable industries. Upon completion of this course, the student will be able to:
demonstrate correct use of common electronic measurement tools including multimeters, oscilloscopes and others;
demonstrate sound electrical construction techniques including cable preparation, soldering, circuit board construction, and others;
demonstrate sound troubleshooting skills for electrical and electronic systems;
understand common elements of power distribution systems;
understand simple measurement and control circuits represented by schematics or ladder diagrams;
understand and apply various sensors to measure temperature, pressure, strain, force, proximity, speed etc.;
understand the application of data loggers, programmable logic controllers, and computer software to collect data and/or control simple processes;
understand the function of common circuit components such as resistors, capacitors, inductors, diodes, op-amps, transistors, and transformers in simple circuits;
understand basic maintenance and safety requirements for facility electrical systems.

BRS 429W Biorenewable Systems Analysis and Management (3)

BRS 429W is a capstone course for the BioRenewable Systems major. The course covers systems analysis and optimization techniques including an introduction to systems theory, qualitative and quantitative analysis, linear programming, waiting line models, PERT/CPM, minimal spanning tree, calculus methods, simulation modeling for decision making, inventory, and energy audits. All topics are presented in the form of case studies that require the students to solve problems in realistic production and processing scenarios. The course also provides a writing-intensive structure. The course targets BRS students in their last semester because it integrates knowledge and experiences acquired in prior BRS, business, and agricultural science courses.
check the specific course syllabus.

**BRS 437 Bioproduct Marketing and Sales (4)** Business-to-business bioproduct sales and marketing fundamentals and market overview of key forest industry sectors including biorefinery value chain outputs.

**BRS 437 Bioproduct Marketing and Sales (4)**

This course covers business-to-business (B2B) bioproduct marketing fundamentals and a market overview of key forest industry sectors (solid wood, composite panels, and engineered wood products) including biorefinery value chain outputs (environmental services, energy, fuels, and co-products) and personal selling of bioproducts. Students will apply B2B market principles and concepts toward an understanding of bioproducts industries and markets. Personal selling techniques will be developed and applied to enhance understanding of the industrial sales function within bioproduct firms. Marketing research for decision-makers will be examined.

Business (BUS)

BUS 500 Negotiation, Communication, Teamwork (2) Experience-based learning approach to developing effective teams and work organizations; emphasis on developing reflective thinking and interpersonal skill sets.

BUS 500 Negotiation, Communication, Teamwork (2)

This course provides students with an enhanced understanding of their own behavior, the behavior of others, and the capability to deal more effectively with people and groups in organizations. Primary emphasis is placed upon application of experiential learning theory in developing the ability to perform well as a member of a team, and also in facilitating team effectiveness. As adult learners, students are empowered to become active creators of their own learning, and working with the faculty member responsible for the course, to develop skill sets and competencies in analyzing ethical issues, negotiation and communication skills, and developing leadership responses to these issues.

This course provides the skill sets and competencies underpinning the collaborative learning model used throughout the MBA program. It is intended to be taken by students who have not taken a similar course either as part of their undergraduate programs, or as graduate work. Where required, this course must be among the first 6 credits taken in the MBA program.

A combination of individual and team assignments, consistent with expectations for 500-level courses forms the basis for evaluation. There will be no formal in-class exams. However, in addition to participation in group discussions and projects (40% of the grade), and short summary papers at the completion of each chapter (20% of the grade), four short (minimum five page, typed, double spaced) papers will be required (40% of the grade). These papers will consist of an analysis and summary of the student's experiences in, and possibly, out of class, in attempts to apply theories of behavior being studied at the time. The last paper in the series will be a summary by the student of his/her interpersonal strengths and weakness, and an action plan to improve the areas of weakness.

BUS 505 Data Analysis for Business Decisions (2) Selection and application of statistical methods, and use of business data bases, to support managerial decision-making; interpretation and presentation.

BUS 505 Data Analysis for Business Decisions (2)

Data analysis is the process of drawing meaningful information from a database for business research and to support managerial decision-making. Business managers may be either producers or consumers of data analysis. A producer generates a data analysis from raw quantitative and/or qualitative information. The producer needs the skills to select the appropriate statistical methods, to apply them correctly and to present results in a meaningful way.

The consumer is a manager who must interpret, utilize, and often evaluate data analysis that was created by others. Business managers typically function as producers, especially at earlier stages of their careers or if they work in managerial support functions. Managers function as consumers at other times, especially as senior executives or directors.

MBA students are expected to have become familiar with basic concepts of statistics such as means and standard deviations, the normal distribution, confidence intervals for means, t-tests, and simple regression. This can result from an undergraduate course or through structured self-study. BUS 505 will focus on in-depth application of statistical methods for specific business cases.

The course begins with discussion of the formulation of business research problems that call for analysis of quantitative data. Using business cases, students will identify management problems, formulate research questions, and develop testable hypotheses.

Unlike the short, isolated, data-sparse problems solved in most introductory statistics courses, the business case approach emphasizes the preparation and use of large databases that are common in business settings. Students will learn how to extract data sets from these bases that are appropriate to the specific hypotheses that must be tested. Often, a business case may require the student to apply several hypotheses tests and statistical methods, using the same database.

All of the statistical methods covered in this resource module can be applied using EXCEL or LOTUS spreadsheet software, which are widely available in business firms. Sophisticated dedicated statistical packages, such as SAS and SPSS, can also be used.

BUS 515 Business Ethics and Corporate Governance (2) Social, legal and ethical obligations of key organizational participants; organizational structure and goals; conduct in global and multicultural contexts.
BUS 515 Business Ethics and Corporate Governance (2)

The subject matter of corporate governance deals with the nature of the interrelationships among shareholders (owners), boards of directors (representatives of the owners), and managers (agents of the owners). These interrelationships form the basis for the modern corporation. As their agents, managers are supposed to run a company in the interest of its shareholders; the board of directors is expected to monitor the performance of managers and to ensure that they do not stray from their primary obligation to the owners. The subject of corporate governance also encompasses the study of corporations’ relationships with its employees, creditors, supplies, and customers. Finally, as corporations are expected to be good citizens of their communities, corporate governance also extends to the study of corporations’ relationships with their communities.

Periodic scandals involving major, publicly held companies have underscored the fundamental importance of these relationships. The larger interests of society and of its citizens require that various stakeholders perform their roles in an ethical manner. This course reviews major theories of ethical and moral development, provides cases and exercises to heighten students awareness of these areas, and reviews heuristics and decisions-models for ethical conduct. This course thus also addresses the emerging area of ethical corporate governance, specifically exploring the how ethical conduct and the ethical underpinnings of corporate governance function to safeguard the interests of all stakeholders.

BUS 588 Strategic Management (2) Analysis of current theory and practice for the formulation and implementation of organizational strategies in complex dynamic environments; capstone course.

BUS 588 Strategic Management (2)
BUS 588 is the capstone course in the MBA curriculum. It takes a multi-disciplinary approach that requires the student to apply knowledge gained in a variety of functional courses within a framework of strategic management theory and practice in order to understand the strategic decision-making process. The course adopts a systems perspective in which organizational outcomes are viewed as being the result of interaction with a variety of environmental agents and forces. Special emphasis is placed on managing the organization to create competitive advantage in dynamic contexts. Both the formulation and implementation of strategic actions are analyzed. The case study approach is used extensively to aid the learning process.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BUS 589 Strategic Venture Planning and Innovation (2) Development and presentation of a venture plan including product development; market research; competitive analysis; financing and capitalization; organizational structure.

The purpose of BUS 589 is to have the business student apply strategic management theories and practices acquired in BUS 588 to a specific, practical project in order to further the understanding of the process of creating and managing a strategy based on innovation (an entrepreneur strategy). This course is a direct extension of BUS 588 and should be taken immediately following it. The process of innovation is analyzed in detail together with the influences on it. The effects of various contexts on entrepreneurial strategy will be considered. Finally, issues related to the implementation and management of a strategy based on innovation will be discussed.

Students are required to develop a comprehensive new venture plan for an actual business organization to demonstrate knowledge of organizational design from a strategic perspective. Students will have to apply management, marketing, finance, information systems, and accounting knowledge in the new venture proposal. They must also demonstrate their knowledge of the influence of external (environmental) contexts on strategy formulation and implementation through the use of appropriate analytic frameworks. Finally, they must demonstrate a grasp of what constitutes competitive advantage within the strategic context that they have chosen for their project.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

BUS 590 Colloquium (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Colloquium (1-3)

Individual Studies (1-9)
BUS 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Special Topics (1-9)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Business Admin (B ADM)

B ADM 500 The Business Enterprise (3)

The Business Enterprise course is designed as an interdisciplinary introduction to business and basic business processes using problem-based and collaborative learning approaches. A key objective is to introduce students to basic concepts and models that will enable them to formulate and answer important questions applicable to any business. The course will require students working in interdisciplinary teams of 4-5 to write multi-disciplinary business/operating plan for a new product or service as a final integrative project. Students in the MFGSE graduate program will be required to write a plan for a manufacturing business. Students completing an MBA degree may write a plan for a manufacturing or service business or a non-profit organization. To the extent possible, teams will be comprised of individuals with different academic and industry backgrounds.

Business/operating plans will address all of the functional areas of business introduced throughout the course and require students to integrate them into a coherent plan. The final plans will be presented for critical review to the class, interested faculty, and an appropriate group of business professionals.

The role of the instructor in this course is to facilitate student inquiry by helping students formulate questions that must be answered and by directing students to information resources appropriate to answering their questions. It is anticipated that the instructor will call upon other faculty and members of the business community to provide functional expertise to student teams as needed.

Faculty: John Magenau and Richard Progelhof

B ADM 514 Strategic Planning and Business Policy (3) Formulation of objectives and the implementation of programs to promote long-range success of the organization in a changing environment.

B ADM 514 Strategic Planning and Business Policy (3)

Drawing from concepts in competitive strategy, organizational economics, financial economics, and industrial organization, this course will describe the skills that managers must command to create economic value through firm strategy. These skills include the ability to apply analytical tools to assess industry structure and competitors’ strategies, the ability to assess the optimal scope and boundaries of the firm, and the ability to design administrative structures, systems, and processes that facilitate the development and deployment of corporate resources. Even though the course incorporates various theoretical perspectives, it ultimately is designed to focus on the essential issues and problems of competitive strategy as experienced by managers.

International Business (3)

General Education: None
Diversity: None
B ADM 525 Innovation and Change Management (3) Analysis of innovation sources, effects on industry structure and firm resources, and how firms can manage adoption and implementation process.

Innovation and Change Management (3)

B ADM 526 Leadership and Ethics (3) A multiperspective review of leadership theory and research with special emphasis given to the ethical dimensions of leadership.

Leadership and Ethics (3)

The objectives of this course are to: a) increase moral awareness of ethical issues in organizations, b) consider the interrelationships between organizations and their stakeholders, c) analyze the ethical impacts of managerial decision-making, d) understand how to manage the ethical performance of people and organizations, e) develop an understanding of the ethical dimensions of leadership theory and research, f) explore the relationship between the concepts of leadership effectiveness and ethical leadership.

Ethical conduct is an important issue for managers in all functional areas of business organizations. Long-term “success” in business depends not only on mastery of the immediate technical environment and competitive domain, but also consideration of and attention to the broader social and ethical environments in which all organizations and institutions are embedded. Leaders have an important role to play in managing the financial and ethical performance of individuals and organizations. Even though leadership is one of the most researched topics in management, most reviews of the leadership literature rarely mention the ethical dimensions of leadership. Understanding what ethical leadership is and why it is important can provide a more comprehensive view of what it means to be an effective leader.

B ADM 530 Investment Theory (3) Advanced literature pertaining to investments; special reference to the theory of random walks, stock valuation models, and portfolio management.

Investment Theory (3)

B ADM 532 Corporate Finance (3) Application of modern corporate finance theory to corporate practice.

Corporate Finance (3)

Derivatives (3)
Global Marketing (3)

Global Marketing (3) is a course designed to provide students with an understanding of marketing decision making from a global perspective. This course will examine the complexities of marketing in a global context, including cultural, economic, and political factors that influence marketing strategies.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Marketing Research (3)

Marketing Research (3) is a course that examines marketing research today, including research and marketing decisions, sampling and measurement, and collection and analysis of data. Students will learn how to design and conduct marketing research projects.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Service Marketing (3)

Service Marketing (3) is a course that focuses on the application of marketing concepts to special needs of a service environment. This course examines the unique challenges and opportunities in the service industry and how to develop effective marketing strategies.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Consumer Behavior (3)

Consumer Behavior (3) is a project-oriented course that introduces students to consumer research techniques to formulate marketing strategies. The course is designed to help students understand the complex behaviors that influence consumer decision making.

The purpose of this course is to acquaint students with the field of consumer behavior and its major concepts, research techniques, and research findings. Students will be exposed to individual and psychological factors, as well as the social and cultural factors that influence consumer behavior. There will be a group project focusing on the development of a new product concept for a specific target market. Throughout the course students will be exposed to how firms utilize consumer behavior research to develop marketing strategies. Consumer behavior is presented as an actionable and strategic discipline. A deliberate attempt will be made throughout the course to tie consumer behavior concepts with "real world" illustrations. Case analysis and experiential exercises will be relied on to help accomplish this objective.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Marketing Strategy (3)

Marketing Strategy (3) is a course that focuses on the application of marketing theoretical principles from popular press publications. This course is designed to help students develop critical thinking skills and apply marketing strategies to real-world business situations.

This course is an investigation into current popular press publications and their application of marketing theoretical principles to actual business situations. It includes analytical processes and an emphasis on critical thinking skills useful to upper level marketing managers.
B ADM 562 Financial Statement Analysis (3) Utilizes concepts in accounting, economics, and business strategy to analyze financial statements of real companies.

B ADM 590 Colloquium (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

B ADM 594 Research Topics (1-18) Supervised student activities on research projects identified on an individual or small group basis.

B ADM 595 Internship (1-18) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

B ADM 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Evaluation of the Impact of Therapy Dogs on Children with Physical, Behavioral, and Emotional Disabilities (1-9)

BUSAD 511 New Ventures 1 (3) Introduction to the issues involved in the development of new ventures within existing business organizations or from start-up.

BUSAD 511 New Ventures 1 (3)

This course deals with the process of finding, evaluating and developing new ventures, from both the perspective of the start-up as well as the larger existing organization, which has different opportunities, resources and barriers. Students will develop an appreciation of the many legal, financial, operational, HR, and technical challenges posed by venturing. Course activities include discussion of readings, case analyses, developing components of business plans, and teamwork. These activities encourage students to develop the critical thinking, communication and managerial skills necessary to further their understanding of corporate venturing.

This course prepares students for future coursework in the New Ventures and Entrepreneurial Studies Option within the MBA program. It is also relevant to students engaged in the general MBA program who are involved in new product development and R&D. This course is followed by New Ventures 2, which provides an in-depth view of the legal and financial issues facing managers of new ventures.

The course is a graduate elective primarily for MBA students and could also be taken by MSIS students. It is intended to be the introductory course in the New Ventures and Entrepreneurial Studies option within the MBA program.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005

BUSAD 515 Acquiring the Existing Enterprise (3) The process of acquiring an existing company as an alternative to starting a new venture is explored.

BUSAD 515 Acquiring the Existing Enterprise (3)

The focus of this course is on the methods and strategies required to successfully acquire an existing enterprise as opposed to building one from scratch.

Most prospective entrepreneurs think of a start-up as the path toward becoming an entrepreneur. However, the time required to develop products and services and to build sales to a profitable level is long, and the failure rate for new organizations is high. Existing organizations have the advantage of already having products, customers, suppliers, and employees. Also, financing the purchase of an existing company is easier than financing a start-up. This may be a better path into a new venture for many people. Since it is a different process than a start-up, a separate course is required to provide adequate coverage of the topic.

The Pennsylvania State University
Evaluation will be on case study analyses, exams, and a written and oral report on the legal and financial aspects of new venture.

Designed especially for students taking the New Ventures and Entrepreneurial Studies option within the MBA program. This course builds on the work in New Ventures 1, which is required for all New Ventures majors.

This will be an elective course for students taking the New Ventures option in the MBA program. It would also be an elective for students in the general MBA program and the MSIS (Info Science) program who have an entrepreneurial orientation.

**BUSBAD 519 (LEAD 519) Developing Creative High Performance Organizations (3)**  
This course focuses on how to create high performing organizations based on models provided by business, science and the arts.

**BUSBAD (LEAD) 519 Developing Creative High Performance Organizations (3)**  
**Overview:**

This course focuses on how to create high performing organizations based on models provided by business, science and the arts. We will examine the key assets that these disciplines bring and show how to apply them to business activities. For example, it has been shown that improvisational models from music are highly relevant to new product development. Course activities will include a discussion of the readings from relevant academic research in the business field. We will discuss the philosophy of aesthetics, analyze cases, and review original works. We will also listen to short lectures by practicing artists, musicians, actors, scientists, and writers. Together, these activities will help students to develop strategies to help their organizations attain higher levels of performance. This course is a graduate elective for MBA students and could also be taken by other students (such as Leadership students) if it meets their degree requirements.

**The way the course will run:**

This course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor’s. We will learn about each of the topics noted above through a variety of means. Our interaction will include general discussions, lectures, case discussions, exercises, small group meetings, and on-line chats. We will have invited speakers for the class representing the arts, music, science and business.

**BUSBAD 522 New Ventures 2 (3)**  
Examines the financial and legal issues that are critical in the formation, development, and management of new ventures.

**Evaluation will be on case study analyses, exams, and a written and oral report on the legal and financial aspects of new venture.**

All students in the MBA program are required to take an introductory finance course. This course builds on that foundation and introduces the various legal issues that are critical to new venture development. Designed especially for students taking the New Ventures and Entrepreneurial Studies option within the MBA program. This course builds on the work in Entrepreneurship or New Ventures 1, which are required for all New Ventures majors.

This will be an elective course for students taking the New Ventures option in the MBA program. Students in the other options would not usually take this course. However, they could take it as an elective, since it has little overlap with the required courses in the business option. It would also be an elective for students in the MSIS (Info Science) program who have an entrepreneurial orientation.

**BUSAD 530 Biotechnology and Health Industry Overview (3)** Organization, financing, policy, trends, problems and issues in the biotechnology, pharmaceutical, and health industries. Overview of cost, quality, access issues.

**BUSAD 530. Biotechnology and Health Industry Overview (3)**
BUSAD 530 explores current issues and trends in the biotechnology, pharmaceutical, and health industry. The classic cost, quality, and access paradigm is applied from the perspective of multiple stakeholders. Organization, financing, policy, regulatory, and ethical problems and issues are emphasized. Teaching methods include video and didactic presentations, small group and class discussions, guest lectures by industry executives, and case study analysis. Student evaluation methods will include individual and team projects, presentations, and papers. The course will be offered twice annually by the Penn State Great Valley School of Graduate Professional Studies' MBA program and is a required course in the Penn State Great Valley MBA program option in biotechnology and health industry management.

**BUSAD 534 Ethical Dimensions of Management in the Biotechnology and Health Industry (3)** Ethical managerial decision-making in biotechnology, pharmaceuticals, and health including ethical implications of technological/scientific advances, medical interventions, and business decisions.

**BUSAD 534. Ethical Dimensions of Management in the Biotechnology and Health Industry (3)**
BUSAD 534 introduces the students to various ethical decision-making frameworks, which are then applied to critically examine issues within the biotechnology and health industries. Ethical decision-making frameworks include utilitarian principles, rights and justice theories, virtue ethics, feminist ethics, and various medical ethics models. Applications to cases involving genetic testing, stem cell research, euthanasia, organ retrieval and transplantation, and pharmaceutical development are among those to be explored. Teaching methods include faculty lectures, case study analysis, small group and class discussions, and industry guest speaker presentations. Students will be evaluated on the quality of individual and team writing assignments as well as a team oral presentation. The course will be offered twice annually by the Penn State Great Valley School of Graduate Professional Studies' MBA program and is a required course in the Penn State Great Valley MBA program option in biotechnology and health industry management.

BUSAD 545 Negotiation Strategies (3) This course covers strategies and tactics for understanding conflicts, for negotiating effectively, and for dealing successfully with power in organizations.

BUSAD 545 Negotiation Strategies (3)

Although situations involving international incidents, corporate acquisitions, or national collective bargaining contracts demonstrate the dramatic effects of the need for negotiation, it is something that most people do every day. Negotiation is not a process reserved for skilled diplomats, top salespeople, or leaders of labor unions. The structure and processes of negotiation at the interpersonal level are fundamentally the same as at the corporate or international level. For this reason, knowledge about and skill in negotiating is essential to anyone who works with and through other people to accomplish objectives. It is part of the normal “give and take” of any business situation, such as negotiating salaries, arranging deals with vendors, or allocating resources for a project. Unfortunately the ability to simply recognize conflict and the need for bargaining does not insure successful negotiating situations. Negotiation is a complex human activity, involving a dynamic interpersonal process. The skilled negotiator possesses a number of skills including: the intellectual ability to understand the key facts that shape and characterize different negotiation situations; the skills to diagnose problems and select appropriate strategies and approaches to address them; and the understanding of one's own personality and value system, which affect the perception of a situation and the choice of tactics and strategy. Negotiation is a learnable process. In this course students will learn how to recognize and resolve conflict through bargaining, what the bargaining process involves, and how to plan and carry out a successful negotiation.

BUSAD 551 Business, Ethics, and Society (2-3) The course focuses upon the exploration and analysis of the ethical, political, technological, social, legal and regulatory environments of business.

BUSAD 551 Business, Ethics, and Society (2-3)

Students will explore and analyze the challenging issues that lie at the intersection of business, government, and society through a lens of business ethics. Topics covered include the importance of ethics in the business decision process and the types of ethical issues business practitioners face in the business environment; consequentialist and nonconsequentialist ethics principles and their application to business decision-making; the role of personal and organizational values in business decision-making and the impact that organizational culture has on the ethical dimension of decision making. Students will evaluate and analyze the ethical dimension of decision-making; become familiar with the stakeholder concept and utilize it in the business decision-making process; identify the constraints societal values place upon the firm; examine the role government plays in the marketplace; explore the social and ethical dilemmas that arise from the globalization of business; and understand and explain the process through which corporations attempt to influence societal and government institutions.

BUSAD 555 (LEAD 555) Full Range Leadership Development (3) Development of behavioral skills associated with outstanding leadership of individuals, teams, and organizations through advanced information technology, experimental exercises, and case analysis.

BUSAD (LEAD) 555 Full Range Leadership Development (3)
Leadership is one of the world's oldest preoccupations. Since the beginning of civilization, prophets, kings, rulers and managers have struggled to find answers to an important question: Why do most leaders or managers elicit merely competent performance from their followers, while a select few inspire extraordinary achievement? Given increased globalization, diversity, restructuring, e-business and innovation in today's business environment, finding answers to this question is important for maintaining organizational competitiveness.

The purpose of this course is to provide answers to this question by identifying traits and behaviors associated with outstanding leaders, explaining how they get results, and why their leadership often exceeds all expectable limits. This course is designed to introduce students to a) behaviors associated with outstanding leadership, b) social learning and cognition in organizations as a context to promote outstanding leadership, and c) leadership development as a strategic intervention to enhance individual, group, and organizational motivation and performance.

The course will be run as a graduate seminar. We will interact through Web site technology, general group discussions, team projects, lecturettes, case discussions, exercises and videos. Class sessions will focus on issues raised by the readings, cases, and issues relevant to students' organizational experiences. A portion of the class time may be set aside for the coordination of team projects.

**BUSBAD 558 Knowledge Management (3)** This course examines the strategic value of knowledge and how organizations can manage their knowledge assets for competitive advantage.

**BUSBAD 558 Knowledge Management (3)**

This course is designed to explore the topic of knowledge management (KM), which differs from information management in critical ways. Knowledge pertains to the subset of all information that embodies experience, experimentation, organizational learning, best practices, and techno-scientific knowledge. Knowledge thus differentiates average firms from great ones: e.g., Google vs Alta Vista. KM is now on the short list of strategic objectives for firms large and small. Future managers thus need to better understand the issues and challenges posed by knowledge management.

Students taking the course will learn about KM as a human social process as is evident in Communities of Practice. We will examine the processes of knowledge creation, acquisition, retention and utilization. To understand how knowledge-based systems and practices are implemented in the "real world" (e.g., Merck, Lockheed Martin, Vanguard) we will review various case examples that highlight the unique problems posed by KM to business organizations. Experts from industry will be invited to speak to the class and students are invited to attend the Knowledge Management Group of Philadelphia (www.kmgphila.org) meetings that meet once a month.

The course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor's. We will learn about each of the topics noted above through a variety of means. Our interaction will include general group discussions, lectures, case discussions, exercises, small group meetings, and on-line chats.

BUSD 577 Management of Information Technology (3) This course focuses upon the challenges of aligning IT strategy with organizational goals.

Management of Information Technology (3)
This course identifies the challenges facing managers of information technology resources and addresses the methods of managing them. These resources include hardware, software, networking, data, information, and personnel. The course takes the approach of high-level management of what has become an important strategic resource in almost every organization. Therefore, it focuses on strategies rather than project management of individual efforts. The course focuses on decision making at the level of chief information officers and their immediate underlings. Its premise is that to succeed, an organization must align its IT strategy with the general organizational and business goals.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Managing Business Processes (3)
Twenty-first century executives cross-functional business processes rather than managing their organizations as independent functional silos. Consequently, the ability to design and implement process oriented organizations has considerably evolved over the past decades. More importantly, initiatives related to Service Oriented Architectures (SOA) and Business Process Management (BPM) systems are predicated on the existence of well-designed business processes. However, the task of designing processes has become harder due to the disappearance of boundaries both within and across enterprises. Managing Business Processes provides students with an understanding of the key aspects of business processes such as collaboration, information flow, people, and business rules. The main objective is to provide an overview of various techniques and tools for analyzing, improving, and implementing business processes and information system controls. The course will utilize cases, process modeling methodologies, and simulations to strengthen the students’ understanding of business processes and their contribution to business performance.

General Education: None
BUSAD 581 Venture Strategy, Planning and Development (3) This is the capstone course in the New Ventures option of the MBA program. Students develop a strategic or operational plan for a new venture.

The purpose of the New Venture option in the MBA program is to prepare students to develop and start their own entrepreneurial ventures or to prepare them to head new ventures in their existing organizations. This course allows them to integrate the material they have learned in the MBA program and the New Venture option, which can lead to the development of a venture.

Evaluation will be on participation in discussion of cases and contributions to fellow classmates. The major weight for evaluation will be on the project. Students with strong papers will be encouraged to apply for funding for their proposals via grants, internal budgets or competitions.

This is the capstone course in the New Ventures option. It will typically be the final course taken, although it is possible that, because of scheduling limitations, one or two courses may be taken after this one, since it will not be offered every semester. It integrates the material from many of the New Venture courses into the final product. It could also be taken as an elective by information science and other students who have taken at least one New Venture course.

BUSAD 582 (LEAD 582) Social Entrepreneurship and Community Leadership (3) This course will provide an opportunity for students to explore concepts of developing and leading businesses that create social value.

This course uses entrepreneurial and leadership skills to craft innovative responses to social needs. Entrepreneurs are particularly good at recognizing opportunities, exploring innovative approaches, mobilizing resources, managing risks, and building viable, sustainable enterprises. Entrepreneurial skills are just as valuable in the social sector as they are in business. Social Entrepreneurship aims at social impact but does not exclude economic wealth creation. Therefore it is not limited to the non-profit sector. Despite a sustained economic boom in this country, numerous social problems remain and some seem to be getting worse. The course will focus on introducing business leadership and entrepreneurship principles to both profit and non-profit organizations whose products and services are designed to create social value.

BUSAD 583 Future of the Biotechnology and Health Industry: Strategic Implications (3) Strategy in biotechnology, pharmaceutical, and health industries; impact of technological innovation and economic, social, political trends, and events.

BUSAD 583 explores and analyzes future trends in the biotechnology, pharmaceutical, and health industries. An analysis of trends in technology, administration and control, advances in research methods, emerging products and services, and preparing for the future will be undertaken. The strategic management impact of these trends will be explored from the perspective of suppliers of goods and services, professional care providers, payors and governmental and regulatory activities. Teaching methods include facilitator led didactic presentations, class discussions/classroom exercises, small group activities centered on case studies, team project/group presentations, and papers. The course will be offered twice annually by the Penn State Great Valley School of Graduate Professional Studies’ MBA program and is a required course in the Penn State Great Valley MBA program option in biotechnology and health industry management.

Faculty member proposing course: Donald Snook
BUSAD 585 Research in Security Valuation (3)

BUSAD 585 focuses on the analysis and valuation of a firm’s equity securities in the financial market using a fundamental analysis. Students will learn how to use different valuation techniques for different types of companies (e.g., companies in financial distress/bankruptcy, private companies, start-up companies with no earnings). The course integrates topics discussed in various finance courses to help students to develop their analytical ability to identify strategies that enhance value creation. The philosophical basis for this topical integration is that valuation of a firm’s securities requires one to know not only the accounting issues involved in the preparation of financial statements and how to analyze financial statements, but also to understand the impact of monetary policy, the operation and regulation of financial markets on the value of the firm’s equity securities. Moreover, because firm value depends on how well the company is managed, a good understanding of its operations in the global markets, its internal control and risk management strategy is also essential. Finally, because valuation is also based on quantitative models, knowledge of quantitative methods is paramount.

BUSAD 802 Cornerstone of Sustainability (3)

BUSAD 802 provides students with an overview of the social, environmental, and organizational sustainability challenges facing business leaders in the 21st Century.

BUSAD 802 Cornerstones of Sustainability (3)

BUSAD 802 provides students with an overview of the social, environmental, and organizational sustainability challenges facing 21st Century business leaders. The course seeks to develop students’ critical capacities for reflection and action based upon a systems thinking framework. Topics to be explored include the history of the sustainability movement, an overview of pressing environmental and social issues, and alternative perspectives on the local and global economy. The course addresses local and global issues surrounding sustainable management and reviews the major frameworks of sustainability that provide the scientific foundations and economic principles of how sustainability can help organizational leaders to achieve natural competitive advantage. Students will apply theoretical and practitioner frameworks to real world cases.

BUSAD 809 Triple Bottom Line Accounting (3)

BUSAD 809 expands the traditional financial and managerial accounting topics to encompass economic, social, and environmental impacts. Students will investigate the strategic linkages between sustainability and the value of the organization, define true costs and become familiar with alternative cost measurement systems, and assess the impact of social risk. Other topics include the design and implementation of management performance evaluation and reward systems that align with social and environmental as well as economic goals, and global reporting standards and best practices.

The Pennsylvania State University
BUSAD 824 Finance and Investment for Sustainable Growth (3) In-depth exploration of the methods of financing available for sustainable growth in developed and emerging markets.

BUSAD 824 provides students with an in-depth exploration of the theories and the applications that financial professionals can leverage to simultaneously earn a profit and have a positive impact on society. The specific financial sectors students will examine are: Capital Markets (to address environmental issues), Commercial Banking (to create sustainable economic development), Project Finance (to reduce poverty and create infrastructure development), and Investment Management (to understand and employ socially responsible investing).

BUSAD 835 Commercialization of Biopharmaceuticals (3) Review organizational processes, regulatory, and environmental issues in the development and commercialization of biopharmaceuticals in the United States and globally.

This course reviews organizational processes, regulatory, and environmental issues in the development and commercialization of biopharmaceutical products in the United States and globally. Business development strategies and tactics that encourage innovation and enable biopharmaceutical organizations to prosper in changing business environments are emphasized. The regulatory environment globally and nationally is reviewed for its impact on biopharmaceutical discovery and commercialization, including the IND (investigational new drug) and NDA (new drug application) process and quality control/assurance. Organizational dynamics including culture, structure, ethical dimensions of management, and special considerations in global marketing are explored. Marketing and brand management, financial forecasting, and structuring sales and marketing are examined for their impact on successful commercialization of biopharmaceutical products.

BUSAD 879 Sustainable Products and Service Development (3) In-depth exploration of the creation and development of sustainable products and services.

BUSAD879 provides students with the opportunity to explore the creation and development of sustainable products and services. The course merges theory and practice, investigates the linkages between products and services, examines historic, current, and potential examples of sustainable products and services, and guides students toward practical tools of inquiry and application that will serve them in their careers. The emphasis in this course is on the process of new product innovation, development and commercialization. The term “product” will be treated in its most general sense in which service may be an important component or the “product” might be entirely a “service”. For example, a software product may have no other function than to provide a service. Students will examine how requirements for sustainable development affect the process of product development and will assess how sustainable products contribute to the firm’s competitive advantage and to its entrepreneurial opportunities. Students will study various sustainability frameworks in integrating the environment and societal externalities in the traditional product design process.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Business Administration (B A)

B A 411 Analyzing Business and Industry (3) Prepares students to obtain an enterprise-wide view of business and industry by integrating operational and financial decisions in a team and learning environment.

B A 411 Analyzing Business and Industry (3)
The course provides the students with a methodology for analyzing the business, introduces the students to sources of financial information available from private and public sources and trains the student to prepare and professionally present business analysis reports. The course, which adopts a user perspective, extends the students' basic knowledge of financial reporting and provides them with a broader context for understanding business that includes economic and social forces, the regulatory environment of businesses and their financial reporting, capital market operations and corporate governance. It applies concepts and decision tools that are studied throughout the curriculum such as present value, financial ratio analysis, break-even point analysis and statistical analysis.

B A 412H B A 412H Honors Integration and Research (2-3 credits)
The purpose of this course is to assist students in developing their Schreyer Honors Thesis. It proceeds by exposing students to research conducted within the various business majors; the research conducted by prior honors students; and having student teams conduct research or contemporary businesses and industries. Typical readings include materials related to evaluating an actual company, prior Schreyer Honors theses, contemporary business articles, prior course projects and supporting academic literature. Written company analyses and oral presentations are made by the teams.

B A 420 Preparation for Career Management (1) This course emphasizes effective career planning by closely examining oneself, the business world, communication styles and strategies.

B A 420 Preparation for Career Management (1)
BA 420 develops students' career preparation and management skills through the close examination of self, the world of work and communication styles and strategies. This course is one of a series in the program which collectively develop the skills and competencies necessary for the business administration student.

The course is designed on the belief that (1) career decision-making is greatly enhanced by considering personal traits such as one's interests, values, goals, and approach to making decisions; and (2) through the exploration of self and world through out-of-classroom learning experiences. The student becomes empowered to apply prior classroom learning outside of the academic environment. These skills are utilized throughout a person's career.

Students who successfully complete the course will be able to:
• Prepare resumes targeted to a range of industries and positions.
• Write effectively to prospective employers.
• Identify personal traits and qualities in the context of career management.
• Demonstrate effective interview techniques.

**B A 421 Project Management (3)** Introduction to Project Management covering all phases of a project including proposal development, planning, execution, and closing.

**B A 421 Project Management (3)**

BA 421 is designed to provide the fundamental skills necessary for success in the business environment. BA 421 is one of a series of courses that collectively develop the skills and competencies necessary for business administration students.

BA 421 is designed to provide students with the fundamental understanding of the Project Management Book of Knowledge that defines the standards of the Project Management Institute (PMI) which is the professional credentialing body of the discipline. This introductory course in project management covers all phases of a project, including: proposal development, planning, execution and closing.

The course will also explore the application of the Theory of Constraints to project management, and will use project management software to demonstrate and reinforce class concepts. The software will also be instrumental in the execution of a business project.

By the end of the proposed new course, students should be able to:

- Identify the role of the project manager within organizations and projects.
- Understand the Processes and Procedures needed to Plan and Control a Project.
- Recognize the options available as well as the inherent strengths and weaknesses of different approaches.
- Define the project scope and priorities.
- Create Work Breakdown Structure (WBS) and integrate it with the organization.
- Estimate and interpret project times and costs.
- Construct project networks and find critical paths.
- Understand and Implement Activity Precedence Logic
- Identify, assess and respond to project risks.
- Schedule project resources and evaluate resource constrained projects.
- Differentiate between the options to accelerate project completion.
- Use Microsoft Project Management Software as a skilled tool for Project Management.

**B A 422W Strategic Business Planning (3)** Study of strategic planning and implementation in multi-industry, multi-cultural, and multi-national settings with emphasis on sustaining competitive advantages.

**B A 422W Strategic Business Planning (3)**

BA 422W is the capstone of the series of business administration courses in the BSB degree. These courses collectively develop the skills and competencies necessary for the business administration student.

BA 422W is designed for students to examine the discipline of strategic management and to develop an appreciation of the criticality of strategic management in guiding a business entity through a changing and challenging environment. The course requires students to build upon their knowledge of business structure, internal and external environments, and functional design as each relates to strategy development and implementation. Students explore methods and techniques to identify strategies best suited to accomplish an entity’s mission and its business objectives.

As a writing intensive (W) course, there is a strong emphasis on development and reinforcement of effective writing skills. Students prepare well reasoned, organized, and constructed bodies of work.

Upon successful completion of the course, students will be able to:

1. Identify environmental threats and opportunities impacting a firm.
2. Identify strengths, weaknesses and competencies of a firm.
3. Effectively apply critical thinking skills to design strategic alternatives and then recommend the best alternative.
4. Critique and evaluate strategic actions taken by firms.
5. Explain the profound effects that a strategic move (either at the corporate level or at the business level) can have on the entire organization.
6. Demonstrate exceptional skills in presenting complex business information and issues.
7. Efficiently research a firm or industry using a variety of sources.
8. Demonstrate proficiency in analyzing business cases and formulating well reasoned recommendations when no “right” answer exists.
9. Demonstrate effective leadership skills in a group environment.
B A 441 Strategies for Enterprise Sustainability (3) An understanding and analysis of how environmental and sustainability issues are impacting business strategies and ultimately profits.

Enterprise globalization warrants a greater level of awareness and responsibility in seeing that products and services maintain a high level of integrity, quality, and reliability; products need to be produced and moved throughout the supply chain in a manner that does not cause unacceptable environmental or social burdens, but that also allows for acceptable profits. We will examine both external and internal forces, such as environmental groups, policy-makers, and consumers that impact business strategies. This will be put into the context of the “triple bottom line” with an understanding of its challenges and opportunities. Business students will benefit by a better understanding of environmental/sustainability issues that impact operations and strategies. Students will learn via analyses of cases studies and by working in teams to solve real-world problems faced by chosen organizations. Focus will include all key aspects of an enterprise, from procurement to product development, and from human resources to supply chain solutions.

B A 442 Sustainable Behavior of Consumers, Firms, and Societies (3) Strategies to influence sustainable behavior considering consumer response and marketing communications.

