**M E 491 Bioengineering Applications of Mechanical Engineering (3)**

The primary objective of this course is to teach students how to apply mechanical engineering knowledge in the context of life sciences. Fundamental mechanical engineering knowledge such as solid mechanics, fluid mechanics and system dynamics will be reviewed first. Then, different topics in bioengineering, such as motion biomechanics, physiological fluid mechanics, modeling of physiological systems, and rehabilitation engineering will be discussed. Throughout the semester, students also work in groups to solve several simplified real-life bioengineering projects. Students will be evaluated through these projects plus a final project presentation, an application presentation and several homework assignments. This course is a technical elective in the ME BD program and allows students who have completed their junior year to learn the application of mechanical engineering knowledge in the life science context.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2008 Ending: Summer 2011
Prerequisite: E E 211, M E 320, M E 357, E MCH 213 or permission of program

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering (M E)

M E 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Research Project (1-12)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering (M E)

Mechanical Engineering (M E)

M E 494H Senior Thesis (1-9) Students must have approval of a thesis adviser before scheduling this course.

M E 494H Senior Thesis (1-9)

All Schreyer Scholars are required to complete an undergraduate honors thesis. This work represents the culmination of a student's honors experience. Through the thesis, the student demonstrates a command of relevant scholastic work and a personal contribution to that scholarship.

The thesis project can take many forms - from laboratory experiments all the way to artistic creations. The thesis document captures the relevant background, methods and techniques, as well as describing the details of the completion of the individual project. Two Penn State faculty members judge the merits of this Scholar's honors thesis, the student's self-selected thesis supervisor and the department-selected honors adviser in the student's area of honors.

Bachelor of Arts: None
Effective: Summer 2008

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

**MET 105** Mechanical Systems (3) Mechanical Systems with Laboratory is an introductory course for Engineering Technology major students to broadly introduce Mechanical Engineering Technology.

**MET 105 Mechanical Systems (3)**
MET105 includes mechanical engineering technology profession, United States Customary System and Metric System, communication skills; structures and mechanics including the resultant of a system of forces, moment of a force, and the requirements for equilibrium; Materials and Stress including a stress-strain curve, the material properties for metals and their alloys, ceramics, polymers, and composite materials, a factor of safety; Fluids Engineering including the application of fluids engineering, a fluid's density and viscosity properties, laminar and turbulent fluid flows, buoyancy, drag, and lift, the volumetric flow rate and pressure drop of fluids through pipes. Thermal and Energy system including various energy, heat, work, and power quantities in the SI and USCS, the principle of energy conversion, the basic operating principles of various engines; Motion and Power Transmission including the design and operation of power-transmission equipment, rotational velocity, work, power, belts, and gears.

General Education: None

Mechanical Engineering Technology (MET)

MET 206 Dynamics (3) Kinematics (particles and rigid bodies), kinetics, work-energy, impulse-momentum; select mechanisms associated with local industries.

MET 206 Dynamics (3)
• Instructional, Educational, and Course Objectives – To introduce students to the basic principles of dynamics as applied to practical problems which include such topics as friction, kinetics of particles and rigid bodies, laws of force and motion, work, energy and power. Further, to consider mechanisms which are typical in local manufacturing industries via field trips, research project w/oral presentation. These goals serve to satisfy the following course objectives:
• Students should be able to demonstrate proficiency in applied design, manufacturing processes, and mechanics.
• Students should be able to apply concepts of applied mathematics and science in solving technical problems.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2008
Prerequisite: MCH T 111
Concurrent: MATH 083 or MATH 140

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

**MET 210W Machine Design (3)**
Design machine elements including bearings, springs, levers, shafts, gears, belts, and small mechanical devices; writing skills and computer applications.

**MET 210W Machine Design (3)**

MET 210W is designed to provide students with the necessary concepts and procedures to properly design machine elements in mechanical systems. The course starts with the study of the properties of various engineering materials, including various types of steel, aluminum, and plastics. Heat treating of steels is also covered. Machine design criteria are presented along with discussions of various types of stresses, concepts of principle stress, combined stresses, and methods of stress analysis. Failure theories and their application to brittle and ductile materials are covered along with the relationship of these concepts to design factors. The influence of dynamic loads on design and design margins is also covered. Welded and bolted connections and their design requirements are also studied, along with the application of buckling and beam deflection analysis to the design of support columns and beams. The course also examines the design of various types of springs and gears, the calculation of shaft stresses, and the design of clutches, brakes, belts, and chains.

The writing component of the MET 210W course is satisfied by having students choose a design project which is completed over the course of the semester. Instructors introduce the design project early in the semester and discuss how writing exercises will be used to complete the project. Students write an initial proposal that is graded and returned. Subsequently, students prepare and present progress reports at various times through the semester. These are also graded. The project ends with students preparing a draft final project report, which is critiqued and returned. Based on the critique, a final design report is prepared and is a significant component of the final course grade. Both the progress reports and the final design report activities involve both written and oral exercises.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: MET 206 or MCH 212; MCH T 213 or MCH 213 or ET 322 or EMET 322

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 281 Elementary Thermo- and Fluid Dynamics (4) Basic problems in compressible fluid flow. Laws of dynamics and thermodynamics, mechanical properties of fluids, elementary heat transfer.

Elementary Thermo- and Fluid Dynamics (4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: or concurrent: MATH 083, PHYS 150 or PHYS 250

Mechanical Engineering Technology (MET)

MET 303 Computer-Aided Design (3) Study of the fundamentals of computer-aided design and manufacturing systems; hands-on exercises utilizing a microcomputer-based CAD/CAM system.

Computer-Aided Design (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: junior standing

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 306 Computer-Aided Design (3) Computer-aided drafting and design; computer software solutions to mechanical engineering technology design problems.

MET 306 Computer-Aided Design (3)
This course is designed to be the third CAD course in a Mechanical Engineering Technology program. Students will be exposed to modeling industry specific geometry using solid and surface modeling techniques. Sheet metal modeling, tool path generation and material removal simulation for CNC operations as well as mechanism analysis are taught. Automation and optimization techniques using CAD packages are also covered in lab assignments. Students are expected to document their designs by producing industrial quality working drawings. Lecture material is directly related to the laboratory assignments and topics in understanding hardware and CAD software bench marking as well as associated costs and their relationship to the engineering design process are also covered. Experience in basic CAD modeling is required as well as a working knowledge of Statics, Dynamics and Strength of Materials. Evaluation is based on laboratory assignments, homework assignments, quizzes and a final project.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
Prerequisite: MET 107; EG T 121 or EG T 201 and EG T 205

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 308 Computer Aided Solid Modeling and Analysis (3) Basic techniques necessary to perform Computer Aided Design and Analysis in three dimensions for machine components.

MET 308 Computer Aided Solid Modeling and Analysis (3)

To introduce students to the theory and practice of creating computer aided design files for mechanical components, drawings, layout of multiview drawings, detailing design projects, assemble parts, and create assembly drawings and sections. Although it is highly recommended that the students have basic knowledge of finite element analysis FEA theory, the very user friendly interfaces and CAD interactive modes available in the market together with appropriate introductory training will enable students to perform reasonable and reliable structural, thermal, and motion analysis. This analysis is at the core of every day assignments for design engineers working in modern industrial firms with concurrent engineering culture. With the advent of very powerful desktop workstations, FEA is now available at a practical cost to virtually all engineers and designers.

Mechanical Engineering Technology (MET)

MET 331W Heat Transfer (4) Introduction for technologists to the basic concepts and applications of heat transfer. Includes a thermodynamics and heat transfer laboratory.

Heat Transfer (4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: M E 300 or MET 330. Prerequisite or concurrent: MET 341

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 330 Thermodynamics (3) Introduction for technologists to the basic concepts and applications of thermodynamics.

MET 330 Thermodynamics (3)
This course is designed as the first thermal sciences course in a series of three. Students are introduced to the basic thermodynamic units and concepts, the properties of pure substances, first law of thermodynamics for open and closed systems, second law of thermodynamics, ideal cycles, performance and efficiency, entropy, power and refrigeration cycles. Evaluation is based on homework assignments, quizzes and examinations. Students need a background that includes inorganic chemistry and calculus to succeed in this course.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2011 Future: Fall 2011
Prerequisite: PHYS 250 or PHYS 211 or PHYS 150. Prerequisite or concurrent: CHEM 110; MATH 083 or MATH 140

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 330 Thermodynamics (3) Introduction for technologists to the basic concepts and applications of thermodynamics.

MET 330 Thermodynamics (3)
This course is designed as the first thermal sciences course in a series of three. Students are introduced to the basic thermodynamic units and concepts, the properties of pure substances, first law of thermodynamics for open and closed systems, second law of thermodynamics, ideal cycles, performance and efficiency, entropy, power and refrigeration cycles. Evaluation is based on homework assignments, quizzes and examinations. Students need a background that includes inorganic chemistry and calculus to succeed in this course.

General Education: None

Bachelor of Arts: None
Effective: Fall 2010 Ending: Summer 2011
Prerequisite: PHYS 250, PHYS 211 or PHYS 150. Prerequisite or concurrent: CHEM 110, CHEM 111; MATH 141 or MATH 210

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

**MET 332** Thermal Engineering A (3) Basic thermodynamic units, concepts, properties of ideal gases and vapors, first and second laws, gaseous mixtures, one-dimensional compressible flow.

**Thermal Engineering A (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2007  
Prerequisite: CHEM 110, CHEM 111, MATH 140

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 334 Engineering Thermodynamics and Heat Transfer (3) Basic thermodynamic concepts and definitions, first and second laws; properties of pure substances; cycle analysis; power generation; heat transfer.

Engineering Thermodynamics and Heat Transfer (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: CHEM 110, CHEM 111, MATH 140

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 341 Mechanical Measurements and Instrumentation (3)

This course serves as an introduction to the fundamental principles of instrumentation and measurements. Subjects covered in this course may include the responses of first and second order systems, the concept of time constant and rise time, calibration, standards, design of experiment, and lectures on the design and function of different types of sensors and instruments. Topics may be added or removed, as needed to meet Program Outcomes. The course includes lectures alternating with hands-on laboratory where students apply the material learned in the lectures. For many students this is the first time they have actual hands-on experience with electronic and measurement equipment, such as oscilloscopes, breadboards, function generators, digital data acquisition systems, integrated circuits, strain gauges, displacement sensors, thermocouples, tachometers, force sensors, accelerometers, velocity meters, pressure transducers, flow measurements, etc. Students learn not only how to use these devices in the lab, but also the fundamental principles of their operation.

General Education: None
Diversity: None
Bachelor of Arts: None
Prerequisite: EET 105 or EET 100 or EE 211 or EET 320 and PHYS 151, PHYS 211 or PHYS 250
Concurrent: PHYS 151 PHYS 212 or PHYS 251

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 336 Engineering Fluid Mechanics (3) Thermal and dynamic principles applied to fluid behavior, ideal, viscous, and compressible fluids under internal and external flow conditions.

Engineering Fluid Mechanics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: E MCH 211
Concurrent: Chemistry Physics Calculus

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 342 Instrumentation (2) Measuring system responses of first and second order instruments; fundamentals of mechanical measurements, including pressure, temperature, fluid flow, etc.

Instrumentation (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 358 Process Design Engineering (3) Introduction to process design for production applications from job shop to world-class manufacturing environments.

MET 358 Process Design Engineering (3)

Process design engineering includes the theory and application of principles and practices for economical tool design. Students will learn and demonstrate the use of basic engineering metrology tools. Students will learn and apply the principles of geometric dimensioning and tolerancing to datum systems. Students will learn the elements of process design for a variety of manufacturing processes currently used in industry with a focus on material removal methods including computer numerical control machining. Students will learn the fundamentals of process specification, planning, and fixture design for high-volume material removal operations. Students will participate in a team project to design and build a production machining fixture. The project teams will document and present their designs.

This course is the second of a three-course sequence with a focus on manufacturing. The first two courses, Introduction to Manufacturing Processes and Process Design Engineering, are required in the Mechanical Engineering Technology program at Penn State Capital College. The third course, Manufacturing Engineering, is a senior-level technical elective. The course in this proposal will be offered every spring semester with a projected enrollment of 30. All lab work will be done in the Engineering Lab Building.

Students are evaluated based on their individual performance as well as their participation as a team member. Evaluation opportunities are both lecture and lab-related. There are two exams and a couple of short projects that each student will complete. Student teams will conduct a machining experiment, which each student will analyze in a formal lab report. Project teams will document their fixture designs with drawings and supporting descriptions. Also, each team will prepare a formal presentation showcasing their fixtures and present it to the class.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
Prerequisite: IET 321 or IET 215 and IET 216

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 403 Advanced Mechanical Design (3) Continuation of strength of materials and machine design, with emphasis on advanced methods of design and analysis of machine elements.

Advanced Mechanical Design (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MET 365

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 365 Design of Machine Elements (3) Design of structural and mechanical elements with emphasis on theories of fatigue failure.

MET 365 Design of Machine Elements (3)
Design of Machine Elements covers a wide array of mechanical engineering principles. The course draws heavily on the knowledge gained in the strength of materials lecture and laboratory courses. Failure Theory is covered for both static and dynamic loading conditions. The study of failure under “low stress” cyclic loading, also called fatigue, is a feature of failure theory study. Finally, the theories are applied to the design of machine and structural elements that include beams, columns, pressure vessels, shafts, keys, couplings, belt and chain drives, fasteners, springs, gears, brakes, and clutches. The effects of wear and lubrication on machine design are also examined.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2008
Prerequisite: E MCH 213 or ET 322

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 397 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007

Mechanical Engineering Technology (MET)

MET 435 Building Energy Systems (3) Analysis and design of components and systems for building heating and cooling; emphasis on applying the thermal sciences.

Building Energy Systems (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MET 332, MET 336

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

**MET 432 Fluid Power (3)** Principles of fluid flow, hydraulic components, and hydraulic circuits having application to industry.

**Fluid Power (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2007  
Prerequisite: M E 300 or MET 330; MET 331W

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 438 Thermal Engineering B (3) Applied thermodynamics of power cycles; refrigeration and air conditioning cycles; combustion; psychometrics; and gas mixtures.

Thermal Engineering B (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MET 332

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
**Mechanical Engineering Technology (MET)**

**MET 440 Vibrations for Technologists (3)**
Principles of basic vibration theory, vibration measurement, data acquisition and analysis, and the effective presentation of vibration data.

This course will introduce students to basic vibration theory. The theoretical topics will include lumped parameter, single degree-of-freedom and multi degree-of-freedom systems with descriptions of damping models, transmissibility, and transient behavior. Simple continuous systems will also be described. The focus of the course will be on data acquisition and analysis and on practical vibration solutions. Students learn how to install various measurement devices and how to discriminatively process vibration signals. They also learn effective ways of presenting data to engineering and management. The practical vibration solutions presented will allow the student to understand and solve general problems typically encountered by a technologist in industry.

Student performance will be evaluated by exams, graded homework, assignments, and laboratory reports.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2008 Ending: Summer 2011  
Prerequisite: EMCH 212 or MET 206; MATH 231 and MATH 250 or MATH 211; MET 341; MET 415  

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Prerequisite: IET 216, MET 306

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mechanical Engineering Technology (MET)

MET 450 Manufacturing Engineering (3) Design, analysis and operational issues related to improved productivity and efficiency in modern manufacturing systems.

MET 450 Manufacturing Engineering (3)

Manufacturing engineering includes discussion and integration of the components of automated manufacturing systems. The basic components of those systems are computer numerical control (CNC) machines, robots, and programmable logic controllers. Students also consider the design, analysis, and operational issues related to improved productivity and efficiency in modern manufacturing systems. Students will learn and understand manufacturing systems and their related problems in planning, design, analysis, and implementation. Students will learn associated technology including computer numerical control, robotics, and material handling systems. Students will learn how the technology is integrated into flexible manufacturing systems. Students will learn the fundamentals of manufacturing systems including group technology, cell formation, and just-in-time manufacturing. This course is the third of a three-course sequence with a focus on manufacturing. The first two courses, Introduction to Manufacturing Processes and Process Design Engineering, are required in the Mechanical Engineering Technology program at Penn State Capital College. This course, Manufacturing Engineering, is a senior-level technical elective. The course in this proposal will be offered at least every other year with a projected enrollment of 25. All project work will be done in the Engineering Lab Building.

Students are evaluated based on their individual performance as well as their participation as a team member. Evaluation opportunities are both lecture and project-related. There are two individual exams and student project teams will document their manufacturing system design. Also, each team will prepare a formal presentation showcasing their systems and present it to the class.

**Mechanical Engineering Technology (MET)**

**MET 454 Automatic Controls (3)** An introduction to basic automatic control theory, practical applications of automatic controls to typical industrial machinery, HVAC equipment, etc.

**MET 454 Automatic Controls (3)**

This course is intended for mechanical engineering technology students. It provides the student with a spectrum of knowledge about process controls and control systems. The course will cover some of the theoretical and practical concepts that underline the analysis and response of linear control systems. A brief coverage of industrial and electronic components used in modern control engineering is also necessary. Examples include microprocessors, Operational amplifiers, Solid state switches, relays, filters, PLC’s, motors, etc. Principles of closed-loop control systems and stability analysis using the Laplace transform are also discussed. Laboratory demonstration on PLC’s and the use of computer simulation for modeling control systems are available.

Mechanical Engineering Technology (MET)

MET 455 Mechatronics (3) Integration of mechanical and electronic systems implemented using data acquisition systems, sensors, actuators, signal conditioning, feedback controls, and programmable logic controllers.

MET 455 Mechatronics (3)

Mechatronics is essential to the design and manufacture of modern products and processes. Mechatronics design is an approach where mechanical, electronic, computer, and control subsystems are designed simultaneously to function as an integrated system forcing the designer to be familiar with several disciplines. The course offers an integrated approach to engineering, incorporating product design, microprocessor-based control, manufacturing systems, modeling, and simulation.

Mechatronic systems depend for their unique functionality on computer software; whether PC or PLC. This course studies mechatronics at both the theoretical and practical level using in-class lectures with formal concepts and laboratory simulations to prove out design concepts. Emphasis in the course is placed on physical understanding of the system rather than on mathematical formalities.

Lecture topics include the fundamental aspects such as automation safety, logic functions, Boolean algebra, system input and output sources, flow charting, PLC programming and system design. Each of the lecture topics are reinforced using lab assignments based on software simulations or physical hardware configurations designed to stimulate the student’s involvement and interest.

Mechanical Engineering Technology (MET)

MET 457 Lean Manufacturing (3) Principles and methods of Lean Manufacturing currently used in modern industries.

MET 457 Lean Manufacturing (3)
This course introduces the students to the methods of Lean Manufacturing used currently in the manufacturing industry. The basic Lean Manufacturing topics covered in the lecture include its history, the commitment required by a company to start and sustain Lean Mfg, team building, and the training required by both management and the employees. To aid in the organization of the many Lean topics lectured on and to give the students a structured guideline for analyzing a process, the method of Value Stream Management is used. This method, when used on either a manufacturing or office environment, maps the manufacturing process and analyzes it for opportunities to reduce waste. Once the process mapping has been accomplished, the more advanced Lean topics are then covered which introduces the student to methods of reducing or eliminating waste in the manufacturing process. These topics include fast setup (SMED), plant floor organization (5S), improving equipment uptime (TPM), improving product quality, error proofing a process (Poka-Yoke), work balancing and cellular layout. Additionally, the most advanced topics of autonomation, just-in-time (JIT), flexible or agile manufacturing, and Kanban are covered. In order for the student to fully comprehend the material presented, the students are placed into teams that are sponsored by local industries to work on a manufacturing process. The students are given the opportunity to explore a manufacturing process and develop ways to eliminate problems, issues, and waste in an actual situation rather than a simulation.

Mechanical Technology (MCH T)

MCH T 111 Mechanics for Technology: Statics (3) Forces; moments; resultants; two- and three-dimensional equilibrium of force systems; friction; centroids and moments of inertia of areas.

MCH T 111 Mechanics for Technology: Statics (3)
MCH T 111 will provide practical and comprehensive coverage of elementary statics. In addition to the theoretical approach, the course will demonstrate the practical applications of statics concepts. Students entering this course should have basic knowledge of algebra as well as geometry and trigonometry. Course will introduce the definition of scalar and vector quantities. This will be followed by vector addition, vector subtraction, resolution of vectors, addition of systems of coplanar forces, rectangular components of a vector, etc. Course will also introduce the concept of moments and couples. This will be followed by introducing free-body diagrams as a tool for solving statics problems. Emphasis will be placed on equations of equilibrium for particles and rigid bodies. Students will be exposed to 2D and 3D equilibrium. Course will put emphasis on truss and frame analysis as well as pulleys. Distributed loads will also be discussed. Course will also introduce the concept of friction, angle of friction, wedges, etc. Belt friction and rolling resistance as well as friction in bearings will also be discussed. Course will also introduce the concept of centroids, center of gravity, and moment of inertia of an area. Emphasis will be put on calculating centroidal moment of inertia of composite areas. Polar moment of inertia and mass of moment of inertia will also be introduced. Student will learn not only problem solving strategy but also develop ability to present results in clear manner.

Medieval Studies (MEDVL)

MEDVL 107 (GH;IL) (HIST 107) Medieval Europe (3) Rise and development of the civilization of medieval Europe from the decline of Rome to 1500.

MEDVL (HIST) 107 Medieval Europe (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

MEDVL/HIST 107 is an introductory course on the history of Europe from the late classical period to the beginning of the sixteenth century. There are three main areas of concentration in this course. First, the development of political, judicial and diplomatic institutions, from the collapse of central Roman authority through the rise of local chieftdoms to the centralized kingdom as ancestor of the modern state. The second theme is the role of Christianity in all its forms--orthodox, heretical, and popular--and its contribution to a distinctly medieval society. The third main theme is the development of society following changes in economic activity, cultural interest and the extended family.

Several forms of learning are used in this course. A textbook gives the student a broad overview of the period and gives a chronological structure to the material. This material provides a background to the instructor’s lectures, which not only give factual information, but integrate the various trends, individuals and events. The assigned readings illustrate specific events or individuals; the discussion groups allow the student to explore these texts in a collaborative environment with the instructor and their fellow students. The research paper gives the student the opportunity to investigate a specific topic of interest, while training them in scholarly writing and analysis. Finally, the tests, all essay questions, let students demonstrate their comprehension of the material through problem solving.

The essay exams and discussion groups allow the student actively to address specific problems from the material. The research paper enables the student to gather information from traditional (library archives) and non-traditional (electronic) sources, then to present a conclusion in a comprehensive and coherent argument.

The class discussion promotes collaborate and cooperative learning, as the students expand on, and/or argue against, positions taken on the material by their instructor and fellow students. Internationalism and interculturalism is the essence of this course.

The research paper, essays and discussion allow for scholarly development through the investigation of communities in an important era of history.

Medieval Studies (MEDVL)

MEDVL 108 (GH;IL) Medieval Civilization (3) An interdisciplinary introduction to literature, art, and thought of the Middle Ages.

MEDVL 108 Medieval Civilization (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The Middle Ages, the period from roughly A.D. 400 to 1500, was an important era in the development of many of the institutions, ideas and technologies so familiar today. Our ideas of love, honor, town planning, literature and science have their origins in the medieval period. MEDVL 108 studies the culture and community of this time through lectures complemented by discussions based on the reading of stories from the Middle Ages and viewing of medieval works in art.

The course will begin with a brief look at the chronological progression of events in the Middle Ages, particularly the connection of political events with cultural ideals and scientific progress. Then, various broad topics will be studied. One topic will investigate the types of people found in the three orders of society: the labatores (workers), bellatores (warriors) and oratores (clergy). Other topics include the growth of art and literature (such as the legends of King Arthur), the development of Gothic cathedrals, the creation of fashion, life in a castle, magic, and the idea of faith.

Medieval Studies 108 integrates all five active learning elements:
1) The essay exams and discussion groups allow the student actively to address specific problems from the material.
2) The optional research paper enables the student to gather information from traditional (library archives) and non-traditional (electronic) sources, then to present a conclusion in a comprehensive and coherent argument.
3) The class discussion promotes collaborative and cooperative learning, as the students expand on, and/or argue against, positions taken on the material by their instructor and fellow students.
4) Internationalism and interculturalism is the essence of this course.
5) The optional research paper, essays and discussion allow for scholarly development through the investigation of communities in an important era of history.

Meteorology (METEO)

METEO 003 (GN) Introductory Meteorology (3) Nontechnical treatment of fundamentals of modern meteorology and the effects of weather and climate. A student who took METEO 002 may take the laboratory part of this course for 1 credit only.

(METEO 003 Introductory Meteorology (3)
(GN))

(BA) This course meets the Bachelor of Arts degree requirements.

The objectives of the course are for students to gain a better understanding of atmospheric structure and processes so they can better apply the weather information they encounter. Students will learn to read the sky so they can make their own short-term forecasts and adjust their behavior accordingly. When presented with a weather forecast containing caveats, they will have a better feeling for what controls the evolution of a developing system so they can understand why a certain degree of hedging is necessary. Students will be better able to assess the validity of the commonly expressed concerns about climate change and deteriorating air quality. Each semester, the several sections of METEO 003 at University Park use material and exercises drawn from a common textbook such as A World of Weather: Fundamentals of Meteorology by J.M. Nese and L.M. Grenci. The lecture, taught by an instructor, is supported by weekly labs that are taught by different people, normally student teaching assistants.

General Education: GN
Diversity: None
Bachelor of Arts: Natural Sciences
Effective: Spring 2003

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

METEO 004 (GN) Weather and Risk (3) Non-technical introduction to the science and historical development of meteorology, and the role of weather forecasting as a tool for risk management by individuals, businesses, and societies.

METEO 004 Weather and Risk (3) (GN)

METEO 004 traces the development of weather forecasting as both a scientific discipline and as a tool for risk management. Beginning from the pre-modern history of weather forecasting as a diverse set of folkloric and ritualistic practices, the emergence of meteorology as a genuine science has enabled the development of powerful tools for managing risks faced by individuals, businesses and societies.

Students will learn about the fundamental principles that govern the global atmospheric circulation, and how this circulation shapes weather and climate. They will learn how this scientific understanding has served as the foundation of a global system of weather observation and forecasting, encompassing a worldwide network of atmospheric observing instruments, powerful computer modeling systems, and a highly elaborate system for disseminating information to diverse users. Demand for weather forecasts is driven by the need to manage weather risks confronting agriculture, transportation, the military, insurance, humanitarian relief, and virtually every other sector of society. Examples will be given of how forecasts are incorporated into the decision-making of businesses. This topic leads to a discussion of the economic value of weather information, and the role of public and private providers of information.

The treatment is organized around three themes. First, the possibility of generating a forecast of future conditions requires the adoption of the perspective that the natural world has an underlying regularity, and that this regularity can be discovered and organized through research. The second theme is the critical role of instrumentation in providing the quantitative basis for formal scientific forecasting models. Third, developments in weather forecasting have not proceeded solely from improvements in scientific knowledge; rather, society’s demand for risk management tools has acted as a constant spur on efforts to improve forecasting techniques, as part of a feedback loop between the producers and consumers of forecasts.

Meteorology (METEO)

**METEO 002** (GN) Our Changing Atmosphere: Personal and Societal Consequences (3) A survey of meteorology emphasizing how the nature of our lives, individually/societally, depends upon atmospheric structure, quality, and processes.

**METEO 002 Our Changing Atmosphere: Personal and Societal Consequences (3)**

(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

The primary objective is to provide the student with an understanding of the mechanisms that determine local and regional weather and climate patterns, with emphasis on how these factors impact individuals and society. We focus on the energy balance of the atmosphere and the forces that drive motion and that are ultimately responsible for surface properties such as precipitation and air quality. Cloud microphysical processes are discussed with emphasis on natural and man-made influences. The potential for inadvertent as well as planned modification of precipitation is discussed. Data sets are provided that enable the students to investigate climate change patterns and to assess the causes of these changes. Student teams are required to prepare reports of findings that are presented in class as well as in written form. Finally, we shall explore the governmental policy implications and responses to a variety of climate threats (including global warming, ozone depletion and urban pollution and heat islands). Students are asked to explore a variety of governmental policy initiatives and to assess the soundness of these initiatives. Course readings are selected from popular scientific literature as well as government documents. Students are evaluated on their comprehension of the physical process (as determined by written examinations) and the soundness of their individual and team efforts in a variety of projects. Because of the hands-on nature of this course, we envision an enrollment of no more than 30. The course will be offered every semester.

Meteorology (METEO)

METEO 005 (GN) Severe and Unusual Weather (3) Non-technical introduction to the physical processes important in the formation of various severe and unusual weather phenomena.

METEO 005 Severe and Unusual Weather (3) (GN)

METEO 005 provides a current, relevant, and scientifically accurate discussion of a wide range of severe and unusual weather. Severe weather has made a major imprint on the world’s cultures and economies throughout history (e.g., the drought of the 1930s led to westward migration and changes in agriculture practices in the U.S., utilities in East Coast cities were placed underground after the Blizzard of 1888, and the severe winter of 1941–1942 helped change the momentum of World War II), and also has been prominent in our literature and entertainment (e.g., The Wizard of Oz, The Grapes of Wrath, Twister, The Perfect Storm).

Students will learn about the fundamental principles that govern severe and unusual weather. Concepts are taught in a descriptive manner without relying heavily on mathematics: thus, the material is highly accessible to students with a wide variety of backgrounds. It is believed that learning about weather is enhanced by experiencing weather. For this reason, the class frequently draws upon examples of significant historical and recent severe weather events. Students will be able to apply what they have learned immediately to weather events occurring near their homes or around the world.

The course has four major themes. The unit on hazardous cold-season phenomena treats the formation of freezing and frozen precipitation, lake-effect snowstorms, and blizzards. The unit on hazardous warm-season weather treats thunderstorms and larger-scale conglomerations of thunderstorms known as convective systems, including hurricanes. Students also will learn about flash floods, lightning, tornadoes, downbursts, and hailstorms. The unit on hazardous weather triggered by mountainous terrain deals with topographically-forced gravity waves, downslope windstorms, and rotors. The final unit treats a wide variety of unusual atmospheric optical phenomena resulting from the interaction of light with raindrops or ice crystals, such as rainbows, glories, and haloes.

Meteorology (METEO)

METEO 101 (GN) Understanding Weather Forecasting (3) Fundamental principles of synoptic and physical meteorology, satellite and radar imagery, and data analysis in the setting of mid-latitude weather forecasting.

METEO 101 Introduction to Weather Forecasting (3) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Never before has the quantity of available weather information so far exceeded the quality of the public's understanding of atmospheric science. Meteorology 101: Understanding Weather Forecasting aims to help correct this imbalance by helping students develop the knowledge and skills they need to become critical consumers of weather information. Students who successfully complete Meteorology 101 will be able to apply knowledge of fundamental concepts of atmospheric science to discriminate between reliable and unreliable weather forecasts, and to explain what makes one forecast better than another.

To ensure that students develop the knowledge and skills required to critically assess public weather forecasts, Meteorology 101 will provide an apprentice-training environment that will encourage students to learn forecast mid-latitude weather themselves. They will discover that weather forecasting involves sophisticated data analysis techniques, a thorough understanding of atmospheric science, and strong verbal and graphic communication skills. As it develops these competencies, METEO 101 will fulfill the goals established for Penn State General Education courses in the Natural Science knowledge domain.

The intended audience includes undergraduate students at University Park and other Penn State campuses, as well as adult learners in the weather information industry and weather hobbyists worldwide. To reach this diverse audience, METEO 101 will be offered through the University's World Campus in a Web-based, instructor-led format. Currently in development in collaboration between the Department of Meteorology, the EMS e-Education Institute, and the World Campus, METEO 101 will combine digital video, audio, simulation models, virtual field trips to on-line weather data resources, text, and interactive quizzes that provide instantaneous feedback. The course will provide unprecedented access to one of the world's most distinguished meteorology programs.

METEO 101 will be offered three times each year during the spring, summer, and fall semesters to an expected audience of about 300 annually.

Meteorology (METEO)

METEO 122 (GN) (AGECO 122) Atmospheric Environment: Growing in the Wind (3) Students will learn about the effect of weather on plants, animals, and humans.

METEO 122 Atmospheric Environment: Growing in the Wind (3) (GN)

Atmospheric Environment: Growing in the Wind is for first-year students who are interested in learning about the atmospheric environment and its influence on animals, plants, and humans. It is about how processes at the ground surface and in the air govern weather conditions on Earth. Growing in the Wind focuses on five major weather elements: energy, temperature, moisture, pressure, and wind and how these factors govern ecosystems and habitation of Earth. Emphasis is also given to human impacts on weather and climate. The lectures (2, one-hour lectures each week) are organized around the central theme that the unequal distribution of incoming solar energy (both spatially and temporally) produces temperature and pressure contrast at the Earth’s surface and in the atmosphere that in turn cause storms and control the weather and climate. Computer lab exercises (1, two-hour lab each week) will reinforce concepts learned in lecture. No prerequisites are required. A sincere interest in the environment helps. The course will be offered each fall semester.

Meteorology (METEO)

METEO 241 Fundamentals of Tropical Forecasting (3) Applying atmospheric principles to the tropics, with an emphasis on the development, structure, prediction and destructive impact of hurricanes.

METEO 241 Fundamentals of Tropical Forecasting (3)

Worldwide, approximately 80 tropical cyclones develop each year. This global annual average of tropical cyclones is small in comparison to the thousands of low-pressure systems that routinely parade across the middle latitudes each year. Yet tropical storms and hurricanes garner far greater attention from meteorologists and the media. The obvious reason for this lopsided focus is that tropical cyclones can inflict great devastation to life and property.

One of the primary goals of Meteorology 241: Fundamentals of Tropical Forecasting is to give students a working knowledge of hurricanes and tropical storms so that they can become critical weather consumers. For example, when a hurricane bears down on the coast of the United States, the media often portray the storm as a monster capable of laying waste to anything in its path. In METEO 241, students will understand that the initial fury of a land-falling hurricane is focused within a swath of coastal area approximately 30 miles long or less.

To ensure that students develop the knowledge and skills required to critically assess weather forecasts issued by the National Hurricane Center, METEO 241 will provide, like METEO 101, an apprentice-training environment. Under the tutelage of professional weather forecasters, students, in their role as apprentices, will also work toward the goal of creating their own tropical-weather forecasts.

In the process, students in METEO 241 will learn about the pitfalls of forecasting the tracks and intensities of tropical storms and hurricanes as they actively work with output from sophisticated numerical models available on the Internet. Moreover, successful students will apply their knowledge of the fundamental concepts of atmospheric science in order to competently evaluate forecasts issued by the National Hurricane Center in Miami and the Joint Typhoon Warning Center in Honolulu.

Students will also gain a broad perspective of the general weather and oceanic patterns in the tropics. For example, students will learn about El Nino and La Nina. In the process, they will discover that El Nino and La Nina are not to blame for every unusual weather event that occurs anywhere in the world.

It should be noted here that METEO 241 will be one of four courses required for students to earn a Certificate of achievement in Weather Forecasting, a unique online program offered through Penn State’s World Campus. The three other courses that will comprise this online program are METEO 101: Understanding Weather Forecasting, METEO 361: Fundamentals of Mesoscale Weather Forecasting and METEO 410: Advanced Topics in Weather Forecasting.

To facilitate the learning objectives, METEO 241 will include the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback.

To demonstrate their mastery of the learning objectives, students will complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish to a personal "e-portfolio", four comprehensive projects that will explore timely case studies related to weather forecasting. The e-portfolio will take the form of a Web site that students initially create during the second course of the program (METEO 241 or METEO 361). Students will augment their e-portfolio as part of the requirements for METEO 241, METEO 361 and METEO 410. They will also use the space to reflect on their learning.

At the end of the program, students will make a final e-portfolio entry that highlights their program accomplishments. In this way, the e-portfolio will serve both as a showcase of a student's work for the purpose of course assessment and as a chronicle of a student's achievements during the program. By using their Penn State personal Web space to host their e-portfolios, students will be able to share their work not only with program faculty and students, but also with external audiences, including potential employers. Upon successful completion of the program, graduates will receive a copy of their final e-portfolio on CD-ROM.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2004

Meteorology (METEO)

**METEO 215 Weather Forecast Preparation Laboratory (0.5 per semester/maximum of 4)** Forecast methods/data discussed prior to nightly weather forecast entry. Satisfactory performance will be determined by attendance and forecast accuracy.

**METEO 215 Weather Forecast Preparation Laboratory (0.5 per semester/maximum of 4)**

Students will learn basic weather forecasting techniques and identify appropriate sources of weather information that will assist them in weather forecast preparation. Forecast accuracy will be judged against peer groups at Penn State and several other institutions of higher learning across the U.S. and Canada through WxChallenge (or a similarly run program), a national weather forecasting contest. The bulk of the class time will be spent preparing weather forecasts for five different U.S. cities, each for two consecutive weeks. Cities from different climate regimes will help familiarize students with forecasting challenges from across the country. In addition, the previous day’s weather forecast difficulties and ways to improve forecast accuracy will be discussed. The remaining weeks of the semester will be devoted to in-depth analysis of forecast errors and ways to keep improving forecast quality. Satisfactory performance is determined through attendance records and weather forecast contest results. The course should be taken in BOTH the fall and spring semesters each year for maximum learning potential. METEO 215 may be repeated up to 8 times.

Meteorology (METEO)

METEO 361 Fundamentals of Mesoscale Weather Forecasting (3) Applying atmospheric principles to small-scale weather systems, with an emphasis on the conceptual modeling and short-range prediction of severe thunderstorms.

METEO 361 Fundamentals of Mesoscale Weather Forecasting (3)

When outbreaks of severe weather occur, dire warnings for tornadoes, large hail or damaging straight-line winds urgently scroll across the bottoms of television screens. Simultaneously, television weathercasters warn viewers to “take cover immediately”. Yet, because of the limited spatial and time scales of severe thunderstorms, the areas affected by tornadoes, large hail and damaging straight-line winds often turns out to be relatively small (sometimes as small a tenth of one percent of the original “watch area”). There is no doubt that people should be prepared to take definitive action to protect their lives and the lives of their families when outbreaks of severe weather occur. But the overall impression that entire counties or cities will be destroyed by severe weather can be, and frequently is, misleading.

One of the primary goals of Meteorology 361: Fundamentals of Mesoscale Weather Forecasting is to give students a scientifically grounded perspective of the spatial and time scales of typical outbreaks of severe weather. In the process, students will become better weather consumers. To gain such insights, students will learn conceptual models of the life cycles of severe thunderstorms and will then apply them in real-time outbreaks of severe weather. In the final analysis, students will be able to more accurately weigh the information being disseminated by the media and the Storm Prediction Center in Norman, Oklahoma.

To ensure that students develop the knowledge and skills required to critically assess public weather forecasts, METEO 361 will provide, like METEO 101, an apprentice-training environment that will guide students, under the tutelage of professional weather forecasters, to actively learn how to create their own mesoscale-weather forecasts. In the process, METEO 361 will reinforce the notion that weather forecasting involves sophisticated techniques of data analysis and a thorough understanding of atmospheric science. METEO 361 will also stress that the clear communication of the forecast requires strong verbal and graphic communication skills.

Using conceptual models and real-time radar and satellite imagery in concert with output from numerical models designed specifically for mesoscale forecasting, students will predict severe weather on time scales of a few hours to one day. For example, students will be given a litany of web-based tools and asked to place their own “watch box” for severe weather. Students will then be asked to verify and discuss the outcomes of their forecasts. For more general outlooks of severe weather (time scales of one to two days), students will use output from the numerical models that were introduced in METEO 101 to identify the areas likely to be at risk for severe weather.

It should be noted here that METEO 361 will be one of four courses required for students to earn a Certificate of Achievement in Weather Forecasting, a unique online program offered through Penn State's World Campus. The three other courses that will comprise this online program are METEO 101: Understanding Weather Forecasting, METEO 241: Fundamentals of Tropical Forecasting and METEO 410: Advanced Topics in Weather Forecasting.

To facilitate the learning objectives, METEO 361 will include the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback.

To demonstrate their mastery of the learning objectives, students will complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish, to a personal “e-portfolio”, four comprehensive projects that will explore timely case studies related to weather forecasting. The e-portfolio will take the form of a Web site that students initially create during the second course of the program (METEO 241 or METEO 361). Students will augment their e-portfolio as part of the requirements for METEO 241, METEO 361 and METEO 410. They will also use the space to reflect on their learning.

At the end of the program, students will make a final e-portfolio entry that highlights their program accomplishments. Meteorology (METEO)

METEO 300 Fundamentals of Atmospheric Science (4) An introduction to the fundamentals of atmospheric dynamics, physics, and chemistry.

METEO 300 Fundamentals of Atmospheric Science (4)
This course prepares students for their 400-level meteorology courses by laying a solid foundation in the application of physical, chemical, and mathematical principles to a broad range of atmospheric phenomena. Students are introduced to fundamental concepts and applications of atmospheric thermodynamics, radiative transfer, atmospheric chemistry, cloud microphysics, atmospheric dynamics, and the atmospheric boundary layer. These topics are covered broadly but in enough depth to introduce students to the methods atmospheric scientists use to describe and predict atmospheric phenomena. The course is designed to be taken by sophomore meteorology students as well as by students in related disciplines who have an adequate mathematical and physical background.

Meteorology (METEO)

METEO 395D International Meteorological Internship (3 per semester/maximum of 6) An internship in an international setting that focuses on applying meteorological knowledge.

METEO 395D International Meteorological Internship (3)

A student participates for at least 100 hours in an internship in an international setting that focuses on applying meteorological knowledge. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

**Meteorology (METEO)**

**METEO 413 Map Analysis (3)** Analysis of actual surface weather observations, with emphasis on the Norwegian cyclone model, missing or bad data, and mesoscale phenomena.

**METEO 413 Map Analysis (3)**

METEO 413, Map Analysis, is designed as a professional elective for Meteorology majors and as such it is primarily taken by fourth-year students. Third-year students who have completed METEO 411 may also register for Map Analysis. The course encourages students to tie together concepts learned in prior meteorology courses through analysis of numerous weather maps from across the northern hemisphere both at the surface and above. This is accomplished by improving the student's understanding of the cyclone model and applying that knowledge to "real-life" analyses where data quality may be compromised and topographic and other mesoscale factors may be important. Grades are based upon the best 13 of 14 lab assignments, 2 or more quizzes, and in-class assignments. Class participation is rewarded on an extra-credit basis. METEO 413 is offered each spring; enrollment is limited to 15 students.

Meteorology (METEO)

METEO 410 Advanced Topics in Weather Forecasting (3) Exploring highly specialized topics and techniques in weather forecasting that span from mesoscale to planetary spatial scales and short-term to long-range time scales.

METEO 410 Advanced Topics in Weather Forecasting (3)

T.H. Huxley's passage from Biogenesis and Abiogenesis -- "The great tragedy of Science - the slaying of a beautiful hypothesis by an ugly fact" (1870) -- will serve as the springboard for learning in METEO 410. In the spirit of a "beautiful hypothesis," forecasters' diagnoses of the present state of the atmosphere and their prognoses for how the atmosphere will evolve with time may be scientifically sound. Yet, local weather can turn out dramatically different than the intent of the forecast (the ugly fact). To compound this "great tragedy of Science," weather forecasters routinely spend most of their preparation time on local details, particularly when the weather tends to get more interesting.

Nonetheless, there are "master forecasters" who regularly avoid great tragedies in weather forecasting. Master forecasters will prudently weigh the length of the forecast time as well as interactions between weather features on the hemispheric, synoptic, meso and local scales while, at the same time, they will adroitly use an array of forecasting tools to arrive at a high-quality local forecast. With the prudent and seasoned approach of the master forecaster in mind, METEO 410 will provide students with a master apprenticeship in weather forecasting. As master apprentices, students will learn highly specialized tools and techniques that will help them to hone and expand their overall forecasting skills.

For example, students will learn a new technique for forecasting rare and extreme weather that is based on assessing departures of specific meteorological fields from climatological norms. In the process, students will study rare historic events, such as the great ice storm across northern New England and eastern Canada in 1998. Along the way, students will learn some basic statistics, including climatological means and standard deviations.

As master apprentices, students will also learn about medium-range forecasting (three to seven days into the future) and medium-range computer models. Students will learn how to implement modern prediction techniques, such as ensemble forecasts from computer models. Master forecasters increasingly take advantage of this avant-garde technique in short to medium-range forecasting.

Unique learning modules, which run the gamut from forecasting wildfires to learning about the influence of the North Atlantic Oscillation on long-range forecasts (seven days or more), will provide students with the tools to understand the bases for all the forecasts they see on television, hear on the radio, read in publications such as Weatherwise, or access on the World Wide Web. For example, students will learn about the forecasting products issued by the Climate Prediction Center, which include seasonal outlooks that focus on the seasonal impacts of La Nina and El Nino.

To facilitate the learning objectives, METEO 410 will include the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback.

It should be noted here that METEO 410 will be one of four courses required for students to earn a Certificate of Achievement in Weather Forecasting, a unique online program offered through Penn State's World Campus. The three other courses that will comprise this online program are METEO 101: Understanding Weather Forecasting, METEO 241: Fundamentals of Tropical Forecasting and METEO 361: Fundamentals of Mesoscale Weather Forecasting.

To demonstrate their mastery of the learning objectives, students will complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish, to a personal "e-portfolio", four comprehensive projects that will explore timely case studies related to weather forecasting. The e-portfolio will take the form of a Web site that students initially create during the second course of the program (METEO 241 or METEO 361). Students will augment their e-portfolio as part of the requirements for METEO 241, METEO 361 and METEO 410. They will also use the space to reflect on their learning.

At the end of the program, students will make a final e-portfolio entry that highlights their program accomplishments. In this way, the e-portfolio will serve both as a showcase of a student's work for the purpose of course assessment and as a chronicle of a student's achievements during the program. By using their Penn State personal Web space to host their e-portfolios, students will be able to share their work not only with program faculty and students, but also with external audiences, including potential employers. Upon successful completion of the program, graduates will receive a copy of their final e-portfolio on CD-ROM.

Bachelor of Arts: None
Effective: Fall 1995
Prerequisite: METEO 414

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

METEO 419 Air Quality Forecasting (3) Issues relating to the prediction and dispersion of air pollutants as discussed.

METEO 419 Air Quality Forecasting (3)

Prediction of air quality is discussed from the perspective of operational weather forecasting. The chemical properties of pollutants for which public forecasts are currently made, fine-scale particulate matter and ozone, are summarized to provide the physical background for making forecasts. The impacts of weather on pollutant concentrations are discussed. Current techniques for forecasting air quality are presented and used by the students to create their own air quality forecasts. Students present air quality weather briefings and post-analysis of significant historical air quality events. To take this course, students must have the background provided in a basic course in chemistry and a basic course in meteorology that covers weather systems governing the transport of air pollution.

Meteorology (METEO)

**METEO 421 Atmospheric Dynamics (4)** Balanced and unbalanced flows, vorticity, circulation and potential vorticity, an introduction to wave dynamics and stability analysis, and a quantitative discussion of the general circulation.

**METEO 421 Atmospheric Dynamics (4)**

This course builds on the foundation laid in METEO 300, Fundamentals of Atmospheric Science, by presenting applications of the equations of motion to the description of a variety of atmospheric motions. The dynamics of balanced flows (e.g., geostrophic winds) are reviewed and contrasted with unbalanced flows (e.g., inertial oscillations, isallobaric and convective isallobaric winds) that often help to maintain geostrophy (for examples, frontogenesis). The intrinsically rotational aspects of large-scale atmospheric motions are presented through a discussion of vorticity dynamics (including both relative and planetary vorticity) and the related circulation theorems of Kelvin and Bjerknes that culminate in potential vorticity thinking. An introduction to wave dynamics presents the perturbation method and the concepts of phase and group velocity with applications to gravity and Rossby waves, and to geostrophic adjustment. These techniques are then applied to the stability of convective, barotropic, and baroclinic motions. Finally, the general circulation (including zonally averaged circulation, longitudinally dependent features, the angular momentum budget, and the Lorenz energy cycle) is discussed quantitatively to provide a description of planetary-scale motions.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009
Prerequisite: METEO 300; MATH 230 or MATH 231 and MATH 232

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

METEO 436 Radiation and Climate (3) Elements of earth-sun geometry, radiative transfer, photochemistry, remote sensing of the atmosphere, physical climatology, climate forcing.

METEO 436 Radiation and Climate (3)

This course covers radiation and how it interacts with the atmosphere and earth's surface to drive motions in the atmosphere. The fundamentals of radiative transfer at the molecular level, including absorption, scattering, transmission, and emission of radiation by matter, are discussed and applied to help describe the earth's energy budget. Crucial to understanding these processes in the atmosphere are the interactions of radiation with water in the vapor, liquid, and solid states. Applications of radiative transfer to the understanding of seasons and of climate and climate change are presented as well.

Meteorology (METEO)

**METEO 434 Radar Meteorology (3)** Fundamental operating principles of radars, with application to observation of meteorological phenomena.

**METEO 434 Radar Meteorology (3)**

Students will learn the basic operation principles of weather radar as it affects the taking and interpreting of measurements of weather phenomena. To achieve this ability, students must master concepts of radar design and operation, electromagnetic propagation through and scattering by atmospheric constituents, and the characteristics of atmospheric scatterers. With these tools in hand, the class will focus on interpreting weather phenomena. One-third of each lecture will be dedicated to the discussion and interpretation of student-provided radar images. Students will actively participate in the class through bringing radar observations to class for discussion. They will be required to access data from the World Wide Web, organize it for a computer-based presentation, do an in-class presentation and lead the subsequent discussion. Students should have a basic background in electromagnetic theory, such as can be acquired in a physical meteorology course (METEO 437), as well as have either completed or be co-registered for a mesoscale meteorology class (METEO 414). Students will be evaluated based on class participation, homework and two exams.

Meteorology (METEO)

METEO 440W Principles of Atmospheric Measurements (3) Theory and practices used in measurement and analysis of meteorological variables.

METEO 440W Principles of Atmospheric Measurements (3)
The standard theories and practices used in measurement and analysis of atmospheric variables are surveyed in the lecture portion of the course. The laboratory portion of the course provides students hands-on experience with using standard and self-produced instruments to make reliable measurements and with analyzing meteorological observations to determine their significance. In the laboratory reports, students learn the fundamentals of appropriate scientific writing to summarize the objectives of the lab exercise, to provide an analysis of the observations, and to critique the results. The initial drafts of these reports are evaluated critically by the instructors and teaching assistants and then are revised by the students based on these evaluations. Discussion of scientific writing and of proper report protocols are presented in the course as well.

Meteorology (METEO)

METEO 448 Stormwater Hydrology (3) Relationship between surface runoff, rainfall and water chemistry during rainfall events for the purpose of assessing urbanization, non-point source contamination.

METEO 448 Stormwater Hydrology (3)

This course uses material from conventional hydrology and water quality texts and relates that material to field and laboratory measurements. The focus of our attention is the Spring Creek Watershed in State College, specifically a few of its tributaries within 2 miles of the campus. The course consists of lectures and field work. Field work will be concerned with measurements of certain organic and inorganic chemical constituents (to be analyzed externally by local laboratories), pH and electrical conductivity in water samples taken during storm events along tributaries of Spring Creek. This data will be integrated with half-hourly measurements of flow rate at stream gauges along these same streams and half-hourly rainfall data. Lectures will relate these measurements to practical aspects of surface runoff, water quality, and the identification of non-point source contamination, specifically urbanized surfaces.

The purpose of the course is to use classroom theory to understand the direct runoff response to storm events and its relationship to both urbanization and water quality. The material is diverse, practical, and cross-disciplinary, requiring the instructor to act alternately as team leader and lecturer. No exams are given, but homework based on the field measurements, a term project, and a term paper constitute the evaluation mechanism, along with the instructor's perception of each student's efforts in the field and laboratory. A team project that addresses the solution to a practical problem may also be assigned, and a report summarizing all the newly acquired data and their significance will be generated as a classroom project. Students outside the Department of Meteorology and the College of Earth and Mineral Sciences are encouraged to take this course.

Meteorology (METEO)

METEO 451 Introduction to Physical Oceanography (3) Air-sea interaction, wind-driven and thermohaline circulations, upwelling, El Nino, waves, and tides.

METEO 451 Elements of Physical Oceanography (3)

The primary objective of this course is to describe the circulation of the ocean and present a theoretical basis for understanding it. The focus is on the large-scale, basin-wide features of the ocean circulation, such as: 1) the subtropical ocean gyres that contain the wind-driven western boundary currents like the Gulf Stream, 2) the equatorial oceans that respond rapidly to external forcing to produce phenomena like El Nino, and 3) the thermohaline circulation that acts as a slow regulator of the earth's climate. A main goal is to demonstrate to meteorology students that the ocean is not a static, passive lower boundary to the atmosphere but a dynamic, evolving entity that is intimately coupled to the atmosphere through the exchange of heat, momentum, and water. Thus the oceans affect weather and climate. Students are evaluated on their comprehension of the relevant physical processes (as determined by written examinations) and by term papers and laboratory reports or a combination of the two. This course will be offered annually with an enrollment of about 12 students.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Meteorology (METEO)

METEO 455 Atmospheric Dispersion (3) The basic principles of atmospheric flow, introduction to the modeling of turbulent diffusion, and the use of EPA dispersion models.

METEO 455 Atmospheric Dispersion (3)

Students will learn both the theory and current practice of numerical modeling of the turbulent dispersion of effluents from sources in the atmospheric boundary layer. Lab sessions involve hands-on experience with the numerical models used in the applied dispersion community. Classroom sessions cover the boundary-layer meteorology and dispersion theory on which these models are based. In laboratory sessions, students become acquainted with the present practice of short-range atmospheric dispersion modeling through:

- exploring the air-quality resources available on the World Wide Web
- examining the design of the air-quality models used today in permitting and hazardous-release applications
- discussing the input data needed by the models, the nature and reliability of their predictions and the advantages of improved models including AERMOD
- running the models SCREEN3 and ISC (the U.S. EPA's Industrial Source Complex model).

Lectures on boundary-layer meteorology include:

- the atmospheric boundary layer, turbulence, and the surface energy budget
- buoyancy, stability and their influence on the atmospheric boundary layer
- mass conservation in fluid motion, turbulent and molecular fluxes and their roles in atmospheric dispersion
- the contrast between instantaneous and average properties of turbulent flow, the convergence of averages and implications for dispersion models

Meteorology (METEO)

**METEO 454 Introduction to Micrometeorology (3)**
Physical processes and their measurement in the lowest layers of the atmosphere; application to hydrology, plant systems, and air pollution.

**METEO 454 Introduction to Micrometeorology (3)**
Students will learn the basic fluid mechanics and thermodynamics of the atmospheric boundary layer (ABL), the lowest few hundred meters to few kilometers of the atmosphere. Specific topics covered include:

1. Introduction to micrometeorology
2. The surface energy budget
3. Radiation balance near the surface
4. Soil heat transfer
5. Air temperature and humidity in the boundary layer
6. Wind distribution in the boundary layer
7. Introduction to viscous flows
8. Introduction to turbulence in the boundary layer
9. Semi-empirical theories of turbulence

Meteorology (METEO)

METEO 470 Climate Dynamics (3) The fundamental principles that govern Earth's climate and their relevance to past and future climate change.

METEO 470 Climate Dynamics (3)

Climate Dynamics delves into the fundamental processes that control the earth's climate of the past, present, and future. Fundamentals are developed from concepts of basic dynamic meteorology, radioactive transfer, and thermodynamics. Basic atmospheric radioactive transfer, the surface energy and hydrologic budgets, and the atmospheric and oceanic circulation are covered. A survey of the earth's climate through geologic history is also covered, including extinction events and the impacts on climate. The concepts developed in this course are applied to the topic of anthropogenic climate change and how various aspects of the system could be influenced by global warming.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2002
Prerequisite: METEO 300, METEO 421, METEO 431
Concurrent: METEO 436

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Human-caused climate change represents one of the great environmental challenges of our time. As it is inextricably linked with issues of energy policy, a familiarity with the fundamentals of climate change is therefore critical for those looking to careers in the energy field. To appreciate the societal, environmental, and economic implications of policies governing greenhouse gas emissions, one must further understand the basic underlying science. METEO 469 serves to lay down the fundamental scientific principles behind climate change and global warming. A firm grounding in the science is then used as a launching point for exploring issues involving climate change impacts and mitigation. METEO 469 will introduce students to the basic information necessary for understanding Earth’s climate, including the relevant atmospheric processes, and aspects of other key components of the climate system such as the cryosphere, hydrosphere, and biosphere. Students will learn how to do basic computations and to use theoretical models of the climate system of varying complexity to address questions regarding future climate change. Students, further, will explore the impacts of various alternative greenhouse gas emissions scenarios and investigate policies that would allow for appropriate stabilization of future greenhouse gas concentrations. The structure of the course roughly parallels the treatment of the subject matter by the reports of the Intergovernmental Panel on Climate Change (IPCC), focusing first on the basic science, then the future projections and their potential impacts, and finally issues involving adaptation, vulnerability, and mitigation. METEO 469 will combine digital video, audio, simulation models, virtual field trips to on-line data resources, text, and interactive quizzes that provide instantaneous feedback.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010
Prerequisite: MATH 110

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

METEO 473 Application of Computers to Meteorology (3) Application of statistical and numerical methods to practical problems in meteorology.

Application of Computers to Meteorology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: CMPSC 101, CMPSC 201 or CMPSC 202

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

**METEO 471W** Observing Meteorological Phenomena (3) Teaching the observational and interpretative skills needed to read the sky.

**Observing Meteorological Phenomena (3)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1999
Prerequisite: METEO 421. Prerequisite or concurrent: METEO 436

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

METEO 474 Computer Methods of Meteorological Analysis and Forecasting (3) Distribution of scalars and vectors; sampling; regression and correlation in two and three dimensions; time series, statistical forecasting; forecast verification.

METEO 474 Computer Methods of Meteorological Analysis and Forecasting (3)

Meteorology 474: Computer Methods of Meteorological Analysis and Forecasting explores the computationally intensive statistical methods used in the development of automated weather analysis and forecasting systems. The focus of the course is on learning to develop and use artificially intelligent automated systems to perform data quality control, quantitative analysis of large meteorological data sets, and weather forecasting. Coverage will include the relevant statistical, mathematical, and computational methods including matrix operations, data quality control, regression analysis, neural network construction, decision tree growth, and forecast system verification. Students will leave the course with an understanding of how to efficiently develop accurate and robust statistical weather analysis and prediction systems. Thus, the course serves as a professional elective for those students wishing to pursue careers in statistical weather forecasting, meteorological data analysis, and associated fields. Meteorology 474 uses a project oriented lecture/lab format to provide students with hands-on experience in developing and testing weather analysis and forecast systems. Students will both code their own forecast system development programs and use off-the-shelf software designed for rapid development and testing of forecast systems. To tackle these assignments, students will team up in pairs using the computer laboratory facilities of the Meteorology Department and meteorological data sets of current interest. A key element of the resulting project reports will be an investigation into the origin of the observed forecast system errors. One section of Meteorology 474 will be offered each year with a capacity of approximately 20 students. The class size is tailored to in-class training with the software tools and open discussion with the instructor and classmates. Grading will be based on the team assignments and on a mid-term and final examination.

Meteorology (METEO)

**METEO 484 Weather Communications Apprenticeship (3)** Mentor-led course that focuses on a specific issue or problem in weather communications related to broadcasting, climate or industry.

**METEO 484 Weather Communications Apprenticeship (3)**

METEO 484 is a professional elective course that is offered on an individual basis to a student or a team of students (up to 3) who are engaged in a long-term project related to developing a new approach to weather communications. It could be offered any semester, but will usually be held in the spring or summer. It is an elective course toward the completion of the Weather Forecasting and Communications Option in Meteorology. Under the tutelage of a primary instructor in Weather Communications, the student will extend to its completion work that was begun in METEO 483 and reviewed by the individual course committee. The likely projects include web design of community weather pages, production of a weekly 15-minute weather show for local government access channels, case studies for a forensic climatology investigation, and similar types of projects.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2003
Prerequisite: METEO 481, METEO 482 and METEO 483

Monthly Meteorology (METEO)

METEO 485 National Weather Service Operations (2-3) Joint instruction with lead personnel from the State College National Weather Service Office on a variety of operational weather topics.

METEO 485 National Weather Service Operations (2-3)

METEO 485 is a professional elective course that is offered to interested students who desire to expand their horizons in the field of operational weather forecasting. This course provides a view of operational meteorology from those involved in the daily routine of regional forecasting. The topics vary with each offering, but are focused on the advances occurring and needed in this field. Sample topics include quantitative precipitation predictions, long-range weather forecasting, and the climatology of significant weather events. Regular interactions with experienced forecasters helps focus the student's career choices and stimulates the operational meteorologists to be lifelong learners. The course will be offered in the spring and fall semester each year. It is an elective course that may be used toward the completion of the Weather Forecasting and Communications Option in Meteorology.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2003
Prerequisite: prerequisite or concurrent: METEO 481, METEO 415

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

METEO 483 Weather Communications III (3) Individualized course designed for in-depth study of weather communications in industry, broadcasting, the courtroom and/or the classroom.

Weather Communications III (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2002
Prerequisite: METEO 411, METEO 482

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

**METEO 486 Pennsylvania Climate Studies (1-2 per semester/maximum of 3)** An overview of the Pennsylvania State Climate Office and an introduction to various aspects of its operations.

**METEO 486 Pennsylvania Climate Studies (1-2)**

Those interested in climate topics will become thoroughly acquainted with the important process of acquiring and assessing the quality of climate observations. Students will be introduced to the various observational networks and data formats. They will learn to manipulate large climate data fields using both flat and relational database management systems. Each student will contribute to the state climate web page and will conduct a research project during the second half of the semester. This course will be offered in fall and spring semesters.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2011  
Prerequisite: METEO 101 or METEO 200A and METEO 200B or METEO 201

**METEO 495B Meteorology Private Sector Internship (3 per semester/maximum of 6)** Internship focusing on meteorological problems and applications pursued by private sector companies.

**METEO 495B Meteorology Private Sector Internship (3 per semester/maximum of 6)**

A student participates for at least 100 hours in an internship with a private sector company that focuses on problems or applications that use meteorological information. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to a 400-level meteorology course, students must have completed the required course on synoptic meteorology. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2010  
Prerequisite: METEO 411

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
**Meteorology (METEO)**

**METEO 495A Meteorology Communications Internship (3 per semester/maximum of 6)**

Internship focusing on communication of weather forecasts or other meteorological information.

**METEO 495A Meteorology Communications Internship (3 per semester, maximum of 6)**

A student participates for at least 100 hours in an internship with an agency or company that focuses on communication of weather forecasts or other meteorological information. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to a 400-level meteorology course, students must have completed the required course on synoptic meteorology. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

Meteorology (METEO)

METEO 495C Meteorological Operations Internship (3 per semester/maximum of 6) Internship focusing on time-sensitive meteorological applications such as weather or climate forecasts that are produced.

METEO 495C Meteorological Operations Internship (3 per semester/maximum of 6)
A student participates for at least 100 hours in an internship in an operational setting that focuses on the creation of time-sensitive meteorological products such as weather or climate forecasts. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to a 400-level meteorology course, students must have completed the required course on synoptic meteorology. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

General Education: None
Diversity: None
Effective: Summer 2010
Prerequisite: METEO 411

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

**METEO 495D Meteorological International Internship (3 per semester/maximum of 6)** Meteorological internship in an international setting.

**METEO 495D Meteorological International Internship (3 per semester/maximum of 6)**

A student participates for at least 100 hours in an internship in an international setting that focuses on applying meteorological knowledge. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to 400-level meteorology coursework, students must have completed at least six credits of Meteorology courses. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010
Prerequisite: 6 credits of 400-level Meteorology coursework

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Meteorology (METEO)

METEO 495E Meteorological Off-Campus Research Internship (3 per semester/maximum of 6) Off-campus meteorological internship focusing on a research project.

METEO 495E Meteorological Off-Campus Research Internship (3 per semester/maximum of 6)

A student participates for at least 100 hours in an internship whose focus is a research project requiring applications of meteorological knowledge. This internship is normally completed after the junior year. To provide sufficient background for performing atmospheric research successfully, students must have completed at least nine credits of 400-level Meteorology courses. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student’s Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student’s internship supervisor.

Microbiology (MICRB)

MICRB 107 (GN) Elementary Microbiology Laboratory (1) Selected techniques used to observe, identify and count bacteria; effects of chemical and physical agents on microorganisms. The combination of MICRB 106 GN and 107 GN must be taken to receive General Education credit in biology.

MICRB 107 Elementary Microbiology Laboratory (1) (GN)
(BA) This course meets the Bachelor of Arts degree requirements.

Microbiology 107 is an introductory laboratory course designed for students who do not intend to pursue further study in the field. The course demonstrates the use and practice importance of microbes in everyday life. Instruction begins with the proper handling and visualization of microorganisms. Almost by definition, the vast majority of microorganisms are too small to be seen with the naked eye. Therefore, students must learn the correct use of the light microscope.

Instruction in the proper care and maintenance of the microscope is provided. Students prepare and stain specimens using a number of methods designed to characterize microorganisms. The importance of working safely in a laboratory setting is emphasized throughout the course.

Many skills are developed in this laboratory course. Aseptic (without contamination) technique is taught and is used to transfer organisms properly from one culture medium to another. A variety of media are used and the reasons for their use are explained. Students also learn how to calculate the number of bacteria in specimens such as water, soil or food.

The course demonstrates ways to control microbial growth by means of temperature, osmotic pressure, pH, exposure to ultraviolet light and disinfectants. Students learn the importance of controlling microbial growth on their person and how failure to do so can lead to the spread of disease, especially in hospital settings. Other experiments illustrate methods used to preserve dairy products and test water for contamination.

While students learn to isolate and identify organisms from their own body, other common bacteria found in or on the human body are also studied. A variety of diagnostic cultural and physiological tests are employed to identify organisms students have isolated. This simulates in a very real way the process physicians depend on for diagnosis of infectious diseases. A related experiment demonstrates how antibiotics that are likely to be effective in treating an infection are selected. Taken together, most of the experiments conducted in MICRB 107 are designed to encourage students to investigate the many important roles microorganisms play in the living world.

General Education: GN
Diversity: None
Bachelor of Arts: Natural Sciences
Effective: Spring 2002
Prerequisite: or concurrent:MICRB 106

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Microbiology (MICRB)

MICRB 106 (GN) Elementary Microbiology (3) Importance of microorganisms in health and disease, agriculture, and industry; descriptive course for students not planning advanced study in microbiology. The combination of MICRB 106 GN and 107 GN must be taken to receive General Education credit in biology.

MICRB 106 Elementary Microbiology (3) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Microbiology 106 is an introductory lecture course intended for students who do not plan to pursue further study in microbiology. It is particularly appropriate for students in allied health fields, agriculture, environmental engineering, and restaurant and institutional food management. The course can be used to meet natural science (GN) General Education requirements. To receive GN credit, however, MICRB 106 must be taken with its companion laboratory course, MICRB 107.

Students taking this course will come to understand and appreciate the unique nature of microorganisms and their importance to life on earth. Microbes were the first form of life to evolve, and even though different in structure from other forms of living things, many similarities can be found in terms of genetics, metabolism, and the roles they play in nature. Bacteria, viruses, and other forms of microscopic life will be examined in some detail, as will their biological activities both beneficial and harmful.

Most people think of microbes in their negative roles: disease, food spoilage, and bio-deterioration. Indeed, we spend a lot of time and resources controlling microbes in our environment and treating diseases they cause. But microbes are found naturally on and within the human body with beneficial effect. They are also important in the production of food, vitamins, drugs, and other useful products. They are used extensively in biotechnology. They have important ecological roles and are essential to the continued existence of life on earth.

MICRB 106 uses a lecture format supplemented with contemporary videos to highlight the current challenges and benefits that microbiology brings to our society and our collective and individual health. Also included in the course are active learning activities that involve critical thinking and investigation of internet resources.

Microbiology (MICRB)

MICRB 201 Introductory Microbiology (3) Elementary principles of microbial and viral structure, reproduction, genetics and physiology; relationship to food, water, soil, industrial and disease processes.

MICRB 201 Introductory Microbiology (3)

MICRB 201, Introductory Microbiology, is a survey course that touches on the full range of topics generally considered to fall within the scope of microbiology. After a short overview of the origins of microbiology and the ways in which forms of life too small to be seen with the naked eye can be studied, the course launches into the following basic topics:

1) structure and function of the bacterial cell as compared with plant and animal cells
2) care, feeding, and controlling the growth of bacteria
3) how bacteria acquire and use energy
4) how energy and nutrients are used to make cell components and carry out life processes
5) how bacteria organize, replicate and control the expression of genetic information
6) how viruses differ organizationally and reproductively from bacteria, and finally
7) how bacteria are classified and why various classification schemes are important

The remainder of the course is concerned with specific roles bacteria and viruses play in nature. Issues addressed include:

1) role of bacteria in the cycling of elements in the terrestrial environment
2) importance of bacteria in aquatic environments, including the safety of drinking water and treatment of waste water
3) the role of bacteria and viruses in human health and disease

Bacteria existed long before higher life forms, so animals, including humans, evolved means to protect themselves from harmful bacteria while forming relationships with bacteria that are beneficial. These harmful and beneficial relationships are intimately connected to immunology, a field that has long been included in the study of microbiology. The study of disease-causing microbes includes the topics of how these organisms are spread and how they can be controlled using anti-bacterial and anti-viral agents. Selected diseases are used to explain the various mechanisms by which microbes are able to cause illness.

Finally, the course also covers the role microorganisms play in the spoilage of foods and, more importantly, the myriad ways in which bacteria, yeast and fungi are used to manufacture such popular foods as breads, cheeses, wines, beers and many other fermented food and dairy products. At some point in the course, there is discussion of how microbes are used in the rapidly-expanding area of biotechnology. Bacteria have, by far, the greatest genetic diversity of all living things, so their potential for yielding products of benefit to agriculture and humankind is enormous. This topic also treats the controversial issues connected with biotechnology, including ethical, theoretical and practical issues that are or will eventually need to be addressed by society.

General Education: None

Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: CHEM 110

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Microbiology (MICRB)

MICRB 201H Introductory Microbiology (3) Elementary principles of microbial and viral structure, reproduction, genetics and physiology; relationship to food, water, soil, industrial and disease processes.

MICRB 201H Introductory Honors Microbiology (3)

MICRB 201H, Introductory Honors Microbiology, is a survey course that touches on the full range of topics generally considered to fall within the scope of microbiology. After a short overview of the origins of microbiology as a science and the ways in which forms of life too small to be seen with the naked eye can be studied, the course covers the following basic topics: 1) the tree of life and the position of microbes in the biological world, 2) structure and function of the bacterial cell as compared with plant and animal cells, 3) microbial nutrition and growth, 4) molecular biology and gene regulation in microbes, 5) microbial genetics, 6) an overview of microbial classification and diversity, and 7) the principles of how microbes interact with their environment.

Unlike the standard sections of MICRB 201, the honors course then moves on to an integrated description of microbial diversity and ecology in association with topics such as carbon metabolism, energy acquisition and utilization including photosynthesis, and the environmental impacts of microbial utilization of inorganic chemicals. This is followed by a section concerning eukaryotic or non-bacterial microbes, a section concerning the use of microbes in industry, and then a basic overview of viruses and how they work.

The last part of the course deals with microbial interactions with other organisms with an emphasis on their interactions with man. This starts with a discussion of how microbial growth can be controlled, and then the various kinds of relationships that can exist between microbes and other organisms are covered. This is followed by a section on immunology or the mechanisms animals possess to defend themselves against potentially harmful microbes. The final section concerning a broad range of microbially-caused diseases is preceded by a description of microbial analysis in the clinical or medical laboratory as well as a discussion of how disease-causing microbes are spread in animal populations.

MICRB 201H is taught so as to emphasize the impact of microbes on our everyday lives. One way this is accomplished is by class presentations made by small groups of students on topics of current interest in the community at large. Students also write a term paper that can involve any aspect of microbiology using an article from the popular press as their starting point. All students are also required to make a short in-class presentation in which they provide an overview of their term paper. While much of the instruction involves the standard lecture format, classroom discussion is encouraged at all times.

MICRB 411 Survey of Microbiology Literature (1 per semester) An introduction to readings and oral presentations in microbiology.

Survey of Microbiology Literature (1 per semester)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1994
Prerequisite: 8 credits in microbiology courses

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Microbiology (MICRB)

MICRB 413 Microbial Diversity (2) survey of microorganisms having special adaptive mechanisms for life in common and unique environments; topics include ecology, evolution, and bioremediation.

Microbial Diversity (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1997
Prerequisite: MICRB 201, MICRB 202

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Microbiology (MICRB)

MICRB 416 (BIOTC 416) Microbial Biotechnology (2) Fundamentals of applied biotechnology; the use of microorganisms in the synthesis of biologically-important and industrially-useful products.

Microbial Biotechnology (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2009
Prerequisite: MICRB 201, MICRB 202; B M B 442 or MICRB 442

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
**Microbiology (MICRB)**

**MICRB 415 General Virology: Bacterial and Animal Viruses (3)** The interaction of different types of viruses with bacterial and animal cells, including mechanisms of infection and viral synthesis.

**MICRB 415 General Virology: Bacterial and Animal Viruses (3)**

General Virology: Bacterial and Animal Viruses covers the interactions of different types of viruses with animal and bacterial cells, emphasizing molecular and genetic concepts of viral infection and viral replication. Students are expected to apply basic concepts of microbiology as well as molecular and cell biology to understanding selected viral life cycles, particularly at the molecular level. Lectures are augmented by in-class discussion and homework assignments. Typically, students are evaluated by two hourly exams and a final exam that assess their knowledge of virology and their ability to apply basic concepts of gene expression and cell biology to explaining viral life cycles. This course builds on the common requirements of MICRB 201 and B M B(MICRB) 251/252. The instruction expands into the cellular and molecular bases of viral life cycles with regular reference to and comparison with cellular and molecular biology of uninfected cells. The content of this course complements those on the basic mechanisms of gene expression (B M B 400) and prepares the student for understanding the molecular basis of viral pathogenesis covered in B M B/MICRB/V SC 435.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2000  
Prerequisite: B M B 251, B M B 252 or BIOL 110, BIOL 230W; MICRB 201

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Microbiology (MICRB)

MICRB 432 (B M B 432, VB SC 432) Advanced Immunology: Signaling in the Immune System (3) The study of signaling pathways that regulate the immune response.

MICRB (B M B/V SC) 432 Advanced Immunology: Signaling in the Immune System (3)

This course will use the immune system as a model in which to study how cells communicate in order to coordinate an immune response. We will focus on signaling mechanisms that regulate such immune responses as T cell activation, Th1/Th2 differentiation, macrophage activation and migration of immune cells to sites of inflammation. All lectures are based on recent reviews by key investigators in each field, as well as primary articles to present students with the most recent advances as well as techniques and approaches used. The goal of the course will be to convey a basic understanding of intracellular signaling mechanisms that will pertain to all areas of biology, an appreciation for current questions and future directions in the field, and an in depth understanding of the signals that govern immune responses. The material presented will build on the basic concepts learned in B M B 400 and MICRB 410, and will lay the foundation for more advanced courses at the graduate level, such as Molecular Immunology, Special Topics in Immunology, and Readings in Immunology.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: B M B 400, MICRB 410

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Microbiology (MICRB)

MICRB 421W Laboratory of General and Applied Microbiology (3) Laboratory exercises demonstrating fundamental techniques and principles of experimentation of general and applied microbiology.

Laboratory of General and Applied Microbiology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: MICRB 201, MICRB 202

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Microbiology (MICRB)

MICRB 422 Medical Microbiology Laboratory (2) Laboratory exercises demonstrating properties and classification of medically important microorganisms and techniques used in their identification.

Medical Microbiology Laboratory (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1993
Prerequisite: MICRB 202
Concurrent: MICRB 412

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Microbiology (MICRB)

MICRB 442 (B M B 442) Laboratory in Proteins, Nucleic Acids, and Molecular Cloning (3) Laboratory in enzyme purifications and assay techniques; nucleic acid isolation and characterization, including plasmid preparation.

MICRB (B M B) 442 Laboratory in Proteins, Nucleic Acids, and Molecular Cloning (3)

The DNA portion of B M B/MICRB 442 serves as an introduction to fundamental techniques of recombinant DNA technology and as a reinforcement of principles of Molecular Genetics from lecture courses. The central experiment entails all basic procedures necessary to clone a gene, i.e. to make a recombinant molecule comprised of DNA from two sources. Students use restriction enzymes to cut two distinct DNA molecules into smaller fragments. The fragments are mixed and treated with the enzyme Ligase, which randomly combines small fragments into large recombinant DNA molecules in new combinations different in composition from either original molecule. The recombinant molecules, which include genes that confer drug resistance, are transformed into E. coli cells that initially have no drug resistance. Cells that acquire recombinant DNA molecules are identified by selective plating on growth media containing drugs. From the transformed cells, recombinant DNA is isolated and analyzed by agarose gel electrophoresis, completing the array of basic gene cloning techniques. In addition to this central, multi-session experiment, students also do PCR and an investigation of the lac operon, a classic molecular genetic model system.

The proteins portion of B M B/MICRB 442 is designed to introduce students to protein biochemistry topics and laboratory techniques typically encountered in academic and commercial settings. Students will learn about buffers, spectroscopy, enzyme purification and characterization methods. Specifically, the experiments include preparation of buffers and performing kinetic studies to determine Km and Vmax values. Separation of a mixture of phycobiliproteins using ion-exchange column chromatography is a major experiment that the students will perform to learn protein purification methods. In this experiment they will learn how to pour a column, apply sample, elute it with salt gradient and collect fractions using automated fraction collector. Ammonium sulfate precipitation and dialysis will be part of protein purification procedures. Characterization of the separated proteins will be performed by determining the absorption spectra with a Genesys-5 spectrophotometer and by determining the molecular weights of the subunits of the phycobiliproteins by SDS-polyacrylamide gel electrophoresis.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2009
Prerequisite: B M B 251, BIOL 230W orMICRB 201;CHEM 202 orCHEM 210 . Prerequisite or concurrent:B M B 211 orB M B 401

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
MICROBIOLOGY (MICRB)

MICRB 435 (B M B 435, VB SC 435) Viral Pathogenesis (2) A study of the molecular, immunological and pathological aspects of viral diseases as well as laboratory methods of diagnosis.

MICRB (B M B/V SC) 435 Viral Pathogenesis (2)

In Viral Pathogenesis, a multifaceted approach that includes lectures, in-class discussion, and outside assignments is used to introduce students to molecular mechanisms of viral pathogenesis. Emphasis is placed on human viruses. In some instances, traditional animal virus model systems are also discussed to address important concepts in detail. The course is divided into three parts: (1) general concepts in virology (20%); (2) general concepts in viral pathogenesis (40%); and (3) specific examples of viral pathogenesis (40%). Students are typically evaluated on in-class participation, outside assignments, quizzes and exams. Exams emphasize students’ knowledge of concepts more than specific, factual information and are comprised of a combination of multiple-choice, short-answer and/or essay questions. To fully understand concepts/mechanisms of viral pathogenesis, a working knowledge of viruses, molecular biology, cell biology and immunology is beneficial. Hence, MICRB 201 is a prerequisite for this course as is the combination of either BIOL 110/230 or B M B (MICRB) 251/252. While MICRB 415 is not a prerequisite for the course, some material covered in MICRB 415 is addressed, albeit rapidly, during the initial lectures.

