DANCE 280 Dance Improvisation (1) Introduction to the concepts and techniques of dance improvisation.

Dance Improvisation (1)

DIVERSE: None
Bachelor of Arts: None
Effective: Spring 2001

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

DANCE 281 Introduction to African Dance and Culture (1) An introduction to African dance based in a holistic approach integrating music, movement, drama, costume, and vocalization.

Introduction to African Dance and Culture (1)

DIVERSE: None
Bachelor of Arts: None
Effective: Spring 1999

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

DANCE 282 Mojah Fusion Dance (1.5 per semester/maximum of 3) Mojah introduces intermediate/advanced level dance
students to a unique dance technique that blends Horton, Dunham, West African and jazz movements in one form.

**DANCE 282 Mojah Fusion Dance (1.5)**

DANCE 282 is an introduction to the Mojah dance form. Moja is a Swahili term meaning one. Mojah fuses various forms to create a unique style of modern African dance that blends Horton, Dunham, West African and jazz movements into one form. The objectives of the course include: learning/executing Mojah terminology and technique; and learning/executing the techniques from which Mojah is derived. Mojah is a dance course and is directly related to other dance courses, theatre/arts courses and African American studies courses.

General Education: None

Bachelor of Arts: None  
Effective: Spring 2013 Future: Spring 2013  
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**DANCE 282 Mojah Fusion Dance (1.5 per semester/maximum of 3)** Mojah introduces intermediate/advanced level dance students to a unique dance technique that blends Horton, Dunham, West African and jazz movements in one form.

**DANCE 283 Beginning Hip Hop Dance (1)**

Beginning Hip Hop dance introduces the student to Hip Hop culture through dance, free expression with the body/freestyle and choreography.

DANCE 283 Beginning Hip Hop Dance (1)  
Hip Hop dance is designed for students with an interest in Hip Hop dance/culture. This class introduces students to Hip Hop through movement that includes freestyle dancing, locomotive movements, and choreography. In addition, this class includes lecture sessions and discussions about Hip Hop culture and its role in society. This course seeks to introduce students to a culturally significant art form, enhance mind/body awareness, and provide practical opportunities for students to apply skills learned in class via performances. This course is directly related to dance, theatre, African American history and other arts based and humanities based courses. Students will be evaluated on their attendance, participation in class, willingness to learn, and the effort put forth in class.

General Education: None

Bachelor of Arts: None  
Effective: Summer 2007  

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**DANCE 285 Contemporary Dance Performance (1-2 per semester/maximum of 8)**

Contemporary Dance Performance is designed to introduce the beginning performer to the choreographic and rehearsal process as preparation for performance.

**DANCE 285 Contemporary Dance Performance (1-2 per semester/maximum of 8)**

This is a dance course to introduce the beginning performer to the rehearsal process, creative process and performance experience. The class will develop around the building of an original dance piece, created on and for the participating students by the instructor of record.

The students will perform this piece at the end of the semester in a formal performance situation, on a proscenium stage with full lighting and sound accompaniment. The instructor will create an original dance on students enrolled in this course which will provide the student with performance experience in a live dance concert. The student will learn original choreography, be responsible for retention of movement, experience and assist in the choreographic process, participate in discussions concerning choreography, expression, rehearsal expectations and roles. The student will keep a journal and complete written assignments which demonstrate cognitive understanding of the artistic process.

The Pennsylvania State University
Each student will be expected to execute the choreography at a level suitable for concert performance, show an understanding of the choreographic process through written work, demonstrate growth as a dancer and artist through performance and written work and participate fully in a concert performance of the dance work created in class.

**DANCE 331** Intermediate Ballet I (1.5 per semester/maximum of 6) A continuation of the course work established in Beginning Ballet II.

**DANCE 331 Intermediate Ballet I (1)**

Dance 331 allows the student who has had a solid introduction to the fundamental movements and style of ballet to develop more strength and flexibility in their technique. The pace of the class is faster. Choreography is more complex and taught more quickly. The student is expected to know the elements that constitute a ballet class and is ready to embrace seriously the study of the skill and artistry required to perform ballet. The student is expected to be able to execute a double pirouette and simple beats in petit allegro. Interpretation of choreography taught for exams is emphasized more strongly than in the previous courses.
The attitude should be positive, receptive to correction, and exhibit an eagerness to work, and the student's progress should reflect growth in their abilities to perform the choreography and to know the terms used. The student will be required to identify and explain the meaning of the terms used in class, as well as perform choreography with confidence and a sense of character.

Required dress for the course for women is black leotard, pink or tan tights, pink ballet shoes and for men it is black tights, white T-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

DANCE 332 Intermediate Ballet II (1.5 per semester/maximum of 6) A continuation of the course work established in Intermediate Ballet I.

DANCE 332 Intermediate Ballet II (1)

Dance 332 allows the student who has a strong background in the basics of ballet technique to be challenged with more difficult movements and choreography and to develop a more mature approach to healthy alignment. The Zena Rommett floor barre and the Pilates techniques will be explored with more emphasis than in the beginning semesters of ballet study. The student is expected to know the terms used in ballet in French, their meaning, and how to execute them. The student should be able to perform choreography with a sense of character and style, as well as strong technique.

The attitude should be positive, receptive to correction, and exhibit an eagerness to work, and the student's progress should reflect growth in their abilities to perform the choreography and to know the terms used.

Required dress for the course for women is black leotard, pink or tan tights, pink ballet shoes and for men it is black tights, white T-shirt, black ballet shoes, and dance belt. DANCE 341 Intermediate Jazz I (1.5) A continuation of the course work established in DANCE 242, Beginning Jazz II.

DANCE 341 Intermediate Jazz I (1)

Dance 341 allows the student who has successfully completed Beginning Jazz II to continue to broaden their knowledge of Intermediate Jazz Dance. The purpose of this course is to improve the beginner's knowledge of jazz dance. Technique will be stressed, but performance and interpretation will be emphasized with the following in mind: to develop character, mood and ability to improvise and choreograph Jazz Dance. A variety of choreographed dances ranging from pop, jazz, to musical theatre styles will be taught.

The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. A positive attitude and maintaining proper discipline and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). They are responsible for learning and executing all material taught.

Jazz Dance 341 satisfies the requirement for the BFA Music theatre option and fulfills one of the requirements for the Dance Minor. The BFA musical theatre student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may enroll into the next level of the performance sequence.

The required dress for men: Jazz shoes, T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

DANCE 342 Intermediate Jazz II (1.5) A continuation of the course work established in DANCE 341, Intermediate Jazz I.

DANCE 342 Intermediate Jazz II (1)

Dance 342 allows the student who has successfully completed Intermediate Jazz Dance I to continue to broaden their knowledge of Jazz Dance. The purpose of this course is to continue to improve the dancer’s technical aspect of Jazz Dance. Combinations will be taught at a faster pace. Techniques will be stressed, but performance and interpretation will be emphasized with the following in mind: to develop character, mood and the ability to improvise and choreograph Jazz Dance. A variety of challenging choreographed dances ranging from pop, jazz, to musical theatre styles will be taught which the student will be expected to perform.

The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. A positive attitude and maintaining proper discipline and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). They are responsible for learning and executing all materials taught.

Jazz Dance 342 satisfies the requirement for the BFA Music Theater option and fulfills one of the requirements for the Dance Minor. The BFA musical theatre student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence.

The required dress for men: Jazz shoes, T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).
DANCE 361 (GA) Intermediate Modern Dance I (1.5 per semester/maximum of 6) Development of techniques and principles of modern dance on the intermediate level.

DANCE 361 Intermediate Modern Dance I (1.5)

DANCE 361, Intermediate Modern Dance I, continues to build on the technical foundation from Beginning Modern I and Beginning Modern II in relation to a release-based modern dance technique. This intermediate level class centers on developing a strong technical foundation in modern dance. Along with technique, students should develop greater flexibility, strength, and alignment. The concepts of weight, time, energy, and space are central to the class. The body as a tool of expression and communication and using dance as a language is stressed.

This class serves as a prerequisite for DANCE 362.

DANCE 362 (GA) Intermediate Modern Dance II (1.5 per semester/maximum of 6) A continuation of Modern Dance I to augment technical proficiency.

DANCE 362 Intermediate Modern Dance II (1.5)

DANCE 362, Intermediate Modern Dance II, continues to build on the technical foundation from Intermediate Modern Dance I in relation to a release-based modern dance technique. This intermediate level class centers on developing a strong technical foundation in modern dance. Along with technique, students should develop greater flexibility, strength, and alignment. The concepts of weight, time, energy, and space are central to the class. The body as a tool of expression and communication and using dance as a language is stressed.

DANCE 365 Contemporary Movement Lab I (3) An intermediate level modern dance technique utilizing improvisation to enhance technical and performance issues: alignment, connection, balance, transition, expression, discovery.

DANCE 365 Contemporary Movement Lab I (3)

DANCE 365 is an intermediate level modern dance course utilizing improvisation as a tool for understanding technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also will gain self-awareness and begin to develop a personal dance vocabulary. Contemporary Movement Lab I will meet four hours a week, with an additional 1 hour studio lab for personal discovery. CML I is designed to further expose the intermediate level dancer to the style and techniques of modern dance as it uses improvisation for expression and performance. The intermediate level dancer will be developed through more thorough movement requirements, floor work, and strengthening experiences with the support of improvisation as a tool. Full articulation of body, feet and arms will be fostered through regular exercises, which will bring about stronger connections through the body to support complicated and difficult movement. Each class period will allow time to be spent in the traditional aspects of an intermediate modern dance technique class: floor warm up and connection to center of weight, center floor balance and strengthening technique exercises and combinations, traveling sequences across the floor, and final accumulative combination.

An equal amount of time will be spent in the exploration of improvisation: personal introspection, group interaction based on conceptual themes, weight sharing and beginning contact improvisational techniques, and development of a group structured performance improvisation. Improvisation will be explored regularly through individual and group work. The student will experience moving without specific directions for the body, but rather with directions for content, sensing, theme, or task oriented physicality. Observation of self and others will aid in the discovery of the freedom of moving improvisationally. Outside reading and follow up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for opportunities to express and share levels of comfort and personal discoveries with various experiences. This is an important aspect of the process of opening up to the act of improvisation.

DANCE 366 Contemporary Movement Lab II (3) An intermediate level modern dance technique utilizing composition to enhance technical and performance issues: alignment, connection, balance, transition, expression, discovery.

DANCE 366 Contemporary Movement Lab II (3)

DANCE 366 is an intermediate level modern dance course utilizing the techniques, tools and theories of composition for understanding technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also will gain self-awareness and further develop a personal dance vocabulary. Contemporary Movement Lab II will meet four hours a week, with an additional 1-hour studio lab for personal discovery. CML II is designed to further expose the intermediate level dancer to the style and techniques of modern dance as it uses composition for expression and performance. The intermediate level dancer will be further developed through a more thorough level of movement requirements: floor work, and strengthening experiences while exploring the connections of technique to composition and performance. Full articulation of body, feet and arms will be fostered through regular exercises, which will bring about stronger connections through the body to support complicated and difficult movement. Each class period will allow time to be spent in the traditional aspects of an intermediate modern dance technique class: floor warm up and connection to center of weight, center floor balance and strengthening technique exercises and combinations, traveling sequences across the floor, and final accumulative combination.

An equal amount of time will be spent in discovering the many theories and tools of composition: time, weight, space, rhythm/phrasing, theme based creative experiences, and dance as a tool for communication. Students will be expected to create a variety of studies regularly through individual and group work. Outside reading and follow up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for
opportunities to share and express levels of comfort and personal discoveries with various experiences.

DANCE 371 Music Theatre Dance--Style I (1.5) A practical study of dance styles from the 1890'S to the 1990'S.

DANCE 371 allows the student who has successfully completed two semesters of ballet (DANCE 231 and 232), two semesters of jazz (DANCE 241 and 242), and two semesters of Music Theatre Studio (THEA 223 and 224) to expand their capabilities of combining their skills of dancing and acting through the use of different stylistic approaches. In this semester, the BFA Music Theatre candidate will study and perform choreography characteristic of Vaudeville, Charleston, Ragtime, Ballet, Folk/Ethnic and elements of Modern and Jazz. In particular, Agnes deMille's use of ballet and Jerome Robbins' use of Ballet/Jazz/Modern will be studied.

The goals of the course include enabling the student to feel confident in identifying, performing, and competing in the professional audition venue using these styles. Also, the student should deepen their understanding of how the use of varied dance styles contributes to the development of character and/or the furthering of plot in Music Theatre.

The student's grade is determined by their attendance, attitude, progress, performance in the final semester showing, and the completion of two projects. Attendance is mandatory; more than three absences or lateness will affect the grade. The attitude should reflect the focus and enthusiasm characteristic of a professional. Progress will be assessed through frequent performance "quizzes". The mid-term and final showings will be video-taped and examined as a class. The two projects consist of a paper and one minute of original choreography.

In the paper, the student will analyze the use of the different styles used by Agnes deMille in one viewed musical, such as OKLAHOMA or CAROUSEL. A date will be assigned for the completion of the paper. No late papers will be accepted. In their original choreography, the student, using a Balletic style and vocabulary, should exhibit their understanding of how to use dance to portray a character in a specific situation or mood. The student should consult the Instructor concerning their creative ideas. The choreography will be performed for the class by the student.

Successfully completing DANCE 371 is the prerequisite for DANCE 372. Part of the final exam for this course will be a performance juried by members of the School of Theatre Performance Faculty. Their evaluation will help to determine whether the student may be allowed to enroll into the next level of the performance course sequence.

Required dress for this course is: men - tights or dance pants, t-shirt, dance belt, ballet and jazz shoes -- women - tights, dance pants, leotards, and ballet, jazz, and character shoes, with rubbered soles. Dance sneakers are not appropriate for warm-ups and certain combinations.

General Education: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

DANCE 372 Music Theatre Dance--Style II (1.5) A continuation of course work established in Music Theatre Dance Style I.

DANCE 372 allows the student who has successfully completed DANCE 371 to continue broadening their understanding and expanding their performance skills of different stylistic approaches to choreography. In this course the student will study and perform choreography using stronger Jazz and Folk/Ethnic/Social influences. In particular, the works of Jerome Robbins, Ron Field, Michael Bennett, and Bob Fosse will be studied. The goals of the course include enabling the student to feel confident in identifying, performing, and competing in the professional audition venue using these styles. Also, the
student should deepen their understanding of how the use of varied dance styles contributes to the development of character and/or the furthering of plot in Music Theatre.

The student's grade is determined by their attendance, attitude, progress, performance in the final semester showing and the completing of two projects. Attendance is mandatory -- more than three absences or lateness will affect the grade. The attitude should reflect the focus and enthusiasm characteristic of a professional. Progress will be assessed through frequent performance "quizzes". The mid-term and final showings will be video-taped and examined as a class. The two projects consist of a paper and one minute of original choreography.

In the paper, the student will analyze the use of the different styles used by a choreographer in one viewed musical. The student may choose from the movie musicals of Jerome Robbins, Michael Kidd, or Bob Fosse. A date will be assigned for the completing of the paper. No late papers will be accepted. In their original choreography, the student should exhibit their understanding of how to use elements of a jazz style to portray a character in a specific situation or mood. The choreography will be performed for the class by the student.

Required dress for his course is: men - tights or dance pants, t-shirt, dance belt, ballet or jazz shoes -- women - tights, dance pants, leotards, and ballet, jazz and character shoes, with rubbered soles. Dance sneakers are not appropriate for warm-ups and certain combinations.

DANCE 381 Dance Composition I (2) Introduction to the basic principles and craft of choreography.

DANCE 381 Dance Composition I (2)

This course is an introduction to the basic principles and craft of the art of choreography. The students will work with the principles and craft of choreography through practical methods to foster and enhance the creative process with relation to the solo form.

Each student will develop an understanding of the architectural strengths of the proscenium stage and how best to use these for the solo form; gain knowledge of professional working methods through the exploration and use of the choreographic tools; develop an individual vocabulary through improvisational and choreographic elements; gain a knowledge of the craft for original creative expression; and demonstrate an overall understanding of the course by choreographing an original solo work as a culminating project.

DANCE 431 Advanced Ballet I (1.5) An advanced ballet training course.

DANCE 431 Advanced Ballet I (1)

DANCE 431 allows the student who has successfully completed DANCE 232, or who has interviewed with the Instructor concerning their previous training in ballet, to develop greater proficiency in performing ballet. The barre work continues to emphasize proper alignment, supported by exercises using the Zena Rommett floor barre technique and the Pilates technique, and the floor work moves more quickly then in the beginning levels of study. The student will learn more complex steps requiring greater strength and coordination, and the class will move at a faster pace, thus enabling the student to learn choreography more quickly. The student will also develop their ability to communicate character and mood through their dancing. More advanced ballet terminology will be taught, and the student will learn the French terms, their English meanings, be able to identify the steps and perform them.

DANCE 431 can satisfy one of the two semesters of advanced dance study required by the BFA Music Theatre degree option and can satisfy requirements for the Dance Minor.

The student's grade is determined by their attendance, attitude, and progress. Attendance is mandatory. More than three absences or lateness will affect the grade. The attitude should reflect a serious focus on improving their abilities with a positive approach to applying corrections to their dancing. Their progress will be assessed through observation of their classroom work and especially the video-taped performances of their mid-term and final exam choreography. There will be a final showing at the end of the semester with an invited audience. The exams will also include an oral section, covering the terms used in class.

Required dress for class is -- for men, dance belt, black tights, white t-shirt, and black ballet shoes, and for women, pink or tan tights, leotard, and pink ballet shoes. All hair must be pulled back and secured away from the face. No sweat clothes may be worn, but leg warmers, belts, and suspenders are optional.

General Education: None
Diversity: None
Bachelor of Arts: None

DANCE 432 Advanced Ballet II (1.5) A continuation of Advanced Ballet I to augment technical proficiency.

DANCE 432 Advanced Ballet II (1)

DANCE 432 allows the student who has successfully completed DANCE 431, or who has interviewed with the Instructor concerning their previous dance training, to challenge themselves further in the study of ballet. The barre work continues to emphasize proper alignment, supported by exercises using the Zena Rommett floor barre technique and the Pilates technique. The center work expands on some of the vocabulary taught in DANCE 431, requiring more confidence, strength, and stamina in different ways of turning and jumping, as well as adagio work. The student will learn more complex steps requiring greater strength and coordination, and the class will move at a faster pace, thus enabling the student to learn choreography more quickly. The student will also develop their ability to communicate character and mood through their dancing. More advanced ballet terminology will be taught, and the student will learn the French terms, their English meanings, be able to identify the steps and perform them.

DANCE 432 can satisfy one of the two semesters of advanced dance study required by the BFA Music Theatre degree option and can satisfy requirements for the Dance Minor.
Advanced Jazz I (1.5) An advanced course in the techniques of jazz dance.

Advanced Jazz II (1.5) A continuation of Advanced Jazz I to augment technical proficiency.

DANCE 441 Advanced Jazz I (1.5) An advanced course in the techniques of jazz dance.

DANCE 442 Advanced Jazz II (1.5) A continuation of Advanced Jazz I to augment technical proficiency.

Required dress for DANCE 441 consists of dance belt, dance pants, t-shirt and jazz shoes for men and tights and leotard, jazz and character shoes for women. Dance sneakers are not appropriate for warm-ups and certain combinations.

DANCE 441 Advanced Jazz I (1)

DANCE 441 allows the student who has successfully completed DANCE 242 to continue their study of jazz technique and performance. The focus of the course is to improve capability through learning and performing more challenging choreography at a faster pace. Eight combinations of choreography are taught, to music of various types -- pop, jazz, and musical theatre. Performing with confidence and a sense of character will be emphasized. The student will also become familiar with the fundamentals of the Pilates technique to improve alignment, strength, and flexibility. The student will also be given opportunities to develop confidence in improvisation.

DANCE 441 enables the BFA Music Theatre candidate to satisfy one semester of advanced level dance training. For the Dance Minor and other students of dance, it provides challenges in technical execution and a greater range of jazz styles.

The student's grade will be determined by their attendance, attitude, and progress at learning quickly and performing the dance combinations, as well as the completion of two projects. Attendance is mandatory; more than three absences or lateness will affect the grade. The attitude should be focused, positive, receptive to correction, and eager. Progress will be assessed in frequent performance "quizzes". The mid-term and final exams will be video-taped and viewed by the class.

The two projects consist of paper and one minute of original choreography.

The paper should consist of the student's personal analysis of jazz dancing and their abilities, based on their past and present experience. The choreography should reflect work learned in class and be performed to instrumental music. The student will perform their choreography for the class.

Required dress for DANCE 441 consists of dance belt, dance pants, t-shirt and jazz shoes for men and tights and leotard, jazz and character shoes for women. Dance sneakers are not appropriate for warm-ups and certain combinations.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

DANCE 442 Advanced Jazz II (1)

DANCE 442 allows the student who has successfully completed DANCE 441 to continue their study of jazz technique and performance. The focus of the course is to improve capability through learning and performing more challenging choreography at a faster pace. Technique will be stressed, but performance and interpretation will be emphasized with the following standard in mind: to develop character, mood, and ability to improvise and choreograph jazz dance. A variety of choreographed dances ranging from pop, jazz, to musical theaters styles will be taught. Students are responsible for learning and executing all material taught in class.

The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework).

Students enrolling in this course should have successfully completed DANCE 441 or have permission of the instructor. JAZZ 442 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence.

The required dress for men: Jazz shoes, t-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes,
DANCE 451 Advanced Tap I (1.5) An advanced course in the techniques of tap dance.

DANCE 451 Advanced Tap I (1)

DANCE 451 allows the student who has successfully completed DANCE 251 and 252, or has permission of the instructor, to continue to broaden their knowledge to tap dance. The work will include expanding the student’s knowledge of tap vocabulary, rhythm, tempo and counting. The work introduces audition techniques from the dancer’s perspective and expands the awareness of proper rehearsal discipline. Professional conduct and behavior is now cultivated into a useful marketing tool. Material is taught faster and with greater detail to reinforce audition techniques and equate professional challenges. Audition classes will be held at the instructor’s discretion.

The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class.

Students enrolling in this course should have successfully completed DANCE 251, 252 or have permission of the instructor. Tap DANCE 451 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence.

The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer’s body.

DANCE 452 Advanced Tap II (1.5) A continuation of Advanced Tap I to augment technical proficiency.

DANCE 452 Advanced Tap II (1)

DANCE 452 allows the student who has successfully completed DANCE 451 to continue to broaden their knowledge of advanced tap dance. The course will emphasize a broader dance vocabulary and more complex dance combinations. The repetition and rehearsal techniques will be reinforced and intensified. The ability to communicate character and setting through dance is strongly emphasized. Material is taught faster and with greater detail to reinforce audition techniques and equate professional challenges.

The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or tardiness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class.

Students enrolling in this course should have successfully completed DANCE 451 or have permission of the instructor. Tap DANCE 452 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence.

The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer’s body.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

DANCE 461 Advanced Modern Dance I (1.5 per semester/maximum of 9) Development of dance technique and movement combinations on the advanced level.

DANCE 461 Advanced Modern Dance I (1.5)

DANCE 461 is Advanced Modern Dance. This class continues the technique foundation from DANCE 261 & 262 of exploring the use of weight, time, space, and energy in relation to a release-based modern dance technique. DANCE 461 also works with focus, style, and performance techniques. Students should gain greater technical proficiency, flexibility, strength, and alignment. Understanding and demonstrating the different uses of weight and the concept of grounding is essential. Students should begin to develop as an individual mover (personal artistic voice) and gain greater confidence in using the body as a tool of expression and communication.

Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class.

This class serves as a prerequisite for DANCE 462. Together these two semesters serve as core technique classes for all dance minors.

DANCE 466 Contemporary Movement Lab III (3 per semester/maximum of 6) An advanced exploration of modern dance techniques supported by the choreographic process.

DANCE 466 Contemporary Movement Lab III (3 per semester/maximum of 6)
DANCE 466 is an advanced level modern dance course using the choreographic process and experience as a way to enhance and further understand technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also will gain ability for self-awareness and increase in personal dance vocabulary.

Contemporary Movement Lab III will meet four hours a week, with a minimum additional 1-hour studio lab for personal discovery. CML III is designed to further expose the advanced level dancer to the choreographic process as a means of expression of modern dance as it influences the discovery of personal style and communication. The advanced level dancer will be further developed through higher levels of movement requirements: floor work, and strengthening experiences while exploring the connections of movement as a goal for communication and performance. Each class period will allow time to be spent in the traditional aspects of an advanced modern dance technique class: floor warm up and connection to center of weight, center floor balance and strengthening technique exercises and combinations, traveling sequences across the floor, and final accumulative combination.

An equal amount of time will be spent in discovering the choreographic process utilizing the tools of composition from Dance 366 and improvisation from Dance 365 to successfully communicate personal ideas or themes through fully explored dances. Students will be expected to create a number of dances/studies throughout the semester with the goal of producing one for the concert stage. Outside reading and follow up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for opportunities to express levels of comfort and personal discoveries with various experiences.

DANCE 480 Choreographic Projects (2) Choreographic practicum experiences for concert performances.

DANCE 480 Choreographic Projects (2)
This course is a forum for choreographic practicum experiences for concert performances. This course will provide an opportunity to students to develop their artistic and creative abilities in the field of dance. The student will create a group choreographic work to be presented in concert dance. This course will cover skills for advanced group dances, the creative process, selection of music of dance, costuming for dance, lighting for dance, rehearsal techniques, performance techniques, and organizational/leadership skills.

Each student will submit a written proposal of the dance s/he intends to create, specifying the number of dancers,
choreographic intent, and movement phrases as well as ideas for music, costumes, and lighting. The student will complete one choreographic dance to be performed in concert, which is presented each semester. The student must attend technical week prior to the concert, use past choreographic experiences gained from compositional study and be responsible for organizing weekly rehearsals. The student is required to hand in a self-evaluation paper reflecting on the original proposal and completed dance, and to maintain a journal throughout the semester documenting the choreographic process.

This course will be offered fall semester with an enrollment of 10 students.

DANCE 482 Introduction to Laban Movement Analysis (3) Observe and analyze movement elements by exploring concepts of Body, Effort, Shape, and Space to increase personal communication and expression.

DANCE 484 (US;IL) Dance History (3) Survey of dance history concerning perspectives of culture, race, and gender with a focus on Nineteenth and Twentieth centuries.

DANCE 485 Contemporary Dance Repertory (1-2 per semester/maximum of 12) An advanced dance course in the choreographic process with emphasis on original choreography in performance.

This is an advanced dance course in the choreographic process with emphasis on original choreography. The instructor will create an original dance on students enrolled in this course which will provide the student with performance experience in a live dance concert. The student will learn original choreography, experience and assist in the choreographic process, participate in discussions concerning choreography, performance and style. The student will keep a journal and complete written assignments which demonstrate cognitive understanding of the artistic process.

Each student will demonstrate proper rehearsal protocol and behavior, execute the choreography at a level suitable for concert performance, show an understanding of the choreographic process through written work, demonstrate growth as a dancer and artist through performance and written work and participate fully in a concert performance of the dance work created in class.

DANCE 485 Contemporary Dance Repertory (1-2)

This is an advanced dance course in the choreographic process with emphasis on original choreography. The instructor will create an original dance on students enrolled in this course which will provide the student with performance...
experience in a live dance concert. The student will learn original choreography, experience and assist in the choreographic process, participate in discussions concerning choreography, performance and style. The student will keep a journal and complete written assignments which demonstrate cognitive understanding of the artistic process.

Each student will demonstrate proper rehearsal protocol and behavior, execute the choreography at a level suitable for concert performance, show an understanding of the choreographic process through written work, demonstrate growth as a dancer and artist through performance and written work and participate fully in a concert performance of the dance work created in class.

**DANCE 487 Advanced Hip Hop Dance (1.5)**

Advanced Hip Hop Dance reinforces and expands concepts from Beginning Hip Hop Dance. Free expression of the body, freestyle, and choreography are emphasized.

Advanced Hip Hop Dance is designed for the serious minded dance student with an interest in Hip Hop dance/culture. This class provides an intensive study of dance, choreography and culture. As in Beginning and Intermediate Hip Hop Dance, freestyle dancing, locomotive movements, and choreography are emphasized. In addition, this class includes lecture sessions and discussions about Hip Hop culture and its role in society. By the end of this course students should be able to articulate why Hip Hop is a culturally significant art form and choreograph and perform a Hip Hop dance combination. This course also enhances mind/body awareness, and provides choreographic and performance opportunities. This course is directly related to dance, theatre, African American studies and other arts based and humanities based courses. Students will be evaluated on their attendance, participation in class, willingness to learn, and the effort put forth in class.

D S M 295A Field Experience in Foodservice Management (1-4) Supervised experience in a foodservice operation: analysis of food service systems.

Field Experience in Foodservice Management (1-4)

DSM 295A is designed to provide an opportunity for students to apply theories and knowledge learned in D S M 260 Management & Analysis of Quantity Food in a real life setting in order to develop the competencies related to managing the preparation and service of quality food in a non-commercial setting. The course objectives include: 1. gaining

The Pennsylvania State University
experience in supervising the production and service of food that meets nutrition guidelines, cost parameters, and consumer acceptance; 2. participating in facility management including equipment selection and design of work units; 3. conducting a food preference survey and evaluating results in order to assess consumer needs and wants; 4. translating nutrition guidelines into menus for a target population; 5. participating in the procurement and inventory management of food and supplies for a food service unit; 6. participating in quality improvement, including systems and customer satisfaction for dietetic service; 7. participating in organizational change and planning and goal-setting processes. To complete the DSM 295A assignments students must be working in a hospital, nursing home, retirement facility or a school foodservice operation where they complete directed assignments under the supervision of a Registered Dietitian or a qualified mentor approved by the Dietetic Food Systems Management Program. The foodservice operation serves as the learning environment where students develop skills related to the planning, operation, and evaluation of a foodservice operation in an institutional setting. The course assignments are designed to develop problem solving and critical thinking skills as well. Students will complete a minimum of 40 hours of supervised practice in the foodservice setting and complete a minimum of six written assignments per credit. Students enrolled for 2-4 credits will spend 40 hours per credit in the practice setting and complete more in-depth projects and written reports related to the course objectives. Evaluation methods: students will be required to submit a written report, using guidelines provided by the course instructor, at the completion of each module/assignment. These written reports will be evaluated by the course instructor. In addition, the student's mentor will evaluate the student's performance using an evaluation form designed by the course instructor.

Earth Sciences (EARTH)

EARTH 002 (GN) The Earth System and Global Change (3) An interdisciplinary introduction to the processes, interactions and evolution of the earth’s biosphere, geosphere and hydrosphere.

EARTH 002 Gaia - The Earth System (3)

(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

EARTH 002 is a broad introduction to the Earth and to the forces and processes that shape the present-day global environment. The course focuses on global-scale changes, both natural and human-induced. These include: global climate change, destruction of stratospheric ozone, and tropical deforestation, species extinction, and the loss of biodiversity.

The discussion of these modern environmental issues occupies about 40% of the course. Unlike other "environmental" courses, this one sets these issues in the context of the long-term evolution and natural variability of the Earth systems. Thus, the course is structured around three major themes--the issues of global change, time scales of change, and understanding the Earth as a system.

By the end of this course, we expect students to:

1) Recognize that:

The Pennsylvania State University
- the Earth operates as a complex system,
- there is considerable interaction between the different components of this system (e.g. atmosphere, oceans, solid Earth, and biota),
- changes in one part of the system can be expected to impact all others to a greater or lesser degree.

2) Develop an understanding of how the Earth system operates at the global scale, and the consequences this has for regional variability.

3) Understand how this system has evolved through time.

4) Understand how to use systems and graphical analyses to predict system response to perturbations.

As a result of this course, we expect students to:

1) Synthesize this information to better appreciate the complexity of modern global change issues.

2) Be in a position to make more informed judgments on the nature and seriousness of these issues.

General Education: GN
Diversity: None
Bachelor of Arts: Natural Sciences
Effective: Fall 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EARTH 100 (GN) Environment Earth (3) Natural processes and their relationship to anthropogenic influences. General principles of global cycles and the role they play in natural hazards, global warming, ozone depletion, etc.

EARTH 100 Environmental Earth Science (3) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

“Environment Earth” is designed to generate a student's interest in natural processes and the effects humans have on these processes. In addition, students are encouraged to think critically about environmental problems and discover the complexity of these issues. An emphasis on the discrepancies between political rhetoric, media reporting and scientific data provides students the opportunity to evaluate conflicting arguments for themselves.

The goals of this course are (1) to develop students' understanding about our Earth and human effects on natural resources, (2) to foster the ability to critically evaluate scientific arguments, and (3) to practice expressing reasoned opinions on complex problems. To achieve these goals, grades are based on examinations, homework assignments, written reports and oral presentations.

Exams use a traditional multiple choice format and are based on the lecture and readings. However, questions are designed to test a student's knowledge of the principles and interrelationships discussed rather than memorization of facts and terms. Homework assignments are given on approximately a weekly basis. Questions cover the most important concepts of the text and lecture and encourage consistent reading to complement lectures. These exercises have two purposes. First, the short answer nature of questions provides practice in writing logical, concise paragraphs while ensuring the student understands key concepts. Second, assurance that students are reading chapters concurrent with the lecture topics allows the instructor to interact with the class more effectively during class discussions. Two written reports are given to test a student's ability to comprehend scientific articles and explain the science and its implications for environmental policy. A wide variety of topics are suggested based mainly on newspaper and magazine articles on environmental issues, but students can select almost any topic related to the environment with prior instructor approval. Students must then research the science behind the media coverage via library and web-based resources. The class web site (http://www.geosc.psu.edu/People/Faculty/FacultyPages/Kubicki/ear100.html) is designed to facilitate searches related to course topics. Papers are judged based on the clarity of writing, the quality of scientific data included, and discussion of the implications of the research. Oral presentations debating two sides of environmental issues will be conducted. Small teams (4-5 students) will be assigned one side of an issue and each member will participate in a debate against another team. These debates will develop students' speaking and team-building, skills. Although each student will be responsible for a section of the debate, factual research will be carried out as a group to present the best overall case.

EARTH 101 Natural Disasters: Hollywood vs. Reality (3) (GN;US)
(BA) This course meets the Bachelor of Arts degree requirements.

This course investigates a variety of natural hazards and disasters. We will use the popular media as a starting point for discussions and development of tools for analyzing the causes of disasters. Using excerpted segments of "disaster films" in conjunction with scientific treatments, we can identify the causes, consequences and public perceptions of natural hazards. Small group discussions and cooperative research held "real time" in the classroom will be a major component of this course. The goal is to help students develop both an understanding of natural hazards and disasters, and enhance their understanding of scientific approaches to problem solving.

During the course approximately four to five topics selected from the list of volcanoes, earthquakes, hurricanes, tornadoes, flooding, bolloid (e.g., asteroid) impacts, and tsunami (tidal waves) will be covered. For each topic, we will incorporate the following activities: (a) short edited excerpts from disaster movies (or equivalent) of approximately 10 minutes each; (b) discussions by small groups of students (approximately 10 per group) to identify scientific issues to be addressed; (c) development of scientific background and tools via faculty lectures, tutorials, and library or web-based activities; (d) cooperative learning activities by small student groups--each group working together to address one of the identified scientific issues; (e) group presentations of results of the cooperative learning activity; and (f) individual writing activities producing focused reports on specific scientific issues. A typical topic will be covered in three weeks (six class meetings) with approximately 50 percent of the time (in class) allotted to group activities and discussion; lecturing by the faculty will involve approximately 25 percent of the time, with the remaining 25 percent of the time used for video and Wed-based presentations.

Grades will be based on participation in "breakout" group discussions and cooperative activities, writing assignments (two to three pages each) associated with each topic, and an annotated "disaster diary" of natural disasters which have occurred during the course. Each writing assignment will be aimed at a client audience (e.g., municipal government, businesses, or the general public) and written to explain the exposure to natural hazards or potential for disaster faced by the client.

This course has no prerequisites and should be accessible to all students. Through cooperative activities students can benefit from the range of expertise brought to the course by their colleagues and thus address scientific issues beyond the reach of any individual.

EARTH 103 (GN) Earth in the Future: Predicting Climate Change and It's Impacts Over the Next Century (3)
(3) Climate predictions for the coming century are utilized to examine potential impacts on regions, sectors of society, and natural ecosystems.

EARTH 103 Earth in the Future: Predicting Climate Change and It's Impacts Over the Next Century (3)

(3) This course meets the Bachelor of Arts degree requirements.

The United States is actively working on national assessment of the impacts of the climate change predicted to occur over the next century. The U.S. National Assessment has developed three major documents, an Overview written for Congress, a Foundation document giving the sources of information and their interpretation, and a series of regional (e.g. Northeast, Midwest, etc) and sector (water, health, agriculture, forests, and coastlines) reports. These reports present an exceptional opportunity to connect advances in the natural sciences to society. The course has four major objectives: (1) to gain an understanding of climate science and of the possible scenarios of how climate may change in the future; (2) to analyze the linkages between climate and major human and natural systems (e.g. agriculture, human health, water, coastal ecosystems, and forests), necessary to assess the potential impacts of climate change; (3) to demonstrate that the impacts of climate change, and the way in which society responds, depend on factors such as age, economic capability, lifestyle (e.g. urban vs. rural), generational differences, and cultural differences; and (4) to understand the different types of responses that humans may have to climate change, including adaptations to change and possible mechanisms to mitigate the factors that are forcing change to occur.

The course includes smaller enrollment computer laboratory/discussion sessions designed to (1) provide hands-on data analysis and interpretation and the exploration of climate linkages to natural and human systems; (2) promote discussion and formal debate around key issues; and (3) develop tools to assess class perceptions of vulnerabilities and appropriate responses. Several of these elements will be developed with a team or group approach. Grading will be based primarily on a student record, or portfolio, stemming from a combination of lab exercises, written material, and debate materials.

Tests on lecture material will be a secondary evaluation mechanism. This course fulfills a Natural Sciences General Education requirement, as well as course requirements for the Earth major. It provides a natural partner to Earth-as-a-System (Earth 002) that focuses on Earth system concepts and the scientific evidence for a changing planet throughout Earth history and into the future.

General Education: GN
Diversity: None
Bachelor of Arts: Natural Sciences

The Pennsylvania State University
EARTH 105 (GN;IL) (AFR 105) Environments of Africa: Geology and Climate Change (3) Significant natural features of Africa as related to human endeavor; case studies include the Nile, climate change, and natural resources.

EARTH (AAA S) 105 Environments of Africa: Geology and Climate History (3) (GN;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

"Environments of African: Geology and Climate History" investigates the interrelationships between geology, hydrology, land use and human development in several areas of Africa. We focus primarily on regions north of the equator, although there is a brief segment on South Africa mining. Specific topics include the Nile River (sources of the Nile, agricultural practices, effects of damming the Nile, hydropolitics), the Sahara and Sahel (salt mines, climate change, drought, water resources), and natural resources and their role in politics (gold, diamonds, oil, and gas). The theme of climate change cuts across the entire semester. The quantitative and analytical components of the course involve working through a combination of map exercises and data manipulations (flood stage, groundwater age, rainfall and temperature records). Writing exercises are conducted both individually (essays, analysis of readings) and in collaborative teams (climate change analysis). Readings for the course come from the popular scientific literature, current refereed research journals, and transcribed oral histories of African people. Faculty lectures will comprise ~30% of the course, and student presentations ~20%, with the remainder of the time devoted to in-class collaborative exercises. There are no pre-requisites for this course. It will be offered annually with a maximum enrollment of 100 students.

The goals of the course are to (1) introduce the scientific study of Africa; (2) develop quantitative and scientific reasoning skills; (3) explore the relationship between human society and the natural world. The topics that we explore (e.g., global climate change, allocation of limited water resources) are important political issues that affect people in developed and developing countries throughout the world. It is crucial that the next generation of citizens be informed as to how scientific data is obtained, presented, and interpreted by scientists as well as politicians. Students will work individually and (more commonly) in teams to analyze real data from natural African systems, and will then report their findings to the class both orally and in writing. Examples of the data sets include 100-year records of monthly rainfall and temperature from stations throughout the continent, fossil suites from ancient lake cores in the modern Sahara, and historical writings of Nile flood levels from pre-Biblical times. Through these exercises students will gain an appreciation of the scope of geographical time and change, and will be able to incorporate this new long-term perspective into identification and resolution of modern questions.

EARTH 106 (GN) The African Continent: Earthquakes, Tectonics and Geology (3) Study of earthquakes and seismic waves to learn about the geology and plate tectonics of the African continent.

EARTH 106 Shaking Up Africa: The Geology and Tectonics of Africa (3) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Earthquakes are natural phenomena that can cause immense human suffering because of intense ground shaking, and are consequently of great societal importance. Earthquakes are also important because the seismic waves that generate the ground shaking provide scientists with important information about Plate Tectonics and geology, in particular information about the structure and composition of our planet and how the insides of the planet are deforming. In this course, earthquakes in Africa and the seismic waves they generate are used to help students to learn about the geology of Africa and how the earth beneath the African continent is being deformed by Plate Tectonics.

EARTH 106 is designed in four modules. Modules, in turn, are divided into weekly lessons. Offered in a "hybrid" format, each weekly lesson includes a single face-to-face class meeting, complemented by online reading assignments, self-check learning activities, and discussions. The online, hands-on learning activities are similar to the labs conducted in similar courses that are offered solely in face-to-face environment, including the manipulation of geographic data, map reading exercises, and rock and mineral identification activities. They are designed to help students learn skills and knowledge that they then apply to a course project. While the weekly lesson activities involve working with seismic data from East Africa, the course project requires students, working in small groups, to apply their skills and knowledge to another geographic area of the African continent. In addition to the weekly lesson activities and the course project, students are required to complete weekly quizzes that assess comprehension of the online reading assignments. Quizzes that come at the end of a module also assess the skills and knowledge addressed in the lesson learning activities for that module.

This course is a general education offering in natural sciences (GN) and is open to all students regardless of academic major.

EARTH 111 (GN;US) Water: Science and Society (3) Investigation of water behavior and occurrence, its relevance to life, human activities, politics, and society.

EARTH 111 Water: Science and Society (3) (GN;US)

The Earth is often called "The Blue Planet", a reference to the fact that over two-thirds of its surface is covered by water. Despite its apparent abundance, water is a valuable and limited resource; less than 2.5% of the water on the planet is fresh, and only one third of that is potable. And that's not all - the small fraction of Earth's water that is usable to humans is distributed very unevenly. As a result, conflicts over water occur from the local level, for example: pitting rancher against developer - to the global level, at which nations square off against one-another in war and use water as a mechanism for imposing sanctions. The dire situation in some regions has spurred numerous research and technological endeavors, such as water desalinization, genetic engineering of crops, and major overhauls of agricultural practice.

In this course, we will explore the relationships between water and human populations, with emphasis on water resources and quality in the Western U.S., and how these have shaped history and modern politics. We will focus first on developing the scientific underpinnings of water's unique properties, behavior, movement, occurrence, and quality. With this background, we will then discuss key issues relating to modern and historical conflicts, human impacts on the natural world, and human engineering accomplishments driven by our thirst for this valuable resource. We will discuss historical examples from the American West, specifically the development of water resources in Colorado and California. We will also explore modern and historical conflicts between stakeholders. Major themes will include political and economic conflicts over (1) water resources - for example, balancing agricultural and urban demands in the American west in the Denver and Los Angeles metropolitan areas, (2) water quality - for example, considering the impact of economically profitable human activities on water quality and transmission of disease, and (3) human impacts on natural processes, specifically connecting human activity with our cultural history of water use and exploration in the American West. Our approach is to include a substantial component of student-initiated learning. The course will include critical evaluation
and discussion of assigned reading and films, a series of laboratory exercises and field trips to illustrate concepts and stimulate discussion, and a major research paper.

EARTH 150 (GN) Dinosaur Extinctions and Other Controversies (3)
Diversity: None
Bachelor of Arts: None
Effective: Summer 2006

One of the most dramatic developments in the Earth sciences is the suggestion that extinction of the dinosaurs was caused by a meteorite impact. Evidence for and against this controversial idea is just one of the subjects addressed by this course, dealing broadly with the history of our planet, the evolution of life upon it, and the sometimes rocky development of our understanding of Earth history. In addition to dinosaur extinction, we will discuss issues relating to catastrophic vs. gradual theories about the Earth's history, fossils and the history of life, and mass extinctions, including whether or not we're in the middle of one now. How are scientific discoveries made? What distinguishes a scientific argument from a non-scientific one? What roles do social and historical factors play in the construction and acceptance of scientific theories? Questions such as these will permeate the course. Readings will include selected texts by leading scientists, with supplements from the primary scientific literature, including current discoveries published in Science and Nature.

EARTH 240 (GN) Coral Reef Systems (4)
Diversity: None
Bachelor of Arts: None
Effective: Summer 2009

The course introduces students to coral reef environments, past and present. It describes the processes that control the distribution, growth, and morphology of reefs and introduces students to the complexity of the coral reef ecosystem. The course emphasizes the role that reefs play in the natural environment and examines their importance to society both globally (e.g. in terms of biodiversity and its potential benefits) and locally in terms of, for example, food supply and tourism. We then look at the natural disturbances (such as disease, storms, sea surface temperature variations) that affect
the reef, as well as ways in which reefs are threatened from human impacts, with an emphasis on global climate change and the long-term outlook for reef survival.

Students will work in groups to research elements of the system, first at a global scale, and then focusing specifically on one region -- the Bahamas platform. Students will look at the history of the Bahamas platform and its relationship to the present nature and distribution of coral reefs. They will then examine these in the context of their social, cultural, and economic importance to local communities. A third component of the course will concentrate on the identification of vertebrate and invertebrate species and substrate conditions that are important indicators of reef health. There will then be a one-week field trip to a coral reef system to conduct reef surveys. The surveys follow the Reef Check protocol (a volunteer, community-based monitoring protocol designed to measure the health of coral reefs on a global scale). Reef Check is administered out of the University of California at Los Angeles.

The coral reef surveys will be conducted on scuba and the field trip and participation in the survey are required elements of the course. Students who are not scuba certified will be given the opportunity to obtain open water scuba certification as part of the course, through Penn State's Science Diving Program (The PSU Science Diving Program is a member of the American Academy of Underwater Sciences). There will be an additional charge for the scuba certification course and the field trip.

Student assessment will be through group presentations, term papers, 3 exams and their contribution to the field program. The course satisfies part of the field requirement for the University's Marine Science Minor and serves as an introduction to the Science Diving Program.

EM SC 100S (GWS) Earth and Mineral Sciences First-Year Seminar (3) Writing, speaking, and critical thinking skills applied to topics of general interest in Environmental and Materials Science.

EM SC 100S Earth and Mineral Sciences First-Year Seminar (3) (GWS;FYS)
The EMS First-Year Seminar is designed to encourage students to begin the important process of “thinking for a living.” The primary focus of the seminar is to promote critical reading and thinking skills, and to help students develop effective written and oral arguments. Students learn the importance of reading, sharing ideas and collaborating, through independent and group research, discussion and debate.

We want our students to think about some of the major issues facing the world today, the role that science and technology have played in defining and addressing these issues, the way in which present-day thinking has been shaped by the past, and the development of scientific thought. The Seminar’s content focuses on communication skills, but these are addressed within the context of issues relevant to the disciplines represented in EMS. As such, the discussions range across topics such as the Earth and its resources; scientific and technical aspects of global habitability; development of the advanced materials necessary for sustaining and advancing civilization in the 21st century; and the social, economic, and political factors that shape and constrain society’s view of the Earth system.

Students undertake three to five major writing projects throughout the semester, as well as several smaller one to two paragraph written assignments. Grades are determined from their performance on the written papers, oral presentations, and in-class participation.

The Seminar is a required course for all EMS first-year students at the University Park campus and, together with English 015 and either English 202 or Speech Communications 100, will satisfy the Writing and Speaking requirements of General Education.

EM SC 101 (US;IL) Resource Wars (3) "Resource Wars" presents an analysis of natural resources and how competition for them shapes national and international cultures and geopolitics.

EM SC 101 Resource Wars (3) (US;IL)
The faculty of the College of Earth and Mineral Sciences are uniquely qualified to teach “Resource Wars”, a course that presents an analysis of natural resources and how competition for them shapes contemporary and historical culture and geopolitics. "Resource wars" will examine the extent to which the Gulf War of 1991, the explosive conflict between the United States and Islamic extremists, and present engagement in Iraq are manifestations of a foreign policy that comes from a desire for resource security. While the current Iraq war is the most recent manifestation of the clash between US and IL cultures, there are many examples of past resource wars in world history. Although the present conflict in the Middle East is about petroleum, past conflicts involve the entire spectrum of natural resources from gold and diamonds to
rubber and tea to water, clean air, and living space. Class discussion will meld the technical aspects of discovery and extraction with its impact on society from a cultural and geopolitical points of view (US & IL).

Technical analysis starts with the geology of the natural resource. The extraction, harnessing, or mining of that natural resource and resource transportation come next. The use of that natural resource as a material follows. Of course, short term and long climatic instability may play roles. The human elements (US & IL) involved in the trading and development of the resource lead to both armed interstate conflicts and intrastate disputes. Cultural questions might include how the digital age impact resource control and trade, how global resource distribution impacts energy security and utilization, and how international resource competition impacts the climate. Ultimately, the class is led to an understanding about how scarcity has impacted cultures throughout human history (US & IL).

The tentative plan is that each lecture period consists of two parts starting with a moderator (the lead faculty member throughout the entire semester) who summarizes the resource under discussion in a 10-15 minute introduction. Then, appropriate EMS faculty will offer detailed accounts of their particular expertise. This format requires two 75-minute classes per week (30 per semester).

The moderator shall be responsible for grading the class including the discussion and written responses in a large classroom format (50+ students) taught in one lecture hall. Active learning shall include discussion sessions with a wireless response pad technology for in-class interaction between student and instructor.

Professional e-Portfolio Development (1 per semester) Design, creation and critique of on-line portfolios for personal and professional development. This course is for second-, third-, and fourth- year EMS students.

**EM SC 300 Professional e-Portfolio Development (1 per semester; maximum of 4)**
The EM SC 300 course on Professional e-Portfolio Development is intended to help second-, third-, and fourth-year undergraduate students in the College of Earth and Mineral Sciences adopt proactive, strategic approaches to planning their Penn State careers and developing professional and personal goals for life after graduation. As a vehicle for reflective learning and professional development, the course will require each student to design, create, and maintain an on-line portfolio that contains evidence of his or her curricular and co-curricular activities. The course will be team-taught with faculty and staff members of Penn State's Office of Career Services, who will provide students with career assessment sessions, videotaped mock interviews, and one-on-one consultation with alumni career coaches. In addition, students will develop or improve the information design and technology skills needed to become active producers, rather than passive consumers, of Web-based information. EM SC 300 will serve as a career-oriented follow-on to EM SC 100S, the EMS First Year Seminar. The course will be offered every Spring semester for one credit. Students and instructors will meet for one two-hour session each week in a technology classroom in which all students have access to networked personal computers. Students will be allowed to take the course up to four times. Within each course section, students will be working in groups based upon the extent of their previous experience in the class. Repeat students will be expected to mentor first-time students. For example, experienced students may be asked to demonstrate advanced skills, provide technical support, and help conduct mock interviews (under the supervision of Career Services staff and interns). Student performance will be evaluated on the basis of participation, skills improvement, fulfillment of individual course goals, the ability to offer and accept constructive criticism, and collaboration (helping fellow students to achieve their goals).

EM SC 440 Science Diving (4) Science Diving (4)

EM SC 440 is a four credit intermediate science diving course for students already holding a basic open water scuba diving certification from an internationally recognized certification agency (e.g. PADI, NAUI, CMAŚ, YMCA, SSI etc.).

Scientific diving is concerned with the observation of underwater phenomena and the acquisition of scientific data. This course introduces students to advanced scuba diving skills following the standards established by the American Academy of Underwater Sciences (AAUS) -- with a significant emphasis on diver safety.

The course covers theoretical aspects of the physics of diving, dive physiology, and underwater environments. There is a strong emphasis on diver safety with theoretical and practical training in cardiopulmonary resuscitation, diving-related first aid, accident management and dive rescue. The course will cover advanced recreational diving techniques, including deep diving and enriched air (nitrox) diving. A significant component of the course will involve scuba diving accident analysis, the focus of the course textbook. The course will also include an introduction of advanced underwater sign language.

The course will include classroom sessions, pool sessions, and open water dives focusing on underwater skills development for eventual application in research settings.

Each government or university underwater research program certifies its own divers based on standards that, at a minimum, conform to those of the AAUS. Successful completion of the course will allow the student diver in training to enroll in EM SC 441, Advanced Science Diving. Successful completion of EM SC 441 will allow the student diver in training to apply for science diver certification from the Penn State Science Diving Program. Certification is also dependant on a medical examination and is at the discretion of the University Dive Safety Officer; it is not automatically offered on completion of the course. The course is usually offered once a year in the spring semester and will involve several day trips (usually at weekends) to various river, lake, and quarry locations within the state. There will be an additional fee charged to cover the costs of the open water dives and administrative charges for recreational dive certifications.

EM SC 441 Advanced Science Diving (4) Advanced scuba diving skills applied to underwater data collection and research.
EM SC 441 Advanced Science Diving (4)

EM SC 441 is a four credit advanced science diving course for students who have completed EM SC 440 (Science Diving), an equivalent course at a recognized AAUS member institution, or have been approved by the University Dive Safety Officer based on acceptable demonstration of practical and academic dive experience. Students must have a minimum of 20 logged dives beyond their basic open water certification dives by the start of the course.

Scientific diving is concerned with the observation of underwater phenomena and the acquisition of scientific data. This course introduces students to some of the basic skills and techniques used in scientific diving, following the standards established by the American Academy of Underwater Sciences (AAUS) -- with a significant emphasis on diver safety.

The course covers theoretical aspects of science diving techniques. The course will focus on advanced techniques in underwater ecology, geology, paleontology and archaeology, leveraging expertise from PSU faculty in these disciplines. The course will include classroom sessions, pool sessions, and open water dives. The classroom and pool sessions and the open water dives will involve skills development and their application in research settings. Research will involve a variety of projects (e.g. fish surveys, lake sediment sampling for climate reconstruction, underwater mapping) – the exact nature of which will vary depending on the areas of expertise of the faculty and students involved.

Each government or university underwater research program certifies its own divers based on standards that, at a minimum, conform to those of the AAUS. Successful completion of the course will allow the student diver in training to apply for science diver certification from the Penn State Science Diving Program. Certification is also dependant on a medical examination and is at the discretion of the University Dive Safety Officer; it is not automatically offered on completion of the course. The course is usually offered once a year in the fall semester and will involve several day trips (usually at weekends) to various river, lake, and quarry locations within the northeastern United States. There will be an additional fee charged to cover the costs of the open water dives and administrative charges for recreational dive certifications.

**ECON 083S** (GS) First-Year Seminar in Economics (3) Experiments in microeconomic principles.

**ECON 083S First-Year Seminar in Economics (3)**

(GS;FYS)

(BA) This course meets the Bachelor of Arts degree requirements.

The principal objective of the course is to engage students in active learning of macroeconomic principles, by using economic experiments to exploit the natural curiosity of students about economic affairs. Through these experiments, students will have an opportunity to ponder the questions, rather than simply being given answers. By the end of the course, students should have a good grasp of basic principles of microeconomics, and they will also have learned how to carry out and prepare written reports of laboratory experiments in economics. Students will work in teams, do analyses of the data generated by the in-class experiments, and prepare written reports of these analyses in lab reports. They will also be assigned homework to be done in the same groups and designed to help them solidify the ideas that they have explored. The textbook for the course will be Bergstrom and Miller, Experiments in Economic Principles (1997), which includes 13 experiments covering the topics identified in the previous section.

The Pennsylvania State University
The course provides an introduction to macroeconomic principles based on laboratory experiments, with students who serve to conduct the experiments and also serve as participants. As such, it constitutes an excellent introduction to a major branch of economics. The course also will be a general education and Bachelor of Arts social/behavioral sciences course.

ECON 102 (GS) Introductory Microeconomic Analysis and Policy (3) Methods of economic analysis and their use; price determination; theory of the firm; distribution.

ECON 102 Introductory Microeconomic Analysis and Policy (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Economics is the study of how people satisfy their wants in the face of limited resources. One way to think about economics is that it is a consistent set of methods and tools that is valuable in analyzing certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Macroeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth. Microeconomics deals with the behavior of individual households and firms and how government influences that behavior; it is the subject of this course.

More specifically, ECON 002 is an introduction to microeconomic analysis and policy. The principal objective of the course is to enable students to analyze major microeconomic issues clearly and critically. Students will be introduced to the methods and tools of economic analysis, and these analytical tools will be applied to questions of current policy interest. Learning these methods and tools and applying them to interesting policy questions and issues is sometimes called "thinking like an economist." An important goal of this course is to take each student as far down the road of "thinking like an economist" as possible.

A variety of mechanisms are used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, and group projects.

ECON 002 is an introductory course in economics and as such, serves as a prerequisite for several microeconomics-oriented 300-level courses. It is also a required course for all majors and minors in economics, and meets requirements for a General Education (GS) or Bachelor of Arts social science course.

ECON 104 Introductory Macroeconomic Analysis and Policy (3)
(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Economics is the study of how people satisfy their wants in the face of limited resources. One way to think about economics is that it is a consistent set of methods and tools that is valuable in analyzing certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Microeconomics deals with the behavior of individual households and firms and how that behavior is influenced by government. Macroeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth; it is the subject of this course.

More specifically, ECON 004 is an introduction to macroeconomic analysis and policy. The principal objective of the course is to enable students to analyze major macroeconomic issues clearly and critically. Students will be introduced to the methods and tools of economic analysis, and these analytical tools will be applied to questions of current policy interest. Broadly, the course focuses on the determination of national income, on unemployment, inflation, and economic growth in the context of a global economy, and on how monetary and fiscal policy, in particular, influence the economy. Learning the methods and tools of economics and applying them to interesting policy questions and issues is sometimes called “thinking like an economist.” An important goal of this course is to take each student as far down the road of “thinking like an economist” as possible.

A variety of mechanisms is used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, and group projects.

ECON 004 is an introductory course in economics, and as such, serves as a prerequisite for 300-level courses in intermediate macroeconomic analysis, international economics, and money and banking. It is also a required course for all majors and minors in economics, and meets requirements for a General Education or Bachelor of Arts Social Science (GS) course.

(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Economics is the study of how people satisfy their wants in the face of limited resources. One way to think about economics is that it is a consistent set of methods and tools that is valuable in analyzing certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Microeconomics deals with the behavior of individual households and firms and how government influences that behavior. Macroeconomics, the subject of this course, is concerned with economy-wide factors such as inflation, unemployment, short-run fluctuations in economic activity, and overall economic growth.

More specifically, ECON 104H is an honors introduction to macroeconomic analysis and policy. The principal objective of the course is to enable students to analyze major macroeconomic issues clearly and critically. Students will be introduced to the methods and tools of economic analysis, particularly the use of models, and these analytical tools will be applied to questions of current policy interest. Learning these methods and tools and applying them to interesting policy questions and issues is sometimes called “thinking like an economist.” An important goal of this course is to take each student as far...
down the road of "thinking like an economist" as possible. This honors version of the course goes into greater depth on a
number of topics as compared to the non-honors version. In particular, it covers some material that is normally not
included in ECON 104 but rather in ECON 304, the intermediate macroeconomic theory course.

Several different mechanisms are used to assess student performance. These evaluation methods typically include exams,
homework assignments, and assessment of class participation.

ECON 104H is an introductory course in economics and as such, serves as a prerequisite for three
macroeconomics-oriented 300-level courses (304, 333, 351). It is also a required course for all majors and minors in
economics, and meets requirements for a General Education (GS) or Bachelor of Arts social science course.

ECON 302H Intermediate Microeconomic Analysis (Honors) (3)

( BA) This course meets the Bachelor of Arts degree requirements.

There are two branches within the discipline of economics: microeconomics, focused on the behavior of individual economic actors (consumers, firms, and government) and macroeconomics, focused on economic aggregates (e.g., inflation, unemployment, aggregate economic growth). There are four core courses in economics that are required of all majors and minors: introductory and intermediate courses in microeconomics and macroeconomics. This course is the upper-level core course in microeconomic analysis.

Students will learn, at a deeper level than that covered in the beginning microeconomics course (ECON 002), and with
extensive use of calculus, about supply and demand, consumer theory, the theory of the firm, market structure and market power, factor markets, and extensions to consider uncertainty, missing markets, and limited information. Students will develop their analytical skills for analysis of microeconomic issues. These skills, in turn, will be required for a substantial number of 400-level microeconomics-oriented courses.

This course is a follow-on to the introductory course in microeconomic analysis, its prerequisite, going more deeply into the material covered in that introductory course in microeconomic analysis, and making extensive use of calculus. It is, in turn, a prerequisite for a large number of microeconomics-oriented courses at the 400 level. This honors version is designed to provide the opportunity for stronger students to pursue this key course at a more rigorous and in-depth level.

General Education: GS

**ECON 304H Intermediate Macroeconomic Analysis (Honors) (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

There are two branches within the discipline of economics: microeconomics, focused on the behavior of individual economic actors (consumers, firms, and government) and macroeconomics, focused on economic aggregates (e.g., inflation, unemployment, aggregate economic growth). There are four core courses in economics that are required of all majors and minors: introductory and intermediate courses in microeconomics and macroeconomics. This course is the upper-level core course in macroeconomic analysis.

Students will learn, at a deeper level than that covered in the beginning macroeconomics course (ECON 004), and with extensive use of calculus and economic models, about the measurement and structure of the national economy, long-run economic performance and the factors that influence it, business cycles and macroeconomic policy, and the environment and institutions that are pertinent to macroeconomic policy. Students will develop their analytical skills for analysis of macroeconomic issues. These skills, in turn, will be required for several 400-level macroeconomics-oriented courses.

This course is a follow-on to the introductory course in macroeconomic analysis, its prerequisite going more deeply into the material covered in that introductory course in macroeconomic analysis, and making extensive use of calculus and formal models. It is, in turn, a prerequisite for a number of macroeconomics-oriented courses at the 400 level. This honors version is designed to provide the opportunity for stronger students to pursue this key course at a more rigorous and in-depth level.

**ECON 306 Introduction to Econometrics (3)** The implementation of statistical techniques to analyze data and address economic questions. Econometric results are produced and assessed.

**Introduction to Econometrics (3)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
ECON 306H Introduction to Econometrics (3)

In this course students learn basic quantitative methods used in applied economics, focusing on linear regression models and their applications. The course will cover topics similar to those covered in ECON 306 but with more mathematical rigor (i.e., using calculus). Following an introduction and reviews of probability and statistics, the course will focus on: (1) the statistical properties of commonly-used estimators and test statistics in regression models, (2) how to use them in practice for statistical inference, and (3) the issue of endogeneity and instrumental variables. Students will study both practical and theoretical aspects of econometrics, by which they will be able to implement the basic methods in practice and to understand the limitations of these methods.

This course is an honors version of the second quantitative course in economics that is now required of all economics majors. As noted above, students will learn both theoretical and practical aspects of econometrics, so that they will be able to carry out econometric analyses of data.

Evaluation of student performance will be based on homework assignments, midterm exams, and a final exam. Typically, the homework assignments would account for 20 percent of the overall course grade, each of two midterm exams would count for 25 percent of the grade, and the final exam would count for the remaining 30 percent of the grade.

This course has ECON 106/106H, Statistical Foundations for Econometrics, as a prerequisite, and will use calculus. Further, the course is a prerequisite for advanced course work in econometrics, such as ECON 465W, ECON 466W, and ECON 483W, as well as other 400-level courses requiring econometrics.

ECON 403W The Economics of Arts and Entertainment (3) Supply and demand of creative goods and services; industry structure; role of information; policy issues.

The Economics of Arts and Entertainment (3)

This course surveys the economics aspects of media, art, and culture. Utilizing the latest work from economic journals, students will look at the world of pop culture through an economic lens. The course is divided into four sections: 1) supply and demand, 2) industry structure, 3) the role of information, and 4) policy. The supply and demand section will consider the nature of creative goods, the supply of varying types of creative goods, and word of mouth demand. The industry structure considers the impact of economics of scale and trade, production networks, power, and bargaining. The role of information looks at the role of reviews, peer-sharing, and the impact of star power on artistic industries. The policy section will consider intellectual property rights; ethnic, racial, and gender equity in the performing arts; public financing of art; and the economic effect of concerts on geographic areas.

The primary objective of this course is to look at the world of pop culture through the lens of economics, and use the tools of economic analysis to analyze the economics of artistic industries. Students will develop their analytical skills in the course. In addition, since this is a writing-intensive seminar, students will also develop their skills in writing in economics.

This course is one of a series of writing-intensive 400-level seminars in seven broad areas of economics. This course is an applied microeconomics course. The course will count both toward the major and the minor in economics.

ECON 406W The Economics of Social Conflict (3) Economic theory of the resolution of social conflicts: social choice theory, voting, noncooperative games, voluntary trade, and allocation by force.
ECON 406W The Economics of Social Conflict (3)

This course is devoted to the economic theory of the resolution of social conflicts. The first two-thirds of the course will cover economic models of social choice, majority rule, and voluntary trade. The latter part of the course will focus on the emerging theory of allocation by force.

The course is an advanced writing-intensive seminar in which students will learn about economic theories of social conflict. It is one of a series of 400-level seminars in each of seven broad areas of economics, and this course constitutes a seminar in microeconomic theory. The course counts toward both the major and the minor in economics.

ECON 407W Political Economy (3) Applications of the tools of game theory to analyze topics in collective decision making.

ECON 407W Political Economy (3)

The course covers two main topics. First, the course will analyze elections as a mechanism to aggregate preferences of the electorate. It will be shown that elections provide a good tool to strike a compromise between all members of the electorate if the scope of disagreement in the electorate is one-dimensional. A simple model of taxation in which citizens’ preferences over tax rates are “one-dimensional” in the above sense will be developed. This model will be used to predict how tax rates in democratic countries change with the income distribution. It will be shown next that no satisfaction mechanism of preference aggregation exists in a slightly more general model of taxation. This result is a special case of the famous Impossibility Theorem by Arrow.

Secondly, conditions will be given under which elections are a good mechanism to aggregate information that is spread throughout the electorate. It turns out that theories of information aggregation yield a convincing theory about abstention. A model in which the less informed voters delegate the decision to the more informed voters by simply abstaining will be discussed. The discussion of political debates and the media will be framed in terms of an information aggregation model. Finally, the potential of information aggregation theories to explain social movements will be discussed.

Game theory provides a framework to think about many issues in the social sciences. This particular course focuses on some applications of game theory to politics. The first, and very specific goal, is to use the lens of game theory to understand the workings of various political institutions. The second, more general, goal is to enable students to apply game-theoretic reasoning to a wide range of topics in the social sciences. The third is to make the research frontier in the field of political economy as accessible as possible. It is hoped that students would get a better understanding of what graduate school would be like.

This course has as its broad objective to expose students to the use of the tools of game theory to analyze collective decision making. Students will learn how to use economic theory to analyze real-world situations of collective decision making. They will develop their analytical skills as well as their skills in writing in economics.

The writing-intensive course is one of a series of 400-level writing intensive seminars that the Economics Department is offering to its advanced undergraduates in seven different area of economics. This seminar is in the area of microeconomic theory.

The course will count toward the major and the minor in economics as a 400-level course. Further, it will count toward completion of a module (specialization) in the area of theory and quantitative methods.

ECON 408W Intellectual Property (3) A comparative and cost-benefit analysis of intellectual property that examines patents, copyrights, government supported research, and prizes.

ECON 408W Intellectual Property (3)

We live in a society that has a decentralized system based on the institutions of private property and trade. In such a system, things belong to people and can be transferred by their owners to other people. An exchange that moves something to someone who values it more than its present owner produces a net benefit, which may be shared between the parties to the exchange. Thus such a system tends to move everything to those who most value it, producing an efficient allocation of goods and services. The logic and limitations of this process make up the branch of economics called price theory.
The course undertakes an examination of intellectual property, a subfield of property rights.

In the context of intellectual property, there are five specific areas of note: patent races, poorly constructed incentives, standards, licenses, and an examination of costs. There are three factors relevant to the costs of providing legal protection to some particular sort of intellectual property. One is how easy it is to define and defend property in that sort of idea. Another is the degree in which someone who creates and claims ownership in that particular sort of intellectual property reduces, by so doing, the options available to other people. The more serious these problems are, the less the gains from defining and enforcing property rights in ideas. Where they are sufficiently serious, we are better off with an intellectual commons—a legal regime in which certain classes of ideas are free for all to use than with intellectual property. These three costs must be balanced against the benefits—production of more and better intellectual property and better coordination of intellectual property once produced. The larger these benefits are likely to be, the greater the costs we are willing to bear in order to get them.

The course objectives are to apply the framework of comparative and cost-benefit analysis to the study of intellectual property. The course will examine the empirical evidence, and also consider policy issues in this area.

**ECON 409W Economics of Terrorism (3)** Terrorism throughout history; economic causes, costs, sources, and consequences.

This microeconomics seminar examines the economics of terrorism. Beginning with a survey of terrorism through history and extending to terrorism in the 21st century, economic tools are deployed to better understand the causes and sources of terror.

Terrorism imposes substantial economic costs, but there are also significant costs with policies to combat terrorism. A society is better off if the threat of terrorism can be reduced, or even eliminated, just as it is better off if the threat of crime can be reduced or eliminated. There are some economic roots of terrorism, but these have more to do with the incentives and constraints that individuals and organizations face than with any specific set of easily quantifiable factors that push people toward involvement in terrorist organizations. This suggest that policy responses to terrorism need to be multi-faceted and flexible. Security policies, for example, need to be more cost effective, in order for both to achieve results and to limit the negative consequences of devoting excessive resources to security purposes. Similarly, aid policies need to concentrate on achievable objectives, both to obtain positive results and to provide a more representative and optimistic outlook on the future. Policies need to be targeted at filling in the voids left by weak states and shifting incentive structures within societies away from the use of violence.

**ECON 411W Behavioral Economics (3)**

Behavioral economics examines recent evidence from experiments that seems to violate the hypotheses of economic rationality in traditional microeconomic theory. The course considers, among others, the following three topics: (1) Altruism in human behavior, as demonstrated, for example, in public goods experiments where people typically contribute some positive amount, even with the individually optimal strategy being to contribute nothing. (2) The prevalence of co-operative behavior in societies, which seems essential to their functioning, but which is hard (but not impossible) to
explain on the basis of the actions of purely self-interested individuals. (3) Fairness in distribution: for example, people
do not try to extract everything that their partners or opponents can give even when they are in a position of power (as in
being the proposer of a take-it-or-leave-it offer).

Students play some well-known games with each other to generate examples of their own behavior in multi-person
interaction contexts; the results of the games are analyzed to detect regularities in the observed behavior; and the class
discusses possible explanations drawn from economics, evolutionary biology and psychology as to why people
(specifically the students) played the way they did in these games.

Overall, then, students will learn about various aspects of behavioral economics, including several games and evolutionar
models of social behavior, and how these aspects square with conventional economic theory. Students will develop the
skill of analyzing behavior from a behavioral economics perspective.

This course is a 400-level seminar, part of the Economics Department's offerings, many of them writing-intensive, for our
advanced students in each of seven broad areas of economics. This writing-intensive seminar is in the area of
microeconomic theory. The course will count toward both the major and the minor in economics.

ECON 412 Labor Economics and Labor Markets: Theory, Evidence, and Policy (3) Advanced topics in labor economics:
theory, empirical evidence, and policy.

This course is an advanced course in labor economics. Its coverage of topics overlaps somewhat with the topics covered in
ECON 315, but typically the treatment of the topics considered will be distinctly more rigorous for this 400-level course.
The broad areas that will be focused on in the course include labor supply, investment in human capital, labor demand,
(wage determination, search and unemployment, and earnings inequality.

The objective of this course is to introduce students to topics in labor economics with a rigorous and advanced analytical
approach. For each topic, the course will consider the underlying theory, pertinent empirical evidence, and implications for
public policy. The instructional and educational objectives are to provide students with a strong background in labor
economics. This will allow them to take advanced seminar courses in the labor field.

This course is an advanced introduction to labor economics, and as such has a prerequisite of either ECON 302  or ECON
315. In turn, this course will serve as a gateway to advanced seminar courses in labor economics at the 400 level that the
Economics Department is in the midst of creating. The course will count toward both the major and the minor in
economics.

ECON 413W Economic Growth and the Challenge of World Poverty (3) Economic prosperity in historical perspective; recent
successes (East Asia, China, India); ongoing challenges (the bottom billion; sub-Saharan Africa).

ECON 413W The Challenge of World Poverty (3)
This course will first consider economic growth and the spread of economic prosperity in historical perspective. Then
contemporary success stories, including the East Asian miracle and growth in China and India, will be studied. The last
part of the course focuses on the poor worldwide, and examines poverty traps in Africa, why aid doesn’t work, and why
 globalization hasn’t helped.

Students are expected to learn about the barriers to reducing world poverty and proposals aimed at alleviating poverty.
Students will also learn about the growth and diffusion of economic prosperity, with both historical and contemporary
examples. Students will develop analytical skills as well as writing skills.

This course is one of a series of 400-level seminars, many of them writing-intensive, for our advanced students in each of
seven broad areas of economics. This writing-intensive seminar is in the area of economic growth and development. The
course will count toward both the major and the minor in economics.

Students will read four books about world poverty, write short book summaries, and write a term paper focuses on one
feasible solution to alleviating poverty in Africa. In addition, there will be a midterm exam and a final exam.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ECON 414W The Economic Way of Looking at Life (3)**

Gary Becker is the ultimate economics imperialist, applying economic analysis to areas of life that hitherto had been thought to be outside of the scope of economics. Becker's work, for which he won a Nobel Prize in Economics in 1992, has changed the way economists and others think about a variety of types of human behavior that take place outside of markets. This course, the title of which is also the title of Becker's Nobel Prize Lecture, exposes students to Becker's approach to looking at life.

Students will learn the Becker perspective on a variety of types of nonmarket human behavior, but most prominently the course will focus on criminal behavior and family economics (formation and dissolution of families and interactions among family members). Students will develop the ability to think like an economist when considering nonmarket interactions among people, and since this is a writing-intensive course they will also enhance their writing skills.

This course is one of a series of 400-level writing-intensive seminars in seven broad areas of economics. This seminar is in the area of labor economics and will count toward both the major and the minor in economics.

**ECON 415W The Economics of Global Climate Change (3)**

The first part of the course reviews the scientific evidence on global climate change (IPCC studies). This is followed by an analysis of market failure in the production of greenhouse gas emissions, and consideration of carbon markets as a policy response. A cost-benefit study of the control of greenhouse gases (the Stern Report) is examined, and the concluding part of the course looks at a computer model of economic activity and the environment.

Students will learn about the scientific evidence on global climate change, and the associated economic implications, market failures, and policy options to mitigate those market failures. Students will develop skills to assess policy options in this area, and they will become conversant with applied cost-benefit analysis and a computer model of economic activity and the environment.

This course is one in a series of 400-level seminars, many of them writing-intensive, for advanced economics students in each of seven broad areas of economics. This writing-intensive seminar is in the area of applied microeconomics. The course will count toward both the major and the minor in economics.

**ECON 417W The Economics of Uncertainty (3)**

This course studies the allocation of resources under uncertainty. Decisions without perfect information require the use of probability theory and expected utility preferences. The seminal work of Arrow and Debreu is used as a starting point. Probability and utility theory are then used to interpret insurance contracts. Limited liability is introduced and the Modigliani-Miller Theorem is applied to loan guarantees, deposit insurance, and insurance claims. Finally, asymmetric information is discussed and the resulting problems of moral hazard and adverse selection are addressed.

The course objectives are to introduce students to the theoretical framework used by economists to study uncertainty and to apply that framework in order to explain various regularities observed when decisions are made without complete information, to examine the empirical evidence, and to consider policy issues in this area.
The course will count toward both the major and a minor in economics.

ECON 418W A Comparative and Cost-Benefit Analysis of State Government Activities (3)
This course examines federalism with a particular focus on the activities undertaken by the state of Pennsylvania.

ECON 418W A Comparative and Cost-Benefit Analysis of State Government Activities (3)
This course provides a framework for a comparative and cost-benefit analysis of state government activities. Our federal system of government gives rise to large disparities among the activities undertaken by state governments. This course will focus on activities undertaken by the state of Pennsylvania. Students will pick out particular activities - e.g., state aid and loans to students in higher education, lottery revenues, incidence, state regulation of the sale of alcoholic beverages, and the operation of toll roads and produce a comprehensive project that will involve two related analyses: a comparative analysis comparing Pennsylvania to other states and a cost-benefit analysis.

The course objectives are to apply two frameworks regularly used by economists -- comparative and cost-benefit analysis -- to the study of state government activities. The course will examine the empirical evidence, and also consider policy issues in this area.

ECON 421 Analysis of Economic Data (3)
Economic analysis of data: sources, variable definitions, miscodings, missing observations, censoring and truncation, applications.

ECON 421 Analysis of Economic Data (3)
There are many data sets but the information contained within them for economic analysis is often unclear without substantial investigation. The reliability of data sources, the ambiguity in variable definitions, the miscoding of variables, and missing data are topics covered in the course. In addition, truncation and censoring from the data collection methodologies are examined. Several economic data sets are examined to illustrate the concepts.

This course is an applied course in the field of econometrics and will seek to provide students with the analytical methods for understanding the economic content of data. The instructional and educational objectives are to expose students to the practical details of analyzing economic data in the context of an advanced seminar. The course objectives are to familiarize students with the deficiencies of real-world data and how to address those deficiencies.

The Economics department seeks to provide students with a series of seminar courses in each of seven broad fields in the discipline; this is a course in the field of econometrics, and has a prerequisite of ECON 490 plus either ECON 402 or ECON 451. The course will count toward both the major and minor in economics.

ECON 422W Applying Monetary Theory to Monetary History (3)
Monetary history is examined. Special attention is paid to commodity-based systems, private money, and government monopolies on currency.

ECON 422W Applying Monetary Theory to Monetary History (3)
This course provides a framework for the analysis of monetary history. In the past, there have been many advances in monetary theory. Some of the advances are directly inspired by the varieties of monetary systems that have existed in the past - for example, systems in which private banks issue currency (bank-notes). There is scope for reexamining existing analyses of many of those historical systems in the light of advances in monetary theory.

The course objectives are to introduce students to the theoretical framework used by economists to study monetary...
theory, and to apply that framework in order to explain various monetary systems the have existed in the past. We will examine the empirical evidence, and also consider policy issues in this area.

ECON 436W (US) Economics of Discrimination (3) Analysis of the economic characteristics of women and minorities, with examination of race and sex discrimination and related government policies.

ECON 436W Economics of Discrimination (3) (US)
(BA) This course meets the Bachelor of Arts degree requirements.
This course constitutes an examination of the economics of discrimination. More precisely, the course will focus on economic theories of discrimination and on efforts by economists to measure the extent of labor market discrimination. An important objective of the course is thus to learn how economists conceptualize and study discrimination. This, in turn, requires that we examine how economists view and study economic differences by race, ethnicity, and gender (these are the types of discrimination that will be focused on in the course, although we will also consider other types of discrimination). Following the existing economic literature, much of our emphasis will be on labor market discrimination, but we will also consider discrimination in education and in housing. The first substantive section of the course outline below involves examination of data on the economic characteristics of women and blacks in relation to white males, considering both the current situation and recent trends. Data on Hispanics will also be presented. This work will be done by the students, working in groups. We will look at how mainstream economists conceptualize economic differences by gender and by race/ethnicity, respectively. Then we will focus on formal models of discrimination and empirical issues in attempting to measure discrimination, and we'll also examine an alternative approach to understanding economic inequality. The concluding section of the course will examine public policy issues related to discrimination. The course will count toward either a major or a minor in economics, and will meet the writing requirement for students in economics.

ECON 437W Multinationals and the Globalization of Production (3) This course will focus on trade, multinationals and
offshoring, and explore their implications for the U.S. and developing countries.

ECON 437W Multinationals and the Globalization of Production (3)

This seminar examines the international economy and the effects of multinational activity on globalization.

Some of the key questions that will be examined include:
Is globalization really a new phenomenon?
Is it irreversible?
What are the effects on wages and inequality?
What are the effects on production and innovation?

These questions will be addressed through a careful reading of the historical timeline, an extensive analysis of capital flows, multinational enterprises and development. Students are expected to synthesize their findings into a final paper and present what they have learned to the class.

The Economics Department seeks to provide students with a series of seminar courses in each of seven broad fields in the discipline; this is a course in the field of Trade.

ECON 438W Winners and Losers from Globalization (3) The economic effects of globalization on individuals, governments, nation-states and business.

ECON 438W Winners and Losers from Globalization (3)

This seminar explores the various effects of globalization on individuals in the United States and abroad. It integrates material from a variety of sub-disciplines in economics, including international trade, international finance, growth theory, labor economics, industrial organization, and political economy. Discussion of each core topic is model-based and informed by empirical evidence from the recent economic literature. The objectives of the course are to (1) deepen students' understanding of the basic forces at play as globalization takes place, and their implications for individuals' well-being; (2) sharpen students' ability to critically evaluate policy issues, both theoretically and empirically; and (3) develop students' ability to craft tightly reasoned economic reports.

This course is an applied seminar in international economics. The impact of globalization is explored from a cost-benefit perspective. Winners and losers are identified using the tools and framework of economics. The instructional and educational objectives are to provide in-depth analysis of the consequences of globalization in the context of an advanced seminar. The course objectives are to analyze the winners and losers from globalization.

This is a course in the field of international economics. The course will count toward both the major and minor in economics.

ECON 439 Economics of Technology Diffusion (3) Technology Diffusion: Globalization, productivity measurement, intellectual property.

ECON 439 Economics of Technology Diffusion (3)

This seminar examines the relationship between technology diffusion, globalization of the world economy, and intellectual property. This course has four parts. It begins with a review of international trade. This is followed by an examination of globalization of the world economy. Then both the theoretical and empirical aspects of technology diffusion across national borders are analyzed. The course concludes with consideration of international aspects of intellectual property.

This course is an applied economics seminar in international economics. The interplay between globalization and technology diffusion is examined with special attention to intellectual property. The instructional and educational objectives of the course are to expose students to the economic and policy issues surrounding diffusion of technology, in the context of an advanced seminar. The course objectives are to understand the determinants and consequences of international technology diffusion.

The Economics Department seeks to provide students with a series of seminar courses in each of seven broad fields in the discipline; this is a course in the field of international economics, and has a prerequisite of ECON 433. The course will count toward both the major and minor in economics.
ECON 440 Trade and Labor Markets (3)

This seminar examines the relationship between trade and the labor market, in both industrialized and developing countries.

It is well known that the fortunes of less-skilled workers in the United States and Europe have fallen appreciably over the last few decades. At the same time, there has been an explosion of trade with less developed countries. These changes have sparked a significant debate among the economics profession about the impact of trade on labor market outcomes, with particular concern placed on the impact that globalization has had on low-wage workers with few marketable skills.

This course is an applied seminar in the area of international economics. The interplay between international trade and the labor market is examined with special attention devoted to the role of low-skilled workers in the emerging global economy. The instructional and educational objectives are to expose students to an advanced seminar course exploring labor market issues in international economics. The course objectives are to explore labor market consequences of international trade in both industrialized and developing economies.

This is a seminar course in the field of international economics. ECON 433 is a prerequisite. The course will count towards both the major and minor in economics.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ECON (H P A) 445W Health Economics (3)

The healthcare sector comprises a set of markets that differ in some significant ways from the textbook model. In the US, this sector performs well in some respects and questionably in others. Notably, there has been sustained improvement over time in life expectancy and other indicators of the effectiveness of health care for most people, but the resources devoted to producing this improvement have been growing considerably faster than GDP. The goal of this course is to examine several broad questions raised by these facts.

The course begins with an overview of evidence on wealth, health expenditure, and life expectancy across countries, and then examines increasing life expectancy and medical expenditures in the US and their causes. Issues in measuring the value of medical expenditures are addressed, and an overview of the industrial organization of health care is provided. A major component of the course covers the economics of health insurance, and the course also examines medical R&D and the pharmaceutical industry as well as issues in the financing of medical care for the elderly.

The course seeks to introduce students to the economic analysis of health care. It is in the area of applied microeconomics, and deals with issues relating to labor markets and public finance, in particular. This writing-intensive course will be one of several 400-level W seminars that the Economics Department is seeking to establish, with the broad objective of exposing our advanced undergraduate students to economic analysis in a seminar setting requiring significant writing by the students.

The course counts toward the major and the minor in economics, as a 400-level course, In addition, it also counts toward a "module" (area of concentration) in human resource and public economics.

Student performance in the course will be evaluated based on three papers.

ECON 446W Economics of Industry Evolution (3) Dynamics of industry evolution; empirical evidence and theoretical modeling of firm entry, growth, and exit; entrepreneurship; investment and strategic behavior.

ECON 446W Economics of Industry Evolution (3)

Industries are not static entities. They continually evolve as new products and production techniques are developed. In response to changes in demand and technology, new firms enter while existing firms grow, decline, and exit. This course studies the dynamics of industry evolution using both empirical tools and theoretical models of firm decisions to analyze the following broad questions: How does a new entrant establish a foothold in an industry? How does the entry process differ between industries built around new products versus industries for well-established products? What is the role of entrepreneurship and human capital? How do firms affect their growth and survival prospects by investing in R&D and other types of innovation? How does the life-cycle of high-tech industries differ from consumer products or capital-intensive manufacturing or services? The roles of antitrust policy and regulation in affecting firm turnover and industry evolution are also addressed.

This course will seek to provide students with both theoretical and empirical methods to analyze the economic forces underlying the evolution of industries. Students will develop analytical and writing skills in the course.

This course is one of a series of advanced, writing-intensive seminars in each of seven broad fields in economics; this is a course in the field of industrial organization. The course will count toward both the major and the minor in economics.

ECON 447W Economics of Sports (3) Examination of economic issues pertaining to professional and collegiate sports, including analysis of industrial organization, labor markets, and local economies.

ECON 447W Economics of Sports (3)

Sports play a pervasive role in life in these United States, and this course examines a wide-ranging set of issues in considering the economics of sports. Students will learn about various aspects of sports in the United States, including the "players" (players, owners, fans), the institutional settings (sports leagues), and the effects of sports on the cities in which they are played. Students will develop the skills to analyze a wide variety of issues in sports economics. The course will touch on aspects of three distinct fields in economics: labor economics, industrial organization, and urban economics.

This course proposal is one of a series of 400-level seminars, many of them writing-intensive, for advanced students in economics in each of seven broad areas of the discipline. This writing-intensive seminar is in the area of applied microeconomics. The course will count toward both the major and the minor in economics.

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2009
Prerequisite:

ECON 448W Economics of Auctions and Procurements (3) Theoretical and empirical analyses of auctions and procurements; different modeling environments; econometric analysis of auction and procurement data.

ECON 448W Economics of Auctions and Procurements (3)

This course provides the basic framework for theoretical and empirical analyses of auctions and procurements. The course begins with the foundations of game theory. Both complete and incomplete information models are emphasized. The main auction and procurement modeling environments are then covered. Included among these are the independent private value model, common value model, affiliated private value model, and basic forms of asymmetry. Several data sets are provided for discussion and analysis including FCC spectrum auction data, timber auction data, and road procurement data. Empirical models are proposed for the econometric analysis of the auction and procurement data.

This course seeks to provide students with the analytical methods of both the theoretical and empirical analysis of auctions and procurements. Students should develop their analytical skills pertinent to the economics of auctions and procurements, and they will also develop their skills in writing in economics.

This course is part of a series of advanced writing-intensive seminars in each of seven broad fields in economics. This is a course in the field of applied microeconomics. The course will count toward both the major and a minor in economics.

General Education: None

Bachelor of Arts: None
Effective: Summer 2008
Prerequisite:

ECON 449W Economics of Collusion (3) Theoretical and empirical analysis of collusion among firms, case studies of cartel behavior, bidding behavior at auctions and procurements.

ECON 449W Economics of Collusion (3)

Collusion by firms -- the explicit suppression of interfirm rivalry -- is profitable. However, it is often difficult to accomplish meaningfully. This course provides frameworks to analyze interfirm interactions, both theoretically and empirically. In addition, several case studies of cartel behavior in the U.S., Europe, and elsewhere are presented. Bidder behavior at auctions and procurements will also be examined to understand some of the underlying issues of collusion. Following an introductory section, the course examines first the law regarding collusion and then the history of collusion, focusing on notable cases in the U.S. and Europe. Economic models of collusion are then reviewed, along with the distinction between tacit and explicit...
collusion. The final substantive section of the course examines issues encountered in prosecuting collusion. The broad objective of the course is to use the tools of economics to analyze the interactions of firms in settings where collusion may occur. Educationally, then, the course seeks to expose students to the application of economic analysis in a context with major economic and legal implications. This is an advanced undergraduate course in the field of Industrial Organization (IO), and hence will add to our offerings in the IO field (our beginning IO course is ECON 342). Econometrics (ECON 490) is also a prerequisite because of the empirical analyses that will be an important component of the course. The course is one that may be used to satisfy requirements for the major and the minor in economics, as a 400-level course. It may also be used to complete a module (area of specialization) in the Economics of Business and Law. And it will serve as one of the Economics Department’s writing-intensive 400-level seminars. Student performance will be evaluated via two midterm-intensive exams and a substantial term paper. The exams will each count for 15% of the overall course grade, and the term paper will count for the remaining 70% of the course grade.

ECON 452W Financial Crises (3) Examination of causes and consequences of financial crises; asset pricing theory, market efficiency, speculative bubbles; policy considerations.

ECON 452W Financial Crises (3)

This course focuses on the causes and consequences of financial crises. We study famous crashes from the South Sea Bubble to Long-Term Capital Management, as well as international financial crises such as the Asian Crisis of 1997-98 and the Argentine Crisis of 2001. We examine both the history of the crises and the economic factors that are the fundamental causes, in part with a view to determining if these crises were the inevitable outcome of speculative markets, or the result of regulatory error.

The instructional and educational objectives of the course are to provide students with the opportunity to explore financial crises in a small, advanced seminar setting. The course objectives are to provide students with a theoretical framework for examining financial crises, to examine evidence on historical and more recent financial crises using that theoretical framework, and to consider policies aimed at avoiding and/or alleviating the effects of financial crises in light of the theoretical framework and the empirical evidence.

The Pennsylvania State University
The course is part of a curriculum overhaul of 400-level courses in economics, in which advanced seminar courses are being created in seven broad areas of economics. This seminar is in the area of macroeconomics. This course may be used to meet major or minor requirements.

**ECON 453 Monopolarization and Vertical Restraints (3)**

Monopoly is not illegal in the United States but efforts by single dominant firms to attain a monopoly position in the marketplace are illegal. This course examines the kinds of behaviors in the marketplace that single dominant firms often engage in that lead to the accusation of monopolization conduct. Included among these are territorial and customer restraints, exclusive dealing, bundling, and tying. Other types of monopolization conduct include predation and entry deterrence. The pro-competitive and anti-competitive effects of these conducts are examined. The course also examines empirical methods used to evaluate vertical restraints and monopolization within an industry. Throughout the course, case studies are examined.

This course is an applied microeconomics course in the area of industrial organization and will seek to provide students with the analytical methods of both the theoretical and empirical analysis of vertical restraints and monopolization. Students will develop their analytical skills in economics and their writing skills.

This course is one of a series of advanced seminar courses in each of seven broad fields in the discipline; this is a course in the field of industrial organization. The course will count toward both the major and minor in economics.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ECON 454 Economics of Mergers (3)**

It is not uncommon for two separate and distinct corporate entities within an industry to merge and become one firm. This course examines the economics of mergers as well as economic policy with regard to mergers. There are often both pro-competitive and anti-competitive effects of mergers. In the U.S. the Federal Trade Commission has primary responsibility for assessing the balance between effects. This course examines unilateral effects and coordinated effects as identified in the horizontal merger guidelines. Vertical mergers are analyzed as well. Econometric issues associated with the measurement of unilateral and coordinated effects are discussed. The course concludes with ex post merger reviews.

This course is an applied microeconomics seminar in the field of industrial organization and will seek to provide students with the analytical methods of both the theoretical and empirical analysis of mergers. The course will count toward both the major and minor in economics. This course is one of a series of advanced seminar courses in each of seven broad fields in the disciplines; this is a course in the field of industrial organization, with prerequisites of ECON 444 and ECON 490.

ECON 463W Economic Demography (3) Microeconomics of demographic behavior; interrelationships between
demographic and economic factors, in developing and industrialized economies; economic welfare and policy implications.

ECON 463W Economic Demography (3)

Economic demography is concerned with the interrelationships between economic phenomena and demographic
phenomena. Fundamental demographic variables - fertility, mortality, migration, age composition - are related to
economic factors, as both consequences and determinants. This course uses an economic perspective to study population
phenomena and issues, with a focus on both theoretical and empirical analysis of demographic questions. Indeed, a major
objective of the course is to provide you with the analytical tools from economics that are useful in analyzing issues in
demography.

The instructional and educational objectives of this course are to teach students about economic demography in an
advanced, writing-intensive seminar. The objective of the course is to provide a disciplinary perspective from economics
on numerous issues in the multidisciplinary field of demography. This course is an advanced course that touches on
topics in two different fields of economics: labor economics and growth and development. The course will count toward
both the major and the minor in economics.
ECON 465W Cross Sectional Econometrics (3)

This course extends the econometric analysis of Introduction to Econometrics (ECON 490) to consider three broad categories of models: discrete choice models, censored and truncated regression models, and longitudinal models. Approximately three-quarters of the course will consist of examination of models in these three areas and the issues that those models address. The last four weeks of the course will then focus on applications of these models.

Discrete choice models are used for the analysis of decisions by economic agents facing a fixed number of choices (whether to work or not, which are to buy, etc.). Students will learn how economists model such decision problems and how they can be analyzed empirically.

Censored and truncated regression models can arise for multiple reasons, e.g., because economic agents are generally constrained to consume a nonnegative amount of a given product, which introduces nonlinearities into the relationship of interest. Students will learn how economists model such problems and how they can be analyzed empirically.

Longitudinal models are, e.g., used to analyze durations of (un)employment spells. Students will learn how to analyze such data sets empirically.

Overall, then, students will learn advanced econometric techniques for dealing with discrete choice models, censored and truncated regression models, and longitudinal models. The skills to be developed consist in being able to apply these techniques in practical applications of data analysis.

This course is one of a series of 400-level seminars, many of them writing-intensive, for our advanced students in each of seven broad areas of economics. This writing-intensive seminar is in the area of econometrics. The course will count toward both the major and the minor in economics.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2008
Prerequisite:

ECON 466W Panel Data Models (3)

Panel data sets, consisting of repeated interviews over time of a panel of individuals (in effect, a time series of cross-sectional data on the same individuals) offer multiple opportunities for sophisticated econometric analyses, while at the same time posing some unique problems. This course will cover advanced econometric techniques for dealing with panel data. Random- and fixed-effects models are addressed initially, followed by consideration of endogeneity, balanced and unbalanced panels, censoring of spells, and differences in differences. The concluding part of the course will focus on applications.

The objective of the course is to provide students with exposure to models and techniques designed to deal with panel data (e.g., data on a set of individuals at various points in time), and to equip them with the skills to utilize those techniques in practical applications of data analysis.

In particular, students will learn to exploit the panel nature of a data set to allow for individual-specific heterogeneity (e.g., random and fixed effects). They will learn how to address endogeneity problems, which can arise for various reasons including forward-looking behavior of individuals. Because data are often not available for the same set of (e.g.) individuals at all points in time, care must be taken to deal with such unbalanced panels, especially when such data are absent because of actions of the individuals.

In addition, since this is a writing-intensive course, an additional objective is to provide students with the opportunity to develop their skills in writing in economics.

This course is one of a series of 400-level seminars, many of them writing-intensive, for advanced students in each of seven broad areas of economics. This writing-intensive seminar is in the area of econometrics. The course will count toward both the major and the minor in economics.

ECON 472 Transition to Market Economies (3) Economics of transition to a market economy; problems of former Soviet-type economies; privatization, stabilization, and institutional change.

ECON 472 Transition to Market Economies (3)

(BA) This course meets the Bachelor of Arts degree requirements.

With the demise of communism in Central and Eastern Europe, former socialist economies are in the process of transition from centrally-planned to market economies. Transition is a comprehensive change, involving all aspects of the economy, including labor markets, capital markets, and the organization of industry, especially privatization. The focus of this course is on the experience of economies in transition and the problems encountered. Special emphasis will be given to the experience of Russia and the other countries of the former Soviet Union. In addition to Central Europe and the former Soviet Union, we will also examine the experience of China.

The broad objectives of the course are to provide students with economic analyses of the wide range of issues that arise in considering economies in transition, and to assess the record on transition. The course will examine the following topics: the legacy of central planning; how to organize transition; macroeconomic stabilization in transition economies; privatization; restructuring, ownership change, and improvements in performance; and institutional development and transition. In addition, the concluding section of the course will examine the record transition.

As a 400-level course in economics, this course may be used to meet requirements for the major and for the minor in economics. It requires ECON 302 or ECON 304 (intermediate microeconomic theory and intermediate macroeconomic theory, respectively) as a prerequisite. And the course may be used toward completing a module (area of concentration) in economics in the area of International, Development, and Transition Economics.

ECON 475W Migration and Development (3) Human Capital Approach to Migration; Economics of Family Migration;
ECON 475W Migration and Development (3)
This course introduces students to migration in the developing world. What factors influence such migration, and how does migration affect economic development? The course provides a theoretical framework for examining migration (a human capital approach), and takes into consideration aspects specific to migration in the developing world, family considerations, and different types of migration. Immigration and remittances are also considered. The course examines empirical evidence on migration, and considers public policies that seek to influence migration and development.

The course objectives are to provide students with a theoretical framework for examining human mobility and economic development, to examine evidence on migration using that theoretical framework, and to consider policies aimed at influencing migration and development in light of the theoretical framework and the empirical evidence. The integration of these three activities will develop student’s skills in economic analysis and the writing aspect of the course will enhance their writing skills.

This course is one of a series of writing-intensive seminars in seven broad areas of economics. This seminar is in the area of economic development, with relevance as well to labor economics. This course may be used to meet major or minor requirements.

ECON 476W The Economics of Fertility in the Developing World (3) Demand for children, supply of children, and costs of fertility regulation; fertility transition; public policies to affect fertility.

ECON 476W The Economics of Fertility in the Developing World (3)
Population growth provides more hands on work, and more mouths to feed. Consequently, it has important implications for numerous aspects of a nation's economic development (and vice versa). And population growth, in turn, largely reflects fertility behavior. This course will introduce students to an economic approach to fertility behavior, emphasizing the demand for children, the supply of children, and the costs of fertility regulation. This economic framework for fertility analysis will then be used to examine fertility transitions, past and present, with particular emphasis on the current and prospective status of fertility transition in the developing world. The course will also consider public policies that seek to influence fertility behavior.

Students will learn about the economic approach to fertility behavior and they will apply that approach to consideration of fertility and fertility transition in developing countries. This writing-intensive course will enhance their writing and their data analysis skills.

This course is in the broad area (field) of development economics. The course will count toward both the major and the minor in economics.

ECON 477 Labor Markets in Developing Countries (3) Labor demand and supply in developing countries; urban and rural labor markets, modern and informal sectors; policy issues.

ECON 477 Labor Markets in Developing Countries (3)
In the course of economic development, labor markets emerge and evolve. While some elements of standard labor market analysis, such as the emphasis on demand for labor and supply of labor, remain most relevant here, there are also institutional aspects that are specific to developing countries. This course will examine labor markets in rural areas and in urban areas, and the factors influencing these markets in both settings. Traditional labor market variables (labor force participation, employment and unemployment, earnings) will be examined for several case studies, and policy issues will also be considered.

The proposed course is an advanced seminar in the broad area of development economics. The course objectives are to enable students to learn about labor markets in developing countries, how they are different from as well as similar to those in industrialized countries, and the problems and policy issues that pertain to these labor markets. Students will develop their analytical skills in this area, and their writing skills in economics. This course is one of a series of advanced seminars in seven fields of economics. This course is in the broad area (field) of development economics, and has a prerequisite of ECON 471. The course will count toward both the major and the minor in economics.
ECON 478 Incomplete Markets (3)
Rural land markets, fragmented credit markets, risk and insurance, human capital and labor markets, innovation and technology spillovers, coordination failures.

ECON 479W Economics of Matching (3)
Economic application of matching to employment, marriage, organ markets, and medical residents.

ECON 480 Mathematical Economics (3)
Mathematical techniques employed in economic analysis; formal development of economic relationships.

**ECON 490 Introduction to Econometrics (3)** Use of simple and multiple regression models in measuring and testing economic relationships. Problems including multicollinearity, heteroskedasticity, and serial correlation.

**ECON 490 Introduction to Econometrics (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed for a wide range of students, including those interested in a variety of fields in business (e.g. finance and management studies) and economics, to those in the sciences and engineering who are interested in learning about data analysis and regression techniques. The course is also a good starting point for learning about empirical economics, and may thus be useful for those intending to pursue graduate studies in economics and business. Economics 490 is designed to reach a large audience, and the ultimate goal of the course is to show students that the "application of statistics to the study of economics" is not only fun, but also indispensable for a well rounded economics education. Put
another way, the primary focus of the course is on applied or empirical economics. Learning about empirical methods in this course entails extensive computer work which focuses on the analysis of economic data using currently available software packages (some completely mouse driven), such as SAS, EASYREG, GAUSS, STATA, and EVIEWs. Computer analysis ranges from constructing and interpreting plots of economic data, to forming, fitting, and interpreting regression models. In addition to the computational component of the course, students are familiarized with numerous tools used in applied work, such as mean and variance, hypothesis testing (using statistics with t-, F-, and Chi-Squared distributions), regression model building, regression model estimation, and coefficient analysis. All of the tools learned throughout the course are used in the computational exercises. Completion of this course is useful particularly for students pursuing careers in business, economics, government, banking, insurance, finance, management, consulting, and academics, for example.