Sustainability is a broad domain concerning the extent to which environmental, economic, and social practices are viable for current and future generations. Consumer awareness of sustainability issues has evolved from an emerging social movement to mainstream values, but increasing sustainable behavior remains a challenge. This course is designed to provide students with the knowledge to enhance sustainable behaviors in firms, among consumers, and in society at large. In doing so, this course will include frameworks for understanding how to influence sustainable practices, consumer response to sustainability, and marketing communication issues as well as real-world examples of sustainable practices and issues, offering both a theoretical and applied approach. The course may also include a project which will entail student teams working on a real-world sustainable behavior problem in collaboration with a business or segment of the university campus when available or other course project addressing a relevant sustainability issue. Students should leave the course with an understanding of sustainability issues in the current marketplace and the knowledge and ability to influence sustainable behaviors. Students will enter their career with the knowledge and skills to be a sustainable business decision-maker and foster sustainable behavior.

BA 495A Business Internship (3-6 per semester/maximum of 6) Guided professional practicum in business consisting of 3 or 6 credits of supervised fieldwork in business.

BA 495A Business Internship (3-6 per semester/maximum of 6)

BA 495A facilitates the application of students’ prior classroom learning in a field setting. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student.

The course is designed to provide students with a firsthand opportunity to experience the challenges and rewards of the business professional. Essentially, an internship bridges the gap between the academic environment and the professional environment. Internships provide an opportunity for students to link theory with practice in a nonacademic setting. Internships provide practical, real-world experiences which cannot be simulated in the classroom.

Upon successful completion of an internship, students will:
• Have a better understanding of employer expectations related to career advancement.
• Have an enhanced strategic view of the industry/business segment in which they worked.
• Have experience integrating and using their knowledge and skills from the classroom.
• Have increased awareness of professional and technical areas of strengths and weakness.

BA 495B Undergraduate Research in Business (3-6 per semester/maximum of 6) Guided student research in business, culminating in the presentation of the research project at a professional conference.

BA 495B Undergraduate Research in Business (3-6 per semester/maximum of 6)

BA 495B provides students an opportunity to apply prior coursework to address a business problem or research question in far greater depth than a traditional research paper. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student.

The course provides the students with an opportunity to work intensively on a research project of extended duration and depth of analysis with a supervising faculty member. This course introduces the students to conducting business research on a more advanced level. Students will have the opportunity to develop the research question(s), read extensively in the academic literature, gather and analyze data, and thereby extend learning from prior coursework in a research setting.
**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**B A 495C** Undergraduate Research in Business (3-9) Guided student research in business administration; application of analytical or research techniques to business problems.

**B A 495C. Undergraduate Research in Business (3-9)**

This course is a senior-level project activity that is intended to build upon all of a student’s previous coursework in business, links the theoretical with day-to-day practical applications, and represents the single largest event in the Bachelor of Science in Business (BSB) program. This course is where the student will design a research project in which they have a particular interest and under the supervision of a faculty member will carry out data collection and analysis, prepare a comprehensive paper, and give a presentation of their work. Research as defined for this course means original research of actual business situations or phenomena, the findings, or results of which may be of value to others.

As with many of the other courses within the BSB curriculum, this course further reinforces the development of writing and presentation skills, but also builds upon the competencies attained in project management whereby the student rather than the instructor drives the time schedule and must coordinate their own unique set of resources, including scheduling time as needed ith the supervising instructor.

This is one of the five signature BSB courses (B A 321, B A 322, B A 421, B A 495A, B, or C and B A 422W) and should e taken as close as possible to the end of the course of study. It is recommended that B A 495C be taken concurrently with A 422W, the capstone course for the BSB degree.

**Independent Studies (1-18)**

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Special Topics (1-9)**

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Sustainable Marketing Strategy for Consumers, Firms, and Societies (3)**

Sustainability is a broad domain concerning the extent to which environmental, economic, and social practices are viable for current and future generations. Consumer awareness of sustainability issues has evolved from an emerging social movement to mainstream values, and marketing strategy plays an important role in a business’ ability to respond to these issues in a genuine manner. This course focuses on the role of sustainability in the marketplace and marketing strategies to effectively engage customers and stakeholders around sustainable issues.

**Foreign Study--Business Administration (1-18)**

Study in selected countries of business institutions, functions,

B A 502 Competencies for Converging Economies: Teams, Negotiations, and Ethical Leadership (2)

B A 502 provides students with some basic knowledge about predictable team dynamics and how to constructively deal with issues that arise in the first year MBA teams. The course focuses on observation, diagnosis, and intervention skills for developing effective teams. Topics include diagnosing group dynamics, giving and receiving feedback to teammates, cross-cultural communication and conflict management techniques. The course provides a real-time practicum for diagnosing team issues and addressing team problems and conflicts. Students apply team process concepts and techniques as they work to complete team projects in their other core MBA classes. Students leave the course with an understanding of how to successfully lead a team and how to diagnose and correct dysfunctional team behaviors.

B A 505 Negotiation Theory and Skills (1-3) Development of managerial skills for distributive and integrative negotiations at the two-party and team levels.

B A 505 Negotiation Theory and Skills (1)
The ability to effectively negotiate is an essential skill for managers. Negotiations not only occur with customers or clients, but also between bosses and subordinates, among teammates and across departments. Being able to craft a successful deal, especially in difficult circumstances, requires knowledge of yourself, as well as the substantive material that you are negotiating. Effective negotiators know their own limitations as well as their strengths. They also listen well and have good analytical skills. And, they can craft agreements that garner gains for themselves as well as for other if such gains are possible. Successful negotiating is also closely allied with successful teamwork since both processes require listening, persuasion and influence skills and creativity.

This course will introduce students to the difference between traditional (distributive) bargaining and interest-based (or integrative) negotiations. Students will learn the rudiments of interest-based negotiating and practice it in several negotiation simulations. They will learn how to identify their own and others’ interests, to create and claim value and to craft constructive agreements for all parties. The course will concentrate on two person and small group negotiations as well as to deal with difficult opponents.

B A 536 Global Immersion (1-3) Exploration of the opportunities and the challenges of doing business in another economic region.

Global Immersion (2)

Global Immersion is designed around a visit to another economic region. In the past, MBA students have visited such countries as Belgium, Brazil, Chile, China, Czech Republic, France, Ireland, Turkey, and Singapore. In each country, students visit both local and multinational businesses to understand how a business gets established and run in another country; students also meet with industry and government officials to get their perspectives on the economic policies of the country. Each Immersion is coordinated by a faculty leader who plans the visit so as to appeal to a wide range of student interests.

B A 571 Strategic Management (1-3) Analysis and application of concepts and techniques aimed at successfully developing and implementing competitive strategy in a complex business environment.

B A 571 Strategic Management for Converging Economies (3)
This course introduces students to the field of strategic management and the skills and tools used by general managers to make strategic decisions. Students learn to use frameworks and perspectives for analyzing industries, competitors, and companies with an overall objective of positioning the firm to attain and sustain competitive advantage. Students learn how to identify the industry and firm-level determinants of profitability and then relate those factors to the development of competitive strategy within the context of responsible business practice. Students also learn how to evaluate strategies to understand how and why companies are successful or not. Finally, students will learn how senior managers use integrative approaches for solving strategic problems.

B A 572 Introduction to Business Research (3) An introduction to issues involved in framing, defending, and evaluating business research programs.

B A 572 Introduction to Business Research (3)
This course introduces incoming business doctoral students to the research process. It covers the methodology of framing business research programs, including the problem of generalizing from business data to business theories, problems involved in testing theories, arguments for and against paradigmatically based business research, and issues involved in attempting to construct so-called rational accounts of business research. The course will emphasize similarities and differences across major approaches to business research.

B A 575 Capstone Business Case (4) A team-based project course that requires students to analyze an actual business
problem from a firm or nonprofit organization.

**B A 575 Capstone Business Case (4)**
The Capstone Business Case course is designed to allow second-year MBA students the chance to integrate the knowledge they have gained to date in the program. True business problems are not narrow, functional area problems; rather they require teams of people to come together to jointly solve a problem that extends across many areas. For example, to assess the commercial viability for a new product requires contributions from economics, marketing, supply chain, finance, strategy, and corporate innovation. The more opportunities students have to work on real cross-functional problems, the better prepared they will be to solve them once they are actually on the job. In addition, working on a team and having to present the results gives students the ability to practice communication, teamwork, and leadership skills that are vital to success on the job.

**Business Economics (BUSEC)**

**BUSEC 502 Prices, Markets and Competitive Strategy (2)** Determination of outputs and prices in markets used by the firm; market structure and the design of competitive strategy.

**BUSEC 502 Prices, Markets and Competitive Strategy (2)**

Business firms depend on markets to purchase goods and services (including human resources) from suppliers to create its saleable product (which may be a good or service). The firm then uses markets to distribute its products to buyers. Markets involve rivalries of various types. Firms compete with suppliers and other producers for resources. Firms face competitors to sell their output to customers. To that extent, some parallels can be drawn between business strategy and competitive strategy in games such as football or bridge that also involve rivals. Business strategies often apply game theory as developed by mathematicians.

The course begins with basic economic principles of price and output determination in markets. With this foundation, students proceed to examine market structure, which is the nature of competition among firms, ranging from monopoly (one dominant market supplier) to pure competition (many non-dominant suppliers). Only a relatively short amount of the course will be given to monopolies and purely competitive markets. Most of the course will focus on markets in which business firms that have some market power (which is common where there is a small number of inter-dependent sellers) and are rivalrous. The Bertrand and Cournot oligopoly models will be heavily used for studying design of competitive strategy in rivalrous markets.

Firms develop by means of internal growth, horizontal integration, or vertical integration. Horizontal integration involves economics of scope and scale, as when two similar grocery stores combine. Vertical integration concerns mergers and acquisitions along the supply chain, as when an auto tire manufacturer mergers with a rubber producer or buys auto tire retail stores. This part of the course will give business students an understanding of how firms and market structures develop. To further this discussion of rivalries students will learn how market structure changes by means of entry and exit of businesses and they will learn the methods used by firms to attain comparative advantage in the market.

The basic theme carried through the course will be development and evaluation of competitive strategies by the firms' managers. The course will be concluded by applying the Five Forces framework for designing competitive strategy (as developed by Michael Porter and others.) This framework is a useful means of integrating the various topics of the course.

BUSEC 503 Economic Environment of Business (2) Analysis of the regulatory and global economic environment within which the firm operates and its implications for business strategy.

BUSEC 503 Economic Environment of Business (2)
Most courses in the School's M.B.A. program focus on managing the individual firm. However, business firms operate within an economic environment that provides opportunities, constraints, and threats. This course enables the firm's decision-makers to assess this environment and to design strategies that are appropriate for conditions in the firm's global, domestic, or regional spheres of operation.

The path of changes in the economic environment over time is generally described as the business cycle. The course begins with consideration of business cycle indicators, such as growth of real GDP, unemployment rates and inflation. Students employ simple models of the business cycle to explain recessions, inflation, and other environmental conditions. Class discussions will include consideration of appropriate managerial decisions under each of a variety of these conditions.

Financial markets are important in determining economic conditions. Students learn how the interest rate yield curve and other financial market indicators give insight into expectations about credit conditions and economic change. Financial markets also play important roles in determining availability and costs of funds.

Economic policy is the effort of government to change the economic environment. An important part of the course is the study of these policies. Fiscal policies consist of the use of taxation and government spending to shape the environment. Monetary policy is the effort to influence credit conditions and interest rates for the purpose of achieving a specific environmental change.

Domestic economic conditions are increasing shaped by global conditions. Therefore, a significant part of the course is devoted to analysis of foreign exchange rates, interest rates, and monetary policies of other nations. In addition, students will analyze the impacts of barriers to international trade (primarily quotas and tariffs and foreign exchange controls) and investment.

The course concludes with examination of government regulation and its effect on business. Many regulations are designed to counteract negative external effects of decisions made by private profit-pursuing firms, especially with regard to pollution of the natural environment. Anti-trust policies, patent and copyright laws. These regulations provide constraints and opportunities for business managers.

Students demonstrate achievement through completion of short cases, class discussions, and an examination.

Business Law (B LAW)

B LAW 424 (R M 424) Real Estate Law (3) Analyze contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property.

B LAW 424 B LAW (R M) 424 Real Estate Law (3)
Analysis of contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. The objectives for this course are: (1) to provide students with an understanding of essential U.S. real estate property law, including the rights private property owners may obtain, how ownership and transfer are handled in view of present and future interests, constitutional issues that impact real estate ownership, and the legal aspects of modern real estate contractual transactions; (2) to teach students the ability to spot the legal issues arising from the above as future business leaders and (3) to introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. Student progress and mastery of the material will be evaluated through periodic examinations.

B LAW 425 (R M 425) Business and Environmental Regulation (3) Examines the interplay between environmental regulation and commercial activities, including property interests.

B LAW (R M) 425 Business and Environmental Regulation (3)

The Pennsylvania State University
R M/B LAW 425 is an advanced business law course based on foundation knowledge in legal regulation, property rights, and enterprise. The course explores the interplay between environmental laws and property rights and includes topics such as: common law regulation of the environment, government power and private rights, zoning, protecting endangered species, regulating the transportation and storage of hazardous materials, and Federal regulation of water quality. Students will develop their comprehension and analysis of the legal reasoning processes along with the ability to identify legal issues from the perspectives of the government, property owners, and environmental interest groups. The instructional methods will include class discussions of readings and video presentations. To facilitate thorough analysis of the competing interests affecting environmental law, this course will employ the Socratic teaching method and place a special emphasis upon class discussion and interaction.

B LAW 444 Advanced UCC and Commercial Transactions (3) All articles of the Uniform Commercial Code, banking relationships, debtor-creditor law, and bankruptcy law.

B LAW 444 Advanced UCC and Commercial Transactions (3)  
This course is designed to: (1) provide the student with a systematic study of the laws governing sales transactions, the instruments for financing those transactions and rights and liabilities of debtors and creditors (the Uniform Commercial Code governs these issues); (2) to explore current trends in the law affecting commercial transactions; (3) to develop further the student’s legal reasoning processes; (4) to enhance the student’s ability to identify legal issues from the business decision maker’s and financial auditor’s perspectives. Instructional methods will include lectures, readings, multimedia content, and class discussions. Student progress and mastery of the material will be evaluated through periodic examinations. Some state C.P.A. Boards require completion of this course as a prerequisite to obtaining certification as a public accountant. Completion of the course will be credited toward fulfillment of the requirements for the Legal Environment of Business Minor.

B LAW 445 Advanced Intellectual Property and Competition Law (3) Copyrights, trademarks, patents, and trade secrets followed by related topics in the regulation of competition.

B LAW 445 Intellectual Property & Competition Law (3)  
The objectives for this course are to (1) provide students with an understanding of U.S. and international law that supports the creation of beneficial information via intellectual property rights, allows government to regulate information property through antitrust and privacy statutes, and promotes business development by encouraging competitive uses of information; (2) teach students the ability to spot the legal issues arising from the above as future business leaders and (3) introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. The course builds on the introductory business law curriculum by providing an advanced and detailed study of specific areas of law that are highly valuable to modern, technology-driven businesses.
Effective: Fall 2011
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

B LAW 446 Employment Law (3) Examines the legal and regulatory environment of employment relationships. Topics include anti-discrimination; worker health and safety; and labor relations laws.

B LAW 446 Employment Law (3)

The course is designed for business students seeking a solid understanding of labor relations and employment law. It is not a general overview or introduction to law course for those seeking to enter law school. Labor and employment law has developed and changed over the past seven decades, and continues to evolve as the economic model and means of productions changes globally. With the passing of the National Labor Relations Act and subsequent amendments thereto, including development in the ability of public employees to engage in concerted activity, the understanding of the modifications in the employer-employee relationships is necessary for successful business executives and front-line managers. While a thorough understanding of the underpinnings of these laws is necessary, this is only a portion of the issues at hand. The ability to apply these laws in current working environments along with interpreting and critiquing these laws will assist in the preparation of future corporate managers.

The course goes into detailed discussion regarding the employment at will doctrine, wrongful discharge, workplace torts, and employee privacy and monitoring. With this foundation, the course then covers civil rights and discrimination based on race, color, religion, gender, sexual orientation, family obligation, disability, and national origin are covered using Supreme Court cases that have tested the validity and soundness of our federal legislation. The closing part of the course focuses on organized labor through the process of unionizing and union membership, negotiations and economic pressure used to obtain concessions in collective agreements. Additionally, fair labor laws and occupational health and safety requirements to diminish workplace accidents and improve productivity is discussed.

For each of the topics presented, detailed analysis of prominent cases will be discussed with the expectation that students can apply these case decisions to current employer/employee situations. Exposure to differing opinions, reversed rulings, and detailed legal processes will provide students with a broad understanding of the complex nature of legal proceedings and how these processes impact labor and employment relations in the United States. Content synthesis and critical analysis are the learning goals of the course.

**Chemical Engineering (CH E)**

**CH E 410 Mass Transfer Operations (3)** Introduction to principles and applications of mass transfer, with focus on the design of equilibrium stage and continuous contacting separation processes.

**CH E 410 Mass Transfer Operations (3)**

The objective of this course is to present the principles of mass transfer and their application to separation and purification processes. The course integrates fluid dynamics and thermodynamics and proceeds to develop rate expressions for mass transfer in multiphase, multicomponent systems. Starting with Fick’s law and macroscopic balances the course moves to the design of large scale separation processes such as equilibrium stage separations (distillation, extraction) and continuous separation (absorption towers, scrubbers) for the separation and purification of chemical compounds. The course also introduces the use using modern software tools such as HySys, used in the actual design of such processes and also in the capstone design course.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CH E 430 Chemical Reaction Engineering (3)**

This course teaches the principles of reaction engineering and reactor design. It is one of the core subjects in the chemical engineering curriculum and it is normally scheduled in the senior year. Students learn how to apply stoichiometry in combination with a rate law to design a chemical reactor that produces the desired conversion of reactants. The design of various types of chemical reactors is discussed at length, including continuous stirred-tank (CSTR), plug-flow (PFR), continuous-operation and batch-operation reactors. Additional topics include heterogeneous reactors, catalytic systems and fluidized beds, the design and optimization of reactor networks, and safety. The course integrates fluid mechanics and heat transfer to the design and analysis of isothermal and non-isothermal reactors. It leads to the capstone design course in which chemical reactors are integrated into a chemical plant.

Bachelor of Arts: None
Effective: Summer 2007
Prerequisite:

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CH E 442 (MATSE 448) Polymer Processing Technology (3)**

CH E 442 involves both lectures and laboratory experiments illustrating the interrelations between structure, processing conditions, and physical properties of industrial polymer products. Students apply engineering fundamentals and principles of polymer melt rheology to analyze industrial processing operations. Unlike typical polymer processing courses offered at most U.S. universities, CH E 442 covers detailed analyses of individual processing operations, rather than dwelling on underlying polymer science fundamentals that are covered elsewhere in our curriculum. Students learn to optimize processing variables, given a particular set of materials and conditions, establishing how processing conditions impact the physical properties of finished polymer products. We explore the physics governing processing operations including extrusion, mixing, calendering, blow molding, thermoforming fiber spinning compression molding, injection molding, and nanolithography.

CH E 446 Transport Phenomena (3) Fundamental treatment of mass, heat, and momentum transfer; emphasis on transport properties and mathematical models of chemical engineering transport processes.

This course is an intermediate course in transport phenomena intended to expand on the materials introduced in the required undergraduate courses on momentum, heat and mass transfer. It introduces the student to the rigorous formulation of transport problems using the conservation principles and flux expressions, and identifies the similarities and differences among the transport processes for momentum, heat, and mass. The main focus of the course is on microscopic treatment of transport problems, with particular emphasis on proper use of dimensional analysis and scaling arguments. Transport phenomena is a rather mathematical subject and the student is assumed to be familiar with ordinary and partial differential equations, elementary vector analysis, and elementary numerical techniques. This course is intended to prepare the student for a graduate-level course in transport phenomena.

CH E 449 Bioseparations (3) Analysis and design of separation processes for the purification of biological molecules.

Bioseparations (3)

This course introduces students to the principles and applications of separation processes used for the purification of biological molecules, including fine chemicals, pharmaceuticals, and therapeutic proteins. By the end of the course students will be able to perform preliminary design calculations and scale-up of specific separation systems including centrifugation, filtration, chromatography, and membrane processes. Students will also be able to develop outlines of overall separation schemes appropriate for the purification of different biological products. This course is required for the Bioprocessing and Biomolecular Engineering Option in Chemical Engineering.

Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CH E 450 Process Dynamics and Control (3) Analysis of time-dependent variables in chemical process plants; reactor design and control; computer applications.

Process Dynamics and Control (3)

The course is an introduction to chemical process dynamics and control and is offered as a technical elective. The first part of the course is devoted on the dynamical behavior of systems and the mathematical tools (differential equations,
Laplace transforms) used in their analysis. The second part of the course covers the design and operation of various types of controllers, including proportional, integral and differential and their combinations. The theoretical principles are demonstrated with applications to chemical engineering processes such as storage tanks, chemical reactors and separation processes.

**CH E 452 Chemical Process Safety (3)** This course provides an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant addidents.

The course will provide an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant accidents, their causes, and steps to eliminate them, with emphasis on inherently safe designs. Chemical Plant accidents deal most often with Flammability and Toxicity issues and these are dealt with in great detail. The role of Human Error in accidents is also examined. Actual case studies (including Bhopal, BP Texas City, Piper Alpha) will be examined to show the relevance in today's workplace. The course requires active student participation via discussions of system designs, their weakness and improvements. Guest lecturers will also be invited to supplement the material. This is offered as a senior elective in Chemical Engineering.

Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CH E 470 Design of Chemical Plants (3)** Lectures and practicum on methods and calculations, including economic evaluations for the design of chemical plants; formal technical report required.

The chemical engineering capstone design course introduces the principles of process design and economic evaluation utilizing various industry computer tools, with special emphasis on process simulators. The student will develop critical design logic to evaluate a process, starting with block flow diagrams and simple material balances utilizing practical heuristics and then build the process flowsheet through computer simulation, flowsheet optimization, and detailed equipment design.

**CH E 480M Chemical Engineering Laboratory (Honors) (3)** Data interpretation and analysis from student-operated experiments on pilot-plant equipment. Individual written and oral technical reports.

CH E 480M is the laboratory course in chemical engineering. The objectives of CH E 480M is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior-senior-level classes. This course does not introduce new material but focuses instead on planning, execution and interpretation of experiments. The special aspect of the honors section is that students will be given an open-ended experimental research project.

CH E 480W Chemical Engineering Laboratory (3)
This is the laboratory course in Chemical Engineering. Its objective is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior- and senior-level classes. CH E 480W does not introduce new material but focuses instead on planning, execution and interpretation of experiments.

The course is team-based and includes laboratory sessions as well as lectures. Evaluation is based on the written and oral reports given based on experiments performed. These reports undergo several drafts, in which at different times students or faculty evaluate the report, suggesting corrections. Course evaluation may also include a "pre-exam" to assure that the students understand technical material coming into the course. Peers assess each others’ performance (contributing to the grade), as does the faculty.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CH E 494 Research Projects in Chemical Engineering (1-6)
An original problem, including a search of the literature, experimental investigation, and preparation in formal thesis form.

Research Projects in Chemical Engineering (1-6)

CH E 494H Research Projects in Chemical Engineering (Honors) (1-6)
Undergraduate research projects for honors students leading to the generation of a thesis for the Schreyer Honors College. The content of this course typically falls within the research interests of the chemical engineering faculty. The work can be computational, theoretical or experimental in nature and culminates with the writing of an honors thesis. Students should select a thesis advisor prior to enrolling in this course and file an honors thesis proposal report form with the Schreyer honors College. A student outside of chemical engineering can take this course with a co-advisor outside of chemical engineering; however, the CH E Faculty member is responsible for assigning the grade.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CH E 496 Independent Studies (1-18)
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**CH E 576 (C E 576) Environmental Transport Processes (3)** Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers.

**CH E(C E) 576 Environmental Transport Processes (3)**

This course covers the fundamentals of mass transport of chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (rivers, lakes, and groundwaters). The course is open to all graduate students interested in the fate and transport of chemicals in the environment, and it is required for all students pursuing a graduate degree in environmental engineering.

Course grades are based on three exams and graded homework assignments. This course is taught every fall semester at the University Park campus.

**CHEM 402** Chemistry in the Environment (3) Chemistry of the atmosphere, natural waters, and the land surface with particular focus on human influence on processes occurring therein.

**CHEM 402 Chemistry in the Environment (3)**

Fundamental and descriptive aspects of the sources, reactions, transport, and effects of chemical species, both natural and synthetic, in water, air, soil, and living systems, and the influence of human activities on these processes. The goal of the course is to gain an understanding of the theory and application of the fundamental processes that determine the distribution and transport of inorganic and organic substances in the environment; the techniques for determining important physicochemical properties that influence environmental fate; and the major sources of important classes of environmental chemicals. Rapid increases in technological sophistication have led to startling innovations in our everyday lives almost unthinkable a century ago. However, at the same time, advances in science and engineering have complicated how we live and react to the new technologies and, at times, force consideration of complex issues before our need for reflection. Approaching problems from different directions and perspectives is fundamental to our understanding of Earth processes. New and continued emphasis in global warming, loss of biodiversity, ozone layer depletion, acid mine drainage, sustainable development and energy use are only a few of the major environmental threats which require an intelligent and informed response. As such, the course provides a balanced discussion of the hard science and social sciences aspects of environmental issues.

**CHEM 406 (NUC E 405)** Nuclear and Radiochemistry (3) Theory of radioactive decay processes, nuclear properties and structure, nuclear reactions, interactions of radiation with matter, biological effects of radiation.

**CHEM 406 Nuclear and Radiochemistry (3)**

CHEM 406 provides a basic introduction to many of the important physical phenomena in nuclear and radiochemistry and the theories that describe them. The exposition of both experimental phenomena and theory complements the content of other upper-level courses in physical chemistry such as CHEM 450 and 452.

Specifically, the types of radioactive decay are described, and, using this information, the equations that relate the growth and decay, i.e., the kinetics, of radioactive nuclei are derived. In parallel, a variety of types of nuclear reactions, such as neutron capture are introduced and used to develop the equations that governing the kinetics of nuclear reactions, including the concept of cross section. To describe the nature of nuclear matter, the relationships between energy,
binding energy, and mass, are developed and augmented with the introduction of related quantities including the nuclear magnetic-dipole moment, total angular momentum of the nucleus, and Fermi-Dirac and Bose-Einstein statistics. A basic introduction to quantum mechanics, including several problems of increasing complexity, namely, the one-dimensional particle-in-a-box, the three-dimensional particle-in-a-cubic-box, and the particle-in-a-spherical box is then provided. The latter problem forms the basis for developing the single-particle shell-model of the nucleus, which is compared to the single-particle shell-model of the atom, namely, the hydrogen-atom problem. The barrier-penetration theory of alpha-decay, Fermi's phase-space theory of beta-decay, and the selection rules for gamma-ray decay are then presented. Final topics include the interactions of radiation with matter and the biological effects of radiation.

CHEM 408 Computational Chemistry (3) Introduction to numerical and nonnumerical computer uses in physical science.

CHEM 408 Computational Chemistry (3)

CHEM 408 introduces some of the many ways in which computers are used in modern chemical research. The main emphasis is on “molecular modeling” including such topics as electronic structure calculation, molecular mechanics, molecular dynamics and Monte Carlo simulation methods. In lesser detail, chemical informatics will also be considered, time permitting. Discussion of the theoretical underpinnings of these various methods and their range of applicability will be combined with exercises illustrating the use of several current chemical software packages and with assignments based on critical reading of illustrative literature papers.

CHEM 410 Inorganic Chemistry (3) Conceptual and descriptive aspects of nontransition elements, covering structural, thermodynamic, and kinetic features.

CHEM 410 Inorganic Chemistry (3)

CHEM 410 covers structure and bonding in inorganic chemistry, including the chemistry of main group elements and selected topics in transition metal chemistry. Theories and models of chemical bonding (valence bond theory, crystal field theory, and molecular orbital theory) are applied to inorganic molecules, coordination compounds, and solids. The course also covers the following topics: periodic trends in the chemistry of the d- and p-block elements, structural solid state chemistry, magnetism of transition metal complexes and inorganic solids, ionic and covalent bonding in solids, electronic properties of metals, alloys, superconductors, and semiconductors, synthesis of inorganic materials, and properties of nanoscale inorganic solids.

CHEM 412 Transition Metal Chemistry (3) Structure and bonding of compounds containing transition metals.

CHEM 412 Transition Metal Chemistry (3)

CHEM 412 covers the chemistry of the transition metals, and in particular the d-block elements. Major areas of emphasis include coordination chemistry, organometallics, and the role(s) of transition metals in biology. The course covers the following topics: molecular symmetry with applications to bonding and vibrational spectroscopy, coordination chemistry, structural and optical isomers, crystal and ligand field theories, electronic structure and electronic transitions, spectroscopic methods for probing transition metal complexes, kinetics and thermodynamics of ligand substitution reactions, oxidation-reduction reactions, organometallic complexes and their basic reaction types, heterogeneous and homogeneous organometallic catalysts and their reaction cycles, the interactions of metal ions with biological molecules, the function of transition metal ions in metalloproteins, and medically-important transition metal complexes.

The Pennsylvania State University
CHEM 412 Transition Metal Chemistry (3)

CHEM 412 covers the chemistry of the transition metals, and in particular the d-block elements. Major areas of emphasis include coordination chemistry, organometallics, and the role(s) of transition metals in biology. The course covers the following topics: molecular symmetry with applications to bonding and vibrational spectroscopy, coordination chemistry, structural and optical isomers, crystal and ligand field theories, electronic structure and electronic transitions, spectroscopic methods for probing transition metal complexes, kinetics and thermodynamics of ligand substitution reactions, oxidation-reduction reactions, organometallic complexes and their basic reaction types, homogeneous and heterogeneous organometallic catalysts and their reaction cycles, the interactions of metal ions with biological molecules, the function of transition metal ions in metalloproteins, and medically-important transition metal complexes.

CHEM 413 Chemistry of the Elements (4)

Chemistry of the Elements (4)

CHEM 423W Chemical Spectroscopy (4)

This course reviews modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis. Topics include electronics, optics, and atomic and molecular spectroscopy (UV-VIS, Fluorescence, FTIR, Raman, liquid- and solid-state NMR). The course thoroughly integrates lecture and laboratory activities. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write research papers during the semester. The reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature.

The course is designed to be rigorous and comprehensive in scope. The writing component for this course includes: maintaining a proper laboratory notebook; reports; and an oral poster presentation. All writing elements are reviewed and graded by the instructor and teaching assistants.
CHEM 423W Chemical Spectroscopy (4) Modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis.

CHEM 423W Chemical Spectroscopy (4)

This course reviews modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis. Topics include electronics, optics, and atomic and molecular spectroscopy (UV-VIS, Fluorescence, FTIR, Raman, liquid- and solid-state NMR). The course thoroughly integrates lecture and laboratory activities. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write research papers during the semester. The reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature.

The course is designed to be rigorous and comprehensive in scope. The writing component for this course includes: maintaining a proper laboratory notebook; reports; and an oral poster presentation. All writing elements are reviewed and graded by the instructor and teaching assistants.

CHEM 425 Chromatography and Electrochemistry (3) Gas, liquid, and other forms of chromatography; important techniques of electrochemistry.

CHEM 425 Chromatography and Electrochemistry (3)

The course topics include gas, liquid, and other forms of chromatography, mass spectroscopy, and important techniques of electrochemistry. The course material is designed to increase student understanding of both the analytical instruments used in the laboratory and the principles underlying the measurements. Evaluation of student performance is based on the level to which a student understands how an instrument operates and how particular components determine overall performance and specifications; limitations to measurements as a function instrument design; criteria by which one selects an appropriate instrument to obtain the desired measurements; and criteria by which one selects appropriate components to build an instrument for specific uses.

CHEM 427W (FRNSC 427W) Forensic Chemistry (4) Analytical and instrumental methods used in the forensic sciences with special emphasis on the analysis and characterization of trace evidence.

CHEM (FRNSC) 427W Forensic Chemistry (4)

The purpose of this course is to provide students with a rigorous and comprehensive exposure to the techniques and methods used in private, state and federal crime labs in the analysis of trace evidence. The course thoroughly integrates lecture and laboratory activities to explore the history, controversies and current issues related to each topic. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write five research papers during the semester. Four of the reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature.

The course is relevant to any student majoring in Forensic Sciences or who has an interest in obtaining employment in a crime lab. The course is required for accreditation through the American Association of Forensic Sciences and is recommended by the National Institute of Justice in their published recommendations for undergraduate curricula in the forensic sciences. The proposed course and the course in Forensic Anthropology/Biology comprise the core 400-level science courses required in the Forensic Sciences major.

The course is designed to be rigorous and comprehensive in scope. Grades will be based on in-class lecture examinations (20%), problem sets (10%), laboratory notebooks (15%), laboratory write-ups (30%), and a term project (written and oral presentations; 25%). The writing component for this course includes: maintaining a proper laboratory notebook; five approximately 10-page reports; and an oral poster presentation. All writing elements are reviewed and
graded by the instructor and teaching assistants. Students are allowed to correct, or rewrite, and resubmit notebook entries for three separate submissions (notebooks are graded a total of eight times throughout the semester) and the written reports excluding the final project report. Students are required to submit a preliminary poster for a non-graded review prior to the oral presentation. The writing component of the course accounts for 55% of the total course grade.

CHEM 430 Structural Analysis of Organic Compounds (3) Spectroscopic methods as tools in gross and detailed structural analysis and interpretation within the framework of modern theory.

CHEM 430 Structural Analysis of Organic Compounds (3)
This course is designed to introduce students to the spectroscopic techniques that are used to elucidate the structures of organic molecules of various molecular weights. Some theoretical background will be provided and is necessary, but the emphasis is on solving problems. The course starts with fundamental concepts and techniques learned in sophomore organic chemistry and builds toward state-of-the-art methods used by modern organic and bioorganic chemists. Topics to be covered include: UV spectroscopy, 1D- 1H and 13C NMR, spin-spin (scalar) coupling and chemical shifts, IR spectroscopy, simple and advanced mass spectroscopic techniques, stereochemistry, advanced NMR topics including advanced 1D and 2D NMR and correlation spectroscopies. Some consideration will also be given to the challenges associated with structure determination in biomolecules.

CHEM 431W Organic and Inorganic Preparations (4) Preparation, purification, and characterization of both organic and inorganic compounds by modern methods.

CHEM 431W Organic and Inorganic Preparations (3)
CHEM 431W is a one-semester, writing-intensive advanced laboratory course that focuses on the preparation, isolation, purification, and characterization of organic, organometallic, and inorganic compounds. Students are expected to use the techniques learned in the introductory organic chemistry laboratory and will learn more advanced techniques such as the use of air-free and anhydrous reaction conditions, glove bags, vacuum manifolds, vacuum distillations, flash chromatography, solvent stills, and gas-tight syringes. Molecular modeling techniques are also introduced. Students are given hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Students are expected to search the chemical literature using databases and online journals and to write formal lab reports in ACS style. The lab assignments include syntheses, separating an unknown mixture, and a team project, which includes a written proposal, synthetic work, a final report, and a poster presentation.

CHEM 440 Instrumental Analysis (3) General instrumental theory and methods used in common atomic and molecular analyses.

CHEM 440 Instrumental Analysis (3)

This course presents analytical methods used by the chemistry community in a way that extends and compliments the treatment in CHEM 221. Preliminary discussions will entail sample preparation for organic and inorganic samples, quantitative measurements, sensitivity and limit of detection. Techniques addressed will cover the areas of separation, qualitative and quantitative optical spectroscopic techniques, mass spectrometry, electroanalytical techniques and surface analysis. In separation techniques, methods presented will be capillary electrophoresis, gas, liquid, and ion chromatography. In optical spectroscopy, methods presented will be infrared, Raman, nuclear magnetic resonance, ultraviolet and visible molecular absorption, chemiluminescence, inductively coupled plasma emission, atomic fluorescence, atomic absorption and emission spectrometry. Mass spectrometry methods presented will include time of flight, magnetic sector and electric sector mass spectrometry as well as interfacing with gas chromatography, liquid chromatography and capillary electrophoresis. Electroanalytical methods include amperometric, voltammetric and potentiometric techniques. Surface analysis methods discussed will be atomic force microscopy, scanning tunneling microscopy, Auger electron spectroscopy, X-ray photoelectron spectroscopy and secondary ion mass spectrometry.

CHEM 441 Elemental Analysis and Instrument Design Laboratory (1) An introduction to the use of modern instruments for problems in chemical structure and analysis.

CHEM 441 Elemental Analysis and Instrument Design Laboratory (1)

CHEM 441 is one of three laboratory courses (CHEM 441, CHEM 443, and CHEM 445) which accompany the lecture course in instrumental analysis, CHEM 440. The topics for CHEM 441 are: 1) optics, flame atomic emission spectrometry & microwave induced plasma emission spectrometry, 2) electronics and data acquisition/signal analysis, and 3) basic ultraviolet-visible instrument design. Every student will have ample opportunity to become proficient in the operation of the instruments being studied. They will spend about half of the time learning the fundamentals of each instrument and will then carry out a specific experiment using each one.

CHEM 443 Electrochemistry and Chromatography Laboratory (1) An introduction to the use of modern instruments for problems in chemical structure and analysis.

CHEM 443 Electrochemistry and Chromatography Laboratory (1)

CHEM 443 is one of three laboratory courses (CHEM 441, CHEM 443, and CHEM 445) which accompany the lecture course in instrumental analysis, CHEM 440. The topics for CHEM 443 are: 1) ion sensitive electrodes and cyclic voltametry, 2) gas and high performance chromatography, and 3) gas chromatography-mass spectrometry. Every student will have ample opportunity to become proficient in the operation of the instruments being studied. They will spend about half of the time learning the fundamentals of each instrument and will then carry out a specific determination for each one.

CHEM 445 Atomic and Molecular Spectroscopy Laboratory (1) An introduction to the use of modern instruments for problems in chemical structure and analysis.

CHEM 445 Atomic and Molecular Spectroscopy Laboratory (1)

CHEM 445 is one of three laboratory courses (CHEM 441, CHEM 443, and CHEM 445) which accompany the lecture course in instrumental analysis, CHEM 440. The topics for CHEM 445 are: 1) flame atomic absorption spectrometry and fluorimetry, 2) infrared and ultraviolet-visible spectroscopy, and 3) nuclear magnetic resonance spectrometry. Every
CHEM 446 X-Ray Crystallography (3) Theoretical and practical aspects of structure determination using x-ray diffraction, from crystal growth to structure solution.

CHEM 446 X-Ray Crystallography (3)

CHEM 446 introduces the student to the basic principles of molecular structure determination through the diffraction of X-rays by single crystals. The emphasis is on small organic, coordination and organometallic compounds. However the principles can provide the basis for extensions into disciplines ranging across geology, materials, molecular biology, and nanoscience. The course is organized in the same way that an actual crystal structure determination might proceed, with theoretical considerations introduced as needed. Techniques of crystal growth and selection are summarized. X-ray sources and instrumentation are described briefly. Unit cells, Miller planes, unit cell geometry and Bragg’s law give rationale to the diffraction experiment. Space group symmetry is connected with data collection and the contents of the unit cell. Practical considerations of data collection and instrumentation are covered next. The theoretical description of structure factors and Fourier synthesis leads to consideration of solutions to the phase problem. The remainder of the course illustrates the process of structure solution using real data and software readily available to the students. All the details of publication of a crystal structure; the CIF, ORTEP figures and the format of the experimental section of most journals is described using actual student selected publications. Related structural techniques such as protein crystallography and molecular modeling may be reviewed time permitting.

