The course will also discuss the role of mid-level providers such as physician's assistants, nurse practitioners, nurse midwives, and nurse anesthetists play in the delivery of health care services.

Students will also gain a better understanding of how to effectively communicate with physicians and use their knowledge to become partners with the administration of complex issues such as access, quality, and cost containment.

H&HD 397A  Major and Career Exploration Within Health and Human Development (1)  The purpose of this course is to provide sophomore-level students interested in careers and majors in Health and Human Development with instruction in the career development and planning process directly related to the selection of a college major and ultimately their career path. The primary goal of this course is to introduce students to academic and career areas of interest, and give them tools to explore career and major options, while discovering their own strengths and interests. During this course, students will do in-depth self-assessment activities, to better understand their skills, values, interests and personality characteristics as they relate to academic and professional options. They will participate in engaging career exploration activities to discover a wider number of major and career opportunities, and learn how to interact with professionals in their fields of interest.

HEBR (J ST) 010 Jewish Civilization (3) Life of the Jewish people from Biblical times, emphasizing cultural, religious, and institutional developments.

Jewish tradition goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events -- ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. -- we will explore developments in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are evaluated on the basis of essay exams, essay assignments, quizzes, in-class discussion and commentaries, group projects, journals, a final comprehensive exam/essay, web-based activities, and on-line discussion.

HEBR (CAMS/J ST) 151 Introductory Biblical Hebrew (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses.

The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together from such an important piece of literature.

HEBR (CAMS/J ST) 152 Intermediate Biblical Hebrew (3)

(BA) This course meets the Bachelor of Arts degree requirements.

CAMS/J ST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible.

In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

HEBR 451 Advanced Biblical Hebrew (3) Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details.
HEBR 451 Advanced Biblical Hebrew (3)

HEBR 451 is a Biblical Hebrew literature course in which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of advanced-level students with Biblical Hebrew. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 152 or its equivalent, the course will include grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read a Biblical Hebrew text comfortably and be able to analyze grammatical structures. Students’ work in the course will be evaluated on class participation (20%), short in class quizzes (20%), and a mid-term (30%) and final exam (30%). HEBR 451 is part of a series of advanced Hebrew classes that will allow students to gain skill and knowledge about a range of Biblical Hebrew texts. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

**HI ED 490** Exploration of Careers in Higher Education (3) Foundation of graduate study in the field of higher education.

**HI ED 490 Master’s Professional Seminar (3)**

This course is an introduction to higher education as a field, and as an orientation to graduate study. Early sessions will provide a brief review of the history of higher education, an introduction to the Carnegie Classification scheme of colleges and universities, and an overview of the structure of public and private higher education. Students will participate in an orientation to the services of the library including internet sources and tools needed to develop research skills. Technical writing skills will be developed through direct instruction, practice writing assignments, and peer review workshops in service of completing a literature review on a topic of the student’s choosing. Students will explore a variety of career options through guest lectures and individual projects in areas of potential interest. A final career exploration portfolio will demonstrate what the student has learned regarding career areas. Professional, interpersonal, and ethical skills will be developed through role playing and interviews with actual higher education practitioners. Written work will include an annotated bibliography, a literature review, and integrative analysis essays. In addition, students will explore various options appropriate for a capstone project for their master’s degree: internships, academic papers, portfolios, etc. Readings will reflect current topics and issues.

**HIST 002 (GH;IL)** The Western Heritage II (3) A survey of the Western heritage from the dawn of modern Europe in the seventeenth century to the present.

**HIST 002 The Western Heritage II (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

History 002 is an introduction to the history of Europe from the reformation to the present. The course focuses on four broad shifts in European history: the emergence of the powerful states of the ancient regime from the century of religious violence following the reformation; the critique of and attack on major assumptions of ancient regimes before, during, and after the French revolution; the social and economic transformation of Europe in the eighteenth and nineteenth centuries; and the formation of mass societies during the nineteenth and twentieth centuries. Although individual versions of the course may vary in emphasis, these changes are recognized as vital to Europe’s significance in the modern world. A major teaching goal of the course is the use of historical evidence, in the form of documents, to build interpretations of the past. A book of documents and an additional course packet supply this evidence and serve as the focus of the weekly discussion classes. There are weekly reading quizzes to ensure preparation and to provide questions for the start of discussion. A textbook and lectures supply the overviews and broad themes of the course. The course requirements typically consist of exams, quizzes, and class attendance. (Note that these are the typical, general requirements. Individual instructors may make adjustments that will maintain the intellectual integrity and pedagogic intent of the course.) The course is a basic introduction to modern European history. It is therefore, related to all upper division courses on this subject. It also introduces students to basic cultural and social movements essential to courses in art history and music and to courses in the social sciences. History 002 is required for history majors and for others fulfills a humanities requirement in the university’s general education/bachelor of arts requirements. HIST 002 is offered twice a year with 50 to 250 seats per offering.

**HIST 003 The American Nation: Historical Perspectives (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

This course covers American history from discovery to the present, focusing on racial, ethnic, and religious differences as well as shared traditions and ideals. Major economic, religious, political, and social issues and events from first contact to the present day are addressed, although individual versions of the course may vary in emphasis. Topics, which vary with instructor, view the American past through such lenses as democracy, the world of work, and daily life. A major teaching goal of the course is the use of historical evidence, in the form of documents, images, and other materials, to formulate interpretations of the past. Lectures and readings from textbooks, books, chapters, and academic articles provide the essential material of the course and are supplemented by electronic media. The course requirements typically consist of exams, quizzes, and class attendance and participation; they may include short papers as well. (Note that these are the typical, general requirements. Individual instructors may make adjustments that will maintain the intellectual integrity and pedagogic intent of the course.) The course provides an overview of American history and is therefore related to all upper division courses on this subject. It also introduces students to basic cultural and social movements essential to courses in American studies, art history and music and to courses in the social sciences.

**HIST 005 (GH;IL)** (CAMS 005) Ancient Mediterranean Civilizations (3) Survey of the history and cultures of ancient Mediterranean civilizations in Mesopotamia, Egypt, Syro-Levant, Anatolia, Greece, and Rome.

**HIST (CAMS) 005 Ancient Mediterranean Civilizations (3)**

This course provides an introduction to the history and cultural traditions of the ancient civilizations of the Mediterranean. From the origins of cities and the invention of writing, it surveys the intellectual, artistic, and political
traditions that laid the foundations for the later civilizations of Europe and western Asia. Students will acquire a basic historical framework for the ancient Mediterranean from the third millennium BCE through the end of antiquity in the first millennium CE. Within this framework cross-cultural relationships of time and ideas will be established among religious texts, epic literatures, and political and legal traditions. In the part of the world where the division between Asia and the East and Europe and the West was born, the course will examine the development of regional and ethnic identities along with the historical development of concepts of the universal nature of humanity. This course is designed to serve as the foundation course for all majors in the department of Classics and Ancient Mediterranean Studies (CAMS).

HIST 010 (GH;IL) World History I (3) Human origins; early civilizations; major political and intellectual developments on all continents; cultural interrelationships to 1500.

HIST 010 Non-Western Civilization (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 010 is an introductory survey of ancient history from the emergence of Homo Sapiens to the onset of European exploration (approximately 1500), examining the evolution of the world's various peoples and cultures. The course will focus on the historical processes that led to human diversity, as expressed in varying patterns and systems of government, economics, arts, ideas, belief systems, and social organizations. The course will also treat the growth of agriculture and pastoral nomadism and explore global interactions and linkages, engendered by human migrations, the spread of commerce and disease, wars, and conquests up to 1500. Although the mode of delivery may vary, depending on the semester or session in which a specific section of the course is offered, its campus location, and the instructor's major research specialization, the course will be taught thematically and conceptually. It will include individuals who have played a significant role in influencing the beliefs and institutions of a particular culture, or humanity in general, such as Moses, Confucius, Gautama (the Buddha), Plato, Alexander, Jesus, Muhammad, St. Francis of Assisi, al-Ghazali, Murasaki Shikibu, and Moctezuma. Students will learn about the interrelationships between dominant and nondominant cultures, such as the concepts of Roman imperialism, the tributary relationship between China and its neighbors, the Islamic concept of conquering lands without forcing conversion, the effects of the Mongol conquests, and the beginnings of Portuguese exploration and colonization. The course will make students more aware of the cultural achievements of the ancient Egyptians, Hebrews, Greeks, Romans, Persians, Indians, Chinese, Arabs, Turks, Mayans, and Japanese. Discussion sections (for high-enrollment classes) and essay examinations will promote student facility in written and oral self-expression, analysis, synthesis, comparison and contrast, and cultural empathy. History 010 instructors will, at their discretion, provide opportunities for gathering information from libraries, computerized indexes, and websites. Students will come to understand themselves and their own culture, as well as the background to many other societies and cultures in today's world, through intellectual confrontation with the peoples and cultures of antiquity. Instructors will address issues related to civility, the individual's role within the larger community, and academic honesty.

HIST 011 (GH;IL) World History II (3) Social, economic, and political evolution of societies and cultures from 1500 to the present.

HIST 011 World History II (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 011 is an introductory survey of modern history from approximately 1500 to the present, viewing the world and its various peoples and cultures as a whole. This course will focus on the historical processes that have led to modernization, such as exploration, contacts among peoples and cultures, voluntary and forced migrations, the growth of technology and science, industrialization, urbanization, and other trends that have shaped the world since 1500. It will help students to develop facility in speaking and writing about continuity, change, causation, similarities and differences among cultures, universal and particular values, and conceptualization of modernity, through weekly discussion sections, essay examinations, short writing assignments, and selected readings. Its content is intrinsically international and intercultural, addressing overarching themes of ethnicity, race, religion, gender, and especially global perspectives. Approximately one-half of its content

HIST 020 (GH;US) American Civilization to 1877 (3) An historical survey of the American experience from its colonial beginnings through the Civil War and Reconstruction.

HIST 020 American Civilization to 1877 (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.
HIST 020 is designed to introduce students to the main events and themes of American history before 1877. This course is not intended to simply acquaint the student with facts, but to teach them how to analyze those facts so that they can understand why historical events in America unfolded as they did. A larger goal of the course is to teach them how to think "historically" and to perceive the relevance of the past to the present. It is impossible to understand either yourself or your society if you cannot identify the role, which your individual and collective past plays in the construction of your actions and thoughts today. The course provides the student with a basic background in American History prior to 1877. HIST 021 chronologically follows this course by providing the student with a background in American History from 1877 to the present. HIST 020 is a prerequisite for upper-division courses in American History, and is a required course for the History major. The course grade will be determined by an in-class midterm exam, an in-class final exam (each containing essay and short-answer sections), a five-page paper based on the analysis of a primary source, and participation in discussion sections. This course will be offered twice per year with 150 seats per offering.

HIST 021 (GH;US) American Civilization Since 1877 (3) An historical survey of the American experience from the emergence of urban-industrial society in the late nineteenth century to the present.

HIST 021 American Civilization Since 1877 (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.
History 021 is designed as the second half of a two-term survey of American history, covering the period from 1877 to the present. (History 20 covers the period from 1607 to 1877.) The course uses a lecture format; larger versions have weekly discussion sections as well, led by graduate assistants. In terms of historical knowledge, History 021 seeks to introduce students to salient events, developments, and themes of American history since 1877. Chief among the topics covered are Reconstruction, Westward expansion and the decline of the Native American, the industrial revolution, urbanization, immigration, Gilded Age culture and politics, the labor movement, the New South, Populism, imperialism, Progressivism, segregation and African-American response, the women's movement, World War I, politics and culture in.

HIST 066 Survey of British History (3) (GH;IL)

The Survey of British History is composed of five units of study that chronicle the creation and development of Great Britain. The course’s chronological design should help students trace the trajectory of Britain’s improbable rise to and fall from dominant imperial power. This design is also adopted so as to lead students to identify recurring trends and notable anomalies in how Britain developed. Prioritizing students’ ability to identify and evaluate the impact of historical events, this course examines the interconnections between Britain’s economic, political, cultural, and religious histories, showing how changes in the economy, for example, allowed for the rise of new art forms or how changes in religious ideals influenced the population’s vision of their leaders. Britain’s impact on other nations is a corollary emphasis of this course, one justified by the knowledge that recognizing the past’s ongoing legacy makes the study of history vital.

Each unit of study will be accompanied by the analysis of multiple “objects” of British history, such as the Domesday Book, the Magna Carta, and the Rosetta Stone. Leading students in discussions of the creation and reception of these objects will supplement class lectures. Such discussions should press students to apply their readings and understandings of class lectures, leading them to ask, for instance, how the Roman Baths showcased the Roman’s economic and military strength as well as reflected their plans for British lands and peoples.

Grades in History 066 will be determined four quizzes and three writing assignments. The quizzes will consist of identification and short essay questions based on the readings and lectures, thus testing students’ understanding of the material presented. The first two writing assignments will ask students to outline two assigned books concerning British history; books that have been used in the past include one concerning the development of London and another exploring the impact of Darwin’s ideas on the British nation. These assignments will introduce students to two different types of historical monographs as well as develop their skills in identifying main points and prioritizing evidence. The final writing assignment will ask students to research another “object” of British history and explain how it reflects significant events in British history and/or British ideals. Giving students the opportunity to deal with a type of “primary document,” this paper assignment is designed to introduce students to a type of historical research, to test students’ ability to synthesize information, and to develop their ability to construct an argument about the significance of an object based on their knowledge and understanding of major developments within British history.

HIST 083S (GH) First-Year Seminar in History (3) Critical approaches to the dimensions and directions in History.

HIST 083S First-Year Seminar in History (3)
(GH;FYS)

(BA) This course meets the Bachelor of Arts degree requirements.

Through readings, discussions, lectures, and research projects, students are expected to master the subject material of the course as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. Historical analysis of this type will provide students with techniques for appreciating and judging arguments and presentations in many fields of learning, from scholarly to popular. The topics chosen for these seminars will acquaint students with major figures and developments in important historical areas. By reading and understanding historical documents, students will learn to consider the cultural assumptions of different groups and societies and to appreciate their own values and assumptions by contrast with these. Although the course will focus on a specific topic, the instructor will help the student to see the wider implications of the issues and controversies discussed. Whenever possible, the international and intercultural aspects of the topic will be considered. The course will challenge students to express themselves and to gather information through discussion and writing of papers. It will always challenge students to think about social behavior, the nature of the community, and the value of scholarly endeavor as these relate to the particular topic of the seminar. The course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. The course will be offered twice a year in sections of 20 students.

HIST 100 (GH;IL) (CAMS 100) Ancient Greece (3) Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization.

HIST (CAMS) 100 Ancient Greece (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenae, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E. Evaluation methods include: evaluation by four short objective quizzes, by four short (1-2 page) thematic essays, by participation in four scheduled discussion sections, and by mid-term and final examinations consisting of short answer identifications and an essay, or students may write a term paper in lieu of the final examination. The course will be offered once a year with an enrollment of 90.

HIST 101 (GH;IL) (CAMS 101) The Roman Republic and Empire (3) History of the Roman Republic and Empire from the origins of Rome to the disintegration of the Empire.

HIST (CAMS) 101 The Roman Republic and Empire (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course fulfills 3 credits of the General Education-Humanities (GH) requirement and is an introduction to the ancient Roman empire: how that empire came into being, how it evolved, how it came to govern much of the Mediterranean and European world, and how that empire declined. Particular stress is placed, through readings and discussion, on the sources of our knowledge of the past and on the social and legal structures employed by a past society to govern an ethically- and religiously-diverse population. This course complements other courses on the ancient Mediterranean world.
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

**HIST 102 (GH;IL) CAMS 102, J ST 102, RL ST 102 Canaan and Israel in Antiquity (3) Political, social, and intellectual history of the land of Canaan/Israel in the Biblical era: Late Bronze and Iron Ages.**

**HIST (CAMS/J ST/RL ST) 102 Canaan and Israel in Antiquity (3)**

( BA ) This course meets the Bachelor of Arts degree requirements.

From the domestication of animals and the dawn of agriculture to the development and socialization of monotheism, the world of the first civilizations led to that of the Bible and ancient Israel. This course, involving a critical view of Biblical texts in light of other ancient sources, archaeology and historical methods, explains the nature and the evolution of society, religion and thought in the Biblical era. Learn how civilization arose, and how the state appropriated religion and applied it for its purposes. How the science of administration developed and deployed ideological tools to further its own ideas of the West developed. This course is deeply subversive, particularly of religious and academic shibboleths. The only authority in this class is that of the most persuasive reader, and doctrines, whether religious or political, will have to be checked at the door.

An example of evaluation may be: weekly participation in discussion; mid-term and final essay examinations involving a critical evaluation of ancient text’s claims in combination with archaeological evidence; a research essay, where the class or section size is lower than 30; an ability to read critically, bringing different classes of evidence to bear on issues arising from the texts, and construct coherent and compelling arguments to a particular thesis. The course provides a Near Eastern counterpart to HIST 100, 402 and a Near Eastern aspect to the Jewish Studies major. It complements RL ST 110, by offering historical exploration of the culture under study in that course. Related courses include ANTH 012, HEBR, 010, ENGL 104, RL ST 004, and RL ST 111. The course helps round out the majors in History and Jewish Studies, particularly in ancient history. It also extends the program in Religious Studies (history of religions), and it contributes to the ancient stream of the prospective program in Jewish Studies and History. The class will be offered once every other year with an enrollment limit of 15-20.

**HIST 103 (GH;IL) The History of Madness, Mental Illness, and Psychiatry (3) This course will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness.**

**HIST 103 The History of Madness, Mental Illness, and Psychiatry (3)**

( BA ) This course meets the Bachelor of Arts degree requirements.

This course will be an introduction to the modern history of "madness" in the Western world. In particular, we will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness; the changing experiences of those afflicted; the development of those professions designed to look after those deemed mad, insane, and mentally ill; and the social and cultural assumptions behind treatments, policies, and public opinions. Our sources will include clinical case studies, memoirs of those living with mental illness, histories of psychiatric practice, and films. An example of the evaluation methods would be 3-4 written, in class exams, a 10-12 page research paper on a subject of choice, and class participation. The chief objectives of the course will be to confront head-on some of our most persistent assumptions about mental health and those with mental illnesses, evaluate how mental illness was understood and treated over the centuries, and become acquainted with the ways in which human biology, culture, society, and politics have reciprocally shaped one another in history.

The course can be effectively linked to several courses offered within the Department of History, including HIST 122 and 123 (History of Science I and II) and HIST 422 (European Thought Since 1870). In addition, it will fulfill requirements for both history majors and minors. The substance of the course emphasizes competence in the interpretive and critical understanding of the values, ideas, and experiences associated with mental disability over history and across cultures also means that it meets requirements for both General Education in the Humanities as well as Intercultural/International Competence. It is hoped that students across the human, social, and natural sciences will enroll in the course.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HIST 107 (GH:IL) (MEDVL 107) Medieval Europe (3) Rise and development of the civilization of medieval Europe from the decline of Rome to 1500.

HIST (MEDVL) 107 Medieval Europe (3)

(GH:IL)

This course meets the Bachelor of Arts degree requirements.

HIST/MEDVL 107 is an introductory course on the history of Europe from the late classical period to the beginning of the sixteenth century. There are three main areas of concentration in this course. First, the development of political, judicial and diplomatic institutions, from the collapse of central Roman authority through the rise of local chieftains to the centralized kingdom as ancestor of the modern state. The second theme is the role of Christianity in all its forms—orthodox, heretical, and popular—and its contribution to a distinctly medieval society. The third main theme is the development of society following changes in economic activity, cultural interest and the extended family.

Several forms of learning are used in this course. A textbook gives the student a broad overview of the period and gives a chronological structure to the material. This material provides a background to the instructor's lectures, which not only give factual information, but integrate the various trends, individuals and events. The assigned readings illustrate specific events or individuals; the discussion groups allow the student to explore these texts in a collaborative environment with the instructor and their fellow students. The research paper gives the student the opportunity to investigate a specific topic of interest, while training them in scholarly writing and analysis. Finally, the tests, all essay questions, let students demonstrate their comprehension of the material through problem solving.

The essay exams and discussion groups allow the student actively to address specific problems from the material; the research paper enables the student to gather information from traditional (library archives) and non-traditional (electronic) sources, then to present a conclusion in a comprehensive and coherent argument;

The class discussion promotes collaborative and cooperative learning, as the students expand on, and/or argue against, positions taken on the material by their instructor and fellow students. Internationalism and interculturalism is the essence of this course. The research paper, essays and discussion allow for scholarly development through the investigation of communities in an important era of history.

HIST 108 (GH;IL) The Crusades: Holy War in the Middle Ages (3) The social and political history of medieval religious warfare in Europe and in the Middle East.

HIST 108 The Crusades: Holy War in the Middle East (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 108 is an introductory survey of the so-called holy wars of the High Middle Ages. These wars were fought in theatres from the Baltic to the eastern shores of the Mediterranean, from the Hispanic peninsula to southern France. While the primary emphasis will be given to the expeditions to the Holy Land, two other crusading movements will be studied: the crusades in the Baltic, led by the Teutonic Knights, and the crusades in southern France, against the heretics known as the Albigensians. These conflicts cannot be studied in isolation, and a major topic is the response of Islamic society and non-conformists elements within medieval Europe. How the various elements in the crusading period co-existed, changed or disappeared provides still more material for the student to contemplate.

Students will be evaluated on three essay examinations, regularly scheduled discussions of the assigned readings, the instructor's assessment of the student's ability to read critically, write clearly and knowledgeably, and class participation. History 108 is part of a series of introductory courses to medieval history. It will be accepted but not required for the History Major and Minor. It will be offered once each year with 90 seats per offering.

HIST 109 (GH;US) Introduction to U.S. Environmental History (3) An introduction to the changing relationships between human beings and the natural world in American history.

HIST 109 Introduction to U.S. Environmental History (3) (GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

Taking the United States as its focus, this course provides an introduction to environmental history as a field of scholarship that examines changing relationships between human beings and the natural world. Environmental history centers on the examination of various questions about such relationships, including exploring how natural forces shape history, how humankind affects nature, and how those ecological changes then reciprocally influence human life. A core message of the course will be that environmental factors do not deterministically shape history, but rather structure the possibilities open to human beings. Major themes of the course include: (1) recognizing that American history has a natural context; (2) that relationships between nature and culture change over time; and (3) that knowledge about nature is socially constructed and historically contingent. The course will examine the increasing speed and geographic spread of human-driven changes to the environment and provide students with the historical context necessary to appreciate contemporary environmental dilemmas. This course is intended as an introduction, with no prerequisites, though general familiarity with American history will be helpful.

Course meetings and assignments are designed to encourage comparing and contrasting points of view on questions such as: How has the non-human world shaped the course of American history? What were the environmental impacts of historic changes in the ways Americans produced and consumed resources? What ideas shaped the ways different groups of people defined and used specific resources? What role have science and technology played in changing popular attitudes about the human place in the world? How did America's environment shape the political, social, and economic development of the United States? How have changes in American relationships with nature interacted with other global change processes and recognitions of the need to develop more sustainable societies?

General Education: GH

Bachelor of Arts: Humanities
Effective: Summer 2015 Ending: Summer 2016

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HIST 110 (GH;IL) Nature and History (3) A broad introduction to the history of human relationships with nature throughout the world.

HIST 110 Nature and History (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The human relationship with the natural environment—the world of plants, animals, and microbes, of air, water, and land—is an important historical subject. History 110 provides a broad, thematic description and analysis of major global
trends and shifts, with an emphasis on contemporary issues and problem solving. The most important goal of the course is to provide students with the historical context necessary to construct a thoughtful appreciation of the environmental dilemmas of our time.

History 110 encourages students to break down the barriers that often divide the humanities and the sciences. This course utilizes environmental science to demonstrate and explain specific human tendencies. Finally, this course-as is any in world history-is structured to at least diminish students' American-centered view of both the past and environmental concerns. Particularly in relation to contemporary environmental issues, we hope History 110 will make clear that many environmental problems are local in neither their construction nor impact.

Ecology has contributed a great deal to historical understanding in terms of specific examples or case studies; however, it has also begun to reconstruct the overall structure of the history that we teach. History 110 seeks to exploit this new paradigm by following a topical organization that is structured around human modes of interaction with the environment. In Unit 1 the course borrows its structure from geography and the natural sciences. Students will be able to consider a wide range of human activity as well as to better comprehend similarities in ideas, ethics and concepts from around the world and throughout history. In Unit 2 the course steps out of chronological limitations to embrace two topics that span human history. By studying such topics, of course, students may see change over time contextualized by a shared concern or resource. Unit 3 is designed to reinforce the global nature of the course and the concerns that we study within it. We will highlight interdependence by including issues that link students' local environment with distant others.

The lectures and discussions will focus on several critical points, including: How has the non-human world shaped the course of human history? What were the environmental impacts of historic changes in the ways humans produced and consumed resources? What ideas shaped the ways different groups of people defined and used specific resources? What role have science and technology played in changing popular attitudes about the human place in the world?

HIST 113 (IL) Baseball in Comparative History (3) Comparative survey of baseball history from its beginnings to the present.

HIST 113 Baseball in Comparative History (3) (IL)

This course, which fulfills the International Cultures (IL) requirement, provides an introduction to comparative social history. It uses the broad cultural and geographic diffusion of baseball over time to examine the diverse and changing social, economic, and political meanings of this activity in different cultural settings, emphasizing the ways in which a common activity may acquire unique meanings in different cultures. Although North America, Cuba, and Japan demand attention as the most striking examples of baseball’s pervasive impact, the course will consider baseball as a global phenomenon, exploring the minimal impact or failure of baseball promotions in many European and African societies, for example. As an introduction, the course will confine itself to English language texts, but it will use a wide range of primary sources, including newspapers and journals, memoirs, correspondence, promotional materials, and photographs to introduce students to basic concepts of historical method and problems of evidence. Students will be encouraged to consider baseball’s impact in particular historical contexts as a cultural process, from the manner of its introduction
through its adoption to the emergence of distinctive proprietary, even nationalist attitudes and styles of play. Among the many topics required of a survey, the course will return periodically to the question of American influence and US imperial aspirations. But the evidence of baseball games in other countries as sites of resistance or hostility to US power and as expressions of a potent nationalist politics raises questions about baseball’s value for many conventional historical models of “empire” as a form of political or economic subordination. Students’ assignments will require a combination of reading, writing, and research skills, and the course will introduce through lecture and discussion the variety of materials available at Penn State for the study of this subject.

HIST 115 (GH;US) (J ST 115, RL ST 115) The American Jewish Experience (3) Examination of the history, culture, social tensions, and contributions of Jews and Judaism in America.

HIST (J ST/RL ST) 115 American Jewish History and Culture (3) (GH;US)
Throughout American history, Jewish presence on American soil has compelled Americans to re-think the meaning of religious and ethnic diversity. As one of the earliest non-Christian immigrant populations, American Jews struggled to explain how they could nonetheless fit into American cultural, political and social life. At the same time, many Jews have been concerned with their own survival as a distinctive group, unwilling to cede those practices, behaviors or traits that designate them as a people apart from other Americans. This course is about how these two seemingly contradictory goals—to integrate into America and to remain distinctive from other Americans—shaped the history and experience of Jews in the United States and influenced the way Americans think about diversity and pluralism.

The student of American-Jewish history must be attuned to the multiple ways that Jewishness has been defined: as a race, a religion, a nationality, and an ethnicity. In this course, far from choosing just one of these designations, we will explore Jewish life from many different angles. Topics to be considered include religious reform, immigrant experience, political activism, popular culture, and struggles over community authority. Readings focus on a number of primary texts, including memoirs, novels, films and philosophical essays. Secondary books and articles will also help deepen students’ understanding of trends in American-Jewish history and awaken them to diverse interpretations of history. Students will be encouraged to engage actively and critically with the texts by writing short reading responses, longer essays, and participating in classroom discussion and presentations, all of which will serve as the basis for their evaluation.

This course complements offerings in Religious Studies, Jewish Studies and History. It provides a foundation for an already existing upper-level seminar in American Judaism (listed in Jewish Studies and Religious Studies). In addition, the course strengthens the History department's offerings in American history, serving as a basis for students interested in immigration, ethnicity and religious history. Students who are interested in modern Jewish history will also find this course a worthwhile addition to their program of study, since, unlike other courses, it deals primarily with the story of Jewish life in the United States.

HIST 117 (GH;US;IL) (WMNST 117) Women in Modern History (3) Modernization and women: changing images and roles since mid-eighteenth century in the family, workshop, politics, society; cross-cultural comparisons.

HIST (WMNST) 117 Women in Modern History (3) (GH;US;IL)
(BA) This course meets the Bachelor of Arts degree requirements.
History/Women's Studies 117 is an introductory survey of women in the United States and possibly elsewhere, from the seventeenth to the late twentieth century. The course examines women's history from several different perspectives. First, it introduces students to the methods, sources, and questions of the past thirty years of women's history-writing, and asks students how studying women transforms our understanding of history more generally. Second, it offers a survey of the narrative of modern women's history, stressing women's interactions with the larger processes of economic and political change, their relationship to changing ideologies of gender and feminism, and their complex identities not only as women but as members of a particular race, class, ethnic, and religious group. Throughout, students will ask when gender, and when some other aspect of women's lives and identities, is most salient in identifying the restrictions and opportunities they faced. Third, students will assume the perspective of historians themselves, as they examine primary sources and attempt to make analytic and historical judgments about what they say and why they matter to the larger narrative. Through significant essay-writing assignments, students will develop analytical and writing skills in learning to think historically about women. Questions about race, class, ethnicity, and sexual orientation, as well as gender, are intrinsic to this course. Students will be evaluated based on their class participation, papers, and final exam. This course is cross-listed in History and Women's Studies and fulfills requirements for both programs' majors and minors. History/Women's Studies 117 will be accepted, but not required, for the History Major, the Women's Studies Major, and the Women's Studies Minor. This course will be offered once a year with up to 70 seats per offering.

HIST 130 (GH;US) Introduction to the Civil War Era, 1848 through 1877 (3) Survey of causes and consequences of American Civil War, end of Mexican War in 1848 through end of Reconstruction, 1877.

HIST 130 Introduction to the Civil War Era, 1848 through 1877 (3)
(GH; US)
BA - This course meets the Bachelor of Arts degree requirements.

HIST 130 is a general survey of the American Civil War Era that satisfies the Gen Ed GH requirement. Course content features the cause of the war, the conflict itself, and the consequences for the meaning of freedom in the United States. Chronologically, the course spans from 1848 through 1877, or from the Mexican War through Reconstruction. Students will become familiar with American slavery; northern and southern social, cultural, political, and economic composition; the military progress of the war; problems on the home front; the struggle for emancipation; and the creation of a new nation based on free labor. Lectures are supplemented with discussion days in which students react to readings. Grading stresses the use of analytical and writing skills, as well as the ability to think historically and analyze documents critically.

HIST 134 (GH;IL) Introduction to the British Isles, 1400-1800 (3) Survey of the history and cultures of the British Isles from 1400 to 1800.

HIST 134 Introduction to the British Isles, 1400-1800 (3)
(GH;IL)
This history course, which fulfills the Humanities requirement in General Education (GH) or the International Cultures (IL) requirement, provides an introduction to the history of the British Isles from the fifteenth to the early nineteenth centuries, focusing on the diversity of English, Welsh, Scots, and Irish cultures and customs, their influence on early forms of nationalism in the British Isles, and their importance in the formation of the modern British nation-state. Using a wide range of primary sources, including the work of prominent British writers, the course introduces basic concepts of historical method, while exploring the process whereby an English empire came to govern these four major “peoples” of
This course analyzes the Israel-Palestine conflict in the larger context of Jewish-Arab relations in the modern Middle East. Examination of the seeds of the conflict to the present day. Roots of the conflict between Jews, Palestinians, and Arabs reach back into the late Ottoman period but the First World War constituted a major turning point, when the project of a Jewish state in Palestine took shape as the Ottoman Empire collapsed. The 1917 Balfour Declaration provided an enormous boost to the relatively small Zionist movement. About 300,000 Jews moved to Palestine during the interwar period, with most Jewish migrants driven initially by economic rather than ideological motives. Some Jewish settlers established good relations with local Palestinians. But tensions erupted in the cities, not least over landownership. Clashes continued during the early 1930s. The aftermath of World War II constituted the second major turning point. After 1945 Britain withdrew from the Middle East while large numbers of Jewish refugees from Eastern Europe migrated to Palestine. After the Israeli declaration of independence in 1948, the new Arab states declared war on the newly founded state. Israeli troops expelled large numbers of Palestinians permanently from their homes. At the same time almost all Jews were expelled from most Arab states and settled overwhelmingly in Israel. The course follows the main clashes between Israel and its neighbors without ignoring the internal relations, especially between Jews and Israeli Arabs, and Jews and Palestinians in the occupied territories. The main clashes that will be discussed are the Suez crisis of 1956; the 1967 Six-Day War; the 1973 Yom Kippur War; the bold 1977 peace initiative of Egyptian leader Anwar El-Sadat which led to the 1979 peace accord between Israel and Egypt (and eventually to a détente with Jordan); the 1982 Lebanon War and the first Intifada (protest wave by Palestinians in the occupied territories); the Oslo Peace Process during the 1990s; the Second Intifada and recent developments, especially the implications of Israel’s settlement building in the West Bank. The course concludes with a discussion of potential scenarios for the relationship between Jews and Arabs in the Middle East during the 21st century.

HIST 141 (GH;IL) Medieval and Modern Russia (3) Introductory survey, including political, social, economic, and cultural development of Kievan, Muscovite, and Imperial Russia.

Medieval and Modern Russia (3)

HIST 142 (GS;IL) History of Communism (3) Marxism; Leninism and evolution of the Soviet Union; formation and development of the Communist bloc; impact of Chinese Communism.

HIST 142 History of Communism (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Communism is one of the most powerful ideologies to have ascended in the modern period of history. Fashioned from Marxist philosophy, communism was embraced in the twentieth century to over one billion people from the former USSR, to China, to South Asia, to Africa, to Latin America, and by some here in the U.S. Unquestionably, the institutionalization of communist regimes has left an indelible mark on world history. This course will explore the writings of Marx and his advocates, notably Engels and Lenin, and strive to understand why the first communist regime emerged in the unlikeliest of places: Russia. Using the Soviet Union as a case study, we will examine how Marxist principles were either applied or transformed in the construction of the first communist society. By examining the history of the Soviet Union, including its spectacular and rapid demise, we will come to a greater understanding of communist principles and of the dynamics of capitalism as well. As a counter-example, we will also focus on the Chinese experience of Communism and contrast the divergent paths to reform that have been implemented there. The goal of the class is twofold: to become familiar with the principles of communism by examining their application primarily in the USSR, Eastern Europe and China, and to come to a greater understanding of the dynamics of a capitalist system. The course grade will be determined by the student's performance on in-class essay exams, a research paper, the comprehensive final exam (essays and short answer), participation in class discussions, and regular attendance. This course serves as a prerequisite to History 430 and History of the Soviet Union, and provides valuable background for such related courses as PL SC 413 and 452 and RUS 100. HIST 142 satisfies three credits of any history for History majors. It is also a prerequisite for several upper level history courses dealing with twentieth century Eastern European or Eurasian history. For all other students, this course fulfills a Social and Behavioral requirement in general education. HIST 142 will be offered once each year with 75 seats per offering.

HIST 143 (GH;IL) (J ST 143) History of Fascism and Nazism (3) The study of right-wing totalitarianism in the twentieth century, with special emphasis on Fascist Italy and Nazi Germany.

HIST 143 History of Fascism and Nazism (3)

(BA) This course meets the Bachelor of Arts degree requirements.

History 143 is an introductory survey of fascism and Nazism. The course concerns itself with understanding the social context of fascism, its governing assumptions, ideals, and values, how it worked in practice, and its consequences and historical implications. The course centers on the analysis of secondary and primary sources, and textual, video, and audio materials are all used. Lectures tie the various materials together, while weekly discussion sessions provide an opportunity for students to engage the materials directly. Students are evaluated on the basis of exams (which include an
essay component), papers, and class attendance and participation. The course contributes not only to the study of the history of authoritarianism, antisemitism, and the history of the holocaust, but also contemporary and modern European history and, of course, German, Italian, and Spanish history. History 143 will be accepted, but not required, for the History Major as well as the History Minor. It may function as a service course for the Departments of Political Science and Sociology. It is recommended that it also serve as a general education course in the Humanities. This course is offered once a year with enrollment of up to 150 per offering with small discussion sections once a week.

HIST 144 (GH;US;IL) The World at War: 1939-1945 (3) In-depth study of the origins and conduct of World War II. Political and economic aspects as well as military.

HIST 144 The World At War: 1939-1945 (3) (GH;US;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

This course offers a wide-ranging description and analysis of the second world war, combining military history with political, social and cultural approaches. One major goal is to describe how large-scale war serves as a revolutionary social and cultural force in its own right, massively accelerating social change. In the case of the second world war, the course will describe how the conflict did much to create what we think of as the modern world, not only in political terms (the roots of the cold war, the collapse of European imperialism) but also in radically changing attitudes towards such basic matters as gender relations and generational conflict. Also viral were the new scientific advances of the war years, in nuclear energy, radar, aviation, and perhaps most critical of all, the computer. Particularly important to the educational justification for the course is the stress on the construction of historical memory, a theme with implications far beyond the specific instance of World War II. The course will assess and challenge many of the myths surrounding the war, and to show how subsequent accounts of the conflict were shaped by political and cultural needs. For example, the course will stress the critical importance of the Eastern Front throughout the phenomenon understated in the West because of the patriotic Anglo-American emphasis on D-Day. It will also explore the "Resistance Myth", and suggest the moral compromises necessary to survive in occupied societies of Europe and Asia. Throughout, the course will stress the impacts of war on the home front and civilian society. The course will be offered once every two years, with fifty seats on each occasion. Typically, students will be evaluated on essay exams, written book reviews, and research papers, and are expected to participate fully in class discussions of assigned readings. History 144 is an important complement to several existing courses within the History department, including 120, Europe Since 1848; 121, The History of the Holocaust; 142, History of Communism; 143, Fascism and Nazism; and 160, American Naval History. It also provides an excellent foundation for 400-level courses including 420, Recent European History; 447, Recent American History, and 454, American Military History. 144 satisfies general credit requirements for the history major or minor. Majors and non-majors would both be able to use the course to satisfy their general education humanities selection.

HIST 155 (GH;US) American Business History (3) Major developments in the history of business and industry from the colonial period to the present.

History 155 surveys the development of business and industry within the United States, from the colonial period to the present. It treats the conduct of business as an integral element of American society and culture. Topics to be discussed will include the colonial commitment to commerce and early debates over what kind of commercialism the new national government should encourage; the effects of new technologies like the cotton gin, canals, and railroads in the 1800s and electrical products, cars, and computers in the 1900s; the emergence of modern large-scale industrial production and changes it brought about in business management, in society, and in politics; the changing fortunes and corporate citizenship; changing ideas about what kind of relationships should exist among governments, citizens, and businesses; the importance of world events for American businesses; and the emergence and importance of mass-market consumer products since the First World War.

Materials we will use to cover this comparatively complex set of interrelationships will include textbook, supplementary studies of individuals or particular businesses, and current media coverage of the business world. The course is fast-paced and relies on students self-discipline and analytical skills. Student performance will be evaluated on two essay exams, a class presentation, group discussions, and in-class quizzes, and evaluation will be based on the instructors assessment of the students performance in reading and writing critically and knowledgeably on particular subjects, marshaling evidence in support of coherent arguments, and participating in class discussions and presentations.

History 155 may complement, but does not compete with, courses offered by other departments or programs. It will be useful for students intending to major in business programs, in Labor and Industrial Relations, and/or to participate in the business world, by deepening their historical knowledge of that world, and will complement the Business/Liberal Arts minor. It will complement History 020 and 021 as well as more advance courses in American history. History 155 will be accepted, but is not required, for the history major and minor. It may be used to fulfill either General Education or Bachelor of Arts requirements in the Humanities for those not majoring in History. HIST 155 will be offered once a year with 45 seats per offering.

HIST 159 (GH;US) (CRIMJ 159) History of the FBI (3) Survey of the FBI's history with special emphasis on civil rights and liberties and bureaucratic development.

HIST (CRIMJ) 159 History of the FBI (3)
(GH;US)

The Pennsylvania State University
The History of the FBI introduces students to the 100-plus years history of the Federal Bureau of Investigation. With such a long history, studying the FBI engages students with each of the various historical time periods from the late 19th century to the present, including Reconstruction, the Gilded Age, Progressive Era, First World War, the New Era, the Great Depression, the Second World War, the Cold War, post-Cold War, Age of Terrorism, and contemporary history. Students will understand the evolution of Federal law enforcement, bureaucracy, the increasing power of the Executive branch, the targeting of various minority groups, civil rights and civil liberties issues, and the growth of a national security role for the federal government over time. In its long history the FBI has intersected with a wide variety of groups and issues, and this reality will further expose students to the histories of African Americans, gays and lesbians, women’s groups, Latinos, Native Americans, war protestors, students, various political dissenters, immigrants, targeting of morality, obscenity, and labor organizing.

Because the FBI is responsive to both the political and policy interests of presidents and the influences of American society, students will come to appreciate the influences that politics has on bureaucracy and law enforcement, as well as the different social, political, economic, and cultural influences that each historical time period have exerted on the FBI to help shape its priorities and structure.

HIST 166 (GH;US) (WMNST 166) History of Sexuality (3) Discusses the ideas, practices, and identities surrounding sexuality over several centuries in a variety of contexts, focusing primarily on the US.

HIST (WMNST) 166 History of Sexuality (3)
(GH;US)

This is a 100-level course on the history of sexuality, spanning several centuries and a wide range of contexts. The study of sexuality offers a particularly good lens for developing students' analytical ability to think historically about something that is often considered both "natural" and exclusively "modern." Topics will include the role of religion, medicine, law, and politics in controlling and shaping sexuality; change and controversy over birth control, abortion, and gender roles;
the connections between prescriptive literature and lived experience; the origins and meanings and racial violence in the context of ideas about sexuality; the role of marriage in defining sex, race, and respectability; and the experiences and conflicts that have shaped the emergence of modern lesbian and gay identities. By closely and critically examining one aspect of human thought and experience, the course will teach students to evaluate large questions about sources, methods, and analysis that historians face, including: How do we recover stories of "private life" from societies and eras different from our own? How does our own understanding of what sexuality complicate our historical exploration? What are the connections between gender identity and sexual practices? What can we learn about gender and sexuality, repression and resistance, deviance and acceptance, identity and community from studying the lesbian and gay past? How has racism been employed to justify particular reproductive and sexual practices, as well as to limit claims to sexual respectability? To what extent is the study of sexuality inherently a study of gender, sex roles, and feminism?

While focused primarily on the United States, the course will offer students opportunities to examine these questions in other contexts, including India, the Middle East, and Latin America. It will be especially attentive throughout to the varieties of sexual practices and identities across different races, classes, ethnicities, and religious groups.

HIST 171 (GH;IL) (ASIA 171) Introduction to South Asian History 2: Early Modern to Contemporary (3) An introduction to South Asian history from early modern to contemporary times.

HIST (ASIA) 171 Introduction to South Asian History 2: Early Modern to Contemporary (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will offer students a general introduction to the cultures and societies of the South Asian subcontinent from the early modern to the contemporary, following processes of modernization and social transformation through both colonial and postcolonial periods. It covers the rise of British power, and the various responses to it from collaboration to mutiny; the development of competing nationalisms and anticolonialisms, including secular, socialist, Hindu and Muslim variations; accompanying social reform visions including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration; leading into the 21st century.

**HIST 173 Vietnam in War and Peace (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

The small Southeast Asian nation of Vietnam remained an obscure and exotic land, relatively unknown to the rest of the world until the mid-twentieth century when it became the scene of a military and political struggle with important global implications. History 173 examines two interrelated topics: 1) the long history and unique culture of Vietnam and its peoples, extending from prehistory to the present; and 2) Vietnam's constant struggle over several millennia—to secure its independence in the face of continual military, political, social, and economic pressure from outsiders, especially the Chinese, the French, and the Americans. The course includes special focus on the physical geography of Vietnam; the anthropological origins of its people; the evolution of its unique culture, folklore, and legends; its long-term struggle against Chinese military and cultural aggression; its role as a colony in the French global empire; the rise of nationalism and communism in Vietnam; the origins of global conflict in Vietnam in the post-World War II and Cold War world; the conduct of military, political, diplomatic, and economic affairs of France, the United States, North and South Vietnam, and other nations during the wars of 1945-1975; the response of civilian populations and governments to that military conflict; and post-1975 Vietnam. Evaluation methods include map-based examinations to familiarize students with the geography of the region and to underscore how geography and history intersect. Examinations include both essay and objective questions that require students to integrate information from lecture and from readings drawn from both primary and secondary sources that examine Vietnam's struggles from different viewpoints. Also required is a research/writing project that explores some specific dimension of the American or Vietnamese homefront experience during 1965-1973, the peak years of the U.S. military effort. This course deepens knowledge about Asian cultures introduced in History 010 and 011 (World History). It supports both the interdisciplinary East Asian studies major and Asian Area Studies minor. This course is accepted for the Military Studies minor. History 173 satisfies both General Education and Bachelor of Arts degree requirements for Humanities.

HIST 176 (GH;IL) (BA) Survey of Indian History (3) Survey of cultural, institutional, and political history from ancient times to the present.

HIST 176 Survey of Indian History (3)
(GH;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

This course surveys the history and civilization of India or South Asia from the earliest times to the modern period. The goal of the course is to enable students to form a comprehensive conception of the various facets of Indian or, South Asian civilization in a historical context. This course is an excellent foundation for the history of modern India and also complements a variety of existing courses on the history of the non-western world. In addition to satisfying the GI requirement, HIST 175 satisfies the general credit requirements for the history major or minor, including the "non-western" component of the major. Non-majors may use this course to satisfy a general education humanities selection. Typically, students will be evaluated on in-class quizzes, written exams, participation in class discussions of assigned readings and critical reviews of books. This course is offered once every year and has an enrollment of 50 students.

HIST 177 (GH;IL) (ASIA 177) The Rise of Modern Southeast Asia (3) Study of Southeast Asia from the rise of early empires to the present.

The Rise of Modern Southeast Asia (3)
HIST 178 (GH;IL) Latin-American History to 1820 (3) Conquest of the New World, development of colonial institutions, impact on native cultures, and origins of independence movements.

HIST 178 Latin-American History to 1820 (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The "Colonial Latin America" class is a survey of three centuries, from the initial encounter on New World soil of Iberian, African, and native cultures and races, to the birth of independent culturally- and racially-mixed nations. We emphasize is on the patterns of conquest and cultural encounter, the processes of colonial rule, the nature of interaction between social groups, and on the cultural impact of the colonial experience upon all colonial Latin America's peoples. We study the institutions, cultures, attitudes, and fortunes of Spaniards and Portuguese; African slaves and free blacks; Nahuas and Aztecs, Mayas, and Incas. We discover the roles played in colonial society by a wide variety of peoples, from an African slave on a Brazilian sugar plantation to a Spanish high society woman in Lima to the black and native workers in an Ecuadorian tannery to an Aztec nobleman in Mexico City. The people who lived in colonial Latin America are given a chance to speak for themselves as much as possible; most of the assigned books feature contemporary documents translated from Spanish, Portuguese, and various native languages. Students are evaluated on two sets of essay exams and write a paper, as well as participating in classroom discussion. History 178 is offered most years with 90 seats per offering and is a prequel (but not a prerequisite) to History 179, the "Modern Latin America" class often taught the semester following; both classes are required for the Latin American Studies major, as well as meeting various History major requirements.

HIST 179 (GH;IL) Latin-American History Since 1820 (3) Origin, political growth, international relations, and economic status of the Latin-American republics, with emphasis upon present-day conditions.

HIST 179 Latin-American History since 1820 (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on Latin America (with limited coverage of the Caribbean) from the early 1800's through the present. For the colonial period (c.1500-c.1820), it is easy to see why Latin America has a "common history," as most of it was ruled by two quite similar countries, Spain and Portugal. But after the colonial system collapsed, giving rise to over a dozen independent countries by the 1830s, the issue becomes more complicated. What do these dependence upon markets in developed countries for their economic prosperity? How can we explain the continuing similarities between these countries, without losing sight of their diversity? The approach of this course is broadly chronological, but for each period we will focus on one or more countries that illustrate (however imperfectly) the trends of the period. The goal of the course is not to provide an encyclopedic knowledge of Latin America, but rather to provide a framework for understanding how current issues are rooted in past historical processes, and to offer a better sense of how key historical themes are "lived" by ordinary people in Latin American society. A related goal of the course is to acquaint students with the historiography of Latin American: the different approaches that historians have used to understand the region. Students will be evaluated on two sets of essay exams and a paper, as well as participating in classroom discussion. HIST 178 and 179 are both requirements for the Latin American Studies Major and Minor, as well as satisfying general credit requirements for the History Major.

HIST 180 (GH;IL) (CAMS 180) Ancient Warfare (3) Historical survey of the evolution of warfare in the ancient Mediterranean region from prehistoric times to the Later Roman Empire.

HIST (CAMS) 180 Ancient Warfare (3)
Warfare has occupied a central place in the civilizations of the Mediterranean from the earliest times. The prehistoric origins of warfare is a hotly debated topic and constitutes the starting point for this course. Most scholars are agreed that military culture grew in step with sociopolitical development over the course of the third millennium BCE. In the following centuries, the Egyptians, and later the Assyrians and Persians, took great strides in developing sophisticated tactical systems, using infantry, chariotry, and cavalry. These matters occupy a little over the first third of the course. Across the Aegean Sea, Bronze Age (Mycenaean) Greece was ruled by elites occupying massively walled citadels, their leaders buried surrounded by their weapons. But how did these warriors fight? Do the epic poems of Homer memorialize Bronze Age combat? In the Archaic Period (700-500 BCE) infantry warfare in Greece was transformed by the appearance of the heavily-armored infantryman (the hoplite), deployed in a tight formation (the phalanx). The processes involved in the appearance of this kind of warfare, its nature, and its affects on Greek society and culture will be the focus of our attention for the second third of the course. On the periphery of the Mediterranean basin stood a variety of warrior cultures (the Scythians, Celts, or Germans). Numerous warrior-dominated polities vied with each other in Archaic Italy, but one of them, sitting on a ford on the river Tiber, ultimately rose to be the greatest military power produced by the ancient Mediterranean world – Rome. The Roman legions first won and then ensured the security of a Mediterranean-wide empire that stood for 700 years and evolved ultimately into world’s first standing army of professional volunteers. The Roman military system holds our attention for the final third of the course. The course defines “warfare” broadly to include both tactical and strategic, as well as cultural and ideological, matters. Even this canvas is too vast to be surveyed in all its richness, so the major themes explored are: (i) what is war, where does it come from, and how did it change as civilization spread?; (ii) in what ways did warfare develop in the periods under study, in terms of strategy, tactics, and weapons technology?; (iii) how do different warfare practices reflect essential facets of the various cultures under consideration?

HIST 181 (GH;IL) (J ST 181) Introduction to the Middle East (3) Origins of Islamic civilization; expansion of Islam; the Ottoman Empire; the Middle East since 1918.

HIST 181 Introduction to the Middle East (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course presents a survey of the history of the Middle East from the rise of Islam to the current day. The objectives are to help students develop the vocabulary and historical background to discuss and evaluate contemporary events and debates, stimulate interest in the varied historical experiences and diverse societies and cultures of the region, and provide a foundation for deeper investigation. Students may elect to take one or more of the 400-level sequence on Middle Eastern history, or other specialized courses, upon completion of the course. The first half of the course focuses on the foundations of Islamic government and civilization, the first Islamic empires, and the Ottoman empire. The second half of the course traces the modern history of the Middle East and examines how it has been profoundly shaped by European imperialism and American political, economic, and strategic interests. Students will be evaluated on regular quizzes and essay exams and participate in class discussions of assigned readings and current events. History 181 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. The course may also be used to fulfill requirements for the Middle East Studies minor. Non-majors may use this course to satisfy a general education humanities selection. HIST 181 will be offered once a year with 50-60 seats per offering.

HIST 182 (GH;IL) (ASIA 182) Asian Trade: Economy, Industrialization and Capitalism in Asia (3) An historical overview of economy, industrialization, globalization and capitalism in Asia from the 16th century to present.

HIST (ASIA) 182 Asian Trade: Economy, Industrialization and Capitalism in Asia (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Asian economies have experienced spectacular growth in the second half of the 20th century. But this growth is part of a longer story of Asian commerce and trade and its relationship to and integration with (and, in some cases, isolation from) global patterns of exchange. Moreover, these exchanges are best understood alongside the politics, society, and culture--sometimes local, sometimes regional--that shaped trade and business in entrepots, capitals, and hinterlands throughout Asia. This course begins with a historical exploration of the economic development and social change and ends by asking what lies in store for one of the world’s fastest growing economic regions. By offering a historical frame
for Asian economic experience, students will gain insight into the strengths and weaknesses of prevailing theories that
tend to overstate centralized control, market mechanisms, and cultural determination.

Asian economies and markets are quite diverse, consisting of emerging and mature markets, making it difficult to view
them through a single lens. As a result this course seeks to introduce students to a variety of conceptual frameworks in
these countries. Examinations of the major economic players China, India, and Japan form the backbone of the course, but
the precise geographic emphasis will vary with instructor, and may also include discussions of Japan, Korea, Vietnam,
Singapore, Indonesia, Taiwan, and other Asian states. Themes of the course will vary depending on instructor, but may
include industrialization, sustainability and the environment, gender and labor, protest and political reform, and
consumerism and advertising, among others. The course will also offer a general introduction to economic theories that
underpin the concepts of globalization, capitalism, and socialism as they are understood in an Asian context.

This course is intended as an introduction to Asia for those with particular interests in Business, Economics, Global
Studies, Labor, and/or Government. Through weekly readings, films and class discussion students will be introduced to
the development of Asian economies in the global context.

HIST 183 (GH;IL) (ASIA 183) Gender, Family, and Society in East Asia (3) Investigates the history of gender, family, love,
and sex in East Asia.

HIST (ASIA) 183 Gender, Family, and Society in East Asia (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The Confucian philosophy that guided family life in many East Asian societies articulated specific relationships between
men and women and particular roles for each family member at each stage of life. But these gender ideals were never
static. Instead they were constantly challenged and changed—by the “willow catkin” women poets of eighteenth century
China, the modan gaaru (modern girls) who advocated for “love marriages” in 1920s Japan, and the “iron women” of
Communist China who “held up half the sky,” among many others.

This course tracks these changes in East Asian gender roles, relationships, and family life from 1600 to the present,
placing private life at the center of the history of China, Japan, and Korea. The course will begin with an examination of
how ideals of gender and family life were prescribed through, for example, classic texts, architecture, public morality
campaigns, and law codes, as well as examining how these ideals and norms were described (and contested, satirized, and
subverted) in fiction, film, and legal cases. The course will then examine the realities of gender and private life in imperial
East Asia, considering topics such as marriage customs, women’s economic roles, the cult of female chastity, family
planning and medical practices, prostitution and brothels, footbinding, geisha, ideals of masculinity, alternative families
and male-male sexuality, male bonding and brotherhoods, and women writers.