This course has been designed to engage students in in-depth examination of the process of creating and sustaining a classroom learning community that fosters and enables success for all children. Emphasis is placed on understanding a variety of theoretical models of classroom management as well as observing and studying individual children to develop a better understanding of their needs. The result should be the development of a coherent set of beliefs concerning the 

The Pennsylvania State University
creation of classroom learning environments that support learners and meet their individual needs.

EDLDR 476 The Teacher and the Law (3) An introduction to education law as it affects the teacher.

EDLDR 476 The Teacher and The Law (3)

This course will provide an overview of major issues in law related to teachers. The course will focus primarily on case law including U.S. Supreme Court decisions as well as relevant state and federal lower court opinions. State legislation and administrative laws will also be considered. Topics to be covered include an introduction to education law as it affects teachers, including teachers' privacy rights, school safety, special education, sexual harassment, discrimination, student assessment, slander/libel, tenure and constitutional issues as related to education. The class will be a combination of lectures and discussions on particular legal topics related directly to the training of teachers and based on the text and selected handouts. From time to time, the class will break up into small groups to work on in-class dilemmas.

EDLDR 480 Introduction to Educational Leadership (3) Development of educational leadership. Relationships among local, state, and federal agencies. Introduction to current concepts and theories.

EDLDR 480 Introduction to Educational Leadership (3)

Through lectures, readings, case study, film, and discussion, this course examines basic topics in organizational theory, school administration, and educational policy. In addition, the course presents a historical perspective, suggesting how understandings about education have varied and changed throughout American history. The primary aim of the course is to help students begin to perceive, understand, and apply the important connections between educational theory,
The purpose of this course is to investigate the new conceptions of instructional leadership in schools, especially as these apply to the principal. With new emphases in K-12 education focusing on teaching and learning concerns, the role that the principal plays in instructional leadership is more critical than ever. This course examines the different areas of emphases and roles that are central to promoting effective instructional leadership in schools. This examination will include the development of educational administrative and leadership perspectives and the process of change and reform in educational organizations. The form and function of the instructional leadership will be explored by examining major theories on the nature of school leadership and linking these to the issues of school improvement and school change. An integrated agenda of readings, lecture, class discussions, written assignments and case study work will explore and emphasize the relationship of theory to practice. The readings and activities are designed to integrate thoughtful reflective practices for problem framing and solving, provide a foundational knowledge of instructional leadership best practices, develop an increased awareness of individual values and beliefs, and promote the development of interpersonal and group dynamics skills.

Specifically, the objectives of the course are to assist students: (1) to acquire the ability to establish clear instructional goals for a school; (2) to understand and be aware of the most effective means for promoting and supporting educational change and reform; (3) to develop a school culture and climate conducive to and focused on teaching and learning concerns; (4) to understand how to develop and communicate effectively the vision and mission of the school; (5) to investigate how best to develop teacher leadership within schools; and (6) to become familiar with best practices in professional development.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EDUC 371 Teaching Music in the Elementary School (3)
Music methods course for elementary education majors; students will learn elements of music, and instructional techniques.

EDUC 385 Professional Development in Teaching (3)
This course addresses practical issues central to the profession of teaching and, in some cases, specific to Pennsylvania.

EDUC 397 Special Topics (1-9)
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDUC 400 Diversity and Cultural Awareness Practices in the K-12 Classroom (3)
This course addresses diversity, cultural awareness and sensitivity about cultures, concepts and methods in society, communities and educational settings.

The course is an examination of diverse cultures, stereotypes, concepts and issues that impact the way individuals interact with one another in society. In relation to EDUC 315, it takes students to the next level as they experience cultural attributes from a media perspective, as well as being immersed into diverse settings throughout the course. It is designed for students to develop sensitivity and awareness of cultural influences in America and the public school systems. An emphasis is placed on sociopolitical aspects of the United States and other world cultures, sources of cross-cultural conflict, and approaches to cross-cultural conflict resolution as they relate to P-12 settings, their communities and the communities in which they teach.

Cultural awareness is concrete and/or visible in society and is necessary for promoting sensitivity and respect of cultural beliefs and values amongst teachers, administrators and students. Course participants will be required to demonstrate knowledge of with regard to developing sensitivity and awareness of cultural influences on behavior as these relate to the community, society and schooling processes. Course participants will be required to analyze methods of teaching Multicultural Education and its various camps including: Culturally Responsive Pedagogy, Critical Multiculturalism, and Anti-Racist Pedagogy.

The creative tension between dominant and subordinate voices will lead to both visual and written responses. The major goal of the course is to help students identify their diversity in American society and to develop their own creative voices, while drawing on issues of race, ethnicity, gender, geographical location, sexual identity, age, ability, social class, social status and other cultural attributes that make individuals uniquely diverse.

Teaching Writing (3)
EDUC 458 Behavior Management Strategies for Inclusive Classrooms (3)

Well-organized and effectively managed classrooms provide task-focused instructional environments where students are actively engaged in learning. The inclusion of exceptional learners in the general education classroom has brought the need for a unique set of knowledge and skills to promote student task engagement and prosocial behavior. Topics to be addressed include: characteristics and specific (or unique) needs of exceptional learners and their effect on student learning; components of effective classroom organization and management; principles of applied behavior analysis and research-based behavior management strategies appropriate for use with exceptional learners in the secondary classroom. This course will be a required course for all Secondary English, Math, and Social Studies students seeking initial certification. Course delivery methods will include lectures, reflections, online discussions, projects, class presentations, library research, and other relevant media.

EDUC 459 Strategies for Effective Teaching in Inclusive Classrooms (3)

This course will examine strategies for teaching exceptional students in inclusive secondary classrooms. The course will focus on academic assessment; instructional planning, development and implementation; and strategies for making the curriculum more accessible, flexible and supportive for diverse learners. Topics to be addressed include the following: multidisciplinary evaluation and programming for exceptional learners; designing instruction based on assessment data; progress monitoring; technology for teaching and learning as a way to promote access to curriculum; designing appropriate and legally acceptable accommodations and/or modifications to promote access to the standards-based curriculum for students with exceptional learning needs; research-based instructional strategies to facilitate literacy development and instruction across academic content areas and collaborative structures to support exceptional learners in general education classrooms. This course will be required for all Secondary English, Math, and Social Studies Education students seeking initial certification and will be offered during the 8th semester (student teaching) to optimize performance of students during their student teaching experience. Course delivery methods will include lectures, reflections, online discussions, projects, class presentations, case studies, and other relevant forms of media.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EDUC 463 The Internet and K-12 Education (3) Relates educational theory and practice to applications of the Internet, applying content from educational foundations, curriculum, and research.

EDUC 463 The Internet and K-12 Education (3)

This course focuses on the Internet as a valuable resource for K-12 education. Designed for teachers, curriculum supervisors, and building administrators, this course relates educational theory and practice to applications of the Internet in classrooms and schools. Class participants apply resources available through the Internet to content from the fields of educational foundations, learning theories, curriculum development, educational assessment and evaluation, and educational research. Students maintain a documentation of weekly assignments that form the basis for the final project: the development of a technology-based teaching portfolio. Students also complete a mid-term project that entails the design of an online learning activity for students. This activity requires the student to apply principles of learning theory to web-based resources identified and evaluated to support an identified classroom learning objective or set of objectives. The final project consists of a technology-based teaching portfolio, demonstrating application of the key concepts covered in the course. The portfolio should contain a professional resume; journal entries discussing educational experiences and philosophies related to technology; selected teaching lessons, activities, projects, or assessments; and samples of student work.

EDUC 464 Technology and the Learning Process (3) Evaluates the relationship between technology-based resources and learning theories through design, implementation, and evaluation of online instructional modules.

EDUC 464 Technology and the Learning Process (3)

Designed for teachers, curriculum supervisors, and building administrators, this course examines and evaluates the relationship between technology-based resources and learning theories. Students explore learning theories in terms of how technology may or may not support implementation of those theories in the classroom. Students also examine problem-based learning approaches and how they can be combined with technology, resulting in what has been defined by Dr. Bernie Dodge as a "WebQuest" for classroom use. In the WebQuest development process, students identify a real life problem for their students to solve. They correlate that problem to their academic standards and district curriculum. They then design, implement, and evaluate instructional modules with integrated technology resources designed to lead to a solution of the identified problem, while promoting student acquisition of higher order thinking skills. Through this
experience, students must plan for their students’ learning tasks and activities, resource needs, performance evaluation
and rubrics. As a culminating experience, students design an action research project related to the implementation of
their learning module in the classroom setting.

EDUC 465 Serving Culturally and Linguistically Diverse (CLD) Learners (3) The course provides teachers with knowledge,
understandings, and skills to engage culturally and linguistically diverse (CLD) students in mainstream classrooms.

This course is designed to encourage understandings and appreciation for linguistic and cultural diversity, and to enhance
the knowledge and skills of teachers working with culturally and linguistically diverse learners, their families, and their
communities. The six areas of emphasis within EDUC 465 are as follows: a) the legal, historical, and cultural implications
of ESL, which explores the legal and historical bases of ESL and analyzes the differences among home and school cultures,
especially as they relate to language; b) multicultural education, which focuses on helping teachers acquire knowledge,
develop cultural sensitivity, and identify educational strategies that address the needs of multilingual and multicultural
learners and their families; c) a brief overview of first and second language acquisition theories; d) developmentally
appropriate teaching strategies for culturally and linguistically diverse learners specifically related to their speaking,
listening, reading, and writing skill development; e) Pennsylvania and TESOL standards and the Pennsylvania ELL
assessment systems; and f) the integration of language components across the curriculum. This course aims to provide
theoretical understandings of culturally responsive teaching and pedagogical strategies for CLD learners.

EDUC 466 Foundations of Teaching English as a Second Language (3) Overview of various legal, historical, and
socio-cultural implications of teaching and learning English as a Second Language.

EDUC 466 Foundations of Teaching English as a Second Language (3)

EDUC 466 is the first course in a four-course sequence designed to meet the Pennsylvania Department of Education's
(PDE) requirements for the ESL Program Specialist endorsement. EDUC 466 addresses the legal, historical, and
socio-cultural issues related to non-native speakers of English, and the implications for ESL curriculum, instruction, and
assessment within the K-12 school setting. The course is designed: (1) to encourage understanding and appreciation for
language diversity and culture, and (2) to enhance the knowledge and skills of teachers working with culturally and
linguistically diverse learners, their families, and their communities. The course specifically addresses two of the PDE
competencies necessary for a teacher to acquire in order to be endorsed as an ESL Program Specialist: PDE Competency
IV-Developing cultural awareness/sensitivity. The four areas of emphasis within EDUC 466 are:

a) The legal, historical, and cultural implications of English as a Second Language, which explores the legal and historical
bases of ESL and analyzes the differences among home and school cultures, especially as they relate to language;
b) Fundamentals of developing English language skills, which provides an introduction to the structure of the English
language, grammar, and pronunciation, including lexical, morphological, syntactical, and phonological components;
c) An overview of second language acquisition, which introduces the topics of linguistic skill development, and first and
second language acquisition; and

d) Multicultural education, which focuses on helping teachers acquire knowledge, develop cultural sensitivity, and identify
educational strategies that address the needs of multilingual and multicultural learners and their families.

Prerequisite:  

EDUC 467 English Language Structure for English as a Second Language Teachers (3) An in-depth study and review of
general linguistic concepts and their application to ESL pedagogy.
EDUC 467 English Language Structure for ESL Teachers (3)

EDUC 467 is the second course in a four-course, 12-credit sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for an ESL Program Specialist Certificate. The 12-credit sequence has previously been approved by PDE. The 12-credit sequence is consistent with other approved ESL certificate programs. EDUC 467 introduces students to general linguistic concepts and their application to ESL pedagogy and practice. The course provides an intensive study and review of major linguistic concepts and issues, including but not limited to: phonetics, phonology, morphology, syntax, semantics, pragmatics and discourse analysis, sociolinguistics and dialectology, historical linguistics and world languages, and writing systems. The course specifically addresses two of the PDE competencies necessary for a teacher to acquire to meet the minimum requirements as an ESL Program Specialist: PDE Competency I-English usage and developing linguistic awareness; and PDE Competency III-English language learners [ELLS] language and language services knowledge. The three areas of emphasis within EDUC 467 are:

a) **Language and communication**, which explores the use of dictionaries, English use and usage, social conventions and English usage, American English variations, meaning and significance.
b) **Grammar, pronunciation, literacy development for second language learners**, which focuses on the significance of these areas for ESL learners; and
c) **Evaluative classroom instruments to measure student progress in grammar, pronunciation and English language structure**, which highlights the incorporation of linguistic tools in the assessment of ESL learners' language skills and needs.

EDUC 468 Language Acquisition for ESL Teachers (3)

EDUC 468 is the third course in a four-course sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for an ESL Program Specialist Certificate. The 12-credit sequence has previously been approved by PDE. The 12-credit sequence is consistent with what other PDE-approved ESL certificate programs offer. This course builds upon EDUC 466, Foundations of Teaching English as a Second Language, and EDUC 467, English Language Structure for Teachers, with an emphasis on the processes involved in second language acquisition. EDUC 468 explores first and second language learning, socio-cultural contexts and learner variables, and the issues related to cognition and developmental psycholinguistics. The course specifically addresses two of the PDE competencies necessary for a teacher to acquire to meet the minimum requirements as an ESL Program Specialist: PDE Competency I-English usage and developing linguistic awareness; and PDE Competency III-English language learners [ELLS] language and language services knowledge. The four areas of emphasis within EDUC 468 are:

a) **Learning a first language**, which provides an in-depth study of the process involved in the acquisition and development of first language interrelations between psycholinguistics and cognition, as well as understanding of the processes involved in the acquisition and development of language in human species.
b) **Learning a second language**, which explores the interrelationships between psycholinguistics and cognition, and first and second language acquisition, as well as identifying issues related to developmental psycholinguistics?
c) **Differences in how children, adolescents and adults learn language**, major contributions of leaders in the field of the psychology of language learning.
d) **Evaluative classroom instruments to measure student progress in listening, speaking, reading and writing**, which identifies linguistic tools that can be used to assess the language skills and needs of ESL learners.

EDUC 469 Teaching Methods and Assessment of English as a Second Language (3)

EDUC 469 is the fourth and final course in a four-course sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for an ESL Program Specialist Certificate. The 12-credit sequence has previously been approved by PDE. The 12-credit sequence is consistent with what other PDE-approved ESL certificate programs offer. The emphasis in EDUC 469 is to learn and integrate curricular, instructional, and assessment theories and practices into the K-12 classroom setting to promote language and literacy development. The course specifically addresses three of the PDE competencies necessary for a teacher to acquire to meet the minimum requirements as an ESL Program Specialist: PDE Competency I-English usage and developing linguistic awareness; PDE Competency II-English as a Second

The Pennsylvania State University
Language-instructional materials/development; and PDE Competency III-English language learners [ELLS] language and language services knowledge. The three areas of emphasis within EDUC 469 are:

a. **English as a Second Language methods and collaboration with academic content areas**, which focuses on: the preparation for ESL teaching by exploring trends, major theories, methodologies, and assessment in second language learning; the study of second language teaching approaches applicable to elementary and secondary students; materials development and evaluation; and the development of a broad base of knowledge and skills that will enhance teacher effectiveness in meeting the needs of diverse learners through appropriate instructional, curricular, and behavioral strategies;

b. **Assessment and evaluation of English Language Learners (ELLs)**, which explores: the use of multiple measures of assessment to evaluate academic achievement; the development and implementation of authentic assessment tools; and various approaches and challenges to classroom assessment; and

c. **Literacy development**, which focuses on elementary and secondary ESL students by exploring ways in which to enhance English language learning in elementary students and to enrich content-area instruction for secondary ESL students.

**EDUC 470W Higher-Order Thinking for Educators (3)**

This required course for elementary education majors focuses on three primary objectives. The first objective is to develop students' metacognitive, critical thinking, creative thinking, decision making, problem solving and reflection skills. A second objective is for students to become aware of ways to increase the higher order thinking of children in the elementary classroom. The third objective is to improve the students' ability to write critical thinking/reflection papers on educational problems and issues. This course serves as one of the foundation courses for the Elementary Education Program as one of the goals of the program is to develop reflective practitioners. Students are evaluated on the quality of eight writing samples, the quality and quantity of their contributions during whole class discussions, and the quality of their performance during cooperative group activities.

**EDUC 471 Best Practices in Literacy (3)**

This course is offered to support the Masters of Education degree in Teaching and Curriculum at Penn State Harrisburg by providing an application of research in best language arts It is a required course in the Reading Specialist Certification Program. The course acquaints students with an instructional and assessment framework that has been embraced by the educational community on a nationwide basis. Objectives for the course include the following: (1) Students will demonstrate an understanding of the theoretical underpinnings of the established best practices in literacy. (2) Students will demonstrate the ability to implement effective literacy practices. (3) Students will be able to assess and evaluate student performance according to established best practices. Evaluation methods will include: (1) attendance and participation in class discussion and exercises (10%); (2) a 5-7 page paper dealing with the use of children's books to teach reading and writing (25%); (3) a 5-7 page paper on the most current methods of assessing students' reading, writing, speaking, and listening skills (25%); and (4) the creation of an integrated Thematic Unit for instruction (40%).

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**EDUC 472 Teaching Reading Through the Content Areas (3)**

This course is offered to support the Masters of Education degree in Teaching and Curriculum at Penn State Harrisburg by providing an application of research in best language arts It is a required course in the Reading Specialist Certification Program. The course acquaints students with an instructional and assessment framework that has been embraced by the educational community on a nationwide basis. Objectives for the course include the following: (1) Students will demonstrate an understanding of the theoretical underpinnings of the established best practices in literacy. (2) Students will demonstrate the ability to implement effective literacy practices. (3) Students will be able to assess and evaluate student performance according to established best practices. Evaluation methods will include: (1) attendance and participation in class discussion and exercises (10%); (2) a 5-7 page paper dealing with the use of children's books to teach reading and writing (25%); (3) a 5-7 page paper on the most current methods of assessing students' reading, writing, speaking, and listening skills (25%); and (4) the creation of an integrated Thematic Unit for instruction (40%).

EDUC 475 ESL Leadership, Research and Advocacy (3) Teachers will develop their skills as instructional leaders and researchers by conducting school-based action research projects.

EDUC 475 ESL Leadership, Research and Advocacy (3)
EDUC 475, the capstone course in the ESL Specialist and Leadership Certificate program (now the online SCOPE program), is a hybrid course involving online readings and discussions and field-based action research in PreK-12 educational settings with English Language Learners. ESL faculty will provide mentoring/coaching in the field. This course is designed to familiarize ESL candidates with the processes for developing, implementing, and evaluating action research projects. The ESL candidates will explore best practices in ESL pedagogy through implementation of various models of action research. The four areas of emphasis within EDUC 475 are as follows: a) the principles of ethical and methodologically sound action research related to ELLs; b) culturally and linguistically inclusive best practices supported by ESL research; c) collaborative partnerships between school and community to advocate for ELLs and their families; and d) ESL research, evaluation, and assessment for dissemination of research findings, professional development, and continuous quality improvement within ESL programs. ESL faculty will coach and mentor ESL candidates in the field while they conduct action research. By the conclusion of this course, ESL candidates will have gathered, analyzed, and summarized their data into a research paper for potential publication, as well as developed either: a) a workshop training presentation for their school or district; or b) a draft of a conference proposal for a national, regional, or state conference. By conducting action research projects and subsequently disseminating the results of their research through professional development presentations and potential publications, candidates are expected to become instructional leaders in the ESL field.

This course is the final capstone 3-credit ESL course for the ESL Specialist and Leadership Certificate program.

EDUC 477 Teaching Struggling Readers and Writers (3) A comprehensive overview of learning problems and effective strategies for teaching K-12 students who have difficulties reading and writing.

EDUC 477 Teaching Struggling Readers and Writers (3)
EDUC 477 is a required course in the M. Ed. in Literacy Education Program. The primary goals of the course are to increase the participants’ understanding of special learning problems and to provide participants with teaching techniques for helping struggling K-12 readers and writers. Emphasis is placed on improving these students’ reading, writing, listening, and speaking skills.

EDUC 484 School Law for Teachers (3) This course will focus on increasing teacher awareness of law and how it impacts on daily performance and job security.

School Law for Teachers (3)
EDUC 490 Student Teaching (1-12) Observation and teaching in selected elementary or secondary schools under direction of cooperating classroom teachers and University supervisors. Regular seminars. GPA 3.0 or higher. Passing scores on required Praxis I tests.
EDUC 490 Student Teaching (1-12)

This course fulfills one of the certification requirements established by the Commonwealth of Pennsylvania. Students are assigned for a period of twelve weeks to teach in either an elementary or secondary school. Students have the option of selecting either the primary or intermediate level in elementary education, or the middle or high school level in secondary education. Cooperating classroom teachers provide the day-to-day direction, evaluation and mentoring, and an assigned university supervisor makes weekly visits and observations. Students are phased into the full responsibilities of a classroom teacher, with the ultimate goal being, the assumption of all duties and responsibilities for a period of several weeks. Students plan, implement, evaluate and reflect on a variety of instructional activities throughout their experience. In addition to planning and implementing instruction, students assume responsibilities for classroom management, assessing student progress, communicating with all stakeholders, and participating in professional and co-curricular activities. Student teacher evaluations are based on clearly defined expectations and criteria. The assessment criteria are linked to Commonwealth and national standards.

EDUC 495A Junior Field Experience (1) Second semester juniors assigned to a suburban elementary school for the purpose of actively participating in classroom activities.

EDUC 495A Junior Field Experience (1)

This course is designed to provide Elementary Education majors with an intensive field experience that acquaints the student with the "real" world of elementary education in a suburban setting. The experience will be under the direction of a certified elementary teacher in a suburban Harrisburg setting. Students will have an opportunity to actively work at the primary (K-3) and/or the intermediate (4-5) level, and will be directed to accomplish specific field tasks assigned by their course instructors. These tasks are directly related to each course in which the student is enrolled. Students are assigned a university supervisor who observes and consults with the students throughout the experience. Specific activities will vary depending on the grade level and the school district's curriculum. Students are evaluated by both the cooperating teacher and the university supervisor, and the evaluations are based on classroom observations. This course is offered each
EDUC 495B Senior Field Experience (1) First semester seniors assigned to an urban elementary school for the purpose of actively participating in classroom activities.

EDUC 495C Early Childhood Field Experience (1) First semester seniors assigned to an urban elementary school for the purpose of actively participating in an early childhood classroom.

EDUC 496 Independent Studies (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EDUC 497 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
EDUC 497A Teacher Leadership (2) Develop findings of research and prepare manuscript for submission for publication and presentation at education conferences.

Teacher Leadership (2)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EDUC 497B Action Research Implementation (2) Use observational and interview data gathered to analyze results.

Action Research Implementation (2)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EDUC 497C Myths and Truths: American History for the Classroom (3) An examination of how American history has been taught over the last 200 years and ways to engage K-12 students.

Myths and Truths: American History for the Classroom (3)
EDUC 497D | International Field Experience: Germany (0.5-3)
- Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDUC 498 | Special Topics (1-9)
- Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDUC 498A | Advanced Institute: "Unlocking the Power of Poetry" (3)
- Course will explore poetic techniques and esthetics and the connection between poetry and the domains of writing.

EDUC 499 | (IL) Foreign Studies (1-12)
- Study of educational topics in a country other than the United States.

Education Abroad (ED AB)

ED AB 199 | Temporary Education Abroad Registration (1-18)
- This course is used to temporarily register students that are studying overseas. Permanent courses will be entered after the student returns.
Education Mathematics (EDMTH)

**EDMTH 441 Geometry and Measurement Across the K-12 Curriculum (3)** The course presents participants with investigations of reports, research, and recent trends related to teaching geometry and measurement.

**EDMTH 441 Geometry and Measurement Across the K-12 Curriculum (3)**

This course addresses the areas of Geometry and Measurement as defined by the National Council of Teachers of Mathematics (NCTM) standards and the Pennsylvania academic standards. Designed for graduate students who teach mathematics in K-12 grades or are leaders in mathematics education, the course focuses on discussions and teaching practices related to the fundamental concepts of geometric and measurement. Also, participants will become familiar with current research, reports and recent trends related to the teaching of a geometry or measurement topic.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2008
EDMTH 442 Algebra and Functions Across the K-12 Curriculum (3)
The course presents participants with investigations of reports, research, and recent trends related to teaching algebra and function concepts.

EDMTH 442 Algebra and Functions Across the K-12 Curriculum (3)
This course addresses the areas of Algebra and Functions as defined by the National Council of Teachers of Mathematics (NCTM) standards and the Pennsylvania academic standards. Designed for graduate students who teach mathematics in K-12 grades or are leaders in mathematics education, the course focuses on current research and recent trends related to teaching algebra. The course will also focus on teaching algebraic concepts and algebraic reasoning from patterns, mathematical modeling, and variables of change using manipulatives, graphical representations, and technology.

EDMTH 443 Data Analysis and Probability Across the K-12 Curriculum (3)
The course presents participants with investigations of reports, research, and recent trends related to teaching data analysis and probability concepts.

EDMTH 443 Data Analysis and Probability Across the K-12 Curriculum (3)
This course covers the concepts of Data Analysis and Probability as defined by the National Council of Teachers of Mathematics (NCTM) standards and the Pennsylvania Academic Standards. Designed for K-12 teachers of mathematics or mathematics leaders, the course focuses on discussions related to the teaching of data analysis and probability through problem sets, written assignments, classroom-based projects and research. Topics will also include incorporating activities to address teaching probability and statistics to diverse populations. Also, participants will become familiar with current research and recent trends related to the teaching of a topic on data analysis and probability. Attention will be given to practices utilizing manipulatives, writing, problem solving, technology, and simulations.

EDMTH 444 Numbers and Operations Across the Curriculum (3)
A student who has passed MATH 200 may not take EDMTH 444 for credit.

EDMTH 444 Numbers and Operations Across the Curriculum (3)
This course focuses on investigating reports, research, and recent trends related to teaching number and operation concepts K-12.

EDMTH 455 Current Issues in Mathematics Education (3)
An examination and analysis of contemporary trends and concerns in the teaching of mathematics.

EDMTH 497 Special Topics (1-9)
Formal courses given infrequently to explore, in-depth, a comparatively narrow subject that may be topical or of special interest.
Special Topics (1-9)

Educational Psychology (EDPSY)

EDPSY 010 (GS) Individual Differences and Education (3) Relationships between learner differences and physical, cognitive, language, social, and cultural development; emphasis on ethnicity, gender, special needs; schooling implications.

EDPSY 010 Individual Differences in Education (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is an overview of the major theories and significant research on the development and explanation of individual differences and how those differences affect the education of school-age children. Specific topics include physical, cognitive, language, social-emotional, and cultural development in children and youth ages 3-20. By its very nature, the course will include a diversity focus, with special attention to ethnic, cultural, and gender issues as well as the needs of special populations.

Within each topic area, the course will pay special attention to theoretical and empirical work on how and why variations occur, how they are to be interpreted and measured, and the implications those variations have for society, especially for schooling. Traditional and alternative practices in schools will be examined to see which approaches best meet the needs of an increasingly diverse American society. While the course will focus on individual differences in education it will not be exclusively oriented toward future teachers. The course will also help parents (or future parents) understand the nature of development and individual differences of students as they progress through the educational system.

EDPSY 408 (SPLED 408) Meeting Instructional Needs of English Language Learners with Special Needs (3) The course content and activities focus on instruction and assessment for English Language Learners with special needs. The purpose of this course is to bring together two bodies of research to prepare future teachers of learners with special needs who are also English language learners to be effective teachers. The course has been developed to fulfill requirements of Pennsylvania Department of Education and in recognition of the growing number of English Language Learners (ELLs) in the general population and thus in special education settings. The course presents (1) theory and research on the instructional needs of English Language Learners (ELLs) and (2) the knowledge base on effective instruction for students with special needs and assists students to integrate the two. Major topic areas include principles and issues in second language acquisition; ELL characteristics including linguistic and cultural factors that affect second language acquisition; techniques and methods of research-based instruction for English Language Learners with special needs; lesson planning and instructional modifications for ELLs with special needs; and appropriate assessment practices for ELLs with special needs. A major objective of this course is for students to be able to develop or modify instructional plans that reflect evidence based practices for adapting for the needs of ELL learners with special needs. Evaluation will be based on a combination of methods including, tests and quizzes, analyses of videos and case studies and reports of observations and interviews.

EDPSY 498 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Educational Technology (EDTEC)

EDTEC 400 Introduction to Instructional Technology for Educators (1-3) Use of microcomputers, video, and other media in education; models use technologies including video, audio, print, computer, and telephone.

EDTEC 400 Introduction to Instructional Technology for Educators (1-3)

This course introduces classroom teachers to the computer and its educational applications. It is an introductory level course and instruction is based on the premise that participants are novices. Participants first learn how to work in an online environment. They then work in that environment to develop the skills and perspectives needed for the effective application of microcomputers in education, which involves becoming familiar with a wide range of additional educational computing applications and issues.

Although it is important for students to develop technology skills, technology must be viewed as more than simply a new subject in the curriculum. Teaching students to use technologies well is a means to a much more important set of ends. Today's technologies offer teachers and their students a powerful means for addressing learning-related issues, and potentially redefining teaching and learning.

The potential of technology is most effectively realized when considered in combination with views about how individuals think and learn. The goal of this course, then, is not for participants to become experts in "technology," but to become more experts in using technologies to promote teaching and learning.

Upon completion of this course participants will be able to: successfully operate available computer hardware and associated peripherals including (but not limited to) keyboards, mice, and printers; demonstrate competency in using information technologies, including electronic mail, the Internet, and the World Wide Web; demonstrate competency in creating multimedia presentations and instruction; demonstrate competency in using word processing programs, basic graphics packages, and desktop publishing applications; demonstrate skills in creating spreadsheets and/or databases; integrate thoughtful applications of technology to address everyday teaching/learning problems; identify problems for which use of varied technologies offer productive alternatives for teachers, students, parents, and communities.

Students will demonstrate competence in these areas by developing three unit projects which will use technology to solve a classroom problem of their choosing. The projects address use of computers as communications tools, including the World Wide Web; information processing tools, such as spreadsheets and databases; and interactive multimedia using presentation software or Web-based materials. Each project will include a description of the problem, how the selected technology addresses the problem, a lesson plan demonstrating how the technology would be used, and an artifact which demonstrates the EDTEC 400 student's competency with the technology being used. Students will use Internet tools to share and provide peer reviews of classmates' projects.

Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EDTEC 440 Educational Technology Integration (3) Technology integration in educational settings.

EDTEC 440 Educational Technology Integration (3)

This course introduces educators to broad-based educational computing applications. This course introduces ideas, skills, concepts and strategies for integrating computers into classroom teaching. The focus of the course is on models for integration, but specific applications and how they can be used in the classroom will also be explored. This course is part of a graduate program of study for a Master's of Education (M.Ed.) in Instructional Systems or an M.Ed. in Educational Technology.

Within educational settings, technology is not simply an independent curriculum -- i.e., teaching about how to use technology. Rather it is a powerful means for addressing, and potentially redefining, everyday teaching and learning issues. The potential of technology is most effectively realized when considered in combination with views about how individuals think and learn best. The goal of this course, then, is not for you to become an expert in "technology," but to become more of an expert in teaching and learning. Technology can be used as a vehicle to help you to further develop this expertise.

This course is divided into five units which are based on the following areas of educational computing: (1) Technology Integration Concepts; (2) Productivity Tools; (3) Communication tools; (4) Interactive multimedia; and (5) emerging technologies.

Each of these units is designed not only to provide you with the information you need in order to understand what the technology is about and how it functions, but more importantly to stimulate serious reflection upon how you as a teacher can make use of this resource and how using this resource relates to student learning.

General Education: None
EDTEC 448 Using the Internet in the Classroom (3) This course introduces students to methods and models of using the Internet effectively in their classroom.

EDTEC 448 Using the Internet in the Classroom (3)

This course introduces participants to systematic instructional methods and models for using the Internet effectively in their classrooms. The Internet offers many resources to help educators plan, develop and teach lessons. When guided by a systematic instructional design model, educators can create lessons that are current, highly motivating, mentally engaging, and effective.

Participants will use the Internet to provide background information to support discussions of four issues related to Internet use in educational settings and will then use Internet discussion tools to evaluate examples and arguments related to each issue. Each participant will organize and moderate at least one discussion.

In this course, educators will determine the essential components of a lesson and then design and create web-enhanced lessons and web-based learning objects for the components. As participants search resources they will identify deep principles to develop a classification system for Web resources that can be used in their professional context.

The course is organized around four roles a teacher assumes: Internet miner, Internet policy advisor, integrator of existing Internet resources, and producer of new Internet resources. The main focus of the course is examining and reflecting on the Internet's pedagogical usefulness in the classroom.

Course Goals - Participants in this course will be able to: use a systematic Instructional Design (ID) model to plan educational activities that harness resources from the Internet; integrate Web resources in their classrooms; publish relevant learning objects on the Web; and identify and respond to critical issues regarding Web/Internet uses in the classroom.

Course Objectives - As Internet Policy Advisor, participants in this course will be able to: identify and respond to critical issues regarding Internet use in educational settings, including: access, the "digital divide," and special populations; copyright accuracy and validity of information, and privacy and security; moderate a discussion; participate in on-line discussions and conversations appropriately; and write an administrative policy brief.

As Internet Integrator: use a systematic instructional design model to integrate web-resources into educational activities that apply the First Principles of Instruction, Gagne's Nine Events of Instruction, Web-Enhanced Learning Environment Strategies, and Madeline Hunter Lesson Plan Components.

As Effective Internet Miner: classify, and create an organizational system for the types of resources that will be useful.

As Producer: create three types of web-based learning objects useful for their educational setting; publish learning objects on the Internet.

EDTEC 449 Using Video in the Classroom (3) Skills and knowledge needed to direct the use of video technologies in educational settings.

EDTEC 449 Using Video in the Classroom (3)

This course introduces video and multimedia production for educators based on the premise that participants are novices. The course is intended for teachers and trainers who would like to acquire fundamental theory and skills in designing and producing video and multimedia to support teaching and learning. It introduces the tools of media production (video, audio, and lighting), and develops basic skills, including production and editing techniques, storyboarding and project planning.

Participants in this course will demonstrate: a basic proficiency in the operation and handling of media production tools, including video and audio editing; an understanding of appropriate media use for classroom use; a basic knowledge of the production processes, including conceptualization, storyboarding, scripting, and project management; a basic proficiency in producing effective educational videos. Furthermore, students will facilitate learning by engaging actively in class activities and discussions.

General Education: None

EDTEC 461 Designing Computer Networks for Education (3) Applying fundamental concepts of computer networking to design effective networks for educational purposes.

EDTEC 461 Designing Computer Networks for Education (3)

In this course, participants will learn how to assess the technology needs of an educational institution, how to predict how those needs might grow in the near future, and how to design an effective, cost-efficient, upgradeable computer network to meet those needs.

Participants will: learn about the hardware and software involved in Ethernet networking, and why Ethernet is the preferred technology for today’s schools; experience putting together the basic cabling components for an Ethernet network; work as a member of a team to solve case studies by designing effective school networks; and work independently to design a school network and to connect that network to a network in another school.

Participants are also required to participate in a cabling activity, during which they use the materials provided in the course packet to create a working segment of network cable (including the wall plate connection).

Another important activity involves the design of a wiring diagram for "Paterno Middle School," review of the design diagrams with a group of your classmates, followed by the submission of an individual network design complete with parts list and budget.

The course concludes with an individual project in which participants scour the Internet for that latest information on networks (wired and wireless) in order to answer some assigned research questions and to design a network that connects multiple schools and the district administrative office.

Technology coordinators are asked to identify, plan for, and meet technology needs, to advise and develop technology-related policy, and to help lead the district in important new directions. Technology coordinators: determine which technologies will meet learning and administrative needs; acquire and install them; educate and train district personnel in the use of these technologies; and evaluate the effectiveness of the district's use of technologies.

This course deals with the most daunting aspects of the technology coordinator's role -- the activities that require study and reflection and for which interaction with others enhances the learning experiences. Most would-be technology coordinators are drawn to this new role because of their interest in and knowledge of new and exciting learning technologies, but they lack experience in the tough issues collected as the content of this course: leadership; diversity; laws and regulations; management and administration; professional development; technology planning and budgeting.

The course involves students in on-line activities related to these topics, including reading, email conversations, chats, development of papers and projects, and peer review of papers and projects.

In addition to ongoing conversations and a series of smaller assignments, there are three major "deliverables" for this course: a position paper on leadership and diversity; a comprehensive technology plan; and an effective inservice training program on a technology-related topic.

EDTEC 462 Coordinating Technology Use in Education (3)
Skills and knowledge needed to direct the use of learning technologies in educational settings.

EDTEC 462 Coordinating Technology Use in Education (3)
Technology coordinators are asked to identify, plan for, and meet technology needs, to advise and develop technology-related policy, and to help lead the district in important new directions. Technology coordinators: determine which technologies will meet learning and administrative needs; acquire and install them; educate and train district personnel in the use of these technologies; and evaluate the effectiveness of the district's use of technologies.

This course deals with the most daunting aspects of the technology coordinator's role -- the activities that require study and reflection and for which interaction with others enhances the learning experiences. Most would-be technology coordinators are drawn to this new role because of their interest in and knowledge of new and exciting learning technologies, but they lack experience in the tough issues collected as the content of this course: leadership; diversity; laws and regulations; management and administration; professional development; technology planning and budgeting.

The course involves students in on-line activities related to these topics, including reading, email conversations, chats, development of papers and projects, and peer review of papers and projects.

In addition to ongoing conversations and a series of smaller assignments, there are three major "deliverables" for this course: a position paper on leadership and diversity; a comprehensive technology plan; and an effective inservice training program on a technology-related topic.

EDTHP 115A (GS;US) Competing Rights: Issues in American Education (3) An examination of educational issues relevant to democratic citizenship; emphasis is on understanding the relationship among politics, schools, and society.

EDTHP 115A Competing Rights: Issues in American Education (3)
(GS;US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course offers students a chance to practice solving skills necessary for active and responsible citizenship. Because the course requires students to engage in detailed analysis of contested issues, students will: acquire information about the history and governance of public schools; develop an understanding of ideologies underlying existing schools and proposed reforms; and, as a result, be better equipped to make informed choices as voters. Major topics include curriculum design; school accountability; education of minority populations; the conflict between students’ rights and the need of a school to maintain order; and the teaching of values.

The course will require extensive reading, discussion (in-class and/or on-line), writing, and field research, to include such activities as interviewing teachers and politicians, or attending a school board meeting. Readings may include editorials, proposed legislation, court decisions, chapters from texts, essays and scholarly articles, and material from web sites of interested organizations (such as the National Education Association, the Christian Coalition, or the American Civil Liberties Union). After readings, analysis and discussion, students will prepare and defend a position on each issue, either individually or in groups, formally or informally, in speech or in writing. Students will be graded on their ability to support a particular stance with credible evidence, and on their ability to articulate the ideology underpinning a stance. Therefore, the ability to identify credibility of sources is inherent to success in the course.

In general, this course draws upon concepts and information from history, political science, economics and philosophy as well as from education. As a General Education course, it seeks to help students broaden their perspective on social issues; to offer them practice in informed decision-making; and to understand and accept the responsibilities of active citizenship. The course might be particularly useful to social science majors because it will reveal interdisciplinary connections, while it will also be useful to the wider student body as a form of civic education.

EDTHP 200 (GS) Educational Reform and Public Policy (3) The course uses an interdisciplinary approach to explore the reforms that shape the nation’s largest social institutional-public education.

EDTHP 200 Educational Reform and Public Policy (3)

This course is designed an an introduction to the major “Education and Public Policy”. The course explores fundamental questions about the United States by examining the nation’s largest social institution-public education. Drawing from multiple social science disciplines, the course uses these questions to explore how ideologies, institutions and social groups have interacted to shape formal schooling and how schooling reflects the conflicting, interests, and beliefs of its citizens. Several case studies of past and present reforms will be analyzed to interpret the relations of schools to historic changes in legal norms, the distribution of power and resources in public institutions, and the access of different social groups to leadership and leverage in the political process of American society. The course has no prerequisites. The lectures and readings are designed for students interested in the uses of social science disciplines for studying public policy. Discussion sections are intended to lead to informed interpretation of educational policy dilemmas.

EDTHP 234H Honors Leadership Jumpstart (3) Intensive survey of contemporary leadership theory joined with practice, team-building skills, policy formation and influence, and service leadership.

EDTHP 234H Honors Leadership Jumpstart (3)
This is an intensive honors course for incoming First-Year students in the Schreyer Honors College with an interest in leadership. It provides introductory skills, perspective and background to prepare for and participate in a variety of leadership roles at Penn State and in the university community. Contemporary leadership theory joined with increasingly complex practice situations will be introduced. Content matter will include personal assessments, team building skills, organizational leadership, collaborative leadership, civics and diversity, policy formation and influence, and lessons about service learning and public scholarship. Considerable reading, writing, and discussion, as well as a first-year orientation project and a semester-long team service project will be required.

EDTHP 394 Professional Development in Education and Public Policy (3) This course develops professional skills and opportunities to prepare students for field placement and future employment or study.

EDTHP 394 Professional Development in Education and Public Policy (3)
This course focuses on the development of personal understanding of educational policy in a wide range of governmental, private, and civic organization with interest in educational policy, broadly defined. Students are provided opportunities to discover their policy interests, develop their professional communication and research skills, and design an on-site research project to be implemented during a summer field experience. The culminating project, the Field Experience Proposal, synthesizes readings, research, professional presentation, and details of the field placement. This becomes the blueprint for the students' summer field experience in EDTHP 395.

EDTHP 401 (IL) (CI ED 401) Introduction to Comparative Education (3) Origins, nature, scope, basic literature, and methodology of comparative education. Study of sample topics.

EDTHP (CI ED) 401 Introduction to Comparative and International Education (3) (IL)
The course introduces undergraduate students to global issues in education and provides a survey of schooling practices used in various educational systems around the world. Students will have the chance to create an individual research project that will allow them to explore one country and one global educational issues in depth. Students are required to attend all classes, participate in the discussion sections, and take notes on the films shown. These films play an integral part in the course and provide students with views into classrooms and schools around the world. Students will also have access to international databases and be expected to make use of these databases in developing their projects. Finally, in-class discussions will focus on how comparative educational studies have been used by politicians to influence educational reform around the world.

In this course, we will survey the state of public education in the world today. Each student will focus on one nation and provide a synopsis of educational practice in that nation. We will then move on to focus on global or cross-national issues such as how competition between "core" nations like Singapore and the U.S. drives reform (GOALS 2000 or No Child Left Behind). Other issues will include power differences between north and south, education for democracy, barriers to girls and women's education in developing nations, as well as education and national identity.

EDTHP 425 Anthropology of Education (3)
This course will review the origins and development of anthropology of education and its role in educational research and reform. The course, by reviewing the anthropology of education and its role in educational research and reform, tries to provide the concept and role of schools as agents of cultural transmission and as agents of cultural change. The school's impact on teacher and student culture will also be covered in this course. This course will be concerned with culture and the use of qualitative methods to understand culture. The history and development of anthropology of education and the development of ethnographic research in schools will be covered. Because ethnography has increasingly been used in work with "at-risk" and minority groups, students will evaluate and discuss how authors have attempted to deal with issues of social oppression and inequality. Anthropology of education, within the broader field of socio-cultural anthropology, focuses on schools, classrooms, families and other social institutions where learning occurs. The sub-field was founded in the 1950s and built on studies of childhood in other cultures conducted by Margaret Mead. Even some of the major figures of cultural anthropology (such as Malinowski and Radcliffe-Brown) had come to take a special interest in this area. Anthropology of education meets the definition of both an intercultural and international course because the teaching material draws on cultural aspects of schooling from an extremely broad range of cultures. Students are asked to read about, discuss and interpret learning situations as diverse as the Hopi Kachina initiations, pre-school experiences in Japan and China, and the induction of boy monks into university/monasteries in Nepal. The course uses both texts and videos to portray a broad range of school and educational situations from nations and groups around the world.

EDTHP 434H Honors Teaching Experience in Leadership Jumpstart (1) Guided instruction and practical experience for teaching assistants to the Honors Leadership Jumpstart course (EDTHP 234H).

This course trains and supports the teaching assistants (TAs) who work with the first-year students in the Leadership Jumpstart course (EDTHP 234H). The TAs help guide the first-year students through their course by assisting in the design, implementation, and evaluation of the course and the student projects, providing feedback for what worked and what did not work, and providing important perspective from when they were first-year students. The TAs are expected to be a role model, assist in the instruction of the course, assist in the functional elements of the course, be a confidant/mentor to new students, and occasionally serve as an evaluator of students' work. The TAs' grades will be based on attendance at all class sessions and interactive assistance and leadership during the EDTHP 234H course and on the TA's reflections on the course, its effectiveness to achieve the objectives, and possible improvements.

The major objective of EDTHP (CI ED) 440, Introduction to Philosophy of Education, is to broaden and deepen the students’ understanding of the nature of education. Such a study involves exploring the ends as well as the means of education. It includes both an examination of some of the distinctive or defining characteristics of "educated persons" as well as the different elements of the learning experience (including curricula, pedagogies, and evaluative processes) that encourage the development of such persons. As part of developing an understanding of the educational enterprise, this course will introduce students to some of the important ideas and theories that comprise the rich tradition of educational philosophy. In the design of a course of this nature with constraints established by space, time, and the background of the student, it is necessary to confront the task of making judicious selections from the vast literary wealth accumulated over the centuries. In doing so, the decision made has been to focus primarily on the literary contributions of western philosophers of education. In the interest of making the sample varied and interesting, however, an effort has been made to include writings of some philosophers of education from different cultural contexts. The educational thoughts of A.S. Neill, John Dewey, Eliot Wigginton, Maxine Greene, Paolo Freire, Mohandas Karamchand Ganddhi, David Orr, Ivan Illich, and Wendell Berry, among others, will be explored in this class. The exposure to diverse, rich, and provocative ideas of the educators included for study here will, it is hoped, stimulate students to re-examine and further develop their own philosophy of education into a more comprehensive, coherent, and consistent one.

Special Topics (1-9)

Electrical Engineering (E E)

E E 007S Adventures in Electrical Engineering (1) Exploration of electrical engineering through several hands-on activities that cover a broad spectrum of applications and fundamental concepts.

E E 007S Adventures in Electrical Engineering (1) (FYS)

What engineering discipline should I major in? This is perhaps one of the most important decisions that students in the College of Engineering must make within their first two years of study. Unfortunately, many students often make this decision based on limited knowledge of the various engineering disciplines offered at Penn State.

Adventures in Electrical Engineering is a fifteen week expedition that answers two questions. First, what type of problems do electrical engineers solve? Second, what tools do electrical engineers use to find solutions? These questions are addressed by highlighting various areas of electrical engineering including electronic circuits, semiconductor devices and fabrication, optical communications, feedback control systems, and digital image processing. Most topics are drawn from senior technical electives so that students obtain a broad view of electrical engineering.

Adventures in Electrical Engineering is a hands-on course that requires the design, construction, and testing of several projects. Each project emphasize a different subdiscipline of electrical engineering. In addition to exploring fundamental concepts of electrical engineering, students work with instrumentation and computer software frequently used by electrical engineers.

E E 008S Introduction to Digital Music (1) First-year seminar that discusses digital music from an electrical engineering perspective; topics include sampling, digital filtering, compression, and music synthesis.

E E 008S Introduction to Digital Music (1) (FYS)

E E 008S is a lab-oriented first-year seminar course aimed at students interested in the field of digital music. Specifically, this course discusses how the various digital music formats (and other types of digital audio) relate to the electrical engineering sub-discipline of digital signal processing. Students will come out of this course with a more technical understanding of the digital audio formats that they listen to every day.

This course is structured to have alternating periods of lecture and lab. New concepts are first covered in the lectures and then reinforced with a variety of laboratory activities. In the laboratory experiments, students will use various computer programs and will also get exposure to standard test equipment used by electrical engineers.

Topics covered in the lectures/labs include investigating the physics of sound, sampling and quantization of music signals, generating audio special effects through the use of digital filters, compression techniques used in digital audio, and mathematically synthesizing instrument sounds. Current popular digital audio formats such as compact disc audio, WAV, MP3, and MIDI will also be investigated throughout this course.

No musical experience/talent is necessary.

E E 009S First-Year Seminar in Electrical Engineering (1) First-year seminar covering a variety of Electrical Engineering topics that vary from year to year.

E E 009S First-Year Seminar in Electrical Engineering (1) (FYS)

The overall objectives of Engineering First-Year Seminars are to engage students in learning about engineering and orient them to the scholarly community in a way that will bridge to, and enhance their benefit from, later experiences in the College and the University.

Seminars adhere to the two specific goals identified below by including one or more of the three strategies following each goal:

(1) Introduce students to a specific field, or encourage their exploration of a number of fields, of study in engineering; familiarization with the engineering majors and career options and with the objectives of general education and other components of the curriculum; development of a particular topic, contemporary issue, emerging or interdisciplinary field of concentration, or professional responsibilities in engineering; plant tours or demonstrations of engineering facilities

(2) Acquaint students with tools, resources and opportunities available to them in the department(s), College and University; exposure to learning support services and career development resources

Diversity: IL  
Bachelor of Arts: None  
Effective: Summer 2007

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**E E 300W** Design Process (3) Introduction to the electrical engineering design process, project teaming and management, and technical communication.

**E E 300W Design Process (3)**

E E 300W course will introduce students to the electrical engineering design process, project teaming, and project management in preparation for conducting a senior design project. In the lab, students will get practice managing a project from pre-definition to completion within constraints of customer needs, technical parameters and budgets. The principles of systems engineering will be introduced. The student-engineer will gain professional skills (in areas such as technical communication, teaming, conflict resolution and life-long learning) important for a successful career in a wide range of engineering environments. There will also be discussion of engineering ethics and the responsibilities of the engineer in the emerging global marketplace. A series of lectures by outside speakers will provide perspectives on life as an engineer.

General Education: None

**E E 331 Electromagnetic Fields and Waves (3)** Electromagnetic field theory and applications; Maxwell's equations; plane wave propagation; boundary conditions; basic antenna theory; impedance matching.

**E E 331 Electromagnetic Fields and Waves (3)**

After completing this course the student should understand, and be able to demonstrate a working knowledge of the following topics:
1) Vector Calculus  
2) Coulomb's Law and applications  
3) Gauss's Law and applications  
4) Electric potential and electric fields  
5) Static boundary conditions  
6) Computation of capacitance  
7) Laplace's equation  
8) Current density and Ohm's Law  
9) The Biot-Savart Law  
10) Magnetic field characteristics  
11) Computation of Inductance  
12) Faraday's Law of electromagnetic induction  
13) Maxwell's equations  
14) Time-harmonic fields  
15) Plane electromagnetic waves in various media  
16) Plane waves at boundaries  
17) Transmission lines  
18) Smith charts  
19) Basic antenna theory  
20) Impedance matching.

E E 340 Introduction to Nanoelectronics (4)

This is a required course for junior-level electrical engineering students. The first part of the course provides an introduction to the key aspects of electronic materials, quantum mechanics, and solid state physics needed to understand nanoelectronic devices. The second part is devoted to the fundamental theory of carrier transport including ballistic transport, drift, diffusion, and recombination/generation. The third part of the course applies the fundamentals to describe the operation of several basic semiconductor devices: p-n junctions, metal-semiconductor junctions, and metal oxide semiconductor field effect transistors (MOSFETs), and provides an introduction to fabrication methods used to create these devices. This portion of the course also highlights contemporary concepts in thin film electronics, optoelectronic devices, and solar energy conversion.

The course includes several in-class demonstrations and also web-based remote device measurement laboratories. One of the in-class demonstrations uses a Breeze interface to link a field emission scanning electron microscope session to the classroom. The students can see and communicate with the microscope operator to visualize real nanoelectronic materials and devices at different levels of magnification. The remote device measurement laboratories use web-based labview software to collect device characteristics from silicon p-n junctions and MOSFETs fabricated in the senior level device technology class. The students are given microscope images of the devices and an assignment to analyze the device performance. This allows the students to compare ideal text book performance to non-ideal device response.

E E 352 Signals and Systems: Continuous and Discrete-Time (4) Transient response, frequency response, Bode plots, resonance, filters, Laplace transform, Fourier series and transform, discrete-time signals/ systems; sampling z-transform.

E E 352 Signals and Systems (4)

E E 352 is a course designed to study the characteristics of continuous and discrete time linear systems. These include signal and power input/output relationships in both domains, impulse responses, and the differential equations that describe these systems. Convolution is an essential component of any linear systems course, therefore several classes will
be devoted to this topic in order that students fully understand the concept. Fourier series is used to determine the
spectral content of periodic signals thus illustrating how a signal is distributed in frequency. This is very important when
determining bandwidth requirements. There will be a brief refresher on the trigonometric Fourier series then the
exponential series will be studied extensively. The Fourier transform can be used to determine the spectral content of
virtually any signal encountered in the undergraduate curriculum, aperiodic, or periodic. It is also valuable in determining
the frequency response characteristics of linear systems. Some filter theory is included in the course along with the
Laplace transform. Much of the signal processing performed today is done digitally so the remainder of the course will
approach most of the aforementioned topics from the viewpoint of the discrete domain with a strong emphasis on
sampling and aliasing. Finite impulse response filters will be introduced along with recursive filters using the bilinear
transform method.

E E 353 Signals and Systems: Continuous and Discrete-Time (3) Fourier series and Fourier transform; discrete-time
signals and systems and their Fourier analysis; sampling; z-transform.

E E 353 Signals and Systems: Continuous and Discrete Time (3)

EE 353, Continuous- and Discrete-time Signals and Systems, is a core course taken by all computer engineering students
that provides exposure to a variety of topics in linear systems. The material in this course is needed for further study in
image processing and data communications, both of which are major areas of specialization within the computer
engineering curriculum.

This course is divided into three main sections - continuous-time linear system analysis, sampling and reconstruction,
and discrete-time (digital) linear system analysis. Although the material covered in the first and last sections is similar,
fundamental differences between continuous- and discrete-time exist. One of the goals of this course is to make the
student aware of these differences.

The first part of the course discusses continuous-time linear system analysis. It begins with basic time-domain
mathematical descriptions of various signals and systems. The bulk of the analysis, however, is in frequency domain
approaches such as the Fourier Series and the Fourier Transform. Applications such as modulation and multiplexing are
understood much easier using frequency-domain analysis approaches.

The middle part of the course deals with the bridge between continuous- and discrete-time, namely signal sampling and
reconstruction. Theoretical and practical approaches to sampling/reconstruction are covered. Finally the Nyquist sampling
theorem, which is the key to all digital signals, is developed. At this point, students are ready to study discrete-time
systems.

The final part of this course revisits system analysis, although now discrete-time (or digital) systems are considered. As in
the continuous-time case, both time-domain and frequency-domain approaches to the analysis problem are discussed.
The course ends with select topics in the z-transform, which is the digital counterpart to the Laplace transform.

E E 360 Communications Systems I (3) Generic communication system; signal transmission; digital communication
systems; amplitude modulation; angle modulation.

E E 360 Communications Systems (3)

E E 360 is a junior-level elective course in the electrical engineering curriculum that provides a detailed foundation of
communications systems, expanding on the topics covered in a standard linear systems class. The first part of the course
deals with analog communications. First, analog amplitude modulation (AM) is presented, covering double-sideband
suppressed carrier, double-sideband large carrier, single sideband, and vestigial sideband modulation formats. Detection
techniques for these modulation schemes are also covered. The phase-locked loop for coherent carrier tracking is also
presented. Second, analog angle modulation is presented in the forms of frequency modulation (FM) and phase
modulation (PM). Estimating the bandwidth of the angle modulated carrier is covered, as well as various generation and
detection methods. After analog communications are covered, the basics of digital modulation are presented. Sampling
theory and analog-to-digital conversion are covered. Particular attention is paid to the signal-to-noise ratio and the
aggregate bit rate at the output of the digital modulator. The principles of Nyquist pulse shaping are presented. Particular
topics include intersymbol interference, line coding, and power spectral density. A presentation of emerging digital
communications technologies concludes the course. Topics may include mobile radio, high definition television,
broadband services, video compression, and high-speed local area networks.

The Pennsylvania State University
E E 362 (CMPEN 362) Communication Networks (3) Data transmission, encoding, link control techniques; communication network architecture, design; computer communication system architecture, protocols.

E E (CSE) 362 Communication Networks (3)

E E (CSE) 362 is an elective course in both the electrical and computer engineering curricula which provides an overview of the broad field of data and computer communications. First, a general model of the communication task is presented, including the layered concept by which each layer provides services for the layer above. Next, the lowest (physical) layer is studied. This involves signal design, Fourier analysis representations, bandwidth concepts, transmission impairments and communication media properties. Then the next higher (link) layer is considered which involves organizing bits into frames, data link and error control methods (including frame sequence numbering and error detection principles). Multiplexing to share a link is studied, including frequency division multiplexing, dedicated time division multiplexing, and statistical time multiplexing.

At the network layer level, there are two categories: broadcast (usually local area) and switching networks. Broadcast and local area network studies include bus, tree and star topologies, Ethernet, optical fiber bus networks, ring networks, and medium access control protocols.

Switching, and routine, concepts for networks are explained, including both circuit and packet switching, datagrams and virtual circuits. Properties of frame relay and asynchronous transfer mode (ATM) networks are described. Internetworking, frame structures, routing and protocols are studied. Also, bridge routing for local networks is described.

At the still higher transport (network end-to-end control) layer, transport protocols, including TCP/IP, are described.

E E 380 Introduction to Linear Control Systems (3) State variables; time-domain and frequency-domain design and analysis; design of feedback control systems; Root Locus.

Introduction to Linear Control Systems (3)

E E 383 Signals and Controls Laboratory (1) Design, computer simulation, and practical implementation of systems in the areas of filtering, digital signal processing, and controls.

E E 383 Signals and Controls Laboratory (1)

In this course, students will be exposed to designing, simulating and implementing practical circuits for filtering of signals, digital signal processing, and control of physical processes. The design aspect of the course will be a direct extension of the two associated lecture courses (E E 352 and E E 380). The simulations will use industry standard software tools (e.g., MATLAB, Hyperception, C/C++) while the actual implementation will be accomplished using PC based DSP hardware in addition to analog circuitry. This will be a hands-on laboratory intended to augment the material presented in E E 352 and E E 380. Students will be expected to do a large portion of pre-lab work before starting the laboratory session.

E E 387 Energy Conversion (3) Modeling of induction machines, synchronous machines, transformers, and transmission lines.

E E 387 Energy Conversion (3)
E E 387 is an electrical engineering technical elective course intended for students with an interest in energy conversion in electrical, electromagnetic, electromechanical, and electrochemical systems.

The course begins with a review of static and quasi-static electromagnetics. In particular, methods of determining electromagnetic forces and torques will be discussed in detail. The course will then present methods of developing models for electromagnetic, electromechanical, and electrochemical systems and discuss the use of these models in the analysis and design of devices such as inductors, transformers, actuators, transducers, and rotating machines. Furthermore, fundamental concepts related to the operation of power electronic circuits, which often interface with these types of devices, will be presented.

The course includes a lab component where students gain experience with the analysis and design of energy conversion systems. E E 350, Continuous-Time Linear Systems, is a prerequisite for this course.

**E E 400 Engineering Design Concepts (3)** Engineering design and modelling, engineering economy, project planning, capstone project selection, and technical communication skills.

**E E 400 Engineering Design Concepts (3)**

This course prepares senior electrical engineering students for industrial engineering design and project management. It covers the engineering design process, project planning and evaluation, engineering ethics, and engineering economy. In addition, students select, specify, and start their capstone design project which is completed in the follow-up course, EE BD 481. Students are expected to carry out a group design project that is on par with industrial expectations. Upon completion of this course a student should have a solid understanding of the engineering design process, a clear capstone project description, should have completed some preliminary design work, and be adequately prepared to complete the project in E E 401.

**E E 403W Senior Project Design (3)** Project designs of electrical engineering systems, encompassing various subdisciplines within Electrical Engineering, with an emphasis on technical communications skills.

**E E 403W Senior Project Design (3)**

E E 403W is intended to give senior-year electrical engineering students a "real-world simulation" of a total design experience. This is accomplished through both lectures and a laboratory component. One period each week is devoted to general lectures concerning professional engineering topics. The subjects of these lectures vary but generally are concerned with "life as an engineer" topics that are not purely technical in nature. Topics typically include laboratory safety, quality control, reliability, entrepreneurship, job interviewing, deciding to go to graduate school, ethics, etc. The focus of the weekly three-period lab varies according to the particular section number. In some sections, the first seven weeks of the semester are devoted to three predefined laboratory assignments. These assignments are often

The Pennsylvania State University
focused on interfacing techniques, such as interfacing between multistage analog systems or between analog and digital systems. In the second half of the course, the student teams work on a major design project chosen by each team, with approval of the instructor.

In other sections of the course, the student teams begin work on a major design project at the beginning of the semester. The projects for these "industrial strength" sections are sponsored by industrial companies through Penn State's Learning Factory.

Multidisciplinary teams are formed by students from E E, M E, I E, and/or Aerospace Engineering.

All sections of E E 403W have a small, section-by-section weekly lecture that is concerned with "life on a project" issues. Some of these lectures may be devoted to design issues directly related to the student projects, but many are still general in nature. Small lecture topics can include the following: what's going on with teaming, engineering economics, TQM/CQI, preparing effective presentations, project management, mechanical packaging, preparations for requests for quotes, preliminary and critical design reviews.

About one third of the course is devoted to technical communication issues. The students must develop good laboratory documentation techniques. They must also prepare a detailed project proposal. Engineering reports are required either upon the completion of each assigned task or, in the "industrial strength" sections periodically to the corporate sponsor. Oral presentations are required for the preliminary and critical design reviews. The students must also submit a final written report. A final oral presentation is made by each team for the student-chosen projects, while the industrial projects are presented in poster format at an end-of-semester product showcase.

**E E 405 Capstone Proposal Preparation (1)** Performing the initial research needed for the capstone course, and the preparation of the written project proposal.

**E E 405 Capstone Proposal Preparation (1)**

The capstone design course will incorporate engineering standards and realistic constraints including most of the following considerations: economic; environmental; sustainability; manufacturability; ethical; health and safety; social; and political. While engineering constraints are included in the earlier courses, the senior capstone design requires integration of the appropriate engineering constraints into the capstone design course. This course will mimic the problems encountered by an engineer working in commercial, industrial, and governmental entities. This basically requires that students in the Electrical Engineering BS program select a topic prior to starting the semester of their capstone design course, do the initial research for the topic, prepare a timeline, and prepare a well written proposal that would make a suitable capstone project. The time devoted to the careful topic selection, research, timeline, and proposal preparation, makes for a much better capstone design experience.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2012 Future: Fall 2012
Prerequisite:

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**E E 405 Capstone Proposal Preparation (1)** Performing the initial research needed for the capstone course, and the preparation of the written project proposal.
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

E E 406W Electrical Engineering Capstone Design (3) Project designs of analog and digital systems, interfacing, and relevant electronic circuits, with an emphasis on technical communications skills.

E E 406W Electrical Engineering Capstone Design (3)

E E 406W is designed with the following goals and objectives:

* The students will enter the course with a well-defined capstone design proposal and a timeline for which the first task will be to write the specifications. Upon the specifications' approval, the student teams will begin designing and building the projects.
* Each student will maintain a laboratory notebook that documents the day-to-day activities of the project in a style that could be used for patent documentation.
* Team members will provide short oral and written reports every week for the first five to six weeks, and then, every two weeks until the end of the semester.
* The students will incorporate engineering standards and constraints, i.e., consideration of economic, environmental, sustainability, manufacturability, ethical, safety, etc., in their project and final report.
* A draft copy of the final report will be collected, critiqued, and returned to students with comments and suggestions for changes.
* A final project oral report (20 - 25 minutes) will be given by the project team during the last week of the semester.
* An extensive well-written report describing the project that has been designed and built, is the major outcome of the capstone design course.

This course is a required course in the Electrical Engineering BS curriculum and is intended to be taken by seniors as the capstone course for the major. As such, the course integrates materials from many of the undergraduate electrical courses in addition to related math, engineering, and science courses.

E E 406W Electrical Engineering Capstone Design (3) Project designs of analog and digital systems, interfacing, and relevant electronic circuits, with an emphasis on technical communications skills.

E E 410 Linear Electronic Design (3) Linear circuit design via integrated circuit processes; A/D converters, switched capacitor filters, phase lock loops, multipliers, and voltage-controlled oscillators.

E E 410 Linear Electronic Design (3)
E E 410 is a technical elective intended for electrical engineering students who wish to specialize in semiconductor circuits, especially in linear circuit design. The course emphasizes integrated circuit process-compatible circuit design techniques in recognition of the amazing synergy that has characterized the relationship between modern circuits and integrated circuit processing technology. This course is the third in a series of three courses dealing with the analysis and design of electronics circuits, following E E 310 and E E 311. E E 410 includes three lectures and a two-hour laboratory each week.

E E 410 begins with a deeper look into several key concepts previously considered in earlier course work, such as node voltage and mesh current methods for solving circuits, which are emphasized throughout the course. The small-signal method is revisited and thoroughly examined. The more advanced Ebers-Moll bipolar junction transistor model is introduced and the metal oxide semiconductor field effect transistor device model is reviewed.

The next phase of the course introduces the vertical geometries of integrated circuit devices commonly used in linear circuits. Unwanted parasitic devices that are introduced as a result of the integrated circuit processes are revealed and their effects on circuit sign techniques operation are discussed. Both the limitations and the opportunities provided by integrated circuit technology are examined, particularly in the light of de used to minimize the problems and to take advantage of the features.

The last half of the course is devoted to applications of linear circuits, especially those which students have not previously encountered. The first topics in this series are analog-to-digital and digital-to-analog conversion. Various methods of accomplishing each of these functions are examined. The inverse relationship between speed and accuracy is emphasized. These topics are followed by studies of switched capacitor filters, phase lock loops, analog multipliers, and voltage-controlled oscillators.

The emphasis of the laboratory component of the course is to successfully accomplish a student-chosen linear circuit design project. Students work in two- or three-person teams to select their project and do the design and evaluation. A three-way methodology is emphasized; mathematical analysis by hand, computer simulation, and laboratory breadboarding and measurement. At the end of the project students give an oral presentation and submit a formal engineering report.

E E 413 Power Electronics (3) Switch-mode electrical power converters. Electrical characteristics and thermal limits of semiconductor switches.

E E 413 Power Electronics (3)

E E 413 is an elective course taken by undergraduate and graduate electrical engineering students. The objective of E E 413 is to introduce techniques for the analysis, design, and application of the switch-mode power converters that are used in power supplies, motor and actuator drives, and the interface between power distribution systems and emerging energy sources such as fuel cells, photovoltaics, and superconducting magnetic energy storage systems. Several laboratory experiments provide an opportunity to characterize the switching behavior of semiconductor devices. Build and test various dc/dc and ac/dc converters and consider alternatives for gate/base drive and feedback isolation circuits required to build practical converters.

This course draws upon the students' background in time-domain circuit analysis, electronic devices and circuits, Fourier analysis, and use of software such as PSPICE and MATLAB. It does not require a background in power or electric machinery, although students with such a background will be able to appreciate many of the applications more fully.

The course is divided into four major areas: rectifiers and phase-controlled converters, dc-to-dc converters, inverters, and design considerations for practical converters. The focus in each of the first three areas is to determine the relationship between the magnitude of the fundamental frequency component and/or average value of the voltages and currents at the two ports of the particular converter. Additional harmonic or ripple components are then considered and design guidelines for the switching and reactive components are derived. The fourth area encompasses the study of power device characteristics, the design of gate drive and feedback circuits, and the analysis/design of elementary controllers.

As the name implies, students interested in either electronics or power will find this course worthwhile. Electronics students will gain a new perspective on the operation and analysis of electronic circuits as well as an opportunity to discover what has powered the circuits that they have studied up until this course. Power students will see how and why power electronics are revolutionizing motor control and power distribution as well as the power quality issues associated with electronic power conversion.

E E 416 Digital Integrated Circuits (3)

E E 416 is a technical elective available to electrical and computer engineering students. It is intended for students who wish to specialize in the field of digital circuits. This course introduces the basic concepts involved in the design of digital circuits, which find practical application as logic and memory circuits in computers and other digital processing systems. The course emphasizes integrated circuit process-compatible circuit design techniques in recognition of the amazing synergy that has characterized the relationship between computer circuits and integrated circuit processing technology. This course includes three lectures and a two-hour laboratory each week. The only prerequisite is E E 310, a basic circuits course required for both electrical engineering and computer engineering students.

E E 416 begins with a review of the bipolar junction transistor (BJT) device and proceeds into the more advanced Ebers-Moll device model. This is followed by an examination of a series of BJT-based saturating and non-saturating digital circuits of ever increasing complexity illustrating the evolution of the modern bipolar logic circuit families. The next phase of the course reviews the metal oxide semiconductor field effect transistor (MOSFET) and proceeds along the same path taken for the bipolar transistor circuits. Various MOSFET logic circuit families are introduced and analyzed. Computer semiconductor memory circuits are considered next. Both BJT and MOSFET versions of both static and dynamic read-write and read-only memories are considered. The cell array, memory addressing circuits, and sense amplifier designs are all examined in detail. This is followed by the related subject of programmable logic arrays, the final topic.

The emphasis of the laboratory component of the course is to compare the performance of representatives of each class of circuits to computer simulations of the same circuits. Parameters such as input-output voltage transfer characteristics, noise margins, and propagation delays are evaluated by building and measuring laboratory models. Most of the laboratory exercises require the student to evaluate a specified circuit, but the final exercise requires the student to design a circuit to meet a predefined set of specifications, then to prove that the design meets the requirements by measuring the circuit performance. Students are required to write a formal engineering report detailing the results of each laboratory exercise.

E E 417 Digital Design Using Field Programmable Devices (3)

E E 417 (CMPEN 417) Digital Design Using Field Programmable Devices (3) Field programmable device architectures and technologies; rapid prototyping using top down design techniques; quick response systems.
E E (CMPEN) 417 Digital Design Using Field Programmable Devices (3)

Field Programmable Devices, such as Field Programmable Gate Arrays (FPGAs) and Complex Programmable Logic Devices (CPLDs) are widely used for rapid prototyping and quick response-time designs. The objective of this course is to introduce the student to digital design using Field Programmable ICs, and to provide an understanding of the underlying technologies and architectures of these Integrated Circuits.

The course begins by introducing design alternatives for modern electronic systems identifying and classifying alternative system solutions, and evaluating when particular design solutions are optimal. These alternatives include microprocessors, microcontrollers, off-the-shelf digital ICs, Programmable logic ICs (FPGAs and CPLDs), and various forms of Application Specific Integrated Circuit (ASIC) designs. A homework assignment requires the student to quantitatively evaluate the cost, complexity, packaging, and time-to-market issues for a complex system design specification.

Next, the underlying Field Programmable Logic IC architectures and technologies are studied in detail. Following a broad survey of available programmable IC vendors and on-chip programming technologies (and their cost/performance trade-offs), several specific case studies are presented in the class. The first is the Xilinx XC4000xl line, because of the target boards used in the CAD laboratory component for this class. The initial lab portions of the class help the students to specify their design using various forms of design entry tools and also shows them to see how their design map on to the underlying FPGA architecture. The students also learn the underlying algorithms used by the design software they use in their Labs.

Next, the systematic top-down method for specifying complex designs using VHDL is introduced. Students are given a supporting homework assignment to develop high-level behavioral models for a simple digital system to reinforce this segment of the course. VHDL behavioral synthesis is now introduced as a preferred path to go from high-level system behavior to actual implementation on the FPGA. The strengths and weaknesses of synthesis are discussed, as are the emerging CAD tool trends. Additional VHDL-based homework assignments reinforce behavioral design and synthesis using commercial CAD tools.

The final segment of the course covers special topics that identify current trends in digital system architecture and programmable logic design. These include such topics as partially reconfigurable architectures and dynamic reconfiguration techniques, system design for testability, and field programmable analog arrays. Applications of FPGAs in special purpose computing environments such as signal processing, Java acceleration and image processing are also introduced. In the laboratory, student design project assignments explore larger and more complete system specifications of such things as controllers, CPU and memory design, and signal processing blocks. These assignments reinforce the lecture content as the students model, synthesize and implement their digital designs on the target Xilinx FPGA boards.

E E 421 Optical Fiber Communications (3) Operational principles of optical components, including sources, fibers and detectors, and the whole systems in optical fiber communications.

E E 421 Optical Fiber Communications (3)

E E 421 is an introduction course to fiber optic communications. This course is designed as an elective course for both the E E senior undergraduate students and E E graduate students. Students are expected to have a general knowledge on fiber optic communications after taking this course. The content of this course focuses on the engineering aspects of fiber optic communications. This course is offered once a year.

This course basically consists of four major parts:

The first part introduces the motivations of using fiber optic communication systems, which include the huge bandwidth, low attenuation, immune from the electromagnetic field interference, et al. (1 week)

The second part of this course deals with light propagation in the optical waveguides. Both the simple geometrical approach and wave optics approach are used to calculate the light propagation in the optical fiber. The geometrical approach (i.e., total internal reflection) provides an intuitive feeling about light propagation in the fiber while the wave optics approach (i.e., Maxwell" equations) provides more accurate solutions. In particular, it can explain important concepts such as the conditions for single mode fiber and intramodal dispersions in single mode optical fiber. With the help of popular calculation software (e.g., Matlab, Mathcad), students are required to solve waveguide equations for...
The third part of this course introduces some critical components that are needed in fiber optic communication systems. This includes the optical transmitter (laser diode), optical receiver (i.e., photodetector), modulators and demodulators (such as driving current approach and optical waveguide modulators), optical coupler (how to connect more than two fibers together), optical amplifier (including the basic principle of erbium doped fiber optic amplifiers), fiber optic gratings (a critical component for the multiple wavelengths fiber optic network systems), dispersion compensation device (such as chirped fiber optic grating based device) et al. (6 weeks)

The fourth part of this course talks about fiber optic networks. The major contents include fiber optic network architectures (such as star connect), multiplexing techniques in fiber optic networks (such as wavelength division multiplexing and time division multiplexing), connection fiber optic networks with non-fiber optic networks (such as copper wire based networks), current trends in fiber optic networks, et al. (2 weeks).

E E 438 Antenna Engineering (3) Radiation from small antennas, linear antenna characteristics, arrays of antennas,
impedance concepts and measurements, multifrequency antennas, and aperture antennas.

**E E 438 Antenna Engineering (3)**

E E 438 is an electrical engineering technical elective course intended for students with a specialization in electromagnetics. This course presents antenna engineering concepts including in-depth studies of various antennas and arrays and computer modeling of antennas for analysis and design. The course has three lectures each week as well as an additional period for demonstrations and discussions of outside lab and computer projects. This course requires E E 330, the undergraduate electromagnetics course, as a prerequisite.

E E 438 begins with a review of electromagnetics which leads into an introduction of antennas. A lecture is given which shows how the evolution of a guided wave on a transmission line eventually leads into a device that can act as a wave launcher or antenna. A series of lectures are then given introducing the various classes and types of antennas. Performance parameters such as input impedance, radiation patterns, directivity, gain, polarization, and efficiency are then discussed. Examples and pictures of many antennas and their respective patterns are shown as part of these lectures.

Next, extensive lectures are given which describe definitions and antenna parameters in detail. Much time is spent on how to visualize radiation patterns and beamwidth. Derivations are carried out for directivity and gain adhering to IEEE standard definitions.

Theorems are discussed on the subject of reciprocity and how it can be related to practical measurements of patterns. Another lecture deals with the subject of antenna polarization and cross-polarization. Link analysis is discussed for communication systems and real-world examples are given for its use.

The second half of the course involves extensive study of various types of antennas including center-fed dipoles, monopoles, loops, phased arrays, broadband antennas, Yagi antennas, traveling wave antennas, frequency antennas, and aperture antennas.

Throughout the course, students are introduced to and utilize an advanced antenna computer modeling software package for carrying out assigned projects and use in homework problems. They are also assigned a group design project during the last third of the course where extensive use of the software package is required. Each group gives an oral presentation of the project and the results during the last week of class and turns in a final report.

E E 453 Fundamentals of Digital Signal Processing (3) Design of FIR and IIR filters; DFT and its computation via FFT; applications of DFT; filter implementation; finite arithmetic effects.

E E 453 Fundamentals of Digital Signal Processing (3)
The objective of E E 453, an electrical engineering elective course taken by seniors and graduate students, is to develop a rigorous, yet elementary, introduction to the fundamentals of one-dimensional discrete-time (digital) signal processing. The main topics in the course are the analysis and design of finite impulse response (FIR) and infinite impulse response (IIR) digital filters, the discrete Fourier transform (DFT) and its computation via the fast Fourier transform (FFT), and error analysis due to the constraints of finite arithmetic. The emphasis on the analysis and design of linear time-invariant discrete-time filters rests on the background acquired in the time as well as transform domain analysis of continuous-time and discrete-time signals and systems interfaced via the Shannon sampling theory. The students are alerted about topics outside the main thrust of the course mentioned above and these peripheral issues (that lead to more advanced subject matter pursued in depth in subsequent signal processing courses) include interpolation, decimation, and multirate digital signal processing.

There is also a laboratory portion of E E 453 that exposes students to the use of digital signal processing workstations -- a collection of hardware and software that is used to acquire, digitize, filter, analyze, and display a variety of real-life signals. This hands-on experience helps the student appreciate and understand theoretical concepts covered in class like the sampling and reconstruction of continuous-time signals, IIR and FIR filter design, and error analysis.

E E 454 (CMPEN 454) Fundamentals of Computer Vision (3) Introduction to topics such as image formation, segmentation, feature extraction, shape recovery, object recognition, and dynamic scene analysis.

E E 454 Fundamentals of Computer Vision (3)
E E 454 is an introduction to computer vision. The goal of computer vision is to make computers understand and interpret visual information. Computer vision systems bring together imaging devices, computers, and sophisticated algorithms for solving problems in areas such as industrial inspection, medicine, document analysis, autonomous navigation, and remote sensing. The course involves both pedagogical written assignments and computer projects.

The beginning of the course gives an overview of computer vision and introduces low level image analysis techniques for binary images. Binary vision systems are useful when the silhouette of imaged objects convey enough information to recognize them. Examples can be found in optical character recognition, chromosome analysis and recognition of industrial parts. Moreover, many techniques developed for binary systems can be applied to gray level or color images. Next, the course covers image segmentation and contours. These topics are the foundation of most computer vision techniques. For an image to be correctly interpreted, it must be partitioned into regions that correspond to distinct objects or parts of objects. First, region based techniques such as thresholding, split and merge, region growing and texture analysis are introduced. Next, edge based techniques using gradient and Laplacian operators are discussed. Finally, contour representations and curve approximations linking edges into region boundaries are studied.

Next, depth from vision, with emphasis in stereo vision, is considered. Calculating distances to and among various points in the scene is important in many computer vision tasks such as inspection, robot manipulation, and autonomous navigation. In this part of the course the geometry of stereo systems and how to obtain depth maps from stereo image pairs is studied. Also, alternative 3D imaging sensors such as laser based range finders and radars are discussed.

Following stereo, the topic of computer vision is broaden to understand sequences of images over time. In this section techniques using information on spatial and temporal changes are used to design computer vision systems capable of coping with moving and changing objects, changing illumination and changing viewpoints. Visual motion is important primarily for two reasons. First, motion is a very important cue to understand the scene structure. Second, biological
systems do use motion to infer properties of the surrounding world with very little a priori knowledge.

Finally, the topic of 3D object recognition is discussed. Object recognition entails two main issues: object identification and object localization. Identification determines the objects being imaged while localization determines their position in the world and with respect to the sensors. This topic builds upon all the different techniques discussed until this point.

E E 455 (CMPEN 455) An Introduction to Digital Image Processing (3) Overview of digital image processing techniques and their applications; image sampling, enhancement, restoration, and analysis; computer projects.

E E (CMPEN) 455 An Introduction to Digital Image Processing (3)

E E/CMPEN 455, a technical elective available to both electrical and computer engineering seniors and graduate students, discusses many current techniques for processing and manipulating digital images. The course involves both pedagogical written assignments and computer projects.

The beginning of the course gives an overview of digital image processing systems and digital image fundamentals. During this unit, important elements of human visual perception are reviewed; these ideas help motivate many of the computer-based techniques described in subsequent units. Also, the standard model for a digital image, in addition to the concepts of sampling and quantization, are described. Finally, basic topological concepts between digital image pixel are discussed.

The next unit considers image transform analysis, with a primary focus on Fourier-based techniques. The one-dimensional Fourier transform is reviewed, and then two-dimensional Fourier transform analysis is discussed. To bridge the gap from the continuous world to the digital world, the sampling theorem is introduced. Next, the Discrete Fourier Transform and its properties are described. Fourier-based filtering techniques, such as the ideal low-pass and Butterworth filters are then introduced. The Fast Fourier Transform is also discussed. Finally, the Discrete Cosine Transform, used later in JPEG and MPEG, is introduced.

The next unit discusses techniques for image enhancement and segmentation. These techniques include point-based techniques based on histogram analysis. They also involve linear and nonlinear mask-based methods for noise reduction and region sharpening. Further, techniques of mathematical morphology, which involve an application of set-theoretic concepts to image processing, are described. Finally, image segmentation methods, based on edge detection and thresholding, are described.

The final unit considers the concept of image compression. Techniques for image encoding and decoding are discussed. A brief model of the encoding-decoding process is described. Next, compression techniques, such as run-length encoding and Huffman coding, are described. Finally, the multimedia image-compression methodologies, JPEG and MPEG, are discussed.

E E 456 (E SC 456, EGEE 456) Introduction to Neural Networks (3) Artificial Neural Networks as a solving tool for difficult problems for which conventional methods are not applicable.

E E (E SC/EGEE) 456 Introduction to Neural Networks (3)

This course is in response to students needs to learn Artificial Neural Networks (ANN) as a solving tool for difficult problems for which conventional methods are not available. The objective of this course is to give students hands-on experiences in identifying the best types of ANN, plus developing and applying ANN to solve difficult problems. Students will be introduced to a variety of ANN and will use their training skills to solve their own applications. During this course the students will develop a final project, in which they will apply ANN to widely varied problems.

Examples:
I) students from E E may be interested in applying ANN to solve control problems;
II) students from Material Sciences may be interested in applying ANN to predict the pitting corrosion of components;
III) students from Petroleum Engineering may be interested in applying ANN to characterize the life of a reservoir;
IV) students from Agricultural Engineering may be interested in applying ANN to sort apples automatically, etc.

**E E 458 Digital Image Processing and Computer Vision (3)** Principles of DSP and computer vision, including sensing preprocessing, segmentation, description, recognition, and interpretation.

**E E (CSE) 458 Communication Networks (3)**

E E (CSE) 458 is an elective course in both the electrical and computer engineering curricula which provides an overview of the broad field of data and computer communications. First, a general model of the communication task is presented, including the layered concept by which each layer provides services for the layer above. Next, the lowest (physical) layer is studied. This involves signal design, Fourier analysis representations, bandwidth concepts, transmission impairments and communication media properties. Then the next higher (link) layer is considered which involves organizing bits into frames, data link and error control methods (including frame sequence numbering and error detection principles). Multiplexing to share a link is studied, including frequency division multiplexing, dedicated time division multiplexing, and statistical time multiplexing.

At the network layer level, there are two categories: broadcast (usually local area) and switching networks. Broadcast and local area network studies include bus, tree and star topologies, Ethernet, optical fiber bus networks, ring networks, and medium access control protocols.

Switching, and routine, concepts for networks are explained, including both circuit and packet switching, datagrams and virtual circuits. Properties of frame relay and asynchronous transfer mode (ATM) networks are described. Internetworking, frame structures, routing and protocols are studied. Also, bridge routing for local networks is described.

At the still higher transport (network end-to-end control) layer, transport protocols, including TCP/IP, are described.

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**E E 460 Communication Systems II (3)** Probability fundamentals, digital/analog modulation/demodulation, system noise analysis, SNR and BER calculations, optimal receiver design concepts, introductory information theory.

**E E 460 Communication Systems Performance Analysis (3)**

E E 460 is an elective course in the electrical engineering curricula that provides detailed performance analysis of communications systems studied in E E 360.

First a review of axiomatic approach to probability theory is presented, including review of random variables, their statistics, central-limit theorem and correlation function. This is followed by a review of the theory of random processes including power spectral density, multiple random processes, their transmission through linear systems and band-pass random processes.

Then, behavior of analog systems in the presence of additive white Gaussian noise (AWGN) is analyzed. As a benchmark, signal-to-noise ratio is derived for a base band system. This is followed by a performance assessment of amplitude modulated and frequency modulated systems and comparison is made to the base band system performance. Concepts of optimum pre-and de-emphasis systems are explained.

Behavior of digital communication systems in AWGN is studied. This includes optimum threshold detection and general analysis of optimum binary receivers. Performance of carrier modulation systems ASK, FSK, PSK and DPSK is derived in terms of average bit error rate (BER) as a function of bit-energy-to-noise density height. M-ary communications systems are analyzed. Synchronization issues are discussed.

This is followed by the theory of optimum signal detection; geometrical representation of signals and signal spaces, Gaussian processes, optimum receiver and equivalent signal sets are illustrated by several examples. BER performance analysis of complex digital modulated systems is demonstrated, using the developed signal space concepts.

E E 474 Satellite Communications Systems (3) Overview of satellite communications systems, principles, space platforms, orbital mechanics, up/down links and link budgets, modulation techniques.

**E E 474 Satellite Communications Systems (3)**

This course is designed to give seniors and graduate students an overview of the principles of satellite communications systems. Building on junior-level courses in electromagnetics and communications, it shows how complex satellite systems operate and provide services that we depend on, such as telephone, television, weather forecasting, and global positioning. Specific topics include: historical background on how satellite systems came to be, present uses of satellite systems, and future trends in satellite systems design, construction, and uses; orbital mechanics and launch systems and vehicles; earth stations; radio propagation and link analysis; signals and satellite access methods. Student performance is evaluated via exams, homework assignments, and projects. Hands-on experience in the design of satellite communications links is gained through the use of industry-standard satellite system analysis software. In their design, the student must achieve specific goals of satellite accessibility, earth coverage footprint, orbital launch and stability, and communications link budget.

E E 480 Linear Systems: Time Domain and Transform Analysis (3) Signals and systems representations, classifications, and analysis using: Difference and Differential equations, Laplace transform, z-transform, Fourier series, FT, FFT, DFT.

**E E 480 Linear Systems: Time Domain and Transform Analysis (3)**
Linear Systems: Time Domain and Transform Analysis, is a recommended graduate level course for the Master of Engineering in Electrical Engineering at Capital College, since it is a prerequisite for most of the E E prefixed courses offered at this location. The major topics covered in this course include; Signals and Systems representations, classifications, and analysis using; Difference and Differential Equations, Laplace Transform, z-transform, Fourier series, Fourier Transform, Fast Fourier Transform (FFT), Discrete-Time Fourier Transform (DTFT) and Discrete Fourier Transform (DFT). The objective of this course is to develop intuitive and practical understanding of the essentials in signals and systems. The stress is on fundamentals of representation, and analysis of signals and their applications to systems in both discrete and continuous time and frequency domains. This course is designed to prepare the graduate students for more advanced work in broad range areas including communications, control systems, power systems, computer engineering, signal processing and image processing. The quality of students' performances and therefore their course grades are determined via their performance in a midterm exam, a comprehensive final exam, homework assignments, and a course project in accordance with the university's grading policy.

The Pennsylvania State University
Electrical Engineering Technology (EET)

EET 002S Introduction to Engineering Technology (1)
The primary objective of this course is to teach basic computer skills and the use of basic computer word processing and spreadsheet applications, as well as the fundamentals of formal report writing. More specifically, students learn to use Microsoft Word (word processing) and Excel (spreadsheet) for the preparation of laboratory reports and business documentation. In addition to these applications, the course should also address as many of the following topics as possible:
* Windows operating system
* Selection of a personal computer
* Communication through electronic mail (e-mail)
* Use of the World Wide Web
* Preparation of professional letters and reports
* Use of an HTML editor to create web pages and use of File Transfer Protocol
* Integration of drawing, image, and spreadsheet files into word processing documents
* Technical problem solving

The course should also provide the student with an introduction to the field of engineering technology, with a discussion of job and educational opportunities in the field. Homework and other exercises should, wherever possible, allow the student to investigate the different aspects of engineering technology, or to interact with other faculty, students, or professionals involved with engineering technology.

EET 097 Special Topics (1-9)
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

The Pennsylvania State University
EET 100 Electric Circuits, Power, and Electronics (3)

Electric Circuits, Power, and Electronics is a course for non-major students who will be working with electronic equipment in industry. This course starts with basic knowledge of DC and AC components and concepts used in industrial electrical work. Topics such as circuits, electromagnetism, sources, energy conversion and electrical instruments prepare students to continue with topics in electronics. Beginning with the basics of semiconductors and moving through diodes and transistors, the student is prepared to learn the concepts of rectification and amplification. These form a foundation for the completion of the course with a look at understanding the concepts and use of analog and digital circuitry found in Programmable Logic Control (PLC) systems used in industry today.

EET 101 Electric Circuits I (3) Fundamental theory of resistance, current, and voltage; capacitance, inductance. Direct current and alternating current concepts through series/parallel circuits.

EET 101 Electric Circuits I (3)

Electric Circuits I has been designed to accomplish several related goals. A basic understanding of voltage, electric current and resistance is established early in the course. Then resistance becomes a focal point of the course as resistance of copper and other materials is examined. Resistance as a function of temperature is also considered. Efficiency, electric energy and electric power concepts are developed. A considerable effort is devoted to resistors in series, parallel and series parallel arrangements. Voltage sources in series and parallel are also considered. Resistive circuits with one voltage source are considered. Branch circuit analysis using Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL) receives considerable attention. The basic nature of Capacitance and Inductance is examined in great detail. Transient analysis of resistive-capacitive circuits and resistive-inductive circuits is covered. Sinusoidal waveforms, frequency and phase relations are introduced. Complex and polar numbers are introduced, as tools for AC circuit analysis. AC circuits with resistance, capacitance and inductance are explored. Power factor and power in AC circuits also receive considerable attention. Throughout the course, computer software is utilized for circuit analysis and evaluation.

EET 105 Electrical Systems (3) Introduction to the study of electrical systems, with a focus on applications in our society.

EET 105 Electrical Systems (3)

EET 105 is an introductory course in electrical systems and circuits. It is an entry level course intended to give students the big picture of the electrical technology spectrum. The course will cover the fundamentals circuit analysis such as: Kirchhoff's laws, parallel and series circuits, and superposition. The course then applies this knowledge to various commonplace electrical systems (toaster, electric toothbrush, fan, etc.). The course also gives students a broad, limited exposure to the breath of electrical systems by including components and topics such as resistors, capacitors, inductors, switches, relays, fuses, amplifiers, transformers and motors.

Topics covered include:
- Electrical Safety and House Wiring
- Electrical Science
- Electrical Generation and Utilization
- Electrical Circuits and Analysis
- Electrical Instrumentation and Measurements
- Electronics
- Electrical Systems
- Electrical Machines

The course will emphasize the basic concepts, principles, and analytical models used by engineers and technologists to design, develop and test electrical systems. The course does so from a top down, non-detailed systems perspective. Upon completion of this course, students will have a broad perspective of the electrical technology spectrum as they gain a deeper focused knowledge in subsequent courses.

Lectures will be supported by laboratory exercises in which the student learns about electrical instrumentation and performs electrical measurements on circuits and systems. Students will also be required to complete an electrical system project of their choosing. Students will be required to prepare written laboratory reports outlining the laboratory activity. Reports will be graded based both on their technical quality and their grammatical and professionalism.

Students in EET 105 will be required to use computers in both class and laboratory exercises to simulate electrical circuits and systems and also produce high quality laboratory reports.

The Pennsylvania State University
EET 109 Electrical Circuits Laboratory I (1) Use of basic electrical instruments to measure AC and DC voltage, current, power, resistance. Introduction to report writing.

**EET 109 Electric Circuits Laboratory I (1)**

Electric Circuits Laboratory I provides a variety of experiences building electric circuits and utilizing voltmeters, ammeters, ohmmeters and oscilloscopes to take electrical readings. Emphasis is placed on using computer spreadsheet software and computer analysis software. Throughout the course, technical writing is utilized to describe electrical experiment results. Concepts presented in EET 101 are utilized through this course.

Experiments related to resistor color code, the ohmmeter and Ohm's Law provide a elementary understanding of resistance as well as the measurement of voltage, electric current and resistance. Experiments with resistors in series, parallel and series-parallel arrangements provide experience with electric circuit construction and electric circuit analysis in a laboratory situation. Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL) receive considerable attention. Capacitors are studied in charging and AC circuits. The oscilloscope and signal generator are introduced and utilized in later experiments. AC resistive-capacitive circuits and resistive-inductive circuits are built and analyzed.

EET 114 Electrical Circuits II (4) Direct and alternating current circuit analysis including Thevenin and Norton Theorems, mesh, node analysis. Capacitance, inductance, resonance, power, polyphase circuits.

**EET 114 ELECTRICAL CIRCUITS II (4)**

Electrical Circuits II is the second of two circuit courses aimed at developing fundamentals of electrical circuit operation and analysis. It covers topics in graphical analysis of circuit operation; capacitive, inductive, and magnetic circuits; and sinusoidal excitation and AC reactance due to inductors and capacitors.

EET 114 is normally taken in the second semester of the freshman year concurrently with a coordinated lab course, EET 118. Completion of EET 114 provides a student with all the circuit analysis fundamentals that will be needed for later courses in electronics and AC machinery.

EET 118 Electrical Circuits Laboratory (1) Use of basic electrical instruments to measure AC and DC voltage, current, power, resistance, and lab reporting.

**EET 118 Electrical Circuits Laboratory II (1)**

Electrical Circuits Laboratory is typically taken concurrently with EET 114. The course is a 1 credit course that meets for one 2-hour session each week. Exercises in the lab guide are coordinated with materials being covered in the EET 114 course. All lab exercises involve hands-on work with equipment, and many of the labs are supported by computer activities that help the student collect and interpret data. The computer exercises are coordinated with the lab guide materials. Students are required to submit formal, written lab reports for many of the exercises.

Material covered in the EET 118 lab include exercises in graphical circuit solutions, charging and discharging characteristics of capacitors, reactance and impedance measurements in AC circuits, and circuit resonance. The EET 118 lab is the first lab in which students get significant exposure to the oscilloscope, function generator, and other more sophisticated laboratory equipment.
**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**EET 205 Semiconductor Laboratory (1)** Laboratory study of semiconductor devices and circuits.

**EET 205 Semiconductor Laboratory (1)**

Semiconductor Laboratory is the experimental laboratory course that supports EET 210, the first linear electronics course. The lab meets each week in a single 2-hour session during which students work with the actual devices and circuits discussed in the EET 210 lectures. Students build and test the actual circuits analyzed in class, which gives them an opportunity to understand, first-hand, the practical implications of the theory and the limitations of the analytical models covered in class. Circuits that are typically tested in EET 205 include inverting and non-inverting amplifiers, comparators, integrators and differentiators, low- and high-pass filters, and timer and oscillator circuits.

**EET 210 Fundamentals of Semiconductors (2)** Semiconductor and circuit theory including power supplies, amplifiers, power amplifiers, oscillators, and introduction to op-amps.

**EET 210 Fundamentals of Semiconductors (2)**

Fundamentals of Semiconductors is the first of a 2 course sequence that examines the physics and operation of the four basic forms of linear amplifier circuits. It does so by examining the operation and modeling of typical circuits built from operational amplifiers, including inverting and non-inverting amplifiers, transconductance and transresistance amplifiers, voltage followers, instrument amplifiers, summing amplifiers, and other circuits capable of performing mathematical functions. The course also examines a variety of practical non-linear electronic circuits, including integrators, differentiators, log function amplifiers, filters, and oscillators. Issues of frequency response, circuit stability, negative feedback, and compensation are covered in the course. The course also touches on problems of D-to-A and A-to-D conversion and electronic communication. In all areas, issues related to device characteristics and their impact on circuit operation and device selection are covered.

**EET 212W Op Amp and Integrated Circuit Electronics (4)** Analysis and design of amplifier, rectifier, filter, comparator, oscillator, and other practical circuits using op amps and integrated circuit devices.

**EET 212W Op Amp and Integrated Circuit Electronics (4)**

EET 212W provides students with a basic understanding of the operation and functions of general-purpose linear and non-linear electronic circuits typically found in industrial applications. The course provides background on the basic operating characteristics of key semiconductor devices (diodes, transistors, FETs, etc.); however, the emphasis is on the operation, analysis, design, and application of circuits that use op-amp’s and various linear integrated circuit devices to perform typical electronic functions. Topics covered include:
- Open- and closed-loop amplifier operation and feedback concepts
- Inverting, non-inverting, differential, and instrumentation amplifiers
- Summers, comparators, clippers, clampers, and function generator circuits
- Integrators and differential circuits
- Filter and oscillator circuits
- Rectifier and regulator circuits

The Pennsylvania State University
The course will emphasize the concepts, principles, procedures, models, and computations used by engineers and technologists to analyze, select, specify, test, maintain, and design modern electronic systems. Particular emphasis will be given to circuits and applications prevalent in modern instrumentation and control systems. Modeling detail and the sophistication of mathematical analyses will emphasize the application of standard methods with the aid of computers.

Lectures will be supported by laboratory exercises in which students will investigate actual operating characteristics of devices and circuits explained in the classroom. Lab activities will emphasize comparisons of theoretical and actual performance. Students will also be expected to develop proficiency making electronic circuit measurements using standard laboratory instruments. Laboratory activities will also form the basis for the "W" designation assigned to this course. Students will be required to use standard analysis and reporting tools to prepare formal, written laboratory reports for a substantial portion of all laboratory activities undertaken in the class. Reports will be graded based on their technical and grammatical quality and on their professionalism.

A complete understanding of the electronic circuits covered in this course requires the use of computers. Thus, students in EET 212W will be required to use computers in both class and laboratory exercises to model and simulate the relevant performance of circuits studied.

EET 213W Fundamentals of Electrical Machines Using Writing Skills (5) AC and DC machinery principles and applications; introduction to magnetic circuits, transformers, and electrical machines including laboratory applications.

EET 213W Fundamentals of Electrical Machines Using Writing Skills (5)

EET 213W is devoted to the study of ac and dc electrical machines and power conversion equipment. The course teaches fundamental concepts of electromagnetic circuits as they relate to the physical forces that act on electrical conductors moving in magnetic fields, and the electrical currents and voltages induced in those conductors by that same motion. The
course covers characteristics of magnetic materials and how they influence the operation of electrical machines, and investigates how these properties and principles are used to develop simple yet practical models of various electromotive and power conversion devices.

Presentation of principles and theory will be relatively rigorous; however, the level of modeling detail and the sophistication of mathematical analyses of machine operation will be limited to first order (i.e., linear) and some simple second-order (non-linear) approximations.

Students in EET 213W should gain a sound understanding of how and why ac and dc motors and generators, and single phase ac transformers work as they do. The understanding should extend to cover most types of motors, generators, and transformers commonly used in industry today. Students should also understand and be able to apply the basic mathematical and electrical models developed in the course to determine the power requirements, power capability, efficiency, operating characteristics, control requirements, and electrical demands of these machines when used in typical applications. Students will also gain a general knowledge of how motors, generators, and transformers are constructed, and understand the reasons behind the various construction techniques that are used.

EET 213W is also a "writing-intensive" course, which means one of the course objectives is to teach students to prepare formal, written documents about technical subjects. Thus, students will be required to do a significant amount of writing in the course.

EET 214 Electric Machines and Energy Conversion (3) Fundamental operating principles, characteristics, and analysis of electric machines, transformers, and power systems.

EET 214 Electric Machines and Energy Conversion (3)
The purpose of EET 214 is to introduce students to the electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The course teaches fundamental concepts of electromagnetic circuits as they relate to the induced voltages and physical forces acting on electrical conductors within magnetic fields. The course covers characteristics of magnetic materials and how they influence the operation of rotating electrical machines and transformers, and investigates how these properties and principles are used to develop simple yet practical models of various power conversion devices. Basic control of AC motors, such as starting, reversing, plugging, and variable speed operation using volts per hertz is discussed in the course. Following the study of the basic components of the power system (motors, generators, and transformers), the course will provide an introduction to power systems engineering. This introduction shall include any of the following topics: power distribution fundamentals and protection, power flow, analysis and load flow studies of small power systems, and computer solutions for larger power system studies.

Topics covered include:
- Magnetics: energy conversion principles, motor and generator action
- Transformers: Single-phase, 3-phase, and autotransformers; per-unit representation
- Induction Machines: construction, operation, modeling, characteristics, and basic control methods
- Synchronous Machines: construction, operation, modeling, characteristics, motor and generator operation, power factor control, power delivery
- Power System Representation
- Power System Analysis

Presentation of the principles and theory will be relatively rigorous; however, the level of modeling detail and the sophistication of the mathematical analyses of machine operation will be limited to first order (i.e., linear) and some simple second-order (non-linear) approximations.

Students in EET 214 should gain a sound understanding of electrical machines and transformers and their models, and this knowledge should be extended so that the models are used in the analysis of power systems. Students should be able to apply the basic mathematical and electrical models developed in the course to determine power requirements, power capability, efficiency, operating characteristics, and electrical demands of these components when used in typical applications.

The course will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary.