Microbiology (MICRB)

MICRB 460 (B M B 460) Cell Growth and Differentiation (3) Mechanisms and regulation of protein trafficking, organelle biosynthesis, cell development, signaling and cell cycle control. Emphasizes experimental design and analysis.

MICRB (B M B) 460 Cell Growth and Differentiation (3)

Cell Growth and Differentiation is a unique course that uses the primary literature to teach significant content in advanced cell biology while simultaneously exposing students to the scientific craft of experimental design and analysis. In addition to exploring historical and current cell biology research articles, students will develop two vital scientific skills; critical thinking as applied to experimental data and creative thinking about solving unresolved questions in cell biology.

There is no course textbook. As an alternative, we read from journals to explore questions about cell biology and how cell biologists decipher cell functions. Instead of a general survey of cell biology, we delve into specific issues, often looking at "classic" papers describing how a specific phenomenon was first investigated to place current questions in context before progressing to the latest publications exploring how innovative techniques have been applied to deciphering cell function.

The course is divided into four units, each of which emphasizes content in a different area. Actual content may vary from year to year as the course is updated to reflect progress in a field of research. We have previously explored the general areas of cell membrane dynamics, intracellular protein trafficking, cell cycle regulation, cell signaling pathways and cancer cell biology. Finally, the course ends with a unit on stem cells and therapeutic cloning technology. A portion of the final unit is also devoted to discussing the ethical implications of stem cell research with an emphasis on how to make personal decisions about how our society should approach these issues.

Reading guides are provided for each assignment to help students find and understand important points in reading assignments. Class periods are devoted to explanations and instructor-led discussions about the readings with an emphasis on understanding the questions, the methods used to approach the questions, the experimental results and the interpretations of the results. Furthermore, periodic class periods are dedicated to experimental approach exercises where students work in groups to practice posing new questions as suggested by our readings and proposing experiments to answer these questions. These skills are vital part of what cell biologists do daily, and these exercises provide practice in thinking like a scientist. Students have previously reported that by taking this course they acquired the ability to read and understand the primary literature and have gained an in-depth understanding about how to use various experimental techniques.

Mineral Processing (MN PR)

MN PR 426 (MATSE 426) Aqueous Processing (3) A study of the chemical and engineering principles pertinent to metal processing in aqueous systems: hydrometallurgical extraction, plating, materials preparation.

MN PR (MATSE) 426 Aqueous Processing (3)

This 3-credit course deals with the chemical and engineering principles underlying the aqueous processing of metals: metal extraction from primary and secondary sources, electroplating, and metal finishing, powder synthesis, energy storage and conversion, and treatment of recycling of metal-containing toxic wastes.

1. Physico-Chemical Principles - Thermodynamic, chemical kinetic and transport factors which control hydrochemical processes (leaching; precipitation; adsorption; solvent extraction; ion exchange; electrowinning, electrorefining and electroplating; membrane processes; energy storage and conversion); graphical representation of homogeneous and solid/solution equilibria; chemical reagents.

2. Engineering Principles - Reactor design and staged operations; ideal batch, continuous stirred-tank and plug-flow reactors; fluidized bed reactors; electrochemical reactors; multistage separation processes (solid-liquid, liquid-liquid, and gas-liquid systems).

3. Process Synthesis - Design of metal separation (extraction, refining, waste treatment) materials synthesis, metal finishing, and energy storage/conversion processes and system-integration of unit operations, industrial practice. Emphasis on closing circuits to minimize or eliminate waste effluents.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009
Prerequisite: EME 301 or MATSE 401

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mineral Processing (MN PR)

**MN PR 496** Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Independent Studies (1-18)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1999

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 030 Introduction to Mining Engineering (3) Examination, development, and exploitation of mineral deposits; mining methods; unit operations; mining equipment; fundamentals of explosives.

Introduction to Mining Engineering (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 023  Mineral Land and Mine Surveying (2) Surveying theory and practice applied to mineral lands and mines, traversing, leveling, mapping, underground surveying, microcomputer drafting and graphics.

Mineral Land and Mine Surveying (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006
Prerequisite: ED&G 100, EG T 101 or E 010; 1/2 unit of secondary school trigonometry

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 404 Mine Materials Handling Systems (2) Analysis and design of materials-handling systems in mining, such as belt conveyors, locomotives, and hoisting.

Mine Materials Handling Systems (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1999
Prerequisite: MNG 402

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 401 Introduction to Mining Operations (1) An introduction to underground and surface mining methods; selection of extraction equipment; relevant auxiliary operations. Not intended for Mining Engineering majors.

Introduction to Mining Operations (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: E MCH 211

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

**MNG 410** Underground Coal Extraction (2) Underground coal-mine design; extraction techniques; description of the various auxiliary operations as they relate to the mining methods.

**Underground Coal Extraction (2)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1999  
Prerequisite: MNG 404, MNG 422, MNG 431  

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 412 Mineral Property Evaluation (3) Ore reserve estimation using statistics and geostatistics, mine cost estimation, engineering economy concepts applied to mineral deposits.

Mineral Property Evaluation (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1999
Prerequisite: MNG 030

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 411 Mine Systems Engineering (2) Applied operations research and systems methods for decision making in mine operations; time and systems studies to improve productivity.

Mine Systems Engineering (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1999
Prerequisite: MNG 404

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 422 Mine Ventilation and Air Conditioning (3) Quality, quantity, and temperature-humidity control of the mine atmosphere; general mine environmental control.

Mine Ventilation and Air Conditioning (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: C E 360, MNG 030 . Prerequisite or concurrent: M E 300

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 441 Surface Mining Systems and Design (3) Design of surface mining for noncoal and coal minerals; emphasis on quarry and strip mining planning parameters: unit operations, systems, haulroads, draglines, spoil stability, reclamation, legal requirements, and health and safety.

Surface Mining Systems and Design (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1999
Prerequisite: MN PR 301, MNG 030

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 431 Rock Mechanics (3) Ground stresses, laboratory rock properties, laboratory and field instrumentation, rock
mass characteristics, subsidence, slope stability, design of mine workings.

MNG 431 Rock Mechanics (3)
This course was designed to introduce the student to the subject of rock mechanics. It includes an introduction to
experimental stress analysis, the physical properties of rock, underground stresses, laboratory and field instrumentation,
model studies, rock mass properties, and the discussion of a number of rock mechanics field applications associated with
mining, petroleum and civil engineering, and geoscience. A technical paper written on some field related to the laboratory
and/or theoretical aspect of rock mechanics is required. A series of eight laboratory sessions are included. These give the
students hands-on experience relative to the concepts and instrumentation problems discussed in lectures.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2003
Prerequisite: E MCH 210

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details
check the specific course syllabus.
Mining (MNG)

MNG 460 Mine Maintenance Engineering (3) Mine maintenance system design; maintenance planning and management; safety and cost analysis of maintenance programs.

Mine Maintenance Engineering (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1999

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
**Mining (MNG)**

**MNG 451W** Mining Engineering Project (1-5) Independent and integrative design and report of specific mine evaluation, layout, equipment selection, environmental control, permitting, and financial analysis.

**Mining Engineering Project (1-5)**

- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Spring 1999
- Prerequisite: seventh-semester standing in mining engineering plus six months of mining work experience

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

MNG 497 Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining (MNG)

**MNG 470 Mining and Geologic Structures (3)** Study of geologic structures and their impacts on mining operations.

**MNG 470 Mining and Geologic Structures (3)**

The objective of this course is to introduce students to geologic structures that can impact mining operations and how to represent them for mine planning. A fundamental understanding of geologic processes that lead to various structures is covered.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2009
Prerequisite: GEOSC 001, GEOSC 201

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 030 Introduction to Mining Technology (2) Examination, development, exploitation of mineral deposits; history of mining, common mining methods, operation methods, equipment types, explosives fundamentals.

MNG T 030 Introduction to Mining Technology (2)

"Introduction to Mining Technology" is a second semester course to introduce students to the subject of mining engineering so they understand the bituminous coal mining industry and the challenges that it faces – economic, environmental, political, societal, ethical, as well as technological. Emphasis is placed on encouraging students to learn mining engineering by observing and doing: conducting case studies, solving problems, and designing basic mining systems. Principles of beneficiation and processing will be injected at a continuous pace, as with the disciplines of mining engineering: rock mechanics, ventilation, production, auxiliary operations planning, and management. This technical foundation will serve as a prerequisite for MNGT 203, MNGT 209 and MNGT 205.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

**MNG T 100 Mining Technology Orientation (1)** Introduction to the underground mining industry including history, terminology, current mining equipment and methods, regulations, organization.

**MNG T 100 Mining Technology Orientation (1)**

"Mining Technology Orientation" is a first semester introduction to the underground mining industry from past to present. The student will be introduced to basic mining systems and their evolution over the last century. Mining terminology and its unique application will be discussed. The impact of mining regulations will be reviewed. Possible career paths and the organization of mining companies will be included in this orientation. Visits producing coal mines will be required.

Students who successfully complete this course will be able to:

a. Discuss changes in mining methods over the years.
b. Demonstrate knowledge of terminology used in mining industry.
c. Explain how state and federal regulations impact mine operation.
d. List several career options in mining, and the skills required by each.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 110 Mining Administration and Law (3) Introduction to mine organization and management structure, and government regulations regarding permitting, reporting and recordkeeping.

MNG T 110 Mining Administration and Law (3)

"Mining Administration and Law" is a second semester course that provides a framework for the student to understand the mine organization and management structure and organization. It will also introduce the student to the state and federal regulations regarding permitting, and reporting, and record keeping. This course provides a background for and is a prerequisite for MNG T 216. Students who successfully complete this course will be able to:

a. Explain the basic organization of a mining operation from the general superintendent to the laborer.
b. Know and understand the basic concepts of a safety program.
c. Use and apply accident analysis statistics to further improve a safety program.
d. Discuss the development of rules and regulations with focus on those that impact the first line supervisor.
e. Understand the process for promulgating new rules and regulations.
f. Demonstrate basic management techniques that a first line supervisor will use in performance of his/her job.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 204 Mine Plant Technology (3) Electrical, transportation, ventilation, and other systems required to operate underground coal mine, and to transport and process coal.

Mine Plant Technology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: PHYS 150

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 202 Mining Ventilation (3) Introduction to mine ventilation systems at mine face, mine gases and use of gas detection equipment, state and federal regulations.

MNG T 202 Mining Ventilation (3)

"Mining Ventilation" is an introduction course in mine ventilation systems, equipment and mine gases for students in the productions emphasis only. The course will emphasize ventilation systems used in mining sections at the mine faces. Gas detection devices will be demonstrated and students will become proficient in their uses. The requirements of both state and federal regulations will be discussed and reviewed. General complete mine ventilation will be discussed. CHEM 011 provides a background in combustion and gas reactions, while PHYS 150 provides a background on the static and dynamic forces of moving air. This course requires MNG T 030 as a prerequisite to ensure that students have a basic understanding of background mining methods and equipment. Students who successfully complete this course will be able to:

a. Explain role of ventilation in the mining environment.
b. Explain and understand section ventilation and long-wall ventilation systems.
c. Demonstrate proper use of instruments to measure air pressure, flow rate and air quality, and interpret measured results.
d. Describe and interpret federal and state regulations related to mine ventilation.
e. Understand ventilation mapping and explain how flow is affected by various mining methods.
f. Explain ventilation flow through a mine complex.
g. Know all of the mine gases.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: CHEM 101, PHYS 150, MNG T 030

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 203 Introduction to Strata Control (1) Review basic concepts of geology and impact of geologic features on mining conditions; introduce strata control theory and methods. (Nominal first 5 weeks of spring semester)

MNG T 203 Introduction to Strata Control (1)
"Introduction to Strata Control" will be offered in the first five weeks of the third semester to provide students in both options with a basic background in the geological forces and structure in the roof and walls of a mine environment. It requires MNG T 030 as a prerequisite so students have a basic understanding of mine operation, and serves as a prerequisite to MNG T 213, where the students in the production emphasis learn how to control these strata. Students who successfully complete this course will be able to:

a. Explain where and how coal deposits are formed.
b. Explain structural geology features related to mining and their causes.
c. Explain the impact of coal depositional and structural geology features on mining conditions.
d. Review basic strata control theories and applications.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: MNG T 030

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

**MNG T 205W** Mining Systems Technology (3) Comparison of mining methods with focus on preventative maintenance, coal transport, and estimating production and manpower needs.

**MNG T 205W Mining Systems Technology (3)**
Review of the impact of various methods of room & pillar and longwall mining on the mining operation, the systems required to transport coal from the mine, and the needs for preventative maintenance for each. Quantitative methods for evaluating the production capabilities and manpower requirements of each will also be explored.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2006
Prerequisite: MNG T 030

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 207 Electric Mine Machine Circuits (3) Application of electric power and safety issues related to the installation and maintenance of circuits and various power control devices.

MNG T 207 Electric Mine Machine Circuits (3)

"Electric Mine Machine Circuits" is a fourth semester course for students in the maintenance emphasis only and provides a basic foundation in the application of electric power and safety issues related to the installation and maintenance of circuits and various power control devices from the transformer to the mine face. MNG T 204 is a prerequisite to ensure students have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to:

a. Explain the application of AC and DC power in mining, their effect on motors, and the advantages and disadvantages of each.

b. Use electrical equations to determine AC and DC power requirements, voltage, amperage, and power factor.

c. Understand and use of electrical cables and battery power in the mining industry, the maintenance requirements of each, and the advantages and disadvantages of each.

d. Read electrical wiring schematics and identify symbols. Be able to identify differences between schematic and actual wiring.

e. Determine the maintenance and record keeping required for electrical face equipment to maintain permissible condition and regulatory compliance.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: MNG T 204

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 208 Mine Power Distribution (3) Topics of high voltage circuits, underground transmission, power stations, power conversion, safety regulations and power devices.

MNG T 208 Mine Power Distribution (3)

"Mine Power Distribution" is a fourth semester course for students in the maintenance emphasis only and provides a background into how to distribute and adequately protect the high voltage electricity supply throughout the mining environment to serve the underground transformer for distribution to the variety of electrical systems used. MNG T 204 is a prerequisite to ensure students have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to:

a. Explain state and federal safety requirements in relation to high-voltage mine power systems.
b. Calculate total power requirements for given section of connected equipment, including recommended sectionalizing equipment and overload settings.
c. Demonstrate knowledge of typical mine power distribution systems, identify the key components and how they function.
d. Examine the requirements for splicing and terminating high-voltage mine power cables, and effects of improperly made repairs.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: MNG T 204

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 210 Mine Machine Dynamics (3) Operation and interaction of mechanized equipment used at the coal face including common electrical, hydraulic and mechanical systems.

Mine Machine Dynamics (3)
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: PHYS 150

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 209 Mine Machinery Control Methods (2) Basic principles and applications of solid state, variable frequency, PLC, electro hydraulic and networked controls in mine machinery.

MNG T 209 Mine Machinery Control Methods (2)

"Mine Machinery Control Methods" is a third semester course for students in the Maintenance emphasis and provides information on the current methods used to operate and control the various driven functions of speed in rotating mining equipment. The interface between motors and computer controls, including the safety and automated interlocks will be covered. MNG T 030 is a required prerequisite to provide a technical functional understanding of the operation of the equipment being controlled. MATH 082 and PHYS 150 are required prerequisites to ensure that the students can perform the required performance calculations. Students who successfully complete this course will be able to:

a. Investigate various types of networked controls, their function and capability, and list the advantages and disadvantages of each.
b. Explain the applicable state and federal regulations related to low, medium, and high voltage systems.
c. Troubleshoot various types of control circuits to identify faulty wiring, components, or software.
d. Demonstrate ability to install software, set operating parameters, default values, and recommend adjustments to optimize system reliability.
e. Investigate the ramification of automated systems in the underground environment, both positive and negative.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: PHYS 150, MNG T 030, MATH 082

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 213 Strata Control Methods (3) Introduce pillar-design parameters, roof control planning, roof bolting, standing supports, rib stability, floor condition problems, and longwall strata control.

MNG T 213 Strata Control Methods (3)
Strata Control Methods is designed to introduce pillar-design parameters, roof control planning, roof bolting, standing supports, rib stability, floor condition problems, and longwall strata control in the Mining Environment.

Pillar-design parameters, take into account the structural geology features related to mining. The impact of Geologic Data being extremely useful in assessing mining conditions and aiding in indicating necessary control measures to be taken with increased width, destructive stresses resulting in failure may be produced in the mine roof, bottom, and pillars causing serious limitations on pillar width. The effects of pillar design by incorporating Pillar Collapse through Failure Characteristics, Failure Mechanisms, and Failure Prevention, and the impact that may be contributed to Coal Bumps and Gas Outbursts. A review of the basic strata control theories and applications which incorporates Environmental Impacts of both Subsidence and Reclamation.

Roof Control Planning reviews the strata control theories and applications by introducing the inter-related system of the mines roof, ribs and floor. The introduction of roof control theory and fundamentals with emphasis placed on ground control being a three part process of proper sizing of openings, proper sizing of pillars and selection of proper artificial supports. Also, within the element of roof control planning, MSHA requirements are introduced and incorporated.

Roof Bolting and Standing Supports are brought to the forefront while maintaining an understanding of the three mechanisms of roof bolting which are: Beam Building, Suspension and Keying. Depending on conditions and applications, bolting may range from resin-anchored combination bolts, tensioned rebar, mechanically-anchored resin-assisted systems, cable bolts, and other specialty supplemental supports. The applications of standing supports are discussed in roof support planning as they are used either as remedial measures or throughout gate roads where bolting systems must be coupled with roof-to-floor supports.

Rib Stability and Floor Condition Problems are addressed through rib stabilization methods and proper support installation along with floor condition problems, prevention and control. With the sources of Roof/Rib Hazards in Underground coal mines being associated with the two broad categories being Natural and Mining Related, Geologic hazards and high stresses associated with deep cover are addressed allowing for appropriate action to be identified and proper supports to be utilized.

Longwall Strata Control theories and methods are discussed as they require special precautions to be taken in response to the elevated stress levels encountered. This is done through properly designed gate entry chain pillars to achieve roof/floor stability and mitigate bumps. Also, included are shields as roof support mechanisms and guarding installation on longwall equipment.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: GEOSC 020

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
MNG T 211 Practicum in Mining Technology (3) Field and shop techniques in procedures of electrical, mechanical and ventilation phases of mine maintenance

MNG T 211 Practicum in Mining Technology (3)

"Practicum in Mining Technology" is a fourth semester course that provides students with the practical application of modern equipment and techniques used during the installation, relocation, and repair of complex mining equipment and systems as they are applied in the underground environment. MNG T 204 is a prerequisite to ensure students have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to:

a. Plan the installation of all equipment required to successfully install a complete continuous miner section.
b. Plan the successful relocation of a modern long-wall mining section from a completed panel to a new panel.
c. Demonstrate an ability to conduct or supervise the safe repair of low, medium, and high-voltage equipment in compliance with all regulatory requirements.
d. Explain and demonstrate how to safely troubleshoot and/or repair high-pressure mine hydraulic systems.
e. Discuss and demonstrate the steps required to conduct ox-acetylene and electric arc-welding repair of equipment in compliance with regulatory requirements.
f. Practice the application and safe operation of manual lifting aides and devices used to facilitate the repair of large mining components.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: MNG T 204

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 214 Mining Management I (3) Leadership skill development for supervisors, managing change, tools to plan, organize, control, communicate and monitor effectively.

MNG T 214 Mining Management I (3)

"Mine Management I" will provide students with the introductory skills for individual, group and one-on-one leadership skills to keep up with evolving management roles and responsibilities. This course will explore how supervisors can maintain technical expertise while demonstrating effective leadership. This process includes the tools supervisors use to plan, organize, control communicate and monitor effectively. This course serves as a prerequisite to MNG T 215. Students who successfully complete this course will be able to:

a. Succeed in a rapidly changing environment
b. Plan, organize, communicate and monitor
c. Apply the most appropriate supervisory style to individuals and situations
d. Apply appropriate motivational techniques
e. Use delegation for effective employee performance and development, time management and motivation
f. Create an action plan
g. Develop interpersonal skills that help communicate, listen, and handle conflicts
h. Analyze their own behavior style and recognize strengths and weaknesses
i. Given a labor situation, describe a plan of action toward resolution
j. Identify the characteristics of A & B personalities and explain how they might be managed differently
k. Explain a given organizational chart and the focus and function at different management levels
l. Given an emergency situation at a mining operation, recommend a hypothetical course of action to avoid loss of life and personal injury, and minimize impact on production capability and reserves

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 216 Mine Regulations and Laws (3) State and federal mining regulations and application to underground coal mines. Relationship with company policies and consequences of non-compliance.

MNG T 216 "Mine Regulations and Laws" (3)
"Mine Regulations and Laws" is a fourth semester course that builds on the knowledge gained in the prerequisite, MNG T 110, by providing more advanced study into state and federal regulations and company policies regarding equipment and electrical inspection, personnel safety and egress, and measurement of related environmental conditions within the mine. This class includes discussions on the interaction of state and federal regulation and the conflicts created by applying each. The consequences of non-compliance are also discussed. Students who successfully complete this course will be able to:

a. This course is designed to familiarize the student with the applicable underground coal mining regulations and how they are interpreted and enforced.
b. For a specified situation, find and interpret appropriate sections of PA Bituminous Coal Mining Act.
c. Develop and evaluate alternative solutions to a proposed regulatory issue.
d. Conduct a discussion with a mining inspector, in regards to a violation and potential monetary penalty.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: MNG T 110

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Mining Technology (MNG T)

MNG T 215 Mining Management II (3) Financial management, effective meeting management, critical thinking, project management and cost and risk control.

MNG T 215 Mining Management II (3)

"Mine Management II" is a follow-up to Mine Management I (Mining Technology 214) for students in production emphasis only. The primary goals of the course are to further explore and develop management skills to be an effective leader in an ever-changing industry. This process includes financial management, effective meeting management, critical thinking, project management and cost and risk control. Students who successfully complete this course will be able to:

a. Get a firm grasp of the financial side of the job.
b. Understand the business dynamics of dollars and cents.
c. Set and meet goals for your projects.
d. Understand the principles of process management.
e. Apply process management to process issues and customer satisfaction.
f. Reduce the need for crisis supplies.
g. Identify the actions/approaches you can take to avoid or mitigate risk.
h. Build the trust and rapport necessary for effective coaching.
i. Effectively conduct meetings.
j. Interpret typical income and expense balance sheets.
k. Produce preliminary cost estimate (+/- 10%) for given application.
l. Demonstrate appropriate oral and written communication skills.
m. Prepare hypothetical request for capital improvements required to maintain or improve productivity, complete with financial justification.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: MNG T 214

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 005 (GA) An Introduction to Western Music (3) A general survey of art music in western society, highlighting important composers and stylistic developments.

MUSIC 005 An Introduction to Western Music (3) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

MUSIC 005 is a course on listening, with emphasis on the relationship between musical style and historical context. The course begins with an introduction to the elements of music. The goal of this section is to give all students, whether they have previous experience as performers, the basic skills necessary to approach any musical work as intelligent listeners. This activity takes four weeks. The remaining portion of the course is spent surveying the history of Western art music, with that history treated as a series of case studies: particular works are considered stylistically with regard to the historical circumstances of their production and consumption. From this activity students gain experience considering artworks in discipline-specific terms, even as they learn to relate particular artistic features to nonmusical factors of culture and society. Three methods of evaluation are used. Four examinations test the students' mastery of the course material. Four concert reports give students the opportunity to apply that knowledge to the act of listening in an authentic performance setting. An analytical paper presents a more detailed challenge, asking students to evaluate a relatively complicated work (such as a Mozart symphony), which they come to know intimately through repeated listening, using the basic technical tools of a music theorist. This requirement also includes a historical-research component. The course requires a technology classroom (typically it is taught in the Forum). It is offered fall and spring semesters, with an enrollment of 300 each semester.

General Education: GA
Diversity: None
Bachelor of Arts: Arts
Effective: Spring 2004

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

**MUSIC 004 (GA) Film Music (3)** An introductory examination of music's role in Hollywood narrative film from the classic era (1930s and 1940s) to the present.

**MUSIC 004 Film Music (3)**

The course examines the role of music in narrative film, the premier art form of the twentieth century. The popularity, significance, and value of film art would not be what it is today if music had not become an integral--indeed, indispensable--part of motion pictures from the outset.

Preliminary objectives will include basic musical information (the fundamental elements of music; the broad stylistic eras of western music and their associated characteristics; the culturally encoded language of tonal music and associated musical meaning) and the main techniques of narrative film. The main objectives of the course are: to identify and recognize the principles of non-diegetic music in narrative film; to identify and recognize the purpose and functions of music in narrative film; to recognize some of the historic eras/genres/trends in Hollywood film making; to identify and recognize selected films, directors and composers; to analyze and articulate the role of music in a given scene and in a given film; and to recognize underlying assumptions and values of the culture conveyed through the diegesis.

These objectives will be met by addressing such questions as: What are the underlying principles of music in film? What are the functions of music/sound within a particular scene and how does it achieve those functions? What do we see of what we hear, and what do we hear of what we see--and why? What secrets does music tell? To what extent does music influence--even control--our interpretation of a film? More broadly, to what extent do films reflect our culture, past and present--our interests, our values?

Evaluation methods will include quizzes, exams, discussion boards, and a final paper. The course will be available for GA credit. It will not satisfy any requirements for the major or minor in music. The films and film excerpts will be made available to the students online.

Music (MUSIC)

MUSIC 008 (GA) Rudiments of Music (3) Introduction to the elements of music: notation, scales, meter, rhythm, intervals; basic chord structure.

MUSIC 008 Rudiments of Music (3) (GA)

This course meets the Bachelor of Arts degree requirements.

Learning the rudiments of music can be compared to the learning of a language. Students must learn to hear melodic, harmonic, and rhythmic patterns (audiation) before they sing, play or write in notation. In this introductory class, students are introduced to melodic, harmonic and rhythmic patterns by imitating the instructor who establishes these patterns at the piano, or by singing or as in the case of rhythm by striking a drum head. Eventually students will take turns “tossing” these patterns to teach other. Basic skills of improvisation can also be taught at this level of audiation by having students expand upon the basic patterns.

As a result of these creative and aesthetic experiences, students will be able to translate the audiation of patterns into musical notation - moving from the smallest unit of a rhythmic motive towards the creation of a coherent rhythmic phrase. Intervals are then combined vertically to form harmonies. At the next stage of learning, students will learn to identify and to write that which they are hearing in dictation.

This course in "musical literacy" enables students:
(1) to deepen their appreciation of music
(2) to begin studying a musical instrument and
(3) to enter the rigorous study of music theory required of music majors

MUSIC 007 (GA;US) Evolution of Jazz (3) Study of the origins and development of jazz as an art form.

MUSIC 007 Evolution of Jazz (3) (GA;US)

(BA) This course meets the Bachelor of Arts degree requirements.

Evolution of Jazz is a course designed to examine the historical and sociological of the American art form - jazz. This general education course is for non-majors. The material covered in this course begins with the precursors to jazz emphasizing the African musical traditions and white American (initially European) influences that have shaped jazz as an American art form. This is followed by period studies of the various jazz styles: New Orleans Dixie, Chicago Style Dixieland, Swing, Be-Bop, Cool, Hard Bop, Free Jazz, Fusion Jazz, Neo Bop, Latin Jazz, and New Age. The various jazz styles are examined from musical, sociological and economical perspectives. The major innovators and performers are identified and studied. As new styles are presented, a careful comparison to the previous style is done to help with classification. The primary objectives of the course are to create a greater appreciation for jazz music by providing knowledge about the intercultural development of jazz in America, by developing critical listening skills, and exposing students to the music representing various eras and performers of this music. A major component of the course is listening. Early in the course listening skills are taught. Students learn how to recognize certain instruments, hear the various sections within a group, and identify forms. Several written reviews of recorded and live jazz performances are required. Listening is also a part of each examination. This course is offered each fall, spring, and summer (one section each session) with an average enrollment of 40 each session.

MUSIC 040S First-Year Seminar in Music Education (1)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is offered to music majors during their first semester who are intending to apply to the Teacher Certification Degree Program in Music Education. It provides prospective music teachers with an opportunity to:

- learn about aspects of and opportunities available at the University in general.
- learn about aspects of and opportunities available specifically at the PSU School of Music.
- learn about the PSU music education curriculum and program.
- gain a general understanding of the music teaching profession.
- begin and develop a professional relationship with his/her advisor.

Music (MUSIC)

MUSIC 009 (GA;IL) Introduction to World Musics (3) An overview of the music of India, China, Japan, Indonesia, Africa, and the Middle East.

MUSIC 009 Introduction to World Musics (3) (GA;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

MUSIC 009 is a course that explores world cultures through their music. The course begins with an overview of ways to examine world music as a cultural phenomenon. The goal of this section is to help students move beyond their preconceived understanding of music in order to open their minds and ears to a wide variety of music through a selection of case studies, including, but not limited to, the music of the Celtic nations, the African continent, West Asia (the Middle East), India, Indonesia, Japan, and the Native American culture groups. The music of these cultures is explored both as a product and reflection of culture and as an aesthetic art form. Through this approach students not only develop a basic fluency in the characteristics of selected world musics, but also gain a broader understanding of the general classifications and geographical divisions of world music and the ways in which music relates to and is a part of all world cultures. Two primary methods of evaluation are used. Four examinations test the students' understanding of the material. Two assigned reaction/research papers provide students with the opportunity to explore particular types of music in greater depth, examining both the music itself and the social context in which it is found. These papers require students a) to think actively about contemporary musical developments around the world, including how they are affected by current socio-political events and cultural trends; and b) to utilize resources available in the university library as a way of exploring these developments. World musics are best understood when students engage in the music and in discussions of the music and culture; thus there is also a class participation/discussion component for the purposes of evaluation. The course requires a technology classroom equipped with a sound system, television/VCR, and piano.

Music (MUSIC)

MUSIC 051 (GA) Intermediate Class Piano: Non-Music Major (1) Instruction in harmonizing melodies, accompanying techniques, improvisation, and repertoire.

MUSIC 051 Intermediate Class Piano: Non-Music Major (1)

(GA)

This course meets the Bachelor of Arts degree requirements.

MUSIC 051 is course designed to provide the intermediate non-music major student with strategies for developing some of the advanced skills required for playing the piano. Some knowledge of music or piano is assumed and MUSIC 050 or a placement audition is a prerequisite for this course. The course emphasizes strategies for learning to read and interpret musical notation from two clefs and musically realize the notation in real time with a healthy physical approach to the keyboard. Practice of these strategies outside the class is expected and checked. Objectives include learning to accurately sight-play a multiple voice musical texture with many extensions and shifts beyond a five-finger position. Special facilities required to teach the course include a 17-keyboard midi piano lab with visual displays for teacher demonstrations. The course is offered every semester.

MUSIC 054 (GA) Beginning Class Guitar: Non-Music Major (1) Class instruction in guitar for non-music majors.

MUSIC 054 Beginning Class Guitar: Non-Music Major (1) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides opportunity to explore the structure of various styles of folk music while developing basic skills for playing guitar and reading guitar tablature. Meter, tonality, harmonic progressions, texture, and form as well as stylistic features of various strumming techniques comprise the core knowledge that is developed through the process of playing guitar. The course assumes no previous formal study of music. Assessments are performance-based with students demonstrating knowledge and skill acquired through individual "playing tests" scheduled throughout the semester.

Music (MUSIC)

MUSIC 053 (GA) Class Voice Practicum (1) Voice study in group and individual formats, supervised by in-class lessons and discussions, enhanced by additional individual instruction with pedagogy students.

MUSIC 053 Class Voice Practicum (1) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

MUSIC 053 is a voice class experience that affords the pupil instruction in a class setting and in individual lessons. The weekly class meetings feature either demonstration lessons with his or her teacher (from the voice pedagogy curriculum). These lessons give the instructor the opportunity to monitor the progress of the pupils, supervise and evaluate the teaching of the pedagogy students, and make suggestions for further growth. Pupils and pedagogy students also have the opportunity to learn by observing the demonstration lessons of others in the class. Lesson evaluation forms are completed and turned in at the end of each meeting. Class concerts typically occur at mid-term and at the end of the semester. These performances give the pupils the opportunity to display their vocal and musical progress. The individual lessons that pupils receive out-of-class give them an occasion for concentrated work in a more relaxed atmosphere. It may be of interest that this is the only course offering individual voice instruction in the School of Music that does not carry an additional applied music fee. In addition to the vocal and musical advancement for pupils in MUSIC 053, this course also serves as a progressive training ground in teaching for advanced voice students. They gain important teaching experience in a closely supervised forum.

Music (MUSIC)

MUSIC 086 (GA) Percussion Ensemble (1 per semester/maximum of 8) Study and performance of percussion chamber music in various instrumental combinations, focusing on the classical and contemporary repertoire.

MUSIC 086 Percussion Ensemble (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

Percussion Ensemble involves the rehearsal and performance of works for various combinations of percussion instruments in a chamber music setting. It also involves the group study of the various percussion instruments and techniques as described by or demonstrated by the conductor of the ensemble (percussion faculty member). The objectives of the course are to teach the art of ensemble performing (i.e., performing music well in a collaborative sense rather than just individually), to augment the understanding of the role of percussion within the discipline of music, and to foster the skills of organization and cooperation through rehearsal and performance of music requiring (generally) three to twelve players. Due to the nature of this type of musical organization and given the wide variety and large number of instruments which may be involved at any given time, there is also an inherent study of logistics involved when setting up or moving the instruments from one venue to another. Students performing in Percussion Ensemble are generally also involved in performing in other larger heterogeneous instrumental performing groups such as the bands and orchestras. Skills learned in the Percussion Ensemble setting directly affect the ability of these students to contribute a highly developed sense of musical unity in the larger performing groups. They also learn specific skills which are necessary for successfully entry and acceptance into professional music performance circles. The course is offered each semester and the enrollment is generally between eight and fifteen performers.

MUSIC 084 (GA) Jazz Ensemble (1 per semester/maximum of 8) Survey and performance of historic and contemporary big band styles.

MUSIC 084 Jazz Ensemble (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

MUSIC 084, Jazz Ensemble, includes three sections - Centre Dimensions (001), Inner Dimensions (002), and Outer Dimension (003). These are performance groups of 1619 members each. Admission to the groups is by audition. Students are placed by ability level.

The course consists of the study and performance of big band jazz from the mid 1920s to the present. Important composers of the idiom are routinely represented as well as newer contributors. There is a focus on ensemble group sound as well as individual solo improvisation.

Part of the learning process includes working on the fundamentals of jazz playing, rhythm, articulation, and harmony. Each learning segment, or unit, is concluded with public performance of the music studied and learned.

Section one, Centre Dimensions, represents the School of Music at collegiate jazz festivals as an advanced enhancement of the learning experience.

Members are expected to learn their individual parts, attend sections and rehearsals, and participate in the performances. These courses are offered each fall and spring semester.

MUSIC 091 (GA) Oriana Singers (1 per semester/maximum of 8) Rehearsal and performance of choral repertoire for treble voices from the sixteenth to twentieth centuries, including sacred and secular compositions.

MUSIC 091 Oriana Singers (1.0 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

Oriana Singers was founded in 1994 to serve the musical needs of highly talented undergraduate and graduate women. The 65-voice ensemble performs repertoire representing every musical period, genre and style in its two campus concerts per semester. The choir has been invited to perform at prestigious regional and national music conferences and has participated in tours within the state of Pennsylvania. Membership is determined by audition. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

MUSIC 092 Chamber Music for Voices (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

Chamber Music for Voices is a course which includes four small auditioned chamber choirs comprising of members of four large ensembles. The repertoire of these 9-16 member ensembles is selected from a wide range of choral literature. Membership in Section 1 is open to Oriana Singers members; Section 2 is open to Glee Club members; Section 3 is open to University Choir members; and Section 4 is open to Women's Chorale members. The goal of the ensembles is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, discovery of new means of artistic expression, and the specific skills necessary to sing in a small ensemble with only two or three singers per voice part. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

General Education: GA
Diversity: None
Bachelor of Arts: Arts
Effective: Spring 2004
Prerequisite: audition

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 094 (GA) Women's Chorale (1 per semester, maximum of 8) Rehearsal and performance of treble choral literature.

MUSIC 094 Women's Chorale (1.0 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

Women's Chorale is the largest treble ensemble on the University Park campus. Membership is determined by audition and is open to both undergraduate and graduate students. The choir participates in two campus performances per semester. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessment (both written and aural) and attendance at rehearsals and performances.

Music (MUSIC)

MUSIC 100 (GA) Campus Orchestra (1-10 per semester/maximum of 10) Rehearsal and performance orchestral literature.

MUSIC 100 Campus Orchestra (1-10) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

The goals of this course are to develop the instrumental performing skills, music reading abilities, and interpretive capabilities of the class members within a large symphonic orchestra context. The repertoire includes the standard literature from the 18th through 21st centuries as well as new music written for symphony orchestra. Students will be assessed by the use of performance evaluation and assessment of participation and contribution to established goals of the ensemble. The course is for students who have performance skills on standard orchestral string, wind, and percussion instruments. An audition is required.

Music (MUSIC)

MUSIC 103 (GA) Concert Choir (1 per semester/maximum of 8) Rehearsal and performance of choral repertoire appropriate to mixed-voice ensemble of approximately sixty voices.

MUSIC 103 Concert Choir (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

The Concert Choir is the premier mixed choir at the University. The repertoire of the 14-voiced ensemble is selected from a wide range of choral literature from medieval commissioned twenty-first century choral works. The choir has performed numerous major works with orchestra and tours yearly. Recent tours have included performances in New Orleans, LA and Toronto, Canada. The choir has performed at prestigious regional and national music conferences. Membership is open to undergraduate and graduate students. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

Music (MUSIC)

MUSIC 104 (GA) Chamber Singers (1 per semester/maximum of 8) Rehearsal and performance of choral repertoire appropriate to mixed-voice ensemble of approximately twenty-four voices.

MUSIC 104 Chamber Singers (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

Chamber Singers is a premier chamber choir at the University. The repertoire of the 14-voiced ensemble is selected from a wide range of choral literature from medieval chant to commissioned twenty-first century choral works. Membership is open to undergraduate and graduate students. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

MUSIC 112 Class Guitar (0.5-1) Functional guitar techniques and materials.

MUSIC 112 Guitar Techniques I (.5)

(BA) This course meets the Bachelor of Arts degree requirements.

MUSIC 112 is offered for students who are tracking acceptance into the Teacher Education Degree Program in Music. The focus of the course is learning to play the guitar in order to accompany and learning techniques on how to teach the guitar in classroom settings. Topics include: beginning level guitar pedagogy, instrument care and maintenance, classroom structure and materials. The instructional format includes: performance, lecture, large and small group discussion, readings, and musical and teaching examples. Students complete several practical assignments, and present summations of small group discussions. Two practice performances and a final playing and written exam are given.

Music (MUSIC)

MUSIC 106 (GA) Early Music Ensemble (1 per semester/maximum of 8) Ensemble for the performance and study of Baroque or early music on instruments of the era.

MUSIC 106 Early Music Ensemble (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

The Early Music Ensemble will meet for a single two-hour rehearsal each week. Extra rehearsals may be scheduled when circumstances warrant them, i.e., when visiting ensembles come to Penn State. Membership of the ensemble will remain essentially constant from one semester to the next. Vacancies arising when a student leaves or graduates will be filled as needed. It is integral to the ensemble's activities that faculty and students perform along side each other; thereby providing a unique learning opportunity for the students. A constant membership encourages performers' understanding of early music performance practice. The ensemble will give concerts on campus. Off-campus performances may be considered outreach opportunities and as valuable experiences for the students.

MUSIC 115 Voice Class (1) Class study of voice, with emphasis on pedagogical experiences and techniques useful in public school music classrooms.

MUSIC 115 Beginning Voice Class (1)

This course, delivered jointly by Penn State and the local medical community, is designed to provide field experience for students with plans for a future in the health professions. The course is structured around rotations through multiple no less than five medical settings, which may include Community Medicine, Dentistry, Emergency Room, Family Medicine, Hospice Care, Oncology, Optometry, Palliative Care, Pediatrics, Physical Therapy, Senior Services, Wound Care, and other specialties.

The first four weeks consist of an introduction and orientation to the goals each setting. The purpose of these sessions is to acquaint the students with the requirements of the course as well as expectations for the on-site rotations. During this time, the students become familiar with the health care issues associated with each setting through literature specific to particular medical settings. At the end of these sessions the students write a course plan, in which they review the major issues common to each setting, and project how they expect to gain and how they expect to contribute in each setting.

During the next nine weeks, the students rotate through the medical settings, spending two afternoons per week in rotation. Students are scheduled to assignments with one of the medical settings for the afternoon. At these times the students are under direct supervision of the setting’s staff. Where feasible, students may also sit in on physicians’ staff meetings, attend lectures, or receive other forms of special instruction provided by medical staff. All students will maintain a logbook of activities during the rotations.

Weekly meetings on campus are devoted to reports of experiences by each of the students, discussions based on the questions developed during the orientation period, and resolution of issues which may arise. In this way, students assigned to each rotation inform those students who will later enter that setting.

MUSIC 153 String Techniques I (1) Performance techniques on stringed instruments for music education majors.

MUSIC 153 String Techniques I (1)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is required for students working toward entrance to the Bachelor of Music Education degree program. The purpose of the course is to allow students to develop proper performance techniques on two of the four orchestral bowed stringed instruments (violin, viola, cello, and double bass) at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based on students' musical achievement on the instruments. There will be two performance assessments (one midterm and one final) for each instrument during the course. Required repertoire lists and evaluation tools will be provided prior to all assessments. Students must receive a passing grade for both instruments in order to receive an overall passing grade for the course.

MUSIC 162 (IL) Introduction to Music History (2) An introduction to Western music history and world music of selected cultures through the study of representative works.

MUSIC 162 Introduction to Music History (2)
(IL)
(BA) This course meets the Bachelor of Arts degree requirements.

This course is an introduction to music history and world music. The course has four objectives: 1. to provide an overview of the different types of music that have prevailed in the West during the past 1500 years; 2. to introduce music from other parts of the world; 3. to examine the many ways that music has functioned in society; 4. to "stretch the students' ears" through exposure to a wide range of technical musical materials. The course serves as the first in a sequence of three music history courses taken by all music majors. Evaluation methods include written tests, listening tests, and class participation.

Music (MUSIC)

MUSIC 154 Woodwind Techniques I (1) Performance and teaching techniques for woodwind instruments.

MUSIC 154 Woodwind Techniques I (1)
(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed for students pursuing a degree in music education. Principles of teaching public school students to begin to play woodwind instruments will be covered and applied to the five woodwind instruments. Students will have the opportunity to perform on each instrument, and teach their peers using the principles of woodwind pedagogy and instrument-specific techniques. This course is part of a block of courses covering all band and orchestra instruments traditionally offered in public school music programs. Students can elect to take more courses with more in-depth instruction on each instrument in order to further prepare them to teach the instruments in the public schools. Students will be advised to take such courses if their career goals include teaching band and/or orchestra in the public schools.

Students will observe teaching techniques for teaching instrument-specific pedagogy through being students themselves. They will keep a journal of observed teaching techniques and instrument resources for future reference as a teacher. They will perform playing tests on their instrument to demonstrate proficiency on the instrument, and engage in peer-teaching activities to demonstrate understanding of pedagogical techniques.

Music education majors will take this course as part of a sequence of music education courses. This course is offered as one of the early music education courses, and serves as a model and introduction for the pedagogical techniques and concepts the students will master in future courses.

MUSIC 216 Care and Nurture of Young Singing Voices (0.5) The nature of singing voices in children from birth through adolescence; strategies for helping all children become successful singers.

MUSIC 216 Care and Nurture of Young Singing Voices (.5)
The focus of this course is the nature of child and adolescent singing voices and strategies for assisting all children in learning to sing. Aural identification of various stages of vocal development or children and adolescents will be highlighted as well as strategies for nurturing the young singing voice in a classroom and rehearsal setting. Observations of teachers working with children will be included in the course experiences. This course is for music majors intending to apply to the Teacher Education Degree Program in Music and must be taken prior to entrance to the Degree program, typically during the sophomore year.

General Education: None

MUSIC 241 Music for Classroom Teachers (3) Development of competencies for guiding musical experiences of children in the elementary classroom.

Music for Classroom Teachers (3)

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Spring 2001
Prerequisite: for students in the K-6 Teacher Certification Program only

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 231 Music Theory III (2) Intermediate concepts of tonal theory.

Music Theory III (2)

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 1989
Prerequisite: MUSIC 132

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 251A Brass Techniques II: Trumpet (0.5) A class setting in which trumpet performance techniques, teaching/diagnostic strategies, instructional materials, and literature are taught, practiced, and developed.

This course develops proper performance techniques on the trumpet in a class setting. Teaching techniques and materials specific to the trumpet are demonstrated and applied. Students will develop a performance level that will enable them to provide a desirable aural model for intermediate and advanced trumpet students. Students are introduced to appropriate trumpet teaching techniques; standard trumpet teaching materials including method books, etudes, and solo literature; effective strategies for diagnosing problems in student performances; and recommended instruments and equipment for all levels of trumpet study. Class meetings will occur twice per week for 1/2 semester. Students will be expected to practice outside of class meeting times. Grades will be based on students' musical achievement on the trumpet and understanding of material presented. There will be multiple performance assessments throughout the course. This course is recommended for students working toward entrance to the Teacher Education Program in Music and the Bachelor of Music Education degree.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2006
Prerequisite: MUSIC 151

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MUSIC 254A Woodwind Techniques II: Flute (0.5) Performance and teaching techniques and materials selection for flute.

MUSIC 254A Woodwind Techniques II: Flute (.5)

This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the flute at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the flute, in addition to development of resources for flute pedagogy and demonstration of appropriate diagnosis and prescription for flute performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed:

- Midterm Assessment (performance and diagnosis) 30%
- Final Assessment (performance and diagnosis) 50%
- Resource journal 10%

The required repertoire list will be provided approximately two weeks prior to each assessment. Students will also be provided with a copy of the measurement tool to be used in evaluating their performance. Students must receive a passing grade for both assessments in order to receive an overall passing grade for the course.

General Education: None

MUSIC 261 (IL) Survey of Music History I (3) A survey of music history to 1750, with readings, listening, and lecture.

MUSIC 261 Survey of Music History I (3)
(GA; IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course is a survey of music history from antiquity to 1750, with readings, listening, and lecture. The principal objectives are: to acquaint students with important musical works from this period of European history; to place these works in their larger social, cultural, economic, and intellectual contexts; and to introduce analytical methods useful for describing technical musical features and relating those features to extra-musical concerns. As the second course in the music history sequence designed for music majors and minors, Music 261 forms a part of the core music curriculum required for advanced (400-level) study in the discipline.

Assignments and evaluation methods are designed to help students develop their critical faculties and communication skills, through listening, reading, in-class discussion, examinations, and writing. There is significant emphasis on intercultural and international competence through study of music from a range of European countries. Musical analysis is integrated with consideration of the historical, social, cultural, religious, and economic circumstances of the works' production. The course stresses development of criteria of aesthetic judgment, with respect to musical style (deployment of the various musical elements: melody, harmony, rhythm, texture, timbre) and the relationship of style to non-musical historical factors.

The course is normally offered in the fall semester. It requires a piano and audio equipment.

General Education: None
Diversity: IL
Bachelor of Arts: Arts
Effective: Spring 2006 Ending: Fall 2011
Prerequisite: MUSIC 131, MUSIC 162

Music (MUSIC)

MUSIC 298 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 1992

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 312 Performance of Diverse Musical Styles (1) Exploration of world instruments and singing through performance and study.

MUSIC 312 Performance of Diverse Musical Styles (1)

The focus of the course is participation in a non-Western based music ensemble to gain knowledge of global music traditions and how to apply world music ensemble practices into K-12 teaching. Topics include: cultural knowledge and significance, playing technique and pedagogy, and applications for teaching. The instructional format includes: performance, lecture, small group discussion, readings, and musical examples. Students complete several practical assignments and present summations of small group discussions. A final playing and written exam are given, and a formal concert is performed.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2006

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Foreign Studies (1-12)

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Spring 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 331 Tonal Analysis (2) Introduction to standard procedures of tonal analysis, including concepts of form and structure.

Tonal Analysis (2)

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Spring 1997
Prerequisite: MUSIC 221, MUSIC 231

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 336 Orchestration (2) Scoring for the orchestra.

Orchestration (2)

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Spring 1988
Prerequisite: MUSIC 222, MUSIC 232

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 332 Analysis of Twentieth Century Music (2) Application of analytical techniques and compositional theories to music of the twentieth century.

Analysis of Twentieth Century Music (2)

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Summer 1996
Prerequisite: MUSIC 331

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 341 Instructional Materials in Music (2) Exploration of instructional materials and repertoire for use in K-12 music settings. Limited to Music Education majors who have been accepted into the Teacher Education Degree Program in Music.

MUSIC 341 Instructional Materials in Music (2)

MUSIC 341 is offered to students who have been accepted into the Teacher Education Degree Program in Music. The focus of this course is to gain knowledge through exploration of the process for selecting instructional materials and repertoire for K-12 music across all settings, choral, general, and instrumental settings. Topics include: the exploration of instructional materials, the criteria for selection of materials, and strategies for arranging musical materials to meet the needs of students. The instructional format includes: lecture, large and small group discussion, readings, and musical examples. Students complete several practical assignments and present summations of small group discussions. A written midterm and final evaluation will be given to assess student learning.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2006

Concurrent: MUSIC 340 MUSIC 395A

Music (MUSIC)

MUSIC 345 Instructional Practices in Music (2) For music education students to learn about instrucational techniques and practices for music performance and general music classes.

MUSIC 345 Instructional Practices in Music (2)
This course is designed to cover general principles in planning and delivery of instruction for, and assessment of the learning of, students in public school K-12 music rehearsals and classrooms. Further, this course will focus on application and implementation of strategies to specific settings in which students will be certified to teach. Course objectives enable students to develop an understanding of the interaction of planning and delivery of instruction and the assessment of student learning; develop an understanding of principles of presenting and leading students in music activities and performance experiences; develop strategies for planning music lessons and rehearsals; and develop strategies for assessing student learning.

Students in the course will select appropriate instructional strategies reflecting technical and musical objectives and needs of the students; plan music lessons and rehearsals reflecting technical and musical objectives and needs of the students; and develop valid tools and procedures for assessing students' music learning. The students in this course will be evaluated on their effectiveness in writing task analyses, lesson and rehearsal plans, designing assessment tools, and implementing plans and assessments in a variety of music settings in peer-teaching situations.

Music education majors will take this course as part of a sequence of music education courses. This course is preceded by courses concerning musical development, teaching experiences, and courses in selection and design of instructional materials, and this course precedes a capstone course (MUSIC 441W, MUSIC 442W, MUSIC 443W, MUSIC 444W, MUSIC 445W, or MUSIC 446W) in which students study one instructional setting and curriculum level (choral, band, orchestra, general music; elementary middle school, high school) in greater depth, depending on their future career goals. Approximately 25 students will be enrolled.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2006
Prerequisite: MUSIC 340, MUSIC 341, MUSIC 395A piano and voice proficiencies passed.
Concurrent: MUSIC 395B

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 340 Music Learning and Development (2) Application of psychological principles to teaching of music, including curriculum design and contemporary practices in music education.

MUSIC 340 Music Learning and Development (2)

(BA) This course meets the Bachelor of Arts degree requirements.

MUSIC 340 is offered every fall semester for students who have just been accepted into the Teacher Certification program in Music Education. The focus of the course is music learning and development and their application to curriculum design for school music settings. Topics include: philosophical frameworks for music education, skill and content learning sequences in music, writing instructional objectives, and the process for developing music curricula. The instructional format includes: lecture, large and small group discussion, readings, and musical and teaching examples. Students complete several practical assignments, present summations of small group discussions, and prepare two drafts of a philosophical statement.

A midterm and final exam are typically given. Students in MUSIC 340 also enroll concurrently in MUSIC 341 and MUSIC 395A, a practicum course focusing on teacher delivery skills and application of content from MUSIC 340 and MUSIC 341.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2008
Prerequisite: acceptance into Teacher Education Degree Program in Music
Concurrent: MUSIC 341 MUSIC 395A

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 366 Intermediate Conducting (1) Intermediate instruction in conducting; conducting techniques specific to instrumental or choral music; introduction to rehearsal technique.

MUSIC 366 Intermediate Conducting (1)

(BA) This course meets the Bachelor of Arts degree requirements.

MUSIC 366 focuses on the development of more advanced physical skills and gestures appropriate for conducting expressive performances and rehearsals of music ensembles. The instructional format includes instructor demonstrations, student conducting of the class ensemble, and active participation as a performer and observer for peer conductors. Outside of class, students are expected to practice conducting gestures and use basic score study skills as preparation for conducting assigned music. Students prepare several music scores and conduct the class ensemble in practice episodes and instructor-evaluated performances. Students receive feedback and peer feedback on their performances in both practice and evaluated conducting episodes. Students are graded through instructor evaluation of conducting performances, completion of self-assessments involving review of a video of their performances, and participation in providing feedback for peers.

Music (MUSIC)

MUSIC 395A Cohort Practicum I (1) Observation and pre-service experience in the schools. Limited to Music Education Majors.

MUSIC 395A Cohort Practicum I (1)

(BA) This course meets the Bachelor of Arts degree requirements.

MUSIC 395A is offered for students who are tracking acceptance into the Teacher Education Degree Program in Music. Students will enroll concurrently with the proposed course MUSIC 341 and the revised course MUSIC 340. The focus of the course is to provide students with opportunity to explore instructional materials and repertoire through interviews and observation of K-12 teachers. Topics include: the design and implementation of observational tools, and the leading and teaching of songs in a variety of settings. The instructional format includes: large and small group discussion, readings, and musical and teaching examples and experiences. Students complete several practical assignments including off campus observations, and present summations of small group discussions.

Music (MUSIC)

MUSIC 395B Cohort Practicum II (1) Observation and teaching experiences in a variety of musical instruction settings.

MUSIC 395B Cohort Practicum II (1)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed for students to implement the general principles in planning and delivery of instruction for, and assessment of the learning of, students in public schools K-12 music rehearsals and classrooms, as learned in MUSIC 345. Further, this course will focus on application and implementation of strategies to specific settings in which students will be certified to teach. Course objectives are for students to lead activities with K-12 students in a general, lesson, and ensemble settings; interview teachers in K-12 settings with regard to their approach to planning lessons and rehearsals; identify qualities and behaviors of effective music teachers; identify their own strengths and weaknesses as a teacher, set goals based on those traits, and apply strategies to improve; develop their ability to reflect on their own teaching; and assess students' learning.

Students in the course will observe teachers the K-12 schools teaching students and reflect on their techniques and attributes for successful teaching. Students will implement activities and assessment tools with students in K-12 public school settings, develop their skill in identifying their own techniques and attributes for successful teaching, and become comfortable in a variety of musical settings.

Music education majors will take this course as part of a sequence of music education courses. This course is preceded by courses concerning musical development, teaching experiences, and courses in selection and design of instructional materials, and this course precedes a capstone course (MUSIC 441W, MUSIC 442W, MUSIC 443W, MUSIC 444W, MUSIC 445W, or MUSIC 446W) in which students study one instructional setting and one curricular level (choral, band, orchestra, general music; elementary, middle school, high school) in greater depth, depending on their future career goals. Approximately 25 students will be enrolled.

Music (MUSIC)

MUSIC 420 Song Writing and Recording (3) Song composition, arranging and recording in a variety of style genres.

MUSIC 420 Song Writing and Recording (3)

This course will take the student through the process of composing and producing a recorded song. The class will consist of a combination of class meetings and individual instruction. Topics will include form, lyric writing, arranging, audio/MIDI recording and sequencing. Familiarity with basic audio sequencing software and music theory concepts is essential. The focus of the class is vernacular song as opposed to classical art song, but all the basic concepts discussed in the class apply to either genre. The course requires the composition of original songs and the creation of high-quality recordings of them and their conversion to MP3 format. The student are expected to enter the class with a basic knowledge of digital audio and MIDI (MUSIC/INART 258 or equivalent).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: INART 258, MUSIC 232

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 422 Jazz Harmony and Arranging (3) Analysis and composition of jazz tunes and chord progressions; instrumental and vocal arranging in the jazz idiom.

Jazz Harmony and Arranging (3)

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 1983
Prerequisite: MUSIC 222, MUSIC 232

Music (MUSIC)

MUSIC 433 Advanced Analysis of Twentieth Century Music (2-3) In-depth studies of selected twentieth-century repertoires and/or analytical models.

Advanced Analysis of Twentieth Century Music (2-3)

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Summer 1996
Prerequisite: MUSIC 262, MUSIC 332

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 441W Emphasis in Elementary General and Choral Music (3) Selection and application of materials, methods, teaching and assessment strategies for elementary general and choral music settings.

MUSIC 441W Capstone Experiences in Elementary General and Choral Music (3)

This course is intended for Music Education majors in their senior year who have particular interest in working with elementary school children in a general music or choral setting. Students will apply all previous Music Education course work to this teaching setting. They will learn how to construct a course of study, including assessment strategies. Students will then apply that course of study by working with one elementary music class in the local schools. Teacher delivery issues, reflective practice, and assessment of student achievement will become a major component of this experience. A review of traditional approaches to elementary music teaching will also be presented and critically discussed. In addition, students will prepare two drafts of a philosophical statement justifying the inclusion of music in every child's curriculum as well as four drafts of a paper reviewing and summarizing articles on a topic of interest related to elementary music teaching.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: MUSIC 345, MUSIC 395B

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 444W Emphasis in Elementary and Intermediate Band (3) Examination and application of teaching strategies and materials for students planning to teach band in the elementary and middle schools.

MUISC 444W Capstone Experiences in Elementary and Intermediate Band (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The course is intended to prepare pre-service teachers to teach beginning through intermediate instrumental (band) music. Preparation will include observation of current public school teachers and teaching techniques and methods, preparation and implementation of appropriate lessons including assessments, in-depth analysis (case study) of a student currently in the public schools, development of a written philosophy of music education and band instruction, and consideration of practical matters associated with teaching in the public schools such as scheduling, recruitment and parent interaction.

The course serves as a capstone to the prior courses in the music education curriculum. Previous courses in instructional planning, instructional materials, instrument techniques, conducting piano and voice use will have developed necessary prior skills. Skills and concepts from these classes will be applied in this authentic context in the collegiate and public school classrooms.

The students will be assessed according to their effectiveness in observation, teaching preparation, teaching and research. Evaluation will be in the form of written and verbal feedback, and completion of rubrics by the instructor and the students themselves (self- and peer-evaluation). Enrollment will likely be approximately 5 students each time the course is offered.

The students will be spending considerable class time in local elementary and middle schools for field work.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: MUSIC 345, MUSIC 395A, MUSIC 366 piano proficiency passes

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 442W Capstone Experience in Middle School General and Choral Music (3) Capstone experience to teaching in general and choral middle school settings.

MUSIC 442W Capstone Experience in Middle School General and Choral Music (3)

This course is offered to students who have been accepted into the Teacher Certification program in Music Education. The focus of this course is to provide students with opportunity to explore middle school choral and general music settings under the close supervision of a faculty member. Topics include: the design and implementation of middle school level curriculum in general and choral music, the leading and teaching of songs in these settings, and specific grade-level appropriate pedagogy. The instructional format includes: writing, lecture, small group discussion, readings, musical and teaching examples, and off campus observation and teaching in middle school classrooms. Students complete several practical assignments including off campus observations, presentation of the summations of small group discussions, curriculum planning and models, and teaching within public schools in grades 5-9.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2007
Prerequisite: Limited to Music Education Majors.MUSIC 345, MUSIC 395B

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 450 Teaching Marching Band (2) Traditional and contemporary drill design principles, show development strategies, instructional techniques, and organizational procedures involved in teaching marching band.

MUSIC 450 Teaching Marching Band (2)

(BA) This course meets the Bachelor of Arts degree requirements.

MUSIC 450 is a marching band technique course for music education majors, band directors, and experienced marching band members. This course develops knowledge and skills required to organize and teach marching band with an emphasis on traditional and contemporary drill design and charting. Students are taught an eclectic understanding of drill systems, contemporary drill design, and visual design theory with opportunities to apply drill design computer software (Pyware Java 3D) in developing effective movements for marching units. Course topics include philosophy and role of marching band in the music program, historical perspectives, marching band styles, administration and organization of the marching band and auxiliary units and teaching techniques.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2007
Prerequisite: MUSIC 345 or three years collegiate marching band experience or permission of program

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 446W Emphasis in Strings and Orchestra (3) Development of teaching techniques for instructing elementary and secondary string/orchestra student musicians for music education majors.

MUSIC 446W Capstone Experiences in Strings and Orchestra (3)

This course is intended to prepare pre-service teachers to teach elementary and secondary string instrumental (orchestra) music. Preparation will include observation of current public school teachers and teaching techniques and methods, preparation and implementation of appropriate lessons including assessments, in-depth analysis (case study) of a student currently in the public schools, development of a written philosophy of music education and string/orchestra instruction, and consideration of practical matters associated with teaching in the public schools such as scheduling, recruitment and parent interaction.

The course serves as a capstone to the prior courses in the music education curriculum. Previous courses in instructional planning, instructional materials, instrument techniques, conducting, piano and voice use will have developed necessary prior skills. Skills and concepts from these classes will be applied in this authentic context in the collegiate and public school classrooms.

The students will be assessed according to their effectiveness in observation, teaching preparation, teaching, and research. Evaluation will be in the form of written and verbal feedback, and completion of rubrics by the instructor and the students themselves (self- and peer-evaluation). Enrollment will likely be approximately 5 students each fall semester. Students will spend considerable class time in local public schools for fieldwork.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: MUSIC 345, MUSIC 395B

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 445W Emphasis in High School Band (3) Examination and application of teaching strategies and materials for students planning to teach high school bands.

MUSIC 445W Capstone Experiences in High School Band (3)
This course is intended to prepare pre-service teachers to teach high school band. Students will observe, analyze, and discuss the teaching techniques, methods, and materials used by public school teachers in high school band instructional settings. Students will prepare and implement rehearsal plans including assessments, in-depth investigation of appropriate repertoire for use in high school bands and concert programming. Students will develop score analysis skills necessary to plan and guide music making and learning in the band rehearsal. Students will develop materials and strategies that strengthen the connection of instrumental performance to the public school curriculum. Students will develop a written philosophy of music education and the role instrumental performance in band within the music education of high school students. Students will consider practical matters associated with teaching in the public schools such as: scheduling, interaction with parents/teachers/administrators, parental support organizations (music boosters), advocacy, community/school support, and long-range instrumental music program development plans.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: MUSIC 345, MUSIC 395B

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 455 Technology in Music (1-3:1.5:1.5) Survey of how musical information is stored and processed in computer systems.

Music 455 Technology in Music (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides a survey of how musical information is stored and transmitted in digital devices. It will be divided into three sections.

Weeks 1 and 2 are an introduction to acoustical principles such as the nature of sound transmission and measurements of frequency, sound power level, phase, timbre, and localization. Computer basics will also be covered, with topics to include binary number representation and basic computer operation.

Weeks 3 through 8 cover the MIDI transmission protocol that enables musical information to be stored and transmitted efficiently. Topics include the nature of the MIDI data structure, the types of messages that may be passed, and the suitability of MIDI for expressive performance. MIDI software is discussed, including notation software, editor/librarian software, and sequencers. The bulk of the course's project component involves working with sequencing programs. Students are also exposed to using MIDI on the web, downloading files and importing them into various applications.

Weeks 9 through 15 cover digital audio so that students may understand how instruments capable of understanding MIDI messages are able to translate the instructions into audio signals. Topics include sampling theory, digital vs. analog recording, filters, signal processing, and editing sound files. Projects involving digital audio also use a sequencing program that is able to combine MIDI and audio data.

The students are expected to work independently to complete reading assignments according to the schedule outlined in the course syllabus. While due attention will be given to discussion of this material in class, the primary focus of class sessions will be hands-on application, to ensure that students master a set of skills on the computer.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Spring 2008
Prerequisite: CMPSC 100, CMPSC 101, CMPSC 121 or MUSIC 231

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 451 Computer Programming for Musicians (3 per semester/maximum of 12) In-depth study of music programming techniques.

MUSIC 451 Computer Programming for Musicians (3 per semester/maximum of 12)

This is an in-depth study of a given music programming language or environment. The language/environment will vary from semester to semester, to include languages such as SuperCollider and Max/MSP. Students will be expected to work independently on a series of projects that require increasing levels of difficulty in programming methodology. The course may be repeated for credit.

Students will be acquainted with the basics of how the programming environment treats fundamental matters such as signal flow, defining functions, variables and arguments, and music synthesis techniques.

These principles will be expanded, with added layers of complexity to the types of problems presented. More complex instruments, processing, and filtering will be covered, along with real-time capabilities (ability of the program to respond to input from audio input or data from an external controller) and the creation of graphical user interfaces (GUIs).

Advanced topics will include algorithmic composition and the creation of plug-ins that may be used by other programs.

As this is an upper division class, students will be expected to be self-motivated and work independently. Assignments will present problems that may be approached in a number of ways - there is no single right answer; putting it another way, the correct answer is the one that works.

Students pursuing the minor in Music Technology (MUTEC) are required to complete two elective courses, one of them upper division. This course will serve those students wishing to apply the minor to areas of software development.

Along with MUSIC 455 Technology in Music, this course may also serve as the second part of an elective music technology cognate for students in the graduate and IUG programs in music theory.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011

Music (MUSIC)

MUSIC 458 Electronic Music Composition (3) An introduction to the art of composition in the electronic audio medium.

MUSIC 458 Electronic Music Composition (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Music 458 will focus on the creative craft of musical composition in the medium of electronic audio. Topics covered will include but not be limited to: recording, MIDI and digital audio techniques, study of literature and the investigation of the creative process in musical composition. Students are expected to enter the class with strong fundamentals in both music theory and MIDI and digital audio. The student will be expected to complete several projects that demonstrate both their creativity and their technical competence in the medium.

Diversity: None
Bachelor of Arts: Arts
Effective: Summer 1994
Prerequisite: MUSIC 366

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 468 Acting for Singers (2 per semester/maximum of 4) To help students develop authentic and specific characters/portrayals on stage through physical and emotional awareness.

MUSIC 468 Acting for Singers (2)

This is a course teaching singers the fundamentals of acting. All types of stage work related to vocal music will be explored from performing in recitals and concerts to the opera and excerpted scenes. The objective of the course is to make singers more comfortable on stage and more realistic/believable in their performances/presentations. This course differs from acting courses offered in other areas because the singer has restrictions placed upon him due to the requirements of the music, especially in regard to timing and the sense of time, and the use of texts which are often in foreign languages. The course will be offered to music majors currently studying voice at an advanced level (V220J or higher) so that vocal technique will not be the main issue; this includes students enrolled in the BM, BMA, BA, and BME programs. Exceptions can be made by permission of the instructor. The course is an elective 2 credit course which students may repeat for a maximum of 4 credits. An accompanist will be present to accompany students in their song/aria presentations. Every class meeting will begin with warm-up exercises and then continue with further exercises focusing on helping students develop a sense of timing and enabling them to explore the "beats" (or central topic) of a scene. Emphasis will be placed on learning how to prepare for a scene, analyze it, and determining the goal(s) of the character. The students will be encouraged to learn how to be specific in their acting and to learn what will "read" to an audience while accurately reflecting the portrayed emotion. Some work will be solo work, but there will also be opportunities to work with partners. Improvisation will also be incorporated.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2008
Prerequisite: Must be currently enrolled for voice jury track at the level of V220J or higher or register with permission of the program

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

**MUSIC 467 Opera Workshop (1-3 per semester/maximum of 6)** History, analysis, and production of operas from sixteenth century to present.

MUSIC 488 Studies in the Major Performance Area (1-2) Selected studies in music literature specific to the student's major performance area. Will include research, analysis and performance.

MUSIC 488 Studies in the Major Performance Area (1-2)

The objective of Music 488 is to create a thorough knowledge of the literature and resources in the students' major performance area. The course will be taught in a seminar format. Students will be grouped according by general performance area: i.e., keyboard, strings, woodwinds, brass, percussion, voice. The course will include lectures, research, class presentations and performance. The course will be offered for variable credit in order to meet varying conditions of scheduling and credit requirements. Specific evaluation methods will be determined by the instructor, to include class presentations, class participation, exams and/or written work.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music (MUSIC)

MUSIC 495A Student Teaching: General Music (5-7) Observation and teaching under supervision.

MUSIC 495A Student Teaching: General Music (6-8)

(BA) This course meets the Bachelor of Arts degree requirements.

As required by the Pennsylvania Department of Education, all music education students seeking certification must enroll in a culminating student teaching experience which closely approximates a full-time working experience in the public schools of Pennsylvania. The objective of this course is to offer a transition between student life and professional life directly prior to graduation. This total immersion in the field of GENERAL MUSIC allows the student to learn from and work with a mentor teacher in an off-campus setting. During the semester prior to the course, cooperating music teachers and school districts are contacted requesting their participation and music education students interview with the teachers. The students then move to the community in which they will be student teaching and adopt the practices of that mentor teacher within that specific school district.

Students are evaluated by both the mentor teacher and a Penn State supervisor who visits a minimum of four times per semester. This course is offered every semester.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2001
Prerequisite: completion of all courses in the major with a grade of "C" or better
Concurrent: MUSIC 442

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Music - Brass (BRASS)

BRASS 100J (GA) Trumpet: Secondary (1 per semester, maximum of 8) Individual instruction in trumpet one-half hour per week.

BRASS 100J Trumpet: Secondary (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

The goals of this course are to introduce, define, and develop the musical and technical skills required to play the trumpet well in a variety of musical settings. The instrument is active in orchestral, band, jazz, chamber, and solo settings. Therefore, the basic goal for serious trumpet students as well as amateur trumpet students is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student's ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student's progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-half hour lesson per week, presuming at least 5 hours of practice. Enrollment can range from 10-12 per semester depending on the availability of staffing.

General Education: GA
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2004
Prerequisite: permission of instructor

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Brass (BRASS)

BRASS 103J (GA) Euphonium: Secondary (1 per semester, maximum of 8) Individual instruction in euphonium/baritone one-half hour per week.

BRASS 103J Euphonium: Secondary (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

The goals of this course are to introduce, define, and develop the musical and technical skills required to play the euphonium well in a variety of musical settings. The instrument is active in orchestral, band, chamber, and solo settings. Therefore, the basic goal for serious euphonium students as well as amateur euphonium students is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student's ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student's progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-half hour lesson per week, presuming at least 5 hours of practice. Enrollment can range from 12-15 per semester depending on the availability of staffing.

General Education: GA
Diversity: None
Bachelor of Arts: Arts

Music - Keyboard (KEYBD)

**KEYBD 100J (GA)** Piano: Secondary (1 per semester, maximum of 8) Individual instruction in piano one-half hour per week.

**KEYBD 100J Piano: Secondary (1 per semester/maximum of 8)**

(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

Keyboard 100J is designed to provide the intermediate non-music major and/or music major student with strategies for developing some of the advanced skills required for playing the piano. Some knowledge of music or piano is assumed. Admission to the course is controlled by the piano faculty. Music 050, 051 (for non-music majors), completion of the piano proficiency (for music majors), or permission of the instructor is a prerequisite for this course. Students learn repertoire, sight-playing, score analysis, interpretive techniques, how to practice to the fullest possible communication of the composer's intent, scales, and a proper and healthy physical approach to the keyboard. Practice of these elements outside the class is expected. Objectives include learning score analysis and interpretive rendering of great masterworks of the piano. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible listening assignments, attendance at studio class and specific concerts. Special facilities required to teach the course are two well-maintained grand pianos for student performance and teacher demonstration. The course is offered every semester.

General Education: GA
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2004
Prerequisite: permission of instructor

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Keyboard (KEYBD)

KEYBD 101J (GA) Organ: Secondary (1 per semester, maximum of 8) Individual instruction in pipe organ one-half hour per week.

KEYBD 101J Organ: Secondary (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

Keyboard 101J is designed to provide the intermediate non-music major and/or music major student with strategies for developing some of the advanced skills required for playing the organ. Some knowledge of music or piano is assumed. Admission to the course is controlled by the keyboard faculty. Students learn repertoire, sight-playing, score analysis, interpretive techniques, how to practice to the fullest possible communication of the composer's intent, scales, and a proper and healthy physical approach to the keyboard and pedals. Practice of these elements outside the class is expected. Objectives include learning score analysis and interpretive rendering of great masterworks of the organ. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible listening assignments, attendance at studio class and specific concerts. Special facilities required to teach the course is a well-maintained pipe organ for student performance and teacher demonstration. The course is offered every semester.

General Education: GA
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2004
Prerequisite: permission of instructor

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Keyboard (KEYBD)

KEYBD 110J (GA) Piano: Secondary (2 per semester, maximum of 16) Individual instruction in piano one hour per week.

KEYBD 110J Piano: Secondary (2 per semester/maximum of 16)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

Keyboard 110J is designed to provide the intermediate non-music major and/or music major student with strategies for developing some of the advanced skills required for playing the piano. Some knowledge of music or piano is assumed. Admission to the course is controlled by the piano faculty through interview and/or audition. Music 050, 051 (for non-music majors), completion of the piano proficiency (for music majors), or permission of the instructor is a prerequisite for this course. Students learn repertoire, sight-playing, score analysis, interpretive techniques, how to practice for the fullest possible communication of the composer’s intent, scales, a proper and healthy physical approach to the keyboard. Practice of these elements outside the class is expected. Objectives include learning score analysis and interpretive rendering of great masterworks of the piano. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible listening assignments, attendance at studio class and specific concerts. Special facilities required to teach the course are two well-maintained grand pianos for student performance and teacher demonstration. The course is offered every semester.

Music - Percussion (PERCN)

PERCN 100J (GA) Percussion: Secondary (1 per semester, maximum of 8) Individual instruction in percussion one-half hour per week. For both music and non-music majors.

PERCN 100J Percussion: Secondary (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

This course consists of private instruction in selected areas of percussion performance. Individualized instruction will guide the student toward competence playing the instrument(s), the study of appropriate repertoire, developing interpretive insights, acquisition of music reading skills, and acquiring both tonal and technical command. Skill building will enable the student to be active as a performer, participating in Penn State music ensembles by competitive audition. Evaluation of the student's progress will be graded by the instructor according to the criteria stated in the course syllabus and will include: preparation of weekly assignments; solo and/or ensemble performances as assigned; attendance at recitals, concerts, and masterclasses, as assigned; acquisition of assigned material (music, etude books, etc.), essential accessories (metronome, practice pad, etc.), and appropriate instrumental needs (sticks, mallets, small instruments, etc.); attendance at lessons (as stipulated in the course syllabus). The course is offered fall and spring semesters by permission of the instructor, depending on studio enrollments and availability of staff.

General Education: GA
Diversity: None

Music - String (STRNG)

STRNG 103J (GA) Double Bass: Secondary (1 per semester, maximum of 8) Individual instruction in double bass one-half hour per week.

STRNG 103J Double Bass: Secondary (1 per semester/maximum of 8) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed to introduce, define, and develop the musical and technical skills required to play the double bass in a variety of musical contexts. Fundamentals of technique are addressed through the study of scales and other technical studies or etudes. These are then applied in various musical settings, including solo, chamber, and orchestral works. Students receive one-half hour of private instruction per week. The course is open to Music majors and non-majors and is offered every semester. Enrollment can range from 3-5 students per semester.

General Education: GA
Diversity: None
Bachelor of Arts: Arts
Effective: Spring 2004
Prerequisite: permission of instructor

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - String (STRNG)

STRNG 112J (GA) Violoncello: Secondary (2 per semester, maximum of 16) Individual instruction in violoncello one hour per week.

Music - Voice (VOICE)

VOICE 100J (GA) Voice: Secondary (1 per semester, maximum of 8) Individual instruction in voice one-half hour per week.

VOICE 100J Voice: Secondary (1 per semester/maximum of 8)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed to present and apply basic principles of singing. Students learn songs, and address topics such as posture, breathing, tone production, expressiveness, and vocal health. Objectives are proficiency of breath management, a resonant vocal timbre, and effective communication in song. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible writing or listening assignments, and a possible studio recital.

The course is offered every semester. The maximum enrollment is 30 per semester.

General Education: GA
Diversity: None
Bachelor of Arts: Arts
Effective: Spring 2004
Prerequisite: permission of instructor

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

VOICE 412J Musical Theatre Voice V (2)
VOICE 412J continues to develop a vocal approach and technique to musical theatre repertoire. It is required of fourth-year musical theatre students. All aspects of vocal production are explored. The voice sequence is a required element of the B.F.A. musical theatre training program. Grading will be based on attendance, preparation, and attitude. These are all critical factors for entering the profession and for successfully completing this course. Deadlines and appointments must be kept. Students must do adequate outside preparation. VOICE 412J is a requirement for the B.F.A. in musical theatre. It is offered every fall semester with an enrollment of approximately 15 students.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2006  
Prerequisite: admission into Theatre BFA in Musical Theatre

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Oboe: Performance I (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 124J Saxophone Primary I (2) Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.

Saxophone Primary I (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: acceptance into program by faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 133J Bassoon: Performance I (3) Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

Bassoon: Performance I (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: acceptance into program by faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 132J Clarinet: Performance I (3) Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

**Clarinet: Performance I (3)**

- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Fall 1983
- Prerequisite: permission of faculty jury

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

**WWNDS 171J** Oboe: Primary II (2) Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

**Oboe: Primary II (2)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 121J and permission of faculty jury

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 170J Flute: Primary II (2) Individual instruction in flute one hour per week. For School of Music B.A. and B.S. majors.

Flute: Primary II (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 120J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 134J Saxophone: Performance I (3) Individual instruction in saxophone one hour per week. For B.Mus. saxophone performance majors.

Saxophone: Performance I (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: acceptance into program by faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 172J Clarinet: Primary II (2) Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

Clarinet: Primary II (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 122J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 173J Bassoon: Primary II (2) Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

Bassoon: Primary II (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 123J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

**WWNDS 180J** Flute: Performance II (3) Individual instruction in flute one hour per week. For B.Mus. flute performance majors.

**Flute: Performance II (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite: WWNDS 130J and permission of faculty jury

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 181J Oboe: Performance II (3) Individual instruction in oboe one hour per week. For B.Mus. oboe majors.

Oboe: Performance II (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 131J and permission of faculty jury

Music - Woodwinds (WWNDS)

WWNDS 383J Bassoon: Performance VI (3) Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

Bassoon: Performance VI (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 333J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

**WWNDS 422J** Clarinet: Primary VII (2) Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

**Clarinet: Primary VII (2)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite: WWNDS 372J and permission of faculty jury

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 421J Oboe: Primary VII (2) Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

Oboe: Primary VII (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 371J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 430J Flute: Performance VII (3) Individual instruction in flute one hour per week. For B.Mus. flute performance majors.

Flute: Performance VII (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 380J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 424J Saxophone: Primary VII (2) Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.

Saxophone: Primary VII (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 374J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 423J Bassoon: Primary VII (2) Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

Bassoon: Primary VII (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 373J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 431J Oboe: Performance VII (3) Individual instruction in oboe one hour per week. For B.Mus. oboe majors.

Oboe: Performance VII (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 381J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

**WWNDS 432J Clarinet: Performance VII (3)** Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

**Clarinet: Performance VII (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite: WWNDS 382J and permission of faculty jury

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

**WWNDS 433J** Bassoon: Performance VII (3) Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

**Bassoon: Performance VII (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite: WWNDS 383J and permission of faculty jury

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 470J Flute: Primary VIII (2) Individual instruction in flute one hour per week. For School of Music B.A. and B.S. majors.