The last part of the course considers the remarkable shifts in gender and private life in East Asia beginning in the
nineteenth century and continuing to the present. Topics will include changing work patterns in an increasingly
industrialized economy, urbanization and remade family life, women’s education, changing expectations for courtship,
marriage and sex, expanded opportunities in public life for women and men, divorce, militarization, war and gender,
eugenics and race, homosexuality, gender and revolution, and the state’s role in regulating sex. The post-war period
brought even more changes, and the course will highlight these through case studies of, for instance, women in the
workplace, China’s so-called “one child” policy, and “gender-bending” in popular culture.

By the end of the course, students should have a firm understanding of changes to private life in East Asia over the past
several centuries, and be able to assess the social and political factors that shape cultural phenomena. Students will
develop their abilities to read primary sources closely and to read secondary studies efficiently, in addition to learning to
reflect and integrate multiple kinds of sources in writing essays.

HIST 184 (GH;IL) (ASIA 184) Society and Culture in the Pacific War (3) Examines the role of society and culture in the
Pacific War’s causes, contexts, realities, and aftermath.

HIST (ASIA) 184 Society and Culture in the Pacific War (3)

The Pennsylvania State University
(BA) This course meets the Bachelor of Arts degree requirements.

This class examines the culture and society of modern Asia in the periods immediately before, during and after the Pacific War. While for Americans the Pacific War took place from 1941 to 1945, many people across Asia experienced the war’s beginnings in the late nineteenth century and its repercussions reverberated into the 1960s and even beyond. This course looks at social and historical trends across Asia during this time period in order to better understand the causes of the war and the affect it had on people throughout Asia.

The first section of the course begins with Japan’s rise in the 1890s, situating that rise in the reforms of the Meiji state that increased urbanization, industrialization, opportunities for women, and interaction with other nations. As the course moves chronologically toward war, students will examine the fall of the Qing dynasty and establishment of the Republic of China, the experiences of people living under Japanese colonial rule in Korea and Taiwan, and the repercussions for the Great (European) War in Asia.

The second section of the course looks at the period from the initial Japanese moves into China in 1931 through the end of World War II. It should be stressed that this section of the course will not focus on military maneuvers or battles. Instead, the class will consider the way political and military events affected the day-to-day lives of people throughout Asia. Topics will include the mobilization of Japanese citizens for “Total War,” the colonization of Manchuria, the “Rape of Nanking,” wartime atrocities (including the treatment of “comfort women”), the use of ideas of eugenics, race, and hygiene as justification for Japanese empire, Japanese efforts at empire building in Southeast Asia, the entrance of the U.S. into the Pacific War, and the firebombings and atomic bomb attacks on Japan.

The third section of the course considers the war’s aftermath in Asia. Topics will include the reconstruction of Japan, the tensions around American military presence in Japan, the trials of war criminals, the Chinese Civil War, and the partition of Korea. Students will be encouraged to look critically at cultural evidence from post-war Japan, such as anime, manga, monster movies (like Godzilla), music, and literature in order to understand the post-war mindset. Finally, students will consider how the post-war reconstruction efforts across Asia laid the groundwork for present-day Asia as well as examining the contentious debates over how the war’s victims and events are remembered and memorialized.

HIST 185 (GH;IL) (ASIA 185) Asian Pop: The History of Popular Culture in Asia (3) A history of popular culture from the early modern period to the present.

HIST (ASIA) 185 Asian Pop: The History of Popular Culture in Asia (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Asian popular culture encompasses a broad array of cultural practices and forms that shed light on the politics and society of Asia from the early modern period to the present day. This course examines "low" or non-elite culture, investigating subjects like martial arts, Chinese opera, beggar guilds, popular and folk religion, weddings, teahouses and many others (particular themes will vary depending on instructor) that allow us insight into the day-to-day lives of historical people across Asia. Along the way, we will consider how popular culture intersects with and influences politics, economy, and society.

A significant emphasis will be placed on the scope of cultural influence: some of the topics under consideration were decidedly local affairs, while others moved across political and regional boundaries, sometimes with far-reaching consequences. This focus on dissemination and influence grounds the course. For instance, students will begin their investigation of Asian popular culture by tracing the pre-modern roots of Asian cultural exchange when empires ruled not by political or military might, but what one scholar termed the 'theater state' or, put more simply, cultural persuasion. In contrast, however, common people often subverted state orthodoxy and state policies, in ways ranging from the stories told about local gods to access to martial arts training to marriage practices. Out of this contestation over the meanings and presentations of popular culture symbols and forms, students will be introduced to the various and diverse 'vehicles' for popular culture, from the early modern period up to the present day.

Themes and topics will vary depending on the instructor, but may include cities and urban culture, villages and rural culture, theater, film, mass literature, youth culture, "ethnicity" as culture, music, dance, opera, wartime culture and propaganda, advertising, sexuality, gender and its representations, martial arts and militarism, popular religion, weddings and marriage practices, and so on.

HIST 186 (IL) (ASIA 186) The Silk Roads (3) A survey of the Silk Roads and maritime routes connecting premodern Europe and Asia, and the cultures that flourished along them.

HIST 186

HIST 186 The Silk Roads (3)

What do medieval Buddhist pilgrims, Mongol warriors, Marco Polo, and nineteenth-century British secret agents all have in common? What were the “information highways” that connected people and cultures across the premodern world? Taking crosscultural communication and connectivity as its central themes, this course explores the central role that the Silk Roads and Indian Ocean maritime routes have played throughout Eurasian history. It provides a historical survey of the land and sea trade networks connecting Europe and Asia, and the cultures that have flourished along them. The course explores connections between China, Rome, Byzantium, Persia, the Mongol Empire, Southeast Asia, and Central Asia. It covers exchanges of art, religion, cultural, technological, and economic goods. It also includes discussion of ethnic conflict and cultural identity in Central Asia, the importance of global trade routes in shaping the modern world, and the representation of the Silk Roads in contemporary popular culture. The focus of the course is to provide students with an appreciation of the interconnectedness of the premodern world, as well as the vital role of the trade system in the development of the major civilizations of Eurasia.

HIST 188 (GH;IL) (ASIA 188) Tibet: People, Places and Space (3) This course examines the historical, cultural, and ethnic dimensions of Tibet from the seventh century to the present.

HIST (ASIA) 188 Tibet: People, Places and Spaces (3) (GH;IL)

Few places generate as much curiosity, interest, or controversy, in the Western mind as Tibet. This course examines Tibet from a variety of perspectives from Tibet’s political unification under a single ruler in the seventh century up to Tibet’s incorporation into the People’s Republic of China in the latter half of the twentieth century.

Adopting a Tibet-centered focus, this course probes three core dimensions of Tibet namely its people, its religion and its strong sense of place to allow for a more nuanced and comprehensive understanding of Tibet to emerge. It will also include an introductory unit that orients the students to Tibetan language, religion and basic terminology so that even those with no prior exposure to Tibet or Asia will be able to engage the material that follows.

Given Tibet’s unique placement at the confluence of West, South, Central and East Asia, to understand Tibet one must understand the traditions of its neighbors. As a result the course will place particular attention to the unique blended cultural, religious and political structures that emerged. Similarly, external perspectives of Tibet have often warped or created elaborate interpretive lenses through which Tibet is understood as a ‘land of mystery.’ Through an examination of Tibet’s key religious and political institutions such as the Dalai Lama, Panchen Lama, and myriad saints a better understanding of the processes by which leadership is understood, construed and even manipulated is highlighted. Similarly, unvarnished consideration of Tibetan’s religious and social institutions such as monasteries, traders and local political institutions help offer a fuller picture of Tibetan life.

This course should be useful for those with an interest in Asian history generally as well as students with background in non-history disciplines such as anthropology, religion, or political science. No background or specialized knowledge about Tibet is expected though a willingness to read primary documents on a variety of religious, ethnic and political themes will be quite useful. In this course students can expect to gain an appreciation for how religion, history and politics contribute to contemporary portrayals of Tibet, Tibetans and their society. Classes will generally consist of lectures, films and discussion.

HIST 189 (GH;IL) (ASIA 189) Illicit Asia: An Alternative Introduction to Asia (3) A historical introduction to unlawful, illegitimate and forbidden ideas, goods people and places in modern Asia.
HIST (ASIA) 189 Illicit Asia: An Alternative Introduction to Asia (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines patterns of illicit ideas, goods, peoples and places of modern Asia. Traditional introductions to Asia emphasize a history of the powerful, of the center, of the victors. This course seeks to invert the customary narrative by telling the tale of Asia's early modern and modern past from the perspective of those working against the interest of the elite, popular and mainstream.

At the same time, traditional introductions to Asia often risk perpetuating stereotypes of a mysterious, sinister Orient. In fact, dominant discourses both cross-culturally (such as Orientalism) and within a given society (such as elite nationalism) have tended to criminalize or pathologize all kinds of countercultures, alternate economies, non-normative sexual practices, and so forth. But attitudes to orthodoxy and legality may depend on one's relationship to the dominant system, and the dominant narrative. This class seeks to reveal those phenomena in a different light, according to their own contextual logic. Often omitted or ignored, understanding why illegal activity occurs, how it occurs and who the relevant actors are can offer an extremely potent introduction to the roles traditional boundaries of political, cultural and societal activity played in the shaping of Modern Asia.

Specific content and regional focus will vary according to individual instructor, but the course will be divided into four general sections that focus on forbidden ideas, goods, places and peoples. Topics may unpack heterodox beliefs like secret societies or anarchist movements; trace the production and distribution of illegal goods like opium or counterfeit items; map out notorious places like the Golden Triangle or the internal workings of human traffickers; or examine the practices and scope of criminal elements like pirates or brigands. The objectives of the course are not only to learn about the illicit activities across modern Asia, but are also organized to encourage us to rethink the way we understand standard interpretations of the past and the factors that go into those perceptions. Students will also consider the changing justifications for and definitions of what is legal, normal and orthodox.

HIST 190 (GH;IL) (J ST 190, RL ST 190) Religion and Conflict (3) Critical examination of the role religion has played in human conflict.

HIST (J ST/RL ST) 190 Religion and Conflict (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The role of religion in human conflict has long been debated. Is religion inherently divisive, or has it been manipulated for divisive ends? Is religion a source of conflict, of peace, or of both? Why do religious adherents often claim their scriptures teach harmony and compassion, yet still find religious justification for opposition, aggression, and even war in those very scriptures? Why is it that sometimes it is members of the same religion, but different sects or denominations, who are the most confrontational to each other?

This course introduces students to a critical examination of the negative, positive, or ambiguous roles religion has played in conflict and conflict resolution. After analyzing various theories about the relationship between religion and conflict, we will look at the possible foundations for religious conflict, such as perceptions of religious difference or constructs of identity in society, the scapegoating of the religious Other, and issues of religious conflict brought on by colonialism in the past and by increased globalization in the present. We will also explore the approaches that some religious traditions have had to conflict resolution. Finally, we will examine specific cases of religious conflict in antiquity as well as the modern world from across the globe in order to discern patterns, detect commonalities and differences, and ultimately to better understand the complicated world in which we live.

HIST 192 (GH;IL) (AFR 192) Modern African History (3)
Impact of the slave trade, expansion of Islam, colonial conquest, social and cultural transformations, resistance, nationalism, and independence.

HIST 192 (BA) This course meets the Bachelor of Arts degree requirements.

This course examines the colonial period in Africa from roughly 1750 to the present. Given the vast geographical breadth of the African continent, its diverse peoples and cultures, and the divergent trajectories of colonial rule, this course will focus on a number of common themes in the cultural and historical development of African societies. We will start with an introduction to African cultures and the problems in studying them, move on to examine the evidence for the early origins of humans on the African continent, the agricultural revolution, and ancient African kingdoms, empires and civilizations (including Egypt). We will then explore three interrelated themes in the history of Africa from the 16th-18th centuries: trade, state formation, and the spread of Islam. Finally, we will turn to an examination of the slave trade and its impact on Africa and the Americas. This is also a course in historical reconstruction and analysis. There are few documentary sources for this period and much of the data we have is fragmentary. The resulting history consists largely of long-term social changes rather than detailed narrative. We must thus learn to reconstruct history from what evidence is available, using general principles of African social, economic, and political organization that we will develop in class. Typically, students will be evaluated on the basis of a map quiz, short papers, exams that have both an identification and essay component, and participation in class discussions and debates. AAA S/HIST 191 provides an excellent foundation for both AAA S/HIST 192 (Modern African History) and History 479 (Imperialism and Nationalism in Africa). In addition to satisfying the GI requirement, AAA S/HIST 192 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. Non-majors may use this course to satisfy a general education humanities selection. The course also may be used to fulfill requirements for the African and African-American Studies major and the African Studies minor.

HIST 205 (GH;US) (J ST 205) American Antisemitism (3) The Phenomenon of antisemitism in American history from Peter Stuyvesant to the present.

HIST (J ST/RL ST) 205 American Antisemitism (3) (GH;US)

This course explores the phenomenon of antisemitism in American history from the time of Peter Stuyvesant to the present. The significance and role of American antisemitic movements and authors, as well as its role in American society and culture, are examined and compared to those in European history over the same periods. At the same time, the impact of antisemitism on the lives and mentalities of American Jews is discussed. The course focuses on readings taken from original sources and recent historical treatments. The readings include material on colonial texts, Grant's notorious Order, nativists and anti-immigration texts, Gilded Age antisemitism, the Immigration Acts of the 1920's, Henry Ford's antisemitic campaign, Southern antisemitism and the Leo Frank case, the quota system at American universities, employment discrimination, the "Gentlemen's Agreement" system, Black antisemitism, and the New Antisemitism.

(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on the emergence of the Atlantic World Black Diaspora from the 15th through the 19th centuries with the United States as its central focus. We begin with a brief discussion of African societies at the beginning of the Transatlantic Slave trade, discussing the various ethnicities, cultures, societies, and states. We then discuss the emergence of the TST and its consequences for the forging of the modern world and its centrality to the rise of modern capitalism. The forced migration of over 10 million people of African descent resulted in a massive dispersal of various cultures, ideas, religious systems, foods, crops, and ideologies—all of which formed the Black Diaspora. We look at the centrality of these various cultures and ideas to the successful rise of the American colonies, including the skills that Africans brought to the emerging staple crop economies, the knowledge of plants, foods, crops, and healing practices. We look at both the evolution of American slave societies in the North and the South, as well as the rise of Free Black communities. We use documents and readings to understand the multiple contributions of African Americans to science, literature, and music. Of major importance is the formation of slave communities, kinship networks, the rise of an African American religion, and various forms of resistance to slavery that included running away, daily forms of resistance, and actual slave revolts. We also discuss the rise of a special form of "slave politics" that shapes evolving notions of freedom. In addition to discussions of southern and northern slave society, we also look at the role of free blacks in the antebellum reform movements, especially the abolitionist movement. The course concludes with the coming of the Civil War and a discussion of the multiple ways that African Americans played a role in accelerating the road to war and in facilitating their own emancipation.

HIST 220 (GH;IL) (J ST 220) Global Diaspora and Exile (3) Introduction to and survey of the Jewish and other Diasporas around the world.

HIST (J ST) 220 The Jewish and Other Diasporas (3) (GH;IL)

The long dominant view that the Jewish experience since antiquity defines Diaspora as a concept has been challenged in recent years. The meaning of the term Diaspora and related terms, especially (ethnic and/or national) identity and (ethnic and/or national) community, is a matter of much debate across disciplines. The longevity and diversity of distinct Jewish communities around the globe make the Jewish case a particularly interesting subject for study. In a wide geographical, chronological and disciplinary comparative sweep, the course will explore the diverse nature of ethno-national and ethno-religious diasporas (and sub-diasporas), their position vis-à-vis their place of origin (“homeland”) and their new surrounding culture and society. More specifically, the course will analyze how Diaspora communities in Europe, Asia, and the Atlantic world reconstituted their identities as they expanded into new environments and encountered other cultures, from antiquity to the present. Emphasis will be placed on exploration of the intersection of politics and culture in respect to race, nationality, ethnicity, gender and class. A key question guiding the discussions will relate to the usefulness and limitations of the Diaspora concept, especially in regard to the discourse about globalization where the term is often used.

The course will begin with an extensive discussion of theoretical texts about the Diaspora phenomenon. This is followed by case studies of several larger Diasporas, ranging from the Jewish, the Greek to the Chinese Diaspora. Several case studies, notably the Muslim Diaspora, the concept of a victim Diaspora, or alternative Diasporas highlight the limitations of the Diaspora concept.

The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists. The course includes a one-day field trip to the Lower Eastside in New York (visit of the Museum of Chinese in America, walking tour of the Lower Eastside to explore the history of a key American immigrant neighborhood).

HIST 235 (US;IL) (J ST 235, RL ST 235) The Church and the Jews (3) Examination of the relationship between Western church and the Jews from the First Century to Enlightenment.

HIST 235 The Church and the Jews (3) (US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews.

The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts.

Students will be evaluated on the basis of three quizzes and a final exam.

The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity).

The course will count for 3 credits toward a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits

HIST 250 (GH;IL) (AF AM 250) Introduction to the Modern Caribbean (3) A survey course which explores the historical evolution and emergence of the modern Caribbean.

HIST (AAA S) 250 Introduction to the Modern Caribbean (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the evolution of the Caribbean region from the eve of the arrival of Columbus to the 20th century. It will explore the emergence, migration, and evolution of Amerindian societies in the Caribbean islands prior to the arrival of Columbus. It will then explore the European-Amerindian interactions that lead to the disappearance of these indigenous peoples from the region and the consolidation of European colonial empires. The course will then explore the various forms of coercive labor systems that emerged in the region including indentureship, enslavement, transportation of European prisoners and other social outcasts, African slavery, and the establishment of the plantation system that defined the region until the 20th century using both free and unfree labor to maintain its dominance in these island societies until the late 20th century. The course will also cover the issue of slave resistance, the Haitian revolution, the formation of maroon communities, and the role of abolitionist politics as a factor in bringing an end to slavery. It will also look at the re-emergence of indentureship of Asians as a response to the crisis of labor and the growth of peasant agriculture in the 19th century Caribbean. The course will also explore the emergence of nationalist sentiment in the region, especially the way in which the decay of Spanish colonial authority and the rise of American imperial ambitions helped to set the stage for the nationalist awakening that defined the course of the 20th century in the region. This is the course that will complement and expand upon issues raised in AAA S/HIST 211 - The Emergence and Evolution of the Black Diaspora in the Atlantic World. It will also serve as an introduction to the 400-level course on the Caribbean in the 20th century that will be proposed simultaneously. The course will be required for students interested in pursuing the African Diaspora minor. It may be used as a course to meet non-Western history requirements in the History major. Evaluation will be based upon a book review, a mid-term, a research paper, and class discussion/participation.

HIST 261Y (GH;US;IL) (J ST 261Y) Ghetto: From Venice to Detroit (3) This course explores why certain groups have been segregated in cities around the world in the last 500 years.

HIST (J ST) 261Y Ghetto: From Venice to Detroit (3) (GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines the history of segregated and demarcated districts for certain groups of people within cities (and metropolitan regions) in the last five hundred years in different parts of the world. The course identifies factors that led to the establishment of segregated (and often demarcated) districts – and their eventual dissolution (or transformation). The course traces the social and political impact of exclusion within the segregated district, the possibilities of making contacts beyond the district, the function of innovation and cultural production emanating from these urban areas, and the conceptual trajectory of the Ghetto concept from Renaissance Venice to post-industrial Detroit.

Cities and states have allowed certain groups to settle within their confines for economic benefit but have imposed severe restrictions to safeguard the respective city’s and/or the state’s cultural, political, and “racial” integrity. The course will present several representative case studies of segregated and demarcated districts in European, North American, Asian and African cities, highlighting strikingly different trajectories and purposes behind the spatial segregation of people categorized as different and threatening but also as useful. Comparing the case studies will lead to a discussion about the transformation of the Ghetto concept between 1517 and the present.

Following a discussion of the Ghetto concept and an overview of urban history since 1500 we will study Jewish Ghettos in early and late Renaissance Italy and Central Europe. For comparison we will discuss the history of Dutch and Portuguese trade colonies in Japan around 1600. The second part of the course will focus on Jewish and other immigrant neighborhoods in late 19th century New York and Chicago. Before moving to the origins of the 20th century “Black Ghetto” (Chicag, Detroit) four related cases will be discussed: Chinatowns in the United States; residential segregation in colonial cities in South and East Asia, Nazi Ghettos in Poland and the Soviet Union; and townships in South Africa during
HIST 266Y (GH;US) (WMNST 266Y) Sex and Violence in Nineteenth-Century America (3) Historical Overview of Sex and Violence in the Nineteenth-Century United States.

HIST (WMNST) 266Y Sex and Violence in Nineteenth-Century America (3) (GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

"Sex and Violence in Nineteenth-Century America" is an introductory course in the social and cultural history of the United States designed to reveal the importance of the past to the present by showing how two basic human activities have changed over time in both ideology and practice. Both sex and violence are incredibly broad topics; this class will not provide a comprehensive overview. Rather we will focus on a few intriguing topics, including courtship, prostitution, the early popular culture of sports, slavery, military violence including the Civil War, exploitative journalism, and sex and violence as metaphor. We will also examine the “creation” of homosexuality in the nineteenth century, and manner in which masculinity has been historically constructed. The main purposes of the course are to introduce students to some major issues in nineteenth-century social and cultural history, and to acquaint students with “historical method,” those techniques historians use to research and interpret the past.

*(BA)* This course meets the Bachelor of Arts degree requirements.
The principal aim of the course is to assist in training History Majors in writing, analysis, and criticism by pursuing the study of one historical topic in detail. The precise contents of the course may vary in accordance with the teaching and research interests of the instructors. The course is not a conventional lecture course. It is, instead, designed in the seminar format with emphasis on discussion, sequential writing assignments, and further developing the core skills of the historian. Several features reflect its writing intensive designation. The course requires a series of writing exercises (with on-going instructor feedback), attention to relevant methods of research, all leading to the production of a final seminar paper. The final paper should effectively advance a reasoned argument derived from multiple sources (a portion of which must be primary sources when the historical topic permits).

HIST 407 (IL) Early Medieval Society (3) Rise of European nations and evolution of their social and political institutions from the time of Constantine to the Crusades.

Early Medieval Society (3)
HIST 408 (IL) Church and State in the High Middle Ages (3) European political, institutional, and social history in light of church-state tensions from the Crusades to the Renaissance.

Church and State in the High Middle Ages (3)

HIST 409Y (IL) (J ST 409Y, RL ST 407Y) Antisemitisms (3) Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present.

HIST (J ST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)

BA This course meets the Bachelor of Arts degree requirements.

This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case—is there a single universal, eternal antisemitism? Or are there rather “anti-Semitisms”, each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates?

We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire’s essays, German philosophical texts from Kant to Marx, Wagner’s racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher.

The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

HIST 410 Jews in the Medieval World (3)

This course meets the Bachelor of Arts degree requirements.

The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students’ skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression.

Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam.
The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258).

The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HIST 411 (IL) (MEDVL 411) Medieval Britain (3) Political, cultural, and economic history of Britain from circa 400 to 1485 with an emphasis on the kingdom of England.

HIST 422 (GH;IL) (RL ST 422) Religion and American Culture (3 per semester/maximum of 6) Selected topics, problems, or historical movements in American religion. Relation between religion and American culture.

HIST (RL ST) 422 Religion and American Culture (3 per semester/maximum of 6)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines various aspects of U.S. cultures and religious experiences. Different faculty who offer the course select specific topics or avenues of approach to reflect the multicultural reality of the American experience. In this instance, the course examines one of the main issues that determine American Religion and Culture is the American Constitution's First Amendment that has traditionally been understood both to prevent an "establishment" of religion in the United States while protecting religious liberty. More recently, however, the history of the tension between these two "rights" principles has changed. With the rise of the 20th century civil rights movement and the interest in "human rights" in general, historians, legal scholars, and others increasingly point to potential conflict between the right of full citizenship and equal legal standing of citizens on the one hand, and the accommodation of religious conscience when a group or individual claims a right to be exempt from contemporary understandings of equal rights that conflict with religious conviction. This course traces the history of religion's move from establishment to toleration, to religious liberty, and now, religion accommodation in an age of civil rights.

HIST 424H (J ST 424, RL ST 424H) Monotheism and the Birth of the West (3) The birth of monotheism and its relation to social organization, the idea of individuality, and science.

HIST (J ST/RL ST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Learn about the formation of Western culture while learning to analyze the texts and other evidence about its formation from a critical rather than naive viewpoint. The idea of monotheism probably arose very early, and was even briefly
implemented as a state cultic policy in Egypt in the 14th century BCE. Why then did it take another seven centuries to become widespread—appearing in ancient Judah, Babylon and Ionia almost simultaneously? To answer this question, the course focuses on several developments through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to re-invent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in ANTH/CAMS 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the student experience in CAMS 400, CAMS 440, CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, and Religious Studies and toward the minor in Jewish Studies and Religious Studies.

HIST 426 (IL) (HIST 426) Holocaust (3) This course is an in-depth study of the history of the Holocaust in Europe that puts special emphasis on primary sources.

HIST (J ST) 426 Holocaust (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The Holocaust stands out as the most terrible and challenging phenomenon of the 20th Century. Societies and the scholarship struggled for decades to fully grasp how much the Holocaust has questioned widely shared assumptions about modernity and progress. This course pursues the overarching question how the Holocaust could have taken place. Who were the perpetrators, victims and bystanders? How much agency did they have? How was the Holocaust organized? The course will encourage students to critically engage with the Holocaust, and will consider a variety of different kinds of sources and means of representation, including oral testimony, film and fiction, as well as more conventional documentation.

After discussing some of the most important studies about the Holocaust and identifying the main historiographical debates, students will look at the origins and the evolution of the "Final Solution." The class will touch on the function of the “Ghettos,” the role of the mobile killing units, the extermination camps, and Jewish resistance. The course will also deal with Jewish responses to the Holocaust, notably with attempts to enable Jews to emigrate to safe countries; with efforts to alert the public to the systematic killing after 1940; and the support especially of American Jews for Jewish survivors and DPs. Apart from discussing the historiography, students will work mostly with primary sources. Students are expected to do extensive reading for this class and prepare oral presentations on their respective paper topic. The research paper for this course will be based largely on primary sources.

Apart from discussing the historiography, the sessions will concentrate on the interpretation of primary sources:
- documents created by the perpetrators, bystanders, and victims;
- files relating to postwar trials of perpetrators;
- photographs;
- representations of objects relating to the Holocaust;
- memoirs by survivors;
- interviews with survivors and bystanders.

HIST 431 (US;IL) (AF AM 431) Black Liberation and American Foreign Policy (3) This course deals with American foreign policy and Black liberation in Africa since 1945.

Black Liberation and American Foreign Policy in Africa since 1945 presents an interdisciplinary approach to the study of American foreign policy in Africa. Course readings will consist of both secondary and primary sources to explore the evolution of American policy toward the continent over the last half-century, and the meaning of the American engagement with Africa for American politics and society.

The course will also examine the reasons that Africa has served as a focus of concern among African Americans both prior to, and, over the period 1945 to the present. Of particular concern will be the ways in which American policy has reflected pressures from African Americans as a constituency in foreign policy.

The focus of the course will be student-centered written research and discussion. Students will be required to select topics from the course outline for presentation in class with the instructor serving as the moderator of discussion and guide to relevant research materials. Students will be encouraged to use both primary and secondary sources for their research. Students will be expected to prepare two individual written presentations which will serve as the basis for class discussion (30% of the grade), a book review (10% of the grade), and a research paper of 15 pages (40% of the grade) on a topic drawn from the areas identified in the course outline. The final 20% of the grade will be awarded for participation in class discussion.

HIST 432 (IL) Between Nation and Empire: The Caribbean in the 20th Century (3) An exploration of the political evolution of the Caribbean Region over the course of the 20th Century.

HIST (AAA S) 432 Between Nation and Empire: The Caribbean in the 20th Century (3)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the political evolution of the Caribbean Region over the course of the 20th century. Its focus will be on the ways in which imperial rule and the search for national identity have been the parameters that have shaped Caribbean political history over that period. Students will explore, in written assignments and class presentations, the ways in which the region which has historically been a theatre of confrontation among the major powers in the international system continued to serve that role over the course of the 20th century. The costs that have been borne by the people of the region from these conflicts have been enormous and crippling for several societies, especially Haiti, Cuba, Jamaica, and the Dominican Republic. Among those costs have also been the continued dependence of these societies upon human migration, limited economic strategies of transformation, increasing levels of poverty, and the emergence of a wide variety of political systems that reflect different historical experiences, demographic diversity, varying levels of political autonomy, and a remarkable level of cultural similarities. Evaluation will be based upon two class presentations; one research paper and class participation. The course will be required for students pursuing the African Diaspora minor and for those seeking to broaden their diversity requirements. It can be used to meet non-Western history requirements in the History major.

**HIST 439 (J ST/WMNST) 439 Women and the Holocaust (3)** Analysis of women’s experience in the Holocaust and exploration of the role of gender in Holocaust Studies.

**HIST (J ST/WMNST) 439 Women and the Holocaust (3)**

Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust.

The first question motivating this class is thus what we can learn from examining women’s experiences. Is it possible that the ghetto, the camp, and the forest look different from women’s perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events?

Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

In addition to working intensively on secondary sources from a variety of disciplines in our weekly discussions, students will have the opportunity to apply their insights and methods to the study of primary texts in three papers.

HIST 447 (US) (AM ST 447) Recent American History (3) Contemporary economic, social, and political aspects of the United States and its role as a world power since 1945.

This course covers the history of the United States from the end of World War II to the present. Topics include but are not limited to the Marshall Plan, the Cold War, the Korean War, the rise of television, atomic power, the Eisenhower presidency, the Civil Rights and Women's Movements, the Vietnam War and protests, the space race, Watergate, the Reagan presidency, the two Iraq Wars, the Dot-com revolution, 9-11 and the War on Terror, and the Obama presidency. While addressing major historical movements, the course will also explore the culture of the period — art, literature, music, sports, television, religion, and film. Even though the course covers a relatively short span of years, students will see that American society has undergone dramatic changes in this period as the result of social movements, immigration, wars, political scandal, and technological innovation. The course will close by speculating on the current direction of the United States in light of the serious challenges the nation faces.

HIST 451 The Consumer Revolution (3)

(US)

(BA) This course meets the Bachelor of Arts degree requirements.

This lecture course shows how the United States became a nation of consumers from 1870 to the present. It is designed both for the business and communications student as well as the liberal arts major. The origins of department stores, name-brand goods, fast-food chains, modern advertising, and mass entertainment show us how American business and
culture was transformed by the consumer revolution. We will explore how the automobile became the leading consumer good of the 20th century and analyze its impact on how Americans shopped. The rise of advertising and its linkage to home-based mass entertainment through the radio and TV will interest us. We will also consider how events like the Great Depression, World War II, the counter-cultural movement of the 1960s, the energy crisis of the 1970s, and the economic deregulation of the 1980s and 90s shaped consumer attitudes and advertising. "The Consumer Revolution" also briefly explains how American consumer culture has been globalized (with companies like Coca Cola, Disney, and Ford).

The course also explores how new consumer goods shaped the experience of childhood, youth, family and home life, and retirement. In particular, we will consider how youth-oriented goods in fashion, foods, and entertainment created a unique youth consumer culture. Also important are the intellectual debates about the meaning and value of consumer society: Is mass consumption the real meaning of American democracy or is it a perversion of it? Are consumer needs unlimited and where does the desire for goods come from? Because consumer society seemed to threaten so many traditional values, we will also analyze movements for restricting consumption. We will consider the origins and impact of Prohibition, dieting and health food crazes, and movements to restrict advertising and sale of goods like cigarettes.

In addition to lectures and visual presentations in class, students will read chapters from major studies of the above topics, some of which will be discussed in class. Grades will be based on performance in discussion and essay exams.

HIST 463 (US) American Thought to 1865 (3) Introduction to, scholarly commentary on, major documents of American Intellectual history, early colonial period to end of the Civil War.

(BA) This course meets the Bachelor of Arts degree requirements.

To offer such a course without some treatment of race, class, and gender diversity would be undesirable indeed, irresponsible. The movements for the abolition of slavery, for women's rights, and for the rights of workers will receive prominent and necessary attention. The history department does not, however, seek to invade the territories of programs and/or departments that are primarily concerned with women and racial or ethnic minorities. This course will cover such material in ways specifically appropriate to the contacts with American-Indian, Asian-American, African-American and Spanish-speaking populations.

This course will focus on documents produced by men and women of various class and ethnic backgrounds who are assumed to have participated actively in the American intellectual tradition. Discussions of the ideas and publications of well-educated individuals will to some extent dominate the content of the proposed course. Thus, for obvious reasons, it must address the historical importance of documents such as Thomas Jefferson's Notes on the State of Virginia, and Harriet Beecher Stowe's Uncle Tom's Cabin. These documents are of unquestionable importance to American intellectual history, but due to constraints of time, it is not always possible to discuss their historical importance as cultural documents in the existing American history courses. A highly literate African-American essayist like Francis Ellen Watkins

The Pennsylvania State University
Harper is also an obvious candidate for inclusion in this course. A less educated person like Anna Murray Douglass, although she was an important and interesting figure, whose life and values merit serious reflection, could hardly have left behind a body of writings. Francis Harper, on the other hand, commented significantly on the ideological movements of her time. The course is deliberately biased in favor of highly literate historical figures, who interacted with the traditions of American thought and writing.

An example of evaluation methods would be: Students will be expected to write a mid-semester and a final examination, and to prepare a written paper outside of class. Graduate students will be expected to draft a potentially publishable article, which may be archival, historiographical, or interpretive.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HIST 464 (US) American Thought from 1865 (3) Introduction to, scholarly commentary on, major documents of American Intellectual history from end of the Civil War to the present.

HIST 464 American Thought from 1865
(HA) This course meets the Bachelor of Arts degree requirements.

HIST 464 is intended to fill several needs. First, to introduce advanced undergraduates and beginning graduate students to documents of American thought of the sort collected by David A. Hollinger and Charles Capper in the American Intellectual Tradition (New York: Oxford University Press, 1989). Second, to offer a systematic survey of a standard area of American history that students might wish to approach as a coherent field. Third, to provide students with exposure to the bibliography and the historiography of American intellectual history as an established sub-field of American history. It is intended that either semester of the course may be elected independently of the other.

An example of evaluation methods would be: Students will be expected to write a mid-semester and a final examination, and to prepare a written paper outside of class. Graduate students will be expected to draft a potentially publishable article, which may be archival, historiographical, or interpretive.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HIST 465 (US) (AF AM 465) The Post-World War II Civil Rights Movement (3) The civil rights struggle and its impact upon American politics.

HIST (AF AM) 465 The Post-World War II Civil Rights Movement (3)
(US)

This course focuses on the post-World War II Civil Rights Movement. It begins with a discussion of the “Long Civil Rights Movement,” briefly looking at the roots of the movement in the labor movement and social struggles of the Great Depression and World War II. We then turn to the impact of World War II on African Americans, the growing militancy during the war, the struggles over segregation in the military, the growing role of blacks in the labor movement, and the growing link between African Americans and the rising anti-imperial movements that accelerated after the war. We discuss the role of African Americans in the Cold War and the struggles over the role of Communism and Socialism in the emerging Civil Rights Movement. The course is broken down into key topics of the movement years: the rise of localized grassroots movements all over the United States that were led by local people who sought to challenge school segregation, political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement and segregation existed solely in the southern states, the entire country practiced both and black people suffered the consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian Leadership Conference; and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker, Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the 1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers; the 1965 Selma to Montgomery March, and the final passage of the 1964 Civil Rights Act and the 1965 Voting Rights Act. The emphasis on the post-World War II struggle is on the local, ordinary people who achieved extraordinary things.
HIST 466 (US;IL) (WMNST 466) Lesbian and Gay History (3) Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities.

(HIST (WMNST) 466 Lesbian and Gay History (3) (US;IL))

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the relationships in different cultures and historical periods between the dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the “homosexual” helped establish not simply difference but “normalcy” in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States.

An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper. This course will fulfill a requirement for 400-level courses in both History and Women's Studies majors.

HIST 467 (US;IL) (LTNST 467) Latin America and the United States (3) Historical development of policies of the United States with regard to Latin-American affairs from colonial times to the present.

Latin America and the United States (3)

HIST 468 (IL) Mexico and the Caribbean Nations in the Twentieth Century (3) Political, economic, and social development in Mexico and the Caribbean since 1900. Emphasis on Mexican, Guatemalan, and Cuban revolutions.

Mexico and the Caribbean Nations in the Twentieth Century (3)

HIST 469 (CRIMJ 469) Drugs and Drug Policy in the United States (3) Examines the history and dimensions of drug use and analyzes the impact of drug policy.

HIST (CRIMJ) 469 Drugs and Drug Policy in the United States (3)

For nearly a century, the United States has been waging its version of a hundred years’ war on drugs, spending billions of dollars and incarcerating thousands of offenders while failing to significantly reduce the use of illicit drugs. This course examines drug use in a historical context while addressing the changing nature and dimension of drug use, including the pharmacology of drugs, patterns of drug use, and sentencing policies. Because drug control is inextricably linked to social, political, and public policy, the course will provide the student with a foundation for critical thinking and rational decision making relative to the efficacy of the various drug control initiatives. Since drugs seemingly permeate every level of American society and directly or tangentially touch most Americans’ lives, issues such as drug testing in the workplace, the use of drug courier profiles, legalized medical marijuana, and needle exchange programs are evaluated. Students will
be expected to learn the pharmacology of various drugs, the history of drug use in the United States since the colonial era, the evolution of federal drug agencies, and acquire knowledge about contemporary drug issues. They also will be expected to develop and strengthen their critical thinking skills as they assess the consequences of implementing particular anti-drug policies and their impact on reducing the use of illicit drug use. An example of the evaluation methods would be: students will be evaluated on the basis of three exams and four "think pieces" (requiring students' critical responses to an assigned topic) scheduled throughout the semester. Class attendance also will influence the grade.

HIST 474 (JAPNS 426, ASIA 474) Early Modern Japan (3) Japanese history from 1580-1880.

HIST 474 (ASIA 474, JAPNS 426) Early Modern Japan (3)

Japan's Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national...
identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insomuch as possible, on its own terms.

Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students' knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

**HIST 475Y (IL) (ASIA 475Y) The Making and Emergence of Modern India (3)**

India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle.

- **Prerequisite:** HIST 172HIST 174JAPNS 120 orJAPNS 121

**HIST (ASIA) 476 Technology & Society in Modern Asia (3)**

This course meets the Bachelor of Arts degree requirements.

This course covers India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. It begins during the early modern period, when European travelers encountered the flourishing Mughal Empire, and moves into the dynamic moment following, when the East India Company was one of various competing forces, both locally and globally. It then examines the rise of British power, and the various responses to it from collaboration to mutiny; the multiple development of nationalisms and anticolonialisms, including secular, socialist, Hindu and Muslim variations; the accompanying social reform visions, including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration. This course raises important questions about the nature of modernity and its relationship to global interconnectedness, the rise of capitalism and colonialism, industry and technology; while emphasizing South Asian social and cultural contributions and responses to these global shifts. By filling in the context of this part of the world to that global story, the course enables students to grapple with some of the major economic and geopolitical trends of the early 21st century.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HIST 476 (IL) (ASIA 476) Technology & Society in Modern Asia (3)**

Role of technology in modernization, national identity, and foreign relations of an Asian country from 19th century to present day.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HIST (ASIA) 476 Technology & Society in Modern Asia (3)**

( IL)

( BA) This course meets the Bachelor of Arts degree requirements.

The countries of Asia are often seen (or imagined) in the West today in terms of their technological capabilities. This course will examine the role of technology in modernization, national identities, and foreign relations of one or more countries of East, South, or Southeast Asia from the mid-19th century to the present day. Specific content will vary according to individual instructor, but topics may include the relationship between technological development and international relations, national power, leisure, domestic political and aesthetic movements, war, empire, and trade, as well as the impact of technology on interconnected images of self and other on the part of the peoples of Western and Asian countries.

The objectives of the course are not only to learn about the role of technology in modern East Asia, but also to encourage us to rethink the way we view other countries and the factors that go into those perceptions (as well as developing a new way of understanding of what contributes to the views other peoples hold of their own countries). Students will also consider the changing role that technology has played (and continues to play) in all modern societies.

HIST 479 (IL) History of Imperialism and Nationalism in Africa (3) Theories and types of imperialism; varied patterns of colonial administration; initial African responses; nationalism; decolonization and independence.

HIST (ASIA) 480 Japan in the Age of Warriors (3) An overview of Japan the 10th to 17th century, a period of political decentralization, cultural efflorscence, and social change.

By the eighth century, Japan had become a centralized state centered on the reign of a sovereign, commonly known in English as an emperor. At the end of the ninth century, the emperor's court relocated to the city of Heian (Kyoto), and soon thereafter, an elegant court culture developed in the capital. The courtly culture was based on civilian values and civilian rule. In the countryside, however, Japan was gradually becoming militarized. Local warlords began rising to prominence and vying with each other for power. One of them, Taira-no-Masakado, rebelled against the central government during the years 939-940, declaring himself "emperor" of several provinces in eastern Japan centered on Hitachi. Although the central government in Kyoto enlisted other warrior groups to put down Taira-no-Masakado's rebellion, the process of militarization was underway. Buddhist temples also participated in this process, using their wealth and influence to assemble monastic armies on occasion.

This course examines Japanese history beginning approximately in the 10th century, at time when civilian high culture in the capital was approaching the height of its development. At the same time, the process of militarization of the countryside was beginning to undermine that civilian court culture. The course ends in approximately the seventeenth century with the establishment of a military government under the Tokugawa shoguns. This development was ostensibly the peak of warrior influence, with the samurai (=warrior) class entrenched by law as the elite group within society. However, just as the warriors began their rise to power in the tenth century, by the end of the seventeenth century they were rapidly losing influence and prestige to wealthy merchants as the forces of the market economy spread throughout Japanese society.
HIST 480 is a course in medieval Japanese history, broadly defined. Different instructors will emphasize different aspects of Japanese history and culture during this era. Approaches to teaching will also vary depending on the instructor. Class sessions can take the form of lectures or discussions. Assessment methods and learning activities may include debates, discussions, exams, research papers, book review papers, and other similar academic activities.

HIST 481 (IL) (ASIA 481) Modern Japan Since 1800 (3) The transformation of Japan from a relatively isolated, agricultural nation into a highly industrialized world power.

HIST (ASIA) 481 Modern Japan Since 1800 (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

In the late 19th century, Japan emerged from relative seclusion and grew, within the period of a few decades, into one of the world’s major powers. Japan’s remarkable transformation into an imperialist power ended suddenly with defeat by the Allied powers in August 1945. But the history of prewar and wartime Japanese nation-building and economic growth set the stage for postwar rebuilding. This course examines Japan’s development as a powerful modern state, imperialist aggressor, defeated nation, economic power-house, and pop culture super-power. Specific content will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government’s program of rapid modernization and Westernization, imperialist expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945–1952), Japan’s resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

HIST 482 (CHNS 424, ASIA 482) Confucius and the Great Books of Early China (3) This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China.

HIST 482 (ASIA 482, CHNS 424) Confucius and the Great Books of Early China (3)

This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period. As the first part of a two-semester series of courses (HIST 484), it provides an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as “(Confucian) ritualists,” “statesmen,” “military strategists,” “rebels,” “recluses,” and “spiritual leaders.” Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

HIST 483 (IL) (ASIA 483) Middle China (3) The social, political, and cultural issues and developments from the 8th to 16th
HIST (ASIA) 483 Middle China (3)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This advanced discussion-based course covers the social, political, and cultural issues and developments in Chinese history from roughly the eighth century through the sixteenth century. Specific content will vary according to instructor. Students will gain a strong foundation in Chinese history and culture and experience analyzing historical texts.

General Education: None
Diversity: IL
Bachelor of Arts: Other Cultures and Humanities
Effective: Spring 2015
Prerequisite: HIST 174

HIST 484Y (IL) (ASIA 484Y) History of Chinese Thought (3) A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present.

HIST (ASIA) 484Y History of Chinese Thought (3)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing China’s philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular “Orientalist” myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

HIST 485Y (IL) (ASIA 485Y) China’s Last Empire: The Qing Dynasty, 1644-1911 (3) China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China’s internal diversity.

HIST (ASIA) 485Y China’s Last Empire: The Qing Dynasty, 1644-1911 (3)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as “Chinese” but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of china starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynastic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of Western colonialism on China. Considerable time will also be focused on China’s ethnic, religious and cultural differences in order to allow a deeper understanding of major issues and themes in late imperial Chinese history. Finally, the theme of China’s international relations in Asia and the world and China’s shifting place in the world will be a prominent thread of the course. Through a blend of primary and secondary sources, students in this class will need to think critically, read broadly and express their ideas clearly regarding the evolving challenges facing China’s last empire.

**HIST (ASIA) 486 China in Revolution (3) (IL)**

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines the social and cultural history of modern China from 1900 to the present. Major topics may include the formation of a modern national state, relationships between society and government, economic development and environmental crises, changes in kinship and family life, and changing relationships between elite and popular culture. The course uses excerpts from primary documents, fiction, and film to help students understand the modern Chinese historical experience.

**HIST 489** (IL) (PL SC 486, ASIA 489) International Culture in East Asia (3) Study of the role of culture in East Asian regional and East-West international relations.

**HIST 489 (IL) (PL SC 486/ASIA 489) International Culture in East Asia (3) (IL)**

(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine the place of culture in international history through a comparative look at the role of cultural circulation and exchange in relations among China, Korea, and Japan (and between East Asia and the West) from the propagation of Buddhism in the first century A.D. to present-day circulation of popular music, movies, and comics. We will explore the international politics of culture and the politics of international culture, considering questions of what constitutes culture, whether it is ever entirely separate from politics, and how that separation has evolved over time. These larger themes of the course will be tackled by following the historical movement of concrete objects and people throughout the region. This is a course in international history; historical events, problems, and issues will be at the center of our weekly discussions. But it also seeks to explore aspects of international relations. This course is intended to examine the role of cultural exchange in international relations. The goals of the class are not only to gain an understanding of the uses and impact of culture in international relations, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.
This course is designed to respond to strong student interest in East Asian international history. This course will complement and extend popular survey and upper-level courses such as HIST 172/174/175/480/481/483/484/485/486.

**HIST (ASIA) 493 Japan in the World (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine Japan’s foreign relations and changing position in the international community, from the rethinking of relations with the Western world in the early nineteenth century to its emergence as a pop culture superpower in the present day. The course will explore the structures of international relations, such as imperialism and international organizations, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. We will also consider the development of alternative methods of diplomacy, including cultural exchange and economic and technical assistance. Class work may include some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations.

HONOR 301H The Role of Knowledge in Society (3) Honors interdisciplinary study of topics utilizing contributions from science/engineering, business, public policy, behavioral sciences/education, and the humanities.

HONOR 301H The Role of Knowledge in Society (3)

This course is designed as an honors interdisciplinary study course composed of topics utilizing contributions from science/engineering, business, public policy, behavioral sciences/education, and the humanities.
HONOR 401H Honors Seminar (3 per semester/maximum of 6)
Students will accomplish in-depth honors-level exploration of a topic or theme at the 400-level that crosses disciplinary boundaries. This course may be repeated for credit.

HONOR 493H Honors Service Learning (1-3 per semester/maximum of 6)
Students will have a supervised honors experience doing service, service learning, and/or public scholarship dedicated to improving campus or community welfare and then analyzing the related issues through structured reflection.

HONOR 494M Interdisciplinary Writing and Thesis Formulation (2)
This course is a seminar to help students understand various approaches to interdisciplinary analysis. The course helps students learn about writing as an interpretive process. The course helps students with the formulation of their honors thesis projects and proposals.

HONOR 495H Research Studies (1)
A capstone seminar for honors students working on honors theses and projects to work together and learn about their research interests.
HONOR 496H Honors Thesis (3)
Research, creative activities, and writing necessary for pursuit and completion of an interdisciplinary honors thesis.

HONOR 496H Honors Thesis (3)
Students will learn research, creative activities, and writing techniques necessary for the pursuit and completion of an interdisciplinary honors thesis or honors research project.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010
Prerequisite: HONOR 301H senior standing and enrollment in an honors program belonging to the Penn State Honors Consortium

Horticulture (HORT)

HORT 101 (GN) Horticultural Science (3) Introduction to horticulture with emphasis on plant domestication, morphology, classification, world food crops, commodities, gardens, propagation, and agrochemicals.

HORT 101 Horticultural Science (3) (GN)
(BA) This course meets the Bachelor of Arts degree requirements.

The course content of Horticulture 101, as indicated in the complete course outline, deals with the fundamental concepts and specialty areas, which contribute not only to the science and technology involved in horticulture but also to the art. It provides an overview of the role of various specialties of the natural sciences (e.g. plant morphology, physiology, taxonomy, genetics and nutrition, pest management, management and production of crops, landscaping and technology) relevant to a range of plant uses from medicinals and food production to the aesthetic benefits derived from plants. The course begins with the origin and domestication of plants followed by: A. An Overview of horticulture which includes an explanation of the horticulture industry, how to achieve success in horticulture and the relationship between horticulture and the environment; B. Science in horticulture which includes the classification of plants, plant propagation, plant nutrition, environmental factors affecting plant growth and development, plant growth regulators, post harvest physiology and pest management; C. Management and production of horticultural crops which include nursery, floral, turfgrass, vegetable, fruit and nuts; D. Landscaping including designing landscapes, xeroscapes and sitescapes, establishing and maintaining landscapes; and E. Concluding with Technology in horticulture. The course content additionally includes major areas of knowledge based on the fundamentals, universal concepts and achievements in the cluster of scientific disciplines comprising horticulture and provides students with the opportunity to appreciate that the origins, domestication and production of cultivated plants are the essence of human existence.

HORT 131 Herbaceous Perennial and Annual Identification (3) Herbaceous and annual plant identification; landscape use of herbaceous perennials and greenhouse and garden annuals.

Herbaceous Perennial and Annual Identification (3)
HORT 137 Ornamental Plant Materials (3) Identification and description under fall conditions; discussion of cultural and aesthetic aspects of trees of value in ornamental planting.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 138 Ornamental Plant Materials (3) Identification and description under spring conditions; discussion of cultural and aesthetic aspects of shrubs of value in ornamental plantings.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 150 (GN) Plants in the Human Context (3) An introduction to the many fascinating and vital relationships between plants and human society.

The objective of this course is to expose students to the pervasiveness and essentiality of plants in the human experience. Major topics include 1) human civilization as influenced by plants, 2) a history of food from plants, 3) chemicals from plants, 4) non-food plant uses, 5) current issues in plant production, and 6) current botanical issues of global concern. Specific topics range from botanical pharmaceuticals to global warming/use of biofuels, and from culture-specific rotten foods to genetically-modified plants. Students will be exposed to many basic concepts of plant ecology, ecosystem science, emerging technologies, and the criteria used to evaluate sources of scientific information as a natural consequence of studying the range of topics included in the course. Students completing the course will therefore be in an excellent position to intelligently select from the many botanically- and ecologically-oriented majors, minors and options available to them at Penn State. The format of the course consists primarily of lecture/discussions, and includes one team assignment (making a poster) and three individual projects (one page arguments) in addition to a midterm and a final exam. Student evaluations are based on individual exam scores (50%) and on team (20%) and individual (30%) projects.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 201 Applied Arboriculture (2) Overview of methods used to diagnose problems and provide for the long term care of large trees.

The objective of this course is to provide students with the opportunity to develop an appreciation of the skills required to properly care for large trees. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major. The course will provide an overview of the methods used to diagnose problems and provide for the long term care of large trees. Areas of emphasis will include accessing the upper parts of large trees; safety when working in and around large trees; and the proper selection, use, and maintenance of the equipment used in the arboriculture profession. The course will be taught each Fall semester and will have an enrollment limit of 18. Students will be evaluated by quizzes, exams, and laboratory assignments.
HORT 202 Plant Propagation (3) Principles and practices of asexual and sexual plant propagation.

Plant Propagation (3)

Prerequisite: Students must be physically capable of safely handling a running chainsaw and pulling their weight up a rope.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 220 CAD Applications in Landscape Contracting (3) Application of computer-aided design software including AutoCAD and LANDCADD to landscape contracting.

CAD Applications in Landscape Contracting (3)

Prerequisite: BIOL 027BIOL 110 or HORT 101

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 232 Horticultural Systematics (3) Fundamentals of horticultural crop plant classification and systematics. Examples chosen from fruits and vegetables, exclusive of subtropical and tropical fruit.

Horticultural Systematics (3)

Prerequisite: HORT 101

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 233 (FD SC 233) The Science of Winemaking (3) Introduction to the principles of wine production emphasizing basic wine grape biology, fermentation science, wine chemistry, and wine perception.

The Science of Winemaking (3)

Prerequisite: CHEM 110 or BIOL 110

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 238 (TURF 238) Turf and Ornamental Weed Control (3) Students will be introduced to the development of integrated weed management strategies utilizing a variety of cultural and chemical methods.

Turf and Ornamental Weed Control (3)

Prerequisite: HORT 120

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HORT 250 Landscape Contracting Design/Build Principles (3) Introduction to the processes and principles of residential landscape site development, from initial client contact to implementation.
Landscape Contracting Design/Build Principles (3)

HORT 301 Principles of Arboriculture (3) Overview of the concepts and methods prescribed for the evaluation and care of
large trees in urban settings.

HORT (FOR) 301 Principles of Arboriculture (3)
The objective of the course is to introduce students to the theories and practices related to the care of trees in developed areas. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major, and the Urban Forestry option of the Forestry major. This course will provide an overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings. Emphasis will be placed on maintaining the long-term health of large trees. Major topic areas will include methods for characterization of tree health, diagnosing problems in trees, the influence of environmental factors on tree health, and the assessment of hazard trees. Proper pruning techniques and factors to consider when making decisions regarding long-term tree care in urban areas will be discussed. The course will be taught each spring semester. Students will be evaluated by quizzes, exams, and laboratory assignments.

HORT 402W Plant Nutrition (3) Mineral nutrition of higher plants, including nutrient acquisition, transport, metabolism, and practical implications.