CHEM 448 Surface Chemistry (3) Surface chemistry, emphasizing the physical and chemical aspects of surfaces important for applications in colloids, catalysis, microelectronics and biocompatibility.

CHEM 448 Surface Chemistry (3)

CHEM 448 introduces the student to the basic principles of the chemical behavior of surfaces with an emphasis on the fundamental aspects, including surface structure, bonding, thermochemistry and dynamical behavior. The course is intended to provide the basis for extensions into disciplines ranging across geology, materials, environmental engineering, biology, agriculture, physics and nanoscience. Fundamental concepts and relationships of the chemical behavior of organic and inorganic substances that the student has already learned in previous courses will be assembled, correlated and directed towards understanding the behavior of the special case of the surfaces and interfaces of liquids and solids. Starting from the basic principles the student will be guided to evolve a fundamental understanding and predictive ability for important man made and natural applications and phenomena of practical interest, including colloids, surface coatings, lubrication, heterogeneous catalysis, weather, geology, chemical sensing, microelectronics and biocompatibility.

CHEM 450 Physical Chemistry - Thermodynamics (3) Introduction to physical chemistry with primary emphasis on chemical thermodynamics and its molecular interpretation. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.)

CHEM 450 Physical Chemistry - Thermodynamics (3)

CHEM 450 is a physical chemistry course that introduces students to chemical properties of matter and the fundamentals of chemical thermodynamics. The theoretical foundations of thermodynamic principles are covered and illustrated with a wide variety of examples from the sciences, engineering and technology fields. The course covers the following topics: gas laws, equations of state, the First Law of Thermodynamics, work and heat, internal energy, enthalpy changes, heat...
capacity, the Second Law of Thermodynamics, entropy and entropy changes, the Third Law of Thermodynamics,
Helmholtz and Gibbs energies, phase stability and phase boundaries, phase diagrams, phase equilibrium, surface tension,
capillary action, partial molar quantities, thermodynamics of mixing, chemical potential, solvent and solute activities,
colligative properties, the phase rule, thermodynamics of two-component systems, chemical equilibrium, spontaneity of
chemical reactions, the response of equilibria to experimental conditions, and equilibrium electrochemistry.

CHEM 452 Physical Chemistry - Quantum Chemistry (3) Introduction to physical chemistry with primary emphasis on
molecular structure, spectroscopy, and chemical kinetics. (Graduate credit not allowed for students majoring in
Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.)

CHEM 452 Physical Chemistry - Quantum Chemistry (3)

CHEM 452 is an introductory physical chemistry course that covers quantum chemistry, atomic and molecular
spectroscopy, and chemical kinetics. If time permits, other possible topics include statistical thermodynamics, nuclear
magnetic resonance, electron spin resonance, structures of solids, X-ray scattering, and processes at surfaces.
Quantum chemistry includes: development of wave mechanics, Schrodinger’s equation, particle in a box, in a ring, on a
spherical surface, free particle, barrier penetration, harmonic oscillator, postulates, hydrogen atom, helium atom, electron
spin, atomic and molecular structure and symmetry. Spectroscopy includes: atomic spectra, microwave, infrared, and
visible spectra of molecules. Chemical kinetics includes: rate laws, mechanisms, chain reactions, polymerization reactions,
catalysis, molecular reaction dynamics (collision theory and activated complex theory), and nature of potential energy
surfaces for reactions.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CHEM 457 Experimental Physical Chemistry (1-2 per semester/maximum of 2) Laboratory experiments designed to
illustrate the principles of physical chemistry and teach techniques of error analysis and the presentation of quantitative
data. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.)

CHEM 457

CHEM 457 is a laboratory course designed to illustrate some of the principles of physical chemistry presented in CHEM
450 and 452 and to teach proper treatment and presentation of quantitative data. In this course, students will learn how
to write quantitative laboratory reports complete with analysis of the uncertainties of the measurements they make. They
will also learn how these uncertainties are propagated through each calculation that make use of the initial
measurements. In doing so, students should become more aware of the importance of experimental design, proper use of
instrumentation, and careful data collection.

CHEM 459W Advanced Experimental Physical Chemistry (4) Laboratory experiments and projects for students interested in
advanced study in physical chemistry.

CHEM 459W Advanced Experimental Physical Chemistry (4)

CHEM 459W Advanced Experimental Physical Chemistry is a project-based course designed as a follow-up to CHEM 457.
CHEM 459W provides students with further experience in laboratory techniques used for quantitative experimentation and
with the processing and interpretation of quantitative data. Experiments and short research projects are designed to
complement the theoretical knowledge acquired in lecture courses so as to enhance students’ competence in problem
solving in a research environment. Particular attention will be devoted to written communication of experimental results in
an effective and concise manner according to American Chemical Society journal standards.
CHEM 464 Chemical Kinetics and Dynamics (3) Introduction to chemical kinetics and molecular dynamics.

CHEM 464 Chemical Kinetics and Dynamics (3)

CHEM 464 is a one-semester course that introduces students to chemical kinetics and molecular dynamics, the branch of chemistry concerned with the rates of chemical reactions and the microscopic details of how reactions occur. The course covers old and new experimental, theoretical, and computational methods for kinetics and dynamics. Example systems are chosen from a variety of application including gas-phase reactions, reactions in solution, atmospheric chemistry, and reactions in biological systems. Topics covered are: basic concepts, phenomenological treatments, mechanisms, chain reactions, potential energy surfaces, collision theory, transition state theory, analysis, reactions of surfaces, photochemistry, molecular beams, Monte Carlo methods, molecular dynamics, energy requirements for reaction, and energy disposition.

CHEM 466 Molecular Thermodynamics (3) Introduction to physical chemistry with a primary emphasis on the statistical and molecular interpretation of thermodynamics.

CHEM 466 Molecular Thermodynamics (3)

CHEM 466 is a physical chemistry course that emphasizes the statistical and molecular interpretation of thermodynamics. This focus enables the student to consider macroscopic properties based on the constituent molecular properties. After a very brief introduction to classical thermodynamics, the statistics of large systems is introduced, used to develop the Boltzmann distribution of energies and then combined with the quantum mechanical structure of energy levels to form a basis to predict and understand atomic and molecular properties such as heat capacity and chemical reaction equilibrium. Solution thermodynamics, interfacial phenomena and colligative properties are discussed in terms of lattice models. The course then turns to a molecular view of transport and chemical reaction rates. Molecular transport is described in terms of random molecular motion and intermolecular forces that tie together to give macroscopic behavior such as ionic conductivity and mass diffusion. Reaction rates are formulated in terms of the distributions of energies and statistical probabilities of the combined reactants in a transition state. Cooperativity in phase transitions is discussed, followed by adsorption and catalysis. Examples with proteins and other biomolecules, as well as polymers and various solutions, appear throughout the course.

CHEM 472 General Biochemistry I (3) Basic structure and function of cellular components; principles of enzyme kinetics and regulation.

CHEM 472 General Biochemistry I (3)

CHEM 472 will serve as an introductory course in biochemistry. The course will begin with a review a number of chemical concepts applicable to biochemistry including molecular interactions, acid-base reactions, buffers, titrations and basic thermodynamic and kinetic concepts. The focus will then shift to a discussion of the structures of the biomolecules that make up living matter including carbohydrates, lipids, membranes, proteins, and enzymes, emphasizing the relationship between chemical structure and biological function.
**CHEM 474 Organic Synthesis (3)** Theory and methodology of organic synthesis applied to complex organic molecules.

**CHEM 474 Organic Synthesis (3)**

CHEM 474 will present the theory and methodology of organic synthesis. The course will initially focus on the methodology necessary to synthesize complex organic molecules. This will include an in-depth look at functional group transformations, carbon-carbon bond forming reactions, ring-forming reactions, aromatic chemistry and heterocyclic chemistry. We will then discuss the use of retrosynthetic analysis and the "disconnection approach" to logically guide total synthesis. Finally, a number of literature syntheses will be used to examine the strategies involved in formulating a total synthesis emphasizing the compatibility of functional groups, sequence of reactions, use of protecting groups and the impact of stereochemistry.

**CHEM 476 Biological Chemistry (3)** Fundamentals of Biochemistry for Chemists. Students cannot receive credit for both CHEM 476 and B M B 401.

**CHEM 476 Biological Chemistry (3)**

This course is designed to be an introduction to biological chemistry from a chemistry student’s perspective. The course will cover the basics of protein, nucleic acid, lipid and carbohydrate structure. The three-dimensional structural aspects of these biological macromolecules will be emphasized, showing their structure-function relationships. The course will also cover some of the chemical logic in enzymatic reactions, drawing from advanced organic and inorganic chemistry concepts, and include a focus on physical processes such as reaction kinetics and binding equilibria. More advanced topics of interest to chemistry students will also be covered, including the biochemical aspects of drug design and discovery. Throughout, the approach will be to introduce the analytical tools that have led to major advances in biochemistry as well as the physical and chemical principles underlying each topic. The course will follow a textbook designed for chemistry students. It will also include reading assignments of several types, including historical papers and current scientific literature dealing with recent advances in the field. The course also includes assignments that require students to familiarize themselves with modern biochemical databases such as those from the National Center for Biotechnology Information.

CHEM 500 Seminar in Chemistry (1-2 per semester) No description.

**CHEM 500 Seminar in Chemistry (1)**

CHEM 500 is a course in which 1st and 2nd year Chemistry graduate students write about and present a seminar on current chemical research. During their first year of graduate study students are asked to write 6 or more brief reports summarizing and critiquing designated seminars in one of the department's five regular seminar series. These reports are graded for both their scientific content and writing quality. During their second year of graduate study students are asked to write a more lengthy report and give an oral presentation on a topic of current interest in chemistry, but one not closely related to research being done at Penn State. The written and oral portions of this exercise are also graded.

Faculty: Andrew Ewing and Mark Maroncelli

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2001

CHEM 516 Inorganic Chemistry (3) Overview of systematic inorganic chemistry including main group, transition metal, lanthanide, and actinide chemistry.

**CHEM 516 Inorganic Chemistry (3)**

The purpose of this course is to provide a graduate level foundation in the field of inorganic chemistry and its relationship to other areas of science and technology. The emphasis will be on atomic and molecular structure, synthesis methods, and structure-property relationships in a way that will prepare students for studies in more specialized areas such as environmental chemistry, catalysis, materials science, and the biological fields. Opportunities will be provided to integrate the learning experience with the organization of information through writing assignments and class discussions.

CHEM 517 Organometallic Chemistry (3) Organometallic compounds and their use in catalysis and organic synthesis.

**CHEM 517 Organometallic Chemistry (3)**

CHEM 517 provides a graduate-level foundation to a broad range of topics in organotransition metal chemistry with a particular emphasis on catalytic applications in polymer chemistry and organic synthesis. The course assumes a B.S.-level understanding of inorganic and organic chemistry. Topics to be covered include the following: basic principles of bonding and structure, elementary reaction mechanisms, and catalytic applications including olefin insertion reactions.
cycloisomerization reactions, carbenoid chemistry including olefin metathesis, carbonylations, reactivity of metal allyl complexes, cross coupling and related C–C bond formations, oxidations, reductions and alkylations. Upon successful completion of this course, students can expect to: 1) understand basic concepts in bonding and molecular structure of organometallic compounds, 2) be able to connect electronic and molecular structure with chemical reactivity, 3) describe organometallic reactivity in a mechanistically rigorous fashion, 4) be familiar with common catalytic paradigms that rely on organometallic catalysts, 5) be equipped to critically evaluate the modern primary literature in this field.

Bachelor of Arts: None
Effective: Summer 1990

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CHEM 518 Symmetry and Spectroscopy in Inorganic Chemistry (3 per semester)

CHEM 518 provides a graduate-level foundation in molecular group theory and its use in understanding the molecular orbital structure of organic and inorganic molecules. EPR, NMR, rotational, vibrational, and electronic spectra of molecules are considered with an eye towards using symmetry to simplify analysis. Other spectroscopies of interest to the modern inorganic chemist, such as XPS, PES, and x-ray crystallography are also discussed.

Bachelor of Arts: None
Effective: Fall 2012
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CHEM 524 Electroanalytical Chemistry (3)

CHEM 524 covers the fundamental background and applications of electroanalytical methods. Potentiometric methods are discussed in the context of the basic principles of electrochemical equilibrium. Amperometric methods - chronoamperometry, chronocoulometry, stripping voltammetry, cyclic voltammetry, pulse and hydrodynamic techniques - are also discussed in the context of mathematical models for mass transport and electrode kinetics. Applications including spectroelectrochemistry, photoelectrochemistry, ultramicroelectrodes, corrosion, and scanning electrochemical microscopy are covered. The course involves solving differential equations relevant to electrochemical problems by analytical methods as well as by means of digital simulations, so prior knowledge of a programming language is recommended.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CHEM 537 Organic Synthesis (3) Organic synthesis including both classical and modern synthetic methodology as well as applications to construction of complex molecules.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2013

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CHEM 538 (BMMB 538) Spectroscopic Methods in Bioinorganic Chemistry (3) Foundations in spectroscopic methods employed for the determination of the geometric and electronic structure of transition metal clusters in nature.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2013

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CHEM 539 (BMMB 539) Biochemical Reaction Mechanisms (3) Mechanisms of the most important biochemical reactions, with emphasis on enzyme catalysis.

General Education: None
CHEM 540 Biophysical Chemistry (3) Structure of biomacromolecules, physical techniques for the study of structure and function, thermodynamic and kinetic studies of biomacromolecules in solution.

Biophysical Chemistry (3)

CHEM 543 (MATSE 543) Polymer Chemistry (3) This graduate course discusses the new advances in polymer chemistry that leads to new polymeric materials with interesting structures and properties.

CHEM (MATSE) 543 Polymer Chemistry (3) This course provides advance level of polymer chemistry and materials taught in MATSE 441 - Polymeric Materials. Students are able to know the versatility that is inherent in polymer chemistry and the new research results and activities, especially controlling polymerization, polymer structures, designing polymers with desirable properties, etc. Students shall also understand the major economic and environmental concerns and solutions in producing commercial-scale polymers.

This polymer chemistry course provides important links between chemistry and polymeric materials. The course will focus on recent advances in polymer chemistry that affords new polymer materials with controlled polymer structures, compositions, and properties, as well as economic and "green" processes.

This course is designed for graduate students having basic knowledge in organic, inorganic, and organometallic principles. For Chemistry major, this course offers students with the knowledge to apply chemical principles and methods to design and prepare the desirable polymers (no prerequisite for Chemistry graduate students). For Material Science and other majors, this course provides advance level of polymer chemistry and materials taught in MATSE 441 (a prerequisite course).

In addition, each student will be required to review (presentation and term-paper) a contemporary subject relative to polymer chemistry, which will help student self-education, and presentation and writing skills. Students will be evaluated by quizzes and examinations, a term-paper and presentation, and class participation.

Chemical Thermodynamics (3)

CHEM 544 Chemical Thermodynamics (3) Development of thermodynamic theory, with special reference to common physical changes and chemical reactions.

Chemical Thermodynamics (3)

CHEM 545 Statistical Thermodynamics (3) Basic principles of statistical mechanics with application to the calculation of thermodynamic properties of gases and condensed phases.

Statistical Thermodynamics (3)
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Chinese (CHNS)

CHNS 401 (IL) Level Three Chinese A (4) Emphasis on oral proficiency through discussions of aspects of contemporary Chinese culture.

CHNS 401 Advanced Conversation (4) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course aims to enhance students' abilities in speaking, listening, reading, and writing. The objectives in this course are; 1) to review, reinforce, and expand the basic grammar, 2) to expand knowledge of characters, vocabulary and idioms, 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions, 4) to be able to read and understand simple essays and stories, 5) to be able to write short compositions.

General Education: None
Diversity: IL
Bachelor of Arts: Second or Beyond 12th Level Foreign Language
Effective: Spring 2011
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CHNS 402 (IL) Level Three Chinese B (4) Readings in representative works of traditional and modern literature; practice in composition; study of aspects of Chinese culture.

Level Three Chinese B (4)

General Education: None
Diversity: IL
Bachelor of Arts: Humanities and Second or Beyond 12th Level Foreign Language and Other Cultures
Effective: Spring 2011

CHNS 403W Level Four Chinese A (4) Continuation of CHNS 402. Aims to improve students' proficiency in all four language skills, with a special emphasis on writing.

CHNS 403W Level Four Chinese A (4)
This is a four credit course designed for those who have completed Level Three Chinese B or the equivalent. The course aims to further develop students' proficiency in all four language skills, with a special emphasis on writing. Students will study several topics on current social issues in modern Chinese society, such as education and housing issue, woman's status, through a selected textbook, news reading, and by interviewing native speaker of Chinese from different regions. Via all the debatable topics, students will be guided to explore and practice various writing styles, such as description, narration, argumentation, and expository writing throughout the semester. Comparison of rhetorical strategies between Chinese and English writing will also be introduced to help students think and write more like a native when using the target language. The majority of reading and writing assignments will be done outside of class, with some guidance from the instructor. Class time will be used mainly for discussions of content, feedback on writing. All class activities will be conducted in Chinese.

Writing exercises include short response papers on topics, summarizes of the readings, and short essays. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. This will help students be prepared for a longer thesis in the next course in the sequence.

This course will help students further advance their writing skills by continuously building their vocabulary, understanding the target culture, and its social issues through various sources of structured and authentic materials. Students will also write a resume and formal letter that help them start building their career in Chinese.

CHNS 404 Level Four Chinese B (4) Continuation of CHNS 403W. Aims to improve students' proficiency in all four language skills through content-based language learning.

CHNS 404 Level Four Chinese B (4)
This is a four credit course designed for those who have completed Level Four Chinese A or the equivalent. The course aims to further develop students' proficiency in all four language skills. Students will study several topics on current social issues in contemporary Chinese society. For example, economic spurt in China, environmental protection, values conflict between traditional Chinese culture and Western culture, etc. Students will learn those topics via a textbook, interviewing native speakers of Chinese from different regions, and variety of media, such as newspaper, TV news, and movie. The majority of reading and writing assignments will be done outside of class, with some guidance from the instructor. Students will be guided to use appropriate resources such as dictionaries, reference books, online dictionaries and other online resource to facilitate their learning. Class time will be used mainly for discussion of content, feedback on writing, and presentations by students. All class activities will be conducted in Chinese.

Students will be mainly evaluated by writing exercises and presentations. Writing exercises include short response papers on topics, summarizes of the readings, short essays and a final thesis. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. Presentations include debates, individual and group presentation, which will help students advance their communication and presentational skills. E-portfolio will sample the work students have done in the course.

CHNS 410 (IL) Chinese Through Film (3) This course is designed for students who finish Level Two Chinese or higher and aims to help them develop Chinese proficiency through movies.

CHNS 410 Chinese Through Film (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course aims to provoke students' critical thinking on China-related issues and improve their Chinese language proficiency by encouraging them to reenact and remake selected scenes from the movies, investigate and discuss the
social issues as shown from the movies. This is a three credit course designed to go beyond the day-to-day topics to further develop students' understanding of the social issues in contemporary China and thus enhance their Chinese language proficiency. Through watching movies in Chinese, students will listen to authentic Chinese and expose to broader aspects of Chinese people's lives and Chinese society. In addition, they will have opportunities to conduct culture comparisons between China and the U.S., East and West, which will enable them to make in-depth analysis when examining a complex social, political or economic issue in China. The follow-up class activities include both speaking and writing assignments. Depending on the topics, speaking assignments may include: reenactment or recreation of a selected scene from the movies, class or group discussions, debates and presentations. Writing assignments may include: writing a new story or different ending for the movies, and reflection essays.

CHNS 411 (IL) Chinese Written Characters (3) This course aims to establish a solid foundation of students' Chinese orthography and prepare students for continuing study in subsequent Chinese courses.

CHNS 411 Chinese Written Characters (3)

This course aims to equip students' knowledge and skills of Chinese orthography through both cognitive and meta-cognitive approach of learning, where it is expected to lay a solid foundation for students' continuing study of subsequent Chinese language courses. Students will learn and apply radical and component-building approach to synthesize their already-acquired characters, and further learn approximately 500 additional characters. Characters selected for study in this course are based upon the references of HSK (Hanyu Shuiping Kaoshi) Level V and TOP-Huayu (Test of Proficiency- Huayu) Intermediate level. Building upon these characters, students will further expand their vocabulary volume through character association strategy and extensive reading. Cooperative learning approach will be largely incorporated to promote in-class active learning, such as developing and sharing character learning strategies through keeping learning journal, group reading, discussing cultural connotations of selected amount of characters, etc. Students will also learn the origin, history and evolution of Chinese characters through textbook reading and multimedia materials learning, such as DVD and You Tube video clips that help visualize the evolution process of selected characters for demonstration.

Instructional Objectives (what the student is expected to learn; what skills s/he will develop):
1. Understand the origin, history and evolution of Chinese characters
2. Develop and apply strategies on learning Chinese characters
3. Familiarize with available resources that assist Chinese characters learning and memorizing
4. Strengthen and synthesize students' existing knowledge of Chinese orthography
5. Learn approximately 500 new characters
6. Expand vocabulary volume derived from the acquired characters
7. Expand reading experience by reading semi-authentic and authentic articles that are constituted of the acquired characters
8. Strengthen listening and speaking skills of the target language through intensive in-class discussions and lectures

CHNS 421 China Beyond China (3) Study of modern and contemporary Chinese culture in its diversity and its intercultural contexts.

CHNS 421 China Beyond China (3)

In order to begin to understand Chinese culture, we cannot treat it as a monolithic, unified whole. This course will give an introduction to modern and contemporary Chinese culture (focusing on the 20th and 21st centuries) by paying special attention to China's inner diversity, as well as the continuous shaping of Chinese culture in contact, dialogue, and tension with other cultures. Through the study of literary texts, films, and other cultural material—as well as a small number of theoretical essays—this course will focus on:
1) Chinese culture in its variety by focusing on Chinese cultural spheres beyond the People's Republic (Taiwan, Hong Kong), the Chinese diaspora, as well as other ethnicities and cultures within Mainland China.

The Pennsylvania State University
2) The ways in which Chinese modernity was impacted by intercultural impulses, as well as the recent self-representation of China in the context of globalization.

Course Objectives include:
1. Understand modern and contemporary China in its cultural diversity, as well as shaped by intercultural and global processes.
2. Critically analyze processes of cultural contact and the representations of cultural differences.
3. Think critically about globalization with its impact on such categories as the local and the national.
4. Question your assumptions about the world, re-examine your own points of view, and understand cultures and value systems that may different from (or be shared with) your own.

CHNS 422 (IL) Gender and Sexuality in China (3) Study of gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China.

CHNS 422 Gender and Sexuality in China (3) (IL)

This course explores gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China (from the end of the 19th century up to today), paying attention also to developments in Chinese cultural spheres beyond the People’s Republic, such as Taiwan, Hong Kong, and the Chinese diaspora. This course will use the representation of gender, sex, and sexuality as a lens through which modern and contemporary Chinese culture can be understood in its historical, social, and aesthetic changes. For this purpose, the syllabus adopts a largely diachronic structure, with different foci for each week. The analysis of representations of gender and sexuality throughout the class will focus on literary and filmic texts, as well as art, rather than on theoretical work on gender and sexuality (in China or in general).

Course Objectives include:
1. Critically assess the complex construction of gender roles and sexuality in modern and contemporary Chinese literature and film
2. Reflect critically on different ways of understanding and representing gender difference.
3. Critically assess the connections between gender and sexuality and changing political, historical, and cultural contexts.
4. Question your assumptions about gender and sexualities in the context of cultural difference, understand cultures and value systems that may be different from (or be shared with) your own.

CHNS 423 (IL) The Warrior, the Courtesan and the Ghost in Classical Chinese Novels (3) This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost.

CHNS 423 The Warrior, the Courtesan and the Ghost in Classical Chinese Novels (3) (IL)

A narrowly defined notion of modern literature is a relatively recent phenomenon that dates back only to the early twentieth century in the Chinese context. There is, however, a long tradition of the vernacular novel that remains influential till today, in spite of its marginalization by the Western-influenced Chinese Enlightenment project. This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. The warrior is commonly found in historical romances, tales about errant knights and assassins, and martial arts fiction. Although the typical setting for the courtesan is in novels about prostitution (Xia Xie Xiaoshuo), this course will relate this figure to other female types in various domestic space, thereby tracing the genealogical connections between the domestic fiction and the courtesan fiction. The ghost can be found in Accounts of the Strange (Zhi Guai) and Tales of the Miraculous (Chuan Qi). This course will relate this figure in these narrative genres with other types of the supernatural being, such as Gods and Demons. Most readings will be drawn from the Mind-Qing period (14th -20th c) but modern and contemporary literature as well as visual or media culture that consciously continue or rewrite these narrative traditions will be considered as well. All readings and class discussions will be in English. Knowledge of Chinese or Chinese literature is not assumed or required.

From year to year the content we cover might change, but this course will always explore:

The Pennsylvania State University
1) Major classical Chinese narrative traditions that are radically different from the Western-influenced narrative modes of the twentieth century.
2) Pre-modern practices of literary reading and criticism and pre-modern notions of literacy, literature, and modes of circulation.

Course Objectives include:
1. Critically analyze major texts and genres of the classical Chinese novel.
2. Understand pre-modern practices of story-telling, literary circulation, reading, and criticism.
3. Think critically about pre-modern societies and their connections with the contemporary world.

CHNS 424 (HIST 482, ASIA 482) Confucius and the Great Books of Early China (3) This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China.

This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period. As the first part of a two-seminar series of courses (HIST 484), it provides an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as “(Confucian) ritualists,” “statesmen,” “military strategists,” “rebels,” “recluses,” and “spiritual leaders.” Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

CHNS 426 (IL) The Chinese Rhetorical Tradition (3 per semester/maximum of 6) Study of the rhetorical works in ancient China as well as multiple facets of modern Chinese rhetoric.

CHNS 426 The Chinese Rhetorical Tradition (3 per semester/maximum of 6) (IL)
This course meets the Bachelor of Arts degree requirements.

This course surveys the Chinese rhetorical tradition dating back two and a half millennia. Rhetoric is defined here as the study and practice of artful means of communication, including poetic, expository, and argumentative modes. The class will first delve into the works of competing intellectual schools in pre-imperial China (pre-221 BCE), which set a cornerstone for thoughts and practice of communication in the imperial period (221 BCE - 1918). These schools, including the Daoist, the Confucian, and the Legalist, developed their rhetorical notions through engaging with the political, intellectual, and ethnic Other. From here the class will examine the multiple facets of modern Chinese rhetoric, which has undergone a continual contact and conflation with other rhetorical traditions in the global contact zone. The class will focus on topics such as feminist discourse, Chinese-American rhetoric, and the teaching of writing, which bear direct implications on our contemporary social life.

CHNS 452 (IL) Contemporary China: Culture and Trends (3 per semester/maximum of 6) Survey of aspects of the contemporary Chinese-speaking world. Includes readings from Chinese newspapers, magazines, and fiction. Topics may vary each semester.

CHNS 452 Contemporary China: Culture and Trends (3) (IL)

BA - This course meets the Bachelor of Arts degree requirements.

This course surveys Chinese cultural production in the contemporary period, with an emphasis on literature. Taught in Chinese; readings and assignments in Chinese.

The course will examine the diverse forms of cultural expression (literature, film, new media, theater, television) throughout the Chinese-speaking world. Students will learn about major cultural trends in such locations as mainland China, Taiwan, Hong Kong, and the worldwide Chinese diaspora. Readings will represent several genres, such as poetry, folklore, short story, novel, prose fiction, and drama. Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired literary works in the contemporary period. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others.

Class work includes lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities.

Chinese 452 is designed to be suitable for students (Chinese majors) who have completed Chinese 401. The course is designed to count as international cultures, and as a B.A. "Other Cultures" course.

This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. The course will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

CHNS 453 (IL) Chinese Film (3 per semester/maximum of 6) Selected films and directors representing various aspects of Chinese culture and cinema. Topics may vary each semester. Taught in Chinese.

CHNS 453 Chinese Film (3) (IL)

BA - This course meets the Bachelor of Arts degree requirements.

This course surveys Chinese film from the early twentieth century to the present time, with an emphasis on film and national history. Taught in Chinese; readings and assignments in Chinese.

The course will examine the diverse forms of film language in the works of filmmakers from mainland China, Taiwan, and Hong Kong. Readings will include interviews, reviews, film criticism, and other relevant texts (such as a short story that inspired a film).
Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired Chinese-language films. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others.

Class work will includes lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities.

CHNS 454 (IL) Introduction to Classical Chinese (3 per semester/maximum of 6) Basic patterns and structures of Classical Chinese to the first millennium B.C. to the 19th century.

BA - This course meets the Bachelor of Arts degree requirements.

This course introduces students to the basic patterns and structures of Classical Chinese. Classical Chinese is a language shaped in the latter half of the first millennium B.C. that still persists as a living medium of expression today. Knowledge of Classical Chinese is important to help students read and understand sophisticated modern Chinese texts, which make frequent use of Classical allusions and constructs. In this course, students will learn basic grammar, syntax, and commonly-used vocabulary. The cultural and literary implications of classical Chinese will be discussed throughout the course in order to provide the students not only with the linguistic knowledge of classical Chinese, but the rich historical backgrounds implied in this particular style of Chinese.

The main goal of the course is for students to acquire skills in reading Classical Chinese and expand their knowledge and understanding of ancient Chinese culture, society and history in relation to modern and contemporary Chinese culture, such as Confucianism and family values. With this knowledge and training, not only will students be more comfortable reading the Chinese Classics, they will also thereby increase their proficiency in modern Chinese and their knowledge of Chinese culture.

This course will fulfill the Intercultural Cultures and B.A. "Other Cultures" and foreign language requirements.

CHNS 455 (IL) Masterpieces of Traditional Chinese Literature (3) Survey of traditional Chinese literature, including poetry, historical narratives, philosophical texts, and drama and novel.

BA - This course meets the Bachelor of Arts degree requirements.

CHNS 455 Masterpieces of Traditional Chinese Literature presents an overview of China's literary tradition, focusing, in particular, on literary techniques used in a variety of text types such as poetry, essays, fiction and drama.

This course aims to develop students' advanced knowledge of the features of traditional Chinese literature and its intellectual, cultural, and social background. Through close reading of selected major works, students will become familiar with the features of various genres.

For example, students will study prose writings, the major poetic forms and some of the important poets from the Tang period, and aspects of literati culture through close reading of texts from the late imperial period.

At the end of this course, a student will have read and discussed sample writings from philosophical and poetic traditions
and well as sample writings on the cultural and scholastic activities of the literati. Students should also be able to deal with classical texts on a reasonable level, to identify problematic passages and to be able to clarify them with the help of secondary reference material. Students should also be able to appreciate some of the civilizing aspects of Chinese culture as well as literary and poetic devices such as tonal patterns, rhyme schemes, structure and writing techniques, and discussion of the poets and their work, and have an understanding of the main genres in classical Chinese literature and philosophy.

The Pennsylvania State University
Civil Engineering (C E)

C E 410W Sustainable Residential Subdivision Design (3) Residential subdivision process; site selection; conservation and neo-traditional design; utility design and layout; best management practices for erosion and stormwater.

C E 410W Sustainable Residential Subdivision Design (3)
The course is designed for seniors and graduate students in Architectural and Civil Engineering interested in learning the principles of sustainable residential design and development. The course is typically offered one semester each year. The objective of this course is to provide the students with a working example of the residential land development process from a regional perspective.

The course provides an overview of zoning legislation and regulations followed by an analysis of market trends and information sources. Conservation and neo-traditional design techniques emphasize sustainable development principles for maximizing profits while complying with open space zoning. Access design principles focus on traffic calming strategies and development of a well-defined transportation hierarchy. Students are introduced to key components in utility design including the basic principles of water and wastewater transport. Best management practices for erosion control and stormwater management are reviewed and included as part of the residential design process. Finally the students are asked to use realistic data to estimate costs and profit margins for development.

To work effectively in residential design, students must be proficient in applying the principles of mathematics, economics and engineering software (CAD or similar) included in accredited programs of engineering. Students will be exposed to engineering/design calculations associated with each of the phases of residential land development. Technical Release 55, the stormwater management design manual, and the BMP Handbook for erosion control and stormwater management supplement the text. The CAD lab will be utilized for approximately 25% of the class.

At the completion of the class, students will present a written project narrative and an oral presentation describing a full-scale residential development designed by the project team. This project is open ended and includes at a minimum a market analysis, engineering calculations, a cost estimate, and a full set of engineering drawings which include, soils, contours, open spaces, lot boundaries, roads, utilities and stormwater control systems details. Five preliminary mini-reports will be written and submitted over the course of the semester. These reports will be evaluated by the instructor for both content and professional writing, and returned to students. Students will be encouraged to consult with the instructor for additional feedback. The reports will be revised and incorporated into the final report. In addition to the team development project, students will receive a mid-term and final exam.

C E 421W Transportation Design (3) Design of streets and highway facilities; emphasis on geometric elements, intersections and interchanges, roadway drainage, and pavement design.

C E 421W Transportation Design (3)
This course provides advanced study in highway engineering and is designed for civil engineering students who are interested in Transportation Engineering careers. It includes topics such as functional classification, highway cross-sections, horizontal and vertical alignment and sight distance. Other topics are pavement design, drainage intersection and interchange design and highway signs. The students will also have a CAD lab where they design a complete highway system. The semester project provides hands-on highway design experience and includes the planning and operational aspects of a new highway design. This course serves as a capstone design course with writing projects. Students are expected to do in-class presentations of their projects.

C E 436 Construction Engineering Materials (3)

C E 436 provides students with a working knowledge of the safe design, production and application of quality construction materials unique to civil engineering. The course builds upon the understanding of civil engineering materials gained in the introductory course. C E 436 focuses on the materials design and quality control of aggregates, steel, portland cement concrete, and asphalt concrete.
C E 437 Engineering Materials for Sustainability (3) Environmental impact of materials; life-cycle assessment; material selection to optimize performance; design, evaluation, and production of green construction materials.

C E 438W Construction Engineering Capstone Design (3) Construction project integrating geotechnical reports; materials specifications; quality control; equipment; estimation; scheduling; design details: excavations, foundations, retaining walls, formwork, pavements.

C E 439W Geotechnical and Materials Engineering Design Capstone (3) Subsurface site evaluation; integrated design of retaining walls, foundations, pavements, and materials for airports, highways, dams, or other facilities.

C E 441 Structural Design of Foundations (3) Design of concentrically and eccentrically loaded square, rectangular, and combined footings; analysis and design of mat foundations; retaining walls; piles caps; flexible retaining design, and caissons.

C E 445 Advanced Structural Analysis (3)
The course is an advanced analysis which includes an analysis of structures using classical and matrix methods. Topics covered include the analysis of statically determinate and indeterminate beams; trusses and frames. An introduction to the stiffness method and a software package for structural analysis will also be covered.

Structural Analysis by Matrix Methods (3)
The objectives of the course are to develop an understanding of advanced structural engineering design issues in a capstone context that will merge knowledge gained in prerequisite structural design and analysis courses. Building on concepts introduced in introductory steel building, concrete building, and foundation design, students will gain proficiency in structural conceptualization, environmental and induced load determination, modeling and analysis, detailed design of steel and concrete structures, and graphical communication.

C E 448W Advanced Structural Design (3) Wind, snow, seismic, bridge loads; building design using steel, concrete, and prestressed concrete; advanced steel connections; capstone project; computer applications.

C E 448W Advanced Structural Design (3)
The course provides students with an understanding of advanced structural design processes, the mechanics of special systems (such as prestressed concrete) as well as the ability to design and proportion structural connections and bracing members including reinforced concrete and steel. The course will also introduce the LRDF approach and composite construction in which the design of specific components is integrated into the design of the structure as a whole.

C E 449 Advanced Structural Design (3) Special systems, frames and bracing in steel, wood and reinforced or precast concrete. Introduction to composite construction.

C E 449 Advanced Structural Design (3)
C E 454 Safety (3) This course will focus on safety issues as they relate to OSHA.

C E 458 Construction Management II (3) Procedures in construction organization including procurement, ethics, field supervision, legal and managerial problems, personnel, cost accounting, and construction business practices.

C E 458 Construction Management II (3)

This course presents policies, procedures, and applications in construction management and organization including procurement, ethics, field supervision, legal and managerial problems, personnel, cost accounting, and construction business practices. The course encompasses construction tenets and fundamentals including planning, organizing, staffing, directing, and controlling. Students who successfully complete this course will be able to:

1) understand organizational issues concerning development of a project delivery system
2) comprehend the roles and responsibility of the Resident Project Representative and members of the construction team and the respective utility of the resident inspection office responsibilities
3) know the various documentation construction records/reports normally
4) recognize the salient features of specifications and drawings and the fundamentals for using them in contract administration
5) become familiar with the prevailing construction laws, policies, and procedures dealing with labor and safety
6) understand the utility of meetings during construction and the principles and techniques of negotiation
7) apply risk management through contractual allocation of rush and liability
8) become well versed in planning/orchestrating during reconstruction operations
9) apply management principles of directing and controlling construction operations and resources including CPM scheduling, inspections, tests, and contractor submittals
10) understand the concept of value engineering in construction operations
11) understand the critical control issues involved with measurement and payments, controlling construction materials and workmanship, and changes and extra work

C E 461 Water-resource Engineering (3) Qualitative and quantitative description of the hydrologic cycle, flood and drought frequency analysis, climate and land use change impacts, risk analysis and uncertainty, water resource management at regional, national and global scale.

Water-resource Engineering (3)

General Education: None

The Pennsylvania State University
C E 462 Open Channel Hydraulics (3) Free surface flow in rivers, canals, steep chutes, stilling basins, and transitions.

This is an advanced senior level course dealing with steady gradually varied flow. The laws of conservation of mass, energy and momentum are applied to gradually varied steady flow problems in rectangular and non-rectangular channels. Basic definitions and equations governing flow are developed for uniform and nonuniform flow conditions. The students will use their knowledge of fluid mechanics, calculus, numerical analysis and computer science to solve practical open channel flow problems.

C E 465W Water Resources Capstone Course (3) Hydraulic design of river structures and open channels including supercritical and spatially varied flow; hydrologic/hydraulic computer modeling; design project.

This course is designed to provide seniors in the water resources area with a major design project. In addition, the course has a writing component, which satisfies the University's writing across the curriculum requirement. Projects cover hydrologic and hydraulic design. Hydrologic analysis is performed to size the hydraulic structure systems that convey the design flows. The students utilize Geographic Information Systems data bases, utilize several state of the art computer models, and are required to write several computer programs.

C E 472W Environmental Engineering Capstone Design (3) Principles and design of unit operations for water; domestic and industrial wastewater treatment; equipment selection and application.