Flute: Primary VIII (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 420J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 434J Saxophone: Performance VII (3) Individual instruction in saxophone one hour per week. For B.Mus. saxophone performance majors.

Saxophone: Performance VII (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 384J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 471J Oboe: Primary VIII (2) Individual instruction in oboe one hour per week. For School of Music B.A. and B.S. majors.

Oboe: Primary VIII (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 421J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 472J Clarinet: Primary VIII (2) Individual instruction in clarinet one hour per week. For School of Music B.A. and B.S. majors.

Clarinet: Primary VIII (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 422J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

**WWNDS 473J** Bassoon: Primary VIII (2) Individual instruction in bassoon one hour per week. For School of Music B.A. and B.S. majors.

**Bassoon: Primary VIII (2)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 423J and permission of faculty jury

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 474J Saxophone: Primary VIII (2) Individual instruction in saxophone one hour per week. For School of Music B.A. and B.S. majors.

Saxophone: Primary VIII (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 424J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 480J Flute: Performance VIII (3) Individual instruction in flute one hour per week. For B.Mus. flute performance majors.

Flute: Performance VIII (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 430J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 481J Oboe: Performance VIII (3) Individual instruction in oboe one hour per week. For B.Mus. oboe majors.

Oboe: Performance VIII (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 431J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 482J Clarinet: Performance VIII (3) Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

Clarinet: Performance VIII (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 432J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 483J Bassoon: Performance VIII (3) Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

Bassoon: Performance VIII (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 433J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music - Woodwinds (WWNDS)

WWNDS 484J Saxophone: Performance VIII (3) Individual instruction in saxophone one hour per week. For B.Mus. saxophone performance majors.

Saxophone: Performance VIII (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: WWNDS 434J and permission of faculty jury

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Music Education (MU ED)

MU ED 440 Music Learning and Development (2) Psychological principles related to music learning processes and applications of those to teaching music.

Music Learning and Development (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
Prerequisite: permission of program

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nanofabrication Manufacturing Technology (NMT)

**NMT 250 Introduction to Nanotechnology Quality Control and Quality Assurance (1)** Overview of basic quality control and quality assurance methods used by the Nanotechnology industry.

**NMT 250 Introduction to Nanotechnology Quality Control and Quality Assurance (1)**
This course provides an overview of basic quality control and quality assurance for Nanomanufacturing Technology students. Students will obtain fundamental understanding of modern statistical quality control methods used by industry. The last four weeks of the course will cover the concepts, principles, procedures, statistical tools, and computations used to analyze and maintain statistical control of nanofabrication manufacturing and production processes and systems.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: STAT 200, NMT 210W

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nanofabrication Manufacturing Technology (NMT)

NMT 210W Introduction to Nanofabrication Manufacturing Technology (3) This course provides an overview of basic Nanofabrication Manufacturing Technology for Engineering and Technology students. The course will give the student an overview of atomic physics and the use of atoms to build devices and machines.

This course provides an overview of basic Nanofabrication Manufacturing Technology (NMT) for Engineering and Technology students. The course will give the students an overview of atomic physics and the use of atoms to build devices and machines. Students will study the NMT industry and learn about applications in MEMS, bionanofab technology, and nanochemical applications. Internet resources will be used extensively in this course to aid in instruction. Semiconductors will be introduced and the student will learn about PN junctions, bipolar-, and field effect transistor applications. Included in the course are three project papers and eight hands-on lab experiments. Each lab experiment will require a formal written report. Computer usage will be stressed in both the lectures and labs. Students will look at transistors using PSPICE models and will use LASI to design a simple CMOS inverter.

The student will keep an Engineering Notebook for historical reference and documentation validating the steps and procedures used during the labs. In addition, the student will write seven engineering lab reports (six of these will be written as individual reports, one will be written as a team report). A research paper on the topic of nanofabrication technology is also required.

Maximum enrollment for NMT 210W is set at 25 students per section. In most cases, the number of sections at each location will be one per semester.

Bachelor of Arts: None
Effective: Summer 1998

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 001S Atomic Adventures: First-Year Seminar (1) First-year seminar exploring the interesting and exciting world of nuclear science and its applications.

NUC E 001S Atomic Adventures: First-Year Seminar (1) (FYS)

The overall objectives of Engineering First-Year Seminars are to engage students in learning about engineering and orient them to the scholarly community in a way that will bridge to, and enhance their benefit from, later experiences in the College and the University.

Seminars adhere to the two specific goals identified below by including one or more of the strategies following each goal:

1. Introduce students to a specific field, or encourage their exploration of a number of fields, of study in engineering; familiarization with the engineering majors and career options and with the objectives of general education and other components of the curriculum
   development of a particular topic, contemporary issue, emerging or interdisciplinary field of concentration, or professional responsibilities in engineering
   plant tours or demonstrations of engineering facilities

2. Acquaint students with tools, resources and opportunities available to them in the Department(s), College and University exposure to learning support services and career development resources

General Education: None

Foreign Studies (1-12)

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Summer 2008

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 310W Issues in Nuclear Engineering (2) Societal and technical issues facing nuclear engineers, including safety, operations, waste, regulation, public acceptance, economics, ethics, and radiation.

Issues in Nuclear Engineering (2)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2001
Prerequisite: fifth-semester standing

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 403 Advanced Reactor Design (3) Physical principles and computational methods for reactor analysis and design. Multigroup diffusion theory; determination of fast and thermal group constants; cell calculations for heterogeneous core lattices.

Advanced Reactor Design (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: NUC E 302

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

**NUC E 401 Introduction to Nuclear Engineering (3)** Fundamental concepts of nuclear engineering, including fission, reactor theory, shielding, and radioisotopes; intended for other than nuclear engineering students.

**Introduction to Nuclear Engineering (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2001  
Prerequisite: MATH 250 or MATH 251

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 406 (M E 406) Introduction to Statistical Thermodynamics (3) Statistical description of systems composed of large numbers of particles in the context of classical and quantum mechanics; basic concepts of probability theory and thermodynamics as they relate to statistical mechanics.

NUC E (M E) 406 Introduction to Statistical Thermodynamics (3)

This course is an introduction to probabilistic and statistical concepts in the physical sciences, which we refer to as "statistical thermodynamics." In areas such as design and processing of electronic devices, materials engineering, chemical engineering, and combustion engineering, the science of statistical mechanics is a particularly necessary, powerful, and important tool for the engineer. The underlying foundation of statistical mechanics is developed by (1) reviewing the basic ideas from probability theory, (2) deriving the binomial, Poisson, and Gaussian probability distributions, and (3) using these models to analyze several examples taken from science and engineering. To make a connection between macroscopic quantities and the corresponding probabilistic representation, classical thermodynamics is reviewed using the internal energy, entropy, and free energy functions in the context of the first and second laws. Statistical mechanics for classical and quantum-mechanical systems is presented via the micro-canonical, canonical, and grand canonical ensembles using the associated partition functions. During the syntheses of ideas, applications from various branches of science are presented. Some examples of applications are the Einstein crystal, the Debye crystal, the ideal gas, and black body radiation.

This course covers the following program objectives:
1. Demonstrate knowledge of basic chemistry and physics.
2. Demonstrate a knowledge of atomic and nuclear physics.
3. Demonstrate a knowledge of thermodynamics, heat transfer, and fluid flow.
4. Understand and apply the basic concepts of particle transport.
5. Understand and apply thermodynamics and heat transfer principles to the analysis of nuclear power components and systems.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: M E 300 or M E 201 or M E 202 or CH E 303; MATH 230 or MATH 231

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 408 Radiation Shielding (3) Radiation sources in reactor systems; attenuation of gamma rays and neutrons; point kernel methods; deep penetration theories; Monte Carlo methods.

Radiation Shielding (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1985
Prerequisite: NUC E 301

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 405 (CHEM 406) Nuclear and Radiochemistry (3) Theory of radioactive decay processes, nuclear properties and structure, nuclear reactions, interactions of radiation with matter, biological effects of radiation.

Nuclear and Radiochemistry (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: CHEM 452 or PHYS 237 or NUC E 301

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 409 (MATSE 409) Nuclear Materials (3) Nuclear reactor materials: relationship between changes in material properties and microstructural evolution of nuclear cladding and fuel under irradiation.

NUC E (MATSE) 409 Nuclear Materials (3)

NUC E/MATSE 409 provides a background on the types of materials used in nuclear reactors and their response to neutron irradiation. Most of the materials problems encountered in the operation of nuclear power reactors for energy production are discussed here. The objective of the course is to give nuclear engineering students a background in materials, so they understand the limitations put on reactor operations and reactor design by materials performance. In the first part of the course, we review basic concepts of physical metallurgy, to develop a mechanistic and microstructurally based view of material properties. In the second part of the course, we present the methods to calculate displacement damage to the material produced by exposure to neutron irradiation. The microstructural evolution that results from the reactor exposure (including radiation damage and defect cluster evolution, and changes) is described. The aim is to create a linkage between these changes at the atomistic level and the changes in macroscopic behavior of the material. Special attention is given to property changes that affect fuel performance and operational safety. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is instructed by experimental data. Students use the TRIM and SPECTER codes to quantitatively evaluate neutron damage, as well as learn simple analytical models that describe microstructural evolution and property changes under irradiation.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2003
Prerequisite: PHYS 214

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 420 Radiological Safety (3) Ionizing radiation, biological effects, radiation measurement, dose computational techniques, local and federal regulations, exposure control.

Radiological Safety (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1997
Prerequisite: NUC E 301 or NUC E 405

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 430 Design Principles of Reactor Systems (3) Nuclear power cycles; heat removal problems; kinetic behavior of nuclear systems; material and structural design problems.

Design Principles of Reactor Systems (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: M E 410; NUC E 301 or NUC E 401

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

**Radioactive Waste Control (3)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1997
Prerequisite: NUC E 301 or NUC E 405

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 431W Nuclear Reactor Core Design Synthesis (4) Technical and economic optimization of nuclear systems.

Nuclear Reactor Core Design Synthesis (4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1994
Prerequisite: ENGL 202C; NUC E 403, NUC E 430

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 445 Nuclear Digital Instrumentation (3) Interfacing nuclear instruments to microprocessors and computers.

Nuclear Digital Instrumentation (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: EE 212

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 444 Nuclear Reactor Operations Laboratory (1) Correlation of reactor physics and reactor theory with practical reactor situations that will be controlled by the student.

Nuclear Reactor Operations Laboratory (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983
Prerequisite: or concurrent: NUC E 302

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 450 Radiation Detection and Measurement (3) Theory and laboratory applications of radiation detectors, including proton, neutron, charged particle detectors, NIM devices, and pulse-height analysis.

Radiation Detection and Measurement (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: NUC E 301 or NUC E 405; NUC E 309

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 451 Experiments in Reactor Physics (3) Acquisition and processing of nuclear and atomic data; application to nucleonic phenomena of importance in nuclear engineering.

Experiments in Reactor Physics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: E E 212, NUC E 450

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E (M E) 446 Reliability and Risk Concepts in Design (3)

The course covers materials reliability in design including mechanical, electrical and system aspects. Five main topics will be studied. The course starts by introducing engineering risk and reliability, highlighting its interdisciplinary nature and its significance in system design. The concept of reliability as a probability is introduced and the basic laws of probability are reviewed. The discussion centers on the mathematics needed to understand and analyze complex systems including components in series and parallel. The topics include the independence, mutual exclusivity, truth tables and Venn diagrams. These concepts are then applied to simple systems consisting of one, two and three components in various configurations. The equivalency of the various methods is discussed. The effect of maintenance on a system’s reliability is presented along with discussions of various maintenance strategies. Then, the failure modes and effects analysis is introduced and examples discussed. The concept of fault trees and event trees and their application to reliability analysis are presented. Risk analysis is then introduced as a case study in the application of reliability analysis. A nuclear power plant system is analyzed to quantify the risk to the public from its operation.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: MATH 250 or MATH 251; M E 345 or NUC E 309

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 470 Power Plant Simulation (3) Basic knowledge necessary for intelligent simulation and interpretation of simulations of transients in nuclear power plants.

Power Plant Simulation (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: M E 320, MATH 251, NUC E 302

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 490 (AERSP 490, E E 471) Introduction to Plasmas (3) Plasma oscillations; collisional phenomena; transport properties; orbit theory; typical electric discharge phenomena.

Introduction to Plasmas (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: E E 361 or PHYS 467

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 496 Independent studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Independent studies (1-18)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1983

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nuclear Engineering (NUC E)

NUC E 494H Senior Thesis (1-9) Students must have approval of a thesis adviser before scheduling this course.

NUC E 494H Senior Thesis (1-9)

All Schreyer Scholars are required to complete an undergraduate honors thesis. This work represents the culmination of a student's honors experience. Through the thesis, the student demonstrates a command of relevant scholastic work and a personal contribution to that scholarship.

The thesis project can take many forms - from laboratory experiments all the way to artistic creations. The thesis document captures the relevant background, methods and techniques, as well as describing the details of the completion of the individual project. Two Penn State faculty members judge the merits of this Scholar's honors thesis, the student's self-selected thesis supervisor and the department-selected honors adviser in the student's area of honors.

Nursing (NURS)

NURS 111S (US;IL) Nursing Roles (4) Introduction to nursing roles/process with emphasis on societal norms and multicultural influences on health care needs.

NURS 111S Nursing Roles (4) (US;IL)

NURS 111S US;IL is an introduction to associate degree nursing roles and nursing process with an emphasis on societal norms and the multicultural influences on health care needs. It focuses on professional development which includes an introduction to associate degree nursing roles and nursing process and the need to appreciate the differences that exist among culturally diverse patient populations. This course provides the student with in-depth study of health patterns, cultural diversity, health perception, management, and self perception across the life span while utilizing the nursing process and clinical judgment. Upon completion of the course students will be able to meet the following objectives: identify the following basic concepts related to the individual: adaptation, basic development, basic needs, communication, diversity, life span development, and relationships; identify the individuals' unique physical and personal factors that contribute to a safe, therapeutic environment; describe basic concepts related to the role of the associate degree nurse as provider of care, manager of care, and member within the discipline of nursing; provides basic care to clients applying the nursing process and is sensitive to different cultural values, traditions, beliefs and customs; and recognize research as a theoretical basis for the use of the nursing process. Teaching strategies include lecture, discussion, simulation laboratory and clinical experiences. The course is limited to 2NURS majors, is taught one time per academic year and clinical sections are limited to 8-10 students.

General Education: None
Diversity: US;IL
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: admission to 2NURS major

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 112 Health Patterns/Nursing Interventions (4) Emphasis on individual health patterns and selected nursing interventions.

NURS 112 Health Patterns/Nursing Interventions (4)

NURS 112 focuses on the study of individual health patterns and selected nursing interventions. This course provides the student with in-depth study of emphasized health patterns which include activity-exercise, nutritional-metabolic, pharmacological, interventions, elimination, and perioperative interventions. Students will be able to utilize the nursing process based on the client's individual health patterns and formulate appropriate nursing interventions. Teaching strategies include lecture, discussion and simulation laboratory and clinical experiences. This course builds and expands on the basic concepts of nursing practice that are introduced in NURS 111S US;IL. The course is limited to 2NURS majors, is taught one time per academic year and clinical sections are limited to 8-10 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: NURS 111S

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 113 Nursing Care During Childbearing Years (3) Emphasis on childbearing family through prenatal, intrapartal, postpartal and neonatal periods.

NURS 113 Nursing Care During Childbearing Years (3)

NURS 113 focuses on the care of the childbearing family including prenatal, antepartal, postpartal, and neonatal periods. Upon completion of the course students will be able to meet the following objectives: describe concepts related to childbearing families: life span development, basic health needs, communications, relationships, adaptation and diversity; evaluate physical and personal factors as they contribute to a safe, therapeutic environment for childbearing families; describe common health patterns, and alterations in function for select childbearing families; apply concepts related to the role of the associate degree nurse as provider of care, manager of care, and member within the discipline of nursing while providing care to the childbearing family; use interpreted research related to specific client situations; and apply the nursing process in developing a plan of care for the childbearing family. Students will utilize the nursing process based on the client's individual health patterns and formulate appropriate nursing interventions. Teaching strategies include lecture, discussion, laboratory simulation and clinical experiences. The course is limited to 2NURS majors, is taught one time per academic year and clinical sections are limited to 8-10 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: NURS 112

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 114 Nursing Care During Childrearing Years (3) Emphasis on infancy through young adulthood with common and well-defined health problems, with integrated nursing content.

NURS 114 Nursing Care During Childrearing Years (3)

NURS 114 focuses on nursing care of the childrearing family with emphasis on child wellness and common health problems affecting children with a variety of health maintenance and/or acute and chronic health needs from infancy to young adulthood. Students will provide basic nursing care to children with basic and complex health care needs, apply concepts related to children’s growth and development, learn communication skills appropriate to the development of the child, begin to develop effective interpersonal relationships with the family, identify norms and deviations in the health status of children, and function peripherally as a member of the multidisciplinary team. Upon completion of the course the student will be able to meet the following course objectives: evaluate physical and personal factors as they contribute to a safe, therapeutic environment for select pediatric clients and their families; describe common health patterns and alterations in function for select pediatric clients and families; apply concepts related to the role of the associate degree nurse as provider of care, manager of care, and member within the discipline of nursing while providing care to the childrearing family; use interpreted research related to specific pediatric client situations; and apply the nursing process in developing a plan of care for select pediatric clients and families. Teaching strategies include lecture, discussion, and laboratory simulation and clinical experiences. The course is limited to 2NURS majors; is taught one time per academic year; and clinical sections are limited to 8-10 students.

General Education: None

Nursing (NURS)

NURS 116 Clinical Immersion I: Introduction to Concepts of Illness (2) Clinical immersion course that utilizes clinical experiences and seminars to develop clinical competency.

NURS 116 Clinical Immersion I: Introduction to Concepts of Illness (2)

NURS 116 is designed to further develop the nursing students’ skills in the delivery of direct patient care. Students will be placed in clinical settings where they will practice and develop their ability to utilize the nursing process through the use of assessment skills, clinical judgment, nursing interventions, medication administration, patient safety and patient education, and perioperative care of the surgical patient. In addition, students will explore introductory concepts of illness and pathophysiology that will lay a foundation of knowledge and skills necessary for nursing courses taken in the second level of the nursing major. These include processes of illness – cell injury, inflammation, pain, fever and healing; processes for illness prevention, protection, and homeostasis – immunity, fluid and electrolytes, acid-base balance; and concepts of disease manifestation – poor tissue oxygenation, circulatory perfusion and hemorrhagic shock, and altered glucose metabolism. The course is limited to 2NURS majors, is taught one time per academic year and has clinical sections of 8-10 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010
Prerequisite: NURS 112

Nursing (NURS)

NURS 203 (GHA) First Aid and CPR (3) An introductory first aid course designed to provide the basic knowledge and skills to provide assistance to someone injured/ill.

NURS 203 First Aid and CPR (3) (GHA)

NURS 203 is an introductory first aid and safety course meeting the general education credit requirements for primarily non-nursing majors, such as Education and Special Education. It provides the basic knowledge and skills to provide the immediate care necessary to treat someone injured or suddenly ill until professional help arrives on the scene. NURS 203 incorporates discussion of infectious disease and the standard precautions needed by rescuers to prevent disease transmission. Students are evaluated through written testing and also practical skill testing. A card is issued to the student for First Aid and One-person CPR (not the Professional CPR or Healthcare Provider CPR) upon successful completion of the course. NURS 203 is offered in the fall, spring, and/or summer semester. The course objectives are as follows:

Upon completion of this course, students will be able to:
1. Explain how the EMS system works and how the professional rescuer's role in the EMS system differs from a citizen responder's role.
2. Identify guidelines to follow to ensure personal safety and the safety of others at the scene of an emergency.
3. Describe basic safety precautions to prevent disease transmission when providing first aid and CPR services.
4. Describe four emergency action principles.
5. Recognize breathing emergencies, such as a choking, and demonstrate the correct first aid care.
6. Identify the major risk factors for cardiovascular and cerebrovascular disease.
7. State the signs and symptoms of a heart attack and stroke.
8. Demonstrate the correct technique for providing cardiopulmonary resuscitation (CPR) to an adult.
9. Demonstrate how life-threatening bleeding can be controlled.
10. Demonstrate the correct care for various common injuries, including sprains and fractures.
11. State the signs and symptoms of common medical emergencies, including poisoning, seizures, and heat and cold emergencies.
12. Describe the first aid care for common medical emergencies.
13. Describe when and how to move a person in an emergency situation.

General Education: GHA
Diversity: None

Effective: Fall 2008

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 211 Pathophysiology I - Nursing Interventions (5) Caring for middle-aged adult with acute/chronic alterations in resp/cardio and musculoskeletal dysfunction.

NURS 211 Pathophysiology I - Nursing Interventions (5)

NURS 211 focuses on nursing care of clients through the adult life span with acute or chronic dysfunctional health patterns involving respiratory, cardiac, and musculoskeletal impairment in need of medical and/or surgical intervention. Nursing strategies developed by the student consider the developmental stage, psychosocial needs and cultural sensitivity. Students develop and implement a plan of care that integrates nursing strategies and health teaching during the acute and rehabilitative period and evaluate care making appropriate recommendations and referrals to members of the healthcare team. Upon completion of the course, the student will be able to describe wellness-illness concepts of the individual, family and groups within the community related to life-span development, basic medical-surgical health needs, communications, relationship adaptation and diversity to clients with respiratory, cardiovascular, and musculoskeletal dysfunction; analyze the impact of physical, personal, social and group factors that contribute to safe, therapeutic care for select clients, families, and groups within the community who experience respiratory, cardiovascular, and musculoskeletal dysfunction; analyze health needs and the actual and potential impact of these needs on the individual, family, and groups within the community for clients with respiratory, cardiovascular, and musculoskeletal dysfunction; apply concepts related to the role of the associate degree nurse as provider of care, manager of care, and member within the discipline of nursing for clients with respiratory, cardiovascular, and musculoskeletal dysfunction; demonstrate the application of interpreted research findings as a theoretical basis for the use of the nursing process in the care of the clients with respiratory, cardiovascular, and musculoskeletal dysfunction; integrate the nursing process to provide comprehensive care for select clients, families, and groups within the community for clients with respiratory, cardiovascular, and musculoskeletal dysfunction.

Teaching strategies include lecture, discussion and simulation laboratory and clinical experiences. The course is limited to 2NURS majors, is taught one time per academic year and clinical sections are limited to 8-10 students.

General Education: None
Diversity: None
Bachelor of Arts: None

Nursing (NURS)

NURS 200W Understanding and Applying Nursing Research (3) Introduction to methods and philosophy of empirical inquiry as applied to research in nursing and application to practice.

NURS 200W is the introduction to methods and philosophy of empirical inquiry as applied to research in nursing. The course is a writing intensive course with the goal to help the student write clearly and effectively while learning the basics of nursing research and its application to developing evidence based practice. Upon completion of this course the student will be able to: discuss the roles and responsibilities of the nurse as researcher in the clinical setting; identify criteria for the evaluation of research for applicability to evidence based clinical practice and optimum client care outcomes; introduce basic content relevant to the research process in nursing; identify similarities between the research process and the nursing process; identify the process by which a researchable problem is formulated; provide an opportunity to formulate a problem for study; appraise current issues relevant to nursing research (including cultural diversity issues and ethics of conducting research); write directional hypotheses, null hypotheses, and questions that relate to a given research problem and demonstrate critical thinking; and conduct a research critique and evidence-based practice project on a given topic.

Teaching strategies include lecture, selected readings, discussion, writing exercises, study guide exercises, audio visuals, internet/computer lab, group activities, active learning modules, interactive CD modules and research presentation.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: STAT 200 or STAT 250, NURS 225; or STAT 250 and NURS 390 for NURN major

Nursing (NURS)

NURS 213 Pathophysiology III - Nursing Interventions (5) Care for adults with complex physical and dysfunctional health patterns.

NURS 213 Pathophysiology III - Nursing Interventions (5)

NURS 213 focuses on nursing care of adults with acute and complex health problems related to sensory perceptual and neurological alterations, activity, exercise patterns, nutritional metabolic patterns, urinary patterns, and skin integrity. The emphasis is on enhancing critical thinking skills necessary for making sound nursing judgments for clients with complex health problems. Nursing strategies developed by the student consider the developmental stage, psychosocial needs, cultural sensitivity, and the environment. Upon completion of the course, the student will be able to meet the following course objectives: evaluate the wellness-illness status of the individual, family, and groups within the community; modify physical, personal, social and group factors that contribute to safe, therapeutic care for select clients, families, and groups within the community; support optimal levels of wellness of individuals, families, and groups within the community in relationship to sensory perceptual alterations, activity – exercise patterns, nutritional metabolic patterns, urinary patterns, and skin integrity; integrate concepts related to the role of the associate degree nurse as provider of care, manager of care, and member within the discipline of nursing in relationship to sensory perceptual alterations, activity – exercise patterns, nutritional metabolic patterns, urinary patterns, and skin integrity; value the nursing process as a means of providing a comprehensive plan of care for select clients, families, and groups within the community in relationship to alterations in sensory perceptual patterns, activity – exercise patterns, nutritional metabolic patterns, urinary patterns, and skin integrity. The course is limited to 2NURS majors, is taught one time per academic year and clinical sections are limited to 8-10 students.

Nursing (NURS)

NURS 216 Clinical Immersion II: Introduction to Concepts of Leadership (2) Clinical immersion course focusing on patient care and clinical seminars to develop leadership and clinical competencies.

NURS 216 Clinical Immersion II: Introduction to Concepts of Leadership (2)

NURS 216 is designed as a capstone clinical course to develop the nursing students’ skills in leadership and the management of the delivery of patient care. Students will be placed in clinical settings where they will practice and develop their assessment skills, clinical judgment, and nursing interventions for multiple patient assignments. In addition, students will explore introductory concepts of leadership and management of patient care that will develop their clinical practice in the professional role of the registered nurse. Concepts that will be explored include - advocacy, nursing code of ethics, standards of practice; patient safety, prioritization, managing time, delegation, and supervising care; communication, collaboration, conflict; disaster management, disease management, patient rights and advanced directives; and professional nursing as a career. Teaching strategies include laboratory simulation and clinical immersion. The course is limited to 2NURS majors; is taught one time per academic year; and has clinical sections limited to 8-10 students.

General Education: None

**NURS 214W Nursing Care of Clients with Psychiatric/Mental Health Disorders (3)** Emphasis on care of adults with emotional or dysfunctional mental health patterns.

**NURS 214W Nursing Care of Clients with Psychiatric/Mental Health Disorders (3)**

NURS 214W focuses on applying the principles and concepts of nursing in the care of adults with emotional and dysfunctional mental health patterns. Students will explore the social, cultural and legal issues that influence the care of the mentally ill. Emphasis is placed on exploring acute and chronic mental health disorders and interventions that apply use of therapeutic relationships and selected interventions for mental health crisis. Upon completion of the course, the student will be able to meet the following course objectives: evaluate the wellness-illness status of the individual, family, and groups within the community, in relationship to life-span development, complex medical-surgical and mental health needs, communications, relationships, adaptation and diversity in relation to psychiatric nursing; modify physical, personal, social and group factors that contribute to safe, therapeutic care for select clients, families, and groups within the community in relation to psychiatric nursing; support optimal levels of wellness of individuals, families, and groups within the community in relation to psychiatric nursing; integrate concepts related to the role of the associate degree nurse as provider of care, manager of care, and member within the discipline of nursing; relate interpreted research findings in relation to psychiatric nursing practice situations; value the nursing process as a means of providing a comprehensive plan of care for select clients, families, and groups within the community in relation to psychiatric nursing. Teaching strategies include lecture, discussion and laboratory simulations and clinical experiences. The course is limited to 2NURS majors, is taught one time per academic year and has clinical sections of 8-10 students.

General Education: None
Diversity: None
Effective: Summer 2011
Prerequisite: NURS 212, PSYCH 100

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 225 Pathophysiology (3) Designed to explore the illness component of health with emphasis on the pathophysiological and psychosocial aspects.

NURS 225 Pathophysiology (3)

NURS 225 is designed to explore the illness component of health, with emphasis on the pathophysiological and psychosocial aspects. The required 3-credit course is a foundational course for all succeeding nursing courses. Upon completion of this course, the student will be able to identify knowledge from nursing and contributing disciplines as a foundation for the understanding of illness; describe selected theories of stress and adaptation; identify basic pathophysiological and psychosocial aspects of illness; relate common manifestations of illness to the underlying pathophysiological and psychosocial processes; identify physical environmental factors associated with the development of illness; recognize the significance of research to the evidence base of nursing practice related to illness; recognize the different pathological changes related to human variation and lifespan. Teaching strategies include lecture, audiovisual, case studies/discussion. Enrollment is limited to sophomore level nursing students. The course is offered each spring semester and successful completion is required prior to advancing to the Junior level nursing courses.

General Education: None

Nursing (NURS)

NURS 230 Introduction to the Fundamentals of Nursing (4) Introduction to the nursing process, clinical competencies and psychosocial skills.

NURS 230 Incorporates the analysis of the nursing process and introduction to clinical competencies and psychosocial skills. Students demonstrate beginning skills in utilizing the nursing process in the clinical setting to meet basic physical and psychosocial individual client needs. Upon completion of the course, students will be able to describe the characteristics of each step of the nursing process; demonstrate beginning skills in utilizing the nursing process in the clinical setting to meet basic physical and psychosocial individual client needs; demonstrate safe and competent performance of basic psychomotor nursing skills; demonstrate the ability to practice the principles of health and safety; perform basic interviewing techniques in collecting health status data; demonstrate communication skills that enable the student to establish appropriate interpersonal relationships; recognize variables influencing health status; recognize the psychosocial needs of individuals including basic needs related to loss, grief and the death experience; demonstrate a personal professional philosophy which addresses the individuality, dignity, values, beliefs, and culture of all clients; recognize the significance of evidence based practice as the basis for the use of the nursing process; recognize the importance of health teaching and health promotion across the life span; identify purposes and functions of appropriate community resources. Teaching strategies include lecture, discussion, audiovisuals, clinical experience, simulation laboratory demonstration and practice, self-learning medication and math mathematics packet. The course is offered each spring semester with an enrollment of approximately 120 nursing students divided into clinical sections limited to 10 students each.

Nursing (NURS)

NURS 250 (US) Professional Role Dev I: Intro to Professional Issues in Nursing Practice and Nursing Informatics (2)
Introduction to professional nursing practice and health-related issues emphasizing application of nursing informatics.

NURS 250 Professional Role Dev I: Intro to Professional Issues in Nursing Practice and Nursing Informatics (2) (US)

NURS 250 is the first course in the baccalaureate nursing program and introduces the students to the profession of nursing, the science of nursing and the use of information technology in health care. Designed to explore the wellness component of health and the role that informatics plays in the planning and delivery of health care. Upon completion of the course, the student will be able to meet the following course objectives: identify concepts of health and wellness that contribute to a foundation for nursing practice; discuss the influence of diversity on health care delivery systems and utilization of services; identify the roles of the professional nurse in the delivery of health care to patients, families, communities and populations; define elements that contribute to professional, evidence-based nursing practice; describe nursing theory and its relationship to the implementation of the nursing process; describe nursing informatics and its applications in the planning and delivery of health care; demonstrate beginning competency in utilizing information technology/nursing informatics in selected areas of nursing practice (e.g. research, patient care); apply concepts of ethical and legal considerations to the use of information technology/nursing informatics in health care. The concepts of diversity and cultural competence are emphasized and integrated within each major topic discussed. Teaching strategies emphasize inquiry-based learning, competency in informatics and promote critical thinking and include lecture, selected readings, exploration of internet sites on health and nursing, case studies, small group activities, group discussions, audiovisuals, role playing, journaling, self-reflection, and field trips. Enrollment is limited to sophomore-level nursing students. The course is offered fall semester.

General Education: None
Diversity: US
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: BIOL 129, BIOL 141

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 251 Health Assessment (3) Designed to broaden the student's knowledge and skills in health assessment and physical examination across the lifespan.

NURS 251 Health Assessment (3)

NURS 251 is designed to broaden the student’s knowledge and skills in health assessment. The course enables the student to learn the methods of interviewing patients for completing a health history and the tools and techniques necessary to conduct a physical examination. Upon completion of this course, the student will be able to identify psychosocial, cultural and developmental factors affecting the health assessment process; demonstrate appropriate communication and interviewing techniques (including the use of new technology) with clients of all ages to facilitate the health assessment; demonstrate the ability to obtain a holistic, systematic and comprehensive health history and assessment; promote an environment of safety and caring to maximize client care outcomes; participate in education and activities that would promote cultural competency in nursing assessment; document the health history and current health status and the physical exam according to accepted standards; demonstrate competency in the use of inspection, palpation, percussion and auscultation when performing physical examination; demonstrate the ability to recognize and interpret signs of normal and abnormal health assessment findings; demonstrate critical thinking in the analysis of physical findings; demonstrate the ability to assess risk and promote security and safety in the clinical environment; recognize and document health assessment variations in clients throughout the life span. Teaching strategies include lecture, discussion, demonstration, hands-on practice, audiovisuals, simulation laboratory experiences. NURS 251 is the first required clinical course; is offered each fall semester; and is limited to nursing students. Clinical experience with sections of 14 students is conducted in the Simulation Laboratory where students receive the individualized attention to facilitate learning the techniques of physical assessment. Annual enrollment is approximately 120 students who must successfully complete the course to progress in the nursing program.

NURS 300H Honors Seminar in Nursing (3-12) Seminar activities on selected topics in nursing.

NURS 300H Honors Seminar in Nursing (3-12)

NURS 300H is an honors seminar course designed to follow the introduction to nursing research course for honor students only. Each class session focuses on a different element of the honors thesis proposal. Objectives for the course include: discussion of the role of health care research in the development of disciplinary knowledge; evaluation of researchable problems generated from clinical practice and existing literature; critiquing proposals for clinical studies; describing the ethical issues involved in clinical research, with emphasis on investigator responsibilities and participant’s rights; discussing selected research designs used for clinical research; analyzing opportunities for replication of clinical studies; critiquing sampling techniques used in clinical research; and analyzing strengths and weaknesses of data collection techniques commonly used in clinical research. The course is taught in the spring semester only and is open only to nursing honor students. Teaching strategies include lecture, student presentations, handouts, individual conferences, and written research consent forms and proposals. Evaluation criteria of the course include a critique, protection of human subject packet preparation, class participation, and at the end of this course, students will be expected to have a fully developed honors thesis proposal. Proposals will be evaluated on how convincing the argument is for the proposed research (literature review and identified knowledge gaps), the logical procession of the thinking, the clarity of the writing, and the significance of the proposed research to nursing.

Nursing (NURS)

NURS 303 Clinical Application of Laboratory Tests (1) A study of the background, meaning, and nursing implications of laboratory test results.

NURS 303 Clinical Application of Laboratory Tests (1)

NURS 303 is a study of the background, meaning, and nursing implications of laboratory test results. It is designed to assist the nursing student in comprehending the patient's laboratory results in a clinical setting. Lab values are correlated to patient's condition and physiology of the disease process. Physical assessment data are compared to the various blood and urine lab test results also. Students are evaluated through written examination and the interpretation of case study scenarios. The course is offered in the spring semester and is open to all nursing students who have completed the introductory nursing course at the 200 level. Enrollment is not limited. The course objectives follow.

Upon completion of this course, the student will be able to:

a. Identify important clinical implications associated with a wide variety of blood and urine tests.

b. Correlate lab data with physical assessment findings and other indicators of patient status.

c. Recognize constellations of changes that may precede deterioration in clinical status.

d. Discriminate between changes in lab values that require immediate reporting to the physician and those changes that do not require immediate reporting.

e. Synthesize laboratory test results with assessment findings and pathophysiology and identify appropriate nursing actions.

General Education: None

Nursing (NURS)

NURS 301 Nursing Care of the Adult Client Requiring Medical-Surgical Intervention (4) Therapeutic nursing care of the adult client in a variety of primarily medical-surgical settings.

NURS 301 Nursing Care of the Adult Client Requiring Medical-Surgical Intervention (4)

NURS 301 focuses on nursing care of adult client requiring medical-surgical intervention including. The course is placed in the junior year and is considered a beginning level medical-surgical course. Upon completion of this course, the student will be able to assess risks and promote the health and safety of the adult client throughout the lifespan; formulate nursing actions that are based on scientific principles and concepts from contributing disciplines in caring for the adult client to maximize outcomes; recognize pathophysiological and pharmacological aspects related to the nursing care of the adult medical surgical client; recognize the impact of stress on the adult client to incorporate health promotional and health educational activities; demonstrate the ability to communicate effectively across the health care delivery system; promote factors that create a culture of safety and caring for the adult medical-surgical client; utilize assessment data and technology to plan, implement and evaluate interventions specific to the health of the adult client; practice legal, ethical and professional accountability in the delivery of care to the adult client; demonstrate the ability to practice in a holistic, culturally competent and caring manner; demonstrate the ability to utilize evidence based practice and technology to assess and critically respond to the needs of the adult client; demonstrate with guidance the role of the professional nurse in caring for the adult client. Teaching strategies include lectures, discussions, audiovisuals, clinical experiences, and simulation laboratory. Clinical sections of 8-10 students spend 90 hours (2 credits) caring for medical surgical adult clients. Enrollment is approximately 120 nursing students split between University Park and Hershey Medical Center Campus and is offered fall semester of the junior year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: NURS 225, NURS 230

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 310 Therapeutic Nursing Care of the Older Adult Client in a Variety of Settings (3) Nursing concerns and intervention in promoting the health of the older adult.

NURS 310 focuses on nursing concerns and interventions in promoting the health of older clients. Upon completion of the course, the student will be able to utilize knowledge about aging from nursing and contributing disciplines as a foundation for nursing practice with the older adult client; recognize pathophysiological and pharmacological aspects related to the nursing care of the older adult client; demonstrate progressive development of communication skills including technology which supports the health care needs of the older adult client; promote factors that create a culture of safety and caring for the older adult client; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the health of the older adult client; evaluate nursing care in a variety of settings to meet the health needs of the older adult client and promote healthy lifestyles; communicate pertinent client information, plan of care, and evaluation of goals to staff, instructors and other members of the health team; apply evidence based practice to maximize client outcomes in health promotional and educational activities for the older adult client; demonstrate with guidance the role of the professional nurse in caring for the older adult client; participate in activities that advance the personal and professional development, cultural competency in the professional specialty of gerontological nursing; practice legal, ethical and professional accountability in the delivery of care to the older adult client; recognize the importance of interdisciplinary care in meeting the bio-psycho-social needs of patients and families receiving end-of-life care. Teaching strategies include lecture, discussion, hands-on clinical care and simulation laboratory experiences. Clinical sections of 8-10 students spend 45 hours caring for clients in nursing homes and community settings with the focus on environmental assessment, individual health teaching and group health teaching. The course is offered fall semester and enrollment is approximately 120 nursing student (60 at UP and 60 at HMC).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: NURS 225, NURS 230

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 306 Nursing Care of Children and Adolescents (3) Common health problems and nursing intervention for children and adolescents.

NURS 306 Nursing Care of Children and Adolescents (3)

NURS 306 focuses on common health problems and nursing intervention for children and adolescents. Upon completion of this course, the student will be able to formulate nursing actions that are based on scientific principles and concepts from contributing disciplines in caring for children and adolescents to maximize client care outcomes; develop interpersonal skills in responding in a humanistic manner to the unique needs of children, adolescents, and their families; recognize pathophysiological and pharmacological aspects related to the nursing care of the adult medical surgical client; assess the health needs of diverse populations of children and adolescents based on an understanding of the developmental, psychosocial, environmental, and cultural variables with an emphasis on health promotion; evaluate nursing care in a variety of settings to meet the health needs of children of various ages; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the health care needs relevant to the characteristics of the child and adolescent client in interaction with the personal and suprapersonal environments; evaluate nursing care in a variety of settings to meet the health needs of children of various ages and promote healthy lifestyles; collaborate with colleagues in nursing and other health professions to promote the well being of children and adolescents in a variety of settings including the community; relate relevant research findings to child health nursing practice; practice legal, ethical and professional accountability in the delivery of child health care; participate in activities that advance personal and professional development, cultural competency, and the professional specialty of pediatric nursing and promote factors that create a culture of safety and caring for children and adolescents. Teaching strategies include lecture, discussion, audiovisuals, hands-on clinical care, laboratory simulation experiences. Emphasis is placed on delivery of safe and competent nursing care. Clinical sections of 8-10 students spend 45 hours caring for child/adolescent clients in a variety of settings (clinics, day care centers, elementary schools, and hospitals). Enrollment is approximately 120 nursing students (split between UP and HMC) and the course is offered each spring semester of the junior year.

General Education: None
Diversity: None
Bachelor of Arts: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 305 Introduction to Pharmacological Concepts (3) Study of basic concepts of pharmacology and relevant nursing implications.

NURS 305 Introduction to Pharmacological Concepts (3)

NURS 305 is the introduction to pharmacological concepts and identifies the pharmacodynamics of major classifications of drugs. Prototypes or original drug models from which subsequent types arise are summarized. This course is closely linked to pathophysiology (a prerequisite) as most medications are administered based on a pathophysiologic condition. Pharmacologic principles covered in the course have practical application for students administering medications to clients in the clinical setting during the junior and senior years. Upon completion of this course, the student will be able to identify the measures taken in the United States to ensure drug safety; describe the process of drug development and evaluation; describe the methods of drug standardization; differentiate official and unofficial drug information sources; recognize the legal aspects and nursing responsibilities relative to the administration of drugs to ensure client safety; identify the pharmacodynamics of major classifications of drugs; recognize characteristics and nursing implications of the various types of pharmaceutical preparations and identify research related to pharmacology which influences nursing practice. Teaching strategies include videos, lectures, handouts and power point slides. Enrollment is limited to junior level nursing students or special permission from the instructor for non-nursing majors. The course is offered yearly during the fall semester.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: NURS 225, NURS 230 ; or approval of program
Concurrent: NURS 301 NURS 310

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 350 Professional Role Development II: Ethics, Legal and Genetic Issues (2) The study of the interaction of ethical, legal, and genetic concepts as they apply to current health care practice.

NURS 350 Professional Role Development II: Ethics, Legal and Genetic Issues (2)

NURS 350 is the second of three professional role development courses and addresses the interaction of ethical, legal and genetic concepts as they apply to current health care practice. Upon completion of the course the student will be able to define the fundamental ethical theories; define and integrate into evidence based practice the basic ethical concepts as they relate to nursing; state the American Nurses’ Association Code of Ethics for Nurses; demonstrate ethical behaviors such as honesty, integrity, responsibility, and dependability in clinical practice and everyday life; define and describe the concepts of standards of care and scope of practice; analyze nurse practice acts as they pertain to licensure and scope of practice; define the concepts of negligence versus malpractice; define and distinguish between the concepts of informed consent, patient self-determination, right of refusal, and advance directives (such as living wills, durable power of attorney, and do not resuscitate orders); analyze the role of advocacy from an ethical and legal perspective; communicate effectively (including the use of new technologies) with patients and families regarding legal, ethical, and genetic issues; describe the concept of confidentiality from ethical and legal perspectives; identify the impact genetics has played in the practice of health care; describe the historical to current research findings in genetics that have or may change health care practice guidelines; identify the role ethics, legal issues, and genetics plays in providing health care to culturally sensitive populations; analyze and discuss historical and current biomedical dilemmas utilizing various ethical, legal and genetic perspectives. Teaching strategies include lecture, discussion, audiovisuals, small group activities, role-playing and group presentations. The course is offered spring semester and enrollment is limited to nursing majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 320 Nursing Care of the Childbearing Family and Gynecological Client (3) Therapeutic nursing care of the childbearing family and gynecological client.

NURS 320 Nursing Care of the Child Bearing Family and Gynecological Client (3)

NURS 320 focuses on providing therapeutic nursing care of child-bearing family and gynecological client. Upon completion of this course, the student will be able to utilize knowledge from nursing and contributing disciplines related to reproductive health concerns, life events and health alterations of the child bearing family and gynecological client to maximize client care outcomes; recognize pathophysiological and pharmacological aspects related to the nursing care of the child bearing and gynecological client; demonstrate progressive development of communication skills including technology which supports the child bearing family and gynecological client; promote factors that create a culture of safety and caring for the child bearing family and gynecological client; assess the reproductive health of the child bearing family and gynecological client within the context of the developmental process and the personal and suprapersonal environments; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the health of the child bearing family and gynecological client; evaluate nursing care in a variety of settings to meet the health needs of the child bearing family and promote healthy lifestyles; communicate pertinent client information, plan of care, and evaluation of goals to staff, instructors and other members of the health team; apply evidence based practice to maximize client outcomes in health promotional and educational activities for the child bearing family and gynecological client; demonstrate with guidance the role of the professional nurse in caring for child bearing families and gynecological client; participate in activities that advance the personal and professional development and cultural competency in the professional specialty of obstetric and gynecological nursing; practice legal, ethical and professional accountability in the delivery of care to the child bearing family and gynecological patient. Teaching strategies include lecture, clinical experiences and laboratory simulation, discussion, post clinical conferences, audiovisuals-slides and case studies. The course is offered spring semester of the junior year with an approximate enrollment of 120 nursing students (split between UP and HMC) and with clinical sections limited to 10 students per section.

**NURS 390 (US) Transition and the Professional Nursing Role (3)** Transition to baccalaureate education and professional nursing practice, emphasizing leadership, management, and issues influencing nursing education and practice.

**NURS 390 Transition and the Professional Nursing Role (3) (US)**

NURS 390 is the first nursing course that the registered nurse (RN) student completes. The course's intent is to set the groundwork for transition of the RN to baccalaureate education and professional nursing practice. With the emphasis being on leadership, management, and issues influencing nursing education and practice, the RN has the foundation on which to build nursing expertise as nursing courses progress. The course prerequisite is a current and valid RN license. Teaching strategies include: lecture, discussion, audiovisuals, self-assessment, reflective analysis, critical thinking/problem solving, computer assignments and active/collaborative learning. Evaluation of the course is by grading of written assignments, presentations, and testing. The course is offered in fall, spring or summer semesters of the junior year with a projected enrollment of 10 - 15 students, and is a prerequisite to other nursing courses. Upon completion of this course, the student will be able to: 1. Explain the processes inherent in successful transition to the role of the baccalaureate prepared nurse. 2. Analyze the influences that impact role development and nursing practice, especially self-regulation and accountability. 3. Appraise the health care environment as it relates to nursing roles and nursing practice. 4. Measure the impact of nursing theory and research on baccalaureate level nursing practice. 5. Evaluate the importance of nursing research to nursing practice and the legislative arena. 6. Critically analyze issues that influence nursing education and practice today and in the future.

Nursing (NURS)

NURS 404 Cardiac Dysrhythmias: Interpretation, Treatment, and Nursing Management (1) An introductory course with a focus on dysrhythmia recognition and interpretation of abnormal 12-lead electrocardiograms (EKG, ECG).

NURS 404 Cardiac Dysrhythmias: Interpretation, Treatment, and Nursing Management

NURS 404 (Cardiac Dysrhythmias: Interpretation, Treatment, and Nursing Management) is an introductory course in dysrhythmia recognition and interpretation of normal and abnormal rhythm strips and 12-lead electrocardiograms. The course involves integration of electrophysiology principles, anatomy, physiology, and arrhythmogenesis in interpretation of dysrhythmias. The diagnosis, medical treatment, and nursing management will be incorporated through case study analysis. Evaluation of course content will be done through exams, in class worksheets, and case study analysis. The class is open to nursing and non-nursing majors desiring introductory understanding of cardiac dysrhythmias. NURS 404 is a good course for nursing majors interested in critical care and non-nursing majors interested in emergency medical services associated with any major (e.g., Kinesiology). The class is offered fall and/or spring semester with enrollment limited (20 students) to allow interactive hands-on interpretation of dysrhythmias.

General Education: None

Nursing (NURS)

NURS 403 School Health and Emergency Care of Children and Adolescents (3) Techniques for higher-level care for school health and emergency situations and application-based education.

NURS 403 School Health and Emergency Care of Children and Adolescents (3)

This course is a part of the school nurse series and will provide participants with advanced techniques for school health professionals that respond to health and emergency situations. The topics covered will include abdominal, genitourinary, head, musculoskeletal, and sports-related injuries. Students also will review shock, respiratory, neurologic, psychological and behavioral emergencies, and a wide array of issues facing students with special needs. Additionally, the participant will review disaster planning, preparation, and response activities. The course will review major medical and accidental situations facing the school nurse including the inter-agency coordination with emergency response systems and community entities. Students will learn what to include in a report for the communication center and emergency medical services. Skills stations for orthopedic injuries, trauma, and medical situations will allow students to practice skills and receive immediate feedback. Students will participate in application based education that utilizes case studies to pull the concepts together. Students will be asked to provide return demonstration for skills reviewed in this course.

General Education: None

Nursing (NURS)

NURS 405A Nursing Care of the Adult Client with Complex Health Problems: Part A (4) In-depth study of care of patients with acute and complex health problems, utilizing evidence based practice.

NURS 405A - Nursing Care of the Adult Client with Complex Health Problems: Part A (4)

NURS 405A focuses on nursing care of adult clients with acute and complex health problems related to all major systems of the body. Upon completion of this course, the student will be able to synthesize knowledge from nursing and contributing discipline to maximize client care outcomes; recognize pathophysiological and pharmacological aspects related to the nursing care of the adult client; demonstrate the ability to communicate effectively including the use of technology with patients, families and the health care team; promote factors that create a culture of safety and caring for the adult client; demonstrate the ability to perform a comprehensive and systematic assessment and take appropriate nursing actions for the client with complex health problems; collaborate with colleagues from nursing and related disciplines using empirical and theoretical resources when defining nursing care priorities and determining nursing actions; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the complex health problems of the adult client; participate in activities that advance the personal and professional developmental and cultural competency in the professional specialty of adult medical-surgical nursing; practice legal, ethical and professional accountability in the delivery of care to the adult medical-surgical client; apply evidence based practice to maximize client outcomes in health promotional and educational activities for the complex health needs of the adult client; demonstrate current and relevant knowledge of the social, health, behavioral and psychological sciences that can be applied to nursing practice for the adult client; demonstrate increasing self direction and confidence in providing nursing care for the adult client with complex health needs; demonstrate the role of professional nurse as a client advocate; demonstrate the ability to assess risk and actively promote the well being, safety, and security (patients and coworkers) in the work environment; demonstrate the ability with guidance to lead and coordinate a team, delegating care appropriately and safely; demonstrate the ability to respond appropriately to the emotional, psychological and spiritual needs of the adult client with complex care needs. 

Teaching strategies include lecture, discussion, laboratory simulation and clinical experiences. Evaluation methods include examinations, scholarly papers, simulation laboratory experiences, preclinical preparatory written work, and mid-course and final clinical performance evaluations.

General Education: None

Prerequisite: NURS 350

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 405B Nursing Care of the Adult Client with Complex Health Problems: Part B (4) In-depth study of care of patients with acute and complex health problems, utilizing evidence based practice.

NURS 405B - Nursing Care of the Adult Client with Complex Health Problems: Part B (4)

NURS 405B focuses on nursing care of adult clients with acute and complex health problems related to all major systems of the body. The emphasis is on enhancing critical thinking skills necessary for making sound nursing judgments and the demonstration of self-direction in providing nursing care for clients with complex medical surgical problems. Upon completion of this course, the student will be able to: Synthesize knowledge from nursing and contributing discipline to maximize client care outcomes; Recognize pathophysiological and pharmacological aspects related to the nursing care of the adult client; Demonstrate the ability to communicate effectively including the use of technology with patients, families and the health care team; Promote factors that create a culture of safety and caring for the adult client; Demonstrate the ability to perform a comprehensive and systematic assessment and take appropriate nursing actions for the client with complex health problems; Collaborate with colleagues from nursing and related disciplines using empirical and theoretical resources when defining nursing care priorities and determining nursing actions; Utilize assessment data and technology to plan, implement, and evaluate interventions specific to the complex health problems of the adult client; Participate in activities that advance the personal and the professional specialty of adult medical-surgical nursing; Practice legal, ethical and professional accountability in the delivery of care to the adult medical-surgical client; Apply evidence based practice to maximize client outcomes in health promotional and educational activities for the complex health needs of the adult client; Demonstrate current and relevant knowledge of the social, health, behavioral and psychological sciences that can be applied to nursing practice for the adult client; Demonstrate increasing self direction and confidence in providing nursing care for the adult client with complex health needs; Demonstrate the role of professional nurse as a client advocate; Demonstrate the ability to assess risk and actively promote the well being, safety, and security (patients and coworkers) in the work environment; Demonstrate the ability with guidance to lead and coordinate a team, delegating care appropriately and safely; Demonstrate the ability to respond appropriately to the emotional, psychological and spiritual needs of the adult client with complex care needs. Teaching strategies include lecture, discussion, laboratory simulation and clinical experiences. The course is offered fall semester with approximately 120 students enrolled (60 at UP and 60 at HMC) with clinical sections limited to 10 students per section.

Nursing (NURS)

NURS 409 Introduction to Forensic Nursing (3) Provides an introduction to the forensic health sciences, forensic nursing, and the nursing role in the scientific investigation of violence.

NURS 409 Introduction to Forensic Nursing (3)

NURS 409 is an elective course describing the role of the nurse in the forensic sciences. It is designed to provide the interested student an in-depth study of nursing forensics and provides an introduction to the forensic health sciences, clinical forensic nursing, and the nursing role in the scientific investigation of violence. NURS 409 describes the principles and philosophy of forensic nursing in acute care and community settings and the roles of the forensic science professional and advanced practice forensic nurse are explored. The students are evaluated through case study interpretation, papers, and written examination. The topics included in NURS 409 require the student to have a basic understanding of nursing skills and the professional role of the nurse, therefore, NURS 409 is placed in the spring semester and all Junior-Senior level nursing students are eligible to enroll for it. Course enrollment is not limited. The course also provides an excellent opportunity for the nursing student to collaborate with Sociology/ Criminal Justice in order to obtain a minor in forensics. The course objectives follow.

Upon completion of this course, the student will be able to:
a. Describe the scope of the practice of the advanced practice forensic health professional.
b. Identify and analyze current forensic science and nursing issues and trends.
c. Identify the role of the advanced practice forensic health professional/ forensic nurse in the holistic care of victims of trauma, perpetrators of human violence, and families of both.
d. Describe the role of the advanced practice forensic nurse in the development of protocols and standards for professional practice.
e. Verbalize the connection between advanced practice theories with forensic nursing content while integrating forensic roles into various advanced practice arenas.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: NURS 250, NURS 225, NURS 230

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
NURS 407 Drugs of Abuse and Mental Health Issues (3) Examines the health care needs across the lifespan of clients who have an alcohol or other drug disorder.

NURS 407 is an elective course which examines the issue of substance abuse in today's society. It looks closely into the health care needs across the lifespan of clients who have an alcohol or other drug disorder in combination with a psychiatric disorder. Pharmacological, behavioral, biological, and sociocultural characteristics, along with factors and patterns of addiction, are discussed and then how these factors and characteristics relate to mental illnesses are further explored. The different classes of habit-forming drugs are covered and various treatment options are examined. The student is evaluated by written examination, research project, and/or community focus logs. This is an elective course placed in the spring semester and available to both nursing and non-nursing students in related fields. The course objectives follow.

Upon completion of this course, the student will be able to:

a. Know the difference between pharmacological and behavioral definitions of addiction.
b. Understand the biological basis of drug action and addiction.
c. Understand the co-morbidity of major mental disorders and drug abuse issues.
d. Understand the sociocultural factors of drug use and abuse.
e. Describe and discuss the main characteristics of alcohol abuse, treatment, and recovery.
f. Describe and discuss the main characteristics of stimulant abuse, treatment and recovery.
g. Describe and discuss the main characteristics of marijuana and nicotine abuse and treatment.
h. Describe and discuss the main characteristics of hallucinogen and inhalant abuse and treatment.
i. Describe and discuss the use and abuse of prescription drugs.
j. Understand the concept of Dual Diagnoses—the simultaneous existence of an alcohol and other drug disorder with a psychiatric disorder.
k. Analyze how the use of drugs by an individual with a mental illness complicates treatment and recovery.

Nursing (NURS)

NURS 408 Clinical Application of Pharmacological Concepts (1) Study of the application of pharmacological concepts to the clinical setting.

NURS 408 Clinical Application of Pharmacological Concepts (1)

NURS 408 is an elective course designed to provide the interested student an in-depth review of pharmacology. The application of pharmacological concepts in relation to the clinical setting is a primary focus of the course. The various drug classes are discussed with emphasis placed on care of the patient while administering different types of medications. Discussion of pharmacological principles and patient care requires knowledge and integration of anatomy, physiology, pathophysiology, and medical and nursing treatments for various disorders. NURS 408 provides an excellent review of medication classes as related to medical condition in preparation of the nursing student taking the NCLEX licensure examination upon graduation. The student is evaluated by written examination and/or case study interpretation. NURS 408 is placed in the spring semester and is open to all nursing students who have successfully completed administering medications in the 300 level nursing courses and are concurrently enrolled in the 400 level nursing courses. Enrollment is not limited in numbers. Course objectives are as follows.

Upon completion of this course, the student will be able to:

a. Categorize commonly used medications by major classifications of drugs.
b. Predict classifications of medications given to specific clinical conditions.
c. Develop patient teaching plans relevant to medication administration.
d. Discuss research related to pharmacology which influences nursing practice.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: NURS 305, NURS 301, NURS 310, NURS 320

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Nursing (NURS)

NURS 417 (US;IL) Family and Community Health Concepts (4) Study of the concepts of family and community based nursing care emphasizing multicultural influences on health practices.

NURS 417 Family and Community Health Concepts (4)
(US;IL)

Upon completion of the course the student will be able to (a) Synthesize knowledge from nursing, public health, family, and community theory as a foundation for culturally congruent community health nursing practice that is sensitive to race, religion, gender, disability and sexual orientation; (b) Utilize the nursing process and principles of primary, secondary and tertiary prevention that are culturally appropriate in the care of community based clients who differ in terms of health beliefs, values, and practices; (c) Develop skill in the use of independent/interdependent nursing actions to deliver care to clients across the life span; (d) Demonstrate the management of client, family, and community care through appropriate use of concepts of leadership, case management and group process; (e) Describe collaboration at the collegial level with nurses and other members of the health care team to provide continuity of care through culturally appropriate communication, consultation, and referral; (f) Use coherent, comprehensive and culturally sensitive communication in oral and written form; (g) Analyze biostatistical/epidemiological data and nursing research findings to improve/enhance the delivery of nursing care to diverse populations in the community; (h) Analyze the impact of culture as a significant influence on the health perceptions, interpretations, and behaviors of diverse groups.

Students will spend 40 hours practicing in a clinical setting. In that setting they will be responsible for assessing, planning, implementing and evaluating the care of families within the context of a community. Students will have the opportunity to analyze the impact of culture on health perceptions, interpretations, and behaviors of diverse groups.

Evaluation methods: Students will be evaluated both theoretically and clinically by use of the following: (a) Guided study of complex family and community health patterns using collaboration case analysis; (b) Case findings and analysis; (c) Direct care to culturally diverse families in the community setting.

Relationship/linkage of course to other courses: This course applies and integrates family and community nursing concepts to culturally diverse clients in the community. It is offered at the senior level and incorporates previously learned theoretical and clinical nursing knowledge with an appreciation for how diversity influences the health care behaviors of families and communities as they relate to the health care system.

Relationship of course to major: This senior level nursing course is one of the components of the Advanced Standing Option. It is a required course that provides students with the opportunity to develop skill in delivery of health services to globally diverse populations across the lifespan. It is also designed to increase the student's knowledge base related to the community based client including relationships, lifestyle and kinship patterns. Lastly, it provides an arena for community health planning for diverse populations.

Special facilities required to teach the course: The clinical arena which will be used to teach this course includes but is not limited to high risk populations in the community, senior or special housing projects, prisons and missions.

Frequency of offering an enrollment: The course will be offered every semester and enrollment varies from 10 to 20 students.

General Education: None
Diversity: US;IL

Nursing (NURS)

NURS 415 (US;IL) Community and Family Health Nursing (4) Therapeutic nursing care and health promotion concepts to families, groups and populations in the community.

NURS 415 Community and Family Health Nursing--Concepts and Applications (4) (US;IL)

NURS 415 US;IL focuses on nursing care of clients in the community and the family. This course allows students to work independently providing and improving health care of population groups within a diverse society. Upon completion of this course, the student will be able to synthesize knowledge from nursing, public health, family, and community theory as a foundation for culturally congruent community health nursing practice; utilize the nursing process and principles of primary, secondary, and tertiary prevention that are culturally appropriate in the care of community based clients who differ in terms of age, developmental stage, health beliefs values and practices; demonstrate interpersonal skills necessary for collaboration with and among culturally diverse consumers, community agencies, health professionals, and health related resources in the community; demonstrate the management and safety of client, family, and community care through appropriate use of concepts of leadership, case management, and group process; demonstrate understanding of epidemiological methods in gathering, analyzing, and utilizing data and be able to apply to diverse populations in the community; use coherent comprehensive, culturally sensitive and age appropriate communication in oral and written form; analyze biostatistical/epidemiological data and nursing evidence-based research findings to improve/enhance the delivery of nursing care to diverse populations in the community; identify recommended health screenings and immunizations and health promotional strategies throughout the life span; analyze the impact of culture as a significant influence on the health perceptions, interpretations, and behaviors of diverse groups; demonstrate the ability to perform comprehensive and risk assessments, to make critical decisions, and to take appropriate nursing actions in the area of community health; demonstrates the ability to practice the principles of health and safety in a caring manner to maximize client care outcomes across the lifespan. Teaching strategies include lecture, audiovisuals, student presentations, discussion, clinical experiences, guest speakers, laboratory simulation and clinical experiences in varied clinical settings where the students are responsible for assessing, planning, implementing, and evaluating the care of families within the context of a community. Students have the opportunity to analyze the impact of culture on health perceptions, interpretations, and behaviors of diverse groups. The course is offered fall and spring semester of the senior year with approximately 120 students (60 at UP and 60 at HMC enrolled in clinical sections limited to 10 students per section.

Nursing (NURS)

**NURS 420 Mental Health Nursing (4)** Emphasizes clinical application of mental health theory in nursing care of patients with acute and chronic mental health problems.

**NURS 420 Mental Health Nursing (4)**

NURS 420 focuses on care of clients experiencing mental health problems and emphasizes the clinical application of mental health theory in nursing care of patients with acute and chronic mental health problems. Upon completion of this course, the student will be able to synthesize knowledge from nursing and the social, health and behavioral sciences to describe the nature of mental adaptations throughout the lifespan; demonstrate effective therapeutic communication skills when dealing with clients, groups and families experiencing maladaptive responses to stress; assess the strengths and weaknesses of the client and family in the context of a group and community environment; demonstrate the ability to perform comprehensive and risk assessments, to make critical decisions, and to take appropriate nursing actions in the area of psychiatric mental health; utilize the nursing process as related to the Standards of Psychiatric and Mental Health Nursing practice; collaborate with nursing colleagues, mental health professionals and consumers in the practice of psychiatric mental health nursing; analyze individual and societal forces that effect nursing research and evidence based practice in the area of psychiatric mental health nursing; demonstrate the knowledge of self needed to be an effective therapeutic agent and a client advocate; demonstrate culturally competency and the ability to provide holistic psychiatric mental health nursing care; perform the principles of psychiatric mental health and safety in a caring, nonjudgmental manner; demonstrate a current and relevant knowledge base of legal and ethical issues that can be applied to psychiatric mental health nursing; identify and support mental health promotion and mental health educational activities to maximize client care outcomes and evaluate psychiatric mental health nursing as a professional specialty. Teaching Strategies include lecture, process recordings, discussion, selected readings, audiovisuals, laboratory simulation and clinical experiences. NURS 420 is offered fall and spring semesters with an annual enrollment of approximately 120 students (60 at UP and 60 at HMC) with clinical sections limited to 10 students each.

Nursing (NURS)

NURS 430 Organization and Administration for the Nurse Manager (3) Introduction to organizational theory and principles of practice in the administration of nursing services and patient care.

NURS 430 Organization and Administration for the Nurse Manager (3)
NURS 430 is the first of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 430 includes a study of the history of American management and the influences on management styles and approaches. Topics covered in the course includes: Leadership theory, Change theory, Health care organizational structure and functions, Legal and Ethical issues, Nursing Management structure, function, and roles, Power and politics; Communication; and Nursing care delivery systems. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examination, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

General Education: None

Nursing (NURS)

NURS 431 Data Management for Nurse Managers (3) Analysis of information systems to manage nursing service organizations; includes financial management, the budgeting processes, and productivity measurement.

NURS 431 Data Management for Nurse Managers (3)

NURS 431 is the second of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 431 includes a study of information systems and financial aspects of managing health care organizations and patient care delivery. Topics covered in the course include: Information systems in health care, Electronic medical record, Security and portability of health care information. Topics related to budget and finance include, operating and capital budget management, nurse staffing systems and productivity. Lab activities enable students to develop proficiencies with spreadsheet software. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examination, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

Nursing (NURS)

NURS 433 Seminar for Nurse Managers (3) Course focuses on the application of management principles in the role of the nurse manager.

NURS 433 Seminar for Nurse Managers (3)

NURS 433 is the fourth of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 433 is designed to allow the student to explore issues that challenges individuals in the nurse manager role. Designed with a seminar approach the student will study the following topics: The future of nursing leadership, mentoring, networking, stress management for the nurse manager and avoiding burnout, managing patient care quality and regulatory compliance, and implementing change. Students also complete a field observational study with a nurse manager or nurse executive in a health care organization. It is recommended that students complete at least one of the previous nursing management (NURS 430, NURS 431, NURS 432) courses prior to enrolling in this course. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examinations, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

Nursing (NURS)

NURS 432 Nursing Management of Human Resources (3) Human resource management and related factors in nursing service organizations.

NURS 432 Nursing Management of Human Resources (3)
NURS 432 is the third of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 432 includes a study of human resource management with an emphasis on application to nursing and health care organizations. Topics covered in the course include: Employment laws, hiring, termination and managing staff turnover, conflict management, staff development and productivity, organized labor and unions, the impaired nurse, and discussion of nursing standards, ethics, delegation and the nursing shortage. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examinations, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

Nursing (NURS)

NURS 450B Professional Role Development III: Clinical Capstone (3) Senior level clinical capstone course that emphasizes the integration and application of theory and evidence based practice.

NURS 450B Professional Role Development III: Clinical Capstone (3)

NURS 450B is the clinical capstone course for the Nursing Program. Students will spend 135 hours practicing in a clinical setting, where they will be responsible for assessing, planning, implementing and evaluating the care of clients. Students will have the opportunity to employ management and delegation skills in the care of clients. Upon completion of this course, the student will be able to demonstrate the ability to practice in a holistic, culturally competent and caring manner; demonstrate the ability to practice within the context of professional, ethical, regulatory and legal codes of nursing practice; demonstrate the ability to promote, support, and facilitate the health, well being, and comfort of vulnerable populations so as to enhance the quality of service delivery; demonstrate the ability to perform comprehensive and systematic assessments and take appropriate actions; demonstrate the ability to utilize evidence based practice and modern technologies to assess and respond appropriately to patient needs; utilize nursing skills to provide optimum care and to practice principles of health and safety in a caring, nonjudgmental manner; utilize nursing skills to respond to a person’s needs throughout the life span, i.e. life choices, disability, and end of life issues; demonstrate current and relevant knowledge of the social, health, and behavioral sciences that can be applied to nursing practice; demonstrate current and relevant knowledge of ethical, legal, national, and international policies that can be applied to nursing practice; demonstrate current knowledge of nursing research to provide nursing care that is rigorous and evidence based; demonstrate the ability to communicate effectively (including the use of technology) with patients, families, social groups and the health care team; identify, manages and support health promotion and health educational activities to optimize patient safety and well being; demonstrate the ability to lead and coordinate a team, delegating care appropriately; demonstrate the ability to assess risk and actively promote the well being, safety, and security (patients and coworkers) in the work environment; demonstrate increased confidence in the nurse generalist role and in the value of life-long learning.

Teaching strategies include laboratory simulation and clinical experiences and pre and post clinical seminars. The course is offered each spring semester and is a one on one preceptor based clinical experience.

Nursing (NURS)

NURS 440 Trauma/Critical Care Nursing (3) Focuses on the impact of and the nursing care of persons experiencing acute trauma and/or critical illness.

NURS 440 Trauma/Critical Care Nursing (3)
NURS 440 is designed as an introductory study of the impact of like-threatening physical problems across the life-span utilizing the nursing process. The course focuses on problems encountered in the hospital critical care setting and is a nursing elective. Upon completion of this course, the student will be able to meet the following objectives: Integrate knowledge from nursing and related disciplines into case study format for persons with life-threatening illnesses; Explore practice, ethical, legal and interpersonal dimensions within the critical care setting. Identify problems for nursing critical care research. Study the most common illnesses in the critical care setting for the neurological, respiratory, cardiac, renal, gastro-intestinal, trauma and multiple system organ failure systems. Students incorporate academic learning with some case study review to simulate the critical care setting. Success in the course is evaluated by in-class examinations, assigned research readings, and written critiques. NURS 440 is offered in the spring semester only, with an average enrollment of 40 students.

General Education: None
Diversity: None
Bachelor of Arts: None

NURS 459 Legal and Professional Issues in School Nursing (3) Legal and professional issues of school nurses and delivery impact of health care in school environment.

NURS 459 Legal and Professional Issues in School Nursing (3)

This course is part of the school nurse series. This course encompasses the synthesis and analysis of the legal and professional issues faced by school nurses and other professionals in the school setting. Strategies on the legal and professional delivery of health care in the school environment are integral to the course. Objectives include: explore legal and ethical issues influencing school nursing practice; analyze attributes of the legal and professional issues faced by school nurses and other professionals; develop strategies for addressing school nursing, interdisciplinary or health care issues; analyze issues that impact the resolution of special problems in school-age populations; identify resources and management strategies available to the school nurse and other professionals in meeting the needs of at risk school-aged populations.

NURS 461 Perioperative Nursing (4)

Comprehensive introduction regarding fundamental principles and practices of the Operating Room Nurse, when managing the care of the surgical patient. Upon completion of this course, the student will be able to define the roles and responsibilities of the circulating and scrub nurse and the other members of the surgical team; practice aseptic technique as related to the roles of the Perioperative Nurse; integrate knowledge from the sciences to function in a Perioperative setting with the specialized environment, procedures and equipment; discuss types of anesthesia and medications used in the Perioperative period; utilize the nursing process in meeting the physical, psychological, and educational care of the surgical client; discuss the various methods of sterilization related to the care of the surgical patient; recognize the complexity of the Operating Room environment related to patient safety; identify the legal and ethical responsibilities of the professional nurse related to the rights of the surgical patient.

Course topics will specifically cover the roles and responsibilities of the perioperative nurses and the Operating Room team, aseptic technique, specialized environment, procedures and equipment, communication, documentation and legal issues, safety, medications an anesthesia, and specialty areas of the Operating Room. Since the course is a clinical preparation course for RNs, the clinical takes place in the Operating Room.

Teaching strategies may include seminar/discussion, films/videos, guest speakers, student presentation. The course may be offered spring, summer or fall semesters.

Nursing (NURS)

NURS 463 Compassionate Counseling for Children/Adolescents Dealing with Dying, Death, Other Life Crises (3)
Compassionate Counseling for Children and Adolescents Dealing with Dying, Death, and Other Life Crises.

NURS 463 Compassionate Counseling for Children/Adolescents Dealing with Dying, Death, Other Life Crises (3)
This course is part of the school nurse series. The school nurse series is anticipated to be offered in the summers throughout PA by Penn State Outreach: Professional and Organizational Development and the School of Nursing as an outreach mission. This course explores the complex issues involving death in today’s world as faced by children and adolescents. Content includes: counseling skills for nurses; child and adolescent development in the understanding of dying, death, and other life crises; exploring dying, death, and crises that are present in the lives of children and adolescents in the modern world; discussions of risks of death in the modern world including suicide, accidents, disasters, violence, war, and communicable diseases; description of death rituals and how societies cope with dying and death; identifying effective strategies to assist children and adolescents in coping with dying, death, and other life crises. The societal and school issues that affect not only an individual student but the milieu of the school and other students, parents, teachers, advisers, and administrators are inherent in the content. This course expands knowledge and interventions for those working with children and adolescents in the school setting. Presentations and examinations compose the evaluative methods.

Nursing (NURS)

NURS 468 Client Education Strategies for Nurses and Other Health Care Providers (3) Explores current and emerging roles of client education in the knowledge era.

NURS 468 Client Education Strategies for Nurses and Other Health Care Providers (3)

This course explores current and emerging roles of client education in the knowledge era. Emphasis is placed on the application of teaching and learning strategies that deliver empowering and engaging health education to promote wellness, prevent health problems, and manage chronic illness. Upon completion of this course, the student will be able to:

- assess the challenges and issues facing nurses and health care providers enacting the role of client educator in the knowledge era;
- explore the promotion of client health at all levels of prevention: primary, secondary, tertiary;
- integrate the client education process for individuals, families, groups, and communities;
- assess learner motivation, readiness, and situational impacts such as psychosocial factors and cultural beliefs that affect the client education process;
- implement sound, effective teaching and learning strategies in selected clinical settings with special populations;
- develop teaching plans using taxonomies of educational objectives;
- select specific teaching strategies and delivery systems, including technology, appropriate for the developmental stage and needs of the learner;
- describe methods for evaluation of teaching;
- identify appropriate communication and documentation of the process and outcomes;
- and list topics in client education which can be further explored through research.

This course may be used as a nursing elective or by nurses or other health care workers to increase knowledge and promote successful health teaching to clients. Continuing education has been the delivery mode, plus it has been offered at other campuses through the school of nursing. The course could be with approximately 20 – 30 students. This course has been run through continuing education last semester.

Nursing (NURS)

NURS 465 Health Concepts for Adults with Complex Health Care Needs (3) In-depth study and application of the theoretical principles and roles of adult clients and families with complex healthcare needs.

NURS 465 Health Concepts for Adults with Complex Health Care Needs (3)

NURS 465 focuses on the application of those concepts that relate to the adult high-risk client, family, or significant other in a complex health care setting. Course prerequisites include Introduction to Computing and Nursing Informatics and Transition and The Professional Nursing Role. The student selects a clinical nursing practice experience related to complex health care of the adult high-risk client and, based on course objectives, develops clinical practice objectives in collaboration with the course faculty. Evaluation of the course is by grading of written assignments and achievement of clinical nursing practice objectives. The course is offered in fall and/or spring semesters of the senior year. Upon completion of this course, the student will be able to: 1. Integrate theory and knowledge of nursing and related disciplines as a basis for professional nursing practice with adult high-risk clients. 2. Demonstrate interpersonal skills to support and guide clients/families/significant others in the selection of appropriate health patterns. 3. Utilize the nursing process to analyze complex adult high-risk situations occurring in acute care, transitional care, and/or community settings. 4. Apply critical thinking skills to clinical nursing practice situations involving the high-risk client/families/significant others. 5. Collaborate with colleagues in the design, implementation, and evaluation of nursing interventions. 6. Demonstrate in the clinical nursing practice setting the role of the professional nurse as case manager, change agent, advocate and researcher with the adult high-risk client/families/significant others. 7. Demonstrate a comprehensive understanding of opportunities for clinical nursing research with the adult high-risk client/families/significant others. 8. Demonstrate nursing practice within the legal and ethical guidelines for professional nursing practice with the adult high-risk client.

Nursing (NURS)

NURS 467 Medication Update and Health Teaching Interventions for School Nurses (1) Study of current pharmacologic concepts, including health teaching, prescribed for acute and chronic conditions commonly encountered in school nursing.

NURS 467 Medication Update and Health Teaching Interventions for School Nurses (1)

The course addresses the current pharmacologic therapies and related health teaching that school nurses commonly encounter in the student population. The most commonly used medications in the school-age student include the following categories: the Respiratory System, the Central Nervous System, the Cardiovascular System, the Digestive System, the Endocrine System, the Dermatologic System, and medications used to treat and prevent infections/infestations. Upon completion of this course, the student will be able to identify the classifications of commonly used medications; discuss the pharmacologic treatment of specific ambulatory pediatric health problems; develop patient teaching plans for students taking medications. Teaching strategies may include lecture, discussion, audiovisuals, and selected readings.

Nursing (NURS)

NURS 492 Emergency Care and Safety (3) A comprehensive first aid course designed to provide knowledge of prehospital emergency care at the First Responder level.

NURS 492 Emergency Care and Safety (3)
NURS 492 is a comprehensive emergency care and safety course that incorporates basic first aid skills and knowledge and advanced topics such as oxygen therapy, hazardous materials, farm/rural incidents, disaster planning, incident command, triage, and mass casualty incidents. The course includes discussion of infectious diseases and the standard precautions utilized by rescuers to prevent the transmission of disease. Critical thinking and decision-making skills are utilized throughout NURS 492 in practical exercises using various scenarios to enhance the rescuers response in emergency situations. Students are evaluated by written examination and practical skill testing. Cards in First Aid/Emergency Care and CPR for the Healthcare Provider/Professional CPR will be issued to the student upon successful completion of the course. NURS 492 is a complimentary course to NURS 203, which is a basic first aid/community CPR general education elective course designed for the non-nursing major who is required to have first aid/CPR certification for their course of study. NURS 492 provides the student an alternative to NURS 203 by providing emergency care at a higher level of training. NURS 492 is an excellent course for nursing students with advanced health care knowledge, community health care providers (i.e., school nurses), and any non-nursing major interested in emergency medical services (i.e., Kinesiology). NURS 492 is offered fall and/or spring semesters and enrollment is limited to 30 students. The course objectives follow.

Upon completion of this course, the student will be able to:
a. Recognize and state signs and symptoms of both non-urgent and life-threatening illnesses and injuries.
b. Demonstrate an ability to treat injuries and illness until Emergency Medical Service (EMS) help arrives by utilizing critical thinking skills to make correct decisions, integrate knowledge and improvise materials as necessary.
c. Demonstrate the correct procedure of CPR for the Adult, Child, and Infant victim of cardiac arrest, including Obstructed Airway.
d. Recognize the special cultural and technical barriers of providing first aid in a rural setting and a farm environment.
e. Demonstrate an awareness of hazardous materials at a first responder level of competency.
f. Demonstrate appropriate triage decisions in single or multiple person accidents.
g. Demonstrate an awareness of primary and secondary prevention of trauma, especially with farming incidents.
h. Demonstrate an awareness of safety by conducting a safety inspection of the home or work place.
i. Design and plan a shelter for victims in the event of a man-made or natural disaster.

Nursing (NURS)

NURS 475 Integrated Concepts in Nursing Practice (3) Project-based capstone course for application of nursing concepts to health promotion/disease prevention in populations.

NURS 475 Integrated Concepts in Nursing Practice (3)

NURS 475 is a project-based capstone clinical course with a focus on the application of nursing concepts. The course is designed to provide opportunity for students to synthesize and apply the art and science of nursing to health promotion and disease prevention in culturally diverse populations in varied clinical settings of the global community. Upon completion of this course, the student will be able to synthesize knowledge from nursing and related sciences for application to evidence based nursing practice; interpret legislative and regulatory processes relevant to the capstone project; collaborate with members of the health team to provide continuity of care through appropriate communication, consultation, and referral; communicate effectively using written, verbal, nonverbal and emerging technology methods; apply biostatistical, epidemiological, and research findings to enhance the delivery of evidence based nursing care; provide evidence based nursing care that contributes to safe and high quality patient outcomes within healthcare Microsystems; participate in the development and implementation of theory-based and a population-focused health promotion project; facilitate change in the healthcare Microsystems affecting the provision of nursing care to diverse populations throughout the lifespan; demonstrate accountability in the delivery of professional nursing care; and integrate the concept of life-long learning into professional nursing practice. Teaching strategies include: seminar discussions, population-based nursing practice project and preceptored nursing practicum. NURS 475 is the final nursing course and contrives to craft future nursing career goals for RN to BS students.