The Pennsylvania State University
HORT 402W Plant Nutrition (3)

The course considers the mineral nutrition of higher plants from physiological, ecological, and agricultural perspectives. The first part of the course considers factors influencing the acquisition of mineral nutrients and their transport in the plant, including nutrient mobility in the soil, root biology, rhizosphere interactions, membrane transport, xylem, and phloem transport. Root symbioses and metabolic assimilation of N and S will also be discussed. The second part of the course gives an overview of mineral metabolism. The final third of the course illustrates the practical dimensions of plant nutrition. The diagnosis of nutritional disorders, nutrition, and yield, foliar fertilization, genetic aspects of plant nutrition, and nutrient cycling will be covered by lecture and laboratory exercises. Laboratory exercises demonstrate lecture topics and permit a "hands-on" involvement with the subject. Emphasis is placed on concepts and integrating principles rather than memorization of technical details.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2013

HORT 407 Plant Breeding (3)

The scientific principles and techniques of utilizing genetic variability in improving the heredity of plants for specific purposes.

HORT 407 Plant Breeding (3)

Horticulture 407 is a 3-credit course that is taught every spring semester and is required of horticulture undergraduate students at Penn State. This course also attracts upper-division and graduate students from other departments such as Agronomy, Biology, Forest Resources, Plant Pathology, Biochemistry, and Molecular Biology. The objectives of the course are to 1) develop an understanding of the role of genetics in plant breeding, 2) elucidate the diversity of plant characteristics which are subject to improvement, 3) review conventional and contemporary techniques for the development of new cultivars, and 4) present the opportunity for the student to effectively communicate scientific information in writing and through speaking. Horticulture 407 emphasizes basic principles of plant genetics and breeding and the utilization of molecular biology techniques for crop improvement. It includes two-hours of lecture and a two-hour laboratory-discussion session each week. Major topics of discussion during lecture periods include plant reproduction, genetic variation in plants, review of mitosis and meiosis, Mendelian genetics, linkage, and recombination, qualitative and quantitative traits, population genetics, cytogenetics, theory of selection and response to selection, heritability, review of statistical tools useful in plant genetics and breeding, systems of pollination controls in plants including self-incompatibility and male sterility, breeding methods for self- and cross-fertilized plants, and application of modern technologies, including molecular markers, marker-assisted selection, and genetic transformation, to crop improvement. The laboratory sessions are designed to complement the lectures and provide opportunities for hands-on experience. For example, students practice staining and counting plant chromosomes on microscope slides, self- and cross-pollination of different plant species, linkage mapping and analysis of plants for Mendelian segregation, inoculating plants with fungal pathogens and observing and evaluating plants for disease development, extracting DNA from plant tissue and separating DNA segments on agarose medium using gel electrophoresis, and practicing computer programs for gene mapping and analysis of Quantitative Trait Loci (QTLs). Furthermore, students are mentored to prepare a term paper on a plant breeding/plant genetics subject and to orally present their findings to the class using visual aids.

Student evaluation is based on two mid-term exams (each 100 points), one comprehensive final exam (200 points), 10 weekly homework or laboratory reports (for a total of 100 points), and a term paper (50 points for writing and 50 points for presentation). For the presentation, each student is required to turn in a 3-5 page write-up about a topic of interest.

HORT 432 Deciduous Tree Fruits (3) Science, art, and techniques of regulated cropping; orchard designs and management systems.

This course will provide students with in-depth background about current modern orchard production practices. It emphasizes a hands-on approach with 13 three period laboratory exercises at the Horticulture Research Farms at Rock Springs. Physiology of tree growth, flowering, light management and precision crop load management principles will be covered in both discussions and exercises in the field. Two field trips will be part of the course: one will be to a local retail orchard operation during a regularly scheduled lab period. The second will occur on a Saturday to a commercial wholesale orchard in Bedford county. (An alternative assignment will be made available for those unable to make the trip.)

HORT 433 Vegetable Crops (3) Cultural requirements of important vegetable crops in conjunction with physiological processes and problems related to commercial production.

HORT 433 Vegetable Crops (3)
This course will provide students with information, techniques and ideas to produce vegetable crops on a commercial scale. Students learn production fundamentals applying to all vegetable crops including fertility management, transplant production, season extension, and pest management during the first part of the semester. This is followed by detailed and specific information for important vegetables on the science of producing high quality crops. Using a participatory approach students learn important techniques to successful production including experimenting on a small scale, designing a drip irrigation system, scouting for pests and developing a pest management strategy. Field trips to successful operations and outlets and the research farm are important elements of the class.

HORT 499H (IL) Walking in the Footsteps of the Irish During the Irish Potato Famine: Examinations of New World Crops in Old World Societies (2) Partnering with the Schreyer Global Honors Program (HORT 499H) is offered during Spring 2016. This will be a two credit interdisciplinary course introducing students to New World crops (i.e., species that were native to North and South America before 1492) including corn, beans, squash, cassava, sweet potatoes, tomatoes, peppers, cocoa (chocolate), vanilla, blueberries, cranberries, and pawpaw, along with coca (coca), quinine, and rubber. Students will learn about the environmental and cultural histories of each plant, along with current production methods. In addition, the course will explore how these crops ‘migrated’ to the Old World (i.e., Europe, Asia, Africa, and other places known to Europeans prior to 1942) and will discuss the impact of these migrations on global ecology, biodiversity, and human demographics.

HM 201 Introduction to Management in the Hospitality Industry (3) Introduction to the hospitality industry and hospitality management.

HM 201 Introduction to Management in the Hospitality Industry (3)

The objectives of this course are to provide an introduction to the hospitality industry, to management practices within the industry, and to the hospitality major. Students have an opportunity to learn about the functions of management; the major components of the hospitality, travel, and tourism industries; trade associations and publications; growth areas and trends; and the need for creative leadership. Main topics typically include: functions of management and functional areas of business segments of the hospitality industry, international business as related to hospitality, services business, the planning process and strategic planning, organization design in hospitality, directing and leading in hospitality, the control process in hospitality, travel and tourism industries hospitality, hotels and lodging, the restaurant business,
managed services, leisure and recreation/other hospitality opportunities, beverage management, and management ethics and social responsibility.

HM 202 Colloquium in Hospitality Management (1 per semester, maximum of 4) Major industry and professional speakers lecture on current issues followed by discussion with students and faculty.

HM 202 Colloquium in Hospitality Management (1)

This course has two primary objectives. First, students have an opportunity to hear from industry leaders. Second, students can determine their career directions, learn about the requirements for success in the industry, and identify career opportunities. The topics for the course vary from semester to semester depending upon the expertise of the distinguished speakers who address the class. However, a common theme is to explore trends in the industry regarding hotels, restaurants, and institutional foodservice. Students may learn about related career opportunities, such as careers with cruise lines, travel agencies, and other sectors in the hospitality and tourism industry.

HM 203 Hospitality Pre-Professional Development Seminar (1) Professional development preparation to help students obtain quality work experience.

HM 203 Hospitality Pre-Professional Development Seminar (1)

The purpose of this course is to provide students with professional development preparation early in the curriculum. This course will help students obtain quality work experience during their college career to best prepare them for post-graduate employment. In particular, this course is designed to prepare students for meeting the major’s work experience requirement. Meaningful work experience serves as a complement to classroom learning and provides the foundation for securing employment upon graduation. This course will help students understand the connection between college work experience and full-time careers and will impart strategies for conducting a successful job search and making the most out of these work opportunities. The class will include lectures, discussions, experiential exercises, guest lectures, and professional development assignments.

HM 204 Hotel and Restaurant Marketing and Merchandising (3)

Hospitality marketing and one of its major activities, merchandising, is concerned with motivating consumers to purchase industry products and services. The objective of this course is to introduce students to a systems approach to marketing management and its tools for marketing hospitality products and services. This course allows students the opportunity to identify societal trends that have shaped the current hospitality marketplace as well as to identify demographic, psychographic, and environmental factors that affect customer needs. Merchandising strategies are discussed as appropriate. Main topics include: principles of marketing, marketing orientation, and ethics in the marketing process; services marketing, product marketing, and hospitality marketing process; customer wants and customer needs and stages of buying; marketing research for hospitality services industry (situation analysis, market analysis, and feasibility analysis) primary and secondary market research, market segmentation, trends that influence services and shape the

HM 260 Hospitality Supervision Seminar (3) Hospitality management topics are discussed with a major emphasis on operations management. This course will not meet the prescribed requirements for the HM major in any option.

HM 260 Hospitality Supervision Seminar (3)

This course is an introduction to human resource management in the hospitality industry. The course examines the fundamentals of supervision that include planning, basic management functions, and customer relations and service. The overall course focus is on building relationships with diverse employees through communication, motivation, supervision and leadership. Additional topics covered include the human resource environment in hospitality operations, employee recruitment, selection, orientation, training, empowerment, performance appraisals and discipline, risk management, and labor organizations. An introductory supervision course is vital to the success of a hospitality student. It is important to explore this topic in relation to the labor trends in the United States. It is equally important to examine the current demographic and socio-economic conditions that the student faces. Knowing how to access this information in the future will assist the student throughout his/her career. Emphasis will be placed on the diversity of the student as well as his/her employees and colleagues. Social identity is addressed early in the course. Human relationships and interactions are included throughout the course, as supervisors interact with their employees, colleagues, upper management and customers on a daily basis. Values, traditions, beliefs, and customs shape every human being and students will learn how to be sensitive to those differences through the practical applications in each lesson.

General Education: None
HM 270 Hospitality Administration Seminar (4) Components of food service systems are identified and studied as separate problems and as a total system. This course will not meet the prescribed requirements for the HM major in any option.

HM 270 Hospitality Administration Seminar (4)

The organization of a restaurant facility, from concept to operation, allows a student the opportunity to apply all previously learned course material in the Hospitality Management program. The focus of the course urges the student to apply the principles of marketing, menu planning, food cost control, human resource management, financial accounting, layout and design, and purchasing. This course is presented in a seminar format and includes a restaurant design project. Students who have completed this course gain the perspective of designing a restaurant facility with customers' needs and owners' profits in mind. Main topics include: creating a marketing plan and business plan, financing and leasing, leasing and tax matters, menu writing, menu analysis, function analysis, kitchen design and layout design conventions, recruiting and staffing including training and development, food purchasing, bar and beverage purchasing, beverage and alcohol service, and budgeting and controlling costs. The content of this course is considered fundamental for anyone in hospitality management and, therefore is required of all Hospitality Management majors.

HM 318 Club Management and Operations (2) Principles and practices of club organizations and management.

HM 318 Club Management and Operations (2)
This course focuses on the unique management skills that are necessary in the private club industry. A key objective is to
demonstrate to students the concept of “exceptional service” that is demanded in this field. The course leads students on
a tour of the responsibilities and operations of all departments that would be found in a city or country club. Main topics
typically include: club management industry and career opportunities; types of clubs that exist in the industry, including
structure, organization, and philosophy; the various departments of a successful club including but not limited to: food
and beverage, accounting and cost control, human resources, marketing and promotion, catering and banquets, golf
operations, tennis operations, aquatics, and fitness facilities; and management skills required of a club manager:
leadership, board relations, general management, service excellence, communications. The course is required in the
Professional Golf Management option in the Recreation, Park, and Tourism Management program and is a professional
elective for Hospitality Management majors.

HM 319 Hospitality Facilities Management (3) Fundamental principles of facilities planning, facilities management, and maintenance for all segments of the hospitality industry.

HM 319 Hospitality Facilities Management (3)

This course has been designed to provide students with information related to hospitality facility design and maintenance. While managers may not have to fix equipment or install heaters, they should understand the complexity of these tasks and respect the position of the architect and hospitality engineer. Main topics typically include: principles of facility engineering and maintenance, costs associated with the life cycle of a hospitality facility; role of the manager in the planning and maintenance process; function of the building in service and marketing, impact of building design on guest service and operation; evaluation of building and grounds for compliance with the Americans with Disabilities Act of 1990; role of management in development, planning, and remodeling of food service operations; and flow of resources as exhibited in blueprints. The course is a required course for all Hospitality Management majors. Students must first complete the introductory hospitality course and the hospitality colloquium.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014
Prerequisite: a grade of "C" or better required for HM 201

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HM 329 Introduction to Food Production and Service (3) Principles of quality food production and service stressing the integration of menu planning, recipes, cost control, and service.

HM 329 Introduction to Food Production and Service (3)

This course provides students with information on the basic principles of effective food production and service management. The primary focus is the integration of menu planning, recipe writing, including HACCP, and the development and maintenance of quality standards and cost control for both food and labor throughout the foodservice cycle. Students will also be introduced to managing service in the front of the house for foodservice operations. The course is required of HM majors, and is part of the foods sequence, providing knowledge prerequisite for HM 330 and HM 430 in which students prepare and serve food for the public. This course also covers foodservice management competencies required for Nutrition students desiring to obtain a dietetic internship and the RD credential through ADA. Students must complete this course with a C or better before proceeding to the food production classes.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014
Prerequisite: Prerequisite or concurrent: HM 228

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HM 330 Food Production and Service Management (2) Food service management laboratory stressing the integration of purchasing, menu planning, and costing in quantity production of quality food.

HM 330 Food Production and Service Management (2)

This course is designed as the application of foodservice production and service management stressing the integration of management modules with training in employee positions for the quantity production of quality food. The course draws from the students' theoretical background in accounting, management, nutrition, food production and sanitation, and thus integrates these areas into the daily operation of a campus foodservice facility as a living laboratory. Students, working as a management team, coordinate and manage all aspects of the food service laboratory. Students also experience a number of employee work positions in the laboratory. Main topics typically include: critical management decisions in a foodservice operation; evaluation of manager and employee performance, interpersonal and time management skills; procedures to prevent sanitation and safety hazards in a foodservice operation; food production, service, sanitation, and quality assurance techniques typical to foodservice operations; technical responsibilities in the development, production and evaluation of a food service system including sales, recipe production and service, cost control, purchasing, facilities management, personnel management, and financial management; critical thinking and leadership skills; and interaction with guests and accurate evaluation of the guests' dining experience.

This foodservice practicum is the second course in the foods sequence. Students enroll in this course after completing the introductory course in food production and service and a Nutrition course in food preparation. The course is a prerequisite for the advanced food production course.

The Pennsylvania State University
Hospitality Financial Accounting (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014
Prerequisite: A grade of "C" or better required for MATH 021. Prerequisite or concurrent: HM 201

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HM 335 Hospitality Financial Accounting (3) Basic accounting concepts and practices applicable to hospitality organizations.

HM 336 Hospitality Managerial Accounting (3)

Managerial decision-making using accounting data is an integral part of the function of managers in the hospitality industry. The accounting function of the lodging business generates financial data, and managers need to be able to interpret the data, analyze it and make decisions based on their interpretation and analysis of the data. This course provides the student with the core knowledge needed to understand the kinds of data generated by the financial systems of hospitality operations, prepare budgets, perform variance analysis, and provide control over the financial aspects of the hospitality business. Main topics typically include:

- Introduction to managerial decision-making in the hospitality industry
- Cost behavior analysis in the hospitality industry
- Cost, volume and profit analysis in the hospitality industry
- Pricing decisions in the hospitality industry
- Preparation of operational budgets in the hospitality industry
- Calculation and interpretation of cost and revenue variances in the hospitality industry
- Preparation of cash budgets and control over cash in hospitality operations
- Preparation of the statement of cash flows in the hospitality industry
- Preparation of proforma financial statements in the hospitality industry

The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hospitality Management majors. Prior to this course, students are required to have taken Financial Accounting in the Hospitality Industry. HM 336 is a pre-requisite to Financial Management in Hospitality Operations.

HM 350 (GQ) Hospitality Decision Making and Information Systems (3)

This course provides students with the opportunity to apply analytical techniques, Excel-based models, and simulation to the management of operations in the hospitality industry. The overriding goal is to provide students with the skills needed to make effective, data-driven decisions. Key topics include: decision making under certainty and risk, total quality management, process analysis and design, capacity planning, process strategy, project management, principles of revenue management, and forecasting for operations management.

HM 355 Legal Aspects of the Hospitality Industry (3) Specialized applications of law to the hospitality industry.

Laws, courts, and more generally the legal system together constitute an integral feature of the environment within which the hospitality industry operates. The objective of this course is to acquaint students with the application of law to hotels, restaurants, and institutional settings. A hospitality manager who understands the law can prevent many legal problems from occurring, including preventing injuries that may lead to lawsuits.

Main topics in this course typically include: types of law, judicial structure and trial procedures; conduct of legal research, including use of Web resources; legal duties of innkeepers and guests; negligence and other torts; contract law; civil rights and public accommodations, especially protections from discrimination; guests’ property; regulation and licensing; employment law, especially protections from discrimination; casinos and the law; and food and alcohol service liability.

HM 365 (IL) Organizational Behavior in the Hospitality Industry (3) Study of individual satisfaction and performance in hospitality organizations. Topics include cultural diversity, motivation, communication, group behavior, and leadership.

HM 380 Hotel Management (3) Introduction to rooms management including front office, housekeeping, security, and engineering. Emphasizes operations, coordination, and communication within and between departments.

HM 384 Introduction to Meeting and Event Planning (3) This course provides an overview of the meeting, event, and conference sector of the hospitality industry.
HM 384 Introduction to Meeting and Event Planning (3)

This course focuses on the meeting and event sector of the hospitality industry. This course provides an overview of the major processes involved in planning and implementing meetings, special events, and conferences. Students will learn and apply the logistics of building a meeting plan to gain an overall understanding of contract negotiation, menu planning, budgeting, site selection, and on-site management. When applicable, invited speakers will provide an applied perspective about the meeting and event profession.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2014
Prerequisite: Prerequisite or concurrent: HM 201

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HM 385 Management Principles in Dietetic Services (3)

This course is designed to foster the integration of management principles in the profession of dietetics. Emphasis is placed on leadership development, decision making/problem solving, strategic planning, and marketing of dietetic services. Through case studies, the interrelationship of food and nutrition labor and equipment are demonstrated. Students develop a business plan for a food and nutrition services business venture, which will be presented at the end of the semester. Main topics typically include: effective leadership in dietetics services; interpretation of financial data with emphasis on identifying and correcting problematic areas in food and nutrition services; types of budgets, including operating, capital, and flexible; negotiation techniques in different situations; strategic planning process, including vision and mission statement writing; principles and skills necessary in human resource management and their unique application in food and nutrition services; service marketing principles in a variety of food and nutrition settings; and kitchen equipment layout and design and their relationship to efficient production and service in delivery of nutrition services.

This course is part of the required sequence of foodservice management courses applied nutrition science majors take in the hospitality discipline. Students must have completed a food production course and a nutrition course on administration of nutrition services in a health care setting. This course provides management of dietetic services principles addressed in the national registration examination for dietitians.

General Education: None

HM 395W Practicum Analysis (3) Written analysis comparing and contrasting conceptual issues in the hospitality industry.

HM 395W Practicum Analysis (3)

The purpose of this course is to help students develop a more thorough understanding of critical and strategic issues impacting the hospitality industry. Drawing on their previous work experience and course work, students will reflect on and analyze a variety of issues, such as those relating to operations, human resource management, marketing, and financial management. Ultimately, the goal of this course is to develop students' critical thinking skills to be successful in their future careers as managers and executives in the hospitality industry.

Bachelor of Arts: None  
Effective: Fall 2014  
Prerequisite: a grade of "C" or better in HM 329

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HM 415 International Cuisine (3)**

Cooking and eating practices of cultures around the world, including historical, religious, cultural, geographic, and political influences on each cuisine.

The objective of this course is to expose students to managerial and cultural issues of cuisine and how they influence the development of commercial food and beverage operations. The text and lectures lay the foundation for the understanding of culture and cuisine. Main topics typically include: understanding how cuisine has developed over time; exploring a variety of foods grown in distant regions and dissemination as adventures contacted (and often conquered) other people and learned of their cultures; evolvement of trade that brought exotic foods from distant locales; geography's role in defining the types of foods and quantities of crops that can be produced around the globe; and critical components of the major world cuisines.

The course is an elective for Hospitality Management students. Prior to taking this professional elective, students must complete the introductory course in food production and management.

**HM 430 Advanced Food Production and Service Management (3)**

This course is designed to give students an opportunity to gain experience in the wide range of skills and techniques that are normally associated with the duties of a hospitality manager. The skills and techniques that will be emphasized include, but are not limited to, duties involved in the planning, execution and evaluation of full-service, theme oriented ala carte dining. Students are expected to form a marketable theme and then develop, produce and evaluate an authentic dining experience. A successful dining experience is contingent upon both guest satisfaction and the achievement of financial goals. Main topics typically include:

* Research, describe and produce an authentic restaurant environment from a selected theme  
* Demonstration of technical responsibilities involved in the development, production and evaluation of a wide range of food service systems including: sales, menu planning, recipe development and evaluation, pricing, purchasing, facilities management, personnel management and financial management  
* Operational needs and potential problems in a food and beverage operation during production and service  
* Timely and effective managerial problem identification and decision-making abilities  
* Interpersonal and teamwork skills both within a management team and with classmates as employees  
* Interaction with guests and evaluation of guests' dining experiences

The course is a capstone management class in the foods sequence and is required of all Hospitality Management majors. Students must first complete the introductory food production course.
The purpose of this course is to focus on contemporary issues and current events in the restaurant and food service management. The course will attempt to keep the students as updated as possible regarding the industry by covering these topics and including a discussion of current events from headline news services and other electronic references. Students gain knowledge that is applicable specifically to the restaurant and foodservice industry. This course explores the global food and drink market in today’s challenging climate with analysis of trends and conditions expected to influence sales value and volume growth over the next five years. Discussion will include the impact economic shifts have on the restaurant and food service industry and the subsequent influence on consumer purchasing habits and food and drink sales over several years. This course considers food and drink New Product Development (NPD) and other vital branding, marketing and sales strategies in the context of the following challenges, issues and trends expected to influence restaurants and food service management over the years.

HM 443 Sales Planning and Advertising for Hospitality Operations (3) Elements of sales management, advertising, promotion, and public relations as applied to hospitality organizations.

The Pennsylvania State University
HM 443 Sales Planning and Advertising for Hospitality Operations (3)

The hospitality industry is entering an era in which operational and product parity between organizations and their properties is increasingly likely. This is so because of their shared access to technology, design and training devices. Consequently, it becomes evident that increases in sales will be reliant on the competitive advantages that professionals achieve in marketing strategies, sales management, and especially in marketing communications (MARCOM) tactics and execution. This course exposes students to a wide range of hospitality marketing communications issues. Students gather information from electronic media, trade and travel media, and consumer media. Students explore hospitality MARCOM issues through semester-long individual projects. Main topics typically include:
- Marketing versus selling strategies
- Industry trends that affect advertising and sales especially Internet activities
- Types of advertising media
- Print advertising principles
- Broadcast advertising principles
- Foundations of direct marketing
- Elementals of public relations
- Travel agency relations
- Personal sales

This is an elective course. Students must first take the hospitality marketing course in Hospitality Management.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014
Prerequisite: a grade of "C" or better for HM 442

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HM 466 (US) Human Resource Management in the Hospitality Industry (3)

The objective of this course is to provide students with an understanding of labor relations in the hospitality industry. Students need to know about labor laws as they affect the industry and specifically about collective bargaining. Primary emphasis is given to private-sector labor relations, but some consideration is given to the public sector. Main topics typically include:
- Introduction to employee relations in hotels and restaurants
- Economic influences on the hotel and restaurant labor market
- Labor law as applied to the hospitality industry
- Management strategies in collective bargaining
- Administration of labor contracts
- Management and supervisory strategies in labor disputes

The course is an elective in the hospitality program. Students must first complete the course in hospitality human resources.

General Education: None
Diversity: US
Bachelor of Arts: None
Effective: Fall 2014
Prerequisite: A grade of "C" or better required in HM 201HM 365

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HM 467 Management of Hotel and Restaurant Employee Relations (3)

The objective of this course is to provide students with an understanding of labor relations in the hospitality industry. Students need to know about labor laws as they affect the industry and specifically about collective bargaining. Primary emphasis is given to private-sector labor relations, but some consideration is given to the public sector. Main topics typically include:
- Introduction to employee relations in hotels and restaurants
- Economic influences on the hotel and restaurant labor market
- Labor law as applied to the hospitality industry
- Management strategies in collective bargaining
- Administration of labor contracts
- Management and supervisory strategies in labor disputes

The course is an elective in the hospitality program. Students must first complete the course in hospitality human resources.

HM 471 New Trends and System Selection in Hospitality Information Technology (3)

This course introduces the student to
new information technology in the hospitality industry and to the system selection process.

HM 471 New Trends and System Selection in Hospitality Information Technology (3)

The purpose of this course is to focus on new IT trends and system selection in the hospitality industry. New trends are topics that have become important or prevalent in the industry and are generally not covered in other courses. Examples include Software as a Service delivery of property management systems, enterprise restaurant management reporting, Web 2.0-3.0, smartphone applications, Radio Frequency Identification (RFID), etc. The course will attempt to keep the students as updated as possible regarding the industry trends by covering these topics and including a discussion of current events from industry partners, headline news services, and other electronic references. Students gain knowledge that is applicable specifically to the hospitality industry.

HM 484 Hospitality Entrepreneurship (3) The course focuses on successfully launching new business ventures in the hospitality industry.
HM 484 Hospitality Entrepreneurship (3)

The purpose of this course is to commence the learning process regarding Entrepreneurship in the Hospitality Industry. The course provides the student with a solid foundation of how an idea is generated and taken to market for implementation. The students will examine the characteristics of the entrepreneur and the process followed from generating an idea, to building a business model, preparing a competitive analysis, completing a feasibility study, reviewing intellectual property, developing a business plan, seeking funding and presenting their idea to potential investors. Topics include idea recognition, feasibility studies, business plans, developing a business model, intellectual property, marketing, financing, organizational growth, and franchising. The course is oriented to the student who would like to own a business.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HM 486 Casino Marketing (3)

Students will learn marketing techniques for casinos which take into account the external environment, individual consumer choices, and ethical considerations.

The primary objective of this course is to introduce the advanced standing student to the factors affecting the effective marketing of a modern casino. General marketing principles and concepts build the foundation for the study of marketing techniques unique to the casino industry. Consumer behavior and external environments create the context in which all marketing decisions and activities occur. Their study ensures the student has the basics to approach any marketing problem. Before the strategic use of marketing to build brand awareness and to ensure profitability is learned, the impact of social and ethical responsibility is studied including disordered gambling and smoking bans. The need to advertise and promote without exacerbating the incidence of disordered gambling is an increasingly necessary ability required of casinos today. A thorough knowledge of segmentation and positioning are required as well. Extra time is allotted to both social responsibility and segmentation/positioning. Strategic marketing entails identifying the components of a marketing plan, their purpose, and the method of execution. Various concepts such as profit-service chain and revenue management are covered to round out the student's knowledge of marketing. The course spends time on promotions which are unique to the casino industry including, but not limited to professional boxing matches and other special events, slot and players' clubs, special entertainment venues, on-floor promotions, and so on. The student learns the importance of location and transportation issues and how they impact the revenue and profitability of a casino. Meetings and conventions generate revenue during off-peak periods and are significant factors in the revenue stream of a casino.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014
Prerequisite: "C" or better in MKTG 221 HM 387 HM 388 and HM 495

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HM 487 Casino Operations and Societal Impact of Gaming (3)

Students will learn the structure, culture, and ethical
The primary objective of this course is to introduce the advanced standing student to the organization structure, the organizational culture, and the ethical responsibility toward disordered gambling and other lifestyle issues of modern casinos. The student will study leaders in the casino industry to gain insight into how they contributed to the growth of their companies and the industry as a whole. Emphasis will be placed on their approach to the ethical issues of their day. The modern day casino is complex and its organizational structure reflects that complexity. The student will study the different structures and reporting relationships of actual casinos to ascertain the factors that impact the level of effectiveness of different organizational charts. The job titles and descriptions of all departments will be examined. The job titles and descriptions of the gaming departments will be studied in greater depth than in Gaming Operations (HM 388). The lifestyle of customers and employees alike will be examined particularly those issues that impact health and social services. Specific topics include disordered gambling and smoking. Disordered gambling will be studied in greater depth than in Introduction to Casino Management (HM 386) and will be examined simultaneously with Casino Marketing (HM 486). The human resources function will be scrutinized as a filtering process for selecting the right employees and for training and reinforcing the organization’s commitment to ethical and responsible behavior. The casino design project will take the student’s ability to design a slot floor layout, a table games floor layout, to create a list of hotel room amenities, to write a positioning statement for a range of restaurants in a hypothetical casino, to develop a list of multiple entertainment venues and so on to a higher level than previous coursework so that the final product demonstrates the student’s knowledge and expertise in casino management.

**HM 490W Strategic Hospitality Management (3)**
This capstone writing-intensive class integrates content from throughout the previous curriculum, focusing on strategic application to current industry issues.

**HM 492 Advanced Professional Seminar in Hospitality Management (1)**
Course prepares senior HM students to assume leadership positions in the hospitality industry (Focus on careers, leadership, ethics, lifelong learning).

**HM 495 Internship (1-18)**
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
HM 495A Penn State Hospitality Services Hotel Internship (3) Supervised internship with Penn State Hospitality Services and weekly class meetings.

Students will obtain hands-on work experience through employment in one or more departments with Penn State Hospitality Services. Experience may include front desk, housekeeping, maintenance, sales, accounting, food and beverage, culinary, banquets, or reservations. Students will work 15-20 hours per week throughout the semester and attend weekly classroom sessions.

HM 495B Penn State Hospitality Services Executive Internship (3) A project-oriented internship with Penn State Hospitality Services either at The Nittany Lion Inn or The Penn Stater Conference Hotel.

Students will participate in project-based internship under the guidance of a department head with Penn State Hospitality Services. Students will work approximately 15-20 hours per week over the course of a semester. The goal of this internship is to provide students with a variety of work and project experiences to develop their managerial competencies. These assignments will vary from student to student, based on his or her interests and professional development needs.

HM 495C Penn State Housing & Food Service Internship (3) Supervised internship with Penn State Housing and Food Services and weekly class meetings.

Students will obtain hands-on experience through employment with Penn State Housing and Food Services. Experience may include preparing for concerts and sporting events, front-of-house and back-of-house food and beverage operations, shadowing managers, and supervising employees. Students will work 15-20 hours per week throughout the semester and attend weekly classroom sessions.

HM 495D External/Off Campus Internship (3) A supervised off-campus internship with an approved site participant, typically spanning one semester or a summer in length.
HM 495D External/Off Campus Internship (3)

Students are employed off campus for this internship for a full semester or summer, working 40-50 hours per week in an approved hospitality setting (a minimum of 400 hours). Work experiences and projects will vary from student to student and from site to site.

Hotel, Restaurant, and Institutional Management (HRIM)

HRIM 295W Analysis of Field Experience I (3) Capstone class integrating content from throughout the previous curriculum, including directed written analysis of the 500-hour hospitality working experience.

HRIM 295W Analysis of Field Experience I (2)

This course is designed for current and future operators of lodging, commercial, and on-site (institutional) operations. It will provide the opportunity for students to apply their theoretical knowledge from previous course work in the major to the hospitality world-of-work. The various course modules will incorporate writing as a mode to allow students to further explore their understanding of hospitality organization, marketing analysis, human resource practice, food production analysis, physical plant considerations, lodging operations, career development, management practice, and financial statement analysis. Case studies and other applied activities through written interpretation will be used to illustrate human resource practices, career development as well as other topics. This course will provide students with opportunities to develop written skills necessary to communicate effectively as hospitality professionals.

The topics typically include:

- Organization of an hospitality environment
- Demographic trends vs. advertising applications
- Employment laws
- Employee coaching
- Food production planning for productivity and control
- Organization of a physical plant
- Operations and quality control in lodging
- Opportunities for continuing hospitality career development
- Strategic planning in the hospitality industry
- Reviews of financial statements
HRIM 310 Hotel, Restaurant, and Institutional Purchasing and Cost Control (3)
The objective of this course is to provide a practical study of procurement as the basis for cost control and as essential support for all quality hospitality operations. Main topics typically include:
- Principles and functions of purchasing, roles of the purchasing agent
- Mechanics of purchasing, vendor selection, specification development, competitive bid development, freight agreements, purchase order
- Application of principles and mechanics to food commodity procurement (meat Products, seafood, poultry, staples, perishables, produce, and non-food supplies.

This course is an elective in the Hotel, Restaurant, and Institutional Management program. Students must first complete several courses in Hotel, Restaurant, and Institutional Management (the introductory course, colloquium, financial accounting, and introductory hotel management) and a Nutrition course dealing with elementary foods. Evaluation methods usually include examinations and homework assignments. The course is offered during the spring semester and has a maximum enrollment of 100 students.

HD FS 129 (GS) Introduction to Human Development and Family Studies (3) Introduction to psychosocial and family development at all stages of the individual and family life cycle. Students may take only one course for General Education credit from SOC 030 or HD FS 129.

HD FS 129 Introduction to Human Development and Family Studies (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides a basic introduction to the concepts, theories, and research on human development as it occurs over
the life span and in context. Students will be introduced to developmental tasks and challenges unique to each stage of human development from the womb through infancy, early and middle childhood, adolescence, emerging adulthood, middle age and old age. Beginning with the prenatal state and infancy, students will be introduced to the biological, emotional, cognitive, psychosocial, as well as the social, cultural and historical factors that influence growth and development across infancy, childhood, adolescence, adulthood, and advanced adulthood. Students will be introduced to basic concepts, theoretical orientations, and key empirical studies that inform human growth and development. Furthermore, attention is given to the central role of families and family life as a context for development. The formation of intimate relationships, marriage, marital processes, motherhood and fatherhood will be reviewed, as well as problems and challenges that families face such as financial stress, separation and divorce, abuse, and caregiving. Finally how families and family behavior are influenced by their communities, the larger culture, and other social and economic forces will be discussed. Students will be evaluated on the basis of tests, writing assignments, group projects, as well as participation in class discussions and occasional panels. This course will be offered five times a year at University Park, with enrollments in the 200-400 range during the semester and 20-30 in the summer sessions. Enrollments at other locations will vary from 15-200, depending on the campus and the time of the year.

Students may take only one course for General Education credit from SOC 030 or HD FS 129.

HD FS 229 (GS) Infant and Child Development (3) Theory, research, and methods of social/behavioral/biological sciences related to developmental processes and intervention during infancy and childhood.

HD FS 229 Infant and Child Development (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course introduces students to the study of children from the prenatal period to (not including) adolescence. Students will become familiar with the most prominent theoretical ideas about child development. The latest research on prenatal development, infancy, early and middle childhood will inform the discussions, and students will become familiar with key studies. The major domains of children’s functioning covered include social interactions and emotional development, cognitive changes and acquisition of language, physiological growth in infancy and biological changes that underlie the transition out of childhood into adolescence. A key feature of this course is how processes in these different domains interact to influence children’s overall adaptation. Finally, informed by a life course developmental framework, this course will place these developmental processes in context. Students will become familiar with the theoretical and empirical literature that locates children’s growth and development in the context of families and family change, peer groups, neighborhoods and communities, and the larger cultural context within which they are embedded. Students will be evaluated across several performance areas which may include tests, writing assignments, group projects, and participation in class discussions and panels. This course will be offered five times a year at University Park and varying amounts at Altoona and the Commonwealth Campuses. Enrollments vary by semester and location: Fall/Spring: 15-50 students at the Commonwealth and Altoona locations; 100-200 at University Park. Summer: 10-20 at the Commonwealth and Altoona locations; 20-30 at University Park.

HD FS 230 Overview of Curricular Practices in Early Childhood Care and Education (3) Curricular practices in programs for infants, toddlers and preschoolers. Focus on developmentally appropriate practice, emergent curriculum and home/child care links.

HD FS 230 Overview of Curricular Practices in Early Childhood Care and Education (3)

This course, intended for current or future providers of early childhood care and education, examines curricular practices in programs for young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course addresses current practices in early childhood care and education programs for infants, toddlers, and preschoolers. After a brief examination of the history of early childhood care and education, this course focuses on the use of developmentally appropriate activities and strategies to maximize children’s positive growth and development. Each of the traditional early childhood curricular areas (involving physical, social, emotional, cognitive development) is considered, as is the importance of the connection between families and early care and education settings. Reading and discussion in each curricular area stresses diversity issues and inclusion of children with special needs in groups with normally developing children. There is an emphasis on applications of the project approach and emergent curriculum as appropriate for use with infants, toddlers and preschoolers.

Students show mastery of the course material through tests over each topic of discussion, reports on outside reading related to current issues in early childhood care and education, individual and small group presentations about a specific curricular issues, and use of a reflective journal.

The course will be offered once each academic year, with an enrollment of 15-25 students.

**HD FS 231 Guidance in Early Childhood Care and Education (3)**  
Positive guidance methods for infants, toddlers and preschoolers, leading to self-control and social capability. Includes focus on home/childcare links.

**HD FS 231 Guidance in Early Childhood Care and Education (3)**  
This course, intended for current or future providers of early childhood care and education, examines guidance methods for use with young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course emphasizes the use of guidance techniques that help children grow in independence, responsibility, self-control, and ability to function as group members. It addresses organization and guidance methods that foster the child’s responsibility, independence, positive social interactions and emotional self-control. While the course covers various types of guidance, it emphasizes responding to children with respect and acceptance, using positive discipline. Since guidance is an area in which families and teachers frequently must confer, this course also deals with the use of effective parent-teacher communication skills. It requires weekly experience with young children.

Each student will produce a portfolio demonstrating understanding of guidance techniques and their theoretical backgrounds. In addition, portfolios will demonstrate evidence of competence in analyzing the early childhood care and education environment in terms of its effect on young children’s behavior, as well as competence in solving environmental problems that contribute to guidance issues. Portfolios will also demonstrate evidence of competence in communicating with parents and families about guidance issues. Students will reflect, in writing, on their own use of developmentally appropriate guidance techniques in their work with young children.

The course will be offered once each academic year, with an enrollment of 15-25 students.

**HD FS 232 Creativity and Play in Early Childhood Care and Education (3)**  
Planning for play, creativity and exploration in programs for infants, toddlers and preschoolers. Includes focus on home/childcare links.

**HD FS 232 Creativity and Play in Early Childhood Care and Education (3)**  
This course, intended for current or future providers of early childhood care and education, examines the development of play and creativity in young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course addresses the potential of play, creativity, and exploration in the optimal development of a child. Content includes the development of play, creativity, and aesthetics. The course emphasizes adult-child interaction styles and activities that encourage, enhance and expand play, exploration and creativity in infants, toddlers, and preschoolers throughout the daily care and education routine. There is an emphasis on effective communication with families regarding the benefits of play and open-ended activities. It requires weekly experience with young children.

Each student will develop a portfolio that demonstrates understanding of the development of play, exploration and creativity in the early years, as well as competence in planning for and enhancing that development. The portfolio will also show evidence of competence in communicating with parents and families.

In addition to the portfolio, the student will develop an activity card file containing ideas for developmentally appropriate play and creative activities for infants, toddlers, and preschoolers. Each student will participate in individual and group presentations related to course topics, and will take tests covering reading and other class material.

The course will be offered once each academic year, with an enrollment of 15-25 students.

**HD FS 233 Emergent Language and Literacy: Development and Practice in Early Childhood Care and Education (3)**  
Fostering development of language and literacy in infants, toddlers and preschoolers. Includes children’s literature and focus on home/childcare links.

**HD FS 233 Emergent Language and Literacy: Development and Practice in Early Childhood Care and Education (3)**  
This course, intended for current or future providers of early childhood care and education, examines the development of language and literacy in young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course addresses the development of language and literacy in infants, toddlers and preschoolers. Content includes the development of language and literacy in infants, toddlers, and preschoolers throughout the daily care and education routine. There is an emphasis on effective communication with families regarding the benefits of language and open-ended activities. It requires weekly experience with young children.

Each student will develop a portfolio that demonstrates understanding of the development of play, exploration and creativity in the early years, as well as competence in planning for and enhancing that development. The portfolio will also show evidence of competence in communicating with parents and families.

In addition to the portfolio, the student will develop an activity card file containing ideas for developmentally appropriate play and creative activities for infants, toddlers, and preschoolers. Each student will participate in individual and group presentations related to course topics, and will take tests covering reading and other class material.

The course will be offered once each academic year, with an enrollment of 15-25 students.
This course, intended for current or future providers of early childhood care and education, examines the emergence of language and literacy. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course emphasizes why and how to foster continuous development from first sound through recognizable speech; from initial symbol recognition through reading; from making the first mark through writing. Content also includes choosing literature appropriate for use with infants and young children and methods of integrating literature throughout the daily child care and education routine. There is a focus on developing activities centered on language and literature, and an emphasis on effective communication with parents and families. This course requires weekly experience with young children.

Students will produce a portfolio demonstrating understanding of language and literacy development, competence in planning developmentally appropriate language and literacy activities for infants and young children, and competence in evaluating child care settings in terms of support for emergent language and literacy. Portfolios will also demonstrate evidence of competence in choosing and using good literature with young children, and in communicating to parents and families the importance of facilitating early language and literacy.

In addition to the portfolio, students will develop files of language and literacy activities appropriate for use with infants and young children. They will also take tests related to reading and material covered in class.

The course will be offered once each academic year, with an enrollment of 15-25 students.

HD FS 234 Mathematics and Science Reasoning: Development and Practice in Early Childhood Care and Education (3)
Fostering development of mathematical reasoning and scientific inquiry in infants, toddlers and preschoolers. Includes project approach and focus on home/childcare links.

HD FS 234 Mathematics and Science Reasoning: Development and Practice in Early Childhood Care and Education (3)

This course, intended for current and future providers of early childhood care and education, examines the emergence of mathematics and science reasoning. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies.

The course addresses processes involved in mathematical reasoning and scientific inquiry. It emphasizes the development of activities, questioning skills, and observation and documentation techniques that extend infants’ and young children’s exploration, discovery, and thinking patterns. Content also includes methods of integrating mathematics, science and reasoning activities throughout the daily child care and education routine. Participation in the project approach provides students with an experiential understanding of constructing knowledge. There is also an emphasis on effective communication with parents and families. This course requires weekly experience with young children.

Students will produce a portfolio demonstrating understanding of the development of mathematics and science reasoning in the very early years and competence in planning developmentally appropriate mathematics, science, and logical thinking activities for infants and young children. Portfolios will also demonstrate evidence of competence in communicating to parents and families the importance of exploration and discovery in facilitating young children’s mathematics and science knowledge. Students will reflect, in writing, on their own growth in knowledge and competence in facilitating young children’s thinking.

In addition to the portfolio, students will develop files of mathematics and science reasoning activities appropriate for use with infants and young children. They will also take tests related to reading and materials covered in class.

The course will be offered once early academic year, with an enrollment of 15-25 students.

HD FS 250 (US) (WMNST 250) Sexual Identity over the Life Span (3) Concepts of affectional and sexual orientation over life span, with emphasis on lesbian and gay male personal, family, and community adaptation.

HD FS (WMNST) 250 Sexual Identity over the Life Span (3) (US)

This course reviews concepts of sexual identity as informed by a human development perspective. Concepts of sexual orientation are discussed in the context of a review of lesbian, gay male, and bisexual lives. Developmental processes of lesbian and gay life are detailed: personal change from the teenage years through adulthood, changes in family and relationship patterns, and impact of communities, laws, and culture. These processes are contrasted to the developmental processes of women and men who identify themselves as heterosexual. The complex effect of gender, race, ethnicity, class status, and historical time on sexual orientation and its expression has generated ongoing controversies in scholarship as well as in public discourse. The course will be an introduction to these controversies as informed by human development research.

HD FS 258 (CMAS 258) Introduction to Child Maltreatment and Advocacy Studies (3) Introduction to multidisciplinary field of clinical maltreatment.

HD FS (CMAS) 258 Introduction to Child Maltreatment and Advocacy Studies (3)

This course will focus on the identification, investigation, service, advocacy, prosecution, and prevention of child maltreatment as well as the treatment of adverse health outcomes for children who have been maltreated. Specific topics include the causes, correlates, and consequences of child maltreatment, best practices for reporting and investigating an allegation of child maltreatment, evidence-based prevention and intervention programs, the Child Welfare System, and relevant legal issues (e.g., termination of parental rights, children’s testimony in court, etc.). By definition, this course will detail issues related to the abuse and neglect of children. This material can be difficult to hear, view, and discuss. This course is a required course, and a prerequisite for all advanced courses, for a Minor in Child Maltreatment and Advocacy Studies.

**HD FS 287W (GS;US) Intercultural Community-Building (3)**

An experiential introduction to negotiating differences in small groups, families, institutions, and communities.

This course provides students an experiential introduction to how individuals and families both affect and are affected by the various cultural/community contexts in which they develop, including schools, places of work, and youth and community programs. Students will identify and explore their own unique and shared assumptions, and the relationships between those assumptions and life histories and experiences. They will become aware of the dynamics of how communities are formed and function by forming a community themselves, and through involvement in a local community group or agency. Group discussions and written reflections will link their personal experiences to theory and research presented in class and readings on such topics as developing systems theories, cultural communication theories, and decision-making. The goals of the course are to increase students' understanding of the relations between values, power relations, and the various processes of social change, and encourage the development of communication skills and citizenship. Special emphasis will be placed on developing relationships within culturally and ethnically diverse groups. Because it is designated as a writing intensive course, particular attention will be given to the development of written communication skills. Students will be evaluated on the basis on their performance in several areas, which may include examinations and quizzes, several writing assignments, and participation in class discussions and simulations. The course may be delivered at certain Commonwealth College campuses and Altoona College. Depending on location, the course may be offered during the fall, spring and/or summer sessions, with anticipated class enrollments of 12-20 students.

**HD FS 310M Seminar in Honors--Research Methods (4)**

Overview of research and methods issues tailored around development of honors thesis proposals.

HDFS 310M is designed to cover all of the elements in designing a research project. Through a series of written projects, students study the scientific method, research question development, and tools and techniques for data gathering and analysis. The course covers how to take a theory about human development and family studies and develop testable hypotheses/research questions. Students learn the basic skills needed for managing and understanding data; analyzing data; and presenting data. Then, students use real data to practice data management, data analysis, and reporting on data in both oral and written forms.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HD FS 311 Human Development and Family Studies Interventions (3)**

Survey of individual and family formal and informal intervention efforts; historical and current perspectives and approaches.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**Human Development and Family Studies Interventions (3)**

**HD FS 312W Empirical Inquiry in Human Development (3)**

Introduction to the skills involved in critical thinking in general and the methods of empirical inquiry in particular. Open to HD FS majors only.

**Empirical Inquiry in Human Development (3)**

The main purpose of this course is to help students become informed and critical consumers of scientific research. Throughout the course, they will develop the critical thinking skills necessary to understand scientific inquiry in the field of Human Development. This course will serve as an introduction on how the tools of the scientific method can be used to understand human behavior, developmental processes, and modification of those processes. Students are encouraged to develop their critical capacities through a process that involves learning basic components of empirical inquiry, such as study design, measurement approaches, and sampling strategies, and applying their understanding of those components to evaluate the conclusions of research studies. Students will be exposed to quantitative and qualitative approaches as well as information on intervention and applied research. The course will consist of lectures and class exercises.

**HD FS 313 Empirical Inquiry in Human Development for Non-Majors (3)**

The main purpose of this course is to help students become informed and critical consumers of scientific research. Throughout the course, they will develop the critical thinking skills necessary to understand scientific inquiry in the field of Human Development. This course will serve as an introduction on how the tools of the scientific method can be used to understand human behavior, developmental processes, and modification of those processes. Students are encouraged to develop their critical capacities through a process that involves learning basic components of empirical inquiry, such as study design, measurement approaches, and sampling strategies, and applying their understanding of those components to evaluate the conclusions of research studies. Students will be exposed to quantitative and qualitative approaches as well as information on intervention and applied research. The course will consist of lectures and class exercises.
Effective: Summer 2014
Prerequisite: a grade of C or better in: EDPSY 101 or STAT 200

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HD FS 315 (US) Family Development (3) Family functions over the life course; family from a multidisciplinary perspective, emphasizing adaptation and change.

HD FS 315 Family Development (3) (US)

This course offers an overview of families focusing primarily on contemporary American families. The primary thrust of this course is to step beyond our personal experiences with families and place them within a broader social, historical, cultural and economic context. This class will be multi-disciplinary in its approach to the study of American families. However, we will begin with the historical, demographic and social changes that American families have undergone and try to understand some of the causes and consequences of these changes for the developmental life courses of adults and children in families today. Throughout this course we will be particularly concerned with the diversity of American families stressing differences based on gender, race and ethnicity, and socioeconomic status.

General Education: None
Diversity: US
Bachelor of Arts: None
Effective: Summer 2005
Prerequisite: HD FS 129; 3 credits of social behavioral or human biological sciences

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HD FS 315Y (US) Family Development (3) Family functions over the life course; family from a multidisciplinary perspective, emphasizing adaptation and change.

HD FS 401 Project Planning, Implementation, and Evaluation in the Human Services (3) Exercises and activities related to the design, planning, implementation and management, and evaluation of projects and programs in the human services.

**HD FS 401 Project Planning, Implementation, and Evaluation in the Human Services (3)**

HD FS 401 is part of a sequence of courses that develop skills and competencies of the human services student. The course emphasizes the further development of communication skills, diversity skills, team-building skills, critical thinking skills, and technology and leadership skills. Intended to be completed prior to the internship experience, the course will initially focus students' efforts on the identification of a field-based human services project or program, and a setting within which it could be carried out. Subsequently, students will design and plan the project or program, examine and propose effective implementation and management procedures, and incorporate state-of-the-art evaluation procedures into the design.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HD FS 416 (US) Racial and Ethnic Diversity and the American Family (3) This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States.

Racial and Ethnic Diversity and the American Family (3)

During the last several decades, the racial and ethnic composition of the U.S. population has changed dramatically. At end of the 20th century, non-Hispanic whites accounted for less than 75 percent of the U.S. population. While blacks remained the largest minority group, there were nearly as many Hispanics as blacks, and the number of Asians was increasing. Population projections indicate that by the middle of the 21st century, Hispanics will make up nearly one-fourth of the U.S. population. Blacks, Asians, and American Indians together will comprise an additional fourth of the population. The last several decades have also brought significant changes in family life in the United States, including declining rates of marriage, a rising age-at-marriage, an increase in cohabitation, and a dramatic rise in the proportion of births outside of marriage. While these trends in family life have been experienced by all racial and ethnic groups, there is substantial variation in family patterns by race and ethnicity. The course will build on other courses in social inequality and the family. The course does not overlap with any existing courses in the Department of Sociology or with courses offered in other relevant departments.

This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. The student will read articles from major sociological journals and learn to extract major points and issues. He/she will learn to synthesize and critique various arguments on major issues in the field. The student will acquire skills in summarizing and evaluating arguments in essay form. He/she will also develop oral presentation skills. Final grades for the course will be based on class participation, a brief (approximately 5 pages) paper, a group presentation, a midterm examination (essay format) and a final examination (essay format). The course is not required for the Sociology minor or major. However, the course can count as one of the 400-level elective courses in Sociology for the Sociology minor, B.A. or B.S.

HD FS 416 (SOC 411) Racial and Ethnic Diversity and the American Family (3)

HD FS 427 (KINES 427) Developmental Sport & Exercise Psychology (3) Developmental changes in the antecedents and consequences of physical activity across the lifespan.

HD FS (KINES) 427 Developmental Sport & Exercise Psychology (3)

Change is constant with physical activity - our reasons for being active change across the lifespan and our experiences with physical activity change how we view ourselves and those around us. Developmental Sport & Exercise Psychology focuses on developmental changes in the psychosocial antecedents and consequences of physical activity across the lifespan. Specific course objectives include (1) describing theoretical frameworks and methods used to study physical activity-related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, (3) explaining how contextual factors influence developmental processes associated with physical activity, (4) identifying age-related differences in activity-related antecedents and consequences of physical activity, and (5) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students’ engagement in the class. It extends but does not duplicate existing courses in the Department of Innersole, Human Development & Family Studies, and Psychology.

**HD FS 430** Experience in Preschool Groups (1-6 per semester/maximum of 6) Guided practicum experience in planning and facilitating developmentally appropriate activities for young children.

**HD FS 430 Experience in Preschool Groups (1-6 per semester/maximum of 6)**

This course is intended to provide students with guided experience in interacting with young children and in designing and conducting developmentally appropriate activities for children in preschool groups. In addition to working with preschool children in preschool classrooms, students will meet weekly to discuss curriculum and activity planning, guidance techniques and issues relevant to providing quality preschool settings. Time will be set aside in each class period for open discussion of classroom experiences. Visits to campus preschool locations are planned to enhance the selection of appropriate teacher resources for curriculum development.

HD FS 440 (SOC 440) Family Policy (3) An in-depth examination of family policy.

HD FS (SOC) 440 Family Policy (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is designed to provide an in-depth examination of family policy. Students will identify and critically analyze major issues, controversies, and policies that affect families. Attention will be devoted to recognizing both intended and unintended consequences of family policies and understanding policy challenges and trade-offs. Students will gain an understanding of how policies are shaped by both facts and myths, as well as our values. Students will examine historical and current trends in family patterns (e.g., divorce, women's labor force participation, nonmarital births) to understand the implications they hold for individuals, families, and society. Students will gain an awareness of the social, economic, historical, legal, and political contexts within which family policies exist and are proposed. Although the main focus is on U.S. family policy, some time will be devoted to learning about family policies in other countries. We will learn about several specific family policies in-depth (e.g., welfare), but a final goal is to help students develop a general way of looking at family policy that they can then use to understand any issue of family policy that unfolds throughout their lifetime. This course will foster thoughtful reflection and critical thinking, writing skills, research skills, and skills of synthesis, logic, and argument. Course goals will be accomplished through course readings, writing assignments, lectures, class discussions, debates and group projects. Mastery of course material and student evaluation are assessed in several ways. Students will take a midterm and final exam that cover lectures, class discussions, and assigned readings. Two papers are also required. The first paper is based on an analysis of newspaper articles dealing with family policy issues that students will collect and relate to course materials. The second paper is a literature-based analysis of a family policy in a society outside the United States. Class participation is also essential and its evaluation will be based on a combination of class attendance, contributions to class discussions, participation in group debates and projects, and an oral presentation of the final paper on a non-U.S. family policy.

Child maltreatment, including physical abuse, sexual abuse, emotional abuse, and neglect, is a highly prevalent condition affecting nearly one million children each year in the United States alone. This course will delineate the long-term health consequences affecting those who have experienced child maltreatment with an emphasis on those outcomes exerting the greatest impact on overall public health throughout the lifespan. Importantly, a focus on the etiology of such health consequences in the child maltreatment population will be made in order to understand the causal pathways leading to these health consequences. This focus on etiology will serve as a segue into the remaining sections of this course, specifically the prevention and treatment of child maltreatment and its consequences. Universal and targeted prevention programs, where the focus is to prevent an initial instance of child maltreatment from occurring, will be detailed, as will tertiary prevention programs, where the focus is on preventing a re-occurrence of child maltreatment. Similarly, prevention of adverse health outcomes for those affected by child maltreatment will also be covered. Finally, evidenced-based interventions applied with children who have been maltreated and are currently experiencing clinical levels of impairment (e.g. post-traumatic stress disorder) will be detailed. Identification and rehearsal of treatment components commonly used in prevention and clinical intervention programs will be emphasized. Students successfully completing this course will have direct knowledge of the consequences of child maltreatment and the established methods used in prevention and intervention programs applied with this population.