This course will integrate engineering science and design skills through application to an open-ended environmental problem dealing with one or more of the following: industrial sustainability and pollution prevention; water transmission and treatment; wastewater collection and treatment; solid waste collection, treatment, and disposal; remedial investigation and feasibility studies for a hazardous waste site.

C E 475 Water Quality Chemistry (4) Chemistry applicable to the understanding and analysis of water quality, pollution, and treatment.

C E 475 Water Quality Chemistry is a senior/graduate-level course focused on both theoretical aspects of water chemistry and applied aspects of engineering practice. The course will cover a wide range of fundamental chemical principles that will be investigated further in the laboratory exercises and through an independent research project. The course covers reaction stoichiometry and reaction type with specific examples of processes typically encountered in water, wastewater and hazardous waste treatment situations. The course distinguishes between kinetic and equilibrium reactions and presents mathematical formulations for both types of reactions. The course reviews thermodynamics and electrochemistry.
C E 479 Environmental Microbiology for Engineers (3) Intro microbiology for engineers; microbe structure, function, and diversity; environmental ecosystems; diagnostic labs.

C E 479 Environmental Microbiology for Engineers (3)

C E 479 Environmental Microbiology for Engineers is a senior/graduate-level course comprised of three main sections: (1) the fundamentals of microbial structure, function, nutrition, and growth for students with no prior formal instruction in microbiology; (2) microbial diversity and ecology; and (3) the application of these fundamental microbial principles to environmental systems. In the fundamentals section, the course covers microbial nomenclature, macromolecules, cell biology, energetics, growth, and genetic regulation. This is illustrated with calculations of thermodynamic constraints in microbially catalyzed reactions, the calculation of efficiencies based on energy conservation from common pathways, and the connection of these efficiencies to microbial growth in a chemostat. Building on these fundamental concepts of metabolic potential and conserving energy and acquiring reducing equivalents from redox reactions, the second section covers the reactions and energetics of the primary microbial functional diversity such as phototrophy, lithotrophy, autotrophy, anaerobic respirations, and fermentations. It also introduces modern molecular biology techniques for studying microbial systems, and pulls the concepts of functional diversity together by illustration with the major nutrient cycles, including discussions of environments in which each reaction might be encountered. Finally, the last section applies these ecological principles to several specific engineered environments of interest. Homework assignments throughout the semester involve questions about the methods, findings, or applications of recent articles that highlight the recently covered material, giving the students experience in the critical evaluation of primary literature and demonstrating the relevance of the material to environmental microbiology research and application. Complementing the progression of the lectures are eight instructional laboratories that provide hands-on application of diagnostic microbiological techniques to the characterization of environmental enrichment cultures and pure cultures. For example, a microscopy lab immediately follows the lecture material on cell biology, an enrichment experiment follows the section on microbial growth, etc. The final seven weeks of the laboratory period are devoted to group projects, in which students apply the techniques they have learned as appropriate to answer specific short-term research hypotheses. The final period is devoted to group presentations of their projects.

C E 476 Solid and Hazardous Wastes (3) Characteristics and treatment of solid wastes and hazardous wastes.

C E 476 Solid and Hazardous Wastes (3)

Solid waste management continues to be a major area of concern for the Environmental Engineering profession. Based on the principle of the conservation of mass, we know that all of our wastes must be deposited in either the air, water or land environments. With improvements in air and water pollution control technologies, resulting in solid residuals, an increasing waste load is being placed on the land. Environmental impacts are being addressed as a future need.

The Pennsylvania State University
C E 488C Capstone Project - Construction (4) This course consists of a project either selected by the students with approval or assigned by the instructor.

This course integrates the structural design and construction skills through an application to a project focusing in the construction management area. The course is serves as the capstone of the senior student's education courses. The course C E 488C identifies the student selection of a construction capstone project. The student works on a team during the course project process. The team will evaluated on different assignments during the project as well the final product. The team will submit a final written report as well make an oral presentation. The SDCET advisory board is invited to participate in the oral participations. The 4 credit hour course is separated into two parts which are taken in two consecutive semesters. The first course offering is for 1 credit to provide the students an overview of the course and an introduction to the project. The course is then repeated for 3 credits the following semester for the project. This is to allow the necessary time for students to complete the project.

C E 488D Capstone Project - Structural Design (4) This course consists of a structural design project either selected by the students with approval or assigned by the instructor.

This course integrates the structural design and construction skills through an application to a project focusing in the construction management area. The course is serves as the capstone of the senior student's education courses. The course C E 488D identifies the student selection of a structural design capstone project. The student works on a team during the course project process. The team will evaluated on different assignments during the project as well the final product. The team will submit a final written report as well make an oral presentation. The 4 credit hour course is separated into two parts which are taken in two consecutive semesters. The first course offering is for 1 credit to provide the students an overview of the course and an introduction to the project. The course is then repeated for 3 credits the following semester for the project. This is to allow the necessary time for students to complete the project.

C E 494 Senior Thesis (1-9) Students must have approval of a thesis adviser before scheduling this course.

C E 494H Honors Senior Thesis (1-6) Investigation of an original project in the area of Civil Engineering.
course. Students may register for a total of 6.0 credits over their last two semesters.

**C E 531 Legal Aspects of Engineering and Construction (3)**

- Basic legal doctrines, contractual relationships between parties, analysis of construction contract clauses, contract performance, and professional practice problems.
- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Fall 2001

**Legal Aspects of Engineering and Construction (3)**

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**C E 533 Construction Productivity Analysis and Performance Evaluation (3)**

- Construction productivity concepts and models; productivity measurement, control, and forecasting; analysis of factors affecting productivity; methods improvement techniques.
- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Fall 1992

**Construction Productivity Analysis and Performance Evaluation (3)**

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**C E 539 Approximate Methods of Structural Analysis (3)**

- Structural analysis through the application of initial-value methods, Newmark's method, Fourier series, finite difference techniques, and work and energy procedures.
- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Fall 1992

**Approximate Methods of Structural Analysis (3)**

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**C E 540 Statically Indeterminate Structures (3)**

- Analysis of statically indeterminate straight/curved beams, grids, 2D/3D frames, arches, cables, and shells using classical and modern techniques.
- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Spring 2005

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**C E 541 Structural Analysis (3)**

- Theory of various finite elements as applied to civil engineering structures. Term paper
C E 542 (A E 542) Building Enclosure Science and Design (3) The building enclosure: nature, importance, loadings; building science: control of heat, moisture, air, hygrothermal analysis; design: walls, windows, roofs, joints.

The building enclosure, or envelope, is the environmental separator in any building and is, like the superstructure and the service systems, one of the major physical components of the building. The primary objective of this course is to develop an understanding of the nature, importance, functions, and performance of the building envelope in general. The necessary building science--concerning primarily heat, moisture, and air--is covered, and hygrothermal analysis procedures are developed. A generalized categorization system for enclosure elements, i.e., walls (both above- and below-grade), roofs, and other enclosure sub-assemblies, is proposed. General design strategies are developed. The design of specific wall systems (both above- and below-grade), roof systems, base floors, windows, and their joints is then addressed in some detail. The integration of structures (composite action, restraints, etc.), service systems (especially energy consumption), and finish (exterior and interior) is considered in sonic detail. Evaluation is based on an equal combination of assignments (6) and examinations (2). This course complements courses in architecture, civil engineering, architectural engineering, and mechanical engineering.

C E 543 Prestressed Concrete Behavior and Design (3) Design and behavior of prestressed concrete structures: materials and systems losses, flexure, shear, bond, deflections, partial prestressing, continuous beams.

C E 544 Design of Reinforced Concrete Structures (3) Advanced topics in design of reinforced concrete structures. Torsion and shear; beam moment-curvature; two-way slab systems; slender columns; strut- and-tie methodology.

This course explores advanced topics in the design of reinforced concrete structures in conformance with standardized building codes. Topics covered include load combinations, principles of structural modeling, torsion and shear in reinforced concrete members, two-way slab systems, moment-curvature of beams, slender columns, and strut-and-tie models. Students enrolled in this course should have prior knowledge of the design of reinforced concrete beams, one-way slabs, and short columns. Due to the course content, students must be familiar with the American Concrete Institute (ACI) Building Code Requirements for Reinforced Concrete.

This course will generally be offered each fall, with an anticipated enrollment of 10. Grades will be based on two examinations, assignments, and a comprehensive final examination.

C E 545 Metal Structure Behavior and Design (3) Design philosophies and basis; seismic loading; fatigue; bending, column, plate, and beam-column stability; tapered members; torsion; connections; bracing; frame stability.
C E 545 Metal Structure Behavior and Design (3)

This course presents advanced topics in elastic and inelastic structural metal member behavior and the theoretical basis of modern design codes and procedures. Philosophies of design, fatigue, bending stability and tapered members, torsion, stability of plates, stability of columns, stability of beam-columns and bi-axial bending, connections, and frame stability are covered in depth in addition to other topics relating to advanced behavior and design of metal structures. Students interested in this course must be familiar with the American Institute of Steel Construction (AISC) Manual of Steel Construction.

This course will generally be offered each fall, with an anticipated enrollment of 12. Grades will be based on homework assignments, a semester project, two examinations, and a comprehensive final examination.

Bachelor of Arts: None
Effective: Fall 1992
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

C E 551 Random Processes in Hydrologic Systems (3) Hydrologic systems analysis, simulation; design using probability, time series and dynamical systems; formulating models, parameter estimation, environmental impact, resource assessment.

Random Processes in Hydrologic Systems (3)
C E 552 Coastal and Nearshore Processes (3) Hydrodynamics of the near-shore environment, including waves, currents, and storm surges. Coastal response, sediment transport, engineering structures.

C E 552 Coastal and Nearshore Processes (3)
Coastal and Nearshore Processes is concerned with the hydrodynamic processes that transport mass, momentum, and energy in the nearshore environment. These processes include tides, waves, currents, and storm surges.

Following study of the characteristics of these processes, emphasis is placed on the qualitative and quantitative study of the physical response of the coastline to these forcing mechanisms. Both cross-shore and long-shore sediment transport are considered, as are simple models for long-term coastline evolution. Finally, some attention is given to engineering structures placed in the coastal environment and the accompanying modifications to wave and current climates.

C E 555 Groundwater Hydrology: Analysis and Modeling (3) Introduction to groundwater resource analysis, model formulation, simulation, and design of water resource systems using symbolic and numerical methods.

Groundwater Hydrology: Analysis and Modeling (3)

C E 561 Surface Hydrology (3) Quantification of the processes that govern the movement and storage of water near the land-surface including precipitation, evapotranspiration, and runoff.

C E 561 Surface Hydrology (3)

Water is an important factor in numerous engineering and scientific problems. It can be both a hazard and a resource. Knowledge of the movements and storage of water in the terrestrial, oceanic, and atmospheric environments is fundamental in many such applications. This course provides a graduate level introduction to surface hydrology, which focuses on the quantification of water pathways near the land-surface. It presents basic properties of the terrestrial, oceanic, and atmospheric environments and develops water and energy budget equations for different settings and scales. The course also provides detailed quantitative descriptions of the main processes responsible for the movement of water in the environment including precipitation, evapotranspiration, snowmelt, infiltration, surface runoff, groundwater recharge, subsurface runoff, and streamflow.

C E 563 Systems Optimization Using Evolutionary Algorithms (3)

A comprehensive introduction to the field of genetic and evolutionary computation. The course emphasizes state-of-the-art methods for designing and implementing evolutionary algorithms for computationally intensive engineering and science problems. Course concepts are demonstrated using case studies drawn from the disciplines of
the students enrolled. The course is offered every spring semester.

General Education: None
Diversity: None
Bachelor of Arts: None

C E 564 Sediment Transport in Alluvial Streams (3)
River flow, river channel formation, the physical characteristics of rivers, responses of rivers to natural and human-made changes.

C E 564 Sediment Transport in Alluvial Streams (3)
A comprehensive presentation of river processes and engineering must be built upon the foundations of fluvial geomorphology, hydraulics of river flow, and sediment transport. The course is organized into the following five principal parts:

Part I. Fluvial Geomorphology
Part II. Foundations of Fluvial Process
Part III. Regime Rivers and Processes
Part IV. Mathematical Modeling of River Channel Changes
Part V. River Engineering

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

C E 566 Uncertainty and Reliability in Civil Engineering (3)
Introduction to probabilistic modeling, simulation, uncertainty analysis, and reliability estimates applied to civil engineering.

C E 566 Uncertainty and Reliability in Civil Engineering (3)
The objective of this course is to develop understanding of the uncertainty in Civil Engineering analyses, design, and construction and to introduce reliability-based methods of analysis. The course covers review of probability and statistics, uncertainty analysis, probabilistic models of load and resistance, and the application of reliability analysis to problems in Civil Engineering.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

C E 567 River Engineering (3)
Introduction to river mechanics and fluvial geomorphology applied to problems of sediment transport and channel morphology.

C E 567 River Engineering (3)
River Engineering will introduce students to the concepts of flow and sediment transport in canals and alluvial rivers. This course covers: river morphology and hydraulic geometry; hydraulics of flow in river channels; measurement of velocity; rating curves; properties of sediment; scour-related problems; stream stability and classification; sediment movement in rivers; channel design; software for erodible channels; stream bank, bridge pier, and bridge abutment protection; environmental considerations; and stream restoration. During the semester, the students will visit local streams for the purpose of making various observations and measurements.

The Pennsylvania State University
C E 576 (CH E 576) Environmental Transport Processes (3) Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers.

C E 576 Environmental Transport Processes (3)

Environmental Transport Processes covers the fundamental of mass transport of chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (i.e., rivers, lakes, and groundwaters).

C E 591 Environmental Engineering Seminar (1) Seminar topics selected by faculty and students based on research interests on topics related to environmental engineering and science.

C E 591 Environmental Engineering Seminar (1)
This is a seminar course offered primarily for graduate students in Environmental Engineering, although other graduate students with interests in environmental research take this course. Graduate students may receive only 1 credit of this seminar towards a degree in Environmental Engineering, however, they are encouraged to register and attend every semester during their graduate career. This course is offered for 1 credit for both fall and spring semesters. Students making presentations receive letter grades, while others receive a satisfactory/unsatisfactory grade.

Seminar topics are selected by faculty and students based on research interests on topics related to environmental engineering and science. Most of the talks will be by environmental engineering graduate students. However, during the semester there will typically be three outside speakers that will be invited to give talks. Students in this class are expected to meet with these outside speakers in the laboratory to discuss their own research projects.

Students in this class give short presentations on their research topics. Each presentation should be about 20 minutes in length, allowing for 10 minutes of questions concerning the technical content of the presentation. The rest of the class is sued for general discussion. Students are encouraged to give a seminar even though they have not completed all of their research (i.e. prior to their defense). Feedback from faculty and other students in this informal setting can be used to help improve research ideas and stimulate new ideas and research directions during the course of their research work.

C E 592 Environmental Engineering & Science Topics (1) Current topics in environmental engineering and science.

C E 592 Environmental Engineering & Science Topics (1)
This is a literature review course for graduate students interested in topics related to environmental engineering. The subject of this seminar changes each semester. Examples of topics include: membrane bioreactors; biological hydrogen production; metal reduction by soil bacteria; anaerobic respiratory pathways used by bacteria for pollutant degradation.

This class is highly participation-oriented. Each week we review a single paper selected by the instructor or by a student in the class. The first two papers are selected by the instructor. Thereafter, students choose the paper. The paper must be selected one week in advance, and sufficient copies will either be brought to class or a pdf file will be provided by email to all participants one week prior to the class. The student choosing the paper will be expected to lead the discussion by: prompting others to provide a summary of the paper or of key items; suggesting areas that require closer inspection; stimulating a critical evaluation of the paper. No background is needed on this topic other than general environmental engineering courses typical of an M.S. program in Environmental Engineering.

Classics and Ancient Mediterranean Studies (CAMS)

CAMS 400W Comparative Study of the Ancient Mediterranean World (3) Comparative study of ancient Mediterranean civilizations.

CAMS 400W Comparative Study of the Ancient Mediterranean World (3)

(BA) This course meets the Bachelor of Arts degree requirements.

CAMS 400W provides students in the Classics and Ancient Mediterranean Studies (CAMS) Major, and other undergraduate and graduate students in allied fields, a capstone overview of research methodologies as they are applied to contemporary issues in ancient Mediterranean studies. The course is interdisciplinary in nature, and stresses the interactions among the ancient cultures of the Mediterranean region. The specific course content varies depending on the current research interests of the department faculty and the work undertaken by participating students. The course is organized as a seminar with participation by department faculty, and, when appropriate, visiting speakers. The topics concern issues of chronological, geographic, and cultural breadth. Students are expected to give an oral presentation of their research on a relevant topic during the last three weeks of the semester.

This course requires a sequence of written assignments that constitute drafts in the process of writing an extended research paper. These consist of a statement of the problem, an annotated bibliography, a preliminary draft, and a final paper revised in light of the instructor's comments on the assignments. This paper and an oral presentation in class based upon it will constitute about half of the final grade. A quiz and essay final examination will constitute the remainder of the grade.

CAMS 405 (IL) Law & Economy in the Ancient Near East (3) This course is an overview of the legal and economic texts and institutions in the Ancient Near East.

CAMS 405 Law & Economy in the Ancient Near East (3)

(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will introduce the students to the legal and economic institutions of the Ancient Near East, as well as to the many theoretical issues raised by their study, such as: the matter of land tenure; the role played by the temple and the palace in the economic structure; the nature of law within political theology and kingship; and the legal and economic status of specific social groups (women, the elderly, slaves, children). Since most of the topics to be examined are widely debated, the course will provide the students with a broad overview of scholarly theories and intellectual schools. In order to accomplish such an objective, the readings for the class will include both introductory works (taken, for instance, from Sasson, Civilizations of the Ancient Near East) and more advanced and specific articles and works (e.g., R. Westbrook, A History of Ancient Near Eastern Law). Students will be asked to prepare these readings, which will be available in the library or in electronic format, so they will be ready to take part in class discussions.

The source book for the basic legal texts will be M.T. Roth's edition of law collections. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accomplished by some handouts.

Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations.

This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the several history and culture courses in CAMS that provide detailed overviews of major civilizations of the Mediterranean and Near Eastern regions.

CAMS 411W Classical Drama (3) Masterpieces of Greek tragedy (Aeschylus, Sophocles, Euripides) and comedy (Aristophanes, Menander); their influence on Roman writers.

CAMS 411W Classical Drama (3)
(BA) This course meets the Bachelor of Arts degree requirements.
The aim of this course is to read, interpret, discuss, and write about the best known and most influential examples of classical drama (in English translation). Students will become conversant with the formal and thematic aspects of Greek tragedy and comedy. (The course could also include a module devoted to Roman adaptations of Greek drama.) The Greek playwrights to be read are Aeschylus, Sophocles, Euripides, and Menander. (Roman playwrights would include Plautus, Terence and Seneca.) The objectives of this course include learning how to read, analyze, and interpret tragedy and comedy within a literary, cultural, and historical framework that is fundamentally different from our own. At the same time as students come to grip with the cultural differences of Greek drama, they will be invited to ponder why these texts are still relevant to modern readers and audiences. The second objective of this course is to give students a forum in which they may reenact the critical debates and dramatic conflicts that characterize the ancient Greek theater. Class time will be devoted to structured discussion on set topics. Toward the end of the semester students will give 15-minute presentations on different aspects of classical drama that illuminate the texts read in class: for example, the design of Greek theaters and ancient theatrical production, the religious and civic functions of tragedy, gender roles, tragic and comic heroism, myth, rhetoric, philosophy, and the legacy of Greek tragedy and comedy in the modern world. The third objective of the course is to focus on developing critical writing skills and communicating clearly with readers. Students will write six papers of varying length (three papers in two drafts) and two essay exams (mid-term and final). The process of writing will provide a vehicle for close-reading and critical interpretation of classical drama. Students will also learn in classroom discussion and in feedback from the instructor and other students that critical writing entails drafting ideas and revising them. Finally, participants will learn how to write properly documented and well-argued research papers.

CAMS 420 Introductory Targumic Aramaic (3) Fundamentals of Aramaic grammar, syntax, and vocabulary.

CAMS 420 Introductory Targumic Aramaic (3)
The aim of CAMS 420 is to introduce students to the fundamentals of Targumic Aramaic as quickly and thoroughly as possible. Targumic Aramaic, is the dialect used by Jews in the last few centuries BCE in their translations of the Bible into Aramaic. Targumic Aramaic texts remain vital within Judaism and Biblical study. This course focuses primarily on the morphology and syntax of Aramaic. Drills on each point of grammar, as well as translation of sentences from Aramaic to English and English to Aramaic, and brief passages taken from the native texts are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of actual Aramaic. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS will prepare students to work with Aramaic in related courses in CAMS, in particular those dealing with other Aramaic dialects, the Bible, and other related ancient languages. The course goals, in addition to providing the students a basic understanding of the history of the Aramaic literary tradition. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to real Targumic Aramaic texts, which are of great importance to understanding the history of Biblical textual transmission.

CAMS 440W Studies in Classical and Ancient Mediterranean Archaeology (3-6) Selected topics in the literary sources and material evidence for classical and ancient Mediterranean society.

The Pennsylvania State University
CAMS 440W Studies in Classical Archaeology (3-6)

This course meets the Bachelor of Arts degree requirements.

CAMS 440W is a writing-across-the-curriculum upper level archaeology course on various topics in the broad field of ancient Mediterranean archaeology. The course will vary depending on the specific topic, which could be a study of authors such as Herodotus and/or Pausanias in relation to the archaeological record; epigraphy; numismatics; food production and consumption (e.g., diet, subsistence requirements, public dining, symposia, Roman dining, furnishings) from the literary and archaeological record; various classes of ancient Mediterranean ceramics; or the archaeological study of a specific urban site, such as Troy, Babylon, Egyptian Thebes, the Athenian Agora, or Pompeii with an emphasis upon economic and social organization.

In most semesters the topic will emphasize interdisciplinary themes, such as comparative state formation, or Egyptian-Greek-Persian relations, or the cultural development of a particular society, such as the Etruscan, that was strongly influenced by interaction with other Mediterranean cultures.

Students will learn of major publications in the field of study, and how to conduct searches of the previous archaeological literature and the related literary record. As one requirement, students will complete a research paper on a topic related to the particular theme of the course that semester. The sequence of writing assignments is designed to allow students to develop a project, to search for related publications, to develop a proposal, and to revise drafts of the final paper.

The course is also intended to provide students with a practical background in Classical and ancient Mediterranean archaeology that will help prepare them for fieldwork at ancient Mediterranean sites, for the interpretation of archaeological publications, and, as relevant, for utilizing the literary and/or epigraphic record for interpreting archaeological evidence.

Those considering enrolling in this course may obtain information about the specific topic by asking the faculty member listed as teaching the course or the Undergraduate Officer in the Department of Classics and Ancient Mediterranean Studies.

CAMS 442 (IL) (KINES 442) Sport in Ancient Greece and Rome (3) An examination of the continuity of sport in Greek and Roman societies.

CAMS (KINES) 442 Sport in Ancient Greece and Rome (3) (IL)

This course examines the continuity of sport in ancient Greek and Roman societies. It investigates the role of athletic festivals in both cultures as well as the value placed on physical activity as part of the educational process.

The objectives of the course are to enable students to gain an appreciation for the continuous involvement of the ancient Greeks in the areas of competitive athletics and gymnastics[Kinesiology] as an important part of their value system. Moreover, the course will provide a comparison of Greek and Roman attitudes of athletics and gymnastics.

Typical topics include athletics during the Minoan /Mycenaean Bronze Age, Athenian and Spartan philosophies regarding education, the importance of spectator sports in Roman society and their link to politics.

CAMS 470 (IL) Languages and Cultures of the Ancient Near East (3) This course is an overview of the languages and cultures that populated the Ancient Near East.

CAMS 470 Languages and Cultures of the Ancient Near East (3) (IL)

This course meets the Bachelor of Arts degree requirements.

This course aims to provide students with a wide overview of the languages spoken in the Ancient Near East. The goal is to go beyond the merely linguistic sketches of the main grammatical features of these languages. In fact, the focus will be placed on historical, literary, social, anthropological, and ethnic matters: language contact settings; relations between language and ethnicity; sociolinguistic aspects of language evolution, language variation, bilingualism, and diglossia; relations between historical and social patterns and the literary, bureaucratic, and popular uses of language; etc.

In order to address this ample variety of issues, the students will be introduced first to the essential set of facts needed
to comprehend the sociolinguistic history of each region, i.e., basic overviews of the languages in question, their linguistic affiliation, the main periods of their history as evolving linguistic realities, and their different writing systems. These overviews will immediately open the door to the discussion of a tapestry of topics concerning the realities behind these languages, especially their speakers and their ethnic, historical, and political identity. This inquiry into the facets of language as an inherently human reality will lead to a miscellaneous constellation of problems, such as, for instance, the construction of a national identity through the use, revival, or vindication of a concrete language or dialect.

Students will be required to do a number of readings before each class. These readings will include basic historical sketches of the languages and linguistic traditions with which the course will deal. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of a lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accompanied by some handouts.

Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations.

This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide overviews of major civilizations of the Mediterranean and Near Eastern regions.

CAMS 471 Sumerian (3) Introduction to the Sumerian language and the cuneiform writing system.

CAMS 471 Sumerian (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Sumerian was the language originally spoken in the south of Ancient Mesopotamia (modern Iraq) during the third millennium b.c.e. After it died out as a spoken language, Sumerian became the essential cultural vehicle for a wide variety of literary, scholarly, and religious genres, and it was preserved in writing until the practical disappearance of the Mesopotamian civilization by the second century of our era.

This course aims to familiarize students with the basics of Sumerian grammar and enable them to read royal inscriptions from the Early Dynastic and Ur III periods (3rd millennium b.c.e.) as well as provide them with a preliminary introduction to some literary and non-literary texts. Students will be introduced to a variety of genres: royal inscriptions, administrative documents, letters, incantations, and literary texts.

Because of the specific nature of the writing system and the fact that most Sumerian texts are available only in copies, students will also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs.

Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put on class participation: every student will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a midterm and a final examination.

This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to as essential language of the Mediterranean and Near Eastern regions.

CAMS 472 Akkadian (3) Introduction to the Akkadian language (Babylonian & Assyrian) and the cuneiform writing system.

CAMS 472 Akkadian (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Akkadian is the cover term for the East Semitic dialects spoken and written in Mesopotamia (modern Iraq) from the mid-third millennium b.c.e. to about the first century c.e. These dialects (Babylonian and Assyrian) are all quite similar. As is customary, the course will focus on Old Babylonian, as this is the "classical" variety of the language, and served as the basis for the dialect of the vast majority of later Akkadian texts (Standard Babylonian). This course aims to familiarize students with the basics of Akkadian grammar and enable them to read a wide variety of genres: legal texts, letters, omens, royal inscriptions, and literary compositions.

Because of the specific nature of the writing system and the fact that many texts are available only in copies, students will
also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs. Every meeting will follow a similar structure: the first part will be devoted to the exercises corresponding to the lesson in the textbook that was explained the previous day; and the second part will be an explanation of the next lesson, the exercises of which will have to be prepared for the next meeting.

Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put on class participation: every student will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a midterm and a final examination.

This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies. Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to an essential language of the Mediterranean and Near Eastern regions.

CAMS 481 (IL) Introduction to Middle Egyptian & Hieroglyphics (3) An introduction to the language and script of Ancient Egypt, familiarizing the student with grammar, syntax and lexicon.

CAMS 481 Introduction to Middle Egyptian & Hieroglyphics (3)

This course is offered as a basic introduction to that stage in the evolution of the Egyptian language known as "Middle Egyptian" (used as a vernacular c. 2300-1700BC, and as a "literary" dialect c. 2200-1350BC). First encountered in caption texts and snippets of conversation of the workers and peasants in late Old Kingdom mastaba depictions, Middle Egyptian originally was the vernacular of the "street" during the outgoing Old Kingdom. In the upheaval that swept away the monarchy and elite of the Old Kingdom the language which characterized the Pharaonic court (Old Egyptian) was swept away as well. In the subsequent First Intermediate Period, the language that everyone speaks is a lower class register. Middle Egyptian was given a fillip shortly after the turn of the millennium when the new regime of the 12th Dynasty (c. 1991-1786 BC) established a writing school and adopted this dialect as the accepted literary medium. The scribes of this institution produced a number of literary pieces, hymns and poetry which although created in writing, were intended for oral dissemination parlando. They rapidly became classics and were copied and learned by heart for centuries into the future. Middle Egyptian was used in every walk of life from monumental inscriptions, religious, and mortuary texts to letters, business documents and accounts, and the output from Dyn. 12 through 18 was prodigious. Even beyond the 14th Century BC learned scribes would continue to make the attempt at composing in Middle Egyptian, even though the language was no longer spoken, and as a quasi-ecclesiastical speech it continued down to Greco-Roman times. By that time its restriction to temple texts gave the false impression that both language and script had always had the purpose of conveying religious concepts, hence the Greek misnomer 'hieroglyphs', i.e. holy script.

CAMS 490 Ancient Mediterranean Languages (3-6) Variable topic study of an ancient language of the Mediterranean basin and related areas, other than Greek, Latin, or Hebrew.

CAMS 490 Ancient Mediterranean Languages (3-6)

(BA) This course meets the Bachelor of Arts degree requirements.

CAMS 490 is a variable topic course in ancient languages, other than Greek, Latin, and Hebrew, that are offered by the Department of Classics and Ancient Mediterranean Studies. The course expands the range of ancient languages of areas in the Mediterranean region which students may study at Penn State. The course permits students of Latin, Greek, or Hebrew to learn the basics of other ancient Mediterranean languages, thereby extending their understanding of the
structural similarities and differences of the region's writing systems. The languages taught at present include Egyptian and Sanskrit. Other languages, such as Akkadian, Hittite, Ugaritic, or Aramaic may be offered in future years. The course consists of three major components: The course begins with an overview of the language of study with respect to the language systems of the ancient Mediterranean world in a historical context. Next students learn the essential features of the language of study including its forms, grammar, and lexicon. In the second part of the semester, students read selected texts of various genres as appropriate, including literary and historical texts and inscriptions. The known features of the oral language will also be discussed. The course complements advanced courses such as LATIN 45OW, The History of the Latin Language, and other advanced language offerings in Greek, Latin, and Hebrew. It also complements offerings in historical-comparative and Indo-European linguistics such as LING 102(GH).

**Comparative Greek and Latin Grammar (3)**
CAMS 503 Seminar on Ancient Mediterranean Languages (3 per semester, maximum of 6) An in-depth examination of the ancient languages of the Mediterranean basin, including Indo-European and non-Indo-European languages.

CAMS 504 Topography of Ancient Rome (3) Lectures and readings on physical development of the ancient city of Rome from earliest habitation to time of later empire.

The objective of this course is the acquisition of a scholarly understanding of the ancient city of Rome’s physical identity: its foundation, development, and expansion, with particular attention to the identification of physical structures for which there is evidence either archaeological or literary or both.

This seminar complements graduate programs of study in Ancient, History, Art History, Anthropology, and is integral to the graduate curriculum in Classics and Ancient Mediterranean Studies.

Evaluation of student seminar work is based on (1) active participation in seminar discussions; (2) oral presentation of research reports; (3) a major research paper. This seminar has a limited enrollment of 8 and is offered once a year.

CAMS 520 Advanced Sumerian (3) Advanced study of Sumerian grammar and cuneiform writing through the reading of Sumerian literary texts.

CAMS 521 Advanced Akkadian (3) Advanced study of Akkadian grammar and the cuneiform script through the reading of texts in various dialects.
CAMS 522 Comparative Semitics (3) Overview of the Semitic language family and introduction to its comparative linguistic study.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2009

CAMS 592 Proseminar (3) Introduction to the history, research methods, historiography of modern scholarship on ancient Mediterranean studies.

CAMS 593 Research Seminar (3-6) Significant research experience in the fields represented by CAMS; guided supervision in the preparation of a scholarly article.

CAMS 596 Individual Studies (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CAMS 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.

**CSA 507 Social Justice Issues in Higher Education (3)** Exploration of diverse student population, their different experiences, and the value university communities place on these differences.

**CSA 507 Social Justice Issues in Higher Education (3)**

Higher education reflects the societal context in which it exists but also has the responsibility to critically examine and change that context. An important role for higher education is to work to achieve equity for all its constituents and in society as a whole by raising awareness, increasing knowledge, and encouraging action related to social justice. This class presumes some knowledge of the concept of social justice and a willingness to explore your own positionality with regard to social justice. A basic understanding of the ideas of privilege and oppression and the role that each of us plays within the power dynamics of American society is necessary to gain new awareness and learning in the short amount of time we have to explore these issues.

CAS 409 (PL SC 409) Democratic Deliberation (3) Explores the theory and practice of democratic deliberation in elections, town meetings, juries, legislatures, and other public institutions.

CAS (PL SC) 409 Democratic Deliberation (3)

Many modern democracies have made strides to become more deliberative in how they make decisions. This course looks closely at the most promising innovations in self-government while also reviewing the persistent anti-deliberative and undemocratic features of modern societies and governments. Topics covered in the course include deliberative democratic theory, political conversation, common forms of public meetings, mediated deliberation, campaigns and elections, the jury system, and deliberative democracy on larger social scales.

CAS 410W Mother-Daughter Communication (3) Explores the mother-daughter relationship with an emphasis on understanding mother-daughter communication.

CAS 410W Mother-Daughter Communication (3)
The mother-daughter relationship has been explored in literature, film, and in the social sciences. This course will examine the mother-daughter relationship through social, psychological, developmental, and relational communication lenses. The course challenges students to explore the socially constructed nature of the mother-daughter relationship in film and literature and investigate the many ways this unique relationship is understood through the social sciences. In addition to examining the social construction of the mother-daughter relationship across time, contemporary social science theories will be discussed and students will be challenged to assess how these theories do or not help to explain their own personal maternal relationships. This course satisfies the university writing intensive requirement, which means that over 80% of the final grade is based assessment of writing. Evaluation will include a series of multiple choice and short essay quizzes, a mid-term paper, and a final application paper. This mother-daughter communication course is an upper division course that contributes toward students' personal development and complements students' interests in pursuing counseling, pastoral, health, gerontology, social services and other career ambitions involving a need to understand family relationships. CAS 410 may be used to fulfill Major or Minor requirements for upper division credits. This course relies heavily on whole-class and small group discussion.

CAS 421 Communication and Aging (3) Concentrates on the pivotal role that communication plays in the social process of aging.

Communication and Aging is a course that concentrates on the pivotal role that communication plays in the social process of aging. An understanding of the communicative behavior of older adults can result in significant improvements in our ability not only to describe the essential components of a quality life, but to actively intervene in the various factors that help each of us adapt to the many physiological, psychological, social and economic challenges of the aging process. Topics covered in this course include: the theories of social aging; attitudes and ageism; mass media use and portrayals; work, leisure, and retirement; family relationships such as siblings, grandparent-grandchild, parent-child; friendships; health and aging; death and dying; and successful aging. This course places communication and our interactive behavior at the heart of the aging process and helps us combine the growing bodies of literature in physical, psychological and social aging as we attempt to grasp the process of life long development.
CAS 422 (US) (AF AM 422) Contemporary African American Communication (3) A focused study on the continuities between African and African American culture and communication.

CAS (AAA S) 422 Contemporary African American Communication (3) (US)

(BA) This course meets the Bachelor of Arts degree requirements.

At least once a year, this multidisciplinary course is designed to serve both Speech Communication and African and African American Studies. It is concerned with the relationship between a people’s culture and world view and their systems of rhetoric/communication. It also provides a focus on the continuities between African and African American culture and communication. Specifically, it offers an approach to ascertaining the salient features of African and African American communication for community development. Special emphasis is given to the development and rhetoric of the Civil Rights Movement. The course utilizes videos, guest lectures, tapes of speeches, etc. to clarify objectives and stimulate classroom discussion. Students will be evaluated on two exams, one oral report, a final paper and class participation. Even though students need 400-level courses for their major and minor, this course is not required for Speech Communication majors. However, it does meet the Intercultural and International Competency requirement because it focuses on the communication of African Americans and how that communication has affected all Americans. The course will accommodate ten students in Speech Communication and ten students in African and African American Studies to ensure active discussion of issues.

CAS 426W Communication Ethics (3) Ethical issues in public and private communication; role of communication in expressing and realizing individual and social values.

CAS 438 Rhetoric of Documentary (3) Rhetorical analysis of the documentary in film, television, and other media; historical and critical analysis of functions and form.

CAS 450W Group Communication Theory and Research (3) Selected theories of problem solving through group discussion emphasizing participation and leadership.

(CAS 450W Group Communication Theory and Research is a writing-intensive course in which students study a broad range of theories and perspectives concerning the role of communication in decision-making and problem-solving groups through a variety of writings by leading scholars in the area of Group Communication. The objectives of CAS 450W are: (1) to expose students to various facets of group life and theories that account for their performance; (2) to provide a summary knowledge of representative findings from research on group interaction; (3) to develop critical skill in
the assessment of theoretical arguments and the adequacy of the evidence on which they are based; and (4) to enhance students' capacities for addressing, both orally and in writing, substantive issues posed by the subject matter. Theoretical material is examined with a view toward determining how to improve the performance of decision-making and problem-solving groups. Hence, the course has a strong concern with the identification of communication practices on which students can draw in making choices concerning how to participate in such groups. The course incorporates a discussion, rather than lecture, format. Attendance is required. Students will receive a set of questions in advance of each reading assignment that will provide a basis for discussion in the class sessions. The questions for the first five reading assignments will also serve as topics for a series of five short position papers that fulfill the writing intensive component of the course. In addition to the position papers, students are required to complete a midterm and final examination, both of the open-book, essay variety, and a course paper exploring a significant communication issue raised in the course. Among the topics covered in the course are the impact of member characteristics on interaction, the social dynamics of groups, the management of conflict, argument and decisional outcomes, leadership, and principles of meeting management. Students completing the course will have not only a better understanding of why decision-making and problem-solving groups both succeed and fail, but also a much improved basis for contributing effectively to them. CAS 450W satisfies requirements in the Communication Arts and Sciences Major and Minor, the Liberal Arts Business Minor, and the Dispute Management and Resolution Minor. It may also be used as an elective and is complementary to courses dealing with groups and group process in Psychology, Sociology, and Management.

CAS 452W Organizational Communication Theory and Research (3) Explores the nature and functions of communication in organizations; emphasis on writing and exploring concepts, tools, and skills for effective management of communication.

CAS 452W Organization Communication Theory and Research (3)

This course is designed to further introduce you to the field of Organizational Communication. Emphasis is placed on macro-organizational variables that can systematically affect micro-communication behaviors: in other words, how could something like the hierarchy of the organization influence who you talk with as an organizational employee? The purpose of the course is to provide you with a basic understanding of communication-relevant behaviors and activities in organizations. This includes things like leadership, teamwork, conflict management, and diversity. Additionally, we will examine various theories and approaches to studying communication within organizations. My hope is that when you've successfully completed the course you've mastered these objectives:
- Develop a vocabulary and understanding of organizational communication concepts.
- Become familiar with the historical, current, and future issues and problems facing organizations.
- Apply theoretical perspectives and concepts to organizational situations and settings.
- Identify and understand the relationships between macro (e.g. structure and hierarchy) and micro (e.g. social support and stress) organizational communication variables.
- Experience locating, reading, synthesizing, and evaluating scholarly research appropriate for organizational communication phenomena.