Nutrition (NUTR)

NUTR 100 (GHA) Contemporary Nutrition Concerns (1.5) Interpretation of nutrition principles in relation to contemporary problems in selecting a diet to promote a healthy lifestyle. Students who have received credit for NUTR 151 or NUTR 251 may not schedule this course.

NUTR 100 Contemporary Nutrition Concerns (1) (GHA)

This course will present the basic principles of nutrition so that students may be better prepared to evaluate nutrition related issues in the media and to make informed choices about dietary intakes in order to promote a healthful lifestyle. Information about the several classes of nutrients (proteins, carbohydrates, fat, vitamins, and minerals) and the physiological processes used to digest, absorb, and utilize them is presented and related to such topics as maintenance of ideal body weight, improvement in physical performance, and the role of nutrients in various disease states such as heart disease, cancer, and osteoporosis. Students are instructed in ways to obtain information about food and nutrition through training in reading food labels and accessing quality information from electronic and print media. In order to provide relevance to the individual, each student will collect information about his or her diet by keeping a diet record and will use a software program to compare intakes with dietary recommendations. Several other assignments will allow students to use this information to compare their diets to recommendations for fiber intake, to plan a program to accomplish weight gain or loss, to estimate their energy expenditure and to consider ways they might modify their diet to accomplish some stated goal (e.g. increase iron status or decrease salt intake). Students will be evaluated based on two midterm examinations and a final examination and on the quality of the diet project and the other assignments. Percentage distribution of the grades would likely be: 20% for each of the midterms, 30% for the final, and 30% for the various projects. This course is intended for non-nutrition major students and will fulfill 1.5 credits of the Health and Physical Activity (GHA) requirement of general education. The course is offered each semester, including summer sessions, at University Park. Typical enrollment would be approximately 200 students in each of three sections per semester during regular sessions.

Nutrition (NUTR)

NUTR 251 (GHA) Introductory Principles of Nutrition (3) The nutrients: food sources and physiological functions as related to human growth and well-being throughout life; current nutrition issues. Students who have passed NUTR 151 may not schedule this course.

NUTR 251 Introductory Principles of Nutrition (3) (GHA)
Introductory Principles of Nutrition is a 3-credit course offered on the University Park campus every semester plus summers in multiple sections ranging in size from 100 to 300 students, at locations other than University Park, enrollments are typically less. This course is designed for nutrition majors and non-majors to provide a broad understanding of general principles of nutrition. Concepts covered on most essential nutrients include: digestion, absorption, transport, function, and food sources. Additionally, major health issues related to some nutrients which are of public health concern in the U.S. are discussed in more detail giving insight into cause, treatment and prevention. Of major importance to students’ lives are health and nutrition implication of overweight, heart disease, bone health, and energy balance as affected by diet and physical activity. Lastly, understanding of nutritional needs throughout the life span is introduced, with emphasis on pregnancy, lactation, and infant nutrition. All of these concepts at this introductory level are important for students in the major so that they are prepared for upper division courses. Application of knowledge to personal health is accomplished through a series of 5 to 8 assignments and activities. Students record and analyze their own food intake for three days by using software that is purchased with the text. Students then assess these records using dietary guidelines, nutrition standards, and the food guide pyramid. Students work individually and sometimes in small groups to critically evaluate their food behaviors; then they make decisions to formulate dietary plans which may reduce their risks for chronic diseases later in life. For another assignment, students perform a short assessment of their own weight status as compared to national standards profiling healthy weights. The last assignment has them design a nutritionally sound diet with their particular food preferences and habits in mind. The course is evaluated through multiple choice exams, having some questions designed as case studies and involving problem solving. Assignments include the diet and weight status self-assessment process described above, which includes some short essays. An additional assignment on the use of internet sites for reliable nutrition information gathering is required. These assignments promote active learning, analyzing and evaluating, making critical judgments, and using current technologies. Approximately 75-80% of the points are associated with the examinations; the balance of the points are from the various projects.

NUTR 386 Managing Quality in Food and Nutrition Services (3) Application and integration of management theory to quality attainment in food and nutrition services.

NUTR 386 Managing Quality in Food and Nutrition Services (3)
This course is designed to foster the integration of management principles in the profession of dietetics. Emphasis is placed on quality attainment, fiscal decision making/problem solving, strategic planning, and marketing of dietetic services. The three domains necessary for dietetic students to master include clinical nutrition, community nutrition, as well as management. Although each of these domains have very unique characteristics skills learned in this course are transferrable to all areas of dietetics. In this capstone management course students will be able to:
• Apply quality attainment and control principles in food and nutrition services.
• Develop personal and professional perceptions of effective leadership in dietetics services.
• Determine costs of services and operations
• Interpret financial data with emphasis on identifying and correcting problematic areas in health care settings.
• Develop several types of budgets, including operating, capital, and flexible.
• Demonstrated the importance of the strategic planning process, including vision and mission statement writing.
• Develop a basic knowledge of principles and skills necessary in human resource management and their unique application in food and nutrition services.
• Acquire an understanding of the service marketing concepts applied in a variety of nutrition and food settings.
• Demonstrate an appreciation of the importance of kitchen equipment layout and design and their relationship to efficient production and service in delivery of nutrition services.
• Develop a business plan for a business or service in the nutrition field incorporating key operating indicators for marketing and financial objectives

Students are prepared to take this course after completing quantity food courses and Serv Safe training. Skills learned in the prerequisite courses will assist student in understanding the intricacies of managing quality in food service facilities. Due to the application aspect of the course, problem based learning will be the major method of evaluating the students' critical thinking skills. Students will work in groups of 3-4 over the course of the semester. Individually, students will write a business plan for a business or service in the nutrition field as their final evaluation of mastery of the material. This course will be offered fall and spring semesters at the University Park Campus of Penn State with a class enrollment of 40-60 students. A computer lab will be utilized approximately 10-12 times during the semester for problem based learning activities.

Nutrition (NUTR)

NUTR 380 Leadership Principles in Nutrition Services (3) Issues impacting delivery of nutrition services in health care environments, including, health care systems, management theories, decisions making, and leadership.

NUTR 380 Leadership Principles in Nutrition Services (3)
Leadership Principles in Nutrition Services is a 3-credit course offered fall semesters with enrollment of up to 60 students. The course is designed to provide students with the conceptual foundation of how nutrition services are provided in today’s health care environment and the skills necessary to manage them effectively. The educational objectives are that students will be able to: 1) identify trends in the world that could impact health care generally and nutrition services specifically; 2) identify and explain common theories of management, including quality management; 3) compare and contrast different health care delivery systems and how they influence nutrition services; 4) understand the rationale of evidence based medicine and its influence on the development of practice guidelines for nutrition services; 5) explain how credentials and licenses are developed, their role in health care systems, and those associated with nutrition services; 6) understand how reimbursement of nutrition services is determined and methods used to enhance funding; 7) develop a basic knowledge of the principles, roles, and skills necessary to be an effective leader, such as motivation, managing change and time management. Students fulfill the educational requirement of the course by attending class, completing readings, participating in class discussions, writing assignments and a group presentation. Student evaluation will be based on examination, class participation, and the completion of writing and presentation assignments. Examinations may include information from lecture notes, reading assignments, and class assignments.

NUTR 421 (US;IL) Food Culture and Health Trends (3) Social-political, historic, and geographic roots of food patterns, featuring specific cuisine areas and nutritional disease patterns; includes foods laboratory.

NUTR 421 Food, Culture, and Health Trends (3) (US;IL)

Food, Culture, and Health Trends is a survey of the development of cuisine, and of ethnicity and health patterns as they are expressed through food and cuisine. This is also a laboratory course, where each week representative foods from diverse cultures are experienced, prepared by the students into dishes representative of the cuisine, and then consumed. The first third of the course follows the development of food patterns from hunter gathering and agricultural development through trade, conquest, and the globalization of foods. The second two thirds examines particular cuisine clusters as they have affected US food patterns. The course focuses on the physical, historical, social-political, and cultural factors that affect food choice in a specific area, such as geography, colonization, trade, migration, slavery, and religion. The nutritional outcomes of today's cultural food patterns, specifically the epidemiology of nutrition-related diseases, is another focus, particularly how cultural groups adjust to the US diet. The objectives of the course are to create an appreciation and understanding of the diverse origins, changing nature, and strengths of traditional cuisines, the nutritional problems arising from cuisine transitions, and a respect for the role of food in cultural expression. This course provides the cultural awareness needed by dietitians and any student of food and culture to participate in dietary exploration and change. Evaluation methods include weekly essay quizzes, laboratory participation and performance, 5 group activities, 2 essay tests, and a group library, web and informant based evaluation of one culture's cuisine. Two sections are offered each Spring Semester. Enrollment is limited to 36 students per section.

NUTR (S T S) 430 Global Food Strategies: Problems and Prospects for Reducing World Hunger (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Global Food Strategies examines opportunities for the world’s poor to improve their health, nutrition, and physical environment by focusing on their own cultural strengths and organization, reassessing the opportunities within their environment, evaluating the appropriateness of new and old technologies, and gaining a renewed respect for their own abilities. Measures of appropriateness used throughout the course are ecological sustainability and cultural sensitivity. Approximately one third of the course focuses on the historical basis of underdevelopment up to and including the post-modern era. Topics include economic colonization, the industrialization of agriculture, the impacts of globalization, trade priorities and debt loads on the poor, population and ecological issues, and a critique of the economics of scarcity. The second two thirds focuses on micro-strategies for poverty alleviation. Topics include culturally-appropriate people centered development women's empowerment needs including microlending (small loans), the prospects and rationales for biological agriculture vs. industrialized agriculture, successful models of health and population control, the impact of American consumerism, and ecological footprint analysis. The goals of the course are to 1) awaken the student's interest in hunger and poverty issues and the cultural dimensions of poverty, 2) acquaint the student with viable and sustainable strategies for hunger and poverty alleviation for the very poor, and 3) enable the student to understand enough about globalism that he/she can critically analyze and evaluate international affairs articles in national newspapers. The classes integrate lecture information with films that help with the visualization of poverty problems and prospects, readings, current events, and small group discussion around issues and case studies. Readings are drawn from development classics and from a wide range of recent literature on poverty and change. Evaluation includes student responses to three essay tests posed by the instructor over the semester, and journal keeping. The class project is designed to promote citizenship/leadership skills. Students will make a contract to perform a particular citizen action relating to hunger and poverty alleviation, which they will describe in an oral report and written format. Participation is evaluated. The class is offered fall semester only. Enrollment is limited to 60 students.

Occupational Therapy (O T)

O T 103 (US) Occupational Performance Across the Life Span (3) Analysis of occupations from birth to death including descriptions of occupational performance and factors which influence performance.

O T 103 Occupational Performance Across the Life Span (3)

The focus of this course is an in-depth understanding of occupations across the life span. Students engage in an analysis of occupations including: activities of daily living, instrumental activities of daily living, education, work, play, leisure, and social participation. Specific descriptors are used to discuss occupational performance from the perspective of the Occupational Therapy Practice Framework. Areas which influence performance skills and patterns are studied and applied. Topics include: areas of occupations engaged in by individuals from birth to death; performance skills and patterns, context, activity demands, and client factors which impact occupational performance, definitions of grading, adapting, and analyzing occupational performance to support meaningful and socially relevant participation in day-to-day occupations. This course is required in the accredited 20T major and provides the foundation for understanding and applying the concepts related to occupations within the occupational therapy assistant intervention courses which follow. Evaluation methods include: written examination, and graded written/oral assignments. Enrollment is limited to students admitted to the 20T major.

PSU 006 First-Year Seminar Business (1-3) Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

PSU 006 First Year Seminar in Business Administration (1-3 credits)
This course is designed to assist students in examining several areas of the college transition: awareness of self and others; career exploration; majors offered in the Smeal College; and current issues in business. The skills learned in this course will be presented as life-long skills, applicable in the university setting and the corporate environment. The nature of the course requires cooperation, participation, and interaction. This course facilitates learning through experience, lectures and class discussion.

The course contains assignments dealing with:
1). Leadership
2). Ethics
3). Celebrating Diversity
4). Diversity in the Workplace
5). Community Service
6). Major and Career Exploration
7). Time Management and Goal Setting
8). Business Case Study

PSU 017 First-Year Seminar College of Information Sciences and Technology (1) Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

PSU 017 First-Year Seminar College of Information Sciences and Technology (1)
This course will help students be successful in the College of Information Sciences and Technology (IST) at Penn State University. It involves two elements: how to be a successful learner in general; and how to explore the academic challenges of the information sciences and related technologies. Through lectures, class discussions, assignments, and guest presentations students learn what it takes to be successful in college. Through a group project they learn what IST is about, the majors in the College, the learning formats that they will encounter, and what is expected of them as students and citizens in the College. More broadly, this course is centered on learning: learning about learning and learning about what it means to be a student in IST.

General Education: None

Petroleum and Natural Gas Engineering (P N G)

P N G 405 Rock and Fluid Properties (3) Reservoir rock properties, rock and fluid properties (interaction between rock and fluids), flow behavior in reservoir, and fluid properties.

P N G 405 Rock and Fluid Properties (3)
The objective of this course is to introduce students to basic reservoir rock and fluid properties. The course is divided into three sections: rock properties, rock and fluid properties (interaction between rock and fluids), and fluid properties. In the rock properties section, Lithology of Reservoirs, Porosity and Permeability of Rocks, Darcy's Law, and Distribution of Rock Properties are discussed. In Rock and Fluid Properties Section, Existence of Multi-phases, Saturation, Wettability, Capillary Pressure, Effective and Relative Permeability, concepts are covered. Fluid properties topics include Phase Behavior of Single and Multi Component Systems, Compositional and Black-Oil models, Solution Gas-Oil Ratios, Formation Volume Factor, Compressibility, Density, Viscosity, and Interfacial Tension. This is also the first course that Petroleum and Natural Gas Engineering students take in the major. Therefore, an introduction to petroleum and natural gas engineering is also made.

This course is a pre-requisite for most of the Petroleum and Natural Gas Engineering major courses. It is an elective course for majors such as Environmental Systems Engineering. It is offered every Fall semester.

Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: PHYS 211
Concurrent: P N G 405

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Petroleum and Natural Gas Engineering (P N G)

P N G 420 Applied Reservoir Analysis and Secondary Recovery (4) Application of material balance equations/transient flow solutions to water influx problems; displacement theory as it applies to design/behavior of flooding.

P N G 420 Applied Reservoir Analysis and Secondary Recovery (4)

This course addresses two major issues in petroleum engineering: water influx and water flooding. The displacement of oil or gas by water is a complicated physical process that has a great impact on recovery efficiencies. The first objective of the course is to merge the material balance method and transient flow solutions for the aquifer into one analysis tool for understanding and predicting water influx cases. Several analytical and numerical methods are presented including: linear and radial diffusion equation solutions, superposition, Hurst simplified, Schilthuis and Hurst modified. The material is followed by an analysis and design project that focuses on a field in the Gulf of Mexico.

The second objective of the course is to understand the fundamentals of displacement theory and practice. The extension of the Buckley and Leverett water flooding theory is presented for three-phase flow. Three-phase relative permeabilities are determined from experimental data. Several geometrical patterns are discussed in the course including: five spots, staggered line drive, direct line drive, four spots, seven spots, and nine spots. The efficiency of each pattern is determined. Strategies for selecting a pattern for special cases are presented. The behavior of each pattern with time, including oil recover, is an integral part of the course.

The students use our computational facility throughout the course. They write material balance models and use large reservoir simulators for studying water influx cases.

General Education: None
Diversity: None

Petroleum and Natural Gas Engineering (P N G)

P N G 489 Engineering Evaluation of Oil and Gas Properties (3) Application of present worth and rate-of-return analysis; reserve calculations; decline curve analysis; uncertainty and risk analysis to engineering project design and evaluation.

P N G 489 Engineering Evaluation of Oil and Gas Properties (3)
The objective of this course is to introduce to students the application of present worth and rate-of-return analysis to problems peculiar to oil and gas evaluation. The course is divided into four sections: introduction to present worth and rate-of-return analysis; the calculation of oil and gas reserves; the analysis of decline curves; and the application of uncertainty and risk analysis to engineering project design and evaluation. This course is the first course of a four-course sequence (P N G 489, 490, 491, 492) that culminates in a capstone engineering design project and is intended to be taken during the first semester of the junior year. As such the application of these principles elucidated above to engineering design will be emphasized.

This course is a pre-requisite for most of the Petroleum and Natural Gas Engineering Major Courses. It is an elective course for majors such as Environmental Systems Engineering. It will be offered every Fall semester.

General Education: None
Diversity: None
Bachelor of Arts: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Petroleum and Natural Gas Engineering (P N G)

P N G 491 Reservoir Engineering Design (1) Application of the concepts of reservoir and drilling engineering to petroleum engineering design projects.

P N G 491 Reservoir Engineering Design (1)

Engineering design by definition is the integration of knowledge and skills acquired through experience, reading and formal instruction into a final product, the design. To that end, this course is the second course of a 3-course, 3-semester, sequence that will result in a comprehensive capstone-engineering project. As such, P N G 491 will utilize the knowledge gained from P N G 405, 410, 450 and 489 to the project design initiated in P N G 490. Course materials will include introduction to the simulator, development of the computer model, and the use of history match in design.

The class will be divided into teams and students will be evaluated on the basis of their contribution to the team effort. All reports and presentations will be presented to the class as a product of the team.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: ECON 102, P N G 410, P N G 450, P N G 490

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Petroleum and Natural Gas Engineering (P N G)

P N G 490 Introduction to Petroleum Engineering Design (1) Introduction to the concepts of engineering design as applied to petroleum and natural gas projects.

P N G 490 Introduction to Petroleum Engineering Design (1)

The course is designed to provide students with the opportunity to acquire technical data, analyze them and use them to solve petroleum and natural gas engineering systems. It is the first course in a three-course sequence in engineering design as applied to petroleum and natural gas systems that will extend over three semesters. Petroleum, and Natural Gas Engineering students begin formal courses in their major during the first semester of their junior year. With the introduction of this offering, students will begin in a timely fashion (during the second semester of the Junior year), the application of this knowledge to engineering design. Course material will include the analysis of data and the definition, measurement and application of risk to project design.

The class will be divided into teams and students will be evaluated on the basis of their contribution to the team effort. All reports and presentations will be presented to the class as a product of the team.

Philosophy (PHIL)

PHIL 001 (GH) Basic Problems of Philosophy (3) Introduction to central philosophical themes, including the mind/body problem, the existence of God, ethical problems, the nature of reality.

PHIL 001 Basic Problems of Philosophy (3) (GH)

This course meets the Bachelor of Arts degree requirements.

This course provides a critical introduction to, and overview of, fundamental philosophical problems. It includes an examination of historical and contemporary thought through in-class presentation, readings, discussions, and student writings. In this way, students will gain an understanding of diverse and often competing perspectives on basic human problems. These perspectives have shaped cultures and continue to influence thought and practice around the world today. Students will examine diverse viewpoints that will allow them to understand a wide range of views and challenge them to defend their own positions. This course involves active use of writing, speaking, and group projects. It provides opportunities for gathering information, analyzing problems, and synthesizing diverse perspectives. Finally, PHIL 001 allows students to link theory to their own lives and daily practice.

Philosophy (PHIL)

PHIL 003 (GH) Persons, Moral Values and the Good Life (3) Major ethical positions and assumptions regarding questions of freedom, choice, obligation, and conflicts in contemporary moral conduct, values, and reasoning.

PHIL 003 Persons, Moral Values and the Good Life (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.
This course offers students a broad, coherent overview of moral issues, moral reasoning, and questions concerning a good life. It emphasizes the thought of major, influential figures and their works. The course also allows students to apply to contemporary ethical issues the theories espoused by these figures. Students will compare, contrast, and critically assess competing theories of persons and goodness, their assumptions and background world views, and their implications for practice. Students will be graded on the basis of tests, papers and a comprehensive final exam. PHIL 003 satisfies the GH requirement and is geared towards non-Philosophy majors. It may be used to fulfill minor requirements in philosophy. This course will be offered once a year with an enrollment of 25 to 240 students.

Philosophy (PHIL)

PHIL 002 (GH) Philosophy, Politics, and Social Theory (3) Examines relations between political and social organizations, the justification and limits of the state, and issues concerning individuality and community.

PHIL 002 Philosophy, Politics, and Social Theory (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides an introduction to central political and social theories as well as assumptions which underlie contemporary political and social structures and which shape the contemporary cultural environment. The course will discuss the ideas of central social and political philosophers, the broader historical and cultural context in which they work and worked, and the nature of the relations and influences between the two. Students will develop an appreciation of the nature of political and social values in the context of conflicting political visions as well as the critical skills with which to examine them. They will be graded on a collaborative annotated bibliography project, a collaborative position paper, evaluations of peer papers, and a comprehensive final exam. PHIL 002 satisfies the GH requirement and is geared towards non-Philosophy majors. It may be used to fulfill minor requirements in philosophy. This course is offered once a year with an enrollment of 150 to 200 students.

General Education: GH
Diversity: None
Bachelor of Arts: Humanities
Effective: Fall 2003

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Philosophy (PHIL)

PHIL 006 (GH;IL) (CMLIT 006) Philosophy and Literature in Western Culture (3) Explores fundamental issues of human existence through the traditions of western literature and philosophy.

PHIL (CMLIT) 006 Philosophy and Literature in Western Culture (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements.

This course is designed to introduce students to the various interpretive approaches to literature and philosophy. The class will explore key philosophic themes as these are exhibited in imaginative literature, and in doing so will practice both philosophical interpretation of literature and literary treatment of philosophy. The central themes of this course could include, for example, self-knowledge and self-deception; self-isolation, alienation and community; conflict of moral responsibilities; the use and abuse of language; the meaning of art; the ideal of a "simple life;" normalcy and madness. The class will ask such questions as what counts as literature, what purpose it serves, what is the relationship between literature and ideology, and whether a text can be considered independently from what the author wanted to say in it. Students may be graded by a variety of methods, including exams, papers, and individual and group projects. One example might be a collaborative annotated bibliography project, a collaborative position paper, individual evaluations of position papers, and a comprehensive final exam. This course is a non-major General Education Humanities course. It may be used to fulfill minor requirements in philosophy. This course may be used to fulfill an additional-course requirement in either the minor or the major in Comparative Literature, although it is geared primarily towards non-majors. This course will be offered once a year with an enrollment of 25-200 students depending on location. This course deals with literature and philosophy in the western tradition, and thus helps to complete the range of our other courses on western literature, such as Comparative Literature 001 and 002 (survey courses of Western Literature to the Renaissance, and Western Literature since the Renaissance), and Comparative Literature 401W and 402W (upper level chronological courses on Western Literature). This course differs from those however, by its strong emphasis on philosophical texts.

Philosophy (PHIL)

PHIL 007 (GH;IL) Asian Philosophy (3) Introduction to philosophical, moral, and aesthetic teachings of Asian traditions such as Hinduism, Buddhism (including Zen), Taoism, Confucianism, and Shintoism.

PHIL 007 Asian Philosophies (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This class is an introduction to the major intellectual philosophical traditions of Asia: Hinduism, Buddhism and Zen Buddhism, Jainism, Confucianism and Neo-Confucianism, Taoism, and Korean thought. The course introduces students to Asian thought through careful study of major, representative texts and authors of each of these traditions. In addition, the course seeks to identify parallels and differences between Asian thought and Western philosophy, and also seeks to explore the intercultural and interdisciplinary vitality of Asian thought today.

Philosophy (PHIL)

PHIL 005 (GH) Philosophy, Art, and Film (3) Explores relations between images and reality, representation and culture, and beauty and politics through film, artworks, and aesthetic theories.

PHIL 005 Philosophy, Art, and Film (3) (GH)
(BA) This course meets the Bachelor of Arts degree requirements.

PHIL 005 provides a critical introduction to fundamental issues concerning the nature of art in general and film in particular, the nature of aesthetic experience, and the role of art and film in cultural criticism. This course has no prerequisites and assumes no background in philosophy; it would make an excellent introduction to philosophy for students interested in art, film, representation, and creativity. It includes an examination of historical and contemporary thought through films and videos, in-class presentations, readings, discussions, and student writings. These activities will allow students to gain an understanding of diverse, often competing, perspectives on basic human problems and the great influence of film and images in contemporary life. Students will examine diverse viewpoints that will allow them to understand a wide range of views and challenge them to defend their own positions. This course involves active use of writing, speaking, and group projects. It provides opportunities for gathering information, analyzing problems, synthesizing diverse perspectives, and developing one’s own thought and the reasons for it by linking theory to practice.

Philosophy (PHIL)

PHIL 008 (GH) (WMNST 008) Philosophy and Feminism (3) Explores diverse feminist philosophies of culture and knowledge, and examines gender's role in accounts of reality, truth, morality, and justice.

PHIL (WMNST) 008 Philosophy and Feminism (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course familiarizes students with concepts and problems of feminist philosophies. It seeks to examine the feminist critique of theories of knowledge and power, as well as the cultural, political, and linguistic implications of this critique. Students will be expected to evaluate existing epistemological assumptions, social organization, the character of power, and language from the vantage of contemporary feminism and its historical context. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. WMST/PHIL 008 satisfies the GH requirement and is geared towards non-Philosophy majors. It may be used to fulfill the minor requirement in philosophy. This course is offered once a year with an enrollment of 25-200 students.

Philosophy (PHIL)

PHIL 009 (GH;US) Philosophy, Race, and Diversity (3) Critically examines the significance of race and cultural diversity for, and in, understandings of reality, knowledge, truth, morality, and justice.

PHIL 009 Philosophy, Race, and Diversity (3) (BA) This course meets the Bachelor of Arts degree requirements.

This course explores the diverse philosophical concepts and problems regarding race. It covers writings dealing specifically with critiques of the dominant theories and definitions of racial identity, thereby providing an introduction to the diversity of ethical and social approaches to questions concerning race. This course is designed to satisfy the criteria for a humanities course with a focus on diversity (General Education Humanities and Diversity Focused). In particular, it is designed to be an offering in the humanities insofar as it: (1) develops a broad, coherent overview of the meaning of cultural diversity itself (including a clarification of the conceptions of culture, race, gender, nationality, and pluralism); (2) stresses the writings of major theorists from both the traditional canon of Western thought and diverse traditions, most prominently African-American, Latin-American, Asian American, and Native American traditions; (3) helps students develop the skills to interpret and to assess the nature, forms, and place of human values in our multi-cultural world; (4) fosters a deeper appreciation of and more critical attitude toward the ultimate ends of human action; (5) offers ample opportunities to engage in comparative philosophy and, allied with these, numerous challenges to communicate clearly, think logically, and evaluate critically the positions and perspectives being compared; (6) meets fully the stated objectives of general humanities education by providing students with texts occupying a central place in one or more human cultures and, then, by working through these texts in a careful and critical manner (such a process of working through these texts being also one of thinking critically and imaginatively about the questions posed by the texts, moreover one of being invited or even forced to integrate various perspectives). As a diversity focused course, PHIL 009 will carefully treat the philosophical issues of pluralism, universalism, diversity, and community. It will also pay careful attention to the diverse philosophies of different cultural communities. The conflicts between cultural localism and global economics will receive critical attention. In particular, this course will: (1) focus initially on ethnicity and race, then on gender and globalism; (2) encourage students to develop an understanding of the intellectual and ethical backgrounds and assumptions of other traditions and peoples; (3) help students develop a truly global, pluralistic, and multi-cultural viewpoint; and (4) explore the intellectual history of groups identified by ethnicity, race, gender, and religion. Students will be graded on a collaborative annotated bibliography project, a collaborative position paper, individual evaluations of position papers, and a comprehensive final exam. The course is intended as a General Education Humanities and Intercultural/International competency course and as such may serve as an historical overview of race and diversity in philosophy as well as an introduction to critical thinking about topical issues. This course may provide introductory material for courses in anthropology, political science, sociology, philosophy, and so on. More importantly, it may encourage students to think more carefully and critically about the questions raised in this course and their manifestation in social and political life. The course is a non-major General Education Humanities and Intercultural course intended for non-philosophy majors. It may be used to fulfill minor requirements in philosophy. PHIL 009 will be offered once per year with 150-200 seats per offering.

PHIL 010 (GH) Critical Thinking (3) Discussion of the validity, soundness, and fallacies of everyday language use and reasoning; informal logic; and manipulative arguments and propaganda.

PHIL 010 Critical Thinking (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed to bring students to a critical awareness of the function of argumentation in the various forms it takes, both in the academic realm of logic, as well as the everyday world of television, newspapers, and other forms of communication. Students will examine how arguments are constructed and the means that are used to make an argument convincing. They will learn to critically analyze arguments in order to detect careless language use and fallacies. They will also learn various types of arguments. Students will be graded on weekly problem-solving homework assignments and re-writes, collaborative fallacy presentations, a mid-term exam, and a comprehensive final exam. PHIL 010 satisfies the GH requirement and it may be used to fulfill minor requirements in philosophy. This course is offered once a year with an enrollment of 25-50 students.

Philosophy (PHIL)

PHIL 013 Philosophy, Nature, and the Environment (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course familiarizes students with concepts regarding the central and very old philosophical problem of describing and understanding nature and the place of human beings in it. This philosophical discourse has evolved in the past 25 years into a firm sub-discipline of philosophy itself, usually under the title of "Environmental Philosophy" or "Philosophy of nature." The discipline addresses a complex of crucial problems of contemporary society, politics, and ethics revolving around the relation of human beings and the environment. Students will learn the various and conflicting views on nature and the environment, and they will develop the ability to critically navigate these various positions as well as the assumptions underlying the contemporary environmental debate. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. PHIL 013 satisfies the GH requirement and is geared towards non-Philosophy majors. It may be used to fulfill minor requirements in philosophy. This course is offered once a year with an enrollment of 50-200 students.

Philosophy (PHIL)

PHIL 083S (GH) First-Year Seminar in Philosophy (3) Critical introduction to philosophical issues in ethics, social and political theory, religion, art, metaphysics, and epistemology.

PHIL 083S First-Year Seminar in Philosophy (3) (GH;FYS)

(BA) This course meets the Bachelor of Arts degree requirements.

First-Year Seminars in Philosophy provide critical introductions to fundamental philosophical issues and problems. Each first-year seminar develops a broad overview of historical and contemporary thought through readings, discussions, and student writings. In this way, students will gain an understanding of important figures, ideas, problems, and theories that have shaped and have continued to influence thought and practice around the world. Students will examine diverse viewpoints that will allow them to understand a wide range of views and challenge them to defend their own positions. First-year seminars involve active use of writing, speaking, and group projects. They provide opportunities for gathering information, analyzing problems, and synthesizing diverse perspectives. Finally, each first year seminar in philosophy allows students to link theory to their own lives.

PHIL 014 (GH;US) Philosophy of Love and Sex (3) Explores Western theories and attitudes concerning intimacy and examines various ethical issues involving love and sex.

PHIL 014 Philosophy of Love and Sex (3) (GH;US)

This course meets the Bachelor of Arts degree requirements.

An examination of theories and attitudes concerning love and sexuality that have been prevalent in the Western world. Course topics will include philosophical and theological conceptions of sex and love and ethical issues related to these topics, including monogamy, same-sex marriage, cultural differences, pornography, and consent. The course will focus on contemporary US beliefs and practices examined through the lens of the different beliefs and practices concerning intimacy within the cultures of the US. The lens of gender, race/ethnicity, and sexual orientation will be ongoing themes of the class and included in all topics. The course has no prerequisites and assumes no background in philosophy. It is an excellent introductory course for students interested in learning the skills of doing philosophy. The course will focus on linked ethical issues that will be investigated through readings, essays, and group projects and are designed to encourage students to cultivate ethical awareness and inquiry by understanding and investigating diverse viewpoints and developing a richer understanding of their own positions. The course will provide opportunities for gathering information, analyzing arguments, synthesizing diverse viewpoints, and developing a richer understanding of and support for one's own beliefs and practices. Students will be evaluated based on class participation, short essays, examinations, and group presentations. The course will serve as a GH and GI requirement and it may be used to fulfill minor requirements in philosophy. The course will be offered once a year with 25-250 seats per offering.

PHIL 100 (GH) The Meaning of Human Existence (3) Explores differing views of the significance of human life, the meaning of freedom, and the way to a meaningful life.

PHIL 100 The Meaning of Human Existence (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

The course is primarily for non-Philosophy majors and for students considering a major in Philosophy. It is designed to evoke disciplined reflection on basic philosophical questions which are often raised in an unmethodical and uninformed way. It will attempt to approach philosophical thinking from the perspective of everyday concerns, rather than from the various readings which will be done for the course. The general question of the meaning of human existence will furnish a rubric under which philosophical ideas and evaluations enter into ordinary life. The course will offer the opportunity to look at a variety of ways in which human beings have addressed the issues involved in the question of the meaning of life.

The philosophical figures whose works will be examined include de Beauvoir, Freud, Marcel, Marcuse, Jaspers, and Sartre. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL100 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements in philosophy. This course is offered once a year with an enrollment of 35-50 students.

PHIL 102 (GH) Existentialism and European Philosophy (3) Introduction to European philosophy and issues of life, death, meaning, and absurdity, with a focus on existentialism and its development.

PHIL 102 Existentialism and European Philosophy (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for philosophy majors. (The analogous course for majors is PHIL 402.) PHIL 102 introduces students to European philosophy over the past two hundred years. The course begins with the overview of major philosophical themes and developments, and then examines these developments in existentialism, philosophical literature, and postmodernism. The course will focus on metaphysical, moral, and social issues concerning the nature of reality, the nature of the self, the basis of values, and the relations between individuality and community. Students will critically consider these issues in required comparison/contrast papers, a position paper, a collaborative project, and a comprehensive final exam. This course serves as an introduction to the discipline and prepares students for further study in the history of philosophy. PHIL 102 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in philosophy. It is offered once a year with an enrollment of 35-50 students.

Philosophy (PHIL)

PHIL 101 (GH) Pragmatism and American Philosophy (3) An introduction to American thought and its relation to American culture, with a focus on the development of pragmatism.

PHIL 101 Pragmatism and American Philosophy (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for philosophy majors. (The analogous course for majors is PHIL 401.) Phil 101 is designed to familiarize students with introductory concepts, problems, and history of the American philosophical tradition. The course will explore basic themes in American thought such as nature, God, experience, democracy, progress and process, truth and meaning, focusing especially on the pragmatist philosophers. The course will examine the ways in which American philosophy develops its unique paths as distinct from the European tradition and what this legacy means today. Students will be expected to critically evaluate the problems raised by these philosophers as well as their influences on American society, politics, and culture. One of the principal goals is to enable students to understand better this rich philosophical tradition - for many students, their own heritage - and its place as both formative of and critical of the contemporary American philosophical, social, moral, religious, and aesthetic landscape. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 101 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in philosophy. This course will be offered once a year with an enrollment of 35 to 50 students.

PHIL 105 (GH) Introduction to Philosophy of Law and Legal Ethics (3) Historical and contemporary philosophies of law; concepts of responsibility, property, rights, and justice; and ethical issues in legal practice.

PHIL 105 Introduction to Philosophy of Law and Legal Ethics (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for philosophy majors. (The analogous course for majors is PHIL 405: Philosophy of Law.) PHIL 105 will provide students with a critical overview of central positions and figures in philosophy of law and teach students interpretative and critically evaluative methods for distinguishing and attempting to resolve philosophical problems within these positions. This course will investigate the history of philosophy of law and the diverse views of human nature inherent to central philosophical positions. The course will examine the relations between human values, ethics, and law as well as how these relations affect the organization of broader social, political, and religious institutions. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. PHIL 105 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in philosophy. This course is offered once a year with an enrollment of 25 to 100 students.

Philosophy (PHIL)

PHIL 107 (GH) (S T S 107) Introduction to Philosophy of Technology (3) The character of technology; its relation to human values; philosophical assumptions in its development; and how it transforms the world.

PHIL (S T S) 107 Introduction to Philosophy of Technology (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

Introduction to the Philosophy of Technology" surveys a number of recent thinkers on the meaning of technology, its role in our and other societies, and critiques of its effects. Through readings of classic works on philosophy of technology as well as investigations of contemporary media reports and representations of technology, the course will engage your thought about what technology "means" to you and the values embedded in it. This course meets the broad general education needs of students from the humanities, social sciences, engineering, agriculture, as well as professional tracks such as business and pre-law. As technology is increasingly fundamental to our modern way of life in all its aspects, this course gets students asking question about why we do what we do with technology and how it affects us, others around us, and the environment. Required readings typically include collections of essays ranging in reading level from popular journalism to mass-market fiction to historical analyses of technological change and in-depth philosophical investigations of the concept of technology. Classroom time will be organized around lecture, regular classroom discussion, and a number of student-led debates. Evaluation will be based upon short writings, a small research paper, a midterm, and a final. The course meets the requirement for General Education in the Humanities (GH). Crosslisted with both S T S and PHIL it compliments other S T S courses (notably, S T S 101 and 233) and is a pre-requisite for S T S/ Phil 407. The course is offered biannually and is capped at 40 students.

Philosophy (PHIL)

PHIL 106 (GH) Introduction to Business Ethics (3) Studies ethical foundations of business and ethical problems in business practices such as advertising, international trade, labor relations, and marketing.

PHIL 106 Introduction to Business Ethics (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for philosophy majors. (The analogous course for majors is PHIL 406: Business Ethics). PHIL 106 will teach students central philosophical and ethical problems in the history of business practices. It will investigate the nature of business and business practices, their relation to the human condition more generally, and their relation to and effect on human values. The course will develop a student’s critical skills in evaluating both the assumptions and the philosophical foundations and justifications for business and economic systems, the relation between morality and specific business practices, and central positions and figures in the history of philosophical analysis of these questions. Historical figures will include Aristotle, Hume, Adam Smith, Mill, Marx, Hayek, and Keynes. The course will investigate business as a central feature of modern society and culture, how it evolved, and the philosophical implications for contemporary society and human values. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. PHIL 106 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements in Philosophy. This course is offered once a year with an enrollment of 35-50 students.

General Education: GH
Diversity: None

Philosophy (PHIL)

PHIL 109 (GH) Introduction to Aesthetics (3) Examines the nature of art and aesthetic experience, art's relation to beauty and truth, and the nature of creativity.

PHIL 109 Introduction to Aesthetics (3)
(GH)

This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 409: Aesthetics). Phil 109 is designed to introduce students to the various problems surrounding the philosophical treatment of the various arts. Aesthetics, or the philosophy of art, is a systematic exploration of aesthetic experience, creativity, various theories of beauty, and principles on which criticism of the arts (including literature) can be based. This is a special field of philosophy which focuses on the arts and the creative process, but which, for some thinkers, involves many links to other aspects of human existence, including the political and various metaphysical questions about being and human being. The objective will be to give students a good grounding in these various problems and to expose them to important perspectives and approaches to these problems and to the question of the place of art (as the arts generally) in human existence. Emphasis will be placed on both historical and perspectival sweep in the course and, as a result, the students should leave the course with an enriched understanding of the nature of the arts, of the creative process itself, and of the place both play in being human. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 109 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements in Philosophy. This course is offered once a year with an enrollment of 35-50 students.

Philosophy (PHIL)

PHIL 108 (GH) Introduction to Social and Political Philosophy (3) Critical introduction to political authority, rights, justice, community, inequality, power, pluralism, and other contemporary, social, and political issues.

PHIL 108 Introduction to Social and Political Philosophy (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 408: Social and Political Philosophy.) PHIL 108 will critically examine central philosophical positions, ideologies, and figures in the history of social and political philosophy, their relation to contemporary society, politics, and culture, and the significance of social and political philosophy for human values. The course will investigate the nature of political and social philosophies and systems of social and political practice towards providing students with a greater critical understanding of the nature of social and political organization, their effects on human values, and the traditional philosophical problem of what constitutes the good society. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 108 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy. This course will be offered once a year with an enrollment of 35 to 50 students.

General Education: GH  
Diversity: None  
Bachelor of Arts: Humanities  
Effective: Fall 2003

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Philosophy (PHIL)

**PHIL 113 (GH) Introduction to Philosophy of Literature (3)** Examines philosophical ideas in literature, literary forms in philosophies, style and genre, and relation of philosophy, literature, writing, and culture.

**PHIL 113 Introduction to Philosophy of Literature (3)**
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 413.) PHIL 113 will provide a critical overview of the relation between philosophy and literature, philosophical literature, and literary philosophy, discussing specific historical figures, movements, and theories on the topic. The course will seek to provide students with an understanding of the nature of philosophical aesthetic values in literary expression, as well as ideological expressions within literature. It will investigate the nature of philosophical writing and of literary writing in order to critically interpret and assess their differences and similarities as representative of the nature of the human values and the human condition. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 113 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements. This course will be offered once a year with an enrollment of 35 to 50 students.

Philosophy (PHIL)

PHIL 110 (GH) Introduction to Philosophy of Science (3) Examines science's assumptions about knowledge and reality, the relation between science and culture, and the nature of scientific progress.

PHIL 110 Introduction to Philosophy of Science (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors (and in this case for Science majors as well), as well as for others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 410: Philosophy of Science). PHIL 110 is designed to give students a coherent presentation of science's assumptions about knowledge and reality, the relation between science and culture, and the nature of scientific progress. Historical foundations of science will be addressed as well as contemporary theories and issues, as the class examines the following topics: the relation between physics, mathematics, and philosophy; the nature of reality; the nature of knowledge; the nature of causality; the nature of scientific progress, and the nature of hypothesis in natural science. Students will be required to critically examine and evaluate the positions, relations, and theories addressed in class. They will be graded on class discussion, exams, a collaborative web project, and a final paper. PHIL 110 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy. This course is offered once a year with an enrollment of 35-50 students.

PHIL 115 (GH) Introduction to Philosophy and Education (3) Examines the nature and goals of education, the philosophical foundations of educational theories, and their economic, political, and cultural implications.

PHIL 115 Introduction to Philosophy and Education (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 415: Philosophy of Education.) PHIL 115 provides students with a critical survey of philosophies of education and philosophical conceptions of the relations between knowledge, truth, experience, and human values. The course will consider the historical contexts from which philosophical theories about education have arisen and their ideological political, social, and economic implications. In addition, it will develop a student's critical skills regarding self-education and the development of education in contemporary society towards a greater understanding of the philosophical problems that underlie differing philosophical views of education. Students will be graded on a collaborative annotated bibliography project, a collaborative position paper, evaluations of peer papers, and a comprehensive final exam. PHIL 115 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy. This course is offered once a year with an enrollment of 35-50 students.

PHIL 116 (GH) Introduction to Philosophy of Social Science (3) Examines the philosophical foundations of the social sciences, focusing on issues of methodology, quantification, objectivity, and value-neutrality.

PHIL 116 Introduction to Philosophy of Social Science (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 416: Philosophy of Social Science.) PHIL 116 will provide a critical historical survey of philosophical work on social science, its relation to science, and its value for philosophy. The course will examine key figures in philosophy of social science and develop the student's understanding of the significance of the rise of this area of philosophy, in addition to its central problems, questions, and contributions to further understanding of the human condition. Additionally, the course will seek to develop the student's critical reasoning skills in approaching the subject matter, interpreting and evaluating it, and developing possible solutions to philosophical problems. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. PHIL 116 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements of Philosophy. This course is offered once a year with an enrollment of 25-100 students.

PHIL 118 (GH) Introduction to Environmental Philosophy (3) Considers the moral status of the environment and applies ethical theory to issues such as preservation, hunger, pollution, and sustainability.

PHIL 118 Introduction to Environmental Philosophy (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 418: Environmental Ethics.) PHIL 118 will provide an historical and contemporary survey of differing views of the relation of humans and nature, and of environmental problems and human development. The course will provide a critical examination of differing conceptions of value in regard to nature and differing conceptions of human values and the human condition more generally. The course will investigate how different social, economic, and political ideologies and systems affect the human relation to nature, and how the ethical problems that arise from such systems may be critically evaluated and potentially resolved. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. PHIL 118 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements in Philosophy. This course will be offered every other year with an enrollment of 25-100 students.

PHIL 124 (GH) Introduction to Philosophy of Religion (3) Explores the meaning of religious belief and experience, the existence of God, ideas of spirituality, and the question of immortality.

PHIL 124 Introduction to Philosophy of Religion (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses. (The analogous course for majors is PHIL 424: Philosophy of Religion). PHIL 124 is designed to give students a coherent overview of the various dimensions of religion elucidated when religion is examined from a philosophical perspective. Topics explored in class will include religious belief, religious experience and spirituality, arguments for the existence of God, contemporary philosophical problems in their relation to religion, religion and science, as well as religion and the future. The class will also examine the differences between Western, Eastern, and other conceptions of religion and spirituality. Major historical authors and their works will be examined, including Anselm, Aquinas, Confucius, Descartes, Lao Tse, and Peirce. Students will be required to compare and contrast differing perspectives towards religion, as well as to critically evaluate these positions. The class will also be oriented towards making relevant connections between historical and contemporary views and issues. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 124 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy. This course is offered every other year with an enrollment of 35-50 students.

PHIL 123 (GH) Introduction to Ethics in Media and Journalism (3) Studies ethical problems, human values, and politics in differing media forms and the ways media shape such problems and values.

PHIL 123 Introduction to Ethics in Media and Journalism (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 423.) PHIL 123 will provide a critical survey of media and journalism ethics and media philosophy towards developing the student’s critical media literacy and understanding of central ethical problems in the media and journalism. The course will develop an analytical comprehension of the complex relations between society and culture, the media, and philosophical and ethical problems. It will consider philosophical questions of truth, knowledge, interpretation and evaluation, and the role media culture plays in the formation of truth and knowledge in addition to specific ethical case studies. The thought of major, influential figures and their works will be emphasized, such as Hobbes, Hegel, Marx, Jefferson, Dewey, Habermas, Adorno, McLuhan, and Beauchamp. Additionally, the course shall develop the student’s understanding of the relation between contemporary technological society and changing human values. Students will be graded on participation, case study analyses, a group presentation and response, and a final paper. PHIL 123 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements in Philosophy. This course is offered every other year with an enrollment of 35-50 students.

PHIL 122 (GH) Introduction to Philosophy of History (3) Examines methodological foundations and interpretations of history, the objectivity of history, and the issue of history as design or chance.

PHIL 122 Introduction to Philosophy of History (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 422.) PHIL 122 will provide a critical survey of key problems, concepts, ideologies, and figures in the history of philosophy of history, and encourage and develop the student's analytical and critical interpretation and evaluation of the theses presented. The course will study key questions regarding the human past and the potentiality of the human future as reflective of the human condition more broadly. It develops a broad, coherent overview of the nature and philosophical status of history and the philosophical assumptions and issues in the practice of history. It also emphasizes the thought of major, influential figures and their works, such as Hume, Vico, Hegel, Marx, Mill, Rickert, Dilthey, Croce, Collingwood, Mandelbaum, Hempel, and Randall. Students will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 122 satisfies the GH requirement and it may be used to fulfill the major and/or minor requirements in Philosophy. This course is offered every other year with an enrollment of 35-50 students.

PHIL 129 (GH) Introduction to Philosophy of Language (3) Studies the nature of meaning in language, how we acquire language, communication, signs, and language as descriptive of reality.

PHIL 129 Introduction to Philosophy of Language (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course, as with other 100-level philosophy department courses, is intended for Liberal Arts majors and others likely to take philosophy courses rather than for Philosophy majors. (The analogous course for majors is PHIL 429.) PHIL 129 will provide a critical survey of key concepts, problems, and figures in the history of philosophy of language and in contemporary studies in linguistic philosophy. The course will develop the student's analytical and critical skills through study of the philosophical and logical foundations of language systems and the role of language problems in relation to philosophical problems. Students will be encouraged to use the linguistic and logical tools they study in the course in evaluating the content of the arguments presented. As a general education humanities course, this class develops a broad, coherent overview of the nature of language, the philosophical assumptions and methodological commitments involved in theories of language, and the relation of language to reality. The class emphasizes the thought of major, influential figures and their works, such as Plato, Aristotle, Locke, Berkeley, Herder, Cassirer, Peirce, Carnay, Wittgenstein, Austin, Searle, and Rorty. Students will be graded on participation, three comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 129 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy. This course is offered every other year with an enrollment of 35-50 students.

PHIL 132 (GH) (RL ST 131) Introduction to Bioethics (3) Studies questions of ethics in relation to biotechnology research and implementation, genetic engineering, medicine, animal and human rights.

PHIL 132 (RL ST 131) Introduction to Bioethics (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

The course, as other 100-level Religious Studies Program and Philosophy courses, is intended for Liberal Arts majors and others likely to take Religious Studies and Philosophy courses rather than for Religious Studies majors. This course will provide a critical survey of key concepts, problems, and figures in the short history of bioethics and in contemporary studies and possible future directions. The course will develop the student's analytical and critical skills through study of different views on the nature of life and what experimentation with life-forms morally entails. The course will examine the increasingly techno-scientific definition of the nature of life and the human condition and evaluate such arguments and positions of practice in regard to opposing views of life as inherently sacred. It will investigate the extent and breadth of moral arguments in regard to differing life forms and consider the rights of humans and non-human animals. Students will be graded on participation, case study analyses, a group presentation, and a final paper. PHIL 132/RL ST 131 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy and Religious Studies. This course is offered every other year with an enrollment of 35-50 students.

PHIL 200 (GH) (CAMS 200) Ancient Philosophy (3) Examines the thought and influence of major Western thinkers from the pre-Socratics to the neo-Platonists, emphasizing Plato and Aristotle.

PHIL (CAMS) 200 Ancient Philosophy (3) (GH)

This course meets the Bachelor of Arts degree requirements.

PHIL (CAMS) 200 satisfies the GH requirement. As part of the history of philosophy sequence required of undergraduate philosophy majors, this course is designed to present students with a survey of ancient Western Philosophy beginning with the pre-Socratics, continuing with Plato (Socrates), Aristotle, and the post-Aristotelians, and concluding with neo-Platonists and early Christians. Emphasis will be placed on Plato and Aristotle. The class will examine the historical and cultural foundations from which ancient Western philosophy grew, and will explore issues which were focal points of ancient philosophy, such as the nature of reality, change, permanence, truth, form, and matter. Students will critically consider these issues in required comparison/contrast papers, a position paper, a collaborative project, and a comprehensive final exam. Students will also be evaluated on class participation. The course is prerequisite to Philosophy 400-level courses and it will be offered once a year with an enrollment of 35 students. For students studying ancient languages, particularly Greek, this course will offer an important exposure to the interpretation of philosophical text. For Classical and Ancient Mediterranean Studies majors, PHIL/CAMS fulfills the requirement under Supporting Courses for three credits in Greek or Roman literature and language, civilization, or archaeology; and it also fulfills the requirement for six credits for study at any level from an approved list in the general field of Classics and Ancient Mediterranean Studies.

Philosophy (PHIL)

PHIL 202 (GH) Modern Philosophy (3) Examines the thought and influence of major Western thinkers from Descartes to Kant, emphasizing rationalism and empiricism, and critical philosophy.

PHIL 202 Modern Philosophy (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

As part of the history of philosophy sequence required of undergraduate philosophy majors, this course is designed to examine the thought and influence of the major Western thinkers of Modern Philosophy: Hobbes, Descartes, Leibniz, Spinoza, Locke, Hume, and Kant. The historical, philosophical, and political foundations of this philosophical era will be examined, as well as topics that were prominent intellectually during this time, such as causality, the relation between mind and body, how we come to know things and the degree of certainty we can attribute to our knowledge, and whether or not we can prove God's existence. Students will be required to critically analyze the texts of the philosophers studied in class, as well as to compare, contrast, and critically evaluate the ideas of these thinkers. They will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 202 satisfies the GH requirement, it may be used to fulfill the minor requirements in Philosophy, and it is a prerequisite to the 400-level courses. This course will be offered once a year with an enrollment of 35 students.

General Education: GH
Diversity: None

Philosophy (PHIL)

PHIL 203 (GH) Nineteenth Century Philosophy (3) Examines the thought and influence of major Western thinkers from Hegel to Nietzsche, including Marx, Kierkegaard, and Schopenhauer.

Phil 203 19th Century Philosophy (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

As part of the history of philosophy sequence required of undergraduate philosophy majors, this course provides an overview of the central currents of 19th-century philosophy. This course in combination with the others of the sequence allows a consistent approach to history of philosophy. This historical sequence will comprise the core of all philosophy major options. As a general education humanities course, this class: 1) develops a broad, coherent overview of the historical development of western philosophy in the 19th century, and the philosophical problems, methods, and results of this development; 2) emphasizes the thought of major influential figures and their works, such as Hegel, Marx, Kierkegaard, Schopenhauer, Nietzsche, Mill, and Bergson; 3) develops competence in interpretation and critical assessment of human values and their place in theory and practice as set both in philosophically and historically central views that span all areas of philosophical thought; 4) leads the students to appreciate and think critically about the ends of human action and final, non-instrumental, aesthetic values in moral, political, and aesthetic experience (including attention to the metaphysical and epistemological foundations of this experience) as set both in the work of major philosophers of the 19th century; 5) teaches students how to communicate clearly, think logically, and evaluate critically by providing them a critical survey of philosophical theories that are both important in the historical development of western thought and important for understanding continuing and contemporary philosophical issues today; and 6) meets fully all its stated humanities general education objectives by providing students with texts that occupy a central role in the humanities, requiring careful oral and written analysis of these texts, developing abilities to think critically and imaginatively about the issues in these texts, and leading students to integrate course material with other humanities subjects such as literature, foreign languages, history, religion, social and political theory, philosophy of science. Students will be graded on participation, three comparison/contrast papers, one position paper, one collaborative presentation, and a comprehensive final exam. PHIL 203 satisfies the GH requirement, it may be used to fulfill the minor requirements in Philosophy and it is a prerequisite to the 400-level courses. This course will be offered once a year with an enrollment of 35 students.

**Philosophy (PHIL)**

**PHIL 201 (GH) Medieval Philosophy (3)** Examines the thought and influence of major Western thinkers from the fourth to the fifteenth centuries, emphasizing Augustine and Aquinas.

**PHIL 201 Medieval Philosophy (3)**
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

As part of the history of philosophy sequence required of undergraduate Philosophy majors, this course is designed to examine the movements of thought and major thinkers from the fourth to the fifteenth centuries. The course will begin by studying the historical and philosophical foundations of Medieval thought through an examination of philosophical problems from Ancient Philosophy. It will proceed to a study of Augustine, Islamic Philosophy, Jewish Philosophy, Aquinas, Ockham, and Duns Scotus. Students will be required to critically analyze the texts of the philosophers studied in class, as well as to compare, contrast, and critically evaluate the ideas of these thinkers. They will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 201 satisfies the GH requirement, it may be used to fulfill the minor requirements in Philosophy, and it is a prerequisite to the 400-level courses. It will be offered once a year with an enrollment of 35 students.

PHIL 208 (GH) Contemporary Philosophy (3) Recent trends in philosophical thought and culture, hybrid philosophies, and the philosophical landscape of the future.

PHIL 208 Contemporary Philosophy (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

As part of the history of philosophy sequence required of undergraduate philosophy majors, this course is designed to examine recent trends in philosophical thought and culture, hybrid philosophies, and the philosophical landscape of the future. The class will be divided according to the following areas of contemporary thought: Postmodernism, Analytic Thought (the realism/anti-realism debate), neo-Pragmatism, Beyond Postmodernism, Feminism and Science. Students will be required to critically analyze the texts of the philosophers studied in class, as well as to compare, contrast, and critically evaluate the ideas of these thinkers. They will be graded on participation, comparison/contrast papers, a position paper, a collaborative presentation, and a comprehensive final exam. PHIL 208 satisfies the GH requirement, it may be used to fulfill the minor requirements in Philosophy, and it is a prerequisite to the 400-level courses. This course will be offered every other year with an enrollment of 35 students.

The Pennsylvania State University
Philosophy (PHIL)

PHIL 204 (GH) Twentieth Century Philosophy (3) Examines the thought and influence of major Western thinkers of the century, including pragmatists, phenomenologists, existentialists, critical theorists, and feminists.

PHIL 204 20th Century Philosophy (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

As part of the history of philosophy sequence required of undergraduate philosophy majors, this course provides an overview of the central currents of 20th-century philosophy. This course in combination with the others of the sequence allows a consistent approach to history of philosophy. This historical sequence will comprise the core, of all philosophy major options. As a general education humanities course, this class: 1) develops a broad, coherent overview of the historical development of Western philosophy in the 20th century, and the philosophical problems, methods, and results of these developments; 2) emphasizes the thought of major, influential figures and their works, such as Peirce, James, Dewey, Frege, Moore, Russell, Carney, Wittgenstein, Husserl, Heidegger, Sartre, Merleau-Ponty, de Beauvoir, Addams, Stanton, Rich, Chodorow, MacKinnon, Irigaray, Honkeimer, Adorno, Habermas; 3) develops competence in interpretation and critical assessment of human values and their place in theory and practice as set forth in philosophically and historically central views that span all areas of philosophical thought; 4) leads the students to appreciate and think critically about the ends of human action and final, non-instrumental, aesthetic values in moral, political, and aesthetic experience (including attention to the metaphysical and epistemological foundations of this experience) as set forth in the work of major philosophers of the 19th century; 5) teaches students how to communicate clearly, think logically, and evaluate critically by providing them a critical survey of philosophical theories that are both important in the historical development of Western thought and important for understanding continuing and contemporary philosophical issues today; and, 6) meets fully all its stated humanities general education objectives by providing students with texts that occupy a central role in the humanities, requiring careful oral and written analysis of these texts, developing abilities to think critically and imaginatively about the issues in these texts, and leading students to integrate course material with other humanities subjects such as literature, foreign languages, history religion, social and political theory, philosophy of science. Students will be graded on participation, three comparison/contrast papers, one position paper, one collaborative project, an a comprehensive final exam. PHIL 204 satisfies the GH requirement, it may be used to fulfill the minor requirements in Philosophy, and it is a prerequisite to the 400-level courses. This course will be offered once a year with an enrollment of 35 students.

PHIL 221 (GH) Philosophy of Science (3) An inquiry into the form and function of concepts, laws, theories, and into the character of scientific explanation and prediction.

PHIL 221 Philosophy of Science (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

PHIL 221 provides an introduction to the modern and contemporary theories of space, time, matter, and to scientific methodology more broadly. The course presents these concepts via their historical development. An awareness of the historical background forms the basis for a critical and philosophical understanding of mathematical physics and, again, scientific methodology. The main texts may include: Galileo, On the World Systems, A. Einstein, Relativity: The Special and the General Theory, and B. Hoffmann, The Strange Story of the Quantum. Students will be evaluated on participation, case study analysis, case study group presentation and response, and final paper. PHIL 221 satisfies the GH requirement, and may be used to fulfill major and minor requirements in Philosophy. It will be offered once a year with an enrollment of 50 students.

Technology has been around nearly as long as humans have been around. Humans have always created artifacts and artificial environments to aid us in our survival and to help fulfill our needs and desires. Moreover, today technology is all pervasive, transforming and conditioning our social and political relations, our cultural understanding of ourselves, and our relationship with other animals and the natural environment. Yet not much thought has been expended upon the meaning of technology, particularly in its moral dimensions. This course takes several steps to correct this deficiency. Because technologies can have far reaching effects well beyond the domain of their immediate application, the role of designers is crucial in deciding whether we take an intelligent or unintelligent approach to technology. All technologies exist to serve one human need or another. Designers make important choices concerning the creation, development, and deployment of many if not most technological innovations. Consequently, the task of the designer is an ethical one. Our goal is twofold: First, we will try to broaden our moral imaginations by taking into account the wider ranging effects that technologies have in order to reveal the moral significance of design choices. Second, we will examine the process of design itself, particularly in the way that the design process is similar to ethical reasoning in general. It is hoped that by accomplishing these two tasks, we will be empowered as designers, customers, citizens, and future employers to make choices that better fulfill the moral task of technological innovation. Two means will be used to achieve our course goals. Much of the time will be spent thinking about and discussing the various impacts that particular technologies have upon the social, cultural, and political lives of human beings and upon the natural environment. To facilitate thoughtful discussion, we will read a number of authors, writing short papers in preparation for critical discussion in class. In this way we will be better prepared to discuss and think about the issues at hand by having had the chance to organize our thoughts in advance. The second means is aimed at putting our ideas into practice by working in teams on several design projects. These design projects will require the integration of readings, discussion, and research and their synthesis to solve a design problem. Student teams will work cooperatively on these projects and make oral progress reports as well as final written and oral reports.

PHIL 434H (J ST 424H, HIST 424H, RL ST 424H) Monotheism and the Birth of the West (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Learn about the formation of Western culture, while learning to analyze the texts and other evidence about its formation from a critical, rather than naive, viewpoint. The idea of monotheism probably arose very early, and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why, then, did it take another seven centuries to become widespread—appearing in ancient Judah, Babylon, and Ionia almost simultaneously? To answer this question, the course focuses on several developments, through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to reinvent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in ANTH/CAMS 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; PHIL 200, and enriches the student experience in CAMS 400, CAMS 440, and CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, Religious Studies and toward the minor in Jewish Studies and Religious Studies. This course will be offered once every other year with 35 seats per offering.

Philosophy (PHIL)

PHIL 460 (US;IL) (AAA S 460) African American Philosophy (3) Major works by African American Philosophers, on topics of race, freedom, citizenship, nationhood, law and society.

PHIL (AAA S) 460 African American Philosophy (3) (US;IL)

African American philosophers and social activists have produced important texts that both take their place in the philosophical canon and revise the canon and indeed how we understand the practice of philosophy. This course surveys twentieth century African American philosophy, from Du Bois's Souls of Black Folk and Dusk of Dawn, to King's Why We Can't Wait, to Davis's Women, Race and Class, to Boxill's Blacks and Social Justice. The books refer back to both liberal democratic and socialist philosophical treatises, as well as theological and jurisprudential writings, in order to construct new conceptions of race, citizenship, freedom, the rule of law. Moreover, they are all grounded in the concrete, problematic situation of African Americans in twentieth century America, so that they raise with special urgency the question of how philosophical reflection can address social change. In classroom debate, students will rediscover and critically examine how the history of racial strife and reconciliation affects local, national and international civic life. One constant feature of this course is that white students and students of color become aware of differing perspectives that are hard to reconcile; this helps them to re-examine their own social identities and those of their classmates. When the course is team-taught (with one white faculty member and one faculty member of color) the same dynamic occurs between the instructor: watching them reconcile their views in discussion and pedagogy helps the students as well. It is hoped that this course will often or always be team-taught.

PHIL 468 (J ST 468) Modern Jewish Philosophy (3) Explores the major figures in modern Jewish philosophy and their influences on contemporary philosophy.

PHIL (J ST) 468 Modern Jewish Philosophy (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The primary objective of this course is to encourage students to have a reflective stance on Jewish thought. Students will learn what comprises Jewish thought and how it is distinguished from theology. They will learn what role religion plays in philosophical thought and what is at stake for a philosophy that emerges from a particular religion. This course will give students perspective on how Judaism links to other philosophical movements, for example, the enlightenment of the modern period. It will enable to think about Judaism from a theoretical perspective, adding a new dimension to what they might study from historical, sociological, or literary viewpoints. Some questions we will consider include: In what ways does it converge/diverge, with the philosophical strains that influence it? In what ways have particular events in history shaped Judaic thinking? Does Judaism, or Judaic thinking, have an essence? If so, what is it? What does Judaism mean for the Jews, and what does it mean for others? And finally, what role does mysticism have in the play between religion and philosophy? Students will be evaluated by written work (short papers and a longer seminar paper) and a class presentation.

Philosophy (PHIL)

PHIL 478 (J ST 478, RL ST 478) Ethics After the Holocaust (3) Explores the philosophical effects of the Holocaust for thinking about the primary question: Is ethics possible?

PHIL (J ST/RL ST) 478 Ethics After the Holocaust (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is an examination of ethical theories before the Holocaust and how those theories have failed, philosophically and empirically. Course topics will include the history of ethical theory, the nature and problem of evil, goodness and suffering, witnessing and testimony, and the promise of an ethics. This course provides students with philosophical approaches to the issues that emerge out of the events of the Holocaust. The course will help students expand their knowledge of the events of the Holocaust through a philosophical approach that does not merely expose them to what happened, but asks them to think about the implications of what happened: most specifically, how do we understand ethical life, if it cannot stop or confront evil? This course provides students with the philosophical approaches to the issues that emerge out of the events of the Holocaust. It will encourage them to think critically, write effectively and express their thoughts logically. Student evaluation will be based on weekly reaction papers, group presentations, and a final seminar paper. This course covers material in the history of philosophy, contemporary philosophy, and writings pertaining to the Holocaust in various forms (historical, literary documentary, and so forth). It provides links to other major areas in the history of philosophy, postmodernism, ethics, philosophy of religion, and Jewish history. It will be offered every other year.

Photography (PHOTO)

PHOTO 100 (GA) Introduction to Photography (3) An introduction to the aesthetics, history, and science of photography including practical and critical approaches to the art of photography.

PHOTO 100 Introduction to Photography (3) (GA)

PHOTO 100 is an introduction to the aesthetics, history, and science of photography including practical and critical approaches to the art of photography for beginning students.

The course will introduce students to photography as an art form and as an important medium in commercial applications, news and journalism, science, and industry. The course will look at photography in a social/historical context and showcase the work of important photographers. The course will examine the impact of technological, economic, and cultural forces on photography and, in turn, the role that it plays in our daily life, culture, and society.

The course will also expose students to the various styles and techniques used in making photographs and give them the opportunity to gain experience and practical know-how in creating their own photographs. Through the process of assembling and critically examining "galleries" of their own work and the work of others, they will be encouraged to develop a more informed critical point of view about photography as an art and important form of human expression.

Grading will be based on three photographic assignments that will account for 50% of the semester grade. In addition, there will be four exams (on photographic history, aesthetics, technical aspects of photography, and image manipulation) that will account for 40% of the semester grade. The remaining 10% of the semester grade will be based on participation in class critiques.

Students will be required to have access to a digital camera and the internet.

PHOTO 100 will be offered in the fall and spring semesters each year.

Photography (PHOTO)

PHOTO 201 (ART H 250) A Chronological Survey of Photography (3) A survey of photography's place and influence in a social, cultural, and historical context.

PHOTO 201 A Chronological Survey of Photography (3)
PHOTO 201 explores the role played by photography over time in providing understanding and insight in a social, cultural, and historical context of the impact of the development of the photographic medium and its effect on social, political, cultural, and technological events. Emphasis will be given to understanding the context that surrounds the scientific and aesthetic development of photography. This is a survey of the chronology of events in western culture that transpires from the inception of photography until the year 2000. It includes the influences and outcomes of photographers and those associated with the medium on our culture. Emphasis will be placed on the influence of photography on the world around it, and significant events and individuals in the development of the medium as a vital art form. The structure of the course will consist of research and discussion of events and individuals that characterized years selected for examination. Each week one or two decades of western culture will be highlighted. Although the thrust of research will relate to photographic subject matter, the events studied will span the culture. We will explore the development of art, literature, music, and photography, as well as, historic landmarks, and the events that have shaped present society. Each week a selection of visual material will be presented highlighting selected events, students will read literature from the period of discussion, significant pieces of music will be introduced, and accounts of periodic events will be surveyed.

Each week, a group of students will be assigned to research at least one decade. Each student will gather information about a significant figure or event that occurred in the course of a given period. The student will be expected to prepare a short paper and give a five-minute oral presentation about his/her assigned year, historical figure or event. As each student presents, the chronology of events becomes clear and the multiple threads of history weaves a brilliant tapestry of our culture. For the final presentation the student will prepare a ten-page research paper about a historical figure or event.

Students will be graded on the quality of the weekly oral presentations and the demonstrated level of commitment to research. Another significant part of their grade will be derived from the length of committed scholarship given to the ten-page term paper. Students must exhibit a level of originality, clarity, and insight. The student must demonstrate the capacity for the assimilation of facts and events relative to their subject and demonstrate how their subject relates to other events that occurred around the same time of their event. Toward this end students will be encouraged to work together to illustrate the interconnection of the chronology. Assessments will be rendered as follows: PHOTO 201 will be offered fall and spring semesters.

PHOTO 300 Photo Studio II (4) An intermediate course that explores advanced processes and applications in digital photography, digital image processing, and photographic inkjet printing.

PHOTO 300 is an intermediate course in the aesthetics, processes, and practical applications of digital photography, digital image processing, and photographic inkjet printing.

A digital camera is required.

Students will employ digital photographic applications and techniques to create images and expand their personal photographic vision. The course will help students to:

1. Gain a deeper understanding of the medium of digital photography artistically, critically, and as a technical process.
2. Explore the potential of the medium's ability to express ideas in new ways.
3. Understand advanced digital camera methods.
4. Learn advanced skills in the use and application of Adobe Photoshop.
5. Learn high quality film and object scanning procedures.
6. Learn to make photographic quality color archival inkjet prints and develop critical color awareness.

Grading is based on the quality of work in required creative projects (80%) and presentations / participation in formal critique sessions / tests-quizzes (20%).

The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence.

The prerequisite for PHOTO 300 is PHOTO 200.

PHOTO 300 will be offered fall and spring semesters.

PHOTO 400 Digital Photography in the Studio (4)

PHOTO 400 is a wholly digital, in-depth course in photography that explores the visual, technical, and creative application of digital photographic technologies in a studio setting.

Students will employ digital photographic applications and techniques to create images and expand their personal photographic vision. The course will help students to:

1. Gain a deeper understanding of the medium of digital photography artistically, critically, and as a technical process.
2. Explore the potential of the medium's ability to express ideas in new ways.
3. Master the fundamental studio practices and technologies of digital photography
   - Professional large format digital view cameras
   - Professional electronic studio lighting
   - Adobe Photoshop
   - Digital printing
   - DVD-CD-Rom storage
   - Presentation and distribution utilizing the World Wide Web

PHOTO 400 follows a workshop/critique format. A collaborative team approach is utilized to enhance students' abilities in working together to solve creative problems. Students will have to think critically, develop strategies to solve problems, and engage in class critiques as a normal expectation of the course.

Grading is based on the quality of work in required creative projects (80%) and participation in formal critique sessions (20%). The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence.

PHOTO 400 will be offered spring semesters.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: PHOTO 200

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Photography (PHOTO)

PHOTO 402 Photographic Narratives (4 per semester/maximum of 8) The development of a photographic project that leads to the creation of a handmade book.

PHOTO 402 Photographic Narratives (4 per semester/maximum of 8)

PHOTO 402 is a project course in photography focused on the construction of a handmade book that features a student's photographs as the central content of that book. The course gives the student the opportunity to choose a subject and explore it through photographic means over an extended period of time, in this case, an entire semester. Emphasis is placed on the quality of photography and the organization of those photographs in a book for their display.

Students will be evaluated on their abilities to understand the medium through classroom instruction. Evaluation will also be determined by a student's imaginative capabilities through visualization and through the completion of a series of finished pieces.

The prerequisite to PHOTO 402 is PHOTO 200.

PHOTO 402 will be offered fall and spring semesters.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: PHOTO 200

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Photography (PHOTO)

PHOTO 403 Photo Assemblage (4) Collage making through collecting and assembling found materials, including photography; origins of photographic manipulation and contemporary uses.

PHOTO 403 Photo Assemblage (4)
PHOTO 403 focuses on collage making through collecting and assembling found materials, including photographs. The course will cover the origins of photographic manipulation and contemporary uses.

Students will be evaluated on their abilities to understand the medium through classroom instruction. Evaluation will also be determined by a student's imaginative capabilities through visualization, and through the pleasure of craft completing a series of finished pieces.

PHOTO 403 will be offered spring semester.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Photography (PHOTO)

PHOTO 405 Creative Projects in Photography (4 per semester/maximum of 8) Special individual problems related to photographic vision.

PHOTO 405 Creative Projects in Photography (4 per semester/maximum of 8)
PHOTO 405 is a project course in photography designed to challenge students and engage them in photographic assignments that expand their personal and individual vision.
Projects may be developed using either digital or photochemical process (or a combination of the two) and may be organized as either group or individual assignments.
PHOTO 405 will be offered fall and spring semesters.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite: PHOTO 201, PHOTO 300

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Photography (PHOTO)

PHOTO 406 Product Photography (2) This advanced level course will explore the practices of photographing products for print and product advertising.

PHOTO 406 Product Photography (2)

This advanced level course will introduce the practice of photographing products with a focus on advertising. The development of the photographers' problem solving abilities, when lighting varied surfaces, will be considered. The importance of lighting for scale will be examined along with how or when to contribute to the context of a product by introducing appropriate set propping. Aesthetic and intellectual concepts of rendering of products for specific end uses will be explored. Theory will be applied and practiced by the student in a studio environment. As a practical course, lectures and studio demonstrations are major elements of the instruction. The lecture time will modify throughout the course to allow each student the flexibility to practice learned skills. Students will be responsible for scheduling individual studio time with the Integrative Arts Photo Services unit.

A digital camera and a laptop computer with a copy of Adobe Photoshop installed are required.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2011
Prerequisite: PHOTO 200

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Photography (PHOTO)

PHOTO 407 Portrait Photography (2) This advanced level course investigates contemporary portrait photography and traditional and modern styles of photographic lighting.

PHOTO 407 Portrait Photography (2)

This advanced level course will investigate what portrait photography is and how portrait lighting evolved from the influences of early painting. Throughout the course there will be an ongoing investigation of the successes of historic, contemporary & influential photographers. Styles of photographic lighting will be explored as well as natural and artificial light sources. Why posing is important to portrait photography will be considered as well as how or when to suggest or direct a subject to acquire a pleasing pose will be examined and practiced. Theory will be applied and practiced by the student in environmental and studio locations. Through the study of character and expression, the student Portrait Photographer will introduce their style to portrait making. The course will enable the student to make intellectual and aesthetic choices when choosing appropriate equipment and technique, command the application of skillful lighting, develop sensitivities of interaction in prelude to the direction of the photo session and understand the incorporation of space or environment and it’s relationship to the individual subject.

A digital camera and a laptop computer with a copy of Adobe Photoshop installed are required.

Physical Science (PH SC)

PH SC 440 Applied Solid State and Optical Processes (3) This course covers the solid state physics and material science prerequisite to understand today microelectronic and optoelectronic devices.

PH SC 440 Applied Solid State of Optical Processes (3)
Solid state materials and devices underlie much of the technological advances of the past several decades. A fundamental understanding of the principles of the solid state (both electronic and optic) has become prerequisite to any full participation in these contemporary technologies. Emphasis will be placed on developing a physical intuition over mathematical elegance, although a reasonable level of mathematical rigor is required. A second course in the sequence, PH SC 450, will build on the material developed in this course by applying the gained to the understanding of specific micro- and nano-devices. The course will build upon basic, solid state material science, including aspects of the crystalline state, amorphous semiconductors, glasses and solid state solutions. Electrical and thermal conduction in solids and associated phenomenology will be included. Knowledge of elementary quantum mechanics is expected for understanding the particle wave states of the electron, prerequisite to the discussions on bonding and band theory in solids. The section on semiconductors details the evolution from Bloch states to band strictures and energy gaps as applied to various devices. Both group IV and III/V semiconductors are discussed in considerable detail, providing balanced emphasis on electronic and optoelectronic aspects. Optical processes are included after a discussion of the pn junction and carrier generation mechanisms have been discussed.

General Education: None

Physical Science (PH SC)

**PH SC 410 Quantum Mechanics of Atoms, Molecules, and Solids (3)** The physical concepts underlying the properties of materials are covered. Quantum mechanics is applied to problems in atomic, molecular, and solid-state physics.

**PH SC 410 Quantum Mechanics of Atoms, Molecules, and Solids (3)**

This course provides an introduction to atomic, molecular, and solid state physics. Quantum mechanics is developed as the language for describing a large variety of atomic, molecular, and solid state phenomena. Topics will include multielectron atoms, the electronic, vibrational, and rotational spectra of diatomic molecules, and the band theory of solids. Quantum statistics is applied to phonons, photons, and an electron gas. Lasers and Bose-Einstein condensation are introduced. Scattering theory, molecular dynamics, and magnetic properties of solids are covered.

Physical Therapy (P T)

PT 101 Introduction to Computer Skills for the PTA (1) Introduction to basic computer skills for the physical therapist assistant.

PT 101 Introduction to Computer Skills for the PTA (1)

The focus of PT 101 is to familiarize Physical Therapist Assistant students with basic computer skills that will be used throughout the five-semester Physical Therapist Assistant curriculum. The course objectives include criterion based assessment of basic computer skills, mastery of computer keyboarding, word processing, file management, online library resources, digital graphics, Power Point presentations, web page development, web page publication, and use of medical related software. The course will be taught in the computer lab. Students will create a Power Point presentation, a personal web page, and demonstrate proficiency in use of computers to complete written assignments. Evaluation of student performance will be based on attendance, completion of all criterion and assignments. This course is offered in the first half of the Fall semester. This class will be limited to 12 - 16 students per section. This is an optional PTA course, which may be taken to satisfy the elective requirements of the Physical Therapist Assistant program. Tom Glumac developed this course.

Physical Therapy (P T)

P T 100 Physical Therapist Assistant--Introduction (3) Orientation to the field of physical therapy, historical background of the profession, professional ethics, medical terminology, and patient care techniques.

P T 100 Physical Therapist Assistant - Introduction (3)

This course is a general introduction into the field of physical therapy. The definition, role and function of the physical therapist, physical therapist assistant, and other health care providers as members of the health care team will be covered. The history of physical therapy and the physical therapist assistant will be reviewed. The organization of the physical therapy department and the health care team will be detailed. Each student will be expected to recognize and understand the professional code of ethics and standards that apply to the practice of a physical therapist assistant. The Guide to Physical Therapist Practice will be introduced. Documentation, medical vocabulary and abbreviations commonly used in physical therapy will be studied. The health professional as a student, clinician, and person will be examined. Laboratory topics include an introduction to body mechanics, gait and transfer training, vital signs, aseptic and positioning techniques. Cognitive and psychomotor skills will be assessed through written examination as well as practical examinations and competencies.

This course is a prerequisite for P T 150, P T 160, P T 202, P T 203, P T 205, P T 270, and P T 384. The course is offered once per calendar year. Expected enrollment is 20 - 45 students, with a limit of 15 students in a given lab section.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

P T 160 Therapeutic Exercise I (3) Introduction to the principles of exercise in the treatment of disease and injury.

This course provides an introduction to the principles of exercise and measurement for the interventions utilized in the management of disease and injury. Each student will be expected to understand their role in the implementation of various therapeutic exercise programs and tests and measures. The course may include, but is not limited to, some or all of the following topics: goniometry, manual muscle testing, arthrokinematics, osteokinematics, aerobic/anaerobic exercise, proprioceptive neuromuscular facilitation, muscle stretching techniques, and/or cardiopulmonary treatment. Indications and contraindications for the various forms of range of motion exercises and equipment will be incorporated in the protocols presented in this course. Cognitive and psychomotor skills will be assessed through written examination as well as practical examinations and competencies. Prerequisites for this course include a grade of C or better in: BIOL 129, BIOL 141, BIOL 142, P T 100, P T 384. This course should prepare students for higher level courses within the PTA curriculum and is a prerequisite for P T 250, P T 260, P T 280W, and P T 395E. P T 160 will be offered once per calendar year and expected enrollment is 20-45 students (PTA), with a maximum of 15 students per lab.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

P T 150 Physical Therapist Assistant Procedures I (2) General considerations for basic physical therapy modalities including their indications, contraindications, skill development and practical application.