Effective: Spring 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EET 215 Electric Machines and Energy Conversion Laboratory (1) Laboratory study of electric machine applications,
EET 215 Electric Machines and Energy Conversion Laboratory (1)
The purpose of EET 215 is to provide students with practical experience with electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The laboratory experiments in this course will demonstrate empirically the concepts introduced in the companion lecture course, EET 214.

Topics covered include:
- Magnetics: energy conversion principles, motor and generator action
- Transformers: single-phase, 3-phase, autotransformers; per unit representation
- Induction machines: operation, modeling, characteristics, basic controls
- Synchronous machines: motor, generator, power factor control
- Power system representation and analysis

Laboratory activities will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary. Students will be expected to develop proficiency in instrumentation using standard lab equipment, and will be required to use standard analysis and reporting tools to prepare formal laboratory reports and oral presentations.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: Concurrent: EET 214

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EET 216 Linear Electronic Circuits (3) Theoretical study of linear electronic devices and circuits, including field effect transistors, integrated circuits, and operational amplifiers.

EET 216 Linear Electronic Circuits (3)
Linear Electronic Circuits is the second course in a 2-course sequence that examines linear electronic circuits using semiconductors. It picks up where EET 210 leaves off and delves into the actual devices used to develop amplifiers and op-amp devices. This includes study of the biasing and operation of diodes, zeners, bipolar junction transistors, junction and metal-oxide field effect transistors, and thyristors. The design and operation of CE, CB, and CC transistor amplifiers and CS, CD, and CG FET amplifiers are covered in detail. Students are introduced to the fundamental theory of operation of each of the devices and circuits and are provided with practical models to analyze their operation. Questions of amplifier gains, power efficiency, and frequency response are covered for these devices and circuits just as they were for the op-amp circuits covered in EET 210. A portion of the course also examines class A, AB, and B power amplifiers and power regulation circuits.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EET 220 Programmable Logic Controllers (2) An introduction to programmable logic controllers (PLCs); topics covered include programming, troubleshooting, networking, and industrial applications.

EET 220 Programmable Logic Controllers (2)
The Programmable Logic Controllers (PLCs) course will teach students fundamentals of programming, installation and use, troubleshooting, and networking of industrial grade, state-of-the-art PLCs. Programming instruction will be based on standard ladder logic concepts and will cover the use of relay logic for I/O and memory control; applications of timers, counters, and sequencers; and the effective use of program flow control instructions to manage PLC operations. Data manipulation using standard digital and arithmetic programming instructions will also be covered. Concepts in analog data I/O and advanced programming methods will be introduced. Class room instructions will be supported by laboratory activities in which students will use PLCs to perform typical industrial control functions. Lab exercises will be designed to ensure students learn the practical aspects of installing, programming, troubleshooting, and networking PLCs in situations typical of industrial use. Upon completing this course, students should be capable of recognizing industrial control problems suitable for PLC control, conceptualizing solutions to these problems, and then, using standard programming software, develop, enter, and debug moderately complex programs to solve these problems. They should also be able to install PLC units, interface them with I/O channels and standard data networks, and troubleshoot I/O and networking problems. Student achievement in the course will be assessed using a combination of methods. Grasp of lecture materials will be determined via quizzes, major exams, and out-of-class problem assignments. Lab performance will be assessed through a combination of structured lab exercises and one or more application-focused projects. Both the lab exercises and the project activities will require students to demonstrate proficiency with actual PLC equipment and produce written and/or oral reports. The PLC course will presume students have prior knowledge of digital electronics and electromechanical relays. Therefore, a digital circuits course and an electrical machinery course are appropriate.
EET 221 Linear Electronics Laboratory (1) Laboratory study of transistors; study of differential and operational amplifiers. Emphasis is placed on circuit design.

EET 221 Linear Electronics Laboratory is the experimental laboratory course that supports EET 216, the second electronics course. The lab meets each week in a single 2-hour session during which students work with the actual devices discussed in the EET 216 lectures and build and test the circuits analyzed in class. This gives them an opportunity to understand, first-hand, the practical implications of the theory and analytical models covered in class. Experimental topics that are covered in EET 221 include diode and rectifier circuits, BJT and FET biasing techniques, common BJT and FET amplifier designs, power supply circuits, and IC power supply regulators. Many lab exercises are supported by computer simulations using industry-standard simulation software.

EET 275 Introduction to Programmable Logic Controls (3) Principles of industrial control, programming, interfacing, input/output devices, and applications.

EET 275 Introduction to Programmable Logic Controls is a required course for sophomore-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. Programmable Logic Controllers are one of the fastest growing multi-billion dollar segments of industry. This course provides an in-depth introduction to these devices and their use in modern process industries. Starting with an overall look at the block and modular type PLC, digital inputs, digital outputs and devices such as pushbuttons, pressure switches, motors, and indicators demonstrate the elementary application and system design to which they are applied. Ladder logic programming techniques encompass gate logic, contact/coil logic, timers, counters, arithmetic functions and number comparisons. An introduction to analog input and output applications, along with study of the Proportional+Integral+Differential (PID) process function, and PLC communication networks prepare the technologist for advanced courses on these topics. The lab component of this course provides live experience with all these concepts along with industrial problem solving experience by using indicating and actuating real-time positional and process applications.
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EET 296 Independent Studies (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Independent Studies (1-18)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007

EET 311 Alternating Current Circuits (4) Circuit analysis including controlled sources, op amps, and ideal transformers, and calculus relationships; one/two port network models; three-phase and industrial loads.

EET 311 Alternating Current Circuits (4)

EET 311 is intended to provide competency in analysis of circuits and application of basic electrical principles including equivalent circuits and models, power and energy, and signal/energy transfer. The course will introduce ideal amplifier models, ideal op-amps and ideal transformers as circuit elements and one-port networks (Thevenin, Norton, and driving point impedance), and two-port networks (Z, Y, H, G, T, and T-I) as equivalent circuits. Since this is the first required course taken by all upper division electrical engineering technology students, ethics and professionalism will be discussed by and expected of the students. Grades will be based on four or five exams including a final exam (65%), laboratory work (20%), computer projects requiring the use of circuit simulation software, spreadsheets, and math packages (10%), and student professionalism (5%). The IEEE code of ethics and the Penn State policy on academic integrity will be applied in the instructor's judgment of student professionalism. This course requires calculus through integral and differential calculus of transcendental functions. It provides the circuit analysis skills required in almost every other EET course and is a specific prerequisite for analysis of signals and systems (EET 312) and understanding semiconductor models and electronic circuits (EET 330).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: Concurrent: MATH 141

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EET 312 Electric Transients (4) Applied differential equations; in-depth study of transient electricity using Laplace, Fourier transforms, and state-space methods; Bode plots and application.

EET 312 Electric Transients (4)

This course is designed to provide students with a strong foundation in transient circuit analysis in addition to introduction to signals and systems. The primary objective of the course is to reinforce continuous-time system fundamentals in order to prepare the students for more advanced work in a broad range of areas including communications, control, signal processing and image processing. The topics covered in this course include:

3. Complex frequency.
5. Bode plots and frequency response.
7. Laplace transform pairs, and their applications in circuit analysis.

The Pennsylvania State University
8. Fourier analysis techniques; Fourier series, transform pairs, and their applications in circuit analysis.

This course is a required course in the Electrical Engineering Technology BS curriculum and is intended to be taken by students who have completed their first circuits course requirements. As such, the course integrates materials from the above undergraduate course in addition to related math, engineering technology, and science courses.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
Prerequisite:
Concurrent: MATH 141

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EET 315 Linear and Discrete System Analysis (3) Introduction to the principles and operation of linear and discrete systems.

EET 315 Linear and Discrete System Analysis (3)
Linear and Discrete System Analysis is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to introduce the students to linear system analysis, primarily using Laplace transforms. Students learn the concept of a transfer function, and are able to analyze both the transient and steady state response of a system. Students then learn about discrete time systems, including z-transforms, difference equations, and basic digital filters. Laboratory exercises reinforce concepts developed in lecture.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EET 320 Industrial Electricity and Electronics (3) Basic circuit theory applied to DC/AC circuits containing resistors, inductors, capacitors; magnetic circuits; power; control; electronic applications.

EET 320 Industrial Electricity and Electronics (3)
This course is designed to offer non-electrical students the opportunity to become familiar with the theory and operation of electrical, electronic, and electromechanical devices that are widely used in practice. The course concentrates on the most important concepts, rather than in-depth treatment of any individual area. The number of units covered depends on the class background. The topics covered in this course include:

1. Introduction
2. DC Networks
3. AC Networks
4. Magnetics
5. DC & AC Machinery
6. Selected topics depending on class background (if time permits): Basic electronic devices and their applications; Integrated circuits and their applications; Power Distribution; Transducers & signal conditioning; Control Systems Electronic Instrumentation.

General Education: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EET 330 Wireless Communications Systems (3) Wireless communications technology, transceivers, modulation techniques, serial communications, and applications. Personal area networks, local area networks, RFID systems.

EET 330 Wireless Communications Systems (3)
Wireless Communications Systems is a required course for junior-level students pursuing the Electrical Engineering Technology (EET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The course provides a foundation in spectrum analysis, filtering, serial communications, analog modulation and demodulation, and digital modulation and demodulation. The course discusses applications utilizing infrared (IR) and radio frequency (RF) technologies. Applications for wireless networking include the development of personal area networks (PAN) and local area networks (LAN). The course also introduces radio frequency identification (RFID) systems and applications. Laboratory
exercises reinforce concepts developed in lecture.

General Education: None

Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**EET 331 Electronic Design (4)**

EET 331 is intended to provide competency in the application of basic electronic principles to design with operational amplifiers and integrated circuits. The course will include analog-to-digital and digital-to-analog conversion techniques; introduction to the feedback principles and non-ideal aspects of operational amplifiers including noise - needed for advanced design with op-amps; some nonlinear op-amp circuits - including comparators, Schmitt triggers, pulse width modulation, and ideal rectifiers, active filter design and waveform generator design. Grades will be based on 3 or 4 exams including a final exam (65%), laboratory work, computer projects requiring the use of circuit simulation software, spreadsheets, and math packages, and homework (30%), and student professionalism (5%). The IEEE code of ethics and the Penn State policy on academic integrity will be applied in the instructor's judgment of student professionalism. This course requires calculus through integral and differential calculus of transcendental functions, advanced circuit analysis techniques (EET 311, E ENG 354, or E ENG 352), and knowledge of frequency response analysis techniques (EET 312). It provides the electronic circuit analysis and design skills required in the Electronics, Systems, and Technical Electives in the General Electrical Engineering Technology Option and the Applications and Technical Electives in the Computer Engineering Technology Option.

**EET 341 Measurements and Instrumentation (3)**

Measurements and Instrumentation is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to understand the principles of measurement systems. The course enables students to design software for programming PC-based data acquisition (DAQ) systems, understand various sensors, design signal conditioning circuits for interfacing sensors to DAQ systems, and design various types of measurement systems. Laboratory exercises reinforce concepts developed in lecture.

EET 416 Fluid and Thermal Design in Electrical Systems (3) Introduction to basic electrical engineering technology concepts and applications of thermodynamics, heat transfer, and fluid power in electrical/electronic systems.

EET 416 Fluid and Thermal Design in Electrical Systems (3)

Fluid and Thermal Design in Electrical Systems is a required course for senior-level students pursuing the electrical engineering technology (EET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to teach principles of thermal sciences with an emphasis on electrical/electronic system applications. The course enables students to understand fundamental principles of thermodynamics, heat transfer, and fluid mechanics as they apply to thermal management of electronic systems. These principles include the first law of thermodynamics, the continuity equation, basic principles of system pressure loss and fans, the three modes of heat transfer, resistance analogy for heat flow, and the finite difference method for analyzing two-dimensional heat flow. Specialized CFD software is used to analyze temperatures in electronic systems. Laboratory exercises reinforce concepts developed in lecture.

EET 420W Electrical Design Project (3) Design, construction, and testing of a project either selected by the students with approval or assigned by the instructor.

EET 420W Electrical Design Project (3)

This course is designed with the following goals and objectives:
1. The students will enter the course with a well-defined project proposal and a timeline for which the first task will be to write the specifications. Upon the specifications' approval, the student teams will begin designing and building the project.
2. Each student will maintain a laboratory notebook that documents the day-to-day activities of the project in a style that could be used for patent documentation.
3. Team members will provide short oral and written reports every week for the first five to six weeks, and then every two weeks until the end of the semester.
4. The students will incorporate engineering standards and constraints, i.e., consideration of economic, environmental, sustainability, manufacturability, ethical, safety, etc., in their project and final report.
5. A draft copy of the final report will be collected, critiqued, and returned to students with comments and suggestions for changes.
6. A final project oral report (20-25 minutes) will be given by the project team during the last week of the semester.
7. An extensive, well-written report describing the project that has been designed and built is the major outcome of the project course.

Grades for the course will be based on:
Weight Factor
a. Written specifications for the project
b. General conduct in the laboratory including lab notebook
c. Oral and written progress reports including question-and-answer sessions
d. Final oral and written reports including question-and-answer sessions

This course is a required course in the Electrical Engineering Technology BS curriculum and is intended to be taken by seniors as the capstone course of the major. As such, the course integrates materials from many of the undergraduate...
electrical courses in addition to related math, engineering technology, and science courses. This course should be taken during the last semester (prior to graduation).

EET 450 Manufacturing Related Topics in Electrical Systems (3)
Manufacturing methods, including reliability and quality control considerations as applied to electrical and electronic systems.

EET 450 Manufacturing Related Topics in Electrical Systems (3)
Manufacturing Related Topics in Electrical Systems is a required course for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. This course will introduce the student to statistics, probability, reliability, quality-control theory and best practices used in the manufacturing of commercial and government products and processes. Minitab or an equivalent industrial statistical software tool will be introduced and used by the students to help simulate and solve selected homework problems.

EET 456 Automation and Robotics (4)
Introduction to robotic systems and automation. Emphasis includes robot motion, control, and components, as well as programming PLCs.

EET 456 Automation and Robotics (4)
The objective of this course is to use a hands-on approach to introduce the basic concepts in robotics, focusing on mobile robots and illustrations of current state of the art applications. The course is offered at the senior undergraduate level with emphasis on kinematics, dynamics and control of robot arms. Course materials are tied to lab experiments in which students will work in teams to build and test mobile robots (such as LEGO-based robots).

EET 458 Digital Signal Processing (3)
Continuous and discrete time signals, Fourier series and transform, z-transform, sampling, FIR and IIR filters, FFT, DFT, and applications.

EET 458 Digital Signal Processing (3)
Digital Signal Processing is a technical elective course for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. This course will introduce the student to digital signal processing, DSP, using both mathematical and real signal generation. The applications of DSP are quite varied, ranging from cell phones to motor control systems. DSP signals and systems topics for discussion include but are not limited to: mathematical representation of signals, sampling and aliasing, FIR filters, z-transforms, and spectrum representation & analysis. The lab component of the course will allow students to explore DSP topics of interest using various hardware and software programming tools.

General Education: None

EET 461 Power Electronics (3)
Fundamentals of power electronic circuits, semiconductor power devices, power conversion equipment. Circuit topologies, closed-loop control strategies, equipment design consideration.

EET 461 Power Electronics (3)
Power electronics is a technical elective for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The course introduces students to the different topologies used to convert electrical power via the use of solid state switching. Specifically, the course presents ac-dc, ac-ac, dc-dc and dc-ac converters. The different switching devices used (diodes, SCRs, MOSFETs, etc.) are discussed. Laboratory exercises complement the lecture material. Relevant topics such as power quality, EMI and applications of power electronics are presented.
EET 475 Intermediate Programmable Logic Controllers (3) Application of programmable logic controllers (PLCs) to data acquisition, automation and process control.

Programmable logic controllers (PLCs) are the workhorse of the automation and process control industry. Their rugged design and ease of programming enables PLCs to operate in almost any manufacturing environment. PLCs are employed wherever measurement equipment and computers are needed to control large electrical equipment such as motors and actuators. In this course, students apply their knowledge of basic PLC programming to see how the PLC can be used to communicate with other equipment, sense and react to external stimuli, and provide both open loop and closed loop system control.

EET 480 Electrical and Computer Systems Senior Seminar (1) Concepts of career development; project management; engineering design documentation; industrial design examples.

Electrical and Computer Systems Senior Seminar is a required course for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to introduce students to the practices associated with managing an industrial-based project. Student teams begin working on a capstone project. Project definition, specification development, scheduling, engineering constraints, and budgeting of both time and money are discussed. Other issues of career development are presented, such as interviewing, resume preparation, and career opportunities. Ethical issues related to the discipline are discussed. Engineering economy is introduced.

EET 490W Electrical/Computer Senior Design Project (3) Individual or group design projects in electrical and computer engineering technology.

The Electrical/Computer Senior Design Project is a required course for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to have teams of senior students continue the senior design project they had started the prior semester in their Senior Seminar. The course focuses on project-based work where teams design, build, test and document the results of their senior design project effort. The course integrates and applies prior knowledge learned throughout the curriculum.

**Electro-Mechanical Engineering Technology (EMET)**

**EMET 222** Mechanics for Technology (4) Strength of materials and dynamics, including axial, shear, torsion, and bending stresses, beam deflection, kinematics and kinetics of rigid bodies.

**EMET 222 Mechanics for Technology (4)**

Mechanics for Technology is a required course for sophomore-level students in the Electro-Mechanical Engineering Technology (EMET) baccalaureate degree program. The purpose of this course is to give students the ability to calculate engineering stresses, strains, and deflections using the applied forces and reactions obtained from static equilibrium calculations. It also teaches students how to determine the displacement, velocity, and acceleration of some particle and rigid body motions.

EMET 222 contributes to the following two EMET Program Outcomes. The specific performance measures supporting the program outcomes are listed following each outcome.

**OUTCOME 2:**
Students should be able to apply concepts of calculus, differential equations, and probability and statistics to the design and analysis of electromechanical systems.

**OUTCOME 5:**
Students should be able to apply engineering mechanics, engineering materials, machine design, and fluid mechanics to the development, operation, troubleshooting, and maintenance of electromechanical systems.

The specific course outcomes supporting the program outcome are presented below:

---

The Pennsylvania State University
OUTCOME 2:
• Students will use the laws of beam diagrams to relate the load, shearing force, and bending moment diagrams to each other and to draw complete shear and bending moment diagrams for beams carrying a variety of loading patterns and with a variety of support conditions.
• Students will be able to apply the differential calculus relationships between displacement, velocity, and acceleration to calculate kinematic and kinetic quantities for rectilinear and curvilinear motion.

OUTCOME 5:
• Students will be able to calculate normal stresses, shear stresses, bearing stresses in axially loaded structural members.
• Students will be able to compute the maximum shear stress and angle of twist of members loaded in torsion.
• Students will be able to compute the stress at any point within the cross-section of a transversely loaded member and to describe the variation of stress with position in the beam.
• Students will be able to determine the required dimension of various key mechanical and structural components based upon the principles of static analysis of forces/moments and the determination of force induced tension/compression and shear stresses. The applicable material failure stresses will be used as a basis for determining the required safe dimensions.

EMET 325 Electric Drives (3) Study of operation, application and specification of AC/DC electrical drive motors, servos, actuators, control units and power converters.

EMET 325 Electric Drives (3)
EMET 325 provides students with a basic understanding of the operation, capabilities, limitations, and selection of electrical drive devices and drive controls typically found in industrial manufacturing and production systems. The course provides background on the basic operating characteristics of variety of drive devices, both AC and DC; however, the emphasis is on the practical limitations and typical application of these devices. Particular emphasis will be given to concepts and topics important to the selection, implementation and operation of electrical drives in common industrial applications. Lectures will be supported by classroom demonstrations of setup, connection, and operating characteristics of devices covered in lectures. These demonstrations will emphasize typical uses of the devices studied.

EMET 326 Mechanical Drives (3) Transmission of force and motion using linkages, cams, gears, belts, and hydraulic and pneumatic drives.

EMET 326 Mechanical Drives (3)
EMET 326 is designed to provide the students with the knowledge of various mechanical drives used in engineering.
The course introduces the concepts of displacement, velocity, and acceleration analysis of linkages, cams, gears, and belts. The instructor may employ purely geometric methods or combine it with vector approaches. Differential and integral calculus for some of the topics and may consider using techniques of optimizations for mechanism synthesis. Static and dynamic force analysis of linkages is studied.

**EMET 330 Measurement Theory and Instrumentation (3)**

Fundamentals of measuring, transmitting, and recording temperature, pressure, flow, force, displacement, and velocity; laboratory component emphasizes systems used in manufacturing.

**EMET 330 Measurement Theory and Instrumentation (3)**

The purpose of EMET 330 is to familiarize students with the measurement and instrumentation systems typically used in automated manufacturing and automated process industries. The primary focus of the EMET degree program is the technology of automated control, and measurement and instrumentation systems are essential elements in the control of any industrial or manufacturing process. This course is designed to cover those topics in process measurement, data monitoring, signal conditioning, and data acquisition that are typical in such control systems.

The majority of industrial instrumentation systems involve measurement of position, displacement, velocity, force, flow, pressure, or temperature. EMET 330 will cover the common techniques used to make these types of measurements. Measurement systems also require signal conditioning and amplification to convert primary sensor signals into practical analogs that can be used in electronic controls. EMET 330 will also cover fundamentals of signal conditioning and amplification, including analog and digital data acquisition techniques, D-to-A and A-to-D conversion methods and equipment, and fundamentals of automated data acquisition and instrumentation-computer interfacing. Finally, accurate application of any measurement requires an understanding and proper application of basic statistical methods of data reduction. EMET 330 will include coverage of these topics as well.

EMET 330 is also a lab-based course. Thus, students in the course will be required to conduct lab exercises in which they actually use industrial-quality sensors, transmitters, signal conditioning equipment, and data acquisition systems to gain experience with how these devices actually perform.

EMET 350 Quality Control, Inspection, and Design (3)

The purpose of EMET 350 is to familiarize students with the use of statistical methods to measure, describe, and control the quality of products and processes. This will be done by teaching students the statistical and probabilistic methods that are applied to quality monitoring and quality control; the typical methods used to monitor, describe, and control quality; and the accepted methods for designing effective statistical experiments to characterize quality.

Specific topics that will be covered include:
- Basic statistical concepts, measures, and tools
- Basic concepts of continuous and discrete probability, probability distributions, populations, and samples
- Standard sampling methods
- Data presentation tools, including histograms, frequency charts, stem-leaf plots, Pareto charts, etc.
- Control charting tools and methods as applied to both variables and attributes, including x-bar/R charts, x-bar/s charts, median/R charts, trend charts, charts of non-conformities or nonconforming items, etc.
- Standard measures of process capability
- Acceptance sampling techniques, methods, and tools
- Concepts of gage control
- Methods and tools for design of statistical experiments

The course will also introduce students to standard computer tools for statistical and quality control computations.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
EMET 397 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EMET 397A Introduction to Applied Finite Element Analysis (3) Students will learn how to create 2-D and 3-D finite element models using state-of-the-art finite element software.

EMET 401 Engineering Technology Career Development (1) Career planning, preparation, and decision making for students enrolled in an Engineering Technology baccalaureate degree program.

EMET 402 Fundamentals of Engineering Review (2) Overview of the topics covered on the Fundamentals of Engineering Exam administered by the NCEES for the purpose of earning a Professional Engineering license.
EMET 403 Electromechanical Design Project Preparation (1)
EMET 403, Electromechanical Design Project Preparation, involves the planning and preliminary design for the capstone electro-mechanical design project required for all Electro-Mechanical Engineering Technology baccalaureate degree students. EMET 403 is intended to prepare students who will register to take EMET 440, Electromechanical Project Design, in the subsequent semester. The Electromechanical Project Design course involves the planning, development, and implementation of an electro-mechanical design project. Both courses require formal report writing, project documentation, and group presentations. In EMET 403, students will present to a faculty panel, and proposed projects will be reviewed and approved by the panel. EMET 403 will include instruction in the use of project management software. In the planning and preliminary design of the project, students will follow a rigorous design methodology.

EMET 405 Fluid Mechanics and Thermodynamics (4) Introduction to the principles of fluid mechanics, thermodynamics, and heat transfer with emphasis on the applications to practical problems.

EMET 405 Fluid Mechanics and Thermodynamics (3)
This course is designed to provide students with background in fluid statics, fluid dynamics, thermodynamics, and heat transfer. The emphasis of the course is to introduce students to the fundamental laws and principles of these engineering sciences, and to give them experience in solving problems using these laws and principles. The instructor may employ methods of differential and integral calculus as a part of selected topics. The fluid statics portion of the course introduces students to fluid properties, fluid pressure, manometers, and fluid forces on surfaces. The fluid dynamics portion of the course introduces them to the continuity equation, the energy equation, and pump and turbine head values. It also introduces laminar and turbulent flow, the Reynolds number, fluid flow friction losses, and series and parallel piping systems. It covers some additional fluid dynamics topics as well. The thermodynamics portion of the course introduces students to thermodynamic properties of vapors and gases, the first and second laws of thermodynamics with applications, the Carnot cycle, and entropy. It also introduces power cycles and refrigeration. The heat transfer portion of the course introduces the three modes of heat transfer: conduction, convection, and radiation. It also covers an important type of heat transfer equipment, the heat exchanger.

EMET 410 Automated Control Systems (4) Introduction to analog feedback control theory and computer simulation and analysis using Matlab; laboratory study of feedback systems.

EMET 410 Automated Control Systems (4)
Automated Control Systems is a required course for senior-level students in the Electro-Mechanical Engineering Technology (EMET) baccalaureate degree program. The main goal of the course is to teach students the concepts of automated control by coupling theory, industrial practices, and appropriate laboratory activities. The course demonstrates that physical processes can be represented by differential equations and hence, Laplace transforms. It teaches students how to measure and modify a system’s performance in a variety of ways as well as how to make use of time-domain techniques, root locus and Bode plots. Improving student communication skills is also a goal of this course.

The specific EMET program outcomes addressed by the course are:

OUTCOME 1:
• Students will readily recognize the availability of and be able to apply electrical, fluid and mechanical analogues for use in system models.
• In laboratory exercises, students will correctly design and test control systems as applied to integrated electrical and mechanical systems.

OUTCOME 2:
• Students will develop linear, constant coefficient, ordinary differential equations from electromechanical system models, and solve them using Laplace transform techniques.

OUTCOME 6:
• Students will correctly analyze and design analog control systems to meet performance requirements by using computer tools to perform root locus, frequency domain, and time domain analysis and design.
• Students will correctly design and test analog control systems, including proportional, integral and derivative (PID) feedback control and other compensators in laboratory exercises. This includes tuning PID controllers.

EMET 430 Programmable Logic Controls II (3) A second course in PLCs covering sequencing/shift instructions, program flow control, data and math instructions, PID loops, and machine communication.

EMET 430 Programmable Logic Controls II (3)

The objective of EMET 430 - Programmable Logic Controls (PLC) II course is to give students an in-depth understanding of the advanced control, programming, I/O, communications, and distributed processing capabilities of modern PLCs. The objective is achieved through coordinated lecture and laboratory activities. Lectures cover theoretical and operational concepts; laboratory exercises will require students to apply lecture concepts to actual control problems using real equipment.

EMET 430 is a senior-level elective in the Electro-Mechanical Engineering Technology program. It is intended for those students who want to expand their PLC knowledge beyond the basics covered in required courses in the EMET curriculum. Students must have prior knowledge of basic PLC capabilities, ladder logic programming, and general methods of interfacing PLCs with external devices. This background is typically obtained via the EE T 220 - Programmable Logic Controls (or equivalent) course.

By building on prior concepts of ladder logic and simple relay/contactor style programming, EMET 430 can focus on the applications, programming, and use of specialty I/O modules and advanced control technologies available in state-of-the-art PLCs. The following major topical areas will generally be covered:

The Pennsylvania State University
Electromechanical Devices for Biomedical Instrumentation (3) A study of electromechanical devices, transducers, and instrumentation used in the biomedical field.

This course concentrates on electromechanical devices and equipment (used in a hospital setting) that involve determining information about a patient’s health or controlling treatment. Basic components of such equipment include transducers that convert physiological events to electrical signals, imaging devices such as charge coupled arrays, electronic control systems, and mechanical systems such as pumps. The design and use of such equipment will be demonstrated.

Upon completion of this course, the student should be able to: describe basic human physiology and systems; explain how various biomedical instrumentation functions and how biomedical measurements are made; explain how a variety of biomedical transducers work and how they are interfaced to biomedical equipment; describe various physiological signals such as ECG and EEG; perform various mechanical and electrical calculations that are used in biomedical instrumentation; complete and explain a block diagram for the design process of biomedical instrumentation; design electronic amplifier circuits used in biomedical instrumentation; explain how various regulatory agencies such as the FDA, FCC, IEC, and UL are involved in the regulation of biomedical equipment.

This course is a 400 level technical elective course in the EMET program. Students will use their knowledge in math, science, and physics to understand biomedical instrumentation devices and systems. This course will apply previous knowledge in measurement theory and instrumentation to various devices and measurements in the biomedical field. In addition, this course will look at total systems for biomedical instrumentation, including transducers, data acquisition, analysis and feedback. System design that includes both digital and analog circuits will be covered in detail.

The type of required equipment that should be demonstrated and explained should include: electrodes, sensors, cardiovascular measurement devices such as EKG equipment, respiratory therapy equipment, and ultrasound equipment. In addition, a study of the electrical, mechanical, and system schematics should be included. A hospital demonstration tour should be included for larger radiological equipment.

Students’ academic achievement will be evaluated using exams, quizzes, term paper and/or research project.

Electro-Mechanical Project Design (3) Planning, development, and implementation of electro-mechanical design project; includes formal report writing, project documentation, group presentations, project demonstrations.

This course is designed to provide students with theoretical and practical experience associated with the integration of the various disciplines within the field of electromechanical engineering technology. Students working in teams will employ previously learned material to plan, develop, and construct an integrated, electromechanical system. Projects will
be required to use a variety of electromechanical equipment, including such items as robots, machine vision systems, programmable logic controllers, personal computers, electric motors, CNC equipment, etc. Appropriate project documentation exercises, project presentations, progress reporting, budgeting and scheduling, and development of final design reports will be required elements of the course.

**ELEDM 400** Schools, Families and Communities (3) Cultural and ethnic dimensions of family-school-community communications and the resultant impact on student-teacher relations.

This course examines the cultural and ethnic dimensions of multicultural schools, families, and communities. It examines some of the contextual challenges of multicultural schools in several communities and their impact upon students and teachers. In response to these challenges, the course explores specific strategies for making classrooms responsive to diverse learners. Thus, the course is designed to help prospective teachers begin to formulate a comprehensive understanding of the challenges facing diverse learners and develop knowledge-based responses to those challenges that promote success for the learners. A major emphasis of the course is upon the strengths of diverse learners and the school's responsibility for building upon those strengths in order to enhance student learning. This course also emphasizes the importance of families, schools, and communities working together to support students' development. It is expected that this course will help prospective teachers develop understandings, skills, and positive attitudes that will enable them to work successfully with diverse learners in the elementary grades.

This course requires extensive reading, in-class discussion, writing, research, and weekly field experiences. The latter provides opportunities to observe and interview teachers and work closely with small groups of students. Readings may include chapters from texts, scholarly articles, and materials from appropriate web sites. After readings, analysis and discussion, students will conduct a final research project that includes a research paper and an oral presentation. The purpose of the project is to provide a description and analysis of a multicultural community. The paper must include a detailed history of the community, a description of the community today, major changes that have taken place and their impact upon the quality of life for its residents. This project provides students an opportunity to discover first hand the nexus between schools and communities. Students must present their research in class during the last week of the semester.

Because of the interactive nature of the class, active participation is expected. As the first required major course in the Elementary Education in Multicultural Settings (ELEDM) program, it contributes to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners.

This course is offered fall semester only at the Delaware Campus. Because of the weekly field experiences, the interactive nature of the class, and the need to provide students with detailed feedback on their assignments, class size should not exceed 20-25.

Student performance will be assessed by objective midterm and final examinations; projects showing extensions and applications; student participation in class; and practicum assessment (concurrent).

**ELEDM 401A** Teaching Reading in Multicultural Elementary Schools (3) An exploration of current research, practices, strategies and materials in the development of reading skills in multicultural schools.

**ELEDM 401A Teaching Reading in Multicultural Elementary Schools (3)**

This course provides an exploration of current research, practices, strategies and materials in the development of reading skills in multicultural elementary schools. The development of literacy skills is fundamental to learning at the elementary school level. Thus, it is critical that prospective teachers develop the knowledge, skills, and attitudes that foster the...
development of successful strategies for teaching reading skills.

Among the topics explored in the course are: principles of reading instruction, balanced literacy instruction, word identification strategies, directed reading activities, comprehension strategies, guided reading, language experience activities, and literature-based reading programs. Particular emphasis is given to cultural and linguistic diversity, learning differences/special needs/gifted.

A major requirement of the course is the development of lesson plans for teaching reading. Lesson plans must incorporate state literacy standards. Students are expected to implement some of their reading plans during their weekly field experiences and receive feedback from their mentor teacher as well as their university supervisor. It is the combination of intensive coursework and concurrent field experiences that enable prospective teachers to acquire some of the knowledge, skills, and attitudes needed to successfully teach diverse learners.

This course is part of a three-course literacy focused program of study: ELED 401A, TEACHING READING, ELED 401B TEACHING LANGUAGE ARTS, and ELED 401C CHILDREN'S LITERATURE. Each of these courses is taken during the spring semester of the junior year along with the field experience course. They contribute to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners.

The objectives of ELED 400, 401A, 401B, 401C, 402, and 403 are consistent in that each course develops understandings, skills, and positive attitudes toward the multicultural/urban/multilingual learner. From the research literature on theoretical and pedagogical orientations, ELED students acquire a theoretical appreciation of a research base, unique to each of the ELED courses, that permits knowledge-based responses to special contextual problems. In addition, processes inherent in multicultural schooling, committees, and related institutions highlight the impacts of these orientations on multicultural learners. Finally, the courses identify the implications of these orientations for schools, families, programs, staff development, the assessment of children, and the reporting of assessment of results.

Because of the weekly field experiences, the interactive nature of the class, and the need to provide students with detailed feedback on their assignments, class size should not exceed 20-25. This course is offered during the spring semester.

Student performance will be assessed by objective midterm and final examination; projects showing extensions and applications; student participation in class; and practicum assessment (concurrent).

**ELED 401B Teaching Language Arts in Multicultural Elementary Schools (3)**

This course explores current research, practices, strategies, and materials in the development of language arts skills in multicultural schools. The course enables prospective teachers to apply research in literacy to the development of teaching methods in the language arts. The course emphasizes the principles, problems, materials, and techniques involved in teaching reading, writing, listening, and speaking in the elementary schools. Particular attention is given to the nature of literacy development and teaching language arts in multicultural schools.

This course requires extensive reading, discussion, writing, research, and weekly field experiences. The latter provides opportunities to observe teachers and work closely with small groups of students on a variety of language arts activities. Readings may include chapters from texts, scholarly articles, and materials from appropriate web sites. After readings, analysis and discussion, students will conduct a final research project explaining how they will teach language arts. Their paper must summarize relevant research and ideas from the course and describe how they plan to teach listening, reading, speaking, and writing. Finally, students must describe a lesson they taught at their practicum site. Students are also expected to develop a thematic unit and present it in class.

This course is part of a three-course literacy focused program of study: ELED 401A, TEACHING READING, ELED 401B TEACHING LANGUAGE ARTS, and ELED 401C CHILDREN'S LITERATURE. Each of these courses is taken during the spring semester of the junior year along with the field experience course. They contribute to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners.

The objectives of ELED 400, 401A, 401B, 401C, 402, and 403 are consistent in that each course develops understandings, skills, and positive attitudes toward the multicultural/urban/multilingual learner. From the research literature on theoretical and pedagogical orientations, ELED students acquire a theoretical appreciation of a research base, unique to each of the ELED courses, that permits knowledge-based responses to special contextual problems. In addition, processes inherent in multicultural schooling, committees, and related institutions highlight the impacts of these orientations on multicultural learners. Finally, the courses identify the implications of these orientations for schools, families, programs, staff development, the assessment of children, and the reporting of assessment of results.

Because of the weekly field experiences, the interactive nature of the class, and the need to provide students with detailed feedback on their assignments, class size should not exceed 20-25. This course is offered during the spring semester.

Student performance will be assessed by objective midterm and final examination; projects showing extensions and applications; student participation in class; and practicum assessment (concurrent).

ELED 401C Teaching Children's Literature in Multicultural Elementary Schools (3)

This course provides a survey of children's literature with an emphasis on multicultural literature and its application in multicultural elementary classrooms.

Readings, class discussions, and weekly field experiences provide some of the major learning experiences of the course. In addition, students are expected to create book files consisting of five children's books from each of six genre (i.e. picture books, poetry, fantasy, contemporary realistic fiction, and non-fiction). To improve their reading skills, students are required to perform a dramatic reading and tape themselves reading a children's book.

This course is part of a three-course literacy focused program of study: ELED 401A, TEACHING READING, ELED 401B TEACHING LANGUAGE ARTS, and ELED 401C CHILDREN'S LITERATURE. Each of these courses is taken during the spring semester of the junior year along with the field experience course. They contribute to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners.

The objectives of ELED 400, 401A, 401B, 401C, 402, and 403 are consistent in that each course develops understandings, skills, and positive attitudes toward the multicultural/urban/multilingual learner. From the research literature on theoretical and pedagogical orientations, ELED students acquire a theoretical appreciation of a research base, unique to each of the ELED courses, that permits knowledge-based responses to special contextual problems. ELED 402 Teaching and Assessment in Multicultural Elementary Schools (3)

This course examines growth characteristics of diverse learners in elementary schools, successful pluralistic pedagogical strategies used in multicultural schools, and the use of appropriate qualitative and quantitative assessment techniques. The latter is a particularly timely topic given the current frenzy over high-stakes tests at both the State and Federal levels and their resultant impact upon student achievement especially in largely poor and minority communities. Special attention is given to the importance of using developmentally appropriate instructional and assessment strategies.

This course requires extensive reading, in-class discussion, writing, research, and weekly field experiences. The latter provides opportunities to observe and interview teachers and work closely with small groups of students. Readings may include chapters from texts, scholarly articles, and materials from appropriate web sites. After readings, analysis and discussion, students will conduct a final research project that synthesizes what they've learned over the course of the semester.

The objectives of ELED 400, 401A, 401B, 401C, 402, 403 are consistent in that each course develops understandings, skills, and positive attitudes toward the multilingual/multicultural learner. From the research literature on theoretical pedagogical orientations, ELED students acquire a theoretical appreciation of a research base, unique to each of the ELED courses, that permits knowledge-based responses to special contextual problems. In addition, processes inherent in multicultural schooling, committees, and related institutions highlight the impacts of these orientations on multicultural education; pluralistic pedagogical foundations, assessment, child's play, instrumental activities, State/Federal initiatives, and parent programs.

The Pennsylvania State University
learners. Finally, the courses identify the implications of these orientations for schools, families, programs, staff development, the assessment of children, and the reporting of results.

As a required course in the ELEDM program, this course contributes to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners. This course complements other major courses in ELEDM program and does not duplicate other courses.

This course is offered fall semester only. Because of the weekly field experiences, the interactive nature of the class, and the need to provide students with detailed feedback on their assignments, class size should not exceed 20-25.

Student performance will be assessed by objective midterm and final examinations; projects showing extensions and applications; student participation in class; and practicum assessment (concurrent).

Energy Bus & Finance (E B F)

E B F 200 (GS) Introduction to Energy and Earth Sciences Economics (3) Resource use decisions and their effect on local, national, and global development.

Introduction to Energy and Earth Sciences Economics (3)

General Education: GS
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Fall 2010

The Pennsylvania State University
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**E B F 301** Global Finance for the Earth, Energy, and Materials Industries (3) The aim of this course is to introduce fundamental concepts of financial management and illustrate their global applications.

Global Finance for the Earth, Energy, and Materials Industries (3)
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**E B F 304M** Global Management for the Earth, Energy, and Materials Industries (3) This class is designed to introduce students to modern management and organization strategies for resource businesses.

Global Management for the Earth, Energy, and Materials Industries (3)
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2012 Ending: Fall 2012 Future: Fall 2012
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**E B F 304W** Global Management for the Earth, Energy, and Materials Industries (3) This class is designed to introduce students to modern management and organization strategies for resource businesses.

Global Management for the Earth, Energy, and Materials Industries (3)
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**E B F 401** Strategic Corporate Finance for the Earth, Energy, and Materials Industries (3) Financial decisions corporations in the earth science area make and the tools and analyses used to make these decisions.

Strategic Corporate Finance for the Earth, Energy, and Materials Industries (3)
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**E B F 472** Quantitative Analysis in Earth Sciences (3) Quantitative analysis of decision making in atmospheric/geophysical sciences: exploratory data analysis, quantification of uncertainty, parametric/non-parametric testing, forecasting, time series analysis.

Quantitative Analysis in Earth Sciences (3)
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**E B F 473** Risk Management in Energy Industries (3) Analysis of strategies for mitigating business risk from market, atmospheric, geophysical uncertainties including the use of energy/mineral commodity futures/options, weather derivatives, and insurance.

Risk Management in Energy Industries (3)
Energy Economics (E B F 484) Economics of energy demand, production, storage, and pricing; advanced energy policy issues including regulation, climate change, new energy technology.

Energy Economics (E B F 484)

Energy and Geo-Environmental Engineering (EGEE)

EGEE 012 Energy Science and Engineering Lectures (1) Lectures and discussion by faculty and visiting scientists/engineers on energy science and engineering, job selection, patents, licensing, ethics, and other professional issues and challenges.

EGEE 012 Energy Science and Engineering Lectures (1)

The objective of the course is to expose students through a lecture or seminar format to a wide range of topics on energy science and engineering. The lectures would be presented by faculty and visiting scientists. Occasionally, students may be asked to make presentations. Students would be required to write a short summary of each presentation and provide a critique of the presentation. Seminar topics will cover aspects of energy production, processing, utilization, and conservation, and the associated environmental, health and safety, and policy, economics, and management issues. Students are expected to keep up with current developments on each topic and to actively participate in the discussions. Students will be evaluated based on their class participation, and written summary and critique of each presentation. This is a required course in the energy engineering major.

EGEE 101 (MATSE 101) Energy and the Environment (3) Energy utilization and technological development, energy resources, conversion and consequences on the local and global environment, and future energy alternatives.

EGEE (MATSC) 101 Energy and the Environment (3) (GN)

This course meets the Bachelor of Arts degree requirements.

Energy is the life-blood of any society. The information and principles learnt in this course will allow the students to make sound judgments in the area of “personal energy choices.” There is increasing concern about the influence of human activities, particularly energy use, on global climate change. This has an impact on global business aspects. Students in all walks of life need to be exposed to the basic concepts to appreciate the positions of policymakers, scientists, and industry over the interrelationship between greenhouse gas emissions and global climate change. The students will acquire knowledge, which will enable them to critically evaluate any energy-related concerns of the society. This is important for any college graduate for responsible citizenship and stewardship.

The main objectives of this course are to: provide basic understanding and appreciation of energy and environmental concepts and interconnectedness; analyze energy consumption patterns; discuss various energy resources that power the modern society; examine the energy conversion processes; explore interrelationships between energy use and industrial progress and environmental consequences; discuss future energy alternatives.

Student performance will be evaluated continuously through homework assignments, exams, group activities, class participation and a final examination. Position papers or term papers may be used in lieu of homework assignments in some sections. This course is a stand-alone General Education course. The course is currently offered in four sections every semester (Spring and Fall) with a total target enrollment of approximately 200-250 students per semester.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EGEE 101A (GN;IL) (MATSE 101A) Energy and the Environment (3) Energy utilization and technological development, energy resources, conversion and consequences on the local and global environment, and future energy alternatives.

EGEE (MATSC) 101A Energy and the Environment (3) (GN;IL)

EGEE 102 (GN) Energy Conservation for Environmental Protection (3) Exposure to energy efficiency in day-to-day life to save money and energy, and thereby protect the environment.

EGEE 102 Energy Conservation for Environmental Protection (3) (GN)
Energy is a vital component of modern society. Much of the general population believes that the energy sources we depend on are perpetual. While people believe that the energy use is the culprit for environmental damage, they are not aware of the methods and principles by which energy conversion devices operate. This general education course provides students with necessary knowledge and information on the main operating principles of devices/applications that are in common use and information on which to make the right decision in selecting the most energy efficient and economical choice. These devices are day-to-day appliances such as refrigerators, washers and dryers, ovens, etc., and home heating or cooling and transportation choices. The course also provides necessary information on heating furnaces, insulation, doors and windows, lighting, and air conditioning principles. The objective of the course is to expose students to energy efficiency in day to day life in order to save money and energy and thereby protect the environment. This education is very important for all college students to turn them into environmentally-responsible individuals of this Global Village.

The course entails various simple but important group-activities/projects to reinforce the information taught through formal lectures. This is not meant to be a laboratory course or a research project. The group activities include conducting a set experiments and/or gathering and analyzing the data informally (at home) and formally presenting the observations to their peers both in writing and orally. Examples of group activities (fun) are: 1) conducting a home energy audit while walking around a house, apartment, trailer, etc. and taking notes on the cracks openings, caulking condition, insulating materials used, data on heating system, windows etc., and suggesting specific ways to conserve energy in the residence and 2) Energy usage analysis- involves analysis of home utility bills and energy consumption patterns and costs related to those for a year.

Student performance will be evaluated continuously through group activities, one mid-term exam, class participation and a final examination. Collaborative-activities are used in lieu of homework assignments. This course is a stand-alone General-Education course. The course is currently offered every Fall and Spring semesters with a total target enrollment of approximately 40 students per semester.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EGEE 102H (GN) Energy Conservation for Environmental Protection (3) Honors level exposure to energy efficiency in day to day life to save money and energy, and thereby protect the environment.

EGEE 102H Energy Conservation for Environmental Protection (3) (GN)

Energy is a vital component of modern society. Much of the general population believes that the energy sources we depend on are perpetual. While people believe that the energy use is the culprit for environmental damage, they are not aware of the methods and principles by which energy conversion devices operate. This honors level general education course provides students with necessary knowledge and information on the main operating principles of devices/applications that are in common use and information on which to make the right decision in selecting the most energy efficient and economical choice. These devices are day-to-day appliances such as refrigerators, washers and dryers, ovens, etc., and home heating or cooling and transportation choices. The course also provides necessary information on heating furnaces, insulation, doors and windows, lighting, and air conditioning principles. The objective of the course is to expose students to energy efficiency in day to day life in order to save money and energy and thereby protect the environment. This education is very important for all college students to turn them into environmentally-responsible individuals of this Global Village. Students will be doing two energy related projects and one presentation in class. This honors course also requires two additional home activities compared to a regular course. This honors class is designed to be more discussion based.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EGEE 110 (GN) Safety Science for the Rest of Your Life (3) Survey of applications and technologies associated with safety in our every day life with associated review of scientific principles and economic, social and political impacts.

EGEE 110 Safety Science for the Rest of Your Life (3) (GN)

Safety is an applied field with many aspects. It has engineering, science, psychology and management components. For an understanding of how humans interact with their working and living environment, one has to understand the basic sciences of physics, biology, chemistry, mathematics and psychology as well as some of the traditional engineering disciplines. This general education course is intended to provide students with a basic understanding of how these science and engineering principles are applied in a safety context to every day life, products, hobbies, finances and human interaction. The material that will be discussed, presented, assigned, tested, etc. is the fundamental science and
Oils is the world's most important commodity. Access to oil was decisive in the great military struggles of the 20th century. The economic and strategic value of oil has led to the evolution of a fascinating array of business, political, and strategic alliances around the world. The objective of this course is to describe this evolution and the technological, commercial, and political innovations shaping its current face. This knowledge is vital in achieving a more complete understanding of the role of oil in international affairs and economic development.

The course begins with a discussion of the development of the American and European oil industries during the 19th century and the formation of the first great industrial oil monopolies. The emergence of oil as a strategic commodity prior to and during World War I will then be discussed. The economic and technological reasons for the recurring boom-bust cycles of oil markets and the political arrangements developed to cope with their effects is the third major topic of the course. The focus then shifts back to military affairs with a discussion of the role of oil in the battles of World War II.

We then examine the social and cultural roots of the post-war dissolution of company ownership and the nationalization of oil reserves. Also in the policy arena, is a discussion of the policy response of western governments to a growing dependence upon low-cost oil from the Middle East, Africa, and South America. The analysis then focuses on the ideology and strategy behind the formation of the Organization of Petroleum Exporting Countries (OPEC) and the motivations and execution of their strategies to drive up oil prices during the 1970s and early 1980s.

The last part of the course discusses the emergence of oil as a commodity traded in open commodity market exchanges, the development of reserves in deep water and in Africa, and the relationship between oil policy and the war on international terrorism.

The course will be offered during the spring semester and will include a field trip to the Pennsylvania oil region.

Evaluation and assessment of student performance will rely on grading on-line quizzes and assignments, team papers and presentations, and examinations.

EGEE 210 Technological Legacy of Pennsylvania Coal (3) (GN)

Pennsylvania Coal, a natural resource, has touched many lives from past to present with profound influence on employment, economic growth, social and political relationships, culture, and the natural environment in the state. The heritage and legacy of Pennsylvania coal weave the story of the Industrial Revolution in the U.S., including technological, social, and environmental aspects. Coal continues to be an important natural resource for electricity generation and metallurgical coke production to manufacture iron and steel. In 2000, approximately 80 million tons of coal was mined in Pennsylvania, most of which was used to generate electricity (approximately 62% of total electricity generated in Pennsylvania). Development of new technologies addresses the challenges of preserving and protecting the environment while mining and burning large quantities of coal. Health and safety of U.S. coal miners have been improved significantly over the past century. However, the recent Quecreek Coal Mine incident in Somerset, Pennsylvania reminded that underground coal mining is still a dangerous profession. Many PSU students have personal links to the coal industry through family members who have been engaged in coal related careers over several generations. This course will provide an opportunity to study coal mining practices in Pennsylvania that their parents and previous generations experienced with a review of recent improvements in these practices.

This course will survey the development of the science and technologies (utilizing a multi-disciplinary approach) of coal formation, coal mining, coal transportation, and coal utilization. The integrated EGEE 211 course will study the social and environmental aspects of coal technologies to focus on labor-management relationships, immigration, culture, and environmental pollution. EGEE 210 and EGEE 211 will be held in the same classroom to integrate natural science and social science education.

This course will be offered during both fall and spring semesters and will include a field trip to the Pennsylvania anthracite region. There are no in-class exams. Evaluation and assessment of student performance will rely on grading minute papers, analytical and reflective essays, individual and team papers, on-line quizzes/assignments, team presentations/discussions, and on-line learning portfolios.

General Education: GN
Diversity: None
Bachelor of Arts: None
Effective: Summer 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EGEE 211 Social Legacy of Pennsylvania Coal (3) (GS;US)

Pennsylvania Coal, a natural resource, has touched many lives from past to present with profound influence on employment, economic growth, social and political relationships, culture, and the natural environment in the state. The heritage and legacy of Pennsylvania coal weave the story of the Industrial Revolution in the U.S., including technological, social, and environmental aspects. Coal continues to be an important natural resource for electricity generation and metallurgical coke production to manufacture iron and steel. In 2000, approximately 80 million tons of coal was mined in Pennsylvania, most of which was used to generate electricity (approximately 62% of total electricity generated in Pennsylvania). Development of new technologies addresses the challenges of preserving and protecting the environment while mining and burning large quantities of coal. Health and safety of U.S. coal miners have been improved significantly over the past century. However, the recent Quecreek Coal Mine incident in Somerset, Pennsylvania reminded that underground coal mining is still a dangerous profession. Many PSU students have personal links to the coal industry through family members who have been engaged in coal related careers over several generations. This course will provide an opportunity to study coal mining practices in Pennsylvania that their parents and previous generations experienced with a review of recent improvements in these practices.

This course will survey the development of the science and technologies (utilizing a multi-disciplinary approach) of coal formation, coal mining, coal transportation, and coal utilization. The integrated EGEE 211 GS course will study the social and environmental aspects of coal technologies to focus on labor-management relationships, immigration, culture, and environmental pollution. EGEE 210 GN and EGEE 211 GS will be held in the same classroom to integrate natural science and social science education.

This course will be offered at the University Park campus during both the Fall and Spring semesters and will include a field trip to the Pennsylvania anthracite region. There are no in-class exams. Evaluation and assessment of student performance will rely on grading minute papers, analytical and reflective essays, individual and team papers, on-line quizzes/assignments, team presentations/discussions, and on-line learning portfolios.

EGEE 302 Principles of Energy Engineering (3) Basic engineering calculations and mathematical methodologies on material and energy balances and reaction rates during chemical transformations in energy systems.

**EGEE 302 Principles of Energy Engineering (3)**

This introductory energy engineering course enables students to identify and apply fundamental principles of chemistry and physics, as they pertain to energy and fuels, and mathematics to describe materials and energy flow through a process. Examples of the processes studied will include stoichiometry in combustion and other reactions and material flows with recycle streams. This course also enables students to describe the energy transformations in energy systems. The examples of the processes we would be applying energy conservation principles to include calculation of adiabatic flame temperature during combustion of fuels. In addition, the course will present an introduction to chemical kinetics with an overview of solid, liquid and gaseous fuel transformations. This is a required introductory course to the BS in Energy Engineering degree program. It will be a prerequisite to several of the 400 level energy engineering curriculum courses. Students will be evaluated based on homework, projects, class participation, and mid term and final exams.

General Education: None
Diversity: None
EGEE 304 Heat and Mass Transfer (3)
This course will emphasize the modes of heat and mass transport in energy engineering systems. Students will know, understand, and solve heat transfer problems that involve conduction, convection, and radiation. The course will provide an integrated treatment of heat, mass and momentum transfer by convection and mass transfer by diffusion. Students will also learn and use software that will enable them to solve problems that involve exploratory, what-if, and parameter sensitivity considerations. The course will also assist students to understand the design and operation of different types of heat exchangers. This course also enables students to identify and describe the energy transformations in energy systems. The examples of the processes we would be applying energy conservation principles to include power plant, geothermal energy systems, and industrial reactors and combustors. This is an essential and required thermal science course in the BS in Energy Engineering degree program. Students will be evaluated based on homework, projects, class participation, and mid term and final exams.

EGEE 395 Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

EGEE 397 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EGEE 398 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EGEE 399 (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.
EGEE 401 Energy in a Changing World (3)
Energy is in transition, with increased international energy demand and increasing environmental pressures. Energy transitions, approaches, and outcomes are addressed.

EGEE 411 Energy Science and Engineering Lab (3)
A comprehensive introduction to classic and modern laboratory skills and experimentation of relevance to energy science and engineering practice.

EGEE 412 Green Engineering & Environmental Compliance (3)
Material and energy flows as they relate to industrial systems, environmental concerns, pollution prevention, and the development of clean technologies.

The primary objective of EGEE 412 is to introduce students to how engineering and industrial decisions affect the environment and how clean technologies can reduce environmental impact. Students will also be exposed to global mass and energy flows from an environmental perspective that relate to both industrial and natural systems. Students will be exposed to environmental concepts, principles, and evaluation techniques within the framework of green engineering, pollution prevention, and environmental sustainability. The course is for students with a general science or engineering background.

By examining mass and energy flows on the unit operation, plant-wide, local and regional scale, students will understand the interaction of anthropogenic flows with natural cycles of materials and energy. Students will understand how environmental concerns and regulations provide the motivation and incentive behind reducing pollution during the design phase rather than as an "add-on" or "end of pipe" treatment technology. Students will evaluate plant flow sheets to identify engineering means by which to reduce plant-wide environmental impact.

**EGEE 420 Hydrogen and Fuel Cells (3)**

Course will cover the fundamental principles of electrochemical engineering, hydrogen production and storage, and the design and application of the main types of fuel cells.

**EGEE 420 Hydrogen and Fuel Cells (3)**

The primary objective of the course is to help students understand the fundamental principles of electrochemistry, the production and storage of hydrogen from biomass and fossil fuels, and the design and operation of different types of fuel cells. Students will begin with electrochemistry and electrochemical engineering systems including fuel cells. The chemical and biochemical methods used for producing hydrogen for fuel cells applications and the current technologies available for hydrogen storage will follow next. Students are expected to be able to apply their knowledge and understanding in the analysis of fuel cell systems. Students are also expected to be able to distinguish between the design, operation, and advantages and disadvantages of the different types of fuel cells available. This is an elective course for the energy engineering major. It complements the required course on electrochemical energy conversion in the energy engineering curriculum.

**EGEE 430 (M E 430) Introduction to Combustion (3)**

Concepts related to laminar and turbulent premixed and nonpremixed combustion with applications to propulsion and stationary systems.

**EGEE (M E) 430 Introduction to Combustion (3)**

This course provides an introductory treatment of combustion science. The objectives of the course are to develop in the students an understanding of combustion kinetics, combustion thermochemistry, flame dynamics, flame stability, and pollutant formation. Coverage includes laminar and turbulent flames, premixed and diffusion flames, and detonations. Emphasis is placed on the role that Kinetics, heat transfer, mass transfer, and fluid dynamics have on flame structure and flame stability. The course includes some laboratory demonstrations of flat flame and diffusion flame burners, and incorporates numerical calculations of thermodynamic and kinetic combustion phenomena. The course begins with a review of transport phenomena, physical gas dynamics, and thermochemistry. Then, the concept of the laminar flame speed is introduced in the context of a one-dimensional flame and a propagating chemical wave. Issues of premixed flame structure and stability are presented along with a discussion of flammability limits. Next, laminar diffusion flames are presented via the Burke-Schumann analysis. From laminar flames, the emphasis shifts to turbulent premixed and diffusion flames, and the concepts of flame stretch and strain. Detonations are considered, with emphasis on thermodynamic analysis of the detonation and the structure of the detonation wave. Details of chemical kinetics for the hydrogen-oxygen and hydrocarbon-air reaction systems are presented, with linkage back to earlier topics such as flame stabilization and flammability limits. After kinetic phenomena, the course then considers pollutant formation focusing on soot and NOx. The fundamental aspects of combustion are applied to analysis of the combustion process and pollutant formation in international combustion engines and catalytic combustors. The course wraps up with discussion of atmospheric chemistry, the fate of pollutants, and the formation of secondary pollutants.

**EGEE 433 Physical Processes in Energy Engineering (3)**

Introduces fluid flow, heat transfer, phase equilibrium and mass transport phenomena in energy separation processes.

**EGEE 433 Physical Processes in Energy Engineering (3)**

The objective of the course is to expose students to the physical flow and separation processes that occur in energy engineering systems. Students will be exposed to gas, liquid and solid phase separation processes. The heat, mass and momentum phenomena involved will be discussed. In particular, phase equilibria and mass transfer in the behavior and performance of gas, liquid and solid fuels will be emphasized. Students will be exposed in the class to the operation and design of absorption, adsorption, fluidization, size reduction, filtration, dissolution, entrainment, and heat exchange units. Students will understand the differences between chemical processes that involve chemical reactions and transformations and physical processes that involve mainly phase changes and separation. This is an elective course for the energy engineering major. It will be offered once per year in the spring semester with an estimated enrollment of 40. Assessment of student performance will be based on homework, student projects, mid-term exams, class participation, and final exam.

General Education: None
EGEE 436 Modern Thermodynamics for Energy Systems (3)

This course will be an advanced thermodynamics class that will expose students to the thermodynamics of irreversible processes and the thermodynamic analysis of dynamic systems. Students will learn to analyze the thermodynamics of conductivity, diffusion, gravitation, electrochemical systems, stability, fluctuations and critical phenomena. Students are expected to be able to understand and apply their knowledge to analyze problems involving fuel cells, membrane potential in electrolysis systems for hydrogen production, and other energy and environmental processes. This is an elective course in the energy engineering major and will be offered once a year in the spring semester to about 40 students. Student performance will be evaluated based on homework, mid term exams, class participation, project, and final exams.

EGEE 437 Design of Solar Energy Conversion Systems (3)

The course examines the principles of solar energy conversion to build a foundation for explaining the basic concepts and implementation of conversion processes. It reviews the properties and availability of solar radiation and geometric relationship of sun/collector, principles of photovoltaic conversion and properties of materials used in PV systems, designing PV systems, procedures for solar thermal engineering calculations, and thermal power plants for electricity generation. This course will complement the existing courses on fossil fuels and other renewable energy sources. Students will be engaged in actively participate in learning through team projects, semester papers, class presentations, and field trips.

EGEE 438 Wind and Hydropower Energy Conversion (3)

This course examines the principles of sustainability and renewable energy conversion with emphasis on wind and hydrokinetic energy resources. Concentration is placed on the relationships between the renewable resources, conversion technology and economic feasibility along with consideration of the associated risks and environmental impacts. It will complement existing energy engineering courses on fossil fuel and solar energy conversion. Students will actively participate in learning through team projects, semester papers, class presentations, and field trips. This is a required course in the energy engineering major. The course will be offered every spring with an expected enrollment of 60 students.
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EGEE 441 Electrochemical Engineering Fundamentals (3) Course covers fundamental principles of electrochemistry, including electrochemical thermodynamics, kinetics, catalysis, and corrosion and focuses on applications such as fuel cells, batteries, and photovoltaics. Each application covers: principles of method, criteria determining performance, present state of development, and advantages/disadvantages. Laboratory demonstration of the performance (current-voltage) measurements of an electrochemical converter is scheduled in this course.

EGEE 441 Electrochemical Engineering Fundamentals (3)
The course will cover the fundamental principles of electrochemistry, including electrochemical thermodynamics, kinetics, catalysis, and corrosion. Students will be exposed to the application of these principles in fuel cells, batteries, and photovoltaics. Students will be able to perform efficiency analysis in these systems. They will also be able to understand the differences between types of fuel cells and distinguish between electrochemical and chemical energy systems. For each of the above application areas students will learn the criteria used to determine their performance, their current state of development, and their advantages/disadvantages. Laboratory demonstration will help to enhance student knowledge and understanding. Student performance will be evaluated through problem sets, quizzes, midterm, project papers, class participation, and final examination. This is a required course in the energy engineering major.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2012 Future: Fall 2012
Prerequisite:

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EGEE 441 Electrochemical Engineering Fundamentals (3)
The course will cover the fundamental principles of electrochemistry, including electrochemical thermodynamics, kinetics, catalysis, and corrosion. Students will be exposed to the application of these principles in fuel cells, batteries, and photovoltaics. Each application covers: principles of method, criteria determining performance, present state of development, and advantages/disadvantages. Laboratory demonstration of the performance (current-voltage) measurements of an electrochemical converter is scheduled in this course.

EGEE 441 Electrochemical Engineering Fundamentals (3)
The course will cover the fundamental principles of electrochemistry, including electrochemical thermodynamics, kinetics, catalysis, and corrosion. Students will be exposed to the application of these principles in fuel cells, batteries, and photovoltaics. Each application covers: principles of method, criteria determining performance, present state of development, and advantages/disadvantages. Laboratory demonstration will help to enhance student knowledge and understanding. Student performance will be evaluated through problem sets, quizzes, midterm, project papers, class participation, and final examination. This is a required course in the energy engineering major.

Prerequisite:

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EGEE 451 Energy Conversion Processes (3) Emphasizes processes for conversion of fossil fuels, nuclear and biomass to other fuel forms as transportation fuels and electricity.

EGEE 451 Energy Conversion Processes (3)
The primary objective of this course is to expose students to the principles of chemical and nuclear reactions that underlie most major energy conversion processes, particularly with reference to the conversion of energy resources such as fossil and nuclear energy to fuels and electric power. The emphasis of the first major unit of the course is on fundamental reaction chemistry including nuclear. The second objective is to connect chemical and nuclear principles to practical energy conversion processes by an analysis of case studies used as examples of such processes as ethanol via fermentation, biodiesel via transesterification, formation of light liquids by pyrolysis, coal gasification and Fischer-Tropsch synthesis, direct coal liquefaction, fissionable and fertile isotopes chain reactions, breeding cycles and reactors, and electric power from nuclear reactions. This is a required course for the energy engineering major and will be offered in fall semester with an enrollment of about 50. Student performance will be assessed through weekly homework, mid-term tests, student projects and final exam.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
EGEE 455 Materials for Energy Applications (3)

The primary objective of this course is to introduce engineers and scientists to key principles in the design of materials relevant to energy applications. Application areas will include separations, catalysis, adsorption, semi-conductors, and photovoltaics. Students will be able to understand and apply principles in solid state chemistry/physics, material science and engineering, adsorption, surface science, and catalysis in analyzing materials for energy applications. Introductory information will be followed by case studies, state of the art review of current materials, and research needs for development. Students will be evaluated on their ability to understand and apply basic concepts in material science, solid state chemistry, and surface chemistry; report on an in depth study of one surface characterization technique; perform literature search and understand basic technical concepts in one application area. Term projects will provide an opportunity to apply concepts and skills to real world applications, and require students to report on current 'state of the art' technology and research needs. Groups of three or four students will be asked to choose from a variety of applications and then asked to present their findings. This is an elective course for energy engineering majors with particular interest in materials for energy applications.

EGEE 456 (E E 456, E SC 456) Introduction to Neural Networks (3)

This course is in response to students' needs to learn Artificial Neural Networks (ANN) as a solving tool for difficult problems for which conventional methods are not available. The objective of this course is to give students hands-on experiences in identifying the best types of ANN, plus developing and applying ANN to solve difficult problems. Students will be introduced to a variety of ANN and will use their training skills to solve their own applications. During this course the students will develop a final project, in which they will apply ANN to widely varied problems.

Examples:
I) students from E E may be interested in applying ANN to solve control problems
II) students from Material Sciences may be interested in applying ANN to predict the pitting corrosion of components
III) students from Petroleum Engineering may be interested in applying ANN to characterize the life of a reservoir
IV) students from Agricultural Engineering may be interested in applying ANN to sort apples automatically, etc.

EGEE 494A Research Project (2) Supervised research on a selected topic of energy science and engineering and preparation of written and oral presentation of the research results.

EGEE 494A Research Project (2)
The primary objective of the course is to expose students to supervised independent research and presentation of results. Students will embark on an independent research project under a faculty member. The research topic will depend on the student's interest and may cover topics ranging from the production, processing, and utilization of different forms of energy and the associated environmental, health and safety, and policy and economics issues. Students will be expected to undertake the literature review, design and experiments, conduct the study and perform a detailed analysis of the results. The work will be presented in a final report and presentation. Students will also be expected to explore the implications of their data and conclusions and outline further research opportunities. In particular, the societal impact of their work should be emphasized. This is a required class in the energy engineering major and will be offered each semester.

ENGR 100S Introduction to Engineering (1) A seminar providing information about different engineering majors, coping with college life, and exploring educational and career goals.

ENGR 100S Introduction to Engineering (1)
(FYS)

Engineering 100 is a First-Year Seminar designed as an introduction to the majors available to students in engineering. There are three main goals:

1. To introduce students to the areas of study that the college has to offer - this is to assist students in deciding whether engineering is for them. It also helps students decide which major within engineering is for them. This introduction is accomplished through homework exercises and guest speakers - graduates in industry, graduate students, department heads, faculty, and current undergraduates.

2. To introduce students to the university in general - what resources are available and what it means to be a student at a university instead of high school. This is accomplished through guest speakers, lectures by your professor, and homework exercises.

3. To provide students with an opportunity to interact with faculty members, academic advisers, and other students.

The class meets twice a week. All sections meet together once a week to listen to presentations from people representing each major. On the other class day, sections meet separately with their professor for presentations and activities unique to that instructor.

ENGR 301 (IL) International Engineering Orientation (1) This course will prepare engineering students for an international educational experience, including study abroad and international internships.

ENGR 301

ENGR 301 International Engineering Orientation (1) (IL)

This course will prepare engineering students for an international educational experience, either study or work abroad. The course is conducted as a group seminar, with topics covered to include how engineering is practiced overseas, cultural differences in engineering around the world, recognizing cultural issues, understanding how to conduct oneself in a foreign environment, and preparing for an international educational experience. Students are expected to actively participate in discussions and hands-on activities that will allow them to gain a better understanding of what it will be like to spend time as an engineering student in a different cultural environment. Students are evaluated based on active class participation, team exercises, written assignments, and class presentations. This course is open to undergraduate students in the College of Engineering.

ENGR 310 Entrepreneurial Leadership (3) This course develops leadership and entrepreneurial skills using collaborative, problem-based projects, with engineering and business students working in teams.

ENGR 310 Entrepreneurial Leadership (3)

ENGR 310 is a problem-based learning course; learning by doing is fundamental. Faculty members serve as mentors for student team activities and projects. Teams are composed of students from colleges across Penn State, especially in engineering, business and IST. Clear expectations are set for students to take charge of their own learning. Written and oral communication skill development is a key objective; leaders and entrepreneurs must be clear, persuasive speakers and writers. From the first day of class, constructive feedback is provided after each presentation to improve quality, persuasion, and “thinking-on-your-feet” skills. Completion of a course portfolio, idea journal, and weekly class analysis reports are required. The first half of the course focuses on leadership skill development, including understanding leadership theory, individual leadership styles, group and organizational leadership, the role of values and ethics, and life cycles of organizations.
The last half of the course focuses on entrepreneurship, including basic market research, product prototyping, strategic planning, business feasibility analysis, basic costing and financial analysis, grant proposal or business plan generation, and final project presentations as part of the College of Engineering Design Showcase.

ENGR 312 Sustainable Energy Entrepreneurship (3) Three interrelated modules guide students through technical, global/business, and entrepreneurial aspects of sustainable energy.

ENGR 312 Sustainable Energy Entrepreneurship (3)

ENGR 312 examines three integrated components of the sustainable energy business: technical adaptability, financial structure, and entrepreneurial.

The technical component of the course provides an overview of the concept of energy and sustainable forms of energy, energy auditing process, as well as, the integration between supply, capacity, demand, and usage technology. Technical calculations of the power capacity of sustainable energy systems and the technical limitations, specifications, and feasibility studies of energy systems are also addressed.

The business component of the course provides an overview of the market and finance aspect of sustainable energy systems. Students will study the feasibility of sustainable energy systems from a business perspective, as well as perform quantitative cost-benefit analyses that include depreciation of sustainable energy systems and return on investment. Students will also evaluate existing energy business plans.

The entrepreneurial component focuses on the skills needed to perform a feasibility study of market opportunities related to sustainable energy, including entrepreneurial risk and sustainability ethics. Government incentives and the impact of policy issues on business decisions for sustainable energy systems will also be addressed. Students will learn how to take a global view in the assessment of market needs and they will gain in-depth knowledge of ways to obtain public and private financing for a prospective venture. A justification of sustainable energy applications, including environmental impact, will also be discussed.

The capstone project will link all three components of the course by requiring students to create their own energy business plan for a residential or commercial site of their choice. The energy business plan will focus on the best technical and economic practices in the sustainable energy marketplace.

ENGR 320 Materials Properties Measurement I (3)

Materials Laboratory I introduces students to the experimental procedures in determining mechanical properties (elastic modulus, shear modulus, Poisson’s ratio, and fracture toughness) of engineered materials. Students gain hands-on experience in strain gage mounting and material properties measurement using strain gages. In conjunction with mathematical modeling software, finite element analysis is used to analyze engineering components subjected to mechanical and thermal loading (static and dynamic). Experiments and lectures are designed to demonstrate the theory and practice of mechanical measurement of material. Students utilize state-of-the-art equipment for experimentation in conjunction with advanced modeling software such as ANSYS to predict and evaluate material behavior under mechanical and thermal loading.

ENGR 350 Computational Modeling Methods (3) Theoretical and hands-on experience of mathematical modeling in mechanical systems; 2D thermal stresses, beam elements, solid modeling and vibrations.

ENGR 350 Computational Modeling Methods (3)

Computation and Modeling Methods is intended to introduce students to strategies in mathematical modeling of physical phenomena using ANSYS. The course provides theoretical understanding and hands-on experience of the modeling techniques used in engineering practice and allows students to apply these skills to engineering computational problems. Modeling of engineering processes requires users to have a working knowledge of ANSYS and modeling techniques such as mesh construction and analysis. This course teaches the principles of mathematical modeling of various physical phenomena and allows students to learn the basic strategies of mathematical modeling and advanced mesh analysis on topics involving structural, thermal, and materials engineering.

**ENGR 411** Entrepreneurship Business Basics (3) Three critical entrepreneurship skills are covered for non-business majors: business finance, intellectual property, and marketing.

**ENGR 411 Entrepreneurial Business Basic (3)**

ENGR 411 covers three critical skill areas of non-business students: business finance, intellectual property, and
marketing. These business areas are covered in three sequential 5-week modules over the semester. This course emphasizes problem-based learning (PBL), in which students engage in real-world problem-solving exercises each and every class period. With this learning approach, students develop and use skills sets in financial management, intellectual property management, and both business-to-consumer marketing (B2C) and business-to-business marketing (B2B). Each student is responsible for all course material and completing all PBL exercises covered in class, whether present or not. Student presence and preparation in every class period id expected.

To encourage active learning of ENGR 411 course material, students are divided into small discussion and working teams. Discussion teams will be responsible for: 1) developing questions for class interaction; 2) highlighting the important points of the readings/case studies; and 3) solving problems and presenting solutions to the class.

Up to three technology businesses or events of current interest will be analyzed during the semester. These case studies bring out the interdependence of finance, intellectual property, and marketing decisions in product creation. Example business case studies include Napster and the Bridgestone/Firestone litigation.

ENGR 421 Materials Properties Measurements II (4)
Materials property measurement II introduces students to experimental procedures in the determination of thermal properties (heat transfer/conduction and thermal expansion) and electrical properties (resistance and dielectric measurements) of materials through demonstrations and experiments. Lectures provide a theoretical understanding of the characterization techniques and provide information for the design and interpretation of experimental results. This laboratory complements lectures in materials characterization, materials processing and materials design courses allowing students to apply theoretical knowledge to experimental processes. Students gain hands-on knowledge of testing equipment and experience in data acquisition and interpretation. Students gain experience in the processing of material (powder characterization, consolidation, and densification), the analysis of material microstructures and investigations of structure property relationships.

ENGR 425 (IST 425, MGMT 425) New Venture Creation (3)
Via problem-based learning, teams define new business ventures to meet current market needs, develop business plans, and present to investors.

ENGR 425

ENGR (MGMT/IST/ENTR) 425 Introduction to Entrepreneurship (3)
The goal of ENGR (MGMT/IST/ENTR) 425 is to better prepare undergraduate students to be business leaders in adaptive, globally-minded, technology-savvy companies. The course is structured so students develop skills that are of high value in any workplace: they develop improved leadership skills, higher self-efficacy, creativity and the ability to deal with ambiguity. On course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience and producing a convincing executive summary for internal or external financing and launch. Students who want to augment the skills and knowledge from their major with the ability to refine a new product/service process in an interdisciplinary team will find ENGR (MGMT/IST/ENTR) 425 a valuable course.

This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active learning happens in this course because students develop ownership in their new business venture concept and are fully responsible for the genesis of the idea. The course leverages the on-line course management system (ANGEL) to define weekly learning objectives, support electronic delivery of assignments, robust video content with entrepreneurs is provided on CD-ROM or via ANGEL, providing additional insights into entrepreneurship. The technology or business segment focus of the class is easily adapted by using different case studies and course mentors.

This will be one of two courses in the new two-course sequence for business students in entrepreneurship. This course will be accepted as a supporting course in the Engineering Entrepreneurship Minor (E-SHIP) and in the Engineering Leadership Development Minor (ELDM). ENGR (MGMT/IST/ENTR) 425 can be used as a technical elective in many of the engineering departments. It will be accepted as a Support of Option course for the Information Sciences and Technology (IST) major.

The Pennsylvania State University
This course will be offered each Fall and Spring semester with two sections each semester. Class enrollment per section will be set at 60 total.

**ENGR 426 (IST 426, MGMT 426) Invention Commercialization (3)**

Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path each technology.

**ENGR 426**

**ENGR (MGMT/IST/ENTR) 426 Invention Commercialization (3)**

The goal of ENGR (MGMT/IST/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - "not invented here".

Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome.

This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor.

Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. **NOTE:** Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property Agreement For Students - For Use When Assigning Intellectual Property to The Pennsylvania State University. The form can be viewed at [http://guru.psu.edu/policies/RAG13.html](http://guru.psu.edu/policies/RAG13.html)

The course will be offered both Spring and Fall semesters with an enrollment of 40 students.

**ENGR 450 Materials Design and Applications (3)**

Engineering design considerations for materials selection, organization of property trends of materials families, materials design strategies and property compatibility.

**ENGR 450 Materials Design and Applications (3)**

ENGR 450 introduces students to the process of materials organization and selection for application needs. Students select materials for applications based on desired properties, materials compatibility, and economic factors and learn how to design materials (composites) to fulfill critical materials requirement of an engineering application. The course facilitates students with the understanding of the engineering design process to make educated decisions on the materials selection and/or design for industry application needs. Students learn to understand trends in property characteristics associated within given families of materials, i.e. metals, ceramics and polymers, and to balance engineering needs and economic considerations with the application design process.

Senior design I provides students with experience in solving engineering problems independently and/or working in groups on an open-ended design problems. Students refine skills in information gathering, analysis of market and technical considerations, critical thinking of project/design scope and effective communication of project/design objectives. This course builds on previous knowledge and applies it to a global consideration of design criteria to a specific project provided by relevant faculty. The course is the first installment of a senior capstone program in which students start to understand the global aspects of the engineering design process with respect to individual/group projects. Students gain perspective on project selection and research expectations from faculty and gather the relevant technical knowledge required to initiate the project. Projects are appropriately scoped for undergraduate research and are faculty initiated sponsored by regionally based industry (similar to The Learning Factory Experience at UP). Faculty provides research opportunities and external industry collaborations to students for selection based on common interest.

EDSGN 012S Solar Racers First-Year Seminar (1) Students explore solar energy engineering by designing, building, testing, and racing a model car powered by a photovoltaic panel.

EDSGN 012S Solar Racers First-Year Seminar (1)

This engineering First-Year Seminar, Solar Racers, is intended as a topical introduction to the field of solar engineering with a focus on solar electricity. Through hands-on activities, readings, and research, students explore the application of solar energy to power a model car (and by extension, solar electricity generation in general). Working in small teams, students design, build, and test a model solar-powered car. This seminar emphasizes active learning via project-oriented teamwork. Solar principles to be demonstrated include solar angles, solar resource, and conservation of energy. Students also use spreadsheets and computer models to perform parametric studies as an aid in the design process.

Classes typically begin with a review and overview of the topics for that day. Class time is spend discussing new material, recent assignments, and working in the lab. Students also serve as mentors and advisors for local middle school students who will also be building and racing similar model solar cars.

EDSGN 013S Ethics of Star Trek First-Year Seminar (1) The Star Trek television series is used as an introduction to ethics, with application to student life and engineering practice.

EDSGN 013S Ethics of Star Trek First-Year Seminar (1)

In this first-year seminar, The Ethics of Star Trek, students explore ethical issues that arise in various episodes of Star Trek, from The Original Series with Captain James T. Kirk and company, through The Next Generation, with Captain Jean Luc Picard. Students learn how to methodically approach tough ethical decisions in their lives, especially those in professional life. This course helps them to identify, understand, and examine their moral values, and especially to plan actions that are consistent with these values. The class explores the current thinking on the responsibilities of engineers to society, community, family, and themselves. This is a discussion and application oriented course with emphasis placed on applying key concepts to realistic problems and on developing skills such as team work, argumentation, and communication skills.

Underpinning the viewing of Star Trek episodes, the course starts with a foundation on moral and ethical theory. After discussing the ethical issues faced by the Star Trek crews, the class investigates similar situations faced by students and by engineers. Teams analyze and solve progressively more complex ethical cases in engineering and in general. The goal of the course is for students to develop their moral imagination and to understand how to make the best choices in difficult circumstances.

The Pennsylvania State University
EDSGN 015S Transformations by Design: First-Year Seminar (1)

Engineering design is a diverse field of study with many emerging topics and applications. The goal of this first-year seminar course is to introduce first-year students to engineering design. In turn, design is set within the essential dynamic context of technology: the transformation of the environment and society. Hence, doing design well means creating a better world and a sustainable environment. Students examine the global networks of product life cycles from extraction to disposal that is triggered by engineering design and how it affects people's lives and the environment.

Since much engineering design is integrated design that brings together the disciplines and people necessary to achieve a design solution to a given problem, this FYS provides students with a vivid glimpse of engineering careers. This is developed further by student presentations that focus on their life goals and how their expected career in a given field of engineering will help them to achieve their goals.

This course will combine lectures, discussions, teamwork, projects, and hands-on activities, with an emphasis on active learning and an examination of the transformations of technology from transducers to product life cycles.

In addition to introducing first-year students to design topics and careers in engineering, this seminar course will help incoming students develop success skills and become acclimated to University life. But higher education is also presented to the students as a transformative process that reshapes their social relationships and determines much of their future.

The course will be offered once a year in the fall semester.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

EDSGN 100 Introduction to Engineering Design (3)

Introduction to Engineering Design (3)

EDSGN 100H Introduction to Engineering Design (3)

Introduction to Engineering Design (3)

EDSGN 100S Introduction to Engineering Design (3)

Introduction to Engineering Design (3)
**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**EDSGN 110 Spatial Analysis in Engineering Design (2)**

Spatial analysis techniques using advanced computer-aided drafting and design systems, with an emphasis on engineering concepts, analysis and design.

**EDSGN 110 Spatial Analysis in Engineering Design (2)**

EDSGN 110 is a continuation of EDSGN 100, moving toward an introduction to computer-aided engineering. Emphasis is on the design of mechanical systems using two-dimensional (2D) drawings and three-dimensional (3D) solid modeling techniques commonly used in the mechanical design and structural systems. This course covers spatial relationships using the advanced functionality of computer-aided drafting and design systems. Students will be able to: (1) create and interpret advanced 2D engineering models and drawings; (2) create and manipulate 3D solid models; and (3) use these techniques in practical engineering design problems. Students will become proficient in the use of computers for the simulation of mechanical systems, design documentation, network storage and retrieval, and presentation technologies. The student will create and interpret advanced 2D engineering drawings which may include auxiliary views and working drawings. Using the engineering design process and solid modeling software, the student will create and manipulate 3D solid models and assemblies to aid in the design and documentation of simple mechanical systems.

**EDSGN 210 Tolerancing and Spatial Models (2)**

Professional parametric solid modeling software will be applied to produce complete, industry-typical and standard working drawings, including part detail drawings and various types of assembly drawings; to implement the appropriate tolerance design of interfacing components and to explore advanced productivity-enhancing add-in modules. Students will be introduced to the variety and relative precedence of specifications for feature tolerances, and to the basic differences between form and size tolerance. Topics covered include: unilateral, bilateral and symmetric size tolerances, form control and tolerances, calculations for critical fits, specification precedence for tolerances, e.g., stock size vs. size directly specified in the drawing field vs. title block tolerances vs. drawing notes, etc. Laboratory assignments will include: part drawing with standard three orthographic views, complete dimensions, and a section view; part drawing with complete dimensions and a broken view; part drawing with complete dimensions and a primary auxiliary view; part drawing with complete dimensions and a secondary auxiliary view; part drawing with complete dimensions and removed detail view(s); detail drawing with correct limit tolerances on features which are critical for fit and function, assembly file with separate sub-assemblies, assembly drawing (with part identification balloons and a bill-of-material) which is based upon an exploded view, assembly drawing of a tooling fixture (with part identification balloons and a bill-of-material) which shows the subject work piece transparently with phantom lines, Configured part file with tabulated drawing, welding of an assembly using advanced software.
capabilities and production of a welding drawing with correct symbols, production of an injection mold cavity from the
subject part file, exploration of the functionality of sheet metal modules, applications of top down design and layout
sketches, application of motion-simulating modules and functionality. The differences between coordinate tolerancing and
geometric tolerancing are included in the course.

The American Society of Mechanical Engineers Y14.5M will be referenced. The following topics will be covered: Eight key
GD&T terms, GD&T modifiers and symbols, Rule #1 and #2, concepts of GD&T, introduction to the flatness control,
straightness control, circularity control, perpendicularity control, angularity control, parallelism control, concentricity
control, symmetry control, the datum system (planar datum, introduction to datum targets, FOS datum specifications
(RFS), FOS datum specifications (MMC).

EDSGN 401 Engineering Systems Design (3) Design requirements for complex systems; trade-offs between market opportunities and technology; translation of priorities and needs into an operational concept.

This course provides the knowledge and skills necessary to translate needs and priorities into system requirements, and develop derived requirements, which together form the starting point for engineering of complex systems. Students will develop an understanding of the larger context in which requirements for a system are developed, and learn about trade-offs between developing mission needs or market opportunities first versus assessing available technology first. Techniques for translating needs and priorities into an operational concept and then into specific functional and performance requirements will be presented. Students will assess and improve the usefulness of requirements, including such aspects as correctness, completeness, consistency, measurability, testability, and clarity of documentation. The course explores the role of techniques such as decision analysis, cost-benefit analysis, and risk assessment. Students will understand the limitations of the way that current systems engineering is practiced in terms of dealing with complexity, lifecycle uncertainty and other factors.

EDSGN 410 Robotics Design and Applications (4) Introduction to robotics, with emphasis on the design of robotics systems through multidisciplinary integration of electrical, mechanical, and software components.

The objective of this course is to apply the basic concepts of electrical, mechanical, and software technologies to analyze, design and test a robotics system. This course will draw from skills in prior coursework in electricity and electronics, statics and dynamics, and software design. The course includes a discussion of present applications and future directions of robotics in such areas as manufacturing, science, transportation, military, healthcare, and entertainment. Students will be introduced to mechanical systems analysis, sensors, software development, electrical systems, control algorithms, testing, prototyping, design, modeling, and simulation of robot systems. Students will work in teams to design and prototype a robot to perform a task and to satisfy a set of design requirements. Professional communication and documentation will be included in the course experience. This course is a multi-disciplinary, project-based course and will have a substantial laboratory component supporting team-based design, integration and testing of a robot system.
EDSGN 452 Projects in Community Service Engineering (1-2)  Students engage in research and design of appropriate solutions to real-life community-based problems and project management of such projects.

EDSGN 452 Projects in Community Service Engineering (1-2)
EDSGN 452 is intended to promote civic responsibility and enhance the student's abilities to engage in research and design, project management, communications, professional conduct and the understanding of user needs. This is accomplished by students undertaking team-based engineering projects in community service with partner community organizations. The projects offer real-world engineering design experience, from problem formulation through performance assessment. The project offerings will include a mix of local and international offerings. Students work on multidisciplinary teams with a project supervisor (i.e., faculty or practicing engineer) and a representative from the partner community organization. Projects are selected based on academic content, potential significance to the partner community, commitment of the partner community organization, and student safety.

Students also examine the politics of technology, the relationship between engineering and communities (either domestic or international), and ethics in engineering practice. This includes the ways that engineering can be used positively and negatively in development. In the course of their work, the students will examine the ways that economic, social, cultural, political, and other contextual considerations are implicated in engineering design. Students are challenged to think critically about how engineering can be done most effectively to support community goals, and how engineering can weaken community efforts if done insensitively. These issues are explored through discussions of the relevant scholarly theory and through their manifestation in the course projects.

EDSGN 479 Human Centered Product Design and Innovation (3)  Consumer product design for a global market, incorporating human factors principles and user desires in a multicultural perspective.

EDSGN (I E) 479 Human Centered Product Design and Innovation (3)
This course will focus on consumer product design for a global market, incorporating human factors and ergonomics principles as well as user needs and emotional desires. The students will be led through product design process, various product design strategies, product planning, managing the development process, product evaluation, decision making tools, and market entry. Special emphasis will placed on user centered design, incorporating user characteristics, user needs and emotional desires (including Kansei engineering approaches), survey methodology, and usability testing. To emphasize the multicultural perspectives in today's global product design, interdisciplinary teams from two universities on opposites of the globe will apply these principles on actual industrial product designs for leading consumer product manufacturers.

EDSGN 494 Research Project (1-12)  Supervised student activities on research projects identified on an individual or small-group basis.

**Engineering Graphics Technology (EG T)**

**EG T 060** 3D Visualization and Spatial Development (1) Supplemental course designed to improve spatial skills through the use of interactive hands-on activities, such as clay modeling and multi-media software.

**EG T 060 3D Visualization and Spatial Development (1)**

The ability to visualize objects and situations in one's mind, and more specifically the ability to manipulate those visualizations is an important skill for those in the engineering field. For example, EG T 120 Introduction to Graphics and Solid Modeling requires strong visualization skills to create orthographic (2D) and isometric (3D) representations of mechanical parts. Students must also be able to sketch an object 3-dimensionally from a 2D drawing and vice-versa. Strong visualization skills are also essential to successfully model 3D parts in a solid modeler, such as Pro/ENGINEER. In addition, research has shown students with poorly developed spatial skills, especially women, tend to become discouraged and drop out of engineering altogether if they are struggling in their very first "engineering" course. EG T 060 is designed to improve these spatial skills through the use of interactive hands-on activities, such as clay modeling (building a 3D object from a 2D drawing), snap cubes, and multi-media software specifically designed to improve these skills.

EG T 114 Spatial Analysis and Computer-Aided Drafting (2) Spatial relations of applications in engineering technology with more advanced functionality of computer-aided drafting and design systems.

EG T 114 Spatial Analysis and Computer-Aided Drafting (2)
The EG T 114, Spatial Analysis and CAD course is a continuation of CADD (Computer Aided Drafting and Design) and an introduction to CAE (Computer Aided Engineering) with an emphasis on the state-of-the art 2-D drawing and 3-D solid modeling techniques commonly used in mechanical design and analysis of structural systems.

This course is also designed to cover spatial relations of applications in engineering technology, with more advanced functionality of computer-aided drafting and design systems.

Building on the knowledge and experience of Engineering Design from prior courses, the student will be able to: understand, create and interpret more advanced 2-D Engineering drawings; understand, create and manipulate 3-D solid models; use these two techniques in practical Engineering Design problems.

Having an understanding of computer systems, students will become proficient in the use of computers for the simulation of mechanical systems, design documentation, network storage and retrieval, and presentation technologies.

With a basic understanding of 2-D drawing software, the student will also be able to understand, create and interpret more advanced 2-D Engineering drawings, which may include auxiliary views and working drawings.

Finally, having an understanding of the Engineering Design process and a basic understanding of solid modeling software, the student will be able to understand, create and manipulate 3-D solid models and assemblies to aid in the design and documentation of simple mechanical systems.

EG T 119 Introduction to CAD for Electrical and Computer Engineering (2) Introduction to computer-aided drafting (CAD) for Electrical and Computer Engineering Technology students with a focus on three dimensional assemblies.

EG T 119 Introduction to CAD for Electrical and Computer Engineering (2)
This course is intended to teach Electrical and Computer Engineering Technology students to use a 3-D CAD software package to communicate their ideas so that they may transfer their ideas to others including engineers, designers, and lay people.

Students will successfully create 3-D objects such as rectangular solids, spheres, and cylinders. Those 3-D objects will then be employed to create actual samplings of electrical and electronic components (such as resistors, capacitors, transformers, etc), as well as electro-mechanical components (such as relays, motors, solenoids, etc), enclosures (chassis), and operator interfaces (knobs, buttons, displays, etc) and similar items. Students will successfully create 3-D assemblies. Students will successfully create working drawings of components and assemblies.

The designated course outcomes are as follows: visualize mechanical part(s) 2-D to 3-D and vice versa; incorporate design intent into solid models using extrusions, revolves, shells, ribs, chamfers and rounds; construct datum references (e.g. planes and axes) to facilitate solid modeling; properly execute duplicating operations to create circular and linear patterns of features and mirrored features; use mathematical relations to drive solid models; create a detail drawing of a mechanical part; create 3-D assemblies.

**EG T 205** Transition From 2-D CAD to Solid Modeling (1) Supplemental course designed to introduce students (primarily transfer) to a solid modeling program.

**EG T 205 Transition From 2-D CAD to Solid Modeling (1)**

This is a one credit course in parametric solid modeling. Students will learn how to do basic geometry creation as well as how to create and use reference geometry such as points and planes. Duplicating features though the use of patterns and mirroring will be covered. More advanced geometry creation such as sweeps and blends are introduced, as well as the use of top-down as well as bottom-up modeling techniques. Assembly modeling and detailing topics are covered. Evaluation is done through both weekly homework assignments and a final, comprehensive project. This course is designed to bring students (especially transfer students who already have taken EG T 201) up to a base level of proficiency on the specific CAD package used in MET 306.

**E MCH 210 Statics and Strength of Materials (5)** Equilibrium of particles, rigid bodies, frames, trusses, beams, columns; stress and strain analysis of rods, beams, pressure vessels.

**E MCH 210 Statics and Strength of Materials (5)**

This course is a combination of E MCH 211 and E MCH 213. Students taking E MCH 210 may not take E MCH 211 or 213 for credit, or vice versa. Students will learn how forces and moments acting on rigid and deformable bodies affect reactions both inside and outside the bodies. Students will study the external reactions, and their inter-relationships; the discipline of statics (E MCH 211), as well as the associated internal forces and deformations, quantified by their corresponding stresses and strains; the discipline of strength of materials (E MCH 213). The student will be able to analyze and design simple structural components based on deflection, strength, or stability. Students will be prepared to analyze and design simple structures and take upper division courses in mechanics of materials and structural analysis and design. Students will communicate their analysis through the use of free-body diagrams and logically arranged equations.

**E MCH 210H Statics and Strength of Materials, Honors (5)** Equilibrium of particles and rigid bodies, frames, trusses, beams, columns; stress and strain analysis of rods, beams, pressure vessels.

**E MCH 210H Statics and Strength of Materials, Honors (5)**

This honors course is a combination of E MCH 211 and E MCH 213. Students taking E MCH 210H may not take E MCH 211 and 213 for credit, or vice versa. The same general topics are covered as in E MCH 210, but in a more advanced fashion and with more advanced applications. Students will learn how forces and moments acting on rigid and deformable bodies affect reactions both inside and outside the bodies. Students will study the external reactions, and their inter-relationships - the discipline of statics (E MCH 211), as well as the associated internal forces and deformations, quantified by their corresponding stresses and strains - the discipline of strength of materials (E MCH 213). The student will be able to analyze and design simple structural components based on deflection, strength, or stability. Students will be prepared to analyze and design simple structures and take upper division courses in mechanics of materials and structural analysis and design. Students will communicate their analysis through the use of free-body diagrams and logically arranged equations.

*The Pennsylvania State University*
E MCH 211 Statics (3) Equilibrium of coplanar force systems; analysis of frames and trusses; noncoplanar force systems; friction; centroids and moments of inertia.

E MCH 212 Dynamics (3) Motion of a particle; relative motion; kinetics of translation, rotation, and plane motion; work-energy; impulse-momentum.
E MCH 212H Dynamics (3)

Dynamics (E MCH 212) is the study of forces causing motion and, at least in engineering, its primary goal is the determination of loads on moving structures for the purpose of design. Honors Dynamics (E MCH 212H) will provide students with the tools and guidance to analytically model a wide variety of mechanical and structural systems. In Dynamics, this is done by drawing free-body diagrams of the relevant parts of the system and then applying the laws of Newton and Euler, laws governing material behavior, and equations describing the geometry of motion of points and bodies (kinematics) to those free-body diagrams to obtain the equations governing the motion of the system. Once a system has been modeled, Honors Dynamics will also provide students with the tools to obtain desired information from those models by solving the equations governing the motion of the system. Topics covered in Honors Dynamics include: kinematics of particles, application of Newton's laws to particles, energy and momentum methods for particles, kinematics of rigid bodies, application of the laws of Newton and Euler to rigid bodies, and energy and momentum methods for rigid bodies. In addition to what is done in Dynamics (E MCH 212), students in Honors Dynamics will typically do a project in which they design an experiment and use what they have learned to compare theory with experiment. They will also make use of modern mathematical software to solve the nonlinear differential equations obtained in their analysis of mechanical and structural systems to obtain further understanding of the behavior of these systems.

E MCH 213 Strength of Materials (3) Axial stress and strain; torsion; stresses in beams; elastic curves and deflection of beams; combined stress; columns.

E MCH 213 Strength of Materials (3)

In this elementary course on the strength of materials the response of some simple structural components is analyzed in a consistent manner using i) equilibrium equations, ii) material law equations, and iii) the geometry of deformation. The components analyzed include rods subjected to axial loading, shafts loaded in torsion, slender beams in bending, thin-walled pressure vessels, slender columns susceptible to buckling, as well as some more complex structures and loads where stress transformations are used to determine principal stresses and the maximum shear stress. The free body diagram is indispensable in each of these applications for relating the applied loads to the internal forces and moments and plotting internal force diagrams. Material behavior is restricted to be that of materials in the linear elastic range. A description of the geometry of deformation is necessary to determine internal forces and moments in statically indeterminate problems. The underlying mathematics are boundary value problems where governing differential equations are solved subject to known boundary conditions. Students will be able to:

a) Identify kinematic modes of deformation (axial, bending, torsional, buckling and two dimensional) and associated stress states on infinitesimal elements and sketch stress distribution over cross sections
b) Analyze determinate and indeterminate problems to determine fundamental stress states associated with kinematic modes of deformation
c) Apply strength of materials equations (and formulas) to the solution of engineering and design problems
d) Recognize and extract fundamental modes in combined loading and do the appropriate stress analysis
e) Extract material properties (modulus of elasticity, yield stress, Poisson's ratio) from data and apply these in the solution of problems
f) Calculate the geometric properties (moments of inertia, centroids, etc) of structural elements and apply these in the solution of problems.

which will enable them to solve real engineering problems.

E MCH 213D Strength of Materials with Design (3) Stress and deformation in members under axial, bending, and torsional loads, combined stress; columns. Design with a project.

E MCH 213D Strength of Materials with Design (3)

Strength of Materials with Design adds depth and breadth to the traditional course material, provides an understanding of how the course topics are applied in engineering, introduces the student to information resources crucial to doing engineering and requires teamwork, research and decision-making.

The student is expected to learn: the fundamentals of strength of materials which include the ability to analyze stress and strain structural elements under axial, bending, torsional and multi-axial behavior and predict the onset of buckling in
columns. These objectives are the same for E MCH 213, the traditional course. Distinguishing features of E MCH 213D, Strength of Materials with Design, are: application of fundamental analysis to design of simple structures, application of the design process, research for data in the library and on the web, team-work, organization and writing a report which consists of a design drawing, supporting data and calculations.

E MCH 315 Mechanical Response of Engineering Materials (2) Mechanical response measures and design theories for engineering materials; elastic and plastic response as affected by stress, strain, time, temperature.

E MCH 315 Mechanical Response of Engineering Materials (2)

The main goal of E MCH 315 is to present mathematical models to describe mechanical behavior of materials and develop skills relevant to understanding the mechanical response of an engineering design using realistic materials. Engineering analysis is emphasized by introducing various material responses to external factors including static loading, cyclic loading, and elevated temperatures. The student will gain a broad base in this area that serves as a foundation for subsequent employment in systems design and testing, or further study in engineering analysis, mechanical design, materials engineering or materials selection. E MCH 315 is an extremely useful and versatile class that has many applications in all engineering disciplines. The general topics include: elastic, viscoelastic, plastic, and creep deformation; temperature effects, stress based failure criteria for ductile and brittle material behavior; creep rupture; fracture mechanics prediction of brittle failure; and failure by fatigue.

**E MCH 407 Computer Methods in Engineering Design (3)**

E MCH 407 teaches computer methods and the use of modeling tools for doing mechanical design and the underlying numerical methods necessary to design, design analysis and development of design-related computer tools. The programming tool used in the course is MATLAB. E MCH 407 provides preparation for study of finite element analysis and professional practice. It is well suited to students who expect to work in design, manufacturing and/or project engineering. E MCH 407 is not a typical numerical methods course; for example, it treats solution of differential equations using finite differences only as minor application. Nonetheless the mathematics is at times rather abstract.

Course Objectives (labels for ABET criterion met are appended to each objective). Students will be able to:
- Apply methods prerequisite to finite element analysis to solve well-defined problems (a, e, f, g, i, k)
- Generate splines and curves for the smoothing of surfaces (a, b, e, f, g, h, i, j, k)
- Write computer code to do computer graphics and object manipulation (a, c)

The Pennsylvania State University
Do solid modeling, create rapid-prototypes, generate meshes using a commercial package (c, e, h, j, k)
Calculate eigenvalues/eigenvectors and plot mode shapes (a, e, j, k)
2. Evaluation Methods include homework, mini-project submittals, midterm and final exams.
3. Special Facilities: E MCH 407 is taught in classrooms with computers.
4. Frequency of Offering/Enrollment: E MCH 407 is offered every spring semester. Enrollment is limited to the number of computers in the classroom.

E MCH 412 Experimental Methods in Vibrations (3) Systems of one or more degrees of freedom, mechanical vibrations, vibration properties of materials, vibration techniques in nondestructive testing.

E MCH 412 Experimental Methods in Vibrations (3)

E MCH 412 is an approved technical elective for students pursuing a bachelor’s of Engineering Science. At the conclusion of this course, students will be able to:
1. Connect fundamental concepts from mathematics and physics to experimental practice and results.
2. Apply fundamental ideas, methods and hardware needed to design and conduct experiments on mechanical and electromechanical dynamical systems, and to interpret the resulting data.
3. Bridge the gap between theory and experiments by applying both mathematical theory and experimental craft.
4. Apply basic concepts from probability and statistics, Fourier analysis, and linear and nonlinear system theory relevant to experimental dynamics.
5. Develop a working knowledge of available techniques and hardware for sensing and data acquisition along with concepts needed for specifying and evaluating sensor performance.
7. Learn to effectively work in a group to execute an experiment and analyze the results.
8. Learn to effectively communicate, in a report, the nature of an experiment and its results.