CAS 453 Health Communication Theory and Research (3) Principles of communication about health across the lifespan and within health-care contexts.

CAS 453 Health Communication Theory and Research (3)

This is an upper division course designed to provide students with a comprehensive introduction to multiple discourses
about health and health care. CAS 453 emphasizes the communication about health and health care that reaches us
everyday through many and varied professional, personal, and mediated forms. Interactions with health care providers
were once limited primarily to physicians and nurses. Today, careers in health care are among the most rapidly expanding
job areas, and a bewildering array of technicians and technical and professional titles greets the client of formal health
care. Awareness and understanding of how to assess these various roles increases the ability of students to interact
competently with care providers. Family, friends, and the cultural groups that nurture our youth and sustain our
adulthood interact with us about health on a regular basis as well. Awareness and understanding of the impact that
interactions with these primary social network members has on interactions with health care providers increases the
likelihood that both provider and client will be better understood and better served.

Every message about health and health care carries an ethical dimension in its content. The course will increase a
students' critical thinking and informed decision-making skills associated with others efforts to influence them regarding
their own health practices. It also frames discussion about the ethics of and ethical decision-making associated with
health communication. Students will examine communication about health in many situations and contexts to illustrate
how it reflects efforts to assign labels to illness and disease, and sometimes the environmental and political contributors
to the situation. Students will assess whether communication about health and health care places the responsibility on
individuals, institutions, society, or some combination for the particular health condition or situation. Finally, students will
evaluate how communication is used to invoke personal, professional, and societal norms of conduct associated with
standards of conduct that should promote health and well-being.

The course is linked to the courses in interpersonal communication, organizational communication, health
communication, and small group communication, as discourse about health crosses societal, cultural, and personal
contexts. CAS 453 is one of the upper division courses that may be used to fulfill Major or Minor students' requirements
for upper division credits.

CAS (US) (WMNST 455) Gender Roles in Communication (3) Explores the literature on gender research in the discipline
of human communication.

CAS (WMNST) 455 Gender Roles in Communication (3)

This 400-level course is a theory and application course which also satisfies an intercultural requirement. CAS/WMNST
455 strives to ensure that students understand female and male differences and similarities in communication patterns,
perceptions of the opposite sex, and expectations and stereotypes regarding the opposite sex. Many researchers find that
gender communication is "cross cultural," i.e., that women and men come from two different cultures, and therefore
misunderstanding of each others' intent and expectations may frequently occur. This course examines how distinctions in
meaning and interpersonal dynamics may create these two differing cultures, and promotes understanding and
possibilities for adaptation. It also investigates when and if changing communication styles is desirable, and in which
settings. A goal of the course is to help students to solve puzzles toward understanding those we work with and relate to,
as well as to apply their knowledge to their own lives and contexts. The course content and format reflects these goals.
CAS/WMNST 455 begins with theoretical information, later applying it to situations of interest to most -- relationships,
language use differences (verbal and nonverbal), media messages, and workplace issues. Lecture incorporates
considerable discussion and exploration of gender issues, and most topics are followed by activities, which illustrate how
theories work in real life. This course is useful for any students seeking an intercultural course. It is recommended to
Communications Arts and Sciences and Women's Studies majors and minors due to emphasis on communication theory
and gender issues. Business, counseling, psychology, sociology, education and any social science majors may fulfill a US
requirement through 455.

CAS 471 Intercultural Communication Theory and Research (3) Intercultural and cross-cultural communication research theory and practice as applied within and across national boundaries.

CAS 471 Intercultural Communication Theory and Research (3) (US;IL)

This course is designed to introduce theoretical approaches to cross-cultural communication from a variety of disciplines, e.g., speech communication, anthropology, linguistics, sociology, sociolinguistics, psychology, and has a double aim of combining theory with practical application and empirical observation. We will be utilizing a number of readings, films, and such mass media elements as films, magazines, newspapers, and television programs and commercials, as well as actual interviews with people from other cultures. Classes will be conducted through lecture sessions, class discussions, and small group activities. Specific: To examine characteristics of communication, language, and culture; to consider which aspects of language, communication, and culture may be universal, culture-specific or individual characteristics of speakers; to examine cultural values and their relationships to communication involving members of the same cultural group and members of groups outside of that culture; to raise awareness of both similarities and differences within and between cultural groups; to analyze how effective communication is achieved and to identify potential sources of miscommunication and/or misunderstanding; to raise awareness of our own cultural norms, preferences, and expectations; to increase acceptance, understanding, and appreciation of similarities and dissimilarities among people. Students will be evaluated on two midterm exams (undergrads) or two extended analytic journals (grads) 25%, observation journals (6 total) 15%, thought journals (4 total) 15%, article presentation and critique 15%, final paper and oral report 25%, and participation 5% The content and focus of this course is related to any field which has the potential of dealing with persons of other cultures, including but not limited to biobehavioral health, business and marketing, and education. This course is inherently related to Speech Communication Majors and Minors, but is also valuable from a cross-disciplinary perspective since we deal squarely with issues of humanity, tolerance, values, and communication.

CAS 490 Peer Tutoring for Public Speaking (3) This course will prepare students to become peer tutors in public speaking.

CAS 490 Peer Tutoring for Public Speaking (3)

This course will prepare undergraduates for work as peer tutors in the area of public speaking. Students will begin by considering peer tutoring as an opportunity for civic engagement, and public speaking as integral to the democratic process. Students will review and practice elements of the speaking process both to become excellent speakers themselves and also highly competent tutors for their peers across the university’s curriculum. In addition to instruction on elements of public speaking, students will study and practice the art of critique. This course will include in-class instruction, discussion, and activities, as well as a practicum in which students will participate in reviews of peers’ work at all stages of the speaking process.

**CAS 500 Historical Public Address (3 per semester/maximum of 9)**

This is a graduate seminar focusing on special topics in the history of American public address, 1765-1900. It is designed to strengthen students' knowledge of the historical foundations of the American rhetorical tradition. Special attention is paid to key texts, debates, and movements shaping the origins and development of American nationhood. Emphasis is placed on the language of revolution, reform, and reaction. Special topics through which this course is to be taught may include: The Rhetoric of the American Revolution, Rhetoric of Abolitionism and Civil Rights, The Rhetoric of the Women’s Suffrage Movement, Great Debates in American History, and Rhetoric and the American Presidency, 1789-1900. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**CAS 515 Rhetoric and Media (3 per semester, maximum of 9)**

Seminar in the application of rhetorical theory and criticism to television, film, and other media. In a recent offering of the seminar, we studied the films of Alfred Hitchcock from the point of view of The Rhetoric of the Thriller: The Films of Alfred Hitchcock as Art, Entertainment, and Social Text. This course offered an intensive examination of the art of Alfred Hitchcock, one of the great film artists of the twentieth century. Each week, the class screened one or more of Hitchcock’s classic films. The class then met in small discussion sections for intensive analysis of the films and a series of related readings. Our discussions and readings explored Hitchcock as one of Hollywood’s most successful popular entertainers, the "master of suspense"; as one of the great artists of the medium; as a critic of American culture; and as a persona whose reputation is a construction of his own efforts, and the product of reviewers and academic critics. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 530 Political Communication and Media (3) Study of rhetorical and communicative dimensions of contemporary political communication with particular attention to electronic media.

CAS 530: Political Communication and Media (3)

This seminar explores the rhetoric of electronically mediated political discourse, including broadcast speeches, news coverage of politics and political campaigns, campaign debates, political advertising, talk radio, and political websites. Addressing key problems and issues in democratic theory and practical politics, the seminar explores questions frequently raised by both scholars and political pundits: How has the character of political discourse changed in the age of electronic media? How have new communicative technologies affected political discourse? Is it possible to have an engaged, informed, and responsible electorate in the age of 30-second Aspot@ ads and journalistic Asound bites@? What might be done to improve the quality of political discourse and to enhance public deliberation? How might new media technologies be used to combat political alienation and promote civic engagement? The specific focus of the seminar varies by semester. Recent seminars have focused on the rhetoric of presidential campaigns, conceptions of Athe public@ and Apublic opinion@ in the age of mass media and polling, and the political significance of such non-traditional media as motion pictures and websites. Whatever the topic, the focus remains on the impact of mass media on the quality and character of political discourse in America. Students in the seminar will join in a larger scholarly conversation about the impact of new media technologies on democratic politics. Students in CAS 530 will read scholarly works on mass media and politics from a variety of disciplines, as well as more popular writings that have developed influential critiques of contemporary political communication or have advocated reforms in the laws and regulations governing mass media. Given the subject matter, the seminar is necessarily interdisciplinary in approach, and students will be encouraged to take interdisciplinary approaches to their own research and writing for the seminar.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CAS 550 Social Influence (3 per semester/maximum of 6) Theory and devices of persuasion; analysis of persuasive discourse.

CAS 550 Social Influence (3 per semester/maximum of 6)

This is a graduate-level seminar designed to provide students with social scientific theoretical principles for explanation, prediction, and practice in social influence contexts and situations. CAS 550 emphasizes the positive and negative outcomes likely to be associated with specific messages designed to influence others in social and societal settings. It emphasizes the importance of audience analysis and goal selection in guiding message design, and source and channel selection to communicate in ways that are intended to form, change, or reinforce and maintain others’ beliefs, attitudes, values, and behaviors. It affords significant opportunities to address the gaps between theory and measurement in social scientific research pursuits. These attempts may employ a highly active cognitive approach or a more passive strategy. Both approaches are examined in this course.

The course content and setting reflects the above aims. The course begins by defining social influence, provides an overview of its history, and introduces the major theories associated with social influence formation, change, and reinforcement objectives. The course devotes significant time to the evaluation of existing social influence attempts, including review of the channel(s) and source(s) used to deliver particular messages. Students will also practice known strategies for designing influence messages. These activities will take place within the framework of knowledge generated by research findings associated with the influence theories examined in the class.

Evaluation will include participation in class, exams that include application in the form of a social influence case study, and a research proposal associated with the application of social influence theories to message design and evaluation.

The course complements graduate students’ interests in pursuing academic, business, health, management, public relations, advertising, sales, and other career ambitions where communication is associated with the desire to influence others. The course will increase students’ critical thinking and informed decision-making skills associated with others’ efforts to influence them. It also frames discussion about the ethics of and ethical decision-making associated with persuasion.

CAS 550 will be offered every other year with 15 seats per offering.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CAS 554 Small Group Communication (3 per semester/maximum of 6) Communication variables in small groups. Experimental research and innovations in communication in vocational, therapeutic, and educational groups.

CAS 554 Small Group Communication (3 per semester/maximum of 6)

Group communication is a specialized area of study that has ties to the related areas of interpersonal and organizational communication. These ties reflect the fact that groups typically are part of some larger organizational structure and that it is the interaction among the members of groups that drive their performance. The major objectives of the course, which is presently offered once every two academic years, are to provide students with (1) an in-depth examination of what social scientific research has revealed about the functions communication among the members of groups in various interpersonal and organizational contexts and (2) the opportunity to engage in an even deeper examination of a specific issue relating to a specific function of communication in one of the types of groups included, that is, decision-making and problem-solving groups, familial groups, educational groups, work groups, and support groups, by means of an original research project. The first three weeks of the course acquaint students with the general domain of group communication as a specialized area of study, as well as the dominant theoretical and methodological approaches in evidence. In the fourth and fifth weeks, students come to understand how communication in groups functions generally to socialize the members and thereby shape their respective cultures, as well as influence the ways in which they characteristically fulfill the purposes for which they have been created. During the remaining ten weeks of the course, the accent is on particular types of group contexts and the unique ways in which communication is manifested in each. Finally, each student identifies and executes an original research project, the results of which he or she shares with other members of the class in the form of a scholarly paper which, if warranted, he or she subsequently modifies for presentation at a professional conference and possibly publication. Determination of overall mastery of the course content derives from a student's performance on a comprehensive final examination held during the regularly scheduled final examination period. The grade for the research project and the final examination combined provide basis for the recorded grade for the course. The course requires no special facilities other than a classroom. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 555 Interpersonal Communication (3 per semester/maximum of 6) Investigation of the communicative management of ongoing relationships; examination of how communication both creates and responds to exigencies of friendship.

CAS 555 Interpersonal Communication (3 per semester/maximum of 6)

This course is intended for graduate students who want an in-depth understanding of interpersonal communication across contexts. It is a graduate-level course, so the reading is heavy, the expectations for the level of discussion are high, and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes. Structurally, the course begins with a review of definitional and philosophical issues underlying research and theory in interpersonal communication, then covers the major frameworks and theories that make up knowledge in the area. In addition, some of the primary issues debated in the literature will be discussed. Evaluation methods will include presentations and research paper(s), but may also include exams and participation. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 556 Relational Communication (3) Examines theories and research focused on understanding communication in intimate (or potentially intimate) relationships.

CAS 556 Relational Communication (3)

This course is intended for students who want an in-depth understanding of interpersonal communication in intimate and
potentially intimate relationships. It is a graduate-level course, so the expectations for the level of discussion are high and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes in relational contexts. The focus will be on cognitive and social theories of relational encounters, including friendships, romantic relationships, and family relationships. Structurally, the course begins with a review of different philosophical issues underlying research and theory in the field of relational communication. Then, students will shift their attention to the major social scientific perspectives on human relationships. Next, major theories would be discussed and the course would be completed with a more focused discussion of central issues related to relational communication. Evaluation methods will include, research paper(s) and presentations, but may also include exams, short papers, journals, quizzes, and creative activities.

CAS 557 Health Communication (3) Provides experience in making decisions about planning, implementing, and evaluating communication in community-based health campaigns to achieve health promotion/education.

CAS 557 Health Communication (3)
This is a graduate seminar designed to provide students with a comprehensive overview of health communication in community-based health campaigns. Health messages are a pervasive feature of contemporary American life. The study of health communication for community-based campaigns overviews strategies for informing, motivating, and selling ideas and behaviors based on health and health care. Students will select a target community and topic to use as a focal point for applying course readings. Students will prepare an evaluation plan for assessing policymakers’ involvement in your health topic. This should include projection of the need for policymakers’ involvement, using as many archival materials as possible to conduct a formative evaluation of the need and a plan to obtain the additional information needed to identify the gaps between current and projected levels of involvement. Students will also assess previous efforts to involve lay and expert communities in health promotion efforts associated with their topic, and summarize findings, preparing an organizational membership roster for both Expert Advisory Board and Community Steering Committee, and providing a mission statement to be used in recruitment. Provide a draft of a commitment contract to be signed by board and committee members. Students will also examine previous efforts to involve educational institutions, and lay and expert providers in promotion efforts, summarizing findings and developing a vision of how these audiences should be and could be involved. Previous efforts to involve businesses, retailers, and family in promotion efforts will also be assessed, with development of a vision of how these audiences should be and could be involved included.

The health communication seminar complements students' interests in pursuing academic, political, counseling, pastoral, business, health, management, public relations, advertising, sales, and other career ambitions where community-based campaigns comprise an important focus.

CAS 558 Family Communication (3) Examines theories and research focused on understanding communication in family contexts.

CAS 558 Family Communication (3)
This course is intended for students who want an in-depth understanding of communication in family relationships. It is a graduate-level course, so the expectations for the level of discussion are high and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes in family contexts. The focus will be on communication theories of family relationships, including parent-child relationships across the life span, sibling relationships, and marital relationships. Students are encouraged to apply this knowledge to their own lives. Students should leave the course with a much more thorough understanding of factors that affect communication within family interaction. Structurally, the course begins with a review of different philosophical issues underlying research and theory in the field of family communication. Then, students will shift their attention to the foundational issues/principles underlying communication in family contexts. Once the course successfully increases student awareness of these foundational principles, the course moves to a focus on interactions within family settings. As part of this move, the course will address communication in parent-child, intergenerational, marital, and sibling relationships, and will include general topics such as affection and intimacy, conflict, power and control, and strengthening and repairing relationships. Throughout, the course will discuss communication processes within the larger cultural, interpersonal, and communication contexts in which family relationships are situated. Evaluation methods will primarily include exams, paper(s), research projects, and critical thinking reaction papers.

CAS 559 Lifespan Communication (3) How various communication processes such as language skills, interpersonal relationship definition and management, social support change cross the lifespan.

CAS 559 Lifespan Communication (3)

Lifespan Communication is a graduate seminar that emphasizes how communication processes (e.g., language skills, interpersonal conflict management, socialization and support, etc.) are developed, maintained and changed across the lifespan. The seminar concentrates upon numerous communicative processes from infancy through childhood, adolescence into middle age, and beyond middle age into later life. Numerous theoretical perspectives that incorporate lifespan principles will guide this seminar. The most recent research that investigates communication across the lifespan will be read and critiqued. This course is grounded in the assumption that multiple disciplines have investigated and continue to investigate human interaction at all points in the lifespan. Therefore, sociological, psychological and anthropological research will complement the research in the discipline of communication that will be discussed in the seminar.

CAS 560 Communication Theory (3) This course introduces graduate students to the philosophical underpinnings of communication research and develops skills in theory construction.

CAS 560 Communication Theory (3)

The first Department of Communication was established in the 1950s, and most departments of communication are less than 30 years old. This course is intended for graduate students who want an in-depth understanding of the philosophical issues underlying research and theory in human communication. It is a graduate-level course that emphasizes theory development in the area of human communication behavior. The readings covered are extensive, contributing to an expectation for abstract and integrative thought and discussion. Students should have a serious interest in studying theory construction and related philosophical underpinnings. Structurally, the course begins with a review of definitional issues underlying research and theory in human communication, moves to a focused discussion of various epistemological and ontological positions in the social sciences and humanities, then shifts to issues of theory construction and development. In addition, some of the primary issues debated in the related literatures will be discussed. Evaluation methods will include presentations and paper(s), but may also include exams and participation. As a result, students will examine where knowledge about communication comes from while defining social science, metatheory, theory, and levels of theorizing; acquire familiarity with the breadth, scope, and range of communication theory as a domain of study; comprehend major issues confronting researchers and theoreticians in communication; and acquire a vocabulary suitable for understanding the discussion that takes place in the field’s journals and at communication conferences. The course is planned as a foundational course for all graduate students entering the graduate program with interests in non-rhetorical methods of inquiry, and it is strongly recommended for all students entering the graduate program with interests in non-rhetorical methods of inquiry. This course will be offered once a year with 15 seats per offering.

CAS 561 Quantitative Research Methods (3) Introduces graduate students to principles, issues, and design considerations underlying social scientific methodology; material is applied to communication research.

CAS 561 Quantitative Research Methods (3)

This course is intended for graduate students who want an understanding of the quantitative methodology and research design. It is a graduate-level course, so the reading is heavy, the expectations for the level of discussion are high, and the instructor will assume that students have a serious interest in becoming critical consumers of quantitative research methods. Structurally, the course begins with a review of definitional issues, moves to a thorough discussion of sampling, reliability, and validity in research designs, then shifts to an understanding of quasi-experimental and experimental designs. In addition, some of the primary issues debated in the literature on quantitative methodologies will be discussed. Evaluation methods will include presentations and paper(s), but may also include exams and participation. The course is planned as a foundational course for all graduate students entering the graduate program with interests in
non-rhetorical methods of inquiry, and it is strongly recommended for all students entering the graduate program with interests in non-rhetorical methods of inquiry. This course will be offered once a year with 15 seats per offering.

**CAS 562 Qualitative Research Methods (3)**

Qualitative approaches to investigating human experience using tools such as interviewing and observation.

This course provides students with an understanding of both qualitative research methods and the theoretical frameworks that inform qualitative inquiry. Additionally, this course focuses on tools for data collection such as individual and group interviewing and observing and recording interaction. This course provides practical experience for students in collecting and analyzing qualitative data with and without the use of technology and examines particular difficulties in the interpretation and reporting of qualitative findings. Qualitative Research Methods course disciplinary boundaries and is useful to any graduate student who will be investigating human interaction.

**CAS 563 Pairs & Pairings: Quantitative Methods for Interdependent Data (3)**

Foundational course exploring methods for addressing interdependent data: dyadic analysis and social network analysis.

This graduate seminar is a foundational course exposing students to two quantitative perspectives that are increasingly encountered in the communication research: dyadic analysis and social network analysis. Dyadic analysis and social network analysis attempt to analyze non-independent data, and test concepts such as interpersonal influence, position, role, or social distance and segregation. By the end of the semester students should have an understanding of these perspectives, be able to conduct basic dyadic and social network analyses competently, and be ready to anticipate various boundaries, caveats, and necessary conditions. The ultimate objective of this seminar is to produce informed users and consumers of quantitative research using quantitative methods for handling interdependent data.

**CAS 567 Health Campaigns: Design and Evaluation (3)**

Theory and methods of message design, audience analysis, evaluation, and ethics in health communication research.

This graduate course explores theories of health communication and approaches to designing and evaluating effective communication campaigns that attempt to address real-world health issues. The real-world health issues may vary from pandemic conditions involving global coordination to specific ones appearing within a smaller, cohesive network in a particular neighborhood. Students will consider theory-driven campaigns targeting audiences who represent a variety of languages as well as co-cultural orientations and identities, in domestic and international settings. Students will learn theories and methods related to audience analysis, campaign design, and program evaluation. This course will cover issues of inference, ethics, and sources of bias in health campaign design and evaluation.

CAS 581 (APLNG 581) Discourse Analysis (3) Overview of theories and approaches to the analysis of spoken and/or written discourse.

This course is designed to provide an overview of the various theories of and approaches to the analysis of spoken and written discourse, e.g., speech act theory, conversation analysis, pragmatics, contextual analysis, functional/cognitive grammar, grammar and interaction. These and other approaches are intended to serve as analytic tools and frameworks for students to ultimately design and carry out their own research projects within the course of the semester. Research projects may focus on any aspect of language use, such as language and grammar, language and interaction, language and culture, language socialization, language and cognition; projects may center on some phenomenon of English or may involve other languages, as long as the student is capable of conducting an in-depth analysis of the particular phenomenon under investigation in that language.

Communication Sciences and Disorders (CSD)

CSD 433 Aural Rehabilitation (3) Methods for improving receptive skills of persons with hearing impairments; clinical observation and practice.

CSD 433 Aural Rehabilitation (3)
CSD 433, Aural Rehabilitation (AURAL REHAB), is a 3-credit course typically offered during Fall semester. The course is prerequisite by CSD 230, required for Communications Sciences and Disorders majors, and should be taken during the second, third or fourth year. Through lecture, reading, and active learning experiences, students will gain a basic understanding of the principles of aural rehabilitation for hearing impaired (HI) and deaf infants, children, and adults.

The Pennsylvania State University
Specifically, students will gain an understanding of: 1) hearing loss and hearing handicap in relation to speech understanding and communication, 2) the principles of amplification systems and assistive listening and alerting devices, 3) assessment of communication and communication strategies, 4) auditory training, 5) speech reading, 6) aural rehabilitation for adults, and 7) aural rehabilitation for infants/children. In addition, students will also acquire knowledge concerning the roles and work-sites of professionals working with HI and deaf individuals, and the impact of hearing loss and deafness on the individual, family, and society.

CSD 442 Introduction to Disorders of Articulation and Phonology (3) Etiology, diagnosis, and treatment of articulation disorders.

CSD 444 Introduction to Organic Disorders of Speech and Language (3) Etiology, diagnosis, and principles of treatment of stuttering, and of speech-language disorders having organic bases.

CSD 451 An Introduction to Augmentative and Alternative Communication (3) Examination of assessment and intervention issues in augmentative and alternative communication techniques with persons with severe communication disorders.

The Pennsylvania State University
communication disorders. Students will be expected to spend outside of class time becoming familiar with common AAC devices located in the department's AAC laboratory. The educational objectives are that students will acquire an understanding of: 1) persons with severe communication disorders who may require AAC, 2) terminology and principles of AAC applications, 3) types and evaluation of existing AAC systems and emerging technology, 4) assessment issues for children and adults concerning the use of AAC devices, 5) intervention, learning, and therapy issues for children and adults who use AAC, 6) research in AAC, and 7) theoretical issues. Although the course will focus on non-electronic AAC applications, students will be expected to spend time in or outside of class becoming familiar with common electronic AAC devices located in the department's AAC laboratory. Students meet the educational objectives by attending class, participating in class discussions, group projects, constructing an AAC system, completing assigned readings, and examinations.

CSD 459W Principles of Clinical Management in Communication Disorders (3) Survey of principles and practices for diagnosing, interviewing, counseling, treating, reporting, and programming in Communication Disorders.

CSD 459W Principles of Clinical Management in Communication Disorders (3)

CSD 459W, Principles of Clinical Management in Communication Disorders (PRIN CLIN MGMT), is a 3-credit writing-intensive course offered each semester. The course is required for Communications Sciences and Disorders majors, prerequisites by CSD 146, and should be taken during the third or fourth year. The intent of this course is to closely review the principles and practices for assessing and treating people across the life span who have a communication disorder as well as reviewing, interviewing, counseling, and report writing skills. Overall, this "how-to" course is designed to provide students with practical solutions and methods when serving persons with communication disorders. The educational objectives are that students will acquire an understanding of: 1) report writing with emphasis on different styles and the need for clear documentation and explanations, 2) assessment with emphasis on interviewing skills, preparation and test administration, interpretation of the results, and oral and written presentation, 3) therapy practices with emphasis on task analysis, behavioral objectives, and implementation, 4) documentation with emphasis on lesson plans, mid and final reports, documentation specific to school versus medical settings, and billing, and 5) client and family counseling and group sessions. Students meet the educational objectives by attending and participating in class discussions, quizzes, writing assignments, and class projects.

CSD 462 Clinical Bases of Language Disorders (3) Description of pathological language and cognitive development, and principles of assessment and remediation among individuals with communication disorders.

CSD 462 Clinical Bases of Language Disorders (3)

CSD 462, Clinical Bases of Language Disorders (LANG DISORDERS), is a 3-credit course typically offered Spring semester. The course is required for Communications Sciences and Disorders majors, prerequisites by CSD 300, and should be taken during the third or fourth year. The course is designed to be an overview of language disorders with emphasis given to child language disorders. Specifically, the course provides information with a wide range of language disorders that affect individuals having different disabilities such as autism, hearing impairment, mental retardation, cerebral palsy, specific language impairment, learning disabilities, and traumatic brain injury. Through lecture, active learning experiences, and out-of-class assignments, students will learn to differentiate communication characteristics and associated problems for specific populations and become familiar with basic assessment and intervention principles. In addition, students will gain information of associated educational and medical problems common to individuals with language disorders.

**CSD 520** Physiologic and Acoustic Issues in Speech Science (3) Seminar in the physiologic and acoustic aspect of normal and disordered speech production.

**CSD 520** Physiologic and Acoustic Issues in Speech Science (3) is a 3-credit course offered every Fall semester. The course is required of all CSD graduate students working towards a masters degree in Communication Sciences and Disorders. The educational objectives of the course are to provide information on acoustical and some physiological aspects of normal speech production, along with some applications to disordered speech production, particularly neurogenic speech disorders, stuttering, and voice disorders. The goal of the course is to provide the graduate student with experience using the most common methods of speech analysis in the research laboratory and the clinic. Because of the frequent use of audio recording equipment in the field, the emphasis is on acoustical analyses for measurement of vowel and consonant properties. Considerable emphasis is placed on coarticulation. Assessment is based on student projects including vocal fundamental frequency analysis, electroglottographic analysis, acoustic analysis of articulation, analysis of vowels of typical speakers as well as vowels of speakers who stutter, and acoustical analysis of consonants.

**CSD 540** Phonological Disabilities (3) is a 3-credit graduate course typically offered every spring semester. The course is required of all graduate students pursuing a masters degree in Communication Sciences and Disorders. The course has two prerequisites, CDS 442, Introduction to Disorders of Articulation and Phonology and CSD 495A, special topics in phonetics. The objectives of the course are to develop an attitude of critical thinking in the areas of phonological disorders. Class discussions, tests, and projects promote synthesis of ideas. In addition, the course integrates research and practice and a portion of class meetings is spent relating research findings to clinical practice in the treatment of phonological disorders. Original articles focusing on treatment of phonological disorders are required reading. Class sessions and independent and group projects emphasize the assessment and analysis of speech produced
by children with disordered phonological systems and assist students to utilize clinically efficient speech sample collection and transcription procedures that optimize the reliability, validity, and potential informativeness of obtained data. Activities involving treatment planning are utilized to assist graduate clinicians in designing efficacious treatment, predicting outcomes, and determining effectiveness of intervention. Student performance is evaluated through tests, take-home projects, critique writing, and inclass projects and quizzes.

CSD 541 The Voice and Its Disorders (3) Physical, physiological, and psychological bases of voice production; causes, nature, and symptoms of its disorders; current clinical methods in voice improvement.

This course presents information on vocal function for speech and the disorders that are common to the human vocal folds. During the first section of the course, the physical, physiological, and psychological bases of voice production are discussed along with the causes, nature, and symptoms of voice disorders. Voice disorders are difficult to understand without adequate demonstrations; therefore, the class uses videotapes and voice samples to help foster understanding of the course material. The first portion of the course also includes a review of the anatomy and physiology of the voice and vocal acoustics and extensive coverage of various laryngeal pathologies. Second, voice evaluation and diagnosis are examined including VisiPitch training, electroglottography, endoscopy and stroboscopy. Third, specific clinical management techniques are examined including treatment for vocal abuse and laryngeal muscle tension reduction. Alaryngeal voice disorders are examined including pre- and post-operative counseling and tracheosophageal speech and voice prosthetics. Finally, neurological disorders of the voice and resonance disorders are examined.

Fluency disorders are difficult to understand without adequate demonstrations. Therefore, this class makes use of numerous videotapes to foster understanding and assist with explanation of difficult concepts. Topics covered include facts about stuttering and its core behaviors, the etiology of stuttering, the development of stuttering. Furthermore, students learn to evaluate stuttering behaviors and to work as part of an interdisciplinary team. Students will learn to evaluate and treat preschool children, school-age children and adults who stutter. In addition, other types of fluency disorders are introduced. Course activities include exams, a stuttering assessment project, team observation of videotapes of individuals with fluency disorders, and modeling stuttering behaviors in order to fully understand the disorder.

CSD 545 Neuromotor Disorders of Speech (3) Etiology and symptomatology of dysarthric and apraxic speech: diagnosis, treatment, and the team rehabilitative program approach to these disorders.

In this course, students gain basic knowledge of neurological bases for speech-motor control. Students learn to identify and describe diseases/conditions that result in acquired and developmental motor speech disorders. Students learn to identify and describe the dysarthrias in clinical populations across the age span. Emphasis is placed on the development and implementation of appropriate intervention plans to remediate and/or compensate for motor speech disorders. Students complete three examinations during class and write a paper that synthesizes current research on a topic in motor speech disorders.

The Pennsylvania State University

This course provides information about the disorders of language that result from impairments to the central nervous system. Basic neurology, the aging process, and the nature and cause of aphasia-producing conditions are covered along with issues related to the assessment and management of adults with aphasia. Stroke-related aphasia in adults is the emphasis of this course, but it also briefly covers other common language and cognitive neuropathologies of traumatic brain injury, Alzheimer's Disease, and right-hemisphere brain damage.

This course provides students with a strong foundation in the nature of language disorders, the current issues in and theories of language disorders, assessment and intervention and key language assessment and intervention approaches. Major topics include assessment and intervention of infants, toddlers, preschoolers, school-age children, adolescents, children from diverse cultures, and children with special needs such as autism, cerebral palsy, and mental retardation. As a result of the foundation laid in this course, students will be able to critically evaluate and apply the current literature and forthcoming research to their clinical practice. The class includes a combination of lecture, class discussions, and small group activities. In addition, students complete various assignments in and out of the classroom that are designed to assist them in relating theory and research to clinical practice.

CSD 548 Dysphagia (3) Understanding the process of the swallowing mechanism and the management and treatment of swallowing disorders.

This course is designed to provide graduate students with basic knowledge of the swallowing process/mechanism. A brief overview of normal swallowing from birth to the aging adult will be presented. The course will focus on assessment, management, and treatment of individuals who present with a swallowing disorder. Students will become familiar with both non-instrumental assessments of swallowing, and will interpret videofluoroscopic swallowing studies (VFSS). Students will also develop treatment plans for case study patients with dysphagia. Multicultural issues related to swallowing will be discussed.

CSD 549 Speech-Language Pathologists in the Schools (3) Topics concerning service delivery in the school setting; legislation related to service delivery, special education enrollment, collaboration, caseload management, special populations.
This course covers multiple aspects related to becoming a competent speech-language pathologist in the public school system. Topics include: legislation related to school-based service delivery; the hierarchy of special education enrollment; considerations for special populations; caseload management and logistical aspects of work in the public school system., Case examples, class discussion, and group activities will be used to illustrate various aspects of this work setting.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

This seminar is designed to address special topics of interest to doctoral students in the Communication Sciences and Disorders. Topics covered vary from semester to semester and include the art and science of grant writing; various research approaches such as qualitative research methods or single-subject experimental research methods, etc.; issues related to teaching at the university level, speech perception, neuroscience, cognitive science, and cochlear implants.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

In this course students examine current applications of augmentative and alternative communication (AAC) including unaided and aided AAC systems. Students critically evaluate the strengths and limitations of these systems, identify the skills required to use these systems, and describe individuals who may benefit from AAC. Many topics of importance to AAC are studied including key legislation related to people with disabilities, consumer-responsive services and strategies to effectively implement services that are consumer-responsive. Clinical management is emphasized and students determine appropriate AAC assessment goals, procedures, and tools to identify the communication needs of individuals who require AAC, assess their skills and determine opportunity barriers. Students customize AAC systems to meet the needs of individuals who require AAC, determine partner strategies to enhance communicative interaction with individuals who use AAC and use empirically-validated instructional procedures to teach these strategies to partners. Students evaluate the efficacy of AAC interventions and determine consumer satisfaction. To accomplish these goals, students complete laboratory assignments and written case assignments in AAC assessment, vocabulary selection, and intervention planning and implementation.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

This course introduces first year graduate students to clinical practice. Topics covered include task analysis, clinical teaching, and activities to enhance teaching and learning. Students also learn appropriate methods of data collection and writing clinical objectives and intervention plans. Students learn to screen for suspected communication disorders and become familiar with clinic policies and procedures.

The Pennsylvania State University
CSD 595C Speech/Language Therapy Externship (7-15)
Full-time clinical experience in speech/language intervention and assessment procedures at an off-campus site.

CSD 595C Speech Therapy Internship (7-15)
This course is a full-time externship experience in the assessment and treatment of communication disorders and is completed at an off-campus site. Students may complete the externship in a variety of clinical and/or educational settings including hospitals, rehabilitation centers, and public schools.

CSD 595E Audiology Practicum (1-5)
This course provides speech-language pathology graduate students with a detailed and pragmatic understanding of hearing testing, normal and abnormal auditory systems, and common practices used to evaluate hearing ability. Students will gain experience in pure-tone audiometry, tympanometry, speech audiometry, central auditory processing disorders, and otoacoustic emissions. Students participate in hearing aid fittings, programming and repairs. Students learn to interpret the results of audiological evaluations and make appropriate recommendations based on results of audiological evaluations.

CSD 595G Speech/Diagnostic Practicum (1-3)
In this practicum course, advanced speech-language pathology graduate students gain experience in interviewing clients, parents and spouses. They learn to counsel clients and their families regarding communication disorders. With supervision, students complete diagnostic evaluations for a broad range of communication disorders and synthesize data. Report writing is also emphasized.

CSD 595I Speech Pathology Mini-Placement (1-6)
Part-time clinical experience in speech/language intervention and assessment procedures at an off-campus site.

CSD 595I Speech Therapy Third Site (1-2)
Graduate students in Communication Sciences and Disorders participate in an active learning clinical practica with working professionals to enhance their academic and clinical competencies and skills. Students will accrue these required hours (minimum of 50 hours) by completing this mini-placement in an off-campus clinical and/or educational setting including hospitals, rehabilitation centers, nursing homes, early intervention programs, and public schools including pre-school programs. This experience will be completed part-time during the Spring or Fall semester or fulltime during Summer I or Summer II semester.
Audiology Third Site (1-2)

CSD 595J Audiology Third Site (1-2) Internship course.

CSD 596 Individual Studies (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Individual Studies (1-9)

CSD 597 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.

Special Topics (1-9)

CSD 597C Issues and Phonological Assessment and Intervention (2) This seminar will introduce students to the principles of phonological processing. Students will learn to assess clients with disordered phonological processes. Intervention strategies using evidence based practices will be reviewed.

Issues and Phonological Assessment and Intervention (2)

CSD 597E Craniofacial Anomalies-Cleft Lip and Cleft Palate (1) This seminar will introduce students to the etiology, assessment and treatment of craniofacial anomalies. Special focus on treatment of resonance disorders associated with cleft lip and cleft palate.

Craniofacial Anomalies-Cleft Lip and Cleft Palate (1)

Communications (COMM)

COMM 400 In the Game: TV Sports Magazine (3) Students will produce, report, anchor and direct half-hour sports magazine show.

COMM 400 In the Game: TV Sports Magazine (3)

Magazine shows have expanded beyond traditional news subjects to cover various aspects of American culture. None is more prominent and prevalent than the coverage of sports. In the Game: TV Sports Magazine is a sports story-telling course in which students examine sports-related topics in their context within society. Students will use writing, photography, editing and technical skills gained from their journalism skills courses. The goal will be to produce sports enterprise stories.

COMM 401 Mass Media in History (3) Relationship of news media to social, economic, and political developments in the Western world.
COMM 402 International Reporting (3)

International Reporting is an advanced level course in the College of Communications designed to give student journalists experience in reporting the news in a foreign country. The course is offered in the spring semester only. The key component is a 10-day reporting trip over the spring break to a foreign country. In its first three semesters, the class has gone to Mexico City and Shanghai, and Cape Town, South Africa. The course has been approved as an embedded program by the Office of Global Programs. Admission to the course is highly selective and open only to junior and senior journalism majors. Students must apply for admission and present examples of their work as well as recommendations by a member of the journalism faculty.

The aim of this course is to help young journalists acquire the skills they will need to compete in an industry where increasingly the threads of even the most local stories either come from, or lead, overseas. This is not a course aimed at training students to become foreign correspondents. Rather, we hope to prepare students to function in a foreign environment, and to recognize, overcome and ultimately benefit from the linguistic, cultural, economic and legal challenges that working in another country will entail.