P T 150 Physical Therapist Assistant Procedures I (2)
This course is an introductory study of the general principles for applying and treating with the use of massage, radiant heat, conductive heat, hydrotherapy, cryotherapy, and intermittent compression. The course is designed to give the PTA student a working knowledge in the application and theory of physical agents, in order to enhance the rehabilitation process. These treatment methods will be discussed and practiced in relation to the overall clinical management of patients and their specific disorders. Cognitive and psychomotor skills will be assessed through written examination, as well as practical examinations and competencies. At some campuses, traction, ultrasound, continuous passive motion, ultraviolet, diathermy, aquatic therapy, and other physical agents will also be studied and practiced.

This course is the first course of the Procedures series and is a prerequisite for P T 250, P T 260, P T 395E and P T 280W. Prerequisites for this course are a C or better in the P T 100, BIOL 141, BIOL 142 and P T 384 courses. The course is offered once per calendar year at each campus. Expected enrollment is 20-45 students, with a limit of 15 students in a given lab section.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

P T 202 Pediatric PT (1) A study of physical therapy as it applies to pediatric patients.

P T 202 Pediatric PT (1)
This course is an elective course for those Physical Therapists Assistant students interested in further study in pediatric physical therapy. The course will focus on various conditions affecting children, which may include cerebral palsy, spina bifida, and Down syndrome. The students will be given the opportunity to learn about pediatric physical therapy in lecture/discussion sessions and/or laboratory settings, some of which will take place at PSMA and some which may take place at other locations where they will observe children with various disabilities.

General Education: None
Diversity: None
Bachelor of Arts: None

Physical Therapy (P T)

**P T 203 The Rehabilitation of the Lower Extremity Amputee (1)** Students will be introduced to the rehabilitation process involved with a patient who has a lower extremity amputation.

The students will be introduced to the rehabilitation process involved with a patient who has a lower extremity amputation. Course objectives include identifying the reasons for lower extremity amputations, understanding pre and post-operative care of the amputee, being familiar with various feet, sockets, knees and suspensions of a prosthesis, explaining the different characteristics between various levels of lower extremity amputations, understanding the importance of skin care and proper footwear for contralateral limb, and demonstrating an understanding of an appropriate therapeutic exercise program for a patient with a lower extremity amputation. To achieve these objectives, students will be involved in lectures, small group discussions, and laboratory experiences with amputee patients, and utilization of information/research from the library and Internet resources. Students will obtain "hands-on" laboratory experiences with people who have lower extremity amputations. Evaluation of the student's performance will be based on class attendance, class participation and class project/presentation. The course will expand on the general amputee information presented in the current Physical Therapists Assistant curriculum. Frequency of offering will depend on student interest, faculty availability and campus preference, but can be up to once an academic year. Frequency is at the discretion of each individual campus. Enrollment will vary due to the above stated circumstances.

P T 205 Human Musculature (1-2) Comprehensive review of Human Musculature.

P T 205 Human Musculature (1)
This course is an elective course for those PTA students interested in a review of human musculature. The course is designed to provide advanced students with a comprehensive review of the human muscles including identification of the muscles, their actions, insertions, origins, and innervations. Students will be graded on preparation, participation, class attendance, and completion of self-assessments. Prerequisites for this course are a C or better in the P T 100, P T 384 and BIOL 129 courses.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

**P T 204 Seminar in Physical Therapy (1)** Specialized physical therapy topics investigated in the framework of clinic visitations and presentations by clinical experts.

**P T 204 Seminar in Physical Therapy (1)**

The purpose of P T 204 is to provide Physical Therapist Assistant students with an opportunity to explore special topics in physical therapy. The format of the course will be seminar based. The course will consist of a series of presentations led by faculty or outside lecturers and may involve travel to hospitals and clinics. Evaluation of student performance will be based on attendance, completion of all criterion and assignments. This course will typically be offered in the last semester of classroom instruction, before the students begin their final clinical affiliations. This class will be limited to 12-16 students per section. This is an optional PTA course, which may be taken to satisfy the elective requirements of the PTA program. Prerequisites for this course are a C or better in the P T 100 and P T 384 courses.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

P T 250 Physical Therapist Assistant--Procedures II (4) General considerations for advanced physical therapy modalities including their indications, contraindications, skill development and practical application.

P T 250 Physical Therapist Assistant Procedures II (4)

This course is a comprehensive study of electrical modalities in Physical Therapy. Concepts of nocioception and neuromuscular excitation will be discussed and introduced to the student. The course is designed to give the PTA student a working knowledge in the application and theory of electrical modalities and physical properties to enhance the rehabilitation process. These treatment methods will be discussed and practiced in relation to the overall clinical management of patients and their specific disorders. Cognitive and psychomotor skills will be assessed through written examination, as well as practical examinations/competencies. At some campuses, ultraviolet and other physical agents will also be studied and practiced.

This course is the second course in Procedures and covers the more advanced modalities and principles. Prerequisites for this course include a grade of C or better in: P T 150, P T 160, P T 270, P T 384, P T 395E, and P T 395W are required prerequisites. This course is a prerequisite for: P T 395E, P T 395F, and P T 395G. The course is offered once per calendar year at each campus. Expected enrollment is 20-45 students, with a limit of 15 students in a given lab section.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

P T 260 Therapeutic Exercise II (3)

Advanced principles and application of exercise in the treatment of disease and injury will be explored. Verbal and non-verbal communication and their role in patient education approaches will be addressed. Students will learn concepts and skills necessary to promote healing through exercise and will be able to apply these skills appropriately for a variety of populations. Topics of instruction may include but are not limited to: pre/post-surgical interventions, orthopedics, women's health, cardiopulmonary, postural dysfunction, pediatrics, geriatrics, occupational medicine, muscle stretching and strengthening, and other specific topics. Integration of all techniques and didactic material presented in other courses is required. Cognitive and psychomotor skills will be assessed through written examination as well as practical examinations and competencies. Prerequisites: a grade of C or better in BIOL 141, BIOL 142, P T 150, P T 160, P T 270, P T 384, P T 395E, and P T 395W. This course should prepare students for higher level courses within the PTA curriculum and is a prerequisite for P T 395F and 395G. P T 260 will be offered once per calendar year and expected enrollment is 20-45 PTA students, with a maximum of 15 students per lab.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check with the specific course syllabus.

**Physical Therapy (P T)**

**P T 270 Pathophysiology (3)** Introduction to medical and post-operative conditions and/or disease states most frequently treated by physical therapy modalities.

**P T 270 Pathophysiology (3)**

This course is an introduction to the study of diseases and those conditions most often treated by Physical Therapy methods. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. The course is designed to give the PTA student a working knowledge of the physiology of disease states in order to prepare the student to think and speak intelligently with patients and other health professionals regarding diseases and conditions commonly seen in physical therapy and their diagnoses, progression, and treatments. Areas of study in the course may include, but are not limited to, the history of pathophysiology, diagnostic methods, infection and healing, metaplasia, mental health, genetic and congenital disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, nervous, integumentary, endocrine, blood and lymphatics. The student's knowledge of pathophysiology will be assessed in the course using any or all of the following tools: written examination, student presentations, written term papers, special projects and assignments. This course is a prerequisite for P T 250, P T 260, P T 280, P T 280W, and P T 395E.

Prerequisites for this course are a C or better grade in BIOL 141, BIOL 142 and P T 100 and P T 384 courses. The course is offered once per calendar year at each campus. Expected enrollment is 20-45 students.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

P T 270W Pathophysiology (3) Introduction to the study of disease and those conditions most often treated by physical therapy methods; basic signs, symptoms, and causes of disease and conditions will be covered.

P T 270W Pahtophysiology (3)

This course is an introduction to the study of diseases and those conditions most often treated by Physical Therapy methods. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. The course is designed to give the PTA student a working knowledge of the physiology of disease states in order to prepare the student to think and speak intelligently with patients and other health professionals regarding diseases and conditions commonly seen in physical therapy and their diagnoses, progression, and treatments. Areas of study in the course may include, but are not limited to, the history of pathophysiology, diagnostic methods, infection and healing, metaplasia, mental health, genetic and congenital disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, nervous, integumentary, endocrine, blood and lymphatics. The student's knowledge of pathophysiology will be assessed in the course using any or all of the following tools: written examination, student presentations, written term papers, special projects and assignments. This course is a prerequisite for P T 250, P T 260, P T 280, P T 280W, and P T 395E. Prerequisites for this course are a grade of C or better in BIOL 141, BIOL 142 and P T 100 and P T 384 courses. The course is offered once per calendar year at each campus. Expected enrollment is 20-45 students.

This is a writing intensive course that will include instructor written evaluation and feedback of student's writing. The student writing will be specific to the Physical Therapy discipline and include multiple and varied assignments. Writing will be a factor in the final grade for this course.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2004
Prerequisite: a grade of C or better in BIOL 141, BIOL 142, P T 100, P T 384

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physical Therapy (P T)

P T 280W Rehabilitation (4) Examination of techniques and laboratory experiences in rehabilitation techniques for the physically challenged.

P T 280W Rehabilitation (4)

Students will learn and develop skills in the rehabilitation treatment of patients with diseases or conditions frequently seen in physical therapy. Students are expected to be able to recognize normal and abnormal gait patterns of patients diagnosed with the diseases/conditions studied. In the laboratory sessions, students practice mobility skills as they related to the pathologies studied. Students learn to treat patients in the orthopedic and neurological populations. To achieve these objectives, students will be involved in lectures, laboratory activities, audiovisual material, and utilization of information from professional literature. Attainment of educational objectives will be determined via written exams and laboratory practical exams. Basic principles utilized in this course have been learned in P T 100. The anatomical and neurological foundations have been presented in BIOL 129 and P T 270. Instruction of patients in and the performance of rehabilitation activities are a foundation in physical therapy.

This is a writing intensive course that will include instructor written evaluation and feedback of student's writing. The student writing will be specific to the Physical Therapy discipline and include multiple and varied assignments. Writing will be a factor in the final grade for this course.

Prerequisites for this course are a grade of C or better in BIOL 141, BIOL 142, P T 150, P T 160, P T 270, P T 384, and P T 395. This course is a prerequisite for P T 395F and P T 395G. This course is offered once per calendar year and may be offered in two parts over the course of two semesters. Expected enrollment is 20-45 students, with a limit of 15 students in a given lab section.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

P T 280 Rehabilitation (4) Examination of techniques and laboratory experiences in rehabilitation techniques for the physically challenged.

P T 280 Rehabilitation (4)

Students will learn and develop skills in the rehabilitation treatment of patients with diseases or conditions frequently seen in physical therapy. Students are expected to be able to recognize normal and abnormal gait patterns of patients diagnosed with the diseases/conditions studied. In the laboratory sessions, students practice mobility skills as they related to the pathologies studied. Students learn to treat patients in the orthopedic, neurological and pediatric populations. To achieve these objectives, students will be involved in lectures, laboratory activities, audiovisual material, and utilization of information from professional literature. Attainment of educational objectives will be determined via written exams and laboratory practical exams. Basic principles utilized in this course have been learned in P T 100. The anatomical and neurological foundations have been presented in BIOL 129 and P T 270. Instruction of patients in and the performance of rehabilitation activities are a foundation in physical therapy.

Prerequisites for this course are a C or better grade in BIOL 141, BIOL 142, P T 150, P T 160, P T 270 and P T 384. This course is a prerequisite for P T 395F and P T 395G. This course is offered once per calendar year and may be offered in two parts over the course of two semesters. Expected enrollment is 20-45 students, with a limit of 15 students in a given lab section.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

P T 384 Applied Kinesiology (4) Study of anatomical structure, body movement. Characteristic muscle action and motion will be analyzed in relation to physical therapy context.

P T 384 Applied Kinesiology (4)

The focus of P T 384, Applied Kinesiology, is to incorporate anatomical structure of the human body, principles of biomechanics, kinetics, and kinematics with the study of human motion and mobility. Areas of instruction may include but are not limited to: origins, insertions, actions, and innervations of muscles of the upper extremity, lower extremity, head, neck, and trunk; examination and assessment of the muscles of the extremities and axial skeleton; concentric, eccentric, and isometric muscle contractions- closed and open kinetic chains; active and passive insufficiency of muscles, arthro- and osteokinematics; normal gait and posture; manual muscle testing; and the forces involved in moving the human body. To achieve these objectives, students will be involved in lectures, small group discussions, laboratory experiences, and the utilization of information/research from the library and Internet resources. Students will obtain “hands-on” laboratory experiences including surface anatomy and examination and assessment techniques in the Physical Therapy Lab.

Evaluation of student performance will be based on a combination of all or some of the following: written examinations, laboratory practical examinations/competencies, in-class and/or on-line quizzes, student projects and presentations, and written assignments. The prerequisite courses for P T 384 are a grade of C or better in BIOL 129, BIOL 141, BIOL 142, and P T 100. Students are expected to enter P T 384 with a basic knowledge of human anatomy and the basic principles of physical therapy. The course should prepare students for any higher-level PT course offered in the PTA curriculum. P T 384 is a prerequisite for P T 150, P T 160, P T 202, P T 203, P T 205, P T 250, P T 260, P T 270, P T 270W, P T 280, P T 280W, P T 395E, P T 395F, P T 395G, and 395W. P T 384 will be offered once per calendar year and expected enrollment is 20-45 PTA students, with maximum of 15 students per lab section.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Physical Therapy (P T)

P T 395E Physical Therapist Assistant--Practicum I (4) The practice of physical therapist assistant skills in a clinical setting under the direct supervision of a physical therapist.

P T 395E Physical Therapist Assistant - Practicum I (4)

P T 395E is the practice of physical therapist assistant skills in a clinical setting under the direct supervision of a physical therapist. Course expectations include, but are not limited to: understanding and adhering to the Code of Ethics, following departmental policies, presenting with appropriate dress and appearance, being punctual and reliable, respecting patient confidentiality, treating all personnel with respect, showing positive attitude and enthusiasm towards the profession and exhibiting adaptability. Course objectives include, but are not limited to: demonstrate appropriate verbal, non-verbal and written communication, implement treatment programs as outlined in the plan of care, and demonstrate appropriate treatment techniques as learned in the classroom. To achieve these objectives students will be in a clinical setting under the direct supervision of a physical therapist. Evaluation of student performance will be based on a combination of the clinical instructor’s evaluation and the Academic Coordinator of Clinical Education’s evaluation. Prerequisites for this course are a grade of C or better in P T 150, P T 160, P T 250, P T 260, P T 270 or P T 270W, P T 384. This course is required for P T 250, P T 260, P T 280W, P T 395F, P T 395G.

This course is offered once per calendar year at each campus. Expected enrollment is 20-45 students.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Physics (PHYS)

PHYS 001 (GN) The Science of Physics (3) Historical development and significance of major concepts, with emphasis on the nature of physics and its role in modern life. (For students in non-mathematical fields.)

PHYS 001 The Science of Physics (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Introduction to the basic concepts of physics at a conceptual level for students in non-technical majors. Provides a broad survey of the history, concepts, and applications of physics including topics such as classical mechanics in one- and two-dimensions, Newton's laws of motion, work and energy, momentum, rotational motion, vibration, sound, and waves, heat and the laws of thermodynamics, electricity and magnetism, including simple electrical circuits, and topics in 20th century physics, including relativity and quantum mechanics. Course objectives include the development of an understanding of the scientific method, its application to physics problems of historical interest, as well as to modern applications; providing an appreciation of the historical role played by physics in the development of modern science, its role in important cultural and societal issues, and in understanding the basic laws of nature, as applied to everyday experience, natural phenomena, or applications technologies (old and new); the development of scientific literacy, to help motivate the many connections of physics to other fundamental scientific fields and applications disciplines; providing experience in problem solving and the conceptual understanding of physics, and emphasizing the recurring role of a few important concepts, cutting across many scientific disciplines, such as the fundamental laws of classical mechanics, the basic laws of thermodynamics (including conservation of energy), as well as applications of modern quantum theory.

Physics (PHYS)

PHYS 150 (GN) Technical Physics I (3) Elementary treatment of topics in mechanics, heat, wave motion, and sound leading toward an understanding of technical applications.

PHYS 150 Technical Physics I (3) (GN)

PHYS 150, Technical Physics I, provides an algebra-based introduction to mechanics, heat, wave motion, and sound exemplifying scientific method and leading toward an understanding of technical applications. It is the first course in a two-course sequence with PHYS 151 surveying all of physics. It includes topics such as measurement, dimensional analysis, systems of units, describing motion in one dimension, scalars and vectors, describing motion in two and three dimensions, projectile motion, circular motion, particle dynamics via Newton's Laws of Motion, forces, work and energy, momentum, systems of particles, collisions, rotational motion of rigid bodies, torque, moment of inertia, static equilibrium, mechanical advantage, mechanical properties of materials, fluids, vibrations, wave motion, sound, temperature, heat, thermodynamics, and heat transfer.

Students attend two lecture/recitation classes and one two-hour laboratory/activity period per week. Classes emphasize conceptualizing the basic ideas, terminology, and principles of the physical phenomena of nature; their quantitative expression through algebra and trigonometry; their relation to applications in science and technology; and their use in quantitative problem solving. Both computer-based and traditional lab exercises and activities illustrate class material and scientific method while giving students experience with a variety of measuring tools and the general principles of measurement, including the analysis of error. Students work collaboratively in small groups to plan their measurements, collect and analyze data (often using modern computer hardware and software), make judgments based on their results, and communicate their efforts and conclusions in a written lab/activity report.

The prerequisite for this course is 1 1/2 units of algebra. Prerequisite or Concurrent: MATH 021, 081. It is a prerequisite for PHYS 151 and is a required course for many engineering technology programs. It is offered at least once per academic year at all Penn State locations with engineering technology programs. Class size varies up to about 40 students per lecture section and 21 to 24 students per lab/activity section.

Course evaluation is based on a combination of regular homework assignments and/or quizzes, written lab/activity reports, two or three exams, and a final exam.

It includes topics such as electric charge, electric force, electric field, electric potential difference, capacitance, cathode-ray tube, electric current, Ohm’s Law, batteries, direct current circuits, resistors, ammeters, voltmeters, magnetic force, magnetic field, electromagnetic induction, motors, generators, transformers, inductors, alternating current circuits, electromagnetic waves, light, reflection, refraction, interference, diffraction, atomic physics, atoms in combination, and the nucleus.

Students attend two lecture/recitation classes and one two-hour laboratory/activity period per week. Classes emphasize conceptualizing the basic ideas, terminology, and principles of the physical phenomena of nature; their quantitative expression through algebra and trigonometry; their relation to applications in science and technology; and their use in quantitative problem solving. Both computer-based and traditional lab exercises and activities illustrate class material and scientific method while giving students experience with a variety of measuring tools and the general principles of measurement, including the analysis of error. Students work collaboratively in small groups to plan their measurements, collect and analyze data (often using modern computer hardware and software), make judgments based on their results, and communicate their efforts and conclusions in a written lab/activity report.

The prerequisite for this course is PHYS 150. It is a required course for many engineering technology programs. It is offered at least once per academic year at all Penn State locations with engineering technology programs. Class size varies up to about 80 students per lecture section and 24 students per lab/activity section.

Course evaluation is based on a combination of regular homework assignments and/or quizzes, written lab/activity reports, two or three exams, and a final exam.

Physics (PHYS)

PHYS 211L (GN) General Physics: Mechanics (0-4) Calculus-based study of the basic concepts of mechanics: motion, force, Newton's laws, energy, collisions, and rotation. NOTE: UP offers for 0 credits; Altoona offers for 4 credits.

PHYS 211

PHYS 211L General Physics: Mechanics (4) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Calculus-based introduction to classical mechanics, including such topics as: measurement, dimensional analysis, motion in one-dimension, vectors, motion in 2 and 3 dimensions, relative and circular motion, force and dynamics, Newton's Laws, friction, kinetic energy, work, potential energy, energy conservation, systems of particles, center of mass and momentum, elastic and inelastic collisions, rotation (moments of inertia), rolling motion, torque, angular momentum, static equilibrium, gravitational force and Kepler's laws, gravitational potential energy, oscillations, waves (transverse and longitudinal, superposition of waves).

This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. Students attend two lectures, one recitation session, and one two-hour lab/activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in both lab and recitation settings. The introduction of data acquisition and analysis methods (often making use of modern computer tools) will be stressed in the laboratory/activity period. Course evaluation is based on a combination of regular homework sets and/or quizzes, reports from the lab/activity period, midterm and final exams and other evaluative tools. The course is an important prerequisite for later work in many science and engineering disciplines.

Physics (PHYS)

PHYS 230 Introduction to Relativity (3) Introduction to special and general relativity including space-time diagrams and relativistic kinematics, length contraction, time dilation, equivalence principles, curved space and cosmology.

PHYS 230 Introduction to Relativity (3)
This course is designed for science or engineering students who have successfully completed calculus-based physics courses through electricity and magnetism (PHYS 212), and differential and integral calculus (MATH 140 and 141). Co-requisites of linear algebra (MATH 220) and vector calculus (MATH 230 or 231) are required. This course should provide the student with a mathematical and physical understanding of relativity theory beyond that which one encounters in semi-popular treatments of the subject. The mathematical skills which this course will develop, e.g. tensors and tensor analysis, should be especially useful to students in a wide range of science and engineering fields from computer science to physics and electrical engineering.

Physics (PHYS)

PHYS 237 Introduction to Modern Physics (3) Relativity and quantum theory applied to selected topics in atomic, molecular, solid state, and nuclear physics.

PHYS 237 Introduction to Modern Physics (3)
A broad survey of post-classical physics, taken by physics and other science and engineering students. Required of all physics majors, it is typically taken in the fourth-semester. The course covers much of the modern physics curriculum including topics such as special relativity, the concepts and mathematical formalism of quantum mechanics, both in one- and three-dimensional model systems, and the applications of quantum theory to topics ranging from atomic/molecular, nuclear, particle, and condensed matter physics to astrophysics.

The course is a prerequisite for a junior-senior course in quantum mechanics.

Physics (PHYS)

PHYS 250 (GN) Introductory Physics I (4) Selected topics in mechanics, heat, and sound.

PHYS 250 Introductory Physics I (4)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Algebra-based introduction to classical mechanics, including such topics as one- and two-dimensional motion, vectors, relative and circular motion, force and dynamics, Newton's laws of motion, work and kinetic energy, potential energy and energy conservation, momentum, rotational motion and angular velocity, static equilibrium and properties of materials, static and moving fluids, vibrations, simple harmonic motion, general properties of waves, sound and human hearing, temperature and kinetic theory, heat and calorimetry, and the basic laws of thermodynamics.

This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications to everyday phenomena and to the life sciences, to enhance their conceptual understanding of physical laws, and to increase their problem solving abilities especially as applied to physical systems. The mathematical prerequisites for this course (and the subsequent PHYS 251) are mathematics at the level of algebra and trigonometry, demonstrated by suitable coursework or demonstration of satisfactory performance on the mathematical proficiency exam. Students attend two lectures, one recitation session, and a two-hour lab/activity per week. Students perform laboratory experiments, discuss their results, and write up their conclusions in weekly lab reports. Course evaluation is based on a combination of homework, quizzes, lab reports, midterm and final exams, and other evaluative tools. The course is a prerequisite for the second semester continuation, PHYS 251.

General Education: GN
Diversity: None
Bachelor of Arts: Natural Sciences
Effective: Fall 2002
Prerequisite: MATH 022, MATH 026; orMATH 040; orMATH 041 or satisfactory performance on the mathematics proficiency examination

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 237R Introduction to Modern Physics Relativity and quantum theory applied to selected topics in atomic, molecular, solid state, and nuclear physics.

PHYS 237R Introduction to Modern Physics (3)
A broad survey of post-classical physics, taken by physics and other science and engineering students. Required of all physics majors, it is typically taken in the fourth-semester. The course covers much of the modern physics curriculum including topics such as special relativity, the concepts and mathematical formalism of quantum mechanics, both in one- and three-dimensional model systems, and the applications of quantum theory to topics ranging from atomic/molecular, nuclear, particle, and condensed matter physics to astrophysics.

The course is a prerequisite for a junior-senior course in quantum mechanics.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PHYS 212
Concurrent: PHYS 214

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 237L Introduction to Modern Physics (3) Relativity and quantum theory applied to selected topics in atomic, molecular, solid state, and nuclear physics.

PHYS 237L Introduction to Modern Physics (3)

A broad survey of post-classical physics, taken by physics and other science and engineering students. Required of all physics majors, it is typically taken in the fourth-semester. The course covers much of the modern physics curriculum including topics such as special relativity, the concepts and mathematical formalism of quantum mechanics, both in one- and three-dimensional model systems, and the applications of quantum theory to topics ranging from atomic/molecular, nuclear, particle, and condensed matter physics to astrophysics.

Physics (PHYS)

PHYS 250L (GN) Introductory Physics I (0-4) Selected topics in mechanics, heat, and sound.

PHYS 250L Introductory Physics I (4) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Algebra-based introduction to classical mechanics, including such topics as one- and two-dimensional motion, vectors, relative and circular motion, force and dynamics, Newton's laws of motion, work and kinetic energy, potential energy and energy conservation, momentum, rotational motion and angular velocity, static equilibrium and properties of materials, static and moving fluids, vibrations, simple harmonic motion, general properties of waves, sound and human hearing, temperature and kinetic theory, heat and calorimetry, and the basic laws of thermodynamics.

This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications to everyday phenomena and to the life sciences, to enhance their conceptual understanding of physical laws, and to increase their problem solving abilities especially as applied to physical systems. The mathematical prerequisites for this course (and the subsequent PHYS 251) are mathematics at the level of algebra and trigonometry, demonstrated by suitable coursework or demonstration of satisfactory performance on the mathematical proficiency exam. Students attend two lectures, one recitation session, and a two-hour lab/activity per week. Students perform laboratory experiments, discuss their results, and write up their conclusions in weekly lab reports. Course evaluation is based on a combination of homework, quizzes, lab reports, midterm and final exams, and other evaluative tools. The course is a prerequisite for the second semester continuation, PHYS 251.

Physics (PHYS)

PHYS 251 (GN) Introductory Physics II (4) Selected topics in light, electricity, and magnetism.

PHYS 251 Introductory Physics II (4) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Algebra-based introduction to classical electricity and magnetism, optics, and areas of modern physics, including such topics electric charge and fields, electrical potential and energy, electric currents and resistance, direct current (DC) circuits, magnetism, electromagnetic induction and applications to devices, electromagnetic waves, light and geometrical optics, wave nature of light, basic optical instruments (microscopes, telescopes, etc.), basics of quantum mechanics, applications of quantum theory to atoms, molecules, and solids, nuclear physics and radioactivity, applications of nuclear energy and radiation.

This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications to everyday phenomena and to the life sciences, to enhance their conceptual understanding of physical laws, and to increase their problem solving abilities, especially as applied to physical systems. The mathematical prerequisites for this course (and the prerequisite PHYS 250) are mathematics at the level of algebra and trigonometry, demonstrated by suitable coursework or demonstration of satisfactory performance on the mathematical proficiency exam. Students attend two lectures, one recitation session, and a two-hour lab/activity per week. Students perform laboratory experiments, discuss their results, and write up their conclusions in weekly lab reports. Course evaluation is based on a combination of homework, quizzes, lab reports, midterm and final exams, and other evaluative tools. The course is a continuation of the first-semester course, the newly renumbered PHYS 250.

General Education: GN
Diversity: None

Physics (PHYS)

PHYS 400 Intermediate Electricity and Magnetism I (3) Electrostatics, steady-state magnetic field; electrical and magnetic properties of matter; Maxwell's equations, boundary-value problems, and wave propagation.

PHYS 400 Intermediate Electricity and Magnetism I (3)

A second undergraduate course in electricity and magnetism, required of all physics majors who typically take it in their fifth/sixth-semester. The course includes a review of vector calculus, and in-depth discussions of electrostatics, magnetostatics, time varying electric and magnetic fields, and electromagnetic waves. Students are encouraged to take the MATH 405 and 406 sequence while they are in Physics 400.

This course is a prerequisite only for Physics 401 which is a second-semester extension.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MATH 250 or MATH 251; MATH 230 or MATH 231; PHYS 212, PHYS 213 and PHYS 214
Concurrent: MATH 230 OR MATH 231; PHYS 204

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 402 Electronics for Scientists (4) Circuit and network theory; active devices; amplifiers; introduction to digital electronics; noise theory.

PHYS 402 Electronics for Scientists (4)
A junior-senior theory/laboratory course providing a survey of modern electronics from a data acquisition and analysis point of view. One of several possible lab-based courses taken by physics majors in several options to satisfy a lab requirement, typically taken by physics majors in their senior year. This course is very useful for students interested in experimental research work and includes examples such as digital data acquisition, the lab study of various electronic devices, fast Fourier transform methods and other topics.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MATH 250 or MATH 251; PHYS 212, PHYS 213 and PHYS 214

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

**PHYS 406** Subatomic Physics (3) Introductory treatment of elementary particles, fundamental strong and electroweak interactions, nuclear structure, accelerators, particle detection, nuclear astrophysics.

**Subatomic Physics (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1995  
Prerequisite: PHYS 410

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 410 Introduction to Quantum Mechanics I (3-4) Basic postulates; Schrodinger wave equation; stationary states; variational method; scattering in one dimension; orbital angular momentum; hydrogen atom; numerical methods.

Introduction to Quantum Mechanics I (3-4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MATH 250 or MATH 251; MATH 230 or MATH 231; PHYS 237

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 411 Introduction to Quantum Mechanics II (3) General theory of angular momentum; approximation methods; scattering theory; radiation theory; applications to atomic, molecular, condensed matter, nuclear and particle physics.

Introduction to Quantum Mechanics II (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1994
Prerequisite: PHYS 410

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

**PHYS 412 Solid State Physics I (3)** Crystal symmetry, x-ray structure analysis, lattice vibrations, thermal properties, free electron transport theory, elementary one-electron quantum theory of solids.

**Solid State Physics I (3)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1986
Prerequisite: MATH 230 or MATH 231
Concurrent: PHYS 410

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

**PHYS 413 Solid State Physics II (3)** Quantum theory of electronic and optical properties of solids, semiconductors, dielectrics, magnetic properties, crystal imperfections, low-temperature effects, and superconductivity.

**Solid State Physics II (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1986  
Prerequisite: PHYS 412

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 414 Solid State Physics (3) Crystal structure; reciprocal lattice; X-ray diffraction; lattice vibrations; thermal properties; free electron gas model; energy bands; semiconductors; magnetism.

Solid State Physics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MATH 230, PHYS 237

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

**PHYS 419 (MATH 419) Theoretical Mechanics (3)** Principles of Newtonian, Lagrangian, and Hamiltonian mechanics of particles with applications to vibrations, rotations, orbital motion, and collisions.

**PHYS (MATH) 419 Theoretical Mechanics (3)**

A second course in classical mechanics, required of all physics majors who typically take it in their 5th or 6th semester. The course includes a review of relevant mathematics, detailed discussions of advanced topics in Newtonian mechanics, introductions to Lagrangian and Hamiltonian dynamics, and applications to such forced oscillations, orbital motion, vibrational motion and normal modes, rigid body motion, and collisions.

It is a prerequisite for Physics 461, which is a second semester extension. It is also a valuable background for most 400-level physics courses, especially Physics 410.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2007  
Prerequisite: MATH 230 or MATH 231; MATH 250 or MATH 251; PHYS 212, PHYS 213 and PHYS 214

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 421W Research Methods in Physics (3) Methodology focusing on the theory of measurement and experiment design.

Research Methods in Physics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PHYS 237

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 420 Thermal Physics (3) Basic postulates of statistical mechanics and thermodynamics, microscopic quantum states and macroscopic parameters; partition functions; Maxwell-Boltzmann and quantum statistics.

Thermal Physics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MATH 230 or MATH 231; MATH 250 or MATH 251; PHYS 237

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 445 Nanoscience Seminar (1) Advanced nanoscience seminar required of Behrend College students for completion of the nanoscience minor.

PHYS 445 Nanoscience Seminar (1)

PHYS 445 is a one-credit seminar course to be taken exclusively by students intending to complete the Nanoscience Minor at Behrend College. It serves as the culminating course for students in the Nanoscience Minor. The students will integrate information from their major fields of study to choose and explore topics related to nanoscience. The course will be offered once a year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: CHEM 112, E SC 211, E SC 212, E SC 213, E SC 214, E SC 215, E SC 216, MATH 140, PHYS 211 or PHYS 250

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 444 Topics in Contemporary Physics (2) Modern research topics and career opportunities in physics; employment, graduate education, and tailoring the physics curriculum to meet career goals.

PHYS 444 Topics in Contemporary Physics (2)
A course required of all Physics majors, designed to be taken in the Spring semester of the junior year. Introduces students to modern research areas in physics at Penn State and elsewhere. Provides background on career choices available with an undergraduate physics degree, including employment opportunities, planning for graduate study, and tailoring the physics curriculum to meet career goals. The course structure is typically comprised of talks by Penn State faculty, outside visitors, students panels, and other information speakers, with students writing short and long reports using the class presentations discussions, and research from outside sources (research journals, internet, etc.) as background material.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PHYS 237 and 3 credits of physics at the 400 level

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 443 Intermediate Acoustics (3) Vibration and simple vibrating systems, sound wave propagation, acoustic instruments, recent developments.

PHYS 443 Intermediate Acoustics (3)
An intermediate acoustics course, used as an elective by Physics majors in many options and used as a requirement by Physics majors in the Acoustics option. Building on classical wave theory learned in the 200-level introductory sequence, this course discusses such topics as the mathematical foundations of wave equations, basic acoustic systems, acoustics in fluids, attenuation and the fluctuation-dissipation theorem, and acoustical radiation and scattering. The emphasis is on the basics of mathematical and physical acoustics rather than applied acoustics.

General Education: None
Diversity: None
Effective: Fall 1999
Prerequisite: MATH 251, PHYS 212, PHYS 213 and PHYS 214; or PHYS 203 or PHYS 204

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 446 The Year in Physics: A Seminar on the Latest Research (1) Discussion recent research in physics.

The Year in Physics: A Seminar on the Latest Research (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PHYS 211

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 457 Experimental Physics (1-3) Selected experiments in various fields of physics.

PHYS 457 Experimental Physics (1-3)
An intermediate laboratory course, required of all Physics majors and taken by other students, typically in their junior/senior years, this course provides an introduction to modern laboratory techniques and instrumentation used in research labs. Typical 'short' experiments include X-ray diffraction, Compton scattering, velocity of light determination, high-temperature superconductors, Raman scattering, Hall effect, scanning tunneling microscopy (STM), and many others, as well as long experiments. This three-credit course also serves as the writing intensive course at the 400-level for most physics majors. One- and two-credit versions of 457 (without the writing-intensive component) are taken by science and education students outside of physics.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PHYS 212 rPHYS 213, PHYS 214 andPHYS 237

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

Theoretical Mechanics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 1986
Prerequisite: MATH 419

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 457W Experimental Physics (3) Selected experiments in various fields in physics.

PHYS 457W Experimental Physics (3)

An intermediate laboratory course, required of all Physics majors and taken by other students, typically in their junior/senior years, this course provides an introduction to modern laboratory techniques and instrumentation used in research labs. Typical 'short' experiments include X-ray diffraction, Compton scattering, velocity of light determination, high-temperature superconductors, Raman scattering, Hall effect, scanning tunneling microscopy (STM), and many others, as well as long experiments. This three-credit course also serves as the writing-intensive course at the 400-level for most Physics majors. One- and two-credit versions of Physics 457 (without the writing-intensive component) are taken by science and education students outside of Physics.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PHYS 212, PHYS 213, PHYS 214 and PHYS 237

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 458 Intermediate Optics (4) Geometrical and physical optics: theory of lens systems, aberrations, apertures, interference, diffraction, polarization.

PHYS 458 Intermediate Optics (4)

An intermediate optics course which builds on the wave and optics used in the 200-level introductory course, this course (which includes a lab component) focuses on physical and geometrical optics, propagation of light and its interaction with matter, polarization, interference, and diffraction. Optical components such as lenses, mirrors, prisms, fiber optics, spectrometers, and interferometers are discussed and employed. The laboratory component includes a number of 1-2 period experiments designed to illustrate the principles of applied geometrical and physical optics. Longer (5 period) experiments are also included which utilize modern, computer-controlled multi-channel detection systems and are applied to such systems as thin-film optics and the optics of semi-conductors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PHYS 212, PHYS 213, PHYS 214; MATH 250 or MATH 251; MATH 230 or MATH 231

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 479 (MATH 479) Special and General Relativity (3) Mathematical description, physical concepts, and experimental tests of special and general relativity.

PHYS (MATH) 479 Special and General Relativity (3)

This course is intended as an elective course (within the undergraduate Physics program) for Physics majors to be taken in their senior year. Intended to be cross-listed with MATH, it can also be used in support of a Mathematics minor and, in some options, within the Math program as a program elective as well. The course significantly expands upon the introduction to Special Relativity (SR) seen in PHYS 237, including discussions of experimental tests of SR and applications to relativistic mechanics. It then introduces students to the mathematical machinery required to understand General Relativity (GR), starting with the description of curved spacetimes and geodesics. It discusses solutions to the Einstein equations and surveys the classic tests which established the validity of General Relativity. It concludes with applications of GR in such areas as black hole physics, the generation and detection of gravitational waves, other topics (such as cosmology, relativistic astrophysics, etc.).

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Physics (PHYS)

PHYS 462 Applications of Physics in Medicine (3) Applications of physics in human physiology and in instrumentation for medical diagnosis and treatment.

PHYS 462 Applications of Physics in Medicine (3)

This course is a general survey of applications of physics in understanding the physiology of the human body--for example, the function of the eye, ear, and electrical conduction. Physical principles behind diagnostic medical measurement are covered, including imaging modalities: X-ray, nuclear, magnetic resonance, and ultrasound. Treatment applications such as laser surgery and radiation therapy are also covered. The course is appropriate for students intending work in a health profession.

PPATH 120 (GN) The Fungal Jungle: A Mycological Safari From Truffles to Slime Molds (3) Students will learn about the world of fungi and the many ways it impacts their lives.

PPATH 120 The Fungal Jungle: A Mycological Safari From Truffles to Slime Molds (3) (GN)

Fungi are a fascinating group of organisms that we encounter in everyday life. Apart from the mushrooms in our pizza or mold in our bathtub, fungi are important plant pathogens that severely interfere with agricultural production, cause diseases in humans and insects, and have a major role in ecosystems. The aim of this course is to introduce students to the world of Fungi and review the important functions of fungi in human society. We will discuss examples that students are familiar with in an attempt to bring fungi closer to them and will have several class activities and visits. This course is intended to be an introductory science course to non-science majors and will provide important general science knowledge as well as specific details about fungal biology.

General Education: GN

Plant Pathology (PPATH)

PPATH 300 (GN) Horticultural Crop Diseases (3) Diseases of horticultural crops are examined stressing their cause, diagnosis, control and national and international importance.

PPATH 300 Horticultural Crop Diseases (2) (GN)
Diseases of horticultural crops are examined stressing their cause, diagnosis, control and understanding the roles they play in national and international trade and bio-security concerns. The biology of plant diseases involving a broad range of biotic and abiotic plant pathogens will be discussed. The objectives are that the student completing the course will 1) be able to describe the causes of plant diseases in general and horticultural crop diseases in particular; 2) be able to explain the interactions that occur among the plant, the environment, and biotic and abiotic agents during disease development; 3) have the ability to diagnose and explain the management of key diseases of horticultural crops; and 4) be able to describe the economic and social impact that plant diseases have on horticultural crops, including how the world trade of these crops can result in the global spread of pathogens important to other agricultural crops and native plants in the environment. A once-a-week, 2 hour laboratory will stress practical aspects of identifying diseases and plant pathogens and gaining experience in selecting appropriate disease control practices. The course is recommended for majors in horticulture and urban forestry but is appropriate for everyone interested in growing plants for enjoyment or profit or in maintaining the health of horticultural crops. This course provides an introduction to plant pathology in general and can be followed by more in-depth courses in plant-microbe interactions, mycology, nematology, phytophthora, air pollution impacts on terrestrial ecology, or forest pathology. Enrollment is expected to be between 25 and 50 students. It will be offered every Fall semester. Students will be evaluated based on a term paper with a topic of the student’s choosing as well as short essays and objective answer questions on quizzes, exams, and a final exam.

**PPATH 416 Plant Virology: Molecules to Populations (3)** A exploration of the molecular biology and population dynamics of the virus-plant interaction.

**PPATH 416 Plant Virology: Molecules to Populations (3)**

This will be the departmental foundation course for plant viruses, one of the four major pathogen groups. The course will entail an exploration of the history, nature, cause, socioeconomics, symptomatology, physiology, diagnosis, ecology, epidemiology, and control of viral diseases on plants. Special emphases will be placed on the nomenclature taxonomy, replication, and evolution of plant viruses, molecular biology of the virus-plant interaction, replication, virus-like agents (viroids & prions), natural and genetically engineered disease resistance, virus-vector relationship, and population dynamics.

Grade assignment will be based on student performance involving written examinations, special projects, and an oral presentation.

The course will be offered in the fall semester of odd years and with an enrollment limit of 24 students.

Plant Pathology (PPATH)

PPATH 412 Turfgrass Disease Management (3) Introduction to biology of turfgrass pathogens and management of cool- and warm-season turfgrass disease.

PPATH 412 Turfgrass Disease Management (3)
This course will provide an introduction to concepts of disease processes in plants and biology of plant pathogens, principles of turfgrass disease diagnosis based on symptom development, recognition of signs and microscopic structures of the pathogens, environmental and cultural management factors influencing disease development, significance of pathogen life cycle in disease epidemic development, and integrated turfgrass disease management practices for root and foliar disease. Disease of various turf types for golf courses, residential lawns, landscapes, and athletic fields will be discussed. Disease topics will include diseases that commonly occur in winter, disease that develop in spring and persist into summer, and disease that initiate in summer and remain active until late fall in most regions of North America. A number of non-infectious disorders of turf caused by extreme environmental conditions and improper cultural practices will also be discussed.

Students will be evaluated by the use of two hour exams and a final exam.
The course will be offered fall semester with an expected enrollment of 55 to 60 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008

Plant Pathology (PPATH)

PPATH 417 Phytobacteriology (3) Lecture and lab coverage of how bacteria cause plant diseases.

PPATH 417 Phytobacteriology (3)
This course covers the genetic, molecular, and physical, and physiological mechanisms of bacterial pathogenesis in plants. We will examine how the tools of microbiology are used to deduce the pathogenic mechanisms behind various plant diseases caused by bacteria. Topics include: motility; attachment; evasion of host defense; toxins; enzymes and proteins; biofilms; and bacterial communication. Readings include research and review articles. The course includes weekly hands-on laboratory activities that cover handling bacteria, isolating bacteria from plants, monitoring bacterial growth in plants, monitoring plant symptoms, and the genetic control of bacterial and plant interactions.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plant Pathology (PPATH)

PPATH (BIOL) 425 Biology of Fungi (4)
This course is a hands-on survey of fungal diversity, covering a wide variety of topics in fungal biology: phylogenetics, morphology, ecology, evolution, population biology, fungi as food, fungi as sources of toxins, ethnomycoLOGY, fungi as agents of plant and animal disease, fungi as sources of pharmaceuticals, and industrial uses. All fungi will be discussed, from mushrooms and other fleshy fungi to molds to slime molds. The laboratory portion of the course will center mostly around handling and manipulating freshly collected and living fungi and microscopic analysis of their major features. Field trips will include an all-day Saturday trip to a forest to collect and observe fungi, a similar afternoon field trip, and a demonstration trip to Penn State's mushroom production facility. Participation in a weekend field trip coordinated with other Universities (e.g., SUNY ESF's Peck Foray) will be optional. Students will come out of the course with a broad base of knowledge about fungi and their diversity and the ability to handle them in the laboratory and observe them using the microscope. Grades will be based on exams and a semester-long project. The course is designed for any undergraduate at the fifth semester or beyond or graduate student majoring in the basic (e.g., organismal, ecological, evolutionary, molecular) or applied (agricultural, medical) biological sciences after having completed at least six credits in one of these areas.

General Education: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plant Pathology (PPATH)

**PPATH 419 Plant Nematology (2)** The biology of plant pathogenic nematodes, the diseases they cause, and their control.

**PPATH 419 Plant Nematology (2)**

The course provides a comprehensive overview of important plant-parasitic nematodes causing economic damage to food, fiber and ornamental crops. Major topics include, identification, taxonomy, biology, ecology, plant-nematode interactions, symptomology and nematode management. The laboratory portion of the course provides hands-on experience extracting nematodes from soil and plants and preparing them for microscopic examination. The course will provide students with sufficient background information to make a preliminary nematode disease diagnosis and control recommendations. The course will also present a broad overview of other important nematode groups found in the soil including free-living, predatory and entomopathogenic forms. Throughout the course, students will be introduced to important scientific literature on nematodes.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plant Pathology (PPATH)

PPATH 427 Mycotoxins: Effects of Fungal Toxins on Human and Animal Health (3)

This course will provide a comprehensive overview of the multi-disciplinary subject of mycotoxicology. Mycotoxins are chemicals produced by fungi that are toxic to humans and animals. Students will become familiar with the history and description of mycotoxins and mycotoxicoses, formation of mycotoxins, biology of mycotoxigenic fungi, methods of mycotoxin analysis, fate of mycotoxins in food processing, management and prevention of mycotoxins, regulations, and economic and social impacts. This course is appropriate for students who wish to learn more about fungi beyond the introductory level, as well as for those with interests in animal science and husbandry. The subject of mycotoxicology involves most aspects of the agriculture-food system so students of food science, crop and soil science, entomology and plant pathology will find relevant topics in mycotoxicology. Biology and microbiology students especially those with interests in plant-associated microbes and ecology will also benefit from this course. Course format will be two lectures per week and one period of discussion that will include laboratory activities, field trips, case study discussions, and student presentations. Students will be evaluated by a midterm exam, final exam, research paper, oral presentation on the research topic and participation in class discussion. The course will be offered each spring semester with an anticipated enrollment of 20 students per semester.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: BIOL 110 or BIOL 011 and BIOL 012; CHEM 112, CHEM 113; course can also be taken with approval of the department

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

PPATH 430 (ERM 430) Air Pollution Impacts to Terrestrial Ecosystems (3) An overview of direct and indirect effects of air pollution on terrestrial plants and ecosystems.

PPATH (ERM) 430 Air Pollution Impacts to Terrestrial Ecosystems (3)
Pollutant sources, transport, meteorology, and temporal and spatial trends of pollution dispersion and deposition are introduced. An overview is presented of the direct and indirect effects of air pollutants on terrestrial ecosystems with an emphasis on plant life. The effects of ozone, sulfur dioxide, nitrogen oxides, particulate matter, halogens, and combined pollutants leading to acidic atmospheric depositions are presented. Emphasis is placed on air pollutants as plant pathogens leading to symptoms and eventual long-term accumulative effects to entire ecosystems. Methods of diagnostics, factors affecting plant response, ecosystem decline and resiliency, pest interactions, assessment of loss and cost/benefit analysis leading to abatement follows. Final parts of the course include perspectives of public awareness, development of National Ambient Air Quality Standards, compliance prevention of significant deterioration, and the Clean Air Act reforms of 1990. Evaluations of student performance are made by unannounced quizzes and two scheduled examinations. The course is offered every Spring semester.

PL ET 222 Introduction to Plastics Processing (4) Introduction to plastic processing methods, materials, tooling, design, and equipment. Safe operation and practices are emphasized.

PL ET 222 Introduction to Plastics Processing (4)

This course provides an introduction to plastics processing and is intended to provide broad foundational knowledge of the different types of plastics processing methods, equipment, and materials. The educational objectives are to develop competency in the determination of potential methods for manufacturing various component designs and the determination of cost effectiveness for the possible process alternatives selected. After completing this course, the student should have a basic understanding of a multitude of plastic processing methods and have knowledge of the interrelationship of part and tool design as it impacts manufacturing. The student should also understand materials and material flow phenomena as it affects processing and should understand the processing and troubleshooting techniques typically found in the industry. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

Plastics Engineering Technology (PL ET)

PL ET 225 Instrumentation, Control, & Automation for Plastics (2) Instrumentation, control and automation basics & strategies for plastics processing.

PL ET 225 Instrumentation, Control, & Automation for Plastics (2)

This course provides basic foundational knowledge in the circuits, instrumentation and control systems used in plastics processing. The educational objectives are to create a basic understanding of electric circuits, transducers, automation, control systems, and control strategies encountered for a variety of processes. After completing this course, the student should demonstrate a basic understanding of the operation of temperature, force, pressure, position, and flow transducers along with the operation of different types of hard automation and robots used in typical plastics processing applications. The student should also demonstrate an understanding of issues related to interfacing instrumentation and automation systems with processing and monitoring equipment. Finally, the student should demonstrate understanding of basic control strategies such as OPEN LOOP, CLOSED LOOP, ADAPTIVE CONTROL, and PID. Lectures will be reinforced through laboratory exercises. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

PL ET 227 Plastics Processing & Statistical Methods (4) Study of advanced issues in plastics processing, such as design of experiments and SPC/SQC will be covered.

PL ET 227 Plastics Processing & Statistical Methods (4)

The course is intended to give the students the basic tools needed to identify and troubleshoot plastic processing problems. Injection molding will be the primary focus. The course objectives are: to introduce the student to the root cause of injection molding problems both at the start-up of a new mold and during production runs, to identify when a process has changed and to monitor the effects of attempts to improve the process using statistical process control and other statistical methods, to identify and minimize the sources of process variation; to ascertain the capability of measurement systems, and to gain understanding in the use of designed experiments techniques for developing cause and effect information. During the course, students will build upon knowledge gained in earlier courses in plastics materials and plastics processing. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

PL ET 232 Introduction to Part and Tool Design (3) CAD techniques for designing plastic products and related tooling.

PL ET 232 Introduction to Part and Tool Design (3)

This is the introductory course for designing plastic parts using CAD solids modeling techniques. This course builds upon fundamental CAD modeling skills developed during earlier courses and initially focuses on the fundamental techniques needed to construct solids models for thin walled plastic parts. Focus then shifts toward using similar solids and surface modeling techniques for designing molds for plastic parts. The course objective is to provide the basic knowledge to construct solid models of plastic parts and related tooling and to lay the foundation for more advanced plastic part and mold design courses. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

PL ET 235 Tool Design & Machining (2) Study of the methods used to create the tooling used in plastics fabrication and the methods of maintaining tooling.

PL ET 235 Tool Design & Machining (2)
This course will provide the students with an understanding of the construction methods and materials used in the creation of plastics tooling. Various methods of mold manufacture are introduced along with the fabrication practices needed to permit successful mold operation. The course concludes with a study of the materials used in mold construction and plastics tooling preventative maintenance practices. The course objective is to provide the knowledge needed to properly design parts for manufacturability. Students will also learn how to set up a system to maintain tooling to reduce catastrophic failures. Through the lab portion of this class, the students will obtain hands-on experience in the actual construction methods. This course uses knowledge gained in earlier plastics materials and processing courses to guide tooling design and fabrication decisions. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plastics Engineering Technology (PL ET)

PL ET 323 Packaging Processes (3) In-depth studies and laboratory experiments will be conducted on processes such as blow molding, thermoforming, extrusion and other packaging processes.

PL ET 323 Packaging Processes (3)
In this course the student will learn about plastic packaging processes of blow molding, thermoforming, extrusion. Other minor processes will be presented. The course objectives are to develop student proficiencies in identifying the polymer material requirements for each process, in identifying the mold design and construction techniques for each process, and knowing how plastic packaging processes differ from injection molding. The laboratory will include experiments that show the advantages of each process and to develop student competency in running equipment for each process explored. The students shall also develop competency in conducting elementary process troubleshooting for each process. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: PL ET 225, PL ET 227, PL ET 304

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plastics Engineering Technology (PL ET)

PL ET 304 Plastic Material Properties and Applications (3)

This course studies the fabrication of polymers and macromolecules. Current commercial techniques are covered in detail and encompass the reactions and processes currently being used in the plastics industry today. Also covered is the technology for creating different grades of polymers by using various fillers, additives, and blends to create variations within the known polymers. This is supplemented by laboratory exercises that draw together theory and practice.

Polymer synthesis is a key link between the atoms present before they become a part of a polymer molecule and the molded article, the end product of the molding operation. The course objective is to establish a basic knowledge of these processes to enable a deeper understanding of the capabilities of molding, designing, and the performance of polymer articles. Students will be able to start with a handful of carbon atoms, a synthesis procedure, and an injection molding machine, and understand what affects the polymer at each stage, rather than being limited to understanding a given molding process. It will allow students to adapt to industrial needs and the push towards a scientific approach to problem solving, rather than acting as traditional molding machine processors. Students will also be able to correlate the polymerization process to the performance derived in plastics processes and molded articles. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plastics Engineering Technology (PL ET)

**PL ET 340 Mold Design and Process Strategies (3)** Overview of mold design and the development of strategies and techniques integrating CAD and CAE technologies for optimizing part quality, moldability, and productivity.

**Mold Design and Process Strategies (3)**

- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Summer 2011
- Prerequisite: EG T 121

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plastics Engineering Technology (PL ET)

PL ET 330 Advanced Tooling & Rheology (4) Tooling design strategies are developed considering a material's physical and rheological influences on processing and part formation.

PL ET 330 Advanced Tooling & Rheology (4)
This course is intended to allow the student to develop an understanding of the critical relationship between the physical and rheological properties of plastic materials and their influence upon processing and part formation. The course objective is to establish this relationship since it is the basis of establishing tooling design strategies for optimizing part quality, moldability, and productivity. Upon completing the course, the student will have proficiency in the use of injection molding analysis software (Moldflow) and be able to develop strategies for its efficient and effective application. The software is used as a means to accelerate and enhance the students understanding of the injection molding process. Students will learn how software usage can be interwoven with knowledge of polymer melt rheology, shrinkage, warpage, residual stresses and their relationship to tooling to enable proper process and molded part design. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: PL ET 206W, PL ET 227, PL ET 232, PL ET 235, PHYS 250

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plastics Engineering Technology (PL ET)

**PL ET 366 Fluid and Thermal Sciences (3)** Fundamentals of thermodynamic principles, fluid statics, and fluid dynamics.

This course is intended to develop the student's ability to conceptually evaluate thermal or fluid problems, and solve practical problems that might be encountered in the plastics industry. The course objectives are: to introduce the fundamentals of thermodynamic behavior by defining pertinent material properties that define an equilibrium state based on temperature and pressure, to study internal energy, enthalpy, and the specific heats of liquids, solids, and gases, including ideal gas behavior and changes in energy level as a result of phase changes, and to introduce mechanical and electrical work leading to applications of the First Law of Thermodynamics. Other objectives are to study fluid static principles involving submerged body behavior by investigating topics of buoyancy and centers of pressure. Fluid dynamics studies explore the Bernoulli and Energy equations, head losses, and calculation of pump requirements from pressure drop and volumetric flow data. Criteria for determining laminar and turbulent flow are established. Viscosity of fluids and fluid rheology topics are also introduced. Students will apply the lessons learned in a subsequent course on heat transfer. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: MATH 083, PHYS 250, PL ET 222, PL ET 227. Prerequisite or concurrent: PL ET 330

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plastics Engineering Technology (PL ET)

PL ET 350 Design of Plastic Parts (4) Designing plastic parts utilizing CAD, FEA, and CAE technologies for the design and for structural, dimensional, and process evaluation and optimization.

PL ET 350 Design of Plastic Parts (4)
The educational object of this course is to develop knowledge in the process of designing plastic parts and products. The course focuses on the critical relationship between the part design and the plastic material, tooling and the specific manufacturing methods used to produce the part. Use of CAE technologies are used for enhancing concurrent engineering strategies and evaluating manufacturability of a design. The course develops special design guidelines to accommodate plastic material characteristics and production requirements. The course also addresses issues of assembly and decoration of plastic parts. Upon completing the course students will demonstrate competency in relating how engineering properties of plastic materials and their unique characteristics relate to product design. This includes understanding viscoelasticity and the effects of time, strain, rate, temperature and environment on plastic materials and the product. During this course students will build upon the knowledge gained in previous courses on strength of materials, plastic materials, part and tool design and finite element methods. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40-50 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MCH T 213, PL ET 232, PL ET 304, PL ET 330 . Prerequisite or concurrent:MET 418

Plastics Engineering Technology (PL ET)

PL ET 345 Heat Transfer (2) Fundamentals of heat transfer including conduction, convection, and radiation.

PL ET 345 Heat Transfer (2)

The course is intended to allow the student to develop the ability to conceptually evaluate heat transfer problems, and solve practical problems that might be encountered in the plastics industry including those that relate to energy management in plastic materials or processes. The course objectives are accomplished by establishing the concepts of the three principle mechanisms of heat transfer, solving plastics related problems illustrative of each mechanism, and reinforcing theoretical concepts learned through the use of simulation software and hands-on laboratory experiments. During this course students will build upon the knowledge gained in an earlier course in the thermal and fluid sciences. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

Plastics Engineering Technology (PL ET)

**PL ET 430 Packaging Design & Materials (2)** Study of design and materials for plastic packaging including blow molded, thermoformed and extruded products.

**PL ET 430 Packaging Design & Materials (2)**

This course is intended to acquaint the student with issues related to plastic packaging material selection and packaging design. The course objectives are to establish knowledge in the primary materials used in packaging and how each is used in the design of various packaging systems, to identify how to select materials based on the requirements of the product, to identify the benefits and limitations for each process, to identify key materials and processes for a given type of package, to design robust packaging, and to optimize the product for each process. During the course students will build upon knowledge gained in earlier courses related to plastics packaging processes and plastics part design. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: Prerequisite or concurrent: PL ET 304, PL ET 330

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plastics Engineering Technology (PL ET)

**PL ET 429** Plastics Packaging (3) Introduction to plastics packaging including production methods, economic concerns, aesthetics, color and transparency, environmental concerns, and package lifetimes.

**Plastics Packaging (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1996  
Prerequisite: PL ET 350

Plastics Engineering Technology (PL ET)

PL ET 462 Advanced Injection Molding (3) New and advanced injection molding technologies, implementing statistical methods such as design of experiments.

PL ET 462 Advanced Injection Molding (3)
This course continues studies in advanced processing and is intended primarily for students with career interests as a process engineer in an injection molding facility. The course objectives are to: establish how to use data collected from a molding process for new machine evaluation, expand knowledge in process monitoring & troubleshooting, perform advanced process modeling, and develop an awareness of computer integrated manufacturing. The student will study new developments in process control and advanced injection molding technologies (such as gas assist, powder injection molding, & microcellular molding). During the course students will build upon knowledge gained in earlier courses in instrumentation and controls, plastics processing, and advanced tooling and rheology. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year as a technical elective with an enrollment of 15 to 20 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: PL ET 225, PL ET 227, PL ET 330

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plastics Engineering Technology (PL ET)

PL ET 440 Advanced Mold Design Technologies (4) This is the second course in mold design; focuses on mechanical aspects of designing and building a mold; includes CAD, CAM, and CAE technologies.

Advanced Mold Design Technologies (4)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MCH T 213, MET 306, METBD 366, PL ET 340

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Plastics Engineering Technology (PL ET)

PL ET 464 Plastics Failure Analysis (3)
This course is intended to give the student an introduction to failure analysis for plastic articles. Course objectives are to: provide methods for the identification of common failure problems associated with modern molded plastic parts, perform a causal analysis for each failure type, provide an introduction, instruction, and allow operation of several analytical tools used to establish failure mechanisms, and review the relevant polymer physics and chemistry concepts involved in failure analysis. During the course students will be using concepts studied earlier in plastic material properties and applications. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year as a technical elective with an enrollment of 15 to 20 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: PL ET 304

Plastics Engineering Technology (PL ET)

PL ET 465 Advanced CAE for Plastics II (3) Advanced Computer-Aided Engineering techniques for plastic part design.

PL ET 465 Advanced CAE for Plastics II (3)

This course focuses on advanced applications of computer-aided design (CAD), computer-aided engineering (CAE), and finite element analysis (FEA) to plastic product development and plastic processes. The course objectives are to: analyze gas-assist injection molding from a design, simulation, and processing perspective; conduct data exchange techniques that reflect industry trends for moving geometry between native CAD systems, use finite element preprocessors, and analytical software packages; conduct an in-depth cooling analysis using mold cooling software and finite element heat transfer techniques; use CAE in the analysis of shrinkage and warpage; and study design optimization software approaches to maximize strength and minimize material investment. Extensive lab time is allotted for hands-on application of material present in the class, and is tied closely to lecture concepts. During the course students will build upon knowledge gained in earlier courses in plastics part design, heat transfer, and finite element methods. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year as a technical elective with an enrollment of 15 to 20 students.

Plastics Engineering Technology (PL ET)

PL ET 481 Plastic Product Development (3) This course provides students with an in-depth overview of the integrated new product development process.

PL ET 481 Plastic Product Development (3)

Current product development trends have moved toward an integrated and interdisciplinary development process that includes team members from all aspects of the corporation. This course serves as an overview of that integrated product development process. Prior to this course, students will have studied methods and processes for the detailed and structural design requirements for plastic components. In this course, the students will be taught how their detailed design process fits into the remainder of the overall product development process. This will be accomplished by traditional lectures on the process and is underscored by a semester long project in which the students will form teams, invent a product idea, and develop that idea to a prototype state.

Among the topics addressed are:
- Concept development and selection
- Working in a interdisciplinary team environment
- Gathering and organizing customer needs
- Translating customer needs into product specifications
- Product development economics
- Prototyping methods and purpose
- Industrial design
- Intellectual property

Plastics Engineering Technology (PL ET)

PL ET 468 Rapid Commercialization (3) Techniques to help get plastic products to market quicker and to build solids and surface modeling skills.

PL ET 468 Rapid Commercialization (3)
The educational objective of this course is to develop the student's ability in using techniques to reduce the time to design a product and get it into production. The course objectives are to enable students to understand how to evaluate the differing points of view of each group during the concurrent engineering of plastic products and to analyze various rapid prototyping and tooling methods to determine their applicability to plastic products. Several simulations packages will be used to show their use in the preliminary design stages. During the course students will be using concepts studied earlier in plastic part design. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year as a technical elective with an enrollment of 15 to 20 students.

General Education: None

Plastics Engineering Technology (PL ET)

PL ET 482 Medical Product Development (1) This course provides students with medical device development requirements and processes. The course is to be taken in conjunction with PL ET 481 as both courses will utilize a semester project to invent and design a new product. Over the course of the semester students will review the FDA classifications, filing requirements, and recommended practices for medical device development. This knowledge will be applied and practiced through the semester projects. Students will learn techniques for Failure Modes and Effects Analysis and how to properly document and manage product change through the development process.

PL ET 482 Medical Product Development (1)

This course provides students with medical device development requirements and processes. The course is to be taken in conjunction with PL ET 481 as both courses will utilize a semester project to invent and design a new product. Over the course of the semester students will review the FDA classifications, filing requirements, and recommended practices for medical device development. PL ET 483 Plastics in Medical Applications (3) This course focuses on plastics materials and properties and how they meet the unique medical application and device requirements.

PL ET 483 Plastics in Medical Applications (3)

This course studies plastics materials in medical applications and devices. The course focuses on the properties that are important to medical devices such as chemical resistance, sterilization and biocompatibility. A broad range of polymers will be reviewed including commodity resins, such as polyolefins, engineering resins such as polycarbonates, acrylics, nylons and advanced polymers including polysulfones, polyetherether ketones and aramids. The synthesis, production and structure property relationships will be studied with particular emphasis on the effect on sterilization, biocompatibility and FDA regulatory requirements. The effect of additives, stabilizers, fillers and blends will also be reviewed.

PL ET 484 Medical Manufacturing Methods (3) This course provides instruction in the methods and practices used in the manufacturing of plastic devices in the medical industry.

PL ET 484 Medical Manufacturing Methods (3)

This course provides instruction in the methods and practices used in the manufacturing of plastic devices in the medical industry. The course includes both manufacturing and regulatory requirements. A large portion of the class will involve a simulated process validation exercise. The concepts will be introduced in lecture, parts will be manufactured and measured in the processing lab, and data analysis will be completed in a computer lab. Injection molding will be emphasized as the major plastic part production method, but other processes will be used as needed. Clean room requirements, sterilization and material handling, and common assembly methods will also be covered.

Political Science (PL SC)

PL SC 001 (GS) Introduction to American National Government (3) Introduction to development and nature of American political culture, constitutional/structural arrangements, electoral/policy processes; sources of conflict and consensus.

PL SC 001 Introduction to American National Government (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

This course takes a broad look at American national government and American politics. It begins with a discussion of founding principles and documents and concludes by looking at how government uses its power. Readings and discussions cover the governing institutions—Congress, Executive, and Courts—and the institutions that link the American people to these—political parties, interest groups, and the media. Throughout, contemporary political events are placed in the context of theories, concepts, and arguments presented in class. By the end of the course students should have an understanding of how American national government is organized; a sense of what political scientists do, the types of questions they ask and the methods they employ; and the ability to make more informed choices in the political arena.

Class meets for two lectures and one discussion section each week. The recitation is led by a graduate teaching assistant and is used to review lecture material, do exercises based on the lectures and reading, and discuss current events and course materials. Grading is based upon multiple choice (or identifications) and essay exams, short papers (some based on applying course concepts to New York Times articles), and participation in section. The course is a prerequisite for most upper level American Politics courses. It fulfills a lower level requirement for Political Science majors, and may be used by non-majors to fulfill General Education and Social/Behavioral requirements. It is generally taught every semester.

General Education: GS
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2002

PL SC 003 Introduction to Comparative Politics (3)

(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

In this course, you will be introduced to the major types of governments in existence today. We will examine several democratic nations, and several dictatorships. We will learn how power is exercised in each major type of government and how different governments grant authority and seek the acceptance and legitimacy of their citizens.

In doing so, we will learn about the variety of ways to organize legislatures and executive branches, the difference between presidential and parliamentary systems, and the varying roles played by the courts and other legal institutions. We will also compare the different ways of holding elections and the different functions of political parties.

In addition, students will gain a better understanding of the history and politics of a small number of nations that will serve as examples throughout the semester. The countries used as examples will vary from semester to semester; however, these will usually include a mix of advanced industrial democracies, developing nations, and communist and former communist governments.

Students will take examinations that include multiple choice, short answer essays, and longer essays. Short projects or a major paper supplement exams. Students are also graded on attendance, participation and oral presentations in weekly recitation sections. The course fulfills one of the lower-division requirements for majors in Political Science and International Politics. For non majors this course may be used to fulfill a general education or Bachelor of Arts social/behavioral science requirement. It will be offered once a year with an enrollment limit of 180.

General Education: GS

PL SC 014 International Relations (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

This course has three major goals. First, you should come away from this course with an idea of what the scientific study of Political Science is all about. Second, you should come away from the course knowing some general theories (explanations) for international behavior that you should use when you think about international politics in the future. Third, you will be introduced to a number of important topics in international politics. These include the end of the Cold War, nuclear weapons, international economics, and international development.

Students will take examinations that include short answer and essay questions. Short projects or papers will supplement exams. Students are also graded on attendance, participation and oral presentations in weekly recitation sections. The course fulfills one of the lower-division requirements for majors in political science and international politics. For non-majors this course may be used to fulfill a general education or bachelor of arts social/behavioral science requirement.

It will be offered at least once per academic year with an enrollment limit of 180.

General Education: GS
Diversity: IL
Bachelor of Arts: Social and Behavioral Science
Effective: Fall 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Political Science (PL SC)

PL SC 007 (GS) Contemporary Political Ideologies (3) Critical analysis of contemporary political ideologies such as liberalism, conservatism, socialism, anarchism, fascism, feminism, and environmentalism.

PL SC 007 Contemporary Political Ideologies (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Liberalism, conservatism, socialism, anarchism, fascism, feminism, and environmentalism are ideologies which have inspired political movements. Understanding their meaning is an essential aspect of the study of contemporary politics. In this course, we examine the basic principles of these ideologies and assess their power to mobilize people for political action. In the process, we also explore the role of ideology in America today, including the responsibility of democratic citizens to understand how ideology shapes their politics. This course serves as a prerequisite for all 400-level political theory courses. This course fulfills one of the lower division requirements for majors in Political Science. It is taken by nearly all Political Science majors. For non-majors this course will be used to fulfill general education social/behavioral science requirement and bachelor of arts social science requirement. Students will take examinations which include short answer and essay questions. They also trace a basic concept, e.g., equality, liberty, democracy, across the political ideologies studied. Their final take-home exam compares contrasting meanings of their chosen concept. Participation and group exercises in discussion sections are also graded. PL SC 117 will be offered twice a year with 90 seats per offering.

General Education: GS
Diversity: None

Political Science (PL SC)

PL SC 017 (GS) Introduction to Political Theory (3) Introduction to basic issues in political theory through analysis of selected major political thinkers.

PL SC 017 Introduction to Political Theory (3)
(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines how the ideas of selected political theorists have been -- and continue to be--crucial for understanding how best to conduct our political lives. Following an introductory exploration of how political theorists think and write about politics, we will read selected theorists from three historical periods: ancient, modern, and contemporary. Our focus will be how these theorists respond to important questions about politics, including how their answers (and even their questions) change over time. Possible questions include: What are the rights of citizens? What are the purposes of states? When is a regime just? How should we organize authority? How should we participate in politics? What counts as political knowledge? How do knowledge and power interact in politics? Most important, what constitutes a good society and a good life? How can we work toward these? So these questions do not remain abstractions we also consider theoretically informed empirical research. By the end of the course, students have a better understanding of selected political theorists and the normative foundations of contemporary politics. This course serves as a prerequisite for all upper level Political Theory courses. This course fulfills one of the lower division requirements for majors in Political Science. Many Political Science majors and minors take it. For non-majors, this course may be used to fulfill general education requirements or the Bachelor of Arts social--behavioral science requirement. Grading is based on analytical papers and--or journal assignments, essay exams, occasional quizzes, group presentations, and class participation. PL SC 017 is offered once a year with 60 seats per offering.

PL SC 022 Politics of the Developing Areas (3) (GS;IL)

BA - This course meets the Bachelor of Arts degree requirements.

This course will introduce students to the political and economic development of countries in "developing world." Upon gaining an exposure to definitional issues, such as the distinction between the developed and developing world, we'll discuss the theoretical lenses that structure our discussion throughout the semester. The course will then turn to the processes and institutions involved with development assistance, the legacy of colonialism, and state building. By the conclusion of the course students should have a stronger understanding of how political and economic dynamics fuel the nexus between domestic and international institutions and how this affects economic and political development. Evaluation will be primarily through examinations. This course is appropriate for potential majors in Political Science and International Politics seeking to satisfy comparative politics requirements and non-majors satisfying general education requirements.

PL SC 020 (GS;IL) Comparative Politics--Western Europe (3) Comparative analysis of political cultures, interest groups, parties, and decision-making processes in principal Western European political systems.

PL SC 020 Comparative Politics-Western Europe (3)
(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

The goal of this class is to learn how to compare democratic processes. Therefore, this course is organized by components of political systems rather than individual countries. We will begin with basic information and an overview of organizing principles of modern democracy. Then we will examine the institutional structures of democracies: legislatures, executives, bureaucracies, and federal structures. We will then cover societal interests and social cleavages and the way in which they are organized to influence government. The third section of the course focuses on elections, political parties, party systems, and government formation. Finally, we will examine the effects the rise of the EU on West European governments and their capacity to represent citizens' interests.

Readings in this class will focus on seven countries: France, Britain, Germany, Italy, and Sweden, Netherlands, and Spain. Working in groups students will choose one additional country to study over the course of the semester. Students will use their detailed knowledge of different political systems, from their own study and the readings in the textbook and the web, to assess the larger arguments about how citizens' interests are represented in democratic systems. Evaluation in this course will be based on class participation, quizzes, group projects, and exams. Evaluation methods will vary with instructors. PL SC 20 satisfies the Comparative Politics component of the International Politics Major and the Comparative Politics distribution requirement for the Political Science major. It is recommended for study abroad in Europe. PL SC 20 is a prerequisite for several PL SC 400- level courses. PL SC 20 will be offered once a year with 35 seats per offering.

General Education: GS
Diversity: IL
Bachelor of Arts: Social and Behavioral Science

Political Science (PL SC)

PL SC 060 (GS;IL) (ANTH 060, J ST 060, SOC 060) Society and Cultures in Modern Israel (3) An introduction to the society and cultures of the State of Israel from 1948 to the present.

PL SC (ANTH/J ST/SOC) 060 Society and Cultures in Modern Israel (3) (GS;IL)

This course will review the social, cultural, and political systems in the State of Israel as they have developed and changed since its inception in 1948. The role of immigration, ethnicity, and religion on Israeli society and cultures will be explored along with the non-Israeli cultures that have helped to shape conditions there. The course will look into the diverse social and political institutions of contemporary Israel, examine the borders and geographic features of the region, and discuss who lives there, where they reside, and for which portions of this period. It will examine the wars and tensions between Israel and neighboring Arab states; the status of the Arab/Palestinian minority in Israel; and the growth of Palestinian nationalism. Social conditions in the State of Israel are the result of a unique history. Israelis have absorbed large numbers of immigrants from many parts of the world while engaged in ongoing political and military conflicts. Jewish settlers in Israel/Palestine revitalized a language (Hebrew) and developed unusual collectivistic institutions (e.g., the kibbutz). Israeli nationalism is founded both on secular and religious ideologies. It includes notions of a return from Diaspora and the desire for personal and collective redemption. The study of social processes such as these will provide an opportunity to consider the foundations and functions of nation-states and social systems generally. Materials will include selections from primary texts, official documents, novels, films, and ethnographic materials along with scholarly reviews and essays. Students will be exposed to materials produced from a variety of disciplinary and political perspectives. Through writing assignments, projects, and essay examinations, students will integrate, compare, and analyze these materials. The course complements offerings in Jewish Studies, Sociology, Anthropology, Political Science, and Middle East Studies and will satisfy the IL requirement. It enables those in Jewish Studies to examine the roughly 30% of Jews who reside in Israel, builds upon a current course on Zionism, and provides context for the study of modern Hebrew. It offers an additional international alternative for students in Sociology and Political Studies and a topical area in cultural Anthropology. Students in Middle East Studies will find it worthwhile to study a nation with a significant impact on the region. The course will be offered approximately once a year, and enrollment will be limited to 50 students in order to promote active, engaged learning. Evaluations will be based on papers, a project, short quizzes, and essay examinations.

Political Science (PL SC)

**PL SC 083S (GS) First-Year Seminar in Political Science (3)** Exploration of current topics of interest in political science, international relations, and/or political theory.

**PL SC 083S First-Year Seminar in Political Science (3)**

(GS;FYS)

(BA) This course meets the Bachelor of Arts degree requirements.

Every first-year seminar in Political Science focuses on several of the major questions of the field. Many of these questions concern the constitutional arrangements of governments:

- What is it that we want governments to do, and what is the ideal government arrangement? Why does every nation (and every state and city) have somewhat different constitutional provisions for legislation, judicial, military and executive functions of government? What can we learn from careful comparisons of different types of government? What is unique to the American system and what are the consequences of this uniqueness?

- Other questions concern power: To what extent do wealthy individuals and wealthy organizations have disproportionate power in society? Is this appropriate or not? What is the impact of governmental attempts to limit the influence of the wealthy?

- We are also very much interested in the international system: What types of foreign policies and diplomatic strategies reduce the likelihood of war? What is the role of international organizations (such as the UN or World Bank) and multinational corporations in shaping conflicts between nations?

- Finally, we are interested in ordinary citizens: Do citizens know enough to formulate rational opinions on public issues? Why are many citizens apathetic? What motivates citizens to support one candidate over another or to favor particular policies and philosophies?

Each first-year seminar will select a special topic of interest and use that topic to explore a subset of these questions in order to provide a challenging introduction to political science. In the course of doing so, each first-year seminar in political science will also introduce students to specialized materials (such as government documents), library resources, and appropriate electronic media. In addition, each seminar will emphasize the standards of evidence, logic, and critical thinking required to develop effective and persuasive reports and oral presentations. Students will write essay exams and one or more written reports on the relevant topic of their own choices. Class participation is required. The course will be offered three times per year with a maximum of 20 seats per offering.

In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests.

Political Science (PL SC)

PL SC 123 (GS;US;IL) Ethnic and Racial Politics (3) Political movements among United States ethnic and racial groups; government policies on race and ethnicity; comparison to other culturally diverse countries.

PL SC 123 Ethnic and Racial Politics (3) (GS;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Despite many historical predictions that ethnic and racial distinctions would decline over time, recent events in the United States and around the world indicate that ethnic and racial identity remain strongly significant in politics. An analysis of the role race and ethnicity play in politics and government is of major relevance not only in the field of political science, but in several other fields, such as anthropology, sociology, economics, history, linguistics, and religious studies.

By studying ethnic and racial politics, students will learn the various methods by which social groups organize to achieve political goals, how and why opposition usually arises to those goals, and what policies governments can pursue to defuse social tensions. Students will also learn the historical and cultural basis of ethnic identities and the resulting political disputes that result when social groups differentiate themselves from other social groups.

Important to the course will be the use of comparative case studies of the United States to ethnic and racial politics in other countries, such as Canada, Indonesia, and South Africa. Examination of relevant political movements and government policies in these countries will help to determine whether the United States can learn from others or whether others can learn from the United States. The course will also include an international component through the comparative case studies as well as discussion of immigration policy and the role of ethnic groups in U.S. foreign policy.

Political Science (PL SC)

PL SC 110 (GS;US) Rights in America (3) This course explores the historical and contemporary struggles of particular groups within American society to expand their rights.

PL SC 110 Rights in America (3) (GS;US)

The American political system established in 1787 promised several fundamental things: (1) a social order not based upon aristocracy; (2) the rule of law; and (3) basic unalienable liberty. But some groups were excluded from these. This course explores the historical and contemporary struggles of particular groups within American society to expand their rights. We will explore the efforts of African-Americans, women and other marginalized groups to obtain basic liberty, equal protection and civil rights. As we discuss these groups, political institutions, and American politics we will focus on four overarching questions: (1) what is liberty; (2) why do some groups need to fight for rights; (3) how did the expansion of rights—or “rights creation”—come about; (4) and what is the role of courts in expanding, or not expanding, rights? Our exploration of rights in American will proceed one group at a time (i.e., African-Americans, women). We will look first at the history of how rights developed for each group and then discuss the implications of this more generally for the state of equal protection and discrimination in the country. At the end of the course, issues that “push” equality claims into a new dimension are considered. These include movements for separatism in race and gender; the debate over reverse discrimination; speech codes; native Americans and peyote; giving personhood status to the fetus; polygamy; and animal rights.

Political Science (PL SC)

PL SC 132 (GS;IL) The Politics of International Intolerance (3) Introductory course emphasizing psychological, historical, and political aspects of global intolerance towards minorities.

PL SC 132 The Politics of International Intolerance (3)
(GS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

PL SC 132 is an introductory survey concerning the social phenomenon of “intolerance” i.e., attitudes or behaviors that seek to exclude or eliminate groups perceived to be different. Here “difference” encompasses such features as nationality, belief, race, gender, or sexual orientation. Often these aspects of the human condition are the targets of majority discrimination or collective violence.