Topics include measurement process and components of a measurement system; error analysis of measurements; dimensional analysis; time and frequency domains; Fourier analysis and Fourier transforms; probability and noise; types of sensors and measurement instruments; sensors for vibration measurements; performance characteristics of instruments; measurement of instrumentation; Fast Fourier Transform; Power Spectrum estimation’ Correlation and Envelope Measurements; Histograms and Probability Density Functions; damping estimates; frequency response functions; coherence; introduction to modal analysis; techniques for nonlinear systems.

A typical course assessment includes laboratory experiments; homework assignments; a midterm and final examination. The course is offered in a lecture/lab format odd year spring semesters. A typical enrollment is 15 students. This course is not a prerequisite for other courses.

E MCH 461 (M E 461) Finite Elements in Engineering (3) Computer modeling and fundamental analysis of solid, fluid, and heat flow problems using existing computer codes.

E MCH (M E) 461 Finite Elements in Engineering (3)

This is an introductory course in the Finite Element Method. Through this course, students gain knowledge in finite element theory and problem modeling. The mathematical formulation of the method is presented and then applied to problems in elasticity and heat transfer. Projects are assigned to demonstrate the finite element method in simplified problems using hand calculations and computer programs such as Matlab. The use of commercial FEA programs is introduced and problems of increased complexity are assigned to demonstrate their use in a computer lab. Finally, problems of realistic complexity are assigned such that students can practice solving, documenting and presenting their use of commercial FEA programs.

E SC 120S Design for Failure--First-Year Seminar (1) This seminar, through the utilization of commonly used examples, discusses the engineering principles which are exploited by such designs.

E SC 120S Design for Failure (1) (FYS)

Although an important facet of engineering design is to minimize the possibility of failure of a system component, there are many devices which actually protect a system by their controlled "failure". Further, some components are designed to "work" through failure. In the former situation are such devices as: a shear pin in an outboard motor driveline, a fuse in an electrical circuit, a valve actuated by heat in a sprinkler system. In the latter situation, "tab tops" allow one to open a beverage can, perforations cause the paper towel to "tear" in a prescribed manner, plasticity/elasticity allows stamped parts, such as automobile hoods, to retain their new shape following stamping.

E SC 121S Science/Engineering Fiction and the Engineering Sciences--First-Year Seminar (1) Examines the technology predictions of authors in view of the engineering sciences on which the underlying devices of their stories are based.

E SC 121S Science/Engineering Fiction and the Engineering Sciences (1) (FYS)

From the times of Jules Verne, books, then movies and TV, have utilized engineering/science and pseudo-engineering, in envisioning devices which were not then available, but perhaps became so in later times. From Verne’s nuclear driven submarine to his voyage to the moon; to Mary Shelly's electrically created monster; to Dick Tracy’s wrist radio (cell phone); to the warp speed of the Jedi, there are successes and failures as to predictions of what would some day be possible. These are examined and discussed.

E SC 122S Weird, Wild, and Wonderful Materials and Devices--First-Year Seminar (1) First-year seminar that surveys the use of novel materials and material systems to create practical devices.

E SC 122S Weird, Wild, and Wonderful Materials and Devices (1) (FYS)

There are many materials whose response to a particular stimulus (mechanical, thermal, electrical, etc.) is of a completely different type. For example, if a piezoelectric material is mechanically "squeezed" (stimulus) the response is the creation of an electrical signal. Birefringent (photoelasticity) materials change their optical properties under mechanical displacement. Thermoluminescent "remember" their configuration under certain environmental combinations, to which they will abruptly return when these same combinations are repeated. This seminar surveys many classes of such materials and material systems and provides examples of engineers utilizing their behavior for sensors, transducers, and actuators. Examples include acoustic refrigerators, phonograph cartridges, door openers, and stress concentration locators.

E SC 123S Catastrophic Failures--First-Year Seminar (1) First-year seminar that explores design deficiencies through the study of case histories of a number of famous failures.

E SC 123S Catastrophic Failures (1)
Engineered Systems sometimes fail in catastrophic ways. Bridges collapse, buildings burn, airplanes explode, ships break in two, spontaneous combustion occurs, automobiles crash, etc. Virtually all such failures occur because the designers, builders, and/or the users have overlooked some unexpected combination of inputs (they seldom fail due to simple overload). For example, a bridge designer may have overlooked (a) the potential danger of aerodynamic loading and mechanical resonance; (b) having a bridge mooring struck by a tugboat; or, (c) the possibility of an earthquake. The ship designer may not have expected a combination of very cold weather and large waves or bad materials, etc. This seminar explores design deficiencies through the study of cash histories of a number of famous failures such as the explosion of the Challenger (modern era) and the sinking of the Titanic that caused catastrophic loss of life. A primary objective of reliving such failures is to alert students to the myriad factors that must be considered for a safe and effective engineering system, and to encourage them to broaden their education so that they will not repeat the mistakes of the past in their own careers.

E SC 124S Green Engineering--First-Year Seminar (1) This First-year seminar introduces students to basic concepts in green engineering practices and processes.

E SC 124S Green Engineering (1) (FYS)

Engineering activities materially alter the environment so all engineers are effectively environmental engineers. Incorporating the principles of green engineering in industry is not only cost-effective, it is also environmentally sound. Engineers can make a difference in reducing pollution, alleviating the solid waste crisis, and in arresting source depletion. This course is designed to be taken by freshmen engineers. It exposes them to achievement of cost-effectiveness in industry by proper selection of materials and materials at every step of the manufacturing process. Focus lies on waste reduction, repairability, recyclability, planned degradation, life-cycle analysis, etc. The course consists of 14 weekly seminars. The course grade evaluation uses a mixture of tests, presentations, reports, and project assignments. Teaming and team problem solving are stresses.

The Pennsylvania State University
E SC 212 Basic Nanotechnology Processes (3) Step-by-step description of equipment and processes needed in top-down, bottom-up, and hybrid nanotechnology processing.

This course is the hands-on introduction to the processing involved in "top down", "bottom up", and hybrid nanotechnology. The majority of the course details a step-by-step description of the equipment, facilities processes and process flow needed to fabricate devices and structures. Students learn to appreciate processing and manufacturing concerns including process control, contamination, yield, and processing interaction. The students design process flows for micro- and nano-scale systems. Students learn the similarities and differences in "top down" and "bottom up" equipment and process flows. Hands-on exposure covers basic nanotechnology processes including colloidal chemistry, self-assembly, catalyzed nanoparticle growth, lithography, wet and dry etching, physical vapor deposition, and chemical vapor deposition.

E SC 213 Materials in Nanotechnology (3) The use of materials for nanotechnology as well as the unique material properties available at the nano-scale.

This course is an in-depth, hands-on exposure to materials synthesis and fabrication approaches used in nanotechnology. Students learn that these processes can be guided by chemical or physical means or by some combination of these. Hands-on exposure will include self-assembly; colloidal chemistry; atmosphere, low-pressure and plasma enhanced chemical vapor deposition; sputtering; thermal and electron beam evaporation; nebulization and spin-on techniques. This course is designed to give students hands-on experience in depositing, fabricating and self-assembling a wide variety of materials tailored for their mechanical, electrical, optical, magnetic, and biological properties.

E SC 214 Patterning for Nanotechnology (3) Lithographic process from substrate preparation to exposure; process from development through inspection; advanced optical lithographic techniques.

This course is an exposure to all aspects of advanced pattern transfer and pattern transfer equipment including probe techniques; stamping and embossing; e-beam; and optical contact and stepper systems. The course is divided into five major sections. The first section is an overview of all pattern generation processes covering aspects from substrate preparation to tool operation. The second section concentrates on photolithography and examines such topics as mask template, and mold generation. Chemical makeup of resists will be discussed including polymers, solvents, sensitizers, and additives. The role or dyes and antireflective coatings will be discussed. In addition, critical dimension (CD) control and profile control of resists will be investigated. The third section will discuss the particle beam lithographic techniques such as e-beam lithography. The fourth section covers probe pattern generation and the fifth section explores embossing lithography, step-and-flash, stamp lithography, and self assembled lithography.

E SC 215 Materials Modification in Nanotechnology Applications (3) Processing steps used in modifying material properties in nanotechnology.

E SC 215 Materials Modification in Nanotechnology (3)
This course will cover in detail the processing techniques and specialty hardware used in modifying properties in nanotechnology. Material modification steps to be covered will include etching, functionalization, alloying, stress control and doping. Avoiding unintentional materials modification will also be covered including such topics as use of diffusion barriers, encapsulation, electromigration control, corrosion control, wettability, stress control, and adhesion. Hands-on materials modification and subsequent characterization will be undertaken.

E SC 312 Engineering Applications of Wave, Particle, and Ensemble Concepts (3) The engineering applications of the wave and ensemble pictures of the physical world.

E SC 312 Engineering Applications of Wave, Particle, and Ensemble Concepts (3)
This course covers the engineering applications of wave based and ensemble-formulated pictures of the physical world. It begins by discussing criteria for the applicability of geometrical optics and of physical optics and moves into a general discussion of wave phenomena. An introduction to the formalism of physical optics is then given along with examples of its use in engineering applications. The course then moves to discussing the criterion for the applicability of classical mechanics and of quantum mechanics. The parallelism between the geometrical optics/physical optics and classical mechanics/quantum mechanics criteria is underscored. An introduction to the formalism of quantum mechanics is then undertaken followed by a discussion of engineering applications of quantum mechanics. The impact of quantum mechanics on particle, quasi-particle, and cooperative phenomena is discussed. The course then treats the problem of determining the physical properties of ensembles of particles and quasi-particles. Statistical mechanics concepts are introduced and the effects of quantum mechanics on ensemble predictions is covered. Fermi-Dirac, Bose-Einstein, and Boltzmann statistics are developed and discussed. The connection is also made between statistical mechanics and thermodynamics. Engineering applications of statistical mechanics are presented and discussed.

The objective of this course is to give engineering students a broad technical picture of physical concepts that will affect much of the engineering advances of this century. Students will be exposed to the duality of the wave-particle picture and to that picture's critical engineering important to the fields of optics and mechanics. They will be taught the influence of quantum mechanics on physical properties and the need for ensemble approaches for predicting the expected values of those properties for many particle systems. The impact of wave and ensemble approaches on engineering applications will be stressed and the students will be given hands-on exposure to this impact in three laboratory experiences.

Evaluation methods to be used in this course will be two in-class examinations and one final period examination.

E SC 313 Introduction to Principles, Fabrication Methods, and Applications of Nanotechnology (3) Principles, fabrication methods and applications of nanoscale.

E SC 313 Introduction to Principles, Fabrication Methods, and Applications of Nanotechnology (3)
This course covers the unique opportunities provided by the nano-scale and focuses on the engineering issues of fabricating and applying structures designed to take advantage of these opportunities. The course begins with defining nanotechnology and nanofabrication. It then moves to the unique features available in nano-scale structures such as large surface-to-volume ratios, quantum size effects, unique chemical bonding opportunities, dominance of physical optics, surface control of reactions and transport, and the creation of structures on the same size scale as basic features in living cells. With this understanding of the uniqueness of the nano-scale, the course progresses into the fabrication methods used in nanotechnology and then into nanostructure applications. The various nanofabrication approaches found in top-down, bottom-up, and hybrid fabrication approaches are explained and discussed in the lecture format. The principles behind the application of structures fabricated at the nano-scale are then addressed in more depth. This section of the course includes an introduction to nano-scale electronic devices, an introduction to nano-scale sensing devices, an introduction to nano-scale optics and optical devices, an introduction to material property modification at the nano-scale, and an introduction to the biology/nano-scale interface. Specific applications of the structures made using various combinations of top-down and bottom-up fabrication techniques are overviewed in various applications including sensors, nano-electronics, molecular electronics, photonics, nano-optics, information storage and computing, materials, nano-mechanics, and nano-biotechnology and medicine. The course concludes with an introduction to the manufacturing issues encountered when fabricating, assembling, and interfacing nano-scale structures as well as with an overview of health, environmental, and societal issues.

The objective of this course is to give a broad technical picture of nanotechnology to engineering students from various engineering disciplines. In so doing, the course will develop a sound background for making informed judgments concerning the potential of nanotechnology for various technical applications and a sound background for assessing the societal and health issues as well as environmental impact of nanotechnology. The course objectives are to have students be able to consider nanotechnology solutions to technical problems, be able to fabricate these nanotechnology solutions in a manufacturable manner, be able to determine if there are any potential health or environmental issues involved in their solutions, and be able to assess the societal impact of their solutions. The course will require a college-level chemistry and physics background. Evaluation methods to be used in this course will be two in-class examinations and one final period examination.

E SC 314 Engineering Applications of Materials (3)
This course is intended primarily for Electrical Engineering and Materials Science and Engineering majors, as a core-level exposure to the electron-based properties of materials and their engineering applications. Building upon a basic foundation from early Physics courses, it offers an introduction to the behavior of electrons in crystalline as well as non-crystalline solids, and its impact on properties. A comprehensive treatment of electrons in solids is essential to understand the electronic, optical, thermal, magnetic, and other properties of materials and their incorporation in functional devices. The topics are chosen to deal with all the basic facets of electrons in solids and their response to external fields and waves, and lead up to a broad range of elementary device applications. It haws upon the results of quantum mechanics and band theory of solids that provide the broad umbrella needed for understanding the properties of materials and designing them into practical devices including the new class of nanosystems. The development of the energy band diagram is shown to offer a convenient model for understanding the properties of materials and designing device structures. The overwhelming role of semiconductors as building blocks of modern electronics is emphasized by introducing the key concepts of doping, electron transport by drift and diffusion, and electron-photon interactions. The students are shown the strong link connecting atomic bonding, physical structure and material properties in order that they understand the need for and emergence of artificially synthesized structures and new device phenomena. Along with a detailed coverage of semiconductors due to their widespread applications and their dominance in modern micro- and optoelectronics, a basic introduction to dielectric and magnetic properties is also included. Engineering applications involving sensing and transduction as well as signal amplification and energy conversion will be interspersed in the discussions of properties throughout the course. The role of defects, impurities and interfaces on electrical, optical and other properties are introduced briefly, along with corresponding applications in device structures. The devices discussed include p-n junctions, metal-semiconductor contacts, bipolar and field effect transistors, optical detectors and light emitting diodes. The broad topical coverage will prepare students for advanced studies in a variety of fields including micro- and optoelectronics and functional microsystems. The course provides essential background for senior technical electives on semiconductor devices and processing as well as nanotechnology, and also complements courses that deal with atomic structure and mechanical properties of materials.

Effective: Spring 2007
Prerequisite:
6. Understand the solutions of the reduced wave equation, for time-harmonic excitations, for plane wave propagation in both perfect and lossy dielectrics, the concepts of skip depth and wave polarization, plane wave reflection at planar boundaries, Snell's Law, Brewster's angle, and the concept of standing wave ratio and apply these to solve basic and applied problems.

7. Understand the basic principles of waves on transmission lines and apply these to solve basic and applied problems.

Topics include: Vector Analysis; Coulomb's Law and Electric Field Intensity; Electric Flux Density, Gauss's Law, and Divergence; Energy and Potential; Conductors, Dielectrics, and Capacitance; Poisson's and Laplace's Equations; the Steady Magnetic Field; Magnetic Forces, Materials, and Inductance; time-Varying Fields and Maxwell's Equations; the Uniform Plane Wave; Waves at Boundaries and in Dispersive Media. A typical course assessment includes homework assignments, mid-semester examinations and a final examination. The course is offered, in a lecture format, each spring at the University Park Campus. A typical enrollment is 25-30 students. This course is not a prerequisite for other courses.

E SC 407H Computer Methods in Engineering Science, Honors (3)

The overall objective of this course is the creation of mathematical continuum models in the form of differential equations and the application of numerical methods to solve them. To reach this goal, fundamental methods dealing with numerical approximation, specifically starting with Taylor's series, are covered: differentiation, integration, and root search of single nonlinear equations. Mathematical models are transformed into discrete models using the finite difference method, hence the solution of simultaneous algebraic equations in matrix and iterative forms is also covered. In addition, eigenvalue problems are also covered in order to characterize models, both continuous and discrete. The concept of vector-variable and vector-valued functions are used to form algorithms, cast them into computer code, in a language of student choice, usually Mathematica or MATLAB because graphical output is required in doing assignments. This course relates to programs of study in most engineering disciplines based upon the physics of solids and fluids. Evaluation methods include assessment of written reports, at least one midterm examination and either a final examination or a final report.

E SC 414M Elements of Material Engineering (3) Structure and imperfections in engineered materials; their influence on properties, behavior, and processing. Applications of metals, ceramics, polymers, and composites.

This course is a junior-level, writing-intensive engineering science course designed to introduce students to the fundamentals of materials science and engineering. In the early part of this honors course, structure property relationships in materials are explored. The student will examine how atomic structure and bonding influence engineering properties such as strength and electrical properties. Next, solidification, strengthening mechanisms, and phase diagrams for some common engineering materials are discussed to further examine structure property relationships and to provide the basis for the study of more complex materials. The second half of the course introduces properties and attributes of each of the major classes of materials (metals, ceramics, polymers, and composites) to acquaint the student with the wide array of material properties and choices available for design. Next, electrical, optical, and thermal properties of the various classes of materials are introduced. Finally, the course closes with an introduction to the topics of materials selection and design. Throughout the course, integrated writing assignments allow the student to explore the properties of a specific material or materials process in detail and gain insight the design process.

E SC 417 (MATSE 417) Electrical and Magnetic Properties (3) Electrical conductivity, dielectric properties, piezoelectric and ferroelectric phenomena; magnetic properties of ceramics.

E SC (MATSE) 417 Electrical and Magnetic Properties (3)

E SC 417 is designed to provide students with a fundamental understanding of the different responses a material can have to applied electrical or magnetic fields. Important properties are introduced and correlated with knowledge of material chemistry, crystal structure, and microstructure to provide an understanding of the mechanisms responsible for controlling the observed properties, as well as the ways in which properties can be engineered. Electronic and magnetic properties encompass dielectric, ferroelectric, conductor, superconductor, and ferromagnetic materials. Material properties and structures are related to sensors, energy storage and conversion devices, biomedical devices and electronic components in telecommunications.

E SC 419 Electronic Properties and Applications of Materials (3)
The course covers the electrical, optoelectronic, dielectric, and other electron-based properties of solids, semiconductors in particular, and their engineering/ device applications.

E SC 419 Electronic Properties and Applications of Materials (3)
This course is designed primarily as a Foundation Elective for Engineering Science majors. It covers the electron-based properties of materials and their engineering applications. Building upon the strong foundation of wave, particle and ensemble concepts covered in the prerequisite course (E SC 312), it will offer an advanced introduction to the behavior of electrons in crystalline as well as non-crystalline solids, and its impact on properties. A comprehensive treatment of electrons in solids is essential to understand the electronic, optical, thermal, magnetic and other properties of materials and their incorporation in functional devices. The topics will address many facets of electrons in solids, their interaction with fields, cooperative phenomena and low-dimensional effects, and lead up to a broad range of elementary device applications. It will draw upon the results of quantum mechanics and band theory of solids that will provide the broad umbrella needed for understanding the properties of materials and designing them into practical devices and nanosystems. The importance of structure on material properties will be emphasized, so as to bring forth the importance of artificially synthesized structures and emergence of new phenomena. Along with a detailed coverage of semiconductors due to their widespread applications and their dominance in modern micro- and optoelectronics, dielectric, magnetic and superconducting materials will also be discussed in the course. The role of defects, impurities and interfaces on electrical, optical, dielectric and other properties will be discussed, along with corresponding applications in device structures. The broad topical coverage will prepare students for advanced studies in a variety of fields including micro- and optoelectronics, functional nanosystems and synthesized nanostructures. The course will provide a solid background for senior technical electives such as E SC 481 (Elements of Nano/Micro-electromechanical Systems Processing and Design) E SC 445 (Semiconductor Optoelectronic Devices) offered in ESM, as well as Electrical Engineering and Materials Science and Engineering Courses. It will also complement (and be independent of) E SC 414M that encompasses atomic structure and mechanical properties of materials.

E SC 433H Engineering Science Research Laboratory Experience (1)
Hands-on lab experience and exposure to campus-wide interdisciplinary experimental research. Experimental probability and statistics. Applications across all Engineering Science disciplines.

E SC 433H Engineering Science Research Laboratory Experience (1)
This course provides an introduction to experimental research, including hands-on laboratory experience. In addition, students take part in campus-wide laboratory tours that illustrate the variety of experimental practice, as well as the strongly interdisciplinary nature of contemporary experimental research in Engineer Science. Lab tours involve laboratories in a variety of disciplines, both within the Department of Engineering Science and Mechanics, and in other departments with related interdisciplinary activities. The classroom content focuses on the fundamentals of experimental probability and statistics, including: the experimental process; probability distributions and error; statistical estimators; least squares; and confidence limits and hypothesis testing. Applications of the statistical analysis of experimental data are drawn from across all Engineering Science disciplines and illustrated in the labs and lab tours. There will be three hands-on laboratories. Each lab will include additional introductory lecture material, specific handouts, and readings. A report will be required for each lab that represents a significant writing component to the class, and includes both descriptive and analytical components. Assessment for the course is based on the laboratory reports, which include analytical and descriptive components, as well as exercises involving the material discussed in lectures.

E SC 445 Semiconductor Optoelectronic Devices (3)
The course will present the basic engineering science and technology involved in modern semiconductor optoelectronic devices.

E SC 445 Semiconductor Optoelectronic Devices (3)
This course deals with the optoelectronic properties of semiconductors and their application in functional devices for detection, emission, amplification and conversion of optical and electrical signals. A comprehensive introduction to the
various optical absorption and emission processes in semiconductors is followed by an outline of specific properties of
important optoelectronic semiconductors. The physical basis of detectors operating in the visible and near-visible regions
is covered with an exploration of various photon detection phenomena present in solids. The devices discussed at length
include intrinsic and extrinsic photoconductive detectors, p-n and Schottky detectors, p-i-n and heterojunction devices,
average photodiodes and photoemissive detectors, and light emitting and laser diodes. Novel structures based on
variable gap and superlattice structures are also considered. The topical coverage includes basic operating principles,
design considerations and performance assessment of each of these devices. The course will enable students to apply the
physics of optoelectronic devices to applications such as displays, fiber optic communications, imaging, and integrated
optoelectronics.

The course is offered once every year, and complements related courses on semiconductor device offered by the
departments of Engineering Science and Mechanics, and Electrical Engineering. Student assessment is from homework,
exams and a writing assignment involving a device application note.

E SC 455 Electrochemical Methods in Corrosion Science and Engineering (3) The objective of the course is to give
students hands-on experience in assessing environmental degradation of engineering materials.

E SC 455 Electrochemical Methods in Corrosion Science and Engineering (3)
The objective of the course is to give students hands-on experience in assessing environmental degradation of
engineering materials. Students will be introduced to a variety of experimental electrochemical methods and will use their
training to evaluate corrosion of steel, stainless steel, and aluminum. Techniques that will be used in this
laboratory-intensive course include potentiodynamic and potentiostatic polarization, galvanic corrosion measurements,
localized corrosion measurements (scratch, critical pitting temperature, and metastable pitting experiments), evaluation
of sensitization (double-loop electrochemical potentiokinetic reactivation), cyclic voltammetry, and electrochemical
impedance spectroscopy of painted and unpainted specimens.

E SC 456 (E E 456, EGEE 456) Introduction to Neural Networks (3) Artificial Neural Networks as a solving tool for difficult
problems for which conventional methods are not available.

E SC (E E/EGEE) 456 Introduction to Neural Networks (3)
This course is in response to students’ needs to learn Artificial Neural Networks (ANN) as a solving tool for difficult
problems for which conventional methods are not available. The objective of this course is to give students hands-on
experiences in identifying the best types of ANN, plus developing and applying ANN to solve difficult problems. Students
will be introduced to a variety of ANN and will use their training skills to solve their own applications. During this course
the students will develop a final project, in which they will apply ANN to widely varied problems.

Examples:
I ) students from E E may be interested in applying ANN to solve control problems
II ) students from Material Sciences may be interested in applying ANN to predict the pitting corrosion of components
III ) students from Petroleum Engineering may be interested in applying ANN to characterize the life of a reservoir
IV ) students from Agricultural Engineering may be interested in applying ANN to sort apples automatically, etc

E SC 481 Elements of Nano/Micro-electromechanical Systems Processing and Design (3)

The objective of the course is to introduce students to the theory and technology of nanofabrication. This objective is realized via the study of materials and devices for NEMS as well as nano-system's design, manufacture and packaging. Emphasis on the interrelationships between material properties and processing, device/system structure, and the mechanical, electrical, optical, or (bio)chemical behavior of devices/systems. As taught, the course is multidisciplinary and requires adequate background in materials science, mechanics, and device physics. The course comprises lecture presentations and laboratory demonstrations. Students attending this course come from different engineering majors, physics, and materials science. The students are assessed using a combination of homework assignments, class presentations, group projects, and written quizzes and exams.

E SC 482 Micro-Optoelectromechanical Systems (MOEMS) and Nanophotonics (3) Principles and applications of Micro-Optoelectromechanical and Nanophotonic devices and systems.

E SC 482 Micro-Optoelectromechanical Systems (MOEMS) and Nanophotonics (3)

E SC 482 provides the engineering student with a unifying and multifaceted description of MOEMS and nanophotonics. Students will learn the fundamental principles behind many novel micro- and nanophotonic devices and systems and their practical applications in the fields of communication, sensor and image technology.

The course starts with an overview of the fundamental physics of semiconductors with emphases on silicon, III-V and II-V compound semiconductors due to their important applications in MOEMS and active nanooptoelectronic devices. Semiconductor nanostructures, such as epitaxial grown quantum wells and quantum dots, and chemically synthesized nanowires and colloidal nanocrystals will be introduced through discussions on their unique electronic structures carrier transport and excitonic dynamics. In addition to inorganic materials, the structures and critical characteristics of electro-optic and light emitting polymers will also be reviewed for their fast-growing applications in display technology, sensory and information processing systems.

The general principles for the design and operation of MOEMS and nanooptoelectronic devices will be discussed in the frame of geometrical optics, electromagnetic theory, and semiconductor physics. The reflection of light at dielectric interfaces will be reviewed to reveal the critical features of optical waveguide structures and to introduce the concept of surface plasma waves. In-depth descriptions will be given for the interband-and intraband- electron transition and exciton emission process in semiconductor quantum structures. Important instances of applying the "quantum confinement" in nanostructures to tailor their optical and optoelectronic properties will be underscored during the mechanism-analysis of laser diodes, detectors and modulators. The new concept of "photonic crystals" will be introduced through the analysis of parallelism between electron transport in semiconductor lattices and light propagation in periodic dielectric media.

Following a brief survey of the state-of-the-art technologies for the fabrication of MOEs and nanophotonic devices, the course topics will move to their application examples in the fields of communication, sensor and image technology. For each application example, analysis will be carried out on the design, fabrication, and characterization issues of the involved systems/devices. Their merit-of-performance will be linked to the application practice to illustrate how the introduction of MOEs/nanophotonic devices advances the technology in each specific field. Important topics to be covered in this part include micromachined lightwave systems, microcavity light emitting devices, fiber based biological...
nanosensors, nanoparticle enhanced surface plasma resonance sensors, microspectrometers, and digital micromirror device (DMD)-based projection display engine.

**E SC 483 (MATSE 483) Simulation and Design of Nanostructures (3)**
Introduction to computer simulation techniques and their applications at the physical/life sciences interface.

**E SC (MATSE) 483 Simulation and Design of Nanostructures (3)**
Students will learn the simulation techniques and the design rules of nanostructures. Basic concepts of computer modeling will be introduced using quantum and classical approaches. Fundamental physical phenomena encountered in the molecular fields of computational physics, chemistry, and biology will be studied. Applications are drawn from a broad range of fields including soft and condensed matter to build an understanding of nanostructures.

The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of nanostructures and their design rules.

Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a computer code generation and implementation component. Students will use commercial or educational computer codes (e.g. Matlab, Mathematica, AMBER, CHARMM, VASP, etc.) which are available at our high performance computing clusters (http://gears.asct.psu.edu/hpc/). Students will use the computing clusters to perform simulations which are accessible from any classroom or laboratory at Penn State.

The principal objectives of the course is to learn the fundamental physics of nanostructures and to design them with computer simulations. This approach starts from classical molecular dynamics that apply on the large scale biological and synthetic assemblies and encompasses quantum mechanics for the molecular and atomic sizes. This course will give a broad scientific picture of simulation techniques in the area of nano-science and technology.

**E SC 484 Biologically Inspired Nanomaterials (3)**
Advances in biomolecular-based Science and technology at the physical/life sciences interface.

**E SC 484 Biologically Inspired Nanomaterials (3)**
Students will learn the concepts of molecular engineering and the advances in biomolecular-based science and technology at the physical/life sciences interface. Basic concepts of protein structure and function will be introduced. Applications from a broad range of fields, including condensed and living matter to build an understanding of device applications including biologically-inspired molecular-scale devices will be introduced.

The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of molecular structures and their design rules.

Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a substantial writing component. Students will prepare bio-science and technology reports.

The principal objective of the course is to learn and analyze molecular engineering technologies at the bio and nano interface. This course will give a broad technological picture of emerging protein technologies in the area of biomolecular materials.

**Engineering Technology (ET)**

**ET 002 Engineering Technology Orientation (1)** Introduction to computer methods for analyzing and solving engineering technology problems; microcomputer fundamentals, word processing, spreadsheet, and database software packages.

**ET 002 Engineering Technology Orientation (1)**

Engineering Technology Orientation is one of the first technology-related courses taken by EE T students. It is a 1 credit, 2-hour combined laboratory and lecture course designed to develop basic computer skills in engineering technology students. Students are exposed to the basic concepts and features of computer hardware and operating systems, including key topics in software operation and file management. They are then taught basic word processing, spreadsheet, and database skills and are introduced to electronic communications and information retrieval via the Internet, World-Wide-Web, and e-mail. All topics are presented in the context of how they can and will be used in coming technology classes. The course concludes with an introduction to electronics simulation software (e.g., PSpice, Electronic Workbench, etc.) that students will be obligated to use in future courses.

**ET 300 Mechanics I: Statics (3)** Equilibrium of coplanar force systems; analysis of frames and trusses; shear and moment diagrams; friction; centroids and moment of inertia.

**ET 300 Mechanics I: Statics (3)**

This course is intended to provide the students with both the theory and application of the fundamental principles of static analysis by introducing free-body diagrams as a tool for solving statics problems. Students gain knowledge of Vector Mechanics, representation of physical quantities by a vector notation. Grasp the meaning of magnitude and direction of a vector; understand the definition of a unit vector. Master the mechanics of Vector Algebra. Emphasis will be placed on equations of equilibrium for particles and

The Pennsylvania State University
rigid bodies. Students are able to understand the physical meaning of a force and moment equilibrium. Master the balance of forces and moments to ensure equilibrium for 2D and 3D structures. This will be followed by analyzing internal forces in cables and bending moments in beams.

**ET 302 Mechanics II: Dynamics (3)**
Kinematics of a particle; relative motion; kinematics of a mass-point; kinematics of a rigid body; work-energy; impulse-momentum.

**Mechanics II: Dynamics (3)**

ET 321 Dynamics (3)

The students will be introduced to the fundamental concepts of dynamics for particles motion along straight and curved paths. The students will learn and utilize concepts in particle kinematics and study the relationship between the forces acting on a body, the mass of the body and the motion of the body by using Newton's second law of motion, the principle of work and energy and the principle of linear momentum and impulse. This will be followed by analyzing the rotation of a rigid body about a fixed axis, and extending kinematic concepts to plane motion of rigid bodies.

The concepts of work, energy, linear momentum and angular momentum of a rigid body in plane motion will be introduced. The students will learn how to apply the principle of impulse/momentum to solve rigid-body planar kinetic problems that involve force, mass, velocity and time, and the principle of work/energy to solve problems that involve force, mass, velocity and displacement.

Dynamics course will also provide students with the tools to obtain desired information from those models by solving the equations governing the motion of the system. Topics covered in Dynamics include: kinematics of particles, application of Newton's laws to particles, energy and momentum methods for particles, kinematics of rigid bodies, application of the laws of Newton and Euler to rigid bodies, and energy and momentum methods for rigid bodies.

**ET 322 Strength of Materials (3)**
Axial, torsional, bending, and combined stress analysis; deformation and deflection analysis of cables, shafts, and beams; column design and analysis.

**Strength of Materials (3)**

Strength of materials deals with the relationship among the external forces acting on a body, the resulting stresses (intensity of internal forces) and the deformation (change of size or shape). The determination of proper sizes and material of construction of mechanical components and structural members to satisfy strength and deformation requirements are important topics of strength of materials. The students will be introduced to the concept of stress – normal, shear and bearing stress, and relate strain to stress using material properties. The students will develop an understanding of design parameters such as design stresses, factors of safety for axial loads, transverse loads and torsional loads, to design components such as beams and circular shafts satisfying strength and deformation requirements. The students will also learn to calculate moments of inertia, centroids and apply parallel axis theorem for moment of inertia. The students will be introduced to the concept of combined stresses and their analysis using graphical and analytical methods. Finally, the concept of buckling in columns will be introduced.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2010
**ET 323 Strength of Materials Laboratory (1)**

The objective of the strength of materials laboratory is to demonstrate the basic principles in the area of strength and mechanics of materials to the undergraduate students through a series of experiments. Students will be conducting experiments using Universal Testing Machines to calculate tensile strength of steel and aluminum samples and experiments to measure hardness of non-heat treated and heat treated steels. Students will also test steel samples in single shear, double shear and impact loading, followed by experiments on the torsion testing machine to calculate torsional strength of aluminum samples and the strut apparatus to analyze different modes of buckling in a slender aluminum column. The laboratory demonstrates important concepts from the strength of materials theory course.

English (ENGL)

ENGL 001 (GH) Understanding Literature (3) Explores how major fiction, drama, and poetry, past and present, primarily English and American, clarify enduring human values and issues.

ENGL 001 Understanding Literature (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

In ENGL 001 students will study a wide variety of genres of literature --- poetry, novel, short story, drama, perhaps even genres like the comic book --- from different time periods and cultures to gain a better understanding of how literature explores human values and issues. These readings will be organized around important issues that relate to each other, or are in tension with each other, such as "Love," "Violence," and "Recuperation," asking basic questions about how the different genres convey meaning, and how they ask significant questions about human relationships and ideals. For instance, readings including works by Toni Morrison, Shakespeare, J. M. Coetzee, August Wilson, Art Spiegelman, selections from each year's new Best American Short Stories, and others might raise questions about volition and responsibility in times of extreme violence (like American slavery, South African apartheid, or the Holocaust), and speak to how we can judge violent acts during violent times, or how love can flourish or languish in the face of such horrors. Throughout the course, students will use the texts to ask such questions as: of what value is a play, a novel, a poem, or a short story? Is literature worthwhile for its ability to tell a good story or for its questions that do not lend themselves to easy answers? Are we "better" for having experienced literature? The course will also take advantage of literary events occurring on campus each semester--such as poetry readings, dramatic performances, even films relating to the course --- to enrich the experience both of literature and of campus life. By addressing issues of contemporary significance, the course will not only prepare students for other literature courses, but will also help them make literature a regular part of their lives. ENGL 001 serves as a bedrock course in the mission of the humanities at Penn State. It prepares students for other academic courses that engage in the verbal and written analysis of complex written texts, and prepares them for other courses that explore human values and social and cultural elaborations of them (for instance, basic philosophy and history courses). Students should expect to complete three exams. The first two will consist of identification questions and short essays, and the third and final exam will be a combination of identification questions and a take-home essay. Moreover students will write at least two papers for the course, demonstrating their abilities at literary analysis, and grappling with the themes of the course. Classroom discussion and general class participation will also be a factor in evaluation. ENGL 001 can be used as a general elective credit toward the major. The course will be offered once or twice a year with 60 seats per offering.

ENGL 002 (GH) The Great Traditions in English Literature (3) Major works of fiction, drama, and poetry from the Middle Ages to the twentieth century expressing enduring issues and values.

ENGL 002 The Great Traditions in English Literature (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

Students are expected to learn fundamental skills of close textual analysis in the context of established literary texts of English and Irish fiction, drama, and poetry from the Middle Ages to the twentieth century that address large questions of ethical and social value. They are also expected to learn to talk and write clearly about the issues and ideas generated by the texts that they are directed to read. ENGL 002 will fulfill the writing component of the Active Learning Elements by requiring a minimum of three writing assignments. These assignments will be drawn from the following kinds of writing: essay, essay exam, or a semester-long reading journal. ENGL 002 will require all students to confront the major interpretive problems found in their assigned readings and to participate actively in the various forms of critical thinking required to comprehend and resolve those problems. ENGL 002 will require all students to participate in an assessment of the social behavior and other values, both communal and scholarly, relevant to the texts being read and discussed in the course. This course fulfills a General Education humanities requirement or a Bachelor of Arts humanities requirement. This course will be offered once a year with a limit of 60 seats.

ENGL 003 (GH) The Great Traditions in American Literature (3) Major works of fiction, drama, and poetry from the colonial to the modern periods expressing enduring issues and values.

ENGL 003 The Great Traditions in American Literature (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

English 003 will constitute a wide ranging study of American literature, including novels, poems, plays, and prose, from a variety of thematic historical and/or generic vantages. Topics under consideration will vary from class to class, but may include such rubrics as autobiographical modes of American writing, the notion of America as a nation and the myth of American opportunity, the situating of "great " American literature within context of American history, the representation of "American family" and its values, for the construction of ideas of American character. The class will routinely address works by writers such as Bradstreet, Franklin, Emerson, Hawthorne, Douglass, Thoreau, Fuller, Melville, Witman, Dickinson, Twain, James, Cather, Frost, O'Neill, Hurston, Faulkner, Hemingway, Hughes, Wright, and Morrison. Students are expected to learn fundamental skills of close textual analysis in the context of their reading of a variety of established works of American literature from across a range of genres. They are expected to learn to write and think clearly about issues and ideas generated by the texts that they are directed to read. They are also expected to learn to write and think clearly about the issues raised by the discussion of these texts in the classroom. This course will satisfy a General Education Humanities requirement or a Bachelor of Arts Humanities requirement. This course will be offered at least once a year and will have an upper limit of 60 students.

ENGL 006 Creative Writing Common Time (1 per semester/maximum of 8) Required one hour a week meeting time; readings, professional development, advising, community-building.

ENGL 006 Creative Writing Common Time (1 per semester/maximum of 8)

This course is to be required of all B.F.A. in Creative Writing majors at Penn State Erie as long as they are students in that degree program. This means that every semester they are working toward the B.F.A. in Creative Writing they must sign up for this course, and they must complete it successfully. Successful completion is based on regular attendance at the
various functions, all held at the same one hour time period each week. The purpose of this course is to provide students with the necessary experience of listening to the writers of national stature brought to campus through The Smith Series, to provide them with lectures by both faculty and outside experts to help them develop professionally as writers, to allow for essential group advising for successful completion of the major, and to foster a sense of community among the student writers in the program.

ENGL 050 (GA) Introduction to Creative Writing (3) Practice and criticism in the reading, analysis and composition of fiction, nonfiction and poetry writing.

ENGL 050 Introduction to Creative Writing (3)

(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

If you believe that the heart of a poet beats inside you anyway—or if you simply enjoy writing to express yourself creatively—you will be at home in this course. You will also be at home here if you are an avid reader of fiction, poetry, and nonfiction, but have never tried your hand at writing it. In English 050 you will explore the genres of nonfiction, fiction, and poetry by reading published essays, short stories, and poems and by writing personal essays, sketches, scenes, and poems. We’ll discuss the relationship between the genres and also discuss what makes each a distinct art form. You’ll hand in weekly writing assignments in addition to completing longer writing projects. You’ll make copies of some of your creative work to distribute and discuss in class.

ENGL 088 (GH) Australian/New Zealand Cultural Perspectives (3) Australian and New Zealand cultural and social perspectives, with emphasis on the historical development of intellectual, aesthetic, and humanistic values.

ENGL 088 Australian/New Zealand Cultural Perspectives (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

Students are expected to learn fundamental skills of close textual analysis in the context of the study of a variety of works by authors from Australia and New Zealand. Studying a range of novels, poems, plays, and works of non-fiction, students will discuss the development of Australian and New Zealander literatures in historical context and gain understanding of the historical development of societal values in nations other than the U.S.A. The course aspires to relate geography and history to emerging social and cultural developments as the state and status of the two countries changed during the nineteenth and twentieth centuries, and to track their increasing separation from the “Mother Country” (i.e. Great Britain) as they developed a sense of themselves as different and separate from European societies. The process was neither comfortable nor easy, nor steadily progressive, but the record of it is an often fascinating story of human endeavor and struggle, very frequently against great odds and disappointments, which in turn affected the development of national character if such a thing can be said to exist.

The literatures reflect some of the attitudes and qualities that emerged as the two societies were coming into being and forging their own unique identities.

ENGL 104 (GH) The Bible as Literature (3) Study of the English Bible as a literary and cultural document.

ENGL (AM ST) 105 American Popular Culture and Folklife (3) Survey of popular culture, folklife, and ethnicity, synthesizing material from such areas as literature, media, entertainment, print, music, and film.

AM ST/ENGL 105 covers a broad scope of materials, which may range from early to contemporary American folk and popular cultures. While selected topics for reading and discussion often vary from class to class, all courses focus on a critical examination of a variety of popular and folk cultures in order to produce an enriched understanding of America and its inhabitants. To meet this goal, popular and folk cultures will be examined from a variety of perspectives, including literature, history, politics, film, race, gender, class, and geography. Course requirements frequently include: essay exams, papers, journal entries, vigorous class discussion, and course talk participation. Technology is often incorporated into the class well, this course (or AM ST 100) is a requirement for the American Studies major and minor, and offers students valuable experience in critical thinking, analysis, and writing. Non-American Studies majors and minors may use this course to fulfill a general education or Bachelor of Arts/Humanities credit. AM ST/ENGL 105 serves as a broad introduction to American popular and folk cultures as well as interpretive strategies relevant to the study of cultures and individuals. The course, as a result, provides preparation for more advanced courses in American studies, American literature, and American history.
ENGL 110 Newswriting Practicum (2 per semester, maximum of 6) Practice in writing and editing articles for the campus newspaper.

ENGL 111 The Possibilities of English (2) This course familiarizes students with the range of professional possibilities offered by the English major.

ENGL 129 (GH) Shakespeare (3) A selection of the major plays studied to determine the sources of their permanent appeal. Intended for non-majors.

ENGL 129H (GH) Shakespeare (3) A selection of the major plays studied to determine the sources of their permanent appeal. Intended for non-majors.
ENGL 130 (GH) Reading Popular Texts (3) Popular texts (printed, visual, and aural texts) and their social, political, and cultural significance in the contemporary world.

ENGL 130 Reading Popular Texts (3) (GH)

ELISH 130: Reading Popular Texts explores a variety of popular texts with the goal of enabling students to sharpen their ability to interpret the social, political, and cultural significance of such texts in the contemporary world. For the purposes of this course, the term "texts" is defined broadly, to include printed texts (books, periodicals, and hypertext), visual texts (film, television, visual arts and graphics), and aural texts (music, sound, and spoken word). Since these texts are primarily examples of popular culture-pervasive, self-replicating, commercialized artifacts of the contemporary scene—they are familiar to the general student outside the classroom. Too often, however, students have not seen such texts subjected to the same kind of critical reading as more elite cultural forms (e.g., canonized literature, art, and music). As a result, the general student in particular benefits from learning that cultural phenomena to which she or he is exposed on a daily basis have layers of significance as yet unexplored or unrealized. The purpose of the course is fulfilled if such students come away from it with a sharpened awareness of the role that popular texts play in their daily lives and the means to discuss and explain their influence in short, to read their culture more critically.

ENGL 132 (GH;US) (J ST 132) Introduction to Jewish American Literature (3) A historical and thematic survey of Jewish Literature of the United States.

ENGL (J ST) 132 Introduction to Jewish American Literature (3) (GH) (US)

This course will provide an introduction to Jewish American literature through a historical survey of the tradition's key texts, figures, and themes. The course will focus on the defining aspects of the literature and on what the literature "thinks" about Jewish American culture and identity. But rather than assuming a unity to Jewish-American culture, this course will use Jewish American literature to seek ways of articulating and representing both the points of cohesion and the points of divergence that characterize Jewish life in America. The United States has absorbed large numbers of Jewish immigrants hailing from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions. Moreover, Jews have settled and made homes in a wide variety of American communities. This course aims to explore Jewish American culture's marked diversity by offering a literary window onto the major fault-lines running through Jewish American culture: lines demarcated by gender, by political affiliation, by geography, by pre-immigration community by religious practice, by attitude toward world Jewry, by national allegiance, and by minhag (or custom), to name just a few. The class therefore provides an opportunity to consider the constitution, origin, and development of Jewish American's identity and social formations by looking at how that identity and those social formations exist and what they "do" in literature written by and about Jews in America. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film. Course methodology will emphasize the close reading of these texts. Through occasional writing exercises, formal papers, in-class projects, and essay examinations, students will respond to, integrate, compare, and analyze these materials. The course complements offerings in Jewish Studies and English, and it will satisfy the GH and US requirements. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English a valuable, sustained introduction to an important U.S. and world sub-culture.

ENGL 133 (GH) Modern American Literature to World War II (3) Cather, Eliot, Frost, Faulkner, Fitzgerald, Hemingway, Hurston, Wharton, Wright, and other writers representative of the years between the world wars.

ENGL 133 Modern American Literature to World War II (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

English 133 will constitute a wide ranging study of modernist American literature, including novels, short stories, poems, plays, and prose, written roughly between the turn of the 19th century and the end of the Second World War. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of modernist American...
literature, a consideration of a principle theme or themes common to modernist American literature through a number of works from across the period, a consideration of a number of modernist works in the context of historical events central to the period, such as the American participation in the First World War and/or the effect on American literature of the ensuing world-wide depression. Time allotted for the study of the works under consideration will vary. This class will prepare students for advanced courses in modernist literatures as well as other academic courses that engage in the verbal and written analysis of complex written texts. Students will be evaluated by means of essays written in and out of class, essay exams, term-long reading journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as English Major elective credit or as credit towards the English Minor. Non-English majors may use this course to fulfill a general education or Bachelor of Arts/Humanities. English 133 will be offered once a year with 60 seats per offering.

ENGL 136 (GH) The Graphic Novel (3) The graphic novel as a literary and visual form (produced primarily in English).

ENGL 136 The Graphic Novel (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course considers the graphic novel as a literary medium which joins text and image. The course explores the aesthetic of sequential narrative, its methods of production and consumption, and its place in contemporary culture.

I. Introduction
A basic outline of the medium, its generic range, and its reception in the United States.

II. History of Comics
An overview of the history of comics in the United States, with some discussion of Japan and Europe. The unit covers the development of comics in the United States during the twentieth century: newspaper strips, the comics boom of 1930s and 40s, the 1950s Senate hearings on the ‘corrupting influence’ of comics, and the abiding perception of comics as
juvenile fare. This component also considers questions of marketing, reception, and gender across various genres.

III. Formal Analysis of Comics
Introduction to critical terminology and methods for the critique of the medium: panel layout, interplay between text and image, visual vocabulary and icons, and narrative techniques. This component will provide students with language and concepts necessary for critical analysis of graphic novels.

IV. Graphic Novels
This unit presents graphic novels primarily from the United States, all single volume works and nearly all the work of a single creator. The course primarily focuses on works originally written in English. The unit targets texts that have established an abiding influence in the medium (Maus) or received critical esteem (Fun Home, Jimmy Corrigan). Students will conduct close reading and analysis of specific texts using terms and concepts learned in the ‘Formal Analysis of Comics’ unit.

This course uses readings, images, lectures, and discussion to introduce students to the medium of graphic novels.
• Students will analyze formal techniques of the medium and understand its development as a popular form in the modern era.
• Students will encounter a range of perspectives and consider the challenges of representing history through an artistic medium.
• Students will learn to think critically about issues of identity, ethnicity, sexuality, history, and religion.

Individual instructors may vary their evaluation methods. One option might be:
Class participation: 20%
1 take-home exam: 20%
2 analytical papers: 40%
Presentation of secondary research: 10%
Book review: 10%

Students will gain a sense of the development of the medium across time, as well as an understanding of the place graphic novels hold in contemporary culture.

This course would be most effective in a technology classroom. The unit on formal analysis in particular demands projection capabilities.

ENGL 137H (GWS) (CAS 137H) Rhetoric and Civic Life I (3) Within a liberal arts framework and with attention to public discourse--speaking, writing, online communication, and visual presentation--this course instructs students in the arts, practices, and principles of rhetoric.

ENGL (CAS) 137H Rhetoric and Civic Life I (3)
This course introduces Schreyer Honors College freshmen and Paterno Fellows Aspirants to the art of rhetoric in the context of civic issues. Students will read, discuss, and develop facility with principles of rhetoric as they apply to public speaking, writing, online communication, and visual presentation. The first part of the sequence, ENGL/CAS137H (Rhetoric and Civic Life I), will focus on understanding rhetoric in a variety of cultural contexts. Students will practice incorporating visuals in oral presentations while also learning to analyze how visual rhetoric works in the world around them. In the process of becoming "critical citizens," students will research, discuss, and analyze public controversies. The course provides explicit training in general library and digitally based research methods, as well as interview-based research. In addition to formal writing and speaking assignments, students in the course will hone their interactive rhetorical skills by using a blogging platform to explore a topic about which they are passionate, to engage course readings together, and to share work in progress.

ENGL 145 (GH;IL) Modern Irish Literature (3) Irish literature in the twentieth century and beyond; focus on the interplay of political, social, and cultural, forces on literature.

ENGL 145 Modern Irish Literature (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

ENGL 145, Modern Irish Literature, will concentrate on Irish literature, history, and politics from the early twentieth century to the present. The course will begin with the socio-political implications of the Home Rule movement and the important figures associated with the rise of the Irish Literary Renaissance. Instructors will spend much of the course
ENGL 181A: Adventure Literature: Exploring the Chesapeake Bay (4.5)

The course focuses on a specific place—the Chesapeake Bay and its watershed—that has generated a distinctive regional identity and literature from its natural and social context. The course begins consideration of the concept of watershed, both as a geographical concept and a literary metaphor, before turning to an examination of the culture(s) and nature of the largest and most important tributary of the Bay, the Susquehanna River. Students will read texts associated with the history and the development of the Susquehanna, with some emphasis on logging, rafting, mining, and hydropower development. Readings here should aim at helping students see how a regional cultural identity has evolved from the river’s geography and economics. Focus on the Bay itself, students can learn similar lessons. We begin by looking at the rich native cultures that occupied the region before the advent of Europeans and then move to initial European exploration and settlement. The class might then focus on development (agricultural, cultural, and industrial) of the Bay and Bay Region generally, through readings that might include regional histories and literary works like James Michener’s Chesapeake: A Novel. Significant attention should be devoted to the sub-culture of the Chesapeake waterman, a regional identity that has generated its own mythology and folklore and has been the focus for numerous writers. Texts might be chosen to show the role nostalgia plays in conceptions of the Bay or the ways in which issues of race, class, and gender are raised by examining representations of the waterman culture. What students should see is how literature and culture are transformed over time, while resonances of former place identities remain. Finally, the course will turn to the Bay as it is today and how the representation of place and regional identity in literature has changed over time.

This course was designed to include out-of-the-classroom educational experiences on the Susquehanna River and other tributes of the Bay and on the Chesapeake Bay itself. The trips should provide students opportunities to fully understand...
the interconnections of nature and culture in the Bay region. They should also allow students the chance to travel in the footsteps of the writers they read in venues throughout the region. The goal is to both see how a distinctive culture derived from the natural circumstances of the Chesapeake and to understand how that culture might continue (or not) into the future.

**ENGL 181B** (GH;US) Adventure Literature: Exploring Cape Cod (4.5) Examines the interconnection of culture and nature on Cape Cod through considerations of texts in various literary genres that have contributed to development of a distinctive regional identity and culture.

The purpose of this course is to teach students how natural and cultural contexts contribute to the production of meaning in literary texts. In this case, the locality that serves as the focus of study is Cape Cod, arguably the most written-about locale in the United States. The course begins with classes devoted to the Cape’s natural history—its formation and the ever-present effect of wind and water—and then moves to its early human history. Readings in the first part of the course will focus on the period just before and after European settlement and readings could include selections from William Bradford’s Of Plymouth Plantation or Mourt’s Relation, both contemporaneous accounts of the Pilgrim’s landing on and exploration of the Cape and appropriate chapters from Paul Schneider’s history of the Cape, The Enduring Shore, and Nathaniel Philbrick’s excellent account of the Pilgrim adventure, Mayflower. These readings could be enhanced with selections on the European settlement of the Cape in Robert Finch’s anthology of writing about the Cape, A Place Apart. This introductory material will lead to the major part of the course, which will be devoted to reading and study of classic literature about the Cape, such as Thoreau’s Cape Cod, Henry Beston’s The Outermost House, Wyman Richardson’s The House on Nauset Marsh, and John Hay’s The Great Beach, as well as selections of poetry poets associated with the Cape. Each of these works, in its time, represents the writer’s attempt to somehow capture and come to terms with the landscape and natural exigencies of the Cape. The focus will then turn to representations of the Cape in the work of contemporary writers, and might include work by Michael Cunningham, Annie Dillard, David Gessner, Cynthia Huntington, and Mary Oliver among others. The course ends with a brief look at Cape Cod’s literary and natural future as it has been imagined over the last 140 years. This course was designed to include an out-of-the-classroom education experience on Cape Cod. The trip to the cape should include experiences related to the cultural and natural history of the region, and it should provide students the opportunities to walk in the footsteps of William Bradford, Thoreau, Beston, and Hay, as well as opportunities to see for themselves how the natural features that have inspired the classic and contemporary writers of the Cape will continue to inspire future generations of artists.

Diversity: US  
Bachelor of Arts: None  
Effective: Summer 2011

**ENGL 181C** (GH;US) The Beach: Exploring the Literature of the Atlantic Shore (4.5) Examines the interconnection of culture and nature in coastal areas of the Atlantic seaboard.

English 181C—“The Beach: Exploring the Literature of the Atlantic Shore”—should begin with some exploration of the dynamic forces at work on the barrier beach, with special attention to the ways in which great literature has taken what is described in the scientific literature and turned it into art. Examples for discussion could be drawn from the work of such writers as Henry Beston Rachel Carson, and Jan DeBlieu. The general concerns of the course then move to environmental ethics, specifically as ethical questions are embodied in literature’s representation of the human relationship with the other-than-human world. General ethical questions then lead to specific treatments of human and wild animal interaction by various writers. The point is to explore how writers represent the optimal sort of relationship humans can have with the wild world, and what such representation might mean to the ways we personally interact with nature.

From these opening considerations, the course turns to an examination of the way in which writers who focus on a specific region of the coast--South Atlantic barrier islands, for example-- establish a sense of the place in their writing. The course would then narrow its focus even more, moving from a consideration of a regional cultural identity to that of specific towns or narrowly defined areas within the general region. The subject of the narrower focus should then be explored in specific detail, beginning with pre-European cultures, the first explorers and settlers and then moving on to other aspects of the American culture history that make the subject area distinctive. For example, a course on the Low Country of South Carolina might start with the accounts of John Lawson, who published his journal of his own trip up the Santee River in 1701, move to accounts of the rice culture so important to the region in the nineteenth century and to the examination of the Gullah Geechee culture established by West African slaves on Low Country plantations, and then
move to writing from more recent writers, all of which help to define the area’s distinctive cultural and particularly its literary identity.

This course was designed to include an out-of-the-classroom education experience. The enhancement trip should include experiences related to the cultural and natural history of the region. It should provide opportunities to walk in the footsteps of writers whose work is discussed in the classroom. There could be a course fee in addition to tuition for such enhancement experiences.

ENGL 182A (GH;US;IL) Literature and Empire (3) Literature written in English from countries that were once part of European empires, e.g., India, Canada, South Africa, and others.

ENGL 182A Literature and Empire (3) (GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

English 182A will constitute a wide ranging study of literature written in English, including novels, short stories, poems, plays, and prose, from countries that were once part of the British Empire or some other European empire. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Chinua Achebe, Buchi Emecheta, Alan Paton, David Malouf, Robertson Davies, Ngugi Wa Thiongo, J. M. Coetzee, R. K. Narayan, Amitabha Ghosh, Salman Rushdie, Christina Stead, Thomas Keneally, Jill Ker Conway, V. S. Naipaul, Wilson Harris, and Michael Ondaatje. Topics under consideration will vary from class to class, but the course will often discuss matters of race and ethnicity, as well as matters of religion, gender, sexual orientation and global context, where appropriate. The principle emphasis of the works in this course will be the recognition of non-European/non-American societies and the differences between their culture and that of Europeans or Americans. The conflicts generated by clashing cultures will drive the choice of readings. By the end of the course, students will have studied works from a minimum of five different cultural perspectives. This class will also prepare students to consider social and cultural problems from a variety of cultural perspectives. Students will be evaluated by means of essays written in and out of class, essay exams, term-long reading journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as English Major elective credit or as credit towards the English Minor and will be offered once a year, when staffing restrictions permit, with 35 seats per offering.

ENGL 182C (GH;IL) Literature and Empire (3) Literature written in English from countries that were once part of European empires, e.g., India, Canada, South Africa, and others.

ENGL 182C Literature and Empire (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

English 182C will constitute a wide ranging study of literature written in English, including novels, short stories, poems, plays, and prose, from countries that were once part of the British Empire or some other European empire. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Chinua Achebe, Buchi Emecheta, Alan Paton, David Malouf, Robertson Davies, Ngugi Wa Thiongo, J. M. Coetzee, R. K. Narayan, Amitabha Ghosh, Salman Rushdie, Christina Stead, Thomas Keneally, Jill Ker Conway, V. S. Naipaul, Wilson Harris, and Michael Ondaatje. Topics under consideration will vary from class to class, but the course will often discuss matters of race and ethnicity, as well as matters of religion, gender, sexual orientation and global context, where appropriate. The principle emphasis of the works in this course will be the recognition of non-European/non-American societies and the differences between their culture and that of Europeans or Americans. The conflicts generated by clashing cultures will drive the choice of readings. By the end of the course, students will have studied works from a minimum of five different cultural perspectives. The course may be used as English Major elective credit or as credit towards the English Minor and will be offered once a year, when staffing restrictions permit, with 35 seats per offering.
This course is designed to introduce students to the art of the short story and to acquaint them with some of its most talented writers. During the semester we will read short stories from various cultures and countries, ranging from stories written in the early nineteenth-century to those written within the last few years. Readings will include works from authors like Hawthorne, Melville, Toi, Dostoevsky, Gogol, Bierce, Chekhov, Kafka, Chopin, Crane, Gilman, James, Cather, Joyce, Woolf, Faulkner, Hemingway, Lawrence, Orwell, O'Connor, Baldwin, Olson, Silko, Erdrich, Ondaatje, Coover, Barth, Barthelme, DeLillo, Atwood, Mukherjee, Walker, Tan, Calvino, Garcia M, Irving, and Cortazar. All readings will be in English. We will usually read one story for each class meeting and it is important that the story is read in advance of our discussion. This course is intended to help one learn how to read fiction, how to understand it, and how to talk about it. The desire to tell stories and to be told stories is one of the most basic human needs, and all cultures have been defined in part by the stories they hear and the stories they tell. We are not born, however, knowing how to read the short story or any fiction for that matter. Rather it is a skill that one acquires, and the more one does it, like playing tennis or any other activity, the better one becomes at it, for we learn what to look for. We will also explore the historical development of the short story genre, and examine how historical contexts relate to the content and style of the stories under discussion. We become familiar with how stories are put together and with the vocabulary that is used to discuss fiction—terms such as plot, narrative, character, tone, language, closure, irony, imagery, and so forth. Students will be evaluated by class participation, a group oral presentation on the historical contexts of a story, small group problem solving exercises, out of class essays, a reading response journal, and in-class exams (such as a mid-term and a final).

ENGL 184 (GH;IL) (CMLIT 184) The Short Story (3) Lectures, discussion, readings in translation, with primary emphasis on major writers of the nineteenth and twentieth centuries.

ENGL 184 The Short Story (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

ENGL 185 (GH;IL) (CMLIT 185) World Novel (3) Development of the modern novel in the last century (outside the British Isles and the United States); lectures, discussions, readings in translation.

ENGL (CMLIT) 185 The Modern Novel in World Literature (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

In this course, which is cross-listed with Comparative Literature, students will read examples of the modern novel from around the world. Focusing on novels written outside of America and England, this class will explore the development of the modern novel as a genre across a number of world cultures. As an example, moving from the beginnings of literary modernism (the late nineteenth century) through the early and mid twentieth century, the course will consider works by writers such as the following: Chinua Achebe, Italo Calvino, Albert Camus, Simone de Beauvoir, Fyodor Dostoevsky, Isak Dinesen, Marguerite Durand, Natalia Ginzburg, Herman Hesse, James Joyce, Thomas Mann, Gabriel Garcia Marquez, Kenzaburo Oe, and Marcel Proust. This course will address the ways in which the world novels under consideration constitute examples of various literary forms and styles. The class will examine the differences and distances between literary movements such as social realism and magical realism, modernism and postmodernism. The goals of this course will be to hone students' critical reading and writing skills while granting them the ability to think about the modern novel as a distinct genre in a comparative global context. Students will be asked to read a minimum of five to six novels, spending an average of two weeks studying each work. They will be asked to complete at least three writing assignments including at least two kinds of writing such as the: essay, essay exam, or semester-long reading journal. This course will prepare students for additional college-level literature courses by helping them to develop the analytical skills necessary to analyze complex written texts. This course fulfills a General Education Humanities requirement.

ENGL 189 (GH;IL) (CMLIT 189) Modern Drama (3) Playwrights who set the world's stage for twentieth-century drama; issues that continue to shape the contemporary theatrical world.

ENGL (CMLIT) 189 The Founders of Modern Drama (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

ENGL/CMLIT 189 will constitute a wide-ranging study of plays by authors often credited with the making of modernist drama. The class will approach these plays from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Ibsen, Strindberg, Chekhov, Shaw, Wilde, Galsworthy, O'Neill, Beckett, and Yeats. Topics under consideration will vary from class to class but may include a chronological introduction to the development of modern drama, a consideration of a principal theme or themes in modern drama through a number of plays, or a consideration of plays in the context of historical events or formal or

The Pennsylvania State University
aesthetic elements. Time allotted for the study of the works under consideration will vary. This class will prepare students for advanced courses in dramatic literature as well as other academic courses that engage in the verbal and written analysis of complex written texts. Students will be evaluated by means such as essays written in and out of class, essay exams, term-long reading journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as an English or Comparative Literature major credit or as credit towards the English or Comparative Literature minor and will be offered once a year, with 60 seats per offering.

ENGL 192 (GH) The Literature of Fantasy (3) Literature(s) of fantasy from early forms through a variety of contemporary traditions.

ENGL 192 The Literature of Fantasy (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

Perhaps more than any other genre of speculative fiction, fantasy is richly varied. This course examines the development of literary traditions in fantasy literature from their earliest origins in mythology and folklore, through the historical development of classic fantasy works, into the books, movies and other fictions of the modern day. The course also explores different critical and theoretical approaches to the student of fantasy literature and related artistic traditions, as surrealism and magical realism-. In addition to completing primary readings, students will engage in weekly lecture/discussions of materials. Evaluation for the course includes essay exams and a course project. English 192 satisfies the GH requirement. The course can count toward the major and toward the minor in English. Class size, frequency of offering, and evaluation methods will vary by location and instructor.

ENGL 194 (GH;US;IL) (WMNST 194) Women Writers (3) Short stories, novels, poetry, drama, and essays by English, American, and other English-speaking women writers.

ENGL (WMNST) 194 Women Writers (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

English 194 will constitute a wide ranging study of works by American, British, and other English-speaking women writers, including novels, short stories, poems, plays, and prose. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Bradstreet, Wollstonecraft, C. Rosetti, M. Shelley, Austen, C. Bronte, E. Bronte, G. Eliot, D. Wordsworth, Dickinson, Wharton, Stowe, Freeman, Jewett, Fuller, H.D., Moore, Sitwell, Bishop, Brooks, Plath, Cather, Woolf, Stein, Lessing, Bowen, O'Connor, Welty, Porter, Oates, Olsen, Sarton, Gordimer, Atwood, Morrison, Kinkaid, McCarthy, and Churchill. The course seeks to make students aware of the extensive body of literature written by women through the analysis, evaluation, and appreciation of specific works by women writers. The course also seeks to help students understand the female perspectives-the varying values and interests of women--reflected in the texts at hand and to position these perspectives within wider social, historical, and political contexts. The course also seeks to make students aware of the special problems faced by both women writers and the female inhabitants of the societies they describe in their work. As a course in women's literature, ENGL/WMNST 194 concerns itself with questions of gender. In so far as some of these women
writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of women's literature, a consideration of a principle theme or themes common to women's literature through a number of works from across a number of historical periods, a consideration of a number of women's works in the context of historical events central to their creation, a consideration of a number of women's works in the context of formal or aesthetic elements common to those works and their various effects. Time allotted for the study of the works under consideration will vary. This class will prepare students for advanced courses in women's literature as well as other academic courses that engage in the verbal and written analysis of complex written texts. Students will be evaluated by means of essays written in and out of class, essay exams, term-long reading journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as English Major elective credit or as credit towards the English Minor and will be offered once a year with 60 seats per offering.

ENGL 196 (GH:US) (AM ST 196, AMSTD 196) Introduction to American Folklore (3) A basic introduction to verbal and nonverbal folklore stressing the basic procedures of collection, classification, and analysis.

ENGL (AM ST; AMSTD) 196 Introduction to American Folklore (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.
English 196 is an introduction to the verbal and nonverbal folk traditions characteristic of several American subcultures, including Native Americans, Hispanic Americans, African Americans, and immigrants. It will cover important genres of folklore, including folk speech, folk narrative, beliefs and religious experiences, use of space, and material culture. Topics under consideration will include ethnicity and cultural identity, the ways in which verbal and material cultures have influenced the literary, political, and economic development of the United States. Students will learn strategies for "reading" and valuing the folklore of subcultures other than their own. This class will prepare students to be able to perform well in future courses that deal with analyzing written, oral, and nonverbal texts and being able to analyze their significance within the subculture that produced them. By the end of the course, students will be able to recognize the cultural, political, and historical implications of such traditions. Additionally, they will have received first-hand practice in compiling a fieldwork project from first-hand interviews and site observations, combined with archival research. Students will be evaluated on the basis of class discussion, oral presentation and group exercises, in-class examinations, and a fieldwork portfolio, based on the fieldnotes, research, and analysis done as part of their project. This course may be used by English majors for English Major elective credit or as credit toward the English Minor, and (as AMST 196) also by American Studies majors in the same way. Non majors may use this course to fulfill a general education or Bachelor of Arts Humanities requirement. English 196 will be offered twice a year with 60 seats per offering.

ENGL 200W Introduction to Critical Reading (3) Responses to a variety of literary texts written in English that evoke different approaches.

ENGL 200W Introduction to Critical Reading (3)

(3) This course meets the Bachelor of Arts degree requirements.

When we read a work of literature, how do we determine what it means? Why do readers and critics come up with different interpretations of the same work? How do we decide if a literary work is valuable or not? This course addresses these and other questions by introducing students to the variety of literary questions on which critics and scholars base their interpretations of literature. Each theory poses different questions about a literary text's meanings and focuses our attention on different aspects of a text's language and background. We will examine the theory and practice the application of the following schools of criticism: formalism, psychoanalytic criticism, new historicism, Marxism, and feminism. We will apply different methods to particular literary texts, and students will practice different types of approaches in in-class writing assignments as well as in four papers (4-5 pages each). At the end of the semester, each student will put together a portfolio containing careful revisions of three of those papers as well as an introductory commentary of 1-2 pages.

ENGL 201 What is Literature (3) Acquaints students with theory and practice relevant to studies of narrative, lyric poetry, and drama.

ENGL 201 What is Literature (3)

(3) This course meets the Bachelor of Arts degree requirements.

English 201 will familiarize students with theories and practices that are foundational for thinking about literature, and for studying narrative fiction, poetry, and drama. The course will pose such questions as "what is narrative fiction?", "what is poetry?" "what is drama?" It will introduce students to how conventions of literary genres operate, how they generate meaning, and how they require and manipulate readers' responses. English 201 will also encourage students to explore whether or not literary discourse, as instanced in the genres that have been named, can be distinguished from other written or spoken discourses. While asking such questions, the course will acquaint students with technical vocabularies used by literary scholars and literary historians, and will provide students with sample scholarly rationales for hypothesizing the singularity of literary discourse, for constructing literary history, and for understanding literature's relation to life. It will teach students close analytic practices of reading, both those that have shaped the discipline of English studies and those emerging currently. Students will be evaluated in English 201 by means of essays written in and out of class, essay exams, and class participation. The course will be required of all English majors and will be a part of their 36 credit degree requirement. The course will be offered in both Fall and Spring semesters with 25 seats per offering.

ENGL 211W Introduction to Writing Studies (3)  This course introduces students to the most salient issues and theories in writing studies. Students explore contemporary theories and issues about writing in order to understand writing as a skill and a complex object of study in various professional contexts.

Most students know that writing is something one does; they are less aware that writing is something one studies, and that doing so is a challenging and fascinating intellectual endeavor. In this class, students explore the multifaceted nature of writing. As the list of major topics indicates above, students study a broad range of contemporary theories and issues, from the socially-constituted self in the act of writing, to plagiarism as it is variably defined in professional settings, to the role of the writer in social change.

The course is designed for both breadth and depth. Breadth is achieved through the many topics described above. The exams are designed to encourage students to make connections from one topic to another, to see how each builds on and intertwines with others. For example, early semester study on a writer’s individual agency is later complicated by issues of power determined by race, class, and gender. Writers’ ethical choices are made more challenging when confronted with questions of ideology and social justice.

Depth is achieved through the written essays. Each essay requires that students examine a narrow topic in depth, building on an assigned reading with limited and manageable primary and secondary research. For example, students may study their own writing as intertextual, drawing conclusions about originality and creativity in the process.

Throughout the course, students are encouraged to apply issues and theories to real-world situations, in such realms as professional settings, politics, media, and social justice. Several speakers come to class throughout the semester to expose students to the many kinds of writing professional writers do, the expectations and standards required of professional writers, and the avenues to success as professional writers.

ENGL 225 (GA;GH) (ART H 225, WMNST 225) Sexuality and Modern Visual Culture (3) An examination of the visual expression of gender and sexual identities in English-speaking cultures since the late nineteenth century.

ENGL 225 Sexuality and Modern Visual Culture (3)

(GA;GH)

The terms "feminist" and "homosexual" were invented by the Victorians and reflect profound shifts in conceptions of identity. Another invention of the nineteenth century was the idea of the literary and artistic "avant-garde," a minority contingent with politically and/or aesthetically advanced views. These ideas of minority culture were deeply enmeshed with one another, and have exerted profound influence ever since. This course explores that history with the objective of developing a more sophisticated understanding of how the history of ideas affects our sense of who we are and how we read both texts and images. The course will be relevant to students of American and English studies, art, art history, and women's and sexuality studies.

ENGL 226 (GH;US;IL) (LNST 226) Latina and Latino Border Theories (3) English 226 will constitute a wide-ranging examination of contemporary texts (1960-present) central to the construction of contemporary Latino/a culture.

ENGL 226 Latina and Latino Border Theories (3) (GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on contemporary Latina/o cultural production, placing it in historical context and analyzing it through the framework of borders. We make connections between Latina/o groups, showing both similarities and differences. We examine the politics of representation, asking how artistic texts define community and individual identities that are coherent yet also embody the complexity of these identities. The texts cross and claim borders—cultural, sexual, gender, geographical, generational, spiritual, and institutional. We will ask how these art forms work to claim border spaces: How are cultural differences retained without constructing hierarchies of exclusion? What models of identity do these artists propose in response to structures of domination? We'll read novels, short stories, poems, history, and theoretical essays; we will also watch several films. Throughout the course, we will attend to particular histories and cultures of Latina/o groups; it is crucial to both maintain the specificity of each culture (Chicana/o, Puerto Rican, Cuban-American, and Dominican-American) and their connections to each other as Latinas/os in the U.S. Inquiring into these intersections leads one to ask the following: how can Latinos unite against the assault on immigrants and bilingual education without erasing very important differences among Latina/o populations? How can Latinas unite against ongoing sexism and homophobia within their communities and the U.S. in general? How should we view the marketing category "Hispanic" and/or "Latino," and how do artists offer alternative conceptions of group identity?

ENGL 227 (GH;US;IL) (WMNST 227) Introduction to Culture and Sexuality (3) A course addressing the relationships between sexuality, literature, and culture.

ENGL 227 Introduction to Sexuality Studies (3) (GH;US;IL)

This course focuses primarily on queer literature, theory, and culture in the post-Stonewall (1969) decades in the United States and Britain. The course will interrogate sexual norms and their deviations, with a particular focus on the relationships between sexuality, imagination, and ethics in the making of sexual communities and in the fostering of sexual activism. We will focus on how class, race, and gender have been shaped, historically, through the production of sexuality, and the resistances offered to the formation and sedimentation of rigidly sexed bodies.

We will examine the relationships of memory, temporality, and spatial location in contemporary queer culture and theory. We will explore the relationships between sexuality and ethics, and how both shape the history of queer activism. Above all, we will study the connections between fantasy, imagination, and sexuality in shaping the literary and visual cultures of the U.S. and Britain. We will focus on the ways marginalization, shame, and criminalization are transformed, in the history, culture, and theory of queer people, into visionary acts of "world-making" that have changed contemporary understandings of bodies, identities, social formations, and literary and cultural forms.

ENGL 233 (GH;GN) (CHEM 233) Chemistry and Literature (3) Exploration of key concepts of chemistry, the reciprocal influence of chemistry and literature through history, and the relationship of science to society, culture, and values.

ENGL (CHEM) 233 Chemistry and Literature (3) (GN or GH)
ENGL/CHEM 233 is a pedagogically innovative course that will be team taught by an instructor from the English department and one from the Chemistry department. Both instructors will be present in the classroom throughout the semester, providing joint presentations and leading discussions. Students may earn either GH or GN credit for the course, but not both. This course teaches both basic concepts of chemistry and their cultural elaboration in literature. It seeks to provide students with a nuanced understanding of how literature and science inform each other and negotiate cultural, religious, and political tensions. The course seeks to explore ways in which our modern world is defined by and dependent on a variety of sciences and technologies. The impact of scientific and technological discoveries continues to dominate discussions of who we are, where we come from, where we are going, and our place in the universe. Understanding how we, as a society, have acquired knowledge is especially important when the ideas, perspectives, and discoveries are perceived to be in conflict with our religious, cultural, or political beliefs. Understanding the origin and development of these ideas, perspectives, and discoveries is an essential component of science and scientific achievement, but too often our methods of teaching science focus almost exclusively on teaching facts and theories at the expense of the historical discovery and development of those facts and theories. This course teaches both the scientific facts and theories and the contexts of their production in order to sharpen students’ abilities at critical evaluation of facts. The literary and scientific focus will vary from class to class, but may include writings by literary authors such as Edward Bulwer-Lytton, Bram Stoker, H. G. Wells, Garrett Serviss, William Butler Yeats, Arthur Machen, D. H. Lawrence, A. E. Waite, Aleister Crowley, Arthur Conan Doyle, and Camille Flammarion, and scientific texts by scientists such as William Crookes, William Ramsay, Frederick Soddy, Ernest Rutherford, Wilhelm Comad Roentgen, Henri Bequerel, J. J. Thomson, Niels Bohr, and Marie Curie. Like many literature courses, ENGL/CHEM 233 interprets history, assesses individual and social behavior, engages philosophical ideas, and expresses ethical and aesthetic values. It is especially useful at exploring cultural and social tensions involving scientific knowledge. For students in science programs, the course will explore the technical and conceptual dimensions of scientific knowledge in historical and cultural context. Political, cultural and personal motivations are integral components of the scientific method and deeply influenced the discovery of many of the fundamental chemical and physical concepts students are expected to master in their science curricula.

Students should expect to take two exams consisting of a midterm and a final, to write at least two papers for the course demonstrating their abilities at literary analysis and grappling with the themes of the course, and to make a group presentation to the class. Classroom discussion and general class participation will also be a factor in evaluation.

The course can be used as an elective credit toward the English Major and Minor, and can help students in English, Chemistry, or any other major fulfill General Education degree requirements. It will be offered once every other year with 20 seats per offering.

ENGL (AAA S) 235 African-American Oral Folk Tradition (3) (US)

(BA) This course meets the Bachelor of Arts degree requirements.
By its concentration on ethnic and racial difference, AAA S/ENGL 235 fulfills the requirements of the University for the designation of an Intercultural/International Competence (GI) course. This lower division course provides an opportunity for undergraduate students to examine the origins, forms, and function of the oral folk tradition of Americans of African descent, especially the speech and music, from signifying to rap. Beginning with the issues of African or European origins, students will explore questions concerning the definitions, source, transmission, variation, meaning, and function of African-American folklore as the basis for a better understanding and appreciation of the distinctiveness of African-American culture and character. Assessment of student performance will include two oral reports, a folklore collection project, two (outside of class) essays of 5-10 pages typed, and a final examination consisting of essay questions and short answers. Students will also be evaluated upon their participation in class discussions. AAA S/ENGL 235 will be a basic core course for students emphasizing African-American literature within the English major. It will also be important in the offerings of African and African American Studies. AAA S/ENGL 235 will satisfy one of the five 200-level courses required for the major in English. It can also satisfy one of the six courses required for a minor in English. It will also be important in the offerings of African and African American Studies. This course can be used to fulfill a major requirement for African and African American Studies. It also will fulfill the University's cultural diversity requirement. The course will be offered once a year with an enrollment of 35 students per section.

**ENGL 245 (GH;US) (WMNST 245) Introduction to Lesbian and Gay Studies (3)** An introduction to the study of homosexual identities across a wide range of disciplines and methodologies.

**ENGL (WMNST 245 Introduction to Lesbian and Gay Studies (3) (GH;US)**

An introduction to the study of homosexual identities across a wide range of disciplines and methodologies, this course explores the history of modern, "western" ideas about sexual identity as manifested in both writing and images. The class examines sexuality not as a "natural" or consistent phenomenon, but as a set of beliefs that have changed over time and manifest themselves differently in different cultural and historical contexts.

Starting in the late nineteenth century, scientific and medical authorities began categorizing individuals into sexual types based on their manifestations of gendered characteristics and their erotic attractions and practices. This medical typing corresponded with the development of subcultures associated with deviance from sexual norms; these subcultures produced a rich variety of texts, images, performances, and social forms, many of which are now considered central to both vernacular and high culture.

This course explores this rich archive. It investigates constructions of sexual conformity and how sexual nonconformists positioned themselves as a shared group identity. It examines how sexual distinctions between gendered, raced, and classed bodies were historically produced and culturally contested. It considers what commonalities gay identities may -- or may not -- share with lesbian identities and how the increasing visibility of bisexuality, transgender, and transsexuality has altered perceptions of sexual identity. The course explores the relationship of the avant-garde to mass-mediated politics of GLBTO subcultures and the impetus to "normalcy." Comparative study of issues of sexual mobility beyond and between the borders of the United States expands the course's critical scope beyond dominant forms of western culture.

---

The Pennsylvania State University
This course does not propose definitive answers to the questions of identity it addresses. Instead it negotiates the ways sexualities have enabled individuals to articulate – and disarticulate – themselves within social bodies past and present. This course, therefore, has wide relevance for students interested in how group identities come into being and transform over time in dynamic relation to other historical forces. Exploring a wide variety of texts and images associated with the history of sexual identity as well as a variety of interpretations of that history, this course opens students to an archive with the potential to inform and enrich their understandings of many kinds of challenges to regimes of normativity today.

ENGL 402 Literature and Society (3 per semester, maximum of 6) Texts confronting social, political, technological, or other issues in the English-speaking world. (Section subtitles may appear in the Schedule of Courses.)

(BA) This course meets the Bachelor of Arts degree requirements.

One variation will focus on Literature and Censorship by first considering general arguments for and against censorship and then by examining texts by writers who sought publication in their own country but whose books were censored or banned. The course will consider such questions as, Are there ever legitimate grounds for censorship? How do standards of censorship differ between countries? What is the relation between censorship on political and/or moral grounds? What does artistic merit have to do with concern about moral or political subversion? Works from England, South Africa and the United States will be read and discussed, and where available, excerpts from trial transcripts will be read in order to examine arguments for and against publication. Readings will include works by Milton, D. H. Lawrence, Alan Paton, Nadine Gordimer, Athol Fugard, Eugene O'Neill, Henry Miller, and Alan Ginsberg.

Another variation will focus on war and gender in 20th century American literature by examining the ways male and female authors write about war. Texts will vary from battlefield experiences to repercussions of war to the symbolic implications of war. Questions will be raised about literary authority: Does one need to be combatant to write about war? If not, how does one find the authority to speak, particularly as a woman? How does race and/or ethnicity complicate one’s perceptions of American participation in war? Readings will include works by Ernest Hemingway, William Faulkner, Joseph Heller, Cynthia Ozick, Leslie Marmon Silko, Norman Mailer, Bobbie Mason, Tim O’Brien, and Toni Morrison.

Another variation will focus specifically on the writings which emerged from the postwar African-American struggle for
civil rights. The course will include not only fiction and poetry but also those speeches, sermons, editorials, and other forms of discourse to have emerged from the era. The emphasis will be both traditional literary concerns as well as on the various rhetorical strategies involved in each work. Ideally, the course would make visible to students the difficulties attendant upon any attempt to separate the concerns of rhetoric and persuasion too firmly from the concerns of literature. The course could conclude with a look at some of the various biographies, autobiographies, and histories written over the last twenty-five years, which attempt to shape our national memory.

Other variations include literature as a response to Newtonian science or to Darwinism or to the American Depression or to postwar technology or to new dystopias or to AIDS or, as in the sample outline, the Civil Rights movement.

ENGL 403 Literature and Culture (3 per semester, maximum of 6) Historical, theoretical, and practical issues within cultural studies in relation to English-speaking texts. (Section subtitles may appear in the Schedule of Courses.)

ENGL 403 Literature and Cultural Studies (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Topics covered in this course will vary from semester to semester, but a broad framework will be to introduce students to literary and other texts read in relation to cultural studies. Individual instructors may take up different historical periods, while other versions may suggest ways cultural studies draws on different theoretical discourses such as rhetoric, deconstruction, feminism, or the New Historicism for its problems. All Reading Culture courses should serve as an introduction to cultural studies, moving from theoretical to practical readings of literature and culture. In any case, a common goal would involve examining cultural studies as constituted by plural theories and ends.

ENGL 409 Composition Theory and Practice for Teachers (3) An overview of the theory and practice of writing for teachers, with emphasis on the writing process.

**ENGL 409 Composition Theory and Practice for Teachers (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

ENGL 409 is intended to help teachers improve their writing instruction by immersing them in composition theory and providing them with the opportunity to learn the writing process through personal experience. On completion of the course, participants will be able to:
- Articulate and test composition theory in written works
- Work through each phase of the writing process in assigned essays
- Develop strategies for writing effectively in various genres and styles, including journal writing
- Produce written works which demonstrate an awareness of audience
- Implement recommendations for effective revisions
- Provide responsive feedback to peers' written work
- Develop a precis for a model lesson

Evaluation: Students will be evaluated on their knowledge and understanding of instructional objectives, demonstrated in written assignments, class discussions and other projects.

**ENGL 420 Writing for the Web (3)**  
Analysis and composition of informative, persuasive, and "creative" Web texts, based on rhetorical principles; no prior Web writing experience required.

**ENGL 420 Writing for the Web (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

This course, designed for writers and potential writers, will explore the unique opportunities and constraints of writing for the Web. As a writing course, it should appeal to students in the Humanities; however, because of the growing importance of Web texts in fields such as business and the social sciences and given the opportunity to compose/construct a variety of fictional and non-fictional "creative" and informative/persuasive Web texts, this course should be of value to students across the college.

The Pennsylvania State University
In this course, students will survey a wide variety of Web texts—webs, electronic journals and books, learning to analyze these as to their efficacy in light of each text's rhetorical situation. As students learn to compose and construct such texts themselves, rhetorically based principles of audience awareness and persuasive appeal will be emphasized. Rather than focusing on writing html codes and java scripts, this course will build on the rhetorical principles taught in first-year writing courses, teaching students how to apply those principles to more sophisticated, multi-sensory, multi-media hyper textual writing.

The course will be taught primarily in a hands-on workshop environment—in a PC computer lab or laptop-equipped classroom. Although no prior Web writing experience is required, some experience with Web navigation and computer word processing will be helpful. Students will be evaluated on the basis of their participation/attendance in the course’s workshop environment, written web analyses, and constructed web texts.

ENGL 424 (ENVST 424) Creative Writing and the Natural World (3) Creative writing workshop focused on the environment and related issues.

ENGL (ENVST) 424 Creative Writing and the Natural World (3)

American literature includes a long and rich tradition of writing that focuses on the natural world. From the oral stories of indigenous people to the journals of the first European settlers, many have looked for a way to understand their own place in the world based upon their relationship to the earth and its creatures. While Puritans often discerned the pleasure or wrath of God in the environmental changes they experienced, Transcendentalists like Henry David Thoreau and Ralph Waldo Emerson sought out moments of spiritual enlightenment by immersing themselves in the natural order. More recently, such poets as Galway Kinnell, James Wright, and Robert Bly have attempted to connect with the depths of collective unconsciousness by exploring the natural world, while others, like Mary Oliver, Dan Gerber, Jim Harrison, Gary Snyder and Wendell Berry, have used transcendental thought and melded it with Christian and Buddhist insights. Still others, like Gary Paul Nabhan, Rachel Carson, and Alison Hawthorne Deming have brought science to bear upon the riches that nature, art, and scientific exploration may offer when joined in the pursuit of a deeper understanding of, and relationship with, the natural world. This course will acquaint students with the tradition of American nature writing, as
well as contemporary nature writing, in the genres of nonfiction, poetry and fiction. Students will be introduced to issues of style, philosophy, and content, as they produce their own essays, poems, and stories. The course culminates in the production of a portfolio of nature writing. Much of this work will begin in class with specific assignments, which will include field work, and feedback from other students in the class. As a workshop course in creative writing, the emphasis will be upon the production of literary texts that interact with the natural world and upon the revision of those texts.

ENGL 426 (US) (LTNST 426) Chicana and Chicano Cultural Production: Literature, Film, Music (3) An in-depth study of Chicana/Chicano literature, film, and music from the inception of the Chicano Movement (1965-1975) to the present.

ENGL 426 Chicana and Chicano Cultural Production: Literature, Film, and Music (3) (US)

(BA) This course meets the Bachelor of Arts degree requirements.

ENGL 426 will constitute an in-depth study of Chicano/a literature, film, and music from the inception of the Chicano movement (1965-1975) to the present. In addition to primary aesthetic texts, students will read historical, political, and theoretical essays designed to situate the Chicano/a cultural texts in historical and political context. The aim of the course is to give students a better understanding of Chicano/a cultural production by situating these works of art against other U. S. artistic traditions and within wider historical and political movements. Authors and artists under consideration in this class will vary, but will likely include Luis Valdez, Tomas Rivera, Estella Portillo Trambley, Oscar Zeta Acosta, Corky Gonzales, Gloria Anzaldúa, Norma Alarcon, Cherrie Moraga, Richard Rodriguez, Dagoberto Gilb, Rolando Hinojosa, Alfredo Vea, Charlie Trujillo, Diego Vasquez Jr., Joe Rodriguez, Tomas Almaguer, Jose Esteban Munoz, Manuel Ramos, Lucha Corpi, Rudolfo Anaya, Michael Nave. This class will prepare students for advanced courses in Latin/a literatures as well as other academic courses that engage in the verbal and written analysis of complex texts. Students will be evaluated by means of essays written in and out of class, essay exams, group projects, term-long journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as ENGL major elective credit or as credit towards the ENGL minor and will be offered once a year with 40 seats per offering.

ENGL 427 (J ST 427) Topics in Jewish American Literature (3) An in-depth examination of important themes, writers, and/or historical developments in Jewish Literature of the United States.

ENGL (J ST) 427 Topics in Jewish American Literature (3)

This course will provide sustained examination of major themes, texts, and figures in the Jewish American literary tradition. The course will focus on depth rather than breadth in its analysis of the defining aspects of the literature and on what the literature reveals about Jewish American culture and identity. The United States has absorbed large numbers of Jewish immigrants from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions, and moreover Jews have settled and made homes in a wide variety of American communities. Close analysis of literature will therefore provide an opportunity to consider the constitution, origin, and development of Jewish America's wider cultural, political, and social contexts. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film, and the methodology will emphasize the close reading of these texts. Through short writing exercises, in-class projects, essay examinations, and a longer research paper, students will respond to, integrate, compare, and analyze these materials.

The Pennsylvania State University
The course complements offerings in Jewish Studies, English, and Comparative Literature. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English and Comparative Literature a valuable, sustained introduction to an important U.S. and world sub-culture and literature.

ENGL 428 (US) (AAS 428) Asian American Literatures (3 per semester/maximum of 6) A seminar on the literatures and cultures of Asian America, with attention to forms of geographic, historical, and ethnic diversity.

AAS (ENGL) 428 Asian American Literatures (3 per semester/maximum of 6) (US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course selectively examines the contemporary major works, authors, and themes of twentieth-century Asian American literature, with particular emphasis on post-1965 literary production. The course aims to give students a sense of the historical development of Asian American literary studies in addition to introducing them to some significant thematic and theoretical issues—of panethnicity and resistance; of memory, desire, and perception; of trauma and diaspora, to name a few possibilities. We will focus primarily on Asian American literatures and cultures within the contexts afforded by the histories of Asians in the United States although there will also be some attention to issues of neocolonialism, globalization, transnationalism, and militarization. Ultimately, this course proposes that the aesthetics of Asian American literature are inseparable from the politics of Asian American experiences. Issues to be discussed will include the rise of the Asian American movement in the 1960s; the emergence of diaspora; strategies for contesting canonicity and cultural authority; different versions of what it means to be an “American;” the intersections of race, class, and conflict; and the relationships between gender, sexuality, and stereotype.

The course introduces students to the diversity of Asian American literary and cultural production. It teaches them how to approach and analyze literature and other kinds of cultural formations as well as how to critically engage with texts through formal written analysis and through oral presentations.

This is an upper-level seminar course with enrollments between 15-35 students. A typical grading breakdown would look something like this:

Essay 1--20%
Attendance/Participation (which includes weekly quizzes and a group book presentation)--20%
Critical Responses--20%
Essay 2--20%
Final Exam/Project--20%

ENGL 429 (CMLIT 429) New Media and Literature (3) New media literary genres; critical discussion of creative works in digital media.

ENGL (CMLIT) 429 New Media and Literature (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is an introduction to new media literary genres. It includes reflection on the concept of mediation (electronic and otherwise); on genre in both print culture and electronic publishing; and on literariness itself. It introduces students to critical discussion of creative works in digital media, including hypertext and hypermedia fiction and nonfiction, code poetry and codework, cybertext and ergodic literature, net art and Web art, and software and electronic installation art. Students will learn about major debates in North American and European new media theory, understood as a distinct current of influence in twentieth century literary and cultural theory. They will acquire a critical vocabulary and an interpretive methodology for literary artifacts created and/or published in screen media. Finally, they will acquire a basic familiarity with the range of creative works in digital media and the critical debates animating their reception. Students will write both short written exercises (30 percent) and longer essays (40 percent), as well as give an in-class presentation (10 percent). 20 percent of the course grade may be determined by class participation or quizzes. This course is an advanced-level course, for students who have already acquired the prerequisite basic skills in interpretive reading and writing. It expands elective and post-1800 offerings at the 400 level for the English major and minor, and expands the topical range of the English studies curriculum, which currently includes no course dedicated to new media.

Prerequisite:

ENGL 449 Women Poets (3) Study of major writings by women poets; instructor chooses emphasis, language, and period.

ENGL 449 Women Poets (3) (US;IL)

The material for this course consists entirely of poetry by women, examined from a feminist perspective, and includes the work of African-American, Hispanic-American, Native American, and Asian-American women. The course also provides for an international perspective, should the instructor wish to take such an approach. Students examine the relationships among gender, race, ethnicity, and aesthetics in the discourse that we call “poetry by women.” Thus, not only do students discuss the ways in which women write poetry, but they also look at the pressures imposed by race and culture upon the content and style of their poetry. Relationships among women poets of different ethnicities and cultures are also studied; thus, students consider what it means to be a “hyphenated writer” in America, and how these writers read and relate to each other. Students also discuss the “cultural work” done by these women poets, looking at the ways in which these writers contribute to the formation of culture(s) within their worlds.

ENGL 451 Literary Modernism in English (3) Survey of literary modernism in English and English translation in a variety of genres, including poetry, fiction, and drama.

ENGL 452 The Victorians (3) Poets such as Tennyson, Browning, Arnold, and Hopkins; also prose by writers such as Carlyle, Mill, Ruskin, and Arnold.

ENGL 453 Victorian Novel (3) Novelists such as the Brontes, Thackeray, Dickens, George Eliot, Meredith, and Hardy.

ENGL 454 Modern British and Irish Drama (3) From Wilde and Shaw to the present season.

ENGL 455 Topics in British Literature (3) Focused study of a particular genre, theme, or problem in British literature. (May be repeated for credit.)
This course meets the Bachelor of Arts degree requirements.

This course will allow faculty and students to focus a semester's study on a particular genre, theme, or problem in British literature. The flexibility of a topics course will allow faculty a forum in which to share current scholarship or to relate issues in British literature to larger School-wide themes in a classroom environment. Offering such focused studies under a British literature umbrella will allow majors to apply these offerings to their upper-level British literature requirement. Because of the potential variety of topics and faculty members, specific evaluation methods will be determined by the instructor and specified in the syllabus.

This course will be offered once every two years, with an expected enrollment of 20-25 students.

**ENGL 463 African American Autobiography (3)**
The African American literary quest for identity and its adaptation to Euro-American culture and autobiographies.

**ENGL 463 African American Autobiography (3)**

Starting with the slave narratives which initiate the literary quest of African Americans for identity, this upper-division course will examine the trope of writing (the "talking" book) as the (w)rite of passage into the dominant Euro-American culture. The course will identify, describe, and analyze how the major elements of the "quest" found in the slave autobiographies have been adapted as textual strategies by many contemporary African American writers of autobiography, semi-autobiography, and fictional autobiography. Authors under consideration will vary from class to class, but may include writers such as Frederick Douglass, Harriet Jacobs, W. E. B. Du Bois, Ida B. Wells, Richard Wright, Zora Neale Hurston, Maya Angelou, Martin Luther King, Alex Haley, Harriet E. Wilson, James Weldon Johnson, and Ernest Gaines. Topics explored will vary from class to class, but will likely consider slave narratives, the role of autobiography in the fashioning of identity and self, gender issues, genre questions, and the historical development of the genre and its shifting preoccupation from slave times through the early twentieth-century, the pre-Civil Rights era, the Civil Rights Movement, the Black Power Movement, and the present. The course will prepare students for other courses that engage in the verbal and written analysis of complex written texts, and will also prepare students to consider the social and cultural issues involved in the role of race in American history. Students will be evaluated by means of essays written out of class, essay and short answer exams, a term-long reading journal reflecting upon issues of the student's own "autobiography," an oral class presentation, and class participation. The course may be used as English Major elective credit or as credit towards the English minor, and will be offered once every other year, with 40 seats per offering. The course can be used to complete the major and minor in Women's Studies Arts and Humanities area and it also satisfies the Women of Color (WOC) sub-requrement.
ENGL 467 (US) African American Novel II (3) Thematic, stylistic, and structural characteristics of the African American novel from naturalism to modernism and postmodernism.

ENGL (AAA S) 469 Slavery and the Literary Imagination (3) The impact of slavery on the petitions, poetry, slave narratives, autobiographies, and novels of African Americans.

ENGL (AAA S) 469 Slavery and the Literary Imagination (3) (US)

(BA) This course meets the Bachelor of Arts degree requirements.

ENGL/AAA S 469 provides an opportunity for undergraduate students to examine African American petitions, poetry, slave narratives, autobiographies, and novels as literary reconstructions of the economics, politics, ethics, and poetics of slavery. Authors under consideration will vary from class to class, but may include writers such as Paul Laurence Dunbar, Phillis Wheatley, F. Harper, James Weldon Johnson, Langston Hughes, Claude McKay, Sterling Brown, Booker T. Washington, Harriet Jacobs, W. W. Brown, Harriet Wilson, Margaret Walker, Arna Bontemps, D. Bradley, S. A. Williams, Toni Morrison, Ishmael Reed, and Charles Johnson. The course will focus on the complex relationship of slavery to the literary imagination of Americans of African descent as they increasingly discovered the limitations and possibilities of reading and writing themselves into freedom, literacy, and wholeness as human beings and American citizens. Topics covered will vary, but will include issues of the legacy of slavery in the west; the political aims and rhetorical conventions of African-American autobiography; the myths and realities of slavery; economic, political, ethical, and aesthetic issues of the representation of slavery; understandings of black consciousness and black culture on the road from slavery to freedom; the rise of African American realism as a response to the legacy of slavery; Black Feminism and issues of slavery; the role of history and memory in the construction of slavery; post-modern configurations of slavery; and the like. This class will prepare students for advanced courses in African American literature, as well as other academic courses that engage in the verbal and written analysis of complex written forms. Students will be evaluated by class participation, a group oral presentation, small group problem solving exercises, three out-of-class essays (of 5-8 pages each), and an in-class final examination consisting of essays and short answers. AAA S/ENGL 469 will satisfy one of the six 300H-400 level courses required for the major in English and the required 400 level course for the emphasis in African American literature within the major. It can also satisfy one of the six courses required for a minor in English. The course may be used as English Major elective credit or as credit towards the English minor. It will also be important in the offerings of African and African American Studies, American Studies, and American History. This course can be used to fulfill major requirements on the African and African American Studies major. It will be offered once every other year, with 40 seats per offering.

ENGL 477 Teaching Children's Literature (3) Teaching Children's Literature in light of recent literary pedagogy, the history of childhood, and critical approaches to Children's Literature.

ENGL 477 Teaching Children's Literature (3)

This course explores the teaching of Children's Literature. Beginning with students' own interpretations of the children's books we read, we develop critical concepts through which to understand and teach children's literature. The course presumes that books written for children have an intrinsic importance as literary and cultural artifacts and so demand serious consideration. Because this course is offered as an English course, we will concentrate on such things as the formal characteristics of the works we study, the kinds of audiences they seem to solicit, their implied authors, their ideologies, and so forth. The emphasis of the course is on teaching Children's Literature as literature; the course assumes that teaching literature is teaching reading and writing. Students are evaluated according to their participation in class discussion and three required papers—one on the teaching of a particular work of Children's Literature, one on some aspect of the history of childhood, and one that analyzes a children's book.

ENGL 479 Business or Technical Writing Practicum (1-3) Practical experience applying business or technical writing principles, working with advanced business, science, or engineering students on classroom projects.

ENGL 479 Business or Technical Writing Practicum (1-3)

English 493 enables students to bring their skills as writers and their knowledge of the requirements and conventions of business or technical writing to bear on a team project assigned in an advanced business, technical, or science course. The course requires students to work with the other members of the team on all aspects of the project where they are expected to contribute their skills to writing the final report that will constitute the primary means of communicating the results of the project to an appropriate audience. The major objective of the course is to provide students with opportunities to apply the writing skills they have mastered in previous or concurrent courses to projects of the kind that they would encounter in a professional writing situation. Thus, they will learn to work effectively in a team, to contribute to the overall objectives of the project, to serve as writing "consultants" to the group, and to work with others in perfecting the final written product. Their skills in organizing, editing, assessing the audience’s needs, and finding the most effective ways to meet these needs will be tested in "real life" situations. Evaluation of the student's contributions and effectiveness will be made by the instructor in charge of ELISH 493 and the cooperating instructor in the business, technical, or scientific course. Evaluation methods could include (but not be restricted to) a journal kept by the student during the course project, observations by one or both instructors of the team in operation, peer evaluations by other student members of the project, and evaluation of the final written product by one or both of the cooperating instructors.

ENGL 480 Communication Design for Writers (3) This course explores visual design, non-verbal communication, and software packages used in professional settings to most effectively present written communications.

ENGL 480 Communication Design for Writers (3)
ENGL 480 is a course designed to familiarize students with an integrated theory of the roles that visual, verbal, and non-verbal communication play in the production of professional documents using the technologies and software applications most widely used in many organizational settings. To this end, the course will focus on employing non-verbal design elements (color, photographs, graphics, page layout, typography, paper) to develop effective communications tailored to a variety of media, audiences, and purposes using software packages such as Quark XPress, Photoshop, Illustrator, InDesign, Excel. Emphasis will be placed on producing clear, insightful, polished, professional documents, both individually and as part of a team.

As part of the course, students can expect to
a.) Understand the theories, elements, and principles of visual and non-verbal communication.
b.) Appreciate the roles of the audience, purpose, and context in planning and composing documents.
c.) Value the role of ethos, pathos, and logos when planning and composing documents.
d.) Learn basic skills in a variety of software packages most widely used in the professional world.
e.) Design and compose a variety of documents for a variety of audiences that display their writing and design skills.
f.) Demonstrate through their documents an understanding of the theories of visual, verbal, and non-verbal communication.
g.) Assess their own strengths and weaknesses as writers and designers.
h.) Demonstrate the ability to reflect critically on their own and others’ discourse practices.
i.) Gain an understanding of the role and scope of other professionals and other disciplines in creating professional communications.

ENGL 486 (IL) The World Novel in English (3) Studies in the novel, written in English, by writers outside of the United States and Great Britain.