The course has three segments. In the first half of the semester we study the history, culture, politics and economics of the country to which we are traveling. We also develop and refine our ideas for the stories we will report when we get there. We will also learn about foreign reporting and how it differs from the reporting we have been used to doing here. The second part of the course consists of supervised travel to our target country. Here, we report the stories we have selected, file blogs and video posts to ComMedia, and also meet with local journalists, officials and students of the host country. Depending on the country in which we are working, students also have the opportunity to collaborate, when appropriate, with students from local universities. The final half of the semester is devoted to supervised individual work aimed at turning our reporting into stories suitable for publication or broadcast.

Although students are required to acquire a general working knowledge of the country to which we are traveling, and will be tested on it, in the end they will be evaluated almost entirely on their work product. This results-oriented approach has been chosen because it most closely replicates the environment of a professional newsroom.

COMM 403 Law of Mass Communications (3)

This discussion-intensive seminar provides an in-depth analysis of contemporary First Amendment issues ranging from the protection of violent media content and sexually explicit speech to defamation and invasion of privacy. Students explore the legal standards, public policies and theories that protect - and restrict - the Constitutional rights of free speech and free press. The primary area of study in this course is the law of mass communications and, in particular, legal issues facing the entertainment and news media. Using a law school casebook, written by a Harvard Law School professor, we will cover legal issues related to topics such as sex and violence in the media, defamation, privacy, and copyright.

COMM 403H Law of Mass Communications (3)

This discussion-intensive seminar provides an in-depth analysis of contemporary First Amendment issues ranging from...

COMM 405 Political Economy of Communications (3) Structure and functions of American and other mass communications systems and their relationship to political and economic systems.

COMM 405 Political Economy of Communications (3)
COMM 405 takes a critical look at the structure and performance of the U.S. mass media within the U.S. and global political economy. The normative purpose of the course is to evaluate whether the media system is performing in such a way as to support and promote a democratic society. We will look at theoretical approaches to the study of political economy; the origins and development of capitalism and the mass media; the structure of contemporary capitalism; the ownership and control of mass communications; the origins of advertising and its effects on the U.S. economy and the mass media; the economic structure and organization of the recorded music and filmed-entertainment industries; and the political economy of democratic communications.

COMM 406 Electronic News Gathering and Editing (3) Intermediate level skills in creating and editing television news packages.

COMM 406 Electronic News Gathering and Editing (3)
This course is designed to provide a substantial background in video production techniques coupled with electronic newsgathering and the use of video equipment. Although students enrolled in this course would be expected to have a basic understanding of video production from previous courses, more advanced editing techniques, along with sustained practice in interviewing, taping, organizing and writing various types of news and feature packages, should provide an excellent preparation for subsequent internships or employment. This is a "hands-on" course and will provide extensive opportunities for practical application of material covered in class. Students will be evaluated on the quality of their productions. This course serves as a supporting course in the Communication and Media Studies major.

Bachelor of Arts: None
COMM 407A Media and Government (3) This course examines the relationship between politics, governance, and news media, and provides a foundation for understanding media's role in public policy.

The course is designed to broaden, inform, and empower thinking about media influence on the ways people think about issues and how that influences public policy choices. The course will also analyze the various ways in which elected officials seek to craft messages and manipulate media to encourage support for policy agendas and initiatives. Through the process of examining the relationship between these powerful forces, students will gain critical thinking skills that will better prepare them to consume and create media and to function as citizens in American democracy.

This course will examine the symbiotic relationship between politics, governance, and media, particularly news media, and will provide a foundation of classic media theory combined with new thinking on media's role in public policy formation and its impact on the larger society. The course will emphasize the importance of political narratives, how they are constructed and communicated and also how they influence elections and public policy choices. Primary sources will provide diverse perspectives on the many questions that will emerge from readings and discussions.

This course is only offered as part of the Washington, D.C. Program.

COMM 407B Perspectives on American Journalism (3) The course examines a number of current issues and topics surrounding journalism including: ethics, state of the industry, and news vs. entertainment.

Journalism is a unique occupation. News editors, reporters, producers, anchors, and other media professionals have a special responsibility to the public – the responsibility to provide their readers and audience members with the information they need in order to make choices about how to vote, what issues to get involved with, how to live their daily lives. While journalists – unlike members of other professions – have very few laws that exist specifically to govern their work, their duty to the public carries with it a number of important ethical burdens and responsibilities to the public and to society as a whole.

The course examines a number of current issues and topics surrounding journalism. While there will be new themes and topics for each week’s class, nearly all of the topics are interrelated, and each class will build on what has gone before. Among the topics that will be covered are the current state of the news industry, the ethical guidelines that journalists are supposed to follow, the blurring of lines between news and entertainment, and the news media’s role in making people famous or infamous. The issues that we examine in this course will be most directly related to the practice of journalism, although we may touch on other aspects of communications (e.g. advertising or public relations) from time to time. Our goal will be to examine news coverage with a critical eye – to think about the reasoning and decision-making that shape the final products that we read or view. The class meetings themselves will center on discussion of the readings and presentation of real-world examples drawing from current news stories and issues involving the news industry.

COMM 407C Media and World Politics (3) COMM 407C helps to make sense of the impact of media, public opinion and non-state actors shaping foreign policy.

COMM 408 (S T S 408) Cultural Foundations of Communications (3) Examination of oral, scribal, print, industrial, and electronic cultures; analysis of impact of technology on communications and social structure.

COMM (S T S) 408 Cultural Foundations of Communications (3)
(BA) This course meets the Bachelor of Arts degree requirements.

COMM (S T S) 408 traces the development of communications technologies and their impact on culture over the last 500 years. Students will examine how different tools for communicating changed the way people organized and made sense of their worlds. The course begins by looking at oral cultures and moves on to the scribal, print, industrial, electronic and post-industrial or postmodern cultures, studying the media developments that marked each of these eras. With each period and its corresponding technology students will examine how and why the new media altered not only the form of communication (the type of speech, form of writing and/or speed of information transfer), but also how such changes altered the content of knowledge (how people made sense of their lives and communities). Readings are drawn from a range of disciplinary perspectives on the issues, from history, sociology and anthropology, to philosophy, communication studies and cultural theory.

The historical and theoretical knowledge provided by the course will give students a solid foundation for coming to terms with media trends in present-day society and for thinking through their possible epistemological, political and cultural impacts.

The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

COMM 409 News Media Ethics (3) Ethical problems in the practice of journalism; principal public criticisms of news media; case study approach.

COMM 409 News Media Ethics (3)

Ethics is about doing the right thing - which, in the news business, is rarely as easy as it sounds. Is it ever OK for reporters and photographers to intrude on grieving families? Is it ever OK to lie to get information? Are the sex lives of politicians and celebrities our business? COMM 409 will give students a fuller understanding of how journalists do their jobs and how they should make ethically sound decisions. This class is more about learning to ask the right questions than learning the right answers. We'll rely on recent news coverage to get us in the habit of working through the moral dilemmas that reporters routinely confront.

COMM 410 (IL) International Mass Communications (3) The role of international media in communication among and
between nations and peoples.

**COMM 410 International Mass Communications (3)**
*(IL)*

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course examines the role of international mass media in communications and debates about global questions and/or crises between and among nations and peoples. These roles will be examined using such theories as imperialism, hegemony, information society, modernization, globalization, capitalism, cultural industries, propaganda, and others. Among other issues the course will examine the way in which media report, portray, represent, misrepresent, and construct knowledge about global questions and crises that may border on social injustices, health, the politics of armament, disarmament, and recognition of statuses of states. The course may also explore other issues of international importance not limited to those involving economic questions such as balance of trade, global debt, and financial crises.

In addition, this course provides avenue for the appraisal of mediated debates between nations at such platforms as the United Nations (UN), the World Health Organization (WHO), and the World Trade Organization (WTO) among other international and bilateral organizations that serve as platforms for consideration of issues of global importance. Students are led to understand ways in which states relate and communicate with each other in the environment of supranational governance. Students are exposed to these issues through readings in pertinent theories, ICT-enhanced conversations, and critical examinations of applicable concepts, exposure to contemporary issues via media messages; including those presented via newspapers, newsmagazines, broadcast documentaries, films, and other media products that will aid students’ ability to better appreciate issues of historical and contemporary relevance to the global community.

**COMM 411 Cultural Aspects of the Mass Media (3)**
The mass media as creators and critics of mass culture in American life; relationships between the media and mass culture.

**COMM 411H Cultural Aspects of the Mass Media (3)**

**COMM 411H** takes a cultural studies approach to media and more generally culture and politics. The class is predicated upon three assumptions about media. First, media must be examined in context. Second, media play a significant role in the construction of our lived reality. Third, these constructions and all attempts to study them are political and implicated in relations of power. As such, this course treats media as part of cultural and political processes that are not separable,
but instead co-constitutive. In other words, these three assumptions have some immeasurable effect on each other and impact our understanding of their relationships.

COMM 413W The Mass Media and the Public (3) Social-level and political theories of the relationships between media and public; media influences on public opinion; social pressure on the media; political communications.

COMM 413W The Mass Media and the Public (3)
This course is designed to explore the complex and dynamic relationships among the media, public, and government. These relationships are examined through the lenses of sociological and political theories regarding the nature and process of mass communication. The central questions answered in the course are: "How do the media influence the public, its opinions, and social and political behavior?" and "How does the public - through social pressures, and political constraints - influence media performance and content?" Special attention is paid to modes of inquiry in communication research, social functions and control of the media, social construction of reality, political communication, and public opinion. The goals of the course are to introduce students majoring in professional areas of communications to theoretical frameworks that help explain media practices, advance the understanding of the communications research literature for Media Studies majors, and develop skills of all students to be informed and critical consumers of the media. The course is required of Media Studies majors and is a communications elective for the Journalism and Telecommunications majors, the Corporate Communications and Journalism options in Communications, and the Media Studies minor.

**COMM 419 (US;IL) World Media Systems (3)**
Comparative study of modern mass systems and the evolution and structure
COMM 419 World Media Systems (3) (US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is a comparative study of modern mass media systems with focus on the ways in which two or more countries' media have evolved and are structured by the political, economic, social, and cultural environments within which they exist. Students will be exposed to the theories and practices of media systems – as explained in such normative expositions as the four theories of the press and other contemporary iterations. One objective of the course is for students to gain a better appreciation of the structure and location of the media system in the United States vis-à-vis greater awareness of media systems in other political contexts where media cultures may vary from the U.S. matrix. Across the board of sampled countries’ media systems, students will be exposed to the ways in which each country’s media have developed, are shaped, and are continually shaped by factors that include history, political cultures, evolving legal regimes, media regulations, finances, media economics, new technologies, institutional arrangements, citizens’ access to information, or lack thereof.

Another objective of this course is to equip students with a toolbox and framework with which they can replicate comparative media systems analyses in other countries and regions of interest as they contemplate study abroad and/or long-term career (employment, graduate studies) engagements. To achieve foregoing objectives students will be exposed to readings in theories of media systems and to academic articles using comparative methodologies to examine structural evolution of media in tandem with countries transformations over time. Students will analyze historical or contemporary media systems’ developments through careful comparisons and applying critical thinking skills. In the process, students develop analytical skills useful in contending with academic and professional environments.

COMM 419H World Media Systems (3) (US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Students in this course will have the opportunity to discover the variety of media systems in the world today and, more importantly, how they got that way and what functions they perform for their respective societies. Students will evaluate each media system’s history and analyze the functions of the mass media in the respective contexts. They will examine the historical, social, economic and cultural forces that influence the adoption of a national media system. They will compare perspectives on the problems and issues in freedom of expression within national media systems and evaluate the organization, regulation and economics of those systems. Finally, students will analyze the national development of media systems and the impact of the mass media in the modernization of peasants.

COMM 420 Research Methods in Advertising and Public Relations (3) Primary and secondary research methods used in the development of solutions to advertising and public relations problems.

COMM 420 Research Methods in Advertising and Public Relations (3)

This course is designed to provide an introduction to the logic and methods of social science research and its applications in the professional practice of advertising and public relations. Students will be introduced to methods of primary research used in the advertising and public relations fields such as survey, focus group, content analysis, and experimental design. Students will also become more familiar with basic and advanced statistical techniques and statistical software used in the field. Understanding how research is conducted and the strengths and limitations of research findings is a critical first step in developing the ability to apply research findings to communication problems in advertising and public relations.

In addition to helping students understand how to conduct research, this course is also designed to help them become critical consumers of the research conducted by others. Advertising and public relations problems often require the
identification, understanding, synthesis, and application of data collected by others in developing problem solutions. Understanding secondary sources of data commonly used in the field, such as Simmons, Nielsen, Arbitron and SRDS, is an essential component of professional expertise.

Problem-solving in advertising and public relations requires decision-making in a turbulent and dynamic marketing environment. To help students learn how to relate research tools and outcomes to the advertising and public relations problems at hand, this course will examine the role of research in decision-making at the critical steps in the problem-solution process. As part of developing understanding of this decision-making process, students will also become more aware of the ethical issues associated with research in advertising and public relations.

**Effective:** Summer 2002  
**Prerequisite:**

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**COMM 421W Advertising Creative Strategies (3)** Planning, designing, writing advertisements; introduction to graphics and production techniques and processes; layout and copywriting practice and critiques.

This course is designed to provide students with an overview of the intellectual and practical skills involved with the development of advertising creative work. Students are introduced to research and thinking strategies that lead to creative ideas and are provided with computer software and other training that facilitates the execution of advertising based on their ideas. The course requires students to complete several creative projects, in distinct product categories (e.g., packaged goods, durable goods, public services, consumer services), over the course of the semester. Before developing advertising, students will be expected to research the product, service or idea that constitutes the creative project. They will gain an understanding of the kinds of information most valuable to creative professionals in the development of ideas, and be provided with an overview of research strategies leading to the discovery of such information. After completing the required research, students will produce briefs that summarize findings and serve as a platform for further work on their creative projects. Given the course’s designation as writing intensive, these documents will be evaluated both for their content and the degree of accuracy demonstrated in grammar, spelling, punctuation and word choice. Since the evaluation of creative ideas is inherently subjective, these written research documents are usually weighted more heavily in the calculation of final course grades. Students will use their own research as the platform for generating creative ideas to advertise their product, service or idea. Instruction on creative thinking techniques will be provided as tools for this activity. As ideas are developed, students are encouraged to share their work with their peers and the instructor for feedback. In “workshop” fashion, these in-class critiques of creative work serve to refine and improve ideas. Over the course of the semester, students work toward finalizing creative solutions. By semester’s end, each student will be expected to submit a final portfolio of work that demonstrates proficiency in the subject matter covered by the course. Traditionally, the final portfolio includes creative briefs and ads developed from them.

**COMM 422 Advertising Media Planning (3)** Analysis, selection, and scheduling of advertising media; examination of algorithms, technologies, and software used in media planning.

This course is designed to provide an introduction to the concepts and techniques of media planning. The course will cover traditional and online media options. The student will learn to use software models to facilitate media decisions. Secondary sources of research used in the media planning process will be discussed. The design, construction, implementation and evaluation of effective media plans that meet specific advertising objectives will be detailed. Ethical media planning processes will be reviewed. The goal of the course is to develop critical thinking skills that will improve decision making in a dynamic and turbulent media environment.

**COMM 424 Advertising Campaigns (3)** Advertising campaign problems from the viewpoint of the national advertiser and advertising agency; production of a complete advertising campaign.
COMM 424 COMM 424 Advertising Campaigns (3)

This comprehensive capstone course is designed to provide an opportunity to showcase your creativity and knowledge about advertising communications. Strategic integrated marketing communications concepts are emphasized. The campaign proposal developed in this course will showcase the full weight of your knowledge and skill in the area of advertising communications. Students will need a background in creative design and practices, media planning principles and practices, and research methods used to delineate appropriate target groups and evaluate campaign effectiveness. A strong focus will be on understanding the audience and developing message strategies that have a high potential to influence attention and marketing behaviors. During the course you will create a complete advertising/marketing communications campaign proposal that reflects a set of communication goals derived from a set of measurable objectives all designed to meet the needs of your client.

A situation analysis will be developed to provide a detailed assessment of the product or service environment. This includes analysis of the product class, lifecycle, generic and brand level competition, and target group identification. The goal is to gain relevant information that can be used to make justifiable strategic decisions related to the advertising campaign. Strategic goals and objectives will be developed that allow the direction and efficacy of the campaign to be measured. Tactics must reflect the strategies developed in the campaign. Campaigns include diagnostic and performance benchmarks used to evaluate the progress of a set of predetermined measurable objectives. The goal is to provide timely feedback that allows the agency and client to evaluate the effectiveness of the campaign. This is especially important as client -agency relations continue to adapt a series of formal measures of campaign effectiveness.

The class is designed to develop critical thinking skills. For example, each strategic decision presented in a campaign must have a fully explicated rationale that is based on quantitative and qualitative criteria. Research tools will be presented in class that allow and support the development of measurable objectives. The campaign proposal must include a series of benchmarks designed to evaluate the progress of the campaign at key time points.

The campaign will have a complete media plan that includes selected media, cost efficiencies, and media schedule. Students will be expected to be familiar with media principles and media planning software.

COMM 425 Advanced Advertising Campaigns (3) An academic option for student AAF members who will develop an integrated advertising campaign to be presented in District competition.

COMM 425 Advanced Advertising Campaigns (3)

The class is structured along the lines of a real-world advertising agency and the manner in which they might pitch a new account. Students work through the research and situational analysis to develop an integrated communication plan, campaign budget, and message strategies for a client.

The client is provided by the National Student Advertising Competition. This group provides undergraduate advertising students with a realistic problem that is solved through team effort, knowledge and creativity. Students might have the opportunity to pitch their plan to the NSAC client.

COMM 426 International and Intercultural Strategic Communication (3) Advertising and public relations in the international and intercultural arenas; multicultural strategic communications strategies.

COMM 426 International and Intercultural Strategic Communication (3)

COMM 426 will provide students with a framework for applying their existing public relations and advertising tools in the global arena. Working internationally and/or interculturally challenges the advertising, public relations or marketing executive to think outside his or her own "cultural box." Some of the challenges include finding research about consumers, competitors and the marketplace outside of North America and Western Europe, understanding local cultures and customs, understanding the importance of ethnicity, and building an integrated core of professional communications that work with a common purpose, even if they come from different backgrounds - or are on different continents.

The emphasis will be on developing a methodology for researching international and intercultural strategic
communications problems, and then discussing possible communications-based solutions. To that end, case studies from both the international advertising and international public relations disciplines will play an important role in the course. Additionally, students will be exposed to a number of frameworks for analyzing culture, coming from the areas of anthropology (Schwartz’ 10 Value Domains), social psychology (Bond’s essay on impression management in multicultural organizations) and international business (Hofstede’s Dimensions of National Culture).

COMM 427 Client/Agency Relations (3) Building and maintaining client/agency relationships in advertising, public relations and direct response agency business functions.

COMM 427 Client/Agency Relations (3)
Client/Agency relations provides students with an understanding of advertising, public relations and direct response agency business functions, and the important role of building and maintaining client/agency relationships. It covers the phases of pre-relationship (identifying, prospecting, pitching and winning accounts), developing relationships with clients and maintaining and enhancing these relationships over time. Client/agency relationships are built on the development of viable partnerships with clients, establishing strategies to support and maintain the vitality of client business success, and the on-going delivery of fresh creative ideas from all agency disciplines.

Today’s agency has become a resource for all integrated marketing communication (MARCOM) needs. This includes, but is not limited to, advertising, promotion, public relations, direct response marketing, event marketing, customer-relationship marketing, interactive internet communication and branding ideas. This course covers the integration of these disciplines on behalf of an agency’s clients.

COMM 428A Principles of Strategic Communications (3) Principles of Strategic Communications provides an overview of the various media and communications methods that comprise modern integrated marketing campaigns.

COMM 428A Principles of Strategic Communications (3)
Principles of Strategic Communications will introduce students to strategic communications in the context of integrated marketing communication (IMC). It will overview the industry by providing a foundation for understanding what IMC is and how it developed to its current state, what it tries to accomplish, how it works, and how it can affect society. It lays the groundwork for other courses in the strategic communications sequence. The fundamentals of consumer psychology will be introduced, along with theories of persuasion. In addition to traditional advertising, the course will review other critical functional areas of IMC such as public relations, sales promotion and direct marketing. The role of the internet and emerging new media technologies will also be covered. The advantages and disadvantages for different media will be summarized, and the basics of media planning will be introduced. Course content is present in the context of strategy and planning, with the goal of illustrating how various elements in the promotional mix work together to achieve campaign objectives. The importance of effective measurement and accountability at each point of campaign development and execution will be explained. Finally, the ethical and regulatory environment for IMC will be explored.

COMM 428B Strategic Communications Law (3) Analysis of laws and regulations affecting online advertising and strategic communications.

COMM 428B Strategic Communications Law (3)

Strategic communications law focuses on the key legal issues affecting strategic communications, advertising and marketing in an online environment. Major topics include First Amendment protection for commercial speech; advertising regulation including spam and the use of trademarks and copyrights; privacy regulation including the collection of user data and use of endorsements, and procedural issues such as jurisdiction and analysis of various regulatory authorities. Additional topics will include domain names, marketing to minors and current developments in advertising and Internet law.

COMM 428C Strategic Communications in a Global Environment (3) Strategic Communications in a Global Environment will provide students with a framework for applying public relations and advertising tools across media platforms and across cultures.

COMM 428C Strategic Communications in a Global Environment (3)

Strategic Communications in a Global Environment will provide students with a framework for applying public relations and advertising tools across media platforms and across cultures. While cross-cultural communication has always been a challenge for strategic communicators, introducing online elements to campaigns exposes strategic communications professionals to a host of new challenges, including a wide range of ethical and legal dilemmas emanating from new to abilities to collect sensitive data from audiences, often without their knowledge. Students will be exposed to a number of frameworks for segmenting publics in this new environment, both geographically and psychographically, and will learn the skills to work with colleagues across borders and cultures to create effective, ethical strategic communications campaigns.

COMM 428D Research & Analytics (3) This course covers online research methods for strategic communication, including web analytics, online surveys, online interviews, and content analysis.

COMM 428D Research and Analytics (3)

Increasingly, organizations are using the web as a vehicle for communicating with key audiences such as customers, shareholders, volunteers, donors, community members, and government entities. In this class students will be exposed to theories and practices in the areas of online research and analytics with a focus on understanding how customers perceive the organization, assessing the engagement with target audiences online, measuring the value of relationships that
organizations initiate and build online, and tracking how web site visitors experience an organization’s site. The course will expose students to tools for tracking and measuring online communication, and it will help students understand how to prioritize audiences and communication to maximize the effectiveness of measurement. Research methods taught in this class include web analytics, online surveys, online interviews, content analysis, and online focus groups. Gauging the impact of online communication helps organizations engage in more efficient and effective communication practices. Practitioners in strategic communication need to understand how to measure and evaluate the effectiveness of their communication in this medium. This course will prepare students to conduct online research in practice.

COMM 430 Mass Media and Politics (3) Study of mass media as institutions and the effects of the mass media on politics, public policy, and citizens.

In Mass Media and Politics, we address issues and relations of the political realm, the media institutions, and the public sphere. Particular attention is dedicated to the influence of and coverage by both the domestic and international news media. In addition, we also examine topics such as bias in the media, women and politics, political campaigns, and
advertising, ideology and hegemony, and cultural representations in the media. Of importance are notions of how and why mass media influences the national political debate, as well as what mass media exports in terms of culture and what this means to the political reality of other nations. The discussion of these issues is often couched in terms of technologies, especially emerging and traditional mass media technology systems such as convergence technologies, the World Wide Web, television, radio, and newspapers. Prerequisite: COMMS 251.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**COMM 433 Film History for Filmmakers II: The Development of the Cinema from 1960 to the Present (3)** History of the art, industry, economics, culture, and technology of cinema from 1960 to the present.

**COMM 433 Film History for Filmmakers II: The Development of the Cinema from 1960 to the Present (3)**

Film History for Filmmakers II presents the history of the medium of cinema from 1960 to the present. The course explores the artistic, technical, economic development of the cinema, and the cultural contexts in which this development occurred. The course covers narrative, experimental, and documentary cinema and trains students in the techniques of close formal analysis of the cinema. The course builds upon formal, thematic, and cultural analysis of the cinema introduced in Film History I. This course is integral to the existing curriculum. It provides Film-Video students with a detailed description of trends in their art form. It provides students with a more intensive study in the history of an influential medium in the development of the concept of mass media and communications. The course will be taught each Spring semester.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**COMM 436 Advanced Audio Production (3)** Advanced concepts and techniques of audio production in analog and digital formats with hands-on experience in recording, mixing and editing.

**COMM 436 Advanced Audio Production (3)**

This course builds on the concepts and techniques of audio production in both analog and digital formats introduced in COMM 374 and includes in-depth examination of sound theory and hands-on practice in advanced projects involving recording, mixing and editing in analog and digital formats. This course provides an understanding of technical and aesthetic aspects of advanced audio production, and provides students the opportunity to demonstrate advanced skills in recording, editing and mixing. Students gain an understanding of professional studio and field practices and develop advanced studio and field projects suitable for a portfolio.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**COMM 437 Advanced Documentary Production (3 per semester/maximum of 6)** Advanced exploration of documentary production techniques and aesthetics through the completion of a short video project.

**COMM 437 Advanced Documentary Production (3 per semester/maximum of 6)**

This course is designed to enable students to produce portfolio-quality work while bringing together ideas, processes, practices, and theories in the service of documentary production. Students will explore the history, conventions and theory of the documentary film form, while developing and producing a film or video work for screening at the end of the semester. Working in small crews with others from the class and using sophisticated production equipment, students will write and produce short digital video projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as on providing the support, guidance, and critique necessary for a successful production. Particular emphasis is given to the traditions of social criticism, the creative treatment of actuality, the individual and collective points of view.

The history of documentary form is illustrated by comparing the work of the American "Direct Cinema" style embodied in the work of Drew Associates to the French "Cinema Verite" style developed by Jean Rouch. The evolution of these styles into what we now just refer to as "Verite" filmmaking is put into practice through a series of exercises that incorporate a
variety of points of view.

Analysis of the above works, as well as examples from Barbara Kopple, Errol Morris, and Frederick Wiseman, provide students with a springboard to develop their own style, vision, and personal creative voice. An examination of Bill Nichols taxonomy of non-fiction film classification further contextualizes aesthetic and theoretical issues for students. A series of lectures, discussions, readings, and screenings move students through the personal and collaborative process of documentary production.

**COMM 438 Advanced Narrative Production (3 per semester/maximum of 6)** Advanced exploration of narrative production techniques and aesthetics through the completion of a short film or video project.

This course is designed to enable students to produce portfolio-quality short projects that bring together ideas, processes, practices, and theories in the service of narrative production. Over the course of the semester, students will pursue an entire project from conception to completion through intensive pre-production, production, and post-production stages. Working in small crews composed of fellow classmates and using sophisticated production equipment, students will write and produce short digital video projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions, as well as providing the support, guidance, and critiques necessary for a successful production. There will be an emphasis on the thorough execution and evaluation of the steps taken toward completion of their project.

As a workshop, specific topics pertaining to the three stages of production will be reviewed as necessary. Students will be expected to hand in a pre-production packet (budget, schedule, script breakdown and lined script) before proceeding to the production phase.

**COMM 439 Advanced Alternative Production (3 per semester/maximum of 6)** Advanced exploration in experimental and animation forms through the production of a film or video project.

Advanced Alternative Production is a senior level course focusing on the development and expression of the individual filmmaker. The emphasis of the course is on exploring the history, conventions and modes that surround the experimental and animation film forms and using this knowledge in creating work that challenges conventions of mainstream media. The course involves viewing works of classic and contemporary alternative media, discussing its contribution or value in communications, and using these examples as models for exploration.

Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions, as well as providing the support, guidance, and critiques necessary for a successful production. There will be an emphasis on the thorough execution and evaluation of the steps taken toward completion of their project.

This course assumes a working knowledge of intermediate film and video production and post-production techniques. Additional production and post-production techniques may be introduced based on the students’ interest.

**COMM 440 Advanced Cinematography and Lighting Techniques (3)** Advanced exploration in camera, lighting, audio, and color-grading techniques, emphasizing technical skills as well as aesthetics.

**COMM 440 Advanced Cinematography and Lighting Techniques (3)**
This course is a comprehensive approach to techniques, equipment and procedures of film and video production with an emphasis on both practical skills and aesthetics. The course is divided into four sections that will employ a combination of lectures and workshops in camera, lighting, audio and color grading. The course will focus on understanding the theory and procedures underlying dynamic composition, visual and psychological perspective, practical and emotive lighting and sound, color, and the conveyance of meaning through color and continuity. In addition, students will learn accepted procedures in care and use of film and video cameras, sound recording equipment, lighting and grip gear, as well as proper organization, media storage and maintenance techniques specific to post-production. Students will work individually and collaboratively to produce projects for critique and evaluation.

The emphasis of the course is on the artistic and technical aspects that allow an idea to be cinematically realized on celluloid and/or a suitable digital format. The course involves viewing the work of outstanding, established cinematographers and videographers in great detail, and assessing their contributions to film aesthetics and history through the detailed, direct analysis of film excerpts and sequences from landmark films and video work, and the discussion of assigned reading materials on both film and video technique. Students then work in specific film and video production positions to reproduce precisely scenes from the films analyzed. By doing so, students will develop an understanding of the technology and artistic vision used in film and video production so that they may be better prepared to successfully create challenging and thought-provoking projects. In addition, this course also allows for an exploration and comparison of the ever-changing technology used in film and video production. Through this direct use of multiple visual and audio formats, students will discover the creative advantages and disadvantages of various media used to fulfill their artistic vision.

COMM 440 is a support course for the senior level production courses. Student cinematographers in COMM 448 (Adv. Production for Groups) are strongly encouraged to take this course concurrently. It can also be taken as an elective technique course in conjunction with any of the one-semester mode specific advanced production courses (COMM 437, COMM 438, or COMM 439).

COMM 441 Advanced Graphic Design for Communications (3) Theory and practice designing graphic visual communication in commercial, non-commercial, and fine art formats for print and on-line media.

COMM 441 Advanced Graphic Design (3)

An advanced examination of graphic design. Students develop proficiencies in the art, craft, formats, and vocabulary of commercial graphic design by creating original work in a series of hands-on projects. During the semester, students learn to research, organize, and interpret verbal and visual information and to solve increasingly complex communication problems. They will further refine their creative problem solving and collaborative production skills. By semester end, students will have begun to develop their own styles and are able to verbally articulate it to others. Assignments generally include topics such as interactive media design, animation, advertising design, and infographic design.

COMM 443 Producing Workshop (3) This course will immerse students in the language and practice of producing film and video projects.

COMM 443 Producing Workshop (3)

Through a combination of lecture, readings, screenings, and practical exercises, students will learn the fundamental producing skills needed to begin to understand creative producing in an increasingly complex global marketplace. Producing students will learn how to bring stories all the way from development through post-production and beyond. Students will be afforded an opportunity to develop their creative voices, all the while developing their communication and problem-solving skills. The course will follow a standard production timeline starting with pre-production topics such as the basics of pitching, script development, and financing. The second portion of the class will focus on production issues particularly as they apply to independent film production. This will include line producing and production management, including scheduling/budgeting, script breakdowns, assembling talent and crew, location scouting, and running a set. Finally post-production and distribution topics will be addressed including discussions of trends from major trade publications that impact the industry. Throughout the semester students will complete practical exercises that will help build their skills at translating a script into a realized project with a minimum budget and maximum production value.

COMM 443 is a support course for the senior level capstone production courses. Student producers in COMM 448 (Adv. Production for Groups) are strongly encouraged to take this course concurrently. It can also be taken as an elective technique course in conjunction with any of the one-semester mode specific advanced production courses (COMM 437, COMM 438, or COMM 439). The prerequisites are in place to ensure students have the necessary production background taught in the intermediate-level courses.

The Pennsylvania State University
COMM 444 Advanced Post-Production Techniques (3) This course offers intensive practical experience in editing, motion graphics and sound mixing techniques, emphasizing both technical skills and aesthetics.

Through a combination of lectures, readings, screenings, and practical exercises, students will learn advanced post-production techniques needed to produce high quality finished film and video pieces. The course includes modules on the theory and aesthetics of editing, motion graphics, visual effects, 2D animation, audio signal processing and audio mixing. The course will enable students to develop creative skills for translating ideas into short films and to serve as post-production support for senior level productions. Specific design strategies and approaches will be discussed. Students will also be required to demonstrate competence in a variety of digital graphics programs. Throughout the semester students will work individually and collaboratively on practical exercises for critique and evaluation, developing technical, analytical and critical skills.

The course is divided into three sections. In the first section students will focus on the procedures for successful post-production supervision and workflow management, including an exploration of accepted professional practices of editing departments. Students will explore advanced methods of picture editing in all modes and will edit and critique a professionally produced scene. In the second section of the course, students will work on graphics, animation and special effects procedures generally accepted as part of film-video post-production processes. The focus will be on techniques that translate to a variety of software and work environments; including manipulation of picture and text, light and color effects, compositing of multiple images and manipulation thereof. The third section of the course will focus on the practice of preparing elements for a professional audio mix and use of advanced digital audio workstations. This section will feature a discussion of the theory and practice of how tracks are organized, advanced psychoacoustics and signal processing, preparing a multi-track project for mix, and completion of a mixed sound design project.

COMM 445 Directing Workshop (3) An advanced aesthetic and skill production course in directing for the screen.

This course is an advanced aesthetic and skill production course in directing for the screen. The class is designed to introduce more advanced directing concepts and techniques as well as to more deeply explore the collaborative processes of working with a creative team on effectively integrating the aesthetics of cinematography, production design and acting performance in film narrative.

The first section of the course will focus on understanding the actor’s preparation and process with the goal of developing the appropriate and effective communications skills to coach performance. Students will thoroughly explore scenes for interpretation of subtext and motive, and will learn accepted practices of script preparation. Casting and audition styles will be investigated and demonstrated, as will various types of rehearsal techniques. At the end of this section students will workshop a scene in a small group, blocking it and executing it to illustrate concepts of character relationships, stage and camera craft to produce a short scene for discussion and critique.

The second section of the course will be an advanced aesthetic exploration of the visual vocabulary, including cinematic, psychological and fine art concepts that contribute to the planning and design of screen direction. Students will then analyze the technical means to execute this aesthetic vision through production design, lighting and composition. In practice the students will then translate this analysis into a working scene plan and will produce a short scene for discussion and critique. Students will also be introduced to professional practices such as location and studio set protocols and on-set safety procedures.

The third section of the course will explore narrative conventions and their relationship to screen genres in the interest of understanding the film language shared between filmmaker and audience. At the end of the section students will produce a short classic scene with an alternative interpretation for discussion and critique.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**COMM 446 Writing for the Screen II (3)**
An advanced course in screenwriting that further develops elements of storytelling technique.

**Writing for the Screen II (3)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1994
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**COMM 448 Advanced Group Production I (3)**
A two semester advanced production course emphasizing intensive collaborative film-video production from script through post-production.

**COMM 448 Advanced Cinematography and Sound Workshop (3)**
This course is designed to enable students to produce portfolio-quality work in any production mode (alternative, documentary, narrative) and to bring together ideas, processes, practices, and theories in the service of this production. Over the course of the semester, students will engage in intensive pre-production and production of an approved film or video project. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by collaborative productions as well as providing the support, guidance, and critique necessary for a successful production. There will be an emphasis on the thorough execution of every step of pre-production, principal photography, and preparation for post-production in spring semester. Students will fill a single production role (such as producer, director, cinematographer, sound designer, editor) throughout the two semesters and are strongly encouraged to take concurrently the supporting technique course for that production role.

Students will be assigned individual exercises specific to their production role in addition to the collaborative work of the project's production.

Production groups will be formed the first week of class. The first part of the semester is devoted to the development of the projects and pre-production. Roughly half way through the semester, the projects will begin production, with shooting and editing to be completed the following semester.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**COMM 449 Advanced Group Production II (3)**
Continuation of advanced production course emphasizing intensive collaborative film-video production from script through post-production.

**COMM 449 Advanced Film and Video Projects (3)**
This course is the second half of a two-semester production course designed to enable students to produce portfolio-quality work in any production mode and to bring together ideas, processes, practices, and theories in the service of this production. Students from the fall semester will complete production and engage in intensive post-production in order to have a high-quality finished project to submit to film festivals by the end of the semester. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as providing the support, guidance, and critique necessary for a successfully completed project. Students will continue in the same production role (producer, director, cinematographer, sound designer, editor) from the fall semester, learning new skills for their role in the post-production phase.

Students will be assigned individual exercises specific to their production role in addition to the collaborative work of the project’s production. It is expected that all production group members will continue into the spring as well.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**COMM 451 (AM ST 451) Topics in American Film (3 per semester, maximum of 6)**
Critical and historical studies of American films. Analysis of directing, cinematography, editing, screenwriting, and acting.

The Pennsylvania State University
Topics in American Film (3 per semester, maximum of 6)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2013
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 452 Topics in International Cinema (3 per semester, maximum of 6) Critical and historical studies of topics in non-American film. Analysis of theory, direction, cinematography, editing, and screenwriting.

Topics in International Cinema (3 per semester, maximum of 6)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1989
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 453 (IL) (CMLIT 453) Narrative Theory: Film and Literature (3) Comparative study of the aesthetics and techniques of film and literature; close analyses of masters of each art form.

Narrative Theory: Film and Literature (3)

General Education: None
Diversity: IL
Bachelor of Arts: Humanities
Effective: Fall 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 454 Documentary in Film and Television (3 per semester, maximum of 6) Study of representative films from various documentary movements, examining form, technique, trends, and audience objectives.

Documentary in Film and Television (3 per semester, maximum of 6)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 455 Advanced Film Theory and Criticism (3 per semester, maximum of 6) Close examination of classic and contemporary film theory and critical perspectives.

Advanced Film Theory and Criticism (3 per semester, maximum of 6)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1989
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 456 Media Criticism and Theory (3) Critical and theoretical approaches to the analysis of media and communication.

COMM 456 Media Criticism and Theory (3)

To what extent does media (television, movies, print, radio, Internet, etc.) shape our awareness of not only the world around us but also ourselves as thinking human beings? Is it all a matter of perception and relative exposure to these media? How do we approach everyday interfaces with the immense number of media messages in both public and private spaces? Where do our opinions of the validity of both the informational and the aesthetic standards of media messages come from? In this class we attempt to come to terms with the rise and apparent predominance of media as a dominant cultural institution.
COMM 457 Media Audiences and Contexts (3) Survey of the ways media attempt to influence audience reception and how audiences hold sway over media content.

The course begins with an examination of how the mass audience is conceived as a statistical entity by analyzing quantitative methods such as the Nielsen ratings. Much of the course is then spent interrogating how this statistical information is used and by whom. If the audience is created as a commodity and is sold to advertisers, what ethical guidelines are in place? How do audience profiles influence the programs we see and consume? As media become more and more fragmented, how does the problem of audience as a commodity get resolved? Students utilize a case-study approach to explore a variety of audience problems and present their findings in papers, demonstrations, and exhibitions.

COMM 458 Media Law and Ethics (3) The study and practice of key issues in media law and ethics, including libel law, conflict of interest, truth in advertising.