The course presumes the following assumptions:
(1) Intolerant attitudes are not just “another point of view” but also an utterly destructive form of behavior inimical to civilized values.
(2) Few, if any, societies have existed without some forms of intolerance.
(3) The causes of intolerance are usually multi-causal (economic, political, and psychological) and are understood through social science.
(4) “Politics” implies both the ideology and organization of intolerant movements and the relation of such movements to public authorities.

Students should expect fairly extensive readings involving primary source material, analyses of intolerant behavior drawn from different disciplines, and comparison of intolerance phenomena from a global perspective. All examinations are in an essay format and may require synthesis of sources to address specific questions. Each student should be prepared to research an example of intolerance through print and electronic sources. A short paper based on the research should emphasize comparison, analysis, and consequences. The finding may be presented to the class for discussion.

Political Science (PL SC)

PL SC 135 (GS) (S T S 135) The Politics of the Ecological Crisis (3) The political implications of the increasing scarcity of many of the world's resources.

PL SC (S T S) 135 The Politics of the Ecological Crisis (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

"The Politics of Scarcity" examines some "big" questions about the prospects for humans in general and democracy in the United States in particular. Much of the reading assumes that our civilization faces the twin problems of increasingly serious shortages of resources and a growing ecological crisis that threatens the basis of life. Further, it argues that these "twin crises" feed upon each other, and that together they pose serious short and long run challenges to survival. Some readings attribute these problems to the dominant values that characterize modern Western society. The course does consider some dissents from this perspective, arguments that things will be just fine. However, it concentrates on problems and predictions of trouble. Thus, the class does not claim to present an evenly balanced assessment. Rather, it recognizes that most of what we learn, read, and see supports the status quo and assumes our civilization and energy-dependent way of life will continue. Consequently it makes sense to emphasize the less frequently argued position that we may be headed for disaster.

The class aspires to appeal to students regardless of major or college -- to scientists, engineers, students of the humanities, and even economists and political scientists. It fulfills the University-wide general education requirement in Social Science. Although it discusses the role of politics in general and the role of the American political system in particular in discussing the "twin crises," it mostly grapples with fundamental questions of value that underlie and guide the play of power in our political system and with how the massive changes now taking place globally both affect and are affected by politics.

PL SC 140 (GS) Contemporary Controversies in International Relations (3) Contemporary issues of international security presented rigorously using analytical tools of international relations and political science.

PL SC 140 Contemporary Controversies in International Relations (3)
(GS)

PL SC 140 investigates international security in the post-Cold War world. It does so by focusing on critical, ongoing, international conflicts and problems. These include the rise of China, resurgence of Russia, and international terrorism. After a brief introduction to key theories and tools of International Relations and some historical context, we will focus on the division of the post-Cold War world into zones of peace (characterized by liberal, free market democracies) and turmoil (characterized by ethno-nationalist, religious, and territorial conflict). The course will also cover a range of related security topics including terrorism, the proliferation of weapons of mass destruction, and instability in the developing world.

PL SC 177 (GS) Politics and Government in Washington DC (1-3) The course centers on a Spring Break trip to Washington DC, with students meeting on campus before and after the trip.

PL SC 177 Politics and Government in Washington DC (1-3) This course centers on a Spring Break trip to Washington DC, where students will meet with their members of Congress, get briefings at foreign embassies and international organizations, meet with leaders of federal government agencies, participate in seminars led by interest groups and political party officials and consultants, and tour government offices and facilities. The class will meet before the trip to discuss the history, culture, and context of politics and government in the capital city of the United States and will continue to meet after the trip so that students can analyze what they have learned about politics and government in Washington as a result of their experiences during the trip. The course is open to and appropriate for students in all majors.

PL SC 306H Senior Thesis Writing Workshop (1 per semester, maximum of 3) This seminar supports the writing and editing of senior honors theses.

PL SC 306H Senior Thesis Writing Workshop (1-3)
(BA) This course meets the Bachelor of Arts degree requirements.
This is a workshop for honors students in their senior year writing their thesis in political science. There are no assigned readings or written assignments outside of those necessary for the completion of your thesis. Participants are expected to make progress on their own thesis and to contribute to the collaborative enterprise of discussing thesis progress and problems while critiquing one another's work. Each participant is expected to make progress on their thesis, to collectively discuss and consider the research process during workshop sessions, and come prepared to offer useful feedback and criticism on other participants' research.

PL SC 309 Quantitative Political Analysis (3) Data analysis and statistical applications in political research, including data processing; inferential statistics; contingency analysis; correlation and regression; multivariate analysis.

PL SC 309 Quantitative Political Analysis (3)

This course introduces students to the basic statistical techniques used to study politics quantitatively. It can be taken by itself or as the second course in a two course sequence with PL SC 308. It is required for all Liberal Arts Fellows. Students in 309 learn about developing questions suited to empirical research; constructing hypotheses; measuring political concepts; and conducting basic univariate and multivariate analyses. The course includes sections on the basic principles of probability, sampling, and statistical inference so that students can understand and implement statistical techniques for describing and explaining political phenomena. There is also extensive coverage of the use and application of various statistical techniques. Exercises both in and out of class will require students to engage with and apply various social science concepts, and to undertake quantitative analyses of political and policy-relevant data.

PL SC 308 Introduction to Political Research (3) Introduction to conceptualization, research design, and measurement in political research.

PL SC 308 Introduction to Political Research (3)

This course introduces students to the research process in political science. The course can be taken by itself or as the first in a two course sequence with PL SC 309. It is intended to give political science majors the skills needed to conduct research in political science, or in related fields such as public policy. The course introduces students to the scientific approach to accumulating knowledge, it examines conceptual and theoretical thinking about politics (e.g. understanding what concepts, variables and hypotheses are), it covers different methods of collecting social science data (interviews, surveys, observation, experiments, analysis of documents, etc.) and it provides an introduction to the interpretation of that data. Ethical issues in research are discussed, and students are also introduced to basic statistical concepts. The course typically includes multiple take home and/or in-class assignments that require students to utilize different data collection methods and practice the generation and interpretation of those data.

PL SC 410 Game Theory in International Relations (3) Game theoretic approaches to the study of international relations.

PL SC 410 Game Theory in International Relations (3)
This course will investigate the rational choice approach to the study of international relations. This approach views the actions we see in the political arena as resulting from choices that actors, people or states make. We view these choices, in turn, as the results of a decision process that is based on relatively simple, reasonable and innocuous assumptions. The approach can lead to some novel and informative insights into how and why political actions turn out the way they do. It is not, however, without critics and we will consider their positions too. Overall, this class will look at how rational choice may help us understand international relations. This is a core course in the revised International Politics major. It fulfills International Relations distribution requirements in the Political Science and International Politics major. Evaluation will be based on exam and exercises form the text and class presentations. This course will be offered one time per year. Enrollment limit is 35.

Political Science (PL SC)

PL SC 411W Principles of International Cooperation (3) An exploration of the forces that make conflict, or cooperation, more likely in international relations.

PL SC 411W Principles of International Cooperation (3)
This course explores the forces and conditions that make conflict, or cooperation, more likely in international relations. Since international anarchy prevents actors from trusting one another cooperation should be rare or nonexistent. In spite of the logic and prevalence of such arguments, international cooperation does exist. While there is no definitive explanation for the persistence of cooperation in a world without central authority, we will pursue several arguments about how and why it does emerge. These arguments are based upon characteristics of the international system along with concepts developed principally from game theoretic approaches to the study of politics. By the end of the course students should have a basic grasp of game theory in international relations as well as examples of cooperation and conflict around the world. The game theoretic approach will enable students to understand why countries with often common interests and good intentions nevertheless fail to cooperate. Students will be expected to write essays that demonstrate their mastery of these theoretical constructs and ability to apply them to real world situations about which they have done independent research.
Political Science 411W fulfills the related course requirements for the revised International Politics Major and International Relations and 400 level course requirement for the Political Science major.

Political Science (PL SC)

PL SC 412 International Political Economy (3)
(BA) This course meets the Bachelor of Arts degree requirements.

This course is an introduction to the scientific study of international political economy (IPE), an interdisciplinary field related to international politics and international economics. Some exemplary issues IPE addresses include the collective action problem among nation states, the management and openness of international economy, the determinants of foreign economic policies, and the causes and consequences of economic globalization. IPE examines the interaction between politics and economics at the international level as well as between the international and domestic levels, involving various political and economic actors (governments, MNSs, interest groups, as well as individuals). The course aims to develop the analytical skills of students in explaining theoretically international political and economic events.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
PL SC 414 Dictators and Their Demise (3)

Dictators and Their Demise examines the political economy of authoritarian rule. We examine: the conditions that give rise to authoritarianism; the variety of authoritarian regimes; the strategies authoritarian leaders use to stay in power; the consequences of different types of authoritarianism for outcomes such as economic growth and human development; and the domestic and international sources of authoritarian demise. The course covers cases of authoritarian rule in: Chile, the Dominican Republic, Egypt, Malaysia, Mexico, and the former Zaire (now the Democratic Republic of the Congo or DRC).

The course builds knowledge about the governments under which most people in the Global South lived during the 20th century. Even today, roughly half of the world’s population lives under some form of non-democratic government. Yet almost all courses currently in the curriculum, particularly in the field of comparative politics, focus exclusively on democratic forms of government. This course therefore examines a new topic not currently offered in the curriculum.

In addition to learning about different types of authoritarian rule, students form an understanding of how common foreign policy tools, such as economic sanctions, foreign aid, and human rights shaming, are likely to affect domestic politics in these countries. This knowledge helps students critically evaluate foreign policy relationships between democracies, such as the United States, and dictatorships.

Course materials cover theoretical approaches to the study of authoritarian rule, in-depth case studies (including novels, biographies, and documentary), and empirical research. This course requires student presentations, weekly reading assignments, descriptive analysis of quantitative data in graphs, multiple written assignments, and a final take-home essay exam. Students develop analytic skills through the weekly written homework assignments in which they apply the broad theoretical concepts to analyze counter factual situations from specific cases of authoritarian rule. Oral presentations develop inter-personal skills and require students to research specific cases of authoritarian rule currently in the news. This helps students critically evaluate current events.

Finally, the written assignments require students to develop skills working with real data. Students collect and graphically present basic descriptive data about economic and human development in non-democratic countries: economic data, infant mortality, literacy, and indicators of women’s well-being. Using real world data to make international comparisons helps students develop skills to form and articulate complex arguments, and teaches them the basics of research design.

PL SC 416 International Negotiations (3) The study of international negotiations from a strategic perspective.

PL SC 416 International Negotiations (3)

(BA) This course meets the Bachelor of Arts degree requirements.

While wars attract most of our attention, the vast majority of international disputes are settled by peaceful means. Among the most important of these is negotiation, which occurs at all levels of social life—interpersonal, organizational, national and international. The purpose of this course is to study negotiations from a strategic perspective. We'll look at the roles that reputation, threats, bargaining power and diplomacy play in negotiations and how they players, countries or individuals can take advantage of these and other tools to make it more likely that they will get a good outcome. This course will show you that this can mean not only seeing what the opponent wants, but also what the opponent minimally can accept, and that other issues can be introduced so that less good outcomes on one issue can be traded for better outcomes on others. In order to experience how negotiations occur, students will participate in a political simulation. Often, good and successful negotiators (which are not necessarily the same thing) are able to see things from their opponent's perspective. The class format will also include lecture and discussion. Finally, throughout the semester we will play a game of “Diplomacy” (by Avalon Hill) for additional credit. This is an upper level international Politics course that follows PL SC 014. It fulfills the international Relations distribution requirements in International Politics or Political Science. Students will be evaluated on examinations, simulation participation and reports, class participation, and papers.

PL SC 428 (US;IL) (WMNST 428) Gender and Politics (3) Gender in politics in the United States and around the world; major areas of women and politics research.

PL SC (WMNST) 428 Gender and Politics (3) (US;IL)

(IA) This course meets the Bachelor of Arts degree requirements.

This course is designed as an overview to the field of women and politics. It examines the role that women play in politics in the United States and around the world. Students will begin by examining how women are socialized differently from men and how that socialization effects women's political attitudes and participation. Then students will focus on women in different political offices and how their behavior compares to that of their male counterparts. Students will then analyze the women's movement in the United States. Finally, students will turn to different theories of the ideal position of women and men in politics and use those theories to explore the issue of pornography. Students will be evaluated on a final exam, short essays (4 3-5 page essays), class participation, and a research paper (15 pages). This is an advanced course with 6 credits prerequisite in Women's Studies or Political Science. This course fulfills the American Politics and Comparative Politics distribution as well as the advanced course requirement for the Political Science major. It is an elective for a Women’s Studies major. It also fulfills an International/Intercultural competency requirement. This course will be offered once a year with 35 seats per offering.

General Education: None

PL SC 430W Selected Works in the History of Political Theory (3) Detailed examination and analysis of a selected major work, thinker, or tradition in the history of political theory.

PL SC 430W Selected Works in the History of Political Theory (3)

The course will examine the tradition of "liberal" political philosophy, focusing principally on the social contract tradition in Western political philosophy. We will examine the work of the "classic" social contract theorists - Hobbes, Locke, Rousseau, and Kant - and discuss some more recent variants. We will then consider broad contemporary critiques of this tradition. In particular, we will consider charges of exclusion, parochialism, and biased conceptions of the self allegedly manifested in liberal theories, especially as those charges that center on considerations of race and gender.

PL SC 434 (IL) (AAA S 434) War and Development in Africa (3) This course will examine the relationship between war and development in sub-Saharan Africa in the post colonial era.

PL SC (AAA S) 434 War and Development in Africa (3) (IL)

This course will examine the relationship between development and war in sub-Saharan Africa in the modern era. Specifically, it will analyze the extent to which the processes of state building, nation building, and international intervention have contributed to the incidence of both civil war and international conflict in Africa. We will begin with a review of several theoretical arguments on the causes of warfare in Africa and then turn to a discussion of theses on African political development. This course complements present offerings in international relations and comparative politics in the PL SC department and can serve as an advanced undergraduate offering in the African Studies concentration in AAAS. The course directly complements our present offerings in international conflict given that we don’t have a regularly offered course that focuses on conflict in a specific region. In addition, it will augment our comparative politics offerings with an examination of prominent issues in comparative politics such as political development, democracy, and modernization. The course will fulfill the IL requirement and encourage students understanding of the historical background as well as the political, economic, and cultural factors that influence African politics. African conflicts are often viewed as “ethnic conflicts” and in this class students have an opportunity to assess the extent to which ethnic, linguistic, or religious factors influence the likelihood of conflict and contribute to development in African states. Students will also be required to write essays evaluating the contribution of a range of theoretical arguments on Africa’s conflicts in order to assess the degree to which cultural more than political or economic factors contribute to their onset. Students will then have the opportunity to conduct more extensive research on a specific African case to develop their analyses further. These exercises will often require that students reevaluate their beliefs about social identities such as race (e.g. in Rwanda the difference between Tutsi and Hutu is often viewed as a “racial” difference between black Africans, which is at odds with most Western conceptions of race). They also require students to challenge stereotypes regarding the subordination of African values in conflicts to a simple concern with “tribe”. Students will gain a broader knowledge and appreciation of the different values, traditions, and cultures evident in Africa and understand how these can both exacerbate and mitigate conflict. Evaluation in the course will consist largely of examination of the students’ brief expository essays and larger case studies for which students will be encouraged to conduct original research. The course should be offered biannually with a class limit of about 40 students.

**Political Science (PL SC)**

**PL SC 433 Political Foundations of the Early American Republic (3)** The course introduces students to the major political and philosophical movements that influenced the founders of the early American republic.

**PL SC 433 Political Foundations of the Early American Republic (3)**

The course introduces students to the major political and philosophical movements that influenced the founders of the early American republic. The first section of the course, set in the ancient world, will examine the earliest experiments in democratic government in both Greece and the Roman Republic. In addition to studying the structure and traditions of ancient governments, students will consider competing theories for why these early democratic experiments ultimately failed. The second section of the course traces the gradual evolution of representative democracy in Britain from the signing of Magna Carta to the quiet subjugation of the monarchy in the 19th Century. Recognizing that the theoretical structures of political power remain somewhat fixed in this period, students will consider how legal precedent can gradually transform seemingly static political institutions. The third section of the course examines American efforts to establish stable representative institutions in the aftermath of the Revolutionary War. Looking back at both ancient and modern constitutional traditions, students will examine how prior democratic experiments heavily influenced the deliberations of the founders both at the Constitutional Convention and in the establishment of the new federal republic.

PL SC 440 (US;IL) (AAA S 440, I B 440) Globalization and Its Implications (3) This course explores the socioeconomic implications of globalization.

PL SC (AAA S/I B) 440 Globalization and Its Implications (3) (US;IL) (BA) This course meets the Bachelor of Arts degree requirements.

This course explores the socioeconomic implications of globalization and some fundamental changes that have taken place in the global socioeconomic system. The bipolar configuration of global power has been radically altered, market-state relations have been reformulated, and global systems of production and finance have been reorganized. Given these recent changes in the world's structure, globalization as a socioeconomic force is examined with a special emphasis on its implications on social issues, capital-labor relations, the roles of unions and trans-nationalists, unemployment issues, poverty and inequality, gender and ethnicity issues, race relations, and democratization around the world. This course also allows students to explore how different countries, communities, social classes, business firms and even institutions are affected differently by globalization. The implications of globalization on Africana communities is given special attention.

The course is organized into three parts: A) The first part of the course attempts to define globalization and identify its essential characteristics in light of social and economic change. This part attempts to answer questions such as what constitutes globalization, how do we know if globalization is taking place, and what aspects of it are new. B) The second part of the course attempts to assess the implications of the different aspects of globalization (identified in the first part) on many critical social issues, including capital-labor relations, the roles of unions and transnational corporations, problems of unemployment, poverty and inequality, gender, ethnic, and race relations, and democratization. C) The third part of the course examines the implications of globalization to African communities.

This course exposes students to the economic, social, political, and cultural implications of the unfolding global order. It allows them to explore how different countries, communities, social classes, business firms and even institutions are affected differently by globalization. Evaluation will be based on daily attendance, along with a class presentation of a design of a research paper; an actual research paper, a mid-term exam and a final exam.

PL SC 443 (IL) (AAA S 443) Ethnic Conflict in Africa (3) This course explores the various causes and impacts of ethnic conflicts in the African context.

PL SC (AAA S) 443 Ethnic Conflict in Africa (3)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Ethnic conflict is presently a pervasive worldwide phenomenon. Ethnic groups in various regions of the world contest the terms of their incorporation into the 'nation' state and the world order. Such contests have often erupted into violent conflicts crossing national borders. The objectives of this course are to examine the problems of state building, the evolving nature of the state, and ethnic conflicts in the African context. The course explores the factors that contribute to violent ethnic conflicts and the factors that mitigate such conflicts. The course largely evolves around the following two general questions. What are the most important internal and external factors that cause ethnic conflicts? The second is what political systems and arrangements tend to mitigate or resolve ethnic conflicts? In an effort to deal with these two general questions the course examines a number of case studies from different parts of Africa. The course is organized into three parts. The first part surveys general theories on the causes of ethnic conflicts and how democracy relates to ethnic conflict. The second part examines several case studies from Africa and attempt to construct a general hypothesis on the major causes of ethnic conflicts and how democratization or lack of it impacts the conflicts. The third part examines measures that may contribute in the resolution of ethnic conflicts and enhance the process of state building in Africa. Students in groups of two or three will choose a case and give a class presentation on the most important issues involved in a given conflict.

This course compliments other courses that deal with African politics, politics of developing areas, and social movements. It also supplements courses in African and African American Studies, Sociology, and Political Science that deal with issues of ethnic and race relations, as well as issues of nation building (state building).

This course exposes students to the various internal and external factors that precipitate ethnic conflicts in Africa and the economic, social, and political implications of these conflicts. It allows students to explore how different states attempt to address the problem. Evaluation will be based on attendance (5%), a class presentation of a design of a research paper (10%), a research paper (35%), a mid-term exam (25%) and a final exam (25%). This course will be offered once a year.

**PL SC (AAA S /LER) 445Y Politics of Affirmative Action (3)**

(US)  

(BA) This course meets the Bachelor of Arts degree requirements.

The objectives of this course are to introduce students to the relationship between affirmative action and other policies purportedly designed to end racial inequality in the U.S. This course approaches the study of affirmative action in the context of the historic racial discrimination and inequality that Black Americans have faced since the founding of the Nation. The purpose of this course is to help students think about how contemporary and historic affirmative action policies relate to race, concepts racial inequality, the historic and continuing causes for racial inequality, public opinion, American politics and economic thought. The course materials will lead students through scholarly and popular articles, books and video presentations on the topic. It is hoped that students will become familiar with the history of affirmative action from its conception. Students will gain an intimate understanding of affirmative action economic and social outcomes on various racial groups. No prior knowledge is assumed, however a knowledge of civil rights history, quantitative methods, and constitutional law will be useful. The Politics of Affirmative Action satisfies the requirements for major and minor electives for the African American Studies, and major and minor electives for Political Science, and Labor Studies and Industrial Relations. Students are evaluated on the basis of an examination, term paper, class participation and class presentations of papers.

Political Science (PL SC)

PL SC (AAA S) 454 Government and Politics of Africa (3) (IL)

(IA) This course meets the Bachelor of Arts degree requirements.

In this course, we will discuss the current democratization trend in Africa by focusing on the experiences of African countries.

The course is divided into three sections. Part One considers a range of factors that affect politics in Africa. We will discuss in depth the following factors: colonialism, nationalism, the relationship between state and society, ruler-ship, the military, political parties, and economic development. Then, we will consider the experiences of our four cases, to gain a historical background. In part two, we will focus on democratic transitions. We will discuss the factors that enable transitions to occur, as well as the process that transitions follow. Then, we will consider four transitions: two that resulted in the installation of a democratic government (Nigeria in 1979, Sudan in 1986) and two that ended in continued authoritarianism (Angola in 1992, Kenya in 1978). Part three considers the prospects of democracy. We will discuss the probability of a democratic transition occurring in the near future.

The goals of this class are four fold. First, students will gain detailed knowledge about four African countries. Second, we will learn how to compare countries. Third, students will have a better understanding of the democratization process in general, and will be able to explain or predict democratization beyond the four cases discussed in this class. Finally, the experiences of these four countries offer a deeper understanding of what democracy is and provide students with greater flexibility to fulfill requirements in either the African and African American Studies major or the Political Science/International Politics major. PL SC 454 will be offered once per year with 35-50 seats per offering.

Political Science (PL SC)

PL SC 459 (IL) (AAA S 459) Culture and World Politics (3) Role of culture in world politics.

This course examines the role of culture in world politics through an analysis of the varying dimensions of culture and their respective impact on the likelihood of cooperation and conflict among the state and non-state actors in the global system. Specifically, we examine the impact of culture in terms of social boundaries, political associations and the likelihood of an emergent global culture defined largely in terms of customs and practices related to international trade and economic production. We also examine the role of culture as a mechanism for the dissemination and maintenance of patterns of hierarchy. Integrating these different conceptions of culture, we examine the relationship between culture and foreign policy in the US.

The cultural approach to studying politics complements the institutional and rational choice perspectives that are featured in most of our current offerings in the area of international politics. As a consequence, this course will provide students with an opportunity for a course of study that is representative of the diverse traditions in the discipline.

PL SC 459 satisfies the international relations requirement for the Political Science major and the Supporting Courses requirement for the revised International Politics major. Evaluation is based on examinations, class participation, and frequent essays.

Globalization has brought increased investments in extractive industries in many African countries. Investments in extractive industries are also likely to continue to increase rather rapidly, given the rising intensity in the competition for African resources, brought about by growing involvement of countries, such as China and India. The terms African countries obtain from corporations for mineral rights have been generally unfavorable. The unfolding competition for African resources brought about by investments from China and India may, however, help African governments to renegotiate the terms of mining concessions corporations to obtain better deals for their resources. Despite the rather poor terms African governments currently have, investments in extractive industries have stimulated economic growth in several countries. Some African countries, including Equatorial Guinea, Botswana, Gabon, Angola, Cameroon, and the Sudan, are experiencing what might be regarded as resource-based economic boom.

Such growth has, however, intensified compulsory acquisition of communal lands by African governments for concessions to extractive industries exposing large numbers of rural communities to evictions from the land they traditionally owned. The expropriations, which purportedly take place for public and development purposes, have led to serious socioeconomic problems, including unemployment and poverty of those evicted from their land, disintegration of traditional institutions of governance, civil wars, communal conflicts, human rights violations, high levels of corruption, and alarming rates of environmental degradation. The conflicts have ravaged many African counties and are likely to continue to occur until mechanisms that allow rural communities to become partners of the transformation are developed. This course examines the socioeconomic and environmental problems associated with land expropriations and extractive industries.

PL SC 481 Global Political Economy (3) This course examines states, markets, power, production, and the relations between the various transnational agents who act in these areas. Students may not receive credit for PL SC 481 and PL SC 412.

PL SC 481 Global Political Economy (3)
Changes in the international system in the 1970s led to increased interest on the part of students of international relations in the political economic processes underlying change. Important debates among scholars in both mainstream theoretical traditions and in critical theory gave rise to International Political Economy as an increasingly visible sub-field in International Relations. This seminar tracks the historical relations between the development of capitalism as an economic system and the emergence and transformation of global politics, using concepts developed in the study of political economy. Seminar discussion, examinations, and a short research paper will be used to evaluate students' learning.

Political Science (PL SC)

PL SC 487 International Law and Organizations (3) Major topics and issues of international law with special attention to institutional arrangements (international organizations) through which that law operates.

PL SC 487 International Law and Organizations (3)

The course is useful in two distinct ways. First, it aids in the understanding of how countries conduct their relations with one another. Second, studying international law— it is a distinct system of law— helps students to assess whether they might be suited for law school.

The course introduces international law and international governmental organizations (the two are closely linked) and their role in the management of peaceful relations among countries as well as during international conflict. Both the contributions and limitations of international law will be analyzed. International law is viewed both as a body of norms countries feel an obligation to follow and as a means of communication among countries.

Major topics covered include sources of international law, human rights law, environmental law, economic law, law of the sea, and the use of force. There are several hundred major intergovernmental organizations. Several of the most prominent will be discussed including the UN, the WTO, the European Union, the International Labor Organization, and the International Court of Justice.

Examinations are principally of the essay variety although a command of factual information is essential to success in the course. Students also prepare critiques of important international legal cases (many of which have been decided by national courts) and of treaties (the principal modern manifestation of international law).

PL SC 488 Comparative Public Policy (3)
Comparative Public Policy is an upper level political science course that includes components of comparative politics, public administration, and descriptive economics. The course presumes that developed industrial democracies confront common challenges in meeting human needs and that policy comparison is worthwhile despite distinctive societies and political cultures. For example, government involvement in the provision of health care varies widely from Britain's National Health Service to the largely private approach of the United States. Nevertheless all health care systems confront rising technology costs, an ageing population, and rising performance expectations. A primary purpose of the course is to consider the origin and development of individual country programs while assessing the common challenges. Cross national comparison becomes relevant to the course by including some available data on costs, implementation and outcomes. Because the course includes about six distinct areas, e.g., education, taxation, urban planning income support, and overall macroeconomic policy, the course will depict profiles of policymaking in Europe, North America and Japan. Ideally comparison should help students to evaluate the effectiveness of policy choices of a particular country and government.

A second objective of the course will be to examine the national approaches to the relationship between the state and private economic activity. Not only does government expenditure amount to nearly half of some country’s total output, government choices create distinctive legal environments for business activity. Antitrust, health, wage, and consumer regulation offer an excellent point of comparing different incentives for economic activity in the United States and Europe. Apart from policy choices mentioned in the first paragraph, the regulation of economic activity has cumulative results for employment and the distribution of income. This portion of the course is intended to be somewhat more elementary than the first because of the probability that students will be less familiar with its content. The primary objective will be to help students understand the variations among market economies and reasons for their description as “neo-liberal,” “social market,” or “corporatist.”

Finally, the course will examine some current ideas about recent changes in the global economy and their consequences for national policy. Clearly “globalization” has become a matter of political concern owing to its consequences for the creation of wealth, employment, growth and distribution. While the course cannot devote detailed or exclusive to the European Union, Europe’s response to rapid movements in short term capital and investment presents an interesting point of comparison with the United States and Japan. The course should enable students to understand the meaning and criticism of “globalization” as a factor in shaping some national policies.

**Political Science (PL SC)**

**PL SC 489 Public Administration (3)** A survey of the major approaches to the management of most governmental agencies.

Government Management is a three-credit Political Science course that teaches the role and function of bureaucracy. Although some investigation is made about state and local government functions, the primary focus of the course is on the federal bureaucracy. In particular, the course illustrates how the interrelationship between the three branches of government exists using the various federal agencies as functionaries.

The course first examines the basic functions of bureaucratic agencies in the modern world; primarily their distributive, re-distributive and regulatory activities. In addition to these functions, the various external and internal political forces that form the mission of the agencies are examined. Next the internal function of a bureaucracy is examined by highlighting the various roles of the people who comprise a typical large agency. The roles of the political appointee, the career professional, the general civil servant and the union laborer are examined, with the GS system of the federal government used as a guide to show the hierarchy that exists in a large agency.

By highlighting both the functions of a typical agency and examining its role in the larger government structure, and by looking inside the bureaucracy to see the various short and long term roles of the people who comprise those agencies, the student appreciates how large bureaucracies are at the same time always changing, and always staying the same.

Psychology (PSYCH)

PSYCH 083S (GS) First-Year Seminar in Psychology (3) Scientific, societal, and individual implications of contemporary psychological theory.

PSYCH 083S First-Year Seminar in Psychology (3)
(GS;FYS)
(BA) This course meets the Bachelor of Arts degree requirements.

Modern science provides perspectives on human beings that may conflict with our intuitive and conventional views of ourselves as individuals capable of free choice and responsibility. These perspectives raise important questions for how we understand ourselves and others: Does brain chemistry govern our moods and motivations? Do our genes determine our abilities? Is the human mind just a kind of computing machine? Views based on the biology of behavior and on the computer metaphor for the mind can be found both in a wide range of academic disciplines, including psychology, anthropology, sociology, biology, neuroscience, medicine, and computer science. Perhaps more important, these perspectives are apparent in the news media, entertainment, and other aspects of popular culture. Biological and technological views of what it means to be human are thus shaping our common-sense understanding of our selves and others.

The goal of this course is to help students to understand the basis of these contemporary scientific views of human beings, and to think critically about the ways in which these views shape human experience. We will read three scholarly but accessible paperbacks (listed below), two that present biological and technological perspectives, and one that provides a critical counterpoint. We will also consider selections from popular media, including news stories, movies, and fiction, to examine the appearance of these perspectives in our contemporary culture. On a more pragmatic level, we will consider ways in which scientific perspectives can help students understand their own learning processes, leading to more effective academic skills.

The class format will be open discussion, and students will be expected to come to class prepared to discuss the assigned readings. Evaluation will be based on 10 short writing assignments, a term paper or take-home final, an in-class presentation, and class participation. Writing assignments will generally require that students apply concepts discussed in class to particular topics, or that they use library and Web resources to find relevant material. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. This course fulfills the first-year seminar requirement as well as a general education or Bachelor of Arts social/behavioral science requirement.

Psychology (PSYCH)

PSYCH 100 (GS) Introductory Psychology (3) Introduction to general psychology; principles of human behavior and their applications.

PSYCH 100 Psychology (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Psychology is a scholarly discipline, a scientific field, and a professional activity. Its overall focus is the scientific study of behavior and experience, and of associated mental and physiological processes. As a scholarly discipline, psychology represents a major field of study in academic settings, with an emphasis on theories and principles of behavior and experience. As a science, psychology is a domain of research in which investigators analytically and systematically study behavior and experience to develop theories and principles and to understand their application to real-world situations. As a profession, psychology involves the practical application of knowledge, skills, and techniques for enhancing well-being and quality of life, as well as solving or preventing individual and social problems. This course provides an overview of the field of psychology, including research, theory, and application. Specific topics include the biological bases of behavior, sensation and perception, learning, cognition, motivation and emotion, development, social cognition and social influence, personality and individual differences, and mental disorders and therapy. Content is presented through a combination of lectures, readings, and demonstrations. Evaluation is primarily on the basis of objective exams given in class. A major goal of the course is to show how questions within these areas are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes thinking about how students can apply this knowledge to enhance their lives. After taking this course students should be able to make more informed decisions about participating in future psychology courses and have a better understanding of psychology as a science and of human behavior. This course serves as a prerequisite for most upper-level psychology courses. It introduces basic concepts covered in more depth in those courses. PSYCH 100 is required for the Psychology majors and minor. PSYCH 100 is offered three times per year. Five to six sections/semester are offered at University Park with 330-370 students per section; other locations and delivery channels may offer smaller sections.

Psychology (PSYCH)

PSYCH 105 Psychology as a Science and Profession (3) Overview of history and methods of psychology as a science and profession; applications and ethical issues in psychology.

PSYCH 105 Psychology as a Science and Profession (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to introduce Psychology majors and prospective majors to basic principles of research and practice in scientific psychology. The course provides a survey of the subfields of psychology, their history, and their current importance in both academic and applied settings. The focus is on common principles and issues important across these subfields. Students will learn how psychological research is conducted, survey applications of psychological research, consider ethical issues in psychological research and practice, and learn about careers in a variety of subfields in psychology. Students will be evaluated on the basis of multiple-choice exams (75%), in-class activities (10%), and short writing assignments (15%). The course will be required for the Psychology B.A. and Psychology B.S. (all options) majors, but will not be a prerequisite for any other course. The course will be offered each fall and spring semester in large sections of 300-350 students.

General Education: None
Diversity: None

Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 212 (GS) Introduction to Developmental Psychology (3) Developmental principles; physical growth; linguistic, intellectual, emotional, and social development from infancy to maturity.

(BA) This course meets the Bachelor of Arts degree requirements.

Developmental psychology involves the scientific study of the social, emotional, and intellectual changes that enable progression from infancy to adulthood. As part of a scholarly discipline, scientific field, and professional activity, the overall focus of developmental psychology is the scientific study of age-related changes in emotions, cognitions, language, personality and social relations and the relationships of these changes to familial, peer, and cultural experiences, biological development, and personal efforts to make sense of the social and object worlds. As an important area of psychological science, developmental psychology is a domain of research in which investigators analytically and systematically study behavior and experience to develop theories and principles and to understand their application to real-world situations. As part of a profession, developmental psychology involves the practical application of knowledge, skills, and techniques for enhancing the well-being and quality of life of children, adolescents, and their families, as well as the development of age-relevant solutions to and strategies for the prevention of individual and social problems.

This course provides an overview of the field of developmental psychology, including its history, research methodologies, theories, and applications. Specific topics include the biological bases of development, parent-infant attachment, the development of sensation and perception, cognition and linguistic development, emotional development, moral development, stereotype development, childhood and adolescent psychopathology and its development. Content is presented through a combination of lectures, readings, activities, and demonstrations. Evaluation is primarily on the basis of objective exams given in class.

A major goal of the course is to show how questions within these areas are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes thinking about how students can apply this knowledge to enhance their lives. After taking this course students should be able to make more informed decisions about participating in future psychology courses and have a better understanding of human development, psychology as a science, and the importance of developmental psychology to the construction and improvement educational programs and clinical practice. PSYCH 212 may be applied to the requirements of the Psychology BA and Psychology BS majors and of the Psychology minor. The course meets the Social/Behavioral Sciences requirement. This course will be offered three times a year at University Park 330-350. Other locations and delivery channels may offer smaller sections.

General Education: GS

Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 200 (GQ) Elementary Statistics in Psychology (4) Frequency distributions and graphs; measures of central tendency and variability; normal probability curve; elementary sampling and reliability; correlations; simple regression equations.

PSYCH 200 Elementary Statistics in Psychology (4) (GQ)

Psychological science is based upon empirical research. Questions about behavior and experience are answered by gathering and analyzing data. In upper-level classes students will be expected to read and understand this research, and many will be expected to design sensible investigations of their own. At the core of these skill sets is the ability to understand and perform statistical analyses, and the ability to evaluate the match between statistical analysis and experimental procedures. This course provides an introduction to descriptive and inferential statistics commonly used in psychology, and introduces hypothesis testing as a method of scientific investigation. In addition, it explores the ways in which the assumptions of statistical tests place constraints on experimental design and, conversely, how the design of experiments can dictate the statistical test appropriate for data analysis. Specific topics include probability theory, measures of variability and central tendency, normal curves, the relation between samples and populations, correlations, and simple regression. Classes may also cover z-tests, t-tests, ANOVA, or other techniques commonly used in psychology. Content is presented through a combination of lectures, readings, and demonstrations. Evaluation is primarily on the basis of objective exams given in class. The course introduces students to quantitative procedures used in psychological research and practice. It also promotes thinking about how students can apply this knowledge to answer self-generated questions. With PSYCH 301W (Basic Research Methods in Psychology) the course provides an excellent two-course sequence to prepare students for upper level courses. After taking this course students should be able to make more informed decisions about majoring in psychology. This course serves as a prerequisite for PSYCH 301W, which itself prerequisite for many some upper-level psychology courses. PSYCH 200 or Stat 200 is required for the Psychology majors and minor.

General Education: GQ
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: PSYCH 100; MATH 021

Psychology (PSYCH)

PSYCH 231 (GS;US) Introduction to the Psychology of Gender (3) Psychological study of gender in historical and contemporary perspective. Role of gender in development, self-concept, social relations, and mental health.

PSYCH 231 Introduction to the Psychology of Gender (3)
(GS;US)

(BA) This course meets the Bachelor of Arts degree requirements.

After a beginning period of domination by men, the rise of feminism in the 1960s and 1970s in the US gave impetus to the study of women and gender. Through both traditional and feminist research methods, psychologists have sought to clarify what is general among and between women and men, and what may be individualized to specific persons or groups. Conceptions of gender are also examined cross-culturally. Emphasis of study is upon those experiences that are specifically related to gender, such as stereotypes and expectations of femininity, violence against women, economic and work-related constraints, and pregnancy and childbirth. There will be two major evaluation methods used. One will be tests that will assess students' knowledge and understanding of the major concepts, theories, and research findings. The other will be assignments that will provide the opportunity for students to apply, research, analyze, and discuss key areas of the course. Psychology 231 is intended as a basic introduction to the psychology of gender. For PSYBA and PSYBS majors, PSYCH 231 is part of the History/Philosophy/Religion/Diversity group that can be used to meet the requirement of additional courses in four different groups. PSYCH 231 can be used for the Psychology minor. Non-majors may use it to fulfill a general education social/behavioral science and international/intercultural competency selection. This course will be offered once a year with 60 seats per offering.

General Education: GS
Diversity: US
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 221 (GS) Introduction to Social Psychology (3) Research and theory on topics including interpersonal attraction, aggression, helping, attitudes, attribution, cooperation, competition, and groups, from a psychological perspective.

Introduction to Social Psychology (3)

General Education: GS
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 232 (GS;US;IL) Cross-Cultural Psychology (3) This course examines how ethnic and cultural background influences patterns of human thought and behavior.

PSYCH 232 Cross-Cultural Psychology (3)
(GS;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Cross-cultural psychology investigates the influence of sociocultural factors on human thought and behavior. It will revisit the topics covered in introductory psychology in order to investigate the degree to which the major findings in each subdiscipline are culturally universal and/or culturally specific. The course will reflect the interdisciplinary nature of cross-cultural psychology by examining issues that link psychology to other fields such as anthropology, sociology, economics, and political science. One goal of the course will be to develop an understanding of the problems involved in the design and interpretation of studies comparing ethnic or racial groups, both within and across national boundaries. Students will learn to identify how subtle forms of ethnocentric bias influence both the research questions asked and the conclusions that are reached and will learn ways to identify and avoid such bias. Students will learn to analyze and integrate knowledge from a variety of sources including films, readings, scientific literature and the popular media. Course projects will require them to interact in a respectful and sensitive manner with people of other cultures in person and via the Internet. Students will learn to critically examine their own beliefs as well as the information that they encounter about culture and ethnicity inside and outside of the classroom. They will enhance their oral and written communication skills during class discussions, small group and collaborative exercises and presentations. Topics are covered that have a significant body of cross-cultural research and are directly relevant to students' lives, including issues such as: child-rearing practices around the world, culture-fair intelligence testing, aggression and ethnic conflict, and cultural influences on therapeutic success. By studying psychology from a cross-cultural perspective, students should become more aware of the diversity of the international community and develop an increased understanding and tolerance of attitudes and viewpoints different from their own. Evaluation is conducted using integrative essay exams, completion of readings quizzes, and papers and presentations of case studies and learning activities. The course fulfills general education requirements in the social and behavioral sciences and requirements for intercultural/international competence.

General Education: GS
Diversity: US;IL
Bachelor of Arts: Other Cultures and Social and Behavioral Sciences
Effective: Spring 2007
Prerequisite: PSYCH 100

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 238 (GS) Introduction to Personality Psychology (3) Past and recent conceptualizations of key issues and root ideas of personality psychology.

PSYCH 238 Introduction to Personality Psychology (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Personality psychology involves examining theories of human nature and evaluating them in an empirical fashion. Personality psychology begins with the observation that each person is (to paraphrase Harvard psychologists Kluckhohn and Murray) in certain respects (a) like all other persons, (b) like some other persons, and (c) like no other person. In other words, personality psychology concerns itself with the study of (a) universal aspects of human nature, (b) psychological traits and types, and (c) individual uniqueness. Principal goals of the discipline include constructing descriptive taxonomies of personality, inquiring into the evolutionary and developmental origins of human universals and individual differences, and assessing the impact of personality on the life course.

This course aims to cultivate in students a breadth of understanding through an analysis of some of the major intellectual statements concerning human nature, viz., psychoanalysis, humanism, existentialism, symbolic interactionism, and Darwinism. Questions considered within the course include: How can we determine what might be a part of fundamental human nature? What are the relative contributions of conscious rationality and unconscious irrationality to human behavior? Can human behavior be explained by a finite set of motives? Do explanations in psychology differ in kind from explanations in the natural sciences? Can personality be quantified? How does one distinguish between sincerity, dissembling, and self-deception?

Short-answer examinations and class participation are used to evaluate the degree to which students have successfully comprehended course material. Students should understand why it is difficult for a theorist to create a view of human nature that transcends the theorist's own personality and cultural/historical context, and how empirical research can help overcome these obstacles. Students are to learn how to identify and evaluate the assumptions (either implicit or explicit) about human nature and individual differences that underlie any social or behavioral science. By the end of the course, students should be able to describe the basic tenets of the major theories, to be able to compare and contrast the theories, and to be able to evaluate the strengths and weaknesses of each theory. A good understanding of the course material will prepare students for advanced study in personality theory and measurement, as well providing a useful context for courses in abnormal, clinical, developmental, health, historical/philosophical, industrial/organizational, and social psychology, as well as for courses in other social sciences, certain humanities, and some applied fields such as business which at least tacitly presuppose some view of personality.

Students are evaluated on examinations that include a mixture of short answer and objective questions. Individual instructors may supplement such examinations with other forms of evaluation as appropriate to section size and setting, such as in-class exercises and term papers. PSYCH 238 is an Additional Course in the PSYBA and PSYBS majors and may count toward the Psychology Minor. It may be used to fulfill the Social and Behavioral Sciences requirement. This course will be offered once a year with 25-40 seats per offering at several non-UP locations.

General Education: GS
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 244 (GS) Introduction to the Psychology of Human Factors Engineering (3) Introductory course in engineering/human factors psychology, emphasizing the application of core psychological principles and research to designing products and systems.

PSYCH 244 Introduction to the Psychology of Human Factors Engineering (3)

Human Factors Psychology is an area of psychology where the overall focus is the scientific study of human behavior and how it can be applied to the use, design and development of products and systems. Students will learn basic principles of how people process information, perceive and interact with the world in various circumstances. They will learn how psychologists conduct research on human thought and behavior in an effort to measure peoples’ perceptions, attitudes, and behaviors. These basic principles will be illustrated and explored with a series of hands-on activities that relate the material to everyday life.

Topics to be covered include: research design and methods, sensation and perception, memory and language, and social psychology. Psychological principles from these areas will be used to discuss ways to improve the safety of tools and systems, reduce human error and increase user satisfaction. Students will also gain a better understanding of the influence of stress and workload on human performance. A major topic will be ways to develop reliable and valid evaluation techniques for assessing performance, safety and ease of use of systems. In order to design effective systems, individual differences in age, gender and culture must be taken into account. People in different regions of the world have cultural differences that influence the way they perceive the world and process information. These individual differences will be addressed throughout the semester. Topics are presented through a combination of lectures, readings, demonstrations, and in-class activities. Active learning elements such as library/internet research, writing activities, and collaborate learning experiences will be applied. Evaluation is on the basis of content-based quizzes, objective exams, brief written reports of hands-on exercises, and collaborative assignments.

A major goal of the course is to show how questions relating to proper use and design of tools, computers and other systems are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes students to think critically about how they can apply this knowledge to enhance their lives. After taking this course students should have more sophisticated knowledge of the relationship between the brain, our thought processes and behavior. They should be able to make more informed decisions about what makes a usable product as well gain a better appreciation of the science and profession of human factors psychology.

General Education: GS
Diversity: None
Bachelor of Arts: None
Effective: Spring 2009

Effective: Spring 2007
Prerequisite: PSYCH 100

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 243 (GS) Introduction to Well-being and Positive Psychology (3) Applying psychological knowledge to develop and maintain effective personal adjustment and well-being and positive social relations.

PSYCH 243 Introduction to Well-being and Positive Psychology(3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

The psychology of personal well-being and adjustment involves the application of the empirically derived principles of psychology to the problems of everyday behavior. As part of a scholarly discipline, scientific field, and professional activity, the overall focus of the course is the study of the psychological process of adapting to, coping with, and managing the problems, challenges, and demands of modern life. As an important area of psychological science, well-being and adjustment is an area of research in which investigators develop and systematically test theories about adjustment. As part of a profession, it involves the application of this empirically gained knowledge to enable people to respond to environmental pressures, both physical and psychological, and to cope with stress.

This course provides an overview of the field of adjustment, including topics such as the way in which personality affects people's pattern of adjustment, the effect of stress on adjustment, the use of coping strategies to deal with stress, the adjustments people make in their social relationships (including how individuals view others, communication, behavior in groups, and intimate relationships), the development of gender roles, the emergence of sexuality, the phases of adult development, transitions in the world of work, and the way in which adjustment influences a person's psychological and physical wellness.

Content is presented through a combination of lectures, readings, active learning activities, and demonstrations. Assessment is based on objective and essay exams taken in class, and on instructional and collaborative writing assignments (which include library and internet research, and a personal journal). Discussion and questions are encouraged in all sections. Along with personal contact, students have the opportunity to communicate with faculty members via e-mail.

After taking this course students should be able to make more informed decisions about participating in future psychology courses and have a better understanding of adjustment psychology as a science, and the importance of adjustment in their own lives.

Students will be evaluated on a combination of examinations, research projects and writing assignments. PSYCH 243 may be applied to the requirements of the Psychology BS and Psychology BA options and to the requirements of the Psychology minor. This course currently meets a General Education requirement in the Social and Behavioral Sciences. It is being offered once a year with 25 seats per offering at several campuses.

General Education: GS
Diversity: None

Psychology (PSYCH)

PSYCH 256 (GS) Introduction to Cognitive Psychology (3) Introduction to study of such higher mental processes as thinking and reasoning, imagery, concept formation, problem solving, and skilled performance.

PSYCH 256 Introduction to Cognitive Psychology (3) (GS)
(BA) This course meets the Bachelor of Arts degree requirements.

This course is an introduction to cognition, an area of psychology that investigates the ways in which we acquire, store, create and use knowledge. Cognition includes a wide range of mental processes that are used every day in almost all human activities. These include attention, perception, memory, imagery, language, problem solving, creativity, and reasoning.

Cognition refers to a theoretical approach in psychology that emphasizes the role of people’s knowledge, reasoning, and expectations and this approach has had a broad influence on all areas of psychology. It also involves developing sophisticated methodologies to study processes that are not always observable. Cognitive research can be applied in order to improve mental functioning, e.g., developing programs for improving memory or cognitive rehabilitation for brain injury. It can also be used to address serious societal issues and problems such as understanding how people develop and use stereotypes. Cognitive psychology has applications to many fields including medicine, the legal system, education, and understanding mental disorders. In addition, cognitive psychology is part of the active interdisciplinary field of cognitive science that also includes disciplines such as philosophy, neuroscience and artificial intelligence.

This course provides an overview of the field of cognitive psychology, including its research, theory, and application. Content is presented through a combination of lectures, readings, activities, and demonstrations. A major goal of the course is to show how the major questions in cognition are addressed through empirical research. It also promotes critical thinking and encourages students to apply this knowledge to enhance their lives.

This course is a basic 200-level course for the psychology majors (PSYBA, PSHBA, PSHBS, APSCC, APSYC) at several campuses. It fulfills category c. cognitive/learning and psycholinguistics at University Park and category 3, cognitive/experimental at Penn State Erie, Category b. developmental, cognitive, learning at Berks Lehigh Valley college and the Commonwealth College. It may be used to satisfy the Social Behavioral Sciences requirements. In large sections evaluation will be primarily based on objective, multiple-choice examinations. Individual instructors may supplement such examinations with other forms of evaluation as appropriate to section size and setting. In smaller sections the course evaluation may be supplemented with essay exams, laboratory projects and student presentations. This course will be offered twice a year with 100 to 125 seats per offering at University Park and once a year with smaller sections at other locations.

Psychology (PSYCH)

PSYCH 260 (BB H 203) Neurological Bases of Human Behavior (3) An introduction to biopsychology, emphasizing the structure and function of the human brain.

PSYCH (BB H 203) 260 Neurological Bases of Human Behavior (3)

The nervous system provides the biological underpinning of behavior, and several scientific fields are concerned with the relationship between the nervous system and behavior. The goal of this course is to introduce the principle methods, findings, and theories of these scientific fields. Topics include (a) the anatomy and physiology of the nervous system, (b) how the nervous system gives rise to perception, action, language, memory, emotion and reproductive behavior, and (c) how drugs and mental illnesses affect the nervous system and alter normal perceptual, cognitive, and emotional behavior. The course prepares students for a number of more advanced courses in Psychology and Biobehavioral Health that address specialized topics in neuroscience, and may satisfy a requirement of these majors. Evaluation is based on objective exams. The course is offered each fall and spring semester.

General Education: None

PSYCH 260A (GS) Neurological Bases of Human Behavior (3) An introduction to biopsychology, emphasizing the structure and function of the human brain. Students may take only one course for credit from PSY 203 and PSY 203A.

PSYCH 260A Neurological Bases of Human Behavior (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Biological Psychology is an area of psychology where the overall focus is the scientific study of behavior and experience, and underlying associated neurological and physiological processes. This course provides an overview of the biological bases of behavior and includes a presentation of the research, theory, and application of this knowledge. Specific topics include the basic anatomy and physiology of the central and peripheral nervous system, neural transmission and the function of various neurotransmitters. The majority of the course will focus on how these basic processes contribute to the processing of information from the senses, simple and complex learning, and cognitive processes such as memory, and language. Topics will include brain development, developmental and acquired neuropsychological disorders and therapeutic techniques. Content is presented through a combination of lectures, readings, demonstrations, and in-class activities. Evaluation is primarily on the basis of objective exams given in class, and brief written reports.

A major goal of the course is to show how questions relating brain and neural function to behavior are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes thinking about how students can apply this knowledge to enhance their lives. After taking this course students should have a more sophisticated knowledge of the relationship between brain and behavior. They should be able to make more informed decisions about participating in future psychology courses and gain a better appreciation of the science and profession of psychology.

General Education: GS

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 269 Evolutionary Psychology (3) Survey of evolutionary perspectives in current psychological research.

PSYCH 269 Evolutionary Psychology (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course demonstrates how knowledge and principles from evolutionary biology are used to conduct research on the design of the human mind. The course explains how evolutionary psychologists identify adaptive problems faced by our ancestors and test hypotheses about psychological mechanisms designed by natural selection to solve these adaptive problems. The psychological mechanisms discussed are involved in phenomena such as perception and the control of activity, learning and cognition, mate selection and courting, development and parenting, altruism, aggression, and social structure. Evolutionary psychology is thus not a topic area such as perception, learning, or motivation, but rather a way of thinking that can be applied to any topic within psychology. The course, therefore, shows how evolutionary psychology is (1) changing how scientists approach old topics, (2) opening up new areas of research, and (3) beginning to provide a unifying framework for integrating the various subdisciplines of psychology. Students will learn to understand and evaluate evolutionary hypotheses about a range of topics in psychology and related social sciences. Evaluation will be based on a combination of methods, including for example traditional exams, written homework, papers, and participation in class and group discussions. The course is offered as a perspective that can be used to think about the subject matter in any particular content course in psychology. Students may choose this course to fulfill a requirement in the major.

PSYCH 268 Animal Minds (3) This course considers the cognitive and communicative abilities of animals, especially primates, as compared with humans.

PSYCH 268 Animal Minds (3)

This course covers select topics in animal cognition and communication. This course will focus mostly on the behavioral level. It will focus on observations and controlled behavioral experiments rather than on neurophysiological experiments (though it will cover some mechanisms that are implicated through behavioral research). One of the main goals of this course is to discuss how we can scientifically approach the study of animal minds. One of the recurring themes of the course will be methodological: how can we pose a question to a being that does not have language? Another goal of the course is to teach critical thinking about experiments in this field. It will discuss how to run a well-controlled experiment and closely examine the claims that are made by each experimenter. Through a class project, students will gain some experience trying to observe behavior and designing experiments.

This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. Because of this broad appeal, no background in psychology is assumed, and no prerequisite is required. The course will fulfill a 200-level requirement for students in the PSY majors and minors. Students typically will be evaluated by two midterm exams (25% each), a final exam (35%), and a research project (15%). The course will typically be offered once each academic year with an enrollment limit of 50.

Psychology (PSYCH)

PSYCH 270 Introduction to Abnormal Psychology (3) Overview of assessment, causes, and treatments of psychological disorders.

PSYCH 270 Introduction to Abnormal Psychology (3)
(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on some of the topics and questions people most commonly ask about psychology: What are the different psychological disorders, and what are they like? How do clinicians diagnose someone with a disorder? What do therapists actually do in therapy? Course objectives include: (a) examine historical and current conceptions of normal and abnormal behavior; (b) survey the origins, symptoms, and characteristics of several adult psychological disorders; and (c) introduce the main treatment approaches for psychological disorders. The course is designed to be accessible to both Psychology majors and others. Psychology B.A. and Psychology B.S. majors may use the course toward the 200-level breadth requirement of the major. Students will be assessed primarily with objective exams.

Foreign Studies (12)

General Education: None
Diversity: IL
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 297A Mindfulness Based Stress Reduction (3) Introduction to Mindfulness-Based Stress Reduction as a self regulatory approach to increase self awareness and decrease the physical and psychological symptoms of stress.

Mindfulness Based Stress Reduction (3)
General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 301W Basic Research Methods in Psychology (4) Introduction to methods of psychological research, with special attention to hypothesis formation and testing, threats to validity, and data presentation.

Basic Research Methods in Psychology (4)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100; PSYCH 200 or STAT 200

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 302W Critical Thinking and Writing in Psychology (4) This course aims to teach psychology majors to think critically and to write clearly using APA writing style.

PSYCH 302W Critical Thinking and Writing in Psychology (4)
The course is intended for undergraduate psychology majors. After an initial formative writing skills assessment students will work with the instructor to outline an individual plan for further skills development. Recommendations for writing support services will be made if deemed necessary by the instructor. Students will be introduced to strategies for critical thinking, and practice those strategies in class exercises and in writing assignments. Using critical thinking skills, students will develop a research question. The class will receive library instruction from a reference librarian and further narrow their topic. The library component will include instruction in the use of both print and electronic resources, such as PsycInfo, to obtain professional literature pertinent to their question. Students will learn to use both online and traditional inter-library loan services to obtain materials. Use and limitations of the World Wide Web will be discussed. An introduction to APA style requirements for a review paper will be provided, and students will learn to use APA style in their writing.

Students will have three writing assignments which are progressive in their demands. The three assignments will be the basis for course grades. The first assignment builds upon skills practiced in ENGL 202A, is brief and is not research-based. This first assignment is an essay about a topic which has relevancy for psychology. This assignment follows a unit on developing ideas by thinking critically, and evidence of sound reasoning in the essay should be apparent. For the second assignment students will select a professional article relevant to the topic, and write a critical essay evaluating the reasoning in that article. Finally, students will integrate several relevant professional articles in a critical review of the professional literature. The final writing assignment is intended to be the basis of the initial draft of an introduction to the research proposal required in PSYC 451W. All three assignments will require multiple written drafts, and include opportunities to obtain peer and instructor feedback prior to submission of the revised work. Each submitted draft will receive written feedback from the instructor, which will be discussed in individual conferences with the student.

A grade of "C" in this course will be a prerequisite for registration for PSYC 451W Statistics and Research Design II, and for several other 400-level Psychology classes at Capital College which have substantial research and writing requirements.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: Psychology major a grade of C or better in ENGL 202A

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 300H Honors Course in Psychology (1-6) Individual study and seminar in selected phases of psychology.

Honors Course in Psychology (1-6)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: invitation of Program Honors Committee

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

**PSYCH 395 Internship (1-18)** Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Internship (1-18)**

- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Spring 2007
- Prerequisite: prior approval of proposed assignment by instructor

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 370 (US) Psychology of the Differently-Abled (3) This course familiarizes students with the needs and abilities of people with varying physical challenges through academic and experimental exercises.

PSYCH 370 Psychology of Differently-Abled (3)
(US)

In 1991 President Bush signed the Americans with Disabilities Act (ADA) which recognized that the hundreds of thousands of Americans living with disabling conditions form a class which should receive protection under the law. Many people look at the ADA as civil rights legislation which is intended to offer disabled Americans the same legal rights to access as the Civil Rights legislation of the 60s offered to Americans of color.

While discrimination in the workplace, in housing, and in other areas based on race is no longer openly practiced, people with different physical abilities are still fighting an uphill battle. Often the barriers they face are due to ignorance of their needs. The intent of this course is to increase awareness and sensitivity to the needs of people who are different in the physical dimension. Additionally, policy and economic implications will be studied.

The content will include multiple modalities, such as mobility and visual differences. The focus will be positive, emphasizing how differences in one area are overshadowed by similarities in most areas. Language in the course will focus on the positive as well, hence Psychology of the "Differently-Abled" rather than "Disabled". Accomplishments of people such as FDR and Mozart will be discussed in the context of significant contributions made by people who were physically different. Finally direct experience with people will be obtained through a community service component of the course.

The objectives of this course are to first familiarize students with the causes and consequences of different physical challenges. The long term objective is to increase sensitivity to the needs of people who are different from most of us in some ways, but very similar to us in most ways. Research has shown that familiarity is a critical tool in raising comfort levels and decreasing discriminatory and hurtful acts.

Evaluation Methods:
Examinations 40%, mid-term and final
Community Service 30%, this will be assigned through the same form Internship supervisors use to evaluate students for PSYCH 395
Research Paper 25%
Oral Presentation 5%, 15 minute presentation to class regarding their community service experience

This course will draw on materials covered in General Psychology. No other course preparation will be needed. The course is an Intercultural and International Competence (GI) course, focusing on intercultural aspects only.

General Education: None
Diversity: US
Bachelor of Arts: None
Effective: Spring 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 408 Program Evaluation (3) Examination of the theories and practice of program evaluation; emphasis on applied work utilizing a wide range of evaluation approaches.

PSYCH 408 Program Evaluation (3)

This course will introduce the student to the basic procedures and design methodologies of program evaluation. The student will learn about the purposes of evaluation, types, applications, and ethical issues involved in evaluation. A history of programmatic theory design will be reviewed with the purpose of clarifying the linkages between goals, objectives, and the hypothesized relationships between specific programmatic elements and desired outcomes. The student will be challenged to identify and understand the normative assumptions specific to organizations about their basic program design, implementation, and assessment processes.

Students will be evaluated by a combination of the following: evaluation proposal, short written assignments, exams, oral presentation, and attendance. The prerequisites for this course include satisfactory completion of PSYCH 100, SOC 001, PSYCH 200, STAT 200, and PSY 201. This course presupposes critical thinking skills and basic competencies in statistics and research methods.

For the Psychology major (PSHBS or PSHBA) at Penn State Erie, this course is important for students who will be entering graduate school or going into practice in the areas including, but not limited to: community psychology, social psychology, industrial-organizational psychology, sports psychology, or the general social services field. This course can count towards: a) the advanced course requirement, b) the special interest course requirement, or c) elective credit. Psychology minors at Penn State Erie can apply this course toward the 15 credits in psychology beyond the PSYCH 100 requirement. Students in other majors should consult with their academic advisers to determine how this course fits into their program of study.

This course will be offered once annually (fall semester).

Psychology (PSYCH)

**PSYCH 410 Child Development (3)** Study of the psychology of the growing person from conception through adolescence, focusing more on periods up to middle childhood.

**PSYCH 410 Child Development (3)**

PSYCH 410 Child Development is intended for undergraduate students majoring in psychology, education and related disciplines. The purpose of this course is to introduce students to the theories and the influences on child development from conception through adolescence. Students will be introduced to research concerns in developmental psychology, including descriptions of research designs and ethical considerations in research with children and adolescents. Course content will include an in depth review of prevailing theories and influences on development from conception through adolescence. Application of the principles and influences will be applied to the physical, cognitive, and social development of children.

Requirements for the course will include objective examinations, as well as written assignments. Written assignments will involve comparisons and critiques of major developmental theories. Examples of such assignments include descriptions of the key points of a major developmental theory or process of child development, detailed description of an observation of a child and how the child’s behavior relates to a major developmental theory, descriptions of how application of developmental theory apply to the student’s chosen major or occupation, or comparisons and critiques of developmental theory.

Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: HD FS 249 or PSYCH 100; HD FS 312W or PSYCH 301W; PSYCH 200, STAT 200 or 3 credits of statistics; 6 credits in HD FS PSYCH or SOC.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 419 Psychology and a Sustainable World (3) Students study relationships between humans and the natural world and psychological factors contributing to environmental problems and sustainable solutions.

PSYCH 419 Psychology and a Sustainable World (3)

This course examines psychological dimensions of humans' connection to the natural world, causes of human contributions to environmental problems, and psychological approaches for encouraging sustainable behavior. The course draws on the new field of conservation psychology and responds to the University's commitment to becoming a leader in sustainability education. This course is designed for upper-level undergraduate students to satisfy requirements for Psychology degree programs, the Psychology minor, and the Sustainability Leadership minor. Major topics covered include psychological foundations of environmental problems (psychological understanding of unsustainable behavior, psychological perspectives on ethical dimensions of environmental problems, people's place in nature, psychological approaches to promoting sustainable behavior), and the application of psychological principles to specific environmental topics (consumerism and sustainable lifestyles, population overshoot, climate change, land use, water use, energy use, food production and consumption, pollution and waste). Students will be able to apply concepts, theories, and findings to change cognition, motivation, and behavior, with the goal of reducing negative human impacts on the environment. They will be able to write and communicate about their work in the form of a final paper and a class presentation that conform to the standards of psychological research. Assessment methods include weekly journal assignments that document students' application of lecture and reading material to their experiences with nature, their observations about their own negative impacts on the environment, and their actions to reduce negative impacts on the environment. In addition, students will develop a conservation intervention program that targets a specific problem on campus or in a community, for which students review relevant literature, design an intervention program, give a presentation of the program, and submit a final paper on the program.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2011
Prerequisite: PSYCH 100, PSYCH 221

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

The Pennsylvania State University
Psychology (PSYCH)

PSYCH 422 Human Sexuality (3) Psychological influences on human sexual behavior such as love, sexual orientation, gender, intercourse, contraception, sexually transmitted diseases, dysfunctions, and paraphilias.

PSYCH 422 Human Sexuality (3)

PSYCH 422, Human Sexuality, is intended to examine the influence of psychological factors on human sexual behavior. Information on male & female anatomy, on the roles/influences of hormones, and on conception/pregnancy will be covered as well as information on gender, sexual orientation, communication, love, sexual harassment, paraphilias, sexually explicit material, and sexual dysfunction.

Evaluation will be by means of exams (60% of grade), papers (15% of grade), small group projects (10% of grade), and a poster presentation (15% of grade). The prerequisite for this course is satisfactory completion of PSYCH 100. As the course presupposes critical thinking skills and an awareness of research methods in psychology, it is an advanced undergraduate level course requiring junior/senior level standing.

For the Psychology major (PSHBS or PSHBA) at Penn State Erie, this course can count either toward (a) the diversity basic course requirement, (b) the advanced course requirement, (c) the special interest course requirement, or (d) elective credit. Psychology minors at Penn State Erie can apply this course toward the 15 credits in psychology beyond PSYCH 100 requirement. Students in other majors should consult with their academic advisors to determine how this course fits into their program of study.

No special facilities are required for this course, though students will need to prepare a poster for presentation.

This course is expected to be offered at least once every four semesters.

Psychology (PSYCH)

PSYCH 426 (LING 429) Language and Thought (3) Relations between language and cognition; cognitive implications of normal and impaired language development; cognition and bilingualism.

PSYCH (LING 429) 426 Language and Thought (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Is language a special and uniquely human ability that develops and functions independently of other cognitive processes? Do individuals who speak different languages also have different concepts about the meaning of objects and ideas? Does language development depend on exposure to spoken language? In this course we will examine the relation between language and thought by considering evidence on language and cognition in both children and adults. Topics to be covered include the typical development and use of language as well as language and cognition in individuals whose language and/or cognition is impaired in some form. The latter include individuals with aphasia who have sustained brain damage following stroke or head injury, schizophrenics whose language reflects aspects of their disorder, children diagnosed with Williams Syndrome who appear to have good or even precocious language abilities in the face of severe cognitive impairment, and Alzheimer’s patients in whom semantic memory has begun to deteriorate. The course will also discuss the acquisition of sign language among deaf individuals and the consequences of bilingualism for children raised with two languages and for adults with proficiency in more than a single language.

The purpose of this course is to provide a survey of current scholarship on the relation of language and thought, including a review of recent developments in the primary literature. The necessary background is covered in introductory Psychology and Linguistics courses, which serve as alternative prerequisites. Students will learn about the consequences of typical and impaired development for relations between cognition and language ability. It is distinguished from PSYCH 457, Psychology of Language, by a focus on the implications of language, language development, and language impairment, for cognitive processes. It covers some topics also addressed by current courses in Linguistics and in Communications Sciences and Disorders, but is distinguished from those courses by its focus on perspectives and theories from cognitive psychology. This course may be used toward the 400-level PSY requirements of the PSYBA and PSYBS majors, and toward the PSY minor. Students typically will be assessed on the basis of class participation and discussion (20%), four papers (total 60%), and an in-class presentation based on reading original research literature (20%). The course typically will be offered once each year at the University Park campus with an enrollment limit of 50.

Psychology (PSYCH)

PSYCH 445 Forensic Psychology (3) Relations between psychological theory and research and the law, legal processes, and social policy.

PSYCH 445 Forensic Psychology (3)
(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on the interplay between psychological theory and research and the law, legal processes, and social policy. Students will be exposed to the dilemmas faced in the law and how overlap with the knowledge base and expertise of psychologists. Students will learn about the roles psychologists might play in the court system and the history of their involvement. This will include roles of consultant, policy evaluator, expert witness, assessor, and advocate. Legal issues that emerge in psychological practice will also be covered (e.g., limits to confidentiality, duty to warn, consent issues). Students will gain an understanding of the basic theories of the law and how psychological theories may intersect with these. The emphasis of discussion will be on those affecting children, youth and families. These will include topics such as divorce, child maltreatment, juvenile delinquency, domestic violence, and social welfare. Other topics of the law will also be highlighted (insanity plea, civil commitment). Particular attention will be paid to issues dealing with race, ethnicity, and social class and law and social policy.

This course expands the PSY curriculum at the 400-level to include a popular and socially significant topic, and will fulfill a 400-level PSY requirement for Psychology majors and minors. It addresses in detail legal and social policy implications of topics covered in other psychology courses. Significant background in psychology is assumed; thus PSYCH 270 (Introduction to Abnormal Psychology) is a prerequisite. Students typically will be assessed on the basis of three exams (20% each), a paper (30%), and class participation (10%).

General Education: None  
Diversity: None  
Bachelor of Arts: Social and Behavioral Science  
Effective: Spring 2007  
Prerequisite: PSYCH 100; PSYCH 238, PSYCH 243 or PSYCH 270

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 447 Psychology of Discipline (3) Provides theory and practice for effective discipline of children in a variety of situations.

Psychology of Discipline (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100 6 additional credits PSYCH

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 450 Psychology of Consciousness (3) Introduction to psychological and physiological aspects of consciousness as related to brain function and clinical psychology.

Psychology of Consciousness (3)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100 6 additional credits of PSYCH

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 451 Psychology of Action (3) Basic and applied science of action, from psychological, computational, and physiological perspectives.

PSYCH 451 Psychology of Action (3)
In all walks of life, people must adaptively control their physical movements. Whether in industrial settings, on the highway, in the kitchen, in the studio, in the concert hall, or on the football field, skillful physical action is essential. This course will focus on the means by which skilled physical behaviors are learned, planned, and controlled. The course will focus on a broad range of basic behaviors (e.g., reaching, walking, looking, speaking, and typewriting) as analyzed from several perspectives (physiologically, psychologically, and computationally). Basic science as well as practical applications will be emphasized, as will links between movement control and other, related topics such as perception, cognitive development, and robotics.

This course addresses topics in an active research area in cognitive psychology. It assumes some prior knowledge of cognitive psychology, requiring PSYCH 100 and PSYCH 256 as a prerequisite. The course will cover some topics addressed in several Kinesiology courses, but does so from the perspective of cognitive psychology. It will fulfill a 400-level PSY requirement for Psychology majors and minors. Students typically will be assessed on the basis of midterm (25%) and final (35%) exams, brief writing assignments and in-class activities (15%) and research papers or projects (25%). The course will normally be offered once each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100, PSYCH 256

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 452 Learning and Memory (3) General survey of learning and memory processes as revealed in experimental work with animals and humans.

Learning and Memory (3)

General Education: None
Diversity: None
Bachelor of Arts: None
 Effective: Spring 2007
Prerequisite: PSYCH 100, PSYCH 256

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 456 Advanced Cognitive Psychology (3) In depth study of complex mental processes: thinking, problem-solving, imagery, symbolic behavior, information-processing, attention, artificial intelligence, and language.

Advanced Cognitive Psychology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100 6 additional credits of PSYCH

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

**PSYCH 458** Visual Cognition (3) Overview of concepts and methods in cognitive visual-spatial processing.

**Visual Cognition (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: Social and Behavioral Science  
Effective: Spring 2007  
Prerequisite: PSYCH 100 6 additional credits of PSYCH

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

**PSYCH 457** Psychology of Language (3) Overview of psychological research and theory on language processes, including speech perception, word recognition, meaning representation, comprehension, and language acquisition.

**Psychology of Language (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: Social and Behavioral Science  
Effective: Spring 2007  
Prerequisite: PSYCH 100 6 additional credits of PSYCH

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 460 Comparative Psychology (3) Behavior from standpoint of phylogenetic growth and development; biological implications; comparison of different types of animals, including man.

Comparative Psychology (3)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100;PSYCH 260

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 459 Attention and Information Processing (3) An examination of attentional processes. Contemporary informational processing approaches will be emphasized.

Attention and Information Processing (3)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100; PSYCH 200 or STAT 200; 3 credits 400-level PSYCH

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 461 Advanced Conditioning and Learning (3) An examination of basic learning processes that have been determined within the context of classical, instrumental, and operant learning situations.

Advanced Conditioning and Learning (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100 6 additional credits of PSYCH

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 462 Physiological Psychology (3) Study of the biological bases of behavior and experience, including the anatomy and physiology of the brain and nervous system.

Physiological Psychology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100; PSYCH 260 or 3 credits of BIOL

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 463 Developmental Biopsychology (3) Developmental neuroanatomy and neurophysiology of vertebrates as they relate to behavior; emphasis on early postnatal development of birds and mammals.

Developmental Biopsychology (3)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 260

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

**PSYCH 464** Behavior Genetics (3) Survey of gene mechanisms and gene-environment interactions in the determination of behavior; emphasis on deviant human behavior.

**Behavior Genetics (3)**

- General Education: None
- Diversity: None
- Bachelor of Arts: Social and Behavioral Science
- Effective: Spring 2008
- Prerequisite: PSYCH 100; ANTH 021, BI SC 002, BIOL 133 or BIOL 222

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 470 Abnormal Psychology (3) Causes, dynamics, symptoms, and treatment of neuroses, psychoses, personality disorders, and other psychological disorders of adulthood.

Abnormal Psychology (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100; PSYCH 238, PSYCH 243 or PSYCH 270

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 474 Psychological Intervention in Childhood (3) Psychology of personal relationships in school situations.

Psychological Intervention in Childhood (3)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100, PSYCH 212, PSYCH 238, PSYCH 243 or PSYCH 270

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 471 Psychology of Adjustment and Social Relationships (3) Theory and application of psychological principles to problems in personal and social adjustment.

Psychology of Adjustment and Social Relationships (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100 6 additional credits of PSYCH

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 473 Behavior Modification (3) Principles of advanced behavior modification techniques.

Behavior Modification (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100 6 additional credits of PSYCH

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 475 Psychology of Fear and Stress (3) Description and evaluation of major trends in research on stress and fear in humans and other animals.

Psychology of Fear and Stress (3)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100 3 credits of BIOL statisticsPSYCH 200 orSTAT 200

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 476 Child Psychopathology (3) Etiology, diagnosis, and facilitation of adjustment of the mentally retarded, gifted, physically handicapped, and emotionally disturbed child.

Child Psychopathology (3)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100; PSYCH 212, PSYCH 238, PSYCH 243 or PSYCH 270

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 478 Clinical Neuropsychology (3) Overview of functional human neuroanatomy and clinical neuropsychology, with emphasis on origin, assessment, and treatment of human brain damage.

Clinical Neuropsychology (3)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100, PSYCH 260

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 479 (US) (WMNST 471) The Psychology of Gender (3) Theories and research on gender differences and gender roles. Emphasis on women's and men's current positions in society.

The Psychology of Gender (3)

General Education: None
Diversity: US
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: PSYCH 100, PSYCH 221

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 477 Mental Health Practicum with Children (3) Overview of interventions for children at risk for mental health disorders; emphasis on intervention strategies, program evaluation, and applied skills.

**Mental Health Practicum with Children (3)**

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100 permission of program

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Psychology (PSYCH)

PSYCH 482 Selection and Assessment in Organizations (3) Background in personnel testing, performance measurement, selection strategies, with emphasis on validity and measurement reliability.

Selection and Assessment in Organizations (3)

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite: PSYCH 100, PSYCH 200 or STAT 200, PSYCH 281

Public Administration (P ADM)

P ADM 404 Homeland Security and Defense in Practice (3) This course analyzes, evaluates, and critiques homeland security plans in practice.

P ADM 404 Homeland Security and Defense in Practice (3)

The focus of the course is to apply lessons learned in previous courses to actual organizations. Key material is reviewed, to provide context for the capstone experience that this course provides. Students will apply the Homeland Security framework (the National Response Plan and the National Incident Management System) to case studies, such as FEMA's response to Hurricane Katrina. The main theme of the course is the need for collaboration (interoperability) across state, local, and national governments as well as with the private sector and other relevant actors. A major portion of the course examines the Commonwealth of Pennsylvania as a state-level case study. The course will culminate with a paper that applies the framework of Homeland Security and Defense to an organization of the student's choosing.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2008
Prerequisite: P ADM 401

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Public Administration (P ADM)

P ADM 401 Introduction to Homeland Security (3) This course provides foundational knowledge about homeland security, including policy, organization, and legal issues in the American context.

P ADM 401 Introduction to Homeland Security (3)
The Introduction to Homeland Security/Defense course provides a baseline of common knowledge for homeland security professionals. The course achieves this goal by focusing on homeland security/defense, the motivation and nature of terrorists, the policies established by governments, pertinent governmental plans to meet homeland security/defense goals, who the key players are across the homeland security/defense spectrum, and the relevant legal issues framing efforts to defend the nation’s security. As an introduction to this broad area of study, this course serves as a basis for specialized study such as bioterrorism defense, critical infrastructure protection, cyber-security, and emergency response management. Understanding key principles will be measured through preparation of a written analysis of key homeland security/defense issues with alternative strategies consistent with current policy and legal constraints.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2008

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Public Health Preparedness (PHP)

**PHP 410 (HLS 410)** Public Health Preparedness for Disaster and Terrorist Emergencies I (3) Analyzes the history of terrorism and explores the preparation and response to specific terrorist threats, natural disasters, and conventional catastrophes.

**Public Health Preparedness for Disaster and Terrorist Emergencies I (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2010  
Prerequisite: Undergraduate Students BIOL 011 and BIOL 012 or CHEM 110 and CHEM 111 or MICRB 106 and MICRB 107; Graduate Students - Enrollment in the MHS program the Post-Baccalaureate Credit Certificate in Homeland Security or permission from the instructor.

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Public Policy (PUBPL)

PUBPL 201 Introduction to Homeland Security (3) An introduction to homeland security, and defense, with a focus on policy, legal issues, organization, and administration.

PUBPL 201 Introduction to Homeland Security (3)

Introduction to Homeland Security provides a baseline of common knowledge for understanding the nature of homeland security. The course achieves this goal by focusing on homeland security, the motivation and nature of terrorists, the policies established by governments, pertinent governmental plans to meet homeland security goals, who the key players are in homeland security, and the relevant legal issues framing efforts to defend the nation’s security. As an introduction to the broad area of study, this course serves as a basis for specialized study such as critical infrastructure protection, emergency response management (including natural disasters), border security, security administration, national security, and terrorism. Understanding key principles of homeland security will be expected from students who complete this course.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Public Policy (PUBPL)

PUBPL 304W Public Policy Analysis (3) The use of analytic models for describing and explaining the forces shaping policy and the consequence of policy decisions.

PUBPL 304W Public Policy Analysis (3)
This course provides an overview of the policy process and an examination of specific policy areas in the American political system. We will focus on what constitutes public policy and basic aspects of the policy process, including agenda setting, implementation, and policy evaluation. The course covers important contemporary policies such as health care, education, energy, welfare reform, and defense. It also will provide us with an opportunity to consider the utility of policy studies, and the various ways knowledge about particular issues is put to use by academics, partisan political figures, journalists, policy advocates, and policy makers.

General Education: None
Diversity: None

PUBPL 325 (AMSTD 325) American Political Culture (3) Study of political culture in the United States.

PUBPL (AM ST) 325 American Political Culture (3)
Examination of American political culture, including political history, party structure, campaign practices, elections analysis, voter behavior, and political ideology. The course satisfies the “area” requirement in society for undergraduate majors in American Studies, and is open to all majors. Students analyze social and cultural influences on the American political process. Issues of regional, ethnic, rural, urban, and gender traditions on campaigns are considered. Distinctive characteristics of American politics such as the two-party system, populism, and coalition building are discussed. Evaluation methods include examinations and essays. The course is offered once during the academic year and typically closes at 30 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2003
Prerequisite: 3 credits American Studies Political Science Public Policy or Sociology

Public Policy (PUBPL)

PUBPL 306 Introduction to Crisis and Emergency Management (3) An introduction to emergency management in mitigating, preparing for, responding to and recovering from hazards.