The World Novel in English (3) (IL)
This course examines the nature of the novel as written in English by writers outside of the United States and Great Britain. Such a study necessarily involves both an aesthetic and a political perspective, in that the tradition of the novel in these landscapes so often involves the aesthetic and political suppression of native literary forms and voices. Thus, this course looks at the novel as written both by the colonizer and by the colonized. It considers the politics of the aboriginal author writing in an adopted language, and the ways in which such an adoption bears upon related ethnic and gender matters; it also considers the sorts of artistic and political tensions that emerge in the work of writers who write in what might be called the dominant English tradition. This course also studies the work of what might be called the multi-cultural writer, or the writer perforce extracted from a native, non-English-speaking culture and placed within a larger, colonial, English-speaking culture. Matters of novelistic form, as they are related to ethnic and cultural identity, are also discussed. One intent of the course is to reveal the cultural, racial, and gender diversity that naturally adheres to these particular literary traditions.

ENGL 489 (WMNST 489) British Women Writers (3) A study of selected British women writers.

ENGL (WMNST) 489 British Women Writers (3)
This course provides the opportunity to study writing by British Women from a historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will address the question of the role gender plays in the selection of literary forms and the development of character, theme, symbols, and rhetorical strategies. It will also explore what particular dimensions British women writers have brought to the British literary tradition.

Students will be active learners through keeping reading journals, presenting background reports on the history of women in England, participating in small-group discussions about the texts, and writing 2 shorter essays and one longer research essay for the class. This course focuses on an area of British literature, which more traditionally structured courses tend to obscure. The course will be attractive to students from a variety of programs, including English majors, Women's Studies minors, and Interdisciplinary Humanities students. The course will be offered once every two years. Estimated class size 20.

ENGL 490 (US;IL) (WMNST 490) Women Writers and Their Worlds (3) American and British literature written from the perspective of women.

ENGL (WMNST) 490 Women Writers and Their Worlds (3)
(US;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

ENGL/WMNST 490 covers particular aspects of American and British literature written from the perspective of women. The courses stress the diversity of women's authorial worlds, both through time and/or space. The readings and specific focus vary from semester to semester. ENGL/WMNST 490 seeks to make students aware of the extensive body of literature written by women, but, unlike ENGL 194, which is a survey course of women's literature, ENGL/WMNST 490 can be a more intensive course, focusing on selected themes and topics of particular concern to women as reflected in the poetry and fiction of twentieth-century American and British women writers. The class can also be taught in relationship to earlier periods, dealing, for instance, with English women novelists from 1775-1865. In such a class, readings would include fiction by Fanny Burney, Mary Wollstonecraft, Ann Radcliffe, Jane Austen, Mary Shelly, Emily Bronte, Elizabeth Gaskell, and George Eliot. The course would then place each novel in its historical, social, intellectual, and literary context, and explore the various ways in which some of England's best writers transformed their female experience of the world into fiction that extended the range and influenced the development of the novel. Regardless of the particular focus, all sections of the course pose the following questions throughout: Do women use the same myths, archetypes, and literary conventions as male writers? Or do they sometimes have to modify the myths, archetypes, and literary conventions originated by their male precursors in order to adapt them to female experience? Is there such a thing as a distinctively female imagination, with a symbolic language of its own? Is there such a thing as a chain of literary influence linking women writers to each other? What are the strategies for coping with the anxieties of authorship? What is the interaction between gender and genre? In what ways are creativity and procreativity modes of defying prevailing ideologies? Does a woman's psychological development have an effect on the plots a woman novelist conceives? How does women's literature reflect the realities of women's lives? As a course in women's literature, ENGL/WMNST 490 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Students should expect to complete a minimum of three written assignments in the course, two course papers, and an essay final exam in class. The papers each will ask students to choose a text to analyze in relationship to one of the thematic modules the course has chosen, for instance, to discuss how Virginia Woolf's Mrs. Dalloway analyzes the position of upper-middle class women in a particular moment in history when women had achieved the vote, but were still largely constrained by patriarchal social norms. In addition to
written assignments, students will be evaluated on class discussion and general participation. The course not only prepares students for taking up literary and cultural analysis in English classes, but also in any other class that engages in the verbal and written analysis of complex written texts, and in other classes in Women's Studies or in other Penn State departments that address the social, cultural, or ethical issues of gender. The course may be used as English Major elective credit or as credit towards the English Minor; it may also be used in the Women's Studies major and minor. It will be offered once a year with 40 seats per offering.

ENGL 491 The Capstone Course in Professional Writing (3) This culminating course for Professional Writing majors concentrates on reflective analyses, design, and presentation of documents in the development of professional portfolios.

ENGL 494 The Capstone Course in Professional Writing (3)

(BA) This course meets the Bachelor of Arts degree requirements.

English 494 is the capstone writing course for the Professional Writing degree program. Its overall purpose is to provide students with the opportunity to reflect on and integrate academic coursework, co-curricular activities, and internship experiences through the design and development of print and electronic professional portfolios. To this end, students will analyze and evaluate their own professional texts as well as the texts of their peers, focusing on rhetorical analysis, content, organization, and expression. Emphasis will be placed on producing clear, insightful, polished, professional documents for inclusion in both paper and digital portfolios.

As part of the course, students can expect to:

a) demonstrate the ability to reflect critically on their own and others’ discourse practices
b) assess their own strengths and weaknesses as writers and evaluate their writings for inclusion in the portfolios
c) compile both paper and electronic portfolios that integrate relevant material from academic courses, internships, and other co-curricular learning experiences
d) demonstrate the ability to employ technology in the development of the portfolios
e) design materials that display their writing skills and rhetorical knowledge for a professional audience
f) develop a finished professional resume and application letter
g) discuss and demonstrate a variety of strategies for securing a professional writing position

ENGL 492 (AM ST 476, WMNST 491) American Women Writers (3) A study of selected American women writers.

ENGL 492 (AM ST 476, WOMST 492) American Women Writers (3)

A study of selected women writers, this course provides the opportunity to study writing by American women from an historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will raise the question of the role that gender—as well as other differences such as race, class, and ethnicity—play in the selection of literary forms and the development of character, theme, symbol, and rhetorical strategy. It will also explore the dimensions American women have brought to the American literary tradition. The course satisfies the area requirement in culture for American Studies majors and is open to all majors meeting the prerequisite requirements. The course will be offered once every two years and enrollment is 25.

ENGL 494 The Capstone Course in Professional Writing (3)

English 494 is the capstone writing course for the Professional Writing degree program. Its overall purpose is to provide students with the opportunity to reflect on and integrate academic coursework, co-curricular activities, and internship experiences through the design and development of print and electronic professional portfolios. To this end, students will analyze and evaluate their own professional texts as well as the texts of their peers, focusing on rhetorical analysis, content, organization, and expression. Emphasis will be placed on producing clear, insightful, polished, professional documents for inclusion in both paper and digital portfolios.

As part of the course, students can expect to:

a) demonstrate the ability to reflect critically on their own and others' discourse practices
b) assess their own strengths and weaknesses as writers and evaluate their writings for inclusion in the portfolios
c) compile both paper and electronic portfolios that integrate relevant material from academic courses, internships, and other co-curricular learning experiences
d) demonstrate the ability to employ technology in the development of the portfolios
e) design materials that display their writing skills and rhetorical knowledge for a professional audience
f) develop a finished professional resume and application letter
g) discuss and demonstrate a variety of strategies for securing a professional writing position

This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

**ESL 004 ESL/Composition for American Academic Communication I (3)**

This course is for undergraduate students who are beginning-intermediate level non-native speakers of English. The course is designed to improve their grammar and writing skills in preparation for future American academic writing assignments. Topics to be covered include the following: (a) subject-verb agreement; (b) verb tenses; (c) adjectives and adverbs; (d) independent and dependent clauses; (e) essay and paragraph organization; (f) paragraph development; editing and proof-reading. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

ESL 015 (GWS) ESL/Composition for American Academic Communication II (3) For intermediate/advanced level non-native speakers of English to develop strategies for reading and writing American academic discourse.

This course is for undergraduate students who are intermediate-advanced level non-native speakers of English. Students will become familiar with the various stages in the process of writing and develop strategies for reading and writing various models of American academic discourse. Overall, students will be able to use what they have learned in this course to participate successfully in academic reading and writing tasks throughout their university experiences in the United States. Students will participate in a variety of reading and writing tasks that will enable them to: (a) define the subject, purpose, audience, and appropriate organizational structure for written compositions; (b) revise and reshape their writing to improve ideas, organization, language use, vocabulary and mechanics; (c) identify and correct structural and grammatical errors within their written texts; (d) select sources, take notes, and acknowledge sources to support ideas, using the library to conduct library research; and, (e) become better writers in preparation for their college careers.

ESL 115G American Oral English for ITAs I (3-9) Initial course in American Oral English for preparation of international teaching assistants.

This course is designed for non-native speakers of English who wish to improve their overall speaking and listening skills in English. Through various oral and aural language activities, students will increase the intelligibility of their speech by improving their pronunciation of American English. They will also develop academic speaking skills in order to engage critically and constructively in the exchange of ideas during discussions of academic content. They will improve their overall listening comprehension, as well as their discrimination of particular sounds in English. By the end of this course, students will have improved their overall speaking and listening skills, in particular their fluency, to participate successfully in academic settings.

ESL 116G ESL Composition for Academic Disciplines (3) For international students at the graduate level to engage in scholarly activity in their academic disciplines.

This course is designed for international students at the graduate level who are preparing to engage in scholarly activity...
in their academic disciplines. Through reading and writing selected rhetorical models of academic disclosure, students will be able to analyze and use the organizational structure of various models of academic texts. They will engage in contextualized language activities, which will enable them to match appropriate English linguistic forms to specific rhetorical purposes. Students will be expected to gather appropriate sources, organize information, and compose various models of academic essays and research papers. By the end of the course, students will be able to translate their research activities into written reports that conform to the expectations of the English-speaking academic community.

ESL 118G American Oral English for ITAs III (3) Advanced course in American Oral English for preparation of international teaching assistants.

This course is designed to provide English language instructional support for advanced non-native speakers of English who need to improve their communication effectiveness in order to become teaching assistants. Through various language related activities, students will increase the intelligibility of their speech by improving their pronunciation of American English. To do this, they will develop an acute awareness of their own strengths and weaknesses as a communicator in real and simulated instructional contexts. They will also develop effective oral communication strategies necessary for interaction with individual students, small groups, and large classes. Students will learn about American cultural traits and underlying assumptions as they pertain to communication in the university-level classroom. By the end of this course, students will have improved their overall communication effectiveness to carry out their future teaching assistants responsibilities successfully.

**Environmental Engineering (ENVE)**

**ENVE 301W Environmental Microbiology (3)** Fundamentals of microbial ecology and environmental microbiology with an emphasis on aspects of these fields important to environmental engineers.

**ENVE 301W**

**ENVE 301W Environmental Microbiology (3)**
This course provides students with the skills necessary to understand and effectively communicate environmental aspects of microorganisms. There are laboratory exercises associated with each of the related topics. Subjects include both water quality and treatment. The emphasis in the course will be on the development of the appropriate writing and speaking skills. As such, formal grading will be reserved for completed assignments only. This does not imply that students will be expected to produce these completed assignments quickly and in a single draft. For three assignments—the non-technical summary, the review paper, and the laboratory report—students will be required to submit draft copies for evaluation and suggestions for improvement. The students will then revise these assignments and submit them for either reevaluation or grading. For the remaining assignments in the course, students will have the option to submit a draft copy for evaluation before a final copy is graded. This, of course, necessitates that due dates for assignments be somewhat flexible. Within the time constraints of the semester, the opportunity to rewrite and revise an assignment will be given priority over a fixed due date. Examination and Grading: ENVE 301W will be divided between lecture and laboratory portions of the course. The lecture will count for 60% of the final grade; while the laboratory will count for 40% of the grade. Each will have a significant writing component.

- General Education: None
- Diversity: None

ENVE 401 Occupational Safety and Environmental Health (1) Regulations, management practices, hazard identification, exposure assessment, monitoring, employee protection, and program management for occupational safety and health.

ENVE 401 Occupational Safety and Environmental Health (1)
The passage of the Occupational Safety and Health Act of 1970 created the Occupational Safety and Health Administration (OSHA), a federal agency, to protect employee safety and health. In 1983 OSHA established hazard communication requirements. By May of 1988, all employees, regardless of size, were required to comply with the Right-To-Know Standards. These regulations established the need for employee training on potential occupational hazards and safe work practices. This training includes safety equipment training, management procedures to address workplace hazards, and accidental emergency response planning. Companies established safety and health managers for their facilities along with employee training. The goal of this course is to introduce students preparing for work in the environmental field to important topics, issues, and training needs for addressing environmental-occupational safety and health. Course topics include: regulations, management practices, hazard identification, exposure assessment, monitoring, employee protection, and program management.

ENVE 411 Water Supply and Pollution Control (3) Water supply, wastewater characteristics, design of unit processes for water and wastewater treatment, sludge processing, and related new technologies.

ENVE 411 Water Supply and Pollution Control (3)
Providing safe drinking water to the public and decontamination of wastewater before discharge are the two main functions of municipal water systems. Properly designing and operating municipal water and wastewater systems allows safe and sustainable use of this limited resource. This course introduces students to design concepts used in water and wastewater treatment processes. Concepts will be categorized into physical, chemical, and biological processes, and presented through a series of lectures, readings, and problem solving. Subjects covered include: water and wastewater characteristics and flows; unit processes for drinking water treatments, including coagulation, flocculation, sedimentation, water softening, filtration, and disinfection; and unit processes for wastewater treatments, including preliminary headwork, primary sedimentation, secondary treatment, tertiary nutrient removal, final clarifier, and residual digestion and management. After completion of this course, students should have the basic knowledge necessary to select and design water and
wastewater treatment processes.

ENVE 413W Operation and Control of Treatment Systems (3) Wastewater treatment, water treatment, solids handling, hazardous waste site control and operations, operator certification, report writing.

ENVE 413W ENVE 413W Operation and Control of Treatment Systems (3)

This course provides students with knowledge and experience related to water treatment, wastewater treatment, solids handling, hazardous waste management, operator certification, and safety, through a combination of lectures, lab experiments, pilot studies, and field trips. The focus of the course is on operation and control of water and wastewater treatment plants. There is also an emphasis on technical report writing.

ENVE 415 Hydrology (3) Watershed response to rainfall events; hydrologic systems; ground water flow.

ENVE 415 Hydrology (3)

Hydrology is the study of water’s movement over the earth and in the atmosphere, with a particular focus in the class on the processes of precipitation, infiltration and runoff. The general public focuses on hydrology when there either is too much water (flooding) or too little water (drought). Engineers working in the hydrology arena focus on evaluating the timing and location of potential floods, designing structures and sites to minimize the impacts of the site on the hydrologic behavior of an area, and evaluating potential sources of water supply during drought times so that the public impact of a drought is minimal. This course builds on concepts learned in the hydraulic design course in terms of conveyance system design. Course topics include determination of the safe yield of a water supply, calculation of hydrographs in ungaged watersheds, the hydraulics of groundwater wells, and the design of stormwater management structures to minimize flooding. The students use currently available models from the U.S. Department of Agriculture, the U.S. EPA and the U.S. Army Corps of Engineers in their watershed evaluations and design of stormwater control practices.

ENVE 416 Treatment Plant Design (3) Design of treatment facilities for water and waste water based on regulatory requirements and standards.
ENVE 416 Treatment Plant Design (3)

This capstone design course will teach students how to integrate various design concepts they have learned from other environmental engineering courses, including ENVE 411 Water Supply and Pollution Control, ENVE 415 Hydrology, ENVE 417 Hydraulic Design, and ENVE 425 Hazardous Waste Management. Additional design and design related concepts will be introduced through a series of lecturer, seminars, tours, case studies, and design projects. Subjects covered include unit processes for water and wastewater treatment, hydraulic design, sludge handling and disposal, chemical storage and safety, project bidding and management, plant design and retrofitting, and engineering ethics and society impacts. After completion of this capstone design course, students should have basic knowledge in selection and design of conventional and modern environmental systems, especially water and wastewater treatment processes and application of knowledge they learned from various environmental engineering courses in solving real world engineering problems.

General Education: None
Diversity: None
Bachelor of Arts: None

ENVE 417 Hydraulic Design (3) Design of water and waste water conveyance systems and storage facilities.

ENVE 417 Hydraulic Design (3)

The delivery of clean drinking water and the collection of wastewater are two of the fundamental activities of municipal or regional governments. Installing new systems or rehabilitating old ones are expensive, large-scale infrastructure projects. Therefore, it is important that these projects be designed correctly and address both current population needs and growth projections for the design life of the project, typically 25 or more years. This course builds on the concepts learned in fluid mechanics and applies them to the design of municipal water conveyance systems. Students learn to apply the appropriate pipe flow equation (Darcy-Weisbach, Hazen-Williams, or Chezy-Manning) to the design of the conveyance system, e.g., drinking water supply, sanitary sewer collection and storm sewer collection systems. Their projects focus on the design of small conveyance systems and use currently available EPA models for water supply, sanitary sewer, and stormwater piping design. Students also learn to perform basic population projections, design water storage towers and design appurtenances such as manholes and storm sewer inlets. Culvert, weir and orifice design also are covered in the class.

ENVE 425 Hazardous Waste Management (3) Overview of regulations, risk assessment, waste minimization and pollution prevention, treatment of hazardous waste, and remediation of contaminated sites.

ENVE 425 Hazardous Waste Management (3)

This course covers concepts and techniques for managing hazardous wastes. Subjects covered include hazardous waste fundamentals (hazardous waste characteristics, regulations, fate and transport, and toxicology), current management practices (environmental audits, and pollution prevention), treatment and disposal methods (physicochemical processes, biological methods, stabilization and solidification, thermal methods, and land disposal) and site remediation (site characterization, and remedial technologies). Additional hazardous waste management related concepts will be introduced through a series of lectures, tours, case studies, and design projects. After completion of this course, students should have basic knowledge in identifying hazardous wastes, understand physical, chemical, and biological factors governing the fate of a compound in the environment, know the fundamental physical, chemical, and biological processes used to treat hazardous wastes.

ENVE 430 Sustainable Engineering (3) A course on engineering which uses ecological principles to minimize waste and maximally use input materials.

ENVE 430 Sustainable Engineering (3)

This course is for upper-level and graduate students in engineering science, environmental engineering, engineering technology, or environmental pollution control. Sustainable engineering is a term that describes engineering which maximizes the use of all input materials and minimizes waste using principles of ecology. The course is designed to train engineers to use the principles of sustainable engineering in their practice. Engineers responsible for the design and operation of industrial systems have a social responsibility for not harming the environment. The topics include pollution prevention, waste minimization, process economics and resource management. Evaluation is based on both examinations and a project.

Environmental Resource Management (E R M)

E R M 151 Careers and Issues in Environmental Resource Management (1) Career opportunities and topical issues in the environmental sciences.

E R M 151 Careers and Issues in Environmental Resource Management (1)
The course is designed to introduce students to the environmental resource management field early in their academic experience. The course is the first required E R M course for students in the major and the minor. Weekly presentations are made by E R M graduates and Penn State faculty and student interns.

Course objectives include: discuss topical issues in environmental sciences and resource management; familiarize students with career opportunities for E R M graduates; provide feedback from graduates to students on enhancing their Penn State experience; enhance critical thinking and communication skills; create an opportunity to address student questions about the E R M program.

Two types of writing assignments (PIT and PDP) are designed to enhance the learning process and to serve as a basis for awarding a course grade. The PIT (Putting It Together) is written by each student during the last 10 minutes of each class period, and requires the student to focus on one point made by the speaker and to either explain how the point contributes to the students understanding or explain why they disagree with or have questions about the point. Students are instructed to consider the audience for their PIT to be lay people and that the PIT should simulate a letter to the editor or an Op Ed piece. The PDP (Personal/Professional Development Plan) is developed by each student throughout the semester. It is designed to facilitate the establishment/refinement of career goals and objectives, and to be an action plan for their Penn State experience. Students receive feedback on their draft PDP early in the semester.

Student progress is assessed by evaluating the PITs and the PDPS. The course grade is weighted 48% PITs, 17% draft PDP, and 35% final PDP.

A conventional auditorium-style classroom that can accommodate up to 100 students is required.

The course is offered each fall semester at the University Park campus. Current and projected enrollments are 75-100 students. The course could be offered at other Penn State campuses utilizing distance learning technologies.

E R M 210 (GN) Environmental Factors and Their Effect on Your Food Supply (3) An exploration of how urban environmental problems influence our ability to obtain food and natural resources.

E R M 210 Environmental Factors and Their Effects on Your Food Supply (3) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Environmental Factors and Their Effect on Your Food Supply will study links between environmental issues and the agricultural systems from an urban perspective. Insects, one of the most diverse groups of organisms, will be used to provide examples of human impact on ecosystem structure and function. Differences between sustainable and non-sustainable systems, along with efforts to create sustainable human systems, will be explored. This course looks at the Earth as a single ecosystem composed of interacting biological, chemical and physical systems. The social and economic dimensions of issues will be discussed. We will focus on how non-human systems interact with each other and with the human population. The course focus will be on the principles and concepts from biology, chemistry, geology and physics. Specific topics treated within the context of this interdisciplinary course include but are not limited to: human response to (insecticide use) and influence on (reduction in diversity) insects, the unique and life-giving properties of
water, nutrient cycles, energy flows, species diversity, the dose-response relationship, risk assessment and perception, global climate change, and conservation of energy and matter.

We will also be learning about how the use of the scientific method an interdisciplinary setting. Scientific situations found in everyday life will be used to explore and practice how to ask questions, gather data, and reach conclusions.

Evaluation of student performance will be based upon critical thinking exercises, class discussion, short in-class writing assignments, and examinations. The critical thinking exercises will be assessed by written material submitted by the student. The written material will include the steps undertaken in the exploration (methods), the observations made (results) and description of what was learned (conclusions). These explorations will help students learn to solve problems and think critically using information they have discovered. The explorations will require students to supplement their observations with information found on the Web and in the Library. Students will be required to participate in class discussions using CourseTalk. Contributions will be evaluated for content and quality. Short, in-class, written student feedback will be collected frequently to determine the level of understanding and attendance. Two midterm evaluations and a comprehensive final will be given. These exams will consist of higher-order thinking questions requiring the student to synthesize information to solve problems. Self-quizzes will accompany each unit to help the student determine when they understand the concepts being learned.

Environmental Factors and Their Effect on Your Food Supply is an introductory level, general education science course without prerequisites. This course is not a prerequisite for any other course. An introductory level course in sustainable environmental systems will provide a useful context for future course work.

Recitation sections will be used to increase the student's understanding of concepts discussed during lecture. Computer exercises develop specifically for this course, the textbook CD-ROM, and data found on the Web will be used to aid students in their understanding of course concepts.

The course will be offered annually in the spring. Expected enrollment is 100 students.

E R M 300 Basic Principles and Calculations in Environmental Analysis (3) This course will teach basic problem solving skills while using examples taken from environmental media – air, water, and soil.

E R M 300 Basic Principles and Calculations in Environmental Analysis (3)

Students will be provided a contextual link between chemical, biological and physical principles learned in their basic science courses and the advanced environmental concepts presented in later required Environmental Resource Management (E R M) courses. This course will demonstrate the dependence of environmental science on biology, chemistry and physics. Students will integrate the knowledge from each of these disciplines into an interdisciplinary framework. This course will teach Environmental Resource Management students basic problem solving skills while using examples taken from environmental media – air, water, and soil. Students will have many opportunities to examine, manipulate, and solve quantitative problems related to the environment. This is a required course for Environmental Resource Management majors.

The Pennsylvania State University

This course will provide students the opportunity to learn and apply basic measurement techniques that serve as critical tools in professional practice in water resources. Mapping development and use serves as a critical aspect of water resources engineering and planning, and a major portion of this course will focus on the fundamentals of surveying and translation of surveyed data into useful maps and engineering drawings. Students will learn the theory that underpins basic surveying and then apply this theory in actual survey practice. Autocad serves as a primary software tool used in engineering design and water resources planning, and students will be afforded opportunities to use Autocad to present and process various watershed- and survey-based data. Geographic information system (GIS) techniques will also be investigated as a tool to process, record, analyze, and display various spatial data commonly used in water resources planning and engineering design. Students will learn the basic techniques and processes used to transfer data between GIS and Autocad, both of which are commonly used in practice. The course will also investigate the instrumentation, techniques, and theory involved in common water resources measurements including weather conditions (which serve as the principle driving conditions in water resources), flow monitoring, basic soil properties, water movement in soils, and water quality sampling and analyses. Students will conduct hands-on exercises that will focus on the use of various instruments and techniques commonly employed to conduct such measurements. Data collected will be processed and analyzed within the context of professional practice case studies. The various aspects of the course will coalesce around the concept of the watershed being the basic unit of water resources analyses and design, and students will experience how various measurement techniques and approaches are necessary tools for practicing professionals. This course will be useful to any undergraduates seeking degrees in a major related to water resources planning, engineering, or technology.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

E R M 430 (PPATH 430) Air Pollution Impacts to Terrestrial Ecosystems (3) Overview of the direct and indirect effects of air pollutants on terrestrial plants and ecosystems.

Pollutant sources, transport, meteorology, and temporal and spatial trends of pollution dispersion and deposition are introduced. An overview is presented of the direct and indirect effects of air pollutants on terrestrial ecosystems with an emphasis on plant life. The effects of ozone, sulfur dioxide, nitrogen oxides, particulate matter, halogens, and combined pollutants leading to acidic atmospheric depositions are presented. Emphasis is placed on air pollutants as plant pathogens leading to symptoms and eventual long-term accumulative effects to entire ecosystems. Methods of diagnostics, factors affecting plant response, ecosystem decline and resiliency, pest interactions, assessment of loss and cost/benefit analysis leading to abatement follows. Final parts of the course include perspectives of public awareness, development of National Ambient Air Quality Standards, compliance prevention of significant deterioration, and the Clean Air Act reforms of 1990. Evaluations of student performance are made by unannounced quizzes and two scheduled examinations. The course is offered every Spring semester.

E R M 431 (VB SC 431) Environmental Toxicology (3) Effects of pollutants on animal health at the chemical, physical, and cellular level.

E R M (VB SC) 431 Environmental Toxicology (3)

This ecotoxicology course is designed to provide a mechanistic understanding of how chemicals released into the environment affect individuals and populations. General concepts of fate and transport of chemicals in the environment, including sources and emission of pollutants, is a major focus of this course. In addition, the principals underlying the study of adverse health effects, toxicology, will be described. The experimental means used to assess toxicity and the regulation of chemical releases by governmental agencies will be included. Many of these concepts will be reinforced through the use of a case study approach where a pertinent, timely, environmental issue is incorporated into the ongoing lectures.

E R M 433 Transformation of Pollutants in Soils (3) Processes regulating fate and transport of metals, organics, nutrients, salts, pathogens, and radionuclides in soil systems.

The Pennsylvania State University
E R M 433 Transformation of Pollutants in Soils (3)
The course provides the chemical and biological basis for understanding, predicting and controlling the fate of pollutants added to the soil. The material falls distinctly into two major sections: Section I discusses the fundamental concepts of soil science as they relate to the fate of pollutants in soil systems. Section II provides specific coverage of important classes of soil pollutants. The environmental impacts associated with soil enrichment of these pollutant groups are discussed. Primary emphasis is given to pollutants having adverse effects on human health via water and the food supply, namely, trace elements, trace organic contaminants, pathogens, and radionuclides. The major plant nutrients, nitrogen and phosphorus, warrant coverage because of their potential negative impacts on aquatic systems. Salts can harm soil productivity and structure and thus represent a third distinct pollutant category.

Instructional Objectives: The course objectives are twofold: 1) to provide the chemical and biological basis for understanding the fate of pollutants added to the soil, and 2) to provide specific coverage of the important classes of soil pollutants. The students should gain the ability to predict the behavior and fate of pollutants in soils on the basis of various tabulated chemical and biological pollutant parameters.

Evaluation Methods: Performance will be evaluated based on three roughly equally weight factors: homework/quizzes; midterm exam; and final exam.

Relationship to Other Courses: This is a conversion of E R M 426 into a three credit course.

Relationship to Major, Option, Minor or General Education: The restructuring of the E R M major will require students to select two of the three credit ERM 43x courses as Prescribed Courses. In addition, E R M 430 and 432 will be on the list of courses for the ecology selection, and appropriate 43x courses could be taken in the student's specialization. Thus, it is possible that a student would take all four of the 43x course and have them "count" toward meeting the requirements in their major.

Frequency of Offering and Enrollment: E R M 433 will be offered once each year. This course has traditionally attracted 30-50 students and the future enrollments are likely to be similar or perhaps larger. The changing to three credits may actually increase enrollments from students outside the Environmental Resource Management major, including graduate programs.

E R M 435 (W F S 435) Limnology (3) Biogeochemistry and natural history of freshwater ecosystems.

E R M (W F S) 435 Limnology (3)

This course will define and describe major principles (physical, chemical, biological, and ecological) that govern the structure and function of freshwater ecosystems (ponds, lakes, and rivers). Current scientific literature will be critically reviewed and discussed in relation to comparative philosophy, methodology, and case studies that cover a range of topics in limnology. The objectives of E R M (W F S) 435 are to familiarize students with the major physical properties, chemical cycles, taxonomic groups of organisms, and ecological interactions that define and describe the natural function of aquatic ecosystems. The course will use case studies to illustrate and examine pertinent issues (e.g., excessive material loading, introduction to exotic species, habitat fragmentation, and climate change) that can alter the structure and function of aquatic ecosystems. Knowledge of these basic ecosystem principles will be applied towards formulating real-life resolutions to the issues identified in class, in order to better manage aquatic resources (methods to reduce material loads, transport controls of exotic species, habitat restoration, and reduction of global gases). This course will be useful to both undergraduate and graduate students seeking degrees in Environmental Resource Management, Wildlife and Fisheries Science, Ecology, and other related subjects. At the undergraduate level, the course will serve as a 400-level selection in both the Environmental Resource Management and Wildlife and Fisheries Science degree programs. At the graduate level, the course will compliment several Wildlife and Fisheries courses that form the compliment of that degree program. Moreover, the course can satisfy the course requirement for ecosystems ecology in the inter-college Ecology graduate program and serve as a breadth course in Water Resources for graduate students in the Watershed Stewardship program. Grades will be based on three exams, individual participation and written papers. This course will generally be offered each year in the fall with expected enrollments of 20 to 30 students.

Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

E R M 436 (W F S 436) Limnological Methods (3) Application of current methodologies to evaluate the biological, chemical, and physical characteristics of aquatic ecosystems.

E R M (W F S) 436 Limnological Methods (3)
Limnological Methods will instruct students to apply state of the art analytical measurements in order to gain an understanding of how and why ecosystems support specific biodiversity and biogeochemical cycles. The course will help students define key ecological elements (e.g., ecosystem metabolism, resource limitation, predator-prey relations) in both qualitative and quantitative terms, thereby making them tangible, tractable, and readily understandable. The course will use an instructional rubric to integrate conceptual, analytical, and communicative exercises in order to instruct students about how to evaluate variation in natural ecosystems.

This course provides experiential training in the scientific process (rubric), so students can learn by doing, thereby internalizing their knowledge. Course content is organized into three 5-week sections, each of which will emphasize one component of the biogeochemical cycle (physical, chemical, biological). In each section, students will carry out a focused group study designed to evaluate how a pertinent environmental perturbation can affect that component of the aquatic biogeochemical cycle. The course content in each five-week block will have students: 1) review the experimental design and hypothesis, 2) implement the experimental design in the field or laboratory, 3 and 4) process and analyze samples in the laboratory, and 5) make statistical and graphical evaluations of the experimental results relative to their hypothesis (in class) and present these findings in written form. Knowledge of these basic ecosystem principles will be applied towards formulating real-life solutions to the issues identified in class, in order to better manage aquatic ecosystems.

This course will be useful to undergraduate students seeking degrees in Environmental Resource Management and Wildlife and Fisheries Science, as well as graduate students pursuing degrees in Ecology, Forest Science, Wildlife and Fisheries Science, Watershed Stewardship, and other related subjects. At the undergraduate level, the course will serve as a 400-level elective in Environmental Resource Management degree program, Wildlife and Fisheries Science degree program, and the inter-college Marine Science option. At the graduate level, the course will complement several Forest Science and Wildlife and Fisheries courses. Moreover, the course can also satisfy the requirements for the ecosystems ecology focus in the inter-college Ecology graduate program. Grades will be based on three research papers, and a final laboratory practical.

**E R M 447 Stream Restoration (3)** Stream restoration including fluvial geomorphology, stream classification, impairment, sediment transport, stable stream design, and watershed assessment.

**E R M 447 Stream Restoration (3)**

Stream restoration will focus on understanding stream impairment by evaluating the stream channel, its floodplain, and the watershed supplying runoff to the stream. A wide variety of stream assessment tools will be introduced along with several stream classifications systems. Students will be expected to understand stream stability and evolution and how human activities and our infrastructure impact the health of a stream. Various restoration approaches designed to restore impaired stream reaches to stable channels will be introduced. Stream stability and the role of sediment transport in the context of pebble-count data will be introduced along with several sediment transport models. Stream biology, especially macro-invertebrates, the role of riparian buffers, and desirable plant populations will be introduced.

The laboratory experiences will focus on stream assessment tools and stream surveys needed for the stream restoration design process.

Students will be responsible for assessing a stream and developing a preliminary design for restoring an impaired local stream reach.

**Note**: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ERM 450 (W F S 450) Wetland Conservation (3)** Wetland types, classification, functions and values; hydrology, soils, and plants; introduction to wetland identification and delineation; wetland regulations.

**ERM (W F S) 450 Wetland Conservation (3)**

Wetlands are unique ecosystems, differing in many ways from both terrestrial and aquatic environments. They provide recognized values and functions to society, although these values and functions remain difficult to quantify. The study of wetlands is interdisciplinary, requiring background knowledge in science, management and policy disciplines. This course will explore the variety of wetland types and functions, and emphasize the diverse hydrological, biological, chemical, and physical interactions that occur within wetlands. Because wetlands are recognized as valuable assets in the landscape, issues surrounding wetland management and regulation have taken on increased importance; we will address these issues as well. Topics will also include the restoration of degraded wetlands and wetland creation, along with the construction of wetlands for pollution abatement.

Students will become familiar with different wetland types and how they are classified, and will develop skills in understanding the interactions between wetland hydrology, hydric soils and hydrophytic vegetation. They will also develop an understanding of important national and state policies and regulations pertaining to wetlands and their protection and delineation. Classroom assessment will be based on three cumulative exams, homework assignments, and a final project.

The course will fulfill 3 credits of electives or technical selections in the Wildlife and Fisheries Science major. Other students university-wide may be interested in the course, and the intention is to develop a course that is accessible to a wide variety of traditional and non-traditional students. For proper instruction, a technology classroom with computer projection equipment will be required.

ERM 450 will be offered each fall semester. Enrollment will be limited to 60-80 students.

---

**ERM 494H Honors Thesis (1-6)** Independent study directed by a faculty supervisor that culminates in the production of an ERM honors thesis.

**Honors Thesis (1-6)**

### Environmental Studies (ENVST)

**ENVST 100** (GS) Visions of Nature (3) An interdisciplinary introduction to environmental studies, including perspectives from ethics, economics, public policy, art, literature, history, geology, biology, and ecology.

**ENVST 100**

**Visions of Nature (3)**  
*(BA)* This course meets the Bachelor of Arts degree requirements.

An interdisciplinary introduction to environmental studies, including perspectives from environmental ethics, economics, public policy, art, literature, history, geology, biology, and ecology. This course may be team-taught and include field and laboratory work. Students will be introduced to interdisciplinary study of the environment with an overview of nature’s role as subject matter in a variety of academic disciplines. Students will examine the formative value of nature in our cultural history, consider the role of nature in our current value systems and social and economic structure, and be introduced to the theory and practice of ecological science. Students should achieve a broad understanding of the value (not just economic) of living things and their habitats. The course will demonstrate how information from different fields can interconnect. It also serves as the “gateway” course for students intending to major or minor in an interdisciplinary environmental studies program, introducing the program's concerns, aims, and goals and the varied academic perspectives to be built upon in later coursework.

General Education: GS

**ENVST 200** Research Methods in Environmental Studies (3) Focus on interdisciplinary research methodologies from biology, social sciences, and humanities for the study of environmental issues and problems.

The Pennsylvania State University
ENVST 200 Research Methods in Environmental Studies (3)

Interdisciplinary approach to various research methodologies which are necessary to study environmental issues or problems. The course will be separated into a three-part series focusing on (1) research methods in the humanities, (2) research methods in public policy and the social sciences, and (3) biological/ecological research methods and will be team-taught. Students will review the methods used to address problems in environmental studies and will work to understand environmental issues. The objective of this course is to introduce students to the interdisciplinary nature of environmental studies by combining ideas and information from the natural sciences, social sciences, and humanities, and to present a general idea of how nature works and how knowledge is acquired in the various fields of study. This course will also provide students with the experience of developing the principles and concepts learned as guidelines for future studies and for decision-making concerning environmental issues. This course is a critical element in the Environmental Studies major, and also fulfills a requirement for the minor in Environmental Studies.

ENVST 297A Education and Outreach at the Fair Trade Festival (1)
Media, PA, is the home to the first Fair Trade Town in the United States and the first campus in the Penn State system to earn Fair Trade University status. The two communities will work together to help create, promote, and distribute education and outreach materials at the 2012 Fair Trade Festival and Marketplace, being held in Media on Sunday, October 21, 2012. Students enrolled in this course will receive an introduction to the scholarship and ethical responsibilities of engaging with a community partner, learn about the Fair Trade Movement and Penn State Brandywine’s Fair Trade University status, and create the online and print materials to address the overarching goal of the Fair Trade Festival-education and outreach. Students will be required to volunteer at the Festival to assist with communicating the education and outreach efforts.

**ENVST 400W** Senior Seminar in Environmental Studies (3) Writing-intensive study of a specified topic in environmental studies integrating approaches and research from a variety of disciplines.

**ENVST 400W ENVST 400W Senior Seminar in Environmental Studies (3)**

A writing-intensive, interdisciplinary study of a specified topic in environmental studies (examples: Mountains, Water, Forest, Endangered Species), integrating approaches and research from a variety of academic disciplines, including literature, history, geography, biology, geology, microbiology, meteorology, economics, political science. Students will develop a major project in consultation with a participating faculty member. This project will include a research question, a research design, and a final project, which will be presented to the class with commentaries from other students. Focusing on a specific issue or concern in environmental studies, students will apply research methods covered in earlier coursework to their extended project or paper. This project will require students to delve deeply into one aspect of the topic, but they will be expected to draw on information and expertise from a variety of disciplines to support their findings. This course, part of the required core for the B. A. in Environmental Studies, serves as the senior capstone course for the major, reinforcing its interdisciplinary focus.

**ENVST 424** (ENGL 424) Creative Writing and the Natural World (3) Creative writing workshop focused on the environment and related issues.

**ENVST (ENGL) 424 Creative Writing and the Natural World (3)**

American literature includes a long and rich tradition of writing that focuses on the natural world. From the oral stories of indigenous people to the journals of the first European settlers, many have looked for a way to understand their own place in the world based upon their relationship to the earth and its creatures. While Puritans often discerned the pleasure or wrath of God in the environmental changes they experienced, Transcendentalists like Henry David Thoreau and Ralph Waldo Emerson sought out moments of spiritual enlightenment by immersing themselves in the natural order. More recently, such poets as Galway Kinnell, James Wright, and Robert Bly have attempted to connect with the depths of collective unconsciousness by exploring the natural world, while others, like Mary Oliver, Dan Gerber, Jim Harrison, Gary Snyder and Wendell Berry, have used transcendental thought and melded it with Christian and Buddhist insights. Still others, like Gary Paul Nabhan, Rachel Carson, and Alison Hawthorne Deming have brought science to bear upon the riches that nature, art, and scientific exploration may offer when joined in the pursuit of a deeper understanding of, and relationship with, the natural world. This course will acquaint students with the tradition of American nature writing, as well as contemporary nature writing, in the genres of nonfiction, poetry and fiction. Students will be introduced to issues of style, philosophy, and content, as they produce their own essays, poems, and stories. The course culminates in the production of a portfolio of nature writing. Much of this work will begin in class with specific assignments, which will include field work, and feedback from other students in the class. As a workshop course in creative writing, the emphasis will be upon the production of literary texts that interact with the natural world and upon the revision of those texts.

FIN 108A Personal Finance: Wealth Management (1)

Personal finance with an emphasis on wealth management and retirement planning along with investment securities, tax strategies, personal financial needs, and long-term care. The course deals with financial wealth management with an emphasis on fundamentals for retirement planning. The objective of this course is for students to gain an understanding
of the financial needs of retirement and the actions over the course of one's life required to meet those needs. The course begins with an overview of basic financial planning, financial strategies and types of investment opportunities available to individuals and families by covering basic retirement and personal planning concepts. Investment securities such as money markets, stocks, mutual funds and real estate investments are then covered in the investment securities section and include tax issues and investment plans along with Roth IRAs, ROTH 401(k)s, defined benefit plans and other qualified plans. The final part of the course covers planning strategies for retirement along with strategies while in retirement including withdrawal strategies, long-term health care, and family obligations.

FIN 301 Corporation Finance (3) Nature of finance function; risk and return concepts; working capital; dividend policies; mergers; security markets; acquisition and management of corporate capital; analysis of operations, forecasting capital requirements; raising capital; and planning profits. Available to Baccalaureate students only. Not available to students who have taken B A 301.

FIN 301 Corporation Finance (3)
Finance 301, Corporation Finance, is a 3 credit course. FIN 301 is offered, at minimum, once a year during either the fall
or spring semester. FIN 301 may not be used to satisfy Smeal College baccalaureate degree requirements. A student may not receive credit toward graduation for both FIN 100 and 301, or for both BA 301 and FIN 301. FIN 301 provides a basic understanding and framework of how firms acquire, allocate, and control their financial resources. It covers the acquisition and management of corporate capital; analysis of operations, forecasting capital requirements, raising capital, and planning profits. This is an introductory finance course focusing on basic financial principles and practices essential to managing a business. In addition, this course also covers financial markets, institutions, organizational forms and investments. FIN 301 relies heavily on accounting and economic principles with a strong emphasis on problem solving and decision making. One objective of this class is to be able to assess the past and present performance of the firm. This can be achieved through vertical and horizontal analysis of the financial statements as well as ratio analysis. Another aspect of this course is the financial planning process. This includes concepts such as pro forma statements, developing the statement of cash flows, as well as the budgeting process through the preparation of the cash budget. Another facet of this class is to understand how financing and investment decisions are made. Students will learn about the time value of money as well as fundamental techniques for valuing financial assets such as stocks and bonds. Additionally, capital budgeting techniques such as the net present value and internal rate of return are explained. Other important objectives include the management of working capital, the determination of the cost of capital, operating and financial leverage, and risk and return. The concepts and tools covered in this class allow the student to gain a fundamental understanding of how the finance function works within the business environment. Finance 301 promotes critical thinking and will enable the student to better integrate the individual functions of a business in order to make good business decisions.

Concurrent: FIN 301

The Pennsylvania State University

The objective of this course is to give students an understanding, and working knowledge of the major decisions faced by corporate financial managers. In general, the course will emphasize three major areas: investment and capital budgeting, financing and capital structure, dividend policy and corporate growth. A basic understanding of financial analysis and valuation will be provided. Basic corporate securities markets will be described. Determinants of securities prices, yields, and returns will be discussed. Special emphasis is placed on the role of the capital markets in financing corporate operations and investment, in facilitating corporate reorganizations and financial restructuring, and in reflecting owners wealth and evaluating the performance of corporate management. Within the general framework, a number of special topics will be covered, including mergers and acquisitions and the market for corporate control, international financial management, derivative instruments and their applications to corporate risk management. Students taking the course should have a working knowledge of elementary statistics, and a basic understanding of accounting and financial statements.

FIN 305M Financial Management of the Business Enterprise (Honors) (3) Development of advanced practices of financial management and their application to decision making in a business firm.

The objective of this course is to give students an understanding, and working knowledge of the major decisions faced by corporate financial managers. In general, the course will emphasize three major areas: investment and capital budgeting, financing and capital structure, dividend policy and corporate growth. A basic understanding of financial analysis and valuation will be provided. Basic corporate securities markets will be described. Determinants of securities prices, yields, and returns will be discussed. Special emphasis is placed on the role of the capital markets in financing corporate operations and investment, in facilitating corporate reorganizations and financial restructuring, and in reflecting owner’s wealth and evaluating the performance of corporate management. Students taking the course should have a working knowledge of elementary statistics, and a basic understanding of accounting and financial statements.

As an Honors course, students will study the impact of corporate activities on the market value of its stock, so a common stock pricing model is needed that accounts for factors that matter to investors. FIN 305M looks at these issues through topics such as, time value of money, risk and return, and valuation of stocks and bonds. The course concludes with topics related to specific business activities, such as capital budgeting, capital markets, capital structure, and dividend policy. The level of discussion and critical analysis expected in FIN 305M compliments the expected level of performance for honors students.

FIN 306W Investment Valuation (3) Approaches to investment strategy, investment decisions; valuation of corporate securities, including the impact of dividend policy and capital structure.

FIN 395A Nittany Lion Fund - Associate Fund Manager Practicum (3 per semester/maximum of 6) Introduction to working with the Nittany Lion Fund. Students work on projects such as investor reports and earnings reports along with assisting Nittany Lion Fund Managers with the development of stock pitches based on market insights.

FIN 395A Nittany Lion Fund - Associate Fund Manager Practicum (3 per semester/maximum of 6)

While the Lead Fund Manager is accountable for all work done by a given sector, an Associate Manager often does much of the behind the scenes work. Specific assignments include: putting together the weekly reports for investors, creating reports that are sent out to the Nittany Lion Fund (NLF), and providing assistance with pitches.

In general, an Associate Manager is supposed to be well informed about the sector’s current holdings and with that, an Associate should be able to provide support for the Lead Manager during a stock pitch or class discussion. Although Associate Fund Managers are the workhorses of the fund, often performing some of the more tedious tasks, the position offers the opportunity to learn from the Lead Managers as well as make an impression by delivering quality work.

While Lead Managers are responsible for and have the final say in stock pitches and sector strategies, it is highly encouraged that the Associates provide their Lead Managers with pitch ideas as well as inform them of their opinions about current market trends. Ultimately, the Associate Manager position is more detail and task oriented than the Lead Fund Manager position. However, there is always room to provide high quality insight into the market by asking thought provoking questions during pitches and staying current on market news.

Students use financial software, such as Bloomberg Professional, Reuters Station, TradeStation, and FactSet, and must have working knowledge of various forms of financial modeling. The Penn State Investment Association (PSIA), which co-exists with the Nittany Lion Fund, LLC (NLF) assists the NLF in ensuring students are appropriately trained in these skills. The PSIA is open to students of all majors and experience levels and is the starting point for students interested in participating in the NLF.

**FIN 406H** Security Analysis and Portfolio Management (Honors) (3) Advanced valuation theory; fundamentals of security analysis; portfolio construction and management.

**FIN 406H - Security Analysis and Portfolio Management (Honors)(3)**

Finance 406 is about how to invest money in stocks, bonds and derivative securities. The course focus is on creating portfolios of assets rather than on picking individual assets for investment. To create a portfolio of assets, the portfolio manager must have knowledge of the assets available for purchase, the markets the assets are traded in, and the statistical and mathematical techniques needed to assign weights to the assets within the portfolio. The manager must also be able to predict changes in the economy that justify changes in the portfolio, as well as be able to evaluate the performance of the portfolio relative to standard benchmark portfolios such as the S&P500.

The course begins with a review of the structure of the asset markets, basic pricing formulas, fundamental and technical analysis, and the tools from previous statistics, economics, and calculus classes needed. Different models relating risk and return such as the CAPM and arbitrage pricing model are covered. These models exemplify how investors are willing to trade-off the variance in returns from investments with the expected value of the investment. The students then learn

*The Pennsylvania State University*
how to choose the weights to assign to each asset available to maximize the expected return while minimizing risk of the portfolio using the portfolio theory of Markowitz. While the focus of this section of the class is on investing in equities, the portfolio theory learned is applicable to all types of assets. Because there are important differences between stocks and bonds, the next section of the class focuses on the unique characteristics of fixed income securities. Models explaining the different risk and return characteristics of bonds are examined. Because fixed income securities prices and returns are directly linked to changes in interest rates, theories of what determines interest rates are presented and applied to evaluating the performance of portfolios including fixed income securities. The course concludes with an overview of investment in options and futures contracts. The basic pricing models for these types of assets are reviewed as well as practical concepts of investing in derivatives such as margin accounts and creating synthetic returns using combinations of different types of options.

As an Honors course, the level of research and academic investigation is enhanced with outside journal readings in topics such as portfolio theory, anomalies and market efficiency, overpricing, and current topics in Portfolio Management as material is published. This material is incorporated into class discussions and course exams beyond what is covered in the standard version of the class.

FIN 407 Multinational Financial Management (3) Analysis of the international aspects of managerial finance; emphasis on the impact of the international financial environment on firm operations.

FIN 408 Financial Markets and Institutions (3) Functional analysis of major credit institutions; sources and uses of funds; impact of government regulation.

FIN 408H Financial Markets and Institutions (Honors) (3) Introduction to bonds, equities, derivatives, and financial institutions including insurance, pension funds and mutual funds.

Finance 408H is about financial institutions and markets. The markets section will include approximately 9 classes on debt markets, and another nine classes on equity markets (e.g. NYSE, NASDAQ) and derivatives (options and futures). The primary institutions covered in this course include insurance companies, mutual funds, pension funds, securities firms, and investment banks. We hope to include an analysis of personal financial planning issues as well. Reading assignments at various web sites will be made. The course will include weekly spreadsheet assignments that focus on the course concepts presented in class. These assignments ought to provide a rigorous understanding of the concepts recently presented in class and they will develop and improve the students’ Excel skills. The overarching objective is for each student to develop an understanding of markets and institutions that will provide lifetime enjoyment.
FIN 409 Real Estate Finance and Investment (3) The sources and uses of credit; instruments and methods of financing; the theory and practice of real estate investment analysis.

FIN (R EST) 409 Real Estate Finance and Investment (3)

Real Estate financial markets are rapidly changing, with new instruments and ideas introduced every day. Therefore, the emphasis of this class will be on preparing the students to tackle any new instrument that might be introduced to the market, understanding why and how people make money in the field, and be able to understand and utilize the innovations that have been introduced and are still being developed. The course will provide a broad coverage of real estate investment, finance, and valuation. We will study different measures of investment performance, the impact of the financing decision on real estate investment risks and return, and various real estate financing techniques. Specific topics include: legal considerations in real estate finance, present value concepts, fixed rate mortgage loans, adjustable rate and variable payment mortgages, underwriting and financing residential properties, income-producing properties and valuation fundamentals, leases, projecting cash flows, investment value, investment and risk analysis, financial leverage and financing alternatives, disposition and renovation of income properties, financing corporate real estate, real estate capital markets, the secondary mortgage market and REITS.

FIN 413 Risk Management of Financial Institutions (3) Measuring and managing risk faced by financial institutions.

FIN 413 Risk Management of Financial Institutions (3)

This course focuses on measurement and management of risk faced by managers of modern financial institutions. Students will be introduced to various tools and techniques used to measure and analyze risk from traditional balance sheet activities (such as credit risk, liquidity risk, insolvency risk, interest rate risk and market risk) and from off-balance sheet activities. In addition, students will learn strategies for controlling and managing the risks to achieve the best risk-return outcome. This course is designed to be an upper level, undergraduate course. Students will have opportunities to apply fundamental concepts learned in other finance classes. It is recommended for business students, especially finance majors, who wish to have careers in financial service firms or non-financial firms that use financial assets.

FIN 414 Financial Trading and Applications (3) This course focuses on financial modeling and analysis of trading strategies. Bloomberg, Reuters, spreadsheets and trading simulations are used extensively.

The Pennsylvania State University
FIN 414 Financial Trading and Applications (3)

The focus of this course is the application of financial theory and technology to the practice of financial trading. The first half of the course examines tools for constructing and evaluating trading strategies. After a short review of probability and statistics, attention turns to the analysis of models for valuing options, credit default swaps, and other financial instruments. Emphasis is placed on the assumptions underlying these models and the application of these models in the real-world. This discussion includes approaches for estimating volatility and the use of the models when underlying assumptions do not hold. The first half of the course concludes with a discussion of value-at-risk and tools for evaluating performance. The analysis of these topics highlights commonly used measures of performance and the potential pitfalls using these measures.

The second half of the class examines trading strategies commonly used by hedge funds. Strategies discussed include merger arbitrage, relative value, momentum, index arbitrage, and other quantitative based strategies. Students also study accounting based and fundamentally based trading strategies. Application of these strategies in both the equity and fixed income markets is examined. Attention is also paid to the impact of trading on market prices and other aspects of market microstructure.

Throughout the second half of the course, students participate in a project in which they form into teams of fund managers who analyze market data with the purpose of constructing and managing a portfolio that applies various trading strategies. The fund is managed using market simulation software that allows students to execute all trades using real-time market prices and allows them to go long or short equity, commodity, fixed income, and foreign exchange instruments, as well as derivative securities. Upon completion of the project, students make a pitch to a group of potential investors (the class) in which they summarize the themes underlying their strategies, provide performance metrics for their fund, and discuss their primary trading strategies if they were to continue as fund managers.

The course pedagogy is lectures, case assignments, trading and valuation simulations, and a trading project. The class will make extensive use of Bloomberg, Reuters, trading software, basic programming languages for financial software, and other technology available. Students are evaluated based on their performance on assignments, exams, and the portfolio project.

FIN 415 Advanced Financial Modeling (3) Develop financial models using spreadsheets, VBA programming, and trading room applications such as Bloomberg and @Risk.

FIN 415 Advanced Financial Modeling (3)

Students will develop financial models using spreadsheets, VBA programs, and trading room applications such as Bloomberg and @Risk. Students learn Excel’s financial functions, shortcuts, web queries, data analysis capabilities, and optimization techniques. Students use @Risk software to define variable distributions and correlations to run Monte Carlo simulations to evaluate stochastic processes. Students access market data through the internet and proprietary providers such as Bloomberg. Students build models to construct optimal portfolios of securities and asset classes. Students estimate asset returns using CAPM, multi-factor models, and fundamental analysis. Students estimate asset volatility using exponential weighting, GARCH, and Black-Scholes implied volatility. Students model and optimize bond portfolios using portfolio duration, convexity, leverage, and income. Students value options using Monte Carlo, Black-Scholes, and binomial option pricing models. Students learn to apply Brownian motion models to asset returns and prices. Students construct and test delta-hedging strategies for option portfolios. Students use matrix algebra and Excel matrix functions to compute portfolio return and volatility. Students write VBA functions and macros using VBA code, objects, array functions, loops, matrix operations, and data types. Achievement is measured by assignments, computer-based exams, and a final assignment.

FIN 430 Estate Planning (3) Liquidity planning, titling and transfer of property, trusts, federal unified tax system, gifting, incapacity planning, legal documents.

FIN 430 Estate Planning (3)

This course addresses estate planning issues for individuals as part of an overall personal financial plan. Personal financial planning encompasses budgeting, credit management, insurance, taxes, investments and retirement planning in addition to estate planning. The objective of this course is identifying and quantifying the goals of an individual regarding their final wishes and determining how best to meet those goals given the current applicable laws and the individual’s situation. The estate administration and probate process are discussed along with common estate documents. The titling and transfer of assets as well as asset valuation are covered. Methods used to provide estate liquidity are presented. Common forms of trusts that are used in estate planning are introduced along with an overview of basic methods of transferring family owned businesses. Case studies are emphasized since estate planning is unique to each individual’s situation. Some legal research is commonly incorporated into the course because estate planning is based on federal and state law. Student evaluation generally consists of examinations, individual and group assignments, quizzes, and case studies. Students desiring a career in financial services, law, or tax accounting should consider incorporating this course into their program of study. Currently the course is offered once per year with a class enrollment of 40.

FIN 451 Intermediate Financial Management (3) Case studies are used to develop skills in solving a variety of financial management problems.

FIN 451 Intermediate Financial Management (3)

This course is designed to reinforce and extend the principles from its prerequisite, FIN 301, Corporation Finance. It is a required course for the Finance major. It will also serve as a business supporting course for students in other School of Business majors.

Students will develop skills necessary to solve a variety of complex financial problems by applying statistical and analytical techniques and utilizing electronic spreadsheets. The course will enable students to develop a firm foundation in the principles of financial management and an understanding of how concepts in financial management are used in the valuation process. The topics are consistent with the knowledge required to prepare students for the relevant portions of
Level I of the Chartered Financial Analysts (CFA) Exam. The course will address important financial management topics, including the methods of analyzing capital budgeting decisions and the unique problems they pose, long-term capital structure and dividend policy decisions, corporate financial analysis and forecasting, working capital management, and additional special topics in financial management.

FIN 456 (IL) International Capital Markets (3) This course develops understanding of international capital markets by striking a balance between institutional details, theoretical foundation and practical application.

FIN 456 International Capital Markets (3) (IL)

This course extends the issues of international finance into a framework for international investing. It is designed for students aspiring to be money managers and investors operating across national boundaries.

Foreign travel enables students to contrast the micro-structure of financial markets in the United States with those in other centers that play important roles in our global financial system.

Students are also given an opportunity to learn about business, cultural, and political aspects of international investment. Besides class meetings on campus, students are assigned readings, videos, and research projects to be completed before the foreign experience component of the course. While abroad, students visit specific sites and attend specific lectures that will enable them to complete further course work upon their return to the United States. Topics include the case for international asset diversification, international asset pricing, international stock, fixed-income, and derivative markets, and the process of international investing. Other materials will be specific to the foreign business center visited during the course.

(The initial offering of this course included a visit to London where students toured the stock exchange and financial firms, attended lectures, and met with financial executives; this gave students exposure to a major international financial institution and the largest currency market in the world.) The travel portion requires additional costs to the student beyond tuition.

FIN 460 (R M 460) Real Estate Financial Analysis (3) Debt and equity financing, capital structure, "creative financing," risk analysis, corporate asset management.

FIN (R M) 460 Real Estate Financial Analysis (3)

The objective of this course is to provide in-depth coverage of real estate investment and financing decisions. The focus is on the private market, including corporate asset management. Investment analysis moves from the basics of forecasting cash flows, through advanced topics including the impact of real option value on investment and development decisions. Risk measurement is given particular attention with a focus on sensitivity and simulation analysis. There is some coverage of asset pricing models like the Capital Asset Pricing Model, which is critically analyzed with respect to its applicability in real estate markets. The impact of illiquidity, management costs, and the suspicion of non-normally distributed returns are explored, as are the implications of relative market inefficiency. The financing module begins with the basics of mortgage debt mathematics, which is then extended to include comparisons of various repayment programs. Included are interest-only, balloon, shared appreciation, growing equity, graduated payment and reverse annuity loans, as well as various creative financing of commercial properties.

The latter include participating mortgages, convertible mortgages, and mezzanine debt. Featured in the corporate asset management section is the lease/buy decision. Other topics may be addresses based on current events. It is anticipated that guest speakers will be invited where appropriate.

Bachelor of Arts: None
Effective: Spring 2012
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
FIN 461 Portfolio Management and Analysis (3) Investment policy and process, modern portfolio theory, portfolio construction, and portfolio performance measurement and evaluation.

The course provides a mix between theories and applications of portfolio management. The content is divided into five sections: (1) implications of the efficient market hypothesis and behavior finance in portfolio management, (2) investment policy and process, (3) diversification and modern portfolio theory, (4) portfolio performance measurement and evaluation and (5) bond portfolio management.

After completing the course, students are expected to (1) demonstrate the importance of portfolio management under the efficient market hypothesis and behavior finance, (2) write an investment policy statement, (3) create an optimal portfolio, (4) manage bond and equity portfolios, and (5) measure and evaluate portfolio performance.

FIN 470 (R M 470) Real Estate and Capital Markets (3) Analysis of publicly-traded real estate of both the equity, (REITs) and debt (MBSs) sides. The course also provides international perspectives.

The objectives of this course are to expose the student and explore the issues associated with the analysis of "public" ("Wall Street") real estate, including both equities (such as Real Estate Investment Trusts or REITs) and debt vehicles (such as Mortgage-Backed Securities or MBSs). In addition, the course will focus on the increasingly globalization of real estate capital markets as the real estate sector becomes integrated into the global financial system. The differences between private and public real estate analysis will also be explored, including the suitability of traditional asset pricing models for real estate analysis. Topics include the growing impact of institutional real estate forces on the real estate sector, the use of modern financial economics methods to real estate including the concept of market efficiency, modern portfolio theory applications, market measures of risk and return, the use of option-based models, and other advances. The rise of Wall Street's interest in real estate securities is an important institutional development and serves as the underlying background for the analysis of MBSs using fixed-income security techniques.

As globalization has spread, the real estate sector has moved with these changes and prospects for a global real estate market are examined and evaluated.

This course serves as a compliment to FIN 460, which emphasizes traditional financial analyses of individual real estate projects. In FIN 470, real estate securities are viewed as a natural extension towards the complete integration of real estate and capital markets. In this sense, these courses will enable traditional and modern analyses of the real estate sector for years to come.

FIN 471 International Finance (3) Financial decision making in an international environment. Emphasis on topics relevant to small businesses and entrepreneurs.

This course provides an understanding of the basic terminology, structure, and importance of international finance for corporations. It will also help enhance analytical and critical thinking skills. Topics of study include foreign exchange (FX), FX markets, FX instruments, FX risk, hedging of these risks, international debt and equity markets, etc.
FIN 475 Financial Decision Making (3)
The objective of this course is to tie together the various topics in finance such as corporate finance, investments, and financial institutions & markets. Using the variety of different analytical tools and techniques that students have been exposed to, they will
- Evaluate the relationship between profitability and solvency of a firm.
- Project the need for short term and long term financing.
- Evaluate the various sources of financing and recommend the optimal.
- Budget the capital that is raised to identify the profitable projects that capital should be invested in.
- Evaluate different dividend policies to maximize value of a firm.
- Carefully examine the risk-return tradeoff that portfolio managers face.
- Study the relationship between assets and liabilities of financial institutions.
- Critically evaluate synergies that are created in mergers and acquisitions.

FIN 481 Advanced Financial Analysis (3) Capstone course integrating financial analysis coursework. This course is based on the case study method which provides a challenging setting in which to apply business concepts.

FIN 481 Advanced Financial Analysis (3)
It is a required course for the Finance major. Students are expected to develop a working knowledge of several advanced topics in financial analysis sufficient to help prepare them for the relevant portions of Level I of the Chartered Financial Analysts (CFA) Exam. They also are expected to demonstrate their ability to integrate the tools and knowledge developed in their previous coursework by completing cases. Each class is devoted to discussion of firms in various situations. Class participants are challenged to apply financial concepts and concepts from other disciplines. This course requires extensive, detailed pre-class prep for each class. Use of spreadsheets is required. The course objectives include the following:

* Application of financial concepts and related tools.
* Further develop decision making skills.
* Enhance critical thinking skills.
* Augment written and oral communication skills.

FIN 489 Seminar in Finance (3) In-depth study of new trends, concepts, and practices in financial or portfolio management.

FIN 489 Seminar in Finance (3)
New financial institutions or practices are created to address the needs of financial managers and investors as a result of changes in economic conditions, government legislation and regulation, geopolitical events, or financial markets. Examples of changes during the past decade that effect financial managers are elimination of the Glass-Steagall Act that separated commercial and investment banking activities, evolution of nation-wide branch banking, development of financial derivatives markets that can be used to manage financial risk exposure, creation of the European Monetary Union and the Euro currency, and growth of private (defined contribution) pension plans. The Seminar will give students the opportunity to rigorously examine one of these current developments before they are included in textbooks and regular courses. As such, the Seminar will rely primarily on recent publications in academic and practitioner journals.

The Seminar will start by studying the problems that motivated financial innovation.

Students will consider the economic difficulties that existed, or would have existed, in the absence of the financial innovation(s) covered by the Seminar. This will be followed by comparing methods of financial management before and after the financial innovation.

In examining innovative practices in financial management, Seminar participants will study the strengths and weaknesses of the specific financial institutions that facilitate the innovations they examine, such as the organized exchanges where financial derivatives are traded.

Participants will also learn the nature of related government regulation and judge the effectiveness of this regulation. In the case of financial derivatives a federal regulatory agency oversees the operation of financial derivatives markets.
An important component of the Seminar is the study of specific practices for utilizing financial innovations. Business firms have developed sophisticated methods for using financial derivatives. These practices will be carefully assessed from the standpoint of the practitioner.

FIN 491 Financial Planning Capstone (3) Critical thinking and decision-making about personal financial planning topics in the context of the financial planning process.

FIN 491 Financial Planning Capstone (3)

This capstone course is designed to reinforce and extend the principles from each of its prerequisite courses. The CFP Board of Directors are requiring the addition of this financial plan course as a requirement to CFP Board's educational standards to enhance the knowledge, skills and abilities of individuals seeking to attain the CFP® certification to deliver professional and competent financial planning services to the public.

This course will engage the student in critical thinking and decision-making about personal financial planning topics in the context of the financial planning process. The purpose of this course is to both refine and develop the skills needed to become successful financial planners when working with individuals, families, and business owners in helping them to meet their financial needs and goals. This course will address the important financial planning topics listed in the previous section.

FIN 495A Nittany Lion Fund -- Lead Fund Manager Practicum (3 per semester/maximum of 6) Advanced work with the Nittany Lion Fund. Lead Fund Managers are accountable for sector and stock performance as well as reports. Students delegate work to Associate Fund Managers while focusing a great amount of attention to all aspects of stock pitches, weekly and quarterly reports, along with conducting weekly training session for new analysts.

FIN 495A Nittany Lion Fund -- Lead Fund Manager Practicum (3 per semester/maximum of 6)

A Lead Fund Manager is accountable for sector performance as well as sector output. This means that while the Lead Fund Manager has to be an effective delegator of work to his or her Associate(s), the manager must also have great attention to detail when reviewing all aspects of pitches, weekly reports, and earnings reports. A Lead Fund Manager focuses more on knowing the big trends in his or her overall sector and in each subsector. The Lead is the strategist for the sector. He or she has the responsibility of choosing what stocks to pitch in class and at PSIA meetings. This means that the Leads must constantly reevaluate not only their current portfolio, but the sector as a whole, in order to find where to best allocate their respective funds. Another major responsibility that a Lead Fund Manager has is to lead a group of anywhere from 10-50 PSIA members. While there are weekly educations for the PSIA analysts, it is one of the most important responsibilities of a Lead Fund Manager to provide support for the PSIA analysts to help them with their PSIA certification assignments. In addition to helping the analysts understand their weekly assignments, the Lead Fund Managers are also responsible for holding weekly sector meetings to give sector-specific educations to a smaller group of PSIA analysts.

The goal for any Lead should be to get as many PSIA analysts as involved and interested as possible in PSIA. The interest generated should draw PSIA analysts to apply for entrance into the Nittany Lion Fund. PSIA is the feeder system for the NLF, and making sure there are intelligent and motivated applicants each semester ensures that the investment group will continue to have a strong class going forward. Consequently, once the Lead Manager has developed analysts' interest in applying to the NLF, it is an unwritten responsibility of the Lead to help the applicants to become as best prepared as possible for the interviews (Associates are encouraged to help new applicants as well). In total, the role that the Lead plays is not just that of a figurehead, the Lead must be well informed of current events and trends within their sector, and they must be able to speak eloquently of their investment strategy when speaking in class, at PSIA meetings, or to investors at the yearly investment meeting.

FIN 495B Nittany Lion Fund - Executive Board Practicum (3 per semester/maximum of 6) Oversight of the Nittany Lion Fund (NLF) and its overall performance. Executive Board members and Directors are accountable for all aspects of the Nittany Lion Fund. Students interact with investors and are responsible for delivering professionally developed performance reports, weekly information updates, and annual shareholder meetings. Executive Board members assume specific duties within the NLF associated with their position, along with a shared responsibility for being a spokesperson for the fund.

FIN 495B - Nittany Lion Fund - Executive Board Practicum (3 per semester/maximum of 6)

The Executive Board practicum affords students with intense practical experience in oversight and performance of the Nittany Lion Fund (NLF). Executive Board members and Directors are accountable for all aspects of the NLF. An Associate Fund Manager is responsible for all work that is presented to his or her Lead Fund Manager and in turn, a Lead Fund Manager is responsible for all work that is submitted for the Nittany Lion Fund (NLF) to view. While those are certainly tremendous responsibilities, an Executive Board Member is ultimately responsible for any and every document that leaves the Nittany Lion Fund, most of which are delivered to investors. It is the responsibility of the Executive Board to make sure that both the weekly news, and quarterly performance releases are flawless. Additionally, although the Lead Fund Managers are responsible for their individual sector’s performance, the Executive Board is held responsible for the overall performance of the Nittany Lion Fund. This means that the Executive Board must do a number of things to keep performance awareness and accountability at high levels.

Students in these executive positions are expected to ask excellent questions during stock pitches and be, in a sense, a devil’s advocate for each pitch, making sure that there was proper due diligence and thought put into the strategy of the pitch. With regard to being accountable to investors, the Executive Board is responsible for conducting weekly conference calls with the NLF’s investment committee as well as leading the yearly investor meeting. As for the PSIA, the Executive Board is responsible for booking locations for meetings, handling the funds for all club transactions, and developing and implementing the education for the analysts to become PSIA certified.

Education is a very large part of the Nittany Lion Fund. An Executive Board Member is expected to utilize their past experience to provide helpful influence to other members of the Nittany Lion Fund as well as the large group of PSIA members. While the members of the Executive Board all have different responsibilities, in aggregate the group is responsible for the performance of Nittany Lion Fund as a whole, as well as being individual figureheads and spokesmen for the NLF.

**FINSV 411 Federal Income Taxation for the Financial Services Professional (3)**

The purpose of this course is to attain an appreciation of and a familiarity with the Federal Income Tax Code as well as develop the analytical skills to evaluate potential tax liability and tax planning on a situational basis. Furthermore, the student should attain a working knowledge and comfort level in the use of tax software. This will be accomplished via a five module approach. The modules are:

a. Module 1 An Introduction to United States Taxes and the Basic Tax Model: An introduction to both income taxation and other types of United States taxes. The purposes of the Federal tax law are examined and the legislative, administrative, and judicial sources of Federal tax law are analyzed. Module 1 concludes with the introduction of the basic tax model for the individual taxpayer.

b. Module 2 Gross Income: Presents the income component of the basic tax model. Included in this module are the determination of what is income and the statutory exclusions that are permitted in calculating gross income.

c. Module 3 Deductions: Presents the deduction component of the basic tax model. Deductions are classified as business versus--non-business, "for" versus "from", employee versus employer, active versus passive, and reimbursed versus unreimbursed. The effect of each of these classifications is analyzed. The presentation includes deductions that are permitted, limitations and disallowances associated with deductions, and the treatment of losses.

d. Module 4 Tax Computation Methods, Payment Procedures, and Tax Credits: Presents several topics that relate to tax liability determination. The calculation of tax liability, the use of tax credits to reduce calculated tax liability, and the timing of the payment of the calculated tax liability are discussed.

e. Module 5 Property Transactions: Presents the tax treatment of sales, exchanges, and other dispositions of property. Included are the determination of the realized gain or loss, recognized gain or loss, and the classification of the recognized gain or loss as capital or ordinary. The topic of basis is evaluated both in terms of its effect on the calculation of the gain or loss and in terms of the determination of the basis of any subsequent acquisition of property.

The use of a tax software program is embedded within each module.

**FINSV 420 Estate Planning for the Financial Services Professional (3)**

This course examines the why and how people plan for their retirement. The course examines the various aspects of estate planning: wills and trusts, estate and gift tax planning, estate administration and taxation. The course guides the student in a step-by-step process through the entire estate planning process. Critical to the process is gathering the necessary financial facts, setting realistic objectives, and planning the requisite income tax and investment strategies. Students will utilize a range of personal financial statements and planning forms to assist in the gathering, organization, and use of pertinent data.

This course has four objectives: (1) To understand the motives for why people plan for their retirement. Related to retirement planning is the disposition of the residual value of their estate in a financial and tax prudent manner. (2) To understand the process by which individuals explore the various decision options. The most frequently cited motivation for estate planning is to minimize the tax burden on beneficiaries and to maintain the integrity of the planning process. (3) Students are motivated to understand how estate planners manage their client's wealth portfolios. The increasing wealth of the baby-boomer generation and those that follow make this process more important than for earlier generations. (4) To help students prepare for the Certified Financial Planner certification exams.

**FINSV 420 Estate Planning for the Financial Services Professional (3)**

This is an additional course in the Financial Services Option of the Bachelor of Science in Business (BSB) program. It is a relatively sophisticated course and students who select FINSV 420 will complete it only after completing courses in investments, insurance, and taxes.

Evaluation will normally take the form of examinations, a research project, and class participation. At most campuses, the course will be offered once per year.

Food Science (FD SC)

FD SC 105 (GHA) (S T S 105) Food Facts and Fads (3) Impact on society and the individual of modern food technology, food laws, additives, etc.; historical, current, and futuristic aspects.

FD SC (S T S) 105 Food Facts and Fads (3) (GHA)

(BA) This course meets the Bachelor of Arts degree requirements.

Food Facts and Fads is an introductory food course that broadly surveys various aspects of food, agriculture, nutrition, and health. Students in this course explore the components of the food system from producer to consumer; examine issues related to modern food technology, food and nutrition policies, and changes in the food industry; and assess the impact on the food system, consumers, and society as a whole. Students will assess their own food and nutrition behaviors, become more aware of the environment in which they make food decisions, and devise strategies for improving health through better diet and increased physical activity. Students learn through lectures, videos, guest speakers, discussions, individual and group activities, and optional field trips. This course emphasizes active learning and critical thinking. Students are expected to complete electronic quizzes, write two or more short reflective papers, and complete a project on a food topic of the student's choosing, for which information must be gathered from several sources in a variety of ways.

FD SC 207 (AN SC 207) Animal Products Technology (2) Composition, safety, palatability, preservation, and processing of foods from animals, impact of animal production and handling practices on product properties.

FD SC (AN SC) 207 Animal Products Technology (2)
This course is intended to give students knowledge and understanding of production and processing of foods derived from animals (meat, milk, and eggs). Upon completion of this course students will be able to describe and explain the
physical and biochemical characteristics of muscle foods, milk, and eggs. Students will be able to describe and compare harvesting, processing, and preservation procedures used in preparation of animal products for human consumption. Students will be prepared to predict the impact of variations in animal production, handling, harvesting, and product processing on meat, milk, and egg product characteristics. This is one of a group of courses dealing with foods from animals. Related courses offered in Animal Science covers animal growth and development and evaluation of animals and meat products. Related courses in Food Science cover food microbiology, food chemistry, and meat and dairy processing technology. The content of this course is intended to emphasize the connection between animal production and the resulting food products. FD SC/AN SC 207 is intended to be of general interest to people who produce or eat animal products and thus is an integral part of the Animal Sciences major. This course will also be useful for strengthening meat industry knowledge for students in Food Science. FD SC/AN SC 207 will be offered one semester per year. Student performance will be evaluated through written exams, quizzes, and written reports.

FD SC (AN SC) 208 Animal Products Technology Laboratory (1)

This laboratory is intended to be taken along with or following Animal Products Technology lecture. Providing students with an opportunity to experience the procedures involved in harvesting and processing foods from animals. Upon completion of this course students will be able to describe, demonstrate, and explain procedures commonly used in harvesting and processing of muscle food, milk, and egg products. Students will be able to recognize and predict the impact of incorrect procedures for harvesting and processing muscle food, milk, and egg products. The course includes hands-on exercises and demonstrations that allow students to experience the "look and feel" of industry procedures used in harvesting and processing meat, milk, and egg products for human consumption. Focus on issues related to food safety and food quality. Student performance is evaluated through weekly written reports, and a final lab exam.

FD SC 400 Food Chemistry (4) Chemical properties of food constituents as influenced by processing and storage.

Students successfully completing this class will be able to describe the properties of food in terms of the underlying chemistry. They will be able to conduct simple laboratory investigations of the major reactions and report the results in an acceptable scientific format. Achievement of these goals requires both an accumulation of facts and the development of an analytical approach to food.

In the context of a degree in Food Science this course builds upon core science courses to allow students to apply chemical principles to food. By understanding the important underlying chemistry of foods, students will be able to study food processing in terms of the science as well as technology involved. While the course is primarily designed as a requirement of the Food Science major, it is also expected to be useful for non-food science students as a practical application of chemical principles. The course prerequisites are B MB 211 and B MB 212 and students are expected to be familiar with the structures of the key biomolecules (i.e., proteins, lipids, carbohydrates).

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009
Prerequisite:

FD SC 404 Sensory Evaluation of Foods (3) Sensory evaluation of food, methods of test analyses, panel selection and training, taste sensation theory, consumer testing methods.

This course is designed to demonstrate how the senses function in the perception of tastes, flavors, and textures of foods and how sensory tests are used to measure human perceptions. Students will have the opportunity to design sensory tests and apply statistical methods when interpreting sensory test results. The overall objective of this course is to learn the theories and practical applications of sensory evaluation that will enable students to conduct valid sensory tests and use the test results in the decision making process in food product development.

Evaluation will be based on written essay exams, group reports, and written lab reports in which they will be expected to demonstrate their understanding of theoretical issues regarding sensory testing and how to use statistical procedures to effectively interpret the test results. This course is a support course for the Food Science major.

Effective: Spring 2001
Prerequisite:

FD SC 405 Food Engineering Principles (3) Engineering principles of importance to food manufacturing, including units, dimensions, mass and energy balance, fluid flow, rheology, heat transfer, and psychrometrics.

Food engineering will discuss the principles of the various unit operations used in the food processing and manufacturing industry. Topics covered will include: units, dimensions, mass and energy balance, fluid flow, rheology, heat transfer, psychrometrics. Through lectures, the student will learn the principles of fluid flow, heat transfer and mass transfer as applied to food processing and manufacturing operations. Through practicum sessions, the student will be exposed to practical applications in the above three areas. Additionally, they will learn to analyze experimental data, organize and communicate thoughts in a logical fashion through cooperative and collaborative learning strategies, and to write effective lab reports. Through practicum sessions, they will also learn numerical problem solving and to size and select equipment for fluid flow, heat transfer and drying operations within the food industry.

Student evaluation within this course will be conducted through weekly quizzes, home works, lab write-ups and three exams. This is a required course for the food science major. This course serves as a prerequisite for several 4th year required courses within the food science major.

**FD SC 408 Food Microbiology (2)**

Food Microbiology focuses on the application of microbiological principles to foods and food ingredients. Topics covered include: potential for microbial growth in a particular food or food ingredient based on the following parameters - biological structure, nutrient composition, naturally occurring inhibitors, pH, water activity, oxidation reduction potential, temperature, atmosphere conditions and humidity; choice of appropriate microbial detection methods for groups of organisms and foodborne pathogens; identification of types and the consequence of growth of pathogens and non-pathogens associated with particular commodities; evaluation of the effect of different processing conditions on the destruction, survival and growth of spoilage and pathogenic microorganisms; identification of significant factors affecting the association of pathogens with food and food ingredients, events leading to infection and/or intoxication, and prevention and control of foodborne illness; comprehension of the importance of food microbiology in everyday living. Student knowledge will be evaluated through three examinations during the semester and one final exam. This is a C-required course for the Food Science major.

**General Education:** None  
**Diversity:** None  
**Bachelor of Arts:** None  
**Effective:** Fall 2009  
**Prerequisite:**

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**FD SC 409W Laboratory in Food Microbiology (3)**

Food Microbiology Laboratory is intended to demonstrate microbiological concepts through the appropriate use of equipment and laboratory procedures. The laboratory focuses on the practical application of microbiological principles to foods and food ingredients based on the following experiences: development of proficiency in using selected microbiological techniques currently employed in regulatory, quality control and research laboratories; performance of specific microbiological analyses of foods to assess numbers and kinds of spoilage organisms or foodborne pathogens; evaluation of the effects of several processing methods on growth and survival of microorganisms. In addition, this course serves as the required Writing across the Curriculum course for the Food Science Curriculum. As such, the course emphasizes problem solving and critical thinking as manifested by written and oral skills; scientific analysis of data, including statistics where applicable; demonstration of basic scientific writing and critiquing skills; usage of primary scientific sources in the food microbiology literature. Practical laboratory skills are assessed through measurement of proficiency in plating and isolation of an unknown microorganism. Writing skills are measured through development of a team project, written lab reports and journal article, and three examinations during the semester. This is a C-required course for the Food Science major.
FD SC 410 Chemical Methods of Food Analysis (3) Qualitative and quantitative determinations of food constituents.

Chemical Methods of Food Analysis (3)

FD SC 411 Managing Food Quality (2) Principles and applications of Hazard Analysis Critical Control Points. Statistical tools for the control and improvement of food quality.

Managing Food Quality (2)

FD SC 413 Science and Technology of Plant Foods (3) Physical and chemical behavior of plant-based raw materials and ingredients, with emphasis on parameters influencing finished product quality.

Science and Technology of Plant Foods (3)

This course focuses on the unique importance of foods produced from plants to human health and wellness. The influence of cultural practices, harvesting and handling methods and processing technology on quality and safety of whole, fresh and processed food products using minimal processing and fermentation to preserve food products from plant sources will be emphasized.

FD SC 414 Science and Technology of Dairy Foods (3) Physical and chemical behavior of dairy-based raw materials and ingredients, with emphasis on parameters influencing finished product specifications.

Science and Technology of Dairy Foods (3)

FD SC 415 Science and Technology of Muscle Foods (3) Physical and chemical properties of muscle food commodities,
with emphasis on muscle-based ingredients in formulated foods.

**FD SC 415 Science and Technology of Muscle Foods (3)**

This course applies food science and technology to the processing, storage and handling of red meat, poultry, and seafood products. The course includes two lectures and one lab session each week. The laboratory sessions are conducted in the Meat Laboratory located on Porter Road. Student performance is evaluated based on two mid-term exams, one final exam, lab reports including short summaries and full reports and homework exercises. Course objectives are set to: 1. help students understand the nature and importance of structure, compositional and quality differences among muscle food ingredients and their impact on product manufacturing, 2. inform students of the basic steps of primary processing for live stock, poultry and seafood species and their impact on meat properties, 3. give students first-hand experience with typical manufacturing steps and processes for fresh, cured, smoked, fermented, dried or cooked meats and help them understand how variations in processing will affect finished product properties, and 4. give students practice in applying the scientific method in answering questions or solving problems that may arise during the manufacture of muscle foods products. Course activities draw on the students' prior knowledge of food chemistry, food engineering, food microbiology and food analysis, applying concepts from those disciplines in the manufacture and evaluation of meat products. Course topics cover the range from meat science through technical and practical aspects of meat product manufacture including product quality, safety, profitability and regulatory issues. There is emphasis on meat industry practices including traditional and recent technology. Through laboratory exercises and independent group projects students gain experience in application of the scientific method for solving product development problems.

**FD SC 430 Unit Operations in Food Processing (3)**

Unit Operations in Food Processing will discuss major unit operations used in the food processing and manufacturing industry. Topics covered will include: thermal processing, microwave heating, extrusion, food packaging and waste management. Through lectures, the student will learn the principles of selected unit operations in food manufacturing, and the effects of input and operational parameters on performance and food quality. Through practicum sessions, the student will be exposed to practical applications in the above areas. Additionally, they will learn to analyze experimental data, organize and communicate thoughts in a logical fashion through cooperative and collaborative learning strategies, and to write effective lab reports. Through practicum sessions, they will also learn numerical problem solving and to size and select equipment for food manufacturing operations.

Student evaluation within this course will be conducted through weekly quizzes, home works, lab write-ups and two exams. This is a required course for the food science major.

---

**Forensic Science (FRNSC)**

**FRNSC 100 (GN) Introduction to Forensic Science (3)**
Introduction forensic science.

The course will review the application of the physical and social sciences as they apply to the forensic analysis of evidence. Students will gain an understanding of how forensic science and the law intersect to solve crimes. The course will track evidence recovered from the crime scene, as it moves to the crime laboratory where it is analyzed and into the courtroom where it is presented to a jury. The course will cover the most common types of physical evidence obtained in criminal and civil cases.

General Education: GN
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**FRNSC 200 (GN) Introduction to Crime Scene Investigation (3)**
This course offers an exploration of the science, management, and investigative techniques for the field of crime scene investigation.

Students will develop the intellectual skills needed to be able to plan for and organize a crime scene investigation. Each student will understand the nature and value of each kind of physical evidence and how to recognize, collect and preserve it. They will research all the topics in this course and provide their own evidence of competency in each in the form of a professional portfolio. A student who demonstrates competency in the subject matter of this course:

* Employs the philosophies and practice of science;
* Generates hypotheses of crimes based on evidence;
* Can use deduction in a scientific manner;
* Is tenacious when recovering and developing evidence;
* Prescribes recovery and development cascades for: fingerprints; trace evidence; impression evidence; photographs; biological evidence
* Prescribes and amends crime scene search plans;

The Pennsylvania State University
*Sketches crime scenes to scale;  
*Makes competent use of limited time, human and other resources;  
*Calculates: measurements for crime scene sketches; bullet trajectories; Angel of impact; and area of impact  
*Provides complete, admissible reconstruction reports;  
*Understands and accounts for chain of custody

General Education: GN

FRNSC 210 Essential Practices of Forensic Science (3) Basic practices of forensic science including documentation methods (measurements, notes, sketches, and photography), microscopy, communication of results, and integration of concepts from other sciences including chemistry, biology, and physics, as well as mathematics and statistics.

FRNSC 210 Essential Practices of Forensic Science (3)

In this course, students will learn the essential practices of forensic science and criminalistics. The necessity of an objective, rigorous, scientific approach in a forensic investigation will be stressed. This course will prepare students to understand the foundation of forensic science practice including the basic knowledge required to understand the nature and origin of physical evidence, preservation of the physical evidence record, forensic microscopy, and communication of results. This course uses an intensive, problem-solving style and through practical exercises, students will be introduced to:

• Documentation techniques including measurements, notes, sketches, photography, and other techniques  
• Basic microscopy and forensic microscopy  
• Verbal and written communication of forensic findings  

The primary aims of the course are to:

• Introduce students to scientific philosophy, integrity, forensic science, criminalistics, basic practices of forensic science/criminalistics, and the role of the criminalist as they relate to a forensic investigation  
• Prepare students for advanced 400-level courses in forensic science and criminalistics

General Education: None

FRNSC 295 Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Internship (1-18)

General Education: None
FRNSC 296 Independent Studies (1-18)
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

FRNSC 301 Criminalistics IA (3)
Basic concepts of criminalistics and the role of the criminalist in a forensic investigation.

In the laboratory, students will examine physical evidence that has been obtained from crime scenes mocked up at designated locations. The types of evidence chosen for analysis will be contemporary with topics covered in the classroom. Students will learn how to create a case file and to establish a laboratory notebook for their data. They will learn laboratory safety. They will establish an in-laboratory chain-of-custody for the evidence they receive and then track that evidence through its analytical scheme. They will learn to examine the physical evidence according to established forensic procedures. They will learn how to locate trace evidence and to perform presumptive and confirmatory tests when necessary. Finally, since forensic testing ultimately results in testimony in a courtroom, students will prepare written reports of their findings and then present their findings orally in a mock courtroom setting. The course will concentrate on microscopy (stereo, transmitted light, polarized light, and comparison) and its application to the analysis of physical evidence. Additionally, students will employ chemical techniques to classify evidence and pattern matching techniques to individualize impression evidence. The course is relevant to any student majoring in Forensic Science or who has an interest in obtaining employment in local, state, or federal law enforcement agencies and crime lab facilities. The course is required for accreditation through the American Association of Forensic Sciences and is recommended by the National Institute of Justice in their published recommendations for undergraduate curricula in the forensic sciences. The proposed course is a core 300-level science course required in the Forensic Sciences major.

FRNSC 302 Criminalistics IB (3)
Basic concepts of criminalistics and the role of the criminalist in a forensic investigation.

In the laboratory, students will examine physical evidence that has been obtained from crime scenes mocked up at a designated campus location. The types of evidence chosen for analysis will be contemporary with topics covered in the classroom. Students will learn how to create a case file and to establish a laboratory notebook for their data. They will learn laboratory safety. They will establish an in-laboratory chain of custody for the evidence they receive and then track that evidence through its analytical scheme. They will learn to examine the physical evidence according to established forensic procedures. They will learn how to locate trace and biological evidence present and to perform presumptive and confirmatory tests when necessary. Finally, since forensic testing ultimately results in testimony in a courtroom, students will prepare written reports of their findings and then present their findings orally in a mock courtroom setting. The course will concentrate on the examination and analysis of biological evidence and other types of trace evidence in the...
laboratory. Additionally, students will employ chemical, biological, and biochemical techniques to classify evidence. The course is relevant to any student majoring in Forensic Sciences or who has an interest in obtaining employment in local, state or federal law enforcement agencies and crime lab facilities. The course is required for accreditation through the American Association of Forensic Sciences and is recommended by the National Institute of Justice in their published recommendations for undergraduate curricula in the forensic sciences. The proposed course is a core 300-level science course required in the Forensic Sciences major.

FRNSC 400 Courtroom Proceedings and Testimony (1) Introduction to courtroom proceedings and testimony as they related to forensic science.

FRNSC 400 Courtroom Proceedings and Testimony (1)

Classroom discussions will focus on the structure and procedures of the courtroom, the role of its members, admissibility issues, and how testimony is presented in court. Students will read transcripts from actual forensic cases, will discuss how the evidence was presented in court, and will have an opportunity to present data in mock proceedings.

At the end of the course, students will have a strong understanding of how courts operate regarding the introduction of forensic evidence. The course is relevant to any forensic science student who has taken FRNSC 201 and 301, and should be taken either concurrent with or before FRNSC 401. Any student in the Forensic Science major who has an interest in obtaining employment in a private forensic company or a local, state or federal law enforcement agency will benefit greatly from this course.

This is a 400-level forensics course for students in the Forensic Science major. It will also satisfy a requirement for accreditation by the Forensic Science Education Programs Accreditation Commission (FEPAC).

FRNSC 401W Criminalistics II - Advanced Analysis and Crime Scene Investigation (4)

Advanced concepts in criminalistics as they apply to criminal and civil investigations.

In the laboratory, students will investigate scenes of crimes and analyze evidence obtained from them. Students will prepare laboratory reports and testify to their results in a courtroom setting. The types of evidence chosen for analysis will be contemporary with topics covered in the classroom.

At the end of the course, students will have mastered the most common forensic techniques for examining evidence, locating it at scenes and analyzing it in the laboratory. Additionally, they will have mastered the foundation of crime scene investigation and understand the basics of crime scene reconstruction. In the laboratory, students will examine physical evidence.

The course is relevant to any student majoring in Forensic Sciences or who has an interest in obtaining employment in local, state or federal law enforcement agencies and crime lab facilities. The proposed course is a core 400-level science course required in the Forensic Sciences major.

FRNSC 410 A Scientific Approach to Crime Scene Investigation (2)

Principles of crime scene investigation with emphasis on scientific philosophy, concepts, and procedures.

In this course, students will learn many of the essential principles and techniques of crime scene investigation. The necessity of a rigorous scientific approach will be stressed. This course uses an intensive, problem-solving style to teach scene management and the recognition, evaluation, enhancement, documentation, control, and collection of physical evidence. Students will be introduced to:

- Scene management principles
- Search techniques
- Techniques to recognize, enhance, document, and collect various types of physical evidence
- Communication of procedures and results
- Scene reconstruction and its role in a scientific investigation

The primary aim of the course is to immerse students in the scientific philosophy, integrity, scene investigation procedures, criminalistics, and role of the criminalist as they relate to scene investigation.

FRNSC 411 Criminalistics: Trace and Impression Evidence (3)

Laboratory-based examination of forensic evidence; microscopy, classification and identification.

Laboratory-based examination of physical evidence typically recovered from crime scenes. Examination of physical evidence will occur according to established forensic procedures, including the location of trace evidence and performance of presumptive and confirmatory tests. Students will establish a laboratory notebook to document their findings. Since forensic testing ultimately results in testimony in a courtroom, students will prepare written reports of their findings and learn how to present their findings in a courtroom setting. The course will concentrate on microscopy (stereo, transmitted light, polarized light, and comparison), physical and chemical techniques to classify evidence, and pattern matching techniques to individualize impression evidence. The course is relevant to any student majoring in Forensic Science or who has an interest in obtaining employment in local, state, or federal law enforcement agencies and crime lab facilities.
FRNSC 413 Criminalistics: Biology (3) Laboratory-based examination of forensic evidence; biological fluid identification, hair microscopy.

FRNSC 415W Laboratory in Crime Scene Investigation (2) Laboratory course covering crime scene investigation with emphasis on scientific philosophy, concepts, procedures, problem solving, and hands-on activities.

FRNSC 421W Forensic Molecular Biology (3) Concepts and application of serology of molecular biology techniques to analyze biological evidence collected at crime scenes.

Classroom discussions will focus on the application of biochemistry and molecular biology techniques in forensic serology and DNA analysis. The course will start with a history of forensic biology techniques and move quickly to modern day techniques (e.g., STR analysis). Laboratory analysis will include population samples and mock evidence samples. Students will expand their knowledge of population genetics and fine tune their practical laboratory skills. Students will learn about laboratory safety, quality assurance and control, and ethics. They will evaluate results from actual forensic DNA cases, and both discuss how evidence is presented in court and have the opportunity to present their data in mock deposition proceedings. Laboratory exercises will result in the preparation of courtroom ready materials (data, documents, and demonstrations). Many of the classroom discussions will be problem solving exercises designed to emphasize specific applications of laboratory analysis.

At the end of the course, students will have a strong understanding of forensic screening techniques and STR analysis of biological evidence, and how to convey their findings in written format. In the laboratory, students will have analyzed different sample types, interpreted DNA profiles, prepared laboratory reports and case files, and presented the evidence in mock testimony proceedings. As a result, students will have the basic skills necessary to work in a forensic biology crime laboratory.

The proposed course is relevant to any science student who has taken B M B 342, 400, and 401, and any student in the Forensic Science major who has an interest in obtaining employment in a local, state or federal law enforcement agency and/or crime laboratory facility. This is a 400-level forensics course that will be required for students in the Forensic Science major who elect to complete the biology option.
FRNSC 421W Forensic Molecular Biology (3) Concepts and application of serology of molecular biology techniques to analyze biological evidence collected at crime scenes.

FRNSC 421W Forensic Molecular Biology (4)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

FRNSC 427W (CHEM 427W) Forensic Chemistry (4) Analytical and instrumental methods used in the forensic sciences with special emphasis on the analysis and characterization of trace evidence.

FRNSC (CHEM) 427W Forensic Chemistry (4)

The purpose of this course is to provide students with a rigorous and comprehensive exposure to the techniques and methods used in private, state and federal crime labs in the analysis of trace evidence. The course thoroughly integrates lecture and laboratory activities to explore the history, controversies and current issues related to each topic. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write five research papers during the semester. Four of the reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature.

The course is relevant to any student majoring in Forensic Sciences or who has an interest in obtaining employment in a crime lab. The course is required for accreditation through the American Association of Forensic Sciences and is recommended by the National Institute of Justice in their published recommendations for undergraduate curricula in the forensic sciences. The proposed course and the course in Forensic Anthropology/Biology comprise the core 400-level science courses required in the Forensic Sciences major.

The course is designed to be rigorous and comprehensive in scope. Grades will be based on in-class lecture examinations (20%), problem sets (10%), laboratory notebooks (15%), laboratory write-ups (30%), and a term project (written and oral presentations; 25%). The writing component for this course includes: maintaining a proper laboratory notebook; five approximately 10-page reports; and an oral poster presentation. All writing elements are reviewed and graded by the instructor and teaching assistants. Students are allowed to correct, or rewrite, and resubmit notebook entries for three separate submissions (notebooks are graded a total of eight times throughout the semester) and the written reports excluding the final project report. Students are required to submit a preliminary poster for a non-graded review prior to the oral presentation. The writing component of the course accounts for 55% of the total course grade.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Forest Technology (FORT)

FORT 100 Introduction to Forestry (1) A general introduction to forest ecology, history, management, and practices.

FORT 100 Introduction to Forestry (1)

FORT 100S is offered as a 1 credit, first semester course at Penn State Mont Alto. It is an introductory course designed to provide a foundation of forestry and natural resource management to first semester students in the forest technology program and to interested students in other academic programs. This course introduces topics in forestry that will be covered in more detail in subsequent courses in the Forest Technology program. An introduction to forest harvesting techniques, ecosystem management, and forest economics are covered. Alumni and other guests provide different viewpoints on career opportunities. The course is supplemented with a textbook and digital media. It also addresses the core goals of the first-year seminar program.

The course objectives are for students to develop an understanding of forestry, such as collecting forest inventory data and conducting research to learn about natural resource management, and to become familiar with the historical and current biological, political, and social issues in forestry. They will also become better prepared as PSU students through the first-year seminar components.

FORT 105 Forest Mensuration (3) Measurement of forests and forest products.

FORT 105 Forest Mensuration (3)

FORT 105 is a first-year, three-credit course required for the completion of the associate degree in Forest Technology. The course covers the techniques, procedures, and equipment used to measure tree and forest parameters, including various forest products. The course also covers statistical concepts and sampling and includes the use of current computer software. The course includes lectures, and students improve their skills in weekly field lab exercises.

The course objectives are for students to learn the principles and techniques used in forest mensuration, the use of tools
and technology used in forest mensuration, the use of statistics as related to forest mensuration, to prepare and write comprehensive, professional reports, and to learn to work well as a member of a crew under field conditions by always performing accurate and safe work and by following directions and assignments of the instructor.

Course grades will be based on lecture exams, a cumulative final, quizzes, assignments, lab reports, and attendance and participation in class.

General Education: None

Bachelor of Arts: None
Effective: Fall 2002

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

FORT 110 Forest Inventories (3)

FORT 110 is a 3-credit, field-lab-oriented course that is a continuation of FORT 105 (Forest Mensuration) and builds upon other forestry, math, and English courses. Students will apply the principles of tree measurements to the inventory of forest resources. The major inventory systems will be covered as well as sampling techniques and statistical analysis of data.

The management and stewardship of forest resources depends upon the collection, analysis, and conveyance of quantitative and qualitative data that describe forest resources. The data is used to make informed, science-based management decisions concerning the growth, health, and/or volume of forest resources. The basis of the course is learning how to plan, conduct, coordinate, and summarize forest inventories.

The course objectives are for students to develop an understanding of sampling techniques and statistical analysis in the inventory of forest resources, learn how to use forest inventory systems currently used in natural resource management, conduct inventories that are cost-efficient and that meet predetermined sampling standards, learn to accurately and efficiently process and compute inventory data by hand and computer, learn to prepare and write comprehensive, professional cruise, and inventory reports for supervisors and/or clients, and learn to work well as a member of an inventory crew under field conditions. Conducting accurate and safe work, following directions, and the assignments of supervisors and instructors is imperative.

Course grades will be based on lecture exams, a cumulative final, quizzes, lab reports, assignments, and class attendance and participation.

FORT 120 Forestry Computer Applications (2)

FORT 120 is a first-semester, two-credit course that is designed to familiarize students in the Forest Technology program with basic computer applications as well as those specific to forestry. Instruction in the use of the Internet, e-mail, word processing, spreadsheet, and database management software is provided. Students are able to demonstrate proficiency in computer operating skills at the end of the semester, including the use of forestry hardware such as data recorders and software applications.

Course objectives are to help students develop skills in using various computer software packages in forest resource management.

Grading is based on tests, quizzes, and class projects.

FORT 130 Forest Mapping Systems (2)

FORT 130 is a 2-credit course that is designed to familiarize students in the Forest Technology program with basic computer applications as well as those specific to forestry. Instruction in the use of the Internet, e-mail, word processing, spreadsheet, and database management software is provided. Students are able to demonstrate proficiency in computer operating skills at the end of the semester, including the use of forestry hardware such as data recorders and software applications.

Course objectives are to help students develop skills in using various computer software packages in forest resource management.

Grading is based on tests, quizzes, and class projects.
FORT 130 is offered as a 2-credit, first-semester course at Mont Alto. Students will become familiar with a variety of maps commonly used in forestry, including topographic maps, vegetation classification maps, and boundary surveys. Hand compasses will be used for basic field navigation and with maps. Global Positioning System (GPS) technology will be used to record and process locational data for use in forest management. Geographic Information Systems (GIS) will be used to organize and analyze various types of geographically-related data.

The course objectives are for students to develop skills in reading and interpreting topographic and other forest maps, to learn to use a compass for navigation, to measure distances with pacing, to use GPS in forest mapping, and to use GIS. Grades will be based on class and laboratory assignments and problems, quizzes, and exams.

General Education: None
Diversity: None
Bachelor of Arts: None

FORT 140 Forest Surveying (3) Plane surveying including hand compass and survey equipment, map reading, deed and title research, land descriptions and property line location.

FORT 140 Forest Surveying (3)

FORT 140 is a three-credit, field-lab-oriented course that reinforces the skills gained in FORT 130 (Forest Mapping Systems) and MATH 081 (Technical Mathematics). Students will apply the principles of mapping and mathematics to land surveying techniques used by forest technicians and foresters.

The course objectives are for students to learn to measure horizontal and vertical angles and distances in the field, perform boundary, topographic, and road surveys, use USGS topographic maps, and become proficient with deed and boundary research.

Course grades will be based on exams, quizzes, lab reports, assignments, and class attendance and participation.

General Education: None

FORT 150 Dendrology (3) Taxonomy, identification, ranges, and uses of important U.S. timber species and lesser vegetation of a regional nature.

FORT 150 Dendrology (3)

FORT 150 is a first-semester, 3-credit course for students in the Forest Technology program as well as interested students in other academic programs. It is a field course that is focused on taxonomy, nomenclature, ecology, and silvics of common forest plant species. Students are exposed to native and introduced to plant species in south central Pennsylvania. Scientific names, common names, geographic ranges, and economic importance are taught. Students learn to identify plants by key characteristics: arrangement, bark, buds, flowers, fruits, general form, and leaves. Basic plant biology as well as ecological relationships are covered. Information learned in this course serves as the foundation for future courses, including FORT 110 (Forest Inventories) and FORT 160 (Silvicultural Practices).