Prerequisite: HD FS 129 or PSYCH 100; HD FS 312W; 3 credits in human biology

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HD FS 477 Analysis of Family Problems (3) Analysis of families' behavioral, managerial, interpersonal, and financial problems and their interrelationships.

Analysis of Family Problems (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: HD FS 312W; HD FS 315 or HD FS 315W; 3 credits in social sciences

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HD FS 490 Introduction to Internship Experience (2) Planning and preparation for field experience in human service setting. Analysis of human service system and arrangement of site.
Introduction to Internship Experience (2)
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1996
Prerequisite: HD FS 312W; approval by internship coordinator. Prerequisite or concurrent: HD FS 411
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HD FS 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Research Project (1-12)
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2000
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HD FS 494H Senior Honors Thesis (1-6) Independent study under the direction of the thesis advisor of topics related to the interests of the student, culminating in presentation of a thesis.

Senior Honors Thesis (1-6)
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1997
Prerequisite: approval of honors thesis advisor
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HD FS 495A Internship: Advanced Experience (9) Full-time, one semester experiential training in human service settings. Open to HD FS majors only.

HD FS 495A Internship: Advanced Experience (8)
HD FS 495A represents a full-time, one-semester internship experience. Its focus is experiential learning accompanied by intensive supervision, provided by one-site personnel, as well as University-based mentoring. Taken within a year of the pre-internship course (HD FS 490), which helps the student with the details of making arrangements for their internship, HD FS 495A, taken during the same semester as HD FS 495B, is considered the capstone of the HD FS undergraduate program. The internship can be taken during the fall, spring, or summer semester. It is one full semester spent working as a human service professional in a setting of your choice. Generally interns will work as a full-time professional (35-40 hours a week) for the semester.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2014
Prerequisite: HD FS 490HD FS 301HD FS 455 and permission of internship director
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

HD FS 495B Internship: Advanced Project (3) Implementation of internship projects or scholarly paper. Open to HD FS majors only.

HD FS 495B Internship: Advanced Project (4)
HD FS 495B is taken at the same time as HD FS 495A, and within a year of the pre-internship course (HD FS 490), which helps you with the details of making arrangements for the HD FS internship. HD FS 495B focuses on the academic aspects of the internship experience. This course can be taken during the fall, spring, or summer semester. Currently, HD FS 495B consists of writing three papers: The Organizational Analysis, The Policy Analysis, and The Personal Development Paper. The purpose of the organizational analysis paper is to give the intern an opportunity to learn about his or her internship setting or organization in greater depth than might be possible otherwise. This will necessitate the intern taking an active approach to systematically securing information about the internship organization through the review of relevant documents, conducting formal or informal interviews, and observation. This paper will then be saved at the internship office, without identifying information or grade, to be viewed as a source of information about potential internship sites by future students who are seeking internships.

The Pennsylvania State University
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HD FS 495C** Professional Practicum in Human Services (3-8) Guided professional practicum in human services, usually in the form of a project related to a human services issue.

**HD FS 401 or HD FS 490**

**HD FS 496** Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**HD FS 401 or HD FS 490**

**HD FS 497** Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**HD FS 401 or HD FS 490**

**HD FS 499** (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.

**HD FS 499A (IL)** Early Childhood in Italy (3) This course will give students the opportunity to examine the way in which Italians structure the early childhood years, and the social policies that support this structure. Students will observe children in public, as well as having the opportunity to visit preschool and day care programs for young children.

I E 100S Discover Industrial Engineering: First-Year Seminar (1) Informational First-year on Industrial Engineering as a career choice and profession; lab exercises; guest speakers; real world problems.

The Pennsylvania State University
I E 100S Discover Industrial Engineering: First-Year Seminar (1) (FYS)

The objective of this first-year seminar course is to provide information on industrial engineering as a career choice and as a profession. It is a fact that most first-year students have never heard of Industrial Engineering (I E), or the many varied opportunities that exist within the I E major. This course explores the many aspects of the major and also offers the opportunity to interact with I E faculty and students, something that is an uncommon occurrence during the first year of engineering study.

Class time is used for a variety of activities including: interactive class sessions where students work in teams to analyze and solve applied "real-world" problems in industrial and manufacturing engineering; I E faculty guest speakers addressing career opportunities in a particular area within I E; Lab experiences or demonstrations; Alumni guest speakers or panels; Plant tours (1 per semester); I E student panels on topics such as Co-op.

The class atmosphere is relaxed and there are no examinations. Homework assignments are given throughout the semester on relevant topics.

**I E 305 Product Design, Specification and Measurement (3)**

*Product Design, Specification and Measurement* is a first level junior course in manufacturing, required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It exposes students to the principles required for designing a product and developing the specifications for its components and the methods for product verification and checking conformance to specifications.

Students taking this course should be familiar with introduction to engineering design and should have graphical communication skills.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2005  
Prerequisite: Prerequisite or concurrent: MATSE 259

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 306 Machining Process Design & Analysis (3)**

Machining Process Design & Analysis is an elective course within the Department of Industrial & Manufacturing Engineering that can be used to satisfy the undergraduate, manufacturing process course requirement. It will be offered both fall and spring semesters. Its purpose is to provide students with an in-depth experience into the science, engineering, and thought processes that are used to apply machining processes to economically convert raw materials into finished products. Students will learn how to design, analyze, implement, and troubleshoot machining processes and machining systems. Students taking this course must have previously completed I E 305, and have knowledge of produce specification, metrology, and computer aided design tools.

General Education: None

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

I E 307 Additive Manufacturing Process and Reverse Engineering (3) The study and application of rapid prototyping technologies in design and manufacturing.

**I E 307 Additive Manufacturing Process and Reverse Engineering (3)**

Speed to market is an essential element of competitiveness. New manufacturing technologies, driven by CAD, such as Additive Manufacturing (AM), Rapid Tooling (RT), and Reverse Engineering are making it possible for companies to significantly cut design and manufacturing cycles times. This course will explore these new manufacturing technologies, study the basic processes and their role in the design and manufacturing cycle, and provide hands on experience with these processes. Students will be able to use process models, characteristics and capabilities of specific AM processes such as Stereo Lithography Process, Fused Deposition Modeling, Selective Laser Sintering, Electron Beam Melting, and 3-D Printing to compare different processes. The students will study the use of these processes for Rapid Tooling applications for sand casting, investment casting, and injection molding. The students will be able to describe the role of CAD and Reverse Engineering in providing the data needed and current technological challenges for AM. The students will be able to develop cost models for the processes to evaluate the production economics. Students will gain hands on experience with the processes and reverse engineering through the laboratory component.

General Education: None
**Principles of Solidification Processing (3)**

Discussion, laboratory practices, and laboratory experiments covering principles of metal casting and joining, nondestructive testing, and nonmetallic processing.

**Product Design and Manufacturing Processes (3)**

Theory and principles of mechanical design specification, verification, and manufacturing. Industrial engineering majors may not schedule this course.

**Probabilistic Models in Industrial Engineering (3)**

The study and application of probability theory in the solution of engineering problems.

**Statistical Methods in Industrial Engineering (3)**

The study and application of statistics in the solution of engineering problems.
**I E 327 Introduction to Work Design (3)**

*Introduction to Work Design* is a first level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in fall and spring semesters. It exposes students to the basic introductory tools required for analyzing and designing both the job and the worksite in a cost-effective manner, as well as measuring the resulting output. These tools include human information processing, basic auditory and visual displays, anthropometry and musculoskeletal principles, cumulative trauma disorders, work measurement and stopwatch time study.

Students taking this course should be familiar with the basic concepts of cost.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2013  
Prerequisite: MATH 141 Prerequisite or concurrent: E MCH 211 or E MCH 210  

**I E 330 Engineering Analytics (3)**

Engineering Analytics is a required course for all baccalaureate students in the Industrial Engineering major. It provides students with a quantitative background in descriptive analytics which deals with data mining, predictive analytics which deals with forecasting, and the use of Big Data in analysis. Examples of analytics will be presented in various industries including manufacturing, healthcare, and distribution. The students will learn to work in settings to make data-informed decisions from large data sets.

Students taking this course should be familiar with differential and integral calculus, statistics, and basic computing.

I E 405 Deterministic Models in Operations Research (3) Deterministic models in operation research including linear programming, flows in networks, project management, transportation and assignment models and integer programming.

**I E 405 Deterministic Models in Operations Research (3)**

This course will be an introduction to deterministic modeling. In particular, the student will learn to formulate linear programs, network models, and integer programs. The student will also learn solution strategies such as the simplex method and branch and bound. Duality and sensitivity analysis will be covered along with their economic interpretation. Optimization software will be used for solving the formulations. Practical examples along with a detailed case study will be presented to help the student to synthesize the topic. This will be a required course for all undergraduate students pursuing a baccalaureate degree in Industrial Engineering.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2014

I E 408 Cognitive Work Design (3) Design and evaluation of cognitive work, including the human/computer interface, visual displays, software design, and automated system monitoring, with emphasis on human performance.

**I E 408 Cognitive Work Design (3)**

*Cognitive Work Design* is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is one of two courses which follow I E 327, Introduction to Work Design. This course focuses on the cognitive part of human factors and work design. It will be offered in fall and spring semesters. This course will enable students to design, implement, and evaluate human-computer interfaces according to principles outlined in foundational human-computer interaction readings. Students will be engaged in the active learning of design, programming, and usability concepts by way of building interfaces on the personal computer.

The Pennsylvania State University
Students taking this course should be familiar with computer programming and introduction to work design.

Prerequisite: I E 327

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

I E 418 Human/Computer Interface Design (3)
Design and evaluation of the human/computer interface, including human performance, visual displays, software design, and automated system monitoring.

I E 419 Work Design - Productivity and Safety (3)
Methods improvement, physical work design, productivity, work measurement; principles and practice of safety.

I E 424 Process Quality Engineering (3)
Statistical methods for engineering process characterization and improvement. For non-Industrial Engineering majors.
I E 425 Stochastic Models in Operations Research (3) Stochastic models in operations research with real world applications including dynamic programming, Markov chains, queueing models and inventory models.

This course will be an introduction to the modeling of stochastic systems. The student will learn about Poisson processes, Markov Chains, Dynamic Programming, and Queueing systems; both model formulations and solutions strategies. The students will learn several applications of these models in manufacturing and service systems, so that they can synthesize the lecture material. The student will study the topic of inventory theory, including fundamental tradeoffs, EOQ modeling, and stochastic models. Grading will be based on exams and homework. This will be a required course for all undergraduate students pursuing a baccalaureate degree in Industrial Engineering.

I E 428 Metal Casting (3) Application of engineering principles to the design of castings; casting of ferrous and nonferrous alloys; laboratory and simulation projects.

I E 433 Regression Analysis and Design of Experiments (3) Theory and Application of Regression Analysis and Design of Experiments to build models and optimize process and product parameters.

I E 434 Statistical Quality Control (3) Statistical techniques for univariate and multivariate monitoring of independent and autocorrelated processes; foundations of quality control and improvement.
service fields. The course will give an overview of the basic statistical methods and then concentrate on some of the more useful recent developments including univariate and multivariate techniques to monitor autocorrelated data, analyzing process capability, and improving process quality in short-run environments. The course objectives are to: (1) understand the assumptions and theoretical foundations of process monitoring; (2) know how to select, set up, and use monitoring charts effectively depending on the system characteristics; and (3) understand the basic business and economic principles of process monitoring.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

I E 436 Six Sigma Methodology (3) Techniques for structured problem-solving to improve the quality and cost of products and processes.

Six Sigma Methodology (3)
Six Sigma is a structured, quantitative approach to improving the quality and cost of products and processes. It provides a framework for quality improvement that builds upon statistical tools to achieve business results. Although statistical techniques are emphasized throughout, the course has a strong engineering and management orientation that will prepare students for synthesizing the material that comprises the Six Sigma body of knowledge. Important aspects of the Six Sigma approach include a strong focus on the customer, proactive management, fact-based decision-making, and interdisciplinary collaborations. The course objectives are: (1) to give students a fundamental understanding of and experience with solving a problem using the structured problem-solving approach of Define-Measure-Analyze-Improve-Control (DMAIC); (2) to provide an opportunity for students to solve or be involved with solving business problems with statistical tools; and (3) to help students build confidence in their business sense and statistical skills.

I E 453 Simulation Modeling for Decision Support (3) Introduction of concepts of simulation modeling and analysis, with application to manufacturing and production systems.

Simulation Modeling for Decision Support (3)
Simulation Modeling for Decision Support is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is the third course in operations research offered to the undergraduate students. The objective of this course is for students to learn to appropriately apply discrete event simulation modeling for decision support in IE problems through developing skills in model building, simulation output analysis, and communication of technical information and conclusions drawn from data analysis.

Students taking this course should be familiar with computer programming and operations research techniques.

I E 456 (M E 456) Industrial Robot Applications (3) Introduction to robotics, with emphasis on robot selection,
programming, and economic justification for manufacturing applications.

**I E (M E) 456 Industrial Robot Applications (3)**

This course is a technical elective, and is normally taken by students in their Senior years. In this course, students learn about present and future status of robot applications, and are required to apply fundamental knowledge of physics and mathematics to develop software to analyze and control robots.

The course deals with mechanics and control of robot manipulators and wheeled mobile robots. First, students are taught to analyze 3-D kinematics, statics and dynamics of robot manipulators. Then, control algorithms for robot manipulators are presented. Sensors, actuators and softwares used in industrial robots are discussed. In the end, kinematics and control of wheeled mobile robots are presented. During this course, application of computer, particularly Matlab, is emphasized as much as possible.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 460 Service Systems Engineering (3)**

This course focuses on using operations research methods such as mathematical programming, network analysis and applied probability to solve problems that arise in service systems. The lecture topics will include measuring service quality, methods for evaluating service systems, financial engineering & portfolio optimization, supply chain design & operations, manpower planning & scheduling, and revenue management. Several case studies will be used to illustrate applications. Course grades are based on homework, case studies, mini-project, midterm and final exams.

**I E 463 Computer Aided Design and Manufacturing (3)**

Three dimensional modeling and manufacture of parts and assemblies using Computer Aided Design and manufacturing software, and numerically controlled machines.

The objective of this course is to teach the students the fundamentals underlying computer aided design (CAD) and computer aided manufacturing (CAM). The students will learn the drawing elements for CAD, including the coordinate systems, the fundamentals of 3 D modeling techniques and basics such as wireframe models, surface and solid models and parametric modeling. The course will include application of CAM techniques to CNC machines, which consists of programming basics, machine setup and tooling systems. The data issues such as representation formats, data exchange and translation for integration of CAD/CAM will also be addressed.
**I E 464** Assembly of Printed Circuit Boards (3) Manufacturing processes and principles for assembly of printed circuit boards with surface mount and through-hole technology.

**Assembly of Printed Circuit Boards (3)**

General Education: None

**I E 467** Facility Layout and Location (3) Analytical and computational methods for facility layout designs, material handling systems and equipment, and location.

**I E 467 Facility Layout and Material Handling (3)**

Facilities planning and design is the process of locating and laying out the of industrial and service facilities to best support the purpose of the facility while respecting constraints on resources such as space and budget. The facility planning function involves strategic, tactical and operational decisions depending on the nature of the facility. In this course, we address both the layout and the location of facilities. The layout problem involves a discussion of the arrangement of departments within a plant, the design of material handling systems and the design of storage and warehousing systems. Structural and architectural design questions are NOT addressed in this course. We shall also consider simplifications to the manufacturing process that result in a simplification of the layout problem. Finally, we will investigate a range of facility location problems, including median and center location problems as well as some advanced variants. One of the objectives of this course is also to familiarize the student with the analytical and computer tools that can be used for facility planning and other production and operations management problems.

**I E 468 Optimization Modeling and Methods (3)** Mathematical modeling of linear, integer, and nonlinear programming problems and computational methods for solving these classes of problems.

**I E 468 Optimization Modeling and Methods (3)**
This course provides an analytic treatment of optimization models in linear, integer, and nonlinear programming. In particular, the course is concerned with the development of mathematical optimization models and computational solution techniques for solving these problems. The mathematical modeling of real-world applications is complemented with the use of modeling software such as LINGO or GAMS (General Algebraic Modeling System), which allows the user to readily develop large-scale mathematical models. The course also considers solution techniques for solving these optimization problems. Students will develop a basic understanding of the solution techniques through actual implementation of simple algorithms, as well as the use of commercial software such as those provided by LINDO, LINGO, and GAMS.

**I E 469 Global Industrial Engineering Experience (1)** Students will learn how to prepare for a short term, professional exchange in a foreign nation. Students will then travel to a designated university within a foreign nation for the purpose of a five day cultural and professional exchange.

**I E 469 Global Industrial Engineering Experience (1)**
This course will teach industrial engineering students how to prepare for a short term, professional exchange in a foreign nation and how Industrial & Manufacturing Engineering education and practice is carried out in a foreign nation. Students will be required to research and report on one or more industries in a designated foreign nation. Their report will focus on the products and/or services produced by these industries, the processes employed, known use of industrial and manufacturing engineers and/or practice, and their domestic and global standing.

Students will travel to a designated university within that nation for the purpose of a one week cultural exchange. The designated university will have an Industrial Engineering, Production Engineering, and/or Manufacturing Engineering program. Information about the international destination and the dates of travel will be provided on the course syllabus each semester.

During this period, students will:
1. tour the department and engineering laboratories to learn about the education and research facilities at their host university
2. attend engineering classes within the host university to learn about the engineering topic matter as well as how foreign engineering classes are conducted
3. give and receive engineering presentations with their host university students
4. tour the local community to learn about their culture
5. tour local manufacturing industries and interact with local Industrial/Manufacturing engineers to learn about the companies as well as how industrial & manufacturing engineering is specifically practiced

**I E 470 Manufacturing System Design and Analysis (3)** Contemporary design and analysis methodologies used to organize systems for economic manufacture of products.

**I E 470 Manufacturing System Design and Analysis (3)**
Manufacturing System Design and Analysis is a senior level course in manufacturing, required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. Students will be exposed to the contemporary techniques used to design and analyze manufacturing systems for economic manufacture of products. Students will learn to design manufacturing systems (human and automated) to satisfy differing types of product demand.

Students taking this course should be familiar with introduction to manufacturing and product specifications and

Objective of this course is to gain physical insight and hands-on experience with modern control engineering. Lectures and laboratory topics will include modeling and simulation of digital control systems, control computers, interfacing, analog-to-digital converters, digital-to-analog converters, programmable logic controllers, sensors and actuators. Lectures will be devoted to case studies in instrumentation for computer control of manufacturing machines and processes. Course includes a significant group project in which students will design and construct a computer controlled machine or process. This course is a senior undergraduate level technical elective course in the manufacturing system engineering track in the Industrial & Manufacturing Engineering Department. This course is also allowed for graduate credit in the Industrial & Manufacturing Engineering Department.

I E 478 Retail Services Engineering (3) Introduction to retail services operations, process models, and application of information technologies to enhance productivity and profitability.

Objective of this course is to understand modern retail industry with focus on their operations and information technologies that are used in such systems. The course starts with an overview of the basics of types of retailing, their channels, and economics of their operations. Much of the emphasis in the course is on processes and information technologies used in retail industry such as point of sale systems, barcode, RFID/EPC, global data synchronization, EDI, XML, data warehouse, analytics for decision support and supply chain management. Several case studies will be used to draw out the application of tools and techniques covered in the course. Course includes a group project focused on retail industry. Specific topics will include:

Global retail industry
Multi-channel retailing
Performance and metrics
Pricing
Layout and workforce
Information Systems and SCM
Barcode and RFID
Data warehouse and analytics
Case studies

I E 479 (EDSGN 479) Human Centered Product Design and Innovation (3) Consumer product design for a global market, incorporating human factors principles and user desires in a multicultural perspective.

This course will focus on consumer product design for a global market, incorporating human factors and ergonomics principles as well as user needs and emotional desires. The students will be led through product design process, various product design strategies, product planning, managing the development process, product evaluation, decision making...
tools, and market entry. Special emphasis will be placed on user-centered design, incorporating user characteristics, user needs, and emotional desires (including Kansei engineering approaches), survey methodology, and usability testing. To emphasize the multicultural perspectives in today's global product design, interdisciplinary teams from two universities on opposite sides of the globe will apply these principles on actual industrial product designs for leading consumer product manufacturers.

I E 480W Capstone Design Project (3) Industry-based senior capstone design project emphasizing manufacturing systems, service systems, and information systems in an interdisciplinary setting.

I E 480W Capstone Design Project (3)

Students will develop "real-world" engineering project experience through an industry-based project. Projects will focus on manufacturing systems, service systems, and/or information systems. Students will work in teams to complete the projects, where the teams will be interdisciplinary and composed of students from within the major with different areas of expertise and students from other majors as needed. Students interested in taking this course should have senior standing and be familiar with basic principles in manufacturing, operations research, and human factors engineering. Students will be evaluated through in-class participation, and a group project that consists of weekly communication with the project sponsor along with three design reviews, interim written reports and a final report, presentation, and poster.

This is a Writing-Intensive course in the department and hence students will be given opportunities to practice writing throughout the semester in multiple writing assignments.

IST 110 (GS) Information, People and Technology (3) The use, analysis and design of information systems and technologies to organize, coordinate, and inform human enterprises.

IST 110 Introduction to Information, People and Technology (3) (GS)

Information, People and Technology presents the high points of an education in the College of Information Sciences and Technology. It opens an intellectual journey through the ideas and challenges that IT professionals face in the world. It will address major questions such as: How can we use technology to organize and integrate human enterprises? How can technology help people and organizations adapt rapidly and creatively? What can we do about information overload?

Three perspectives (or facets) address the core issues: information or the basic science of data encoding, transmission and storage; people or the interactions among technologies, institutions, regulations and users; and technology or the design and operation of basic information technology devices. Students completing the course will be confident users and consumers of information technology. Students will develop research and analytical skills to evaluate specific devices and understand how those devices function in larger socio-technical systems. Students will be able to predict and anticipate the impact of new technologies on human institutions as well as understand the potential impact of institutions on the use and design of information technologies.

The course employs an action-oriented approach. Students learn by doing—formulating and solving problems drawn from professional contexts, detecting and recovering from errors related to technology use, and locating, reading and studying materials that support their analysis and problem-solving. Students will accomplish this by participating in team-based learning. The course provides students with the opportunity to use, modify, and evaluate software to search for, frame, and express ideas with fluency. A variety of mechanisms are used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, group projects, and peer and self-assessments.

IST 110 is the introductory course in IST, and, as such, serves as a prerequisite for 200-level (intermediate) IST courses. It is a required course for all majors and minors in IST, and meets requirements for a General Education or Bachelor of Arts Social Science (GS) course.

The course is delivered with significant student interaction with technology. At University Park, it is offered in multiple sections (typically 40-60 students per section), in the Fall and Spring semesters. At other Penn State campuses, it would be offered in class sizes typically ranging between 20-50 students.

The Pennsylvania State University
IST 111 Seminar in IST (1) Introduction to academic requirements, career planning & information literacy for students majoring in College of IST.

IST 111 Seminar in IST (1)

IST 111 introduces the student to the academic requirements, career planning and information literacy for the School of Information Sciences and Technology degree programs. Seminar in Information Sciences and Technology is required of all Information Sciences and Technology Associate degree candidates.

Upon completion of the course, the student will have an understanding of the programs and requirements of the School of Information Sciences and Technology and the University, and the career options for which they prepare students. The student will also develop and exercise habits and techniques for continuing self-assessment of learning styles, personality traits, vocational interests, and career plans. The student will learn how to maintain involvement in professional conversations and networks, including local, state, national, international organizations, listservs, etc. Students will have a basic knowledge of professional news literature, and the ability to identify and use reference tools and databases, which provide access to professional knowledge and literature. Finally, the student will have a basic understanding of government plans, policies and actions regarding the information professions including: regulatory agencies of the executive branch, legislative activities, and judicial decisions at local state and national levels. Students will be graded on course attendance, participation, examinations and brief exercises.

IST 111S Seminar in Information Sciences and Technology (1) Introduction to academic requirements, career planning, and information literacy for students majoring in the College of Information Sciences and Technology.

IST 111S Seminar in IST (1)

IST 111S introduces the student to the academic requirements, career planning and information literacy for the School of Information Sciences and Technology degree programs. Seminar in Information Sciences and Technology is required of all Information Sciences and Technology Associate degree candidates.

Upon completion of the course, the student will have an understanding of the programs and requirements of the School of Information Sciences and Technology and the University, and the career options for which they prepare students. The student will also develop and exercise habits and techniques for continuing self-assessment of learning styles, personality traits, vocational interests, and career plans. The student will learn how to maintain involvement in professional conversations and networks, including local, state, national, international organizations, listservs, etc. Students will have a basic knowledge of professional news literature, and the ability to identify and use reference tools and databases, which provide access to professional knowledge and literature. Finally, the student will have a basic understanding of government plans, policies and actions regarding the information professions including: regulatory agencies of the executive branch, legislative activities, and judicial decisions at local state and national levels. Students will be graded on course attendance, participation, examinations and brief exercises.

Since this is a core requirement, all IST students will be enrolling; it should be offered at least once per year. As enrollment growth warrants, it may require more frequent offering.

IST 130 (GA) Emerging Technologies in Popular Culture (3) A survey course that explores emerging technologies used to produce and consume popular cultural artifacts.

IST 130 Emerging Technologies in Popular Culture (3) (GA)
Popular culture refers to people's capacity to classify, codify, and communicate their experiences symbolically. Popular culture is shaped by the development of new technologies of text, sound and image recording and dissemination. While mass media companies have traditionally served as the primary means by which popular culture is diffused throughout society, emerging technologies enable people to produce and consume their own cultural artifacts as well as redefine mass produced cultural artifacts. As people become more adept in their use of emerging technologies, mass media industries such as film, news, radio and television respond by introducing Internet-based services that deliver both newly designed and repackaged traditional content to consumers. We use four approaches to analyze the intricate relationships between people and industry, emerging technologies and popular culture:

1. Production Analysis: Who owns the media? Who creates new media? What technologies are being used to produce new media? how does new media challenge the historical dominance of mass media?
2. Textual Analysis: how do specific works of popular culture gain their meaning?
3. Audience Analysis: How do different audiences make sense of the same cultural and technological artifacts?
4. Historical Analysis: how do current culture perspectives on emerging technologies differ from those of the past? What accounts for these changing perspectives?

Through individual and team-based learning activities, students will analyze and interact with cultural artifacts across popular culture genres. The course content and the assignments are directed at helping students to both create and critique cultural artifacts in ways that demonstrate their understanding of, engagement with, and reflections upon the relationships among people and industry, emerging technology, popular culture.

Assessment is based on students' ability to clearly and convincingly articulate their analysis through classroom discussions, individual activities, and team-based projects. Students will gain hands-on experience with social media such as wikis, virtual worlds, and podcasts. Students will also design and produce short films that demonstrate their ability to integrate and synthesize central themes from the course. Grading will be based on individual and team components.

This is an introductory course in IST, and meets the requirements for a General Education course in Arts (GA).

This course is delivered with significant student and instructor interaction with computers and digital media.

General Education: GA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2009

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

IST 140 Introduction to Application Development (3) A first course in concepts and skills for application development.

IST 140 Introduction to Application Development (3)

This is a first course in application development. Applications are computer programs developed to support human activity in enterprise and other social contexts. Examples of applications might include programs to help run a business, manage personal information, or provide entertainment. The emphasis of this course is on learning to translate practical problems through domain analysis into software applications usable in a human or organizational context. It will focus on the knowledge needed to create applications that use high level programming languages, combining original code with existing code libraries and application programming interfaces (APIs).

Students in this course will learn application development concepts including problem solving using computer programming; how to recognize the need for different types of data and how to use data of different types to represent an application's information; application testing and debugging; basic computer organization; and the basics of operating systems. This is a hands-on, practical course designed for students without prior computer programming experience who will use computer languages and tools to develop applications in their later courses and future careers.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2016 Future: Fall 2016
Prerequisite: A grade of "C" or better is required in:MATH 021 or placement above the level of MATH 021 in the mathematics placement test

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

IST 210 Organization of Data (3) Introduction to concept of databases including the storage, manipulation, evaluation, and display of data and related issues.

IST 210 Organization of Data (3)

As the database management software becomes one of the critical components in modern IT applications and systems, a solid understanding of the fundamental knowledge on the design and management of “data” is required for virtually any IT professionals. In a business setting, such IT professionals should be able to talk to the clients to derive right requirements for database applications, ask the right questions about the nature of their entities and in-between relationships in their business scenarios, analyze and develop an effective and robust design to address business constraints, and react to the existing database designs as new needs arise. Modern IT professionals should be able to guide a company in the best use of the diverse database-related technologies and applications toward the “Big Data” era.

As such, IST 210 aims to prepare students for obtaining fundamental understanding on the database concepts and practical skills to analyze and implement a well-defined database design. In particular, IST 210 provides an introduction to physical database design, data modeling, relational model, logical database design, SQL query language, and instructors’ choices on database
applications and advanced concepts. Students will learn to use a real-world commercial or open-source database management system, too. Upon taking IST 210, students should be able to understand the implications and future directions of databases and database technologies.

IST 211 Advanced Topics in Relational Database Management Systems (3) In depth coverage of: database administration, advanced Structures Query Language inquiries, normalization, referential integrity; troubleshooting, tweaking; implementation dependent transactions, embedded SQL, Open Database Connectivity.

IST 211 Advanced Topics in Relational Database (3)
The course aims to develop an in depth understanding and ability to use advanced relational database management systems, specifically to understand and use advanced normalization procedures, advanced referential integrity, and advanced SQL queries in depth. Students will be exposed to the administrative aspects of robust database management systems.

This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts that define the course. Students will be evaluated by examination, exercises, quizzes, and a small project from design to implementation (including documentation).

IST 211 is the first advanced IST course for the students pursuing the Data Option in the Information Sciences and Technology Associate Degree program. Successful completion is required prior to enrollment in IST 213, 214. It may be taken simultaneously with IST 212. IST 210 is a prerequisite for IST 211.

Since this is an option requirement, only selected IST students will be enrolling; it should be offered at least once per year in class sizes of 30 or less. As enrollment growth warrants, it may require more frequent offering.

General Education: None
Diversity: None
Bachelor of Arts: None
IST 220 Networking and Telecommunications (3)

The course includes an introduction to: telecommunications history; telecommunications transmission media (conducted and radiated); transmission characteristics (including an introduction to coding and modulation techniques); error characteristics, detection, and correctional; local and wide area networking applications, hardware, and software; the OSI models; industry standards; topologies; protocols; internetworking devices; communications management; security and recovery; information system applications; and the selection of telecommunications and networking systems. Special attention will be paid to evolving Internet Protocol (IP) technologies, e.g., Internet2.

IST 220 is an introduction to digital networking and telecommunications and their applications in information systems. IST 110 is the only prerequisite. It is a required core course for both the two-year and four-year Information Sciences and Technology degrees, and is a critical part of the curriculum. Its objective is to provide the students with a basic understanding of the working of digital networks and the ability to apply this knowledge to specific applications and situations. Evaluation of knowledge objectives will be by examination; and of application (i.e., selection and management) objectives by grading of group and individual projects and case studies.

As a "core course", IST 220 will be offered every semester at University Park, in as many sections as necessary to meet current demand. At other locations where the Associate and Baccalaureate degrees are offered, it will be offered 1-2 times annually depending on demand. Ideally, section size should not exceed 45 students per class.

While the course is about digital technology and how it works, it is not a "hands on" course, or a training course in particular equipment and/or applications. While there will be demonstrations of relevant technologies, the course is not equipment-intensive and will not involve special technology needs beyond the normal access to computing and the Internet.

The course is not duplicative of any other course currently offered. Although there is some overlap with CMPET 401-402, CSE 458, and COMP 421, none of these courses cover exactly the same material, and they operate at a different level of depth and detail. M I S 180 also overlaps somewhat, but it appears that no current course provides the same 200-level mixture of local and wide-area networking and business communications topics.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
mixture of local and wide-area networking and business communications topics.

IST 225 PC Hardware Basics (3) Preparation for PC hardware support: Students learn data recovery and how to build, configure, upgrade, troubleshoot, diagnose, and repair PC's.

IST 225 PC Hardware Basics (3)

IST 225 covers materials needed to prepare students to function as PC support technicians in business and industry. In a hands-on laboratory environment, students learn to build, configure, upgrade, troubleshoot, diagnose, and repair PC hardware. Course modules cover all the basic hardware components of the PC - their functions, interactions, installation, configuration, upgrading, repair, and replacement. Detailed coverage of system BIOS, CMOS setup, and the boot process is also included. Preventive maintenance and data recovery procedures are also studied. IST 225 is one of four courses required for the Networking Option in the Associate degree in Information Sciences and Technology (IST).

The IST 225 is designed to help the student to thoroughly understand all the basic hardware and firmware PC components, from PC resources, their function (BIOS and CMOS setup) and interaction, to diagnosing and resolving resource conflicts. The IST student should be able to install, configure, troubleshoot, repair, recover data, correct errors or replace all basic hardware components. The student should also be able to make appropriate hardware recommendations, purchases and upgrade decisions, as well as, determine appropriate preventive maintenance procedures. Finally, the Information Sciences and Technology major will learn how to foster communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects, laboratory exercises, and related experiences.

Achievement of knowledge objectives will be evaluated by examinations. Ability to perform hands-on support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

IST 226 Networking Essentials (3)

IST 226 covers basic networking concepts such as network types, cable types, wireless technologies, and network adapters. It discusses network models, including the ISO-OSI reference model and all industry standard network architectures. Both peer-to-peer and server-based commercial network operating systems are introduced with hands-on laboratory experience provided. Basic network administration issues are introduced. Internetworking/enterprise networking devices and architectures are also covered, as are network troubleshooting, performance monitoring, and optimization. IST 226 is one of four courses required for the Networking Option in the Associate degree of Information Sciences and Technology (IST).

Achievement of knowledge objectives will be evaluated by examinations. Ability to perform hands-on network administration and support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies.

Upon completion of this course, the students will be able to understand both cabled and wireless media types and be able to select appropriate media. The student will also understand the ISO-OSI and IEEE models and other industry standards, the roles of drivers and protocols and network architectures. The student will have experience with the installation, configuration and administration of basic server-based networking, as well as, an understanding of wide area/enterprise networking, performance monitoring and network troubleshooting. Most important, the student will learn how to foster communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects, laboratory exercises, and related experiences.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

General Education: None
Diversity: None
IST 227 Network Administration (3) Administering peer-to-peer and client/server networks: Planning, installation, server configuration, resource management, remote access, performance monitoring, and optimization.

IST 227 covers the essential knowledge and skills required to successfully administer peer-to-peer and client/server networks. Hands-on experience with commercial networking software such as Windows 9x, NetWare, Windows NT Workstation, and Windows NT Server is an important course component. Topics covered include pre-installation planning, network installation, network software architecture, server configuration, profiles and logon scripts, user account management, policies, resource sharing and security, disk management, remote access, backup and recovery, performance monitoring, and network optimization. IST 227 is one of four courses required for the Networking Option in the Associate degree in Information Sciences and Technology (IST).

Upon completion of this course, the students will be able to understand network software architecture, plan and install peer-to-peer and server-based networks. The IST student will also be able to manage user accounts, profiles, logon scripts, and system policies. The student will have practical experience with disk storage, resources, security, backup and recovery procedures. Finally, the student will be able to manage remote access features, monitor and optimize network performance, and foster communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects, laboratory exercises, and related experiences.

Achievement of knowledge objectives will be evaluated by exam. Ability to perform hands-on network administration and support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

IST 228 Advanced Network Administration (3) TCP/IP planning, installation, configuration: IP addressing, subnetting, routing, Dynamic Host Configuration Protocol (DHCP), Windows Internet Naming Service (WINS), address/name resolution, Domain Name System (DNS); database, web, mail server management.

IST 228 covers the essential knowledge and skills required to successfully administer TCP/IP networks and applications servers such as database servers, web servers, and mail servers. Hands-on experience with commercial software such as SQL Server, Exchange Sever, and Internet Information Server is an important course component. Topics covered include TCP/IP planning, installation, and configuration, IP addressing, subnetting, IP routing, DHCP, WINS, address and name resolution protocols, DNS, and management of database, web, and mail servers. IST 228 is one of four courses required for the Networking Option in the Associate degree of Information Science and Technology (IST).

Upon completion of this course, the IST students will be able to plan, install, configure and troubleshoot TCP/IP. The student will also understand IP addressing, subnetting, supernetting, routing and configuration. The student will have practical experience installing and configuring DHCP, WINS, and various protocols. Finally, the IST student will have administrative skills with database, server and web software, as well as, the ability to foster communications, interpersonal, and group interaction skills; through appropriate collaborative and active learning projects, laboratory, exercises, and related experiences.

Achievement of knowledge objectives will be evaluated by exam. Ability to perform hands-on network administration and support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies.

The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.
IST 230 Language, Logic, and Discrete Mathematics (3) Introduction to formal languages, mathematical logic, and discrete mathematics, with applications to information sciences and technology.

IST 230 Language, Logic, and Discrete Mathematics (3)

IST 230 is one of the five introductory core courses for the baccalaureate degree program in Information Sciences and Technology. The purpose of IST 230 is to provide students with an understanding of an array of mathematical concepts and methods which form the foundation of modern information science, in a form that will be relevant and useful for IST students. Exams and assignments will be used to assess that understanding. IST 230 will draw some of its material from several mathematical disciplines: formal language theory, mathematical logic, discrete mathematics. In-depth treatments of each of these subjects are offered elsewhere in the University as advanced mathematics and computer science courses. The difference is that IST 230 will present these concepts in a more elementary way, with much more emphasis on IST applications, and in a more eclectic, web-based format. IST 230 will be structured as a small number of modules. Each module will introduce a group of mathematical concepts and present applications of those concepts to problems of information storage, information retrieval, information management, etc. These include: MODULE 1: SET, RELATIONS, FUNCTIONS, NUMBERS set operations, applications of relations, equivalence relations, function composition, inverse functions, logarithms, exponential function, number systems, applications of number theory. APPLICATIONS: mathematical data types (integers, fractions, real numbers, tuples, function spaces); exponential growth; non-feasible algorithms; public key encryption. MODULE 2: LOGIC AND BOOLEAN ALGEBRA predicates, quantifiers, formulas, interpretations, syllogisms, logical consequence, tableau method, boolean connectives, boolean functions, valuations, truth tables, logic gates. APPLICATIONS: database query languages; specification languages; switching circuits; boolean search expressions. MODULE 3: COMBINATORICS AND PROBABILITY combination, permutation, discrete probability APPLICATIONS: lexicographic ordering; combinatorial explosions; lower bounds of algorithms; reliability of computer systems. MODULE 4: GRAPHS AND TREES directed and undirected graphs, weighted graphs, walks, paths, matrix representations, graph algorithms, spanning trees, rooted and structured trees, combining trees to form new trees, inserting nodes in trees, sorting, searching. APPLICATIONS: flow diagrams; task scheduling; critical paths; network connectivity; finite state machines; parsing; derivation; trees as data structures for storing information. MODULE 5: INDUCTION AND RECURSION induction and recursion on the natural numbers and other structures such as trees. APPLICATIONS: recursive evaluation of mathematical and Boolean expressions; recursive searching and sorting algorithms; asymptotic analysis of algorithms. MODULE 6: GRAMMARS, LANGUAGES AND FINITE STATE MACHINES alphabets, strings, grammars, languages, regular languages, regular expressions, finite state machines, language recognizers. APPLICATIONS: regular expression search; efficient pattern matching using finite-state machines.

IST 235 (US) (WMNST 235) Gender and the Global Information Technology Sector (3) Integrates information technology and gender studies. Overview issues and socio-cultural shaping of gender in the IT field.

Gender and the Global Information Technology Sector (3)

General Education: None
Diversity: US
IST 237 Digital Entrepreneurship (3) Introduction to foundational concepts for starting and operating digital business, including business models, funding, strategic, operational, structural, and cultural components.

IST 237 Digital Entrepreneurship (3)

The proliferation of new IT combined with the reach of the Web, Internet, and mobile devices is opening up new possibilities for individuals and companies to leverage IT to create new digital businesses. This course provides a broad overview of the role of entrepreneurial thinking and innovation in advancing IT-focused businesses. Students will examine how these skills can be leveraged to create new IT-driven businesses as well as to create competitive advantage for existing businesses via new IT products and services (i.e., intrapreneurship). This course provides a broad overview of the role of entrepreneurial thinking and innovation in advancing IT-focused businesses and familiarizes students with the processes and tools used to conceptualize and plan new innovative products and/or services that leverage IT as a core component of their business model. Students will be introduced to concepts, tools, and principles of business management including business strategy, finance, marketing, human resources, and leadership within the context of IT business models.

This will be a very hands-on active class. Using problem-based learning (PBL) and a “flipped” classroom, students will spend time outside class learning key concepts and time inside class applying them. Students will have the opportunity to work in teams to practice skills related to identifying novel ideas, assessing market opportunities, defining customer segments, identifying key partners, and building IT-based business models. In addition to regular in-class hands-on activities, each student will be expected to contribute to a class blog.

IST 240 Introduction to Computer Languages (3) Introduction to the specification and application of languages and language paradigms that interact with computers.

IST 240 Introduction to Computer Languages (3)

IST 240 is one of two courses added to the three core courses for the associate degree program to form the core courses for the baccalaureate degree program in Information Sciences and Technology. The primary goal of this course is to study the foundations underlying the design, specification and use of a wide variety of language paradigms used to interact with computers. The following details the content of the course: (1) nature of languages; (2) elements of languages; (3) classification of languages; (4) formal descriptions of languages; (5) data and types; (6) names and bindings; (7) control structures; (8) language processors; and (9) study experiences.

Student evaluation may be accomplished by means of assignments, examinations, and possibly a project. This course will most likely involve Web-based course material and will therefore require student access to computers and the Web. Although other existing courses are similar to IST 240 in content, none of those courses fit the objective of this course and of this program.

**IST 242 Intermediate & Object-Oriented Application Development (3)**

This is a second course in application development. It will focus on the intermediate knowledge needed to create applications that use high level programming languages, combining original code with existing code libraries and application programming interfaces (APIs). The perspective will be of application development that takes place within a human and organizational context; in this sense data structures will be construed as representations of organizational entities and information, and algorithms as a reflection of human and organizational processes and activity. Students will also learn about common application architectures and design patterns. This is a hands-on, practical course designed for IST design and development option undergraduate students and others as an elective.

This is a second course in application development. It will focus on the intermediate knowledge needed to create applications that use high level programming languages, combining original code with existing code libraries and application programming interfaces (APIs). The perspective will be of application development that takes place within a human and organizational context; in this sense data structures will be construed as representations of organizational entities and information, and algorithms as a reflection of human and organizational processes and activity. Students will also learn about common application architectures and design patterns. This is a hands-on, practical course designed for IST design and development option undergraduate students and others as an elective.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2016 Future: Fall 2016
Prerequisite: A grade of "C" or better is required in: IST 140 or CMPSC 121 or IST 240

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IST 250 Introduction to Web Design and Development (3)**

Introduction to how the World Wide Web utilizes emerging technologies. Students acquire conceptual and practical understanding of constructing Web sites. Recommended preparation: IST 110

**IST 250 New Media and the Web (3)**

This course provides an introduction to how the world wide web utilizes new media technologies. Students will acquire a sound conceptual understanding of how simple to complex web sites are constructed, and how this knowledge can be applied in their professional career. Knowledge gained in this course will dovetail into Information Sciences and Technology Associate degree options.

There are three major course objectives: (1) students will be able to perform a written critical evaluation of any web site, using the criteria listed below for evaluation; (2) students will be able to develop a written and/or electronic comprehensive proposal for the design/redesign of a web site; and (3) students will collaborate in meaningful, deep discussions of the topics listed above with peers, experts, and faculty via interactive technologies, as demonstrated by chat logs or other interaction records.

The Pennsylvania State University
Students will construct a simple web page that exemplifies the weekly topics. This web page may be built over the course of the initial 10 weeks as new topics are introduced, or the students may construct separate examples for each topic area. In some cases (such as e-commerce) the students may construct a non-functional prototype as opposed to a fully functional site. A quiz on the weekly topic(s) will occur at the end of each week. The quiz will be derived from the assigned readings and chats. This quiz will be on-line and automatically scored. Students will develop a comprehensive proposal for the design/redesign of a web site. Included in the proposal will be: (1) rationale for each decision; and (2) how conceptual criteria covered in segment 1 are applied to the design. IST 250 is part of the core curriculum for the Information Sciences and Technology Associate degree; thus it links to the other core courses in this degree. IST 110 is a prerequisite but may be taken concurrently. In addition, this course is a prerequisite for all courses in the Associate degree Web Administration Option. Generally, enrollment will be 20 students per semester building to 20 students per semester over a 3-4 year ramp-up period of the Information Sciences and Technology program.

IST 255 Fundamentals of Web Administration (3) An introduction to fundamental web administration concepts: Internet, graphic design, Hypertext Markup Language (HTML), security, legal/ethical implications, Internet business.

IST 255 Fundamentals of Web Administration (3)
Students will be required to demonstrate understanding of the course content by building web pages that incorporate and illustrate the facts, concepts, and procedures in the course content, and by identifying given features (such as security flaws) in given web sites. IST 255 is a required course for the Web Administration Option of the Associate degree in Information Sciences and Technology (IST).

Upon completion of the course, students will have knowledge of the fundamental web administration concepts, including information about the Internet, graphic design, basic HTML, security, legal/ethical implications, and business on the Internet.

Achievement of knowledge objectives will be evaluated by examination of students projects, including the following: The student will develop a web page(s) according to established guidelines that demonstrates basic knowledge of visual design, including GUI design principles, use of text, graphics, audio, animation and video.
The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

IST 256 Programming for the Web (3)
An introduction to fundamental Web programming concepts: Advanced Hypertext Markup Language (HTML), Dynamic Hypertext Markup Language (DHTML), extensible Markup Language (XML), Data Warehouses, JavaScript, common Gateway Interface (CGI), and Java.

IST 256 Programming for the Web (3)
The first part of the course consists of introduction of web programming facts and concepts. Students will be required to demonstrate understanding of the course by building web pages via individual and group activities that incorporate and illustrate the facts, concepts, and procedures in the course content. The latter half of the course involves in-depth programming projects in JavaScript, CGI, and Java, and will incorporate concepts from the first part of the course. IST 256 is required and represents the introductory web programming course for the Web Administration Option of the Associate degree in Information Sciences and Technology (IST).

Upon completion of the course, the IST student will be able to identify basic concepts for programming for the web, including decentralized computing and shared information, client/server/database, e-commerce, design issues, and scalability issues, as demonstrated by miscellaneous tests. The student will also have experience with basic UNIX/NT programming skills, including system programming basics for webmasters. Unix, and NT systems, as demonstrated by completed projects. They will be able to utilize advanced HTML, DHTML concepts, including style sheets, dynamic content, and scripting events, as demonstrated by completed projects. The student will also understand basic concepts for databases/data warehousing/data mining, including information and the organization, database and database management system environments, the relational database model, and object-oriented database model, as demonstrated by miscellaneous tests. They will be able to identify basic concepts about XML, multimedia resources, GUI Programming Environments, such as Visual J++, Symantec Cafe, NetObject's Fusion, and Dreamweaver (or the current equivalent environments). They will be able to utilize current programming technologies to produce functional programming code that enhances web page capabilities.

Students will be graded on course attendance, participation, quizzes, examinations, brief exercises and their project presentation (from design to implementation, including documentation).

IST 257 Advanced Web Administration (3)
Web site server installation, access, management, security, performance monitoring and optimization, network services, and troubleshooting.

IST 257 Advanced Web Administration (3)
IST 257 will help the student to acquire advanced web administration skills, including web server installation, access, management, security, performance monitoring and optimization, database strategies, network services, and troubleshooting. IST 257 is a required course for the Web Administration Option in the Associate degree in Information Sciences and Technology (IST).

Upon completion of the course, the student will be able to demonstrate an understanding of advanced web administration concepts. The IST student will be able to install, manage, create virtual directories, incorporate network services as demonstrated by inclusion of a functional FTP service, e-mail, and news groups within an active web server environment. They will have knowledge of web security features by utilization of user authentication, network-related techniques, certificate-based techniques and be able to monitor and optimize performance on a web server.

Students will be graded on course attendance, participation, quizzes, examinations, brief exercises and their project presentation (from design to implementation, including documentation).

IST 257 does not appear to be offered in any form at this time. IST 255 is a prerequisite for this course. IST 257 is a required course for the Web Administration Option in the Associate degree in Information Sciences and Technology.

The majority of campuses offering the Associate degree in IST will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

The Pennsylvania State University
IST 260W Introduction to Systems Analysis and Design (3) Introduction to systems analysis and design, stressing the process of requirements acquisition, specification, design, and implementation.

IST 260W is an introductory course to system analysis and design. It covers the process and is intended to be independent of the specific system, whether it be a hardware, software, telecommunication, logistics, or information system. This course can be used as a prerequisite to specific Associate degree system design courses. It can also be used for breadth for those IST students who do not pursue technical emphases. It serves as a writing across the curriculum course for the Information Sciences and Technology Associate degree. The course looks at two design paradigms. A small design project is included in the course.

The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; (2) teaching students a systems design strategy that emphasizes customer requirements at all stages of the process; (3) introducing students to the object oriented design process; (4) giving students a full design experience on a small project such as designing an e-Commerce system; and (5) showing students examples of the writing required for systems design and requiring them to write individual and team reports as well as give oral presentations on their designs.

Students will be evaluated by examinations and by grading of their written reports and oral presentations.

System design courses are taught at the upper-division level in Engineering and Business departments. This is a lower-division course that serves as an introduction for Associate degree students to give them a background for project-level courses in their fourth semester. It will serve as a core requirement in the Associate degree program and act as a prerequisite for the design courses that are capstone courses in many of the Associate degree options. The course will be offered one semester each academic year.

IST 261 Application Development Design Studio I (3) Introductory design and development studio course for IST and SRA students.

This studio course will provide opportunities for students to practice the technical skills acquired in their foundation application design and development courses, specifically, in IST 140 and IST 242. The course will follow the general format of experiential studios in the arts and architecture. It will be primarily problem-based and project oriented. Peer and instructor design critiques will be the major feedback and assessment mechanisms. Students in the IST Software Design Studios will be expected to complete deliverables in each phase of the systems development lifecycle (i.e. problem definition, requirements analysis, design, development, test) regardless of the development paradigm employed (plan-based, agile, etc).

A key objective of this design studio will be to introduce students to the challenges faced in different application design and development activities before exposing them to specific techniques to manage these challenges in upper-division courses.

Projects may be undertaken by individuals, pairs, or larger groups but each studio participant will be responsible for producing significant individual project deliverables. Project ideas may come from the student or from the instructor; however, projects related to students’ other course deliverables will require the agreement of both instructors.

Students will be required to maintain a design and development journal. This journal will be the analog of an engineering notebook or artist’s sketchbook and should contain a running account of the students design and development ideas, explorations, rationale, and other notes.

The IST design and development studios are a forum for serious students to engage with the concepts, process, tools, and materials used to envision and build software applications. Both collaboration and individual performance will be emphasized, as will experimentation, risk-taking, and enthusiasm for the process of designing and building working software applications. Students will be expected to improvise and then respond constructively to feedback from instructors and peers.
IST 261 Application Development Design Studio I (3) Introductory design and development studio course for IST and SRA students.

This studio course will provide opportunities for students to practice the technical skills acquired in their foundation application design and development courses, specifically, in IST 140 and IST 242. Students will be expected to improvise and then respond constructively to feedback from instructors and peers.
information project development. Students will be graded as a team by the faculty mentor on the quality of the project. An individual written report detailing the work accomplished during the course is required from all team members. The grade of the individual report and the team project grade form a basis for student evaluation.

The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; and (2) exposing students to the virtual workplace and providing them with meaningful information and technology related tasks.

General Education: None

Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: IST 110

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

IST 295B IST Internship (1-3) Supervised work experience where the student is employed in an information sciences and technology position in industry, government, or academia.

IST 295B IST Internship (1-3)

This course is offered as an internship for a student within a company. Faculty and industry collaborate to specify the duties of the intern. The faculty member responsible for the course then approves the internship. The internship must consist of a minimum of 150 hours of meaningful information and technology related tasks. A written report by the student, detailing the work accomplished during the internship, is required. This report and a report from the intern supervisor form the basis for the grade.

The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; and (2) exposing students to the workplace and providing them with meaningful information and technology related tasks.

IST 301 Information and Organizations (3) Overview of organizational structures and functions. Includes information processing and analytic perspectives of organizations.

IST 301 Information and Organizations (3)

This course provides students the opportunity to learn and experience:
1. Applicable organization and the ways in which IT can alter and enable these activities.
2. A series of analytic techniques that students can use to investigate the effects of new IT on work and organization.
3. Examples and problems set in and drawn from a range of domains including military, medical, high technology, business and government.

This course is designed around a series of ill-structured, contemporary problems that require students to develop responses by applying analytic techniques and theories of work and organization. At the end of the course, students will be able to:
1. Apply theories of work and organization as analytic techniques.
2. Conduct organizational and inter-organizational process analyses.
3. Map information flows among organizational units and actors.

IST 302 IT Project Management (3) Exploration and application of the basic concepts, methodologies, and tools of project management in the field of information sciences and technology.

IST 302 IT Project Management (3)

This course is designed to introduce and explore the basic concepts and practices of project management and help students understand how to plan and manage IT projects successfully. Throughout the course, students will be asked to utilize course concepts, methodologies, and tools while utilizing technology applications and addressing real-world problems. Students will learn the skills necessary to define project scope, create workable project plans, and manage projects with quality, budget, and schedule in mind. The course is structured around the key phases of project lifecycle, including initiating a project, developing project plans, executing and managing a project, and closing out a project. In addition, students will be taught how to identify and address the change management and political issues associated with project management.

IST 310 (COMM 310) Digital Media Metrics (3) Analysis of audience data for traditional and new media to create metrics for advertising, content marketing and audience analysis.

IST (COMM) 310 Digital Media Metrics (3)

The emergence of a converged marketplace where all media are now digital, including broadcasting, websites and social media, has created enormous new opportunities for advertising, promotions and content distribution. The proliferation of media has made the marketplace much more competitive, but simultaneously the availability of data too has increased significantly making possible the much more precise and segmented distribution of messages and content. For media practitioners in this new environment, a familiarity with audience data, metrics and dimensions is essential.