PUBPL 306 Introduction to Crisis and Emergency Management (3)

The course offers an overview of the field of emergency management in dealing with routine emergencies, crises or disasters, and mega disasters. Specific topics emphasized include: the roles and interactions of the public, nonprofit, and private sectors in emergency management; the legal and organizational structure of the national emergency management system; and the problems and policy issues associated with emergency management. This is done by examining the four phases of emergency management: mitigation, preparedness, response and recovery as they relate to resilience, the attempt to; and an overview, including case studies, of various human-made and, technological disasters as well as disasters related to natural hazards. Emergency management as conducted within the U.S. integrated emergency management system (IEMS) by local state and national emergency management agencies, not terrorist incidents, is the course focus rather than the emerging field of homeland security and terrorist events.

Bachelor of Arts: None
Effective: Summer 2011

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Public Policy (PUBPL)

PUBPL 415 (CRIMJ 415) Drug Control Policy in Comparative Perspective (3) Examines the history of drug control policy in the United States; comparisons and contrasts with other countries' experiences.

PUBPL (CRIMJ) 415 Drug Control Policy in Comparative Perspective (3)

This course focuses on the history of drug control policy in the United States and the internationalization of drug prohibition. We also examine the experience of other countries with drug use, abuse and control, including alternative regulatory policies in Western Europe. This class is both historical and comparative in orientation: in tracing the roots of drug prohibition, and examining the experience of other countries, we seek to enrich our understanding of American style drug control and the feasibility of alternative approaches.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2004
Prerequisite: CRIMJ 200 or PL SC 001 or PL SC 014 or SOC 001

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Public Policy (PUBPL)

PUBPL 419 Western Constitutional Traditions (3) This course reviews the major political, economic and social movements that shaped the development of the US Constitution.

PUBPL 419 Western Constitutional Traditions (3)
The course will explore the major political, economic and social movements that shaped the development of the US Constitution. Particular emphasis will be placed on early experiments in self-governance which predate the American Constitution including the Greek democracies, the Roman republic/empire and the English constitutional monarchy. After reviewing the historical foundations for American governance, students will consider the major political events which profoundly influenced the shape of the early republic. Whereas classes in constitutional law focus primarily on methods of legal interpretation and the case law, this course will focus on how historical events shaped the evolution of American government. Beyond an examination of our Western legal traditions, the course is designed to promote independent thought, critical thinking and enhance students’ written and verbal communication skills.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2011
Prerequisite: HIST 001, HIST 002, I HUM 311, PL SC 001, PUBPL 420 or PUBPL 421

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Public Policy (PUBPL)

PUBPL 475 Critical Infrastructure Protection (3) This course provides knowledge about protection of critical infrastructure as an aspect of homeland security.

PUBPL 475 Critical Infrastructure Protection (3)

Critical Infrastructure Protection provides a definition of critical infrastructure and examines the importance of protecting it in the post-9/11 era. The course focuses on policies and programs designed to prevent catastrophic events and to protect and maintain the nation’s critical infrastructure. It examines such activity through an understanding of the network of organizations at all levels of government and in the private sector responsible for protecting infrastructure. Case examples are provided of catastrophic events to provide an understanding of risks involved in infrastructure protection. Understanding key principles will be measured through preparation of a written analysis of a key homeland security/defense issue with alternative strategies consistent with current policy and legal constraints.

General Education: None

Radiological Sciences (RADSC)

RADSC 110 Patient Care in Radiologic Sciences (3) Basic concepts of routine and emergency patient care procedures addressed from the radiographer's perspective.

RADSC 110 Patient Care in Radiologic Science (3)

The content of this course includes the basic concepts of patient care, including consideration for the physical and psychological needs of the patient and family. Routine and emergency patient care procedures are addressed from the radiographer's perspective. Students will learn proper infection control techniques and will prove competency in CPR. This course is a requirement of the radiography (radiologic technology) curriculum and could be utilized as an option for students interested in patient care procedures such as health science majors. As is consistent with the core courses in the Radiography program, a passing grade for enrolled radiography students is 75%.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Radiological Sciences (RADSC)

RADSC 210W Radiographic Pathology (3) Writing intensive study of theories of disease causation and the pathophysiological disorders compromising health systems with emphasis on radiographic presentation.

RADSC 210W Radiographic Pathology (3)
A writing-intensive study of the basic fundamentals of pathology (disease process) with emphasis placed on radiographic presentation. Material covered includes the basic concepts of disease and terms related to pathology, systemic classifications of disease including etiology, examples, complications and prognosis, radiographic procedures and presentation, and the health process. Writing requirements include two short papers and a longer sequenced paper. All papers will receive instructor feedback and subsequent submission of a final revised paper. An informal writing assignment with peer review is also required. The writing process evolves throughout the course as the student applies knowledge learned to current assignments. This course is a requirement of the radiography (radiologic technology) curriculum and could be utilized as an option for students interested in a visual study of disease process such as health science and biology majors or for students in need of a writing-intensive course. As is consistent with the core courses in the Radiography program, a passing grade for enrolled radiography students is 75%.

Real Estate (R EST)

R EST 420 Analysis of Real Estate Markets (3) Historical performance, land use issues, market valuation, real estate development, public policy issues.

R EST 420 Analysis of Real Estate Markets (3)

The objective of this course is to provide an analytical approach to exploring real estate markets from both a private and public perspective. The course begins with "big picture" topics, including the historical performance of real estate as an asset class, and how and why urban areas develop and look as they do. In the historical performance module, various data bases and data analysis techniques are critically analyzed. The implications of different measuring tools and reporting formats are emphasized. The urban development module traces land value and land use theory from the mid 1700s to the present, emphasizing the evolution of ideas and how modern thought is built on enduring fundamentals. In the section on private land use decision making, valuation and valuation techniques are emphasized. Topics include market analysis, the real estate development process, and the impact of the financing decision on market performance. Spreadsheet modeling is introduced at appropriate points. It is anticipated that the module on the development process will rely partly on guest lecturers. These may include planners, lenders, developers, and representatives of citizens groups. The final part of the course addresses public policy issues surrounding land use decisions. Topics include zoning, eminent domain, and property taxation. Some of this material is presented in a "law and economics"framework, emphasizing the tradeoffs between equity and efficiency in the development of public policy.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005 Ending: Fall 2011
Prerequisite: R EST 301 or R EST 460 or R EST 470

R EST 424 (B LAW 424) Real Estate Law (3) Analysis of contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property.

R EST (B LAW) 424 Real Estate Law (3)

The objectives for this course are: (1) to provide students with an understanding of essential U.S. real estate property law, including the rights private property owners may obtain, how ownership and transfer are handled in view of present and future interests, constitutional issues that impact real estate ownership, and the legal aspects of modern real estate contractual transactions; (2) to teach students the ability to spot the legal issues arising from the above as future business leaders and (3) to introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. Student progress and mastery of the material will be evaluated through periodic examinations. Completion of the course will be credited toward fulfillment of the requirements for the Legal Environment of Business Minor.

Real Estate (R EST)

R EST 460 (FIN 460) Real Estate Financial Analysis (3) Debt and equity financing capital structure, "creative financing," risk analysis, corporate asset management.

R EST (FIN) 460 Real Estate Financial Analysis (3)

The objective of this course is to provide in-depth coverage of real estate investment and financing decisions. The focus is on the private market, including corporate asset management. Investment analysis moves from the basics of forecasting cash flows, through advanced topics including the impact of real option value on investment and development decisions. Risk measurement is given particular attention with a focus on sensitivity and simulation analysis. There is some coverage of asset pricing models like the Capital Asset Pricing Model, which is critically analyzed with respect to its applicability in real estate markets. The impact of illiquidity, management costs, and the suspicion of non-normally distributed returns are explored, as are the implications of relative market inefficiency. The financing module begins with the basics of mortgage debt mathematics, which is then extended to include comparisons of various repayment programs. Included are interest-only, balloon, shared appreciation, growing equity, graduated payment and reverse annuity loans, as well as various creative financing of commercial properties.

The latter include participating mortgages, convertible mortgages, and mezzanine debt. Featured in the corporate asset management section is the lease/buy decision. Other topics may be addresses based on current events. It is anticipated that guest speakers will be invited where appropriate.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Real Estate (R EST)

R EST 470 (FIN 470) Real Estate and Capital Markets (3) Analysis of publicly-traded real estate of both the equity, (REITs) and debt (MBSs) sides. The course also provides international perspectives.

R EST (FIN) 470 Real Estate and Capital Markets (3)

The objectives of this course are to expose the student and explore the issues associated with the analysis of "public" ("Wall Street") real estate, including both equities (such as Real Estate Investment Trusts or REITs) and debt vehicles (such as Mortgage-Backed Securities or MBSs). In addition, the course will focus on the increasingly globalization of real estate capital markets as the real estate sector becomes integrated into the global financial system. The differences between private and public real estate analysis will also be explored, including the suitability of traditional asset pricing models for real estate analysis. Topics include the growing impact of institutional real estate forces on the real estate sector, the use of modern financial economics methods to real estate including the concept of market efficiency, modern portfolio theory applications, market measures of risk and return, the use of option-based models, and other advances. The rise of Wall Street's interest in real estate securities is an important institutional development and serves as the underlying background for the analysis of MBSs using fixed-income security techniques.

As globalization has spread, the real estate sector has moved with these changes and prospects for a global real estate market are examined and evaluated.

This course serves as a compliment to FIN 460, which emphasizes traditional financial analyses of individual real estate projects. In FIN 470, real estate securities are viewed as a natural extension towards the complete integration of real estate and capital markets. In this sense, these courses will enable traditional and modern analyses of the real estate sector for years to come.

Recreation, Park and Tourism Management (RPTM)

RPTM 101 Introduction to Recreation Services (2) Introduction to discipline and exploration of professional career models/paths, historical development of profession, expectations and opportunities in recreation services.

RPTM 101 Introduction to Recreation Services (2)

The primary objective of this course is to provide students with an understanding of the historical and contemporary perspectives of the recreation and park profession. In addition, the course will provide an exploration of careers in leisure, recreation and parks, or related services with emphasis on the various leisure delivery systems.

Main topics typically include:
* Understanding of the roles and significance of leisure and recreation in past and present societies.
* Awareness of the factors contributing to the emergence of specific movements, delivery systems, and agencies within the recreation and parks movement.
* Knowledge of the specific roles assumed by public, private, nonprofit, community and commercial agencies in providing resources and contributing to contemporary participation patterns and lifestyles.
* Awareness of professional career models, expectations, and opportunities.
* An understanding of issues and trends currently affecting the direction of leisure services.

This is a required course for the Recreation, Park and Tourism Management major, usually taken during the freshman or sophomore year. Students in other majors who are exploring Recreation, Park and Tourism Management are encouraged to enroll.

Recreation, Park and Tourism Management (RPTM)

RPTM 210 Introduction to Commercial Recreation and Tourism (2) Historical and contemporary perspectives of the field of commercial recreation and tourism.

RPTM 210 Introduction to Commercial Recreation and Tourism (2)

The primary objective of this course is to introduce students to, and provide core competencies in, the fundamentals and principles of commercial recreation and tourism as fields of service including: the delivery of goods, services, amenities, facilities, entrepreneurship, and trends in commercial recreation and tourism. A second objective is to provide students with an overview of career possibilities in the fields of commercial recreation and tourism.

Main topics typically include:
* The history of recreation and tourism and how these sectors fit in the broad spectrum of leisure delivery systems
* The role and inter-relationship between private, nonprofit, and public resources in commercial recreation
* Management principles in organization, planning, marketing, promotion, finance, public relations, human resource practices, and decision making in commercial recreation and tourism
* Current needs, problems and issues associated with the commercial recreation and tourism sectors
* Career opportunities in commercial recreation and tourism.

This is a required course for the RPTM major in the Commercial and Community Recreation Management option. Students in other majors are welcome after all RPTM majors have scheduled.

The Pennsylvania State University
Recreation, Park and Tourism Management (RPTM)

**RPTM 120 (GS;US;IL)** Leisure and Human Behavior (3) Leisure from historical and contemporary perspectives, including forces shaping leisure behavior, and relationships among leisure, the environment, and social institutions.

**RPTM 120 Leisure and Human Behavior (3)**

Leisure and Human Development introduces leisure from historical and contemporary perspective including forces shaping leisure behavior, and relationships among leisure, the environment, and social institutions. Special attention is given to the role of leisure in individual health and wellness. Main topics include: the role of leisure in past and present societies; the ways in which leisure, recreation, and play relate to personal health and wellness, the economy, personal identity, work, religion, sexuality, race, class, socio-economic status, time use patterns, and education; leisure's contribution to human development throughout the life course; the role of leisure in one's life, specialization in leisure activities, leisure careers, serious forms of leisure, and leisure and addiction; and trends in the world economy and culture, technology, urbanization and suburbanization, governance, and demography and how they may influence leisure behavior.

Student performance is evaluated through exams and concept maps undertaken in class. Students also examine their own leisure by constructing a one-week time diary. The diary involves providing a detailed account of time allocated to work, personal maintenance, and “free time.” Students analyze their data, calculate statistics about their time use, and write a reflexive essay that connects their findings to class concepts. The time diary also includes wearing a pedometer for one week to gauge physical activity.

Recreation, Park and Tourism Management (RPTM)

RPTM 230 Teambuilding Facilitation (3) Learn leadership and teambuilding skills to facilitate group dynamics and adventure, team activities.

RPTM 230 Teambuilding Facilitation (3)
Through hands-on experience, discussion, and observation students will develop a sound background to the basics of teambuilding. This course will focus on the philosophy of team activities and experiential education, and the skills required to lead and facilitate teambuilding events. In addition to learning skills, the students will be asked to apply their knowledge of teambuilding to lead actual activities for their peers. Finally, students will be exposed to information about career opportunities in the field of teambuilding and adventure education.

Main topics include:
* An introduction to teambuilding philosophy and its relation to the outdoor education field. General concepts to be covered include: challenge by choice, full value contracts, the experiential learning cycle and the adventure wave.
* Activity understanding to include icebreakers, problem solving activities and trust events
* Programming and activity sequencing
* Leadership skills and the role of the facilitator
* Stages of group development
* Debriefing activities, transfer of learning and metaphoric transfer
* Activity safety: emotional and physical
* Risk Management and the elements of good judgment
* Group assessment and program creation
* Program evaluation

This course is one of the selections for RPTM majors in the adventure-based programming emphasis of the Outdoor Recreation Option. Students in other majors are welcome after RPTM majors have scheduled.

RPTM 236 Leadership and Group Dynamics in Recreation Services (3) Supervision in recreation services, including theories, strategies, group dynamics, applied leadership and decision-making skills.

RPTM 236 Leadership and Group Dynamics in Recreation Services (3)
The primary objectives of RPTM 236 are for students to examine both leadership and group dynamics as a function of leisure and recreation services. Students in RPTM 236 will be given a variety of leadership opportunities, both in and out of class, to begin to develop leadership skills as well as observe others in recreation leadership positions. Information on leadership theory and group dynamics (group development, roles in groups, group decision making) will be provided through group exercises and hands on experiences.

Main topics include:
* Leadership theory
* Approaches to leadership; leadership styles
* Definition of group including characteristics and effective group management
* Group decision making and problem solving
* Recreation leadership skills including behavior management, interpersonal skills and motivation
* Teaching as a leadership skill; learning theory
* Communication as a leadership skill
* Teambuilding

RPTM 236 is a required course for RPTM majors. Students in other majors are welcome. It is strongly suggested that RPTM 236 be taken prior to, not concurrent with RPTM 356.

**RPTM 295A Introduction to Golf Management (1-4)** Introduction to various phases of golf operations in public, private, municipal, or military settings.

**RPTM 295A Introduction to Golf Management (1)**

The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving the United States Golf Association’s rules of golf. The student will also complete a variety of assignments associated with tournament operations and the teaching of the game of golf to both adults and juniors. Another primary objective involves golfer development programs.

Main topics include:
- Rules of Golf: officiating, rules clinic, newsletters, tips, and course clinic
- Tournament Operations: budgeting, staffing, publicity, course preparation, health and safety issues, tournament operations software, and evaluation
- Introduction to Teaching Golf: research teaching styles, lesson observation, and conducting a series of lessons
- Development of Golfer Programs: program design, planning, budgeting, scheduling, problem solving, and program evaluation

This is a required course for all students in the Golf Management Option that are majoring in Recreation, Park and Tourism Management. The internship is not open to students of other majors.

Recreation, Park and Tourism Management (RPTM)

RPTM 320 Recreation Resource Planning and Management (3) Relationship between leisure behavior and natural environment. Exploration of natural resources which enhance leisure.

RPTM 320 Recreation Resource Planning and Management (3)

This course is an introduction to managing the recreational use of U.S. lands, waters, and wildlife. Course objectives include providing students with an awareness of the scope of outdoor recreation resources and major outdoor activities; knowledge about outdoor recreation resource agencies, their mandates, and their resources; an understanding of key outdoor recreation issues and impacts and their relationships to activity type and visitor behavior; knowledge about appropriate management tools for addressing impacts; and an understanding of the contribution of planning to effective recreation resource management.

Main topics typically include:
* Introduction to the scope of outdoor recreation in the U.S., key characteristics of major user groups, visitor motivations and benefits, and phases of the recreation experience
* The recreation resource base
* Federal, state, local, and private recreation resource providers
* Ecological impacts of outdoor recreation
* Conflict, crowding, and equal access in outdoor recreation
* Recreation carrying capacity, direct and indirect management techniques, and concentrating versus dispersing visitor use
* Facilities and design of recreation sites
* Visitor use limits, permits, and fees
* Information, education, and programs for visitors
* Visitor use monitoring
* Planning frameworks for outdoor recreation

This is a required course for RPTM majors in the Outdoor Recreation Option. The course is open to students in all majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 300Y (IL) Tourism and Leisure Behavior (3) Examination of the impact of recreational sociocultural, governmental, economic, and physical environment on the leisure traveler within the tourism industry.

RPTM 300Y Tourism and Leisure Behavior (3) (IL)

The objective of this course is to help students understand the tourism concept from a national and international perspective. The students will debate the motivations that lead people to engage in tourism and in hosting tourists. They will also examine the social, economic and ecological impacts that tourism development can bring to host communities and to tourists. The students will finally apply all the learned materials to conceptualize sustainable development strategies that aim at improving the quality of life of host communities, provide quality experiences to visitors, and protect the existing cultural and ecological resources of the destination.

Main topics typically include:
* History - How people engage in tourism throughout all periods of history and the influence of major historic events on modern tourism
* Socio-cultural impacts - How host cultures are transformed through tourism
* Economic impacts - Revenues and costs to host economies due to tourism
* Ecological impacts - Ways in which tourism helps and hurts the environment
* International terrorism and peace - Why tourism is called the peace industry and how it is affected by terrorism and political instability
* Sex tourism - Why tourism can alleviate or aggravate the exploitation of vulnerable segments of society
* Tourism planning and policy - How to plan and manage tourism in ways that it produces sustainable benefits to the host community

This is a required course for RPTM majors in the Community and Commercial Recreation option. Students in other majors are welcome.

General Education: None
Diversity: IL
Bachelor of Arts: None
Effective: Summer 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 325 Principles of Environmental Interpretation (3) Introduction, history, practice, and principles of contemporary interpretive activities common to natural and cultural history program sites.

RPTM 325 Principles of Environmental Interpretation (3)

The primary objective of this course is to provide students with an overview of the field of environmental interpretation with special emphasis in understanding and applying the principles inherent in effective programs and presentations. The second objective is to provide information about career opportunities in the interpretive profession. The third objective is to provide students with a variety of service learning opportunities to help them refine their career aspirations.

Main topics typically include:
* Becoming aware of the history, professional resources and best practices in the field of environmental interpretation.
* Creating and using effective interpretive materials including exhibits and visuals aids in non-formal programs.
* Demonstrating sound interpretive methods and techniques by conducting short presentations.
* Gaining an awareness of the operation of a visitor center and the experience of using live animals in interpretive programming.
* Demonstrating a competency in program development by participating in the planning, presenting and evaluation of the Children's Halloween Trail at Shaver's Creek Environment Center.

This course is one of the selections for RPTM majors in the Environmental Interpretation emphasis and the Adventure-based Programming emphasis of the Outdoor Recreation Option. Students in other majors are welcome. This course is a pre-requisite for RPTM 326, 327, 425, and 430.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 326 Natural History Interpretation (3) Methods, techniques, resources to acquire knowledge of natural history. Field identification, projects of an applied nature, and seasonal application.

RPTM 326 Natural History Interpretation (3)
The primary objective of this course is to give students the basic skills and resources to research and interpret the natural history of a given park or natural area. Building on the prerequisite course (RPTM 325: Principles of Environmental Interpretation), students continue to apply and practice principles that help create effective outdoor programming. The second objective is to provide students with a variety of service learning opportunities to help them refine their career aspirations.

Main topics typically include:
* Learning the skills and available resources to identify common fauna and flora found in Central PA including birds, mammals, amphibians, trees and wildflowers
* Imparting a basic understanding of the ecology of the Eastern Forest landscape and the ability to interpret that understanding to a general audience.
* Writing a short natural history interpretive article for a general audience.
* Demonstrating sound interpretive methods and techniques by conducting short presentations.
* Gaining an awareness of the operation of a visitor center and the experience of using live birds of prey in interpretive programming.
* Demonstrating a competency in program development by planning, researching, and presenting a natural history program in an outdoor setting to their peers.

This course is one of the selections for RPTM majors in the Environmental Interpretation emphasis of the Outdoor Recreation Option. Students in other majors are welcome providing they have met the pre-requisite (RPTM 325).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 325

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 327 Cultural History Interpretation (3) Methods, skills, and techniques necessary for the programming of historical sites and areas.

RPTM 327 Cultural History Interpretation (3)

The purpose of this course is to provide students with an understanding of the cultural resources within central Pennsylvania and to learn how to effectively interpret these resources through interactive programs and experiences. Building on the prerequisite course (RPTM 325: Principles of Environmental Interpretation), students continue to apply and practice principles that help create effective outdoor programming.

Main topics typically include:
* Demonstrating sound interpretive methods and techniques by conducting short presentations
* Demonstrating a competency in program development by planning, researching, and presenting two different 1st Person Interpretation -living history programs in an outdoor setting to the general public and to school groups.
* Participation, planning and presenting a Maple Sugaring Lesson at the community attended Maple Harvest Festival.
* Engaging in research and writing of a Historical Character Paper. Learning how and where to conduct cultural history research in any community by utilizing historical societies, historical sites, libraries, and personal interviews.
* Observation of professional cultural history interpreters.

This course is one of three selections for RPTM majors in the environmental interpretation emphasis of the Outdoor Recreation Option. It is included as part of the "Discovery Semester" block of courses taught by faculty at the Shaver's Creek Environmental Center.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 325

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 330 Adventure-Based Program Leadership (3) Both theoretical and experiential components are included as the role of the leader in outdoor adventure programs is examined.

RPTM 330 Adventure-Based Program Leadership (3)
Both theoretical and experiential components are included as the role of the leader in adventure-based programs is examined. This course will focus on the philosophy, ethics, and current practices in the area of adventure-based programming. Focus of instruction will be upon program design, developing skills for facilitating personal growth and providing leadership for outdoor pursuits including rock climbing, canoeing, teambuilding, hiking and backpacking.

Main topics to be covered:
* Leadership aspects of teambuilding: spotting, the purpose of teambuilding initiatives, debriefing
* Leadership aspects of rock climbing: belaying, safety, climbing skills, a look at top rope set up
* Leadership aspects of whitewater canoeing: preparation, reading the river, rope rescues, righting a capsized canoe, paddling skills
* Leadership aspects of backpacking: leave no trace environmental ethics, how to pack and prepare, 2-night backpacking trip to Black Moshannon State Park, planning a trip, reading a topographic map, acquiring a permit

RPTM 330 is one of the selections for RPTM majors in the adventure-based programming emphasis of the Outdoor Recreation Option. The course is open to students from all majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 334 Non-profit Recreation Agency Operations (3) Recreation agencies in voluntary and semiprivate sectors will be investigated through membership strategies, fund raising, volunteer management, etc. case studies.

RPTM 334 Non-Profit Recreation Agency Operations (3)

The primary objective of this course is to expose students to the operational practices and missions of nonprofit recreation and tourism organizations. In particular, this course will allow students to investigate voluntary and semi-private sectors through membership strategies, fundraising and development roles, and volunteer management.

Primary topics taught in this course will typically include the following:

* The role of non-profit organizations in providing park, recreation and tourism opportunities
* Missions, governance procedures, and societal roles associated with non-profit organizations
* Program support functions and non-profit fundraising strategies
* Skills and roles of professional staff in non-profit organizations

This course is a requirement for RPTM majors in the park management emphasis of the Outdoor Recreation Option. This is also a supporting course (i.e., department list) for RPTM majors in the Commercial and Community Recreation Management Option. Students in other majors are welcome after all RPTM majors have been scheduled.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: or concurrent: RPTM 356

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

**RPTM 386** Therapeutic Recreation Service Delivery (3) Skills and knowledge to deliver therapeutic recreation services based upon a sound philosophy.

**RPTM 386 Therapeutic Recreation Service Delivery (3)**

The primary objective of this course is for students to develop an understanding of the theory and practice of Therapeutic Recreation. Information is provided on the models of Therapeutic Recreation and professional practices within the field. RPTM 386 provides the foundation and information related to Therapeutic Recreation that will assist the student in providing recreation services to people with disabilities.

Main topics include:
* Models of Therapeutic Recreation
* Goals and Objectives
* Assessment
* Documentation
* Treatment Planning and Evaluation
* Activity and Task Analysis
* Community Re-integration

RPTM 386 is a required course for RPTM majors in the Therapeutic Recreation option. Students enrolled in the class must have completed or be enrolled in RPTM 277. RPTM 386 is a prerequisite for RPTM 486 and 490. Students in other majors should not enroll in this course.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: or concurrent: RPTM 277

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 356 Programming in Recreation Services (3) Translating agency philosophy and policy into understanding of organization, management, implementation, and evaluation of programming in recreation services.

RPTM 356 Programming in Recreation Services (3)

This course is designed to provide students with information and practical experience required to successfully design, promote, implement, and evaluate programs and special events in community, campus, or commercial contexts. There are several course objectives, including: (a) increasing students' knowledge of key concepts in program planning and an understanding how they impact programming decisions; (b) increasing students' knowledge of decision factors involved in analyzing and designing a recreation program or special event; and (c) increasing students' skills associated with key management functions required to implement a recreational program or special event. Students are required to work in teams to design, promote, implement and evaluate a special event that will benefit participants and the sponsoring agency.

Main Topics Typically Included in the Course:
* Programming concepts, including programmer, program contexts, benefits-based programming, programming approaches, comprehensive programming cycle, and program formats
* Management structures, including organization of teams into committee structures with clear roles, responsibilities, and reporting structure
* Program design, including program concept, program purpose, goals and objectives, and development of themed events
* Situation analysis, including analysis of internal and external factors/ resources, potential participants' needs and interests, and program-related research
* Budget development and sponsorship, including direct fixed and variable costs associated with event, differential pricing, and sponsorship
* Promotion, including purposes for promotion, types of promotional tools, and development of a promotional plan
* Event logistics, including development of a schedule of events, equipment and supplies, volunteers and staffing, registration, site layout, and event logistics
* Risk management, including safety check, policies and procedures, staff/volunteer orientation, and overall risk management plan.
* Program evaluation, including summative and formative, process and outcome evaluation

This is a required course for majors in Recreation, Park, and Tourism Management. Students from other majors may enroll in this course, providing they have met the pre-requisites.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: or concurrent: RPTM 101, RPTM 236 ; fifth-semester standing

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 360 Golf Operations Management (3) The course will focus on business planning, budgeting, inventory management, and financial controls within golf operations.

RPTM 360 Golf Operations Management (3)
The primary purpose of this course is to prepare a student in the fundamentals of retail management pertaining to effectively operating a golf shop. Although successful retail management of a golf shop requires many different considerations, this course specifically emphasizes the planning and controlling of both the operational and merchandising effort. The first objective is to teach the student about the planning process that is necessary to effectively manage a retail business. The second objective is to provide a student with an understanding of the practices and procedures in operating a golf shop. The third objective is to teach the student effective merchandising and pricing techniques.

Main topics typically include:
* Types of plans that are needed in order to operate a retail business effectively.
* Developing strategic plans and business plans.
* Effective merchandising techniques for purchasing, pricing and selling.
* Planning techniques concerning both the purchasing and selling process.
* Quantitative open-to-buy planning as well as effective assortment planning procedures.
* Vendor selection and relations as well as negotiable terms of sale.
* Techniques regarding pricing, merchandise presentation and promotion.

This is a required course for RPTM majors in the Golf Management Option. It is usually scheduled during the student's sixth semester. Students from other majors may enroll after RPTM majors have registered.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: MGMT 100

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 395B Participation in Golf Management (1-4) Practical individual involvement in selected golf operations in public, private, municipal, or military settings.

RPTM 395B Participation in Golf Management (1-4)

The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving: turfgrass management, analysis of the golf swing, and pre-work in merchandising and inventory management.

Main topics include:
* Turfgrass Management: routine and non-routine maintenance, practices, traffic management, environmental issues, pest control, communications with superintendent.
* Analysis of the Golf Swing: video lessons, business plan for teaching, clubfitting systems.
* Merchandising and Inventory Management (pre-work): explore OTB practices, compare product lines, profile vendors, pricing methods, and evaluation of merchandise displays

This is a required course for RPTM majors in the Golf Management Option. The internship is not open to students in other majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 295A ; 2.00 cumulative grade point average

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 394 Orientation to Internship (1) Plan and prepare for internship in Recreation Services. Analyze career opportunities, internship process, and associated requirements. For RPTM majors only.

RPTM 394 Orientation to Internship (1)

The primary objective of this course is to assist students with planning and preparing for their professional Practicum experience. The supporting objectives are: to provide awareness of the role and significance of the Practicum experience, including its relationship with professional practice; assist students in their understanding of the placement process, including prerequisites for placement; provide students with a working knowledge of their requirements while on Practicum, including contractual arrangements, on-site professional conduct, written assignments, evaluation procedures and evaluation criteria; and to provide the students with knowledge of post-practicum concerns, including resources for professional employment and professional certifications.

Main topics typically include:
- Introduction to the practicum experience and pre-requisite requirements
- Personal and professional needs assessments and the importance of determining deficit skill and competency areas as related to the student's intended career.
- Development of career and practicum goals and their relative importance to practicum site research and selection.
- Preparation of a professional cover letter and resume.
- Searching for and selecting possible practicum sites
- Professional approaches to contacting, communicating and following-up with prospective practicum agencies.
- Interviewing skills, including various interview formats, commonly asked questions, appropriate body language, and professionalism.
- Practicum requirements, including assignments, communication with the university and agency supervisor, and academic and performance evaluation.
- Post-practicum concerns, including graduation, employment, and professional certifications.

This course is required of RPTM majors (except Golf Management Option), and is usually taken two semesters prior to the semester that a student plans to participate in RPTM 495A (Internship in Recreation Services). The course is not open to students from other majors.

Students are evaluated by performance on written assignments and quizzes.

This course is offered both spring and fall semesters with typical enrollments of 70-90 in the fall and 50-70 in the spring.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: fifth-semester standing

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 397S First Year Seminar (1) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

First Year Seminar (1)

Effective: Fall 2011 Ending: Fall 2011 Future: Fall 2011

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 397 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 410 Marketing of Recreation Services (3) Theoretical/practical application of marketing/advertising strategies in the development/delivery of recreation services.

RPTM 410 Marketing of Recreation Services (3)

The primary objective of this course is to provide students with an overview of marketing in general and recreation/tourism marketing in particular. Supplemental objectives are to (a) provide students with a review of different marketing theories and practices and (b) help students apply marketing principles to practical recreation/tourism situations.

Main topics typically include:
* Introduction to marketing and its evolution
* Parameters of the recreation/tourism experience and how this affects marketing practices
* Defining and segmenting the consumer market
* The marketing mix
* Conducting marketing research in an effort to develop effective marketing strategy
* Service quality and its impact on marketing strategy
* Customer loyalty and its impact on marketing strategy
* Recognizing and responding to the changing needs of consumer markets

This is a required course for RPTM majors, generally taken after completion of the introductory courses in the major. Students in other majors, including those pursuing the Liberal Arts Business minor, are welcome after RPTM majors have scheduled.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: fifth-semester standing or above

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 415 Commercial Recreation Management (3) Planning, developing, and managing profit-oriented recreation opportunities.

RPTM 415 Commercial Recreation Management (3)

Building upon subject matter presented in many of the core RPTM courses, the primary objective of this course is to provide students with an understanding of strategic management processes and how they apply to recreation/tourism businesses. A second objective is to develop students' decision-making and analytical abilities.

Main topics typically include:
* An overview of the strategic management process
* Having the mindset of an entrepreneur/intrapreneur
* The "ins and outs" of conducting feasibility studies
* The pros and cons of different forms of business
* Generating and setting short- and long-term goals and objectives for recreation/tourism businesses
* Capitalizing, financing and budgeting for recreation/tourism businesses
* Planning, organizing, managing and controlling recreation/tourism businesses
* Regulations, taxation and licensure of recreation/tourism businesses
* Recognizing the importance of developing and maintaining relationships with various constituencies
* Options for strategic growth

This course is required of RPTM majors in the Commercial and Community Recreation Management option. Students take this course after or concurrent with RPTM 410. Students in other majors who have met the pre-requisites, including those pursuing the Liberal Arts Business minor, are welcome after RPTM majors have scheduled.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 210 and RPTM 410

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 425 Principles of Interpretive Materials (3) Principles, practices, application of non-personal interpretive activities common to natural/cultural history, including exhibits, audio-visual and illustrative materials.

RPTM 425 Principles of Interpretive Materials (3)

The primary objective of this course is for students to follow the exhibit creation process from conceptualization through construction to completion. Along the way, students will present their works-in-progress to fellow students and instructors for modification and improvement. Their final products will be used in a practical environment in the exhibit room at Shaver's Creek Environmental Center and at various educational functions around the state - PA State Farm Show, Central PA Festival of the Arts, Penn State's Ag Progress Days, etc.

Main topics to be covered:
* Topics vs. Themes: narrowing the unifying concepts in exhibit design
* Flow in an exhibit and museum space: how to guide logical progression of thought in both an exhibit and exhibition area
* Color Schemes
* Computer aided design techniques
* Woodworking skills

This course is one of the selections for RPTM majors in the environmental interpretation emphasis of the Outdoor Recreation option. Students from other majors may enroll in this course if they have met the pre-requisite (RPTM 325).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 325

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 430 Environmental Education Methods and Materials (3) Methods and materials for developing, implementing, and evaluating environmental education programs within formal and non-formal educational settings.

RPTM (AEE) 430 Environmental Education Methods and Materials (3)

The primary objective of this course is to provide students with an introduction to Environmental Education (EE) methods (pedagogy) and materials for both formal and non-formal settings. A second objective is to provide the student with an opportunity to apply specific methods and materials to practical situations at Shaver's Creek Environmental Center. These opportunities include Outdoor School, School Day Programs, Maple Harvest Festival, and Scout Programs. A third objective is to provide information about gaining access to EE materials through web-based, written, and personal contacts.

Main topics typically include:
* Introduction to the history, definition, and philosophy of Environmental Education (EE)
* Differences between formal and non-formal EE settings
* PDE Environment & Ecology Standards
* Models of EE pedagogy
* Place-based-education labs covering: The Land, Water Resources, Fauna, and Flora
* "Keystone Aquatic Resource Education" teacher resource workshop (or other national curricula- i.e. P WILD, PLT, Project WET, etc.)
* EE Resources available at SCEC, the web, and other EE centers

This course is one of the selections for RPTM majors in the environmental interpretation emphasis and adventure-based programming emphasis within the Outdoor Recreation option. Students from other majors may enroll in this course if they have met the pre-requisite (RPTM 325).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2011
Prerequisite: AEE 100 or RPTM 325

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 433W Program Evaluation and Research in Recreation Services (3) Systematic, structured problem-solving process for decision making in recreation and parks. Research techniques/evaluation procedures; quantitative, qualitative methodologies; deductive, inductive reasoning.

RPTM 433W Program Evaluation and Research Services (3)
The goal of this course is to provide students with the background necessary to understand and evaluate research reports and to conduct research projects of moderate complexity in the field of recreation, parks, and tourism management. The research focus of the class is on evaluation and assessment. Class topics include introductions to the philosophy of science, including the nature of theories, hypotheses, concepts and constructs, to measurement theory, to applied sampling techniques, and to methods of scale construction. Both quantitative and qualitative research methods are addressed. In-class activities include the conceptualization and execution of an applied evaluation project. This project involves practice in interviewing, in-class focus groups, survey questionnaire development, data collection, and data analysis. The course will provide students with a conceptual map of how research is conducted, the resources available to them, the vocabulary of research, and guidance in writing a research report.

Additionally, this is a Writing Across the Curriculum class. Students will prepare several short writing projects, some based on interviews or observational studies that they have conducted, as well as a final report based on the evaluation research conducted by the entire class.

The course material is divided into units of study with topical areas within each unit sequentially presented to parallel the research process itself. Students are expected to have read assigned materials and to attend class prepared to discuss them. Classes involve lectures, discussions, and in-class activities such as focus groups, survey questionnaire development and presentations of research results.

This class is required of all undergraduate majors in Recreation, Park and Tourism Management. RPTM 356 and a 3-credit course in statistics are prerequisites for this course. Students from other majors are welcome in this course, providing they have met the pre-requisites.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 356 3 credits in statistics

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 435 Recreation Facilities Planning and Management (3) Planning and management of selected facilities with emphasis upon maintenance, activity, and support provisions.

RPTM 435 Recreation Facilities Planning and Management (3)

The purpose of this course is to introduce students to planning, design, and maintenance practices at recreation and park facilities. This course will emphasize the activity and support provisions of recreation facilities and will identify standards of design and maintenance. Compliance with accepted risk management practices and the Americans with Disabilities Act (ADA) will also be stressed in this course.

Specific topics covered in this course include:
* Maintenance management practices and risk management procedures
* Monitoring and reporting recreation and park facility use
* General planning considerations of selected recreation facilities, parks and tourism attractions
* Special materials and apparatus required for specific park and recreation facilities
* Support facilities necessary to complement developments that offer these activities (e.g., vehicular circulation and parking, lighting, emergency provisions, etc.)

This is a required course for RPTM majors in the park management emphasis within the Outdoor Recreation Option. The course is also on the department list of the Commercial and Community Recreation Option. Students in other majors are welcome providing there are seats available after RPTM majors have been scheduled.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: fifth-semester standing or above

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 440 Adventure-based Programming and Administration (3) Utilization of wilderness/backcountry environments and participant challenge; history, models, theories; survey of organizations; program design, administration; and issues.

RPTM 440 Adventure-Based Programming and Administration (3)

The first objective of this course is to promote awareness of the history and evolution of adventure-based programming and to look at how this process has impacted the state of programming today. Secondly, through experiential, in-classroom activities students are expected to apply their knowledge of the various outdoor topics and theories examined in class throughout the semester. Third, students learn about the hiring and interview process as they create resumes and explore the currently listed jobs in the field. Fourth, various topics related to current issues in the field are debated, discussed and considered while looking at the future of adventure-based programming.

Main topics to be covered:
* History of Experiential Education/Adventure-based Programming
* Risk Management in relation to outdoor programming: looking at accidents, forms, and client screening
* Hiring/interviewing/looking at resumes
* Programming for various audiences: youth at risk, elderly, people with disabilities, women, college student orientation programs, and experiential education in the classroom
* Staff training: topics/skills to be covered, leader problems, and burnout
* Current Issues: controversial issues, what is in the news, media, gender roles/stereotypes

RPTM 440 is a selection for RPTM majors in the adventure-based programming emphasis of the Outdoor Recreation option. The pre-requisite for this course is RPTM 330 or RPTM 356.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: or concurrent: RPTM 330 or RPTM 356

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

**RPTM 470 Recreation and Park Management (3)**

Management of recreation and park services in public/non-profit settings; planning, budgeting fiscal development, resources allocation, decision-making, computer applications.

**RPTM 470 Recreation and Park Management (3)**

The primary objective of this course is to provide advanced standing RPTM students with an understanding of management and administration procedures that are essential to operating and managing park facilities and recreation programs. Secondarily, students will be given an opportunity to be exposed to park and recreation governance processes and will be asked to synthesize the roles that key stakeholders play in the management of public-sector park and recreation organizations.

Key topics covered in this course include:
* A historical account of park and recreation operating environment as well as trends in park support and positioning of the field
* Inter-organizational partnerships and collaborations in the park and recreation field
* Financing, budgeting and fiscal control processes
* Human resource management principles and policies
* Creating effective working relationships with community stakeholders and park and recreation board members
* Comprehensive recreation, park and open space planning

This course is required for RPTM majors in the park management emphasis within the Outdoor Recreation Option. Students in other majors are welcome providing there are seats available after RPTM majors have been scheduled.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 320

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 460 Political and Legal Aspects of Recreation Services (3) Role of local, state, federal government in provision of recreation services. Legislative and judicial systems.

RPTM 460 Political and Legal Aspects of Recreation Services (3)
The primary objective of this course is to examine the governmental systems that influence the delivery of recreational services. The formal structure of government is considered along with the day-to-day political processes that determine public policy. All three levels of government-federal, state, and local--are studied. Particular attention is given to the judicial systems of these governments. The course also gives considerable attention to tort liability by examining case law as it relates to recreation facilities and services. The course also explores federal and state laws pertaining to employer/employee relations and administrative responsibilities. An additional objective is to investigate land use planning as it impacts recreation services.

Main topics include:
* The Court Systems, legislative branches
* Planning: historical perspective, land use, zoning, mandatory dedication, easements, building codes
* Liability: elements of negligence, situations giving rise to law suit, product liability, defenses & risk management, review
* Personnel laws; Federal laws, State Human Relations Acts, Civil Service, Hatch Act, FLSA, finance, garnishment & bankruptcy
* Public Relations Law: copyright, photography, lotteries, libel, slander, privacy
* Administrative Law: purchasing, entrepreneurship, Federal Tax laws

This is a required course for all students majoring in Recreation, Park and Tourism Management. It is open to students of other majors, providing they have met the pre-requisite.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 101

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 476 Leisure Education in Therapeutic Recreation (3) Theoretical and practical application of leisure education in the therapeutic recreation process.

This course is designed to cover concepts, theories, and practical issues relating to leisure education. Various models, assessment tools, and intervention strategies of leisure education will be explored. Diverse settings for leisure education will be examined. Students will be given the opportunity for practical experience that will build on course content, as well as course content from previous courses.

Upon completion of this course, students should be able to:
* Define leisure education and its relationship to therapeutic recreation.
* Understand the historical development of leisure education.
* Promote, advocate, interpret, and articulate the concerns, purpose, and value of leisure education.
* Understand the concepts and theories that serve as a foundation for leisure education.
* Analyze and evaluate various leisure education models.
* Organize, conduct and evaluate a leisure education program.

Main topics of the course include:
* Introduction to leisure education
* Foundations of leisure education: concepts and theories
* Models and approaches to leisure education
* Systematic development of leisure education programs
* Conducting a program
* Evaluating the program

This course is a requirement for RPTM majors who are in the Therapeutic Recreation Option. Students from other majors are eligible to register for this course, providing they have met the pre-requisites (RPTM 376 and 386).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 277 and RPTM 386

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 480 Senior Management Seminar (1) Current management issues will be examined relative to professional management strategies, ethics, and leadership in leisure services.

RPTM 480 Senior Management Seminar (1)
This course is a seminar about current issues in outdoor recreation management. The course objective is to provide students with an opportunity to read about and discuss issues including outdoor recreation management goals and techniques, liability and risk management, leadership, ethics, the place of outdoor recreation in multiple-use management of natural resources, public participation in resource management, and career opportunities.

Topics for the semester are typically selected by the instructor in consultation with students. Examples that have been selected in the past include:
* Managing potential conflict between motorized and non-motorized recreation
* Leadership and risk management in outdoor adventure activities
* Commercial recreation on public lands and waters
* Politics, policy, and public involvement in managing public lands and waters;
* Recreation and the management of wildlife, timber, minerals, water, and grazing
* Career opportunities in teambuilding and leadership development
* Concession operations in public parks and forests
* Planning and developing a new National Monument
* Public employment and civil service requirements.

This is a required course for RPTM majors in the Outdoor Recreation Option. Students are required to have sixth semester standing or higher and have completed RPTM 320. The course is not open to students from other majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: sixth-semester standing in RPTM

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 486 Facilitation Techniques in Therapeutic Recreation (3) Intervention strategies, therapeutic approaches, and group facilitation techniques in therapeutic recreation.

RPTM 486 Facilitation Techniques in Therapeutic Recreation (3)

The primary objective of RPTM 486 is for students to develop an understanding of the intervention strategies used in the field of Therapeutic Recreation. Information is provided on the concepts and techniques applied in Therapeutic Recreation services. Information related to intervention strategies, therapeutic approaches and group facilitation skills in Therapeutic Recreation is provided.

Main topics include:
* Therapeutic approaches to client-practitioner interaction
* Communication and behavior management techniques used in client-practitioner Interaction
* Activity adaptation and modification
* Reality orientation vs. validation therapies
* Reminiscence and remotivation therapies
* Stress reduction and relaxation
* Social skills and assertiveness training
* Adventure programming in Therapeutic Recreation
* Animal facilitated programming in Therapeutic Recreation
* Wheelchair mobility skills and transfer techniques

RPTM 486 is a required course for RPTM majors in the Therapeutic Recreation option. RPTM 376 and 386 are pre-requisites for this course. The course is not open to students from other majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2011
Prerequisite: RPTM 386

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 494H Senior Honors Thesis (1-6 per semester/maximum of 6) Senior Honors Thesis

Senior Honors Thesis (1-6 per semester/maximum of 6)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2011

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

**RPTM 495A Internship in Recreation Services (12)** Meet educational objectives through participation in organized practical experience; direct observation and professional supervision in full-time work experience.

**RPTM 495A Internship in Recreation Services (12)**

The primary objective of this course is to provide students with an opportunity to meet their educational objectives through participation in well-planned and organized practical experience. Secondary objectives include individualizing the practical experience based upon the student's intended professional career; structuring the experience to facilitate increases in professional skills and competencies as related to the student's professional goals; providing the student with professional supervision and mentoring; and offering the student a diversity of professional responsibilities, including direct leadership and administrative opportunities, in order to prepare the student for successful career entry.

Main topics typically include:

* Orientation to the Internship Agency
* Development of individualized practicum goals/educational objectives
* Critical analysis of professional issues and events
* Comparison and contrast of complementary and competing agencies/organizations
* In-depth study of the student's practicum agency
* Development and implementation of a "special project"

This is a required course for RPTM majors (except Golf Management option) usually taken after a student has completed the majority of the courses in the major. Students must complete RPTM 394 (Orientation to Internship) prior to enrollment. The course is not open to students from other majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 394; seventh-semester standing; 300 hours practical experience; and a 2.0 grade-point average; current and valid certification in advanced first aid and cardiopulmonary resuscitation

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

**RPTM 490 Management and Issues in Therapeutic Recreation Services (3)** Topics related to management and professional issues in therapeutic recreation services in both clinical and community settings.

**RPTM 490 Management and Issues in Therapeutic Recreation Services (3)**

The primary objectives of RPTM 490 are for students to develop an understanding of the management theory and skills used in the field of therapeutic recreation, and to become aware of contemporary professional issues in the field. Information is provided on management theory and practices applied in therapeutic recreation service delivery. Information related to both clinical and community based programs is covered. Survey research techniques will be used to gather information from practitioners in the field of therapeutic recreation. This process will focus on both management practices in the field and contemporary issues facing therapeutic recreation professionals. Issues may include credentialing in therapeutic recreation, professional identity, inter-professional relationships in health care environments, role of research in professional practice, trend analysis, clinical vs. community service delivery, and reimbursement for therapeutic recreation services.

Main Topics to be Included in the Course:
- The role of therapeutic recreation in health care settings and how TR as a discipline interacts with other professions in service delivery
- Standards of practice in therapeutic recreation including credentialing and accreditation; documentation; treatment planning and quality improvement
- Management theory as it applies to therapeutic recreation
- Administrative management including developing mission and vision statements, policy and procedures and evaluation
- Operations management with a focus on resource management, marketing and budgeting
- Risk management as it relates to therapeutic recreation service delivery
- Human resource management including recruitment and selection of staff, training, staff development and clinical supervision
- Contemporary issues and trends in the field of therapeutic recreation

This course is a required course for Recreation, Park and Tourism Management students within the Therapeutic Recreation option. RPTM 376 and 386 are prerequisites for this course.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2011
Prerequisite: RPTM 386

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 495C Internship in Golf Management (1-4) Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

RPTM 495C Internship in Golf Management (1-4)

The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving merchandising and inventory management, food and beverage control, and portfolio development.

Main topics include:
* Merchandising and Inventory Management: creating an open-to-buy plan, pricing, sales, inventory, displaying
* Food and Beverage Control: customer survey, labor pro forma, costing, storage, and regulations
* Portfolio Development: industry problem statement and presentation

This is a required course for RPTM majors in the Golf Management Option. The internship is not open to students of other majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 495B ; 2.00 cumulative grade point average

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 495B Internship in Golf Management (1-4) Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

RPTM 495B Internship in Golf Management (1-4)
The primary objectives of this course are to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving philosophy and swing concepts of teaching, and supervising and delegating.

Main topics include:
* Philosophy and Swing Concepts of Teaching: group lessons, teaching evaluation, lesson plan, lesson series with disability populations, physical training.
* Supervising and Delegating: performance problems, joint problem solving, motivating assignments, and delegation.

This is a required course for all RPTM majors in the Golf Management Option. The internship is not open to students of other majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 395B ; 2.00 cumulative grade point average; current and valid certification in advanced first aid and cardiopulmonary resuscitation

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 495D Internship in Golf Management (1-4) Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

RPTM 495D Internship in Golf Management (1-4)
The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete an initial report, midterm and final evaluations, an agency evaluation, activity logs, and application for membership into the PGA of America.

Main Topics Include:
* Observation and participation under supervision in golf operations in public, private, municipal, resort or military settings
* Complete Membership Application for PGA of America

This is a required course for RPTM majors in the Golf Management Option. The internship is not open to students of other majors.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2005
Prerequisite: RPTM 495C ; 2.00 cumulative grade point average

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Recreation, Park and Tourism Management (RPTM)

RPTM 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Religious Studies (RL ST)

RL ST 001 (GH;US;IL) Introduction to World Religions (3) An historical and comparative survey of the principal beliefs and practices of the world’s major religions.

RL ST 001 Introduction to World Religious (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The academic study of religion is distinct from instruction in a religion, in that one seeks simply to learn about a religion, its history, texts, major personages, and belief claims. Because religions are always deeply intertwined with the entire cultural history of a region (linked with everything from weather and topography to political, social and economic history), studying a religion always means placing it in its larger cultural context. World Religions (RL ST 001) is an introduction to the religions of the world, past and present. After an introduction to the academic study of religion and various aspects of the field (methods, history, problems), the course begins a more-or-less chronological progression from the ancient world to our contemporary times. Each religion (e.g.: Ancient Near Eastern; Greek and Roman; Hinduism; Buddhism; Judaism; Christianity; Islam; NRMs [*New Religious Movements*]) is placed in its historical, social, and cultural context. The questions that arise in the course of such study are profound (e.g.: how have various religions answered the major questions of life: the question of the meaning of life; the question of evil; the question of how one defines “moral” behavior; the question of how one deals with others who may have a different religion or different morality; etc.), and can be of great help in critically examining one’s own views and presuppositions about such matters. The student should leave the course with a good grasp of the variety of answers given by human beings to these “religious” questions over the centuries; how religions are linked to their cultures; how religions change and transform themselves; and how religions function within a culture, including our own. This should provide the student an excellent framework within which to reflect on his or her own religious experience, and prepare the student for mature, sophisticated interaction with the topic of religion later in life. An example of evaluation may be: Evaluation based on discussion, quizzes, mid-term and final exam. As an introduction to religion—and world religions in particular—RL ST 001 offers a brief overview of all the world’s major religions, most of which are the subject of focused courses at the 100–level and above. Because RL ST 001 also contains modules relevant to the methodologies used in the academic study of religion, it is also related (or linked) to all other courses in religious studies, which use these same methods. RL ST 001 may be used to fulfill 3 credits in the Humanities. RL ST 001 also may be used to fulfill a US;IL requirement in the major or minor.

General Education: GH

Religious Studies (RL ST)

RL ST 004 (GH;US;IL) (CAMS 004, J ST 004) Jewish and Christian Foundations (3) Introduction to the perspectives, patterns of worship, morality, historical roots, and institutions of the Judaeo-Christian traditions; their relationships to culture.

RL ST (CAMS/J ST) 004 Jewish and Christian Foundations (3) (GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Jewish and Christian Foundations seeks to help students better understand the Bible as the scriptural background for both Judaism and Christianity. Some people believe the Bible is “scripture,” self communicated by God to humanity. To others, this text is a compendious collection of poetry, historical writing, law, myth, and mystical writings, which stems from the religious, political, and cultural milieu of the ancient Near East. Some people believe this is a book designed to bring people to belief in the power and reality of the god discussed in these writings. For others, the book is a source of both unity and division among people in the world, and must be treated as ambiguous in nature. Still others see the biblical text as the single most important collection of literature to have shaped the religious, political, and imaginative contours of western civilization. This course focuses on selected portions of the biblical text, representing diverse strands of historical remembrances, interpreted and re-interpreted in light of critical historical events, and serving, first as an oral, and later as a written account of the life, beliefs, and hopes of Jewish and Christian peoples. Readings from both the Hebrew Bible (the Christian "Old Testament") and the Christian scriptures (the "New Testament") will be used. RLST/CAMS/J ST 004 provides a broad discussion of the origin of both Judaism and Christianity within a historical and geographical framework. The principle teachers, writers, and "founders" are discussed, including Moses, Isaiah, David, Ezra, Jesus, Peter, and Paul. Students are challenged to read and understand these important writings which have interpreted the human condition and which have oriented generations of people towards a transcendent referent associated with love and loyalty. Evaluation methods may include two hour examinations, a final examination, and two short writing assignments. The examinations are not cumulative. Class participation will also be a factor in overall evaluation for the final grade. RL ST/CAMS/J ST 004 may be used to fulfill requirements for the Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies major/minor. Finally, students will be challenged to evaluate and respond to the literature as it touches on human experience experiences which all people share regardless of their personal religious affiliation.

Religious Studies (RL ST)

RL ST 044 (GH;IL) (CAMS 044) Ancient Near Eastern and Egyptian Mythology (3) Survey of major ancient Mediterranean myths, gods, and goddesses in their cultural contexts; influence on later cultures.

RL ST (CAMS) 044 Ancient Near Eastern and Egyptian Mythology (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

RL ST/CAMS 044 introduces students to a selection of major ancient Mediterranean and Egyptian myths, gods, and goddesses. Ancient Canaan, Mesopotamia, and Egypt (geographically approximating the contemporary Middle East) were primary locations for the development -- beginning already in the fourth millennium B.C.E. -- of highly complex urban civilizations, many of which persisted until the turn of the Era. These ancient societies were responsible both for notable technological achievements, such as writing, sophisticated irrigation systems, and the wheel, and for notable cultural achievements, such as impressive legal codes, highly developed astronomical research, and complex religious systems. This course will acquaint students with some major religious writings stemming from these fascinating old world cultures. The class discusses in some detail a limited range of stories about the divine realm, creation, the flood, kingship, life and death, and sexuality. The course pursues such comparisons by studying myths against the background of the different cultures that produced them. Because a number of these religious myths are historically related, the course will also critically compare the similarities and the differences between them. To underscore how important historical and geographic settings are to understanding these stories, the course uses different techniques of instruction such as small group discussions, slides, lectures, and films. Three of the world's major religions -- Judaism, Christianity, and Islam -- trace their roots to the religions of the ancient Near East and Egypt. Hence, some attention will be paid to the similarities and differences between the views expressed in these myths and the views developed in classical Judaism, Christianity, and Islam. By grappling with issues such as divine character, self-identity, and female/male relationships in the ancient Mediterranean world, students will be better acquainted with how classical Judaism, Christianity, and Islam innovate beyond the religious heritage to which they are indebted.

Religious Studies (RL ST)

RL ST 012 (GH;IL) (CAMS 012, J ST 012) Lands of the Bible (3) Textual and archaeological evidence for the lands, cities, and peoples associated with the Hebrew Bible and Christian scriptures.

RL ST (CAMS/J ST) 012 Lands of the Bible (3) (GH;IL)

This course meets the Bachelor of Arts degree requirements.

CAMS/J ST/RL ST 012 introduces students to the lands, cities, and peoples associated with the Hebrew and Christian scriptures. Using methodologies from historical geography, archaeology, ancient history, epigraphy, and anthropology, students study the Fertile Crescent, from the Nile Valley, through the Levant and its Jordan River valley, to Mesopotamia—the river valleys of the Tigris and Euphrates. Students will study the cities and states of the cultures along these rivers in the Bronze and Iron Ages, including Memphis/Saqqarah, Thebes, Ugarit, Jerusalem, Lachish, Megiddo, Shechem, Samaria, Hazor, Ebla, Babylon, Ur, Petra, Jericho, 'Akko, and others. These are the lands of the Hebrew and Christian scriptures, but also cities that have been revealed through modern study. For example, the texts excavated at Ugarit (Syria) in the 1920's shed light on the relations between ancient Israelites and their Canaanite neighbors in the period of the "Conquest" and the monarchies of the Iron I and Iron II periods. Students will learn that the culture of the ancient Near East is inexorably linked to an understanding of the religious traditions that grew up in the region, including Judaism, Christianity, and Islam. Classes will be a combination of lecture, discussion, and problem-solving, with frequent use of slides and occasional use of artifacts to illustrate the topics at hand. Students are evaluated on three of the following five means: a midterm test, a final essay examination, a five to seven page term paper, a team research oral presentation, a team research poster presentation. Participation in class discussion will also be evaluated. This course fulfills three credits of the General Education or the B.A. humanities requirement. For majors in Classics and Ancient Mediterranean Studies, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology. The course fulfills the three credit requirement for courses in RL ST 001-099 for the Religious Studies major, and the Jewish Studies major's requirements. The course also would fulfill three credits of the six credit requirement for courses in any field that may be below the 400-level for the Religious Studies Minor, three credits of the nine credits required in course work for the Jewish Studies Minor, and three of the 18 credits required for the Classics and Ancient Mediterranean Studies minor.

Religious Studies (RL ST)

RL ST 083S (GH) First-Year Seminar in Religious Studies (3)
Critical approaches to the dimensions and directions in Religious Studies.

RL ST 083S First-Year Seminar in Religious Studies (3)
(GH;FYS)

(BA) This course meets the Bachelor of Arts degree requirements.

Students will be expected to master material relative to the introductory study of a major world religion or aspect thereof, as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. The course will challenge students to express themselves and to gather information through discussion and writing of papers about major world religion(s) or aspect(s) of world religion(s). It will challenge students to think about social behavior, the nature of community, and the value of scholarly endeavor as these relate to the particular topic of the seminar. Frequently, the course will deal with intercultural and international topics, though some of the variable topics may not readily lend themselves to such analysis. Through readings, discussions, lectures, and research projects, students will become acquainted with major figures and developments in a major world religion, as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. Analysis of this type will provide students with techniques for appreciating and judging arguments and presentations in many fields of learning distinct from religion, from scholarly to popular. By reading and understanding religious texts and the arguments based on them, students will learn to consider the cultural assumptions of different groups and societies and will come to discern and, perhaps, gain deeper insight into their own values and assumptions by contrast with these. Although the course will focus on a specific topic, the instructor will help the student to see the wider implications of the issues and controversies discussed. Whenever possible, the international and intercultural aspects of the topic will be considered. The course fulfills the first-year requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement.

General Education: GH
Diversity: None
Bachelor of Arts: Humanities

**RL ST 070 (GH;IL) (CAMS 070, J ST 070) Prophecy: The Near East Then and Now (3) Prophecy in the ancient Near East, the ancient Jewish and Christian traditions, and today.**

**RL ST (CAMS, J ST) 070 Prophecy: The Near East Then and Now (3) (GH;IL)**

The objective of this course is to introduce students to the prophetic traditions of the ancient Near East and the Bible of the Judeo-Christian traditions. The course will explore the development of prophetic circles in the ancient Near East (incl. Egypt, Syria, Canaan, and Mesopotamia) and then focus on the major prophetic traditions of the Hebrew Bible (to include at least Isaiah, Jeremiah, Ezekiel, Amos, Hosea, Micah, Haggai, Zechariah, and Daniel) and how these traditions were understood in early Judaism and nascent Christianity. Special attention will be paid to the roles of priests, kings, and prophets in ancient Israel to better understand Israelite and Judaean prophetic traditions in ancient Israelite society. The course will then examine the rise of apocalypticism and its modern manifestations in the coalition of conservative Christians and Jews in "Zion" -- the new Jerusalem. Additional emphasis will be placed on the religious and political interactions which manifest themselves in the prophetic movements--then and now--including the rhetoric of ideology and propaganda. Important figures and events illustrate these cultural and political trends, in antiquity, and in the contemporary setting.

RL ST 090 (GH;IL) (CAMS 090, J ST 090) Archaeology of Jerusalem: Past and Present (3) Archaeology and history of Jerusalem from earliest times (c. 3000 BCE) to the present.

RL ST (CAMS/J ST) 090 Archaeology of Jerusalem: Past and Present (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Jerusalem, a holy city for Judaism, Christianity and Islam, is symbolically depicted in art and literature as the physical and spiritual center of the world. Throughout its history, this "city of peace" was a focal point attracting numerous cultures and peoples, the latter sometimes as prophets and more often as conquerors. The reasons for Jerusalem's centrality and significance during the past five millennia as a heavenly and earthly capital are explored in this course.

The course curriculum will survey the religious, political, archaeological and historical record of ancient Jerusalem, beginning with its earliest settlement during the fourth and third millennia BC. Jerusalem's urbanization in the second millennium BC, its role as the capital of biblical Israel and Judah during the First and Second Temple periods, and its transformation as a center of Christianity and later Islam are studied utilizing the testimony of artifacts, architecture, and iconography in relation to the written word. Throughout the ages and continuing into the 21st century, Jerusalem remains a contested city for the three monotheistic faiths. The holy city's impact on the politics of the modern Middle East will be critically examined in light of Jerusalem's history and recent archaeological discoveries and their modern-day interpretation.

Objectives include the critical evaluation of archaeological, historical and literary evidence and its relationship to modern-day political and religious perceptions of Jerusalem. The course will encourage research skills (including library training sessions) and writing and oral communication skills based on an analytical approach to the texts and material culture relevant to Jerusalem.

Student evaluation will be based on active participation (attendance, discussion sessions, group presentations, and individual oral presentations), two short papers, a midterm, and a final exam.

This course will fulfill three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in CAMS, the course will fulfill the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the CAMS ancient Mediterranean archaeology option it will fulfill the three credits of archaeology course work requirement. The course will fulfill three credits of course work concerned with the ancient period or with the land of Israel.

RL ST 102 (GH;IL) (CAMS 102, HIST 102, J ST 102) Canaan and Israel in Antiquity (3) Political, social, and intellectual history of the land of Canaan/Israel in the Biblical era: Late Bronze and Iron Ages.

RL ST (CAMS/HIST/J ST) 102 Canaan and Israel in Antiquity (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

From the domestication of animals and the dawn of agriculture to the development and socialization of monotheism, the world of the first civilizations led to that of the Bible and ancient Israel. This course, involving a critical view of Biblical texts in light of other anciant sources, archaeology and historical methods, explains the nature and the evolution of society, religion and thought in the Biblical era. Learn how civilization arose, and how the state appropriated religion and applied it for its purposes. How the science of administration developed and deployed ideological tools to further its own ideas of the West developed. This course is deeply subversive, particularly of religious and academic shibboleths. The only authority in this class is that of the most persuasive reader, and doctrines, whether religious or political, will have to be checked at the door.

An example of evaluation may be: weekly participation in discussion; mid-term and final essay examinations involving a critical evaluation of ancient text's claims in combination with archaeological evidence; a research essay, where the class or section size is lower than 30; an ability to read critically, bringing different classes of evidence to bear on issues arising from the texts, and construct coherent and compelling arguments to a particular thesis. The course provides a Near Eastern counterpart to HIST 100, 402 and a Near Eastern aspect to the Jewish Studies major. It complements RL ST 110, by offering historical exploration of the culture under study in that course. Related courses include ANTH 012, HEBR, 010, ENGL 104, RL ST 004, and RL ST 111. The course helps round out the majors in History and Jewish Studies, particularly in ancient history. It also extends the program in Religious Studies (history of religions), and it contributes to the ancient stream of the prospective program in Jewish Studies and History.

**RL ST 105 Buddhism in the Western World (3)**

(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The academic study of religion is distinct from instruction in a religion in so far as one seeks simply to learn about religion, or religions, by considering the history, texts, major figures, and belief systems of one or more traditions. Because religions are always deeply intertwined with the entire cultural history of a region, studying a religion has always involved placing it in a larger cultural context. Buddhism in the Western World (RL ST 105) provides an intense concentration on a particular topic from the Buddhist religious tradition, focusing on historical, comparative, and phenomenological concerns. The course concentrates on the major figures involved, integrated with significant issues and religious practices in the development of the aspect of the Buddhist religious tradition under investigation. In many cases, across the face of Indian, Chinese, and Japanese Buddhism, gender, racial, and ethnic issues play critical roles in the development of the tradition studied, and these are explored in depth. Finally, the course examines the symbols, myths, and rituals of culture or cultures involved, which are radically different than our own, providing for each student the opportunity to compare, consider, and assess a wide variety of expressions of religiosity. Evaluation is research paper. Buddhist in the based on discussion, written assignments, and a major Western World, RL ST 105, offers a special focus on a particular aspect of one of the major religious traditions of the world. Because general approaches and methodologies in the academic study of religion are employed throughout the course, RL ST 105 is linked to all other courses in religious studies. RL ST 105 may be used to fulfill 3 credits in the Humanities, and may also be used to fulfill a US;IL requirement in the major or minor.

Religious Studies (RL ST)

RL ST 111 (GH;IL) (CAMS 111, J ST 111) Early Judaism (3) Religious thought, practices, and parties in the Second Temple period; the emergence of rabbinic Judaism.

RL ST (CAMS/J ST) 111 Early Judaism (3) (GH;IL)

This course meets the Bachelor of Arts degree requirements.

Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). In this period, ancient Hebrew religion was transformed into a new world religion-Judaism. Students will read selections from the Bible, and from other religious literature, including the Dead Sea Scrolls, the Apocrypha, the Christian Scriptures, the Mishnah, and the Talmudim. By tracing the development of various Jewish "parties," students will appreciate how Classical Judaism evolved, and how the early Church emerged from Jewish roots in the first centuries CE. Early Judaism grew from its roots in the period of Achaemenid domination. Jews were dispersed throughout the eastern Mediterranean, so influences from Persian, Hellenistic, and Roman thought naturally influenced the faith's development. Students in Early Judaism will develop a new appreciation for the basic beliefs and practices of Judaism as well as for the beginnings of the Jesus movement and the development of the early Christian Church. Theological and historical questions concerning the origins of evil, the primacy of prayer, the beginnings of Jewish religious architecture, and the rise of anti-Semitism will be explored. Religion is always linked inextricably to culture. Judaism's transformation in contact with diverse cultures will become evident throughout RL ST/CAMS/J ST 111. The methodologies used in this course will enable students to read and evaluate primary and secondary sources used in the academic study of Judaism. Many other courses in Religious Studies (001, 004, 110, 120, 124), Jewish Studies (010 and 102), and Classics and Ancient Mediterranean Studies, as well as History and Art History are closely related or linked to this course. RL ST/CAMS/J ST 111 may be used to fulfill 3 credits in the Humanities, or to fulfill the GI requirement in the major or minor. The course will be offered once each year, with an enrollment of 65. This course will satisfy 3 credits towards the minor in Jewish Studies or the major in Religious Studies, plus being cross-listed with CAMS, fulfilling part of the requirement for courses in supporting or related areas of all Classics and Ancient Mediterranean Studies majors. The course also provides an excellent addition to other courses, such as CAMS 010, "Mesopotamian Civilization;" CAMS 044, "Ancient Near Eastern Mythology;" CAMS 045 "Classical Mythology;" CAMS 033, "Roman Civilization; and CAMS/RL ST/ JST 012, "Lands of the Bible."

Religious Studies (RL ST)

RL ST 114 (GH;US;IL) (J ST 114) Modern Judaism (3) Trends in Jewish life and thought since the French revolution; Judaism's responses to the challenge of modernity.

RL ST (J ST) 114 Modern Judaism (3) (GH;US;IL) (BA) This course meets the Bachelor of Arts degree requirements.

The course explores the opportunities and problems of Jews around the world from the late eighteenth century -- the "age of emancipation" -- to the present time. Commercial, political, and intellectual revolutions in the 1700s, giving rise to modern capitalism, republicanism, and an emphasis on reason, combined to induce political states to grant Jews unprecedented freedom. Emancipation introduced new elements into Jewish life: religious change, personal choice, and internal disagreements. In practical ways, life improved for Jews, as they became more prosperous and assimilated. But freedom also increased the chances for loss of identity, as liberals discarded some rituals as old-fashioned and many individuals chose to give up traditional practices. In addition, anti-Semitism persisted, although it was now, at times, more difficult to detect. Traditional forms of hostility to Jews, such as heresy trials and political expulsions, were replaced by subtle expressions of political and social discrimination. But hatred of Jews did not disappear, despite widespread acceptance in Western culture of political liberalism. The class explores these trends in Europe, the Americas, and Israel. It begins by looking at the fragile freedom of nineteenth-century Jews. In the twentieth century, Jewish experience has often been characterized by open conflict: in the Holocaust, the formation of Israel, contemporary black-Jewish relations in the United States, and Jewish-Muslim relations in the Middle East. The course concludes with these recent struggles. Course readings include personal narratives (reminiscences or letters) and works of fiction (a short story, play, and novel). The class is primarily a discussion class, using writing assignments as the principal method of evaluation. The course requires three graded essays and an ungraded proposal. Students are also asked to keep a journal of commentary on course readings. Class attendance and participation are components of the final grade. The course serves as an introduction to modern Judaism as a religion and culture. It prepares undergraduate students for advanced work in European and American Judaism, as well as Israeli history and culture. These advanced courses are found in the Religious Studies and Jewish Studies programs and in the Departments of History and Comparative Literature. It may be used to complete the major or minor requirements in Religious Studies and Jewish Studies. The class fulfills the humanities requirement for non majors.

Religious Studies (RL ST)

RL ST 110 (GH;US;IL) (CAMS 110, J ST 110) Hebrew Bible: Old Testament (3) Introduction to the history, literature, and religion of ancient Israel.

RL ST (CAMS/J ST) 110 Hebrew Bible: Old Testament (3) (GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The Hebrew Bible is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel’s neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babylonians, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. Hebrew Bible introduces students to the literature of ancient Israel, its rituals, the stories which established a people’s identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the text and from a textbook which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment, and to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism. Students will be evaluated using an hour examination, a 6-8 pp. “hermeneutical essay,” a final examination, class attendance and discussion. As an introduction to the scriptures of the Hebrew Bible / Old Testament, RL ST/CAMS/J ST 110 utilizes the methodologies used in the academic study of religion. The course is related or linked to many courses in religious studies which use these same methods or which are related to the history and development of Judaism, Christianity, or Islam. RL ST/CAMS/J ST 110 may be used to fulfill requirements for the Religious Studies major. RL ST/CAMS/J ST 110 may also be used to fulfill the GI or GH requirements in the major or minor in Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies.

Religious Studies (RL ST)

RL ST 115 (GH;US) (HIST 115, J ST 115) American Jewish History and Culture (3) Examination of the history, culture, social tensions, and contributions of Jews and Judaism in America.

RL ST (HIST/J ST) 115 American Jewish History and Culture (3) (GH;US)

Throughout American history, Jewish presence on American soil has compelled Americans to re-think the meaning of religious and ethnic diversity. As one of the earliest non-Christian immigrant populations, American Jews struggled to explain how they could nonetheless fit into American cultural, political and social life. At the same time, many Jews have been concerned with their own survival as a distinctive group, unwilling to cede those practices, behaviors or traits that designate them as a people apart from other Americans. This course is about how these two seemingly contradictory goals—to integrate into America and to remain distinctive from other Americans—shaped the history and experience of Jews in the United States and influenced the way Americans think about diversity and pluralism.

The student of American-Jewish history must be attuned to the multiple ways that Jewishness has been defined: as a race, a religion, a nationality, and an ethnicity. In this course, far from choosing just one of these designations, we will explore Jewish life from many different angles. Topics to be considered include religious reform, immigrant experience, political activism, popular culture, and struggles over community authority. Readings focus on a number of primary texts, including memoirs, novels, films and philosophical essays. Secondary books and articles will also help deepen students’ understanding of trends in American-Jewish history and awaken them to diverse interpretations of history. Students will be encouraged to engage actively and critically with the texts by writing short reading responses, longer essays, and participating in classroom discussion and presentations, all of which will serve as the basis for their evaluation.

This course complements offerings in Religious Studies, Jewish Studies and History. It provides a foundation for an already existing upper-level seminar in American Judaism (listed in Jewish Studies and Religious Studies). In addition, the course strengthens the History department's offerings in American history, serving as a basis for students interested in immigration, ethnicity and religious history. Students who are interested in modern Jewish history will also find this course a worthwhile addition to their program of study, since, unlike other courses, it deals primarily with the story of Jewish life in the United States.

Religious Studies (RL ST)

RL ST 116 (GH;IL) Muslims in America (3) This course is a study of Muslims from multiple racial, cultural, and national perspectives; it explores what it means to be a Muslim in America.

RL ST 116 Muslims in America (3) (GH;IL)

This course meets the Bachelor of Arts degree requirements.

This course is a study of Muslims in the United States. It examines the multiple racial, cultural, and national groups that comprise this diverse community; we will question what it means to be a Muslim in America. It traces the trajectory of this seventh century faith as a transplanted faith in the New World. The course interrogates Islam in America starting with the historical record of the surviving Muslims that came to the shores of the Americas as African slaves and their enduring efforts to remain Muslims. Next, we examine African American Islam in its myriad formations. The influx of immigrants in the 1960s from the Arab Muslim world, Africa and Asia, including Central Asia became the second historical chronicle of Islam in America. This inquiry examines the narratives of each wave of Islam as a cultural and religious force in the development of Muslim identity in America. The course will examine how Muslim populations during each of these divergent waves confronted American pluralism, diversity and democracy. The course examines the transformation of the Islamic tradition from its origins in the Arabian peninsula to the shores of North America, including questions of authority, the growing salience of American Muslim women’s conception of gender jihad, the struggle of Muslim trans gender community to gain acceptance, institution building, and the efforts to develop an American Muslim identity. The course will also examine the musical genre of rap music with special reference to the second generation of Muslim. We will also examine the role of Islam in American prisons. The course will examine how the Islamic tradition has been adapted to the American cultural milieu and how Muslim culture is also influencing America. The course will examine how Islam and Muslim populations have been conceptualized in America before and after 9/11.

**RL ST (CAMS/J ST) 124 Early and Medieval Christianity (3)**

(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course traces the development of one of the world's "Big 5" religions from the death of its founder (about the year 30 C. E.) down to the middle ages. It focuses on significant trends, controversies, personalities, and turning points. These are not just diverse in terms of chronological breadth, but are also spread geographically from the eastern end of the Roman Empire (the border with Persia) to northern Europe. Attention is given to the various manifestations of Christianity (Judaic, Hellenistic, Latin), and the linkage between local patterns (culture, history and predispositions) and how these shaped the sort of Christianity that took root in particular areas. Students typically will be evaluated on four "pop" quizzes, a midterm and a final exam. The course can be used towards a major or minor in Religious Studies, Classics and Ancient Mediterranean Studies, and Jewish Studies and used to fulfill 3 credits in the Humanities for non-majors.

General Education: GH

Religious Studies (RL ST)

RL ST (CAMS/J ST) 120 New Testament (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course introduces the student to the New Testament (NT), the principal religious text of Christians. As such, it is one of the most significant and most studio texts in human history. Written in Greek between approximately 55 C.E. and 110 C.E., the New Testament consists of 27 individual books, each written by a separate author (c, authors), that were later assembled into the "New Testament." Because of the growth of Christianity, the NT has influenced every aspect of our world—to name only a few: history, politics, economics, literature, philosophy, ethics, medicine, science, the arts (music, architecture, the visual arts), gender roles, theater and drama, law, psychology, and sociology. After introducing the student to the academic study of religion and the "historical-critical method," our study begins by examining the materials from which the NT's text is reconstructed, and the period in which the NT was authored. This includes exploring other parallel phenomena (such as miraculous hearings, resurrections, and virgin births) in contemporaneous Graeco-Roman religions. After this background is in place, the course turns to an examination of the gospels and their interrelationships, the pictures of Jesus presented (and their relationship to first-century B.C.E. Judaism), variations among Christian understandings of Jesus reflected in the NT and other contemporaneous Christian writings (he was a man, an angel, a lesser divinity). Paul and his life and writings, and the emergence of Christianity from Judaism as a distinct, new, apocalyptic religion. Along the way, we examine the manuscript tradition of the NT, changes that have been made to its text, and different interpretations of certain passages in the NT. We also examine the historical-critical tools scholars use to date and sequence passages in the NT (form, redaction, literary, and historical criticism, for example), for one can correlate the evolution of early Christian theology with the evolution of the NT's text.

RL ST (CAMS/J ST) 133 Archaeology of the Levant and Ancient Israel (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

Ancient Canaan, a region that included present-day Israel, Jordan, Palestine, Lebanon, and southern Syria, traditionally served as the land bridge and crossroads that connected the great empires of Mesopotamia and Egypt of the ancient Near East. Its strategic geographic location has ensured its significance throughout history. In the past as in the present, many different cultures and peoples have influenced and controlled this region resulting in a very multicultural past reflecting the history of the entire Ancient Near East. This is the background to origins of the Israelites at the one of the second millennium B.C.E. and the impact of this history is still evident in modern political events of the region. This course will focus on Canaan in the southern Levant from the origins of agriculture to the emergence of ancient Israel down to ca. 1000 B.C.E. Students will examine cultural, social and political developments and transitions in Canaan and Israel in antiquity that will include the development and emergence of urban society; pastoral nomadism; the age of internationalism of the Middle Bronze - Late Bronze Ages; religion and cultic practices; Egyptians in Canaan during the 13th and 12th centuries B.C.E.; daily life in Canaan; the arrival and settlement of the Philistines; and the Emergence of Israel. Emphasis will be placed on a critical reading of contemporary historical and Biblical texts and an analysis of the archaeological evidence in order to reconstruct the history, culture, and society of Canaan and ancient Israel. The course grade will be based on active participation (attendance, discussion sessions, group presentations and individual oral presentations), one midterm exam and one paper on a topic that requires a critical examination of both historical texts and archaeological evidence. The course fulfills three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in Classics and Ancient Mediterranean Studies, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the Classics and Ancient Mediterranean Studies ancient Mediterranean archaeology option it fulfills the three credits of archaeology course work requirement. The course fulfills three of the nine credit requirement for courses in RL ST 100-299 for the Religious Studies major, and the Jewish Studies major’s requirement for three credits of course work.