Course objectives are for students to gain an understanding of the rules of scientific nomenclature, to know the meanings of scientific terms used in dendrology, to identify 100-plus different woody plant species, to know ranges and site requirements for major species, and to know and be able to spell correctly the common and scientific names (family, genus, and species) of plants.

Grading and course structure will be based on daily field quizzes, a mid-term examination, and field and written final examinations.

FORT 160 Silvicultural Practices (3) Principles and techniques of forest establishment, culture, and regeneration systems.

FORT 160 Silvicultural Practices (3)
FORT 160 is a second-semester, three-credit course in the Forest Technology program. It builds upon the knowledge of silvics introduced in FORT 150 (Dendrology). It combines the tools of FORT 105 (Forest Mensuration) with basic ecology and enables students to understand the processes and management alternatives in the forest ecosystem. This is a lecture class supplemented with weekly field laboratory sessions. The lab sessions allow students to experience silvicultural practices through design and implementation.

The course objectives are for students to develop an understanding of silvics of North American forests, to understand silvicultural relationships, and to be able to write and administer silvicultural prescriptions.

Course grading will be based on lecture exams, a cumulative final, lab reports, assignments, and attendance and participation.

FORT 170 Forest Harvesting and Operations (3) Forest harvesting and intermediate operations: forest worker safety, hand and power tools, harvest planning, and best management practices.

FORT 170 Forest Harvesting and Operations (3)

FORT 170 is a three-credit, applied field-oriented course in the Forest Technology curriculum. The course is offered in the four-week summer intersession following completion of the second semester. Students will be introduced to woods safety and the identification of hazards; the safety and use of hand and power tools used in forest harvesting and intermediate operations; and logging equipment safety, maintenance, and operation. Axes, crosscut saws, chain saws, heavy logging equipment including logging skidder, bulldozer, and woods tractor will be used.

Students will work in crews to complete a forest harvest or thinning operation from beginning to end including: forest inventory and stand analysis; the use of best management practices; the development of an erosion and sedimentation plan; harvest planning and layout; forest stand marking; and the harvest of the marked forest stand.

Daily performance is evaluated based upon safety, effort, and motivation, skill improvement, cooperation, and attendance. Course grades will be based on quizzes, assignments, and daily performance.

FORT 175 Forest Products Industry Tour (1) Field tour of local and regional forest products industries.

FORT 175 Forest Products Industry Tour (1)

FORT 175 is a 1-credit, field-based course in the Forest Technology curriculum. The course is offered in the 4-week summer intersession following completion of the second semester. It provides students with the opportunity to visit and tour forest products industries. Tours of sawmills, pulp and paper facilities, plywood factories, and other manufacturing industries are incorporated into a 3-to 4-day field trip in the Mid-Atlantic region. This course provides a basic understanding of forest products industries for FORT 250 (Forest Management Practices).

The course objectives are for students to develop an understanding of general industrial and manufacturing sectors of forestry and to learn and apply basic concepts of business, economics, and management in relation to forest products.

Course grades will be determined by the level of participation at each forest products industry visited and by the quality of trip reports.

FORT 200 Wood Identification and Properties (1) Anatomy of wood and bark; cell wall formation and composition; and identification of wood by gross and microscopic qualities.

FORT 200 Wood Identification and Properties (1)
FORT 200 is a third-semester, one-credit course at Mont Alto. It will introduce students to the basic concepts of the anatomical properties of wood and bark cells. Students taking this class will learn: basic information on tree form and structure; basic information on cell wall chemical composition, formation, and structure. A significant part of the course will be learning to identify and differentiate selected hardwood and softwood species from gross and microscopic characteristics.

The course objectives are for students to gain an understanding of wood formation and structure and to be able to identify assigned wood samples from gross and/or microscopic characteristics.

Grades will be determined from weekly quizzes in wood identification and exams on lecture material.

FORT 210 Arboriculture (3) Selection, planting, care, and maintenance of woody ornamental plants and shade trees grown in urban, sub-urban, and rural landscapes.

FORT 210 Arboriculture (3)

FORT 210 is a third-semester, three-credit forestry elective in the Forest Technology curriculum. The course is recommended for students who have a basic knowledge of tree/plant identification and forestry but with the instructor's permission is open to third-semester-standing students interested in arboriculture. A significant portion of the course includes labs where tree-climbing skills are taught using climbing saddles, ropes, and applicable hardware.

Course objectives include an understanding of the importance of the urban-community forest, the importance of trees and woody plants, how they grow and how to care for them. Students will gain the basic knowledge and experience needed for employment in the field of urban forestry and arboriculture.

Course grades will be based on assignments, lecture exams, a final examination, lab performance, and reports and quizzes.

FORT 220 Forest Ecosystem Protection (4) Principles and concepts involved in managing the forest ecosystem in regard to fires, insects, and diseases.

FORT 220 Forest Ecosystem Protection (4)

FORT 220 is a third-semester, four-credit course that builds upon information learned in FORT 150 (Dendrology) and FORT 160 (Silvicultural Practices). This course will provide students with tools to identify and understand the effects of insects, disease, and fire on individual trees, forests, and ecosystems. They will learn signs and symptoms of insects and disease, integrated pest management principles, tactics of fire suppression, and will complete the PA-130 wildland fire training course. Emphasis is placed on recognition, prevention, and control of insects and pathogens. A case-study approach is used for the major pest problems of the northeastern United States.

Course objectives include development of assessment and diagnostic skills for major plant pests, recognition of signs and symptoms of abiotic and biotic disease, knowledge of integrated pest management, basic fire behavior and control techniques, and development of verbal and written communication skills.

Course grading will be based on scheduled lecture exams and quizzes, a final comprehensive examination, lab reports, and participation.

FORT 230 Aerial Photo Interpretation (2) Aerial photo interpretation techniques applied to land management inventories, mapping, road location, and procurement.

FORT 230 Aerial Photo Interpretation (2)
FORT 230 is a third-semester, two-credit course that explores the applications of aerial photography in forest and natural resource management. Both black-and-white and infrared photographs at diverse scales will be used. Photographic measurements of distance, area, and elevation will be studied. The use of aerial photos in ecological classification, forest vegetation mapping, and forest inventory will also be covered. Lab exercises will include forestry operations such as logging road layout, timber harvest mapping, and property boundary mapping. Linkages with global positioning system (GPS) and geographic information systems (GIS) will be stressed.

The course objectives are for students to develop skills in interpreting and using aerial photos for forest resource management.

Grading will be based on tests, quizzes, lab exercises, and student participation.

FORT 240 Forest Soils and Hydrology (3) The study of forest soils and hydrology, especially as they are affected by forest management activities.

FORT 240 Forest Soils and Hydrology (3)

FORT 240 is a fourth-semester, three-credit course in the Forest Technology program. The course includes the study of soils and forest hydrology, especially as they are affected by forest management activities. Land reclamation activities in the reclamation and re-vegetation of disturbed sites found in the coal mining areas of Pennsylvania are also considered. This course uses outdoor and indoor labs to reinforce material discussed in lectures.

Course objectives are for students to develop an understanding of the physical, chemical, and organic properties of soils, of forest hydrology, and the impacts of forest management activities of the reclamation process and activities, and of the importance of soil and water resources and their conservation.

Course grades will be based on scheduled quizzes, lab reports, assignments, lecture exams, a cumulative final, and attendance and participation.

FORT 250 Forest Management Practices (3) Practical techniques for implementing management plans for forest stands under various ownerships and management regimes.

FORT 250 Forest Management Practices (3)

FORT 250 is a capstone course in the forest technology program taught in the fourth semester. It will give students the opportunity to use the various skills they have learned in other courses to develop management plans for forests managed with varying objectives. Concepts of valuation, timber procurement, and discounted cash flow will be covered. Regulatory, management certification, public sector, and private sector management issues will also be explored. The skills will be applied as students work on a semester-long management plan of a selected forest tract.

The objective of the course is for students to develop skills in creating and executing forest management and timber harvesting plans in forest stands.

Course grades will be based on quizzes, homework, laboratory exercises, management plans, and exams.

FORT 260 GIS for Natural Resources Management (3) Geographic Information Systems technology including mapping and GIS data management procedures w/ emphasis on natural resource management applications.

FORT 260 GIS for Natural Resources Management (3)

In this course, students will acquire the basics of spatial data analysis using geographic information systems technology.
The course will cover acquiring data, manipulating databases, and displaying the results to solve spatial analysis problems. Problems will come largely from natural resources sciences and forest management. GIS is rapidly becoming a standard technology in many disciplines that use data having a spatial component. Students with knowledge and experience in GIS may improve their job prospects significantly.

FOR 203 Field Dendrology (3) Field identification of native and introduced trees and shrubs by leaf, fruit, twig, and bark.

FOR 203 Field Dendrology (3)

This course establishes the basic skills of woody plant and tree species identification necessary for students of forestry, ecology, and natural history. This course should be taken prior to most courses in forestry; students should be concurrently enrolled in careers in forest resources and anatomical properties of wood. The objectives of the course are for students to 1) recognize many of the common woody plant species encountered in Pennsylvania (and the region) and the taxonomic traits used in their identification, 2) employ the diagnostic skills useful for woody plant identification, including the use of dichotomous keys, and 3) identify resources for identification and continued study of woody plants in Pennsylvania and the region. Herbaceous invasive species will also be addressed. This course introduces the use of dichotomous keys for tree identification and silvics, and is almost entirely field-based. Evaluation methods include oral pop-quizzes and a written final exam.

FOR 228 Chainsaw Safety, Maintenance, and Operation in Forest Management (1) Safety, maintenance, skills, and techniques for effective chainsaw operation in forest management.

This course covers the detailed use of the modern chainsaw. The course begins with safety and personal protective equipment (PPE), Occupational Safety and Health Agency (OSHA) regulations, saw selection, and an introduction into safe saw handling skills and techniques.

The course then transitions to saw maintenance and proper care of the chainsaw, and then to a hazard recognition, mitigation, and avoidance component that addresses both the work site and the resource being harvested and processed.

Once these objectives have been understood, the remaining two-thirds of the course focus on the practice of chainsaw handling skills and techniques that are necessary for safe operation. This course has an extensive hands-on, experiential learning component in actual tree-felling and processing in the forest, including on-site discussion of harvesting as a forest management tool.

The course concludes with training in proper log manufacturing, including scaling and grading of the harvested resource. Efficient recovery of the timber resource that minimizes damage on the residual stand is emphasized.

FOR 242 Elements of Project Supervision in Forestry (3) Supervisory techniques developed through an understanding of the behavioral sciences applied to field forestry personnel management.

FOR 295 Forest Technology Internship (1-4) Supervised field experience related to the student's major.

FOR 296 Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FOR 297 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject
which may be topical or of special interest.

FOR 339 Timber Sale Administration (2) Practical aspects of the logistical, environmental, managerial, and regulatory oversight of active and retired timber sales.

FOR 339 Timber Harvesting Systems (2)

This course provides hands-on experience with all of the activities associated with overseeing a timber sale, including the legal aspects of arranging a sale, marking timber and calculating volume, road and sale layout, best management practices, inspections, harvesting equipment, working with contractors and loggers, and liability issues. It should be taken
after completing coursework in mensuration. The objectives of the course are to: 1) obtain and translate a property deed onto the ground and create a professional map of the timber sale area; 2) design a timber sale, including cutting boundaries, skid trails, haul roads, and landings such that site impact is minimized, harvesting efficiency and safety is maximized and productivity is maintained; 3) collect sufficient information for a professional timber sale prospectus, including which harvesting systems would be best suited to the situation; 4) complete an Erosion and Sedimentation plan, a stream crossing permit, and local harvesting ordinance requirements; 5) develop a timber sale contract and a landowner-consultant contract to protect all parties and address all possible legal scenarios; 6) work with, inspect, supervise and provide meaningful feedback to harvesting, road building and landscape contractors; 7) retire a timber sale area to prevent erosion, create habitat variety and/or recreational opportunities, and maintain aesthetic qualities. Evaluation methods include written exams, written and field projects, and participation. This course is offered every fall and class size is restricted.

FOR 418 (US;IL) Agroforestry: Science, Design, and Practice (3) Agroforestry integrates trees in agricultural landscapes, and/or agriculture products into forested areas for multiple benefits.

FOR 418 Agroforestry: Science, Design, and Practice (3) (US;IL)

Agroforestry is the intentional design of land use systems that combine tree crops with plants and/or animals in a manner that seeks to promote ecological and economic benefits within the landscape. Two possible arrangements for such systems are (1) the integration of trees within non-forested settings; and/or (2) the introduction of high value 'crop' species into existing forestlands. The objective of the course is to foster a practical working knowledge of agroforestry as it is experienced both in Pennsylvania and throughout the world, so that students from a variety of backgrounds can integrate agroforestry practices and thinking into their own disciplines, interests, and lives. Although agroforestry is an ancient land use approach, it is new in many places, and improvements and adaptations to traditional practices are needed to meet local circumstances. This course will provide a framework for critical assessment and implementation within this context.

One of the fundamental aspects of agroforestry is that it is a land use system that operates at a landscape or ecosystem scale. For agroforestry to succeed, many factors, including ones external to the agroforestry practice itself must be considered. Therefore the course is interdisciplinary in nature and topics in ecology, economics, sociology, and policy that are related to agroforestry practices will be discussed. In evaluating the students, the primary emphasis is on class discussion. Students will be expected to review and discuss papers and contribute to the ongoing dialogue and debate about agroforestry as a sustainable land use. Students will be required to carry out critical reviews of agroforestry papers and publications as well as design and develop an agroforestry project pertinent to their individual field of interest and expertise. The course will be offered every Spring semester.

French (FR)

FR 001 Elementary French I (4) Grammar, with reading and writing of simple French; oral and aural work stressed. Students who have received high school credit for two or more years of French may not schedule this course for credit, without the permission of the department.

Elementary French I (4)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

FR 002 Elementary French II (4) Grammar and reading continued; oral and aural phases progressively increased. Students who have received high school credit for four years of French may not schedule this course for credit, without the permission of the department.

Elementary French II (4)

FR 051 Elementary Intensive French I for Graduate Students (3) Intensive introduction to French: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts.

FR 052 Elementary Intensive French II for Graduate Students (3) Intensive introduction to French: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts.

FR 053 Intermediate Intensive French for Graduate Students (3) Continued intensive study of French at the intermediate level: reading, writing, speaking, listening, cultural contexts.
FR 083S (GH;IL) First-Year Seminar in French (3) Critical approaches to the dimensions and directions in French/Francophone literatures and cultures.

(BA) This course meets the Bachelor of Arts degree requirements.

Through the reading of texts, discussions (in-class, study groups, listservs), debates, and collaborative research projects, students are introduced [a] to French/Francophone literatures and/or cultures; [b] to the humanities and to the nature of research and scholarship; [c] to cross-cultural issues (international); and [d] to scholarly conduct and responsibilities. Students develop international competence by cultivating curiosity about and empathy for other cultures; by recognizing that social variables, such as age, gender, social class, religion, ethnicity, race, sexual orientation, and place of residence, affect the way people view the world, behave, and communicate; and by developing the ability to locate, organize, and evaluate information about culture(s) from a variety of sources (print, electronic, people, personal observations). The points of departure for the development of all of these competencies are literary and cultural texts from France and French-speaking regions/counties of the world. All texts are in translation, and knowledge of the French language is not required. Students will be evaluated through written essays, quizzes, class discussions, and a collaborative group project. This course will prepare the students for other courses in the humanities by giving them the opportunity to gain insights into the study of the humanities through literary and cultural texts. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. The Department of French plans to offer three (twenty student limit per seminar) first-year seminars per academic year. The course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. This course does not require any special facility or equipment to be taught effectively.

**FR 137 (GH;IL) Paris: Anatomy of a City (3)** 
Survey of the cultural, artistic, literary, and social life of the city of Paris from Gallo-Roman times to the present.

**FR 137 Paris: Anatomy of a City (3) (GH;IL)**  
(BA) This course meets the Bachelor of Arts degree requirements.

FR 137, taught in English, is an introductory survey of the cultural, artistic, literary, and social life of the city of Paris. We will explore painting, sculpture, architecture, music, dance, theatre, literature, as well as the history and geography of this great city through the ages. Beginning with Gallo-Roman Paris and ending with the Paris of today, the course will explore the continuities as well as the changes in more than 2000 years of Parisian history. Students will read representative texts from every period and be exposed to the artistic movements through slides, films, and virtual tours. There will be extensive use of technology (CDs, DVDs, internet). In discussion sections, students will get a chance to discuss readings and fine-tune their analytical skills.

In addition to the three examinations (short answer and essay), there will be short writing assignments and group research projects. This course will complement the Departments of Art History, Architecture, Comparative Literature, Geography, Music History, History. It will require a room equipped for technology and will be offered every semester.

**FR 138 (GH) French Culture Through Film (3)** 
Introduction to French culture through film by French and francophone directors examining gender, ethnicity, and global issues. Taught in English.

**FR 138 French Culture Through Film (3) (GH)**  
(BA) This course meets the Bachelor of Arts degree requirements.

This course, taught entirely in English with no assumption of prior knowledge of French, will entail the study and analysis of a number of recent and not-so-recent French films that present, in one way or another, problems or themes characteristic of French history and society. We will not, however, be concerned primarily with watching these films as "illustrations" of various aspects of French culture; on the contrary, we will study them as films. We will be concerned with the filmic devices used, and with the intellectual and ideological orientations of the people who made them. For this reason we will discuss techniques used in the presentation of various events shown in the films, which may or may not involve war, the Occupation, city life, growing up, gender relations, the lives or immigrants, etc. From our study of these films, we will inevitably learn quite a bit about French society and its values, particularly in the period from the Occupation (World War II) to the present.

French 138 will satisfy a General Education humanities requirement for students in all majors except French. Students will be evaluated with quizzes (given after the screening of each film ... before class discussion about film) for 20% of final grade; group presentations/participation for 30% and essays (five short papers) for 50%. This course will be offered once a year with a limit of 75.

**FR 139 (GH;IL) France and the French-speaking World (3)** 
An introduction to the culture of France and its impact on the world.

**FR 139 France and the French Speaking World (3) (GH;IL)**
(BA) This course meets the Bachelor of Arts degree requirements.

By studying the artistic, social and intellectual components of the French cultural ethos, the undergraduate student will develop an appreciation of a major Western European humanistic tradition and its impact and adaptation on several continents. The notion of a national culture, which has become an international phenomenon integrates a broad spectrum of subject areas in the arts, humanities, and social sciences. The elements to be articulated embrace: socioeconomic, linguistic, and demographic profiles, social stereotypes (internal, external, and colonial), social structures (family, gender, childhood/old age), and selected "high" and "popular" cultural themes (cuisine, architecture, dress, painting, social philosophy). Using today's metropolitan French culture as a point of departure, and its historical legacy, the course will explore the consequences of French cultural hegemony in various French-speaking areas (Belgium, Switzerland, North and West Africa, North America, Maghreb-Middle East, Orient). In brief, the course introduces Penn State students to the dynamics of cultural pluralism, a crucial acquisition in today's "global village."

FR 142 French and Francophone Literatures in Translation (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

Taught entirely in English with no assumption of prior knowledge of French, this literary course is a broad introduction to French/francophone literature and French intellectual history through a selection of some of France's and Francophone's best-known authors and world famous masterpieces from the Middle Ages to the present. The course promotes a critical reflection on French and francophone literature in its three genres; it aims at a tentative definition of what is literature; it develops critical methods to approach/enjoy a text; it provides theoretical tools to read effectively a linguistic/semiotic text, to write about it, and to enjoy it. This course may be complemented with FR 139 and/or FR 137. Evaluation will be based on active class participation (20%); one book report (20%); two exams (30%); some quizzes (10%); and a final paper (20%). The course will satisfy a General Education humanities requirement for students in all majors except French. While not required for students specializing in French, it is viewed as foundational by the Department, initiating students to basic and broad-based literary concepts and critical approaches which will enhance performance in more advanced courses in literature and/or civilization for French Minors and Majors. This course will be offered once a year with 18 seats per offering.

**FR 201 Oral Communication and Reading Comprehension (4) (IL)**

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed to improve French language skills, with an emphasis on speaking and reading. It aims to hone students’ ability to understand a wide array of native speakers and to expand their active vocabulary; to foster discussion and debate in a range of formats; to enhance the ability to analyze films and literary texts; and to increase awareness of historical and contemporary cultural issues. It also provides opportunities for reviewing selected grammatical points and for practicing writing short interpretive and imaginative exercises. Students draw on written texts, videos, the Web, and other media to explore cultural and literary aspects of France and the Francophone world from a variety of perspectives. Evaluation methods include individual oral and written exams (30%); formal debates (20%); quizzes and homework assignments (10%); class attendance and participation (20%); and a final oral presentation (20%).

FR 407 Business Writing in French (3)
(IL)

This course meets the Bachelor of Arts degree requirements.

The objectives of this course are to: practice the basic ideas and vocabulary of business French; to acquire core knowledge about the social and economic organization of France; to improve spoken and written expression in this arena; to draft business letters; to read and understand newspaper articles dealing with economic and business problems; to understand audio and visual messages in French; and to use Francophone resources on the Web. One of several departmental offerings in the area of French Civilization, FR 407 is required for the French Business option and can also be used to fulfill a 400-level requirement for the French-Engineering and Applied French options, as well as for the French minor. The course also fulfills an "IL" requirement by developing an understanding of French economic and business cultures, values, and traditions within the context of both the European Union and global markets. Evaluation methods include several exams; a debate; a mock interview; research on and the analysis of a French or Francophone company; homework; and class participation. The course is offered once a year, usually in the fall semester.

FR 408 French-American Business Translation (3)
(IL)

Translation from French to English of actual documents from the business world; theoretical consideration and systematic vocabulary building.

FR 409 Commercial and Technical Translation (3)

Translation from English to French of commercial and technical materials; vocabulary building; writing of abstracts and summaries.

FR 410 French Press (3)

Extensive readings of selected French daily and weekly newspapers and magazines, along with newscast viewings.

This course, which is taught in French, is designed to introduce students to the history and current state of French press and media (including newspapers, magazines, radio and television) while introducing them to French society and culture through media coverage of current and recent events. The course is also designed to help students perfect reading, writing and oral communication in French. The course starts with a brief history of the press in France, including the creation of dailies such as Le Journal de Paris and the impact of some well-known journalists or writers upon events such as the Dreyfus Affair. It will then focus more specifically upon the origins of high-circulation, contemporary newspapers and magazines. Quickly moving to the post-WWII period, students will be introduced to radio and television in France and, as they become more familiar with French and Francophone press and media, will be given several opportunities to study current or recent events of the French and Francophone world, in fields such as sports, politics, culture and economics. Library holdings and internet sites will allow the class to regularly read daily newspapers such as Le Monde and Le Figaro and view newscasts on channels such as TF1 and FR2. Once they are familiar with the available resources, students will share research with fellow classmates through oral presentations, for example in the form of simulated newscasts. Students will also develop with the guidance of the instructor an independent, final paper which will explore some aspect of the French press and media. One of several departmental offerings in the area of French Civilization, FR 410 course can be used to fulfill a 400-level requirement for the French Business, French-Engineering, Applied French, and French Language and Culture options, as well as for the French minor. By covering the way in which the range of social identities and the cultural beliefs and values of French-speaking peoples are reflected in various media, and by
assisting students in finding and assessing information about current events in the Francophone world, the course can also fulfill an "IL" requirement. Evaluation methods include a series of short quizzes to cover historical and factual data; a short midterm paper based on primary (newspaper-based) research; a longer final paper based on primary and secondary research; other written work of a short-response nature; a group oral presentation summing up the previous week's news and events; and participation, including presence. The course is offered once a year, usually in the spring semester.

**FR 417 French Phonology (3)** A formal study of the sound pattern of French.

**FR 417 French Phonology (3)**

(IL)

The goal of this course is to present an introduction to the linguistic analysis of the sound pattern of French as it is actually spoken by real speakers. By the end of the semester, the student should be able to:

- transcribe French phonetically;
- understand the articulatory characteristics of French and how these differ from English;
- describe the relationship between French spelling and phonology;
- examine what gives us accent in French;
- discern patterns of pronunciation in different varieties of the language;
- analyze real speakers' pronunciation on your own;
- create your own teaching/learning unit about some aspect of French phonology.

Evaluative Methods: Student performance in this course is generally based on a series of assignments, quizzes, transcriptions, a research project and presentation, an evaluation of other students' presentations, and preparation/participation.

**FR 418 (IL) French Syntax (3)** A formal theory of word order and related issues in French grammar.

**FR 418 French Syntax (3)**

(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The aim of this course is to provide the upper level undergraduate student with the background needed to understand modern generative syntactic theory, as well as to eventually enable him or her to do creative and informed research in this area. Roughly three-quarters of the semester will be devoted to an in-depth overview of the historical development of generative syntax, focusing particularly on modern Chomskyan theory - the so-called Minimalist Program. The remainder will build upon and round out this knowledge of syntax by exploring in depth a number of topics that any syntactician must be familiar with in order to do informed research in the field. This section of the course will involve lectures based on close readings of articles and book chapters exploring such topics as the syntax of negation, raising verbs, auxiliary verbs, adverbs, middle constructions, and/or verb movement. (Only a subset of these topics will be discussed, selected on the basis of student interest.)

General Education: None
FR 419 French Semantics (3) The study of meaning in human language with a special focus on how it is encoded in French.

The aim of this course is to provide upper level undergraduate students in French with a relatively informal introduction to the field of semantics as it applies to the French language. Semantics is the subfield of theoretical linguistics that seeks to make explicit the rules native speakers use to interpret stable aspects of the meaning of natural language sentences. The course will begin by comparing and contrasting semantic and pragmatic aspects of meaning – an important undertaking since only the former are assumed to be subject to invariable rules of grammar. The conclusions reached in this portion of the course will then be extended to account for a very special type of language – humor – in a particular context, France. That as, it will be shown that a more complete understanding of this linguistic behavior entails recognition of the relative contributions of pragmatics and semantics. We will then turn to a survey of the classic model-theoretic approach to lexical and compositional aspects of semantic meaning, with important (sociolinguistic) refinements to the standard approach to lexical semantics being discussed in detail. With a survey of the fundamentals of the field in place, we will then undertake an investigation of specific topics in semantics, looking first at the status of thematic roles in semantic theory (focusing on work by David Dowty). Here we will examine the important implications his work holds for the initial mapping of arguments into sentence structure, not only for primary transitive verbs, but also unaccusative and psyh-verbs. We will then examine current analyses of causation in French, certain aspectual distinctions, and semantic, pragmatic, and syntactic approaches to negative and positive polarity items, n-words, and minimizers.

FR 422 (IL) Old French Literature (3) Medieval masterpieces in original and modern French versions.

This course investigates one or several themes through the reading and discussion of selected French texts from the twelfth through the fifteenth centuries. Readings are in Modern French translation, with one or two classes devoted to a brief introduction to Old French and to manuscript culture. Themes of the course may include Gender and Genre, chivalry and courtly love, court and castle, Arthurian legend, comedy and humor, medieval French literature and film, or others.

FR 426Y (IL) French Literature of the Renaissance (3) Survey of key texts from sixteenth century France, with attention to historical and philosophical currents of French social thought.

FR 430 (IL) Contemporary France (3) Study of contemporary French society, politics, and culture from 1870 to the present.
FR 436Y Readings in Seventeenth-Century French Literature (3) (IL)
Following selected theoretical approaches, the course analyzes various texts from major and lesser-known authors in the three literary genres of the French baroque era. The course examines the (de)formation of "French classicism" by taking into account the strong impact of the theories of literary baroque and concentrates on issues like theatricality and illusion, epistemology and religion, "prciosit," literary circles and academies, and power of theater and theater of power.

FR 440 (IL) Teaching of Romance Languages (3) Theories of second language acquisition. Current classroom practices in the teaching of Romance languages.

FR 445Y Self and Society in Eighteenth-Century France (3)
This course offers an overview of Nineteenth-Century French literature. It includes reading material representative of the major literary movements of the period (romanticism, realism, symbolism). It also gives students a chance to examine a great variety of literary genres (novels, plays, short stories, poems, children’s narratives among others). In addition to developing close textual reading skills, emphasis is placed throughout the semester on the larger relationship between literary production, aesthetics and Nineteenth-Century history (political systems, education, social transformations, industries and technologies, etc.). Anthologies and complete texts will be used.

FR 452Y Nineteenth-Century French Literature (3) (IL)
The course is designed to provide an overview of Nineteenth-Century French literature. It includes reading material representative of the major literary movements of the period (romanticism, realism, symbolism). It also gives students a chance to examine a great variety of literary genres (novels, plays, short stories, poems, children’s narratives among others). In addition to developing close textual reading skills, emphasis is placed throughout the semester on the larger relationship between literary production, aesthetics and Nineteenth-Century history (political systems, education, social transformations, industries and technologies, etc.). Anthologies and complete texts will be used.

FR 452Y Nineteenth-Century French Literature (3) (IL)
This course offers an overview of Nineteenth-Century French literature. It includes reading material representative of the major literary movements of the period (romanticism, realism, symbolism). In addition to developing close textual reading skills, emphasis is placed throughout the semester on the larger relationship between literary production, aesthetics and Nineteenth-Century history (political systems, education, social transformations, industries and technologies, etc.). Anthologies and complete texts will be used.

FR 453Y LaBelle Epoque: Politics, Society, and Culture in France, 1880-1914 (IL)
The goal of this course is to present and analyze the period of extraordinary changes in all domains known as the "Belle Epoque." The starting point for an examination of these changes is Guy de Maupassant's novel, Bel-Ami (1885), which describes the social and professional ascension of an egotistical Parisian parvenu, Georges Duroy. The reading of this novel will allow us at the same time to study in detail one of the novel's protagonists: Paris. Through our discussions and through consideration of a wide range of primary and secondary texts, we will examine the complex rapport between literature (as well as art) and society at the end of the nineteenth century, and we will attempt to answer questions such as: how did the changing Parisian landscape inspire the authors, artists et musicians of this era? How did the new Parisian space encourage the development of new "places of pleasure" cafes, cabarets, cafes-concerts, theaters, racetracks, restaurants, etc.? How did innovations in architecture and the decorative arts, which flourished under the name of Art Nouveau, reflect both social developments and the transforming profile of Paris? What was, in fact, the new social and artistic geography of the capital?

FR 458 (IL) African Literature of French Expression (3) Genesis of Franco-African literature in the 1930s; phases of the negritude movement; colonial and national literature.

FR 458 African Literature of French Expression (3) (IL)
(BA) This course meets the Bachelor of Arts degree requirements.

African literature in French is one of the most vigorous of the many new literatures in French that are emerging throughout the vast francophone world. Writers from a variety of countries, from Senegal to Djibouti, from Algeria to Congo, are producing works in French, that reflect their own very distinct cultural experiences. They must often modify both the French language and traditional Western genres such as the novel to convey African ways of speaking and narrating. In this course, students will read novels, poems and an epic that has been translated into French from an African language. The subjects range from autobiographical accounts of growing up in an African town and going off to Europe to study during the colonial era to sharp criticism of both the French colonial regime and the subsequent national governments that took over after independence, an event that occurred in 1960 in most francophone African countries. For the new wave of women writers that has emerged on the literary scene in the last two decades, more personal themes such as love, family, personal freedom, and the task of balancing traditional customs with the needs of contemporary life in large cities have marked their works. Students who take this course will discover the diversity of African literature written in French, the traits that distinguish this literature from metropolitan French literature, the links between the oral tradition and the written tradition, and the changing role of women in society today. Students will be evaluated on written essays, submission of questions in advance of classroom discussion of each work, presentation of a talk in class on some aspect of the works read, a midterm and final exam. French 458 satisfies the literature course requirements in the French major and the 400-level course requirement in the French minor. It can also satisfy the diversity requirement for General Education. FR 458 will be offered once a year with 18 seats per offering.

FR 460 (IL) Contemporary French Literature (3) Major authors and movements in French novel, drama, and poetry from Proust to the present.

FR 460 Contemporary French Literature (3)
This course is designed for advanced undergraduate work and it is taught in French. To function well in this course, students need to have passed an intermediate introductory course to French literature. The primary goal of FR 460 is to facilitate students acquisition of a coherent view of major contemporary literary movements, from modernism in poetry and drama, through surrealism, both lay and Christian humanistic fiction, and existentialism, to the absurd theatre, the nouveau roman, and post-modernism, ecriture feminine, anti-colonial and post-colonial literatures. Major authors are presented thru one of their works, taking into account the cultural, historical context in which they were developed. Instruction also comprises an initiation to basic theoretical notions on genres, literary techniques, and critical reading methodology. Contents will
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

**FR 470 (IL) Race and Gender Issues in Literatures in French (3)** A critical presentation, taught in French, of changing ideas and values on race and gender in French and Francophone literatures.

**FR 470 Race and Gender Issues in Literature in French (3)**

*(BA)* This course meets the Bachelor of Arts degree requirements.

In addition to presenting subject matter that fosters an appreciation of literatures written in French while exploring racial and gender-related aspects of French and Francophone cultures, this course aims at developing a sophisticated, analytical outlook on peoples of different races and cultures and on women as authors, subjects, and literary "constructions" evolving over time. It provides a sense of the historical development of these questions and the interconnectedness of literature with society, and culture. One example of the issues and selections is the vindication of women -including Middle Eastern and Biblical figures- in Christine de Pisan's City of the ladies, in the early 15th c.; it is shown to have links with the 1970 modernistic and satirical text by Monique Wittig, Les Guiribres. Other examples can be the famed surrealist negritude poetry of Aim Csaire of Martinique, or a classic saga of European Jews by Andr Schwarz-Bart, or the humorous narrative of an African boy in contemporary Paris by Calixthe Beyala. Evaluation is based on a balance of in-class and take home exams and a final paper. Participation is expected, including electronic communication with the instructor. Attendance and participation are assigned a significant proportion of the grade (20%) as is feasible and desirable in small classes with fifteen students or less. The class is led in French, the language of most materials presented, and it is designed primarily for French majors and minors. The literature is supported and illustrated with video excerpts and films available outside class. Internet research is encouraged and expected. It is offered every three or four years, alternating with FR 471 (Francophone Women in Literature and Culture), or special topics courses and period-bound, advanced literature courses in French.

**FR 471 (IL) Francophone Women in Literature and Culture (3)** Women's issues in literatures and cultures of French-speaking countries in Europe, the Mediterranean, Africa, the Caribbean, and Quebec.

**FR 471 Francophone Women in Literature and Culture (3)**

*(BA)* This course meets the Bachelor of Arts degree requirements.

In addition to presenting subject matter that fosters an appreciation of documents and literary sources in French by and about women of Francophone countries in the post-colonial and post-modern era, the course initiates students to researching authentic documentation on those cultures. This course aims at developing a sophisticated, analytical outlook on Francophone women of different ethnic backgrounds and cultures and on women as authors, subjects, and literary "constructions" evolving over time. It provides a sense of the history of colonialism, slavery and Islam where Caribbean or African women are involved. One important component is sociological, demographic research and education. The Internet is a crucial tool for this course. The course contents vary by focussing on particular groups of women such as Caribbean or Islamic Francophone women. Evaluation is based on a balance of in-class and take home exams and a final paper. Participation is expected, including electronic communication with the instructor. Attendance and participation are assigned a significant proportion of the grade (20%) as is feasible and desirable in small classes with fifteen students or less. The class is led in French, the language of most materials presented, and it is designed primarily for French majors and minors. The printed sources and documents are supported and illustrated with video excerpts, films available outside class.
class. Internet research is encouraged and expected. It is offered every three with 18 seats per offering, alternating with FR 470 (Race and Gender Issues in Literatures in French), or special topics courses (“The Francophone Short Story”) and period-bound courses (“Twentieth Century French Literature”), advanced literature courses in French. This course fulfills the French major 400-level requirements in either the literature or the culture options, or the French minor similar requirement, and is also meant to fulfill the General Education requirement in race/gender and cultural diversity.

FR 487 (IL) Topics in French Film History and Theory I: 1895-1945 (3) Provide background needed to understand the broad outlines of French film history and theory in their first fifty years (1895-1945).

FR 487 Topics in French Film History and Theory I: 1895-1945 (3) (IL)
(BA) This course meets the Bachelor of Arts degree requirements.
The aim of this course is to provide the upper level undergraduate student with the background needed to understand French film in the period up to the end of World War II. This will greatly aid the student in understanding French literature and culture of the period as well. Topics will include the invention of cinema and the early days of French film; adventure serials and commercial films; avant-garde and surrealist film of the 1920s and 30s; and finally, the period often considered the "golden age" of French film, the 1930s and 40s, and the so-called "poetic realism" movement. Films will be supplemented with readings in criticism by writers and filmmakers of the period, as well as by the scholarship of critics and theorists writing today. The course would allow upper-level undergraduate students to partially fulfill the 400-level course requirement for French majors and minors. This course may also be used to fulfill a requirement in the newly proposed Film Studies minor. A student's performance in this course will normally be evaluated through an in-class expose, two in-class essay tests, and a short research paper. The class will be offered once a year with 50 seats per offering.

Geography (GEOG)

GEOG 010 (GN) Physical Geography: An Introduction (3) Survey and synthesis of processes creating geographical patterns of natural resources, with application of basic environmental processes in resource management.

GEOG 010

GEOG 010 Introduction to Physical Geography (3) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

Introduction to Physical Geography systematically examines the spatial patterns and interrelationships among physical elements at the earth’s surface. Particular emphasis is given to developing an integrative view of how atmospheric, hydrologic, geomorphic, and biotic processes control the patterns of climate, water, landforms, soils, and biota across a local-to-global continuum. Those physical elements that influence and/or are influenced by people are the primary focus of study.

Physical geography does not simply discuss the atmosphere, hydrosphere, lithosphere, and biosphere in isolation; instead, it concentrates on understanding the integration of these realms of the natural world. For example, the study of
weathering processes demonstrates how the physical and chemical breakdown of Earth’s surface material depends on the interaction of air, water, and biota with rock.

The focus of physical geography is unlike the component disciplines from which it draws. On the one hand, meteorology focuses on the atmosphere above our heads. Hydrology focuses on water in isolation from people. Geology and soil science focus on the Earth beneath our feet. Biology and ecology focus on the plants, animals, and ecosystems in isolation from people. One the other hand, physical geography concentrates on the surface of the Earth where the atmosphere, hydrosphere, lithosphere, and biosphere intersect. Introduction to Physical Geography is concerned with the human habitat—the life layer in which humans interact with their natural world.

Like all geography, five recurring themes permeate Introduction to Physical Geography: location, place, regions, movement, and human-environment relationships. Physical geographers not only are interested in where natural phenomena are located on Earth’s surface, but also they want to know the answers to such questions as:

1. What is special about the physical processes that take place in a location?
2. How does the physical geography of a place relate to other places in the region?
3. How does energy and mass flow into and out of a region?
4. How do biophysical processes change as we move up and down spatial scales?
5. How do people influence natural processes? How do these processes influence people?

Other disciplines typically do not cover these spatial and nature-society themes systematically.

Physical geographers have developed and adopted many tools to address these themes. Maps are obvious choices, but geographers also use a wide array of photographic and imaging technologies to study the distribution of Earth processes and the processes themselves. They use geographic information systems and computer models to manipulate, display, and analyze spatial data. Introduction to Physical Geography acquaints students with many of these tools.

When the above points are taken together, physical geography emerges as a unique field of science. Introduction to Physical Geography provides a learning experience that students can get in no other discipline—one that takes an integrated view that makes the nature environment relevant.

GEOG 020 (GS;US;IL) Human Geography: An Introduction (3) Spatial perspective on human societies in a modernizing world; regional examples; use of space and environmental resources; elements of geographic planning.

GEOG 020

GEOG 020

BA) This course meets the Bachelor of Arts degree requirements.

Introduction to Human Geography introduces students to the breadth of contemporary human geography. It explores both the range of topics that geographers study, and some of the concepts and methods they use to study them. Major topics include the spatial organization of human activities; ways in which social processes and structures can be understood through a geographic lens; and geographic perspectives on human-environment interactions. These general topics are explored largely through close examinations of case studies. Any student interested in how the world functions economically, politically, socially and culturally as it enters the new millennium should enroll in Introduction to Human Geography. For this reason, this course satisfies the General Education and the Intercultural course components of the Penn State student curriculum. Students’ final grades are based on attendance, participation, four exams, and their contribution to a group research project.

GEOG 030 (GS;IL) Geographic Perspectives on Sustainability and Human-Environment Systems (3) Introduction to theory, methods, history and contemporary issues in global and regional relationships between human activity and the physical environment.

GEOG 030 Geographic Perspectives on Sustainability and Human-Environment Systems (3) (GS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

One of the major themes in the discipline of geography is the study of the relationships between humans and the natural environment. GEOG 030 introduces students to the multiple ways in which people and the environment are interconnected. From a dynamic systems perspective, we refer to this interconnectedness as “coupled social-ecological systems.” The course uses a geographic perspective to understand how differently these linkages are shaped in various ecological and cultural settings around the globe. The course follows an interdisciplinary approach, exploring from multiple angles major environmental and societal challenges such as climate change, genetically-modified food, over-consumption, disease, and environmental service provision in the industrialized North and the Global South. It promotes critical thinking regarding key concepts such as carrying capacity, ecological footprints, feedback, stability domains, and resilience. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in their own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate about the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide them with skills for critically analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world. They will also learn how to assess what future pathways are sustainable and ethically sound. One key goal of the course will be to help students increase their sensitivity to the global and international context of human interactions with nature. A recitation section is crucial because it allows students to explore controversial issues such as biotechnology, nature as a commodity, and global warming, and to develop critical positions on such issues.

GEOG 040 (GS;IL) World Regional Geography (3) Introduction to the world as an interdependent community built from unique and independent regions and nations.

GEOG 040 World Regional Geography (3) (GS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

World Regional Geography examines a world that is undergoing political, economic and social transformations at many different spatial scales. Utilizing geographic concepts including scale, place, region, and location, this course examines international linkages, such as global capital, which help forge a world community. However, the course also examines local situations that contradict our understanding of a global community and examines a variety of “voices” struggling to be heard in the world: those embracing the global economy and an international culture and those rejecting a homogenizing global capital and culture because they see their resources being exploited. Concepts such as North and South, developed and developing, globalizing capital and homogenizing world culture, take on new meaning when they are explored at a regional level. Any student interested in how the world functions economically, politically, socially and culturally should enroll in World Regional Geography. For this reason, this course satisfies the General Education and the Intercultural course components of the Penn State student curriculum.

Special Topics (1-9)

GEOG 110 Climates of the World (3) Introduction to climatology, including principal processes of the global climatic system and their variation over space and time.

Climates of the World examines the spatial patterns and physical processes associated with climate and its interannual variations and longer-term changes. Particular emphasis is placed on the integrative role of the different Climate System components (atmosphere, biosphere, hydrosphere, lithosphere, cryosphere), and on the increasing impact of human activities on climate from local through regional to possibly global scales.

Climatology involves more than an understanding of basic principles of meteorology, although these are important. Similarly, climatology is more than the separate study of the other Climate System components represented in, for example, oceanography, glaciology, hydrology, and ecology. It is, instead, a fully integrative discipline that is focused on the climate at and very close to the Earth’s surface. Students are introduced to the importance of energy and mass flows among the different Climate System components, the physical and chemical feedbacks involved in climate stability, the relationships between spatial and temporal scales in climate, and the physical processes associated with interannual climate variations. The last includes concepts such as cloud-radiative forcing, sea-air and ice-air interactions (e.g., in El Nino Southern Oscillation and other teleconnections), and the South Asian Monsoon as an example of a dynamical climate phenomenon affecting millions of people.

Like all geography, five recurring themes permeate Climates of the World: location, place, regions, movement, and human-environment relationships. Climatologists not only are interested in where different climates are located on Earth’s surface, but also they want to know the answers to such questions as:

What is special about the physical climate processes that take place in a location?
How do the climate processes of a place relate to those of other places in the region?
How does energy and mass flow into and out of a region?
How do biophysical processes change as we move up and down spatial scales?
How do people influence climate processes? How do these processes influence people?

Other disciplines typically do not cover these spatial and nature-society themes systematically.

Climatologists have developed and adopted many tools to address these themes. Maps are obvious choices, but geographers also use a wide array of photographic and imaging technologies to study the distribution and changes in climate-forcing factors, such as land use/land cover, clouds and cloud systems, outgoing longwave radiation, and sea surface temperatures. They use geographic information systems and computer-based methods to manipulate, display, and analyze spatial data. Climates of the World acquaints students with many of these tools.

When the above points are taken together, climatology emerges as a field of science best suited to study by geographers. Climates of the World provides a learning experience that students can get in no other discipline—one that takes an
Biogeography and Global Ecology is the science that seeks to identify and understand the past and present spatial distributions of plants, animals, and biodiversity on earth. Particular emphasis is given to developing an integrative framework to explaining how physical and biotic processes have and will continue to contribute to geographic variation in life on earth. The influence of people, and future climates, as agents of change are an important focus of study.

For the uninitiated, biogeography and global ecology may appear to be an amalgamation of topics taken from geology, biology, climatology, oceanography, and other bio-physical sciences. Biogeography and Global Ecology certainly covers parts of these topical areas, but biogeography as a science is unique.

Biogeography and Global Ecology does not simply discuss environmental and biological processes or factors that control species distribution and abundance patterns. The field, instead, concentrates on integrating theory and data from evolution, ecology, population biology, and the Earth sciences to explain geographic patterns in species and species assemblages. As such, it is a branch of both geography and biology. Drawing sharp boundaries between biogeography and other disciplines is counter productive because biogeography has its own theoretical and empirical approaches that readily incorporate conceptual and factual advances in allied sciences.

As in all geography, five recurrent themes are reflected in the content of biogeography: and global ecology place, region, scale, movement, and human-environment relationships. Biogeographers are not only interested in where species are, but also they want to know the answer to such questions as:

- What role does geographic variation in climate, topography, and interactions with other organisms including people play in limiting a species distribution?
- How have historical events such as continental drift, and ice ages shaped a species distribution?
- Why are plants and animals in isolated places such as Madagascar so distinctive?
- How has fragmentation of regions and landscapes by human activity affected species diversity?
- How will the distribution and abundance of key species change under an altered climate?

Biogeography and global ecology is a unique and synthetic field of science. This course provides a unique learning experience that students can get in no other discipline-one that takes an integrated view and makes the natural environment relevant.

The subject of Geography 115 GN is landforms, the shape of the earth's surface. Throughout the course, three questions are asked.

The first question is descriptive: what is the surface of the earth like? What is it made of? What does it look like? And where do certain kinds of landforms occur geographically? The answers to these questions are complicated, but not as complicated as one might think. In fact, certain types of landforms tend to occur again and again, and they are found in predictable places. Mountains, for example, are not just high places, but their arrangement and internal geography are interesting and surprisingly orderly. By the same token, plains are not just dull flat places on the earth's surface. They vary greatly, and those variations are extremely interesting.
The second question deals with origins. It is the basic question which all sciences ask: Why? Why are the landforms of the earth shaped the way they are? Why are they made of certain kinds of rock materials? Why do they differ from place to place? In short, we want to know how landforms are made, and the forces that made them. Again, the answers to these questions are less complicated than one might guess, because certain causes tend to repeat themselves, and when they do, similar landforms result.

The third question deals with the effects of landforms in human terms. How have people adapted themselves to various kinds of landforms? How have landforms helped or hindered people in their daily lives, both now and in the past? The answers, of course, are not surprising: landforms make a huge difference in the way we live. And the answers are especially interesting when we look at them in some detail, with examples from all parts of the world.

Thus, Geography 115 GN is designed to examine:
- Geomorphic processes at large
- The effect of these processes as they work on certain geologic structures
- How the combinations produce certain kinds of landforms, again and again.
- How human beings have been affected by these elementary facts-of-life, with examples from all over the world, but especially the United States, and adjacent parts of Canada.

GEOG 120 (GS;US;IL) Urban Geography: A Global Perspective (3) Introduction to the geography of the world's cities and urban system.

GEOG 120

GEOG 120 Urban Geography: A Global Perspective (3)
(GS;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines urban settlements and analyzes the processes of urbanization from a global perspective. The goal is to provide students with basic information, concepts and analytical tools to understand contemporary processes of urbanization and urban change. Urban places are of fundamental importance: for the distribution of population; for the organization of economic production, distribution and exchange; in the structuring of social reproduction and cultural life; and in the allocation and exercise of power. Geography provides a particularly useful perspective on and insight into the urban condition, helping to understand the internal structure of urban areas and the complex inter-relations between cities around the globe. An over-riding theme in the course is examining the relationship between global and local factors in these processes. Critical areas of inquiry include the economy of cities, politics, social interaction, urban social movements, land-use, and urban structure. A significant portion of the course focuses on urbanization in the Third World.

GEOG 122 (GH;US) The American Scene (3) Historical perspectives on the social and cultural forces associated with the production of distinctive American landscapes.

GEOG 122 The American Scene (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

The American Scene offers a broad introduction to the historical geography of the United States through analysis of distinctive elements of regional landscapes. Archival evidence and contemporary photography are utilized to assist in an understanding of "landscape," "place" and "region", each important frames for geographical inquiry. It offers a humanistic perspective on the transformation of the United States from a land first occupied by Indian groups, then colonists from specific European realms, some supported by indentured or enslaved labor, as well as later immigrants in the national period, that pursue agricultural economies in an array of rural and urban settlement systems. Landscapes of modernity, associated with manufacturing, urban growth and new transportation systems, are also considered, as well as landscapes now emerging in the post-industrial era. At the conclusion of the course, students should have a deeper understanding of some of the issues involved in the analysis of place at a variety of spatial scales, and a better sense of the historical layering in the landscapes that they encounter each day and on their travels. The course is organized regionally and temporally. Case studies are drawn from a dozen regions, each emphasizing a different historical moment in the transformation of landscape since the end of the last Ice Age. Some examples draw on material at the scale of a single house or farm and others at the level of a multi-state industrial corporation such as US Steel in the early twentieth century. Any student interested in how the distinctive landscapes of the United States evolved to this point should enroll.
in The American Scene. It draws on scholarship in historical and cultural geography, as well as architectural history and art history.

**GEOG 124** (GS;IL) Elements of Cultural Geography (3) Locational analysis of changes in non-Western cultures. Problems of plural societies, economic development, population growth, and settlement.

**GEOG 124 Elements of Cultural Geography (3)** (GS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Elements of Cultural Geography, provides an overview of the impact of cultural processes at multiple scales, from the global to the local. Class time will include lectures and discussions in relation to how social identities, such as race and class, just to name a few, impact and are impacted by geographic concepts such as landscape, place and space. The course aims to survey and explore a range of perspectives on the nature of human integration with the environment and the manifestation of human culture on the landscape. The course will engage philosophical and metaphysical questions in addition to those of landscapes and place. The ultimate objective is for participants to develop a deep and multidimensional understanding of how social identities and the environment are inter-related. This course is a selection for majors; it has no prerequisites and is not a prerequisite for any other course. It provides a foundation for understanding human-environment interactions at a global scale, including the regional interactions involved.

**GEOG 128 (GS;IL)** Geography of International Affairs (3) Contemporary international affairs in their geographical setting; geographic elements in the development of national power, political groupings, and international disputes.

**GEOG 128 Geography of International Affairs (3)**
(GS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

*Geography of International Affairs* uses the organizing principle of geographic scale to examine the spatial patterns of and interrelationships among political processes and institutions. Particular emphasis is given to developing an integrative view of how global, national, local, and individual scale processes interact to produce patterns of peace and conflict. The course analyzes how the actions of individuals, states and other political actors are influenced by their dynamic geographical contexts.

The political geography approach does not simply discuss the war, peace, nationalism, terrorism, and religious organizations in isolation; instead, it concentrates on understanding the integration of these processes, and how their integration mediates political decisions and outcomes. For example, the study of terrorism demonstrates how the decision to commit terrorism is made in a multi-scalar context of competing states and/or nation-state building. In addition, the spaces of terrorist networks are contrasted with spaces of nation-states to show the geographical complexities involved in effective counter-terrorism.

The focus of political geography is unlike the disciplines of political science, international affairs and sociology from which it draws. On the one hand, political science focuses on the processes within separate nation-states. International affairs focuses on the interaction between nation-states, seen as unified actors. Sociology focuses on social organizations and institutions, but usually within the confines of a particular nation-state. One the other hand, political geography concentrates on the interaction of domestic politics, international relations, and trans-national social interactions. Seeing each is mutually constitutive of the other. *Geography of International Affairs* is concerned with the geopolitical context, broadly defined - the manner in which spaces and places are combinations of the political and the social, the domestic and the international, the global and the local - and how it partially determines the form and outcomes of politics.

Like all geography, five recurring themes permeate *Geography of International Affairs*: space, place, scale, context, and human-territorial relationships. Political geographers not only are interested in where political phenomena are located on Earth’s surface, but also they want to know the answers to such questions as:

- What is special about the political processes that occur in a particular place?
- How are the political geography of a place relate to other places in the world?
- How do political processes change and interact as we move up and down spatial scales?
- How and why do people use territory in political conflicts, such as ethno-nationalist or religious wars and disputes?

Other disciplines typically do not cover these spatial and human-territorial themes systematically.

As part of the broader discipline, political geographers have developed and adopted many tools to address these themes. Maps are obvious choices, but geographers also use a wide array of statistical and qualitative techniques to study the distribution of political processes and the processes themselves. They use geographic information systems and computer models to manipulate, display, and analyze spatial data. *Geography of International Affairs* acquaints students with many of these tools.

When the above points are taken together, political geography emerges as a unique field of social science. *Geography of International Affairs* provides a learning experience that students can get in no other discipline - one that takes an integrated view that makes contemporary international affairs relevant and understandable.

**GEOG 130 (GS) Environment, Power, and Justice (3)** This course explores contemporary themes in human-environment relations through the lens of political ecology.

**GEOG 130 Environment, Power, and Justice (3)**
(GS)

Relationships between human societies and their physical environments are a defining concern of geography. This course will give students an in-depth knowledge of contemporary human-environment studies in geography through an introduction to the field of political ecology. Political ecology is an interdisciplinary approach that combines environmental justice, cultural ecology, and other related approaches in order to undertake an integrated, holistic assessment of the relationships between social and ecological change, with a particular focus on issues of power and justice in the areas of environmental change and management. In particular, it analyzes the relationships between social and ecological marginalization and change; the social issues surrounding conservation of protected natural areas and species; the underlying causes of environmental conflicts; issues of justice and distribution as they relate to the production and

The Pennsylvania State University
consumption of environmental goods and services; and the role of environmental considerations in the formation of
individual and group identities, including environmental social movements.

Students in this course will gain familiarity with a wide range of theories and methods in central to contemporary
human-environment geography, and increase their knowledge of the world in general, and of environmental policy
challenges in particular, by learning how those theories and methods have been put to use in the analysis of case studies
from many different countries and continents. Students will be evaluated based on the understanding of the course
material they display in a midterm and final examination, and on their contribution towards a group research project.

GEOG 160 (GS) Mapping Our Changing World (3) Fundamental concepts of GIS, cartography, remote sensing, and GPS in
the context of environmental and social problems.

GEOG 160 Mapping Our Changing World (3)
(GS)

(BA) This course meets the Bachelor of Arts degree requirements.

Mapping involves producing and using geographic data. Geographic data specify the locations and characteristics of
people, the objects people create, and the various phenomena of the natural environment with which people interact.
Geographic data are produced by several methods, including land surveying, aerial photography and photogrammetry,
satellite remote sensing and positioning systems, and social surveys such as those conducted by the U.S. Census Bureau.
Geographic information systems (GIS) and related technologies are used to turn data into maps, tables, and other kinds of
information people need to make informed decisions. In a rapidly changing world, detailed, up-to-date geographic data
are indispensable for governance, for commerce, and for research intended to improve our understanding of social and
environmental systems. GEOG 160 helps students begin to develop the knowledge, skills, and dispositions that constitute
geographic information literacy - the ability to "recognize when information is needed and ... to locate, evaluate, and use
effectively the needed information" (ALA 1989). Geographic information science (GIScience) is a research enterprise
concerned with the design, development, and use of geographic information technologies to help institutions and
individuals not only respond to, but ideally to predict, environmental and social change. GEOG 160 is an introduction to
GIScience that provides students with the technical and contextual knowledge they need to become knowledgeable
consumers of geographic data and information produced by government agencies, industry, and popular media. The
course is intended to be of value not only to future specialists in the geographic information enterprise, but also to every
student who is concerned with social and environmental research and policy-making. Like other information technologies,
GIS is evolving rapidly. People who work with GIS understand that learning is a way of life, not just a prelude to a career.
With this in mind, GEOG 160 aims not only to help students learn about geography and GIS, but also to develop the
disposition to become effective lifelong learners.

GEOG 161 Applied Geographic Information Systems (1) An introduction to GIS (Geographic Information Systems) with
emphasis on applications and analysis.

GEOG 161

GEOG 161 Applied Geographic Information Systems (1)

GEOG 161 is a one-credit two-hour laboratory course to be taken concurrently with GEOG 160, Mapping Our Changing
World. GEOG 160 and GEOG 161 will be offered concurrently as a required course pair for the proposed Environmental
Studies Option within the B.S. Science major (SCNBD) at Behrend College. The courses can also be choices in the
"Supporting Courses and Related Areas" list for the B.S. Science major's General, General Pre-certification, and Earth &
Space Science Pre-certification options. The purpose of the course is to familiarize students with GIS and provide them
with the ability to use GIS software commonly used by industry, academia, and government agencies. GEOG 161 will
provide students with training and experience in computer-based practical applications of concepts and theory learned in
GEOG 160. They will analyze and solve "real-world" problems using hands-on, problem-solving, and inquiry-based
approaches to learning. Students will work individually and in small teams in a GIS software-equipped computer
laboratory. Students will be evaluated based on the quality of laboratory reports/assignments and on a larger research
project with a presentation conducted during the final five weeks of the semester. GEOG161 will be offered at least once
per year. Enrollment is expected to be 8-20 students.

**GEOG 293H** Honors Experiences in International Service Learning (1-3) Classroom instruction with supervised student activity on an honors international community service project.

**GEOG 293H**

**GEOG 293H Honors Experiences in International Service Learning (1-3)**

GEOG 293H provides students with activities that integrate academic study with community service in an international context. The aim of service learning is to enrich traditional classroom-based education by getting students into a community, thereby engendering civic responsibility and simultaneously strengthening communities. GEOG 293H has five objectives: (1) to develop understanding of a set of issues in community development; (2) to learn and apply skills associated with those issues; (3) to develop and apply communication skills by speaking, writing, and/or desktop publishing; (4) to gain international experience at the community level; and (5) to reflect on personal and career interests in international development, science, the environment, public policy, or related areas. Thus, students will read, write, and talk about a set of issues of importance to a foreign community and engage in a project in that community.

The specific service-learning projects will change each semester, although some projects will be ongoing and offered multiple times. Students can take GEOG 293H in more than one semester, to a maximum of four offerings.

Depending on the topic of the international service-learning project, GEOG 293H can complement courses in most colleges and their majors. The course is available to all Geography majors as elective credits; it is also available to all Geography Minors for credit toward the minor.

Students will be evaluated on three of the five course objectives: (1) understanding of the issues, (2) learning and application of skills, and (3) application of communication skills. Although exact procedures for determining grades will vary with instructor and service-learning project, the basis for grades will include a combination of written work, oral presentations, in-class participation, and outside-class participation.

GEOG 301 Thinking Geographically (3) Learning to think geographically.

GEOG 301 Thinking Geographically (3)

The course explores the process of thinking geographically. As a discipline that draws on elements of four intellectual traditions - the physical sciences, the social sciences, the information sciences, and the humanities - geography offers an extensive palette of approaches to the study of the interactions among people, places, and environments. In addition to those traditions, geography also draws on key themes: setting events and activities into multiple spatial and temporal contexts; setting events and activities into multiple spatial scales from the local to the global; seeing complex, multi-way interactions between human and physical systems; recognizing the interconnectedness between places. In terms of methods, the fundamental building block is the idea of geospatial location and the associated spatially- or geo-referenced data. Data, both quantitative and qualitative in character, is increasingly available in terms of amounts and quality. Students must come to appreciate and be able to use this powerful way of thinking about the world. GEOG 301 assumes a beginning understanding of geography, in terms of basic content knowledge, and builds an understanding of how to think geographically, how to ask geographic questions, how to find geographic answers, how to assess the quality of those answers, and how to present and communicate those answers convincingly and compelling in multiple formats. Students will learn how to think geographically and to appreciate the power, applicability, and limitations of the geographic approach. Each year the course is organized around a significant contemporary problem as a commonly shared case study. Students will work in small groups to analyze the case study, presenting their own portfolio of work for 60% of the course grade and collaborating with group colleagues for a collective presentation for 40% of the grade. Work will be submitted in stages through ANGEL. GEOG 301 is required of all geography majors and will be offered Fall and Spring of each academic year with an annual enrollment of approximately 120 students. Preference will be given first to declared Geography majors, then to Geography minors, before places are offered to students from other programs. Geography 301 is a bridge between the knowledge that comes from the broad-based introductory geography courses and the detailed understanding that comes from the focused, advanced-level geography courses. It enables students to learn about and to practice geographical thinking in real-world contexts.

GEOG 310W Introduction to Global Climatic Systems (3) Introduction to global atmospheric circulation, including tropical, midlatitude and polar subsystems; ocean, land, cryospheric and urban climatic systems and interactions.

GEOG 310W

GEOG 310W Introduction to Global Climatic Systems (3)

Geography 310W is an advanced undergraduate course in Climatology that emphasizes study of the patterns of interannual climate variability (climate fluctuations) and the physical processes responsible for those variations (climate dynamics). Interannual climate variations include regional- to large-scale anomalies of temperature, precipitation, cloud cover, etc., that become manifest as drought, floods, heat and cold waves, etc. The physical processes associated with climate fluctuations include the following: interactions among the climate-system components (atmosphere, biosphere, cryosphere, hydrosphere); external forcing (e.g., solar variations, volcanic activity); and long-distance interactions involving the coupled atmospheric-oceanic circulations, or teleconnections (El Nino Southern Oscillation (ENSO), the North Atlantic Oscillation (NAO), the Arctic Oscillation (AO), and the Pacific-North America (PNA) pattern). Climatic teleconnections manifest shifts in the atmospheric pressure “centers of action”, storm tracks, jet stream positions, etc. In addition to the study of these climate patterns and processes, the course examines the role of human activities in climate, particularly “global warming”, desertification, deforestation and afforestation, urbanization, irrigation for agriculture, and aviation impacts. In this regard, a key issue that is addressed is the potential role of human activities on the frequency and intensity of teleconnections, such as ENSO, and of severe storms (thunderstorms, tornadoes) and hurricanes; possibly the result of modifications to the oceanic Thermo-Haline Circulation. Students write a term paper, as well as critiques of a number of published articles relating to the above topics in climate dynamics. There is a mid-term (essay) exam but no final exam.

GEOG 311 Landscape Ecology (3) This course examines the ways in which spatial patterns and spatial processes operate
Landscape ecology is an interdisciplinary field that incorporates the tools and theoretical frameworks of geography, ecology and earth sciences. The focus of landscape ecology is on the controls, interactions and outcomes of spatial patterns and spatial processes on ecological dynamics at large spatial scales. Ecological systems are patterned in space by a wide range of interacting physical, biological and human processes. Spatial arrangement and spatial dynamics influence a broad array of ecological processes, such as the flows of energy and nutrients, dispersal and persistence of aquatic and terrestrial organisms, and the spread and impact of natural disturbances. In this course, students will explore the methods, theories, approaches and practical applications of landscape ecology as a framework for understanding landscape dynamics and interactions and how to apply this information for landscape management. Particular emphasis is placed on how humans have modified landscapes and how species, ecological communities, and ecosystems have responded to these changes.

GEOG 313 Introduction to Field Geography (3) Introduction to the methods and techniques for collecting spatial and environmental data for physical geography and ecological studies.

GEOG 313

GEOG 313 Introduction to Field Geography (3)

This course explores a variety of methods used to acquire primary data from field locations. Aspects of physical, chemical, biological, and cultural factors are examined. Fieldwork is often an important component of research and it involves collecting and analyzing data, handling logistical concerns, developing sampling strategies and techniques, and addressing quality assurance and archiving issues. The course objectives are: to explore methods used to collect, analyze, and interpret field data; to expose students to techniques for sampling physical (geomorphologic, topographic, hydrologic), chemical (water and soil), and biological (flora and fauna) factors; and to explore ways to use field data to interpret geographical and ecological questions and hypotheses. Evaluation involves preparation of written laboratory reports, assignments, and tests. The course is offered every Fall semester with enrollment limited to the number of students supported in a laboratory section.

GEOG 323 GIS and Social Theory (3) Critical understanding of how to use GIS and tools of regional analysis in the context of postmodern social theory.

GEOG 323

GEOG 323 GIS and Social Theory (3)

GIS and Social Theory is an introductory-level, laboratory-intensive undergraduate course designed primarily for geography majors to provide a critical understanding of how to use GIS and other tools of regional analysis in the context of postmodern social theory. Fundamentals of GIS are taught alongside social theory to make students aware of both the value and pitfalls of using GIS tools.

GIS and computer mapping are examined through three perspectives: Cartesian spatial analysis, relational analysis, and postmodern discourse theory. Cartesian spatial analysis is explained by using conventional tools of GIS such as map overlay and buffering, focusing on geographic locations of objects, that is, on "where" things are. Relational analysis looks at connections among variables and considers "how" geographical objects are connected regardless of "where" they may be located. The focus here is on choice of variables that are included in the attributes tables of GIS. Postmodern discourse theory argues that categories such as race, class, ethnicity, poverty, community, and neighborhoods are not objectively given entities that are simply mappable, but that they are discursively constructed. We explore the implications of that argument to the mapping exercises in GIS.

Since social categories are "constructed" by discourses about them, discourse is a vital part of what GIS produces through its mapping exercises. Discourse theory also argues that social problems arise in a complex nexus of relations that do not show obvious "root causes" that are easily isolated. In fact social problems are constituted from things that take place simultaneously at a large number of sites diffused throughout the larger society. To address social problems using discourse theory we require methodologies that can simultaneously analyze large quantities of data. So GIS is an ideal tool for looking at social problems using discourse theory. Thus GIS and discourse theory provide useful complements to
each other in the analysis of social problems. These arguments are developed at length, by example, through a series of lab and homework exercises. Evaluations and grades are based on exercises, exams, and a final project.

**GEOG 333 Human Dimensions of Natural Hazards (3)** An introduction to natural hazards, integrating physical and social science perspectives.

**GEOG 333 Human Dimensions of Natural Hazards (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

Natural hazards – such as earthquakes, tsunami, volcanoes, and floods – are not simply forces of nature. Their impacts depend on the interaction between the hazardous events and the characteristics of people, their communities, and the human systems in which they operate. The physical dimensions of natural hazards require knowledge of physical science, and the human dimensions of natural hazards call for knowledge of social science. Nevertheless, understanding natural hazards means not only that students know the physical and social sciences, but also that they know how nature and society work together to increase or decrease potential harm posed by these phenomena.

This course introduces students to the topic by surveying the range of natural hazards and by applying important social science perspectives, such as risk, vulnerability, and the true costs of hazards, to each of the hazards. Because the study of natural hazards is interdisciplinary, readings, lectures, and discussions address crucial aspects of both natural and social sciences.

GEOG 333 has two goals: (1) to develop understanding of a set of issues related to the human dimensions of natural hazards; (2) to develop and apply communication skills by discussing, writing about, and presenting on natural hazards. The specific content of the course will change with the instructor, but the focus on interactions between the natural and human worlds and on skill-development in writing and speaking will be constant.

Students will be evaluated on both the course goals: (1) understanding of the human dimensions of natural hazards; (2) application of communication skills. Although exact procedures for determining grades will vary with instructor, the basis for grades will always include a combination of written exams based on lectures and readings, oral presentations and papers, and in-class discussion and participation.

**GEOG 361 Cartography--Maps and Map Construction (3)** The art and science of creating small-scale maps as a medium for communication and research.

**GEOG 361**

**GEOG 361 Cartography - Maps and Map Construction (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

Mapping is crucial to exploring and understanding distributions of geographic phenomena. It is also an important phase of many database-intensive analyses because a map is often the best way to visualize results and show them to others. Emphases in this course will be on designing and producing both thematic and reference maps that use symbols and visual hierarchies which allow the content of the maps to be readily understood. In addition to principles of graphic design, students learn about map projections, generalization, and data classification, with the objective of becoming proficient mapmakers. Hands-on computer work for lab sections will involve working with varied digital data sources using GIS software. Maps are often built from existing data created by government mapping agencies, stored as geographic information systems (GIS) databases, and based on remotely-sensing imagery. The prerequisite for GEOG 361 is the 100-level mapping course covering basic principles of these technologies and data sources. The course is typically offered once a year. Evaluation is based on written exams and mapping projects that students produce to map location information and represent social and environmental data.

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science
Effective: Spring 2007
Prerequisite:
GEOG 362 Image Analysis (3) Introduction to the basic principles of remote sensing, and the analysis of aerial and satellite data.

GEOG 362 Image Analysis (3) 

This course meets the Bachelor of Arts degree requirements.

The field of remote sensing is vast and includes several inter-related themes. Remote Sensing as a science primarily involves the extraction of information contained within energy. The engineering component of remote sensing involves the design and construction of instruments and systems capable of capturing and recording energy from a target. Remote Sensing as a vital tool is expressed in myriad applications, from land cover change analysis to weather forecasting.

This course will be administered in two parts:

• The first seven weeks of the semester will focus on three broad topics (Fundamental Principals of Radiative Transfer and Energy-Matter, Remote Sensing Systems, and Applications). This part of the course will expect student to grasp the major laws describing the energy-matter interactions. Recitations will be devoted to reviewing homework problems designed to solidify understanding of radiation concepts central to the construction of remote sensing imagery.

• The remainder of the semester will be devoted to image analysis with an emphasis on digital remote sensing, i.e. analyzing data in digital form using computer software. This aspect of the course will have a practical focus on using imagery to analyze land cover and to construct land cover maps, with the expectation that students will be able to become proficient in the handling and processing of remote sensing imagery. Consequently, laboratory work will play a major role in this component of the course.

GEOG 364 Spatial Analysis (3) Geographic measurement, scaling, and classification; analysis of spatial pattern and structure; geographic covariation and autocorrelation.

GEOG 364 Spatial Analysis I (3) 

This course meets the Bachelor of Arts degree requirements.
Geography 364 is an introduction to spatial analysis that focuses on statistical methods for geographers. You will have an opportunity in this course to:

- learn how to use statistics in your own work
- learn how to consume statistics in everyday life

The statistical methods you will learn to use are simple descriptive statistics that we use to summarize complex data, as well as the associated charts, diagrams and maps. From there, we will move on to look at chance and probability theory, and simple inferential statistics.

Throughout the course, we will be concerned with “everyday statistics”, primarily as it relates to geography. Contemporary media are saturated with statistics, from reports of climatic change, through latest presidential election polls, to batting averages and yards-gained statistics in sports. A lot of the presentation of these statistics is lazy or inaccurate, and often misleading (whether, deliberately or not), and a major theme of this course will be to look at the issues involved.

During most lectures we will spend some time working with sample problems, and to discuss practical applications. These activities are meant to build a deeper understanding of the subject matter but it also relies heavily on your active participation. You will often have work to prepare before lectures or other types of lecture homework. Labs will give you experience with statistics functions in Excel before moving onto SPSS as well as other statistical software, and also with mapping statistical data using GIS software.

GEOG 412W Climatic Change and Variability (3) Theories and observations of past, present, and future climatic change and variability; introduction to techniques used in climatic change research.

GEOG 412W

GEOG 412W Climatic Change and Variability (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Geography 412W introduces students to the physical dimensions of climate change and variation. Climate change topics include radiative forcing, greenhouse gases, scenarios, equilibrium models, and time-dependent models. Important Climate variation topics are teleconnections and the El Nino-Southern Oscillation phenomenon. Geography 412W would appeal to students with interests in Earth and atmospheric sciences, as well as environmental protection.

As a writing-intensive course, Geography 412W aims to help students improve their ability to communicate scientific information. The course devotes considerable class time to the mechanics of reading, writing, speaking, and especially report production. Students not only write, but also learn to edit and critique writing.

Because most professional research on climate change and variation involves collaborative science teams, Geography 412W focus on collaboration and participation. Students form teams, conduct research, and compile formal collaborative reports on climate change and variation. Students document their individual contributions by producing portfolios.

GEOG 417 Satellite Climatology (3) A discussion of the application of satellite data to current and planned large-scale climate experiments.

GEOG 417

GEOG 417 Satellite Climatology (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Geography 417 presents the theory and practice of satellite remote sensing as applied to the study of climate. Remote sensing refers to the acquisition of information about a target or phenomenon from a distance; climate is the low-frequency signal of weather that involves interactions among Earth’s environmental systems (atmosphere, biosphere, cryosphere, hydrosphere). Combining these two disciplines into Satellite Climatology is logical because the fundamental basis of both remote sensing and climate is radiation transfer through Earth’s atmosphere. The course emphasizes understanding the different techniques used to determine, from space-borne platforms, the atmospheric, oceanic and land surface conditions important to climate and its variations, and the interpretation of these remotely sensed data in the context of “climate dynamics” and “synoptic climatology.” Specific topics include the following: Satellite systems (platforms, sensors, orbits, data processing); Remote sensing clouds and cloud systems, Retrieval of atmospheric temperature, moisture, and precipitation, the Earth-atmosphere radiation and energy budgets, and Land-surface conditions and their modification by humans. In addition, examples of the different satellite-based climatologies, and
their advantages and limitations with respect to conventional observations ("ground truth"), are presented.

**GEOG 420Y (US;IL) Comparative Urbanism (3)** This course investigates selected urban issues through the lens of comparative urbanism.

**GEOG 420Y Comparative Urbanism (3)**

(US;IL)

**(BA) This course meets the Bachelor of Arts degree requirements.**

As an upper level urban geography seminar, this course investigates selected urban issues through the lens of comparative urbanism and requires active class participation. Examination of readings from the growing literature on comparative urbanism will introduce students not only to possible ways to design an effective comparative study but also to the varying goals of such work. Other readings, drawn from a wide variety of sources, will target particular issues facing urban areas that may vary from year to year, such as economic restructuring, uneven urban redevelopment, transportation planning, historic preservation, arts districts, the social construction of race and ethnicity, aging in place, and urban poverty. Students in turn will be required to design and carry out a comparative research project focusing on a particular urban issue, highlighting both the similarities and the differences between their selected case study cities and placing them in local, regional, and global contexts. This course is reading and writing intensive and satisfies United States Cultures and International Cultures requirements, as well as the Bachelor of Arts Social and Behavioral Sciences Field.

**GEOG 423Y (US) Historical Geography of North America (3)** Exploration, settlement, and changing patterns of human occupance from the seventeenth century to the 1930s.

**GEOG 432Y Historical Geography of North America (3)**

(US)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This is an upper-division, writing-intensive course that presents an overview of current scholarship on the evolving historical geography of the continent. It does this through a set of lectures given by the instructor, through directed readings that will be the basis of class discussion, and centrally through research essays that offer students the opportunity to research, write and argue historical geographies. Research in historical geography is a process of engagement with partial evidence and with secondary material to open windows on aspects of past lives, past economies, and past places.

Since an introductory level overview of the historical geographies of the continent is presented in GEOG 122: The American Scene, this class does not offer a comprehensive survey of regions and periods. Rather, it focuses on three themes—staples and the colonial era, local transformations in agricultural and industrial communities in the nineteenth and early twentieth century, and the packaging of memory—as a way to expose students to primary evidence and current debates.

In the unit on the colonial era, the focus is on a variety of records that illuminate the development of economies based on staples such as fish, fur, tobacco, rice and iron, drawing on evidence from the Lords of Trade and Plantations in London, and from correspondence between merchants and planters, as well as scholarship on the material culture of houses, farms and settlements.

For the unit on local change, workshops illustrate how to tease out information from the manuscript census, county atlases and corporate histories; students then pursue similar material for a locale of their own choice and submit drafts of an evolving research essay. A short presentation to the class encourages the effective distillation of visual and data evidence to communicate research findings.

On the packaging of memory, the class critically examines how historic sites are presented, and how interpretations have changed in response to shifting academic and popular concerns.

Lectures are interspersed with discussions of readings, workshop demonstrations, and by student presentations. Eleven distinct writing exercises are used as the basis of allocating the overall grade.
GEOG 424 (US;IL) Geography of the Global Economy (3) Focus on industrial location theory, factors in industrial location, studies of selected industries and problems of industrial development.

GEOG 424 Geography of the Global Economy (3)

This class will conduct research on firms and industries engaged in the global economy. Students learn to conduct industry and firms analyses in the context of international regulation. Students learn about the competitive conditions, governmental context, and technological challenges facing selected industries.

GEOG 425 (US) Geography of Race, Class, and Poverty in America (3) This class examines the spatial interactions of race, class, and poverty in the United States.

GEOG 425 Geography of Race, Class, and Poverty in America (3) (US)

(BA) This course meets the Bachelor of Arts degree requirements.

The terms "race," "class," and "poverty" are often discussed in the same breath in academic scholarship. Research portrays the interwoven relationships between economic status, economic security, and ethnic heritage. Despite this powerful and abundant literature, few scholars examine the spatial interactions among race, class, and poverty. The class introduces students to a range of literatures on the meaning of race, class, and poverty in the contemporary United States. We will situate these terms in their local spatial context and investigate how location influences perceptions of the meaning of race, class, and poverty. We will blend historical, contemporary, theoretical and empirical scholarship as we investigate the meaning, understanding and manifestation of race, class and poverty in the U.S. Beginning with history, we will move through the 20th century examining how economic and political cycles have influenced social understanding of these terms. There will be a particular focus on deconstructing the measurement and meaning of the terms and their use in public policy discussions based on perceptual understandings of the terms "race," "class," and "poverty." We will examine powerful historical and contemporary media images of race, class, and poverty as seen through the lens of place and identity.

GEOG 426Y (US;IL) (WMNST 426Y) Gender and Geography (3) Description and explanation of the links between gender relations and spatial structures.

GEOG 426Y Gender and Geography (3) (US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Until the 1970's women remained invisible in the analyses of social space; human geography was indeed just that (hu)man. Recently, feminist geography began to challenge the implicit masculinity of the subject of geography; this course will examine the evolution of the feminist challenge. The course addresses four major topics -- Gendering Space; Gendering Work; Gender, Place and Nationalism; and Gender and the Body. Students explore each of these through case studies and group projects, and will produce a series of essays throughout the semester. As a point of entry to discussion of place, space, and gender, this course will explore the diverse ways in which feminists have seen space as central both to masculine power and to feminist resistance. In particular we will explore arguments from feminists of color and from poststructuralists which have influenced current discussion about maps and power in historical and contemporary contexts.
GEOG 427 (US;IL) Urban Historical Geography (3) Study of the development and transformation of the historical urban built environment.

GEOG 427 Urban Historical Geography (3) (BA) This course meets the Bachelor of Arts degree requirements.

Close up, cities can be seen as sets of buildings - some that are lived in, some that are places of work, and others that are places of cultural celebration. The streetscapes created by these sets of buildings can be decoded as a palimpsest of the past. Likewise, the patterns and names of streets, lanes and alleys between buildings contribute to morphological databases of property parcels and land uses that help in the analysis of the historical transformations of urban form. Seen at a more distant scale, cities are also nodes - centers for surrounding regional trading systems, and partners with other places in national and global trading systems - that have evolved over a set of decades or even centuries.

This course offers an investigation of such multiple frames on the urban past. Examples will be drawn from the Americas, but many will be from Europe, Africa and Asia. Imperialism and its associated colonial mercantile practices meant that variants of urbanism were mapped on to other parts of the world where they often created hybrid forms of cities over time. In the industrial era, new relations between cities and the countryside emerged, as new forms of production developed and as resources were harnessed from a more global hinterland. Radically different types of cities have emerged in the past two centuries.

Geography 427 will survey the global urban past and explore ways of decoding urban morphological complexity through historical cartographic record and extant landscape evidence. The ultimate objective is for students to develop an appreciation for the complexity of urban life and landscapes in times past and to understand some of the ways in which American urban forms adapt or draw distinction from urban forms elsewhere.

At the same time, the course aims to enhance student oral and written communication skills. To enhance their oral communication skills, each student will be expected to make two presentations on their research and to participate in class workshops. To enhance their written communication skills, students are required to write two papers that include instructor feedback on interim drafts, to craft three article summaries, and to write short log responses to most lectures.

GEOG 428 (US) Political Geography (3) Geographical foundations of political phenomena; significant geographic factors in growth and development of states, boundary problems, population distribution, colonies, and internal and international regional problems.

Political Geography (3)

GEOG 428Y (US;IL) Political Geography (3) Geographical foundations of political phenomena; significant geographic factors in growth and development of states, boundary problems, population distribution, colonies, and internal and international regional problems.

Political Geography (3)
GEOG 429 Geographic Perspectives on Global Urbanization (3) This course reflects critically on a number of issues related to global urbanization, including the culture and political economy of urban space.

GEOG 429 Geographic Perspectives on Global Urbanization (3) (US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

One of the major themes in the discipline of geography is the study of the relationships between humans and the natural environment. GEOG 429 introduces students to the multiple ways in which people and the environment are interconnected. From a dynamic systems perspective, we refer to this interconnectedness as “coupled social-ecological systems.” The course uses a geographic perspective to understand how differently these linkages are shaped in various ecological and cultural settings around the globe. The course follows an interdisciplinary approach, exploring from multiple angles major environmental and societal challenges such as climate change, genetically-modified food, over-consumption, disease, and environmental service provision in the industrialized North and the Global South. It promotes critical thinking regarding key concepts such as carrying capacity, ecological footprints, feedback, stability domains, and resilience. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in their own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate about the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide them with skills for critically analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world. They will also learn how to assess what future pathways are sustainable and ethically sound. One key goal of the course will be to help students increase their sensitivity to the global and international context of human interactions with nature. A recitation section is crucial because it allows students to explore controversial issues such as biotechnology, nature as a commodity, and global warming, and to develop critical positions on such issues.

GEOG 430 Human Use of Environment (3) The human use of resources and ecosystems and social causes and consequences of environmental degradation in different parts of the world; development of environmental policy and management strategies.

GEOG 430

GEOG 430 Human Use of Environment (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Geography 430 examines the human use of resources and ecosystems, the multiple causes and consequences of environmental degradation, and adaptive institutional and policy arrangements as prerequisites for resilient and sustainable management and development in different parts of the world. The major objective of this course is to help geographers, earth scientists, and other professionals to develop an awareness and appreciation of the multiple perspectives that can be brought to studies of human use of the environment and of the ways in which resource-management decisions are made in human society. This is a capstone course that encourages students to place their individual and technical skills within the context of multiple approaches to environmental decision making and management in complex and dynamic social-ecological systems. GEOG 430 is designed as a collective/social learning experience. This implies that the professor and students share responsibility for the learning process and take advantage of collective skills, insights, experiences, and efforts of each other. As in system dynamics, this requires both commitment and flexibility and the willingness to explore foreign territory. As part of this philosophy, learning consists not only of information flow from professor to student, but also from student to student and student to professor. The course follows a case study approach to explore real life lessons of adaptive management around the globe. To make this process work, attendance and active participation are imperative. The course is run more like a seminar than a lecture course and integrates lectures, in-class discussions, presentations, and interactive activities. Student performance is evaluated based on active participation in all of the above, individual short assignments, group projects, in-class quizzes and exams, and one major writing assignment, varying by faculty teaching. This course is offered every semester.

GEOG 431 Geography of Water Resources (3) Perspectives on water as a resource and hazard for human society; water resource issues in environmental and regional planning.

The Pennsylvania State University
GEOG 431 Geography of Water Resources (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Geography 431 is designed to help geographers, earth scientists, planners, other environmental professionals as well as non-science majors to develop an awareness and appreciation of the multiple perspectives that can be brought to studies of water as a resource and hazard, and of the ways in which resource-management decisions made in human society are strongly related to the availability, quantity, and quality of water. The course traces the hydrologic cycle as a cascading system, addressing factors contributing to flow of water through the system, models of each process, and how processes affect (and are affected by) other land use change and related resource decisions. The course then turns to issues of water resource management, including issues surrounding irrigation; dams and dam removal; provision of safe potable water; water quality including human and wildlife effects; the water economy including bottled water, privatization, and water as a free good; water law; institutions for water management at the global, national, regional and local scale; and issues of water for national security and international peace.

GEOG 432 (EME 432) Energy Policy (3) Analysis, formulation, implementation, and impacts of energy-related policies, regulations, and initiatives.

As concerns for a secure, stable, and clean energy future grow, so does the need for individuals who can develop, assess, and implement effective energy policies and practices. GEOG 437 / EME 437 provides students with an in-depth exploration of energy policy development, implementation, and assessment at multiple governmental and corporate scales. The course utilizes contemporary real-world problems and actions to provide students context for the drivers, frameworks, and assumptions of energy policy.

The course is structured to provide students with the expertise necessary to identify energy policy needs, craft policy alternatives, and evaluate energy policy. Emphasis on tailoring energy policy to meet not just economic goals but also environmental and social goals creates a global perspective from which students learn to approach energy policy challenges. Students will undertake a course-long project in which they must research and write an energy policy at a scale and on a topic of their choosing. They will utilize activities from each lesson in the course to refine their topic, research policy options, and develop an energy policy. Because the demand for highly analytical individuals is so great among energy professionals, students will also anonymously critique another student’s policy. This Capstone Project of the course will hone the analytical and communication skills necessary to complete this degree program.

GEOG 434 Politics of the Environment (3) This course explores politics related to the use, transformation, valuation, and representation of the environment.

GEOG 434

GEOG 434 Politics of the Environment (3)

Scholarship in geography and related disciplines has demonstrated that nature in general and specific environments in particular are unavoidably political. Environmental management can thus never be a purely scientific or technological challenge; it requires critical analysis of cultural, political, and economic contexts, factors, and effects. For instance, effective environmental management requires consideration of how culture shapes how we perceive and value our environments, who wins and who loses in any particular approach to environmental management, and what the relative advantages and disadvantages of competing institutional approaches to environmental management are.

This course examines the development of environmental governance, with a primary focus on the United States. It explores both how various groups within society conceive of and value the environment, and multiple approaches to environmental governance and protection. It reviews the history of environmental movements and regulation, and contemporary issues and debates in environmental governance, with particular attention to the effects of institutional forms and social movements. In particular, it examines competing arguments for and against governance approaches centered on state action, market mechanisms, and prominent roles for NGOs and social movements.

Students will be evaluated based on: 1) their participation in class discussions, based on critical engagement with material from course readings and lectures; 2) their performance on a midterm and a final examination; 3) an individual research project on a topic relevant to the course, to be designed and carried out under the supervision of the course instructor.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GEOG 435H (IL) Global Change and Sustainability - Bulgaria (3) Sustainability in the context of climate change, global socioeconomic change and regional transformation in Bulgaria; embedded foreign fieldwork (honors).

GEOG 435H Global Change and Sustainability - Bulgaria (3) (IL)
This course focuses on sustainable development and global change - vital issues for humanity - with specific attention to the challenges in Bulgaria of the transition from a centrally planed state to an open market economy with an emerging civil society. It is highly integrative in themes and case studies, including seminar work on-campus and field work in Bulgaria. Acquiring knowledge, understanding foreign environment, and developing new values embracing sustainable development are ultimate objectives of the course. Topics include rethinking established ways of production and consumption; policy and decision making affecting sustainability; finding new ways of greening economics, social accounting and planning; constraining consumerism; sustainable transportation, energy, engineering, architecture and construction; agriculture, forestry and water resources in a changing global climate; and the role of media, communication and NGOs. The course focuses on Bulgaria with the multiple challenges of the transition, globalization, global climate change, and important local land use and energy changes, including a critical assessment of sustainable aspects of former socialist states (e.g. compact cities, public transportation) in contrast to contemporary trajectories (e.g. urban sprawl, private automobile use). Within the general student-involved-learning framework of the course, students develop individual or team foci based on their academic major and personal interests, developing a proposal for in-country activity and post-field-session synthesis of a sustainability issue and the Bulgarian case. Special attention is given to meeting the goals of Schreyer Honors College: to demonstrate academic excellence with integrity, students will be held to a high standard of scholarly curiosity and performance, including developing skills and attitudes necessary for responsible and ethical interaction with local officials, scholars and host families. For building a global perspective, students will be challenged with seeing global and regional change from a non-North-Atlantic perspective reflecting the wider post-socialist world. For creating opportunities for leadership and civic engagement, students will be expected to show in their individual proposals and final projects aspects of their own learning and intellectual curiosity that will be shared with the people who assist them in Bulgaria. The course has honors expectations in the level of participation and collaborative learning, the formal project proposal, field work activities for achieving the proposal goals, and in the final symposium presentation and paper. The course contributes to a new generation capable of making vital decisions for a sustainable future in the face of climate change as well as social and economic transitions.

GEOG 436 Ecology, Economy, and Society (3) Analyses of major themes in ecology and economic development, poverty-alleviation, and sustainability.

GEOG 436

GEOG 436 Ecology, Economy, and Society (3)
For many years, it was believed that there was a direct tradeoff between economic growth and a clean environment. Sustainable development has been proposed as an framework within which these two objectives can be pursued in harmony and actually can reinforce one another. This course focuses on sustainability issues at the broader (macroeconomic) level, as opposed to the operation of individual businesses (microeconomic, or industrial ecology) level.

The course will have two main emphases: 1) to evaluate the major conceptual ideas surrounding natural resource management and sustainable development, including equity, poverty, fairness, power, knowledge, and community empowerment; 2) to use empirical case studies to examine the practical, material and policy relevance of these concepts. The first part of the semester will be used to untangle and clarify the ideological and theoretical bases (biases) of broad human-environment discourses as they pertain to community empowerment and resource development. The final part of the semester will be used to analyze case studies in order to assess the relevance of existing theoretical framework for resource empowerment and community development in industrialized countries and the Third World, especially Africa.
check the specific course syllabus.

**GEOG 438W - Human Dimensions of Global Warming (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

Geography 438W, the Human Dimensions of Global Warming, covers both the human causes and consequences of what many people view as the most significant problem facing society. Humans cause climate change primarily by emitting heat-trapping greenhouse gases through everyday activities associated with industrialized society (such as energy production and consumption, transportation, and manufacturing) and land transformation (such as agriculture and deforestation). People experience the consequences of climate change directly through reduced resources (such as food, fiber, forests, and fisheries) or increased natural hazards (such as droughts, floods, and intense storms). They also experience the consequences indirectly through such mechanisms as higher prices for food or larger insurance premiums. GEOG 438W does not address the physical science of climate change; instead, it concentrates on social science issues surrounding the topic.

GEOG 438W has two goals: (1) to develop understanding of a set of issues related to the human dimensions of climate change; (2) to develop and apply communication skills by discussing and writing about the topic. The specific content of the course will change with the instructor, but the focus on the human causes and consequences of climate change and on skill-development in writing will be constant.

Students will be evaluated on both the course goals: (1) understanding of the human dimensions of climate change; (2) application of communication skills. Although exact procedures for determining grades will vary with instructor, the basis for grades will always include a combination of written exams based on lectures and readings, regular written assignments with instructor feedback, and in-class discussion and participation.

**GEOG 439 Property and the Global Environment (3)** This course reviews theoretical and empirical relationships between multiple legal, economic, and cultural approaches to property, and environmental quality and conflicts.

**GEOG 439**

**GEOG 439 Property and the Global Environment (3)**

Property relations are among the most powerful and pervasive institutions in human societies. Fundamental rules governing and legitimating who can do what, and where, they shape and reveal interactions between human societies and physical environments, a concern at the heart of geography. Our own property relations are often all but invisible to us precisely because they are so deeply woven into our perceptions, consciousness, social structures, and everyday experiences of the world. It is thus easy to overlook the fact that we live within highly specific and contingent property arrangements and that changing circumstances are prompting important changes in contemporary property relations.

This course explores these issues with a particular focus on their implications for environmental politics and regulation. We will address questions such as: Is the privatization and commodification of nature a recipe for ecological disaster, or the most effective means of preservation? Can we own the weather? What were the historical-geographical circumstances surrounding the development of major modern property forms, and are those forms adequate to the environmental problems we now confront? Are there property relationships outside of the law? How do property relations and conflicts change in response to changing human control over nature, and how can different kinds of property arrangements lead to, or help to solve, environmental and social problems? Readings will review debates over common property: the benefits and dangers of privatization of environmental goods; distinctions between formal and informal property rights; the development of zoning and other regulation of private property; and contemporary debates over intellectual property rights in nature, and relationships among trade, property rights, and environmental quality.

The course will be of interest to students interested in environmental policy, land use planning and management, law, the areas of nature-society relations and historical geography, and environmental history. Students will gain a sophisticated understanding of the central underpinnings of much property and environmental regulation, and familiarity with many cutting-edge debates in these domains, both domestically and internationally. Evaluation methods will include examinations and an independent research paper and presentation by each student. The course will be offered every other year, with enrollment capped at 30 students.

GEOG 440 Topics in Regional Geography (3)
Analysis of historical, contemporary and future environmental and societal issues in a specified world region from a geographical perspective.

GEOG 440

Topics in Regional Geography (3)

Geographers bring a uniquely holistic perspective to the study of places. This course provides an opportunity for geography faculty with regional expertise to share with students a learning experience that addresses major issues and challenges in a world region. Although the course will vary from instructor to instructor and offering to offering, the courses have common elements that help students to analyze and understand regions as academic constructs, as geopolitical reality, and places in which people interact with others and the environment to sustain livelihoods. The basic objectives underlying all offerings of this course are to learn how to accumulate and assess regional, geographic information and to synthesize such information in a coherent and meaningful understanding of the region in an holistic and comprehensive manner. Regional geography can be key for students in area studies programs, in international business, in regionally oriented environmental and social sciences, in the humanities, in international law and international affairs. Although each instructor will use her or his own course design and evaluation methods, common to all offerings will be activities that develop and assess student abilities to undertake regional analysis. For example, one instructor may require students to prepare briefing notes on a regional issue as might be given to an international agency; another may use the mechanism of a semester-end symposium with powerpoint presentations of student's investigations. Students should contact the faculty member offering a GEOG 440 in a specific instance for details about the course foci, activities and evaluation methods. It is anticipated GEOG 440 will be offered annually with varying regions covered from year to year.

Dynamic Cartographic Representation (3)

Dynamic Cartographic Representation (3)

Theory and practice of mapping and geo-representation in a dynamic media context. Applications in science, policy, travel, and education.

Dynamic Cartographic Representation (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Most maps produced today are electronic, dynamic, and often ephemeral -- with millions of maps generated on the web each day. At the same time, computer graphics technologies developed to enable scientific visualization generally, are being adapted and extended for applications with geographic information. The goal of this course is to provide students with both the conceptual understanding and practical experience needed to design effective dynamic representations and assess their effectiveness.

During the term we will explore the potential and implications of recent advances in cartography, exploratory data analysis, and information visualization as they relate to the theory and practice of geographic visualization (geovisualization). A key focus of the course is on "dynamic" representations of geographically referenced information. Dynamic representations are those that change as a result of user actions or data updates. Topics include: animated and interactive maps, exploratory multivariate spatial data analysis, geovisualization to support knowledge construction, interactive web maps, navigation aids for real and virtual worlds, map-enabled decision-support, collaborative geovisualization, dynamic maps to enable learning, semiotic principles for design of dynamic maps and related geovisualization tools, and perceptual/cognitive issues in dynamic geo-representation (including methods for studying the success of visual displays and interaction devices).

As a writing intensive course, particular attention will be given to writing for geographic information science (GIScience). This writing will include laboratory project reports, reviews of published literature, and a term project.

General Education: None
Diversity: None
GEOG 463 Geospatial Information Management (3) This course examines geospatial data representations and algorithmic techniques that apply to spatially-organized data in digital form.

GEOG 464 Advanced Spatial Analysis (3) Skills and knowledge for applying quantitative methods to analyze information with spatial distributions.

GEOG 464 Analysis and GIS (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Geography 464 is a course in methods for analyzing spatial data--methods that can and should be used when the geographic arrangement of a set of measured observations is thought to be of significance in explaining the values of those measurements. The methods of spatial analysis looked at in this course can be distinguished from conventional statistical analysis techniques, and also from many of the analysis functions programmed into many GIS packages. In fact several spatial analysis methods considered in this course the result of attempts to alter and extend conventional statistical techniques to take account of locational similarity and distance measurements (which is why Geography 364 or an equivalent primer in introductory statistical methods is a prerequisite). This means that the techniques that will be introduced in the course are often quite complex mathematically or statistically. Having said this, the overall goal of the course is to provide sufficient conceptual understanding and practical experience so that students become competent in selecting and applying methods appropriate to a variety of frequently-encountered analytical situations.

GEOG 467 Applied Cartographic Design (3) Project-based map production problems with emphasis on map design and advanced mapping tools in geographic information systems.

GEOG 467 Applied Cartographic Design (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The course objective is to immerse the student in applied problems of map production and geographic representation. Topics include advanced software methods for labeling and data editing; advanced symbolization and production of extended map series; conversion between software environments; and representation for multiple media, scales and purposes. The challenge of working with clients for mapping is often included in a project. Evaluation is based primarily on meeting draft deadlines, map project quality, written reports on project decisions, and an exam. The 300-level cartography course is a prerequisite for GEOG 467, and an introductory GIS course also provides useful background skills, though it is not a prerequisite.
GEOG 468 Geographic Information Systems Design and Evaluation (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course teaches GIS design, project management and communication skills and an appreciation of the ethical, legal and social issues surrounding maps, GIS and geographical data. It also introduces some of the newer information-technology aspects of handling geographic information, such as location-based services and sensor webs, that affect how GIS data are accessed and used. The bulk of practical component of the course is taken up with a large group project (four to six persons per group). The project gives students the opportunity to engage in an exercise that spans the entire range of GIS design and implementation: from problem inception to solution testing.

Outcomes revolve around the experienced gained by conducting a GIS project from inception to solution, including specification, design, implementation and evaluation, and specifically:

1. Practical experience with technical writing relating to GIS systems lifecycle, including interviewing, fact finding, description of the contents of the various project deliverables and their importance.

2. An appreciation of legal and ethical issues surrounding GIS, maps and geographic including copyright, responsibility and liability and computing law.

3. An understanding of contemporary technological innovations that will impact the access and use of geographic information, including: data sharing (interoperability), digital libraries and information portals, web services and grid computing.

4. A portfolio of practical systems development work, that documents all stages in the lifecycle of a GIS project.

GEOG 469 Energy Industry Applications of GIS (3) Roles of geographic information systems in energy siting decisions focusing on electric energy transmission networks.

GEOG 469 Energy Industry Applications of GIS (3)

Over 2 million miles of oil and gas pipeline and nearly 200,000 miles of electric transmission grid currently traverse the U.S. Geographic information systems (GIS) are used to help maintain these far-flung and extremely expensive energy infrastructures. GIS is also used to help determine optimal routes for pipelines and transmission lines as energy demand and production increase, and as the grid is extended to connect to new energy sources and consumers. GEOG 469 provides students with an in-depth exploration of the complexities of siting decisions. The course introduces a variety of siting challenges that confront the energy industry and its customers and neighbors, but focuses on the siting of electrical transmission lines. The course also provides hands-on experience with a common decision support technology, and considers how the technology may be used to facilitate public participation in siting decisions.

Students will undertake a term-length project in which they must propose, research, develop and implement a siting recommendation for an electrical transmission line. They will utilize activities from each lesson to develop primary and alternative routes. Using GIS, students will develop overlays, weights and rankings to determine the most suitable location for a proposed transmission line. Students' final product will be maps showing proposed routes based on the siting criteria and rankings developed to minimize the impacts associated with the various siting criteria used. To help students develop the critical thinking skills needed in the energy industry, students will learn to critique their peers’ analyses systematically from the perspective of local stakeholders who are most affected by siting decisions.

GEOG 469 is designed to help students achieve two of the programmatic educational objectives established for the Energy and Sustainability Policy degree. It fosters energy industry knowledge by illuminating the difficulties intrinsic to facilities siting decisions. And it nurtures analytical skills by familiarizing students with GIS methodology, and by teaching them how to critique GIS analyses systematically.

GEOG 475H (LER 475H) Labor in the Global Economy: U.S. and South African Perspectives (3) This course focuses on how the nature of work is changing in the "new economy", and the implications for economic opportunity and inequality in both the United States and South Africa. Sections of the course examine: theoretical approaches to understanding contemporary process of labor restructuring, including globalization, rise of an information economy, and growth in service sector employment; case studies of restructuring processes in different industrial sectors.

The Pennsylvania State University
in both the U.S. and South Africa; and innovative labor organizing initiatives at a local, regional and global scale. This course aims to develop a framework for understanding the nature of contemporary processes of economic restructuring and its impact on the world of work. Drawing on research in both a South African and U.S. context, key case studies in the changing nature of work will be examined. This will provide a deeper understanding of how broad macro-level changes in the nature of contemporary capitalism are mediated by a variety of technological, political, and socio-economic factors in particular industries and geographic contexts. Finally, an in-depth look at workers’ responses to these changes at different scales (local, regional, global) will help deepen our understanding of the contested nature of workplace restructuring while exploring promising strategies for improving working conditions. This is a reading-intensive course dealing with the theoretical literature on rapid economic restructuring and how this is shaping work and employment. It is run in collaboration with the Sociology of Work Program at the University of Witwatersrand in Johannesburg, South Africa, with video-conference discussions linking the two courses.