An examination of the role of the mass media in American society in regard to the rights, responsibilities, and duties of practicing media professionals. The semester is almost evenly divided between law and ethics topics. Students examine current laws in mass media with the goal of preparing them to be lawful and responsible members of the profession. Law topics include defamation, privacy, intellectual property and protection of anonymous sources. Students also get an introduction to ethical theories and their practical applications in media industries. Topics include journalistic responsibilities, objectivity, conflicts of interest, invasion of privacy, and the ethics of persuasion and entertainment.

COMM 459 Cultural Effects of Interactive and Online Media (3) Study of the global social impact and rhetorical limitations of converging media, emphasizing cross-cultural media influences.

An examination of the various effects of digital media on society and culture. The nature of digital media affects content and production, the way people use media, and social interaction. Topics include convergence, the information society, the global village, and the various changes in the ways media producers do their work. Various aspects of changes including philosophical, economical, and political are examined with the goal of helping students understand how to prepare for future changes in media industries.

COMM 460W Reporting Methods (3) Techniques in reporting news and trends at the local, regional, and county levels. Emphasis on both deadline and interpretive reporting.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
COMM 461 Magazine Writing (3 per semester/maximum of 6) Students will learn about idea conception, writing, and editing of magazine stories.

Students will learn about idea conception, writing, and editing of magazine stories. They will walk through the idea process, including how to pitch their ideas to editors. They will learn about research and reporting for stories, and then begin the process of organizing and writing their material. They will write stories and then work with editors to rewrite and improve the story for publication.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2013
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 462 Feature Writing (3) Reporting and writing the human interest article for newspapers and magazines.

COMM 462 teaches the fundamentals of reporting and writing feature stories for newspapers and magazines. Students learn reporting and writing techniques for various types of feature stories. The course emphasizes the development of sound journalistic judgment and proper ethical standards. Students write various types of features stories.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 463 Newspaper Design (3) This course will cover newspaper design. Students will learn to solve design problems, edit photos, and work with industry software.

This upper-division course will cover contemporary design theory, grid systems, typography, color and photography as they pertain to newspapers. Students will develop skills necessary to solve design problems associated with the editing process. Students will also learn to use photo editing and page layout software.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2009
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 464W Editorial, Opinion and Commentary Writing (3) Introduces techniques of editorial, opinion and commentary writing.

COMM 464W teaches the fundamentals of writing editorial, opinion and commentary articles. Students learn the techniques of gathering information and writing various types of opinion articles. The course emphasizes the development of sound journalistic judgment and proper ethical standards. Students write various types of opinion articles.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 465 Television Reporting (3) Television news reporting and production.

COMM 465 Television Reporting (3)
COMM 465 provides an introduction to television news reporting and production. Students learn the techniques of reporting and writing news for television. They also learn the audio and video techniques required to produce television news stories. The course emphasizes the development of sound news judgment and proper ethical standards. Students complete actual news assignments.

General Education: None

COMM 467 News Editing and Evaluation (3) Concepts and procedures involved in processing news for various news media, but with emphasis on print media editing.

COMM 467 News Editing and Evaluation (3)

The goal of the course is to qualify the student to be a proficient newspaper copy editor. These skills can be easily transferred to editing assignments on a Web site, in magazines and other publications, in broadcasting, and in public relations. Even if the student does not intend to become a copy editor, the course should help him or her do a better job of writing. The course emphasizes editing for accuracy, clarity, precision in language, and fairness of content. Students will learn about evaluating the relative importance of news and writing headlines, captions and other display elements. The course familiarizes the student with editing photographs and graphics and designing a newspaper page.

Skill in editing is particularly important to the student majoring in print journalism. It is useful to anyone who regularly works with words. The student is evaluated through written work (editing copy, writing headlines and captions) and through quizzes, examinations, or other methods the instructor chooses to assess a familiarity with the theory and principles of the course.

Because students need an opportunity to practice their skills under supervision, the course must be taught in a laboratory setting in which each student has access to a computer connected to the Internet.

COMM 467 builds on the student's understanding of reporting and news writing techniques by teaching rigor in the use of language.

**COMM 470C** Convergent Media News Service: Radio and Online Publications (3)

Practicum emphasizing streaming radio news package production or production of news pieces for online publications and for additional media formats.

**Convergent Media News Service: Radio and Online Publications (3)**

The digital revolution and cross media ownership has challenged all areas of communications, especially the electronic and print news media. Most media outlets now have an online presence along with their traditional operations. Increasingly news outlets are producing news packages for more than one media outlet, which can include online production of breaking news reports presented with text, images, movies and/or sound bites. Currently students preparing for news careers must have traditional news skills across media along with multimedia computer-based skills to develop versatility in reporting and production. This practicum in streaming radio and online news provides opportunities to produce pieces for streaming radio and online publications and also to reformat these pieces for other media outlets such as the newspaper or television. It will also give students the opportunity to produce news pieces suitable for a cross-media portfolio.
COMM 471 Public Relations Media and Methods (3) Analyzing media and audiences for public relations purposes; planning, designing, and writing public relations communications; press relations and publicity methods.

COMM 471 introduces students to the methods used in public relations to generate news media coverage for organizations and individuals. The public relations practitioner must understand the goals of the client organization and its publics to establish effective and ethical communication between them. This course focuses on writing and is designed to assist students in developing and improving professional writing skills for public relations practice, in many forms and for a wide variety of media. Students will learn the importance of different writing approaches required for specific publics and news media organizations. In this course students learn to: (1) locate, read, and evaluate research materials; (2) develop clear, concise program objectives based on the organizations' or clients' goals and the results of their research; (3) determine materials that need to be developed and written to achieve the program objectives; (4) develop newsworthy story ideas; (5) write clear, concise copy that is accurate and logically organized; (6) write in a variety of formats commonly used in public relations practice, including: pitch letters, news releases, position papers, backgrounders, public service announcements; and (7) design media kits.

COMM 472 Public Relations Event Planning (3) Effective planning, organization, implementation and evaluation of events planning.

This course links the public relations theories and practices with skills and techniques required for effective events planning. Students will build on their understanding of public relations introduced in COMM 370 by working on projects that are designed to help them to develop skills in conceptualizing public relations events, designing events, selecting sites, analyzing audiences, budgeting, and promoting/marketing. Students will gain experience in event conceptualization and implementation through in-class exercises and discussions, and public events projects. These assignments will provide students the opportunity to develop portfolio materials.

COMM 473 Public Relations Campaigns (3) Case studies and problems in publicity and public relations in industry, government, and institutions.

This capstone course in the public relations major is designed to provide the student with the opportunity to develop a comprehensive public relations/marketing communications campaign plan based on the four-step process of public relations programming. Those steps include formative research, objectives, programming, and evaluative research. Initially, students will critically analyze award-winning public relations problems, cases, and programs that will provide a foundation for understanding the public relations planning process. Students will be introduced to public relations and communications theories that provide the foundation for excellence in program development. The public relations campaign plan will be developed from the analysis of primary and secondary research sources. The campaign plan will begin with a situation analysis that includes the client's historical, financial, and competitive position in the marketplace. Previous public relations, advertising, and marketing communications programs will be reviewed and evaluated. Additional secondary research will include a content analysis of the client's news media coverage as well as an analysis of the psychographic and demographic profiles of previously targeted publics. Account teams will design and conduct surveys and focus groups as part of the formative research required in setting the program objectives, strategies, and tactics. The public relations plan will require the development of a media plan, media objectives, production timetable, and budget for implementing the program objectives, strategies, and tactics. Students will apply their critical thinking
skills and creative abilities to design and produce communication executions that will communicate the program message to the targeted publics. Those creative abilities include a working knowledge of writing, desktop publishing, photography, and graphic communication. The final phase of the public relations/marketing communications plan will include the design of evaluative research to measure the effectiveness of the program objectives. Those research methods will include content analysis, survey research, and focus groups. Students will work in account teams where each team will be responsible for developing a public relations counseling firm, where team members will produce a firm manual outlining the firm’s mission statement, organizational policies, organizational chart, records of all meetings with clients, records of all firm meetings, time sheets for each firm member, a weekly summary of firm activities, project budget reports, bi-weekly evaluations of firm members, and a client presentation plan. The final public relations plan will be presented to the client for evaluation and critique. The final goal of the course is to provide students with the technical and managerial knowledge and experience required for effective public relations program design and implementation.

COMM 474 Depth Reporting (3) Exploration of strategies for developing indepth newspaper or magazine articles, with an emphasis on gathering information and long-form writing.

COMM 474 Depth Reporting (3)
This is an upper-level undergraduate course designed to prepare students for writing in-depth newspaper or magazine articles, which extends beyond the basics of writing and reporting techniques emphasized in courses such as News Writing and Reporting, Reporting Methods, and the Feature Article. Depth stories are comprehensive accounts that go well beyond a basic news story or feature. An emphasis on longer, more comprehensive stories that require extensive research and interviews gives students an opportunity to be more than technicians following a rigid set of journalistic guidelines or principles. Depth stories require journalists to spend days, weeks or months exploring and investigating a topic and writing a lengthy story that must be cemented with effective transitions.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 475 Issues for Newsroom Managers (3) Newspaper and television management, the state of the industry and topics that prospective employees should know about.

COMM 475 Issues for Newsroom Managers (3)
This is an upper level course for students with an interest in newspaper or/and television management. Issues that managers deal with and management approaches will be covered, emphasizing practical experiences. The basic text may be a packet based on professional experiences of instructor. There will be two papers of roughly 1,500 words. There will be one oral presentation, accompanied by a short summary outlining the main points. The class will consider major issues affecting the industry - the economy, the effort to attract younger audiences and how the look of a product forms the basis of what the audience thinks about the brand and whether it appeals to them. The class will consider how the Internet can be an asset to TV stations and newspapers, if used effectively. Students will evaluate some TV and newspaper Internet sites. The role of advertising and community relations for newspapers and television stations will be discussed. Newspaper opinion pages and public (or interactive journalism) will be covered. The importance of a good local report, and evaluating how effective local coverage is, will focus on state newspapers and television stations. The role of The Associated Press and other news agencies and their approach to coverage and how they relate to local media will be covered. Leadership, management and decision-making will be part of the course. The traits of effective leaders and managers will be discussed. There will be some in-class exercises on managing and ethics. Strategy focusing on the start-up of USA TODAY will illustrate how local newspaper can make strategic gains by following the same checklist. There will be occasional video on the topics covered.

COMM 476 Sports Writing (3) Techniques in sports reporting and writing for media.

COMM 476 Sports Writing (3)
This is an upper-level course designed to prepare students to write sports stories for news outlets. These specialized stories - including contest coverage, analysis, columns, enterprisers, profiles, and sidebars - require skills that go beyond those taught in classes such as News Writing.

As the popularity of high-school, college, and professional sports grows, the sports section has become one of the most widely read sections of newspapers. Many magazines as well cover a variety of sports. Modern sports writing requires sportswriters to not only attend games and interview coaches, but also to use statistics, profile sports figures, and explore trends in sports industry. Through a variety of story assignments, the course provides students with the skills that will prepare them for the demands of being modern sportswriters. The course grounds them in the ethical principles that all journalists must follow.

COMM 477 Sports Broadcasting (3) Techniques of sports broadcasting for radio and television.

COMM 477 Sports Broadcasting (3)
This is an upper-level course designed to prepare students to broadcast sports events and news. These specialized broadcasts - including play-by-play, studio sportscasts, field reporting, and features - require myriad skills that go beyond those taught in classes such as Broadcast Journalism I (Radio News Reporting) and Broadcast Journalism II (Television News Reporting).

As the popularity of high-school, college, and professional sports has exploded, sports shows have become some of the most popular on radio and television. Myriad networks and shows are devoted to sports coverage exclusively. But increasingly knowledgeable sports viewers demand more from sports broadcasters than game coverage and opinion pieces. Modern sports broadcasting requires journalists to not only attend games and interview coaches, but also to use statistics, profile sports figures, and explore trends in sports. Through a variety of story assignments, the course will give students the experience that will prepare them for the demands of being modern sports broadcasters. And it will ground them in the ethical principles that all journalists must follow.

COMM 478 Sports Information (3) Techniques of effective media relations used in a sports information office.

COMM 478 Sports Information (3)
This is an upper-level course designed to prepare students for a specialized form of modern media relations, sports information. Sports information professionals combine skills of both journalists and public relations specialists, so the advanced techniques go beyond those taught in introductory classes such as News Writing and Public Relations Methods.

As the popularity of high-school, college, and professional sports has exploded, sports information professionals have increasing demands put on them. More and more journalists, working for a variety of publications and broadcasts, cover sports today. Moreover, the growing complexities of modern sports - from the impact of drugs to the enormous salaries of many athletes - means that sports information professionals have to provide more than simple information on athletes, coaches and sporting contest. Through a variety of assignments, the course will provide students with the experience that will prepare them for the demands of being sports information professionals. And it will ground them in the ethical principles that all media relations specialists must follow.

COMM 479 Telecommunication Networks (3) The objective of the course is to help students understand the economic, regulatory, and business aspects of the physical infrastructures underlying modern telecommunications. We will discuss the large-scale technological systems such as telephone, cable, wireless and computer networks over which media and telecommunications services are delivered today. We will not be discussing the content offered over telecommunications networks as much as the infrastructures themselves: the conduits over which information is delivered to the home and the workplace.

With technological convergence and regulatory changes, telephone, cable and wireless networks have acquired the capability to provide services earlier reserved exclusively for one or the other network. For example, we can now access telephone services over wireless networks or over the Internet. Similarly, Web content is available with the traditional telephone modem, as well as over cable, wireless and even satellite networks. In the not too distant future, it may become more meaningful to talk in terms of consumer network to a broadband conduit for all types of content, rather than to particular services such as cable television or long-distance telephony.

It thus becomes necessary for those who wish to participate in the telecommunications industry of the future to have a clear understanding of the way large-scale telecommunications infrastructures are put together and operated. Existing courses in the telecommunications curriculum provide instruction in the technology and content aspects of the media and telecommunications industries. The proposed course will complement these existing courses by focusing on the economic, regulatory and business aspects of large-scale networks, in a historical and policy context.

What are the mechanisms by which large-scale telecommunications systems such as telephone, cable, wireless and computer networks are deployed over time? What are the costs involved in the initial deployment and expansion, and how do they influence policy? How do planners evaluate and choose between alternative technologies of delivering services? What are the economic justifications for and against government regulation of networked technologies? How do companies charge for services provided over networked systems? What problems do we face as more and more services--such as real-time gaming and interactive television--are added to telecommunications networks, and what are some of the current proposals to solve these problems? These are some of the questions that will be discussed in class.

Students taking this course will be expected to have no more familiarity with telecommunication infrastructure issues and basic economic terms and concepts than will be acquired in COMM 180, and ECON 002 or ECON 014. All additional concepts will be introduced at a sufficiently introductory level.

COMM 480 Television News (6) Produce a weekly television newscast.

COMM 480 Television News (6)
COMM 480 Television News will help prepare students for a career in television newscast content, presentation and production with a strong multimedia component. Students will gain experience in all aspects of producing a newscast. The class will meet Mondays and Fridays, but they will be expected to produce content on a daily basis, whenever and
wherever stories in Centre County happen. After a few weeks of training, we will produce the Centre County Report each week with elements BOTH ONAIR and ONLINE. This is NOT a newscast focusing only on Penn State activities. Students must be prepared to produce a newscast that informs the larger audience of Central Pennsylvania.

COMM 480 needs the best students to produce the Centre County Report. Students will primarily serve as the news-editorial side of the newscast (anchors, reporters, sports, producers and some in-field photojournalists and studio camera operation) or as the technical team (director, technical director, audio, graphics, studio camera operator AND field production/photojournalists).

By the end of this course, students will have the skill set to:
1. Pursue a career in television news
2. Write solid television news scripts
3. Enhance your storytelling ability
4. Enhance your ability to produce and technically support a newscast
5. Understand the importance of multimedia
6. Produce an effective resume tape

COMM 481 Advanced Multimedia Production (3) Advanced work in multimedia production using web authoring, video editing, audio editing, image editing and animation software.

COMM 481 Advanced Multimedia Production (3)
This course builds on the foundations of multimedia production developed in COMM 270 giving students the opportunities to create multimedia website projects. Students will apply advanced multimedia concepts and techniques to website production and demonstrate versatility in multimedia software. Working individually and in teams, students will develop projects for clients using multimedia software, including web authoring, video editing, audio editing, image editing and animation software. These projects will be uploaded to the World Wide Web, and will serve as portfolio materials for the students. This course emphasizes skills development in multimedia and visual media in support of program objective to help students develop cross-media skills and versatility in media.

COMM 483 Wireless Communications Industry (3) A broad examination of the wireless phone industry including its development, current structure and future.

COMM 483 Wireless Communications Industry (3)
Since the 1990s, the wireless industry has transformed “how” people communicate. The ability to offer mobile communication services to consumers allowed the telecommunications industry to rapidly expand and create new products and services. Throughout this period of rapid growth, new players emerged from relative obscurity while incumbent telecommunication providers weighed the benefits & drawbacks of deploying this new technology. In terms of course design, there are three distinct elements: (1) The early days of the wireless and the key figures and events that shaped an industry, (2) A current state view of the tier 1 carriers, device manufacturers and product offerings, (3) The
emerging trends in the wireless industry and the potential impact on consumer products and services.

By the end of this course, the objective is for students to view the wireless industry quite differently. Students will understand the relationship between wireless spectrum, carrier, device manufacturer and products. The industry landscape will be clearer to students and they will be well positioned to pursue a career in wireless.

In this course, students will learn to:
Demonstrate an understanding of the key watershed events and entrepreneurs that initially shaped the wireless industry
Think critically, creatively and independently
Demonstrate an understanding of the current wireless industry landscape
Apply tools and technologies appropriate for the communications professions in which they will work
Appreciate the evolution of the wireless industry and be positioned to contribute to the development of the next generation of wireless products & services.

COMM 484 Emerging Telecommunications Technologies (3)
Overview of technology of electronic media and related societal issues.

COMM 484 Emerging Telecommunications Technologies (3)
COMM 484 will introduce the technologies in telecommunications and information processing, with an eye toward giving students the necessary perspective on how these technologies work and how markets develop. The course investigates old, new and prospective technologies primarily through an interactive classroom analysis of incumbent or emerging companies bringing products and services to market. Students will conduct their analysis by examining materials not customarily used by undergraduates including stock prospectuses, company annual reports and Internet searches. The class will consider recent strategic alliances, mergers and acquisitions (whether consummated or not) in the context of whether and how technologies drove the deal.

COMM 486 Telecommunications Ethics (3)

Drawing on normative theory and political philosophy, this course explores problems in ethics and social responsibility in telecommunications.

COMM 486 Telecommunications Ethics (3)

In this course the instructor and students work together to consider and analyze ethical issues in contemporary telecommunications practice. Using the tools of ethical and political philosophy, students will discuss current cases in often long-standing problem areas such as truth, privacy and content control. The intention is that all involved will develop a greater sensitivity to the ethical dilemmas confronting telecommunication professionals and a greater ability to evaluate media performance. The course also strives to help students gain a deeper insight into their own ethical principles and become more keenly aware of the foundations and professional implications of those principles.

In the first few weeks of the semester, students will review the major ethical theories and theorists. They will discuss the nature and types of normative analysis, including the major systems of ethical thought, the process of ethical reasoning and the meta-ethical problems of definition and justification. They will also explore the foundations of political philosophy as they relate to the role of telecommunications industries in democratic society. Related topics will include the nature and history of professional norms and values, the development of ethical codes within specific industries and existing organizational processes for the applications of those standards (the clearance process).

In the remainder of the semester, students will discuss case studies involving various ethical dilemmas in professional practice across all segments of the relevant industries including, broadcasting, cable, telephony and the Internet. Special attention will be given to contemporary problems in areas such as social networking and Internet search companies. Topics will include: content control in entertainment and advertising, including issues involving race, gender and age; freedom of expression; privacy; intellectual property; international and cross-cultural issues; truth and anonymity; system access and power; questions of civic engagement; image ethics in a digital age; and broader philosophical questions about the inherent social nature of telecommunications technology. There are, of course, no ‘correct’ answers in these cases; stress is placed on the process of analysis. Students will be evaluated on their ability to articulate their assumptions and formulate coherent ethical rationales based on those assumptions. Comm 180 is a prerequisite for this course.

COMM 487 Advanced Telecommunications Management and Leadership (3)

Strategic management, leadership and ethics issues including marketing, financing, entrepreneurship, and innovation.

COMM 487 Advanced Telecommunications Management and Leadership (3)

This senior-level capstone course discusses a range of strategic management, leadership and ethics issues in telecommunications and media firms. Learning objectives include creative problem-solving, critical thinking and writing, basic financial literacy and management considerations in ethics, globalization, diversity and free speech. Specific areas of emphasis include marketing, programming, customer service, technology adoption, finance and strategic planning. Broadly, the aim is the honing of critical and creative problem solving skills and the enhancement of collaboration and communication skills. The course also stresses the fiduciary and social responsibilities that adhere to the telecommunication manager's role.

COMM 488 Writers' Seminar (3)

Workshop designed for advanced students interested in professional writing, involving extensive mutual and self-criticism.

COMM 488 Writer’s Seminar (3)

This course is designed for advanced students interested in professional writing in the theatre, screen, and media arts. The class work involves submission and extensive revision of a variety of written projects. Revisions are based upon direct feedback from the instructor, as well as mutual critiques from classmates. Students will also learn the technique of self-criticism of their writing and in doing so develop a sense of their own writing style and subject matter preferences.

The Pennsylvania State University
COMM 489W Media and Information Industries (3) The structure, conduct and performance of firms and industries in the electronic media and information sectors.

The objective is for students to examine and learn how to apply concepts of structure, conduct and performance to firms and industries in the electronic media and information sectors, primarily in North America. Industries include broadcasting television and radio, broadband/cable television, satellite television, videogaming, Hollywood, music recording, home video, advertising, online content and entertainment and sports media. Topics include competition and competitive advantage, mergers and concentration of ownership, strategic behavior, industrial organization, industry finance basics, industry practices in pricing, marketing and distribution, the economic impact of technological change and advances in e-commerce, industry and firm profitability and innovation, and the relationship between Wall Street and media industries. Class time is devoted to lecture, discussion (particularly about research and writing) and student presentations. Students are evaluated on an original research project, performance on tests, homework and contributions to discussion. There may also be online discussion and collaboration.

COMM 490 Issues in Electronic Commerce: Policy and Implementation (3) Analysis of policy, strategic issues, and implications raised by the rapid growth of electronic commerce over the Internet.

This senior level course teaches students about the unique business, policy, regulatory and legal aspects of commerce on the Internet, as well as the social implications of the global implementation of such commerce for areas such as privacy and consumer protection. Learning objectives include creative problem-solving, critical thinking and writing, basic financial literacy and management considerations in ethics, globalization, diversity and free speech.

COMM 490A Convergent Media Seminar (3) This seminar examines media convergence issues, trends, and effects on society through discussions, presentations, and creation of a capstone project.

COMM 491 International Telecommunications and Trade Policy (3) Development in the law, policy, and business of international telecommunications; emphasis on multilateral forums--International Telecommunications Union and World Trade Organization.

The study of international telecommunications policy requires an interdisciplinary perspective. Students should understand the past and present technological, business, philosophical, geographical and legal environment. Success in either the public or private sectors may depend on one's ability to anticipate and react to future trends and upheavals. This course will provide a forum for students to investigate and debate ongoing or anticipated conflicts in international
telecommunications and trade policy. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. Internet mediation has the potential to change how we communicate, educate, inform, entertain, and transact business. Technological and marketplace convergence means that Internet mediation will have a profound impact on many legal, regulatory and economic constructs, i.e., the preexisting templates we use to describe and understand the communications process and impact on individuals and society. The course also will examine the growing body of cases that have addressed aspects of Internet-mediation in each of the following general categories:

* Speech-commercial and political speech, obscenity, forums analysis
* Legal and Regulatory Consequences of Convergence— the juxtaposition of telecommunications and information processing technologies, markets and regulatory regimes
* Governance and regulation of the Internet— whether the need exists for government intervention on such matters as numbering and domain registration
* Intellectual Property Rights— the impact of Internet-mediation on copyright, trademark and patent laws
* Electronic Commerce— the law and policy of Internet-mediated transactions, privacy and encryption concerns
* Equity, Competition Policy and Consumer Protection Concerns— what, if anything, should governments do to remedy market failures

COMM 492 Internet Law and Policy (3)

This course will provide a forum for students to investigate and debate ongoing or anticipated conflicts in Internet-mediated telecommunications, information processing and commerce. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. Internet mediation has the potential to change how we communicate, educate, inform, entertain, and transact business. Technological and marketplace convergence means that Internet mediation will have a profound impact on many legal, regulatory and economic constructs, i.e., the preexisting templates we use to describe and understand the communications process and impact on individuals and society. The course also will examine the growing body of cases that have addressed aspects of Internet-mediation in each of the following general categories:

COMM 493 Entrepreneurship in the Information Age: Senior Seminar (3)

COMM 493, an active learning course, provides students with knowledge and tools to take their innovation/technology idea through the business planning, capital, and operations budgeting processes. Students bring their own ideas for a communications product or service. They work through the market feasibility, business planning, capital and operations budgeting processes to finally researching and seeking start up capital. The final product produced by each student is a comprehensive business plan suitable for launching a real business. This course is designed for both students plan to pursue careers as entrepreneurs and those who wish to learn more about small business management in the information age. Topics include entrepreneurship, business planning and budgeting, starting and managing a small media or communication technology firm, economic history of media, telecommunications and information innovation, trends and opportunities in media and information innovation, high tech start-up legal and employment issues, financing options, overview of venture capital, IPOs and market capitalization, market feasibility analysis. Cases of recent successes and failures in the information and media sectors are used to illustrate principles of business planning, market and financing trends and entrepreneurship. In addition to producing a business plan complete with market feasibility analysis and financial forecast reports, there may also be quizzes and exams. Classroom time is devoted to lecture, project work and discussion.

**COMM 502 Pedagogy in Communications (3)**

The purpose of this seminar is to train doctoral students to teach in the communications discipline at the college/university level.

This seminar is proposed as a dimension of the emphases on TA training and teacher preparation for doctoral students in Mass Communications in the College of Communications. The course is one aspect of the College's Graduate Teaching Academy. The seminar provides a foundation in pedagogical research, theory and classroom practice for mass communications doctoral students. The Graduate Teaching Academy demonstrates our faculty's commitment to the integration of training in research and teaching. The work of the seminar focuses on the unique characteristics of undergraduate and graduate education in the communications discipline. The principles and practices covered in the
The seminar have applications for teaching communications in a number of venues including the academic, business and government professional settings. The course involves students in collaborative learning, assessment skills, powerful pedagogies, practical workshops and substantive reviews and applications of curricular and pedagogical research in the communications discipline.

The Graduate Teaching Academy in the College of Communications involves students in a number of activities that will prepare them for teaching. This seminar is one of those activities. Graduate Teaching Academy participants:

1. Take coursework in communications curriculum and pedagogical development that stresses a teaching scholarship of learning theory and a pedagogy of active and engaged learning practices.
2. Study the scholarship of learning within a disciplinary context in order to understand the system of organized knowledge in the communications discipline within which our teaching takes place. This orientation encourages a critical review of the comparative costs/benefits of a disciplinary - versus interdisciplinary-based communications pedagogy.
3. Eligible doctoral students become Teaching Associates, under faculty supervision, for selected College of Communications courses.
4. Teach an undergraduate course in the College as an instructor.
5. Develop a teaching portfolio.
6. Attend College colloquia.
7. Have access to College resources like the Academic Services Center, the Office of Multicultural Affairs, and University resources such as the Center for Excellence in Learning and Teaching at Penn State’s Schreyer Institute.
8. Complete the Teaching with Technology certification.

COMM 515 MA Proseminar in Mass Communications (3) An introduction to graduate studies for MA students in Media Studies and Telecommunications Studies.

MA Proseminar in Mass Communications (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2003

Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

COMM 516 Introduction to Data Analysis in Communications (3) To understand and be able to use data analysis techniques common to research in communications.

This class serves as an introduction to data analysis techniques commonly employed in the field of communications and in related disciplines. The course will employ a commonly-used statistical package to illustrate concepts (e.g., Statistical Package for the Social Sciences, SPSS), and instruction will be provided on how to employ statistical software to conduct a variety of specific analysis techniques. These techniques will include descriptive statistics, analysis of variance, correlation and regression, and exploratory factor analysis. Examples of research from the communications discipline and related fields will be used throughout the semester to illustrate concepts. Emphasis will be placed on decisions involved in the data analyses process, interpretation of data, and effective presentation of results in journal-article format. Evaluation will be based on short take-home assignments, exams, and a final paper.

Faculty Member Proposing Course: Mary Beth Oliver

COMM 517 Psychological Aspects of Communication (3)
This graduate seminar is devoted to the investigation of psychological aspects of human-computer interaction (HCI) and computer-mediated communication (CMC). Theories and empirical research from communication, psychology, and human-computer studies will be used to explore social responses to communication technologies; uses and effects of unique technological features such as interactivity and navigability upon individual users’ thoughts, emotions, and behaviors; nature and dynamics of interpersonal and group interaction when mediated by technology; how issues of “source” and “self” are altered by computer-based media; and psychological consequences of internet use, such as addiction and depression. A primary goal of the seminar is to draw out, through readings, discussion and empirical exploration, fundamental theoretical and practical implications of these lines of research for interface design, psychological processing of mediated form and content, human-web site interaction, and internet-based mass, group and interpersonal communication.

COMM 518 Media Effects (3)
Advanced study of the effects of media messages and technologies via theories and empirical evidence pertaining to processes of effects.

COMM 520 Seminar in Advertising Problems (3)
No description.

COMM 521 Advertising Perspectives (3)
An overview of advertising in industrial societies including institutional issues; socio-demographic issues; public policy issues; and ethical issues.

COMM 522 Social and Cultural Aspects of Advertising (3)
Analysis of advertising from a cultural/literary perspective; emphasis on semiotic and hermeneutic analysis; advertising as social communication.
COMM 550 Film Theory and Criticism (3) Studies in traditional and contemporary film theory and criticism.

COMM 550 Film Theory and Criticism (3)
COMM 550 seeks to introduce students to a variety of theoretical approaches to the critical analysis of film. The course devotes attention to aesthetic as well as social, cultural, political and economic issues, assuming that they are, in fact, inseparable. It involves viewing films closely, and researching the contexts of their production and reception. It stresses critical thinking, reading, viewing and writing skills.

COMM 550 assumes that films can reveal, both directly and indirectly, something about the experiences, identity, and culture of the people who produce and consume them. That is, movies can be analyzed—even psychoanalyzed—to reveal something about the cultural conditions that produced them and attracted audiences to them. The course seeks both to familiarize students with works they probably haven't seen, and to “defamiliarize,” through critical and historical analysis, works they very well may have seen. Films are examined as formal constructs, market commodities, and cultural artifacts.

Individual instructors may emphasize film authorship, styles, genres, systems or cycles. They may focus on the context, text or reception of a film, filmmaker, or group of films. The emphasis of COMM 550 is always on the self-conscious, theoretically informed analysis of cinematic texts.

COMM 555 Media and Culture (3) An overview and history of critical theories that aim to explain the relationship between media and culture.

COMM 555 Media and Culture (3)
This course will provide an overview of the major theorists of mass media whose work offers critical appraisals of the impact of mass media on cultures and the people within those cultures. It will give students an understanding of the major theorists and their conceptions of the relationship between media, communication and culture. Each section is designed to interrogate a particular epistemological or methodological challenge to the social and cultural understanding of mass media, from the seminal thinking of the Frankfurt School - the first thinkers to engage this important field of research - through the theorists of the so-called post-modern turn. Special attention will be paid to examining the ways in which mass media constructs ideological foundations for society's understanding of democracy, identity and everyday life.

COMM 584 International Telecommunications and Trade Policy (3) An interdisciplinary perspective that investigates contemporary debates and ongoing or anticipated conflicts in international telecommunications and trade policy.

International Telecommunications and Trade Policy (3)

The study of international telecommunications policy requires an interdisciplinary perspective. Students should understand the past and present technological, business, philosophical, geopolitical and legal environment. Success in either the public or private sectors may depend on one's ability to anticipate and react to future trends and upheavals.

The course presents, investigates and debates ongoing or anticipated conflicts in international telecommunications and trade policy. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations.

The course also will examine how various nations have organized and reorganized the telecommunications sector. We will consider such developments as privatization, liberalization, deregulation and globalization.

Bachelor of Arts: None
Effective: Fall 2000

COMM 585 Media & Telecommunications Industries (3) Study the structure and performance of media, telecommunications and information industries applying principles and ideas from microeconomics, finance and communications.

Media & Telecommunications Industries (3)

The objective of this graduate seminar is twofold. First, the course provides exposure to the applications of selected concepts, principles and topics in microeconomics to the analysis of the media, telecommunication and information markets. This course is not intended as a general introduction to microeconomic theory and practice – however, students will have the opportunity to begin their study of selected applications of microeconomic principles at a fundamental level and advance their understanding to a high level of complexity worthy of graduate coursework. The second objective of the course is to connect ideas and principles from microeconomics to a body of communications theories, demonstrating possible complements and conflicts across the two disciplines. Discussion of both theoretical and empirical scholarship is emphasized. This in turn gives students a framework for further research on the structure of information industries and the conduct and performance of communications firms. Course covers international markets but focus is on North America. Topics may include selected industries such as wired and wireless telephony, satellite communications,
broadband/cable, broadcasting, film, advertising, publishing, computing and Internet; industrial organization; competition and competitive advantage, growth and the economic causes of innovation; economics of intellectual property protection; electronic markets, hierarchies and transactions cost economics; the economic justification and effects of regulation; natural monopoly economics; cost modeling, demand forecasting and pricing in regulated monopoly and competitive industries; telecommunications deregulation and privatization.

COMM 587 Internet Law and Policy (3) Examination of legal, policy and business developments in Internet-mediated communications emphasizing the impact on existing regulatory and economic models.

COMM 587 Internet Law and Policy (3)
This course will provide a forum for students to investigate and debate ongoing or anticipated conflicts in Internet-mediated telecommunications, information processing and commerce. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. Internet mediation has the potential to change how we communicate, educate, inform, entertain, and transact business. Technological and marketplace convergence means that Internet mediation will have a profound impact on many legal, regulatory and economic constructs, i.e., the pre-existing templates we use to describe and understand the communications process and impact on individuals and society. The course also will examine the growing body of cases that have addressed aspects of Internet-mediation in each of the following general categories: Speech - commercial and political speech, obscenity, forums analysis; Legal and Regulatory Consequences of Convergence - the juxtaposition of telecommunications and information processing technologies, markets and regulatory regimes; Governance and regulation of the Internet - whether the need exists for government intervention on such matters as numbering and domain name registration; Intellectual Property Rights - the impact of Internet-mediation on copyright, trademark and patent laws; Electronic Commerce - the law and policy of Internet-mediated transactions; privacy and encryption concerns; and Equity, Competition Policy and Consumer Protection Concerns what, if anything, should governments do to remedy market failures.

COMM 597E Cultural Industries (3) This course will provide an introduction to the scholarly study of the cultural industries, exploring how scholars have theoretically and methodologically engaged them as cultural entities/sites of practice/ideological constructs. As such, it seeks to parse out terms, concepts, and scholarship related to understanding the ideology/praxis nexus connected to creativity as sets of processes/negotiations under capitalist imperatives and dynamics. Critical to all of this is discerning the dialogic relationship between culture and these industries which operate in contextually-specific ways, as well as considerations of how theoretical conceptions of agency and structure (as they intersect in these sites) figure into understanding the outcomes of these mediations.

COMMS 500 Communications and Cultural Theory (3) This course is designed to provide students a broad background in communications and cultural theory.

COMMS 500 Communications and Cultural Theory (3)

This course is an advanced study of various interpretive approaches and methodological tools that are central to the analysis of media artifacts, including newspaper articles, magazines, films, advertising, and television programs. It begins with an overview of various interpretive traditions, including culturalism, psychoanalytic theory, structuralism, ethnic and racial critiques, poststructuralism, postmodernism, feminism, postcolonial studies, and queer theory. It prepares students...
to critically examine philosophical assumptions regarding the relationship between the nature of knowledge, expression, writing and creative production on one hand, and conceptions of personhood, community, social structures and authority, on the other. Students are required to do significant reading and writing in this course, and to propose and conduct analyses of communication artifacts.

COMMS 503 Research Methods in Communications (3)
This course prepares students to conduct research in communications using both qualitative and quantitative research methods.

COMMS 503 Research Methods in Communications (3)
This course prepares students to conduct research in communications. It begins with an overview of the different strategies and philosophies of research methodology including scientific method, inference, skepticism, hypothetico-deductive reasoning, critical, humanistic, and naturalistic inquiry. The course focuses on four major types of communication research methodology: experimental, survey, textual analysis and naturalistic inquiry. Students are required to do significant reading and writing in this course, as well as propose and conduct a research project of their own design. This course is a fundamental element of the masters program curriculum in that it prepares students to conduct their thesis projects.

COMMS 519 Communication Technology and Culture in History (3)
An advanced study of various interpretive approaches and methodological tools that are central to the analysis of cultural artifacts.

COMMS 519 Communication Technology and Culture in History (3)
This course is an advanced study of various theoretical approaches that are central to the analysis of communication technology and culture in historical context. It begins with an overview of various communication historiographies, including the works of Harold Innis, Walter Ong, Umberto Eco, Elizabeth Eisenstein, James M. Carey, Marshall McLuhan, Lewis Mumford, and others. It engages students in the critical examination of such critical issues as communication and public memory, discourse in historical context and the historical basis of identity. Students are required to do significant reading and writing in this course, and to propose and conduct historical research employing one of the theories discussed in this course.

COMMS 525 Advanced Writer's Seminar (3-9 per semester/maximum of 9)
This course supports the development of advanced writing projects in a range of different genres.

COMMS 525 Media Writer's Seminar (3-9 per semester/maximum of 9)
This course is an advanced study of narrative styles and research techniques used in various forms of writing, including journalism and creative non-fiction, memoir, opinion pieces, cultural criticism, copy writing, writing for interactive media, and writing for performance media. Offerings in different semesters will focus on different topics in these writing genres. The course prepares students to create original material in a variety of writing genres, and for a variety of media. It is well-suited for the development of creative master's projects, and for extending the student's graduate research into a professional portfolio. The first portion of the course defines the elements of the genre through textual analysis and establishes a theoretical framework. Students will then submit for peer review a project proposal that addresses the appropriateness of the subject to the genre, outlines research methods, defines the intended audience, and provides examples of potential outlets. Students will then submit a first draft for peer review, and finally a finished draft for peer review and evaluation.

General Education: None
COMMS 555 Media Discourse Analysis (3) This course provides students with advanced theoretical approaches and methodological tools to analyze a variety of media discourses.