RL ST 131 (PHIL 132) Introduction to Bioethics (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

The course, as other 100-level Religious Studies Program and Philosophy courses, is intended for Liberal Arts majors and others likely to take Religious Studies and Philosophy courses rather than for Religious Studies majors. This course will provide a critical survey of key concepts, problems, and figures in the short history of bioethics and in contemporary studies and possible future directions. The course will develop the student's analytical and critical skills through study of different views on the nature of life and what experimentation with life-forms morally entails. The course will examine the increasingly techno-scientific definition of the nature of life and the human condition and evaluate such arguments and positions of practice in regard to opposing views of life as inherently sacred. It will investigate the extent and breadth of moral arguments in regard to differing life forms and consider the rights of humans and non-human animals. Students will be graded on participation, case study analyses, a group presentation, and a final paper. PHIL 132/RL ST 131 satisfies the GH requirement and it may be used to fulfill major and/or minor requirements in Philosophy and Religious Studies.

RL ST 145 (GH;US;IL) (AAA S 145) African American Religion (3) History and significance of the religious dimension of the Black American struggle for equality from enslavement to the contemporary period.

RL ST (AAA S) 145 African American Religion (3) (GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is an introduction to African American religion in the U.S. We will investigate the history and significance of the religious dimension of African American life and culture. We will also examine the demographics of race and religious experience. African Americans (the term Black American is also used) have many different religious backgrounds including Protestant, Catholic, Moslem, and others, which are examined in this course. However, since well over 90% of Blacks who have a religious experience and organization are Christian, the history of the Black Christian church and Blacks in the Christian churches in the United States will occupy most of our study. This course will also examine the theological backgrounds of the Black church from the basic Christian documents in the New Testament, to the most widely known Black theologians and the development of “black liberation theology,” one of Christian theologies most important contributions. The theology of Martin Luther King, Jr., will be of particular concern. We will also watch videos on the subjects of interest and have a number of guest speakers, including local church pastors and Penn State faculty, talk about the meaning of religion in the Black experience.

RL ST (AAA S) 146 The Life and Thought of Martin Luther King Jr. (3) (GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course attempts to provide an accurate description of the life and thought of Martin Luther King, Jr., an historical summary of the civil rights movement and an understanding of nonviolent means of social change. The students degree of achievement will be assessed by means of short-answer and essay examinations (not to exceed three in number) and a research project. Each of these will be equal in weight. This course will count in the supporting courses category of the major and minors in African/African American studies. It also will fulfill additional courses credits in the Religious Studies Program. It may also fulfill GH and US requirements for non majors.

RL ST 147 (GH;US) (AAA S 147) The Life and Thought of Malcolm X (3) The life of Malcolm X/El Hajj Malik El Shabazz (1925-1965) and his social, political, economic, and moral thought.

RL ST (AAA S) 147 The Life and Thought of Malcolm X (3) (GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine in-depth the life, speeches, and thoughts of Malcolm X/El Hajj Malik El Shabazz. While the "Autobiography" will be a major source, we will also use other sources to develop an understanding of the philosophy and thought of Malcolm X. We will explore the social, economic, political, cultural, religious, moral, and spiritual context of America in general and of African Americans in particular. We will examine Malcolm X's influence on the period in which he lived and since his assassination. We will compare and contrast his view on issues of race, culture, politics, education, crime, human rights, civil rights, morality, and economics with those of other African American leaders and with the prevailing views of most Americans on those subjects. We will devote a large portion of the course to the examination of the social movements that impacted on Malcolm and those that he influenced. The speeches of Malcolm X and the writings about Malcolm X are instructive and will be utilized along with other documents. Videotapes and audiotapes will also be employed as instructional materials. Students are expected to be ACTIVE participants in the learning/teaching experience. Students are required to participate in class discussions centered on the readings and related topics. There will be a written mid-term examination and a written final examination. Students are expected to complete an individual research project related to the course and write a paper on that research as well as to participate in a collaborative group project of their choosing on a subject related to the class. This course will count in the supporting courses category of the major and minors in African/African American studies. It also will fulfill credits in the Religious Studies Program. It may also be used to fill GH and US requirements.

RL ST 235 (US;IL) (HIST 235, J ST 235) The Church and the Jews (3) Examination of the relationship between Western church and the Jews from the First Century to Enlightenment.

RL ST 235 The Church and the Jews (3) (US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews.

The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts.

Students will be evaluated on the basis of three quizzes and a final exam. The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity).

The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

RL ST 280 (GH;IL) (WMNST 280, J ST 280) WOMEN AND JUDAISM (3) Explores the Jewish views of women that have influenced the roles of women within both the religion and Western culture.

RL ST (J ST;WMNST) 280 Women and Judaism (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Women and Judaism will introduce students to the roles and views of women as seen in the Jewish tradition. Because Judaism is not monolithic, these views will vary even within time periods and even among rabbis. The goal of this course, therefore, is not for students to leave the class with one idea of what a Jewish woman is or one idea of what issues are at stake for women in Judaism. Rather, the goal is for students to understand the complex relationship women have to this religion. This course will also explore the views of Jewish women and the issues that concern them in contemporary society. Objectives include the following: students will begin to understand the stereotypes that influence how Western society views Jewish women, and as a result, how they have come to view themselves. They will be asked to examine the many important roles that Jewish women have played both in their religion and the society at large. They will be asked to examine how the Jewish tradition both helped and hindered women to play these roles. They will see how Jewish women contributed to the development of their own religion and to the larger culture in which they live. They will develop a deeper appreciation for the complexity of the relationship between women and religion. Topics include images of Jewish women in the Bible and the media, women and Jewish views of sexuality, Jewish ethics, Judaism and feminism, and women and Jewish theology. Students will be evaluated by examination, writing ability (several short papers or one larger paper), and group presentations.

RL ST 408 (US;IL) Hindu Studies (3) Special topics in Hindu studies.

RL ST 408 Hindu Studies (3)
(US;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

Religious Studies 408 (Hindu Studies) provides a critical examination of selected philosophical and devotional systems within the diversity of Hindu religious traditions within the context of south Asian history. This course explores the nature of Hindu Darshana or outlook through textual analysis of some of its primary scriptures (in translation), as well as (in English) works by more recent Hindu thinkers and philosophers. Students will trace the emergence of ethical, moral, and social ideals of Hinduism through a detailed study of its belief systems as they had evolved through the ages. For example, a typical research project may involve writing a series of two papers, one focusing on the religious roots of non-violence in heterodox ideals of Jainism of fifth century B.C.E, and a second one, exploring the modern relevance of non-violence in political discourse as represented in the writings of Mohandas Gandhi. Students will be evaluated on a mid-term and a final exam, two research papers and debates. RL ST 408 serves as one of the courses fulfilling the 6 credits requirement of the 400-level course for a Religious Studies major. It also fulfills the United States Cultures and International Cultures designation.

RL ST 407Y (IL) (HIST 409Y, J ST 409Y) European Anti-Semitism from Antiquity to the Present (3) Surveys the history of anti-Semitism in Europe from antiquity through the Middle Ages to the present.

RL ST 407Y (HIST 409Y, J ST 409Y) European Anti-Semitism from Antiquity to the Present (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course analyzes major episodes in the history of anti-Semitism and tries to clarify the Motives and dynamics involved. It seeks to understand what these episodes have in common, and what is unique in each case. Is there a single universal, eternal anti-Semitism? Or are there rather anti-Semitisms", each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates?

We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher.

The major part of the grade will depend on a short research paper, which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

RL ST 410 (US;IL) (HIST 410, J ST 410) Jews in the Medieval World (3) Trends in medieval Jewish society under Islam and Western Christendom.

RL ST 410 (Jews in the Medieval World (3)
(US;IL)

This course meets the Bachelor of Arts degree requirements.

The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students’ skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression.

The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society) HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258).

The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

RL ST 424H (HIST 424H, J ST 424H, PHIL 434H) Monotheism and the Birth of the West (3) The birth of monotheism and its relation to social organization, the idea of individuality, and science.

RL ST (J ST/HIST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Learn about the formation of Western culture, while learning to analyze the texts and other evidence about its formation from a critical, rather than naïve, viewpoint. The idea of monotheism probably arose very early, and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why, then, did it take another seven centuries to become widespread—appearing in ancient Judah, Babylon, and Ionia almost simultaneously? To answer this question, the course focuses on several developments, through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to reinvent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in RL ST/CAMS/J ST 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the students experience in CAMS 400, CAMS 440, and CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, Religious Studies and toward the minor in Jewish Studies and Religious Studies.

RL ST 478 (J ST 478, PHIL 478) Ethics After the Holocaust (3) Explores the philosophical effects of the Holocaust for thinking about the primary question: Is ethics possible?

RL ST (J ST/PHIL) 478 Ethics After the Holocaust (3)
(BA) This course meets the Bachelor of Arts degree requirements.
This course is an examination of ethical theories before the Holocaust and how those theories have failed, philosophically and empirically. Course topics will include the history of ethical theory, the nature and problem of evil, goodness and suffering, witnessing and testimony, and the promise of an ethics. This course provides students with philosophical approaches to the issues that emerge out of the events of the Holocaust. The course will help students expand their knowledge of the events of the Holocaust through a philosophical approach that does not merely expose them to what happened, but asks them to think about the implications of what happened: most specifically, how do we understand ethical life, if it cannot stop or confront evil? This course provides students with the philosophical approaches to the issues that emerge out of the events of the Holocaust. It will encourage them to think critically, write effectively and express their thoughts logically. Student evaluation will be based on weekly reaction papers, group presentations, and a final seminar paper. This course covers material in the history of philosophy, contemporary philosophy, and writings pertaining to the Holocaust in various forms (historical, literary documentary, and so forth). It provides links to other major areas in the history of philosophy, postmodernism, ethics, philosophy of religion, and Jewish history.

**R SOC (AGECO) 134 Sustainable Agriculture Science and Policy (3) (GN)**

This general education course will teach students about the soil, plant, animal, and ecological sciences; technologies, and policies of our agroecosystems in an integrated manner. We will examine agricultural resources and options available for sustainable management of resources for food production. Students will have many opportunities to examine and critically analyze scientific knowledge and policies during discussions, writing exercises, and role playing to develop analytical and communication skills. There are no prerequisites for this course. This course can link with other courses that address how research and efforts in agricultural sciences, ecology, policy, economics, philosophy, education, and communication influence sustainable management of natural resources for the present and the future.

Rural Sociology (R SOC)

R SOC 011 (GS;US) Introductory Rural Sociology (3) Basic sociological concepts applied to rural societal institutions and rural communities; causes and consequences of rural social change.

R SOC 011 Introductory Rural Sociology (3)
(GS;US)
(BA) This course meets the Bachelor of Arts degree requirements.

The objectives of the course are (1) to acquaint students with the fundamental concepts, principles and research methods of rural sociology; and (2) to assist students in applying these concepts and principles to gain an understanding of rural societal institutions and the forces leading to social change in rural America and globally. Lectures and readings are designed to encourage students to examine their assumptions and understanding of the structure and functioning of rural communities, the forces leading to rural social change, and the likely course of these changes in the future. A major objective is to challenge students to critically analyze rural society and rural social institutions from a sociological perspective. Understanding the changing nature of rural society in an increasingly urbanizing and integrated world is a key consideration. The course meets requirements in the Agricultural Business Management and Environmental and Renewable Resource Economics Majors, as well as one General Education requirement.

R SOC 327 (S T S 327) Society and Natural Resources (3) Analysis of the relationships between societal development and enhancement and natural resources.

R SOC (S T S) 327 Natural Resources, Science, Ethics, and Society (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to enable students to become competent critical thinkers about the state of natural resources through a greater understanding of scientific, discourse formation, and the ethical dimensions of natural resources issues. This course first examines scientific descriptions of the state of natural resources relying particularly on global assessments of biodiversity, forests, water, land degradation, ecosystem health, and other natural resources. The course then examines critically scientific descriptions of the state of these resources using social discourse analyses of how society frames issues relating to the state of natural resources. Discourse frames that are expressly identified include discourses that assume global environmental catastrophes will be triggered if limits to the use of natural resources are exceeded, economic discourses that often assume that there are no limits to the use of natural resources, sustainable development discourses that attempt to integrate economic development and environmental protection, and other dominant discourses. Each discourse will be shown to foreground certain variables and background other issues. The course also examines ethical issues about the use of natural resources that are often excluded from public discussion of natural resource management and are often hidden in discourse that frame these issues. These ethical issues include questions of distributive justice, limits of economic evaluations of the value of natural resources, questions of procedural justice, and others. The course ends with an evaluation of these ethical issues.

R SOC (WMNST/CEDEV) 420 Women in Developing Countries (3)
(US;IL)

The purpose of this course is to increase understanding of women's lives in third world countries at the time when women's movements, grassroots activism, and feminism are on the rise in the third world. The course examines third world women's challenges to Western definitions of feminism and traces the theoretical shifts and practical changes related to women's issues in African, Asia, and Latin America. Students participate in studying specific community and agricultural development projects. Topics include feminist critiques of development and post-colonialism, ecofeminism and environment, sexuality and reproduction, global restructuring, and grassroots community activism. Students will be evaluated based on class participation, two written critiques of readings, a final course project, a mid-term, and a final exam. This course will add diversity to both the rural sociology, community and economic development, and women's studies curricula. International, gender, ethnic, and racial issues are core components of the course. The course will be an elective for women's studies majors and minors and will serve graduate students in rural sociology, women's studies, and other fields.

R SOC 452 (CEDEV 452) Rural Organization (3) Social organization and change in rural communities; use of sociological principles in analysis of rural problems and rural development.

R SOC (CEDEV) 452 Rural Organization (3)

This course combines an introduction to the social theories of communities with real-life examples of applications to understanding community problems and concerns. The focus is on the special circumstances facing, small towns and rural communities, but the concepts are applicable in all communities, from urban neighborhoods to suburbs. Topics covered include local community in a global economy, power and decision-making, the role of governments and other social institutions, development of community and the importance of building social infrastructure as well as economic and physical infrastructure, multi community collaboration and building, sustainable communities. Those taking the class will gain experience in conducting a case study of a small Pennsylvania community, build skills in working in a team, and gain understanding of the complexity of factors that influence community (and your own) well-being. If your future career involves operating within a community setting, this course can increase your knowledge of that setting and how to function within it. And, even if you don't plan on working with communities in your job, you will be living in a community. This course can help you to understand the ways that you can contribute to improving your own quality of life by becoming involved in your community. Grades in this class are based on the community case study report, take home, mid-term and final exams, short team exercises, and class participation. Graduate students taking the course also are required to write reaction papers to three different topics during the semester.

Russian (RUS)

RUS 083S (GH;US;IL) First-Year Seminar in Russian (3) Russia's cultural past and present.

RUS 083S First-Year Seminar in Russian (3) (GH;FYS;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Russia, the world's largest country stretching over eleven time zones in Europe and Asia, is currently undergoing a dramatic transformation. For the past hundred years, Russia has served as a laboratory of gigantic dimensions as various social ideals were implemented with unprecedented radicalism. At the same time, Russia's great writers raised "ultimate questions" about social justice, the existence of God, and the meaning of human life with an unparalleled acuity and intensity.

This course surveys Russia's cultural past and present. Although it touches on aspects of Soviet culture, the main emphasis lies on what some people would call the "real Russian culture," eclipsed for seventy years under the Communist regime and now about to be resurrected. At this crucial juncture in the history of Russia, the notion of a "real" culture remains highly problematic and controversial. The course surveys the various attitudes of Russian thinkers and authors toward the question of national identity and national destiny. Examples of Russian high culture (philosophy, literature, art, music) and the Russian religious faith (Orthodoxy) are discussed alongside with daily life in post-communist Russia. Special emphasis will be placed on the in-depth study of a few seminal works of Russian literature. The course also includes some Russian films. A knowledge of Russian is not required. Each section of this course will be limited to twenty students who will be instructed by an experienced professor. Questions and discussion are strongly encouraged.

This course can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the United States and International Cultures requirement, and the first-year seminar requirement. A series of short papers will train students in the skills of information gathering and written expression. The course grade will be based on oral participation and on the grade for the papers, which will be evaluated both for content and writing. This course will help to prepare students for a variety of additional courses in the fields of literature and Russian/East European area studies. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests.

Russian (RUS)

RUS 100 (GH;IL) Russian Culture and Civilization (3) The Russian people from the tenth century to present times; their literature, arts, music, science, and philosophy. In English.

RUS 100 Russian Culture and Civilization (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course surveys Russia's cultural past and present. Although it touches on aspects of Soviet culture, the main emphasis lies on what some people would call the "real Russian culture," eclipsed for seventy years under the Communist regime and now about to be resurrected. At this crucial juncture in the history of Russia, the notion of a "real" culture remains highly problematic and controversial. The course surveys the various attitudes of Russian thinkers and authors towards the question of national identity and national destiny. Examples of Russian high culture (philosophy, literature, art, music) and the Russian religious faith (Orthodoxy) are discussed alongside with daily life in post-communist Russia. The course also includes some Russian films. A knowledge of Russian is not required. The course format consists of lectures, slide, video and audio presentations. Questions and discussion are strongly encouraged.

At the end of the course, students will be familiar with the problems that Russia faces at the present time, they will have a summary knowledge of Russian history and geography, and will be acquainted with representative achievements of Russian high culture.

Students are evaluated on the basis of four multiple choice exams, of which the lowest grade will be dropped (60% of course grade), and a research paper graded for both content and language (40% of course grade). Extra credit can be earned through class presentations, offering an opportunity for practice in public speaking, and by writing reaction papers about lectures offered by the Penn State Center for Russian and East European Studies, or appropriate extracurricular events (e.g., concerts of Russian music, exhibits of Russian art, etc.)

As a General Education course, Russian 100 incorporates the following four elements of active learning: international competence (which is inherent in the subject matter), information gathering and analysis, active use of writing, and dialogue pertaining to social behavior, community, and scholarly conduct, which will be provoked by the reading material. Russian literature and culture is famous for raising the "big questions." Vast in scope, unabashedly ambitious, nineteenth-century Russian literature aspired to nothing less than to teach its readers how to live. The failed communist experiment in the twentieth century raises poignant questions about the desirability and pitfalls of utopian social engineering. Students have to write a 10-page research paper on a topic previously agreed upon with the instructor. For this paper, they have to explore both electronic and print resources. The paper is graded for content, structure, and language. As an option for extra credit, students can volunteer a class presentation on their research topic. Recent presentations included, for example, a lecture on Russian rock music with sound samples and pictures downloaded from the internet, and a presentation on Russian composers of the futurist avant-garde.

RUS 110 (GH;IL) Russian Folklore (3) Study of byliny, lyrical and historical songs, folktale, drama, ceremonial poetry, chants, charms, proverbs, and mythology of Russia. In English.

RUS 110 Russian Folklore (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Russian 110 is a general survey of Russian folklore for English-speaking students. It concerns itself not with the aristocratic and intelligentsia culture of Russia, but with the rites of passage, agricultural ceremonies, beliefs, legends, folktale, and epics of the Russian peasants, most of whom were illiterate. Students are evaluated on the basis of three examinations (half short-answer and half essay), a legend collecting project, and a final. The legend project requires students to collect a legend or tale (usually from the American tradition), evaluate it against folklore indices, present it to the other students, and write it up. Russian 110 may be counted toward the major in Russian Translation (BS). It may also be used to fulfill General Education Humanities and International/Intercultural Competency requirements. This course will be offered once a year with 50 seats per offering.

RUS 120 (GH;IL) Theatrical Arts of Russia (3) Survey of Russian dramatic literature, including plays, operas, ballets, and cinema. In English.

RUS 120 Theatrical Arts of Russia (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course will acquaint students with the development of Russian theater and the visual and performing arts from early origins to the present day, as well as the masterpieces of the Russian cinema. Students will read and discuss key works of Russian theater and watch films of the related productions. They are expected to write brief reaction papers on plays that they read and films that they watch. The course will include films and expert guest lectures. The course format will consist of lectures, slide, video and audio presentations. Readings will all be in English. Questions and discussion on class lectures and readings and on topical matters will be strongly encouraged. At the end of the course, students will be familiar with the general development of the Russian theater arts and cinema in a European and world context. They will have a basic general knowledge of Russian cultural development as reflected in the works studied, as well as social, psychological, philosophical and political issues raised in them. There will be a mid-term (30%), a final exam (30%), and reaction papers (30%). The latter will be graded both for content and writing ability. Ten percent of the class grade will be for class participation, including attendance and active participation in discussions and performance readings of plays. Students may also receive extra credit by making a 10-15 minute oral presentation in class on a pre-approved topic, which will offer students the opportunity to practice public speaking, or by writing a 10-page research paper on a preapproved topic. The exams will include written identification questions, brief essay questions, and a longer essay question that synthesizes knowledge acquired in class. As a General Education course, Russian 120 incorporates the following four elements of active learning: International competence (Russia and its international cultural influences), information gathering and analysis, active use of writing, and dialogue pertaining to social behavior, community and scholarly conduct. That dialogue inherent in Russian society is often mirrored in the readings and films. Students may also acquire extra-credit by writing reaction papers on topical extracurricular lectures or by observing extracurricular plays or film presentations. Russian 120 is not required for the B.A. degree in Russian, but may be used under the rubric of "Additional Courses" for the B.S. degree in Russian Translation. This course fulfills the Gen Ed Humanities and United States and International Cultures requirements.

RUS 142Y (IL) Russian Literature in English Translation: 1870 to Present (3) Dostoevsky, Tolstoy, Chekhov, Gorky, symbolists, selected Soviet authors. Writing assignments will serve as a major way of exploring subject matter.

Russian Literature in English Translation: 1870 to Present (3)

General Education: None
Diversity: IL
Bachelor of Arts: Humanities
Effective: Spring 2006

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
The regimes of Stalin and Hitler have decisively shaped the 20th-century historical experience not only in Russia and Germany, but in much of Europe and the world at large. At the same time, there is no consensus about how to classify these systems, whether the term "totalitarian" is appropriate to describe them, and whether Stalinist Russia and Nazi Germany are essentially similar or essentially different historical phenomena.

Espousing a comparative perspective, this course will explore the culture produced by both Stalinist Russia and Nazi Germany. The main focus will be on works of literature, but it will also take into account the visual arts, architecture, music, film, and popular culture. The classics of Stalinist socialist realism and Nazi propaganda, such as Nikolai Ostrovskii's How the Steel Was Tempered or Leni Riefenstahl’s Triumph of the Will will be analyzed both as political statements and works of art. The course will also include a reading of authors who attempted to create artistic representations of life in Stalinist and Nazist societies, such as Yevgeny Zamyatin, Alexander Solzhenitsyn, Bertolt Brecht, or George Orwell.

The course will be team-taught by faculty of the Department of Germanic and Slavic Languages and Literatures. Additional faculty from the Departments of Spanish and Italian and Comparative Literature (Japanese) may be invited to lecture about the totalitarian culture in their respective societies, and members from the Department of History may be invited to lecture about the historical context of Stalinism and Nazism. A knowledge of Russian or German is not required, as class lectures and discussions as well as all reading assignments will be in English.

At the end of the course, students will have a summary knowledge of the cultural history of Stalinist Russia and Nazi Germany and of the aesthetic and philosophical issues raised by these cultures. Requirements for the course will include a research paper. The course grade will be based on the average score on the mid-term and final exam (using definitions and essay questions) and the grade for the paper, which will be evaluated both for content and style.

This course will fulfill the General Education and Diversity requirements. It complements courses on the politics and history of totalitarian regimes offered by the departments of Political Science and History, and it will provide a background for students wishing to study Holocaust literature or Soviet Literature.

Russian (RUS)

RUS 400 (IL) Senior Seminar in Russian Culture (3) Senior seminar devoted to topics in Russian culture; conducted in Russian.

RUS 400 Senior Seminar in Russian Culture (3)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

RUS 400 will be the senior seminar for Russian majors. Building on linguistic and cultural material covered in the second and third levels of study toward the Russian major, it will add depth and sophistication to the students' understanding of basic concepts in Russian culture and improve their ability to discuss and write about these concepts in Russian.

The materials for RUS 400 will be arranged chronologically and will cover the "big themes" of Russian culture: e.g., the legacy of Kievan Rus, the cultural/historical preconditions for the "Third Rome" theory, the rift between the people and the upper classes following Peter the Great, Westernizers versus Slavophiles, the Bolshevik Revolution, the Stalinist terror. Readings will be selected from a wide variety of genres and will reflect a diversity of linguistic styles: e.g., passages from the ancient chronicles, folk legends, memoirs and autobiography, letters, historical and literary texts. Some films will be used.

Students will be evaluated on the basis of frequent quizzes and oral participation. In addition, each student will write a short research paper and present it in Russian to the class. These papers will help round out the presentation of central themes in Russian culture. Research papers might cover such topics as Andrey Rublev, religious sectarianism, peasant beliefs about nature, the biography of Lenin.

Russian 400 will be a required course for both the B.A. and B.S. in Russian. Students must complete RUS 204, 214, and 304 prior to RUS 400.

School of Science, Engineering, and Technology (SSET)

**SSET 295 Internship (1-18)** Supervised off-campus, individual training including practical field experiences or internships where written and oral critique of the activity is required.

**SSET 295 Internship (1-18)**

The objectives of the Penn State Harrisburg, Capital College Internship Program are to:

- Attract and retain capable students to pursue their educational and career goals in mathematics, engineering, engineering technology, and the sciences.
- Connect students with professionals who practice engineering, mathematics, technical, and science skills daily.
- Establish mentoring programs to break down the barriers between student learners and practicing professionals.
- Create service learning and internship experiences designed to reinforce classroom learning in technical and theoretical subjects.
- Retain students in the College and in the region by developing a seamless transition from the academy to the workplace.

The instructional and cooperative arrangements with business and industry will begin early, will be sustained throughout the four-year educational program, and will be supported by strong partnerships linking educational, business, industrial, and the intellectual communities in operative regional networks. Cooperation, collaboration, and a commitment to the future of the profession are essential if the "brain drain" is to be reversed in this region.

Another aspect of the internship program is to assist students in finding career-related, temporary employment opportunities, and to provide support and training for such positions while pursuing their education at Penn State Harrisburg, Capital College.

The Internship Program will be administered by the School of Science, Engineering, and Technology. The staff is versed in handling student/employer relations and handles student orientations, resume/job listing database management, interview schedules, registration, evaluations, and final reports. Students who utilize the Internship Program in any way will be required to register for courses applicable to each program. The course credits may range from one to three depending upon the particular program requirements. The utilization or substitution of internship credits to meet degree requirements is strictly a program decision.

This course requires that students submit a report that is of professional quality, concise, and focused on answering the provided questions. It must be typed in 12-point font and double-spaced. Students will be assigned either an SA (satisfactory) or UN (unsatisfactory) grade based on their reports and employer evaluations. The original report, portfolio, and evaluation forms are due on the last day of instruction for the semester or session. The grading will be based on the following criteria:

- 20% Internship Plan
- 20% Portfolio
- 20% Final Report
- 40% Employer Evaluation

No special on-campus facilities are required for the course. The course will be offered every semester including the summer session.

Science (SC)

SC 100 Introduction to Research (1) Introduces essential elements of laboratory safety, laboratory techniques, research ethics, and scientific communication skills. Especially for undergraduate research students.

SC 100 Introduction to Research (1)
The main objective of the course is to prepare students for a fulfilling and successful learning experience in the research laboratory. Students who engage in undergraduate research often continue to project for four to six semesters. This course provides students with the necessary introductory information to the undergraduate research experience so that the entire experience is more satisfying and productive for the students. A corollary goal is to introduce research students to other, like-minded students. Several in-class activities will involve group work combined with an explicit discussion of productive group dynamics. The course will cover four major issues associated with a sustained research project: safety, techniques, ethics, and communication. The course will make students more cognizant of the importance of each of these areas and will provide justification for the importance of each activity in the research enterprise. Students will be evaluated via a series of assignments in which the students reflect on the components of each area and the importance of that area to the continuation of scientific knowledge. Students will be quizzed on safe laboratory practices, usually with a laboratory practical on safety. Students will be assessed on the satisfactory performance of common laboratory techniques such as using a pipette, using an analytical balance, using a power source, and proper handling of large equipment like super speed centrifuges. Ethics will be assessed via assignments that require students to contemplate a variety of ethical issues. As part of ethical conduct students will be expected to learn the proper composition of a laboratory notebook. The notebook will provide a segue between ethics and communication skills. Students will examine several recent scientific research articles and discuss the way in which the article is written. They will be assessed on their ability to summarize and critique the article in writing. A book on scientific writing could be assigned for this portion of the course because a student would find use of such a resource as they progress on an independent research project. The laboratory technicians or laboratory managers might assist the faculty member who is teaching the course.

Science (SC)

SC 200 (GN) Science in Our World: Certainty and Controversy (3) A science appreciation course, aimed at making non-scientists more informed consumers of science.

SC 200 Science in Our World: Certainty and Controversy (3) (GN)

Science is frequently in the news. That’s because it affects our everyday lives, shapes our view of the world and our place in it, and will have a profound impact on our future. This course teaches an appreciation of science and scientific thinking. It is aimed at making non-scientists more informed consumers of science by improving their ability to distinguish good science from bad science, and science from non-science. The course assumes no background knowledge. It is not for scientists. Teaching is delivered by case studies of controversies within science and/or the public domain, some of which are resolved, some of which are not. The first section of the course illustrates general principles by studying arguments now largely resolved, but which still resonate, such as child health and IQ, smoking, and why the peacock has such a ridiculous tail. The second section focuses on unresolved scientific controversies which might include climate change, personalized genetic medicine, passive smoking, nanotechnology, the scientific evaluation of the healing power of prayer, or deer management in Pennsylvania. The third section evaluates unresolved scientific issues in the contemporary media: why it is in the news, what are the scientists involved actually doing and arguing about, and how is the media is handling the science? This will be likely focused on real time analysis of media reaction to a scientific paper published by PSU faculty during the course. The fourth section will discuss paradigm shifts which have occurred during the students’ lifetimes, particularly those involving our view of ourselves and our universe, and end by speculating on the paradigm shifts that could occur in the next twenty years. The course will draw on experts from within and outside of PSU. Throughout, the focus is on the nature of the debates, looking at how scientists evaluate problems, and why that can generate controversy within science and beyond science – but at the same time, generate knowledge which profoundly affects our well being and our understanding of ourselves.

SC 201 Medical Professions (1) Learn about the different medical professions and related subjects.

The purpose of this course is to provide students with general information on the different health professions and various related subjects as potential career options. Many students come to the university with an interest in pursuing a health profession but do not have a clear idea of what kind of work is involved in the particular profession of their choice. Moreover, students often are not aware that there are other health career options available. This one-credit course is targeted to all students that have a general interest in health and science, and may include students in the following majors: premedicine, science, biology, chemistry, biochemistry and molecular biology, forensic science, nursing, kinesiology, nutrition, and biobehavioral health. Some of the professions discussed are: allopathic and osteopathic medicine, physical therapy, occupational therapy, physician assistant, nurse practitioner, dentistry, maxillo-facial surgery, optometry, audiology, genetic counseling, nursing, podiatry, and pharmacy. In addition to describing the professions, time is spent talking about academic preparation for specific professions and the application process for admission to health profession schools. Furthermore, the nature of various health profession training programs are described, as well as how students obtain tuition funds for payment of such programs. One week’s topic generally focuses on health profession training outside the United States (e.g., foreign medical schools). This course is structured as a seminar course; all lectures are given by invited speakers. The speakers talk about the profession in general and may give specific information about the particular school they attend or currently work at. Students are encouraged to ask questions about the health careers and also to interact with the speakers after the class, where they might ask specific questions pertaining to their suitability as an applicant. The course will meet in the evenings, for one hour, one day a week, for 15 weeks. The students that enroll in this course receive a satisfactory or unsatisfactory grade based on attendance only (there are no exams, quizzes or written reports). Students may miss up to three classes during the fifteen week session. Therefore, students that attend twelve of the fifteen lectures will receive a satisfactory grade. If a student needs to miss class due to an evening exam, they will need to fill out an Excused Absence Form, which can be obtained from the instructor (no other activities are excusable except for athletic competitions for students in varsity teams).

SC 210 Sophomore Science Seminar (2) Covers topics related to success in upper level courses including critical thinking, library resources, reading primary literature, and communication skills.

SC 210 Sophomore Science Seminar (2)
The main objective of this course is to serve as a bridge between the first two years of a science program and the last two years. Sophomore students need to understand that upper-level coursework in the sciences requires higher order cognitive skills as well as an intellectual maturity that enables the student to meet the challenge of upper level coursework. Students also require an ability to access the multitude of scientific information available on the web and in library databases therefore students will be expected to demonstrate their ability to retrieve information. Sophomore students are faced with many exciting possibilities that they should be aware of including undergraduate research and cooperative education. This course will enable students to make more informed decisions about how to best structure their own educational needs while meeting the demands of upper level coursework. Students will be assessed via a variety of methods including participation in discussion, actively seeking information from seminar guest speakers (in the form of questions), written reports (interview with faculty member, summary of scientific article, synthesis of newspaper reports about recent discoveries, individually selected research topic), and oral presentations (critique of recent science information in newspapers, independent topic, interview with faculty member).

Science (SC)

SC 401 Basic Science and Disease (1) Clinical aspects of various disease and how basic scientific information contributes towards understanding and treating disease.

SC 401 Basic Science and Disease (1)

The purpose of this course is to provide students with some general background on the symptoms, risk factors, prevention, and treatment of various diseases. Along with the clinical aspects of the diseases, we examine how basic scientific research studies contribute information towards helping to understand the mechanisms underlying disease development and control. This one-credit course is targeted to all students that have a general interest in health and science, and may include students in the following majors: premedicine, science, biology, chemistry, biochemistry and molecular biology, forensic science, biobehavioral health nursing, kinesiology and nutrition. Enrollment priority is given to students with fourth semester or above status.

Examples of topics discussed are: Hypertension, Osteoporosis, Infectious Diseases, Asthma, Chronic Obstructive Pulmonary Disease, Cancer, Diabetes, Sickie Cell Anemia/Anemia, Blood Disorders, Hypercoagulability, Coronary Artery Disease, Alcoholism/Alcohol Poisoning, HIV/AIDS, Tuberculosis, Irritable Bowel Syndrome, Hepatitis, Thyroid Disease, Congestive Heart Failure, Parkinson's Disease, and Arthritis

This course is structured as a seminar. Most lectures are powerpoint presentations by invited speakers, which usually will be local physicians sometimes paired with Penn State research faculty. The speakers introduce the disease topic by discussing the basic anatomy and physiology of the system or body part most affected by the disease, (e.g. lungs, heart, kidneys, etc). Once the foundation is established the pathophysiology is discussed. Risk factors and prevention are also highlighted. One important goal of each seminar is to indicate to students how advances in basic science research can impact the understanding and treatment of disease. Students are encouraged to ask questions after the lecture. The speaker(s) remain afterwards to allow students to ask more specific questions about the disease topic. On occasion, speaker physicians also talk about their medical school training and/or life as a practicing physician. The students that enroll in this course receive a letter grade based on attendance (students must attend 9 out of 10 classes), quizzes and a 2-3 page reaction paper on one of the disease topics. Random short-answer quizzes are sometimes administered at the end of a seminar, testing on information presented during the seminar. Also, reading assignments are sometimes given prior to a seminar, or information handout materials are provided during the seminar. If a student needs to miss class due to an evening exam they need to fill out an Excused Absence Form, which can be obtained from the instructor (no other activities are excusable except for athletic competitions for students in varsity sports).

Science (SC)

**SC 476 Human Dimensions of Health Care (3)** Field experience in five or more medical settings; complementary exposure to the scientific literature; weekly discussions.

**SC 476 Human Dimensions of Health Care (3)**

This course, delivered jointly by Penn State and the local medical community, is designed to provide field experience for students with plans for a future in the health professions. The course is structured around rotations through multiple no less than five medical settings, which may include Community Medicine, Dentistry, Emergency Room, Family Medicine, Hospice Care, Oncology, Optometry, Palliative Care, Pediatrics, Physical Therapy, Senior Services, Wound Care, and other specialties.

The first four weeks consist of an introduction and orientation to the goals each setting. The purpose of these sessions is to acquaint the students with the requirements of the course as well as expectations for the on-site rotations. During this time, the students become familiar with the health care issues associated with each setting through literature specific to particular medical settings. At the end of these sessions the students write a course plan, in which they review the major issues common to each setting, and project how they expect to gain and how they expect to contribute in each setting.

During the next nine weeks, the students rotate through the medical settings, spending two afternoons per week in rotation. Students are scheduled to assignments with one of the medical settings for the afternoon. At these times the students are under direct supervision of the setting’s staff. Where feasible, students may also sit in on physicians’ staff meetings, attend lectures, or receive other forms of special instruction provided by medical staff. All students will maintain a logbook of activities during the rotations.

Weekly meetings on campus are devoted to reports of experiences by each of the students, discussions based on the questions developed during the orientation period, and resolution of issues which may arise. In this way, students assigned to each rotation inform those students who will later enter that setting.

SCIED 410 Using Technology to Enhance Science Teaching (3) This course explores contemporary practice and research associated with applications of technology to enhance science learning and teaching.

SCIED 410 Using Technology to Enhance Science Teaching (3)

The primary emphasis of this course is to explore current research and practice associated with using technology tools to enhance the teaching and learning of science. Through participation in the course, students will have the opportunity to:

* investigate a variety of technology tools with specific applications in supporting student learning in science (e.g., web-based resources, simulations, tutorials, graphing software, concept mapping programs, hypermedia authoring tools, etc.) and document abilities to use these tools;
* incorporate technology tools into science instruction (e.g., making observations, designing and conducting investigations, interpreting and reporting results, etc.) in ways that enhance teaching and learning;
* evaluate technology tools within the context of their applications to supporting teaching and learning science;
* participate in electronic discussions of central considerations associated with enhancing science teaching with technology; and
* author a hypermedia tool that supports science teaching and learning (and incorporates a variety of media).

In addition, students will design and conduct an individualized project targeted at meeting these needs as science teachers and/or graduate students in science education.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
SCIENCE EDUCATION (SCIED)

SCIED 412 Teaching Secondary Science II (3) Implementation of science instruction using a variety of modern approaches.

SCIED 412 Teaching Secondary Science II (3)

SCIED 412 is the third of three sequenced methods courses for secondary science teachers. In SCIED 412 prospective science teachers practice and develop skills in planning, presenting, and assessing effective science learning and teaching for students in middle and high school grades. The course incorporates theory and practice associated with science learning and teaching in school classroom settings. As in SCIED 410 and 411, emphasis will be on becoming a professional science teacher. Goals include: developing the knowledge, skills, and dispositions that encourage reflective practice, collaborative action, and lifelong inquiry into teaching and learning.

Students will develop an understanding of learning theory, and the approaches that diverse individuals take to construct knowledge; becoming competent in the use of science content and inquiry processes and the various materials that can help in the planning instruction relevant to learners' needs; developing skills in instructional, communication, management, and assessment strategies that contribute to planning meaningful science lessons for middle or high school level students, and will become competent in selecting and integrating appropriate technological tools into instruction.

Finally, students will become aware of major issues facing science education today and consider the implications of those issues for teaching. Additionally, the focus on technology initiated in SCIED 410 and continued in SCIED 411 will be extended in SCIED 412. Students will engage in teaching and learning science using appropriate state-of-the-art technology applications. A variety of software tools will be explored including, but not limited to, probeware, spreadsheets and graphing packages, on-line collaborative inquiry-based projects, and models and simulations. Students will apply their knowledge of technology tools acquired in SCIED 410 to classroom settings. Students will teach a technology-enhanced science lesson in a mentored environment, i.e., small group peer teaching, and strive to integrate technology in their practicum classroom.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Science Education (SCIED)

SCIED 457 Environmental Science Education (3) Philosophy, techniques, and skills for teaching environmental science, including curriculum development, fieldwork, and the use of appropriate technologies.

SCIED 457 Environmental Science Education (3)
This course provides an introduction to teaching environmental science to children. Although our emphasis is school-based instruction in the middle and secondary sciences, the course is also appropriate for grade K-6 teachers and teachers of other environmentally related subjects (e.g., social studies, agriculture), as well as educators who plan to work in nonformal educational settings such as nature centers and museums. The course builds students' knowledge in the philosophy, methods, and skills of environmental education; engages students in environmental curriculum analysis and development; and provides hands-on training in classroom-based and field-based environmental investigations. Training and practice with appropriate environmental technologies is included, including CBLS, GPS, and computer software.

Science, Technology, and Society (S T S)

S T S 005 (US) (WMNST 005) Introduction to Women in Science, Technology, and Engineering (3) The role of women and gender in science, technology, and engineering.

S T S (WMNST) 005 Introduction to Women in Science, Technology, and Engineering (3) (US)

(BA) This course meets the Bachelor of Arts degree requirements.

Women's Studies 005 examines the experiences, achievements, and status of women in science, engineering, and technology. The course offers a broad interdisciplinary overview of scholarly research and theory pertaining to women and issues of gender in science, engineering, and technology. The course is interdisciplinary (drawing materials from the natural and social sciences) and cross-cultural (taking a comparative approach to western and non-western sciences and technologies). Students study great women scientists and also barriers institutional and ideological - that women have had to overcome in order to participate in science, asking how the presence and absence of women have effected those studies. Students will be graded by several quizzes and two short exams during the semester. To evaluate progress in developing critical thinking skills, the students will be required to write a response journal and/or response papers to major topic areas during the semester. Also, one individual or group presentation will be required. These instruments enable the instructor to assess students' acquisition of knowledge relevant to the general objectives of General Education. This course will satisfy 3 credits of the 16 credit requirement for the Natural and Social Science courses for the Women's Studies major. It may be used as a supporting course for the Science, Technology, and Society minor. The course will also satisfy the requirement for Women's Studies Natural and Social Sciences for the minor.

S T S 100 (GH) Science, Technology, and Culture (3) A survey of the development and culture of science, technology, and medicine in world history.

S T S 100 Science, Technology, and Culture (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

“Science, Technology, and Culture” surveys the development and culture of science, technology, and medicine in world history. This course will introduce students to using the humanities, social sciences, and the arts to understand the development and uses of science, technology, and medicine in human history. The course focuses on broad trends and changes over time in their social and cultural contexts.

The course is intended to address the needs of a wide range of students. For students majoring in the arts, humanities and social sciences, the course provides a deeper understanding of the relationship between lay/popular and techno-scientific cultures. For the scientific and technically oriented student, the class exposes students to the study of technical and scientific problems from a broader cultural and historical perspective. All students will develop a knowledge of the values that have motivated and informed scientific, technological, and clinical ventures as well as an appreciation of important cultural dimensions of techno-scientific work, including the influence of religious concepts and practices, the impact of race, class, and gender, the significance of language and symbols, and the role played by local and global traditions.

The course also asks students to think critically about the role of science, technology, and medicine in world history and the impact of that history on today’s world. Topics include: the role of scientific and technical expertise in society; the social and economic conditions that have fostered and impeded scientific development and technological innovation; the social, aesthetic, and symbolic considerations that have shaped the way scientific ideas have been framed and used; and the impact of scientific notions and technological innovations on social life.

Students are required to read both primary and secondary texts. Students are also required to augment their classroom readings with scholarly material that they find through library and electronic research. In addition to regular classroom discussions, students will also participate in team-based learning activities and projects that require the students to interact with their peers and to present their thoughts publicly.

Science, Technology, and Society (S T S)

S T S 102 (GS) Science, Technology and Public Policy (3) This course will survey the main issues that relate science and technology to public policy.

S T S 102 Science, Technology and Public Policy (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Technologies in all fields, such as medicine, telecommunications, and energy have created economic opportunities and wealth increasing the quality of life, yet has many times led to public controversy. To help resolve some of these controversies, the use scientific knowledge is called upon to clarify situations and distinguish facts from values in public policy deliberations.

However, developing public policy in science and technology is not always an easy or obvious process. There are times when the underlying science is uncertain or that the problems are beyond the reach of scientific analysis. The practice of the science itself may indeed be a source of concern. Although technologies can create societal controversy, advances in technologies can also be seen as ways to resolve controversies. Examples that highlight these difficulties include advances in biomedical technology like stem-cell research that may create or resolve ethical dilemmas or advances in new energy technology that may mitigate greenhouse gases produced from older energy technologies.

Determining the limits of science in public policy is a critical task. At an elementary level, students will learn the distinguishing features of scientific inquiry and how that inquiry generates knowledge relevant for public policy decision making, such as the scientific knowledge related to the efficacy of medical treatments, environmental protection, or even the creation of standards for technology such as broadcasting. Understanding the difference between “sound science” and “junk science” is essential to understanding how scientific knowledge may be used to justify public policy decisions.

The overarching course objective is for students to understand the roles of science and technology in public policy formation and implementation. Students will learn how different stakeholders – business, government, and citizens – may have different interpretations of a policy problem and the role of science and technology depending upon differences in history, culture, traditions, and their own ideas for the future. Understanding how these different perspectives play a pivotal role in public policy deliberation, formation, and implementation is a central element of the course.

Science, Technology, and Society (S T S)

S T S 107 (GH) (PHIL 107) Introduction to Philosophy of Technology (3) The character of technology; its relation to human values; philosophical assumptions in its development; and how it transforms the world.

S T S (PHIL) 107 Introduction to Philosophy of Technology (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

"Introduction to the Philosophy of Technology" surveys a number of recent thinkers on the meaning of technology, its role in our and other societies, and critiques of its effects. Through readings of classic works on philosophy of technology as well as investigations of contemporary media reports and representations of technology, the course will engage your thought about what technology "means" to you and the values embedded in it. This course meets the broad general education needs of students from the humanities, social sciences, engineering, agriculture, as well as professional tracks such as business and pre-law. As technology is increasingly fundamental to our modern way of life in all its aspects, this course gets students asking question about why we do what we do with technology and how it affects us, others around us, and the environment. Required readings typically include collections of essays ranging in reading level from popular journalism to mass-market fiction to historical analyses of technological change and in-depth philosophical investigations of the concept of technology. Classroom time will be organized around lecture, regular classroom discussion, and a number of student-led debates. Evaluation will be based upon short writings, a small research paper, a midterm, and a final. The course meets the requirement for General Education in the Humanities (GH). Crosslisted with Philosophy it compliments other S T S courses (notably, S T S 101 and 233) and is a pre-requisite for S T S/ Phil 407.

S T S 105 (GHA) (FD SC 105) Food Facts and Fads (3) Impact on society and the individual of modern food technology, food laws, additives, etc.; historical, current, and futuristic aspects.

S T S (FD SC) 105 Food Facts and Fads (3)
(GHA)

(BA) This course meets the Bachelor of Arts degree requirements.

Food Facts and Fads is an introductory food course that broadly surveys various aspects of food, agriculture, nutrition, and health. Students in this course explore the components of the food system from producer to consumer; examine issues related to modern food technology, food and nutrition policies, and changes in the food industry; and assess the impact on the food system, consumers, and on society as a whole. Students will assess their own food and nutrition behaviors, become more aware of the environment in which they make food decisions, and devise strategies for improving health through better diet and increased physical activity. Students learn through lectures, videos, guest speakers, discussions, individual and group activities, and optional field trips. This course emphasizes active learning and critical thinking. Students are expected to complete electronic quizzes, write two or more short reflective papers, and complete a project on a food topic of the student's choosing, for which information must be gathered from several sources in a variety of ways.

Science, Technology, and Society (S T S)

S T S 123 (GH) (HIST 123) History of Science II (3) A history of science and culture from the scientific revolution to the present.

S T S (HIST) 123 History of Science II (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to explore the earliest developments in science, beginning with the prehistoric roots of technology and theories of human origins, followed by an engagement with the achievements of the Mayans, Aztecs, and native North Americans. We then turn to science and technology in the ancient Greek Egyptian worlds, followed by an analysis of early Chinese and East Indian science, medieval science in Europe, selected African sciences, and the rise of modern science in the Scientific Revolution and beyond. The point of the course is to show that science is a world tradition with an ancient history, and that many social, political, cultural, and economic forces can push or pull this peculiar form of knowing in one direction rather than another. There are other history of science courses offered at Penn State, but none treats the history of science in general in relation to its social context and influences. Other history of science courses are more thematic than survey courses (e.g., "History of Mathematics" and "History of Gender in Science and Archaeoastronomy"). HIST 122, "History of Science I," treats science from Stonehenge to the scientific revolution. Students may take either course alone or out of sequence; the first will not be a prerequisite for the second. The expectation is that students will combine knowledge acquired in this course with knowledge from their required general education courses in science to develop a broader understanding of history and science. HIST/S T S 123 may be used to fulfill a requirement for the History major and the History minor and it is an essential part of the recently proposed science and technology history theme within the Science, Technology and Society minor. Students will learn historical techniques for the objective evaluation of readings and the formulation of clear and valid responses. Students’ grades will be formed from a combination of a midterm and a final. Students are also required to do a paper for the class, the topic being subject to the approval of the instructor.

S T S 124 (GH;US;IL) (HIST 124) History of Western Medicine (3) This course explores the history of health, illness, and medicine in western society.

S T S (HIST) 124 History of Western Medicine (3) (GH;US;IL)

Relying on both primary and secondary sources, the course examines developments in medical thinking and practice, the changing status of medical practitioners, and the experience of patients in order to understand the links between medicine and its social, cultural, intellectual, and political contexts.

This course will also augment offerings in bioethics and medical humanities by providing the historical context of ethical issues and social policies concerning medicine. It will be attractive to students pursuing a health professional career and will provide a historical context to the issues raised in courses such as HD FS 301 "Values and Ethics in Health and Human Development Professions," BIOL 461 "Contemporary Issues in Science and Medicine," PHIL/S T S 432 "Medical and Health Care Ethics," and ANTH 470H "Our Place in Nature." The course will be one of the Humanities Electives for the Bioethics/Medical Humanities Minor as well as the proposed Disability Studies minor.

Within the Department of History, the course is part of the undergraduate offerings in the history of science and, thus, is directly linked to HIST/S T S 122, HIST/S T S 123, and HIST 103. The course would also support the Science, Technology, and Society Program's undergraduate minor, augmenting courses in science and health and medicine, such as S T S 101, S T S 105, S T S 200, and S T S 432.

S T S 135 (GS) (PL SC 135) The Politics of the Ecological Crisis (3) The political implications of the increasing scarcity of many of the world's resources.

S T S (PL SC) 135 The Politics of the Ecological Crisis (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

"The Politics of Scarcity" examines some "big" questions about the prospects for human in general and democracy in the United States in particular. Much of the reading assumes that our civilization faces the twin problems of increasingly serious shortages of resources and a growing ecological crisis that threatens the basis of life. Further, it argues that these "twin crises" feed upon each other, and that together they pose serious short and long run challenges to survival. Some readings attribute these problems to the dominant values that characterize modern Western society. The course does consider some dissents from this perspective, arguments that things will be just fine. However, it concentrates on problems and predictions of trouble. Thus, the class does not claim to present an evenly balanced assessment. Rather, it recognizes that most of what we learn, read, and see supports the status quo and assumes our civilization and energy-dependent way of life will continue. Consequently it makes sense to emphasize the less frequently argued position that we may be headed for disaster.

The class aspires to appeal to students regardless of major or college -- to scientists, engineers, students of the humanities, and even economists and political scientists. It fulfills the University-wide general education requirement in Social Science. Although it discusses the role of politics in general and the role of the American political system in particular in discussing the "twin crises," it mostly grapples with fundamental questions of value that underlie and guide the play of power in our political system and with how the massive changes now taking place globally both affect and are affected by politics.

S T S 157 (US) (WMNST 157) Science, Technology, and Gender (3) The role of women and gender in science, technology, and engineering.

S T S (WMNST) 157 Science, Technology, and Gender (3)
(GS;US)

(BA) This course meets the Bachelor of Arts degree requirements.

S T S/WMST 157 examines the role of gender in science, engineering, and technology. The course offers a broad interdisciplinary overview of scholarly research and theory pertaining to women and issues of gender in science, engineering, and technology. The course is interdisciplinary (drawing materials from the natural and social sciences) and cross-cultural (taking a comparative approach to western and non-western sciences and technologies), and it examines the ways that different beliefs and practices related to gender have shaped the practice of science in different times and places. Students study great women scientists and also barriers institutional and ideological - that women have had to overcome in order to participate in science, asking how the presence and absence of women have affected those studies. Students will be graded by several quizzes and two short exams during the semester. To evaluate progress in developing critical thinking skills, the students will be required to write a response journal and/or response papers to major topic areas during the semester. Also, one individual or group presentation will be required. These instruments enable the instructor to assess students’ acquisition of knowledge relevant to the general objectives of General Education.

S T S 202 (GH;IL) Introduction to Disability Studies in the Humanities (3) Provides a humanities-based interdisciplinary introduction to Disability Studies.

S T S 202 Introduction to Disability Studies in the Humanities (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is one of two paired introductory courses developed as required courses for the Disability Studies minor. S T S 202 introduces students to the long historical view of disability, to the political and philosophical assumptions entailed in the concept, and to the stark challenges presented by disabled persons to those assumptions. Beginning with the related concepts of ability/disability, normal/abnormal, impairment/environment, universalism/human variation, and spanning the many types of physical and mental disability, the course then traces the historical record of disability, from ancient Greece to the twentieth century. The course then examines five "case studies" of disability, each presenting a different historical/institutional response to disability. This discussion leads to an in-depth examination of the role played by nineteenth-century "race sciences" in the creation of the umbrella concept of "degeneracy," and related state practices of eugenics. The course concludes with a unit on contemporary disability activism, global representations of and responses to disability, and the efforts of international organizations (e.g. U.N., W.H.O.) to delineate and ensure the rights of disabled persons. The final two weeks are devoted to presentations of independent research and scholarship by students in the course.

S T S 235 (GH) Science and Religion (3) This course investigates the relationship between science and religion in multiple cultures.

S T S 235 Science and Religion (3) (GH)

The purpose of this course, designed to fulfill general education requirements in the humanities (GH), is to encourage students to investigate the relationships between the disciplines of science and religion. While most of the emphasis of the course will be on the historical interaction between science and Western religion, we will also investigate science ("natural philosophy") in the Islamic, Hindu, and Eastern religious traditions. Students will read classic texts that discuss science and religion from scientists such as Newton and Darwin as well as from world Scriptures and contemporary positions of various influential scientists and religious scholars concerning views of the material world as it relates to the spiritual world. There will be no attempt to encourage students to accept a particular religious or secular viewpoint. Rather, the course will be successful if at its conclusion the student can articulate a personal viewpoint while appreciating the reasons others might have for holding alternative opinions. Students will develop an understanding of the arguments and the historical context in which they originated which lead to differing positions. Thus, individual students will be expected to demonstrate this understanding in a series of examinations scheduled throughout the semester, and in a final examination if required by the instructor. Discussion and debate are useful devices in the search for understanding. In order to facilitate such discussion, students will be required to make one presentation to the class on an assigned topic. This presentation will serve as the starting point for class exploration of the topic. To encourage active and collaborative learning, the student presentations may be group efforts, however, no group will consist of more than three students.

S T S 233 (GH) (PHIL 233) Ethics and the Design of Technology (3) Ethics and individual and group decision-making in the design of technology including design projects and specific attention to institutional ethics.

S T S (PHIL) 233 Ethics and The Design of Technology (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

Technology has been around nearly as long as humans have been around. Humans have always created artifacts and artificial environments to aid us in our survival and to help fulfill our needs and desires. Moreover, today technology is all pervasive, transforming and conditioning our social and political relations, our cultural understanding of ourselves, and our relationship with other animals and the natural environment. Yet not much thought has been expended upon the meaning of technology, particularly in its moral dimensions. This course takes several steps to correct this deficiency. Because technologies can have far reaching effects well beyond the domain of their immediate application, the role of designers is crucial in deciding whether we take an intelligent or unintelligent approach to technology. All technologies exist to serve one human need or another. Designers make important choices concerning the creation, development, and deployment of many if not most technological innovations. Consequently, the task of the designer is an ethical one. Our goal is twofold: First, we will try to broaden our moral imaginations by taking into account the wider ranging effects that technologies have in order to reveal the moral significance of design choices. Second, we will examine the process of design itself, particularly in the way that the design process is similar to ethical reasoning in general. It is hoped that by accomplishing these two tasks, we will be empowered as designers, customers, citizens, and future employers to make choices that better fulfill the moral task of technological innovation. Two means will be used to achieve our course goals. Much of the time will be spent thinking about and discussing the various impacts that particular technologies have upon the social, cultural, and political lives of human beings and upon the natural environment. To facilitate thoughtful discussion, we will read a number of authors, writing short papers in preparation for critical discussion in class. In this way we will be better prepared to discuss and think about the issues at hand by having had the chance to organize our thoughts in advance. The second means is aimed at putting our ideas into practice by working in teams on several design projects. These design projects will require the integration of readings, discussion, and research and their synthesis to solve a design problem. Student teams will work cooperatively on these projects and make oral progress reports as well as final written and oral reports.

S T S 245 (GS;IL) Globalization, Technology, and Ethics (3) An investigation of technology and ethics in the globalized world from contemporary, socio-cultural, and historical perspectives.

S T S 245 Globalization, Technology, and Ethics (3) (GS;IL)

The objective of Globalization, Technology, and Ethics is to prepare students (especially but not limited to engineering and business students) who are headed into the corporate or government world for the challenges and realities of working in a rapidly globalizing world. This course will encourage students to become leaders in a mobile and diverse transnational workplace and help them to become critical citizens of that world. Through team-centered projects and readings from the social sciences and humanities, students will broaden their understanding of engineering, technology, and culture and then be given an introduction to how one makes ethical decisions about that world. The course is designed to provide skills, theories and experiences that will help them to be respectful, diplomatic and professional while being able to successfully work with technology in multiple cultures and contexts.

Globalization, Technology, and Ethics will also address topics of critical international and economic importance by including discussion of the World Trade Organization, World Bank, and International Monetary Fund. Students will understand their relationship to global manufacturing and technology use, off-shoring, outsourcing, international debt financing, and restructuring of world economies based upon different models of globalism. In addition, the class will address issues of ‘glocalization’ and student's and citizens’ role in the globalized world and the multiple interactions that shape our technological world today.

S T S 327 (R SOC 327) Society and Natural Resources (3) Analysis of the relationships between societal development and enhancement and natural resources.

S T S (R SOC) 327 Natural Resources, Science, Ethics, and Society (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of this course it to enable students to become competent critical thinkers about the state of natural resources through a greater understanding of scientific, discourse formation, and the ethical dimensions of natural resources issues. This course first examines scientific descriptions of the state of natural resources relying particularly on global assessments of biodiversity, forests, water, land degradation, ecosystem health, and other natural resources. The course then examines critically scientific descriptions of the state of these resources using social discourse analyses of how society frames issues relating to the state of natural resources. Discourse frames that are expressly identified include discourses that assume global environmental catastrophes will be triggered if limits to the use of natural resources are exceeded, economic discourses that often assume that there are no limits to the use of natural resources, sustainable development discourses that attempt to integrate economic development and environmental protection, and other dominant discourses. Each discourse will be shown to foreground certain variables and background other issues. The course also examines ethical issues about the use of natural resources that are often excluded from public discussion of natural resource management and are often hidden in discourse that frame these issues. These ethical issues include questions of distributive justice, limits of economic evaluations of the value of natural resources, questions of procedural justice, and others. The course ends with an evaluation of these ethical issues.

S T S 408 (COMM 408) Cultural Foundations of Communications (3) Examination of oral, scribal, print, industrial and electronic cultures; analysis of impact of technology on communications and social structure.

S T S (COMM) 408 Cultural Foundations of Communications (3)

(BA) This course meets the Bachelor of Arts degree requirements.

S T S (COMM) 408 traces the development of communications technologies and their impact on culture over the last 500 years. Students will examine how different tools for communicating changed the way people organized and made sense of their worlds. The course begins by looking at oral cultures and moves on to the scribal, print, industrial, electronic and post-industrial or postmodern cultures, studying the media developments that marked each of these eras. With each period and its corresponding technology students will examine how and why the new media altered not only the form of communication (the type of speech, form of writing and/or speed of information transfer), but also how such changes altered the content of knowledge (how people made sense of their lives and communities). Readings are drawn from a range of disciplinary perspectives on the issues, from history, sociology and anthropology, to philosophy, communication studies and cultural theory.

The historical and theoretical knowledge provided by the course will give students a solid foundation for coming to terms with media trends in present-day society and for thinking through their possible epistemological, political and cultural impacts.

The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

S T S 416 (US;IL) (AAA S 416, WMNST 416) Race, Gender and Science (3) The class will focus on race and gender as products of science, and how societal values shape scientific activity.

S T S (AAA S/WMNST) 416 Race, Gender and Science (3) (US;IL)

The course’s objective is to provide a seminar for students to integrate feminist theory, social theory, and science studies through class discussions, essays and research. The role of science in defining, producing, applying and policing of gender and race in society will be explored through the work of feminists and traditional scholars working in a variety of disciplines from cultural studies to science studies. Students will be encouraged to develop a critical analysis of race and gender in science in order to understand the impact of gender and race on the production of scientific knowledge. This course is designed for students in the humanities, social sciences, science and technical fields. Readings will be taken from past and contemporary social theory (i.e. students will be reading original works not textbooks). Students will be expected to read, understand and synthesize 75-100 pages of reading per class and to discuss them in a seminar fashion in order to analyze, critique and evaluate various theories to develop their own understanding of the interrelationship of science, race and gender. In addition they will do two professional-style book reviews during the semester. At the end of the semester students will integrate theory with social, cultural and historical data that they collect through library research (with a minimum of 50 sources). Students will present the paper to the class in a conference style presentation that will conclude with a Q&A session.

S T S 427W (CED 427W, SOC 427W) Society and Natural Resources (3) Analysis of the relationship between societal development and enhancement and natural resources.

S T S (CED/SOC) 427W Society and Natural Resources (3)

There is a common tendency to portray environmental and natural resource problems as biophysical in nature. The implication of this tendency is that such problems are best addressed by scientists and engineers who discover evidence of and devise new technologies to fix them. Another common tendency is to assume that people resist solutions to environmental and natural resource problems because of individually held anti-environmental attitudes. In contrast to these two perspectives, sociologists point out that environmental and natural resource problems often lie at the intersection of biophysical processes and social, political, economic, belief, value, and knowledge systems. The goals of this writing-intensive course are to introduce students to the complexity of environmental and natural resource problems and to teach them to think sociologically. In addition to reading assigned books and articles, students will participate in a simulation to negotiate a global environmental treaty, attend a field trip to learn about alternative energy strategies, and conduct research on a local environmental or natural resource issue. After taking this course, students should be better prepared to engage in debates with academics, politicians, and other citizens regarding the causes and potential solutions to environmental and natural resource problems.

S T S (NUTR) 430 Global Food Strategies: Problems and Prospects for Reducing World Hunger (3) (IL)

This course meets the Bachelor of Arts degree requirements.

Global Food Strategies examines opportunities for the world’s poor to improve their health, nutrition, and physical environment by focusing on their own cultural strengths and organization, reassessing the opportunities within their environment, evaluating the appropriateness of new and old technologies, and gaining a renewed respect for their own abilities. Measures of appropriateness used throughout the course are ecological sustainability and cultural sensitivity. Approximately one third of the course focuses on the historical basis of underdevelopment up to and including the post-modern era. Topics include economic colonization, the industrialization of agriculture, the impacts of globalization, trade priorities and debt loads on the poor, population and ecological issues, and a critique of the economics of scarcity. The second two thirds focuses on micro-strategies for poverty alleviation. Topics include culturally-appropriate people centered development women's empowerment needs including microlending (small loans), the prospects and rationales for biological agriculture vs. industrialized agriculture, successful models of health and population control, the impact of American consumerism, and ecological footprint analysis. The goals of the course are to 1) awaken the student's interest in hunger and poverty issues and the cultural dimensions of poverty, 2) acquaint the student with viable and sustainable strategies for hunger and poverty alleviation for the very poor, and 3) enable the student to understand enough about globalism that he/she can critically analyze and evaluate international affairs articles in national newspapers. The classes integrate lecture information with films that help with the visualization of poverty problems and prospects, readings, current events, and small group discussion around issues and case studies. Readings are drawn from development classics and from a wide range of recent literature on poverty and change. Evaluation includes student responses to three essay tests posed by the instructor over the semester, and journal keeping. The class project is designed to promote citizenship/leadership skills. Students will make a contract to perform a particular citizen action relating to hunger and poverty alleviation, which they will describe in an oral report and written format. Participation is evaluated.

Science, Technology, and Society (S T S)

S T S 476 Technology and War (3) A survey and analysis of the interaction of technology, ethics, and warfare in the past and present society.

S T S 476 Technology and War (3)

It can be argued that the history of warfare is the history of humanity. Determinant of political outcomes as well as class relations, warfare touches all aspects of society from economics, ethics, politics, and international as well as domestic relations. Common wisdom argues that technology and technological development underlie the ability to go to war, the ability to prosecute a war, and the ultimate success or failure in that war. Technology can be seen as deterministic in this way, but so, too, does society interact with and help construct the technologies that then are used (or threatened) in conflict as well as the ethical, legal, moral, and political evaluation of these technologies. In addition, the connection of science to military goals for the development of military hardware cannot be underemphasized in the modern world, nor can the continued influence of the military-industrial complex in economic and political decision making be ignored. This course takes a critical look at technologies in war from a historical as well as contemporary viewpoint. This course is not about the hardware nor is it necessarily supportive of nor hostile towards warfare itself. Both war and technology are endemic in human history and understanding their interaction is crucial in looking forward. As educated citizens, it is imperative that students understand how to make reasoned and informed judgments on this matter. Taking a critical and philosophically informed view of the role of technology in war contributes to our understanding of the past and helps augment our path forward.

Security & Rsk Analy (SRA)

SRA 111 (GS) Introduction to Security and Risk Analysis (3) This introductory course spans areas of security, risk, and analysis covering contexts in government agencies and business organizations.

SRA 111 Introduction to Security and Risk Analysis (3)

Introduction to Security and Risk Analysis is a preliminary course with a broad focus, spanning the areas of security, risk and analysis. In addition to familiarizing the student with basic technical terminology, it will also touch upon social and legal issues, risk analysis and mitigation, crime intelligence and forensics, and information warfare and assurance.

This course will motivate students to understand the requirements for security in any government agency or business organization through the use of case studies. Included in this segment are cases related to cyberterrorism, bioterrorism, and critical infrastructure protection. Some concepts to be covered in the area of information security are: confidentiality, integrity, availability, and non-repudiation. Various methods of safeguarding these security concerns will be discussed, such as: single- and multi-factor authentication, encryption, digital signatures, prevention of denial of service attacks, and so forth. This course also covers social and legal issues related to security, in particular identity theft and social engineering. Topics in this section include identity theft, spam, spyware, and adware. This course also covers the principles and the approaches to risk analysis. Here students study vulnerability analysis, crime and intelligence analysis, forensics, techniques for risk assessment and risk mitigation.

The course will prepare students for more in-depth courses such as SRA 211, SRA 221 and SRA 311.

Security & Rsk Analy (SRA)

SRA 001S First-Year Seminar in Security and Risk Analysis (1) Provides introduction to the field of Security and Risk Analysis and assessments of key skills.

SRA 001S First-Year Seminar in Security and Risk Analysis (1)
SRA 001S gives first-year students a concrete overview of the field of Security and Risk Analysis (SRA), including discussion of the knowledge and competencies required for careers in this field, familiarity with the variety of career paths and the specific requirements of each, and an understanding of the skills, abilities and knowledge that is common across career paths within this field. As part of this course, students will participate in a Developmental Assessment Center, which will assess their current skill levels in the areas of Oral and Written Communication, Leadership, Conflict Resolution, Decision Making and Problem Solving, as well as other core areas to be identified. Working with the assessment team, they will create specific, individualized plans to develop skills in areas where they are currently deficient and to build on current strengths.

Security & Rsk Analy (SRA)

SRA 211 Threat of Terrorism and Crime (3) Provides overview of nature, scope, and seriousness of threats to security as a result of terrorism and crime.

SRA 211 Threat of Terrorism and Crime (3)
Threat of Terrorism and Crime is a course designed to acquaint students with the security threats posed by both terrorist and criminal activity, and with strategies to combat these threats. Terrorism and security are defined as well as terrorism in its historical context. Varieties of terrorist groups, organizations and their actions are studied with targets of terrorism being a focus. Types of crime including street, employee, organized and white collar crime are studied.

Information theft can occur in each of the types of crime. Security threats of each type are studied and mitigation techniques are evaluated. Methods of studying terrorism and crime cover data collection, analysis of the reliability of the data, and fusing the data so that information is obtained that leads to knowledge to combat terrorism and crime.

Finally to put the course in perspective, students study critical shortfalls in our understanding of terrorism and crime including unreliable data, biased estimates and a lack of understanding of terrorist and criminal motives and objectives.

General Education: None

Security & Rsk Analy (SRA)

SRA 231 Decision Theory and Analysis (3) Provides an overview of decision theoretical and analytical concepts and tools in the security risk analysis field.

SRA 231 Decision Theory and Analysis (3)

Decision Theory and Analysis is designed for students to build an understanding of how to improve the judgment and decision making of individuals, groups and organizations. Behavioral decision theories provide the theoretical core for the course. These theories draw on insights from a diverse set of disciplines, including cognitive and social psychology as well as economics, statistics and philosophy.

Offered annually (and more if demand requires), this course will foster understanding of: (a) the cognitive, emotional, social and institutional factors that influence judgment and choice, (b) normative (economic) models of rational choice, and (c) how judgment and decision making can be predicted and/or improved through prescriptive aids and models.

Applications of these theories and methods to real-life venues will be used to engage and focus the students. For example, insights on how such concepts apply to supply chain security, bioterrorism threats, legal decision making, large-scale risk assessments (e.g., assessing risks of transnational threat), and first-response/crisis decision making will be common. Where appropriate, real situations and cases are used to bring concepts and scenarios alive.

Overall, the course emphasizes basic skills and concepts that enhance an individual’s ability to understand why individuals, groups and organizations behave the way they do, how they formulate the issues and problems they confront, as well as to choose rationally among competing courses of action.

Security & Risk Analy (SRA)

SRA 221 Overview of Information Security (3) Provides an understanding of the overview of information security including security architecture, access control, and internet secure applications.

SRA 221 Fundamentals of Information Security (3)
SRA 221 focuses on fundamentals of information security. Students will learn the principles of information security, security architectures and models, aspects and methods of information security such as physical security control, operations security, access control, hacks/attacks/defense, systems and programs security, cryptography, network and web security, worms and viruses, and other Internet secure applications. Students will also learn how to plan and manage security, security policies, business continuity plans, disaster recovery plans, and social and legal issues of information security.

A major component of the course will be several hands-on exercises and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphases will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Security & Rsk Analy (SRA)

SRA 311 Risk Management: Assessment and Mitigation (3) Assessment and mitigation of security vulnerabilities for people, organizations, industry sectors, and the nation.

SRA 311 Risk Management: Assessment and Mitigation (3)
The proposed course in risk management focuses on applications of problem solving skills and decision theory. The course will review the theoretical templates developed in previous courses and then move to the implementation of these theories and models. While the course would employ some textbook-based and lecture-based learning, the emphasis will be case-based learning and scenario analysis and will include team presentations.

The first part of the course will review and discuss risk assessment models and ways to mitigate these risks. The course will focus on vulnerabilities and controls that could deter or prevent problems, detect breaches, and correct these ruptures and penetrations. The student will utilize quantitative and qualitative risk analysis as appropriate.

The bulk of the course would apply these theories to the person, to the organization, to the sector, and to the nation. For each focal point, the student will have to identify the threats, the vulnerabilities, and the controls to counterbalance these vulnerabilities. At the individual level, the course will focus on events such as identify theft, physical security during international travel, or invasion of one’s privacy. At the organizational level, including both public and private entities, the course will focus on incidents such as cyber crimes, fires, flooding, financial frauds, kidnapping of employees, and expropriation of resources. At the sector level, the course will focus on the power grid, the transportation system, the communication system, the water supply, and the energy supply chain. At the national level, the course will focus on national disasters, terrorism, and war, both conventional and nuclear.

For each of these topics, the student will analyze the security risk and attempt to find ways to mitigate the risk. This analysis includes incidence response, development of security policies and administration, and security and crisis management. The course will rely heavily on case studies and scenario analysis.

Security & Risk Analy (SRA)

SRA 321 The Role of Information and Intelligence (3) The Role of information and intelligence introduces students to the architecture and policies of the U.S. Intelligence Community (IC) and examines how U.S. intelligence policies and practices relate to overall U.S. foreign policy objectives and are influenced by today’s global environment and emerging technologies. The course examines the users and processes of IC, participants of Competitive Intelligence, and comparative intelligence communities.

SRA 321 The Role of Information and Intelligence (3)

This course introduces intelligence structures and policies and explores the role and use of information and intelligence in the 21st Century, in support of individual citizens, national defense and corporate America. It will introduce the major actors in the U.S. intelligence community and frame U.S. intelligence policies in terms of overall U.S. foreign policy objectives in the current globalized international arena. The course discusses the history and evolution of U.S. intelligence policies, capabilities and information requirements as well as the legal and constitutional foundations of those policies. The course will examine and attempt to apply methods and techniques of the information user and intelligence practitioner. The course will also provide experience in applying principles and techniques learned in the context of a team-based intelligence-analysis simulation exercise.

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
The post-modern world provides a changing climate and context for defining and understanding threats, intelligence, decisions, and risk. Likewise, post-modern cultures consist of beliefs that are heavily influenced by psychology, social connectivity, collective behavior, religion, ethnicity, and political systems. This system of systems is heavily dependent upon and influenced by information, information technology, and the web (social informatics). When examining human behavior as it impacts risk, these various social-technical factors must be considered in planning for terrorism, intelligence analysis, and emergency events.

As the post-modern world becomes increasingly complicated, the ability to discern, identify, and address threats in terms of risk becomes exceedingly more difficult. Provision of learning underlying psychological, social, political, religious, and technical components of how risk accelerates through various stages will be critical for protection of national and international interests within the security sphere. Security informatics will be at the heart of both recognizing emerging situations and employing tools/agents/measures to assuage emergency, terrorist, or even national disaster events.

This course provides the student with a broad perspective to critically examine both theories and practice of security informatics as related to the cultures in which threats emerge asymmetrically. Students will be placed on the role of systems analysts to problem solve and analyze information from a broad bandwidth of information specifically as informed by culture, post-modern thought, psychological intent, and situation awareness. The course will be grounded by participation in case studies and/or analyzing exercises of risk. Students will be required to do comprehensive reading assignments, engage in team cognition-social interaction, and become familiar with social informatics concepts and tools as related to risk, terrorism, and information warfare.

As the post-modern world becomes increasingly complicated, the ability to discern, identify, and address threats in terms of risk becomes exceedingly more difficult. Provision of understanding some of the underlying psychological, social, political, religious, and technical components of how risk accelerates through various stages will be critical for protection of national and international interests within the security sphere. As extreme events become more prevalent in society, security informatics will be at the heart of both recognizing emerging situations and employing tools/agents to assuage emergency, terrorist, or even national disaster events.

_SRA 468 Visual Analytics for Security Intelligence (3)_ Introduce visual analytic techniques for security informatics and intelligence. It covers analytical techniques on visualizing threats, risk, and vulnerability.

**SRA 468 Visual Analytics for Security Intelligence (3)**

This course surveys techniques for visualizing and analyzing security information and for communicating and using information about threats, risk and vulnerability to decision-makers. It will motivate students by the needs for better intelligence in a broad range of homeland security applications. Through case studies and problem-based learning, students will develop understanding of important concepts and issues, such as data source and data quality, associations and integration of incidence, hazards, and risk factors, and the difficulties of analyzing and communicating knowledge. Various visual analytical methods for homeland security intelligence will be discussed, such as: (1) mapping and visualizing patterns of crime and incidence, (2) identifying targets and agents of terrorist attacks, (3) spatial analysis of social, economic and environmental risk indicators, and (4) prediction of threat and risk. It also pays special attention to the interpretation of analytical results for actions. Geographical information systems and associated spatial analytical tools will be used to exemplify the kinds of information environment available to intelligence community. The course will prepare students to become immediate workforce for security-related industries and government agencies.

Effective: Summer 2008
Prerequisite: graduate standing

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Slavic (SLAV)

**SLAV 052 Elementary Intensive Slavic for Graduate Students II (3)**
Intensive introduction to a Slavic language: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts.

**SLAV 052 Elementary Intensive Slavic for Graduate Students II (3)**
This is the second in a series of three courses designed to give students an intensive introduction to Slavic language. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Slavic vocabulary. Lessons are taught in an authentic cultural context.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2008
Prerequisite: SLAV 051 or equivalent and graduate standing

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Slavic (SLAV)

SLAV 053 Intermediate Intensive Slavic Language for Graduate Students (3) Continued intensive study of a Slavic language at the intermediate level: reading, writing, speaking, listening, cultural contexts.

SLAV 053 Intermediate Intensive Slavic Language for Graduate Students (3)
This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Slavic language. Continued intensive study of Slavic language at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Social Science (SO SC)

**SO SC 480W Quantitative Methods in the Social Sciences (4)** Students will learn to conduct, analyze and write up quantitative social scientific research according to appropriate professional standards.

**SO SC 480W Quantitative Methods in the Social Sciences (4)**

Students in this course will gain a working understanding of the rationale for the use of a variety of quantitative research methods and become familiar with the design, constraints and appropriate applications of those most frequently used in the applied behavioral and social sciences. They will gain experience designing and conducting research through a blend of class exercises and field research applications. Students will also gain a basic familiarity with the use of tools such as the Statistical Package for the Social Sciences (SPSS) to analyze the data gathered through quantitative research. Finally, through classroom instruction coupled with a process of writing, revising and individual consultation with the instructor regarding their research reports, students will master APA style and develop their academic and professional writing skills including critical thinking and conceptualization in addition to the basics such as spelling and grammar where necessary.

Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: permission of program

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Social Science (SO SC)

**SO SC 481 Qualitative Research Methods in the Social Sciences (4)** Students will learn how to conduct, analyze and write up qualitative social research according to appropriate professional standards.

**SO SC 481 Qualitative Research Methods in the Social Sciences (4)**

Students in this course will gain a working understanding of the philosophy, conceptualization and application of qualitative and participatory research methods in the behavioral and social sciences including such methods as ethnographic research and participant observation, conceptual mapping and interviewing techniques and explore their applications in participatory and action research. Students will also learn how to analyze and write up the results of such research endeavors according to the standards of the field including the use of computerized qualitative data analysis packages (such as NUD*IST or the Ethnograph) and mastery of APA style.

Prerequisite: C I 295, ECON 104, GEOG 010, HIST 020, HIST 021, PL SC 001; plus 6 credits of other Option Requirements (Prescribed Courses Additions Courses Supporting Courses and Related Areas Concentration)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
Social Studies Education (SS ED)

SS ED 412W Teaching Secondary Social Studies II (3) Writing-intensive course focusing on study of the social studies teacher's role in planning instruction; strategies for teaching.

SS ED 412W Teaching Secondary Social Studies II (3)
Advanced study and practice of teaching social studies in the secondary grades (7-12) with emphasis on content and methods for the major subject areas (citizenship and government, economics, geography, and history). The principal goal is to provide prospective teachers with intellectual preparation and relevant practice in selecting and applying rigorous content knowledge to higher-order thinking in the classroom and practical experience designing, planning, and implementing social studies instruction. Topics include the social studies teacher's role in planning and practicing instruction, strategies for implementing and assessing teaching in the social studies, and others as determined by the section instructor. As a writing course (W), SS ED 412W engages students in professional in-depth writing experiences that involve planning, process, development, teaching and learning social studies content, and other relevant writing that teachers are expected to perform.