GEOG 482 The Nature of Geographic Information (2) Orientation to the properties of geographic data and the practice of distance learning.

GEOG 482  

GEOG 482 The Nature of Geographic Information (2)  
(BA) This course meets the Bachelor of Arts degree requirements.

This course serves as an orientation to the study of geographic information systems in the Master of Geographic Information Systems degree program. It is also the first in a series of four courses that leads to Penn State's Certificate of Achievement in Geographic Information Systems. The course consists of readings, quizzes, projects, and discussions about fundamental properties of geographic data, how such data are produced, and how they are used. The course provides a comprehensive overview of geographic information technologies, including the global positioning system, land surveys, aerial surveys and photogrammetry, topographic mapping, social surveys such as the U.S. Census, and satellite remote sensing. It also ensures that helps students develop the skills required to become successful online learners. The course culminates in a final project in which students independently research, critically evaluate and report on the characteristics and availability of a particular data product, service, or mapping technology. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October).

GEOG 483 Problem-Solving with GIS (3) How geographic information systems facilitate data analysis and communication to address common geographic problems.

GEOG 483  

GEOG 483 Problem-Solving with GIS (3)  
(BA) This course meets the Bachelor of Arts degree requirements.

GEOG 483 is a required course in the Master of Geographic Information Systems degree program. It is also the second in a series of four courses that leads to Penn State's Certificate of Achievement in Geographic Information Systems. The course consists of projects, associated readings, quizzes, and discussions about concepts, operations and tools in geographic information systems. Students confront realistic problem scenarios including such operations as geoprocessing, attribute and spatial joins, map projections, address geocoding and buffering. Students who successfully complete the course are able to access, display, manipulate, edit, and analyze geographic data. They are able to perform common GIS tasks using industry-standard tools and operations. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July and October).

GEOG 485 GIS Programming and Customization (3) Customizing GIS software to extend its built-in functionality and to automate repetitive tasks.

GEOG 485 GIS Programming and Customization (3)

(BA) This course meets the Bachelor of Arts degree requirements.

GEOG 485 is an elective course in the Master of Geographic Information Systems degree program. It is also one of the optional capstone courses that lead to Penn State's Certificate of Achievement in Geographic Information Systems. The course consists of readings, quizzes, projects, and discussions about constructing tools that solve geographic problems not easily solved using out-of-the-box GIS software. Students learn to use the Visual Basic for Applications (VBA) programming environment to add functionality to ArcGIS 8.x. No previous programming experience is assumed. The course covers programming basics like object-orientation, COM, object model diagrams, loops, if-then constructs, and modular code design, as well as GIS-focused topics such as working with maps, layers, tables, and performing queries. Students who successfully complete the course are able to automate repetitive tasks, customize the ArcGIS interface, and share their customizations with others. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October).

GEOG 486 Cartography and Visualization (3) Theory and practice of cartographic design emphasizing effective visual thinking and visual communication with geographic information systems.

GEOG 486 Cartography and Visualization (3)

(BA) This course meets the Bachelor of Arts degree requirements.

GEOG 486 is an elective course in the Master of Geographic Information Systems degree program. It is also one of the optional capstone courses that lead to Penn State's Certificate of Achievement in Geographic Information Systems. The course consists of five projects and a capstone assignment. Each project includes readings, quizzes, and discussions about concepts and tools in cartography and visualization. Throughout the course, students complete "mile marker" assignments that are designed to help them progress toward the capstone assignment. Through the course projects, students confront realistic problem scenarios that incorporate such skills and concepts as creating symbolization schemes, coordinate systems and map projections, creating isoline and other terrain representations, interpolation, classification schemes, multivariate representation and representation of data uncertainty. Those who successfully complete the course are able to design and produce effective reference and thematic maps using GIS software, can create and analyze workflows, and can interpret and critique maps and related information graphics verbally. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October).

GEOG 487 Environmental Applications of GIS (3) Real-world applications of GIS and spatial analysis to investigate a variety of current environmental issues.

GEOG 487 Environmental Applications of GIS (3)
GEOG 487 is an elective course in the Post baccalaureate Certificate Program in GIS and the Master of Geographic Information Systems (MGIS) degree program, both of which are offered exclusively through Penn State's World Campus. GEOG 487 consists of projects, associated readings, quizzes, and discussions related to environmental applications of GIS. Students are exposed to a variety of concepts, tools, data sources and formats, and environmental issues they are likely to encounter in a career involving GIS and environmental management. Like other courses in the GIS Certificate and MGIS programs GEOG 487 is offered in compressed 10-week terms that require a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October). GEOG 487 does not count toward the requirements of the resident B.A., B.S., M.S. or Ph.D. degrees in Geography, except by explicit permission of the student’s graduate advisor and the Department of Geography’s graduate officer.

GEOG 488 Acquiring and Integrating Geospatial Data (3) Advanced technical, legal, ethical and institutional problems related to data acquisition for geospatial information systems.

GEOG 488 Acquiring and Integrating Geospatial Data (3)
GEOG 488 is an elective in the Master of Geographic Information System degree program. The course is organized around six projects and a final project that spans three weeks. Each project includes associated readings, quizzes, and discussions about acquiring and integrating GIS data. The course adopts a developmental learning approach that prepares students to successfully complete projects given progressively less detailed and more realistic project guidelines. Students confront realistic problem scenarios that incorporate such skills and concepts as definition of data needs, metadata content standards, legal and ethical issues related to data use, data formats and types, interoperability, field collection methods and contributing data for public use. Those who successfully complete the course are able to specify a GIS project, identify appropriate and cost-effective data sources, create data dictionaries, assess and ensure data quality, determine appropriate data formats given an intended data use, transform data from one format to another and understand GIS software functionality related to data conversion. The course is ten weeks in length and requires a minimum of 8/12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October).

GEOG 489 GIS Application Development (3) Advanced topics in GIS customization, including the Systems Development Life Cycle, packaging and deployment, and consuming Web services.

GEOG 489 GIS Application Development (3)
GEOG 489 is an elective course in the Master of Geographic Information Systems degree program. The course consists of readings, quizzes, projects, and discussions about advanced GIS programming concepts and techniques. It builds on the material covered in GEOG 485: GIS Programming and Customization. Students will work with ESRI's ArcObjects component library to customize ArcGIS software products using Visual Studio.NET as their development platform. Students who successfully complete the course are able to use the Systems Development Life Cycle methodology to build custom GIS solutions. They are able to package and deploy their customizations through dynamic link libraries (DLLs) and register them with ArcGIS, a more robust deployment solution than those covered in GEOG 485. Students are also able to explain the fundamental differences between COM and .NET software development. Lastly, they are able to consume web services.
services and integrate them into custom Web applications. The course is ten weeks in length and requires approximately 100 hours of student activity. It is offered quarterly (starting in January, April, July, and October).

GEOG 493 Service Learning (3-12) Classroom instruction with supervised student activity on a group community service project.

GEOG 493

GEOG 493 Service Learning (3-12)
GEOG 493, Service Learning, provides students with activities that integrate community service with academic study. The aim of service learning is to enrich traditional classroom-based education by getting students into a community, thereby engendering civic responsibility and simultaneously strengthening communities. GEOG 493 has five objectives: (1) to develop understanding of a set of issues; (2) to learn and apply skills associated with those issues; (3) to learn to interpret science issues for dissemination to the public; (4) to develop and apply communication skills by speaking, writing, and/or desktop publishing; and (5) to reflect on personal and career interests in science, the environment, public policy, or related areas. Thus, students will read, write, and talk about a set of issues of importance to a community and engage in a project in that community.

The specific service-learning projects will change each semester, although some projects will be ongoing. In addition, more than one GEOG 493 project will be available to students in most semesters and will have alphabetical designations (e.g., 493A or 493B). Students can take GEOG in more than one semester, to a maximum of 12 credits.

Depending on the topic of the service-learning project, GEOG 493 can complement courses in most colleges and their majors. The course is available to all Geography majors as elective credits; it is also available to all Geography Minors for credit toward the minor. It counts for credit as an Advanced Physical/Environmental Geography course in the Physical/Environmental Geography Option, and counts for credit as an Advanced Geography course in the General Geography Option.

Students will be evaluated on four of the five course objectives: (1) understanding of the issues, (2) learning and application of skills, (3) interpretation of issues for public dissemination, and (4) application of communication skills. Although exact procedures for determining grades will vary with the instructor and service-learning project, the basis for grades will include a combination of written work, oral presentations, in-class participation, and outside-class participation.

Bachelor of Arts: Social and Behavioral Science  
Effective: Fall 1981  
Prerequisite:  

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 495B Geography Teaching Internship (1-10)** Supervised undergraduate teaching experience in which students serve as peer tutors, laboratory assistants, or course material developers.

**GEOG 495b GEOG 495B Geography Teaching Internship (1-10)**

* (BA) This course meets the Bachelor of Arts degree requirements.

The Teaching Internship provides undergraduate students with formal, supervised teaching experience. Instructors recruit students who excel in a particular course to serve as teaching interns (TIs) in subsequent offerings of the same course. TIs may assist their peers as tutors or as laboratory assistants. They may be assigned to assist faculty members by developing and evaluating new course activities and materials. Although TIs may not evaluate their peers’ class work, they can play important roles in the formative course assessment by providing feedback in regular meetings with instructors. In the process of developing the knowledge, skills and dispositions needed to be effective in helping fellow students learn, TIs gain experience that prepares them for leadership roles in their professional careers. TIs also gain respect for the effort and imagination involved in designing and conducting college classes.

**GEOG 495C Internship Supervision and Mentoring (1)** Candidates for the Master of GIS degree sponsor a GIS-related internship for students in Penn State’s resident undergraduate program.

**GEOG 495C**

* (BA) This course meets the Bachelor of Arts degree requirements.

GEOG 495C enables MGIS students who participate at a distance through the University’s World Campus to earn credit through contributions to the Department’s resident programs. Qualified MGIS students will be encouraged to earn one credit (up to a maximum of three) for every semester that they supervise a resident Penn State Geography student in GIS-related internship conducted in the MGIS student’s place of work. Qualifications will be judged by MGIS students’ academic advisors. Advisors will help MGIS students recruit qualified internship candidates. Advisors will also evaluate the quality of supervision on the basis of the documentation provided by both the MGIS student and the student intern he or she supervised. MGIS students unable to provide internships may still contribute by serving as mentors to students enrolled in the resident course EM SC 300: Professional e-Portfolio Development, through the University’s LionLink program.

**GEOSC 010** (GN) Geology of the National Parks (3) Introduction to geology, geological change, and environmental hazards, as seen in the National Parks.

**GEOSC 010 Geology of the National Parks (3)**

*(BA)* This course meets the Bachelor of Arts degree requirements.

"Geology of the National Parks" uses the unsurpassed features of national parks to address the key questions of geology and the environment. Each topic is introduced with a virtual field trip to a specially chosen national park (involving pictures of the park, a brief history, other highlights of the park, with supplemental materials and links provided on-line). Key questions about the park (Why has Death Valley been getting wider? Why is much of Mt. St. Helens spread across neighboring states?) then motivate discussion of the topic (here, the spreading or squeezing associated with drifting continents), with special attention to implications for humans (for example, predicting earthquakes and volcanic eruptions associated with these features). A suite of exercises provides the opportunity for analytical experience during walking field trips of local geology, quantitative analysis of geological data, written evaluation of library-based information on national parks, and collaborative on-line assessment of geological hazards. Readings are primarily drawn from an on-line text prepared especially for the course, with links to appropriate national-park sites, but readings also include additional technical literature. There are no prerequisites for the course. It is offered twice yearly at University Park, with enrollment fixed by available classroom space (recently, 300 in the spring and 400 in the fall). The goals of the course are to help students learn how certain common-sense ideas allow science to be such a successful human endeavor, that the Earth efficiently but slowly recycles almost everything, that the Earth's environment has been nearly balanced for very long times, that human-induced changes are among the fastest Earth has ever experienced, and that the National Parks are critical but challenged living laboratories, museums, and repositories of biodiversity. In doing so, the students will see the applications to real-world problems of related fields including physics, chemistry, biology, and mathematics, and will develop a greater appreciation of these other subjects. Students will be challenged to reason from data to generalizations, and from these generalizations back to cases, through in-class discussion, exercises (approximately 1/4 to 1/3 of the total grade), and examinations (primarily objective). Owing to the large enrollment, in-class time will be devoted to virtual field trips, discussion and lecture, but with much effort to encourage participation from the students. Activities out of class will focus on exercises and on the extensive web resources developed in collaboration with the e-Education Institute of the College of Earth and Mineral Sciences.

GEOSC 021 (GN) Earth and Life: Origin and Evolution (3) Introduction to the origin and evolution of life on Earth from the perspective of geologic time and the fossil record.

GEOSC 021

GEOSC 021 Earth and Life: Origin and Evolution (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

When and how did the solar system form? When and how did life on Earth originate? How has Earth's environment changed over geologic time? What caused the extinction of the dinosaurs 65 million years ago? Does life occur elsewhere in the universe? These questions are the cornerstones for this course, which traces the history of interaction between Earth's environment and the evolution of the life over 4.5 billion years since the origin of the solar system. The fossil record serves as the primary source of data to study the evolution of life, especially dinosaurs and other extinct vertebrate groups. The causes and consequences of mass extinctions millions of years ago provide a context for understanding the modern biodiversity crisis. This course has four main objectives: (1) to provide a broad overview of chemical, biological, and geological processes responsible for the origin and evolution of the Earth life; (2) to enable comprehension of geologic time and the history of Earth and life; (3) to understand the nature of evidence and hypothesis testing in an historical science; (4) to develop critical-thinking and expository writing skills. This course introduces and integrates basic knowledge in earth and life sciences. Material is presented in a way that emphasizes observation, synthesis of information, and hypothesis testing. This is a general education course in the natural sciences (GN) and is intended for non-science majors.

Students will be evaluated based on their performance on two midterm exams (50%), a final exam (25%), and homework assignments and quizzes (25%). We will offer the course every year in both the fall and spring semesters.

GEOSC 040 (GN) The Sea Around Us (3) Introduction to marine sciences and the world ocean, including physical, chemical, biological, and geological aspects of oceanography.

GEOSC 040

GEOSC 040 The Sea Around Us (3)
(GN)

(BA) This course meets the Bachelor of Arts degree requirements.

The Sea Around Us introduces students to the basic workings of the ocean and is offered both Fall and Spring terms at the University Park campus. The course covers the origin of the ocean's rock-walled boundaries, the evolution of its coastlines, the motion of currents, waves and tides and their destructive power, the source and composition of seawater, and the role of the ocean in local and global climate. The majority of the Earth's surface is covered by water and thus it seems likely that the human race will become increasingly dependent on oceanic resources in the future. This course seeks to illuminate how the ocean will respond to increased anthropogenic pressure. Students are shown how such issues can be addressed through detailed understanding of the complex interplay between the physical, chemical and biological properties of the ocean. Lectures focus on fundamental principles of natural sciences as related to the ocean using extensive graphics, video clips and demonstrations. Students break up into small groups for a weekly laboratory practicum featuring team-based experiments, discussion, and simple problem sets aimed at solidifying key concepts and topics.

GEOSC 040L (GN) The Sea Around Us (2) Introduction to marine sciences and the world ocean, including physical, chemical, biological, and geological aspects of oceanography.
GEOSC 040L The Sea Around Us (2)

(GN)

( BA) This course meets the Bachelor of Arts degree requirements.

The Sea Around Us Lecture introduces students to the basic workings of the ocean and is offered both Fall and Spring terms at the University Park campus. The course covers the origin of ocean basins, the evolution of their coastlines, the motion of currents, waves and tides and their destructive power, the source and composition of seawater, marine life and the marine food chain, and the role of the ocean in local and global climate. The majority of Earth's surface is covered by water and thus it seems likely that the human race will become increasingly dependent on oceanic resources in the future. This course seeks to illuminate how the ocean will respond to increased anthropogenic pressure. Students are shown how such issues can be addressed through detailed understanding of the complex interplay between the physical, chemical and biological properties of the ocean.

Lectures focus on fundamental principles of natural sciences as related to the ocean using extensive graphics, video clips and demonstrations. Geosc040L can be taken concurrently or independently from Geosc040P.

GEOSC 109H (GN) Earthquakes and Society (3) Introduction to earthquakes and seismology, and their relationship to society, including monitoring for nuclear weapons and seismic hazards.

GEOSC 109H

GEOSC 109H Earthquakes, Nuclear Explosions, and Society (3) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is a general education science course that will provide students with an introduction to earthquakes and nuclear explosions and the science and policy issues linking them. Nuclear explosions, like earthquakes, are seismic events that generate elastic waves that propagate through the earth. As in the case of earthquakes, detection of seismic waves from a nuclear explosion provides the principal means of determining its size and location. In this course, students will learn about earthquakes and nuclear explosions, how these seismic events are monitored, and the role earthquake science (seismology) plays in international treaties designed to limit proliferation of nuclear weapons.

The format for this course will be problem-oriented, with students taking an active role in learning. Student groups will actively research web-based and standard resources to learn about the history of nuclear test ban treaties, the effects of nuclear weapons, earthquakes, basic concepts of seismic wave propagation, hands-on recording of seismic waves, earth structure, plate tectonics, and discriminating between nuclear explosions and earthquakes. Students will engage in activities that will require them to learn the material themselves and be able to teach what they have learned to others in the class through in-class presentations. Part of the course will involve the hands-on operation of a seismic observatory and collection of seismic data from earthquakes and local quarry blasts. Scenarios for evasive testing of nuclear explosions will be examined at the end of the course with emphasis on technical issues and international political ramifications. Students will obtain a background in the history of arms limitation treaties, basic physics, basic geosciences, and have experiences in seismic data collection.

The general format of the course is based on a weekly cycle of student groups performing discovery-based learning with two days of class discussion and/or activities based on that learning. Group investigations will involve cooperative organization and research by small (3-4 students) groups of the class. Specific guidelines and instructions will be given to each group in the form of lists of source materials, source material on the class Web site, links to information Web sites, and interactive Web forms for creating classroom and hard copy reports. Students will be required to engage in the full complement of activities described above. In addition, each student will be required to write a summary of each activity. A grade will be assigned for the group presentation and summaries, and the final course grade will be determined based on the average grade of the individual activities. This course will be offered once a year.

GEOSC 110H (GN) The Science of Gemstones (3) An exploration of the geological uses of gems and of the physical and chemical properties underlying their brilliance and color.

GEOSC 110H

GEOSC 110H The Science of Gemstones (3) (GN)

(BA) This course meets the Bachelor of Arts degree requirements.

From Biblical times to the present, gems and precious metals have served as the standard by which empires have measured their worth. Through the ingenious marketing of an international cartel, diamonds have become identified with the oldest and most sacred of human contracts. To what can we attribute the unique allure of pretty minerals? Although we will consider the history and folklore associated with gemstones, this course will focus on the value of gems to scientists. We will see what crystals tell us about the chemical symmetries that govern the atomic architecture of matter, and we will explore the physical attributes that give rise to the brilliance, color, and durability of gems. Finally, we will learn how geologists have used gems to reveal the history and inner structure of the earth.

GEOSC 111 (GN) Forensic Geoscience (3) Covers fundamental geoscience concepts such as stratigraphy, mineral and soil identification, seismology, and geochemistry within the context of forensic investigation.

GEOSC 111 Forensic Geoscience (3)
(GN)

In this course, we will look at the fundamental principles of geoscience and how they can be applied in the context of criminal or liability investigation. Students will learn how to use a stratigraphic column to determine a sequence of events, either in the geologic record or as physical evidence, for example the layers of mud on the bottom of a car suspected of involvement in criminal activity. We will discuss the many types of physical evidence, focusing in particular on those that involve earth materials (soils, sand, mineral dust) or that can be analyzed using techniques commonly applied to geologic problems (for example, analyzing shards of glass from a hit and run accident using a scanning electron microscope). Basic mineralogy, sedimentology, and petrology will be introduced in the context of trace evidence. Common techniques used by both geoscientists and crime scene investigators, including fluorescence, microscopy, ground-penetrating radar, magnetometry, and seismology will be covered, including hands-on demonstrations when possible. We will learn how isotope geochemistry is used to date natural materials, and how it can be used to determine the geographic origin of rocks, minerals, or sediments. Students will learn how and when it is possible to make a statistically meaningful comparison of naturally variable samples present only in trace amounts. The proper handling of earth materials as trace evidence will be explained. Students will be expected to use the knowledge they have acquired to come up with original solutions to both real and invented crime cases. Finally, students will use the material they have learned in class to write an original mystery story in which geological evidence plays a key role in solving a crime.

GEOSC 203 Physical Processes in Geology (4) An in-depth examination of various physical processes that operate within and at the surface of the earth.

GEOSC 203 Physical Processes in Geology (4)
Geoscience 203 applies basic principles from physics and mathematics to explore and understand the Earth and the processes that operate within the Earth and at the Earth’s surface. The course includes the study of Earth’s gravity and magnetic fields, focusing on how they reveal the internal structures and dynamics related to plate tectonics. The basic physics and mathematics of plate motions are also explored in some detail. We will also examine the elastic properties and behaviors of rocks, which form the basis for understanding seismic waves, rock fracture, and fault slip. The next major topic of the class is the flow of heat through the solid Earth system, involving the study of conduction, convection, and advection. The study of heat will provide the basis for understanding the application of simple differential equations with boundary conditions to geological processes; this will also introduce the mathematics of diffusion, which will permeate much of the course. This study of diffusion will enable us to move from steady state conditions to non-steady state conditions that typify most geological settings. We will examine the fluid dynamics relevant to the flow of the mantle and less viscous fluids at the surface such as lava flows and glaciers. The fluid dynamics will also lead us into an exploration of the basic physics of ocean circulation, stream flow, and erosion on land.

Throughout the course, students will learn how to use calculus and very simple computer programming in MATLAB to provide a quantitative framework for understanding the physical processes that shape the Earth. The class involves a weekly lab that involves several field trips to make measurements using a variety of geophysical instruments to solve problems related to gravity, stream flow, and heat flow. Other lab activities involve studies of rock friction and fracture, ocean currents, glacial flow, seismology, and plate motions.

**GEOSC 204 Geobiology (4)** An introduction to how biological processes and materials are used to solve geological problems.

**GEOSC 204** **GEOSC 204 Geobiology (4)**

What caused the mass extinction 250 million years ago that nearly eliminated life in the oceans? How is the fossil record used to understand geological and evolutionary processes? What role do microbes play in cycling chemical elements today and over geologic time? Can we predict the response of modern ecosystems to future climate change? These questions form the basis for this course in geobiology, which considers how biological processes and materials are used to solve geological problems. This course has four main objectives: (1) to provide a broad overview of the role biological processes and materials play in understanding earth today and in the geological past; (2) to learn about the fossil record and how to extract information from it; (3) to learn field and computational skills used by geobiologists; (4) to develop critical-thinking and expository writing skills. Students will be evaluated based on their performance on essay exams (60%), laboratory exercises (20%), writing assignments (10%), and group discussions (10%). This course is designed to complement GEOSC 202 Physical Processes and GEOSC 203 Chemical Processes. GEOSC 204 will become part of our core curriculum in geosciences. Students taking the B. A. degree in geosciences will be required to take one of the following three courses: GEOSC 202 Physical Processes, GEOSC 203 Chemical Processes, GEOSC 204 Geobiology. In the future, we may require this course as part of the core curriculum for the B. S. degree. We will offer the course every year in the spring semester.

GEOSC 297 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Special Topics (1-9)

GEOSC 297A The Geology of the Marcellus Shale (3) A field-based introduction to the geological processes that result in the formation of oil and gas accumulations with an emphasis on the Marcellus Shale.

The Geology of the Marcellus Shale (3)

GEOSC 297D Introduction to Field Geology in Italy (3) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Introduction to Field Geology in Italy (3)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GEOSC 303 Introduction to Environmental Geology (3) Origin of earth and earth materials; natural resources, geologic barriers and hazards, and relationships to human use of the environment. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

Introduction to Environmental Geology (3)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GEOSC 310 Earth History (4) The principles of stratigraphy and paleontology and their use, in combination with plate tectonics, in reconstructing the earth's history. This course has one or more required field trips for which a fee is charged to the student.

Earth History (4)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
GEOSC 320 Geology of Climate Change (3) Geologic evidence for climate change and mechanisms of change, especially from the Ice Age through the near future.

The appropriate human response to global climate change is among the hot-button issues of the modern world. Geologic records provide a critical perspective on climate change, with implications for our behavior. Ice cores, ocean sediments, tree rings, and others reveal that agriculture and industry have arisen during a few thousand years of anomalously stable climate. Natural changes half as large as the entire difference between ice-age and modern conditions have occurred repeatedly in mere years, affecting hemispheric or broader regions. Such climate jumps have been linked to changes in greenhouse gases, but not driven by them. The students in Geology of Climate Change will learn how records of recent climate changes are recovered, read, and dated, how the climate system works and has worked, and the causes of ice-age cycles and faster climate jumps. The students will demonstrate their mastery of this knowledge by assessing its implications for global warming and natural climate changes in the future. Geology of Climate Change will involve lectures, discussion, readings, and individual or small-group projects, with students graded on midterm and final exams, and presentations or papers. The course will serve as an upper-level elective for students in major and minor programs in Geosciences and Earth Science. Enrollment will be limited to 30, with one offering per year.

GEOSC 402Y (IL) Natural Disasters (3) Case studies of the causes and consequences of natural disasters; analysis of disaster impact in different economic, cultural, and social conditions.

GEOSC 402Y

GEOSC 402Y Natural Disasters (3) (IL)

Is anywhere safe from natural disasters? Can we hide, or should we learn to live with the hazards around us? This course will explore the causes, effects, and societal response to disasters. By learning from previous disasters, we can develop strategies to avert the disasters or at a minimum mitigate their affects. We will look at a variety of natural hazards and related disasters including flooding, volcanoes, landslides, earthquakes, hurricanes, and tsunamis. By the sue of case studies of recent occurrences of natural disasters, we will determine how damaging disasters can be, and what we can do
to minimize their impact on society. This course will provide an in-depth, hands-on study of natural hazards, their geography, and their impact on societies worldwide. We will focus on both the physical processes (e.g. underlying geology or geophysics) of selected natural hazards and the human systems that have developed to minimize the impact of natural disasters.

The course will place emphasis on active learning exercises to investigate processes and responses to natural hazards. We will meet for two periods each week which will include both lecture and group research activities (approximately 30% of time is in lectures, 70% time is in group research activities). Grading will be based on reports for each topic, a disaster diary, and a term report. The term report is an independent project which focuses on a selected city facing significant natural hazards. Cities will be selected from both the developed and developing world to allow comparisons of the impacts of natural disasters under different socio-economic and cultural conditions.

The course is offered once each year with a target enrollment of 25-30 students.

Prerequisites for the course are at least 6 credits in science courses (including GN courses).

GEOSC 405 (SOILS 405) Hydropedology (3)

Hydropedology is the study of the fluxes, storages, pathways, residence times, and spatio-temporal organization of water in the root and deep vadose zones, and their relations to climate, ecosystem, land use, and contaminant fate. The aim is to characterize integrated physical, chemical, and biological processes of soil-water interactions across scales (including chemicals and energy transported by water flow). This course embraces interdisciplinary and multiscale studies of interactive pedological and hydrological processes in the earth’s surface and subsurface environments. The course will address the fundamental issues and practical applications of hydropedology (as a sister discipline of hydrogeology). This course emphasizes in situ soils that have distinct characteristics of pedogenic features, structures, layers, and soil-landscape relationships in the real world. Students will gain an in-depth understanding of soil and water interactions across scales from point observations to watershed phenomena, and will gain skills in predicting flow pathways and water fluxes in the landscape. This course promotes active learning, critical thinking, and hands-on skills. Course format will consist of two lectures and one laboratory/field exercise each week. The course will utilize a network of local watersheds with different land uses for demonstrations and class projects. Grading will be based on weekly lab/field exercise (20%), class research project (40%), homework (10%), one midterm exams (15%), and one final exam (15%). Since hydropedology is linked to a wide array of environmental, ecological, geological, agricultural, and natural resource issues of societal importance, SOILS (GEOSC) 405 will support interdisciplinary training of students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Agricultural and Biological Engineering, Agronomy, and Forest Resources. Students in the College of Earth and Mineral Sciences, College of Engineering, Eberly College of Science, and the Intercollege Graduate Degree Program in Ecology also will find this course useful when undertaking research on the vadose zone, the hydrologic cycle, and the earth system. The course will be offered every fall semester with an anticipated enrollment of 20 students per class.

GEOSC 410 Marine Biogeochemistry (3)

Marine Biogeochemistry (3)
GEOSC 410 GEOSC 410 Marine Biogeochemistry (3)

This course covers the basics of the chemistry of the ocean, its circulation, the types of organisms that live in the ocean, and the ways in which organisms influence and are influenced by their physicochemical environment. The format includes lectures, hands-on laboratory exercises, and a field trip to an aquatic environment during which students undertake group research projects. The course is offered in alternate years, in the spring. It satisfies one of the course requirements of the Marine Science minor for undergraduates, and the Data Gathering requirement of students in the Geosciences graduate program. Grades are based on class participation, midterm and final examinations, and an oral and/or written report of the research project.

GEOSC 420 (BIOL 420) Paleobotany (3) Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical techniques and specimens.

GEOSC 420

GEOSC (BIOL) 420 Paleobotany (3)

Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands.

This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

GEOSC 424 Paleontology and Fossils (3) Concepts and procedures using fossils to solve problems in systematics, evolution, biostratigraphy, correlation, sedimentation, paleoecology, and global change.

Paleontology and Fossils (3)

General Education: None
Diversity: None

The Pennsylvania State University
GEOSC 428 Micropaleontology (4) Biology and ecology of microfaunas and microfloras (e.g., foraminifera, coccolithophores, radiolarians, diatoms, dinoflagellates) and applications in biostratigraphy and paleoenvironmental reconstruction.

GEOSC 428

Micropaleontology is the study of the fossilized remains of microscopic plants and animals, most of which are single-celled and belong to the Protista. Although nearly invisible, the organisms at the base of the food chain make up most of the biomass in oceans and lakes. Only a few kinds of microplankton and microbenthos groups have shells that readily fossilize, but these can be so abundant that in places they form mountains of pure fossil remains. The abyssal floor of the ocean is made up of layers of microfossil-rich "ooze" that slowly accumulates from microscopic shells settling to the seafloor. Changes in the abundance and types of microfossils in these layers provide a detailed record of the geological past, in response to climate change and biological evolution. In addition, each time a new species of micro-organism evolves, it quickly spreads throughout the oceans, forming a worldwide time marker in the fossil record. Such marker horizons allow geological events in different parts of the world to be related in a global earth history.

The course has four main objectives: (1) to provide a broad overview of the biology and ecology of living microplankton and microbenthos with a focus on foraminifera and radiolarians (predatory, non-vegetative protists), coccolithophores and diatoms (vegetative, photosynthesizing protists), and dinoflagellates (both predatory and photosynthesizing); (2) to learn about the evolutionary record of these groups; (3) to understand their applications in biostratigraphy and paleoenvironmental reconstruction; and (4) identification of microfossil groups in the light microscope and scanning electron microscope. Group projects will be a key element of laboratory sessions. Assessment will be based on mid-term and final exams, a term paper, and a laboratory exercises.

GEOSC 434 Volcanology (3) Phenomena and products of volcanic eruptions; physical characteristics of lava and pyroclastic material.

Volcanology (3)

GEOSC 439 Principles of Stratigraphy (3) An introduction to the description and genesis of sedimentary rock bodies, the determination of their stratal geometries, and their correlation. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

Principles of Stratigraphy (3)

GEOSC 440 Marine Geology (3) Chemical and physical processes affecting the topography and sediments of the sea floor.

Marine Geology (3)
**GEOSC 444 Matlab Applications for Geoscience (2)**

The goal of this class is that students become familiar with Matlab so that they can conduct scientific research without needing to manipulate spreadsheets or other non-mathematically based software. The course is geared towards, beginning graduate and advanced undergraduate students with little or no previous Matlab experience, and examples are focused on applications in the science and engineering with a focus on the geosciences, including problems from groundwater hydrology, tectonics, geochemistry, rock physics, and climate change. Some basic concepts about vectors and matrices will be helpful, but are not required.

**GEOSC 445 Coastal Geology (4)**

A field course dealing with the processes operative in the environmental systems of a segment of the mid-Atlantic coast.

**GEOSC 450 Risk Analysis in the Earth Sciences (3)**

An introduction to concepts and methods of quantitative risk analysis with focus on water, climate, and energy related risks.

Geosc 450 is an introduction to concepts and methods of quantitative risk analysis in the Earth system. Key concepts include probability, impacts, risk, uncertainty, statistical estimation, and decision-making under uncertainty. Important methods to be covered are sensitivity studies, probabilistic prediction, and uncertainty analysis. Examples of risks to be analyzed include: drought, flooding, nuclear waste storage, and anthropogenic climate change. Students will also use simple risk analysis software (provided by the instructor and accessible without prior programming experience) to actively apply these concepts to example problems. The course is designed for advanced undergraduate students with a prior exposure to basic statistics and calculus.

**GEOSC 451 Natural Resources: Origins, Economics and Environmental Impact (3)**

Geologic, economic and environmental issues related to exploitation of non-renewable natural resources (metals, minerals, rocks, and fossil fuels).
Thorium) and fossil fuels (petroleum, natural gas and coal). The remaining one-third of the lectures/discussions will focus on: (i) exploration methods to discover new mineral (and fossil fuel) deposits; (ii) economic aspect of mineral commodities (usages, production statistics, economic of mining and concentration); and (iii) environmental issues related to mining, nuclear waste disposal, and constructions. There will be two half-day field trips to study the nature of sulfide mineralization and acid-water pollution.

GEOSC 452 Hydrogeology (3) Hydrologic cycle: occurrence, movement, quality, and quantity of groundwater; solute transport; quantitative hydrogeologic methods: role of water in geologic processes. This course has one or more required field trips for which a fee may be charged to the student.

GEOSC 452

GEOSC 452 Hydrogeology (3)

GEOSC 452 is the study of the relation between geological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of natural flow systems, emphasizing the occurrence, movement, quality, and quantity of groundwater and its relations to contaminate fate and transport. The primary objective is to provide students with the fundamental knowledge and tools that are necessary to understand the hydrologic cycle. Students will gain an in-depth understanding of fluid flow across scales from point observations to watershed phenomena, and will gain skills in using mathematics to describe water fluxes. The course format consists of two lectures each week, and includes two field trips. Grading is based on weekly homework assignments, exams, and participation on the field trips. Because hydrogeology is linked to a wide array of environmental, ecological, engineering, and natural resource issues of societal importance, GEOSC 452 will support interdisciplinary training of students in the natural sciences and engineering. Students will find this course useful when undertaking research about fluids in geologic processes.

Structural Geology (4)

General Education: None
GEOSC 470W Introduction to Field Geology (3) Field interpretation of geologic features; principles and techniques of geologic mapping; interpretation of geologic maps and diagrams. This course has one or more required field trips for which a fee is charged to the student.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GEOSC 472A Field Geology I (Introduction to Field Methods) (3) Introduction to geologic field methods and the 3-D characterization of earth structure and the reconstruction of geologic histories. This course includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

GEOSC 472B Field Geology II (Advanced Field Methods) (3) Advanced application of geologic field methods to the 3-D characterization of earth structure and the reconstruction of geologic histories. This course includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

GEOSC 474 (BIOL 474) Astrobiology (3) In depth treatment of principles/concepts of biochemical evolution, the origin/evolution of life; evaluation of distribution of life in the universe.

Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student’s literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student's previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOSC 479** Advanced Stratigraphy (3) Modern topics of sequence stratigraphy are addressed, with a heavy emphasis on field and laboratory data analysis and interpretation.

**GEOSC 488** An Introduction to Seismology (4) An overview of the observations, methods, and frameworks used in seismogram analysis for earthquake and earth-structure investigations (includes laboratory).

**GEOSC 488**

This course is an overview of the observations, methods, and frameworks used in seismogram-based investigation of earthquake and earth-structure. The main goals of the course are to prepare students of seismology for further study of earthquakes and earth structure using seismograms; to provide an overview of earthquake seismology for nonseismologists, to introduce undergraduate geophysics students to quantitative geoscience. Topics covered include stress and strain, faulting and tectonics, seismic body and surface wave propagation including ray methods, dispersion, and attenuation. Students perform fundamental seismological analyses using a computer-based, experiential laboratory exercises exploring the signals contained in research-quality data from recent earthquakes recorded on the international global seismic network.

## German (GER)

**GER 001 Elementary German I (4)**

Introduction to listening, speaking, reading, and writing with emphasis on the first two skills; cultural aspects through readings and videos. Students who have received high school credit for two or more years of German may not schedule this course for credit, without the permission of the department.

**GER 001 Elementary German I (4)**

German 001: Elementary German I is designed to help students develop skills in the interpretation, expression, and negotiation of spoken and written German. In addition to German language skills, students in the course will develop a greater understanding of German-speaking culture.

The course requires active student involvement and participation. Attendance is mandatory. The course meets three times a week in a traditional classroom and once a week in a computer classroom where students will be guided by the instructor in working with German-language materials available on the internet.

Student evaluation is based on active participation in class, homework, quizzes, oral and mid-term examinations, oral and written final examinations and culture projects.

Placement in German 001 is based on Penn State's foreign language placement policy (link to: http://bulletins.psu.edu/bulletins/bluebook/general_information.cfm?section=Placement2). Students who have received high school credit for two or more years of German may not schedule this course for credit, without permission of the department.

German 001 is offered every semester. Enrollment is capped at 24 students per section.

GER 002 Elementary German II (4)

GER 003 Intermediate German (4) Continued four-skill development with increased emphasis on reading, writing, and grammatical accuracy; culturally-oriented reading selections and videos. Students may receive credit for only one of the following: GER 003 or GER 008.

Intermediate German (4)
GER 008 Business German (4)

This course meets the Bachelor of Arts degree requirements.

In this course students will learn about German businesses and their culture. At the same time, students will continue to review and learn additional grammar points. They will have more writing experience by completing five different writing assignments. All four language skills (listening, speaking, reading and writing) will be further developed in this course. Students will be evaluated according to class participation, successful completion of in-class presentation, internet exercises, homework assignments, essays, and examinations. This course complements other offerings for German in the business track. It completes the introduction level of German and prepares the student to go on to German 208W, German 308W, and German 408. This course also can be counted towards the BS in German.

This course will be offered once a year during the Fall Semester. In this type of intensive course, enrollment has to be limited to 23 students.

GER 011 Intensive Basic German (6)

Taught on an accelerated basis. Students may receive credit for only one of the following: GER 001, 011, or 015.

GER 012 Intensive Intermediate German (6)

Taught on an accelerated basis. Students may receive credit for only one of the following: GER 002, 003, 012, or 016.

GER 051 Elementary Intensive German for Graduate Students I (3)

This is the first in a series of three courses designed to give students an intensive introduction to German. This is the first half of elementary sequence in elementary reading, writing, speaking, listening, cultural contexts. Students will learn the German vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.
**GER 052 Elementary Intensive German for Graduate Students II (3)**

This is the second in a series of three courses designed to give students an intensive introduction to German. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the German vocabulary. Lessons are taught in an authentic cultural context.

**GER 053 Intermediate Intensive German for Graduate Students (3)**

This is the third in a series of three courses designed to give students an intermediate intensive knowledge of German. Continued intensive study of German at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

**GER 083S First-Year Seminar in German (3)**

This course is designed to give the student an introductory overview of certain important aspects of German culture and its development during the past 1500 years. The topics selected will give the student an introduction to major periods and representative thinkers that have helped shape the destiny of German-speaking countries and much of Europe as well. As Goethe noted, our views of the past are a mirror in which we dimly see our own reflection. Serious examination of the issues raised in this course also result in learning something about one's self and the world in which s/he live today.

This course can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the Intercultural/International Competence requirement, and the first-year seminar requirement. A series of short papers will enable students to develop the skills of information gathering and written expression. The course grade will be based on oral participation and on the grade for the papers, which will be evaluated both for content and writing. This course will help to prepare students for a variety of additional courses in the fields of literature and German-speaking area studies. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests. The course will be offered once per year to an audience of 20 students.

**GER 099 Foreign Study--German (1-12)**

Courses offered in foreign countries by individual or group instruction.
GER 100 (GH;IL) German Culture and Civilization (3) Culture and civilization of the German people from the Germanic migrations to the Nazi period. Conducted in English.

GER 100 German Culture and Civilization (3) (GH;IL)

This course meets the Bachelor of Arts degree requirements.

In German 100, students examine the ethical basis for decision-making of representative thinkers and periods in German history. The course begins by looking at the warrior ethos that pervades early Germanic literature, proceeds to examine successive changes in ethics brought on by Christianization, the Reformation, and the Enlightenment. The course ends by looking at the ethics of power advocated by Nietzsche and the racist ideology of Nazism. The course will also examine changes in aesthetic values, as represented by the art of Dürer and the Expressionists, the literature of the Storm-and-Stress movement and Kafka, the music and theater of Wagnerian opera and the film of the Expressionists and Leni Riefenstahl. Finally, the nettlesome issue of German national identity will be addressed through the perspective of historical developments since the time of Charlemagne.

German 100 is linked closely to German 200. German 100 concentrates on German culture and civilization up to the Nazi period. German 200 concentrates on German culture and civilization since the Nazi period. German/Russian 143 addresses aspects of Nazism in greater depth than does German 100.

The course meets three times per week, including fifty-minute lectures on Monday and Friday and a discussion section on Wednesday. The total enrollment is limited to approximately 180 students and the discussion sections have no more than 27 students each. When taught in the summer, the total enrollment for the class is less than fifty. Assessment is based on three examinations with an essay component, one short paper, and participation in classroom discussions, and attendance.

German 100 may not be applied toward the requirements of a German major or a German minor. It may be used for the General Education humanities requirement, for the General Education Intercultural/International competence requirement, or for a B.A. humanities requirement.

GER 143 (GH;IL) (RUS 143) The Culture of Stalinism and Nazism (3) The culture of Stalinist Russia and Nazi Germany in comparative perspective.

GER (RUS) 143 The Culture of Stalinism and Nazism (3) (GH;IL)

This course meets the Bachelor of Arts degree requirements.

The regimes of Stalin and Hitler have decisively shaped the 20th-century historical experience not only in Russia and Germany, but in much of Europe and the world at large. At the same time, there is no consensus about how to classify these systems, whether the term "totalitarian" is appropriate to describe them, and whether Stalinist Russia and Nazi Germany are essentially similar or essentially different historical phenomena.

Espousing a comparative perspective, this course will explore the culture produced by both Stalinist Russia and Nazi Germany. The main focus will be on works of literature, but it will also take into account the visual arts, architecture, music, film, and popular culture. The classics of Stalinist socialist realism and Nazi propaganda, such as Nikolai Ostrovski's How the Steel Was Tempered or Leni Riefenstahl's Triumph of the Will will be analyzed both as political statements and works of art. The course will also include a reading of authors who attempted to create artistic representations of life in Stalinist and Nazi societies, such as Yevgeny Zamyatin, Alexander Solzhenitsyn, Bertolt Brecht, or George Orwell.

The course will be team-taught by faculty of the Department of Germanic and Slavic Languages and Literatures. Additional faculty from the Departments of Spanish and Italian and Comparative Literature (Japanese) may be invited to lecture about the totalitarian culture in their respective societies, and members from the Department of History may be invited to lecture about the historical context of Stalinism and Nazism. A knowledge of Russian or German is not required, as class lectures and discussions, as well as all reading assignments, will be in English.

At the end of the course, students will have a summary knowledge of the cultural history of Stalinist Russia and Nazi Germany and of the aesthetic and philosophical issues raised by these cultures. Requirements for the course will include a research paper. The course grade will be based on the average score on the mid-term and final exam (using definitions...
and essay questions) and the grade for the paper, which will be evaluated both for content and style.

This course will fulfill the General Education and International/Intercultural requirements. It complements courses on the politics and history of totalitarian regimes offered by the departments of Political Science and History, and it will provide a background for students wishing to study Holocaust literature or Soviet Literature. The course will be taught every two years.

Effective: Summer 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GER 157 (GH;US) Pennsylvania Germans: The Culture of the Sectarians (3) Survey of the religious background, beliefs, social life, customs, education, and culture of the Pennsylvania German sectarians, especially the Amish. Conducted in English.

GER 157 Pennsylvania Germans: The Culture of the Sectarians (3) (BA) This course meets the Bachelor of Arts degree requirements.

Through lectures, discussions, and films, students will be introduced to the culture, history, religion, language, education, occupations, folklore, music, and literature of the Pennsylvania Germans. Since 1683, people coming from the German-speaking territories of Central Europe settled Pennsylvania to a large degree. Many of these immigrants soon blended into American society but others who had been persecuted in Europe for their convictions and religious beliefs refused to be Americanized and retained their style of life in the New World. The best-known are the Amish who arrived in colonial times and still cling to their traditional language, beliefs and values, their economic basis, and even their clothing after living nearly three centuries in now industrialized America. They live in small, stable, and viable communities an austere life dictated by established beliefs and customs totally opposed to the American dream of progress and innovation, individual happiness and material success. By studying their history and culture and that of other groups, such as the Mennonites, Hutterites, and Moravians, students are offered a unique opportunity to learn more about other truly diverse cultures and are enabled to arrive at a better understanding of their own cultural concepts and values.

In this course, students may either make a 30-minute presentation or write a 10-page paper on a topic pertaining to the curriculum of the course. Given the number of students, only a small number (approximately six) will have the opportunity to make a presentation. Teaching assistants help grade the papers. In addition, students take two one-hour examinations and a final examination.

The course is related to GER 100 and GER 200 by examining the culture of German-speaking peoples. GER 157 differs from those courses, however, by focusing on a German-speaking minority culture found in Pennsylvania and elsewhere in North America.

German 157 may not be applied toward the requirements of a German major or a German minor. It may be used for the General Education humanities requirement, for the General Education Intercultural/International Competence requirement, or for a B.A. humanities requirement.

The course is offered approximately once a year with an enrollment of 150-180 students.

GER 201 (IL) Conversation and Composition (4) Continuation of GER 003; emphasis on reading, writing, and conversational skills; course utilizes short literary selections, a concise novel, videos.

The Pennsylvania State University
GER 201 Conversation and Composition (4)

IL

Offered in the fall and spring semesters of each academic year, this fourth-semester German language course satisfies International Cultures (IL) requirement and is a required course for the German B.A. degree. For the German B.S. degree and the German minor, students must take either German 201 or German 208. German 201 is designed to help students further develop the four basic language skills (listening, speaking, reading and writing) they have attained in previous language courses with particular emphasis on the advancement of their speaking and writing proficiency in German. Through a task-based approach the course aims to assist students in learning to write and speak German with level-appropriate fluency and accuracy. This course will also provide students with ample opportunity to increase their reading command of German through an authentic literary work and short stories by prominent German-speaking authors. The course language is German and class sessions will consist of communicative activities and practices. The learning of the German language will occur through completion of tasks in which students use the level-specific grammatical structures in different formats and circumstances (e.g. writing and oral projects) while receiving little or no direct lecture on German grammar. The delivery and practice of factual information on grammatical structures are integral to the course and thus instructors will highlight them to the extent to help students achieve the course objectives. The class meets twice in a regular classroom and twice in a computer-lab throughout the semester where students will be exposed to computer-mediated language instruction and work on various computer-based projects. Film viewing and discussions will be incorporated into the course, as deemed necessary by the instructors. Attendance and preparation are mandatory and homework is assigned on a regular basis. The evaluation and grading of students' course performance is based on active class participation, successful completion of a rhetorical portfolio, an orally presented cultural project, four brief interviews, and a semester-end aural-oral test.

General Education: None

GER 301 Intermediate Conversation and Composition (3) (IL)

Intermediate Speaking and Listening (3) Intensive practice in spoken German through readings, discussions and video.

GER 301 Intermediate Conversation and Composition (3) (IL)

German 301 is a continuation of the composition and conversation emphases of both GER 201 and 208. Fundamental to the course is a thorough grammar review of both basic and advanced grammatical situations. Much of this review is done outside of class. In class, students devote their time primarily to oral work. GER 301 requires students to use German in various ways: group work, individual presentations, discussion of texts, structured partner drills, etc

Student evaluations are based on participation, homework, quizzes, a class room presentation, and essays.

GER 301 is required for all German majors and the German minor and will be offered every semester.
GER 302W Intermediate Composition and Grammar (3) Continuation of oral and written practice in German with extensive work in composition.

GER 302W Intermediate Conversation and Composition II (3)

(BA) This course meets the Bachelor of Arts degree requirements.

German 302 is a continuation of the language and composition emphases of both GER 201 and 208. Fundamental to the course is a thorough grammar review of both basic and advanced grammatical situations, with the goal of improving students' grammatical and stylistic precision in written German discourse. GER 302 requires students to use German in various ways: group work, individual presentations, discussion of texts, structured partner drills, etc.

GER 308Y (IL) German Business Communication (3) Development of German commerce and industry; extensive practice in the major forms of business communications such as business correspondence.

GER 308Y German Business Communication (3)

(IL)

This course provides an introduction to German business and economics. Students will read and respond to a variety of texts about German economic practices and the German business world, as well as texts that introduce and describe more general economic principles. Emphasis is also placed on expanding students' vocabulary and further developing their writing skills in German, especially with regards to economic and business terminology, and writing genres common in business contexts. As this is not intended to be a grammar review course, students are expected to have previously completed or be concurrently enrolled in GER 301 or its equivalent. This course complements other offerings in the German business track and prepares students for the final course in the Business German sequence. This course can also be counted towards either the German minor or the German major. It is offered once a year during the fall semester.

GER 310 (IL) Introduction to the Study of German Literature (3) History, methods, and the terminology of literary interpretation and analysis in German.

Introduction to the Study of German Literature (3)

GER 344 (IL) Intermediate German Culture (3) An overview of German culture from the Middle Ages to the present. Conducted in German.

GER 344 Intermediate German Culture (3)

(IL)

This course will be a comprehensive overview of major events and figures in German history that have influenced the development of German culture. This will be a foundational course that will enable students to better situate advanced courses in German literature and culture in the broader context of a cultural tradition that stretches from the Germanic
migrations to the present. The course will be taught in German at the intermediate level and will be required of all German majors and minors. It will be a prerequisite for culture courses taught in German at the 400-level. Students will be evaluated on the basis of written tests, an oral presentation and essay on a major cultural figure or event, homework, and class participation. The course will be offered every semester. The enrollment for each section will be capped at approximately 22.

GER 412 (IL) Contrastive Analysis of Modern German and English (3) Structural comparison of the German and English grammatical systems: morphology, syntax, phonology.

Contrastive Analysis of Modern German and English (3)

General Education: None
Diversity: IL
Bachelor of Arts: Humanities
Effective: Spring 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GER 420 (IL) Genre (3-9) Special studies in a particular literary genre in German literature, such as lyrical poetry, drama, or narrative prose.

Genre (3-9)

General Education: None
Diversity: IL
Bachelor of Arts: Humanities
Effective: Spring 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GER 430 (IL) History of the German Language (3) Development of German from its earliest stages, including historical and cultural aspects.

GER 430 History of the German Language (3)

This course provides an overview of the history of the German language from its origins to the present. Historical changes and dialectal variation in phonology (sound system), morphology (word structure), syntax (sentence structure), lexicon (vocabulary), and semantics (word meaning) will be examined. Particular emphasis is placed on the impact of cultural and historical changes on the development of German, including its standardization. Students will be evaluated on the basis of homework, classroom participation, tests, and an in-class presentation with a written abstract. No prior knowledge of linguistics is required. The class is conducted in German.

General Education: None
Diversity: IL
Bachelor of Arts: Humanities
Effective: Fall 2007
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GER 431 (IL) History of German Literature and Culture I (3) Significant works of German literature before the mid-eighteenth century considered in their cultural context.

History of German Literature and Culture I (3)

General Education: None
Diversity: IL
Bachelor of Arts: Humanities
Effective: Spring 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
GER 432 (IL) History of German Literature and Culture II (3) Significant works of German literature from the mid-eighteenth century to the present considered in their cultural context.

History of German Literature and Culture II (3)

General Education: None
Diversity: IL
Bachelor of Arts: Humanities
Effective: Spring 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GER 440 (IL) Seminar in German Culture (3-6) Seminar devoted to a special topic in the field of German culture and civilization.

Seminar in German Culture (3-6)

General Education: None
Diversity: IL

Effective: Spring 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GER 472 (IL) Romanticism (3) A study of both early and late romanticism, including such writers as Novalis, the Schlegels, E.T.A. Hoffmann, and Heine.

Romanticism (3)

General Education: None
Diversity: IL
Bachelor of Arts: Humanities
Effective: Spring 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GER 489 Introduction to German Film History and Theory in Context (3) Introduces films in German since the 1960s and addresses issues relevant to German and European cultures and politics.

GER 489 Introduction to German Film History and Theory in Context (3)

This course focuses on German cinema's development since the 1960s. The course situates the "Young" and then "New German Cinema" within contemporaneous European and U.S. film cultures. Thus the course will address the difference between the European cinematic culture of "auteurs" versus the school of "genres" in the U.S.

The preceding traditions of Italian Neo-realism and of the French nouvelle vague are also engaged alongside a few Hungarian, Czech and/or Polish films. The students will have the opportunity to consider how these other national cinematic productions impacted the German filmmakers who were involved in the creation of a national German cinema that would critically engage Hollywood on the one hand, and distance itself from the Nazi past on the other.

The course will be structured around questions about the grounds for a national cinema and its cultural and critical relevance both at the time these films were produced and today. Yet, the national question will not be the only focus of this class, in the course of which students will be able to discuss the historical, political and ethical questions raised by the directors selected. In addition, students in this course will learn about the specificity of cinematic language and will be exposed to some film theory. In conclusion, the course provides upper level undergraduate students with a basic knowledge of the most important New German films, with a confrontation with issues specifically relevant to a study of German culture, and with some familiarity with film theory.

The evaluation methods for this course will be based on 1) participation [attendance; reports/worksheets, after each film and in class discussion]: 30%; 2) presentation 20%; 3) take-home mid term essay 20%; and 4) final paper 30%. The course is part of the German Program, in particular of the German Studies curriculum. It teaches students of German culture about German and European contemporary cinema, while situating the cinema within broader historical-political debates concerning Europe. It functions as an excellent complementary course to our GER LIT classes at the 400 level and offers an additional choice to pursue cultural studies to those who are more reticent about reading texts. Enrollment: 25. The course will be offered every other year.

GD 100 (GA) Introduction to Graphic Design (3) A beginning level graphic design course. Instruction touches on the practice, theories, history and processes of the graphic design industry.

GD 100 (GA) INTRODUCTION TO GRAPHIC DESIGN (3) is a beginning level graphic design course. Instruction touches on the practice, history, theories, and analysis of the design industry. This course places emphasis on problem solving and observing design, while developing intuition and creativity. Projects focus on the process of defining the parameters of a design problem, observing examples within the design industry, and critically evaluating examples of effective and ineffective design.

The course will help students to:
1. Understand the graphic design industry and the responsibilities of the profession.
2. Develop an appreciation for the practice of design.
3. Begin to develop the ability to define and solve problems.
4. Increase their knowledge of the history of graphic design and typography.
5. Refine their conceptual skills.
6. Learn and understand the vernacular of the industry.

Students will be quizzed on terminology and important facts provided in the readings.

Grading:
1. Grades will be calculated by quizzes, which will be given throughout the semester. Quizzes will be based on topics and material provided online. 60% of the final course grade will be based on quizzes.
2. Participation in online discussion forums is required. Students will be expected to post comments and responses to an online forum. 20% of the final grade will be based on participation within these forums.
3. Students will be expected to research various examples of design in commercial and non-commercial applications,
upload examples, comment on designs, and engage in discussions of effective and ineffective use. Emphasis will be placed on writing skills as part of the evaluation 20% of the final grade will be based on project assignments in design evaluation.

General Education: GA

Bachelor of Arts: None
Effective: Spring 2006

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GD 101 Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas (2)

This course is designed to help students learn to think creatively, define problems, and solve those problems by generating good ideas. The first part of the course, Learning to Think Creatively, will cover basic principles and concepts used in thinking creatively. In the second part of the course, Defining Problems, students will learn how to effectively define problems by establishing and refining goals and objectives based on research. The third part of the course, Solving Problems and Generating Ideas, will engage students in practical project-based learning by creating solutions to design problems through teamwork, brainstorming, and a design sequence that fosters new ideas and tests them through prototyping and analysis.

Students will learn to approach problems in design by developing skills in creative thinking, applying those skills in defining problems, and working in creative teams to solve problems through the generation of new ideas that can be practically applied.

Grading is based on participation (20%), bi-weekly journal reviews (20%), and final projects (60%).

Diversity: None
Bachelor of Arts: None
Effective: Summer 2007

Concurrent: GD 001S

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GD 102 Introductory Design Studio (3) A studio course in defining problems, solving problems, and generating ideas.

GD 102 Introductory Design Studio (3)

This course is designed to build upon the experience of GD 101 Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas by engaging students in a studio environment where they must arrive at solutions to two design problems, each requiring approximately seven weeks work. Students will define problems and arrive at creative solutions to those problems by generating ideas based on an applied method involving teamwork, brainstorming, and a design sequence that fosters new ideas and tests them through prototyping and analysis.

This course is designed for students in the AADES pre-graphic design program, although it emphasizes concepts and methodologies applicable to all design fields. Students will learn to approach problems in design by developing skills in creative thinking, applying those skills in defining problems, and working in creative teams to solve problems through the generation of new ideas that can be practically applied.

Grading is based on participation (20%), studio project one (40%), and studio project two (40%).

GD 102 is only available to students enrolled in AADES or by permission of instructor and carries the prerequisite of GD 001S and GD 101.

GD 200 Graphic Design Studio I (3) A beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation.

GD 200
GD 200 Graphic Design Studio I (3)

This course is a beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation. Emphasis is on problem solving and technical training while, at the same time, nurturing intuition and creativity.

The course will help students to:
1. Develop skills and techniques applicable to graphic design.
2. Become familiar with appropriate computer hardware and software.
3. Develop the ability to define and solve problems.
4. Develop an understanding of graphic design as a profession.
5. Refine their conceptual skills.
6. Develop the work habits and attitudes of design professionals.

Grading:
1. Work will be evaluated on the relevance and originality of the design idea, the suitability of the design approach in serving the client’s needs, the effectiveness of the design in reaching its intended audience, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade.
5. Visual, verbal and written communication skills will also be part of the evaluation.

GD 200 carries the prerequisite of GD 102.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GD 201 Typography (3)

A consideration of the word in relation to visual organization and its application to communication.

GD 201

GD 201 Typography (3)

GD 201 is intended to provide the students with practical, formal, and communicative typographic skills. Instruction focuses on the understanding the practical and analytical application of typography in graphic design and its critical evaluation. Emphasis is on developing strong typographic skills in students. Instruction focuses on problem solving and technical training while, at the same time, nurturing intuition and creativity.

The course will help students to:
1. Develop a well-rounded understanding of typography and its relationship to graphic design.
2. Develop skills and techniques applicable to typography.
3. Become familiar with appropriate hardware and software.
4. Continue to refine their conceptual skills.
5. Foster an appreciation of good typography.
6. Develop the work habits and attitudes of design professionals.

Grading:
1. Work will be evaluated on the relevance of the typography to the design idea, the suitability of the design approach and choice of typography, the effectiveness of the design, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade.
5. Participation in critiques and quality of the presentation of critical evaluations will part of the evaluation.
6. Visual, verbal and written communication skills will be a part of the evaluation.

The prerequisite for GD 201 is GD 200.

GD 201 will be offered spring semester.

General Education: None
Diversity: None
Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite:
GD 202W The History of Graphic Design (3) A survey of graphic design, especially emphasizing influential movements, innovative designers and technological advances relevant to contemporary visual communication.

The History of Graphic Design course provides an overview of design as a vehicle of visual communication. The primary focus of the coursework is on images and styles of image-making as well as on language as a visual, typographic form. The application of images and typography is the basis of design, and its history ranges from Sumerian clay tablets to 21st century digital tablets. Special emphasis is given to periods of innovation and inspiration, including the late Roman period, the Renaissance, the Industrial Era, the rise of Modernism in Europe and America, and the digital revolution. Graphic design is a discipline which embraces its production and delivery technology; therefore, attention is also focused on the evolution of that technology—from the letterpress and metal typography, through the camera and photomechanical reproduction era, to current computer and digital production processes.

GD 303 Graphic Design Technology II (4) Advanced application of digital technology as a medium of graphic design.

GD 303

GD 303 Graphic Design Technology II (4)
GD 303 explores digital technology as a medium for graphic design. Topics include design expressed over time -- both linear, as in motion graphics, and nonlinear, as in Web design. The objectives for this course are to give graphic design students experience in the complexities of digital visual communication and to provide students with the opportunity to work with software packages that facilitate digital communication. Students will receive instruction regarding the graphic designer's role in complex, collaborative digital communications.
The course will help students to:
1. Gain proficiency in using software programs such as Macromedia Flash and Dreamweaver, Apple iMovie and Final Cut Pro, and Adobe GoLive.
2. Gain proficiency with various hardware devices.
3. Familiarize themselves with advanced digital design processes.
4. Stay abreast of emerging technological applications in contemporary Graphic Design.
5. Develop an understanding of the graphic designer as a digital communicator.
6. Develop refined digital craft.
7. Develop the work habits and attitudes of professional designers.

Grading: 75% of the student's grade will be based on work assignments and 25% on quizzes based on assigned readings. Grading criteria include attendance, comprehension of information presented, quality of research for assignments, technical proficiency, and participation in discussions and critiques.

GD 300 and 301 are the prerequisites to GD 303
GD 303 will be offered spring semesters.

GD 304 Practical Communications (3) Practical design experience for students through design/publicity problems from the University and community non-profit organizations.

The Pennsylvania State University
GD 304

GD 304 Practical Communications (3)

GD 304 is an advanced course that is intended to offer practical design experiences to graphic design students through assignments for various University and not-for-profit community clients. The course explores the essential relationship of the verbal and visual aspects of design to the communication of a message to a specific audience. Each student will meet with clients to develop strategies and advance individual projects from initial client contact to finished work. Students will conduct research, present rough ideas to the client, prepare presentations, and carry the work to production resulting in a finished piece.

When necessary, members of the class will work with writers, photographers, and printers as they would in an actual professional setting.

The course is intended to:
1. Prepare the students for the real working environment they will confront in the professional arena after graduation. The course seeks to simulate as close as possible, the atmosphere of a professional design office.
2. Offer the university and community a source of affordable inventive solutions to their design, publicity, and advertising problems.
3. Thoroughly examine the design process and learn to define the problem clearly, and logically work toward an appropriate solution.
4. Help students to develop the work habits and attitudes of professional designers.
5. Practice and polish presentation and interview skills.
6. Practice positive behavior and conflict avoidance/resolution in the workplace.
7. Foster an appreciation for the appropriate integration of typography into design.
8. Develop the ability to work as a member of a team.
9. Gain a deeper understanding of graphic design aesthetically, critically, and technically.

Grading:
1. Work will be evaluated based on the relevance and originality of the idea and the appropriateness of the design approach to the idea, the intended audience, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade.
5. There will be a review at the end of the semester, which will include all work from the class. Each piece will be evaluated for quality and presentation.
6. Visual, verbal and written communication skills will be a part of the evaluation.

GD 400 Time and Sequence (4) Development of visual sequence as replies to graphic design problems.

GD 400

GD 400 Time and Sequence (4)
GD 400 is an in-depth course that explores the essential relation of the verbal and visual elements of design to sequential media, including both traditional and digital media such as film, video, and Power Point. The intrinsic qualities of each medium will be investigated in relation to how each affects the communication of a message to a specific audience.

The course will help students to:
1. Develop an appreciation for time and sequence and how they relate to graphic design problems.
2. Foster an appreciation for the appropriate integration of typography into sequential design.
3. Develop the ability to work as a member of a team in solving sequential design problems.
4. Stay abreast of emerging technological applications in contemporary graphic design.
5. Gain a deeper understanding of time and sequence aesthetically, critically, and technically.
6. Explore the potential of expressing ideas in sequence with still images, film and video.
7. Experiment with new methods of image making that are unique to the technologies involved.
8. Gain practical experience that has direct professional application.
9. Develop the work habits and attitudes of professional designers.

Grading:
1. Work will be evaluated based on the relevance and originality of the idea and the appropriateness of the design approach to the idea, the intended audience, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
4. Neatness, craft and attention to detail will be considered in the final grade.
5. There will be a review at the end of the semester, which will include all work from the class. Each piece will be evaluated for quality and presentation.
6. Visual, verbal and written communication skills will be a part of the evaluation.
GD 400 will be offered fall semester.

GD 401 Package Design (3) Orientation to packaging designs as it relates to the consumer, client, and to societal and environmental concerns.

GD 401

GD 401 Package Design (3)
GD 401 Orientation to packaging design as it relates to the consumer, client, and to social and environmental concerns.

Objectives:
This course will explore the following: creative problem solving through package design, historical and contemporary solutions in package design; the role of the package designer in relation to the consumer, client, printer, photographer, and environment; conceptualization and problem solving techniques. It is designed to encourage student responsibility and professionalism.

Class Format:
Classes will consist of the following: the assignment and discussion of projects, individual and group conferences; classroom critiques of work in progress/completed projects, computer lab work sessions, and professional photography studio sessions.

GD 302 is the prerequisite for GD 401.

GD 401 (3) will be offered fall and spring semesters.

Bachelor of Arts: Arts
Effective: Fall 2006
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GD 402 Senior Problems (4) Development of visual replies to graphic design problems.

GD 402

GD 402 Senior Problems (4)
(BA) This course meets the Bachelor of Arts degree requirements.

This course is an in-depth course that explores the essential relation of the verbal and visual elements of design to advanced graphic design problems. The class is divided into two parts: 1) Each student submits a written proposal for a hypothetical magazine. In the proposal he or she describes the publication’s subject, content and editorial point-of-view, along with the intended audience, must be described in the proposal. Additionally, the functional parameters surrounding editorial design and a discussion of similar publications in the marketplace should be touched upon in the paper. The proposal drives the design of the publication. Each student is required to develop an appropriate title for their magazine, design a masthead, two covers, a table of contents, and a minimum of three articles. The minimum length for each article is two spreads (four pages). All sections of the magazine will be bound together with one of the covers for final presentation. Additionally, each student must apply his or her masthead design to letterhead, envelope and business card. 2) Each student prepares for graduation and the beginning of his or her career by putting together their final portfolios, resumes, letters and job search strategies.

The course will help students to:
1. Perform as editorial designers.
2. Prepare for the real working environment they will confront in the professional arena after graduation.
3. Thoroughly examine the design process and learn to clearly define the problem, in order to work logically towards an appropriate solution.
4. Develop the work habits and attitudes of professional designers.
5. Polish visual, verbal and written presentation skills.
6. Practice positive behavior, and conflict avoidance/resolution in the workplace.
7. Prepare designers for realistic working environment expectations.
8. Foster an appreciation of good typography.

Grading:
1. Work will be evaluated based on the relevance and originality of the idea and the appropriateness of the design approach to the idea, the intended audience, and all pertinent functional parameters.
2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.

**GD 403W Graphic Design Seminar (3)** A seminar on subjects which relate to the field of graphic design.

GD 403W

**GD 403W Graphic Design Seminar (3)**

**BA** This course meets the Bachelor of Arts degree requirements.

This is an advanced course covering the history and contemporary theory and criticism of graphic design. Topics include: the invention of writing and alphabets, medieval manuscripts books, the origin of printing and typography, Renaissance graphic design, the Arts and Crafts movement, Victorian and Art Nouveau graphics, modernist influences on graphic design, visual identity and conceptual images, postmodern design, the computer graphics revolution, new media design, ethics and professional practice, and contemporary issues relating to design theory and criticism.

The course is intended to:
1. Provide a firm understanding of the history of graphic design.
2. Develop the capacity to discuss the articulate current issues in graphic design.
3. Promote writing and speaking abilities through class assignments.
4. Help students to develop the work habits and attitudes of professional designers.

Grading:
1. Class projects as well as class participation will be evaluated.
2. Written assignments, including short synopses of readings and additional essays, and the quality of writing will be a part of the grade evaluation.
3. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
4. Attendance is required. In the case of illnesses or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade.
5. Visual and verbal as well as written communication skills will be a part of the evaluation.

**GD 404 Book Design (3)** Writing, designing, illustrating and production (printing) of a book.

GD 404

**GD 404 Book Design (3)**

**BA** This course meets the Bachelor of Arts degree requirements.

This is an advanced course that explores the relationship of the written and visual elements in the design of a book. Each student (or student team) will select a topic, create the text and give visual form to an original book, which will have a minimum length of 16 pages. The intrinsic qualities of the book medium such as typography, sequence, imagery, paper, dye-cuts, fold-outs, pop-ups, and binding will be investigated in relation to how each affects the overall communication of the book's meaning to a specific audience.

The course is intended to:
1. Foster an appreciation for good typography.
2. Allow students to investigate the sequential relationships between the visual and verbal aspects of a book and their synergistic interaction in the communication of the books meaning to a particular audience.
3. Introduce the appropriate use of illustrations in book design.
4. Help students develop the work habits and attitudes of professional designers.
5. Help students to examine the design process to learn to define the problem and work logically towards an appropriate solution.
6. Develop the ability to work as a member of a team.
7. Gain a deeper understanding of graphic design aesthetically, critically, and technically.

Grading:
1. Each of the two copies of the book that are submitted at the end of the semester should be identical, with flawless execution and craft.
2. The book will be evaluated on the originality of the idea and the appropriateness of the design approach to the idea, the intended audience and all pertinent functional parameters.
3. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules.
4. Visual, verbal and written communication skills will be evaluated.

GD 404 will be offered fall or spring semesters.

*Intermediate Classical and New Testament Greek (4)*
GREEK 051 Elementary Intensive Greek for Graduate Students I (3) Intensive introduction to Classical and New Testament Greek: first half of graduate intensive sequence, elementary reading, writing, speaking, listening, culture.

This is the first in a series of three courses designed to give students an intensive introduction to Greek. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Greek vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

GREEK 052 Elementary Intensive Greek for Graduate Students II (3) Intensive introduction to Classical and New Testament Greek: second half of graduate intensive sequence, elementary reading, writing, speaking, listening, culture.

This is the second in a series of three courses designed to give students an intensive introduction to Greek. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Greek vocabulary. Lessons are taught in an authentic cultural context.

GREEK 053 Intermediate Intensive Greek for Graduate Students (3) Continued intensive study of Classical and New Testament Greek at the intermediate level: reading, writing, speaking, listening, culture.

This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Greek. Continued intensive study of Greek at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

GREEK 101 Introductory Ancient Greek (4)

(BA) This course meets the Bachelor of Arts degree requirements.

The aim of GREEK 101 is to introduce students to the fundamentals of ancient Greek as quickly and thoroughly as possible. The Attic dialect is the basis of Classical Greek grammar, because this is the language of the tragedies of Aeschylus, Sophocles, and Euripides; the comedies of Aristophanes; the histories of Thucydides and Xenophon; the orations of Demosthenes; and the works of Plato. This course focuses primarily on the morphology and syntax of ancient Greek. Drills on each grammar presentation, as well as translation of sentences both from English to Greek and from Greek to English, and of brief passages from ancient authors are the basis of the student’s homework throughout the semester. By the end of the semester, students will be prepared to read short passages of Greek authors. The course will focus on reading and writing rather than speaking, although students will be expected to read Greek aloud regularly in order to master correct pronunciation. GREEK 101 will prepare students to continue with GREEK 102 and then 400-level Greek courses.

The course goals, in addition to providing students with a firm grounding in Greek grammar and morphology, include giving students an improved understanding of English grammar and of English vocabulary and word origins. Moreover, while the primary focus will be on mastering forms and syntax, students will also be introduced to the basic aspects of classical Greek culture so that they are able to place the selections they read within a wider cultural context. Students may select to use GREEK 101 to fulfill either a 3-credit requirement for a course in Greek or Roman language, literature, and civilization, or archaeology or the requirement for 9 credits in courses related to Classics and Ancient Mediterranean Studies within the Common Requirements for the Major. Students desiring to fulfill the B.A. requirement for 12th-credit level foreign language in Greek may do so by successfully completing a 400-level course in Greek. Students’ work in the course will be evaluated on a combination of written work, including frequent tests and quizzes; homework completion; and course attendance and participation. GREEK 101 will be offered once per year with 24 seats per offering.

Bachelor of Arts: Humanities and Second or Beyond 12th Level Foreign Language
Effective: Fall 2001

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

GREEK 102 Intermediate Ancient Greek (4) Intermediate study of classical Greek grammar, syntax, and vocabulary.

GREEK 102 Intermediate Ancient Greek (4)

(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 102 continues from GREEK 101, which is prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Greek vocabulary, morphology and syntax to enable them to read unadapted passages from ancient Greek authors (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from Greek authors themselves rather than either Greek composed by the textbook authors or adapted ancient Greek passages, so that when students enter more advanced classes, they will find the transition to reading Greek as smooth as possible.

In tandem with the increasing emphasis on Greek written by ancient Greeks, the course will continue to focus on the cultural milieu of ancient Athens in particular as a background for the texts that the students read. Basics of Greek history, archaeology, and philosophy will be introduced as relevant to the texts that the students read. Students will be evaluated on a combination of written work, including frequent tests and quizzes; homework completion; and course attendance and participation. GREEK 102 will prepare students to continue with courses in Greek at the 400-level. Students may select to use GREEK 102 to fulfill either a 3-credit requirement for a course in Greek or Roman language, literature, civilization, or archaeology or the requirements for 9 credits in courses related to Classics and Ancient Mediterranean Studies within the Common Requirements for the Major. Students desiring to fulfill the B.A. requirements for 12th-credit level foreign language in Greek may do so by successfully completing a 400-level course in Greek. This course will be offered once a year with 24 seats per offering.

**GREEK 401** Introductory Reading in Greek Literature (3-6) Analysis of selected passages of ancient Greek literature; attention will be paid to grammatical as well as literary details.

**GREEK 401 Introductory Reading in Greek Literature (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 401 is an ancient Greek literature course in which students will read selections from various genres. Students will also read in English additional selections of the authors they are studying. The overall goal of the course is to increase the ease and fluency of advanced-level students with ancient Greek. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in GREEK 003 or 102 or their equivalent, the course will include grammar and building vocabulary. By the end of the course, it is expected that students will be able to read Greek fluently, and be able to analyze grammatical structures.

Students’ work in the course will be evaluated based on class participation, several in-class quizzes and tests, and a final examination. GREEK 401 is one of a series of advanced Greek poetry and prose courses that allow students to gain skill and knowledge about a range of ancient Greek literature. GREEK 401 may be used to fulfill several requirements for the CAMS major including the requirement of courses in Greek or Roman language, literature, or archaeology and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin. The course will be offered every other year with 20 seats per offering.

**GREEK 425** Greek Historians (3-6) Translation and study of one or more of the ancient Greek historians.

**GREEK 425 Greek Historians (3-6)**
(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 440 Greek Drama (3-6) Translation and study of a selected play.

GREEK 440 Greek Drama (3-6)

(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 440 is a reading course in ancient Greek focusing on one or more of the major ancient Greek historians (usually Herodotus, Thucydides, or Xenophon, or Polybius). The course is designed to advance the student's fluency in reading Greek prose, while at the same time enriching their understanding of Greek civilization and history by a thematic choice of historical readings. The course may concentrate on one author or may address a thematic issue with readings from a variety of Greek historians. For example, readings may be selected from Herodotus' accounts of ancient Egypt. Or readings may focus on a comparative study of Thucydides' and Polybius' reasons for writing history. The major portion of class time will be devoted to translating prepared passages. These passages will also be the basis for discussing grammatical forms, as well as stylistic issues in prose writing. The class will also include discussions of historical themes relevant to the readings. Students' work in the course will be evaluated based on class participation, three in-class tests, a final examination, and a term research paper or oral presentation.

GREEK 440 is one of a series of advanced Greek poetry and prose courses that allows students to gain skill and knowledge about a range of ancient Greek literature. This course requires a mastery of basic Greek grammar and vocabulary acquired in GREEK 003, 102, or their equivalent. GREEK 425 may be used to fulfill several requirements for the CAMS major including the requirement of courses in Greek and Roman language, literature, and archaeology, and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin.

GREEK 430 Greek Poetry (3-6) Translation and analysis of selected readings in Greek poetry.

GREEK 430 Greek Poetry (3-6)

(BA) This course meets the Bachelor of Arts degree requirements.

GREEK 430 is an advanced Greek literature course in which students will read 1200-1500 verses of a non-dramatic genre of ancient Greek poetry (in different years the course is offered, this might be epic, lyric, bucolic, or didactic poetry). Students also will read in English the entire output of the author they are studying. The overall goals of the course are as follows: (1) to increase the ease and fluency of advanced-level students with ancient Greek in general and poetic idiom in particular; and (2) to expose students to a limited amount of scholarly literature and give practice in understanding and evaluating a scholarly argument in relation to a primary text with which they are familiar. Students will be expected to enter the class with a comfortable level of reading skill (as acquired in GREEK 003, 102 or their equivalent); the course will not cover grammar, nor will all the assigned readings in Greek be translated in class. Emphasis is on reading a generous amount of poetry in the original Greek and on literary interpretation.

The approach in the classroom will change as the term progresses. Initially, classes will be more lecture-driven in order to explain the background and characteristics of the poetry being read. Translation assignments early in the semester will be relatively short (30-50 verses per class). As students gain in ease and familiarity with the Greek they are reading, assignments will become longer (with a goal of approximately 100 verses per class by the end of the term) and students will assume an increasing proportion of the responsibility for conducting individual class sessions, culminating in student presentations at the end of the semester. GREEK 430 is one of a series of advanced Greek poetry and prose courses that allows students to gain skill and knowledge about a range of ancient Greek literature. This course requires a mastery of basic Greek grammar and vocabulary acquired in GREEK 003, 102, or their equivalent. GREEK 430 may be used to fulfill several requirements for the Classics and Ancient Mediterranean Studies major including the requirement of courses in Greek or Roman language, literature, or archaeology and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin. Students will be evaluated through class participation, quizzes, tests, an oral presentation, and a final exam. The course will be offered once every other year and will offer 20 seats per offering.

Health (HLTH)

**HLTH 306** Physical Education, Health, and Safety in Elementary Schools (2) A study of appropriate activities for elementary-age children. Student participation in physical activities is required.

**HLTH 306 Physical Education, Health and Safety in the Elementary Schools (3)**
This course is designed to prepare elementary classroom teachers to provide age appropriate instruction related to issues of health and safety encountered in the school, home, and community. Understanding and demonstrating a knowledge of foundations, lesson planning, instructional strategies, and assessment is a key component of the program. In addition, the pre-service teachers are prepared to organize and implement physical education activities that may be carried out in the classroom, playground and/or appropriate indoor facilities. The physical education aspects of the program are generally provided as ancillary activities to the program provided under the guidance and direction of a certified Health and Physical Education instructor.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2004
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Health Care Management (H C M)

**H C M 495** Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Health Policy and Administration (H P A)

H P A 057 (GHA) Consumer Choices in Health Care (3) Introduction to consumers’ role in health-care decisions, including health benefits, physician and hospital choice, and end-of-life choices.

H P A 057 Consumer Choices in Health Care (3)
(GHA)

H P A 057 is designed to provide students with an understanding of the consumer’s role in health care decisions. The
growth in health care information resources, the expansion of for-profit medical care, the consumer revolution, and increasing cost pressure mean consumers must be aware of the critical issues involved in health care decisions. Consumer knowledge and decision-making affect the cost and quality of health care received. The main goal of this course is to educate students to become knowledgeable health care consumers. H P A 057 (GHA) can be used as a General Education course for all Penn State students. It focuses on all 4 aspects of General Education in Health and Physical Activity and several of the overall General Education criteria. It helps students learn how to gather information about health and health care and synthesize and analyze that information to make good choices that will enable them to achieve and maintain good health, including making healthful lifestyle choices. H P A 057 emphasizes that students must develop consumer skills, attitudes, and habits that will enable them to make the choices expected of consumers in today’s health care system. Active learning is a critical component of H P A 057, as students must actively gather information and use it to make decisions. H P A 057 also addresses the issue of intercultural competence, by addressing different cultural views of health and information on how culture influences interactions between patients and others in health care settings. It requires students to write and speak about the choices they make through assignments that demonstrate their understanding of the information resources and the reasoning underlying their choices. Finally, several in-class and out-of-class assignments employ collaborative learning and teamwork as students gather and synthesize information. Students in Health Policy Administration may use H P A 057 for a supporting course in their major. It is also a required course in the Minor in Health Policy and Administration. H P A 057 does require a technology classroom to enable demonstration of consumer health information on the web and students will need some independent laboratory access to complete assignments. H P A 057 will be offered 2-3 times per year at University Park and on several other Penn State campuses with an expected enrollment of 50-200 students per semester.

H P A 301W Health Services Policy Issues (3) Analysis of major issues in health services delivery in hospitals, medical practice, public health, mental health, and health professional education.

H P A 301W Health Services Policy Issues (3)

H P A 301W is a survey course of health services policy issues that emphasizes the skills needed to analyze and communicate knowledge about health services policy. The chief goals of the course are to broaden student understanding.
H P A 301W is a required course in the Health Policy Administration major and serves as one of the Writing Across the Curriculum courses Health Policy Administration students can take. It is also an optional course for the Minor in Health Policy and Administration. H P A 101, PL SC 001, and ECON 002 are prerequisites for H P A 301W, providing foundation knowledge in health care and social sciences. In addition, all H P A 400-level courses with a health policy focus require H P A 301 or H P A 301W as a prerequisite.

General Education: None
Diversity: None
Effective: Spring 2011

H P A 390 Professional Development in Health Policy and Administration (3) Development of personal understanding and professional skills to prepare students for future employment or study in health policy and administration.

H P A 390 Professional Development in Health Policy and Administration (3)

The objectives of H P A 390 are to help students understand themselves and the opportunities available in the health care field and professional skills in preparation for their required internship and future profession. In H P A 390 students learn to assess their talents and abilities and how those talents can be best applied in one of the many career settings in health care. They research different types of organizations and opportunities in the health care field. They learn the basic professional skills that are required in the health care world. Students are evaluated on the basis of a personal self-study exercise, completion of a required planning for several professional development exercises, and a team project on a health care organization.

Health Policy Administration students take H P A 390 after they have completed the initial overview of the health care system in H P A 101 and while they are taking their core courses in the major, H P A 301, H P A 310, and H P A 332. The course is a prerequisite for H P A 395, the student's professional internship, providing the professional development background that students need to have a high-quality internship experience that furthers their education. H P A 390 is a required course in the curriculum. No students from other departments may take the course without H P A permission.

H P A (BB H) 440 Principles of Epidemiology (3)

This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations.

The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors; 3) be able to interpret and critique epidemiological research reports on the identification of risk factors and casual factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful interventions; and 7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world.

This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.

**H P A (ECON) 445W Health Economics (3)**

The healthcare sector comprises a set of markets that differ in some significant ways from the textbook model. In the US, this sector performs well in some respects and questionably in others. Notably, there has been sustained improvement over time in life expectancy and other indicators of the effectiveness of health care for most people, but the resources devoted to producing this improvement have been growing considerably faster than GDP. The goal of this course is to examine several broad questions raised by these facts.

The course begins with an overview of evidence on wealth, health expenditure, and life expectancy across countries, and then examines increasing life expectancy and medical expenditures in the US and their causes. Issues in measuring the value of medical expenditures are addressed, and an overview of the industrial organization of health care is provided. A major component of the course covers the economics of health insurance, and the course also examines medical R&D and the pharmaceutical industry as well as issues in the financing of medical care for the elderly.

The course seeks to introduce students to the economic analysis of health care. It is in the area of applied microeconomics, and deals with issues relating to labor markets and public finance, in particular. This writing-intensive course will be one of several 400-level W seminars that the Economics Department is seeking to establish, with the broad objective of exposing our advanced undergraduate students to economic analysis in a seminar setting requiring significant writing by the students.

The course counts toward the major and the minor in economics, as a 400-level course, In addition, it also counts toward a "module" (area of concentration) in human resource and public economics.

Student performance in the course will be evaluated based on three papers. The course will be offered once each year, with an enrollment of 25 students.

H P A 460 Human Resource Management in Health Care Organizations (3) Foundations of human resource management applied to health care organizations, including hospitals, long-term care facilities, and community health organizations.

H P A 470 Health Care Information Management (3) This course introduces information systems terminology, data structures, software applications, and their management functions in health services organizations.

The course introduces the student to information systems terminology, structures, specific applications, and their relationships to management functions in health services organizations. Health providers and health systems are continuing to make multi-million dollar investments in information systems in order to meet new market and regulatory requirements. All health services managers will play a role in the analysis, design, acquisition, installation, operation and ultimate success of information systems necessary to meet organizational goals and objectives. This course exposes students to the IS/IT applications used to support management functions. Further, applications and management issues unique to industry segments (e.g., long-term care, home care, hospital administration, physician practice management) will also be explored.

The goal of the course is to ensure that students are schooled in the terminology, conceptual models, applications and opportunities and limitations of information systems in health services to the point that they can ask appropriate questions, recognize and state significant issues, and participate in the discussion and analysis of information systems development and application.

The course is one of several elective courses in the Health Policy Administration major that students can complete and is also a required part of the Information Sciences and Technology/Health Policy Administration Minor providing students with an understanding of the basic structures of information systems in health administration; the relationship of these systems to managerial functions such as communications, coordination, control strategic and process planning and decision making, and the important policy and ethical issues associated with privacy, confidentiality, and security in information systems. Since the course represents the capstone of the Information Sciences and Technology/Health Policy Administration minor, it is important for students to have the pre-requisites for the course (H P A 332, IST 210, and IST 220), including an understanding of major issues in the health care system, health care management and information systems.

Student's attainment of educational objectives will be assessed through a variety of evaluation methods. Understanding and appropriate application of terminology, management issues, and ethical/privacy concerns will be assessed through examination. Concept integration will be assessed through case-study analysis and project papers. Data presentation and training communication issues will be assessed through individual application projects and presentations.

A technology classroom with access to the World Wide Web and Penn State servers is required for effective instruction. We will use these facilities to demonstrate software applications, provide technical support for guest speaker presentations, and facilitate student presentations. The course will be offered once per academic year with an expected enrollment of 20-40 students.

H P A 490 Physician Practice Management (3) Development of skills needed to effectively manage physician practices.

This course is designed to provide undergraduate and graduate level students the basic knowledge necessary to effectively manage a physician practice in today’s health care environment.

With the ever changing delivery of health care services in the U.S., it is critical for young professionals entering the field to understand the importance of working with physicians.

It is also critical, that students understand the differences that exist between managing physician practices as compared to other health care environments. That includes; physicians as employees, physician practice revenue cycle management,
outpatient vs inpatient services, and other factors that are unique to managing doctors of all specialties.

The course will also discuss the role of mid-level providers such as physician's assistants, nurse practitioners, nurse midwives, and nurse anesthetists play in the delivery of health care services.

Students will also gain a better understanding of how to effectively communicate with physicians and use their knowledge to become partners with the administration of complex issues such as access, quality, and cost containment.

HEBR 010 (GH;IL) (J ST 010) Jewish Civilization (3) Life of the Jewish people from Biblical times, emphasizing cultural, religious, and institutional developments.

HEBR (J ST) 010 Jewish Civilization (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The Pennsylvania State University
Jewish tradition goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events -- ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. -- we will explore developments in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are evaluated on the basis of essay exams, essay assignments, quizzes, in-class discussion and commentaries, group projects, journals, a final comprehensive exam/essay, web-based activities, and on-line discussion. such means as quizzes, essay examinations, and group projects.

**HEBR (CAMS/J ST) 151 Introductory Biblical Hebrew (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses.

The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together from such an important piece of literature.

**HEBR (CAMS/J ST) 152 Intermediate Biblical Hebrew (3)**
This course meets the Bachelor of Arts degree requirements.

CAMS/J ST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible.

In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

HEBR 451 Advanced Biblical Hebrew (3) Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details.

HEBR 451 is a Biblical Hebrew literature course in which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of advanced-level students with Biblical Hebrew. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 152 or its equivalent, the course will include grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read a Biblical Hebrew text comfortably and be able to analyze grammatical structures. Students' work in the course will be evaluated on class participation (20%), several in class quizzes (20%), and a mid-term (30%) and final exam (30%). HEBR 451 is part of a series of advanced Hebrew classes that will allow students to gain skill and knowledge about a range of Biblical Hebrew texts. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

**HIST 002 (GH;IL)** The Western Heritage II (3) A survey of the Western heritage from the dawn of modern Europe in the seventeenth century to the present.

**HIST 002 The Western Heritage II (3) (BA)** This course meets the Bachelor of Arts degree requirements.

History 002 is an introduction to the history of Europe from the reformation to the present. The course focuses on four broad shifts in European history: the emergence of the powerful states of the ancient regime from the century of religious violence following the reformation; the critique of and attack on major assumptions of ancient regimes before, during, and after the French revolution; the social and economic transformation of Europe in the eighteenth and nineteenth centuries; and the formation of mass societies during the nineteenth and twentieth centuries. Although individual versions of the course may vary in emphasis, these changes are recognized as vital to Europe's significance in the modern world. A major teaching goal of the course is the use of historical evidence, in the form of documents, to build interpretations of the past. A book of documents and an additional course packet supply this evidence and serve as the focus of the weekly discussion classes. There are weekly reading quizzes to ensure preparation and to provide questions for the start of discussion. A textbook and lectures supply the overviews and broad themes of the course. The course requirements typically consist of exams, quizzes, and class attendance. (Note that these are the typical, general requirements. Individual instructors may make adjustments that will maintain the intellectual integrity and pedagogic intent of the course.) The course is a basic introduction to modern European history. It is therefore, related to all upper division courses on this subject. It also introduces students to basic cultural and social movements essential to courses in art history and music and to courses in the social sciences. History002 is required for history majors and for others fulfills a humanities requirement in the university's general education/bachelor of arts requirements. HIST 002 is offered twice a year with 50 to 250 seats per offering.

**HIST (CAMS) 005 Ancient Mediterranean Civilizations (3)** (GH;IL)

This course provides an introduction to the history and cultural traditions of the ancient civilizations of the Mediterranean. From the origins of cities and the invention of writing, it surveys the intellectual, artistic, and political traditions that laid the foundations for the later civilizations of Europe and western Asia. Students will acquire a basic historical framework for the ancient Mediterranean from the third millennium BCE through the end of antiquity in the first millennium CE. Within this framework cross-cultural relationships of time and ideas will be established among religious texts, epic literatures, and political and legal traditions. In the part of the world where the division between Asia and the East and Europe and the West was born, the course will examine the development of regional and ethnic identities along with the historical development of concepts of the universal nature of humanity. This course is designed to serve as the foundation course for all majors in the department of Classics and Ancient Mediterranean Studies (CAMS).

**HIST 010** (GH;IL) World History I (3) Human origins; early civilizations; major political and intellectual developments on all continents; cultural interrelationships to 1500.

**HIST 010 Non-Western Civilization (3)** (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 010 is an introductory survey of ancient history from the emergence of Homo Sapiens to the onset of European exploration (approximately 1500), examining the evolution of the world's various peoples and cultures. The course will focus on the historical processes that led to human diversity, as expressed in varying patterns and systems of government, economics, arts, ideas, belief systems, and social organizations. The course will also treat the growth of agriculture and pastoral nomadism and explore global interactions and linkages, engendered by human migrations, the spread of commerce and disease, wars, and conquests up to 1500. Although the mode of delivery may vary, depending on the semester or session in which a specific section of the course is offered, its campus location, and the instructor's major research specialization, the course will be taught thematically and conceptually. It will include individuals who have played a significant role in influencing the beliefs and institutions of a particular culture, or humanity in general, such as Moses, Confucius, Gautama (the Buddha), Plato, Alexander, Jesus, Muhammad, St. Francis of Assisi, al-Ghazali, Murasaki Shikubu, and Moctezuma. Students will learn about the interrelationships between dominant and nondominant cultures, such as the concepts of Roman imperialism, the tributary relationship between China and its neighbors, the Islamic concept of conquering lands without forcing conversion, the effects of the Mongol conquests, and the beginnings of Portuguese exploration and colonization. The course will make students more aware of the cultural achievements of the ancient Egyptians, Hebrews, Greeks, Romans, Persians, Indians, Chinese, Arabs, Turks, Mayans, and Japanese. Discussion sections (for high-enrollment classes) and essay examinations will promote student facility in written and oral self-expression, analysis, synthesis, comparison and contrast, and cultural empathy. History 010 instructors will, at their discretion, provide opportunities for gathering information from libraries, computerized indexes, and websites. Students will come to understand themselves and their own culture, as well as the background to many other societies and cultures in today's world, through intellectual confrontation with the peoples and cultures of antiquity. Instructors will address issues related to civility, the individual's role within the larger community, and academic honesty.

General Education: GH
Diversity: IL
HIST 011 (GH;IL) World History II (3) Social, economic, and political evolution of societies and cultures from 1500 to the present.

History 011 is an introductory survey of modern history from approximately 1500 to the present, viewing the world and its various peoples and cultures as a whole. This course will focus on the historical processes that have led to modernization, such as exploration, contacts among peoples and cultures, voluntary and forced migrations, the growth of technology and science, industrialization, urbanization, and other trends that have shaped the world since 1500. It will help students to develop facility in speaking and writing about continuity, change, causation, similarities and differences among cultures, universal and particular values, and conceptualization of modernity, through weekly discussion sections, essay examinations, short writing assignments, and selected readings. Its content is intrinsically international and intercultural, addressing overarching themes of ethnicity, race, religion, gender, and especially global perspectives. Approximately one-half of its content

HIST 020 (GH;US) American Civilization to 1877 (3) An historical survey of the American experience from its colonial beginnings through the Civil War and Reconstruction.

HIST 020 American Civilization to 1877 (3) (GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

HIST 021 chronologically follows this course by providing the student with a background in American History prior to 1877. HIST 020 is designed to introduce students to the main events and themes of American history before 1877. This course is not intended to simply acquaint the student with facts, but to teach them how to analyze those facts so that they can understand why historical events in America unfolded as they did. A larger goal of the course is to teach them how to think "historically" and to perceive the relevance of the past to the present. It is impossible to understand either yourself or your society if you cannot identify the role, which your individual and collective past plays in the construction of your actions and thoughts today. The course provides the student with a basic background in American History prior to 1877. The course grade will be determined by an in-class midterm exam, an in-class final exam (each containing
essay and short-answer sections), a five-page paper based on the analysis of a primary source, and participation in discussion sections. This course will be offered twice per year with 150 seats per offering.

HIST 021 (GH;US) American Civilization Since 1877 (3) An historical survey of the American experience from the emergence of urban-industrial society in the late nineteenth century to the present.

HIST 021 American Civilization Since 1877 (3) (GH;US)

( BA) This course meets the Bachelor of Arts degree requirements.

History 021 is designed as the second half of a two-term survey of American history, covering the period from 1877 to the present. (History 20 covers the period from 1607 to 1877.) The course uses a lecture format; larger versions have weekly discussion sections as well, led by graduate assistants. In terms of historical knowledge, History 021 seeks to introduce students to salient events, developments, and themes of American history since 1877. Chief among the topics covered are Reconstruction, Westward expansion and the decline of the Native American, the industrial revolution, urbanization, immigration, Gilded Age culture and politics, the labor movement, the New South, Populism, imperialism, Progressivism, segregation and African-American response, the women's movement, World War I, politics and culture in the Twenties, the Great Depression and New Deal, World War II, post-war prosperity, the Cold War, the Civil Rights movement, the Vietnam War, the disillusionment of the 'Seventies', the Reagan revolution, and America in the post-Cold War era. The social and ideological diversity of the American experience is a prominent theme of History 021. A survey textbook selected by the instructor is used, in conjunction with lectures, to provide a comprehensive overview. The textbook is supplemented by a blend of specialized historical works and primary readings. Students are evaluated on the basis of their performance on papers, exams, quizzes, and class participation and attendance. While History 021 instructors vary in the content and mix of work they assign (and the relative weight they give papers, exams, quizzes, and participation in the course grade), all versions share certain underlying objectives: to expose students to essential events and trends in American history; to develop their capacity to identify and analyze key themes and issues from the past; to give them some experience in the critical assessment of primary sources; and, to sharpen their skills in marshaling data and concepts from readings and lectures, and discussing them cogently both in section meetings and in writing. Increasingly, instructors are integrating multi-media components into their lectures. History 21 is the second half of a two-course survey of American history. History 020 is the first half; the year 1877 marks the dividing point between these two courses. Like History 020, History 021 provides a foundation (and is in fact a prerequisite) for many of the more advanced courses in American history. History 021 is a requirement for the major. Non-majors may use this course to satisfy a general education humanities selection. This course is offered three times a year with 140 seats per offering.

HIST 083S (GH) First-Year Seminar in History (3) Critical approaches to the dimensions and directions in History.

HIST 083S First-Year Seminar in History (3)
(GH;FYS)

(BA) This course meets the Bachelor of Arts degree requirements.

Through readings, discussions, lectures, and research projects, students are expected to master the subject material of the course as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. Historical analysis of this type will provide students with techniques for appreciating and judging arguments and presentations in many fields of learning, from scholarly to popular. The topics chosen for these seminars will acquaint students with major figures and developments in important historical areas. By reading and understanding historical documents, students will learn to consider the cultural assumptions of different groups and societies and to appreciate their own values and assumptions by contrast with these. Although the course will focus on a specific topic, the instructor will help the student to see the wider implications of the issues and controversies discussed. Whenever possible, the international and intercultural aspects of the topic will be considered. The course will challenge students to express themselves and to gather information through discussion and writing of papers. It will always challenge students to think about social behavior, the nature of the community, and the value of scholarly endeavor as these relate to the particular topic of the seminar. The course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. The course will be offered twice a year in sections of 20 students.

HIST 100 (GH;IL) (CAMS 100) Ancient Greece (3) Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization.

HIST (CAMS) 100 Ancient Greece (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenae, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E. Evaluation methods include: evaluation by four short objective quizzes, by four short (1-2 page) thematic essays, by participation in four scheduled discussion sections, and by mid-term and final examinations consisting of short answer identifications and an essay, or students may write a term paper in lieu of the final examination. The course will be offered once a year with an enrollment of 90.

The Pennsylvania State University
HIST 101 (GH;IL) (CAMS 101) The Roman Republic and Empire (3) History of the Roman Republic and Empire from the origins of Rome to the disintegration of the Empire.

HIST (CAMS) 101 The Roman Republic and Empire (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course fulfills 3 credits of the General Education-Humanities (GH) requirement and is an introduction to the ancient Roman empire: how that empire came into being, how it evolved, how it came to govern much of the Mediterranean and European world, and how that empire declined. Particular stress is placed, through readings and discussion, on the sources of our knowledge of the past and on the social and legal structures employed by a past society to govern an ethically- and religiously-diverse population. This course complements other courses on the ancient Mediterranean world (such as HIST/CAMS 100) and is a prerequisite to more advanced (400-level) courses in ancient Mediterranean history. An example of evaluation includes: three brief quizzes, a take-home mid-term permitting library and Internet use, and a final examination; all examinations require student synthesis and expression of what has been learned through written essays of varying length. Emphases in the course are on student engagement through class discussion of the topics presented in the texts and lectures. This course is offered once a year with 60 seats per offering for HIST and 30 seats per offering for CAMS and requires no special background save for an interest in the topic.

HIST 102 (GH;IL) (CAMS 102, J ST 102, RL ST 102) Canaan and Israel in Antiquity (3) Political, social, and intellectual history of the land of Canaan/Israel in the Biblical era: Late Bronze and Iron Ages.

HIST (CAMS/J ST/RL ST) 102 Canaan and Israel in Antiquity (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

From the domestication of animals and the dawn of agriculture to the development and socialization of monotheism, the world of the first civilizations led to that of the Bible and ancient Israel. This course, involving a critical view of Biblical texts in light of other ancient sources, archaeology and historical methods, explains the nature and the evolution of society, religion and thought in the Biblical era. Learn how civilization arose, and how the state appropriated religion and applied it for its purposes. How the science of administration developed and deployed ideological tools to further its own ideas of the West developed. This course is deeply subversive, particularly of religious and academic shibboleths. The only authority in this class is that of the most persuasive reader, and doctrines, whether religious or political, will have to be checked at the door.

An example of evaluation may be: weekly participation in discussion; mid-term and final essay examinations involving a critical evaluation of ancient text's claims in combination with archaeological evidence; a research essay, where the class or section size is lower than 30; an ability to read critically, bringing different classes of evidence to bear on issues arising from the texts, and construct coherent and compelling arguments to a particular thesis. The course provides a Near Eastern counterpart to HIST 100, 402 and a Near Eastern aspect to the Jewish Studies major. It complements RL ST 110, by offering historical exploration of the culture under study in that course. Related courses include ANTH 012, HEBR, 010, ENGL 104, RL ST 004, and RL ST 111. The course helps round out the majors in History and Jewish Studies, particularly in ancient history. It also extends the program in Religious Studies (history of religions), and it contributes to the ancient stream of the prospective program in Jewish Studies and History. The class will be offered once every other year with an enrollment limit of 15-20.

HIST 103 (GH;IL) The History of Madness, Mental Illness, and Psychiatry (3) This course will examine the ideas that have
shaped European and American perceptions of madness, insanity, and mental illness.