This course provides students with both theoretical approaches and methodological tools to analyze a variety of media discourses. It begins with an overview of linguistic theories, including structuralism, poststructuralism, semiotics, and critical discourse analysis. The course highlights the philosophical relationship between language, culture, identities, politics, and intercultural communications. It also prepares students to examine discourses from multiple angles, such as textually oriented analysis, critical analysis, linguistic analysis, ethnographic analysis, etc. The course then leads into a discussion of several common discursive models in media: ritual, myth, and social drama. It ends with case studies of discourse in films, television, news, advertisement, the Internet, and politics. Students are required to do significant reading and writing in this course, and to propose and conduct a project of discourse analysis of their own design.

COMMS 560 Seminar on Global Culture and Communication (3) This course explores the globalization of communication and communication technologies within a broad political, economic and cultural context.

Developments in technology have led to new levels of interaction and interdependency of human groups and processes across the boundaries that historically separated them - geography, national identity, state borders, and local community. In such a context, we must re-examine many of our assumptions about space, place, identity, and belonging, and about human social organization and human agency - the potential to purposefully transform ourselves and our surroundings. Globalization calls into question our assumptions about politics, economics, culture, and communication. In this course, students will consider the challenges and opportunities that globalization creates for human community and agency - that is, for the multiple ways in which human activity becomes socially organized and purposeful. They will survey the dominant theories of globalization and regionalization and examine the current trends in regionalization and globalization of politics, culture, communication, economic processes, and regulatory structures. They will focus on the challenges communication globalization poses to past forms of identity, the transformation of traditional understandings of space and place, and the opportunities for new forms of identity, community, and action.

COMMS 568 Media Production Workshop (3-9 per semester/maximum of 9) This course prepares students for the creation of advanced media projects in traditional and digital media.

This course is a workshop for the creation of advanced media projects in traditional and digital media. Workshop topics will alternate coverage of different media, and will include photography, graphic design, interactive media, video, audio, and other media to reflect the needs of the graduate program. Students will submit proposals that address their project objectives, production plans, and intended audiences. After submitting proposals for peer review and faculty evaluation, students will begin a three-stage process of pre-production, production, and post-production in the creation of their work. This process will require the organization of production elements, the acquisition of media, and the creation of the finished project. This seminar is intended for graduate students who wish to gain experience with new media technologies, pursue creative outlets for their research interests, or develop their professional portfolios. It is an intensive workshop with demanding writing and technology requirements.
**COMMS 580 Communications Master's Project (3-6 per semester/maximum of 6)**

A communications master's project requires an original master's paper or creative production with critical paper.

This course may be a scholarly master's paper or it might instead be by a creative production supplemented by a descriptive and analytical paper. The production should display integration in skills and knowledge gained in the program as well as depth within an area of concentration. A committee of Communications faculty, supplemented by outside consultants where appropriate, would be needed to judge the final project.

CMPSY 519 Research Methods I (3) In-depth examination of research methods utilized by community psychologists and social change activists; course followed by CMPSY 520.

CMPSY 519 Research Methods I (3)

This course, along with CMPSY 520-Research Methods II, will examine the key research methods available to community psychologists and social change activists. The course will emphasize a hands-on experience for students so that they can understand all the components of conducting program assessments. All students will develop pilot projects under the guidance of the instructor that will give the students experience in developing action research/program evaluation questions, completing research literature reviews, developing specific methodologies appropriate to their action research/program evaluation questions, data base design, data analysis, and report writing. There will be a balance between action research, program evaluation, quantitative and qualitative approaches. A final report and presentation of the findings of the pilot project are required. This course is the research methods course required of all community psychology and social change graduate students. This course assumes a basic understanding of introductory statistics and the use of statistical software will be undertaken in the course. The course is the introductory research methods course and will be offered in a sequence with CMPSY 520-Research Methods II. Both CMPSY 519 and CMPSY 520 must be taken in order to complete the Community Psychology and Social Change research methods requirement for graduation. This course is for 3 credits.

Community and Economic Development (CEDEV)

CEDEV 430 Principles of Local Economic Development (3) Concepts, strategies, and techniques of local economic analysis, planning, and development; case studies and decision-making exercises.

CEDEV (AG EC) 430 Principles of Economic Development Planning (3)
This course is designed to introduce the issues giving rise to concern for rural and regional economies, and the theories, concepts and tools of rural and regional economic development. The goal is to integrate theory and practice and apply them to economic development problems. Tools are presented in a "how to" manner. Topics include current issues in rural economies, the economic view of rural development; business retention, expansion and location; entrepreneurship and its role in the economy; understanding the local economic structure and the forces of chance; introduction to economic growth theories; export base theory and economic base analysis; the role of labor and capital in development; techniques of market area, central place, shift-share and input-output analysis; policies of local economic development and growth.

CEDEV 452 Community Structure, Processes and Capacity (3) Social organization, processes and change in communities; use of sociological principles in analysis of community problems and development.

CEDEV (R SOC) 452 Rural Organization (3)
This course combines an introduction to the social theories of communities with real-life examples of applications to understanding community problems and concerns. The focus is on the special circumstances facing small towns and rural communities, but the concepts are applicable in all communities, from urban neighborhoods to suburbs. Topics covered include local community in a global economy, power and decision-making, the role of governments and other social institutions, development of community and the importance of building social infrastructure as well as economic and physical infrastructure, multi community collaboration and building sustainable communities. Those taking the class will gain experience in conducting a case study of a small Pennsylvania community, build skills in working in a team, and gain understanding of the complexity of factors that influence community (and your own) well-being. If your future career involves operating within a community setting this course can increase your knowledge of that setting and how to function within it. And, even if you don't plan on working with communities in your job, you will be living in a community. This course can help you to understand the ways that you can contribute to improving your own quality of life by becoming involved in your community. Grades in this class are based on the community case study report, take-home mid-term and final exams, short team exercises, and class participation. Graduate students taking the course also are required to write reaction papers to three different topics during the semester.

CEDEV 500 Community and Economic Development: Theory and Practice (3) Understanding theories, concepts, and frameworks of community and economic development and community decision-making models in application to community development practice and issues.

CEDEV 500 Principles of Community and Economic Development and Leadership (3)
What factors affect the quality of life of American communities? How can citizens and leaders affect change in their community? This course provides an overview of principles of community and economic development and an introduction to approaches to organizing, planning and managing change in communities. Students gain an understanding of principles and strategies of community and economic development in relation to general systems theory, community decision making, and leadership strategies in group and community settings.

Students who complete the course should be able to discuss theories and models of development, to apply general systems theory to development issues, and to understand approaches and techniques for community leadership. They will gain an appreciation of conflict and consensus approaches to decision making and change, and understand action strategies for community development and change.

This is a required introductory course for all incoming students in the new Community and Economic Development graduate program. The course will also be of interest to graduate students in other programs who have an interest in community and economic development.
CEDEV (R SOC) 516 Change in Rural Society (3)

Rural America has experienced change throughout its history, but the most rapid have occurred in the past three decades. Forces of urbanization, industrialization, technological change and globalization of the economy drive change in rural America, and the effects of these forces differ across the United States. Some rural areas benefit from the changes that occur while others are devastated. Some rural people and places are able to adapt and view change as an opportunity, while others are unable to respond to the forces that threaten them. Individuals, families, and communities have changed in response to these broad forces. This becomes manifest in new patterns of inequality, family life, educational attainment, migration, age and racial patterns, health and well being, and local service availability. Questions examined in this course include: What are the theories that explain or describe the social change that has been affecting rural people and places? What industrial restructuring and economic change has occurred in rural areas, how has it affected rural areas, and what drives this restructuring? What other social change has taken place, and can we determine potential sources of that change? What are the options available to rural people and communities as they adapt to forces of change, and how much can they influence their own futures? Underlying each of these questions is the issue of whether the well-being of rural people, families, and communities has improved or is threatened by these changes, and which rural areas are most likely to benefit and which are threatened. Students will leave the class with a broad understanding of the forces affecting rural America, and how and why those forces influence some people and places differently. Grades are assigned in this class.
based on a term paper on a topic related to rural social change, reaction papers written about each set of reading assignments, serving as discussion leader, and class participation.

CEDEV 517 (R SOC 517) International Rural Social Change (3) Implications of planned change for international rural societies, considering basic structural constraints, known institutional linkages, and potential synergetic consequences.

CEDEV (R SOC) 517 International Rural Social Change (3)

Three-quarters of the world's population live in developing countries where problems of hunger, malnutrition, underemployment, high morbidity and mortality, overurbanization, and inadequate housing (to name just a few) often are severe. This seminar covers the sociology of economic change in developing countries. Through an extensive list of readings, a series of topical videos, and in-depth class discussions, seminar participants should come away with a firm grounding in the ways development has been approached theoretically and empirically, the implications for developing countries of being embedded in a larger world economy, the influence of multinational corporations, the policies that developing countries have followed in fostering economic growth, the nature of foreign aid, the causes and consequences of Third World debt, the nature of the informal economy, rural development and land reform, world hunger and the Green Revolution, and other topics.

CEDEV 533 (AEREC 533) Rural Development Research Methods and Topics (3) Advanced theories and methods for rural economic development research.

CEDEV (AG EC) 533 Rural Development Research Methods and Topics (3)

This course is designed to study theories and methodologies to analyze rural and regional economics and sources of economic growth. Objectives are (1) introduce recyonal and rural economic development theories and the literature, (2) study the assumptions and components of the theories for their policy implications, and (3) learn selected methods to analyze rural/ regional economies and economic change. Topics include theoretical paradigms, market failure and externalities, neoclassical growth and development theories, factor mobility, economic base theory and analysis, location theory and analysis, and the “new” economic growth theory/ increasing returns. The theories will be examined from the perspective of the types of problems to which they are applied and the questions they can be expected to answer. The theories will be studied, along with examples of research that utilize the theories.

CEDEV 560 Regional Development: Principles, Policy, and Practice (3) Regional growth and development, focusing on challenges to theory, policy, and practice, emphasizing change in metropolitan, micropolitan, and rural areas.

CEDEV 560 Regional Development: Principles, Policy, and Practice (3)

Effective regional development requires that history, theory, and policy are reflected in practice. Globalization impacts the development of regions and places in the United States and around the world. In this context, the development of regions impacts and is impacted by the pace and level of development elsewhere. Regional development addresses issues of how growth and disparity are spatially distributed and differentiated, and what causes these patterns to occur. The challenge is twofold. The first challenge is defining exactly what a region is and identifying who ultimately decides the policies and practices that determine its fate. The second is determining who benefits and who bares the costs of particular local and regional development approaches.
The purpose of this course is to introduce students to concepts and frameworks of regional development. The first part of the course focuses on definitions and theories of regional growth and development, and begins to uncover ambiguities in pre-existing definitions and theories of regional development associated with topics such as growth and development theory, the new geography, cluster economics, and sustainability. It then delves into various policy approaches and issues including regional, environmental, and rural issues. The course culminates with a discussion of putting regional theory and policy into practice through case studies.

Issues and topics addressed in this course include identifying a region and defining 'place'; understanding the relationship between economic efficiency and sustainability; sustainable development and place-based development; the use of policy and its framing to allow regions and places to build on their assets. Additionally, the course will address how regions become interdependent and how relationships can be optimized in this context, and determining the best way and available sources to garner capital to fund development projects. Students will learn how to identify the assets of a region and the impact of interregional collaboration. The course will provide students with the opportunity to analyze the politics of regional development and the important considerations in regional development planning and practice.

CEDEV 567 Resilient Communities and Environments (3) Understanding connections between communities and surrounding ecosystems; exploration of management techniques for building adaptive, resilient, and sustainable communities and environments.

CEDEV 567 Resilient Communities and Environments (3)

This course provides students with a foundation in concepts which can be used to explore the interconnections of communities and environments, particularly as they apply to community and economic development. The focus of this course is applying concepts from resilience thinking to sustainable community and economic development. In this course, students will explore how communities, whether rural or urban, are linked to their environment, and how this, in turn, can affect the success of community development projects. The class explores the social, political, economic, and ecological barriers guiding these relationships. Topics covered in this context include environmental law and regulation; environmental and land use planning; risk and risk management; the rhetoric of sustainability; natural resource dependency; and interconnections between social and environmental justice. The last portion of the course discusses possible management techniques for building adaptive, resilient, and sustainable communities.

CEDEV 575 Methods and Techniques for Community and Economic Development (3) Understanding and applying methods and hands-on experience with techniques used in community and economic development. Lab.

CEDEV 575 Methods and Techniques for Community and Economic Development (3)

How do I find out what is happening in my community? The economy? The environment? What methods and techniques should I use? I need a "toolbox" for change! This is a "hands-on" course designed to provide students with an understanding of community and economic development methods and techniques, and experience in applying them to a variety of problems that they might expect to encounter in the field. The course is based on modules developed and offered by faculty in the Community and Economic Development graduate program. The specific content varies from year to year depending on the needs of each cohort of students. Typical topics include several methods and techniques from each of the following three areas:

General Community Assessment Techniques, including identifying power structures, industry structure and employment, natural resources and amenities, human and social capital, local government and services, and land use patterns.

Specialized Techniques for Community and Economic Development, including retail trade area analysis, use of GIS, program evaluation, IMPLAN, Input/Output modeling, location quotient, shift-share analysis, survey design and implementation, and the use of social and economic indicators.

Leadership and Process Skills, including visioning, goal setting, and strategic planning; grant writing; small group dynamics; conflict management, negotiation, principled bargaining, and deliberation; public speaking and working with the mass media; coalition building, project management; and use of the Internet, design and implementation of Web pages.

This is a required course for all students in the MS in Community and Economic Development.

life through thoughtful and innovative products and services. But, entrepreneurship in the 21st Century is not just about launching businesses anymore. The social entrepreneurship movement has shown that entrepreneurial thinking can be applied widely throughout the community. The common goal connecting entrepreneurship to social entrepreneurship is knowing how to launch an idea, from concept through creation, in a way that will ensure the sustainability and adaptability of the idea. This course is all about launching ideas, from socially- and environmentally-conscious for-profit businesses to nonprofits to spin-offs of existing organizations.

CEDEV 597D Principles and Practices of Planning (3) The course is an overview of the field of planning. It examines the history of planning and the theories behind it, and corresponding roles that planners can play in their communities. It establishes the legal framework for planning as a profession, then looks at the different types and levels of planning. Finally, it examines the process of planning, what data needs to be collected, how a comprehensive plan is made and implemented, who planners must interact with in the course of doing their job, and current issues in planning, such as sustainability. Throughout the course attempts to emphasize both the positive and negative impacts of planning.

CMLIT 403 (US) (LTNST 403) Latino/a Literature and Culture (3) Literary and other forms of cultural expression (film, music, art, and theater) are compared across different Latina/o communities.

CMLIT (LTNST) 403 Varieties of Latina/o Cultural Expression (3) (US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides students with a multi-faceted comparative view of Latina/o literature in relation to other forms of cultural expression. First, the course presents a variety of cultural expressions to students in an effort to teach them the different ways that form affects content. Each text will be studied in its historical context as well, thereby providing students with a sense of Latina/o cultural history. Second, this course compares works from within the same genre, allowing students to recognize the ways that Latina/o culture has worked to build identity, to deconstruct identity, and to challenge cultural stereotypes. Such comparison further facilitates comparison of the ways that different cultural forms have been used by diverse Latina/o communities. Third, this course compares cultural forms, allowing students to see how Latina/o poetry affects music or how Latina/o theater affects novels. Fourth, this course will include texts that represent a variety of linguistic and national contexts, including many countries in Latin America, thereby allowing students to see the relationship between history, culture, language, geography, and identity. These are all themes that are at the center of both Latina/o Studies and Comparative Literature. A comparative perspective facilitates appreciation of the vast and varied ways that Latina/o communities have used cultural expression. A particular point of contact between Latina/o Studies and Comparative Literature is the influence of hybridity. A central issue explored in this course concerns the intricate connections between multiple ways of expressing identity, in the arts, literature, music, etc., in diverse circumstances, such as locations where Latina/o cultures may be in the mainstream (such as in Latin America) and in the minority (in the U.S.). Drawing upon approaches offered by comparative literature and theories such as post-structuralism, feminism, and post-colonialism, we will examine the complex process through which Latina/o culture has been defined, disseminated, contested, and commercialized. Of particular interest from a comparative perspective are the ways that Latina/o cultures are created through hybridization, processes of mutual borrowing and differentiation, as well as through transnational processes of migration, urbanization, and cultural contact. The course's objective is to show not only how complex societies consolidate a shared culture but also how diverse Latina/o communities have produced a multiplicity of cultures that have been expressed via a broad range of cultural registers. These communities often span vast geographical areas, not only in the U.S. but across the Americas as people continue to look to their countries of origin for artistic inspiration.

General Education: None
CMLIT 404 (IL) (ASIA 404) Topics in Asian Literature (3) Selected works from the major poetry, fiction, and drama of such countries as India, China, Japan.

CMLIT 404 Topics in Asian Literature (3)
(IL)

This course focuses on Asian literature in a comparative and international frame. Different iterations of this course will have different topics as well as different historical or geographic foci, but may include literatures from the countries of East Asia (China, Japan, Korea), Southeast Asia (Thailand, Vietnam, Laos, Indonesia, Cambodia), or South Asia (Bangladesh, India, Pakistan). Because the course is comparative it will highlight relationships between and among literary traditions of Asia, or between Asia and the rest of the world, whether in the fields of poetry, drama, or fictional and non-fictional prose.

CMLIT 404Y (IL) (ASIA 404Y) Topics in Studies of Asian Literature (3) Selected works from the major poetry, fiction, and drama of such countries as India, China, Japan, taught with focus on written analysis and interpretation.

CMLIT (ASIA) 404Y Topics in Studies of Asian Literatures (3)

This course focuses on Asian literature in a comparative and international frame. Different iterations of this course will have different topics as well as different historical or geographic foci, but may include literatures from the countries of East Asia (China, Japan, Korea), Southeast Asia (Thailand, Vietnam, Laos, Indonesia, Cambodia), or South Asia (Bangladesh, India, Pakistan). The various course modules will incorporate writing to allow students to further explore their understanding of Asian literatures. Because the course is comparative, it will highlight relationships between and among literary traditions of Asia, or between Asia and the rest of the world, whether in the fields of poetry, drama, or fictional and non-fictional prose. The course will provide students with opportunities to develop writing skills necessary for academic scholarship in comparative literature and Asian Studies.

CMLIT 405 (US;IL) Inter-American Literature (3) This course examines the development of literature in Canada, the United States, Spanish America, the Caribbean area, and Brazil.

Inter-American Literature (3)

CMLIT 406 (IL) Women and World Literature (3) Literature written by women, especially women from non-Western cultures; the spectrum of genres in which women writers have excelled.

Women and World Literature (3)
CMLIT 408 (IL) Heroic Literature (3) Traditional heroes, their traits and adventures; typical themes and examples chosen from the epics and sagas of world literature.

CMLIT 410 (IL) Literary Translation: Theory and Practice (3) Emphasizing literary translation, a study of the theoretical and practical problems encountered in the processes of translation, transmission, and interpretation.

CMLIT 415 (GH;US;IL) World Graphic Novels (3) Critical analyses of form, genre, medium, and discourse of the graphic novel and its historical precedents in an international and comparative context.

CMLIT 422 (IL) African Drama (3) Traditional and popular drama forms; modern anglophone and francophone drama; nationalism and social criticism in contemporary African drama.

**CMLIT 430 (IL) Global Modernisms (3)** A comparative investigation of global Modernisms, with an emphasis on the relations between modernism, modernity, and modernization.

**CMLIT 430 Global Modernisms (3)** (IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course explores and reassesses, comparatively, the ironies, conundrums, paradoxes, and the self-defying and self-engendering strategies of Modernism’s relentless activity as aesthetic movement and as complement to modernity. Readings from theoretical texts and literary works across cultural contexts, international traditions, and linguistic frontiers.

Students will learn how to do critical analyses of written texts, and how to analyze and write about the history of aesthetic and particularly literary modernism and the concepts of modernism, modernity, and modernization. Students will leave the course as better critics of literary work and with an increase ability to perform literary and cultural analysis that relies on a solid grasp of relevant historical and theoretical contexts. Grading will involve a combination of class discussion, writing assignments, and exams, depending on class size and instructor preference.

General Education: None  
Diversity: IL  
Bachelor of Arts: Humanities  
Effective: Summer 2010  
Prerequisite:

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CMLIT 435 (IL) Cultures of Globalization (3)** Cultural and literary effects of the process of globalization, with an emphasis on world literatures and transnationalism.

**CMLIT 435 Cultures of Globalization (3 per semester/maximum of 6)** (IL)

This course focuses on the cultural and literary effects of the process of globalization, with an emphasis on world literatures and transnationalism. It invites students to think about the ways in which the globalization of culture, politics, and/or the economy affects literary production, and the ways in which such literary features as genre, form, medium, style, and theme in turn reflect and attempt to shape our understanding of the global and its becoming.

The course will have a significant focus on primary material (literature, film, other media) and secondary material (philosophy, journalism, criticism, and so on). It will introduce students to the main theoretical concepts that govern thinking about globalization and global culture, as well as to important literary and cultural texts that articulate those values. It will prepare them for further research in comparative literary studies and in the critical history of globalization.
CMLIT 438 Fantastic Worlds: International and Comparative Perspectives (3)

This course will explore a wide range of “fantastic” narrative voices, crossing the boundaries of genres, periods, and nations, through literary and visual texts from the 19th century to contemporary eras, and from Asia to Americas. Students will examine various types of literary techniques and concepts, such as magic realism, grotesque realism, the absurdity, the fantastic, etc., and learn how texts best capture/grasp the nature of “realities” in their creation of “fantastic” worlds. Students will develop more profound understanding of literatures through global lenses, develop and refine critical thinking, in speech and writing, and comparative methods of literary analysis, and develop communications skills in essays, response papers, class discussions, presentation and research papers.

Instructional objectives:
1) Students will develop more profound understanding of literatures through global lenses
2) Students will develop and refine critical thinking, in speech and writing, and comparative methods of literary analysis
3) Students will develop communications skills in essays, response papers, class discussions, presentation and research papers

CMLIT 443 Transatlantic Literature (3 per semester/maximum of 6) Comparative literary and cultural relations across the Atlantic Ocean; may include Europe, Africa, the Americas, and/or the Caribbean.

CMLIT 446 Postcolonial Literature and Culture (3 per semester/maximum of 6)

Taking a comparative and transnational approach, this course will provide an advanced introduction to the field of postcolonial literature and theory. Readings will include the foundational anti-colonial writings of the early twentieth century, the postwar literature of decolonization, and the most recent literature on cultures of globalization. Themes to be discussed may include nationalism, subalternity, neocolonial formations, migration, and cultural translation. In general, this course will be taught in the active learning mode, featuring in-class discussion, writing projects, and group presentations.

CMLIT 446 is one of the many courses, which count towards the Comparative Literature major and the World Literature minor.

CMLIT 446 Postcolonial Literature and Culture (3 per semester/maximum of 6)

(BA) This course meets the Bachelor of Arts degree requirements.

The Pennsylvania State University
CMLIT 448 Literary Cultures of Buddhism (3) (IL)

This course will provide an in-depth exploration of various cultures of Buddhist literary production. Readings will cover a broad temporal and geographical range. Prior study of Buddhism or literature is not required and materials will be in English. Students will learn about major genres of Buddhist literature, such as sutras (scripture), jataka (stories of the Buddha’s previous incarnations), hagiography, miracle tales, religiously inspired poetry, and k?an meditational riddles. The course will also examine the various forms into which contemporary authors have adapted these materials (such as manga, novels, memoirs, and film). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the literary cultures that gave rise to the works under study.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities.

The course is designed to be suitable for all students generally interested in religious cultures of writing, in Buddhism, or in literature, whether or not they have previously studied in any of these areas. The Comparative Literature major requires a certain number of electives at the 400-level, of which this could be one, depending on its content. Further, the course is designed to count as General Education and as an IL (“International”) course. It will be taught, as feasible, every 2-3 years with an enrollment of 20-30 students. With the addition of supplementary reading and research assignments, the course may also be suitable for certain graduate students. This course would benefit from access to a laptop and digital projector.

CMLIT 449 Literary Cultures of Islam (3-6) (IL)

This course is an advanced introduction to the literary cultures of the Islamic world, from the seventh century to the present. No prior knowledge is required. Works will be read in translation. Students will study the foundational text of Islam, the Quran, as a literary text, and learn about major genres of Islamic literatures (ghazal, masnavi, and maqamah, among others). They will also examine how these genres have been adapted in modern literature and media (novels, memoirs, and film). Supplementary historical readings will be provided to contextualize the primary texts.

CMLIT 449 is one of the many courses which count toward the Comparative Literature major and the World Literature minor.

CMLIT 455 (IL) Ethics, Justice, and Rights in World Literature (3) Concepts of ethics, justice, and rights, appearing in world literature and/or film.

CMLIT 455 Ethics, Justice, and Rights in World Literature (3) (IL)
The course will consider how literature and culture address common concerns, including morality, justice, equality, and agency from different perspectives, aesthetic styles, and formal constraints. Students will consider how cultural texts, like legal and philosophical texts, have the power to influence politics and society. Literature is important for understanding ethics, justice, and rights because it teaches ways of thinking and of relating to others that are central to social values. How do we develop the commitment to social equity? How do stories develop ideas of altruism, of prejudice, of pathos, and more in their audience? What role does culture play in developing the moral imagination required to think through social crises? Each class will explore one or more interrelated topics through a variety of cultural and philosophical works. Readings might include works by Melville, Shakespeare, Kafka, Glaspell, Morrison, Capote, García Márquez, and others. Topics might include: formalism; the paradoxes of equity; narrative, storytelling, and framing; custom, law and the political order; law, society, and power; interpretation, authority, and legitimacy; punishment, retribution, and redemption; and others. This course will provide an opportunity to think about the law and ethics in a new way, to read engaging works of fiction and non-fiction, and to examine the humanistic and philosophical perspectives that are at the core of the ethical imagination.

CMLIT 459 Topics in Theory (3) Selected topics in this history of theory and literary criticism within a global, comparative context.

CMLIT 459 Topics in Theory (3) (BA) This course meets the Bachelor of Arts degree requirements.
Covers specific topics in the history and practice literary criticism, cultural and political theory, and the history of ideas, within a comparative context. Introduces students to major issues, ideas, thinkers, schools, or traditions that have shaped the study of comparative literature. Students will learn how to read, think critically about, and write about theoretical texts, and how to analyze literary texts through the lenses of theory.

They will also engage critically with problems of intellectual and literary history and genealogy.

CMLIT 470 (IL) The Modern Novel (3) Major novels of Joyce, Proust, Kafka, Thomas Mann, Nabokov, and others; their contributions to the art of the novel.

CMLIT 470 The Modern Novel (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements.
The course focuses on the modern novel in a comparative and transnational perspective. It explores the basic connections between the modern period and the novel as a form, noting the rise to prominence of the novel in the modern period, and focuses on several important examples of the genre. Some versions of this course may adopt specific organizing themes, such as the novel and the city, the novel and war, the novel and love, and so on. Other versions may focus on the historical development of the novel over time or on crucial interpretive or narratological issues, including the problems of character, time, or point of view; still others may concentrate on major sub-genres of the modern novel, including realism, magic realism, modernism, and postmodernism.

**CMLIT 471** (IL) Poetry and Poetics (3) Theoretical and practical concepts in the comparative, global history of poetry and/or poetics.

**CMLIT 471 Poetry and Poetics (3) (IL)**

This course explores theoretical and practical concepts in the history of poetry and/or poetics. Like all comparative literature courses, it pursues this task through discussions of poetry from a wide variety of national or linguistic origins and ranges widely across historical period, medium, and social form, where appropriate.

Students will develop a broad array of interpretive skills appropriate to poetry and poetics; they will acquire a knowledge of a wide variety of poetic forms; they will undertake comparative analyses of poems and poetic structures; they will learn how to think about poetics outside poetry.

CMLIT 489 (IL) Contemporary World Fiction (3) A survey of developments in contemporary world fiction in translation.

CMLIT 489 Contemporary World Fiction (3) (IL)

The purpose of this course is to expose students to the developments in world fiction in the last 50 years and to expose them to a range of authors from a number of countries. This course, then, also involves getting to know the novel-writing histories of those countries and in many cases, the recent histories of those countries (for example, in novels like Rushdie’s Midnight’s Children or Garcia Marquez’s Hundred Years of Solitude). The class will approach these fictions from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Pamuk, Grass, Murakami, and Marquez. Time allotted for the study of the works under consideration will vary.

CMLIT 490 Video Game Studies (3) A comparative look at the nature and history of video games as cultural artifacts, from Pong to online role-playing.

CMLIT 490 Video Game Studies (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The video game industry is larger than the film industry, and yet the academic study of video games has only just begun. This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will learn basic narrative theory, and study its impact on game studies and game production. They will survey major debates over the meaning and value of video games, and review its history from Pong to contemporary games, including online world-based games.

The course extends students’ skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production.

CMLIT 491 (IL) Literary Adaptation: International and Comparative Perspectives (3) A comparative, international study of adaptations between literature and other media (film, theater, photography, music).

CMLIT 491 Literary Adaptations: International and Comparative Perspectives (3 per semester/maximum of 6) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

From the very first expressions of literary impulses in prehistoric times, and continuing through the present, literary material has been re-used and creatively recycled through processes of adaptation and appropriation, often involving translations not only between languages, but also between media. This course uses a global perspective to explore the processes and aesthetics of adaptations of literary works, including adaptations into other genres or media, such as the visual arts, a film, opera, stage play (or vice versa — adaptations from other media into literature). Drawing upon a broadly international selection of materials, we will explore multiple discourses surrounding adaptation; address the importance of translation and the dynamics between languages, audiences, and texts; study how adaptations address common themes such as race, class, gender, and sexual orientation; discuss international taxonomies of literary genres; and critically assess different cultural notions of authorship, intellectual property, and communal vs. individual ownership. From year to year the works and authors studied in this course may change.

Course objectives include (1) to encourage students to think critically about adaptations within and between cultures and media, in different parts of the world (2) to critically evaluate several of the often conflicting analytical paradigms which characterize the study of literary adaptations; (3) to assess varied approaches to genre in adapted works in different cultural settings; (4) to understand different perspectives on the concept of the author, such as the literary author and the ‘author’ in theatre studies; (5) to question assumptions about the world, re-examine personal points of view, and
understand an expanded international range of ethical and value systems as expressed in literature. For methods of student evaluation, see the syllabus for each section; options include class presentations, response papers, research projects, and exams. This course may form part of the Comparative Literature major, the World Literature minor, and other majors.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CMLIT 510 Theory and Practice of Translation (3) Theories of translation and interpretation; importance of translation in literary transmission; application of theoretical concepts to individual translation projects.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Comparative Seminar in Asian Literatures (1-12) Comparative topics presenting literary works of Asia, from the origins of literature in Asia to the present time.

CMLIT 522 Comparative Seminar in Asian Literatures (1-12)

This course forms one series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department's global perspective. These proposals also respond to the College's policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers.

Comparative study of Asian literatures is an important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, and supplementing proposed seminars in African and Asian literatures, this course and the other two new graduate courses now being proposed will make visible the ways in which the departmental curriculum to covers the diverse geographic areas relevant to comparative literary study.

Our department has long taught 100-level and 400-level courses on Inter-American Literature. We believe that we were the first U.S. university to have created such courses some twenty-five years ago. Many of our graduate students possess appropriate languages (such as Spanish, Portuguese, and French) necessary for study in this field.

The Americas as two joined continents have produced thousands of writers and a highly diverse literature written in English, Spanish, French, Portuguese, and other languages, including Native American languages. A comparative approach to the study of these literatures provides an appropriately internationalized context for understanding the relations among various literatures of the Americas and for seeing them in the purview of world literature as a whole.

In sum, we have long had separate numbers for our undergraduate Inter-American Literature courses and we have previously offered graduate Inter-American courses under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

General Education: None

CMLIT 522 Comparative Seminar in Asian Literatures (1-12)

This course forms one series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department's global perspective. These proposals also respond to the College's policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers.

Comparative study of Asian literatures is an important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, and supplementing proposed seminars in African and Asian literatures, this course and the other two new graduate courses now being proposed will make visible the ways in which the departmental curriculum to covers the diverse geographic areas relevant to comparative literary study.

Our Department offers instruction in three Asian languages (Chinese, Japanese, and Korean), has long taught 100- and 400-level courses in Asian literatures (Comp Lit 004 and Comp Lit 404), has linkages with universities in China and Japan, and has attracted a steady stream of graduate students who work in Asian literatures and languages. Interest in the literatures of Asia is strong. As a further indication of our Departments globalization, we are establishing a new undergraduate major in Japanese (this proposal is presently in the Senate).

In sum, we have long had separate numbers for our undergraduate Asian language and literature courses and we have previously offered graduate Asian literature courses under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

The Pennsylvania State University
CMLIT 523 Comparative Seminar in African Literatures (1-12)

Comparative topics presenting literary works of Africa, from the origins of literature in Africa to the present time.

This course forms one of a series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department's global perspective. These proposals also respond to the College's policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers.

Comparative study of African literatures is an increasingly important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, this course and the other two new graduate courses now being proposed (on Asian and Inter-American literatures) will make visible the ways in which the departmental curriculum covers the diverse geographical areas relevant to comparative literary study.

Our Department offers language instruction in Swahili and Arabic, has long taught 100-level and 400-level courses on African literature, has developed linkages with several African universities, and has attracted a steady stream of graduate students to work in African literature during the last two decades. Interest in the literatures of Africa is strong.

Africa as a continent has produced thousands of writers and a highly diverse body of literature written in English, French, Arabic, Portuguese and over 50 African languages. It is also a rich source of literature recorded from oral traditions maintained in the more than 1,000 languages spoken on the continent. A comparative approach to the study of these literatures provides an appropriately internationalized context for understanding African literatures and for seeing them in the purview of world literature as a whole.

In sum, we have long had separate numbers for our undergraduate African languages and literature courses and we have previously offered graduate courses on African literatures under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

Comparative and International Education (CI ED)

CI ED 401 (IL) (EDTHP 401) Introduction to Comparative Education (3) Origins, nature, scope, basic literature, and methodology of comparative education. Study of sample topics.

CI ED (EDTHP) 401 Introduction to Comparative and International Education (3) (IL)
The course introduces undergraduate students to global issues in education and provides a survey of schooling practices used in various educational systems around the world. Students will have the chance to create an individual research project that will allow them to explore one country and one global educational issues in depth. Students are required to attend all classes, participate in the discussion sections, and take notes on the films shown. These films play an integral part in the course and provide students with views into classrooms and schools around the world. Students will also have access to international databases and be expected to make use of these databases in developing their projects. Finally, in-class discussions will focus on how comparative educational studies have been used by politicians to influence educational reform around the world.

In this course, we will survey the state of public education in the world today. Each student will focus on one nation and provide a synopsis of educational practice in that nation. We will then move on to focus on global or cross-national issues such as how competition between "core" nations like Singapore and the U.S. drives reform (GOALS 2000 or No Child Left Behind). Other issues will include power differences between north and south, education for democracy, barriers to girls and women's education in developing nations, as well as education and national identity.

Effective: Fall 2007
Prerequisite:

CI ED 440 (EDTHP 440) Introduction to Philosophy of Education (3) Introduction to the examination of educational theory and practice from philosophical perspectives, classical and contemporary.

CI ED (EDTHP) 440 Introduction to Philosophy of Education (3)
The major objective of EDTHP (CI ED) 440, Introduction to Philosophy of Education, is to broaden and deepen the students’ understanding of the nature of education. Such a study involves exploring the ends as well as the means of education. It includes both an examination of some of the distinctive or defining characteristics of "educated persons" as well as the different elements of the learning experience (including curricula, pedagogies, and evaluative processes) that encourage the development of such persons. As part of developing an understanding of the educational enterprise, this course will introduce students to some of the important ideas and theories that comprise the rich tradition of educational philosophy. In the design of a course of this nature with constraints established by space, time, and the background of the student, it is necessary to confront the task of making judicious selections from the vast literary wealth accumulated over the centuries. In doing so, the decision made has been to focus primarily on the literary contributions of western philosophers of education. In the interest of making the sample varied and interesting, however, an effort has been made to include writings of some philosophers of education from different cultural contexts. The educational thoughts of A.S. Neill, John Dewey, Eliot Wigginton, Maxine Greene, Paolo Freire, Mohandas Karamchand Gandhi, David Orr, Ivan Illich, and Wendell Berry, among others, will be explored in this class. The exposure to diverse, rich, and provocative ideas of the educators included for study here will, it is hoped, stimulate students to re-examine and further develop their own philosophy of education into a more comprehensive, coherent, and consistent one.

Prerequisite:

CI ED 444 (WL ED 444) Language, Culture and the Classroom: Issues for Practitioners (3) Critical understanding of cultural linguistic diversity to facilitate the inclusion of English Language Learners in a globalized classroom.

CI ED (WL ED) 444 Language, Culture and the Classroom: Issues for Practitioners (3)
In this course we will focus on the issues of power raised by the use of Standard English as the school language while in its grounds there are an increasing number of students who are using more than one language/dialect to communicate.
We will also discuss how language mutates into an exceptional hegemonic/counterhegemonic device central to the problematic regarding school socialization. Finally, we will critically understand teachers' and schools' roles in building a safe classroom where diversity of languages and cultures are welcome and encouraged.

CI ED (ADTED) 508 Globalization and Lifelong Learning (3) Examination of globalization discourses and their relationships, implications and impacts on lifelong learning processes and contexts.

CI ED (ADTED) 508 Globalization and Lifelong Learning (3)

The course is designed to help students to critically examine the nature and impacts of globalization on lifelong learning. The main goal is to enhance the students’ ability to learn and work in a globalizing world and to challenge traditional perspectives about globalization and lifelong learning. As such, the course will adopt a critical perspective on globalization while helping the students to develop a reflective stance on the theory and practice of lifelong learning. A central focus of the course will be to develop a critical analysis that contributes to the building of a more active and socially responsible adult learner. Students will be evaluated using a number of assignments/projects. The major research paper, class presentation, two critiques of theories of lifelong learning, country profile of lifelong and a short reaction paper will count for 90% of the course grade. Class participation will be awarded 10%.

CI ED 509 (ADTED 509) Language, Literacy, Identity, and Culture in a Global Context (3) Examines the relationship between issues of language, identity, and culture for adult learners in an increasingly global context.

CI ED (ADTED) 509 Language, Literacy, Identity, and Culture in a Global Context (3)

This core required course provides graduate students in the ADTED Ph.D. program a critical overview of the literature, theories, and scholarship examining the complexities inherent in an increasingly diverse global and post-colonial sphere. Explorations of historical, theoretical, postcolonial perspectives will be the focus, as will the daily portrayals of diverse peoples by the media. Participants in the course will be expected to familiarize themselves with the readings portraying the complexities of ethnicity, indigeneity, race, gender, and social class. Evaluation will focus primarily on writing a scholarly paper, preparing video materials that illustrate the issues, writing their personal educational histories, and participating in class.