This course is an introduction to the methods for collecting, analyzing and utilizing audience data for traditional and new media. The class will cover the fundamentals of traditional media audience analysis, web metrics, and social media metrics, specifically as they relate to audience measurement, advertising campaign evaluation and content distribution. Students will learn the methods of data collection, analysis and use for traditional broadcast media, and the transformation of these practices in the newly digitized and converged multiphormat, multiscreen environment. The course will also cover the basics of data capture for new media (at an appropriate technical level), and the use of this data for the design of metrics appropriate for various purposes such as monitoring traffic, conversions and revenue generation. The use of metrics in pricing models for advertising, sales generation and content distribution will also be covered.

Students will be introduced to data sources for digital media audience analysis, with a special focus on Google Analytics. Students passing this class would be able to pass the Google Analytics Individual Qualification test.

IST 311 Object-Oriented Design and Software Applications (3) Introduction to object-oriented applications including applications in an Object Oriented Design (OOD) language or OOD languages.

IST 311 Object-Oriented Design and Software Applications (3)

IST 311 is among the courses making up the Application Design & Development option in the Baccalaureate degree in Information Sciences and Technology. This course is normally taken in the 5th or 6th semester. It is the first
upper-division course in the option sequence. The course is intended to provide students with a background in object-oriented design and object-oriented application development. Students will learn the fundamentals of object-oriented analysis, design, and modeling. They will apply design concepts and develop the skills necessary to bring an idea through the different phases of the application development lifecycle. The course normally involves students working on teams to design and develop working application prototypes.

Upon completion of this course, students will be able to apply object-oriented design principles using object-oriented modeling and programming languages, show how object-oriented principles increase the quality of complex applications, and begin development of the team skills necessary when developing complex systems.

**IST 331 Foundations of Human-Centered Design (3)**

Interdisciplinary survey of topics and methods related to the human-centered design use and usability of information systems.

**IST 331 Organization and Design of Information Systems: User and System Principles (3)**

Not too many years ago, people gained information from watching television news or reading the newspaper. Now, nearly half the population of the United States is connected or planning to connect to the Internet. Recent examples include the release of the "Star Report" which generated a record number of "hits" that almost paralyzed the Internet. IST 331 examines these issues, paying special attention to those problems that are directly impacting the performance and future of this rapidly expanding market. The course will expose the "positive and negatives" of the current information system. Next, it will factor in the "human elements" of the equation, and finally, IST 331 will help the Information Sciences and Technology major to understand the enormous responsibility of their work and how they can "make a difference." This course will serve as a required course in the Infor-nation, Society, and Public Policy Option of the proposed major in Information Sciences and Technology. Upon completion of this course, the students will be able to evaluate the current information systems and apply communication principles. They will also recognize problems in design, appreciating the "human factor" as it relates to pedagogy and research. The material in this course lends itself to active learning elements such as writing projects, library and internet research, and collaborative learning. Evaluation will be based on a combination of examinations, written assignments and papers, and collaborative projects. The exact mix of evaluation components will be determined by the individual instructors. The proposed course has some overlap in content with existing courses in Psychology, English, Instructional Systems, Industrial Engineering, and Management Science and Information Systems. Frequency: IST 331 will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Enrollment: Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.

IST 337 Technologies for Digital Entrepreneurs (3)

This course introduces the student to the applications, technologies, and tools for entrepreneurs engaging in or considering engaging in a start-up or running a small-to-medium size business. Although there will be some consideration of product concept development and implementation, much of the course will be devoted to the tools and infrastructure need to support a start-up up a small-to-medium size business. These concepts and skills will also support entrepreneurs looking to develop new applications to open new market opportunities.

This will be a very hands-on and active class that relies on approaches such as problem-based learning (PBL), "flipped" classrooms, and learning by doing. Students will spend time outside class learning key concepts and time inside class applying them. Students will have the opportunity to implement applications of the back-end technologies in support of a start-up or small- or medium-sized enterprises.

IST 341 Human Diversity in the Global Information Economy (3)

This course examines the effects of human diversity on the analysis, development and use of information systems and technology. This course explores the meaning and implications of diversity. It takes a comprehensive view of diversity that builds upon the notion of 'diversity' as 'differences.' When applied to demographic characteristics of the IT workforce and IT user base, the term includes such meanings as: race, ethnicity, nationality, gender, sexual orientation, religion, socio-economic status, age and disability. The concept of diversity is also applied beyond demographic attributes to also include the characteristics of individuals that make them unique in the ways that they bring different skills, thoughts,
The concept of diversity in IT work is examined from two different viewpoints: that of the ‘minority’ person who is interacting with the ‘majority’ person; and that of the ‘majority’ person who wants to develop greater awareness regarding successful interaction with ‘minority’ individuals. This course makes extensive use of problem-based learning, experiential learning, case studies, guest speakers and team work with students in other countries.

IST 361 Application Development Design Studio II (3) Second of two design and development studio courses for IST and SRA students.

This studio course will provide opportunities for students to practice technical skills acquired in their previous design and development courses to date, specifically, in IST 140, Introduction to Application Development; IST 242, Intermediate and Object-Oriented Application Development; and IST 311, Object-Oriented Design and Software Applications. The course will follow the general format of experiential studios in the arts and architecture. It will be primarily largely problem-based and project oriented. Peer and instructor design critiques will be the primary feedback and assessment mechanisms. Students in the IST Software Design Studios will be expected to complete deliverables in each phase of the systems development lifecycle (i.e. problem definition, requirements analysis, design, development, test) regardless of the development paradigm employed (plan-based, agile, etc).

A key objective of this design studio will be to provide application development opportunities where students can apply knowledge and practice techniques gained from their foundation and first upper-division courses.

Projects may be undertaken by individuals, pairs, or larger groups but each studio participant will be responsible for producing significant individual project deliverables. Project ideas may come from the student or from the instructor; however, projects related to students’ other course deliverables will require the agreement of both instructors.

Students will be required to maintain a design and development journal. This journal will be the analog of an engineering notebook or artist’s sketchbook and should contain a running account of the students design and development ideas, explorations, rationale, and other notes.

The IST design and development studios are a forum for serious students to engage with the concepts, process, tools, and materials used to envision and build software applications. Both collaboration and individual performance will be emphasized, as will experimentation, risk-taking, and enthusiasm for the process of designing and building working software applications. Students will be expected to improvise and then respond constructively to feedback from instructors and peers.

IST 361 Application Development Design Studio II (3) Second of two design and development studio courses for IST and SRA students.

This studio course will provide opportunities for students to practice technical skills acquired in their previous design and development courses to date, specifically, in IST 140, Introduction to Application Development; IST 242, Intermediate and Object-Oriented Application Development; and IST 311, Object-Oriented Design and Software Applications. The course will follow the general format of experiential studios in the arts and architecture. It will be primarily largely problem-based and project oriented. Peer and instructor design critiques will be the primary feedback and assessment mechanisms. Students in the IST Software Design Studios will be expected to complete deliverables in each phase of the systems development lifecycle (i.e. problem definition, requirements analysis, design, development, test) regardless of the development paradigm employed (plan-based, agile, etc).

A key objective of this design studio will be to provide application development opportunities where students can apply knowledge and practice techniques gained from their foundation and first upper-division courses.

Projects may be undertaken by individuals, pairs, or larger groups but each studio participant will be responsible for producing significant individual project deliverables. Project ideas may come from the student or from the instructor;
however, projects related to students’ other course deliverables will require the agreement of both instructors.

Students will be required to maintain a design and development journal. This journal will be the analog of an engineering notebook or artist’s sketchbook and should contain a running account of the students design and development ideas, explorations, rationale, and other notes.

The IST design and development studios are a forum for serious students to engage with the concepts, process, tools, and materials used to envision and build software applications. IST 390 Introduction to Professional Development (1) Interdisciplinary course to introduce students to the issues, concepts and skills involved in successfully transitioning into professional life.

IST 390 Introduction to Professional Development (1)

IST 390 focuses on introducing the students to professionalism and professional development in the field of IT. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing professional skills. For example, students will attempt to master relationship skills such as client relationship management and interpersonal communication, business skills such as presentation planning and scheduling; leadership skills such as decision making and goal setting; and career management skills such as networking and interviewing. Additional focus will be placed on the various resources and strategies available for pursuing a successful job search. Students will be given opportunities to practice the concepts, theories, and methodologies learned in class by working in teams on real-world case studies (many derived from corporate partners). Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate.

The audience is students who are ready to enter the work force. For those pursuing Baccalaureate Degrees, this would mean a class standing of Junior or Senior. For those pursuing Associate Degrees, this would mean a second year standing.

IST 402 Emerging Issues and Technologies (3 per semester/maximum of 9) Introduction to emerging issues, technology forecasting and analysis; overview of emerging issues and leading technologies in IST and how they impact information systems, users, the IT labor force and society.

IST 402 Emerging Issues and Technologies (3 per semester/maximum of 9)

Information Sciences and Technology (IST) is a rapidly changing discipline. New issues, methods, tools, applications and terminology appear on a continual basis. A key skill is the ability to analyze new issues and assess new technologies within the context of the information age. This course prepares students to understand the difference between potential technological failures and success, fads and revolutionary technology. It also helps students to view emerging issues as an opportunity rather than a threat. Intellectual tools are provided to assist in understanding issues, assessing and forecasting technological changes for feasibility and planning in real world situations. The course provides students with:

a.) A process framework for analyzing new issues and a theoretical framework to study technological and social impacts of such issues.
b.) A process framework for recognizing and understanding new technologies and a theoretical framework to take advantage of such technologies.
c.) Exposure to new issues and technologies.
d.) Hands-on experience in studying recent technological advances in detail.

The course will also provide students with the ability to:

a.) Understand the concept of issue analysis and technology forecasting.
b.) Recognize the important of new issues and technologies in information sciences.
c.) Incorporate these new issues and technologies into an existing information systems framework.
d.) Develop and implement new technology solutions, or discuss policies for addressing emerging issues.
e.) Predict impacts of issues and technology on information management, users, policies, and the environment.

Each time the course is offered; new issues and/or information technology areas will be explored. Examples of issues and technologies addressed include: wireless communications, security and intrusion detection, intelligent agents, web search, languages, intelligent systems, bio-informatics, advanced visualization and human-computer interactions, ubiquitous-pervasive computing, groupware, computer aided cognition, system design by global IT teams, IT outsourcing, and digital divide.

IST 420 Fundamentals of Systems and Enterprise Integration (3) Introductory course on integration of information technology into different venues, including the planning, development, and implementation of the integration.

IST 420 Fundamentals of Systems and Enterprise Integration (3)
IST 420 focuses on introducing the student to the role of information systems and technologies in achieving a variety of system goals. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing the integration of information technology and different systems. IST 420 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology Integration Option in their baccalaureate degree. It is the prerequisite for IST 421 which is also required for the Option. Upon completion of the course, the student will be able to recognize information technology integration. They will also understand the "business processes and information value chain" within a system, and be able to foster an understanding of the role of IT in system integration. Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate.

The Pennsylvania State University
IST 420 Fundamentals of Systems and Enterprise Integration (3) Introductory course on integration of information technology into different venues, including the planning, development, and implementation of the integration.

IST 420 focuses on introducing the student to the role of information systems and technologies in achieving a variety of system goals. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing the integration of information technology and different systems. IST 420 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology Integration Option in their baccalaureate degree. It is the prerequisite for IST 421 which is also required for the Option. Upon completion of the course, the student will be able to recognize information technology integration. They will also understand the "business processes and information value chain" within a system, and be able to foster an understanding of the role of IT in system integration. Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate.

IST 421 Advanced Enterprise Integration: Technologies and Applications (3) Advanced course on the integration of information technology into systems applications.

IST 421 expands the knowledge gained in IST 420 on the theories and skills required for planning, developing, implementing, and managing information systems. IST 421 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology Integration and Application Option in their Baccalaureate degree. Upon completion of the course, the student will have expanded knowledge of information technology and systems integration issues across multiple application settings. They will also have a deeper understanding of the specific information technology (both hardware and software) that can serve as the foundation for designing systems within an organization, and have experience that fosters an understanding of the role of IT achieving system performance goals.
IST 422 Enterprise Architecture Foundations (3) Theoretical foundations and practice of enterprise architecture.

Enterprise Architecture is the overall framework and set of strategic objectives for the usage of technology over time across an organization. Enterprise Architecture can also be described as the top-down, strategy-driven, integrating framework that brings together and manages the business model, applications and technology. Its primary goal is to facilitate improvement and deliver business-aligned information systems. This course presents the key components and processes involved in the effective creation and governance of enterprise architectures. Students will acquire knowledge about the key foundational aspects of enterprise architecture, learn what decisions need to be made and how to make them, and be able to explain and justify their recommendations.

General Education: None
Diversity: None

IST 423 Enterprise Information Management and Storage Architecture (3) Provide in-depth study of the concepts, issues, and technologies associated with the complex world of enterprise information and storage architecture.

This course is designed to introduce students to enterprise information storage and management concepts, issues, trends, and technologies. As a junior/senior level course, the focus will center on applying design concepts and associated technologies to real-world problems in the area of enterprise information storage and management. Existing partnerships with leading information management firms will be leveraged to provide real-world exposure to the complex enterprise information storage and management issues facing all organizations today. This course also focuses increasingly on the critical areas of information security and the emerging field of information storage virtualization. The course will mix technical details, applied value, and organizational insights of enterprise information storage and management through the use of labs, case studies, real-life problems, and team projects. This is a unique course that has generated great industry interest.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2013

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

IST 424 Architectural Modeling of Organizations (3) Theoretical foundations and practice of enterprise modeling.

Enterprise Architecture is the overall framework and set of strategic objectives for the usage of technology over time across an organization. Enterprise Architecture can also be described as the top-down, strategy-driven, integrating framework that brings together and manages the organization model, applications and technology. Its primary goal is to facilitate improvement and deliver organization-aligned information systems. Effective modeling is crucial for successful EA. This course provides an exposure to the foundational concepts and practices of effective enterprise modeling for EA. Students will acquire knowledge about the key foundational knowledge in modeling different layers of the enterprise, learn what decisions need to be made and how to make them, and be able to explain and justify their models and recommendations. This course explores the use and effectiveness of architectural modeling to describe an organization and to integrate and manage IT resources strategically from an enterprise perspective. Hands-on exercises and case studies are used to illustrate the role and effect of enterprise architecture concepts and methodologies. Emphasis is placed on understanding different architectural approaches, standards, and styles. Students will use enterprise architectural tools to develop descriptive models and understand how to integrate and manage IT within and between organizations.

For each general topic area, core readings are used to define standard vocabulary, concepts and relations, methods and criteria for evaluation, and implications for enterprise architecture. Students participate in class discussions as well as complete written assignments that focus on solidifying the understanding of the course content. Students also complete a team modeling project that is motivated by, and whose outcomes are discussed with respect to, one or more theoretical frameworks covered in the course.
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IST 425 (MGMT 425, ENGR 425) New Venture Creation (3)** Via problem-based learning, teams define new business ventures to meet current market needs, develop business plans, and present to investors.

**IST (MGMT/ENGR) 425 Introduction to Entrepreneurship (3)**

The goal of IST (MGMT/ENGR/ENTR) 425 is to better prepare undergraduate students to be business leaders in adaptive, globally-minded, technology-savvy companies. The course is structured so students develop skills that are of high value in any workplace: they develop improved leadership skills, higher self-efficacy, creativity and the ability to deal with ambiguity. On course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience and producing a convincing executive summary for internal or external financing and launch. Students who want to augment the skills and knowledge from their major with the ability to refine a new product/service process in an interdisciplinary team will find IST (MGMT/ENGR/ENTR) 425 a valuable course.

This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active learning happens in this course because students develop ownership in their new business venture concept and are fully responsible for the genesis of the idea. The course leverages the on-line course management system (ANGEL) to define weekly learning objectives, support electronic delivery of assignments, robust video content with entrepreneurs is provided on CD-ROM or via ANGEL, providing additional insights into entrepreneurship. The technology or business segment focus of the class is easily adapted by using different case studies and course mentors.

This will be one of two courses in the new two-course sequence for business students in entrepreneurship. This course will be accepted as a supporting course in the Engineering Entrepreneurship Minor (E-SHIP) and in the Engineering Leadership Development Minor (ELDM). IST (MGMT/ENGR/ENTR) 425 can be used as a technical elective in many of the engineering departments. It will be accepted as a Support of Option course for the Information Sciences and Technology (IST) major.

**IST 426 (ENGR 426, MGMT 426) Invention Commercialization (3)** Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path each technology.

**IST (MGMT/ENGR) 426 Invention Commercialization (3)**

The goal of IST (MGMT/ENGR/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - "not invented here".

Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome.

This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor.

Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. NOTE: Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property...
IST 431 The Information Environment (3) Survey of social environment of information technology themes: Community, sovereignty, privacy, ethics, economics, and knowledge management.

The ways that people communicate and utilize information is being changed dramatically by new information technologies. Information and the technologies that are employed by create, organize, transger, and utilize that information in a networked environment, using such global networks as the internet or internal networks such as intranets, have become a key component of the global economy. This global environment can change the way we interact, communicate, and function on the job and in our daily lives. The new technologies also raise new economic, legal, ethical, and social issues that are of grave importance to society. IST 431 examines the overall context of the new information environment and new technical issues relating to knowledge management in the global networked environment. IST 431 is a required course in the Information, Society and Public Policy Option.

There may be some overlap of material with COMM 405, COMM 483, COMM 485, PHIL 407, PHIL 423, PHIL 433 and PL SC 460m but none of these courses cover the same material, or approach it in the same manner.

Upon completion of this course, the student will gain an appreciation of the differences between “cyberspace” and the “real” world. The student will also understand that the implementation and modern information technologies has significant social and policy implications that demand appropriate policy issues in several different contexts (global, national, local). The student will also be able to discuss the major themes in information policy studies (e.g., community, privacy, access, economic participation, security) and be able to relate these themes to the applications of particular technologies. They will be able to describe policy frameworks and issues, as well as the ethical and social implications of these choices.

Homework assignments; Socratic dialogue; analysis and write-up of case studies; assessment of group research projects and presentations; participation in on-line discussion groups; two mid-term and one final examination (objective and essay). The precise mix of evaluation components will be determined by individual instructors; a typical weighting might be exams (60%), written assignments and papers (20%), and collaborative projects (20%).

IST 431 will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IST 432 Legal and Regulatory Environment of Information Science and Technology (3)**

The new information technologies are creating a global economy heavily dependent upon networked information, hardware, software, and electronic commerce, which calls for adaptation of existing legal and business practices. In many cases, the new technologies pose problems that existing laws or legislation are inadequate to cope with; but the complexity of the environment makes new solutions elusive. This course examines the legal, regulatory, and political environment within which intellectual property rights and examination of contracting issues, licensing of information and products, data protection, patents, cyberspace regulation, and implications for personal privacy. It also focuses on where technology is making regulation difficult by challenging previous concepts upon which our legal and regulatory systems depend.

**IST 437 Digital Design & Innovation (3)**

This course introduces students to design thinking, user-driven innovation and user experience, and business model implementation issues for IT-driven innovation.

**IST 437 Digital Design & Innovation (3)**

IT-driven innovation requires a deep understanding of the user, the context of the compute environment, and a systems approach to identifying critical system features. In addition, the IT-driven innovation must meet user needs in a commercially feasible manner. Students taking this class will work in teams to create a design concept and refine it through user analysis and prototyping. To get to a commercially feasible concept, students will analyze the competitive landscape and the ecosystem in which their concept will reside. Each team will express their concepts using the Business Model Canvas—a tool used in both educational and professional settings—to identify the value proposition and potential monetization strategies. Throughout the class, students will be introduced to tools in the IT design space through hands-on problem solving, role playing, and improvisation, among other techniques. A critical part of this course is the in-class coaching that teams will receive from the instructor, as well as guest speakers who can demonstrate the real-world challenges of entrepreneurship and innovation. Frequent communication practice using techniques such as idea pitches will help students refine their ability to express their ideas more effectively.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2014
Prerequisite: IST 237

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IST 440W Information Sciences and Technology Integration and Problem Solving (3)**

Problem-based approach to technology integration by focusing on real-life problems faced by an organization.

**IST 440W Information Sciences and Technology Integration and Problem Solving (3)**

This course is the undergraduate capstone for Information Sciences and Technology majors in the Baccalaureate degree. It requires students to work collaboratively in teams of 4-6 students, with each team comprised of students from more than one option and, if possible, more than one campus. Each team is given a significant real-world problem or issue in which information technology is part of the solution. Teams will be expected to manage the project effectively and to communicate its results clearly to a variety of audiences within an organization. Major topics include: review of problem-based and case-based learning; overview of project management practices; assessment of organizational and technical issues posed by the scenario; development and testing of work plans and analysis of options; communication within the group; communication within a management environment; and presentation of results to a variety of audiences inside and outside the organization.

IST students need to understand the organizational and social contexts in which technology functions. Indeed, many technology problems are multi-dimensional—they have an economic dimension, a legal dimension, a human resources dimension, and so on. This course will require students to analyze, evaluate, and test alternative solutions and to weigh their advantages and disadvantages for the organization.

Students will be evaluated in three ways: by the effectiveness of their team’s solution of the technical or organizational problem; by the quality of the students’ written and oral presentations; and by the quality of their project management and internal communication. A substantial written paper will be required of each student and each time; in addition, each
team will also construct a Web-site for sharing results. Other technologies will be used as required by the project.

It is expected that membership on teams of students will be drawn from the various options in the Information Sciences and Technology major. At least nine credits (including at least one IST 300-level and one IST 400-level course) in the student's option must be completed before enrollment in IST 440W. This course should be offered every fall and spring semester beginning in the fall semester 2002. It will be taught in sections of 25 and have a total enrollment of approximately 100 per semester.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2002
Prerequisite: ENGL 202C or ENGL 202D seventh-semester standing (this course is intended for seniors) and the five common course requirements plus at least three of the required courses in an option

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

IST 441 Information Retrieval and Organization (3)
This is an introductory course for Information Sciences and Technology senior and graduate students covering the practices, issues, and theoretical foundations of organizing and analyzing information and information content for the purpose of providing access to textual and non-textual information resources. Introduces students to the principles of information storage and retrieval systems and databases.

Effective: Fall 2016 Future: Fall 2016
Prerequisite: A grade of "C" or better is required in: IST 210 and IST 240 or IST 242

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

IST 441 Information Retrieval and Organization (3)
This is an introductory course for Information Sciences and Technology senior and graduate students covering the practices, issues, and theoretical foundations of organizing and analyzing information and information content for the purpose of providing access to textual and non-textual information resources. Introduces students to the principles of information storage and retrieval systems and databases.

IST 441 Information Retrieval and Organization (3)
This is an introductory course for Information Sciences and Technology senior and graduate students covering the practices, issues, and theoretical foundations of organizing and analyzing information and information content for the purpose of providing access to textual and non-textual information resources. Introduces students to the principles of information storage and retrieval systems and databases.

IST 442 (IL) Information Technology in an International Context (3)
International concepts to improve strategies for the design, dissemination, and use of information technology.

IST 442 Information Technology in an International Context (3)
(IL)
IST 442 focuses on the implications of the international context for the design, diffusion and use of information technology. The course will provide students with an understanding of the three crucial IT-related characteristics of the international context: 1. information infrastructure, 2. the economic and policy environment, and 3. social and cultural structures. Students will develop analytic skills that will enable them to predict the implications of the international context for information technology and will apply these skills in a final project that addresses a problem in the areas such
as information systems integration, interface design, or management of information technology projects.

Bachelor of Arts: None
Effective: Summer 2006
Prerequisite: IST 110

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IST 443 IT Professional Services Theory and Practice (3)**

This course is designed to introduce students to basic IT professional services theories and practices, including an examination of the professional services industry. A consulting-oriented systems life cycle framework is used as the outline of the course. The phases of this framework include: problem/system analysis and evaluation, requirements definition, solution design, solution development, solution implementation, and on-going evaluation and maintenance. Students will learn how to identify and define client problems, map workflows, develop recommendations, and prototype solutions. They will be given opportunities to practice the concepts and methodologies they learn by working on real-world problems in teams for corporate clients.

This course is designed around real-world problems and projects involving IT systems development, integration and implementation. In this course, the student will be part of a consulting team that is assigned to work with a real corporate client. The student works with the other team members to define their client's problem, map out appropriate workflows, and make recommendations for a solution. Depending on the project, the recommended solution may be prototyped or fully developed during the course.

Bachelor of Arts: None
Effective: Spring 2006
Prerequisite: IST 210
Prerequisite or concurrent: IST 302 or IST 412

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ISTR 444 Advanced IT Professional Services (3)**

This course is designed to allow students to explore in-depth IT professional services issues and strategies. The advanced topics to be covered during the semester include IT strategy consulting, consulting leadership issues, complex and/or strategic consulting methodologies, IT governance consulting, and an in-depth analysis of professional service firm operations and strategies, and the management of multiple, simultaneous projects and initiatives. This course is designed around real-world issues and projects involving problem identification, advanced research methods, IT solution development, integration, and implementation, primarily from a strategic and/or program management perspective. Furthermore, students will explore the culture, operations, and strategies of large, medium and small IT services organizations. The student will understand leadership and managerial issues associated with strategic alignment of IT and business strategies, executive-level stakeholder management, program management, IT strategic planning, and managing the political landscapes of large-scale IT consulting projects.

IST 446 An Introduction to Building Computer/Video Games (3) An interdisciplinary course that introduces students to process and techniques involved in developing a video or computer game.

IST 446 An Introduction to Building Computer/Video Games (3)

The course is project driven. Students will form teams and collaborate with one another to develop an interactive immersive experience. During the course, students will be exposed to several techniques for building graphical 3D worlds, animating characters, moving the camera and lights in real-time, and building intelligent characters (using state machine-based architectures). They will also learn different techniques of interactive storytelling, such as linear narrative, branching narrative, and adaptive narrative. Furthermore, they will be introduced to several tools that will aid in realizing their own projects and ideas, such as graphic engines (e.g. Wildtangent), and game engines (e.g. Unreal Tournament).

The course is heavily project driven. Students will, in the first half of the course, learn the tools used in the development of interactive 3D environments. They will submit 2 individual assignments using these tools to develop a simple interactive environment. These individual assignments will be graded and critiqued.

In the second half of the course, students will work on a game idea from generation to actual implementation. Students will be grouped in teams of three to develop a project, integrating concepts they learned through the class. They will use one or more of the tools they learned to build this project. Projects will be continuously evaluated and critiqued during game tuning sessions. In addition, projects will be formally evaluated through two prototypes that are critiqued by the class and the instructor. The students will continuously revise their designs and projects through the semester. The final version of the system is due by the end of the semester.

The Pennsylvania State University
IST 450A (COMM 450A) Search Engine Marketing (3) This project-oriented course provides students with the knowledge and skills necessary to conduct a sponsored research and keyword advertising-based marketing campaign.

IST 450A
IST 450A Search Engine Marketing (3)
This course offers the students an opportunity to gain knowledge and hands on experience on sponsored search and keyword advertising. In this course, students will gain knowledge and skills to advertise products and services using keyword advertising. Strategies for developing successful advertising campaigns will be discussed, including targeting potential customers based on the geo-location, applying A/B testing to identify the feasible advertising set-up, and organizing keywords with various products and services for effective management. In addition, various tools will be introduced to students for facilitating efficient and effective performance. By participating in a firm-based project, the students will acquire the experience of business consulting for advertising using current web-based techniques.

IST 451 Network Security (3)
Information technology has become a key component to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information/network security a major concern for organizations.

IST 451 focuses on network security. The course will provide the students with a comprehensive understanding of the fundamental issues and concepts of network security, and the mainstream network security technologies and protocols that are widely used in the real world. The course will also address emerging technologies in network security.

A major component of the course will be several team-based hands-on attack-defense projects. Each project has two phases: the attack phase and the defense phase. A group may be asked to defend against the attacks enforced by another group. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

IST 452 Legal and Regulatory Environment of Privacy and Security (3) Exploration of legal, regulatory, public policy, and ethical issues related to security and privacy for information technology professionals in public institutions, private enterprise, and IT services.

IST 452 Legal and Regulatory Environment of Privacy and Security (3)

Institutional constraints on security historically focused on traditional criminal enforcement and a slow but steady increase in civil remedies through the twentieth century. Professional security protection could satisfy reasonable assurance criteria by managing legal and regulatory risks based on commonly-held understandings of burglary, theft, conversion and widely-understood but related institutional constraints in the protection of physical property. This focus retained effectiveness so long as physical security over tangible property appeared successful, even extending to the maintenance of control over mainframe computers and their peripherals. However, the proliferation of networked computers has made access and storage ubiquitous, vastly increasing the vulnerability of confidential data, private information and critical national security infrastructure. Security and privacy regulation compliance responsibility now falls much more harshly on both organizations and most of their individual personnel. These complex new duties constrain organizations in the data management industry as well as suppliers and users of data and all participants in the information supply chain, including consultants, software suppliers, applications service providers, maintenance, outsourcing and communications providers.

Other factors exacerbate these liability risk management difficulties. Advances in network computer storage and use, the broadening perception of heightened value of information and the pervasive availability of rich data warehousing increase the vulnerability of data management. Risks of information theft and integrity losses as well as the explosion of privacy rights and national security concerns now require pervasive and fuller understanding of liability risk management principles/techniques among all managers and subordinates in the data management industry and in government. Information suppliers, handlers, owners and network service providers are increasingly exposed to civil litigation, regulatory oversight/compliance and criminal prosecution for various information-related wrongs. For example, confidentiality is compulsory for corporate trade secrets, privacy is required for personally identifiable information about individuals and secrecy is mandatory over matters of national security; all of which create complex legal duties that are fundamentally driving the design of information handling processes. This course surveys legal and regulatory constraints on information security and privacy practices.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

IST 453 Legal, Regulatory, Policy Environment of Cyber Forensics (3) Legal, regulatory and public policy environment of computer and network forensics that constrain investigatory and monitoring activities in computer and network environments.

IST 453 Legal, Regulatory, Policy Environment of Cyber Forensics (3)

This course covers the major legal, regulatory and policy issues in cyber-forensics including, pre-trial discovery, production of electronic documents (electronic data discovery or EDD), custody, EDD cost balancing, admissibility of The Pennsylvania State University
electronic evidence, “business records,” expert witness roles and qualification, constitutional rights to privacy and confidentiality, privilege, litigation support, forensic service providers, document retention standards, legal constraints on electronic records management, EDD employment policies, key EDD laws, civil, criminal and regulatory procedure and evidence, litigation holds, spoliation, obstruction of justice, interaction with inside and outside service providers and counsel, EDD strategy, audit trails, and multi-disciplinary relations with computer and network forensic experts. Students are exposed to the failure and successes of particular cyber forensic techniques in the dominant legal and regulatory forums.

IST 454 Computer and Cyber Forensics (3) Fundamental issues and concepts of computer forensics; aspects of computer and cyber crime; methods to uncover, protect, exploit, and document digital evidence; tools, techniques, and procedure to perform computer and cyber crime investigation.

IST 454 Computer and Cyber Forensics (3)

Computer and communication technologies have become the key components to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information and network security a major concern for organizations.

IST 454 focuses on computer and cyber forensics. Students will learn different aspects of computer and cyber crime and ways in which to uncover, protect, exploit, and document digital evidence. Students will be exposed to different types of tools (both software and hardware), techniques and procedure, and be able to use them to perform rudimentary forensic investigations.

A major component of the course will be several hands-on exercises and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Integrated throughout are perspectives of computer and related legal process, including computer crimes from state and federal law, methods of interaction with law enforcement and prosecutors, admissibility of expert witness testimony and the use of forensic reports in civil, regulatory and internal investigations.

The Pennsylvania State University
IST 456 Information Security Management (3) Contemporary Security Issues; security management processes, architecture and models; risk analysis and management; security planning, analysis and safeguards; security policies development and administration; contingency planning, incidence handling and response; and security standards and certification processes.

IST 456 Information Security Management (3)

Communication technologies have become a key component to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information systems and network security a major concern for organizations.

IST 456 focuses on security and risk management. Students will learn contemporary security issues; security management processes, architecture and models; risk analysis and management; security planning, analysis and safeguards; security policies development and administration; contingency planning, incidence handling and response; and security standards and certification processes.

A major component of the course will be several case studies and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

IST 461 Database Management and Administration (3) Introduces advanced topics in database management systems that are fundamental to effective administration of enterprise information systems.
IST 461 Database Management and Administration (3)

The objective of the course is to enable a student to comprehend principles of database management and administration. The students will learn how data are stored (indexing), accessed (query processing), shared (currency and transactions), and controlled (security). Students will be creating and using these features in a database in the laboratory. They can then develop, use, and tune database systems and applications, utilizing advanced database management features. This course assumes basic familiarity with relational model, Entity-Relationship diagram, SQL query language, and normalization (as covered in IST 210). It builds the foundation on more advanced concepts of database systems that are fundamental to a career in database administration.

IST 489H Research Methods for the Information Sciences and Technology (3)

Seminar course focused on approaches to studying information and communication technologies and writing theses and other research reports.

IST 489H Research Methods for the Information Sciences and Technology (3)

IST 489H provides students the opportunity to learn and experience:
1) Conceptualizing what are information and communications technologies.
2) Approaches to conducting research on, and reporting results of studies, of ICT.
3) The research process and its academic context.

The course is designed around a series of ill-structured, contemporary, problems that require students to develop responses by applying research approaches to ICT. At the end of the course, students will be able to:
1) Apply different conceptualizations of ICT to common problems.
2) Select and initiate research on ICT.
3) Begin writing research-oriented work such as theses and papers.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**Instructional Systems (INSYS)**

INSYS 433 Teaching and Learning Online in K-12 Settings (3) Explores uses of online technologies for K-12 settings including cybercharter and blended settings.

**Teaching and Learning Online in K-12 Settings (3)**

_The Pennsylvania State University_
INSYS 441  Design, Development, and Evaluation of Internet Resources (3) Design, production, and evaluation of instructional materials for delivery on the Internet.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

INSYS 442  Innovative Instructional Applications of Microcomputer Technology (3) Educators experience and develop innovative instructional applications of text-processing, database management, spreadsheet, and telecommunication software in their classrooms.

INSYS 447  Instructional Design for Multimedia Technologies (3) State of the art multimedia technology hardware such as interactive video, CD-ROM and digitizing audio and video.

INSYS 471  Introduction to Educational System Design (3) Investigates systems theory and how components of educational systems interact; develops insights on current issues and models in Educational System Design.

Integrative Arts (INART)

INART 001 (GA) The Arts (3) Develop critical perception, knowledge, and judgments through an examination of the basic concepts common among the arts.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

INART 003 (GA) Reception of the Arts (3) This course considers how art uses time, space, and causality to define culture and the human condition.

INART 003 Reception of the Arts (3) (GA)
(BA) This course meets the Bachelor of Arts degree requirements.

INART 003 approaches the study of the arts from the audience's point of view. It is designed to meet the General Education Arts requirement. The course is offered in the Fall and Spring University Park, with a typical enrollment of 50, and is available to other locations through Campus Course Exchange. There are no prerequisites, and students are assumed to have little or no background in art. As a result of taking the course, students are able to use analogy, the idea of structure, and theories of reception and communication in both art and non-art situations. The course is offered on-line, making it particularly useful for students with family and personal obligations, for older students with job obligations, and for students with handicaps limiting their access to traditional "classroom" courses. Although INART 003 is designed for potentially large enrollments, students relate to the instructor on a one-to-one basis through e-mail and interact with other students using an on-line bulletin board. Writing, criticism, and analytical thinking are required. Evaluation is based on five on-line quizzes, two on-line exams, and participation in on-line discussions. Tests measure students' ability to reason, synthesize materials, and apply ideas about art to other situations. The discussion sessions expand ideas found in art to apply them to everyday life. Writing is required for the course. Students must contribute at least three short essays and post commentary on others' work for 20 points of the final grade. Informal e-mail conversations supplement this requirement. The course's extensive web site includes lessons corresponding to each chapter in the text, a lexicon of difficult terms, links to other web sites, study guides, works of art, and provocative essays about art.

Effective: Spring 2004

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

INART 005 (GA) Performing Arts (3) Introduction to music, dance, and theatre. Orientation to the aesthetics, theory, and practice of professional performance.

INART 005 Performing Arts (3) (GA)
(BA) This course meets the Bachelor of Arts degree requirements.

INART 005 is not an "art appreciation" course in any traditional sense of the term. Rather, it is focused on the act of experience and the encouragement of critical thinking about those experiences. No effort is made to encourage students to "like" or "dislike" the things that they see and hear or to encourage them to accept the view that some experiences are more or less valuable than others. The idea, simply, is to have informed experiences in the performing arts and think about them in a critical context. Although INART 005 is designed for potentially large enrollments, students relate to the instructor on a one-to-one basis through e-mail and interact with other students using an on-line bulletin board. Writing, criticism, and analytical thinking are required. Grading in INART 005 is determined by attendance, participation in discussions, and a mid-semester and final examination. Fifty percent of the semester grade will be determined by the extent and quality of participation in weekly discussions. Thirty percent of the semester grade will be determined by the mid-semester and final examination (15% each). The final 20% of the semester grade will be based on attendance.

General Education: GA

INART 010 (GA) The Popular Arts in America: Mass Media Arts (3) An introduction to the arts of the mass media with emphasis on how film, radio, television, and the print media influence and reflect society.

INART 010 The Popular Arts in America: Mass Media Arts (3) (GA)
(BA) This course meets the Bachelor of Arts degree requirements.

INART 010 examines the history and form of the popular arts as antecedents for the development of the mass media arts of 21st century America. The primary goal of the course is to help students develop a critical and analytical approach to...
dealing with contemporary mass media. The course presupposes some familiarity with modern popular media and takes as its content both historical and contemporary examples as sources for analysis. While the class offers facts and data, the central focus of the course in the theory, stylistic elements, and structural workings of media content. The pedagogical goal of this approach is to examine not just what the mass media arts are but also where they come from, how they function, and what effects they have on our culture and society. The key to this goal is understanding the naturalized ideologies imbedded in the structural form of popular culture: how the early expressions of popular culture - the minstrel shows, vaudeville, burlesque, pulp fictions, and the early cinema both shaped cultural attitudes and reflected societal notions of race, gender, and socioeconomic norms. The class meetings consist of lectures and in-class discussions that illustrate modern critical approaches to popular culture and the terminology used in presenting critical arguments and ideological viewpoints on these art forms. Reading assignments will support classroom work by presenting students with a diversity of opinion on popular culture and significant examples of that culture in print media. Further, examples of historically significant popular mass media arts will be shown in class and then discussed in relation to the concepts and critical viewpoints covered in lectures. In addition to regular scheduled classes, students will participate in an on-line Media Journal that requires watching, listening to, and reading examples of contemporary mass media art (television programs, motion pictures, comics, graphic novels, etc.). Every two weeks, students will be required to see, read, or hear an assigned contemporary work of popular mass media art and record their critical responses on the online Media Journal that will be accessible to all other members of the class. Grades will be based on three equally weighted objective examinations that will account for 75% of the semester grade. The remaining 25% of the grade will be determined by participation in the online Media Journal.

INART 015 (GA) The Popular Arts in America: Performing Arts (3) The development of the performing arts of American popular culture; emphasis on popular music, dance, theatre, and variety arts.

INART 015 The Popular Arts in America: Performing Arts (3) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 015 examines the Popular performing arts and their place in American popular culture. broken into four units: popular music, popular stage dance, popular theatre, and acts like the circus and stand up comedy. The course will highlight important influences, artists, events, works, and effects such as:

1) Popular Music: This unit will trace the development of the American popular music from the emergence of the popular songwriter in the 1830s to the beginnings of rock and roll. Jazz, country, blues, and mainstream pop will be major genres examined.

2) Popular Stage Dance: This unit will cover the evolution of dance as a popular performance art from percussive dances performed in the minstrel show to rock and roll choreography in music videos.

3) Popular Theatre: This unit examines the founding forms of popular theatre (minstrelsy, vaudeville, and burlesque) and their effect on later arts like motion pictures and television.

4) Popular Variety Arts: This unit deals with those performing arts that fall outside of the broader categories of dance, music, and theatre.

The circus, stand up comedy, and stage magic will be highlighted. There will be three equally weighted objective tests in the course, each covering approximately one-third of the course’s content. These examinations account for 75% of the semester grade (25% each). Students in INART 015 also participate in the Popular Arts Forum, a semester-long examination of an important contemporary issue in popular culture (cultural imperialism and censorship; sexuality in popular culture; gender, ethnicity, and race in the popular arts; etc.) that requires research, critical thinking, the formation of objective opinions, and discussion. The Popular Arts Forum is conducted online utilizing resources held on the Forum website and World Wide Web. Asynchronous online discussions on the topic will occur three times during the semester. The class will be broken into groups of fifteen students for the purpose of discussion. Participation in the Popular Music Forum will account for 25% of the semester grade. The discussion grade will be determined by the quality of participation and degree of involvement in the discussion.

INART 050 The Science of Music (3) (GN)
This course meets the Bachelor of Arts degree requirements.

This course will explore the physical and acoustical bases of sound and music.

The physics will include a study of vibrating systems and simple harmonic motion, wave propagation, reflection and refraction, superposition, resonant frequencies, harmonics, phase, the relationship of speed and velocity, and spectra. The acoustics portion will apply these physical properties to hearing, sound and music, covering the nature of the human auditory system, and correlations of pitch to frequency, loudness to amplitude/power/intensity, timbre to spectra and envelope. NOTE: there need be no specific math prerequisite for the course. Though high school algebra and trigonometry will be recommended, these topics will be integrated with the rest of the course material.

With physical and physiological groundwork laid, the subject matter will move to purely musical areas: the construction of musical scales, the nature of consonance, dissonance, and harmony. Twelve-tone equal temperament, the basis of Western common practice music, is not an absolute, but a decision made to facilitate certain musical choices, and a compromise in terms of optimal consonance. The nature of the different instruments will then be discussed - strings, winds, brass, and voice. Different instruments naturally produce different scale types and different types of spectra. Students will learn to appreciate the inherent differences in different instrument types.

The last portion of the course will return to acoustics, exploring the role that performance spaces play in the propagation and reception of sound. The shape and materials of a room determine its characteristic sound. Students will learn about how sound in large auditoriums is characterized by the balance of direct and reflected sound, the distinction between specular and diffuse reflections, the absorptive properties of different building materials, and the nature of reverberation. Smaller performance spaces are subject to standing waves, flutter echo, and comb filtering. Taking steps to avoid undesirable characteristics is often an easy matter once the nature of these characteristics is understood.

Finally, an overview of perceptual psychological studies of auditory streaming will explore how the auditory system organizes sound on a primitive, unlearned level.

Grading will be based on weekly homework assignments, two midterm exams and a final exam.

INART 055 (GA) History of Electroacoustic Music (3) A history of electroacoustic music as a consequence of developments in culture and technology from 1880 to present.

INART 055 History of Electroacoustic Music (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on the interrelationship and parallel development of technology, art and music from the earliest electronic devices to the current ubiquitous computer audio workstation and electronics dance music.

Electronica is a multi-faceted genre that borrows from a number of past innovators. Its artists routinely acknowledge the influence, for example, of musique concrète. Karlheinz Stockhausen and the theremin, yet their audiences are often unaware of the roots of the music that occupies much of their recreational time and social energy.

Electroacoustic music developed hand in hand with innovations in communications technology, which in turn influenced the way music was conceived and created. Too often, these correlations are not discussed. Both electrical engineers and musicians use filters, without necessarily realizing that they are both using the same technology for different purposes.

FM synthesis revolutionized commercial electronic instruments in the 1980s, yet few people realize that this was the same form of modulation that was the basis of much radio broadcast technology. Many innovators in electronic music started out as inventors or engineers. The creation of electroacoustic music is one of the most fertile cross-disciplinary fields of the twentieth (and now twenty-first) centuries. It has affected the production and reception of music indelibly, and is now a vital component of digital multi-media art, a leading trend of the new century.

The course asks students to be aware of vital technological developments in audio (the evolution from the Edison phonograph to the CD player), electronics (the evolution from the spark gap oscillator to the vacuum tube to the transistor to the microprocessor), cultural movements (from Impressionism and Romanticism to modernism to postmodernism), and to become sensitized to the chief innovators in the field (the differences in the music of Schaeffer, Stockhausen, Carlos, Chowning, and others). They are made aware not only of names and terms, but also taught to recognize differences in the different sounds of different composers and styles.

The course has been offered two semesters as a 297 offering. It is designed so that it may eventually be offered completely online. The text is online, and the listening assignments are also posted at the PSU Digital Music Library.

Grading will be based on weekly quizzes that ask for definitions and short answers, four tests that require essays and identification of listening examples, and two papers focused on different compositions/composers.
INART 062 (GA;US;IL) West African and African American Arts: from the 1960s to the present (3) An introduction to West African and African American Arts from the 1960s to the present.

INART 062 West African and African American Arts: From the 1960’s to the Present (3) (GA;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course focuses on the interrelationship and parallel development of arts in West Africa and the United States from the 1960s to the present. The cultural ties between the slave trading states of West Africa and the slaves and their descendents of the Americas, though weakened by over three centuries of separation, were never completely erased and the similar experiences of colonial oppression in Africa and slavery in America created expressions in art of remarkable similarity and correspondence. Although this comparable and often equivalent development in artistic expression on both sides of the Atlantic was, by and large, unrecognized and unacknowledged, the emergence of black nationalism in the 1960s reestablished the historic cultural associations between African and African American arts and created a remarkable artistic interchange that continues to the present day. The 1960s was a pivotal period for both African and African American art. The Civil Rights movement in the United States and the collapse of colonial rule in West Africa gave rise to a new sense of black identity for Africans and those of African descent and a new art that embodied and expressed that newfound identity. During the 1960s, the visual, performing, and literary arts of Africa and Black America celebrated their shared cultural heritage and found common use as instruments of political and social change. The sense of shared history and like experience on both continents influenced and informed black art in powerful ways and continues to motivate and inspire artists as they reflect and comment on their geographically separate, though spiritually linked, worlds. This course focuses on works of art drawn from many diverse traditions in both Africa and the United States and sets those works in the context of the social, political, and cultural movements that helped to create them. Examples of African and African American visual, performing, and literary arts will be examined, compared, and contrasted in order to gain insight into those works while serving as a vehicle for gaining a better understanding of the cultures that created them. INART 062 is a wholly online course that will be offered simultaneously by Penn State and Kwame Nkrumah University of Science and Technology in Ghana. This will allow students in Africa and the United States to participate as members of the same class in discussions and joint projects created on the World Wide Web. Grading will be based on participation in weekly online discussions, an objective mid-term and final, and the successful completion of a collaborative online project developed by students in both countries. INART 062 will be offered in the fall and spring semesters each year.

INART 100 (GA) Seminar in Integrative Arts (3) A study of various arts with emphasis on comparison, contrast, and other aspects of interrelation. Topics will change each semester.

INART 100 Seminar in Integrative Arts (3) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 100 is a semester-long seminar that explores a theme or topic through selected works of the visual or performing arts. Various arts will be examined with emphasis on comparison, contrast, and other aspects of interrelation. Although topics will change each semester, they will always be bound to broad concerns in the arts that are shared or common. The approach will be strictly interdisciplinary with emphasis on discussion and the direct experience of art.

INART 100 is a General Education Arts offering (GA) and, for selected topics, will satisfy the Intercultural and International Competence Requirement (GI).

At University Park, the course is built around twelve to thirteen motion pictures shown as part of the Palmer Museum of Art’s film series, a gallery exhibition at the Palmer, and two or three performances at the Center for the Performing Arts. Students are required to attend all of these events and showings. The film series and the gallery exhibition are free. Tickets for the two events at the Center for the Performing Arts must be purchased. Attendance will constitute 20% of the semester grade.

Each week, there will be a required online discussion based on the “Commentaries” associated with the event or exhibition of that week. These “Commentaries” are included with the background information on the events and exhibitions contained in the course web site. Discussions will last for one week and all students are required to participate in all online discussions. Participation in discussions will constitute 50% of the semester grade.

The remaining 30% of the semester grade will be based on a series of objective tests based on the background materials.
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

INART 100W (GA) Seminar in Integrative Arts (3) A study of various arts with emphasis on comparison, contrast, and other aspects of interrelation. Topics will change each semester.

INART 100W Seminar in Integrative Arts (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 100W is a semester-long seminar that explores a theme or topic through selected works of the visual or performing arts. Various arts will be examined with emphasis on comparison, contrast, and other aspects of interrelation. Although topics will change each semester, they will always be bound to broad concerns in the arts that are shared or common. The approach will be strictly interdisciplinary with emphasis on writing, discussion, and the direct experience of art. INART 100W is a General Education Arts offering (GA), a writing intensive course (W), and, for selected topics, will satisfy the Intercultural and International Competence Requirement (GI). At University Park, the course is built around twelve to thirteen motion pictures shown as part of the Palmer Museum of Art's film series, a gallery exhibition at the Palmer, and two or three performances at the Center for the Performing Arts. Students are required to attend all of these events and showings. The film series and the gallery exhibition are free. Tickets for the two events at the Center for the Performing Arts must be purchased. Attendance will constitute 20% of the semester grade. Each week, there will be a required online discussion based on the "Commentaries" associated with the event or exhibition of that week. These "Commentaries" are included with the background information on the events and exhibitions contained in the course web site. Discussions will last for one week and all students are required to participate in all online discussions. Participation in discussions will constitute 30% of the semester grade. INART 100W is a "writing intensive" course and, as a consequence, a major portion of the course is devoted to the acquisition of skills and practice in writing. There are three required papers in the course: one 600 word critical review, one 900-word critical opinion paper, and a final 1500-word critical opinion paper. Grading will be based on the quality of students' critical arguments and the quality of their writing. These three papers will constitute 50% of the semester grade.

INART 110 (GA) The Dramatic Arts in the Mass Media (3) The place of television-radio-film drama in our culture; relationship with other art forms; standards of evaluation.

INART 110 Dramatic Arts in the Mass Media (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

INART 110 examines the history and development of the dramatic arts of the mass media with a particular focus on television as the strongest exemplar of media practice. The primary goal of the course is to help students develop a critical and analytical approach to dealing with the dramatic arts of the contemporary mass media. The course presupposes some familiarity with modern popular media and takes as its content both historical and contemporary examples as sources for analysis. While the class offers facts and data, the central focus of the course in the theory, stylistic elements, and structural workings of media content. The pedagogical goal of this approach is to examine not just what the mass media arts are but also where they come from, how they function, and what effects they have on our culture and society. The key to this goal is understanding the effects and influence of dramas in the mass media on our society and its beliefs and values. Class meetings consist of lectures and in-class discussions that illustrate modern critical approaches to popular culture and the terminology used in presenting critical arguments and ideological viewpoints on the dramatic arts of the mass media. Reading assignments will support classroom work by presenting students with a diversity of opinion on mass media and the influence of television dramas and comedies. Further, examples of historically significant radio and television dramatic works will be shown in class and then discussed in relation to the concepts and critical viewpoints covered in lectures. In addition to regular scheduled classes, students will participate in an on-line Television Journal that requires watching and critically responding to assigned television programs. Each week, students will be required to watch and critically respond to assigned television programs. Their critical responses will be posted on the online Television Journal and made available to all members of the class. Grades will be based on three equally weighted objective examinations that will account for 75% of the semester grade. The remaining 25% of the grade will be determined by participation in the online Television Journal.

The Pennsylvania State University
INART 115 (GA;US) The Popular Arts in America: Popular Music (3)
This course examines the roots, development, and significance of popular music in our culture. It covers the origin of popular music in the early nineteenth century and introduces the major genres of the art: blues, jazz, country, mainstream pop, and rock and roll. The thrust of the course is sociological and cultural rather than musicological and will trace the music's development in a historical context. The intent of the course is to provide students with a comprehensive overview of popular music, the significance of major artists in its development, and its importance in our social and cultural history. There are three equally weighted objective tests in the course, each covering approximately one-third of the course's content. These examinations account for 75% of the semester grade (25% each). Students in INART 115 also participate in the Popular Music Forum, a semester-long examination of an important contemporary issue in popular music (censorship, copyright infringement and music piracy, music and violence, etc.) that requires research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online utilizing resources held on the Forum website and World Wide Web. Asynchronous online discussions on the topic will occur three times during the semester. The class will be broken into groups of fifteen students for the purpose of discussion. Participation in the Popular Music Forum will account for 25% of the semester grade. The discussion grade will be determined by the quality of participation and degree of involvement in the discussion.

INART 116 (GA;US) The Popular Arts in America: The History of Rock and Roll-The 1950s (3)
This course examines the roots, development, and significance of rock and roll music in its first decade. This course is composed of eight chronologically arranged units of study that examine the major developments in early rock and roll in an historical context. Rock and roll music, especially in the 1950s, was the reflection of the dynamic cross-cultural interplay between country, gospel, rhythm and blues, and mainstream pop. Of central importance in early rock and roll was the influence of African American music and culture and the effect that African American music and culture had when brought into the mainstream. Through an examination of the foundation of emergence of rock and roll in our culture, students gain an understanding of the role played by intercultural cross-influences in shaping both our music and our cultural sensibilities. Both the content of the course and the assignments in the Popular Music Forum are directed at helping students understand, reflect upon, and critically think about the intercultural nature and effect of our musical heritage. The thrust of the course is sociological and cultural rather than musicological, and the intent of the course is to provide students with a comprehensive overview of the early development of rock and roll and its importance in our social and cultural history.

Each unit of study will be accompanied by key examples of recorded music from the period of the late 1940s through the 1950s. The course includes approximately 100 important recordings for required study. Grades in INART 116 will be determined by a series of eight objective tests and four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to rock and roll in the 1950s that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion. Grading will be based on a point system. There are 1200 possible points that can be earned during the course - 800 points on exams (2/3 of the final grade) and 400 points on written assignments in the Popular Music Forum (1/3 of the final grade).
INART 125 (GA;US;IL) The Popular Arts in America: The History of Rock and Roll - Punk Rock (3) An examination of the roots, development, and significance of punk rock in our culture.

INART 125 The Popular Arts in America: The History of Rock and Roll - Punk Rock (3)
(GA;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Punk rock was an important and historically significant genre in rock and roll music that initially developed in the United States and Great Britain in the late 1960s and has continued to the present. Through an examination of the now more than thirty-year history of punk rock in our culture and that of Great Britain, students gain an understanding of the role played by punk rock in shaping both our musical and cultural sensibilities and the historical and social movements that influenced and led to the development of punk rock as a musical genre and lifestyle.

This course is composed of eight chronologically arranged units of study that examine the major developments in punk rock in an historical context.

In addition to weekly text assignments, students are required to complete four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to the historical development of punk rock in both countries that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion.

Both the content of the course and the assignments in the Popular Music Forum are directed at helping students understand, reflect upon, and critically examine the music created in the genre and the social and cultural forces that influenced and were influenced by punk rock.

The thrust of the course is sociological and cultural rather than musicological, and the intent of the course is to provide students with a comprehensive overview of the development of punk rock its importance in our social and cultural history.

Each unit of study will be accompanied by key examples of recorded music. The course will include approximately 200 important recordings for required study.