**HIST 103 The History of Madness, Mental Illness, and Psychiatry (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will be an introduction to the modern history of "madness" in the Western world. In particular, we will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness; the changing experiences of those afflicted; the development of those professions designed to look after those deemed mad, insane, and mentally ill; and the social and cultural assumptions behind treatments, policies, and public opinions. Our sources will include clinical case studies, memoirs of those living with mental illness, histories of psychiatric practice, and films. An example of the evaluation methods would be 3-4 written, in class exams, a 10-12 page research paper on a subject of choice, and class participation. The chief objectives of the course will be to confront head-on some of our most persistent assumptions about mental health and those with mental illnesses, evaluate how mental illness was understood and treated over the centuries, and become acquainted with the ways in which human biology, culture, society, and politics have reciprocally shaped one another in history.

The course can be effectively linked to several courses offered within the Department of History, including HIST 122 and 123 (History of Science I and II) and HIST 422 (European Thought Since 1870). In addition, it will fulfill requirements for both history majors and minors. The substance of the course emphasizes competence in the interpretive and critical understanding of the values, ideas, and experiences associated with mental disability over history and across cultures also means that it meets requirements for both General Education in the Humanities as well as Intercultural/International Competence. It is hoped that students across the human, social, and natural sciences will enroll in the course.

**HIST 107 (GH;IL) (MEDVL 107) Medieval Europe (3) Rise and development of the civilization of medieval Europe from the decline of Rome to 1500.**

**HIST (MEDVL) 107 Medieval Europe (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

HIST/MEDVL 107 is an introductory course on the history of Europe from the late classical period to the beginning of the sixteenth century. There are three main areas of concentration in this course. First, the development of political, judicial and diplomatic institutions, from the collapse of central Roman authority through the rise of local chiefdoms to the centralized kingdom as ancestor of the modern state. The second theme is the role of Christianity in all its forms--orthodox, heretical, and popular--and its contribution to a distinctly medieval society. The third main theme is the development of society following changes in economic activity, cultural interest and the extended family.

Several forms of learning are used in this course. A textbook gives the student a broad overview of the period and gives a chronological structure to the material. This material provides a background to the instructor’s lectures, which not only give factual information, but integrate the various trends, individuals and events. The assigned readings illustrate specific

The Pennsylvania State University
events or individuals; the discussion groups allow the student to explore these texts in a collaborative environment with
the instructor and their fellow students. The research paper gives the student the opportunity to investigate a specific
topic of interest, while training them in scholarly writing and analysis. Finally, the tests, all essay questions, let students
demonstrate their comprehension of the material through problem solving.

The essay exams and discussion groups allow the student actively to address specific problems from the material; the
research paper enables the student to gather information from traditional (library archives) and non-traditional
(electronic) sources, then to present a conclusion in a comprehensive and coherent argument;

The class discussion promotes collaborative and cooperative learning, as the students expand on, and/or argue against,
positions taken on the material by their instructor and fellow students. Internationalism and interculturalism is the essence
of this course. The research paper, essays and discussion allow for scholarly development through the investigation of
communities in an important era of history.

HIST 108 (GH;IL) The Crusades: Holy War in the Middle Ages (3) The social and political history of medieval religious
warfare in Europe and in the Middle East.

HIST 108 The Crusades: Holy War in the Middle East (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 108 is an introductory survey of the so-called holy wars of the High Middle Ages. These wars were fought in
theatres from the Baltic to the eastern shores of the Mediterranean, from the Hispanic peninsula to southern France. While
the primary emphasis will be given to the expeditions to the Holy Land, two other crusading movements will be studied:
the crusades in the Baltic, led by the Teutonic Knights, and the crusades in southern France, against the heretics known as
the Albigensians. These conflicts cannot be studied in isolation, and a major topic is the response of Islamic society and
non-conformists elements within medieval Europe. How the various elements in the crusading period co-existed, changed
or disappeared provides still more material for the student to contemplate.

Students will be evaluated on three essay examinations, regularly scheduled discussions of the assigned readings, the
instructor’s assessment of the student’s ability to read critically, write clearly and knowledgeably, and class participation.
History 108 is part of a series of introductory courses to medieval history. It will be accepted but not required for the
History Major and Minor. It will be offered once each year with 90 seats per offering.

HIST 110 (GH;IL) Nature and History (3) A broad introduction to the history of human relationships with nature throughout
the world.

HIST 110 Nature and History (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The human relationship with the natural environment—the world of plants, animals, and microbes, of air, water, and
land—is an important historical subject. History 110 provides a broad, thematic description and analysis of major global
trends and shifts, with an emphasis on contemporary issues and problem solving. The most important goal of the course
is to provide students with the historical context necessary to construct a thoughtful appreciation of the environmental
dilemmas of our time.

History 110 encourages students to break down the barriers that often divide the humanities and the sciences. This
course utilizes environmental science to demonstrate and explain specific human tendencies. Finally, this course-as is any
in world history-is structured to at least diminish students’ American-centered view of both the past and environmental
concerns. Particularly in relation to contemporary environmental issues, we hope History 110 will make clear that many
environmental problems are local in neither their construction nor impact.

Ecology has contributed a great deal to historical understanding in terms of specific examples or case studies; however, it
has also begun to reconstruct the overall structure of the history that we teach. History 110 seeks to exploit this new
paradigm by following a topical organization that is structured around human modes of interaction with the environment.
In Unit 1 the course borrows its structure from geography and the natural sciences. Students will be able to consider a
wide range of human activity as well as to better comprehend similarities in ideas, ethics and concepts from around the
world and throughout history. In Unit 2 the course steps out of chronological limitations to embrace two topics that span
human history. By studying such topics, of course, students may see change over time contextualized by a shared concern or resource. Unit 3 is designed to reinforce the global nature of the course and the concerns that we study within it. We will highlight interdependence by including issues that link students’ local environment with distant others.

The lectures and discussions will focus on several critical points, including: How has the non-human world shaped the course of human history? What were the environmental impacts of historic changes in the ways humans produced and consumed resources? What ideas shaped the ways different groups of people defined and used specific resources? What role have science and technology played in changing popular attitudes about the human place in the world?

HIST 113 (IL) Baseball in Comparative History (3) Comparative survey of baseball history from its beginnings to the present.

HIST 113 Baseball in Comparative History (3) (IL)

This course, which fulfills the International Cultures (IL) requirement, provides an introduction to comparative social history. It uses the broad cultural and geographic diffusion of baseball over time to examine the diverse and changing social, economic, and political meanings of this activity in different cultural settings, emphasizing the ways in which a common activity may acquire unique meanings in different cultures. Although North America, Cuba, and Japan demand attention as the most striking examples of baseball’s pervasive impact, the course will consider baseball as a global phenomenon, exploring the minimal impact or failure of baseball promotions in many European and African societies, for example. As an introduction, the course will confine itself to English language texts, but it will use a wide range of primary sources, including newspapers and journals, memoirs, correspondence, promotional materials, and photographs to introduce students to basic concepts of historical method and problems of evidence. Students will be encouraged to consider baseball’s impact in particular historical contexts as a cultural process, from the manner of its introduction through its adoption to the emergence of distinctive proprietary, even nationalist attitudes and styles of play. Among the many topics required of a survey, the course will return periodically to the question of American influence and US imperial aspirations. But the evidence of baseball games in other countries as sites of resistance or hostility to US power and as expressions of a potent nationalist politics raises questions about baseball’s value for many conventional historical models of "empire" as a form of political or economic subordination. Students’ assignments will require a combination of reading, writing, and research skills, and the course will introduce through lecture and discussion the variety of materials available at Penn State for the study of this subject.

HIST 115 (GH;US) (J ST 115, RL ST 115) American Jewish History and Culture (3) Examination of the history, culture, social tensions, and contributions of Jews and Judaism in America.

HIST (J ST/RL ST) 115 American Jewish History and Culture (3) (GH;US)

Throughout American history, Jewish presence on American soil has compelled Americans to re-think the meaning of religious and ethnic diversity. As one of the earliest non-Christian immigrant populations, American Jews struggled to explain how they could nonetheless fit into American cultural, political and social life. At the same time, many Jews have been concerned with their own survival as a distinctive group, unwilling to cede those practices, behaviors or traits that designate them as a people apart from other Americans. This course is about how these two seemingly contradictory goals—to integrate into America and to remain distinctive from other Americans—shaped the history and experience of Jews in the United States and influenced the way Americans think about diversity and pluralism.

The student of American-Jewish history must be attuned to the multiple ways that Jewishness has been defined: as a race, a religion, a nationality, and an ethnicity. In this course, far from choosing just one of these designations, we will explore Jewish life from many different angles. Topics to be considered include religious reform, immigrant experience, political activism, popular culture, and struggles over community authority. Readings focus on a number of primary texts, including memoirs, novels, films and philosophical essays. Secondary books and articles will also help deepen students’ understanding of trends in American-Jewish history and awaken them to diverse interpretations of history. Students will be encouraged to engage actively and critically with the texts by writing short reading responses, longer essays, and participating in classroom discussion and presentations, all of which will serve as the basis for their evaluation.

This course complements offerings in Religious Studies, Jewish Studies and History. It provides a foundation for an already existing upper-level seminar in American Judaism (listed in Jewish Studies and Religious Studies). In addition, the course

The Pennsylvania State University
strengthens the History department's offerings in American history, serving as a basis for students interested in immigration, ethnicity and religious history. Students who are interested in modern Jewish history will also find this course a worthwhile addition to their program of study, since, unlike other courses, it deals primarily with the story of Jewish life in the United States.

HIST 117 (GH;US;IL) (WMNST 117) Women in Modern History (3) Modernization and women: changing images and roles since mid-eighteenth century in the family, workshop, politics, society; cross-cultural comparisons.

HIST (WMNST) 117 Women in Modern History (3)
(GH;US;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

History/Women's Studies 117 is an introductory survey of women in the United States and possibly elsewhere, from the seventeenth to the late twentieth century. The course examines women's history from several different perspectives. First, it introduces students to the methods, sources, and questions of the past thirty years of women's history-writing, and asks students how studying women transforms our understanding of history more generally. Second, it offers a survey of the narrative of modern women's history, stressing women's interactions with the larger processes of economic and political change, their relationship to changing ideologies of gender and feminism, and their complex identities not only as women but as members of a particular race, class, ethnic, and religious group. Throughout, students will ask when gender, and when some other aspect of women's lives and identities, is most salient in identifying the restrictions and opportunities they faced. Third, students will assume the perspective of historians themselves, as they examine primary sources and attempt to make analytic and historical judgments about what they say and why they matter to the larger narrative. Through significant essay-writing assignments, students will develop analytical and writing skills in learning to think historically about women. Questions about race, class, ethnicity, and sexual orientation, as well as gender, are intrinsic to this course. Students will be evaluated based on their class participation, papers, and final exam. This course is cross-listed in History and Women's Studies and fulfills requirements for both programs' majors and minors. History/Women's Studies 117 will be accepted, but not required, for the History Major, the Women's Studies Major, and the Women's Studies Minor. This course will be offered once a year with up to 70 seats per offering.

HIST 123 (GH) (S T S 123) History of Science II (3) A history of science and culture from the scientific revolution to the present.

HIST (S T S) 123 History of Science II (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to explore the earliest developments in science, beginning with the prehistoric roots of technology and theories of human origins, followed by an engagement with the achievements of the Mayans, Aztecs, and native North Americans. We then turn to science and technology in the ancient Greek Egyptian worlds, followed by an analysis of early Chinese and East Indian science, medieval science in Europe, selected African sciences, and the rise of modern science in the Scientific Revolution and beyond. The point of the course is to show that science is a world tradition with an ancient history, and that many social, political, cultural, and economic forces can push or pull this peculiar form of knowing in one direction rather than another. There are other history of science courses offered at Penn State, but none treats the history of science in general in relation to its social context and influences. Other history of science courses are more thematic than survey courses (e.g., "History of Mathematics" and History of Gender in Science, and Archaeostronomy). HIST 122, "History of Science I," treats science from Stonehenge to the scientific revolution. Students may take either course alone or out of sequence; the first will not be a prerequisite for the second. The expectation is that students will combine knowledge acquired in this course with knowledge from their required general education courses in science to develop a broader understanding of history and science. HIST/S T S 123 may be used to fulfill a requirement for the History major and the History minor and it is an essential part of the recently proposed science and technology history theme within the Science Technology & Society minor. Nonmajors may use it to fulfill a general education humanities requirement. This course will be offered once a year with 65 seats per offering.

General Education: GH
Diversity: None
Bachelor of Arts: Humanities
Effective: Spring 2004

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HIST 124 (GH;US;IL) (S T S 124) History of Western Medicine (3) This course explores the history of health, illness, and medicine in western society.

HIST (S T S) 124 History of Western Medicine (3) (GH;US;IL)

Relying on both primary and secondary sources, the course examines developments in medical thinking and practice, the changing status of medical practitioners, and the experience of patients in order to understand the links between medicine and its social, cultural, intellectual, and political contexts.

This course will also augment offerings in bioethics and medical humanities by providing the historical context of ethical issues and social policies concerning medicine. It will be attractive to students pursuing a health professional career and will provide a historical context to the issues raised in courses such as HD FS 301 "Values and Ethics in Health and Human Development Professions," BIOL 461 "Contemporary Issues in Science and Medicine," PHIL/S T S 432 "Medical and Health Care Ethics," and ANTH 470H "Our Place in Nature." The course will be one of the Humanities Electives for the Bioethics/Medical Humanities Minor as well as the proposed Disability Studies minor.

Within the Department of History, the course is part of the undergraduate offerings in the history of science and, thus, is
directly linked to HIST/S T S 122, HIST/S T S 123, and HIST 103. The course would also support the Science, Technology, and Society Program’s undergraduate minor, augmenting courses in science and health and medicine, such as S T S 101, S T S 105, S T S 200, and S T S 432.

**HIST 127 (US) (LTNST 127) Introduction to U.S. Latina/o History (3)**
This course introduces students to the history of U.S. Latina/os, including Puerto Ricans, Dominicans, Chicanos, Cubans, and Central Americans.

**HIST (LTNST) 127 Introduction to U.S. Latina/o History (3) (US)**
This course introduces students to the history of U.S. Latina/os, drawing on the multiple experiences of Puerto Ricans, Dominicans, Chicanos/Mexicanos, Cubans, and Central Americans. Course content features the divergent development of U.S. Latina/o cultural and political identities rooted in the Caribbean, Mexico, Central American, and the United States. Students will understand the formation of racial and class hierarchies within U.S. Latina/o communities; the processes of (international) migration; gendered hierarchies and responses to sexism; and the complexities of U.S. Latina/o identity. Lectures are supplemented with discussion days in which students respond to readings under the guidance of a graduate teaching assistant. Grading stresses proficiency in analytical, historical writing.

**HIST 130 (GH;US) Introduction to the Civil War Era, 1848 through 1877 (3)**
Survey of causes and consequences of American Civil War, end of Mexican War in 1848 through end of Reconstruction, 1877.

**HIST 130 Introduction to the Civil War Era, 1848 through 1877 (3) (GH; US)**
BA - This course meets the Bachelor of Arts degree requirements.

HIST 130 is a general survey of the American Civil War Era that satisfies the Gen Ed GH requirement. Course content features the causes of the war, the conflict itself, and the consequences for the meaning of freedom in the United States. Chronologically, the course spans from 1848 through 1877, or from the Mexican War through Reconstruction. Students will become familiar with American slavery; northern and southern social, cultural, political, and economic composition; the military progress of the war; problems on the home front; the struggle for emancipation; and the creation of a new nation based on free labor. Lectures are supplemented with discussion days in which students react to readings. Grading stresses the use of analytical and writing skills, as well as the ability to think historically and analyze documents critically.

**HIST 134 (GH;IL) Introduction to the British Isles, 1400-1800 (3)**
Survey of the history and cultures of the British Isles from 1400 to 1800.

**HIST 134 Introduction to the British Isles, 1400-1800 (3) (GH;IL)**
This history course, which fulfills the Humanities requirement in General Education (GH) or the International Cultures (IL) requirement, provides an introduction to the history of the British Isles from the fifteenth to the early nineteenth centuries, focusing on the diversity of English, Welsh, Scots, and Irish cultures and customs, their influence on early forms of nationalism in the British Isles, and their importance in the formation of the modern British nation-state. Using a wide range of primary sources, including the work of prominent British writers, the course introduces basic concepts of historical method, while exploring the process whereby an English empire came to govern these four major “peoples” of the British Isles. Students will be encouraged to consider the dynamism of this process, involving complex interrelationships rather than the simple supremacy of one ethnic group over another. The relationships between English and Scots protestants, the importance of translating the Book of Common Prayer from English to Welsh, the influence of
Irish-born families of English descent on the governance of early modern Ireland, were all key elements in the emergence of an empire under the authority of an English dynastic state whose practical control over the territories it claimed to govern often remained quite limited.

HIST 142 History of Communism (3) Marxism; Leninism and evolution of the Soviet Union; formation and development of the Communist bloc; impact of Chinese Communism.

HIST 142 History of Communism (3)
(GS;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

Communism is one of the most powerful ideologies to have ascended in the modern period of history. Fashioned from Marxist philosophy, communism was embraced in the twentieth century to over one billion people from the former USSR, to China, to South Asia, to Africa, to Latin America, and by some here in the U.S. Unquestionably, the institutionalization of communist regimes has left an indelible mark on world history. This course will explore the writings of Marx and his advocates, notably Engels and Lenin, and strive to understand why the first communist regime emerged in the unlikeliest of places: Russia. Using the Soviet Union as a case study, we will examine how Marxist principles were either applied or transformed in the construction of the first communist society. By examining the history of the Soviet Union, including its spectacular and rapid demise, we will come to a greater understanding of communist principles and of the dynamics of capitalism as well. As a counter-example, we will also focus on the Chinese experience of Communism and contrast the divergent paths to reform that have been implemented there. The goal of the class is twofold: to become familiar with the principles of communism by examining their application primarily in the USSR, Eastern Europe and China, and to come to a greater understanding of the dynamics of a capitalist system. The course grade will be determined by the student’s performance on in-class essay exams, a research paper, the comprehensive final exam (essays and short answer), participation in class discussions, and regular attendance. This course serves as a prerequisite to History 430 and History of the Soviet Union, and provides valuable background for such related courses as PL SC 413 and 452 and RUS 100. HIST 142 satisfies three credits of any history for History majors. It is also a prerequisite for several upper level history courses dealing with twentieth century Eastern European or Eurasian history. For all other students, this course fulfills a Social and Behavioral requirement in general education. HIST 142 will be offered once each year with 75 seats per offering.

HIST 143 History of Fascism and Nazism (3) The study of right-wing totalitarianism in the twentieth century, with special emphasis on Fascist Italy and Nazi Germany.

HIST 143 History of Fascism and Nazism (3)
(GH;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

History 143 is an introductory survey of fascism and Nazism. The course concerns itself with understanding the social context of fascism, its governing assumptions, ideals, and values, how it worked in practice, and its consequences and historical implications. The course centers on the analysis of secondary and primary sources, and textual, video, and audio materials are all used. Lectures tie the various materials together, while weekly discussion sessions provide an opportunity for students to engage the materials directly. Students are evaluated on the basis of exams (which include an essay component), papers, and class attendance and participation. The course contributes not only to the study of the
history of authoritarianism, antisemitism, and the history of the holocaust, but also contemporary and modern European history and, of course, German, Italian, and Spanish history. History 143 will be accepted, but not required, for the History Major as well as the History Minor. It may function as a service course for the Departments of Political Science and Sociology. It is recommended that it also serve as a general education course in the Humanities. This course is offered once a year with enrollment of up to 150 per offering with small discussion sections once a week.

HIST 144 (GH;US;IL) The World at War: 1939-1945 (3) In-depth study of the origins and conduct of World War II. Political and economic aspects as well as military.

HIST 144 The World At War: 1939-1945 (3) (GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course offers a wide-ranging description and analysis of the second world war, combining military history with political, social and cultural approaches. One major goal is to describe how large-scale war serves as a revolutionary social and cultural force in its own right, massively accelerating social change. In the case of the second world war, the course will describe how the conflict did much to create what we think of as the modern world, not only in political terms (the roots of the cold war, the collapse of European imperialism) but also in radically changing attitudes towards such basic matters as gender relations and generational conflict. Also viral were the new scientific advances of the war years, in nuclear energy, radar, aviation, and perhaps most critical of all, the computer. Particularly important to the educational justification for the course is the stress on the construction of historical memory, a theme with implications far beyond the specific instance of World War II. The course will assess and challenge many of the myths surrounding the war, and to show how subsequent accounts of the conflict were shaped by political and cultural needs. For example, the course will stress the critical importance of the Eastern Front throughout the phenomenon understated in the West because of the patriotic Anglo-American emphasis on D-Day. It will also explore the "Resistance Myth", and suggest the moral compromises necessary to survive in occupied societies of Europe and Asia. Throughout, the course will stress the impacts of war on the home front and civilian society. The course will be offered once every two years, with fifty seats on each occasion. Typically, students will be evaluated on essay exams, written book reviews, and research papers, and are expected to participate fully in class discussions of assigned readings. History 144 is an important complement to several existing courses within the History department, including 120, Europe Since 1848; 121, The History of the Holocaust; 142, History of Communism; 143, Fascism and Nazism; and 160, American Naval History. It also provides an excellent foundation for 400-level courses including 420, Recent European History; 447, Recent American History, and 454, American Military History 144 satisfies general credit requirements for the history major or minor. Majors and non-majors would both be able to use the course to satisfy their general education humanities selection.

HIST 155 (GH;US) American Business History (3) Major developments in the history of business and industry from the colonial period to the present.

American Business History (3)

BA This course meets the Bachelor of Arts degree requirements.

History 155 surveys the development of business and industry within the United States, from the colonial period to the present. It treats the conduct of business as an integral element of American society and culture. Topics to be discussed will include the colonial commitment to commerce and early debates over what kind of commercialism the new national government should encourage; the effects of new technologies like the cotton gin, canals, and railroads in the 1800s and electrical products, cars, and computers in the 1900s; the emergence of modern large-scale industrial production and changes it brought about in business management, in society, and in politics; the changing fortunes and corporate citizenship; changing ideas about what kind of relationships should exist among governments, citizens, and businesses; the importance of world events for American businesses; and the emergence and importance of mass-market consumer products since the First World War.

Materials we will use to cover this comparatively complex set of interrelationships will include textbook, supplementary studies of individuals or particular businesses, and current media coverage of the business world. The course is fast-paced and relies on students self-discipline and analytical skills. Student performance will be evaluated on two essay exams, a class presentation, group discussions, and in-class quizzes, and evaluation will be based on the instructors assessment of the students performance in reading and writing critically and knowledgeably on particular subjects.
marshaling evidence in support of coherent arguments, and participating in class discussions and presentations.

History 155 may complement, but does not compete with, courses offered by other departments or programs. It will be useful for students intending to major in business programs, in Labor and Industrial Relations, and/or to participate in the business world, by deepening their historical knowledge of that world, and will complement the Business/Liberal Arts minor. It will complement History 020 and 021 as well as more advance courses in American history. History 155 will be accepted, but is not required, for the history major and minor. It may be used to fulfill either General Education or Bachelor of Arts requirements in the Humanities for those not majoring in History. HIST 155 will be offered once a year with 45 seats per offering.

world until the mid-twentieth century when it became the scene of a military and political struggle with important global implications. History 173 examines two interrelated topics: 1) the long history and unique culture of Vietnam and its peoples, extending from prehistory to the present; and 2) Vietnam's constant struggle over several millennia—its origin and culture, folk and legends; its long-term struggle against Chinese military and cultural aggression; its role as a colony in the French global empire; the rise of nationalism and communism in Vietnam; the origins of global conflict in Vietnam in the post-World War II and Cold War world; the conduct of military, political, diplomatic, and economic affairs of France, the United States, North and South Vietnam, and other nations during the wars of 1945-1975; the response of civilian populations and governments to that military conflict; and post-1975 Vietnam. Evaluation methods include map-based examinations to familiarize students with the geography of the region and to underscore how geography and history intersect. Examinations include both essay and objective questions that require students to integrate information from lecture and from readings drawn from both primary and secondary sources that examine Vietnam's struggles from different viewpoints. Also required is a research/writing project that explores some specific dimension of the American or Vietnamese homefront experience during 1965-1973, the peak years of the U.S. military effort. This course deepens knowledge about Asian cultures introduced in History 010 and 011 (World History). It supports both the interdisciplinary East Asian studies major and Asian Area Studies minor. This course is accepted for the Military Studies minor. History 173 satisfies both General Education and Bachelor of Arts degree requirements for Humanities.

HIST 178 (GH;IL) Latin-American History to 1820 (3) Conquest of the New World, development of colonial institutions, impact on native cultures, and origins of independence movements.

(BA) This course meets the Bachelor of Arts degree requirements.

The "Colonial Latin America" class is a survey of three centuries, from the initial encounter on New World soil of Iberian, African, and native cultures and races, to the birth of independent culturally- and racially-mixed nations. Our emphasis is on the patterns of conquest and cultural encounter, the processes of colonial rule, the nature of interaction between social groups, and on the cultural impact of the colonial experience upon all colonial Latin America's peoples. We study the institutions, cultures, attitudes, and fortunes of Spaniards and Portuguese; African slaves and free blacks; Nahuas and Aztecs, Mayas, and Incas. We discover the roles played in colonial society by a wide variety of peoples, from an African slave on a Brazilian sugar plantation to a Spanish high society woman in Lima to the black and native workers in an Ecuadorian tannery to an Aztec nobleman in Mexico City. The people who lived in colonial Latin America are given a chance to speak for themselves as much as possible; most of the assigned books feature contemporary documents translated from Spanish, Portuguese, and various native languages. Students are evaluated on two sets of essay exams and write a paper, as well as participation in classroom discussion. History 178 is offered most years with 90 seats per offering and is a prequel (but not a prerequisite) to History 179, the "Modern Latin America" class often taught the semester following; both classes are required for the Latin American Studies major, as well as meeting various History major requirements.

HIST 179 (GH;IL) Latin-American History since 1820 (3) Origin, political growth, international relations, and economic status of the Latin-American republics, with emphasis upon present-day conditions.

(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on Latin America (with limited coverage of the Caribbean) from the early 1800's through the present. For the colonial period (c.1500-c.1820), it is easy to see why Latin America has a "common history," as most of it was ruled by two quite similar countries, Spain and Portugal. But after the colonial system collapsed, giving rise to over a dozen independent countries by the 1830s, the issue becomes more complicated. What do these dependence upon markets in developed countries for their economic prosperity? How can we explain the continuing similarities between these countries, without losing sight of their diversity? The approach of this course is broadly chronological, but for each period we will focus on one or more countries that illustrate (however imperfectly) the trends of the period. The goal of the course is not to provide an encyclopedic knowledge of Latin America, but rather to provide a framework for understanding how current issues are rooted in past historical processes, and to offer a better sense of how key historical themes are "lived" by ordinary people in Latin American society. A related goal of the course is to acquaint students with the historiography of Latin American: the different approaches that historians have used to understand the region. Students will be evaluated on two sets of essay exams and a paper, as well as participating in classroom discussion. HIST 178 and 179 are both requirements for the Latin American Studies Major and Minor, as well as satisfying general credit requirements for the History Major.

HIST 180 (GH;IL) (CAMS 180) Ancient Warfare (3) Historical survey of the evolution of warfare in the ancient Mediterranean region from prehistoric times to the Later Roman Empire.

HIST (CAMS) 180 Ancient Warfare (3) (GH;IL)
Warfare has occupied a central place in the civilizations of the Mediterranean from the earliest times. The prehistoric origins of warfare is a hotly debated topic and constitutes the starting point for this course. Most scholars are agreed that military culture grew in step with sociopolitical development over the course of the third millennium BCE. In the following centuries, the Egyptians, and later the Assyrians and Persians, took great strides in developing sophisticated tactical systems, using infantry, chariots, and cavalry. These matters occupy a little over the first third of the course. Across the Aegean Sea, Bronze Age (Mycenaean) Greece was ruled by elites occupying massively walled citadels, their leaders buried surrounded by their weapons. But how did these warriors fight? Do the epic poems of Homer memorialize Bronze Age combat? In the Archaic Period (700-500 BCE) infantry warfare in Greece was transformed by the appearance of the heavily-armed infantryman (the hoplite), deployed in a tight formation (the phalanx). The processes involved in the appearance of this kind of warfare, its nature, and its affects on Greek society and culture will be the focus of our attention for the second third of the course. On the periphery of the Mediterranean basin stood a variety of warrior cultures (the Scythians, Celts, or Germans). Numerous warrior-dominated polities vied with each other in Archaic Italy, but one of them, sitting on a ford on the river Tiber, ultimately rose to be the greatest military power produced by the ancient Mediterranean world – Rome. The Roman legions first won and then ensured the security of a Mediterranean-wide empire that stood for 700 years and evolved ultimately into world’s first standing army of professional volunteers. The Roman military system holds our attention for the final third of the course. The course defines "warfare" broadly to include both tactical and strategic, as well as cultural and ideological, matters. Even this canvas is too vast to be surveyed in all its richness, so the major themes explored are: (i) what is war, where does it come from, and how did it change as civilization spread?; (ii) in what ways did warfare develop in the periods under study, in terms of strategy, tactics, and weapons technology?; (iii) how do different warfare practices reflect essential facets of the various cultures under consideration?

**HIST 181 (GH;IL) Introduction to the Middle East (3)**
Origins of Islamic civilization; expansion of Islam; the Ottoman Empire; the Middle East since 1918.

**HIST 181 Introduction to the Middle East (3)**
(GH;IL)

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course presents a survey of the history of the Middle East from the rise of Islam to the current day. The objectives are to help students develop the vocabulary and historical background to discuss and evaluate contemporary events and debates, stimulate interest in the varied historical experiences and diverse societies and cultures of the region, and provide a foundation for deeper investigation. Students may elect to take one or more of the 400-level sequence on Middle Eastern history, or other specialized courses, upon completion of the course. The first half of the course focuses on the foundations of Islamic government and civilization, the first Islamic empires, and the Ottoman empire. The second half of the course traces the modern history of the Middle East and examines how it has been profoundly shaped by European imperialism and American political, economic, and strategic interests. Students will be evaluated on regular quizzes and essay exams and participate in class discussions of assigned readings and current events. History 181 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. The course may also be used to fulfill requirements for the Middle East Studies minor. Non-majors may use this course to satisfy a general education humanities selection. HIST 181 will be offered once a year with 50-60 seats per offering.

HIST 191 (GH;IL) (AFR 191) Early African History (3) Explores important economic and cultural transformations in the making of early African empires from 1 MBC to 1750.

HIST (AAA S) 191 Early African History (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course is an introduction to the history of Africa south of the Sahara from the origins of humankind to roughly 1750. Since it is not possible to undertake a systematic survey of the period -- the continent is too vast and our data too sparse -- we will focus on a number of common themes in the cultural and historical development of African societies. We will start with an introduction to African cultures and the problems in studying them, move on to examine the evidence for the early origins of humans on the African continent, the agricultural revolution, and ancient African kingdoms, empires and civilizations (including Egypt). We will then explore three interrelated themes in the history of Africa from the 16th-18th centuries: trade, state formation, and the spread of Islam. Finally, we will turn to an examination of the slave trade and its impact on Africa and the Americas. This is also a course in historical reconstruction and analysis. There are few documentary sources for this period and much of the data we have is fragmentary. The resulting history consists largely of long-term social changes rather than detailed narrative. We must thus learn to reconstruct history from what evidence is available, using general principles of African social, economic, and political organization that we will develop in class. Typically, students will be evaluated on the basis of a map quiz, short papers, exams that have both an identification and essay component, and participation in class discussions and debates. AAA S/HIST 191 provides an excellent foundation for both AAA S/HIST 192 (Modern African History) and History 479 (imperialism and Nationalism in Africa). In addition to satisfying the GI requirement, AAA S/HIST 192 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. Non-majors may use this course to satisfy a general education humanities selection. The course also may be used to fulfill requirements for the African and African-American Studies major and the African Studies minor.

**HIST (AAA S) 192 Modern African History (3)**  
(GH;IL)

**BA This course meets the Bachelor of Arts degree requirements.**

This course examines the colonial period in Africa from roughly 1750 to the present. Given the vast geographical breadth of the African continent, its diverse peoples and cultures, and the divergent trajectories of colonial rule, this course cannot provide a comprehensive overview of the modern era in Africa. Rather, it considers some of the most significant transformations in modern African history, including the impact of the Atlantic slave trade and the transition to 'legitimate commerce'; the causes and consequences of European imperial conquest from the 1870's; the dynamics of the colonial encounter; the struggles of African peoples for independence in the 1950's and 1960's; and the enduring impact of the colonial experience on contemporary African social, political, and economic realities. The course is designed to familiarize students with the major events and chronology of modern sub-Saharan African history, and to provide an overview of the key themes and theoretical debates which animate contemporary African historiography. Emphasis throughout the course will be on the understanding and application of historical arguments and theories to available information. The course is intended to help students develop analytical skills vital to the discipline of history, which include the ability to collect and analyze evidence and to construct arguments in both oral and written presentations. To this end, students will have the opportunity to practice both identifying and building arguments by writing several focused short papers that deal with the material covered in a week of class lectures and readings. In these papers, as well as in the two essay exams, students will be asked to generate thesis-driven responses to particular historical problems encountered in the course material. The short papers are intended to promote active engagement with the course material and will be used as the basis for in-class discussions and debates. Typically, students are evaluated on a map quiz, several short papers, participating in class discussions of assigned readings, and exams which have both an identification and essay component. The course content of AAA S/HIST 192 is designed to chronologically follow that of AAA S/HIST 191 (Early African History), and provides an excellent foundation for History 479 (Imperialism and Nationalism in Africa), for which it is a prerequisite. In addition to satisfying the GI requirement, AAA S/HIST 192 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. **HIST (J ST/RL ST) 205 American Antisemitism (3) (GH;US)**

This course explores the phenomenon of antisemitism in American history from the time of Peter Stuyvesant to the present. The significance and role of American antisemitic movements and authors, as well as its role in American society and culture, are examined and compared to those in European history over the same periods. At the same time, the impact of antisemitism on the lives and mentalities of American Jews is discussed. The course focuses on readings taken from original sources and recent historical treatments. The readings include material on colonial texts, Grant's notorious Order, nativists and anti-immigration texts, Gilded Age antisemitism, the Immigration Acts of the 1920's, Henry Ford's antisemitic campaign, Southern antisemitism and the Leo Frank case, the quota system at American universities, employment discrimination, the "Gentlemen's Agreement" system, Black antisemitism, and the New Antisemitism.

**HIST (RUS) 210 Between Accommodation and Alienation: African Americans in a Jim Crow Nation, 1896-1932 (GH;US)**

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed for students wishing to develop an understanding of race in American society and politics over the course of the 20th century. It will focus in considerable detail upon the influence of the Plessy vs. Ferguson decision (1896) in the shaping of America over the four decades that followed. Of central concern is an exploration of the ways in which African Americans and their leaders responded to the institutionalization of segregation within American life, and the divergent strategies advocated for dealing with 'Jim Crow' as an impediment to the development of African Americans. The course will also explore the impact of the migration of African Americans out of the South into the cities of the North and the impact of that migration upon both the opportunities for African Americans and the American political system.

Students will be evaluated on the basis of a book review (4-5 pages), a short research paper (5-6 pages), a long research paper (10-12 pages), and their participation in class discussion. The written assignments are designed to improve student research and writing skills, and students are encouraged to be active participants in class discussion.

HIST 211 (GH;US;IL) (AF AM 211) The Emergence and Evolution of the Black Diaspora in the Atlantic World (3) The course will explore the history and role of African and African-descent people in Africa, the Americas, and Europe.

HIST (AAA S) 211 The Emergence and Evolution of the Black Diaspora in the Atlantic World (3) (GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the origins and evolution of communities of African-descent people whose lives have been influenced by the emergence of the Atlantic world since the sixteenth century. As a survey course the material will expose students to the ways in which Africans and their descendants contributed to the making of the Atlantic World and the economy that underpinned the Transatlantic production and trade networks that linked the "Old" and "New" Worlds. The course will provide history majors/minors an opportunity to explore the role of Africa and Africans in the development of the Atlantic economy which linked the Old and New Worlds since the 16th century. It will also expose them to international/transnational history which will allow them to consider history from a perspective that is broader than that of the "nation."

Evaluation will be based upon a book review (4-5 pages - 15% of the final grade); the mid-term (5-6 pages - 25% of the final grade); a research paper (10-12 pages - 40% of the final grade); and participation in class discussions (20% of the final grade).

The course will be of interest to students interested in American, Caribbean, Latin American, and European history. By focusing upon the Black experience in the Atlantic World, it will provide a perspective that transcends the national historiographies of the region. This course is designed to be a core course within the Undergraduate AAA S major, and it will be required for AAA S majors and minors in African Diaspora Studies. For majors/minors in history the course will allow them to consider history from a perspective that is broader than that of a nation. For non-majors and non-minors, it fulfills a General Education or Bachelor of Arts humanities requirement. The course will be offered once per year with 20 seats per offering.

HIST 220 (GH;IL) (J ST 220) The Jewish and Other Diasporas (3) Introduction to and survey of the Jewish and other Diasporas around the world.

HIST (J ST) 220 The Jewish and Other Diasporas (3) (GH;IL)

The long dominant view that the Jewish experience since antiquity defines Diaspora as a concept has been challenged in recent years. The meaning of the term Diaspora and related terms, especially (ethnic and/or national) identity and (ethnic and/or national) community, is a matter of much debate across disciplines. The longevity and diversity of distinct Jewish communities around the globe make the Jewish case a particularly interesting subject for study. In a wide geographical, chronological and disciplinary comparative sweep, the course will explore the diverse nature of ethno-national and ethno-religious diasporas (and sub-diasporas), their position vis-à-vis their place of origin (“homeland”) and their new surrounding culture and society. More specifically, the course will analyze how Diaspora communities in Europe, Asia, and the Atlantic world reconstituted their identities as they expanded into new environments and encountered other cultures, from antiquity to the present. Emphasis will be placed on exploration of the intersection of politics and culture in respect to race, nationality, ethnicity, gender and class. A key question guiding the discussions will relate to the usefulness and limitations of the Diaspora concept, especially in regard to the discourse about globalization where the term is often used.

The course will begin with an extensive discussion of theoretical texts about the Diaspora phenomenon. This is followed by case studies of several larger Diasporas, ranging from the Jewish, the Greek to the Chinese Diaspora. Several case studies, notably the Muslim Diaspora, the concept of a victim Diaspora, or alternative Diasporas highlight the limitations of the Diaspora concept.

The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists. The course includes a one-day field trip to the Lower Eastside in New York (visit of the Museum of Chinese in America, walking tour of the Lower Eastside to explore the history of a key American immigrant neighborhood).

HIST 235 The Church and the Jews (3)

(US;IL) (BA) This course meets the Bachelor of Arts degree requirements.

This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews.

The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts.

Students will be evaluated on the basis of three quizzes and a final exam.

The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity).

The course will count for 3 credits toward a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

HIST 250 Introduction to the Modern Caribbean (3)

(US;IL) (AF AM 250) A survey course which explores the historical evolution and emergence of the modern Caribbean. 

This course will explore the evolution of the Caribbean region from the eve of the arrival of Columbus to the 20th century. It will explore the emergence, migration, and evolution of Amerindian societies in the Caribbean islands prior to the arrival of Columbus. It will then explore the European-Amerindian interactions that lead to the disappearance of these indigenous peoples from the region and the consolidation of European colonial empires. The course will then explore the various forms of coercive labor systems that emerged in the region including indentureship, enslavement, transportation of European prisoners and other social outcasts, African slavery, and the establishment of the plantation system that defined the region until the 20th century using both free and unfree labor to maintain its dominance in these island societies until the late 20th century. The course will also cover the issue of slave resistance, the Haitian revolution, the formation of maroon communities, and the role of abolitionist politics as a factor in bringing an end to slavery. It will also look at the re-emergence of indentureship of Asians as a response to the crisis of labor and the growth of peasant agriculture in the 19th century Caribbean. The course will also explore the emergence of nationalist sentiment in the region, especially the way in which the decay of Spanish colonial authority and the rise of American imperial ambitions helped to set the stage for the nationalist awakening that defined the course of the 20th century in the region. This is the course that will complement and expand upon issues raised in AAA S/HIST 211 - The Emergence and Evolution of the Black Diaspora in the Atlantic World. It will also serve as an introduction to the 400-level course on the Caribbean in the 20th century that will be proposed simultaneously. The course will be required for students interested in pursuing the African Diaspora minor. It may be used to fulfill general education and diversity requirements. It can also be used as a course to meet non-Western history requirements in the History major. Evaluation will be based upon a book review, a mid-term, a research paper, and class discussion/participation.

General Education: GH
Diversity: IL
Bachelor of Arts: Humanities
Effective: Fall 2012 Future: Fall 2012

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HIST 250 Introduction to the Modern Caribbean (3)

This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews.

The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts.

Students will be evaluated on the basis of three quizzes and a final exam.

The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity).

The course will count for 3 credits toward a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

**Scope and Methods of History (3)**
HIST 302W Undergraduate Seminar (3) Thematic or topical investigation; emphasis on historical criticism and analysis.

HIST 320 Contemporary World History and Issues (3) Aspects of global history in 20th and 21st centuries and study of selected trends and controversies.

HIST 320W Contemporary World History and Issues (3) Aspects of global history in 20th and 21st centuries and study of selected trends and controversies.

HIST 395 Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

HIST 399 (IL) Foreign Study--History (1-12) Study in selected foreign countries of various periods and topics in history.

HIST 400 Research in Ancient Sources (3) Guided research in the literature of ancient Mediterranean civilizations.
HIST 401 (IL) Ancient Technologies and Socio-cultural History in the Ancient Levant (3) Social and intellectual development in the Ancient Levant as they affected and were affected by technological development.

HIST 403 (IL) Alexander the Great and the Hellenistic World (3) The career of Alexander, his impact on his own time, and the Hellenistic legacy.

HIST 404Y (IL) Rome and Hellenism (3) The impact of traditional Greek culture on ancient Italian society in the age (ca. 300-30 B.C.) of Roman imperial expansion.

HIST 405Y (IL) The Roman Empire (3) The political and social history of the Roman empire; economic institutions and religious groups which influenced Roman administration.

HIST 406W Research in Medieval Sources (3) Guided research in the literature of medieval Europe.
HIST 407 (IL) Early Medieval Society (3) Rise of European nations and evolution of their social and political institutions from the time of Constantine to the Crusades.

**Early Medieval Society (3)**

This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case—is there a single universal, eternal antisemitism? Or are there rather “anti-Semitism”, each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates?

We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire’s essays, German philosophical texts from Kant to Marx, Wagner’s racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher.

The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

HIST 410 (US;IL) Jews in the Medieval World (3) Trends in medieval Jewish society under Islam and Western Christendom.

**Jews in the Medieval World (3)**

This course meets the Bachelor of Arts degree requirements.

The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new...
conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students’ skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression.

Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam.

The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258).

The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

HIST 419 (US;IL) The History of Feminist Thought (3) A critical analysis of European and United States feminist thought from the renaissance to the present.

HIST 420 (IL) Recent European History (3) Impact of two World Wars in twentieth century; social conflict and economic catastrophe; political radicalism; post-1945 recovery and cooperation.

HIST 420W (IL) Recent European History (3) Impact of two World Wars in twentieth century; social conflict and economic catastrophe; political radicalism; post-1945 recovery and cooperation.

HIST 421 (IL) (WMNST 421) The History of European Women (3) European women’s lives from the Middle Ages to the present.

HIST 422 (IL) Modernity and Its Critics: European Thought Since 1870 (3) Perceptions and critiques of modernity as seen in works of European cultural criticism, social theory, philosophy, and literature.
HIST (J ST/RL ST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Learn about the formation of Western culture while learning to analyze the texts and other evidence about its formation from a critical rather than naive viewpoint. The idea of monotheism probably arose very early, and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why then did it take another seven centuries to become widespread--appearing in ancient Judah, Babylon and Ionia almost simultaneously? To answer this question, the course focuses on several developments through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to re-invent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in ANTH/CAMS 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the student experience in CAMS 400, CAMS 440, CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, and Religious Studies and toward the minor in Jewish Studies and Religious Studies.

(BA) This course meets the Bachelor of Arts degree requirements.

Black Liberation and American Foreign Policy in Africa since 1945 presents an interdisciplinary approach to the study of American foreign policy in Africa. Course readings will consist of both secondary and primary sources to explore the evolution of American policy toward the continent over the last half-century, and the meaning of the American engagement with Africa for American politics and society.

The course will also examine the reasons that Africa has served as a focus of concern among African Americans both prior
Black Liberation and American Foreign Policy (3) (US;IL)

This course deals with American foreign policy and Black liberation in Africa since 1945. Course readings will consist of both secondary and primary sources to explore the evolution of American policy toward the continent over the last half-century, and the meaning of the American engagement with Africa for American politics and society.

The course will also examine the reasons that Africa has served as a focus of concern among African Americans both prior to, and, over the period 1945 to the present. Of particular concern will be the ways in which American policy has reflected pressures from African Americans as a constituency in foreign policy.

The focus of the course will be student-centered written research and discussion. Students will be required to select topics from the course outline for presentation in class with the instructor serving as the moderator of discussion and guide to relevant research materials. Students will be encouraged to use both primary and secondary sources for their research. Students will be expected to prepare two individual written presentations which will serve as the basis for class discussion (30% of the grade), a book review (10% of the grade), and a research paper of 15 pages (40% of the grade) on a topic drawn from the areas identified in the course outline. The final 20% of the grade will be awarded for participation in class discussion.

HIST 432 (IL) (AF AM 432) Between Nation and Empire: The Caribbean in the 20th Century (3) An exploration of the political evolution of the Caribbean Region over the course of the 20th Century.

This course will explore the political evolution of the Caribbean Region over the course of the 20th century. Its focus will be the ways in which imperial rule and the search for national identity have been the parameters that have shaped Caribbean political history over that period. Students will explore, in written assignments and class presentations, the ways in which the region which has historically been a theatre of confrontation among the major powers in the international system continued to serve that role over the course of the 20th century. The costs that have been borne by the people of the region from these conflicts have been enormous and crippling for several societies, especially Haiti, Cuba, Jamaica, and the Dominican Republic. Among those costs have also been the continued dependence of these societies upon human migration, limited economic strategies of transformation, increasing levels of poverty, and the emergence of a wide variety of political systems that reflect different historical experiences, demographic diversity, varying levels of political autonomy, and a remarkable level of cultural similarities. Evaluation will be based upon two class presentations; one research paper and class participation. The course will be required for students pursuing the African Diaspora minor and for those seeking to broaden their diversity requirements. It can be used to meet non-Western history requirements in the History major.

HIST 463 (US) American Thought to 1865 (3) Introduction to, scholarly commentary on, major documents of American intellectual history, early colonial period to end of the Civil War.

HIST 463 American Thought to 1865 (3)
(US)
(BA) This course meets the Bachelor of Arts degree requirements.

To offer such a course without some treatment of race, class, and gender diversity would be undesirable indeed, irresponsible. The movements for the abolition of slavery, for women's rights, and for the rights of workers will receive prominent and necessary attention. The history department does not, however, seek to invade the territories of programs and/or departments that are primarily concerned with women and racial or ethnic minorities. This course will cover such material in ways specifically appropriate to the contacts with American-Indian, Asian-American, African-American and Spanish-speaking populations.

This course will focus on documents produced by men and women of various class and ethnic backgrounds who are assumed to have participated actively in the American intellectual tradition. Discussions of the ideas and publications of well-educated individuals will to some extent dominate the content of the proposed course. Thus, for obvious reasons, it must address the historical importance of documents such as Thomas Jefferson's Notes on the State of Virginia, and Harriet Beecher Stowe's Uncle Tom's Cabin. These documents are of unquestionable importance to American intellectual history, but due to constraints of time, it is not always possible to discuss their historical importance as cultural documents in the existing American history courses. A highly literate African-American essayist like Francis Ellen Watkins Harper is also an obvious candidate for inclusion in this course. A less educated person like Anna Murray Douglass, although she was an important and interesting figure, whose life and values merit serious reflection, could hardly have left behind a body of writings. Francis Harper, on the other hand, commented significantly on the ideological movements of her times. The course is admittedly biased in favor of highly literate historical figures, who interacted with the traditions of American thought and writing.

An example of evaluation methods would be: Students will be expected to write a mid-semester and a final examination, and to prepare a written paper outside of class. Graduate students will be expected to draft a potentially publishable article, which may be archival, historiographical, or interpretive.
HIST 464 American Thought from 1865 (US) (BA) This course meets the Bachelor of Arts degree requirements.

HIST 464 is intended to fill several needs. First, to introduce advanced undergraduates and beginning graduate students to documents of American thought of the sort collected by David A. Hollinger and Charles Capper in the American Intellectual Tradition (New York: Oxford University Press, 1989). Second, to offer a systematic survey of a standard area of American history that students might wish to approach as a coherent field. Third, to provide students with exposure to the bibliography and the historiography of American intellectual history as an established sub-field of American history. It is intended that either semester of the course may be elected independently of the other.

An example of evaluation methods would be: Students will be expected to write a mid-semester and a final examination, and to prepare a written paper outside of class. Graduate students will be expected to draft a potentially publishable article, which may be archival, historiographical, or interpretive.

HIST 465 Civil rights and American Politics 1933-1968 (3) (US) (BA) This course meets the Bachelor of Arts degree requirements.

Students will be encouraged to explore the period over which the civil rights of African Americans and other Americans of color emerged as permanent features of American political and social life. They will be asked to think systematically about the, transformation of American society over the course of the 20th century from a society based upon the constitutional sanction 'white supremacy' and 'racial segregation' to one in which ethnic pluralism and equality of races have become the principles accorded increasing legitimacy in principle, if not in fact. They will also be encouraged to explore the process of political realignment within the major parties, the Democrats and Republicans, and the ways in which the politics of race have been instrumental in shifting the electoral strategies and ideological debates within and between the parties.
HIST 466 (US;IL) (WMNST 466) Lesbian and Gay History (3) Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities.

HIST (WMNST) 466 Lesbian and Gay History (3)
(US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the relationships in different cultures and historical periods between the dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the "homosexual" helped establish not simply difference but "normalcy" in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States.

An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper. This course will fulfill a requirement for 400-level courses in both History and Women's Studies majors.

HIST 467 (US;IL) (LTNST 467) Latin America and the United States (3) Historical development of policies of the United States with regard to Latin-American affairs from colonial times to the present.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HIST 469 (CRIMJ 469) Drugs and Drug Policy in the United States (3) Examines the history and dimensions of drug use and analyzes the impact of drug policy.

HIST (CRIMJ) 469 Drugs and Drug Policy in the United States (3)

For nearly a century, the United States has been waging its version of a hundred years' war on drugs, spending billions of dollars and incarcerating thousands of offenders while failing to significantly reduce the use of illicit drugs. This course examines drug use in a historical context while addressing the changing nature and dimension of drug use, including the pharmacology of drugs, patterns of drug use, and sentencing policies. Because drug control is inextricably linked to social, political, and public policy, the course will provide the student with a foundation for critical thinking and rational decision making relative to the efficacy of the various drug control initiatives. Since drugs seemingly permeate every level
of American society and directly or tangentially touch most Americans' lives, issues such as drug testing in the workplace, the use of drug courier profiles, legalized medical marijuana, and needle exchange programs are evaluated. Students will be expected to learn the pharmacology of various drugs, the history of drug use in the United States since the colonial era, the evolution of federal drug agencies, and acquire knowledge about contemporary drug issues. They also will be expected to develop and strengthen their critical thinking skills as they assess the consequences of implementing particular anti-drug policies and their impact on reducing the use of illicit drug use. An example of the evaluation methods would be: students will be evaluated on the basis of three exams and four "think pieces" (requiring students' critical responses to an assigned topic) scheduled throughout the semester. Class attendance also will influence the grade.

Homeland Security (HLS)

HLS 410 (PHP 410) Public Health Preparedness for Disaster and Terrorist Emergencies I (3) Analyzes the history of terrorism and explores the preparation and response to specific terrorist threats, natural disasters, and conventional catastrophes.

HLS 410 Public Health Preparedness for Disaster and Terrorist Emergencies (3)

This course introduces students to the preparation and response to necessary to deal with specific terrorist threats, such as chemical, biological, and radiologic agents, as well as conventional civilian attacks. Students will analyze the history of terrorism from a public health perspective, and examine recent domestic and international terrorist incidents. The coordination and planning of specific natural disasters will also be explored. Students will have the opportunity to examine the consequences of conventional civilian disasters, including crisis management of conflict-related disasters and transportation and industrial related catastrophes. The current state and inherent challenges of drug, vaccine, and laboratory response to disasters will be reviewed. Students will also be introduced to models used to predict mass casualties.

Honors (HONOR)

HONOR 201 Developing Critical Thinking for Leadership (1) Discussions on various topics using critical thinking skills to make informed leadership decisions.

HONOR 201 Developing Critical Thinking for Leadership (1)

In this course, first-year members of the Presidential Leadership Academy will learn about and develop critical thinking skills to enable them to evaluate and analyze complex problems leading to the ability to make decisions. Upon completion of this course students are expected to be able to identify, evaluate, and construct inductive and deductive arguments; recognize and assess arguments in various forums of reasoning; distinguish the functions of language and its capacity to
express and influence meaning; assess the value and credibility of sources; and understand and evaluate the options, consequences, values, and risks in making decisions. The format will typically include some lecture but will be largely discussion based. The course includes a mandatory field trip to various destinations. The emphasis is upon class participation, preparation, and reflection. Students are required to maintain a journal and analyze issues using the critical thinking skills developed in the course. Grading is based on journals and participation.

Horticulture (HORT)

HORT 101 (GN) Horticultural Science (3) Introduction to horticulture with emphasis on plant domestication, morphology, classification, world food crops, commodities, gardens, propagation, and agrochemicals.

HORT 101 Horticultural Science (3) (GN)
(BA) This course meets the Bachelor of Arts degree requirements.

The course content of Horticulture 101, as indicated in the complete course outline, deals with the fundamental concepts and specialty areas, which contribute not only to the science and technology involved in horticulture but also to the art. It provides an overview of the role of various specialties of the natural sciences (e.g. plant morphology, physiology, taxonomy, genetics and nutrition, pest management, management and production of crops, landscaping and technology) relevant to a range of plant uses from medicinals and food production to the aesthetic benefits derived from plants. The course begins with the origin and domestication of plants followed by: A. An Overview of horticulture which includes an explanation of the horticulture industry, how to achieve success in horticulture and the relationship between horticulture
and the environment; B. Science in horticulture which includes the classification of plants, plant propagation, plant
nutrition, environmental factors affecting plant growth and development, plant growth regulators, post harvest physiology
and pest management; C. Management and production of horticultural crops which include nursery, floral, turfgrass,
vegetable, fruit and nuts; D. Landscaping including designing landscapes, xeroscapes and sitescapes, establishing and
maintaining landscapes; and E. Concluding with Technology in horticulture. The course content additionally includes
major areas of knowledge based on the fundamentals, universal concepts and achievements in the cluster of scientific
disciplines comprising horticulture and provides students with the opportunity to appreciate that the origins,
domestication and production of cultivated plants are the essence of human existence.

HORT 150 (GN) Plants in the Human Context (3) An introduction to the many fascinating and vital relationships between
plants and human society.

HORT 150 Plants and Human Context (3)
(GN)
The objective of this course is to expose students to the pervasiveness and essentiality of plants in the human experience. Major topics include 1) human civilization as influenced by plants, 2) a history of food from plants, 3) chemicals from plants, 4) non-food plant uses, 5) current issues in plant production, and 6) current botanical issues of global concern. Specific topics range from botanical pharmaceuticals to global warming/use of biofuels, and from culture-specific rotten foods to genetically-modified plants. Students will be exposed to many basic concepts of plant ecology, ecosystem science, emerging technologies, and the criteria used to evaluate sources of scientific information as a natural consequence of studying the range of topics included in the course. Students completing the course will therefore be in an excellent position to intelligently select from the many botanically- and ecologically-oriented majors, minors and options available to them at Penn State. The format of the course consists primarily of lecture/discussions, and includes one team assignment (making a poster) and three individual projects (one page arguments) in addition to a midterm and a final exam. Student evaluations are based on individual exam scores (50%) and on team (20%) and individual (30%) projects.

HORT 201 Applied Arboriculture (2) Overview of methods used to diagnose problems and provide for the long term care of large trees.

HORT 201 Applied Arboriculture (2)

The objective of this course is to provide students with the opportunity to develop an appreciation of the skills required to properly care for large trees. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major. The course will provide an overview of the methods used to diagnose problems and provide for the long term care of large trees. Areas of emphasis will include accessing the upper parts of large trees; safety when working in and around large trees; and the proper selection, use, and maintenance of the equipment used in the arboriculture profession. The course will be taught each Fall semester and will have an enrollment limit of 18. Students will be evaluated by quizzes, exams, and laboratory assignments.

HORT 232 Horticultural Systematics (3) Fundamentals of horticultural crop plant classification and systematics. Examples chosen from fruits and vegetables, exclusive of subtropical and tropical fruit.

Horticultural Systematics (3)

General Education: None
Diversity: None
HORT 238 (TURF 238) Turf and Ornamental Weed Control (3) Students will be introduced to the development of integrated weed management strategies utilizing a variety of cultural and chemical methods.

Turf and Ornamental Weed Control (3)

HORT 250 Landscape Contracting Design/Build Principles (3) Introduction to the processes and principles of residential landscape site development, from initial client contact to implementation.

Landscape Contracting Design/Build Principles (3)

HORT 269 Residential Landscape Planning (3) Principles and techniques in landscape design; preparation of plans of small properties.

Residential Landscape Planning (3)

HORT 296 Independent Studies (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Independent Studies (1-18)

HORT 297 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Special Topics (1-9)

HORT 298 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Special Topics (1-9)
HORT 299 (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 301 Principles of Arboriculture (3) Overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings.

HORT (FOR) 301 Principles of Arboriculture (3)
The objective of the course is to introduce students to the theories and practices related to the care of trees in developed areas. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major, and the Urban Forestry option of the Forestry major. This course will provide an overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings. Emphasis will be placed on maintaining the long-term health of large trees. Major topic areas will include methods for characterization of tree health, diagnosing problems in trees, the influence of environmental factors on tree health, and the assessment of hazard trees. Proper pruning techniques and factors to consider when making decisions regarding long-term tree care in urban areas will be discussed. The course will be taught each spring semester. Students will be evaluated by quizzes, exams, and laboratory assignments.

**HORT 402W Plant Nutrition (3)** Mineral nutrition of higher plants, including nutrient acquisition, transport, metabolism, and practical implications.

**HORT 402W Plant Nutrition (3)**

The course considers the mineral nutrition of higher plants from physiological, ecological, and agricultural perspectives. The first part of the course considers factors influencing the acquisition of mineral nutrients and their transport in the plant, including nutrient mobility in the soil, root biology, rhizosphere interactions, membrane transport, xylem, and phloem transport. Root symbioses and metabolic assimilation of N and S will also be discussed. The second part of the course gives an overview of mineral metabolism. The final third of the course illustrates the practical dimensions of plant nutrition. The diagnosis of nutritional disorders, nutrition, and yield, foliar fertilization, genetic aspects of plant nutrition, and nutrient cycling will be covered by lecture and laboratory exercises. Laboratory exercises demonstrate lecture topics and permit a "hands-on" involvement with the subject. Emphasis is placed on concepts and integrating principles rather than memorization of technical details.

General Education: None

**HORT 407 Plant Breeding (3)** The scientific principles and techniques of utilizing genetic variability in improving the heredity of plants for specific purposes.

**HORT 407 Plant Breeding (3)**

Horticulture 407 is a 3-credit course that is taught every spring semester and is required of horticulture undergraduate students at Penn State. This course also attracts upper-division and graduate students from other departments such as Agronomy, Biology, Forest Resources, Plant Pathology, Biochemistry, and Molecular Biology. The objectives of the course are to 1) develop an understanding of the role of genetics in plant breeding, 2) elucidate the diversity of plant characteristics which are subject to improvement, 3) review conventional and contemporary techniques for the development of new cultivars, and 4) present the opportunity for the student to effectively communicate scientific information in writing and through speaking. Horticulture 407 emphasizes basic principles of plant genetics and breeding and the utilization of molecular biology techniques for crop improvement. It includes two-hours of lecture and a two-hour laboratory-discussion session each week. Major topics of discussion during lecture periods include plant reproduction, genetic variation in plants, review of mitosis and meiosis, Mendelian genetics, linkage, and recombination, qualitative and quantitative traits, population genetics, cytogenetics, theory of selection and response to selection, heritability, review of statistical tools useful in plant genetics and breeding, systems of pollination controls in plants including self-incompatibility and male sterility, breeding methods for self- and cross-fertilized plants, and application of modern technologies, including molecular markers, marker-assisted selection, and genetic transformation, to crop improvement. The laboratory sessions are designed to complement the lectures and provide opportunities for hands-on experience. For example, students practice staining and counting plant chromosomes on microscope slides, self- and cross-pollination of different plant species, linkage mapping and analysis of plants for Mendelian segregation, inoculating plants with fungal pathogens and observing and evaluating plants for disease development, extracting DNA from plant tissue and separating DNA segments on agarose medium using gel electrophoresis, and practicing computer programs for gene mapping and analysis of Quantitative Trait Loci (QTLs). Furthermore, students are mentored to prepare a term paper on a plant breeding/plant genetics subject and to orally present their findings to the class using visual aids.

Student evaluation is based on two mid-term exams (each 100 points), one comprehensive final exam (200 points), 10 weekly homework or laboratory reports (for a total of 100 points), and a term paper (50 points for writing and 50 points for presentation). For the presentation, each student is required to turn in a 3-5 page write-up about a topic of interest.

Effective: Spring 2001
Prerequisite:

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 457 Interior Plantscaping (3) Foliage identification, environmental factors affecting plants, concepts of interior plant design, installation and maintenance.

Overview of where foliage plants are native will be followed by a discussion of how each environmental factor will affect foliage plant growth as well as how some of the environmental factors can be managed. Those factors will include light, temperature, humidity, growing media, watering, and fertilization. In addition the students will learn to identify 100 plants that are commonly used in interiors. Design principles will be related to interior plants. The process of analyzing the site, creating an interior plant design, installing the plan and maintaining the finished design will be discussed. Then diagnosing plant problems and integrated pest management will be presented as aspects of plant maintenance. Business principles related to the interior plantscaping industry such as management, marketing and selling and personnel management will be discussed. Students will be evaluated based on exams, quizzes and projects. The course will be offered in alternate spring semesters.

HRIM 201 Introduction to Management in the Hospitality Industry (3) Introduction to the hospitality industry and hospitality management.

HRIM 201 Introduction to Management in the Hospitality Industry(3)

The objectives of this course are to provide an introduction to the hospitality industry, to management practices within the industry, and to the hospitality major. Students have an opportunity to learn about the functions of management; the major components of the hospitality, travel, and tourism industries; trade associations and publications; growth areas and trends; and the need for creative leadership. Main topics typically include:

Functions of management and functional areas of business segments of the hospitality industry
International business as related to hospitality
Services business
This course is an introduction to the field and is required of all hospitality majors. It is a prerequisite for many courses in the major. Students are evaluated based on examinations and exercise and homework assignments.

HRIM 202 Colloquium in Hospitality Management (1 per semester, maximum of 4) Major industry and professional speakers lecture on current issues followed by discussion with students and faculty.

HRIM 202 Colloquium in Hospitality Management (1 per semester/maximum of 4)

This course has two primary objectives. First, students have an opportunity to hear from industry leaders. Second, students can determine their career directions, learn about the requirements for success in the industry, and identify career opportunities. The topics for the course vary from semester to semester depending upon the distinguished speakers who are brought to address the class. However, a common theme is trends in the industry regarding hotels, restaurants, and institutional foodservice. Students also may learn about related career opportunities, such as careers with cruise lines, travel agencies, and the like. This course is required of all hospitality majors and is a prerequisite for other courses. The course is often taken in conjunction with the introductory hospitality management course. Students are evaluated based on attendance and a paper.

HRIM 204 Hotel and Restaurant Marketing and Merchandising (3) Merchandising and marketing as a system concerned with motivating consumers to purchase hospitality products and services. This course will not meet the prescribed requirements for the HRIM major in any option.

HRIM 204 Hotel and Restaurant Marketing and Merchandising (3)

Hospitality marketing and one of its major activities, merchandising, is concerned with motivating consumers to purchase industry products and services. The objective of this course is to introduce students to a systems approach to marketing management and its tools for marketing hospitality products and services. This course allows students the opportunity to identify societal trends that have shaped the current hospitality marketplace as well as identify demographic, psychographic, and environmental factors that affect customer needs. Merchandising strategies are discussed as appropriate. Main topics include:

- Principles of marketing, marketing orientation, and ethics in the marketing process
- Services marketing, product marketing, and hospitality marketing process
- Customer wants and customer needs and stages of buying
- Marketing research for hospitality services industry (situation analysis, market analysis, and feasibility analysis) primary and secondary market research
- Market segmentation, trends that influence services and shape the market
- Marketing mix, marketing strategy, product life cycles, and steps in a marketing plan
- Product/service mix, product development process, vertical and horizontal integration and partnerships
- Applying the marketing mix to people - empowering employees, customer mix, total quality management
- Applying the marketing mix to packaging, programming placement and their roles in marketing hospitality services, developing a package, distribution mix in hospitality, nature of packaging and programming
- Applying the marketing mix to promotion, advertising, public relations, merchandising, personal selling and sales promotion, promotional mix, elements in the communication process
- Planning advertising, sales promotion, merchandising
- Planning, publicity and public relations, personal selling
- Applying the marketing mix to pricing - setting price, demand
The content of this course is considered fundamental for anyone in hospitality management. This course, or a course similar to it in Marketing, is required of all Hotel, Restaurant, and Institutional Management majors. Evaluation methods usually include examination, quizzes, and short writing assignments. Case simulations involving group assignments are also sometimes used. The course is usually offered on the Penn State World Campus on an open enrollment basis and at Penn State Berks on an as-needed basis.

**HRIM 228** Hospitality Food Safety (1) Application of HACCP, U.S. Food Code, biosecurity and other federal regulations to hospitality foodservice operations. Students attain certification in foodservice sanitation.

This course will examine the science associated with preparing and serving food that is safe for consumption with regards to biological, chemical, and physical contamination. Emphasis is on federal regulations associated with HACCP, the U.S. Food Code, and other issues associated with safety of the food supply in the U.S. Case studies help students apply food safety principles to hospitality operations. Students will attain certification in foodservice sanitation by taking the examination administered by the National Restaurant Association. Frequent quizzes will help students prepare for this national exam. This course will be taught each semester and successful completion plus achieving the foodservice sanitation certification is required as a prerequisite for HRIM 330.

**HRIM 250** Principles of Quantity Food Production (3) Principles and methods of quantity food production including preparation techniques, quality control and evaluation, and cost control.

This course provides an understanding of basic food preparation principles including physical and chemical properties of food, preparation methods and equipment use for managers in restaurant and non-commercial food service operations. Main topics include sensory evaluation, food service equipment, standardized recipes, mise en place, cooking methods for principal food groups, menu development, food presentation, convenience foods, seasonings and flavorings, baking principals and current topics related to special diets and new developments in the food supply. Students will develop an understanding of control measures to insure food quality, nutrient retention and achievement of budgetary goals. The objective of this course includes developing a framework for a student to apply organizational skills to the food production worksite.

**HRIM 260** Hospitality Supervision Seminar (3) Hospitality management topics are discussed with a major emphasis on operations management. This course will not meet the prescribed requirements for the HR&IM major in any option.

**HRIM 260** Hospitality Supervision Seminar (3)

This course is an introduction to human resource management in the hospitality industry. The course examines the fundamentals of supervision that include planning, basic management functions, and customer relations and service. The overall course focus is on building relationships with diverse employees through communication, motivation, supervision and leadership. Additional topics covered include the human resource environment in hospitality operations, employee recruitment, selection, orientation, training, empowerment, performance appraisals and discipline, risk management, and labor organizations.

An introductory supervision course is vital to the success of a hospitality student. It is important to explore this topic in relation to the labor trends in the United States. It is equally important to examine the current demographic and socio-economic conditions that the student faces. Knowing how to access this information in the future will assist the
Emphasis will be placed on the diversity of the student as well as his/her employees and colleagues. Social identity is addressed early in the course. Human relationships and interactions are included throughout the course, as supervisors interact with their employees, colleagues, upper management and customers on a daily basis. Values, traditions, beliefs, and customs shape every human being and students will learn how to be sensitive to those differences through the practical applications in each lesson.

HRIM 270 Hospitality Administration Seminar (4) Components of food service systems are identified and studied as separate problems and as a total system. This course will not meet the prescribed requirements for the HRIM major in any option.

HRIM 270 Hospitality Administration Seminar (4)
The organization of a restaurant facility, from concept to operation, allows a student the opportunity to apply all previously learned course material in the Hotel, Restaurant, and Institutional Management program. The focus of the course urges the student to apply the principles of marketing, menu planning, food cost control, human resource management, financial accounting, layout and design, and purchasing. This course is presented in a seminar format and includes a restaurant design project. Students who have completed this course gain the perspective of designing a restaurant; facility with customers' needs and owners' profits in mind. Main topics include:
- Marketing plan, business plan
- Financing, leasing
- Leasing, tax matters
- Menu writing
- Menu analysis, function analysis
- Kitchen design, layout design conventions
- Recruiting and staffing, training, developing
- Food purchasing
- Bar and beverage purchasing
- Beverage and alcohol service
- Budgeting and controlling costs

The content of this course is considered fundamental for anyone in hospitality management and, therefore is required of all Hotel, Restaurant, and Institutional Management majors. Evaluation methods usually include examinations, quizzes, projects, and short writing assignments. The course is usually offered every spring semester with ten students at Penn State Berks and on an open enrollment basis on Penn State World Campus.

HRIM 271 Introduction to Hospitality Technology (2) Introduction to hospitality technology including computer applications, software, and hospitality information systems and applications.

HRIM 271 Introduction to Hospitality Technology (2)
This is an introductory-level required course in the HRIM curriculum. It is designed to introduce students to the technology used in the hospitality industry and to the concepts of information technology. Course objectives are to demonstrate how managers use technology, and how managers can use information to improve their company's position.
The course will initially introduce students to their role of being a manager of information technology. The next topic will be to discuss the basic information technology terminology and database management concepts. To introduce students to basic computing and information technology principles; spreadsheet, presentation software, and web page publishing software will be used. Students will complete exercises using each of the major Office packages. The major section of the course will focus on hospitality-specific systems, such as reservations, point of sale, recipe, menu management, sales and catering, back office accounting, maintenance management, and nutrient analysis. Students will gain experience by either using or viewing demonstrations of these software packages in order to identify the manager’s responsibility for information obtained and to analyze the output from these systems. Students will learn how these systems are integrated and how this integration affects the efficiency and effectiveness of the management function. The monitoring and control of the hospitality facility operations relies on an effective property management system. Students will use examples or case studies to discuss the value of successful implementation of information technology. The last topic covered will be the security issues related to the operation of a hospitality information system. The course is taught as a combination of lectures and labs, and is taught in a technology classroom.

HRIM 295W Analysis of Field Experience I (3) Capstone class integrating content from throughout the previous curriculum, including directed written analysis of the 500-hour hospitality working experience.

HRIM 295W Analysis of Field Experience I (2)
This course is designed for current and future operators of lodging, commercial, and on-site (institutional) operations. It will provide the opportunity for students to apply their theoretical knowledge from previous course work in the major to the hospitality world-of-work. The various course modules will incorporate writing as a mode to allow students to further explore their understanding of hospitality organization, marketing analysis, human resource practice, food production analysis, physical plant considerations, lodging operations, career development, management practice, and financial statement analysis. Case studies and other applied activities through written interpretation will be used to illustrate human resource practices, career development as well as other topics. This course will provide students with opportunities to develop written skills necessary to communicate effectively as hospitality professionals.

The topics typically include:
- Organization of an hospitality environment
- Demographic trends vs. advertising applications
- Employment laws
- Employee coaching
- Food production planning for productivity and control
- Organization of a physical plant
- Operations and quality control in lodging
- Opportunities for continuing hospitality career development
- Strategic planning in the hospitality industry
- Reviews of financial statements

HRIM 304 Institutional Food Service Management (3) Institutional food service management systems in the hospitality field.

**HRIM 304 Institutional Food Service Management (3)**

Institutional and contract food service management is in the growth stage of the hospitality industry life cycle. The objective of this course is to provide an overview of the various segments of institutional food service, including health care, life care, education, business, transportation (i.e., airlines, cruise ships), correctional and recreational services. Main topics typically include:
- Historical overview of institutional/non-commercial food service management  
- Exploring key markets where institutional food service management exists  
- Key systems used in the fundamental areas of quantity food production  
- Current and future trends affecting institutional food service management  
- Career opportunities in the institutional food service management sector  
- Managed services and multi-department management

This course is an elective in the Hotel, Restaurant, and Institutional Management program. Students must first complete the introductory hospitality management course. Evaluation methods usually include examinations, quizzes, projects and case studies. The course is offered on an as-needed basis.

HRIM 305 Restaurant Management (3) Restaurant food service management systems in the hospitality field; analysis including cost control and quality control techniques.

**HRIM 305 Restaurant Management (3)**

Providing quality service and products and ultimately making a profit in a restaurant require the foodservice professional to control and analyze costs. The objective of this course is to provide an overview of the food, labor, budget, and finance information required in restaurant management. Main topics typically include:
- Framework and function of control in foodservice operations  
- Steps and processes of using management information systems in controlling food cost and preparation of food  
- Forecasting and menu pricing techniques in controlling food cost in the preparation and service of food  
- Problems associated with labor costs and analyzing various techniques and tools used to control labor cost effectively through proper staffing and scheduling  
- Methods of controlling food and beverage cost through effective purchasing, receiving, storage, issuing, preparation, inventory, and portion control  
- Techniques of preparation and implementation of effective budgets as control tools  
- Ratio-analysis for analyzing cost in foodservice operations  
- Financial statements used to monitor the financial health of a foodservice operation  
- Capital budgeting and how it is used

This course is required in the Hotel, Restaurant, and Institutional Management program. The introductory course in Hotel, Restaurant, and Institutional Management must have been completed or must be taken concurrently. Evaluation methods usually include examinations, quizzes, reports, and case studies. The course is offered every spring semester at Penn State Berks for ten students as well as several other students at Penn State Berks who elect to take the course. It is also offered on an open-enrollment basis on Penn State World Campus.

The Pennsylvania State University
HRIM 310 Hotel, Restaurant, and Institutional Purchasing and Cost Control (3)

The objective of this course is to provide a practical study of procurement as the basis for cost control and as essential support for all quality hospitality operations. Main topics typically include:
- Principles and functions of purchasing, roles of the purchasing agent
- Mechanics of purchasing, vendor selection, specification development, competitive bid development, freight agreements, purchase order
- Application of principles and mechanics to food commodity procurement (meat, seafood, poultry, staples, perishables, produce, and non-food supplies)

This course is an elective in the Hotel, Restaurant, and Institutional Management program. Students must first complete several courses in Hotel, Restaurant, and Institutional Management (the introductory course, colloquium, financial accounting, and introductory hotel management) and a Nutrition course dealing with elementary foods. Evaluation methods usually include examinations and homework assignments. The course is offered during the spring semester and has a maximum enrollment of 100 students.

HRIM 311 Wine Appreciation (2)

The purpose of this course is to commence the learning process regarding the purpose of wine in the hospitality industry. Topics include the identification of red and white wine grape varieties, methods of viticulture (grape cultivation), techniques of viniculture (wine making), wine producing regions of the world, fortified and sparkling wines, development of wine lists, and wine marketing. Through sensory evaluations, students are exposed to the various varietal characteristics and components of wine, in order to become better service professionals in hospitality.

HRIM 318 Club Management and Operations (2)

This course focuses on the unique management skills that are necessary in the private club industry. A key objective is to demonstrate to students the concept of "exceptional service" that is demanded in this field. The course leads students on a tour of the responsibilities and operations of all departments that would be found in a city or country club. Main topics typically include:
- The club management industry and career opportunities
- Types of clubs that exist in the industry, including structure, organization, and philosophy
- The various departments of a successful club including but not limited to: food and beverage, accounting and cost control, human resources, marketing and promotion, catering and banquets, golf operations, tennis operations, aquatics, and fitness facilities
- Management skills required of a club manager: leadership, board relations, general management, service excellence, communications

The course is required in the Professional Golf Management option in the Recreation and Park Management program and is a professional elective for Hotel, Restaurant, and Institutional Management majors. Evaluation methods include examinations, short writing assignments, small group projects and participation. The course is usually offered in the fall semester to 200 students.
HRIM 319 Hospitality Facilities Management (3) Fundamental principles of facilities planning, facilities management, and maintenance for all segments of the hospitality industry.

HRIM 319 Hospitality Facilities Management (3)
This course has been designed to provide students with information related to hospitality facility design and maintenance. While managers may not have to fix equipment or install heaters, they should understand the complexity of these tasks and respect the position of the architect and hospitality engineer. Main topics typically include:
- Principles of facility engineering and maintenance
- Costs associated with the life cycle of a hospitality facility
- Role of the manager in the planning and maintenance process
- Function of the building in service and marketing
- Impact of building design on guest service and operation
- Evaluation of building and grounds for compliance with the Americans with Disabilities Act of 1990
- Role of management in development, planning, and remodeling of food service operations
- Flow of resources, as exhibited in blueprints

The course is a required course for all Hotel, Restaurant, and Institutional Management majors. Students must first complete the introductory hospitality course and the hospitality colloquium. Students are evaluated by examinations, written exercises, and a term project. The course is offered fall and spring semesters with an enrollment of about 100 students for each semester.

HRIM 329 Introduction to Food Production and Service (3) Principles of quality food production and service stressing the integration of menu planning, recipes, cost control, and service.

HRIM 329 Introduction to Food Production and Service (3)
This course provides students with information on the basic principles of effective food production and service management. The primary focus is the integration of menu planning, recipe writing, including HACCP, and the development and maintenance of quality standards and cost control for both food and labor throughout the foodservice cycle. Students will also be introduced to managing service in the front of the house for foodservice operations. The course is required of HRIM majors, and is part of the foods sequence, providing knowledge prerequisite for HRIM 330 and HRIM 430 in which student prepare and serve food for the public. This course also covers foodservice management competencies required for Nutrition students desiring to obtain a dietetic internship and the RD credential through ADA. Students must complete this course with a C or better before proceeding to the food production classes.

HRIM 330 Food Production and Service Management (2) Food service management laboratory stressing the integration of purchasing, menu planning, and costing in quantity production of quality food.

HRIM 330 Food Production and Service Management (2)
This course is designed as the application of foodservice production and service management stressing the integration of management modules with training in employee positions for the quantity production of quality food. The course draws from the students' theoretical background in accounting, management, nutrition, food production and sanitation, and thus integrates these areas into the daily operation of a campus foodservice facility as a living laboratory. Students, working as a management team, coordinate and manage all aspects of the food service laboratory. Students also experience a number of employee work positions in the laboratory. Main topics typically include:
- Critical management decisions in a foodservice operation
Evaluation of manager and employee performance
Interpersonal and time management skills
Procedures to prevent sanitation and safety hazards in a foodservice operation
Food production, service, sanitation, and quality assurance techniques typical to foodservice operations
Technical responsibilities in the development, production and evaluation of a food service system including: sales, recipe production and service, cost control, purchasing, facilities management, personnel management, and financial management
Critical thinking and leadership
Interaction with guests and accurate evaluation of the guests' dining experience

This foodservice practicum is the second course in the foods sequence. Students take this course after the introductory course in food production and service and a Nutrition course in food preparation. Requirements include management reports, performance evaluations, and quizzes. Uniform and attendance policies also are an important component of course requirements. The course is a prerequisite for the advanced food production course. Students are evaluated based on training meals, employee laboratories, management laboratories, a final examination, and performance appraisals. This course is offered fall and spring semesters, with five sections per semester. Maximum enrollment is 100 students per semester. The course usually is offered in the summer as well.

HRIM 335 Hospitality Financial Accounting (3) Basic accounting concepts and practices applicable to hospitality organizations.

HRIM 335 Hospitality Financial Accounting (3)

This course is designed to provide students with a basic knowledge of financial accounting principles and techniques. The course emphasizes what accounting information is, why it is important, and how it is used in the hospitality industry. The approach taken in this course is that accounting is the information system that measures business activities, processes that information into reports, and communicates the results to decision-makers. The students are exposed to all the important elements described above: the measurement system, processing of the information and the communication. However, the emphasis in this course is on the use of financial information from the user's perspective. Unless the user is aware of the process that generates the results of the accounting process, the user cannot make informed decisions. Therefore, the students first learn the structure of the double-entry system of accounting and then they learn how to use the information to make informed financial decisions. Main topics typically include:

Introduction to accounting principles, financial statements, the fundamental accounting equation, and accrual accounting
Transactions--journalizing, posting, general journal, general ledger, trial balance
Adjusting entries--deferrals, accruals, inventory adjustments, depreciation, adjusted trial balance
Completing the accounting cycle--closing entries, balance sheet, income statement, statement of owners equity, closing trial balance
Income statement
Balance sheet
Specialized journals, subsidiary ledgers
Cash
Receivables and payables
Inventory
Property--equipment, intangible assets, other assets
Payroll taxes

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken college algebra. HRIM 335 is a pre-requisite for Managerial Decision Making in the Hospitality Industry. Evaluation methods usually include examinations, quizzes, problem and paper assignments, and a semester project. The course is usually offered fall and spring semesters with enrollments of about 50 to 60 students per section.

General Education: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HRIM 336 Hospitality Managerial Accounting (3) Collection, processing, and interpretation of accounting data for managerial planning, control, and evaluation in hospitality organizations.

HRIM 336 Hospitality Managerial Accounting (3)
Managerial decision-making using accounting data is an integral part of the function of managers in the hospitality industry. The accounting function of the lodging business generates financial data, and managers need to be able to interpret the data, analyze it and make decisions based on their interpretation and analysis of the data. This course provides the student with the core knowledge needed to understand the kinds of data generated by the financial systems of hospitality operations, prepare budgets, perform variance analysis, and provide control over the financial aspects of the hospitality business. Main topics typically include:

- Introduction to managerial decision-making in the hospitality industry
- Cost behavior analysis in the hospitality industry
- Cost, volume and profit analysis in the hospitality industry
- Pricing decisions in the hospitality industry
- Preparation of operational budgets in the hospitality industry
- Calculation and interpretation of cost and revenue variances in the hospitality industry
- Preparation of cash budgets and control over cash in hospitality operations
- Preparation of the statement of cash flows in the hospitality industry
- Preparation of proforma financial statements in the hospitality industry

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken Financial Accounting in the Hospitality Industry. HRIM 336 is a pre-requisite to Financial Management in Hospitality Operations. Evaluation methods usually include examinations, quizzes, problem and paper assignments, and a semester project. The course is usually offered fall and spring semesters with enrollments of about 50 to 60 students per section.

HRIM 350 Hospitality Decision Making and Information Systems (3)

The ability of hospitality managers to use good decision making processes for both everyday decisions (category I) and strategic decisions (category II) has been identified by industry leaders as a key success factor. The objective of this course is to offer the student an opportunity to learn the qualitative (sociological and psychological) factors affecting the decision process and how to apply management science models and computer-based information systems to the functional aspects of management in the hospitality industry. The course focuses on the application of modeling theory to planning and decision-making in the hospitality industry. Main topics typically include:

- The decision making process
- Rational decision making
- Values for decision making
- Electric approaches to decision making
- The psychology of decision making
- The sociology of decision making
- Strategic decision success
- Quantitative analysis
- Probability concepts and applications
- Fundamentals of decision theory
- Decision trees and utility theory
- Forecasting - regression, analysis of variance, time series
- Project Management, program evaluation and review technique, critical path method
- Waiting lines and queuing theory

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken a course in the principles of programming with business applications course and a course in elementary statistics. This course is a pre-requisite to financial management and marketing courses in the curriculum. Evaluation methods usually include case study analysis, examinations, quizzes, and short writing assignments. Group assignments are often used in a problem-based learning environment. The course is usually offered fall and spring semesters with enrollments of about 80 to 100 students divided into two sections.

- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Spring 2007
- Prerequisite:

HRIM 355 Legal Aspects of the Hospitality Industry (3) Specialized applications of law to the hospitality industry.

Legal Aspects of the Hospitality Industry (3)
HRIM 365 Organizational Behavior in the Hospitality Industry (3)
(II)
This course builds on the students' knowledge of the principles of management. The objective of this course is to acquaint students with organizational issues in the hospitality industry. Main topics typically include:

- What constitutes an organization: its components and different ways of understanding organizations
- What factors influence the behavior of individuals, teams, and groups within organizations
- How the behavior of individuals, teams, and groups affects organizational effectiveness and performance
- Making the connections between organizational behavior and hospitality organization effectiveness.

The content of this course is fundamental to understanding how people work in organizations and the use of teams and groups in organizational goal achievement. This is a required course for all Hotel, Restaurant, and Institutional Management majors and is a prerequisite for the course in hospitality human resource management. Evaluation methods may include examinations, quizzes, short writing assignments, and case studies. The course is usually offered fall and spring semesters with enrollments of about 120 students.

HRIM 380 Hotel Management (3)
Introduction to rooms management including front office, housekeeping, security, and engineering. Emphasizes operations, coordination, and communication within and between departments.

The purpose of this course is to continue the learning process regarding hotel management and operations that began in the introductory HR&M course. The course focuses on the responsibilities of hotel department heads. Students develop decision-making skills that are applicable specifically to hotel operations, and generally to all hospitality industry operations. Main topics typically include:

- Fundamental lodging classifications, including location (e.g., city, resort, highway, airport, suburban), size, service, class, stars, and diamonds
- Recent trends in lodging supply segmentation, including all-suite, extended-stay, and time-share
- Major companies and brands in the hotel industry, and what organizations are involved in ownership, management, and/or franchising
- The relationship between the hotel front office and other departments in the rooms division, including housekeeping, concierge, reservations, PBX/telecommunications, security/loss prevention, and night audit
- The relationship between the hotel rooms division and other divisions, including sales & marketing, food & beverage (in a hotel environment), engineering, human resources, accounting, and convention/conference management/service
- Fundamental operating statistics related to hotels, including occupancy, ADR, and RevPAR
- Hotel night audits

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Evaluation methods usually include examinations, quizzes, and other assignments. The course is usually offered during both the fall and spring semesters with enrollments of about 100 students.

HRIM 385 Management Principles in Dietetic Services (3)
Application and integration of management principles and leadership skills in dietetic services.
This course is designed to foster the integration of management principles in the profession of dietetics. Emphasis is placed on leadership development, decision making/problem solving, strategic planning, and marketing of dietetic services. Through case studies, the interrelationship of food and nutrition labor and equipment are demonstrated. Students develop a business plan for a food and nutrition services business venture, which will be presented at the end of the semester.

Main topics typically include:
- Effective leadership in dietetics services.
- Interpretation of financial data with emphasis on identifying and correcting problematic areas in food and nutrition services.
- Types of budgets, including operating, capital, and flexible.
- Negotiation techniques in different situations.
- Strategic planning process, including vision and mission statement writing.
- Principles and skills necessary in human resource management and their unique application in food and nutrition services.
- Service marketing principles in a variety of food and nutrition settings.
- Kitchen equipment layout and design and their relationship to efficient production and service in delivery of nutrition services.

This course is part of the required sequence of foodservice management courses applied nutrition science majors take in the hospitality discipline. Students must first take a food production course and a nutrition course on administration of nutrition services in a health care setting. This course provides management of dietetic services principles addressed in the national registration examination for dietitians.

Students are evaluated based on an examination, case study analyses, and development and presentation of a business plan.

This course would be offered initially once per year in the spring semester at the University Park campus. Estimated enrollment would be 40-50 students.

HRIM 386 Introduction to the Gaming and Casino Industry (3) Students will learn about those traits of the casino industry which distinguish it from other segments of the hospitality industry.

HRIM 386 Introduction to the Gaming and Casino Industry (3)

The objective of this course is to introduce the advanced standing student to the unique traits of the casino industry. The student will learn that Nevada demonstrated that the potential negative societal impact can be minimized through rigorous, state-sanctioned, state-regulated casino gaming. The review of all American jurisdictions and several international markets with an emphasis on Pennsylvania provides the student with an expanded perspective of career possibilities and the significant economic impact of legalized gaming. The student will learn from casino mathematics how a casino is assured a revenue stream through the house advantage and how game protection is essential to maintaining the house advantage and to the profitability of the operation. Unique marketing activities such as professional events, players' clubs, entertainment, and casino floor promotions are surveyed to demonstrate the market segments casinos attract and to explain the impact of marketing on the image of any particular casino. Technology's significant impact on customer service, cost reduction, and financial controls is discussed. A thorough examination of the social costs and the economic benefits of legalized casino gaming informs the student so that they can understand the public image of casino gaming in general.

HRIM 388 Gaming Operations Management (3) Students will learn casino mathematics, game protection, floor layout
methods, departmental organizational structure, and performance analysis.

The primary objective of this course is to introduce the advanced standing student to the management of various games
and gaming devices used in a casino. The student learns the impact of the Americans with Disabilities Act on casino
design, casino layout, and equipment design. Casino mathematics is explored in greater depth than in the Introduction to
the Gaming and Casino Industry (HRIM386). The student is required to calculate odds and expected values in order to fully
understand the role the house advantage plays in profitability and to recognize the significance of revenue controls. Each
department in the gaming area is reviewed for organizational structure, job titles and descriptions, and performance
analysis. The overlap with Casino Controls (HRIM387) is intentional so that the student realizes a major function of any
supervisory or management position in the gaming area is control. The student learns and practices the rules of each
major game in the casino by playing and dealing. The student must learn the different bets and their payoffs as well as the
control techniques needed to prevent theft and cheating. Various methods used by players to manipulate the odds or
payoffs are studied so that the student can recognize and prevent them. The performance of the gaming areas is critical
to the profitability of a casino. Techniques for analyzing performance of the table games and slots are emphasized due to

control techniques needed to prevent theft and cheating. Various methods used by players to manipulate the odds or
payoffs are studied so that the student can recognize and prevent them. The performance of the gaming areas is critical
to the profitability of a casino. Techniques for analyzing performance of the table games and slots are emphasized due to
the relative importance of the revenue in these areas to overall revenues of the casino. In addition, the student must
create a staffing chart for the table games department. Security and surveillance are studied in order for the student to
discern the difference in roles these two departments play and to understand their importance to the control of revenue
and expenses. The student must become familiar with the various pieces of equipment used in each gaming department.
The impact of technology on equipment design, game protection, and surveillance activities is studied. The student is
taught the selection criteria and maintenance requirements of technology components in order to understand the
tradeoffs made when purchasing electronic gaming devices, surveillance cameras and systems, RFID systems, and other
components affected by imminent technological advances.

**HRIM 411** Beverage Management and Wine Selection (3) Management issues in beverage service and products. Students taste wines, brews, and distilled spirits.

The objective of this course is to acquaint students in the successful management of all beverage products associated with the hospitality industry. Main topics typically include:

- Production
- Purchasing
- Brand recognition
- Marketing and promotion
- Financial control
- Responsible alcohol service

This course is an elective in the Hotel, Restaurant, and Institutional Management program. Students must be at least 21 years old. Evaluation methods typically include examinations, quizzes, short writing assignments, and research projects. This course is offered spring and fall semesters with enrollments of 40 to 60 students. Students in other majors are welcome after all Hotel, Restaurant, and Institutional Management majors have scheduled.

**HRIM 413** New Product Development for Commercial Foodservice (3) This course introduces students to a new product development process that requires coordination, communication, and integration throughout the organization.

**HRIM 413 New Product Development for Commercial Foodservice (3)**

New product development is a critical business design process that crosses multiple functional areas in a corporation. In
today's globally competitive business environment, new product development is not a strategic option; it is a fundamental prerequisite for a company's survival, organizational renewal, and national economic prosperity. In addition, new product development is not the domain of any one function, but a multidisciplinary process that requires coordination, communication, and integration throughout the organization. This course will operationalize the management link by creating cross-disciplinary teams in which students will learn and apply the skills necessary to design and develop a new product prototype.

This course will present and utilize an integrated approach to new product design, development, and marketing. The course will provide a team experience of formulating, designing, and evaluating a new product concept. Students completing this course will have operational knowledge of and competence with a set of tools and methodologies for product design and development. Students will be able to coordinate multiple interdisciplinary tasks in order to achieve a common objective in an action-oriented business setting.

HRIM 415 International Cuisine (3) Cooking and eating practices of cultures around the world, including historical, religious, cultural, geographic, and political influences on each cuisine.

HRIM 415 International Cuisine (3)
The objective of this course is to expose students to managerial and cultural issues of cuisine and how they influence the development of commercial food and beverage operations. The text and lectures lay the foundation for the understanding of culture and cuisine. Main topics typically include:
Understanding how cuisine has developed over time
Variety of foods grown in distant regions and dissemination as adventurers contacted (and often conquered) other people and learned of their cultures
Evolution of trade that brought exotic foods from distant locales
Geography's role in defining the types of foods and quantities of crops that can be produced around the globe
Critical components of the major world cuisines

The course is an elective for Hotel, Restaurant, and Institutional Management students. Prior to taking this professional elective, students must complete the introductory course in food production and management. The course is normally taken in the students' senior year. Students are evaluated based on examinations. The course is offered on an as-needed basis.

HRIM 430 Advanced Food Production and Service Management (3) Simulation and application of technical, conceptual, interpersonal skills. Emphasis on group dynamics; improvement in managerial skills; management team functions.

HRIM 430 Advanced Food Production and Service Management (3)
This course is designed to give students an opportunity to gain experience in the wide range of skills and techniques that are normally associated with the duties of a hospitality manager. The skills and techniques that will be emphasized include, but are not limited to, duties involved in the planning, execution and evaluation of full-service, theme oriented à la carte dining. Students are expected to form a marketable theme and then develop, produce and evaluate an authentic dining experience. A successful dining experience is contingent upon both guest satisfaction and the achievement of financial goals. Main topics typically include:
Research, describe and produce an authentic restaurant environment from a selected theme
Demonstration of technical responsibilities involved in the development, production and evaluation of a wide range of food service systems including: sales, menu planning, recipe development and evaluation, pricing, purchasing, facilities management, personnel management and financial management
Operational needs and potential problems in a food and beverage operation during production and service
Timely and effective managerial problem identification and decision-making abilities
Interpersonal and teamwork skills both within a management team and with classmates as employees
Interaction with guests and evaluation of guests' dining experiences

The course is a capstone management class in the foods sequence and is required of all Hotel, Restaurant, and Institutional Management majors. Students must first complete the introductory food production course. Evaluation methods include a detailed business plan for a working restaurant created in a management team of approximately eight, quizzes, short written assignments, oral presentations, and subjective performance assessments as a manager and a line employee. The course is usually offered in fall and spring semester and summer session, with approximately 30 students in each section.

The Pennsylvania State University
HRIM 435 Financial Management in Hospitality Operations (3) Fiscal techniques in the development, management, and control of hospitality establishments.

Financial management is an integral part of decision-making in the hospitality industry. The study of hospitality financial management helps to ensure that hospitality decision-makers understand the principles of value creation and incorporate them into their decision-making. This course gives students the opportunity to gain knowledge of the fundamental concepts, tools, and applications that represent the core of financial management as applied to decision-making and value creation in the hospitality industry. Main topics typically include:

- Introduction to financial decision-making in the hospitality industry
- Agency theory and the decision-making process
- Value creation and the goal of hospitality financial management
- The functioning of financial markets that are relevant to hospitality firms
- Principles and methods of value creation in the hospitality industry
- Applications of financial statement analysis to hospitality finance
- Principles and applications of risk analysis to the value creation process
- Principles and applications of the time value of money to the value creation process
- Capital expenditure analysis in the hospitality industry
- Principles and applications of financing hospitality projects and firms
- Other special topics relevant to current hospitality financial issues

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken Financial Accounting in the Hospitality Industry, Managerial Accounting in the Hospitality Industry, and three credits of economics. Hospitality Decision-Making is also a pre-requisite for the course but may be taken concurrently. This course is a pre-requisite to Strategic Hospitality Management. Evaluation methods usually include examinations, quizzes, problem and paper assignments, and a semester project. The course is usually offered fall and spring semesters with enrollments of about 45 students per section.

HRIM 437 Hospitality Project Evaluation and Funding (3) Current techniques for project evaluation in the hospitality industry; trends in hospitality project funding.

This is an advanced course in the financial evaluation of hospitality projects and the decisions related to their subsequent financing. The selection of value creating projects is integral to the success of hospitality firms. In addition, project financing decisions can have significant impact on the full realization of a project's value creation potential. In order to provide the hospitality managers with state of the art project decision tools, this course examines the theory related to hospitality project selection and financing and applies it to current techniques in the hospitality industry. Main topics typically include:

- Basic principles of hospitality project evaluation
- Present project evaluation techniques in the commercial hospitality sector
- Present project evaluation techniques in the non-commercial hospitality sector
- The use of cap rates in hospitality lodging valuation
- Issues related to incorporating risk assessment in hospitality project evaluation
- Net present value, adjusted present value, and real options in hospitality project evaluation
- Other advanced techniques in hospitality project evaluation
- Basic issues and theory in hospitality project financing
- Trends in commercial and non-commercial hospitality project financing
- Potential interactions between hospitality project selection, project financing, and value creation
- Other special topics relevant to current and future techniques in hospitality project evaluation and financing

This course is an elective course designed for students who desire to gain an in-depth knowledge of hospitality project selection and financing. The course is appropriate for students seeking to obtain the skills necessary for middle or upper management level positions in hospitality organizations. Prior to this course, students are required to have taken Financial Management in Hospitality Operations or its equivalent. Evaluation methods usually include problem assignments.
quizzes, examinations, case analyses, and a project. The course is usually offered once a year with enrollments of about 30 students per section.

HRIM 438 Cases in Financial Analysis (3) Financial analysis and decision making is examined through a series of hospitality-oriented cases.

HRIM 438 Cases in Financial Analysis (3)
This is an advanced course in the application of hospitality financial analysis and decisionmaking techniques to real life hospitality operational situations. Decisions of managers in actual and hypothetical situations are critically examined from the perspective of appropriate financial and accounting theory using a case format approach. Discussions include the ramifications of real life complicating factors on theoretical outcomes. Main topics typically include:

An overview of the principles of financial analysis
Financial statement analysis: evaluation of performance from a historical, competitive, and industry perspective; effects of alternative accounting techniques
Alternate forms of operations and their financial and accounting implications: subsidiaries, joint ventures, partnerships, management agreements
Budgeting processes and procedures, including operational budgeting and the behavioral implications and procedures common in not-for-profit institutions
Cost allocation in hospitality organizations: techniques and financial implications
Organization of the financial function: alternative designs
Special topics relevant to current trends in hospitality financial analysis

This course is an elective course designed for students who desire to gain an in-depth knowledge of current and future techniques and applications of hospitality financial analysis. The course is appropriate for students seeking to obtain the skills necessary for middle or upper management level positions in hospitality organizations. Prior to this course, students are required to have taken Financial Management in Hospitality Operations or its equivalent. Evaluation methods usually include case analyses, presentations, examinations, and quizzes. The course is usually offered once a year with enrollments of about 30 students per section.

HRIM 442 Hospitality Marketing (3) Marketing management in the hospitality industry, including analyzing the market through market research and developing a marketing plan.

HRIM 442 Hospitality Marketing (3)
Marketing in the hospitality industry is distinctly different than marketing in either the manufacturing or the service industries. The hospitality industry - hotels, restaurants, institutional food service, travel and tourism, is a hybrid that constitutes both products and services. The objective of the course is to give an overview of marketing as applied to the hospitality industry, including but not limited to: unique attributes of service marketing; consumer orientation; understanding consumers and consumer behavior; market segmentation principles; target marketing; product planning; promotion planning; market research; and competitor analysis. Main topics typically include:

The marketing environment
Social responsibility and ethics in marketing
Marketing research and information systems
Target markets: segmentation and evaluation
Consumer buying behavior and the purchase decision
Developing and managing products
Branding and packaging
Strategic planning
Integrating marketing communications
Advertising and public relations
Personal selling and sales promotion
Pricing concepts
Setting prices

This course is required of all Hotel, Restaurant, and Institutional Management majors. Prior to this course, students are required to have taken Principles of Marketing course and the decision models in the hospitality industry course. This course is a pre-requisite to the strategic hospitality management course. Evaluation methods usually include case study
analysis, marketing plan projects, strategic plan projects, examinations, quizzes, and short writing assignments. Group assignments are often used in a problem based learning environment. The course is usually offered fall and spring semesters with enrollments of about 80 to 100 students divided into two sections.

HRIM 443 Sales Planning and Advertising for Hospitality Operations (3)

Elements of sales management, advertising, promotion, and public relations as applied to hospitality organizations.

HRIM 443 Sales Planning and Advertising for Hospitality (3)

The hospitality industry is entering an era in which operational and product parity between organizations and their properties is increasingly likely. This is so because of their shared access to technology, design and training devices. Consequently, it becomes evident that increases in sales will be reliant on the competitive advantages that professionals achieve in marketing strategies, sales management, and especially in marketing communications (MARCOM) tactics and execution. This course exposes students to a wide range of hospitality marketing communications issues. Students gather information from electronic media, trade and travel media, and consumer media. Students explore hospitality MARCOM issues through semester-long individual projects. Main topics typically include:

- Marketing versus selling strategies
- Industry trends that affect advertising and sales especially Internet activities
- Types of advertising media
- Print advertising principles
- Broadcast advertising principles
- Foundations of direct marketing
- Elements of public relations
- Travel agency relations
- Personal sales

This is an elective course. Students must first take the hospitality marketing course in Hotel, Restaurant, and Institutional Management. Student assessment is accomplished through quantitative objective testing and qualitative subjective exams and quizzes. A portion of the total term assessment is weighted by the student's performance in the individual project mentioned above. The course is usually offered spring semester with an enrollment of 40 students.