INART 126 (GA;US) (AF AM 126) The Popular Arts in America: The History of Rock and Roll - Hip-Hop (3) An examination of the roots, development, and significance of hip-hop in our culture.

INART (AF AM) 126 The Popular Arts in America: The History of Hip-Hop (3)
(GA;US)

(BA) This course meets the Bachelor of Arts degree requirements.

Hip-hop is an important and historically significant genre in popular music that initially began in the South Bronx in the early 1970s and has grown to become one of the most influential, controversial, and important new genres in popular music to emerge in the last quarter of the 20th century. It now holds a significant place in our culture and has become a cultural force of global significance. Through an examination of the now forty-year history of hip-hop in our culture and internationally, students gain an understanding of the role played by hip-hop in shaping both our musical and cultural sensibilities and the historical and social movements that influenced and led to the development of hip-hop as a musical genre and lifestyle.

INART 200 The Popular Arts in America: Elvis Presley - The King of Rock and Roll (3)

This course meets the Bachelor of Arts degree requirement.

INART 200 is composed of eight chronologically arranged units of study that trace Elvis Presley's life; accomplishments; the significance of his art; his influence as a performer, recording artist, and motion picture star; and, perhaps most important, his place as a force and symbol of social/cultural change in the second half of the 20th century. Elvis was the principal symbol of change in a time when change was all-important. He was the first of the great rock and roll superstars, a herald of the cultural revolution of the 1960s, and the central figure in the musical revolution that brought rock and roll into the popular mainstream. He was - and is - the King of Rock and Roll and his place and importance in the cultural history of the twentieth century can never be overstated or exaggerated.

The thrust of the course is sociological and cultural rather than musicological and the intent of the course is to provide students with a comprehensive overview of Elvis as an artist, his significance in the development of rock and roll, and his importance in our social and cultural history.

Each unit of study will be accomplished by key examples of recorded music and video records of important performances from television and motion pictures. The course includes approximately 100 important recordings and 15 video performances for required study.

Grades in INART 200 will be determined by a series of eight objective tests and four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to the life of Elvis Presley that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion.

Grading will be based on a point system. There are 1200 possible points that can be earned during the course - 800 points on exams (2/3 of the final grade) and 400 points on written assignments in the Popular Music Forum (1/3 of the final grade).

INART 205 (GA) Introducing the Beatles (3) The influence and achievement of the Beatles as artists focusing on their recordings and films as sociocultural artifacts.

INART 205 Introducing the Beatles (3)

(GA)

INART 205 is composed of eight units of study that trace the lives and work of the Beatles. The course's chronological design is arranged in order to capture the band's artistic trajectory from two-track recording and the relatively primitive
Please Please Me album through the sonic heights of Revolver, Sgt. Pepper's Lonely Hearts Club Band, The White Album, and Abbey Road. This course examines the group’s wide-ranging sociocultural influence in terms of music, fashion, film, gender, consumerism, and politics. The thrust of the course is interpretive in nature, with the Beatles’ songs and albums receiving considerable scrutiny in terms of their composition, production, and attendant musicianship. Developments in recordings and instrument technology are germane to our understanding of the Beatles’ evolving aesthetic, as is the bandmates' development as songwriters who eventually eschew issues associated with romance in order to address larger and more prescient subjects such as loneliness, oppression, nostalgia, ethics, and redemption in their music.

Each unit of study will be accompanied by the analysis of key examples from the Beatles' massive recorded corpus. More than 100 songs will receive consideration, as will the group's five forays as feature-film stars.

Grades in INART 205 will be determined by two objective examinations- a midterm and a final. Class participation will be a key ingredient in student performance, as will students' work on two papers. The first of such assignments will involve a shorter paper in which students address a particular aspect of the band’s sociocultural emergence during their early years. The longer term paper will be researched, argumentative essay in which students will be assigned to discuss any aspect of the Beatles' career - a particular album (or series of albums), their musical influence, or their cultural impact, among other topics - and construct a mature, expansive thesis about its meaning.

INART 210 (GA) Integrative Approaches to Computer-Aided Music Composition (3) Interdisciplinary introduction to music composition using software to assist with notation; historical perspectives drawn from art, dance, theater, and literature.

INART 210 Integrative Approaches to Computer-Aided Music Composition (3) (GA)

INART 210 is an interdisciplinary introduction to music composition using software to assist with notation. Historical perspectives are drawn from period music, art works, dance, theater, and literature. Student composers are required to complete five collaboration projects with students from other arts areas. Through collaboration, student composers will be able to develop a more informed critical point of view about music composition as an art and important form of human expression. Collaborations are encouraged with student choreographers, filmmakers, animators, visual artists and actors, including improvisation and interactive techniques. Students will have access to music classroom facilities and Macintosh computer lab for score and sound editing; semester end recording of compositions. Prerequisite: basic music literacy skills: Music 008 or instructor permission.

INART 220 (GA;US) Stand-Up Comedy: A Cultural History (3) An American cultural history from mid-19th through mid-20th Century as seen through the prism of stand-up comedy.
INART 220 Stand-Up Comedy: A Cultural History (3)
(GA;US)

(BA) This course meets the Bachelor of Arts degree requirements.

Stand-up comedy, the art of making an audience laugh through primarily the spoken word, is a vital and revealing part of American cultural history. The best American comedians from Mark Twain and his sardonic monologues to Lenny Bruce and Richard Pryor’s unexpurgated free form rants not only entertained, but illuminated, challenged, reflected the times, and at their best influenced the culture for the better.

This course, through rare uncensored video and audio clips, readings, and lecture, offers an American cultural history through the lens of stand-up comedy covering a span from the mid-19th through the 20th Century.

Topics of consideration include the art of the joke and stand-up comedy performance, the evolution of American comedy genres and venues, the significant performers, the impact of technologies such as radio and television, as well as a variety of issues ranging from racism, ethnic, and gender stereotyping to freedom of speech and political and social change.

INART 236 (GA) Integrating Music and Animation with Technology (3) An introduction to the theory, design and creation of musical animations. For general students.

INART 258A Fundamentals of Digital Audio (3)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

A thorough introduction to digital music production technologies, covering the fundamentals of how musical information is stored and transmitted in digital devices.

This course is meant for people who are passionate about working with sound, and who are willing to take on new technical and creative challenges in audio production. It is the pre-requisite for more many advanced courses in music technology and audio production. Students complete a series of low-stakes audio exercises on fundamental operations, a series of written responses to questions on the underlying theory of digital audio, and a small number of extended creative projects.

The software used is at the level of professional audio production workstations. Students complete the course with a set of vocational skills in computer music and audio.

INART 258B Fundamentals of Digital Audio (1) A general overview of music technologies current to music educators and performers.

INART 258B Fundamentals of Digital Audio (1)
(GA)

(BA) This course meets the Bachelor of Arts degree requirements.

A general overview of music technologies current to music educators and performers, as defined by their accrediting organization. This course is meant for students who do not intend to pursue further studies in music technology. Students will be exposed to software that is meant for non-specialists, and learn basics of music recording and editing. Students complete a set of lessons, each of which features a hands-on exercise. They gain a set of technical tools that should be of
immediate relevance to their careers, including basics of music recording, audio editing, Internet resources, music arranging and score preparation. This course has a significant active learning component, as all assignments are hands-on creative projects. It qualifies as a General Education Arts (GA) and a BA course.

INART 410 Early Pennsylvania Decorative Arts and Furniture (3) The study of Pennsylvania and related furniture, pottery, paintings, and decorative arts of the seventeenth, eighteenth, and early nineteenth centuries.

INART (AM ST) 410 Early Pennsylvania Decorative Arts and Furniture (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course explores the aesthetic, cultural, and social significance of the household arts common in Pennsylvania in the seventeenth, eighteenth, and nineteenth centuries. Emphasis is placed on the major periods and styles (Puritan, William and Mary, Queen Anne, Chippendale, and Federal) as represented in furniture, pottery, paintings and decorative arts. Indigenous styles and crafts representative of Pennsylvania arts and crafts will be explored in detail.

The course combines lecture and discussion with seven field trips to historic sites to provide students with the opportunity to view furniture and decorative arts within the setting of period homes.

The course carries no prerequisite.

INART 415 Nineteenth Century Pennsylvania Architecture and Restoration (3) Interior and exterior design of early Pennsylvania architecture; understanding and evaluation of and experience in restoration.

INART (AM ST) 415 Nineteenth Century Pennsylvania Architecture and Restoration (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides students with hands-on practical experience in the restoration of historic buildings of the nineteenth century. Each semester, students will research, evaluate, identify problems, and develop solutions to restore these structures in an historically correct manner. Students will then practically restore these structures and gain practical experience in the process of restoration.

Major classroom topics will vary in order to meet the specific needs of the project at hand. Topics may include wood technology, structural problems and solutions, vernacular architecture, use of early tools, etc. Students will also take field trips to several restored homes to gain insight into applicable methods and approaches to restoration and gain perspective on costs and outcomes.

INART 410 Early Pennsylvania Decorative Arts and Furniture is the prerequisite for this course.

International Agriculture (INTAG)

**INTAG 100 (GS;IL)** Introduction to International Agriculture (3) Ag in developing countries; contemporary crucial issues in global agriculture; emphasizing hunger and food security.

**BA** This course meets the Bachelor of Arts degree requirements.

This class focuses on agriculture in developing countries and frames this focus with a discussion of contemporary crucial issues facing agriculture on a global scale, emphasizing global hunger and food security. The primary goal of the course is to inform students about international agriculture, challenging them to think critically and independently about agricultural issues and development, to generate global citizens who are more aware and conversant on important contemporary challenges in the global food, agriculture, and natural resource systems. The objectives of this course are to acquaint students with: (1) the range of cutting edge issues that play an important role in international agricultural development; (2) information and conceptual frameworks of ongoing multi-faceted debates concerning the global food, agriculture and natural resource systems; (3) the social, cultural and ecological systems that shape human decisions about land use in various areas of the world.

This class will primarily focus on agriculture in developing countries and frame this focus within a discussion of contemporary crucial issues facing food, agriculture and natural resources on a global scale. Specific emphasis will be placed on debates concerning global hunger and food security. Several examples from around the world will be included. Class will take a variety of formats, including formal lectures from INTAG 100 staff and guest lecturers, videos, lab and site visits, student presentations and class discussion time.

The course is part of the International Agriculture minor, and satisfies two General Education requirements. Evaluation consists of group presentations, short papers and exams. The course is offered once every academic year.

INTAG 470A (AG BM 470A) Comparing Agricultural and Food Systems in the US and France: Lecture (2.5) Explore key differences and similarities in the food and agricultural systems of the United States and France.

INTAG (AG BM) 470A Comparing Agricultural and Food Systems in the US and France: Lecture (2.5)

This course is designed to explore key similarities and differences in the food and agricultural systems of the United States and France. It introduces students to a number of overarching food and agricultural topics that pertain to both countries, and students explore and analyze these key issues from both countries’ perspective. These overarching topics include the structure of agricultural and environmental policies, the use agricultural land for biofuel production, organic agriculture, food safety, attitudes and policies surrounding the use of genetically modified crops, the role of large agribusiness firms, attitudes towards diet and health, and several others important topics. Students conduct background reading on these topics, hear lectures -- sometimes from guest presenters -- that frame the topics from both the U.S. and France’s perspective, and write reports on specific crops or foods that expose key similarities and differences between the two food systems. Finally, students pick one crop or food for an oral presentation that contains background information on how that crop fits into the two food systems, U.S. and France, and analyzes the key issues that relate to the overarching topics already identified.

This course has two components that must be taken in partnership: 470A (FOOD SYS US/FRANCE I) and 470B (FOOD SYS US/FRANCE II). The first is a classroom-based course, and meets regularly during the semester. The second is a two-week component that takes place after the end of the semester. In this second component, after traveling to France, students hear presentations from the French perspective on the overarching topics identified earlier and also explore the topics first hand via field trips to farms, wholesale markets, retail markets, and other places relevant to the French food system. This component is organized by a host university, AgroParisTech. For these two weeks, students live in dorms within the city of Paris. Knowledge of French is not required.

INTAG 470B (AG BM 470B) Comparing Agricultural and Food Systems in the United States and France: Travel (0.5) Explore key differences and similarities in the food and agricultural systems of the United States and France.

INTAG 490 Senior Seminar in International Agriculture (3) Seminar discussions on contemporary topics in global agriculture; capstone course for INTAG minor.

INTAG 490 Senior Seminar in International Agriculture (3)

This course is designed to meet the need for a capstone course within the International Agriculture (INTAG) minor. The course provides a range of experiential learning techniques including intensive reading and in-class discussion, practical experience through a group trip to the nation's capital, and application of the international experiences encountered through the INTAG program. Included is course content designed to provide a holistic integration of the four main INTAG study areas (Socioeconomic and Communication Systems, Animal and Plant Sciences, Natural Resources and the Environment, and Food, Health, and Nutrition). Students will learn about the current state of international agriculture through recent articles and analyses and respond in-class discussions and through written response papers. The second half of the course involves site visits to major international development organizations in Washington, D.C. (US government, international agricultural research organizations, and various NGOs) and participation in the form of an INTAG senior seminar series open to the public. This seminar series allows students to present and discuss their past (or intended) international agriculture experiences while a student at Penn State, and share with both those in the class and those outside of the class options, opinions about and critical issues in international agriculture. This seminar series will be an important tool in promoting the INTAG minor. The students will then synthesize the knowledge they have obtained both from the course and their international agriculture experiences to complete final reports which outline their understanding of the current state of international agriculture. This course is ultimately designed to facilitate the development of students to be global citizens in the agricultural arena.

The course is geared towards students in their junior or senior years. Evaluation consists of class participation (20%), student-led presentation of materials (15%), response papers to readings and D.C. trip (30%); presentation at INTAG seminar series (15%) and the completion of a final paper on their understanding of the current state of international agriculture (20%). The course is offered once every academic year in the Spring semester.

The course is a core requirement for the International Agriculture minor. INTAG 100 is a prerequisite.

**I B 290** International Business Goes to the Movies (1 per semester/maximum of 3) A business elective to expose students to international and global issues through the eyes of film makers around the world.

**I B 290 International Business Goes to the Movies (1 per semester/maximum of 3)**

I B 290 is an international business elective class which exposes students to international and global issues through the eyes of film makers around the world.
eyes of film makers around the world. Using film as the medium, students can evaluate differing perspectives and arguments on issues affecting business and economics in the global environment. This course is intended for students who are likely to study abroad during their PSU careers. Thus, the course attempts to prepare students for immersion in a variety of cultures, often different from the US. The course objective is to begin a broadening process of students’ world views by examining a wide range of issues captured in film around the world.

Typical topics include the rise of globalization and its impact on various countries and societies, a range of cross-cultural issues and controversies inherent in competing cultural differences between peoples of various nations, the impact of American culture on social, political, economic, and legal institutions throughout the world, and the differential role played by economics in various societies and at different stages of economic development across many nation states.

This course employs film as a powerful medium to enable historical and modern understandings of global issues and international perspectives. As students enter the business world and learned professions, it is imperative that their world view include images and understandings found in a host of competing cultures including Eastern and Central Europe, East Asia, The Middle East, Latin America as well as Western Europe, Australia, and North America.

Upon completion of the course, students will be introduced to a wide range of international issues as well as a foundation for approaching cross-cultural disputes inherent in international and global business. In addition, they will obtain an appreciation of international cinema and its wide scope as an art form, as an informational source for business, and as a powerful medium for argument and debate.

I B 303 (IL) International Business Operations (3) A survey of the major aspects of international business environment and operations with an emphasis on the cultural dimension.

I B 303 International Business Operations (3) (IL)

International business is important and necessary because economic isolationism has become impossible. Failure to become a part of the global market assures a nation of declining economic influence and deteriorating standards of living for its citizens. International business therefore presents more opportunities for expansion, growth, and income than does

The Pennsylvania State University
domestic business alone. This course will cover the major aspects of international business environment and operations with emphasis on its impact on the local businesses in your state. In other words, in this course you will learn why international business differs from domestic business, economic theories on international trade, and how managers deal with the uncontrollable forces such as cultural differences of international environment. In this course you will develop a global perspective through studying the impact of other countries and their peoples on society and develop skills that will enable you to interact effectively in an interdependent global community.

I B 395A Practicum in International Business (3-5)  
Practicum in International Business (3-5)  
Professional and guided international business work experience taken as part of an approved education abroad program.

I B 395A Practicum in International Business (3-5)  
I B 395A is an international business internship that will be taken as part of an approved education abroad program. It is designed to provide experiential-based learning for junior- and senior-level students through which they will apply both prior knowledge and skills learned in the classroom to on-going operations of firms engaged in international business and at the same time acquire additional knowledge, skills, attitudes and other competencies that will be relevant for further classroom-based learning.

Students will be expected to be adaptable, to communicate at different levels within the organization and, in addition to their knowledge and skills, to contribute to team outcomes and/or delivery of services. Although the specific nature of the practicum will depend on the company or organization involved, it will be project based. Following are examples of typical projects that might be undertaken: serving as a member of a team designing and/or implementing a new management information system, creating a new in-house personnel handbook, undertaking feasibility studies for new products, and researching and reporting on services to support new customers.

Grades will be determined by the faculty member supervising the practicum and will be based on an evaluation of work performance supplied by the company supervisor and the evaluation of written reports. The faculty supervisor will evaluate: required written reports describing the project(s) undertaken during the course of the practicum, how they were completed, and the skills that were used to complete them; a profile of the organization providing the internship; the student's critical appraisal of the company and his or her experience, including a reflection on cultural differences between work in the U.S. environment and the international work environment; and a research-based paper on a project undertaken during the internship or a related topic.

This course and the approved education abroad program of which it is a part, will satisfy the 15-credit study abroad requirement for students who have elected the international business option.

I B 404 Contemporary Issues in International Business (3) Investigation of issues in international business practice interpreted from the foundations of the social sciences. Topics will be chosen from contemporary issues in global business and economics.

I B 404 Contemporary Issues in International Business (3)

I B 404 enables students to study the most current topics in international and global business from the framework of the social science issues that form the framework for understanding, business decisions. The course provides structured experiences in library research and data gathering, techniques, and builds the habit of reading the international business press daily and analyzing it weekly. The class is typically organized around 3 integrative business topics that represent a spectrum of questions important to business. These include questions about finance and economics in international business, questions about people and organizations in an international environment, and questions about products (development, production, distribution of goods and services) in international business contexts. This is not an introductory course, and as such, the topics chosen should be substantive and nuanced. For example, one topic might be how the structure of franchises must be modified to reflect the property rights in a particular country, and how those property rights laws impact the value of the franchise. The second topic might be how the internationalization of the structure and role of Boards of Directors in multinational firms contribute to globalization, and challenge the cultural norms in those organizations. The third topic might be how North American firms have been forced to adjust their product packaging, in response to environmental impact laws in Germany, and how this shifts the locus of the product message from point-of-purchase to alternative media.

I B 440 (US;IL) (PL SC 440, AFR 440) Globalization and Its Implications (3) This course explores the socioeconomic implications of globalization.

I B (AAA S/PL SC) 440 Globalization and Its Implications (3) (US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course explores the socioeconomic implications of globalization and some fundamental changes that have taken place in the global socioeconomic system. The bipolar configuration of global power has been radically altered, market-state relations have been reorganized, and global systems of production and finance have been reorganized. Given these recent changes in the world’s structure, globalization as a socioeconomic force is examined with a special emphasis on its implications on social issues, capital-labor relations, the roles of unions and trans-nationals, unemployment issues, poverty and inequality, gender and ethnicity issues, race relations, and democratization around the world. This course also allows students to explore how different countries, communities, social classes, business firms.
and even institutions are affected differently by globalization. The implications of globalization on Africana communities is given special attention.

The course is organized into three parts: A) The first part of the course attempts to define globalization and identify its essential characteristics in light of social and economic change. This part attempts to answer questions such as what constitutes globalization, how do we know if globalization is taking place, and what aspects of it are new. B) The second part of the course attempts to assess the implications of the different aspects of globalization (identified in the first part) on many critical social issues, including capital-labor relations, the roles of unions and transnational corporations, problems of unemployment, poverty and inequality, gender, ethnic, and race relations, and democratization. C) The third part of the course examines the implications of globalization to African communities.

This course exposes students to the economic, social, political, and cultural implications of the unfolding global order. It allows them to explore how different countries, communities, social classes, business firms and even institutions are affected differently by globalization. Evaluation will be based on daily attendance, along with a class presentation of a design of a research paper; an actual research paper, a mid-term exam and a final exam.

IB 450 The Business Environment of Europe (3) This course provides an overview of the economic, institutional, and regulatory environment in Europe at the EU and national levels.

IB 450 The Business Environment of Europe (3)
This course provides an overview of the business, economic, and regulatory environment in Europe at the European Union (EU) and national levels. The course examines how regional integration, through the EU, has shaped industrial, competition, monetary, and related economic policies, and how Europe’s international trade and finance capabilities affect the global economy. As a result, a significant part of the course focuses on the evolution of the EU, its institutional structure, and its impact on business (both European and foreign). The course also compares business-government relations, models of capitalism, and corporate governance in individual European countries, using the United States as a basis of comparison. Particular attention is given to France, Germany, Ireland, and the United Kingdom, and how their business environments differ from each other.

While the primary focus of this seminar will be on these themes, we will use articles from the Financial Times and similar publications as the basis of discussion in each class for a range of topics related to Europe. The approach taken in this course is a multidisciplinary one, with the assumption that business executives must understand the political, cultural, institutional, historical, and geographic aspects of Europe if they are to be successful in the business environment of Europe.

Students are expected to be active participants in class discussion. Readings usually will include a textbook, readings packet, and a subscription to the Financial Times. Evaluation will be based on a combination of participation and attendance, exams, quizzes, a group project, and essay assignments.

INTST 100 (GS;IL) Introduction to International Studies (3) An introductory multidisciplinary course designed to familiarize students with critical international issues.

INTST 100 Introduction to International Studies (3) (GS;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This is an interdisciplinary course designed to provide students with an introduction to a range of global issues. The course will emphasize the themes of international interdependence and globalization and their development over time. A key component of this course is cultural diversity and the connecting international and domestic issues, particularly those of race and culture. In both their written and oral work, students will be required to relate international issues to their own fields of study. The disciplines involved are mainly political science and economics, ecology, history, and cultural studies.

IT 130 (GH;IL) Italian Culture and Civilization (3) Italian life from antiquity to the present; literature, film, the arts, and contemporary problems in historical perspective.

This course meets the Bachelor of Arts degree requirements.
The course aims to develop critical and analytical skills of undergraduate students. It is an Intercultural/International Competence course dealing thoroughly with ethnicity, religion, and global perspective as it pertains to Italian culture and civilization. The course traces, among other themes, the importance of the Roman Empire, the Catholic Church, the Renaissance, presence and contributions of the Roman Catholic Church, the Italian Renaissance, and Italian immigration, artistic patrimony, and culinary contributions. Historical texts used will emphasize the social history of Italians that portrays the continuous processes of adaptations through the ages. Consideration will be given to the various representative Italians such as Dante, Da Vinci, Machiavelli, St. Francis, St. Clare, Fellini, and Fermi. We will read novels and analyze films that depict aspects of Italian thought and culture from religion to politics.

IT 131 (GH;US) Italian American Culture and Civilization (3) Italian-American experience from the late 19th century to present. Socio-political issues seen through cinema and through literary and other readings.

This course meets the Bachelor of Arts degree requirements.
Between 1870 and 1920 over five million Italians immigrated to the United States. They were mainly men, and they came primarily to strike it rich. Of those who came, about one-third returned to Italy. Those who remained, often joined by their families, left an indelible mark on the American cultural, political, artistic, educational and social landscape. This course investigates the fascinating story of Italian immigration to the United States, a story that many students’ great-grandparents and grandparents actually lived and bequeathed in memory via their personal stories. Our inquiry will be interdisciplinary. We will study historical texts, literature and film, which address the historical and sociological conditions of 19th Century Italy, the odyssey of immigration to and assimilation in the United States, and life in the ethnic neighborhood. We will also explore the Mafia, forms of prejudice, and ways Italians uniquely manifested their social values in labor unions, religion and education. Upon successfully completing this course, students will have a solid grasp of how Italians, in becoming Americans, contributed to the rich fabric of life in the United States.

Evaluation will be done through limited class participation, examinations, and quizzes. There will be eight multiple-choice exams with one essay question, and four quizzes based upon the novel readings. IT 131 will provide an Italian American equivalent to IT 130 (Italian Culture and Civilization). It should fulfill Humanities Breadth and Cultural Diversity requirements. The course will not count toward the minor or major in Italian because it is given in English; nonetheless, it
will be complementary in so far as it will give our students a more rounded education concerning Italy and its legacy. IT 131 will be offered once a year with 50 seats per offering.

IT 320 Introduction to Italian Culture; Food, Fashion, Family (3) Focus on the social, historical, and socio-political issues of Italy in the last two centuries.

IT 320 Introduction to Italian Culture: Food, Fashion, Family (3)
(BA) This course meets the Bachelor of Arts degree requirements.
This course focuses on advanced grammar development in the context of social, historical, and sociopolitical issues of Italy in the last two centuries with particular emphasis on contemporary current events. Readings from newspapers, magazines, and the web on Italian geography, regional differences, Italian politics, food, and cultural traditions. Evaluation methods include exams, current events reviews, class debates, and oral presentations. This course is in Italian. It is for students who have completed IT 003 or equivalent. It will be offered once per year. Enrollment limited to 20.

IT 330W Greatest Books of Italian Literature (3) A survey of the greatest books of Italian literature (prose, poetry, drama). Time period varies each semester. In Italian.

This course is a survey of the greatest books of Italian literature (prose, poetry, drama). Time period varies each semester, and may include early literature (St. Francis, Marco Polo, Dante, Boccaccio, Petrarch, Machiavelli, etc.) or modern authors (Vico, Goldoni, Manzoni, Foscolo, Leopardi, Pirandello, Fo, Calvino, Eco, etc.). Please check with department faculty for current offering. Taught in Italian. Course objectives are to read, discuss, and better understand the enduring relevance of Italy’s literary masterpieces, while strengthening linguistic skills in writing (especially), as well as reading, speaking, and listening, through weekly or bi-weekly written reading reactions, critical notebooks, and class discussions/participation. Course is appropriate for students who have successfully completed an intermediate Italian course (such as IT 003 or 020) and counts toward the Italian major (all tracks) and minor. Successful completion of this course may permit further Italian study at the 400-level.

IT 475 Modern Italian Literature and Cinema (3) Focus on silent films, fascism, WWII, Resistance, Neorealism, and reactions against Neorealism.

IT 475 Modern Italian Literature and Cinema (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will explore the literary, cultural, and historical backdrops behind a variety of films from Fellini's The Road, to one of the greatest spaghetti westerns ever made (Leone's Once Upon a Time in the West), to the Oscar winner for Best Foreign Film (Benigni's Life is Beautiful). Selected 19th and 20th-century prose texts also trace such issues as the individual's role in society and the use of the imagination in the representation of history. This course aims to provide students with the fundamental tools to read texts and watch films critically and intelligently while presenting an overview of some major themes of Italian culture. Students will be evaluated on three in-class exams, paper outline, final paper, and participation in class discussions/activities/debates. IT 475 is the first interdisciplinary course taught in English at the IT 400 level. The course helps satisfy the Italian minor requirement. It is also good for students who have taken IT 130 and want to know more about 20th-century Italian lit/film/culture without having to do course work in Italian. IT 475 may also be of particular interest to students of film and media studies, English or comparative literature, religious studies, and history. This course satisfies the Italian minor or bachelor of arts humanities requirements. IT 475 will be offered once a year with 40 seats per offering.

IT 480 (WMNST 480) Italian Women Writers Through the Centuries (3) Analysis of the works of women authors in their historical and literary contexts.

IT 480 Italian Women Writers Through the Centuries (3)

Italian women have been stereotyped as the "mamma" or grandmother who cooks, prays, and idolizes her sons. Such an image does not accommodate the wide variety of experiences, perspectives, and contributions of Italian women throughout history. This seminar will explore the writings of female authors from delimited historical periods (alternating among Renaissance, 19th and 20th Centuries). Depending on time period, genres will include autobiography, poetry, historical novel, drama, film, nonfiction. Throughout the course we will consider the political and social developments in Italy with an emphasis on issues of special relevance to women. As we approach each text, we will examine such questions as: the significance of its form; the author's use of language; the ways in which masculinity and femininity are constructed; intersections with the text's historical moment; the political, philosophical and/or theological questions posed by the text; the ways in which the text inserts or distances itself from the Italian literary canon; and the text's depictions, re-evaluations and uses of history. Through their journal assignments in class discussion, students will be encouraged to reflect upon the implications of course concepts in their own culture and historical moment. Evaluation methods include participation in class discussion, journal entries, short analysis papers, and a longer (8-10 page) research paper. In Italian. Prerequisite: any 300-level Italian course. This course is conducted in Italian and counts for the Italian major and minor. The ability to screen VHS and DVD videos is necessary. Enrollment is limited to 20, and the course will be offered at least once every four semesters.

IT 485 Italian-American Cultural Studies (3) In-depth exploration of Italian-American cultural contributions.

IT 485 Italian-American Cultural Studies (3)
Italian-American Cultural Studies explores the representation of self-representation of Italian-Americans that have been produced over the past century in a variety of aesthetic forms. Through analysis of literary and cinematic works, informed by readings in history and sociology, students will refine their critical reading and writing skills, come to a deeper understanding of important currents in 20th-century American history, gain a more informed appreciation of the contributions of Italian-Americans to the arts, engage critically with concepts such as "identity," "ethnicity," "gender," and "heritage." This course fulfills requirements for the major and minor in Italian, and allows students interested in Italian-American culture to undertake more in-depth and specialized study than is possible in the 100-level General Education survey offered by the department in English. Evaluation methods include participation in class discussion, short analysis papers, and a longer (8-10 page) research paper. The ability to screen VHS and DVD videos is necessary.

(II)

(IIA) This course meets the Bachelor of Arts degree requirements.

The course offers the instruction of intermediate Japanese where students learn how to communicate and express various ideas using the Japanese language. Each chapter includes new essential vocabulary items, grammar patterns, and kanji which enable us to achieve higher overall communicative fluency in Japanese. By the end of the semester, students are able to construct grammatical structures, such as presuppositions, desire, hypothetical condition, causative, completion, regret, etc. The usage of polite expressions of humble and honorific is introduced. Various aspects of Japanese culture and customs are also discussed throughout the semester. This course fulfills the International Cultures requirement.

JAPNS 120 (GH;IL) Japanese Literature in Its Cultural Context (3) Japanese literature and film from classical through contemporary times, with attention to changing cultural settings. Taught in English.

JAPNS 120 Japanese Literature in its Cultural Context (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is intended to provide an introduction to the literature of Japan from the seventh century to the postmodern era. Prior study of Japan is not required and materials will be available in English. Students will learn about major eras of Japanese literature and culture, such as the age of the Man’yoshu, the age of the Genji monogatari (The Tale of Genji), the age of No and Kyogen, the age of Wit and Learning, the age of Meiji, the age of industrialization, the postwar years, and postmodernity. The readings will include several genres, such as poetry, folktale, short story, and novel, with an emphasis on prose fiction. The course is structured so that students develop a historical/cultural perspective in order to understand the contexts that have inspired the literary works. By examining literature in its cultural contexts, students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, the Emperor system, and postmodern consumer culture, among others.

Students will read literature and related materials from different periods, with occasional presentations of films. Class work includes some lecture but emphasizes guided discussions, group discussions, and students’ presentations. This participatory approach is intended to deepen students’ appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing both analytical and expressive abilities. Evaluation will be through means such as in-class presentations, two midterms, one analytic paper (3-7 pages), and in-class participation and discussion.

The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Japan. This course is required for the Japanese major. It is designed to count as General Education and as a B.A. “Other Cultures” course. It will be taught once a year with an enrollment of 40-50.

This course will be taught in the active-learning mode, featuring both lecture and discussion, including oral presentations, which provides students abundant opportunity for expressing their opinions. Web-based activities may also be included, depending on the instructor. Specifically:

Writing, speaking, self-expression: Students will write reaction papers and comprehensive essays (e.g. take-home essay exams), which require the analysis and comparison of various literary works.

Opportunity for information gathering, synthesis and analysis in solving problems; A wide range of texts--synchronic and diachronic terms of time and space--will be comparatively analyzed. Students will use the library as well as electronic resources to research texts and authors for their oral presentations and essays.

Application of intercultural/international competence: Students will explore a wide range of texts in Japanese literature and cultures. Students will compare/contrast texts based on cultural and social contexts.

JAPNS 121 (GH;IL) Japanese Film and New Media (3) Survey of Japanese film and new media in the twentieth century and beyond, with attention to changing cultural settings. Taught in English.

JAPNS 121 Japanese Film and New Media (3) (GH; IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is intended to provide an introduction to modern and cutting-edge forms of cultural production in Japan from the twentieth century to the present day. Prior study of Japan is not required and materials will be available in English. Students will learn about major technologies and forms of media, including film, manga, anime, and various forms of “new media” (cell-phone novels, blogs, MMOGs, IM, and Web 2.0 for instance). Readings and screenings will cover several artistic modes including formalism, historiography, documentary, period drama, and experimental works. The course, or
individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have inspired the creative works under study. By examining Japanese film and new media with attention to changing cultural settings, students will investigate such topics as the relation between social institutions and the individual, the formation and expression of identity, changing gender roles and family structures, the impact of technological and economic trends on social structure, and changing climates of censorship and freedom of expression. In addition, students will learn to think critically about various media’s techniques and aesthetics of representation, and will become more engaged, critical spectators of film and related media.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in modern Japan.

The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Japan. This course is required of the Japanese major. It is designed to count as General Education, as a B.A. “Other Cultures” course, and as an IL “International Cultures” course.

JAPNS 401 (IL) Level Three Japanese A (4) Further acquisition of the four language skills in Japanese--reading, writing, speaking and listening comprehension.

JAPNS 401 Advanced Conversation (4) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course aims to enhance students' abilities in speaking, listening, reading, and writing. The objectives in this course are: 1) to review, reinforce, and expand the basic grammar; 2) to expand knowledge of Kanji, vocabulary and idioms; 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions; 4) to be able to read and understand simple essays and stories; 5) to be able to write a short composition; and 6) to be able to type Japanese on the computer.

Bachelor of Arts: Second or Beyond 12th Level Foreign Language
Effective: Spring 2011
Prerequisite: JAPNS 110

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

JAPNS 402 (IL) Level Three Japanese B (4) Exclusively for study abroad returnees. To further develop Japanese proficiency in speaking, listening, reading, and writing.

JAPNS 402 Advanced Reading (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This class is offered exclusively to students who have studied abroad in Japan. Only primary multimedia sources (i.e., not a textbook) will serve as course materials. Five classes a week will consist of reading session, multimedia presentation, and high level discussion. Intensive analysis and class discussion of multimedia materials will provide the student the opportunity to develop advanced ability to understand, construct, and express opinions and complex verbal concepts in appropriate contextual forms/modes.

JAPNS 403Y (IL) Level Four Japanese A (4) Continuation of JAPNS 402. Aims to improve students' proficiency in all four language skills, with a special emphasis on writing.

JAPNS 403Y Level Four Japanese A (4) (IL)

This is a four credit course designed for those who have completed Level Three Japanese B or the equivalent. The course aims to further develop students' proficiency in all four language skills, with a special emphasis on writing. Students will study several topics such as Japanese society and Japanese literature for content-based language learning throughout the semester. For each topic variety of media will be used—newspaper articles, essays, short stories, TV programs, movies, etc. The majority of reading and writing assignments will be done outside class, with some guidance from the instructor. That will help students become more independent in studying Japanese. They will use appropriate resources such as dictionaries, reference books, online dictionaries and other online resources depending on their individual needs. Class
time will be used mainly for discussions of content, feedback on writing, and presentations by students. All class activities will be conducted in Japanese.

Writing exercises include short response papers on topics and summaries of literary pieces or audio visual materials. In the response papers students will reflect more deeply on certain topics, synthesize information from course materials, express their opinions, and support ideas by referring to and citing from source texts. This will help students be prepared for a longer thesis in the next course in the sequence. Discussion on the summaries will cultivate sensitivity toward words and expressions.

The course will help students start building their career in Japanese. Students will familiarize themselves with and if they wish study for the Japanese Language Proficiency Test (Level N2). They will also write a resume and formal letters that could be used in job applications and practice formal spoken communication in business settings.

JAPNS 410 (IL) Japanese Through Manga (3) The course aims to expand students' knowledge and application of Japanese language beyond elementary and intermediate textbooks through the use of manga (graphic novels).

JAPNS 410 Japanese Through Manga (3)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is a three credit course designed for those who wish to expand their knowledge in Japanese and application of it beyond typical elementary and intermediate textbooks. The course will use manga, the format of which helps students understand the story line, the setting, and the thoughts and emotions of the main characters. Given quick interactions between manga characters and onomatopoeia that accompany pictures, students will learn natural daily communications of Japanese. Class discussions will also cover relevant custom, manners, cultural values, socio-historical context, and social perspectives along with language use. The exact texts will vary from instructor to instructor, and may include film and new media in addition to a primary focus on manga.

The course will serve as a gateway to the further exploration of Japanese authentic texts and audio visual materials.

The prerequisite is JAPNS 110. Students who have successfully completed JAPNS 110, JAPNS 401, or JAPNS 402 are encouraged to take the course. Students who have finished JAPNS 403Y or JAPNS 404 may also take the course.

JAPNS 421 Courtly Japan (3) Focused study of aristocratic society and culture of Heian period Japan.

JAPNS 421 Courtly Japan (3)

(IL)

(IA) This course meets the Bachelor of Arts degree requirements.

The Heian period of Japanese history saw the apex of a refined court culture. Through readings of primary and secondary sources, this seminar-style course will explore the activities, norms, and structures of courtly society in Japan, from the centralization of imperial power in the 8th century through the court’s political marginalization in the late 12th century. We will pay particular attention to religion, the arts, politics and governances, gender, and the gradual rise of samurai power in the shadows of the court.

This course is intended to provide an introduction to the political, social, economic, and cultural life of the Heian court of ancient Japan. The goals of the class are not only to gain an understanding of a time and place far removed from our own, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian or literary critic themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen student’s appreciation of the assigned readings, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. The details of evaluation will vary depending on the instructor. In general, the emphasis will be on student performance on a day-to-day basis and as expressed in a final research project.

The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study. This course is recommended, but not required, of the Japanese major. It is designed to count as a B.A. “Other Cultures” course, and as an IL “International Cultures” course.

General Education: None
Diversity: IL
Bachelor of Arts: Other Cultures
Effective: Spring 2012
Prerequisite: JAPNS 120/JAPNS 121 orHIST 172

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

JAPNS 422 (IL) War and the Warrior in Japan (3) Survey of the role of warfare and the warrior in Japan, with attention to changing cultural settings. Taught in English.

JAPNS 422 War and the Warrior in Japan (3)

(IL)

This course is intended to provide an introduction to the social and historical roles of warfare, and the changing cultural figure of the warrior, in Japan. Some prior study of Japan (JAPNS 120 or JAPNS 121 or HIST 172) is required. All materials will be available in English. Students will learn about subjects like the causes of violence, culturally acceptable ways of resolving conflict, obligations of victor toward vanquished, expectations regarding the memory of the war dead, the ideal of the warrior as a cultural figure, and historical roles that Japanese warriors have played in ages of peace. Readings and screenings will cover several genres, such as film, historiography, history, documentary, classical epic, modern novel, and excerpts from Japanese history textbooks (in translation). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have generated attitudes toward war and the warrior in Japan. In addition, students will learn to think critically about various media’s techniques and aesthetics of representation, and will become more engaged, critical investigators of literature and related media. Readings and in-class discussion will focus on the image of the warrior as a cultural icon, exploring the many ways in which popular understandings of the warrior have changed over time, for instance, as popularized dramas began to idealize warriors as moral exemplars in the late medieval period, and then as historical realities made the position of the warrior itself redundant in the early modern era.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in premodern and modern Japan. Evaluation will be through means such as in-class presentations, short writing assignments, midterms or quizzes, one analytic paper (3-7 pages), and in-class/on-line participation and discussion.

The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study.

General Education: None
JAPNS 423 (IL) Men, Women, and Animals (3) Japanese history and culture through the lens of relations between men and women and between humans and animals.

Through readings in primary and secondary sources, and to a lesser extent through the evaluation of visual images, this seminar-style course will examine relations between men and women in changing social contexts over time in Japan. We will also investigate human-animal interactions, in the realms of literature and symbolism, religion, and food production and other aspects of economic production. The course will address issues fundamental to every society past and present. Therefore, it will not only deepen students' knowledge of Japan but it will also provide a solid basis for comparative study of other societies.

JAPNS 424 (IL) Traveling Voices (3) Transnational Writings of Japan: from Modern to Contemporary Eras.

This course meets the Bachelor of Arts degree requirements.

Through literary and visual texts from modern to contemporary eras, this seminar-style course will explore a wide range of narrative voices of Japan, created by writers who are physically or figuratively dispersed in many directions within, towards, and away from Japan, and who therefore problematize “Japanese-ness” by dealing with cultural situations (e.g. identities, marginality) in their writings. Some Prior Study of Japan (JAPNS 120, JAPNS 121, or HIST 172) is required. Students will explore the rich cultural diversity in Japan and the Japan diaspora, and develop a further understanding of historical border crossers between Japan/East Asia and Americas/the West. They will become more aware of the reciprocal and transformative cross-cultural interactions in languages, literature, religions, economics, ideas, or political formations. They will learn how to think critically, in speech and writing, and develop writing analytic skills appropriate to their final paper project.

Evaluation will depend on specific instructor practice, but will certainly emphasize guided discussions, some student presentations (alone or/and group), and writing exercises (especially final research project). A sample guideline might look like this:

Class Participation/discussion
Response papers
Informal Presentation (pair or group up to three)
Mid-term exam
Final paper presentation
Final Project

JAPNS 425 Beyond Anime (3) Selected works from the history of illustrated narrative from scrolls to chapbook, through film and anime; topics may vary. This seminar-style study of Japanese visual culture will help students see Japanese visual arts in terms that are local to Japanese aesthetics and through those that transcend local cultures.

Beyond Anime (3)
JAPNS 426 (HIST 474, ASIA 474) Early Modern Japan (3) Japanese history from 1580 to 1880.

Japan’s Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms.

Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students’ knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

JAPNS 450 (IL) Introduction to Classical Japanese (3) Basic patterns and structures of Classical Japanese from its development in the 6th century through usage in the 20th century.

JAPNS 450 Introduction to Classical Japanese (3)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is an introduction to the basic grammar and stylistic idiosyncrasies of classical Japanese (bungo). Students will be guided through an examination of key syntactical structures and will be asked to apply their knowledge in order to read, translate, and discuss various texts from the classical, medieval, and early modern periods. In addition to gaining familiarity with standard reference materials (such as dictionaries of classical Japanese), students will also gain a working knowledge of the styles and themes of major works of pre-modern Japanese literature. Successful completion of this course will give students the fundamental skills necessary to read texts composed prior to the 1900’s and to engage in research in the field of pre-modern Japanese studies. With this training and knowledge concerning the development of the Japanese language, students will increase their proficiency in modern Japanese and their overall knowledge of Japanese culture and literature.

Prior study of modern Japanese is required (with proficiency equivalent to successful performance in JAPSN 402). The purpose of the course is to make bungo (“literary Japanese”) accessible to as many students as possible. Classical Japanese first appeared in the 6th and 7th centuries and was used to write a wide variety of texts up until the mid-20th century. Knowledge of it is very useful to anyone interested in studying Japanese history, literature, philosophy, politics, art, or culture. The course offers a systematic introduction to the grammar of Classical Japanese, while also presenting Classical Japanese and Modern Japanese as part of a linguistic and cultural continuum.

JAPNS 452 (IL) Contemporary Japan: Cultures, Lifestyles, Trends (3 per semester/maximum of 6) Survey of aspects of modern Japanese society; includes readings from Japanese newspapers, magazines, and fiction; topics may vary each semester.

JAPNS 452 Contemporary Japan: Cultures, Lifestyles, Trends (3 per semester/maximum of 6)
(IL)

(BA) This course meets the Bachelor of Arts degree requirements.
This course orients students to cultural issues and trends in contemporary Japan, and the way that those issues and trends are explored in literature, film, newspapers and magazines. The course examines a selection of Japanese-language materials from an array of genres, modes of representation, and historical settings. Focusing on the postwar era to present (1945-), this course introduces various aspects of contemporary Japanese culture, from literary works of the postwar experience to recent popular culture, including anime (animated movies) and manga (graphic novels). Each work is discussed in terms of its own literary or artistic merit, the social context that produced it, its position within the larger trends of literary development in Japan, and its relevance for the modern reader. This course is designed for (prospective) Japanese major or minor students interested in broadening their knowledge of Japanese culture and society as well as for students who wish to compare other cultures and literatures they have studied with those of Japan.

General Education: None

Bachelor of Arts: Second or Beyond 12th Level Foreign Language
Effective: Spring 2010
Prerequisite: JAPNS 401

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

JAPNS 453 (IL) Japanese Film (3 per semester/maximum of 6) Selected films and directors representing various aspects of Japanese culture and cinema; topics may vary each semester.

JAPNS 453 Japanese Film (3 per semester/maximum of 6) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This class will be a seminar-style study of Japanese culture, texts, and language as seen through the lens of Japanese cinema. The goal is to deepen the students' understanding of diverse aspects of Japanese life, history, and culture while developing language skills. Typical class sessions may involve watching sections of film (with our without English subtitles); working with listening comprehension; engaging with student presentations (in Japanese) on studies, directors, or actors; discussing Japanese film history; and analyzing film stills for aesthetic qualities.

Participants will be required to view and discuss films in Japanese (with or without English subtitles). Viewing’s will be accompanied by secondary readings (at least some of which may be in Japanese). We will also be discussing the films and readings in the context of nation, identity, history, sociology and culture. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays and film analysis. Students must prepare for class by reading the material carefully, taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or exclusively in Japanese. This course satisfies the International Cultures requirement.

JAPNS 454 (IL) Japanese Literature (3 per semester/maximum of 6) Selected works from important Japanese texts representing genres such as autobiography, poetry, fiction, and drama; topics may vary each semester.

JAPNS 454 Japanese Literature (3 per semester/maximum of 6) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This class will be a seminar-style study of contemporary Japanese literature. The goal of the course is to help students move from grammar-assisted reading assignments (which may provide vocabulary lists, grammar notes, and cultural notes) to reading ‘raw’ materials in Japanese, where students are responsible for knowing how to use the appropriate reference materials so that they can compile vocabulary lists, grammar notes, and cultural notes on their own. Students will be reading selected works from an array of genres such as autobiography, poetry, fiction, drama and essays, with topics and thematic focuses varying from semester to semester.

Typical class sessions may involve reading aloud from a literary work; engaging with student presentations (in Japanese) on authors, genres, thematic elements, and relevant historical or cultural events; discussing Japanese literary history; analyzing short passages for their aesthetic qualities; and working with specific items of grammar or vocabulary. Participants will be required to read and discuss Japanese literature in Japanese. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays, quizzes and tests. Students must prepare for class by reading the material carefully, taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or exclusively in Japanese. This course satisfies the International Cultures requirement.

Foreign Study--Advanced Japanese (1-15)
Jewish Studies (J ST)

J ST 004 (GH;US;IL) (CAMS 004, RL ST 004) Jewish and Christian Foundations (3) Introduction to the perspectives, patterns of worship, morality, historical roots, and institutions of the Judaeo-Christian traditions; their relationship to culture.

J ST (CAMS/RL ST) 004 Jewish and Christian Foundations (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Jewish and Christian Foundations seeks to help students better understand the Bible as the scriptural background for both Judaism and Christianity. Some people believe the Bible is "scripture," self communicated by God to humanity. To others, this text is a compendious collection of poetry, historical writing, law, myth, and mystical writings, which stems from the religious, political, and cultural milieu of the ancient Near East. Some people believe this is a book designed to bring people to belief in the power and reality of the god discussed in these writings. For others, the book is a source of both unity and division among people in the world, and must be treated as ambiguous in nature. Still others see the biblical text as the single most important collection of literature to have shaped the religious, political, and imaginative contours of western civilization. This course focuses on selected portions of the biblical text, representing diverse strands of historical remembrances, interpreted and re-interpreted in light of critical historical events, and serving, first as an oral, and later as a written account of the life, beliefs, and hopes of Jewish and Christian peoples. Readings from both the Hebrew Bible (the Christian "Old Testament") and the Christian scriptures (the "New Testament") will be used. RL ST 004 provides a broad discussion of the origin of both Judaism and Christianity within a historical and geographical framework. The principle teachers, writers, and "founders" are discussed, including Moses, Isaiah, David, Ezra, Jesus, Peter, and Paul. Students are challenged to read and understand these important writings which have interpreted the human condition and which have oriented generations of people towards a transcendent referent associated with love and loyalty. Evaluation methods may include two hour examinations, a final examination, and two short writing assignments. The examinations and participation will also be a factor in overall evaluation for the final grade. RL ST 004 may be used to fulfill requirements for the Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies major/minor. This course will be offered twice a year with 125-150 seats per offering. Finally, students will be challenged to evaluate and respond to the literature as it touches on human experience experiences which all people share regardless of their personal religious affiliation.

J ST 010 (GH;IL) (HEBR 010) Jewish Civilization (3) Life of the Jewish people from biblical times; emphasizing cultural, religious, and institutional developments.

J ST (HEBR) 010 Jewish Civilization (3)
(GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Jewish tradition goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events -- ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. -- we will explore developments in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are evaluated on the basis of essay exams, essay assignments, quizzes, in-class discussion and commentaries, group projects, journals, a final comprehensive exam/essay, web-based activities, and on-line discussion; such means as quizzes, essay examinations, and group projects.

Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**J ST 012 (GH;IL) (CAMS 012, RL ST 012) Lands of the Bible (3)**

(CAMS/J ST/RL ST 012 introduces students to the lands, cities, and peoples associated with the Hebrew and Christian scriptures. Using methodologies from historical geography, archaeology, ancient history, epigraphy, and anthropology, students study the Fertile Crescent, from the Nile Valley, through the Levant and its Jordan River valley, to Mesopotamia—the river valleys of the Tigris and Euphrates. Students will study the cities and states of the cultures along these rivers in the Bronze and Iron Ages, including Memphis/Saqqarah, Thebes, Ugarit, Jerusalem, Lachish, Megiddo, Shechem, Samaria, Hazor, Ebla, Babylon, Ur, Petra, Jericho, Akko, and others. These are the lands of the Hebrew and Christian scriptures, but also cities that have been revealed through modern study. For example, the texts excavated at Ugarit (Syria) in the 1920’s shed light on the relations between ancient Israelites and their Canaanite neighbors in the period of the “Conquest” and the monarchies of the Iron I and Iron II periods. Students will learn that the culture of the ancient Near East is inexorably linked to an understanding of the religious traditions that grew up in the region, including Judaism, Christianity, and Islam. Classes will be a combination of lecture, discussion, and problem-solving, with frequent use of slides and occasional use of artifacts to illustrate the topics at hand. Students are evaluated on three of the following five means: a midterm test, a final essay examination, a five to seven page term paper, a team research oral presentation, a team research poster presentation. Participation in class discussion will also be evaluated. This course fulfills three credits of the General Education or the B.A. humanities requirement. For majors in Classics and Ancient Mediterranean Studies, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology. The course fulfills the three credit requirement for courses in RL ST 001-099 for the Religious Studies major, and the Jewish Studies major's requirements. The course also would fulfill three credits of the six credit requirement for courses in any field that may be below the 400-level for the Religious Studies Minor, three credits of the nine credits required in course work for the Jewish Studies Minor, and three of the 18 credits required for the Classics and Ancient Mediterranean Studies minor. This course will be offered once a year with 50 seats per offering.

**J ST 060 (GS;IL) (ANTH 060, PL SC 060, SOC 060) Society and Cultures in Modern Israel (3)**

(Society and Cultures in Modern Israel (3) An introduction to the society and cultures of the State of Israel from 1948 to the present. General Education: GS Diversity: IL Bachelor of Arts: None Effective: Summer 2006)

**J ST 070 (GH;IL) (CAMS 070, RL ST 070) Prophecy: The Near East Then and Now (3)**

J ST 083S (GH;IL) First-Year Seminar in Jewish Studies (3) Critical approaches to the history, sociology, and literature of Jewish Studies.

J ST 083S First-Year Seminar in Jewish Studies (3) (BA) This course meets the Bachelor of Arts degree requirements.

Through a combination of readings, lectures, discussions, and research projects, students will learn to master the subject material of the course and acquire basic skills important to the study of humanities. Students will learn to read academic books, as well as original documents, to formulate arguments, and to write analytical essays and papers. Analyses of this type will provide students with techniques for formulating, identifying, and judging academic arguments and presentations in many fields of learning other than Jewish Studies. The topics chosen for these seminars will introduce students to some of the major figures, historical, literary, religious, and sociological developments in Jewish Studies. By concentrating on these topics, the students will better understand the cultural assumptions of different groups and societies. Although the course will focus on a specific topic, the instructor will aid the student in seeing the larger implications of the issues and controversies discussed in the class. The international and intercultural aspects of the topic will consistently be considered. The course will require students to express their ideas as well as to gather information through research, discussion, and writing. It will consistently challenge students to consider social behavior, the nature of the community, and the value of scholarly work as these relate to the particular topic of the seminar. The course fulfills the first-year requirement, as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. The first-year seminar will be offered twice per year with an enrollment limit of 20 per section.

General Education: GH
Diversity: IL
Bachelor of Arts: Humanities
Effective: Summer 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

J ST 090 (GH;IL) (CAMS 090, RL ST 090) Jerusalem: Past, Present, and Future (3) Social, cultural, religious, political, and archaeological history of Jerusalem from earliest times (c. 3000 BCE) to present.

J ST (CAMS/RL ST) 090 Jerusalem: Past, Present, and Future (3) (BA) This course meets the Bachelor of Arts degree requirements.

Jerusalem, a holy city for Judaism, Christianity and Islam, is symbolically depicted in art and literature as the physical and spiritual center of the world. Throughout its history, this "city of peace" was a focal point attracting numerous cultures and peoples, the latter sometimes as prophets and more often as conquerors. The reasons for Jerusalem's centrality and significance during the past five millennia as a heavenly and earthly capital are explored in this course.

The course curriculum will survey the religious, political, archaeological and historical record of ancient Jerusalem, beginning with its earliest settlement during the fourth and third millennia BC. Jerusalem's urbanization in the second millennium BC, its role as the capital of biblical Israel and Judah during the First and Second Temple periods, and its transformation as a center of Christianity and later Islam are studied utilizing the testimony of artifacts, architecture, and iconography in relation to the written word. Throughout the ages and continuing into the 21st century, Jerusalem remains a contested city for the three monotheistic faiths. The holy city's impact on the politics of the modern Middle East will be critically examined in light of Jerusalem's history and recent archaeological discoveries and their modern-day interpretation.

Objectives include the critical evaluation of archaeological, historical and literary evidence and its relationship to modern-day political and religious perceptions of Jerusalem. The course will encourage research skills (including library training sessions) and writing and oral communication skills based on an analytical approach to the texts and material culture relevant to Jerusalem.

This course will fulfill three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in CAMS, the course will fulfill the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the CAMS ancient Mediterranean archaeology option it will fulfill the three credits of archaeology course work requirement. The course will fulfill three credits of course work concerned with the ancient period or with the land of Israel.

J ST 102 (GH;IL) (CAMS 102, HIST 102, RL ST 102) Canaan and Israel in Antiquity (3) Political, social, and intellectual history of the land of Canaan/Israel in the Biblical era: Late Bronze and Iron Ages.

J ST (CAMS/HIST/RL ST) 102 Canaan and Israel in Antiquity (3) (GH;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

From the domestication of animals and the dawn of agriculture to the development and socialization of monotheism, the world of the first civilizations led to that of the Bible and ancient Israel. This course, involving a critical view of Biblical texts in light of other ancient sources, archaeology and historical methods, explains the nature and the evolution of society, religion and thought in the Biblical era. Learn how civilization arose, and how the state appropriated religion and applied it for its purposes. How the science of administration developed and deployed ideological tools to further its own ideas of the West developed. This course is deeply subversive, particularly of religious and academic shibboleths. The only authority in this class is that of the most persuasive reader, and doctrines, whether religious or political, will have to be checked at the door.

An example of evaluation may be: weekly participation in discussion; mid-term and final essay examinations involving a critical evaluation of ancient text's claims in combination with archaeological evidence; a research essay, where the class or section size is lower than 30; an ability to read critically, bringing different classes of evidence to bear on issues arising from the texts, and construct coherent and compelling arguments to a particular thesis. The course provides a Near Eastern counterpart to HIST 100, 402 and a Near Eastern aspect to the Jewish Studies major. It complements RL ST 110, by offering historical exploration of the culture under study in that course. Related courses include HEBR, 010, ENGL 104, RL ST 004, RL ST 012, and RL ST 111. The course helps round out the majors in History and Jewish Studies, particularly in ancient history. It also extends the program in Religious Studies (history of religions), and it contributes to the ancient stream of the prospective program in Jewish Studies and History. The class will be offered once every other year with an enrollment limit of 15-20.

J ST 104 (GH) (ENGL 104) The Bible as Literature (3) Study of the English Bible as a literary and cultural document.
This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to acquaint students with the literature of the Bible, particularly in the King James translation, the translation that has been most influential in the English-speaking world. Throughout this course, students will examine the language, thought, images, and structures of the book that has arguably proved the central text of Western literature. Students will also actively explore the ways in which the Bible has shaped the literature of English-speaking cultures. Students will read substantial portions of the Old and New Testaments, including the Book of Genesis, the Book of Job, and selections from the histories, the prophets, the Book of Psalms, the Gospel of John, the Gospel of Matthew, and the Book of Revelation. Students will learn to read the Bible critically and interpret the book as they would any other literary text. They will also learn about the historical construction of the Bible and contemplate the competing versions of existing Biblical texts. Students will be asked to complete at least three writing assignments drawn from the following kinds of writing: essay, essay exam, or semester-long reading journal. This course will prepare students for additional college-level literature courses by helping them to develop the analytical skills necessary to analyze complex written texts.

This course fulfills a General Education Humanities requirement or a Bachelor of Arts requirement. It will be offered twice a year and is capped at 35 students.

J ST 110 (GH;US;IL) (CAMS 110, RL ST 110) Hebrew Bible: Old Testament (3) Introduction to the history, literature, and religion of ancient Israel.

J ST (CAMS/RL ST) 110 Hebrew Bible: Old Testament (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The Hebrew Bible is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel's neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babyloniens, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. Hebrew Bible introduces students to the literature of ancient Israel, its rituals, the stories which established a people's identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the text and from a textbook which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment, and to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism. Students will be evaluated using an hour examination, a 6-8 pp. "hermeneutical essay," a final examination, class attendance and discussion. As an introduction to the scriptures of the Hebrew Bible / Old Testament, RL ST 110 utilizes the methodologies used in the academic study of religion. The course is related or linked to many courses in religious studies which use these same methods or which are related to the history and development of Judaism, Christianity, or Islam. RL ST 110 may be used to fulfill requirements for the Religious Studies major. RL ST 110 may also be used to fulfill the GI or GH requirements in the major or minor in Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies. The course will be offered at least once a year, with an enrollment of 120.

J ST 111 (GH;IL) (CAMS 111, RL ST 111) Early Judaism (3) Religious thought, practices, and parties in the Second Temple period; the emergence of rabbinic Judaism.

J ST (CAMS/RL ST) 111 Early Judaism (3) (GH;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). In this period, ancient Hebrew religion was transformed into a new world religion-Judaism. Students will read selections from the Bible, and from other religious literature, including the Dead Sea Scrolls, the Apocrypha, the Christian Scriptures, the Mishnah, and the Talmudim. By tracing the development of various Jewish "parties," students will appreciate how Classical Judaism evolved, and how the early Church emerged from Jewish roots in the first centuries CE. Early Judaism grew from its roots in the period of Achaemenid domination. Jews were dispersed throughout the eastern Mediterranean, so influences from Persian, Hellenistic, and Roman thought naturally influenced the faith's development. Students in Early Judaism will develop a new appreciation for the basic beliefs and practices of Judaism as well as for the beginnings of the Jesus movement and the development of the early Christian Church. Theological and historical questions concerning the origins of evil, the primacy of prayer, the beginnings of Jewish religious architecture, and the rise of anti-Semitism will be explored. Religion is always linked inextricably to culture. Judaism's transformation in contact with diverse cultures will become evident throughout RL ST / CAMS / J ST 111. The methodologies used in this course will enable students to read and evaluate primary and secondary sources used in the academic study of Judaism. Many other courses in Religious Studies (001, 004, 110, 120, 124), Jewish Studies (010 and 102), and Classics and Ancient Mediterranean Studies, as well as History and Art History are closely related or linked to this course. RL ST 111 may be used to fulfill 3 credits in the Humanities, or to fulfill the GI requirement in the major or minor. The course will be offered once each year, with an enrollment of 65. This course will satisfy 3 credits towards the minor in Jewish Studies or the major in Religious Studies, plus being cross-listed with CAMS, fulfilling part of the requirement for courses in supporting or related areas of all Classics and Ancient Mediterranean Studies majors. The course also provides an excellent addition to other courses, such as CAMS 010, "Mesopotamian Civilization;" CAMS 044, "Ancient Near Eastern Mythology;" CAMS 045 "Classical Mythology;" CAMS 033, "Roman Civilization; and CAMS/RL ST/J ST 012, "Archaeology of the Lands of the Bible."

J ST 112 (GH;IL) (CAMS 121, RL ST 121) Jesus the Jew (3) A historical critical examination of the life of Jesus of Nazareth within the context of first century Palestinian Judaism.

J ST 112 (CAMS/RL ST 121) Jesus the Jew (3) (GH;IL)
(BA) This course meets the Bachelor of Arts degree requirements.

This course offers a historical and critical examination of the life of Jesus within the context of first century Palestinian Judaism. Major emphases will include the historical, social, religious, political, and cultural contexts of Jesus’s emergence, including important precursors and Jesus’s biography; the political, institutional, and cultural history of Jesus’s teachings in the aftermath of his death, with attention paid to variant or alternative traditions and to the mechanisms of normalization; the emergence and history of the early church; and critical analysis of key areas of differentiation between Jesus’s teachings and dominant forms of religious practice at the time. Attention will also be paid to how contemporary religious traditions today imagine Jesus.

J ST 113 (GH;IL) (CMLIT 113, CAMS 113, RL ST 113) Myths and Legends of the Jews (3) Comparative study of diverse interpretations of stories from the Bible in Judaism and Christianity.

J ST (C LIT/CAMS/RL ST) 113 Myths and Legends of the Jews (3) (GH;IL)
The impact of the Bible on Western Culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and re-tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthly-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences are often too subtle to discern apart from careful comparison.

This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Our procedure will be to compare these traditions closely with the biblical text, asking: What is different? What concerns motivated the changes? Is it possible to discern patterns of change, or “agendas” of the author? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods.

**J ST 114** (GH;US;IL) (RL ST 114) Modern Judaism (3) Trends in Jewish life and thought since the French revolution; Judaism’s responses to the challenge of modernity.

**J ST (RL ST) 114 Modern Judaism (3)**
(BA) This course meets the Bachelor of Arts degree requirements.

The course explores the opportunities and problems of Jews around the world from the late eighteenth century -- the "age of emancipation" -- to the present time. Commercial, political, and intellectual revolutions in the 1700s, giving rise to modern capitalism, republicanism, and an emphasis on reason, combined to induce political states to grant Jews unprecedented freedom. Emancipation introduced new elements into Jewish life: religious change, personal choice, and internal disagreements. In practical ways, life improved for Jews, as they became more prosperous and assimilated. But freedom also increased the chances for loss of identity, as liberals discarded some rituals as old-fashioned and many individuals chose to give up traditional practices. In addition, anti-Semitism persisted, although it was new, at times, more difficult to detect. Traditional forms of hostility to Jews, such as heresy trials and political expulsions, were replaced by subtle expressions of political and social discrimination. But hatred of Jews did not disappear, despite widespread acceptance in Western culture of political liberalism. The class explores these trends in Europe, the Americas, and Israel. It begins by looking at the fragile freedom of nineteenth-century Jews. In the twentieth century, Jewish experience has often been characterized by open conflict: in the Holocaust, the formation of Israel, contemporary black-Jewish relations in the United States, and Jewish-Muslim relations in the Middle East. The course concludes with these recent struggles. Course readings include personal narratives (reminiscences or letters) and works of fiction (a short story, play, and novel). The class is primarily a discussion class, using writing assignments as the principal method of evaluation. The course requires three graded essays and an ungraded proposal. Students are also asked to keep a journal of commentary on course readings. Class attendance and participation are components of the final grade. The course serves as an introduction to modern Judaism as a religion and culture. It prepares undergraduate students for advanced work in European and American Judaism, as well as Israeli history and culture. These advanced courses are found in the Religious Studies and Jewish Studies programs and in the Departments of History and Comparative Literature. It may be used to complete the major or minor requirements in Religious Studies and Jewish Studies. The class fulfills the humanities requirement for non-majors. The course is normally offered once every two years, and the enrollment is 40 students.

J ST 115 (GH;US) (HIST 115, RL ST 115) The American Jewish Experience (3) Examination of the history, culture, social tensions, and contributions of Jews and Judaism in America.

J ST (HIST/RL ST) 115 American Jewish History and Culture (3) (GH;US)

Throughout American history, Jewish presence on American soil has compelled Americans to re-think the meaning of religious and ethnic diversity. As one of the earliest non-Christian immigrant populations, American Jews struggled to explain how they could nonetheless fit into American cultural, political and social life. At the same time, many Jews have been concerned with their own survival as a distinctive group, unwilling to cede those practices, behaviors or traits that designate them as a people apart from other Americans. This course is about how these two seemingly contradictory goals—to integrate into America and to remain distinctive from other Americans—shaped the history and experience of Jews in the United States and influenced the way Americans think about diversity and pluralism.

The student of American-Jewish history must be attuned to the multiple ways that Jewishness has been defined: as a race, a religion, a nationality, and an ethnicity. In this course, far from choosing just one of these designations, we will explore Jewish life from many different angles. Topics to be considered include religious reform, immigrant experience, political activism, popular culture, and struggles over community authority. Readings focus on a number of primary texts, including memoirs, novels, films and philosophical essays. Secondary books and articles will also help deepen students' understanding of trends in American-Jewish history and awaken them to diverse interpretations of history. Students will be encouraged to engage actively and critically with the texts by writing short reading responses, longer essays, and participating in classroom discussion and presentations, all of which will serve as the basis for their evaluation.

This course complements offerings in Religious Studies, Jewish Studies and History. It provides a foundation for an already existing upper-level seminar in American Judaism (listed in Jewish Studies and Religious Studies). In addition, the course strengthens the History department's offerings in American history, serving as a basis for students interested in immigration, ethnicity and religious history. Students who are interested in modern Jewish history will also find this course a worthwhile addition to their program of study, since, unlike other courses, it deals primarily with the story of Jewish life in the United States.

This course will be offered approximately once a year, and the enrollment will be 40 students, as is typical for other 100-level Jewish history classes.

J ST (CMLIT) 116 Jewish Great Books (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will introduce students to the rich and diverse expanse of the Jewish tradition through a survey of that tradition's most important texts. Starting from the Bible, moving up through the contemporary world, and spanning the globe, the course will examine religious, cultural, folkloric, philosophical, national, and literary traditions, and attention will be paid to both breadth—emphasizing the vast range and diversity of Jewish thought and writing—and depth—emphasizing the complexity and subtlety of particular texts—in examining the material. Students will learn methods and practices of textual, cultural, and historical criticism as they engage in analysis of Jewish textual traditions, of the relationship between representation and history, and of the productive interchanges between representation, history, and identity.

J ST (CAMS/RL ST) 120 New Testament (3) (GH)

(BA) This course meets the Bachelor of Arts degree requirements.

This course introduces the student to the New Testament (NT), the principal religious text of Christians. As such, it is one of the most significant and most studio texts in human history. Written in Greek between approximately 55 C.E. and 110 C.E the New Testament consists of 27 individual books, each written by a separate author (c. authors), that were later assembled into the “New Testament.” Because of the growth of Christianity, the NT has influenced every aspect of our world—to name only a few: history, politics, economics, literature, philosophy, ethics, medicine, science, the arts (music, architecture, the visual arts), gender roles, theater and drama, law, psychology, and sociology. After introducing the student to the academic study of religion and the “historical-critical method,” our study begins by examining the materials from which the NT’s text is reconstructed, and the period in which the NT was authored. This includes exploring other parallel phenomena (such as miraculous hearings, resurrections, and virgin births) in contemporaneous Graeco-Roman religions. After this background is in place, the course turns to an examination of the gospels and their interrelationships, the pictures of Jesus presented (and their relationship to first-century B.C.E. Judaism), variations among Christian understandings of Jesus reflected in the NT and other contemporaneous Christian writings (he was a man, an angel, a lesser divinity), Paul and his life and writings, and the emergence of Christianity from Judaism as a distinct, new, apocalyptic religion. Along the way, we examine the manuscript tradition of the NT, changes that have been made to its text, and different interpretations of certain passages in the NT. We also examine the historical-critical tools scholars use to date and sequence passages in the NT (form, redaction, literary, and historical criticism, for example), for one can correlate the evolution of early Christian theology with the evolution of the NT’s text.

J ST 122 (GH;IL) (CAMS 122, RL ST 122) Apocalypse and Beyond (3) This course surveys apocalyptic literature and apocalyptic movements from the ancient Near East to the modern world.

J ST (CAMS/RL ST) 122 Apocalypse and Beyond (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course offers a scholarly survey of apocalyptic literature and apocalyptic imagination about the end of the world, from its beginnings in the ancient Near East and the Bible to some examples from the modern world. The course will cover three areas: 1) the ancient literary genre of apocalypse in the Near East; 2) apocalyptic writings in the Jewish and Christian traditions (especially the books of Daniel and Revelation in the Bible, and the Qumran Dead Sea Scrolls), as well as within Islam, which generated Western apocalyptic thinking throughout the ages; and 3) some historical examples and discussion of the sociological underpinnings of apocalyptic groups in the medieval to modern periods. Additional attention will be paid to the impact that apocalyptic worldviews have had on the secular world, especially in the fine arts and cinema.

J ST 123 (GH;IL) (CAMS 123, RL ST 123) Ancient Monotheisms: Judaism, Christianity, Islam (3) Examines the origins and early development of the three major monotheisms of the ancient Near East: Judaism, Christianity, and Islam.

J ST (CAMS/RL ST) 123 Ancient Monotheisms: Judaism, Christianity, Islam (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines the origins and early development of the three major monotheistic religions: Judaism, Christianity, and Islam. These three related religious traditions originate in the Near East and all center around a belief in the existence of one single god (monotheism).

The aim of the course is to describe and compare core events, major beliefs, practices, and significant historical trends in each monotheistic tradition from their respective beginnings to around 750 C.E. The course begins with the origins of Judaism, the first religion in the Near East to be monotheistic. It then examines how Christianity branched out of Judaism in ancient Palestine, as well as how Islam emerged in Arabia in the 7th century C.E. within a historical context rich in Jewish and Christian influences.

All three religions share basic beliefs about the nature of deity, the role of the written word in revelation, and prophets as messengers. Equal emphasis will be placed on these commonalities and on the major tenets and practices that differentiate these three religions.

J ST 124 (GH;US;IL) (CAMS 124, RL ST 124) Early and Medieval Christianity (3) Analysis in cultural context of selected thinkers, ideas, and movements in Christianity from the second through the fifteenth century.
J ST (CAMS/RL ST) 124 Early and Medieval Christianity (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course traces the development of one of the world's “Big 5” religions from the death of its founder (about the year 30 CE) down to the middle ages. It focuses on significant trends, controversies, personalities, and turning points. These are not just diverse in terms of chronological breadth, but are also spread geographically from the eastern end of the Roman Empire (the border with Persia) to northern Europe. Attention is given to the various manifestations of Christianity (Judaic, Hellenistic, Latin), and the linkage between local patterns (culture, history and predispositions) and how these shaped the sort of Christianity that took root in particular areas. Students typically will be evaluated on four “pop” quizzes, a midterm and a final exam. The course can be used towards a major or minor in Religious Studies, Classics and Ancient Mediterranean Studies, and Jewish Studies and used to fulfill 3 credits in the Humanities for non-majors. This course will be offered once a year with 175 seats per offering.

J ST 128 (GH;US;IL) (CMLIT 128, ENGL 128, GER 128) The Holocaust in Film and Literature (3) Thematic, formal, and historical analysis of filmic and literary representation of the Holocaust.

J ST (CMLIT/ENGL/GER) 128 The Holocaust in Film and Literature (3)
(GH;US;IL)

This course provides an introduction to the film and literature of the Holocaust through a historical survey of these traditions' key texts, figures, and themes. Both US and international texts and traditions will be covered, as will both fictional and nonfictional treatments of the Holocaust. The course will focus on the defining aspects of the literature and film and on what these traditions reveal about the Holocaust and how we understand the Holocaust. The course will use Holocaust literature and film to seek both the points of cohesion and the points of divergence that characterize the experience of the Holocaust, the interpretive cultures through which we approach the Holocaust, and Jewish and other cultures. The course will also introduce students to the concept and theory of trauma, and to its place in theories and traditions of representation, as well as to the concept and history of genocide. Some time will be spent analyzing what has been called the Americanization of the Holocaust. Materials will consist predominantly of primary texts, including both fiction and nonfiction film, prose fiction and nonfiction, poetry, and drama. Course methodology will emphasize the close reading of texts and analysis not only of what is represented, but also of the “how” of representation, drawing students' attention to genre distinctions and the different expectations we bring to fiction and non-fiction, to film and the written wo

J ST 131 (GH;US;IL) (CMLIT 110) Jewish Literature: An International Perspective (3) Literature of the Jewish tradition in various cultures and contexts, such as Europe, Israel, Islamic countries, and the Americas.

J ST 131 (CMLIT 110) Jewish Literature: An International Perspective (3)
(GH;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

CMLIT 110 (J ST 131) will provide an introduction to the multiple worlds of Jewish experience and the different literatures they continue to inspire. Jewish literary creativity has varied widely with the personal and communal experience of writers in many parts of the world, and in many different time periods. Readings usually range from the first Jewish literary text, the Hebrew Bible, to twentieth-century works, including writings about the Holocaust. The course typically includes units such as Jewish writing and culture in Eastern Europe, in the Americas, in Spain during the Middle Ages, and in Israel and the Middle East today. The material may be organized chronologically, thematically, or by regions or languages. Texts that critique or apparently suppress Jewish identity, as well as texts with representations of Jews by writers of other heritages, may be included for comparative purposes. We will include writings by Jewish authors who have written in languages usually associated with Jewish tradition (such as Hebrew and Yiddish) and in other languages (such as Spanish, Arabic, German, English, etc.). Topics discussed in the literature may focus on questions of Jewish identity and continuity, the situation of Jews as a minority people, the immigrant and diasporic experience, representations of the Holocaust, and the establishment of Israeli culture as a mixture of several traditions. We will question generalizations about the meaning of “Jewish” by showing the wide range of characteristics associated with Jewish literary productions, and the great diversity of

The Pennsylvania State University

J ST (ENGL) 132 Jewish American Literature (3) (GH;US)

This course will provide an introduction to Jewish American literature through a historical survey of the tradition's key texts, figures, and themes. The course will focus on the defining aspects of the literature and on what the literature "thinks" about Jewish American culture and identity. But rather than assuming a unity to Jewish-American culture, this course will use Jewish literature to seek ways of articulating and representing both the points of cohesion and the points of divergence that characterize Jewish life in America. The United States has absorbed large numbers of Jewish immigrants hailing from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions. Moreover, Jews have settled and made homes in a wide variety of American communities. This course aims to explore Jewish American culture's marked diversity by offering a literary window onto the major fault-lines running through Jewish American culture: lines demarcated by gender, by political affiliation, by geography, by pre-immigration community by religious practice, by attitude toward world Jewry, by national allegiance, and by minhag (or custom), to name just a few. The class therefore provides an opportunity to consider the constitution, origin, and development of Jewish American's identity and social formations by looking at how that Identity and those social formations exist and what they "do" in literature written by and about Jews in America. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film. Course methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies and English, and it will satisfy the GH and US requirements. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English a valuable, sustained introduction to an important U.S. and world sub-culture.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

J ST 135 (GH;IL) (PHIL 135, RL ST 135) Ethics in Jewish Tradition and Thought (3) Examination of Jewish ethical thought from biblical foundations to the modern period, with attention to contemporary issues in moral philosophy.

J ST (PHIL/RL ST) 135 Ethics in Jewish Tradition and Thought (3) (GH;IL)

This course takes its starting point the idea that modern ethical frameworks are deeply rooted in the "soil" of older traditions. By examining the development of Jewish intellectual traditions and their roots in the Bible, it provides students with an opportunity to study ethics in a philosophically textured, culturally rich, and historically informed way. And by focusing on Jewish engagement with the Bible, the course illuminates other traditions that derive from biblical monotheism: for example, those associated with Christianity, Islam, and the Enlightenment. The first part of the course takes up the idea of tradition and includes a study of biblical texts that serve as the foundation for key moral concepts. Following the traditional division of the scriptures, it examines questions of human identity and responsibility in the Torah, social ethics in the Prophets, and the quest for wisdom in the Writings. The final topic in this unit is the development of ethical tradition among the great sages of Jewish antiquity.

The second unit shifts focus to the appropriation of tradition in modern Jewish thought. After reviewing important developments in Jewish thought in the medieval and early modern periods, it turns attention to the ways that some recent figures have addressed perennial concerns in light of commitments and ways of being that are integral to Jewish identity. By reading closely the works of such seminal thinkers as James Kugel, Joseph Soloveitchik, and Abraham Heschel, we will gain a deep acquaintance not only with important vocabulary but also with the ways that traditional words and concepts...
may be used dynamically to produce fresh ways of looking at questions in moral philosophy. Even when the influence of Judaism on a particular figure is not openly acknowledged in his work, as in the case of Sigmund Freud, he may be studied profitably, in a way that sheds light on characteristically Jewish ideas. Finally, the course turns in its third and final unit to applied ethics. The central question here is how Jewish tradition informs ethical reflection in a wide range of contemporary fields: specifically, environmental studies, social and sexual ethics, and legal and business ethics.

J ST 137 (GH;US;IL) (RL ST 137, WMNST 137) Women and Religion (3) Jewish and Christian religious views on womanhood; thought and lives of important religious women; and feminist understandings of these.

J ST (RL ST/WMNST) 137 Women and Religion (3) (GH;US;IL)
Women and Religion examines the historical and contemporary role of women in society and in religion, how those roles are shaped by religious doctrines around leadership, ritual, language, and the valuation of women’s experience and history, and the diversity of women’s voices speaking to these issues.

An historical inquiry begins with a review of early goddess-based religion and an examination of gender roles promoted in selected creation narratives, including those from Genesis. Additional biblical and non-canonical texts are studied for their various characterizations of woman, the influence of marital status, and her place in the public and private spheres. Historical debates about women consider what roles women played in leadership structures, in religious ceremonies and in the creation of a theological tradition as well as the places women created for themselves outside “official” institutional churches or the formalities of worship.

We study prominent women in biblical history, the early church, the medieval past, and in modern American history. What are their stories and what noteworthy contributions did they make in the history of religion? What do we know of their lives and thought?

Furthermore, the course addresses contemporary issues of importance to women and how those issues are resolved from the multiple perspectives within Judaism and Christianity. Such issues may include dating, marriage, family and divorce; spousal and gender relations; reproductive rights; homosexuality; sexual violence toward women; work outside the home; and religious leadership and inclusion.

Finally, the course examines women’s diverse understandings of the ways of being religious. Women are not a homogeneous group and are responding in a multitude of ways to the decisions they face about staying within or working outside established institutions. We consider their choices, from redefining and recreating new traditions and rituals, both within and outside formal worship settings, to returning to goddess worship and other innovations inspired by the most recent feminist movement.

All topics are discussed in light of the different beliefs and understandings across the movements within Judaism as well as within Roman Catholicism and the many Protestant denominations. In addition, the diversity of scholarly interpretation is emphasized, including that offered by feminist theologians and the breadth of women’s experience arising from factors of race, ethnicity, sexual orientation, and class and educational background.

J ST 140 (GH;IL) (HIST 140) The Israel-Palestine Conflict (3) Roots of the Israel-Palestine conflict; relations between Arabs and Jews in the Middle East from 19th century to present.

J ST 140
J ST 140 Jews and Arabs in the Modern Middle East (3)

This course analyzes the Israel-Palestine conflict in the larger context of Jewish-Arab relations in the modern Middle East. Examination of the seeds of the conflict to the present day. Roots of the conflict between Jews, Palestinians, and Arabs reach back into the late Ottoman period but the First World War constituted a major turning point, when the project of a Jewish state in Palestine took shape as the Ottoman Empire collapsed. The 1917 Balfour Declaration provided an enormous boost to the relatively small Zionist movement. About 300,000 Jews moved to Palestine during the interwar period, with most Jewish migrants driven initially by economic rather than ideological motives. Some Jewish settlers

The Pennsylvania State University
established good relations with local Palestinians. But tensions erupted in the cities, not least over landownership. Clashes continued during the early 1930s. The aftermath of World War II constituted the second major turning point. After 1945 Britain withdrew from the Middle East while large numbers of Jewish refugees from Eastern Europe migrated to Palestine. After the Israeli declaration of independence in 1948, the new Arab states declared war on the newly founded state. Israeli troops expelled large numbers of Palestinians permanently from their homes. At the same time almost all Jews were expelled from most Arab states and settled overwhelmingly in Israel. The course follows the main clashes between Israel and its neighbors without ignoring the internal relations, especially between Jews and Israeli Arabs, and Jews and Palestinians in the occupied territories. The main clashes that will be discussed are the Suez crisis of 1956; the 1967 Six-Day War; the 1973 Yom Kippur War; the bold 1977 peace initiative of Egyptian leader Anwar El-Sadat which led to the 1979 peace accord between Israel and Egypt (and eventually to a détente with Jordan); the 1982 Lebanon War and the first Intifada (protest wave by Palestinians in the occupied territories); the Oslo Peace Process during the 1990s; the Second Intifada and recent developments, especially the implications of Israel’s settlement building in the West Bank. The course concludes with a discussion of potential scenarios for the relationship between Jews and Arabs in the Middle East during the 21st century.

J ST 143 (GH;IL) (HIST 143) History of Fascism and Nazism (3) The study of right-wing totalitarianism in the twentieth century, with special emphasis on Fascist Italy and Nazi Germany.

J ST (HIST) 143 History of Fascism and Nazism (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

History 143 is an introductory survey of fascism and Nazism. The course concerns itself with understanding the social context of fascism, its governing assumptions, ideals, and values, how it worked in practice, and its consequences and historical implications. The course centers on the analysis of secondary and primary sources, and textual, video, and audio materials are all used. Lectures tie the various materials together, while weekly discussion sessions provide an opportunity for students to engage the materials directly. Students are evaluated on the basis of exams (which include an essay component), papers, and class attendance and participation. The course contributes not only to the study of the history of authoritarianism, antisemitism, and the history of the holocaust, but also contemporary and modern European

The Pennsylvania State University
history and, of course, German, Italian, and Spanish history. History 143 will be accepted, but not required, for the History Major as well as the History Minor. It may function as a service course for the Departments of Political Science and Sociology. It is recommended that it also serve as a general education course in the Humanities. This course is offered once a year with enrollment of up to 150 per offering with small discussion sections once a week.

The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses.

The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together from such an important piece of literature.

Diversity: None
Bachelor of Arts: None
Effective: Summer 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

CAMS/J ST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible.

In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

J ST 153 (GH:IL) (CAMS 153, RL ST 153) Dead Sea Scroll (3) Examines the discovery, contents, and interpretations of the Dead Sea Scroll, Jewish texts from approximately 225 B.C.E. to 68 C.E.

J ST (CAMS/RL ST) 153 Dead Sea Scrolls (3) (GH:IL)
This course will explore early Judaism through what is known about it from the Dead Sea Scrolls, Jewish documents dating from approximately 225 B.C.E. to 68 C.E. that were discovered in 1947-1956 along the Dead Sea in Jordan (now the West Bank of Palestine). The course will be divided into three parts: 1) a short introduction to Judaism, especially the history of early Judaism, from the writing of the Hebrew Bible (Old Testament) to the Talmud; 2) a discussion of the caves above the Dead Sea and their relationship to the archaeological site called Khirbet Qumran; and 3) a survey of the contents of the 900+ Dead Sea Scrolls and select readings of some of them. These scrolls are primarily of three kinds: “biblical” books (books that came to comprise what is now known as the Hebrew Bible/Old Testament) and their commentaries or translations; “apocryphal” or “pseudepigraphical” books (previously known Jewish writings that never made it into the Hebrew Bible, such as Tobit, Enoch, etc.); and “sectarian” Jewish writings (previously unknown writings that seem to come from a minority Jewish group).

J ST 160 (GH;IL) (CAMS 160, RL ST 160) Sacrifice in Ancient Religions (3) Examines theories of sacrifice and its manifestations in especially the religions of the ancient Mediterranean world and the Near East.

J ST (CAMS/RL ST) 160 Sacrifice in Ancient Religions (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

Sacrifice (from Latin sacer “holy” + facere “to make”) is one of the most prominent and troubling aspects of religion, in that it involves making an offering or slaughtering an animal to a deity. Its destruction and violence is often at odds with other rituals and core understandings within a religion, so why is it done and what good does it bring? This course will first examine some competing definitions and theories of sacrifice, and then turn to its manifestations in the ancient societies and religions of Greece, Rome, Egypt, Mesopotamia, Israel/Palestine (along with its neighbors Hatti and Phoenicia), as well as some examples from outside the Mediterranean world and the Near East, such as Mesoamerica or Vedic religion.

J ST 181 (GH;IL) (HIST 181) Introduction to the Middle East (3) Origins of Islamic civilization; expansion of Islam; the Ottoman Empire; the Middle East since 1918.

J ST (HIST) 181 Introduction to the Middle East (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

This course presents a survey of the history of the Middle East from the rise of Islam to the current day. The objectives are to help students develop the vocabulary and historical background to discuss and evaluate contemporary events and debates, stimulate interest in the varied historical experiences and diverse societies and cultures of the region, and provide a foundation for deeper investigation. Students may elect to take one or more of the 400-level sequence on Middle Eastern history, or other specialized courses, upon completion of the course. The first half of the course focuses on the foundations of Islamic government and civilization, the first Islamic empires, and the Ottoman empire. The second half of the course traces the modern history of the Middle East and examines how it has been profoundly shaped by European imperialism and American political, economic, and strategic interests. Students will be evaluated on regular quizzes and essay exams and participate in class discussions of assigned readings and current events. History 181 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. The course may also be used to fulfill requirements for the Middle East Studies minor. Non-majors may use this course to satisfy a general education humanities selection. HIST 181 will be offered once a year with 50-60 seats per offering.

**J ST 210 (GH;IL) (CAMS 210) Numismatics and the Historian (3)**
Numismatics—the scholarly study of coins and medals—is a major tool in the study of Classical history and archaeology.

**J ST (CAMS) 210 Numismatics and the Historian (3)**
(GH;IL)

WHY STUDY NUMISMATICS? Numismatics is the scholarly study of coins. Coinage has been used in the ancient world since the 7th century BCE. Eventually, minted money—i.e. coinage—came to supplant money in other forms, replacing barter as the primary means of exchange in economies around the world. Coinage became a tool of governments to impose taxation upon their subject peoples, and to spread propaganda about governmental goals or issues. Coins are works of art, but they are common, widely circulating "works of art," which also accomplish a daily monetary function to run commerce and the monetary system of an economy. Coins are also historical records, containing valuable information for the historian who is attempting to reconstruct the history of another time or place. For archaeologists, coins sometimes are the only means of providing absolute dates for excavated strata. The interpretation of numismatic evidence, like any other pieces of evidence in the historical puzzle, however, requires special knowledge and expertise.

This course is not a course in "coin collecting," although the collector may find the course helpful or interesting. It is an investigation of the development of coined money in the ancient world, with special investigations into (1) how coins were struck and used in Phoenicia of the 5th and 4th centuries BCE; (2) the variety and early uses for coins in the Greek city states of the 6th-4th centuries BCE; (3) the development of Jewish coins in the Holy Land, from Persian times to the period of the 2nd Revolt (early 2nd century CE); and (4) the development of coinage in the Roman economy of the 1st—5th centuries CE.

Photographs of coins will enhance class work. With the cooperation of the Palmer Museum, on Penn State's University Park Campus, the class will have access at several points during the semester to view and work with coins from the Palmer's collection of ancient Jewish coins. Students will leave the course with a new understanding of what coins are, how they developed, and what they can teach us about ancient history and economics.

(GH;IL)

The long dominant view that the Jewish experience since antiquity defines Diaspora as a concept has been challenged in recent years. The meaning of the term Diaspora and related terms, especially (ethnic and/or national) identity and (ethnic and/or national) community, is a matter of much debate across disciplines. The longevity and diversity of distinct Jewish communities around the globe make the Jewish case a particularly interesting subject for study. In a wide geographical, chronological and disciplinary comparative sweep, the course will explore the diverse nature of ethno-national and ethno-religious diasporas (and sub-diasporas), their position vis-à-vis their place of origin ("homeland") and their new surrounding culture and society. More specifically, the course will analyze how Diaspora communities in Europe, Asia, and the Atlantic world reconstituted their identities as they expanded into new environments and encountered other cultures, from antiquity to the present. Emphasis will be placed on exploration of the intersection of politics and culture in respect to race, nationality, ethnicity, gender and class. A key question guiding the discussions will relate to the usefulness and limitations of the Diaspora concept, especially in regard to the discourse about globalization where the term is often used.

The course will begin with an extensive discussion of theoretical texts about the Diaspora phenomenon. This is followed by case studies of several larger Diasporas, ranging from the Jewish, the Greek to the Chinese Diaspora. Several case studies, notably the Muslim Diaspora, the concept of a victim Diaspora, or alternative Diasporas highlight the limitations of the Diaspora concept.

The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists. The course includes a one-day field trip to the Lower Eastside in New York (visit of the Museum of Chinese in America, walking tour of the Lower Eastside to explore the history of a key American immigrant neighborhood).

J ST 235 (US;IL) (HIST 235, RL ST 235) The Church and the Jews (3) Examination of the relationship between Western church and the Jews from the First Century to Enlightenment.

This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews.

The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts.

Students will be evaluated on the basis of three quizzes and a final exam.

The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity). The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

J ST 261Y (GH;US;IL) (HIST 261Y) Ghetto: From Venice to Detroit (3) This course explores why certain groups have been segregated in cities around the world in the last 500 years.

This course examines the history of segregated and demarcated districts for certain groups of people within cities (and metropolitan regions) in the last five hundred years in different parts of the world. The course identifies factors that led to the establishment of segregated (and often demarcated) districts – and their eventual dissolution (or transformation). The course traces the social and political impact of exclusion within the segregated district, the possibilities of making contacts beyond the district, the function of innovation and cultural production emanating from these urban areas, and the conceptual trajectory of the Ghetto concept from Renaissance Venice to post-industrial Detroit.

Cities and states have allowed certain groups to settle within their confines for economic benefit but have imposed severe restrictions to safeguard the respective city’s and/or the state’s cultural, political, and “racial” integrity. The course will present several representative case studies of segregated and demarcated districts in European, North American, Asian and African cities, highlighting strikingly different trajectories and purposes behind the spatial segregation of people categorized as different and threatening but also as useful. Comparing the case studies will lead to a discussion about the transformation of the Ghetto concept between 1517 and the present.

Following a discussion of the Ghetto concept and an overview of urban history since 1500 we will study Jewish Ghettos in early and late Renaissance Italy and Central Europe. For comparison we will discuss the history of Dutch and Portuguese trade colonies in Japan around 1600. The second part of the course will focus on Jewish and other immigrant neighborhoods in late 19th century New York and Chicago. Before moving to the origins of the 20th century “Black Ghetto” (Chicago, Detroit) four related cases will be discussed: Chinatowns in the United States; residential segregation in colonial cities in South and East Asia, Nazi Ghettos in Poland and the Soviet Union; and townships in South Africa during the Apartheid period.

The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists.

The Pennsylvania State University
Women and Judaism will introduce students to the roles and views of women as seen in the Jewish tradition. Because Judaism is not monolithic, these views will vary even within time periods and even among rabbis. The goal of this course, therefore, is not for students to leave the class with one idea of what a Jewish woman is or one idea of what issues are at stake for women in Judaism. Rather, the goal is for students to understand the complex relationship women have to this religion. This course will also explore the views of Jewish women and the issues that concern them in contemporary society. Objectives include the following: students will begin to understand the stereotypes that influence how Western society views Jewish women, and as a result, how they have come to view themselves. They will be asked to examine the many important roles that Jewish women have played both in their religion and the society at large. They will be asked to examine how the Jewish tradition both helped and hindered women to play these roles. They will see how Jewish women contributed to the development of their own religion and to the larger culture in which they live. They will develop a deeper appreciation for the complexity of the relationship between women and religion. Topics include images of Jewish women in the Bible and the media, women and Jewish views of sexuality, Jewish ethics, Judaism and feminism, and women and Jewish theology. Students will be evaluated by examination, writing ability (several short papers or one larger paper), and group presentations.

**J ST (RL ST) 405 Jews and Food (3) (IL)**

This course examines Jewish laws, customs and attitudes with regard to food production, agricultural policy and eating from biblical to modern times. These tenets of the Jewish tradition presently underwrite modern movements concerned with land use and food sustainability, as well as ethical behaviors in food production. The goal of the course is to understand how Jewish tradition can inform and contribute to improvements in the modern food system. The starting point is the ancient world of the Israelites. Students will study agrarian interpretations of the Hebrew Bible as well as extra-biblical sources and archaeological data. The biblical attitudes toward food, eating, and agricultural practices are then traced into the post-biblical period and rabbinic periods. The course then jumps ahead to the present day, to shed light on a number of modern Jewish agricultural and food initiatives concerned with issues such as healthy land use, sustainability, and justice in food production and distribution. These movements proceed from various interpretations of Jewish law and custom, and illustrate how some modern Jewish attitudes toward food and eating are responsible for reimagining, and in some cases reinvigorating, biblical ideas and practices. At the conclusion of this course, students will be able to identify and understand the historical and theological significance of diet and eating practices of ancient Israelites and will understand the development of Jewish food laws and practices in the post-exilic and early rabbinic eras. Students will be able to evaluate the extent to which ancient Jewish thought has influenced modern Jewish attitudes and actions regarding food and social responsibility, and will be able to envision the ways in which Jewish tradition, both ancient and modern, can contribute to current progress and future improvement in our systems of food production, distribution and consumption. While a wide variety of derivative topics will be discussed, this course is particularly appropriate for students pursuing programs of study dealing with the biblical world, the development of early Judaism, Jewish ethics, and/or modern Jewish thought, as well as those studying agriculture and food systems who are interested in how Jewish tradition addresses these universal concerns.

**J ST 409Y (IL) (HIST 409Y, RL ST 407Y) Antisemitisms (3)** Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present.

**J ST (HIST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)**

(BA) This course meets the Bachelor of Arts degree requirements.
This course analyzes major episodes in the history of anti-Semitism and tries to clarify the Motives and dynamics involved. It seeks to understand what these episodes have in common, and what is unique in each case. Is there a single universal, eternal anti-Semitism? Or are there rather anti-Semitisms*, each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates?

We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire’s essays, German philosophical texts from Kant to Marx, Wagner’s racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher.

The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category. This course is offered once every other year with 25 seats per offering.

J ST 410 (US;IL) (HIST 410, RL ST 410) Jews in the Medieval World (3) Trends in medieval Jewish society under Islam and Western Christendom.

J ST 410 Jews in the Medieval World (3) (US;IL)

The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students’ skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression.

Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam.

The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society) HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258).

The course will count for 3 credits toward:

a) the 22 credits required for the minor in Jewish Studies
b) the 33 credits required for the major in Jewish Studies
c) the 30 credits required for the major in Religious Studies
d) the 36 credits required for the History major

It will be offered once a year with an enrollment of approximately 60 students.

J ST 424H (HIST 424H, RL ST 424H) Monotheism and the Birth of the West (3) The birth of monotheism and its relation to social organization, the idea of individuality, and science.

J ST (HIST/RL ST) 424H (PHIL 434H) Monotheism and the Birth of the West (3) Learn about the formation of Western culture, while learning to analyze the texts and other evidence about its formation from a critical, rather than naive, viewpoint. The idea of monotheism probably arose very early and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why, then, did it take another seven centuries to become widespread--appearing in ancient Judah, Babylon, and Ionia almost simultaneously? To answer this question, the course focuses on several developments, through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to reinvent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in CAMS/J ST/RL ST 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the student experience in CAMS 400, CAMS 440, and CAMS 480; HIST 402; J ST 411; PHIL 437, PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, and Religious Studies and toward the minor in Jewish Studies and Religious Studies. This course will be offered once every other year with 35 seats per offering.

J ST 425W (CAMS 425W, RL ST 425W) Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12)
Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship.

J ST (CAMS/RL ST) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12)

The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

J ST 426 (IL) (HIST 426) Holocaust (3) This course is an in-depth study of the history of the Holocaust in Europe that puts special emphasis on primary sources.

J ST (HIST) 426 Holocaust (3) (IL)

(BA) This course meets the Bachelor of Arts degree requirements.

The Holocaust stands out as the most terrible and challenging phenomenon of the 20th Century. Societies and the scholarship struggled for decades to fully grasp how much the Holocaust has questioned widely shared assumptions about modernity and progress. This course pursues the overarching question how the Holocaust could have taken place. Who were the perpetrators, victims and bystanders? How much agency did they have? How was the Holocaust organized? The course will encourage students to critically engage with the Holocaust, and will consider a variety of different kinds of sources and means of representation, including oral testimony, film and fiction, as well as more conventional documentation.

After discussing some of the most important studies about the Holocaust and identifying the main historiographical debates, students will look at the origins and the evolution of the “Final Solution.” The class will touch on the function of the “Ghettos,” the role of the mobile killing units, the extermination camps, and Jewish resistance. The course will also deal with Jewish responses to the Holocaust, notably with attempts to enable Jews to emigrate to safe countries; with efforts to alert the public to the systematic killing after 1940; and the support especially of American Jews for Jewish survivors and DPs. Apart from discussing the historiography, students will work mostly with primary sources.

Apart from discussing the historiography, the sessions will concentrate on the interpretation of primary sources:
- documents created by the perpetrators, bystanders, and victims;
- files relating to postwar trials of perpetrators;
- photographs;
- representations of objects relating to the Holocaust;
- memoirs by survivors;
- interviews with survivors and bystanders.

J ST 427 (ENGL 427) Topics in Jewish American Literature (3 per semester/maximum of 9) An in-depth examination of important themes, writers, and/or historical developments in Jewish Literature of the United States.

J ST (ENGL) 427 Topics in Jewish American Literature (3)
This course will provide sustained examination of major themes, texts, and figures in the Jewish American literary tradition. The course will focus on depth rather than breadth in its analysis of the defining aspects of the literature and on what that literature reveals about Jewish American culture and identity. The United States has absorbed large numbers of Jewish immigrants from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions, and moreover Jews have settled and made homes in a wide variety of American communities. Close analysis of literature will therefore provide an opportunity to consider the constitution, origin, and development of Jewish America’s wider cultural, political, and social contexts. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film, and the methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies, English, and Comparative Literature. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English and Comparative Literature a valuable, sustained introduction to an important U.S. and world sub-culture and -literature.

J ST 433 Introduction to Jewish Music and Art (3) Introduction to the study of Jewish music and art from antiquity to the present.

J ST 433 Introduction to Jewish Music and Art (3)

The course will provide an introduction to the importance of art (including architecture) and music to Jewish civilization from the ancient world to the present. The course stresses the way in which Jews have adapted techniques from the peoples around them, and how their art and music have developed under circumstances ranging from almost complete toleration to extreme persecution. Important periods covered including synagogue art and architecture from late antiquity to the Middle Ages; illuminated manuscripts, decorative arts, and songs from the Middle Ages; the emergence of important professional Jewish artists and musicians in the nineteenth century in Europe; Jewish artists in the forefront of political protest art in the early twentieth century; art and music during the Holocaust and to memorialize it; the flourishing of Jewish art and music in both traditional and new forms since World War II. The historical, social, and intellectual contexts of the development of music and art, rather than technical aspects of musical and artistic creation and perception, will be emphasized. In particular, the role of music and art in preserving Jewish pride and identity under two threatening circumstances – periods of persecution where survival was threatened and periods of toleration where conversion and conformity become alluring – will be considered.
In addition to looking at and listening to works of art and music, written texts describing the historical and social contexts and providing information about the works and their creators will be discussed.

J ST (COMM) 434 Movies, Media, and the Jewish American Experience (3)

The course examines film and other popular media, including theater, radio, and television, as important sources for understanding the Jewish experience and its impact on and relationship with American culture more generally since the late 19th century. Topics to be considered include US film and popular media as representations of Jewish history, culture, and experience; the role of Jews as prominent directors, producers, actors, and writers in their social-historical context; and the history and function of the representational modes and techniques used in these texts. A major emphasis of the course will be on analyzing film and other media texts as lenses to reflect, refract, and focus on Jewish American identity. By way of analyzing the interrelationships between filmic and other media texts and Jewish American experience, the course will attend to a number of key themes in Jewish cultural history, including Jewish life in late 19th-early 20th century Europe; immigrant life in turn of the century America and questions such as assimilation, preservation of tradition, family life, social mobility, and male/female relations; Jews in show business, organized crime, and sports; American Jews and the Holocaust; American Jews and Israel; Jews in the modern age; generational and denominational differences among Jews; and Jews and anti-Semitism.

General Education: None

The Pennsylvania State University

Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust. The first question motivating this class is thus what we can learn from examining women’s experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events?

Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

J ST (PL SC) 450H Genocide and Tyranny (3) This course focuses on the conceptualization and socio-political determinants of genocide and tyrannical regimes, with an emphasis on the Holocaust.

This course focuses on the etiology of mass killing, with an emphasis on the socio-political determinants and consequences of massacres, ethnic cleansings, and other crimes against humanity. It is designed to help students understand genocide as a phenomenon of political violence and to explore the epistemological issues associated with the study of genocide. Students will learn to use the study of specific events (such as the Holocaust) to understand broader concepts and phenomena (in this case: genocide) as well as to develop analytical and communication skills through active discussion in class sessions.

The course is divided roughly into three parts: The objective of the introductory part of the course is to situate genocide as an act of political violence, and to create a working definition of the concept for the topics covered in subsequent weeks. In the second part various aspects of the Holocaust will be examined. Starting with a history of the Holocaust, we will cover philosophical, political, and military explanations for it. Some of the questions we will discuss in this part of the course include: (a) How does the Holocaust fit into the typologies of genocide? (b) Can extreme genocide that can be studied in a comparative context with the Holocaust? Does the “uniqueness” of the Holocaust influence the manner in which we study it? (c) Were the determinants of the Holocaust rooted in larger social and political factors? (d) Which contemporary political factors were associated with the Holocaust? During the last part of the course, we will discuss three other instances of genocidal violence: Armenia, Yugoslavia, and Rwanda. These events will be discussed using the same theoretical and analytical approaches as in the previous weeks. The concluding sessions will also focus on the questions of why it is important to study genocide, what lessons can be learned from understanding such events, and whether studying genocide is relevant to the current international system. Course topics will be discussed in light of assigned readings and films.

This course fulfills the distribution requirement for international relations, as well as the advanced and related course requirements for Political Science majors. The course fulfills the supporting course requirement for International Politics and Jewish Studies majors.
J ST (ANTH/SOC) 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL)

This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State’s Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields to promote intercultural understanding, and meet US and IL requirements. Materials will be interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research. The course will be offered approximately once a year. Enrollment will be limited to 30 students in order to promote active, engaged learning. Evaluations will be based on short papers and outlines that will prepare students for their final term papers.

J ST 468 (PHIL 468) Jewish Philosophy (3) Explores major figures and trends in Jewish philosophy and their influences on other philosophical traditions.

J ST (PHIL) 468 Modern Jewish Philosophy (3)

The primary objective of this course is to encourage students to have a reflective stance on Jewish thought. Students will learn what comprises Jewish thought and how it is distinguished from theology. They will learn what role religion plays in philosophical thought and what is at stake for a philosophy that emerges from a particular religion. This course will give students perspective on how Judaism links to other philosophical movements, for example, the enlightenment of the modern period. It will enable to think about Judaism from a theoretical perspective, adding a new dimension to what they might study from historical, sociological, or literary viewpoints. Some questions we will consider include: In what ways does it converge/diverge, with the philosophical strains that influence it? In what ways have particular events in history shaped Judaic thinking? Does Judaism, or Judaic thinking, have an essence? If so, what is it? What does Judaism mean for the Jews, and what does it mean for others? And finally, what role does mysticism have in the play between religion and philosophy? Students will be evaluated by written work (short papers and a longer seminar paper) and a class presentation.

**J ST 473 (IL) (HIST 473) The Contemporary Middle East (3)**
Political, economic, and social changes in Turkey, Iran, Israel, and the Arab countries in the twentieth century; Arab-Israeli conflict.

**J ST (HIST) 473 The Contemporary Middle East (3)**

(IA)

This course meets the Bachelor of Arts degree requirements.

This course surveys and analyzes political, economic, and social changes in Turkey, Iran, Israel, and the Arab countries in the twentieth century, with a fair amount of attention paid to the Arab-Israeli conflict. Some time is devoted to the history of the Middle East, including pre-colonial societies, European colonialism, the rise of the nation state, decolonization, the rise of oil economy, and postcolonial legacies. Attention will be also be paid to Mandatory Palestine, the Jewish settlement of Palestine, and the emergence of the Arab-Israel and Israeli-Palestine conflicts.

**J ST 478 (RL ST 478) Ethics After the Holocaust (3)**
Explores the philosophical effects of the Holocaust for thinking about the primary question: Is ethics possible?

This course is an examination of ethical theories before the Holocaust and how those theories have failed, philosophically and empirically. Course topics will include the history of ethical theory, the nature and problem of evil, goodness and suffering, witnessing and testimony, and the promise of an ethics. This course provides students with philosophical approaches to the issues that emerge out of the events of the Holocaust through a philosophical approach that does not merely expose them to what happened, but asks them to think about the implications of what happened: most specifically, how do we understand ethical life, if it cannot stop or confront evil? This course provides students with the philosophical approaches to the issues that emerge out of the events of the Holocaust. It will encourage them to think critically, write effectively and express their thoughts logically. Student evaluation will be based on weekly reaction papers, group presentations, and a final seminar paper. This course covers material in the history of philosophy, contemporary philosophy, and writings pertaining to the Holocaust in various forms (historical, literary documentary, and so forth). It provides links to other major areas in the history of philosophy, postmodernism, ethics, philosophy of religion, and Jewish history. It will be offered every other year.

### Kinesiology (KINES)

**KINES 001** (GHA) Introduction to Outdoor Pursuits (1.5-3 per semester, maximum of 12) Introduction to selected outdoor pursuit activities, such as, but not limited to, rock climbing, cross country skiing, backpacking, hiking, orienteering.

**KINES 001 Introduction to Outdoor Pursuits (1.5)** (GHA)

Introduction to Outdoor Pursuits is a course that is designed to 'introduce' the student to selected outdoor pursuit activities. The selected activities will depend on the time of the year and availability of resources. The activities could include (but are not limited) to rock climbing, indoor wall climbing, trail day hiking, mountain biking, backpacking, orienteering, kayaking, canoeing, and cross-country skiing. All selected activities will follow the same basic format of skill development and training procedures, history of the activity, available written resources and professional organizations related to the activity, logistical equipment preparation, safety management/risk assessment, and future opportunities to participate in the activity. It is the sole purpose of this course to allow the student to explore different outdoor pursuit activities and then to make a more informed decision as to which activities they might choose to further develop their skill base and competency necessary to partake in the activity at a more advanced level on a lifelong basis. Students will be evaluated by a combination of evaluation techniques. Some examples could include written exams, skill testing and activity management, short writing assignments of topics related to activity, journal keeping and subjective evaluation of performance. This course fulfills the BPA General Education requirement. After completion of the course, students are encouraged to engage in PSOC (Penn State Outing Club) programs, the advanced skills track in the Department of Kinesiology, and other appropriate courses to help with the continued development of 'life skills'.

**KINES 004** (GHA) Principles of Fly Tying and Fly Fishing for Trout (1.5) A course designed to enhance student's knowledge, skill, and performance in fly tying and the sport of fly fishing for trout.

**KINES 004 Principles of Fly Tying and Fly Fishing for Trout (1.5)** (GHA)

Kinesiology 004 is a unique course designed to give PSU students of all experience levels an introduction to the lifetime sport of fly fishing. The purpose of the course is to present the students with the many aspects of fly tying and fishing for trout so that they can enjoy fishing success for the remainder of their active adult lives.

In the course the student will acquire the knowledge, skills, and tactics that they will use to problem solve in the constantly changing natural environment. Instruction/participation will include, but is not limited to, the following topics: conditioning, basic fly tying, tying local patterns, conservation techniques, equipment use/care/selection, fly casting,
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 006 (GHA) Cycling (1.5) A course designed to give students an understanding of and the ability to establish an exercise program involving riding.

Kinesiology 006 Cycling (1.5) (GHA)

Kinesiology 006 introduces students to the performance of cycling as a lifelong activity that helps maintain and enhance physical fitness and overall wellness. This course provides the information that the student needs to understand, organize, plan and implement a physical fitness program that features cycling as a primary activity. The centerpiece of this course is a progression of individually-paced rides of varying lengths that are conducted over various terrains. Past activities have included individual time trials, 5 through 25 mile road and trail rides, interval rides, hill rides, and rides to various locations of interest including, Beaver Stadium, the deer research pens, Sunset Park, and various other landmarks around campus and in the community. These activities are complemented by a series of lectures on such topics as the physiology of exercise, cycling safety; goal-setting for personal health; principles and concepts of physical fitness; training methods to address different cycling goals; and nutrition and weight control. Students also participate in team-based projects such as group-designed scavenger hunts and “landmark rides.” As a final project, each student is asked to define a measurable fitness goal and design a fitness cycling program to realize that goal. As part of this assignment, students assemble data to indicate that they have achieved their goal, and then identify and analyze the factors that contributed to their success. Students also have the opportunity to monitor their performance throughout the course using a variety of personal assessment inventories and instruments, such as logs and heart rate monitors. When a student completes Kinesiology 006, he or she will be able to identify the components of an effective physical fitness program and explain how cycling contributes to the success of this program; develop realistic fitness goals and design a cycling program to meet these goals; perform a variety of fitness cycling techniques; and understand how cycling promotes psychological well-being. Various evaluation techniques will be used to assess individual progress in Kinesiology 006. These techniques will include (but are not limited to) conventional objective testing, performance on an individual time trial cycling test, personal assessment inventories and assignments, and journaling assignments. There are no special facilities for this course. The Department plans to offer two to four sections each fall and spring semesters with an enrollment of 30 in each section.

KINES 010 (GHA) Indoor Rock Climbing (1.5) A course designed to provide students with the basic skills, safety, and knowledge of rock climbing.

KINES 010 Indoor Rock Climbing (1.5) (GHA)

Kinesiology 010 is a course designed to give students a comprehensive introduction to the skills, safety, terminology and equipment used in the sport and recreational activity of rock climbing. This course also provides the knowledge base and experience the student needs to evaluate their continued safe participation in rock climbing. Students will be involved from the onset of the course practicing responsibility, cooperation, and collaborative skills. Group work is an essential component to the success of the student and the course as students work together in teams of climber and belayer.
Downhill skiing has grown as a recreational physical activity over the past century. The early days of skiing in the United States were typified by a variety of styles and techniques, many of which were brought to this country by European ski instructors. In 1961, the Professional Ski Instructors of America was formed to unify ski instruction across the country and to develop a successful standard for teaching people to ski. As the equipment and the snowmaking capabilities have changed so has PSIA changed and adapted the techniques to successful skiing. Downhill skiing can be performed at any level across all ages. If done properly, downhill skiing will promote comprehensive wellness while developing important movements with instruction on proper methods and training procedures. Important information on safety issues and equipment will be presented as a visual demonstration or as an individual assignment. Students have the opportunity to write journals to record goals, share what they have learned in the lessons, and evaluate their progress in the class. Other activities may include internet evaluations of rock climbing web sites and interactive sites. Additional evaluation tools may include objective testing, skill proficiency, and safety knowledge. As a final activity, students can participate in a fun team competition that focuses on group work, problem solving, decision making, and cooperation that challenges the skills practiced in this course. The class will be taught every fall and spring semesters with a suggested enrollment of up to 35 students. An indoor climbing facility or wall will be used.

KINES 013 (GHA) First Aid, Personal Safety, and CPR (1) A course designed to provide students with the opportunity for Red Cross certification in Community First Aid, Safety, and CPR.

The Pennsylvania State University
KINES 013 First Aid, Personal Safety, and CPR (1) (GHA)

Kinesiology 013 provides students with the opportunity for American Red Cross certification in Community First Aid and Safety and Adult, Infant and Child CPR. Students will also be introduced to the AED device. This course can only be taught by an individual who holds a current participation and instructor card in Community First Aid and Safety and Adult, Infant and Child CPR. The main goal of this first aid and CPR course is to provide students with the knowledge and skills necessary to assess an emergency situation, to call for help, to administer mouth to mouth resuscitation or CPR, perform correct choking procedures for conscious and unconscious victims, and to minimize the consequences of injury or sudden illness until advanced emergency medical help arrives. Students will learn to recognize emergencies and make appropriate decisions regarding care. This course teaches the necessary steps in the emergency medical services (EMS) system chain. Students will also receive information on the prevention of injury and illness, with a focus on personal safety. Using healthy lifestyle awareness questionnaires, participants will assess their environment and personal habits to help reduce their risk of injury and illness and risk to others. In accordance by the American Red Cross, this course will provide visual and auditory learning with the use of a required Red Cross manual and videotape. Manikins will be provided for practical skill use. This course also requires the students to work with a partner to practice and demonstrate the skills to each other and then to the instructor for evaluation. Active learning reinforces the information learned from the reading materials and videotape. Peer and instructor feedback are provided before actual demonstration for evaluation of the skills. An objective test for each segment of the course has been prepared by the American Red Cross and a score of 80% or higher is required for Red Cross certification. The tests will be administered by the instructor after the demonstration and passing of the required skills. Frequency of offering: Every fall and spring semesters with an enrollment of up to 12 students per section.

KINES 017 (GHA) Ballroom Dance (1.5) A course designed to provide students with basic dance skills and an understanding and appreciation of ballroom dance.

KINES 017 Ballroom Dance (1.5) (GHA)

Kinesiology 017 introduces students to ballroom dance as a social/recreational or competitive activity, with the goal of leading to an active lifestyle. This course provides the basic skills and information necessary to develop and continue one's interest in ballroom dancing. Dance history and etiquette, cooperation with a partner, and learning the fundamentals of leading/following techniques are stressed from the beginning of the semester. As different dances are introduced (FoxTrot, Waltz, Jitterbug/Swing, Polka, Cha-Cha-Cha, Tango, Viennese Waltz, and/or others), additional figures are added throughout the semester. The accompanying practice affords each student with the opportunity to build confidence by combining skills in a variety of ways, listening to music, and preparing to "perform" during evaluation sessions. Both assessment and evaluation for each student occur throughout the semester. Formal evaluation occurs twice during the semester, at the mid-semester and at the end of the semester. Students dance with a partner of his/her own choice in a group of 3-5 couples. The remainder of the class has the option of practicing or observing. Evaluation may also include a written test (on handouts, class notes, etc.), written critique of a dance concert on campus (e.g. Eisenhower Auditorium concerts), or a paper on the competitive aspects of ballroom dancing, DanceSport. Outside opportunities for dancing are encouraged: Penn State Ballroom Dance Club, Swing Club, etc. Attendance at each class is essential; this is an activity which is dependent upon learning and practicing with a partner. Upon completion on Kinesiology 017, the student will be able to identify music for each of the dances taught, perform basic figures for each dance in combination, know proper leading and following techniques, and work in concert with one or more partners. Frequency of offering: Ten to twelve sections every fall and spring semesters, with an enrollment of 40 students per section.

Bachelor of Arts: None
Effective: Summer 2002

**KINES 024 (GHA) Introduction to Lifetime Sports (1.5)** Students participate in lifetime sports such as archery, bowling, golf, and at least one racquet and/or winter sport.

**KINES 024 Introduction to Lifetime Sports (1.5) (GHA)**

Kinesiology 024 is a course divided into three or four units, with each unit designed to give students the opportunity to learn sports that have potential for lifetime participation. These units include (but are not limited) to racquet sports, winter sports, archery, bowling, and golf. Other sports that have lifetime social and wellness values may be offered due to specific location considerations such as facility and faculty expertise.

The Kinesiology 024 format with three or four sports will give students an opportunity to gain a breadth of information and experience that will serve as a "gateway" to learning opportunities in more advanced classes that offer more depth and focus. These units may also stimulate participation in intramural clubs, and recreational play and encourage participation in lifetime activities.

Participating in lifetime sports will help students understand that regular activity has social, emotional, and physical benefits with potential for total well-being and a better quality of life.

General Education: GHA

Bachelor of Arts: None
Effective: Summer 2002

**KINES 025 (GHA) Introduction to Court Sports (1.5)** A course designed to introduce students to various court sports such as tennis, racquetball, handball, squash, and/or badminton.

**KINES 025 Introduction to Court Sports (1.5) (GHA)**

Kinesiology 025 is a course that has been designed to give the Penn State student an introduction to selected lifetime court sports such as but not limited to tennis, racquetball, squash, table tennis, badminton, handball, and platform tennis.

Kinesiology 025 is taught in a modular (two or three for a given semester) format with two to three court sports being chosen for the course content for the semester. Students will know which court sports have been selected by listings in the semester Directory of Classes. The fundamental skills, strategies, etiquette, and rules will be covered for each court sport selected. Successful completion of this court sports course serves as a "gateway" to advanced level courses in court sports, intramural and recreations play and provide the skills and knowledge necessary to participate in a lifetime activity.

In Kinesiology 025 information gathering is done in an applied environment and usually in the context of solving complex movement problems. Information is gathered, solutions formulated and performances delivered and analyzed as different practice and game techniques are employed, different strategies are suggested and as different movement approaches are tested.

The students in Kinesiology 025 will work collaboratively with fellow students and peer tutors in their efforts to master court skills which will serve as a gateway to lifetime participation in these activities. The holistic approach to teaching activity classes employed in Kinesiology classes requires that students understand and appreciate the cultural traditions and values which are embedded in these movement forms.

Students will be evaluated by a combination of (but not limited to) evaluation techniques. Examples of those techniques are written examinations, skills testing, tournament performance, and subjective evaluation of skill level and game performance.

KINES 026 (GHA) Archery/Indoor & Outdoor (1.5) Course designed to introduce students to Archery/Bowhunting.

KINES 026 Archery/Indoor & Outdoor (1.5) (GHA)

KINES 026 is designed to give the Penn State student an introduction to archery from a historical perspective which includes, but is not limited to, cultural use of the bow and arrow for food, protection, recreation and competition. Emphasis is given to the unique role of the bow in Pennsylvania State History and to its role in Pennsylvania Rural Culture. The use of the longbow, the recurve bow, the compound bow and the crossbow will be covered. In addition, Archery can be an activity that provides a positive outlet for those who are physically challenged. The fundamental skills, strategies, rules and regulations will be covered for Archery. Students are encouraged to develop specific outdoor skills which will enhance their success with a bow. These skills include but are not limited to identifying weather patterns which affect shooting, shooting from different heights and angles, selection of the proper clothing, understanding and respecting the wildlife and game animals native to geographical areas. Emphasis is placed upon ethical harvest techniques consistent with current wildlife biology and respective game commission and wildlife managers. Successful completion of the course will provide a foundation for participation in intramural activities, recreational coeducational activities, and will provide a gateway to lifelong movement. While KINES 026 will focus on the skills, strategies and rules of the sport, the underlying sub-focus of the course is the development of persistence and discipline necessary for success and the resulting self-enhancement that accompanies personal success. The commitment to Archery requires students to develop a focus which is achieved only through rigorous attention to fine motor movement. The improvement of individual skills in Archery is important but the process required for target success can be a foundation for a lifelong recreational opportunity. KINES 026 will focus on the skills strategies and rules of archery. Students will be engaged in a collaborative atmosphere. As they seek to solve complex shooting problems they will be required to cooperate to achieve various team goals. Students are evaluated and graded by a combination of techniques which may include but are not limited to tournament performance, written reports, skill acquisition, logged activities and subjective evaluation of team-building ethics. Dress should be appropriate for the conditions (indoor or outdoor). Equipment for this course will be provided but students will be encouraged to purchase their own personal equipment as “personalized bows” greatly enhance a person’s on-target efficiency. Frequency of enrollment: Two to four sections every fall and spring semesters with a maximum of 20 students per section. Facilities: There is an existing range in White Building, however the activity can be taught outdoors.

KINES 027 (GHA) Badminton 1 (1.5) The course promotes health, fitness, and enjoyment of the game of badminton.

KINES 027 Badminton 1 (1.5) (GHA)

Kinesiology 027 is a course designed to give the student a comprehensive involvement in the game of badminton. The basic fundamentals, rules, and strategies will be taught in a drill/modified game format until the student has developed skills and understanding sufficient to compete successfully. It is through the competition that the socialization, fitness, and enjoyment of the game will be enhanced. Hopefully, the desire to continue badminton as a lifelong activity will result. Successful completion of Badminton 1 will allow the student to choose an advanced level of this course if he/she desires.

Students can be evaluated by a combination of written examinations/quizzes, skills testing, tournament performance, and subjective evaluation of skill development and game performance.

KINES 029 (GHA) Golf I (1-1.5) A course designed to give students an understanding of and a proficiency in golf skills, rules, and etiquette.

KINES 029 Golf I (1.0-1.5) (GHA)

Kinesiology 029 is a course designed to give students the understanding, knowledge and skills to begin an exploration of the game of golf. While the courses main area of emphasis is on golf's short game (putting, chipping and pitching) students will be educated about full swing fundamentals and proficiencies will be developed in short and mid-irons.

Perhaps the most unique feature of Golf I is the weekly on course practice. Each week during this course, students will get a chance to apply the skills they have learned during the week on an actual golf course. This practice time is in a situation where only the students from the class are on the course. This situation creates an ideal practice area for the student golfer to become acquainted situational application of golf skills.

Students who enroll in Kinesiology 029 will find, in the game of golf, a unique form of self-expression. The daily "movement problems" that students will encounter offers a new type of information gathering process accompanied by unusual opportunities to synthesis that information into a "golfing personality". The development of motor skills will complement students' oral and written capabilities.

The active lifestyle requires that the participant be able to gather, synthesis and analyze information. Students in Kinesiology 029 will be asked to involve themselves in Web and CD-ROM based assignments to gather, synthesis and analyze valuable information about golf's rules and etiquette, equipment, and travel planning.

Students will be evaluated by a combination of (but not limited to) evaluation techniques. Examples of those techniques are written examinations, skills testing, written papers and subjective evaluation of skill level and game performance.

The student, who successfully completes Kinesiology 029-Golf I will possess a command of basic golf rules, golf terminology and golf etiquette. These basic fundamentals will ease the transition from golf student to golfer. Students will find that, after completion of Golf I the work done in this course will prepare them for actual participation in the game of golf.

KINES 029A (GHA) Golf II (1.5) A course designed to provide a further understanding of and a more advanced proficiency in golf skills, rules and etiquette.

KINES 029A Golf II (1.5) (GHA)

KINES 029A is a course designed to give students advanced understanding, knowledge and skills and to continue the development of their game of golf. While the courses main area of emphasis is on golf's short game (putting, chipping and pitching) the student will be educated about full swing fundamentals and proficiencies will be developed in midirons, long irons, fairway metals, and driver.

Perhaps the most unique feature of Golf II is the on course practice. Each week during this course, students will get a chance to apply the skills they have learned during the week on an actual golf course. This practice time is in a situation where the student will learn how to integrate themselves into normal golf play. This creates an ideal practice area for the student golfer to become acquainted with situational application of golf skills and be a part of the golf atmosphere.

Students will be evaluated by a combination of (but not limited to) evaluation techniques. Examples of those techniques are written examinations, skills testing, and subjective evaluation of skill level and game performance.

The student, who successfully completes Kinesiology 029A-Golf II will be proficient in golf rules, golf terminology and golf etiquette. These advanced fundamentals will ease the transition from golf student to golfer. Students will find that, after completion of Golf II, the work done in this course prepares them for actual participation in the game of golf.

The use of the Penn State golf course is required for this course. Three to five sections will be offered every fall semester with an enrollment of up to 30 students per section.
KINES 041 (GHA) Handball (1.5) A course designed to introduce students to a basic instructional course in the fundamentals of 4-wall handball.

KINES 041 Introduction to Handball (1.5) (GHA)

Kinesiology 041 is a course that has been designed to give students an introduction into the dynamic game of handball. It is a challenging game requiring the participant to be able to hit a ball with either hand during a rally in a 20'x 40' four-walled court. The technique of hitting a ball is similar to the motions used in throwing a baseball. Since both hands are used to execute shots, the development of the non-dominant hand (“off” hand) is a unique challenge. The course is structured to develop the “off” hand through a logical progression of drills and game settings, which help the participant to mirror image the dominant hand’s motion.

Handball is also a sport, which develops an individual’s eye/hand coordination to the highest possible level. This eye/hand coordination transfers exceptionally well for participants who pursue activities such as racquetball, tennis, squash, badminton, hitting a softball, and fielding a softball.

The tremendous amount of footwork and body movement required to execute a shot in handball develops a fitness level similar to a cross-country skiing workout. Handball is a great lifetime activity.

The fundamental skills, strategies, and rules of handball, along with game play, will be integrated throughout the course. The participant will also apply the rules of the game by being taught how to referee a match between fellow students.

Students will be evaluated by a combination of (but not limited to) evaluation techniques. Examples of those techniques are written examination, skills testing, tournament performance, and subjective evaluation of skill level and game performance.

KINES 042 (GHA) Ice Skating--Beginning (1.5) A course of instruction focused on the physical development and knowledge of basic ice skating skills.

KINES 042 Ice Skating--Beginning (1.5) (GHA)

A course of instruction focused on the development of basic ice skating skills, and the introduction of a new physical fitness activity into the lifestyle of the Penn State student. The course objectives are to develop balance and control while performing the basic skills necessary for the execution of many ice skating maneuvers. Basic ice skating skills are relevant to skaters who have goals of recreational skating, learning to play hockey and/or figure skate. These skills include: forward and backward stroking, forward and backward stops, negotiating circles and curves through the use of forward and backward crossovers, developing edge control through the development of consecutive sustained edges, and changing direction from forward to backward and backward to forward through the use of basic two-and one-foot turns. Skills are acquired through the use of exercises and patterns designed to strengthen the fundamentals of skating and to further develop balance, edge control, and confidence while participating in the activity. These exercises are incorporated into each class period, along with a thorough review of previously learned skills and the introduction of new skills. Every effort is made by the instructor to break each skill down into logical steps so that the student will understand the process of each skill. The instructors are encouraged to allow for individual differences in the pacing of skill development. As the course progresses, the instructor has the option of using partner and small group exercises to balance the individual efforts through peer support and involvement. This course will provide the necessary skill foundation for participation in upper-level courses including advanced/beginner, intermediate and advanced skating, as well as hockey, figure and/or recreational skating activities. In addition to the core component of physical skill development, the student will acquire an enlightened appreciation and understanding of the skill and art of ice sports.

The Pennsylvania State University
KINES 042A (GHA) Ice Skating--Advanced Beginning (1.5) A course of instruction focused on the physical development and knowledge of basic ice skating skills.

KINES 042A Ice Skating--Advanced Beginning (1.5) (GHA)

A course of instruction focused on the development of beginning and advanced beginning ice skating skills, and the introduction of a new physical fitness activity into the lifestyle of the Penn State student. The course objectives are to develop balance and control while performing the basic skills necessary for the execution of many ice skating maneuvers. Basic and advanced beginning ice skating skills are relevant to skaters who have goals of recreational skating, learning to play hockey and/or figure skate. These skills include: forward and backward stroking, forward and backward stops, negotiating circles and curves through the use of forward and backward crossovers, developing edge control through the development of consecutive sustained edges and power pull change of edge exercises, and changing direction from forward to backward and backward to forward through the use of one-foot turns. Skills are acquired through the development of exercises and patterns designed to strengthen the fundamentals of skating and to further develop balance, edge control, and confidence while participating in the activity. These exercises are incorporated into each class period, along with a thorough review of previously learned skills and the introduction of new skills. Every effort is made by the instructor to break each skill down into logical steps so that the student will understand the process of each skill. The instructors are encouraged to allow for individual differences in the pacing of skill development. As the course progresses, the instructor has the option of using partner and small group exercises to balance the individual efforts through peer support and involvement. This course will provide the necessary skill foundation for participation in upper-level courses including intermediate and advanced skating, as well as hockey, figure and/or recreational skating activities. In addition to the core component of physical skill development, the student will acquire an enlightened appreciation and understanding of the skill and art of ice sports.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: KINES 042 or some experience with the activity

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 042B (GHA) Ice Skating--Intermediate/Advanced (1.5) A course of instruction in basic figure skating: field moves, freestyle, choreography, pairs skating, and ice dance.

KINES 042B Ice Skating--Intermediate/Advanced (1.5) (GHA)

A course of instruction focused on the refinement of basic, intermediate, and advanced ice skating skills. The course objectives are to develop balance, control, and confidence while performing skills relevant to the disciplines of figure skating: freestyle, field moves, ice dance and/or pairs. These skills include: field moves that follow a straight line, diagonal, circular, or continuous pattern. Such exercises and patterns are designed to develop and strengthen the qualities that define figure skating: power, edge control, flow, quickness, and extension. Emphasis is placed on developing both sides (bilateral) of the skater. Students are introduced to basic, intermediate and, when appropriate, advanced freestyle maneuvers including jumps, spins, edge moves, footwork sequences, and connecting steps. Basic ice dance positions and patterns are introduced, and students with a particular interest in this area are given the opportunity to further develop these skills. Introductory pairs skating positions are developed through stroking and crossover patterns. Students with a particular interest in this area are taught pairs edge moves, spins, and basic throw jumps. Students are introduced to the fundamental principles of choreography including pattern, form, development, musical interpretation, style, and expression through the composition of a program incorporating skills developed and refined throughout the course. The student has the option of solo, pair, or group work to balance individual efforts through peer support and involvement. The instructors are encouraged to allow for individual differences in the pace and development of skills. This course will provide the necessary skill foundation for participation in organized figure skating programs (USFSA, ISI) and club programs promoting a healthful physical fitness activity for the Penn State student. In addition to the core component of physical skill development, the student will acquire an enlightened appreciation and understanding of the skill and art of figure skating and ice sports.

Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: KINES 042 and/or KINES 042A or equivalent skating experience

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 043 (GHA) Power Skating (1.5) A course of instruction in basic power skating specifically designed for ice hockey, applicable to other ice sports.

KINES 043 Power Skating (1.5) (GHA)

A course of instruction focused on the development and refinement of basic, intermediate, and advanced ice skating skills. Principles of biomechanics and force application are stressed to gain power, strength, flexibility, quickness, and agility. Daily power stroking sessions are conducted to develop physical stamina, endurance, and mental fitness. The course objectives are to improve balance, edge control, and coordination necessary for the successful execution of many movements.
ice skating maneuvers. These skills include: forward and backward power strides, forward and backward stops, forward and backward starts, negotiating circles and curves through the use of forward and backward crossovers, developing edge control through the development of consecutive sustained edges and power pull change of edge exercises, changing direction with front to back and back to front turns, stick handling and puck control. Skills are acquired through the development of drills and patterns designed to strengthen the fundamentals of skating and to further develop balance, edge control, and confidence while participating in this activity. These exercises are incorporated into each class period, along with a thorough review of previously learned skills and the introduction of new skills and drills. Every effort is made by the instructor to break each skill down into logical steps so that the student will understand the process of each skill. The instructors are encouraged to allow for individual differences in the pacing of skill development. This course will provide the necessary skill foundation for participation in intramural, club, and adult hockey leagues, as well as recreational skating activities. In addition to the core component of physical skill development, the student will acquire an enlightened appreciation and understanding of the skill of ice sports.

General Education: GHA

KINES 045 (GHA) NAUI Basic Scuba (1.5) A course to introduce students to the fundamentals of Scuba diving.

KINES 045 NAUI Basic Scuba (1.5)

Kinesiology 045 introduces students to the fundamental academic concepts and practical skills of scuba diving as described by NAUI (National Association of Underwater Instructors) standards. This course addresses academic elements and applied sciences such as: the gas laws, Archimedes' principle, physics (light, sound, heat, aquatic pressure relationships), physiology (arterial gas embolism, miscellaneous barotrauma, decompression illness, hypo and hyperthermia), dive planning, equipment configuration and function, and environmental considerations (salt vs. fresh water, dangerous plants and animals, water temperature and visibility, and altitude). In addition this course introduces practical confined water skills including: basic skin diving skills, fundamental Scuba skills (regulator clearing and retrieval, emergency out-of-air ascents, buoyancy control, rescue techniques, ditch and don of gear, underwater communication, and proper partnership), and equipment preparation and assembly.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002
Prerequisite: meet NAUI standards and/or by permission of the instructor

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 046 (GHA) Squash I (1-1.5) A course designed to give students an appreciation of and proficiency in the skills, rules, and regulations of squash.

KINES 046 Squash I (1-1.5)

Kinesiology 046 is a course designed to provide students with the motor skills and cognitive understanding necessary to successfully compete in the game of squash. Initial emphasis will center around three areas: 1) developing racquet skills and mechanics; 2) acquiring an understanding of the rules and regulations of the game; and, 3) developing appropriate
movement skills. Subsequent effort will focus on applying the above to live-game situations. Here, students will learn to recognize, comprehend, and develop on-court strategies, and will learn to employ these tactics in game play.

Students will emerge from this course with beginning-level squash skills and a solid foundation in racquet fundamentals. This will serve as a "connector" to, not only advanced levels of squash, but other forms of racquet play as well. In turn, this will facilitate the discovery and appreciation of the significant lifetime benefits offered by all racquet sports.

Students will be evaluated by (but not limited to) a combination of techniques: written examinations, skills testing, performance standards, and subjective evaluation of skill level.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 047 (GHA) Beginning Swimming (1.5) A course designed to give students skills and knowledge necessary to be safe in shallow and deep water.

KINES 047 Beginning Swimming (1.5) (GHA)
Kinesiology 047 introduces students who are non-swimmers (or those who are fearful of water) to the performance of swimming skills that can be used as lifelong activities for maintenance of physical health and psychological well-being. Students will learn and practice a progression of swimming-related skills designed to acclimate the non-swimmer to the aquatic environment. An introduction to personal safety and rescue skills provides the students with knowledge necessary for safe behavior in an aquatic setting.

The course provides basic knowledge of physics and hydrodynamic principles that will help the students become more effective and efficient swimmers. Exercises and activities that relate to being in and moving through the water will enable the student to understand and demonstrate various hydrodynamic principles.

Group games and activities designed to improve fitness components of endurance, strength, and flexibility are a key component of the beginning swimmers class. Students will often work in groups to improve their swimming skills.

When a student completes this course, he or she should possess skills necessary to be safe in deep water. The student will have developed enough skill to enter deep water and swim at least the length of the pool unassisted. He/she will be able to understand and demonstrate hydrodynamic principles as they relate to movement in the water.

Various evaluation techniques will be used to assess individual progress in Kinesiology 047. These techniques will include (but are not limited to) objective tests, skills performance tests, and personal assessment inventories and assignments. Students will also keep a written journal of their activities.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2002

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 047A (GHA) Advanced Beginner Swimming (1.5) A course designed to give students skills and knowledge necessary to be safe in shallow and deep water.

KINES 047A Advanced Beginning Swimming (1.5) (GHA)
Kinesiology 047A introduces students who have limited swimming skills and knowledge to the performance of more refined strokes that can be used as lifelong activities for maintenance of physical health and psychological well-being. Students will be introduced to new strokes and techniques including the front crawl, back crawl, elementary backstroke, sidestroke, breaststroke, and butterfly.

Proper breathing techniques will be stressed.

An introduction to personal safety and rescue skills provides the students with knowledge necessary for safe behavior in an aquatic setting. Students will have an opportunity to learn some basic self-help skills. Reaching and throwing assists from dry land will be included.

The course provides basic knowledge of physics and hydrodynamic principles that will help the students become more effective and efficient swimmers. Exercises and activities that relate to being in and moving through the water will enable the student to understand and demonstrate various hydrodynamic principles.

Group games and activities designed to improve fitness components of endurance, strength, and flexibility are a key component of the advanced beginning swimming class. Students will often work in groups to improve their swimming skills. Group games such as water polo and water basketball will help students develop endurance and strength.

The Pennsylvania State University
When a student completes this course, he or she should possess skills necessary to swim continuously for at least four lengths of the pool without stopping. The student will also be able to understand and demonstrate hydrodynamic principles as they relate to movement in the water. Proper use of the diving board will also be stressed.

Various evaluation techniques will be used to assess individual progress in Kinesiology 047A. These techniques will include (but are not limited to) objective tests, skills performance tests, and personal assessment inventories and assignments. Students will also keep a written journal of their activities.

General Education: GHA
Diversity: None
Effective: Summer 2002
Prerequisite: students should be comfortable in shallow and deep water and be moderately proficient in front crawl, elementary backstroke, sidestroke, and breaststroke

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 047B (GHA) Intermediate Swimming (1.5) A course designed to teach students a variety of swimming strokes and increase their knowledge of fitness using aquatic activities.

KINES 047B Intermediate Swimming (1.5) (GHA)

Kinesiology 047B introduces students who have attained moderate swimming skills and knowledge to advanced swimming strokes and related swimming activities that can be used throughout one's lifetime for maintenance of physical health and psychological well-being. Students will be introduced to new strokes and techniques including the front crawl, back crawl, elementary backstroke, sidestroke, breaststroke, and butterfly. Students will also be taught the trudgen, trudgen crawl, inverted breaststroke, and overarm sidestroke. Body alignment, coordination, and proper breathing techniques will be stressed. Students will be required to swim longer distances in this class than in Kinesiology 047 or Kinesiology 047A. The course provides the information that the student needs to understand, organize, plan, and implement a physical fitness program that features swimming as the primary activity.

Personal safety and rescue skills as well as swimming rescues using equipment will be part of this class. Students will have an opportunity to learn how to help themselves and others in an aquatic environment. Group games and activities designed to improve fitness components of endurance, strength, and flexibility are a key component of the intermediate swimming class. Students will often work in groups to improve their swimming skills. Group games such as water polo and water basketball will help students develop endurance and strength.

When a student completes Kinesiology 047B, he or she should possess skills necessary to swim continuously for at least five hundred yards (twenty lengths of the pool) without stopping. Proper use of the diving board will also be stressed. The students will be able to perform a forward dive in tuck and/or pike position at the completion of this class. Each student will be able to identify the components of an effective physical fitness program and explain how swimming contributes to the success of this program. Students should be able to develop a swimming program that would help them meet realistic fitness goals.

Various evaluation techniques will be used to assess individual progress in Kinesiology 047B. These techniques will include (but are not limited to) objective tests, skills performance tests, and personal assessment inventories and assignments. Students will also keep a written journal of their activities.

General Education: GHA
Diversity: None
Effective: Summer 2002

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 048 (GHA) Tennis I (1.5) A course designed to give students an appreciation of and proficiency in the skills, rules, and regulations of tennis.

KINES 048 Tennis I (1.5) (GHA)

Kinesiology 048 is a course designed to introduce students to the basic skills of Tennis. The initial focus will be twofold: stroke development and acquiring an understanding of the rules, regulations, and terminology of the game. Subsequent effort will emphasize the development of movement skills and a progression from hitting to rallying. In turn, students will learn to apply the above to live-game situations (both singles and doubles). Students will emerge from this course with beginning-level tennis skills as well as an appreciation for the requirements of higher-level tennis participation.

Students will be evaluated by (but not limited to) a combination of techniques: written examinations, skills testing, performance standards, and subjective evaluation of skill level.

General Education: GHA
Diversity: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 048A (GHA) Tennis II (1.5) A course designed to give students an appreciation of and proficiency in the skills, rules, and regulations of tennis.

KINES 048A Tennis II (1.5) (GHA)
Kinesiology 048A is a course designed to introduce students to the basic and advanced skills of Tennis. The initial focus will be twofold: stroke development and acquiring an understanding of the rules, regulations, and terminology of the game. Subsequent effort will emphasize the development of movement skills and a progression from hitting to rallying. In turn, students will learn to apply the above to live-game situations (both singles and doubles).

Students will emerge from this course with advanced tennis skills as well as an appreciation for the requirements of higher-level tennis participation.

Students will be evaluated by (but not limited to) a combination of techniques: written examinations, skills testing, performance standards, and subjective evaluation of skill level.

Clean, safe, well-lit course space is needed to properly deliver this course. It is anticipated that two sections will be offered every fall and spring semesters with an enrollment of 30 students per section.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Summer 2004
Prerequisite: KINES 048 or for students who demonstrate reasonable consistency in depth and placement of ground strokes and the serve and who have not had instruction at Penn State.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 054 (GHA) Aikido (1.5) Students will gain a comprehensive understanding and basic level of proficiency in the Japanese Traditional martial art of Aikido.

KINES 054 Aikido (1.5) (GHA)
Martial arts have been practiced for centuries as a method of integrating mind, body and spiritual well-being. While improving physical fitness and emotional health, martial arts have been the cornerstone of unarmed self-defense throughout the ages. Aikido is a relatively new Japanese martial art developed by a man named Morihei Ueshiba. Ueshiba sensei studied a variety of traditional martial arts and developed the style of Aikido in the early 1900’s as a combination primarily of Dyto-ryu Jujitsu and a spiritual philosophy of promoting peace and harmony amongst fellow human beings. Aikido training can be performed at any level across all ages. If done properly, Aikido training will promote comprehensive wellness while developing important life-long motor skills. In this course students will explore the historical development and significance of Aikido and other martial arts. Students will learn a wide number of Aikido techniques in addition to improving physical health and fitness. Throughout the course students will learn to apply principles of Aikido for self-defense and in everyday life. Ultimately students will learn the benefits of Aikido as a lifetime activity for health and wellness. Students will be evaluated using a standard percentage scale. Evaluation is based on attendance and active participation (60%), demonstration of acquired skills (20%), theoretical knowledge as measured by written exam (20%). One to three sections will be offered every fall and spring semesters with an enrollment of up to 24 students per section.

KINES 056 (GHA) Introduction to Martial Arts (1.5) A course designed to give students an introduction to martial arts, and the use of martial arts for lifelong fitness.

KINES 056 Introduction to Martial Arts (1.5) (GHA)
Martial arts have been practiced for centuries as a method of integrating mind, body, and spiritual well-being. While improving physical fitness and emotional health, martial arts have been the cornerstone of unarmed self-defense throughout the ages. Martial arts training can be performed at any level across all ages. If done properly, martial arts training will promote comprehensive wellness while developing important lifelong motor skills. For many, the emotional and psychological benefits of martial arts training will be as rewarding as the physical improvements experienced.
Kinesiology 056 will introduce the student to the historical development and significance of the martial arts. Students will first learn supportive activities such as meditation and yoga, which will be used to optimally prepare the mind and body, respectively, for martial arts training. Once the students are mentally and physically prepared to begin training, they will begin to learn the traditional martial art Karate. After several weeks of training, the students will then begin to study the relatively newer and more passive martial art Aikido.

Ample time will be devoted to allow students to acquire an appreciation of and basic skill of both Karate and Aikido. In addition, students will learn proper "dojo" etiquette which will allow them to comfortably enter and train in any traditional martial arts dojo.

Throughout the semester, students will improve in physical fitness and learn how martial arts such as Karate and Aikido contribute to improved fitness and overall wellness. The basic principles of organizing, planning, and implementing a physical fitness program will be taught using martial arts training as a method of exercise. The fitness principles learned in class can be applied to any form of activity the student chooses. At the end of the course, the students will be invited to explore their personal health and fitness goals and how martial arts training may be incorporated into their lifelong fitness plan. Although the concept of "self-defense" will not be stressed in this class, some introduction to self-defense will be given, and it is likely that by the end of the course students will feel more physically confident in their ability to avoid and deal with conflict situations.

Various evaluation techniques will be used to assess individual progress in Kinesiology 056. These techniques will include (but are not limited to) conventional objective testing, skill testing, and writing assignments.

KINES 057 (GHA) Personal Defense (1.5) A course designed to give students an understanding of and a proficiency in martial arts and self-defense.

KINES 057 Personal Defense (1.5) (GHA)

The term "martial art" is used in western idiom to describe a wide variety of Asian self defense systems. Some of these combat systems evolved in civil settings as methods for physical development, personal self defense, and sport. Taekwondo is perhaps the best example today because of its role in the Olympic Games. This unarmed method evolved in Korea and it can be traced back to the koguryo dynasty, founded 2000 years ago through the study of the ancient Korea and its history.

While improving physical fitness and emotional health, martial arts have been the cornerstone of unarmed self defense throughout the ages. Martial arts training can be performed at any level across all ages. If done properly, martial arts training will promote comprehensive wellness while developing important life-long motor skills. For many, the emotional and psychological benefits of martial arts training will be as rewarding as the physical improvements experienced.

KINES 057 introduces the student to the historical development and significance of the martial arts. Students first learn supportive activities such as relaxation and breathing techniques, which will be used to optimally prepare the mind and body, respectively, for martial arts training. Students start applying mental discipline into the acquired techniques as soon as they learn it and practice it throughout the semester.

Throughout the semester students improve in physical fitness and learn how personal self defense, such as taekwondo and Aikijujitsu, contribute to improved fitness and overall wellness. The basic principles of organizing, planning and implementing a physical fitness program will be taught using martial arts training as a method of exercise. The fitness principles learned in class can be applied to any form of activity the students chooses. At the end of the course the student will be invited to explore their personal health and fitness goals and how martial arts training may be incorporated into their lifelong fitness plan. It is likely that by the end of the course students will feel more physically and mentally confident in their ability to avoid and deal with conflict situations.

Various evaluation techniques will be used in KINES 057. The techniques will include (but are not limited to) conventional objective testing, skill testing, journaling and other writing assignments.

The department plans to offer up to three sections of this course every fall and spring semester with a maximum enrollment of 30 students per section.

KINES 058 (GHA) Judo I (1.5) Kinesiology 058 will help students develop stamina, confidence and discipline, and promote general fitness through the introduction to basic Judo.
KINES 058 Judo I (1.5)  
(GHA)  
Kinesiology 058 will help students develop stamina, confidence and discipline, teach self-defense, and promote general fitness through the introduction of basic Judo. Developed in Japan in 1882, Judo has quickly spread across the globe and won approval as a modern sport. Judo became the first activity of Asian origin to be accepted as an Olympic event in 1964. Women's Judo was admitted to the Games as a full medal event in 1992. Judo, "the gentle way," is the modern day form of the ancient Japanese Jujitsu. The art is based on the principle of using the opponent's own strength to put him or her off balance, using minimum effort for maximum efficiency. Judo was initially developed by Professor Jigoro Kano, whose techniques were refined to form a combative system that demonstrates the superiority of techniques over mere strength. Although Judo is a martial art, students need not fear physical injury due to enrollment at Kinesiology 058. Judo I covers fundamental falling, throwing and grappling techniques. More dangerous techniques, such as choking and arm locks, are reserved until students have demonstrated satisfactory command of more basic skills. Kinesiology 058 is not simply aimed at introducing students to basic Judo. Judo instruction at Penn State encourages fitness by incorporating a brief session of physical conditioning into each class in an effort to augment the aerobic workout and prevent injuries. Each student is also asked to learn basic terms and some general history of the sport of Judo. Facilities/Class periods - held in the IM Building Combat Room - begin with stretching and generally continue with a series of technique demonstrations, form practices and free workout. Class concludes with conditioning and cool-down exercises. Frequency of enrollment: Two sections every fall and spring semesters with a maximum of 30 students per section.

KINES 059 (GHA) Introduction to Karate (1.5)  
A course designed to give students an understanding of and a proficiency in Karate.

KINES 059 Introduction to Karate (1.5)  
(GHA)  
KINES 059 will involve the training in the philosophy, principles and techniques of Karate for self-defense, improvement of overall fitness and to give a greater understanding of the art and themselves. This course will involve physical aspects of Karate including blocking, punching, striking, kicking and body shifting techniques in correct stance and the application of these techniques against an opponent. The course will also introduce the mental aspects of Karate illustrating the ideals of "the way" (including principles such as character, concentration, self control, manners and self discipline) and how they can be applied in everyday life to benefit themselves and society, this will be achieved through meditation and training. There are three primary components of Karate training; fundamentals (basics), sparring and Kata or forms. The basic techniques consist of blocks, punches, strikes, kicks and combinations of these techniques in correct stance or body position. Sparring can take one of three forms: single step, controlled multi-step sparring and free sparing. Only the second form (both controlled and non-contact) is taught in this introductory class. The third component, kata, consists of a series of predefined blocking, striking and kicking techniques performed by an individual and used to simulate defense against multiple opponents. The forms are used to perfect the fundamental techniques to teach balance and timing of techniques so that they then may be applied to sparring. Throughout the semester students will improve in physical fitness and learn how Karate contributes to improved fitness and overall wellness. The basic principles of organizing, planning and implementing a physical fitness program will be taught using martial arts training as a method of exercise. The fitness principles learned in class can be applied to any form of activity the student chooses. At the end of the course the student will be invited to explore, through a term paper, their personal health and fitness goals and how karate training may be incorporated into their lifelong fitness plan. Although some concepts of "self-defense" are discussed in this class it is not given a priority. However, it is likely that by the end of the course students will feel more physically confident in their ability to avoid and deal with conflict situations. Since Karate is one of the most widely practiced martial arts in the world, the students will also be able to continue their training in Shotokan though either the Penn State Club or at any other club around the world. They will also be given the opportunity to sit a formal grading examination (through a world class examiner), which will hold rank within Karate anywhere in the world, thus acknowledging their abilities gained in this course. This formal ranking is completely at the student's discretion and will not be required for credit toward Kinesiology 059. Frequency of enrollment: One to three sections every fall and spring semesters with a maximum of 30 students per section.

KINES 060 Principles and Practices of Healthful Living (3)  
Facts and principles as related and applied to the science of living serve as a basis for health instruction and student guidance.

Principles and Practices of Healthful Living (3)
KINES 061 (GHA) Fitness Theory and Practice (3) Students will learn about the science of fitness/wellness; evaluate their present fitness levels and create a personal fitness plan.

KINES 061 Fitness Theory and Practice (3) (GHA)

Fitness Theory and Practice is a course designed to give the Penn State student a complete understanding of the fundamental principles of physical fitness and the skills necessary to implement a personalized fitness program. This course will provide all the information and skill needed for the student to organize, plan, and implement a complete physical fitness program.

In this course the Penn State student will acquire all the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Through readings, classroom discussions, personal assessment techniques, video presentation, and World Wide Web based assignments, students will build a foundation of knowledge to guide them in their pursuit of an active and healthy lifestyle.

In addition to the above mentioned knowledge base, students will be guided through laboratory activities designed to: assess personal fitness levels pre-and-post intervention strategies, educate the student about cardiovascular training techniques, flexibility training techniques, muscular strength and endurance training techniques, and implement their own personal fitness program.

Various evaluation techniques will be used to assess student progress in Kinesiology 061. These techniques shall include, but not be limited to, conventional objective testing; group and individual presentations; World Wide Web based assignments and leadership activities; personal assessment inventories; and journaling assignments. Students who have already received credit for Kinesiology 084 or Kinesiology 066 may not enroll in this class because of the duplication of material.

KINES 062 (GHA) Introduction to Cardiovascular Activities (1.5) A course designed to give students an introduction to various types of cardiovascular training.

KINES 062 Introduction to Cardiovascular Activities (1.5) (GHA)

Kinesiology 062 has been designed to help students become acquainted with and proficient in many types of cardiovascular activities that can be used as part of a lifelong exercise program. Students should expect to participate in a variety of activities such as, but not limited to, walking/jogging, cycling, aquatics, aerobic dance, and cardiovascular exercise machine use. Additionally, students will have an opportunity to learn skills necessary to create safe cardiovascular exercise programs while considering safety and injury prevention.

Kinesiology 062 is taught in a modular format including three to five separate types of cardiovascular exercise being chosen for the course content for the semester. Students will know which courses have been selected by listings in the semester Directory of Classes. Kinesiology 062 will provide a unique balance of training guidelines that can be applied to the various activities one pursues throughout life. Fundamental guidelines for safe exercise, progression, self-monitoring, etiquette, and injury prevention will be introduced throughout the course. Cardiovascular activities serves as a stepping stone to lifetime physical fitness and disease prevention. Self-and group-paced activity will allow for each individual to maximize the benefits of exercise.

Various evaluation techniques will be used to assess progress in Kinesiology 062. These techniques will include, but are
not limited to, written examinations, performance assessments, and improvement-based evaluations of cardiovascular endurance and strength.

KINES 063 (GHA) Aerobic Dance (1.5) A course designed to involve students in daily aerobic activity while teaching the fundamentals of overall health and well-being.

KINES 063 Aerobic Dance (1.5) (GHA)

Kinesiology 063 has been designed to give each Penn State student a basic understanding of the many different aspects of physical fitness while keeping the main focus on aerobic cardiovascular endurance.

In this course, the student will engage in daily participation in the various types of group fitness classes. This practical participation will be supplemented with lectures including, but not limited to, the principles, components, theories, and training techniques of physical fitness.

This course will provide each student with the necessary information and proper means to develop and maintain a healthy active lifestyle and achieve overall well-being.

Various evaluation techniques will be used to assess student's progress in Kinesiology 063. These techniques shall include, but not be limited to, written examinations, group and individual presentations, participation and performance, and homework assignments.

KINES 065 (GHA) Jogging (1.5) A course designed to give students an understanding of and the ability to establish an exercise program involving jogging.

KINES 065 Jogging (1.5) (GHA)

Kinesiology 065 introduces students to the performance of jogging as a lifelong activity that helps maintain and enhance physical fitness and overall wellness. This course provides the information that the student needs to understand, organize, plan and implement a physical fitness program that features jogging as a primary activity. The centerpiece of this course is a progression of individually-paced jogs of varying lengths that are conducted over various terrains. Past activities have included 1.5-mile timed runs, 2 through 6 mile runs, interval runs, hill runs, and runs to various locations of interest. Locations include Beaver Stadium, the deer research pens, Sunset Park, and various other landmarks around campus and in the community. These activities are complemented by a series of classroom lectures on such topics as the physiology of exercise, jogging safety; goal-setting for personal health; principles and concept of physical fitness; training methods to address different jogging goals; and nutrition and weight control. Students also participate in team-based projects such as group-designed scavenger hunts, “landmark jogs,” and different team games and events that build group interaction skills. As a final project, each student is asked to define a measurable fitness goal and design a jogging program to achieve that goal. As part of this assignment, students assemble data to indicate that they have achieved their goal, and then identify and analyze the factors that contributed to their success. Students also have the opportunity to monitor their performance throughout the course using a variety of personal assessment inventories and instruments, such as logs and heart rate monitors. When a student completes Kinesiology 065, he or she will be able to identify the components of an effective physical fitness program and explain how jogging contributes to the success of this program; develop realistic fitness goals and design a jogging program to meet these goals; perform a variety of fitness jogging techniques; and understand how jogging promotes psychological well-being. Frequency of Enrollment: Ten to twelve sections every fall and spring semesters with a maximum of 30 students per section.

KINES 067 (GHA) Physical Conditioning (1.5) A course designed to give students an experience with an understanding of
vigorous physical training.

**KINES 067 Physical Conditioning (1.5)**
*(GHA)*

Kinesiology 067 has been designed to help students build high levels of overall physical conditioning based upon athletic endeavors such as multi-sport and adventure challenges. Students should expect to physically challenge themselves through a variety of activities focusing on aerobic, anaerobic, and resistance training. Additionally, students will have an opportunity to learn skills necessary to create safe, complete conditioning programs while considering safety and injury prevention.

Physical Conditioning will provide a unique balance of training guidelines that can be applied to the various activities one pursues throughout life. Kinesiology 067 serves as a stepping-stone to lifetime fitness. competition in organized athletic events, and personal challenge activities. Students will develop a holistic approach to training for endurance, strength, and integrated activities. Self-paced activity will allow for each individual to maximize the benefits of physical conditioning.

Through working in groups to complete athletic challenges, students in Kinesiology 067 will integrate exercise, teamwork, and problem-solving skills. Success in group activities will hinge on communication between teammates and the team’s ability to work in a cohesive fashion while experiencing a movement-based activity. Students may need to rely on group members for strengths in various areas.

Various evaluation techniques will be used to assess progress in Physical Conditioning. These techniques will include, but are not limited to, written examinations, completion of special challenges integrating aerobic, anaerobic, and resistance training (i.e. obstacle course), and improvement-based evaluations of cardiovascular endurance and strength.

**KINES 068 (GHA) Strength Training (1.5)** Designed to improve students’ muscular strength/endurance, teaches students how to develop an effective personal strength/endurance training program for lifelong fitness.

**KINES 068 Strength Training (1.5)**
*(GHA)*

The purpose of this class is to learn the basic principles of strength training, the role of weight lifting in an overall program of health and wellness, and to acquire the necessary skills and experience to develop an individualized program for developing muscular strength and endurance.

Kinesiology 068 will require the student to understand the following specific objectives:

1. Become proficient in the use of various types of equipment used to improve strength and endurance.
2. Learn the essential components of a weight training program and overall fitness program.
3. Conduct specific tests to measure muscular strength and endurance.
4. Assess muscular fitness level by comparing strength testing results to national averages.
5. Improve muscular strength and endurance.

Ample time will be devoted to allow students to acquire proper technique for a wide variety of strength training exercises and to create a personal training program. Students will have adequate time to train and should significantly improve strength and endurance throughout the semester. At regular intervals, strength and endurance will be assessed. Students will complete summary reports in which they compare their fitness levels to national standards and will chart individual progress throughout the semester. Throughout the semester, it will be emphasized to the student that strength training is one aspect of a personal health and wellness program and that the student must assume personal responsibility to develop and maintain his/her health and fitness level for life. Students will be encouraged to explore their personal health and fitness goals and how strength training may be incorporated into their lifelong fitness plan.

Various evaluation techniques will be used to assess individual progress in Kinesiology 068. These techniques will include (but are not limited to) conventional objective testing, skill and fitness testing, and writing assignments.

**KINES 070 (GHA) Swim Conditioning (1.5)** A course designed to provide students an understanding of and proficiency in swimming conditioning.

**KINES 070 Swim Conditioning (1.5)**
*(GHA)*
The primary objective of Kinesiology 070 is to teach students, in both a theoretical and practical manner, the fitness benefits derived from swimming. These benefits include but are not limited to: flexibility, cardiovascular endurance, muscular strength and endurance, and weight management. Because of its non-weight-bearing nature, attention is also given to the exercise value of swimming for arthritic, injured, and overweight individuals. This course promotes swimming as a lifelong pursuit and at the same time enables a student to design an individualized fitness plan, using swimming as the primary activity.

Instruction includes a mixture of classroom and practical experiences, with an emphasis on in-water activity. Fundamentally, the water activity consists of a daily workout, 40-50 minutes in length. Workout components include: a warm-up, light stretching, a main training set, and a warm-down. The training emphasis varies depending upon the placement of the workout during the semester as well as the fitness goal (group or individual) at that particular time. Workouts conducted early in the semester, for example, focus on technical issues and general aerobic improvement as the workload is gradually increased. Subsequent workouts are geared toward improving aerobic and anaerobic conditioning while maintaining a steady but varied workload. Throughout the semester, swimming is the primary activity, but an exposure to water walking/jogging/running and dry-land training is also provided. Moreover, the importance of implementing training variety, proper technique, and appropriate safety procedures is emphasized throughout the course.

Classroom sessions are reserved for understanding training principles, terms, and methods. Individual concerns (i.e., fitness goals, videotaping, training alternatives, and problems) are also addressed in this setting.

Swimming ability varies greatly from one individual to another. Because of this, and because space limitations prevent total individuality, students are taught to devise swimming fitness programs that meet both individual and group goals. These workout programs are expected to utilize competitive and noncompetitive strokes, varying degrees of aerobic and anaerobic training, as well as a balanced combination of swimming, kicking, and pulling efforts (using a variety of training equipment). Educational objectives are completed in a systematic yet flexible manner that affords students the opportunity to simultaneously learn and experiment together while developing individual fitness.

Individual progress may be assessed through any or all of the following measures: objective testing, maintenance of a training log, written assignments, and standardized swimming performances. The amount of each is left to the discretion of the instructor. Evaluation methods other than those already mentioned may certainly be used.

KINES 072 (GHA) Fitness Walking (1-1.5) A course designed to give students an understanding of and a proficiency in fitness walking.

KINES 072 Fitness Walking (1-1.5) (GHA)

Kinesiology 072 introduces students to the performance of fitness walking as a lifelong activity that maintains and enhances physical health and psychological well-being. This course provides the information that the student needs to understand, organize, plan, and implement a physical fitness program that features walking as a primary activity.

The centerpiece of this course is a series of small group and individual walks of varying lengths that are conducted over various terrains. Past activities have included one-mile, four-mile, and eight-mile walks to such locations as the Mushroom Research Center, Beaver Stadium, and various museums, and other landmarks around campus and the community. In addition, hikes to such places as Mt. Nittany and Stone Valley Recreation Area have also been featured. These activities are complemented by a series of classroom lectures on such topics as the philosophy of walking and walking safety; goal-setting for personal health; principles and the concept of physical fitness; the physiology of walking; and nutrition and weight control. Students also participate in team-based projects such as group-designed scavenger hunts and "landmark walks." As a final project, each student is asked to define a measurable fitness goal and design a fitness walking program to realize that goal. As part of this assignment, students assemble data to indicate that they have achieved their goal, and then identify and analyze the factors that contributed to their success. Students also have the opportunity to monitor their performance throughout the course using a variety of personal assessment inventories and instruments, such as logs and heart rate monitors.

When a student completes Kinesiology 072, he or she will be able to identify the components of an effective physical fitness program and explain how walking contributes to the success of this program; develop realistic fitness goals and design a walking program to meet these goals; perform a variety of fitness walking techniques; and understand how walking promotes psychological well-being.

Various evaluation techniques will be used to assess individual progress in Kinesiology 072. These techniques will include, but are not limited to, conventional objective testing, performance on a nationally normed fitness walking test, personal assessment inventories and assignments, and journaling assignments.

KINES 076 (GHA) Introduction to Tai Chi Ch’uan (1.5) A course designed to introduce students to Tai Chi Ch’uan, a traditional Chinese system of personal cultivation and self-defense.

KINES 076 Introduction to Tai Chi Ch’uan (1.5) (GHA)

This course will introduce students to Tai Chi Ch’uan a health and martial arts system originating from China, and based on more than five thousand years of observation and practice culled from the major Chinese Schools of philosophy and Chinese medical practice. It is seen as a physical embodiment of the supreme Taoist principles. Tai Chi has become very popular in the rest of the world as a means for attaining physical health and vitality and as a formidable defensive martial art. Tai chi has been the focus of research in China and the west and has been found extremely beneficial for balance, arthritis, Parkinson Disease and for general health and well being. Students will be introduced to the principles of Tai Chi Ch’uan by learning Tai Chi relaxation techniques and warm ups to relax the joints, right body alignment and Qi Gong exercises to promote the flow of chi or life energy through the body and the internal organs. They will learn and become proficient in the performance of the first part of the Tai Chi Yang form, which is the heart of the practice. The students will also explore the martial aspects of Tai Chi Ch’uan through the practice of push hands, a two person play, and through the demonstration and introduction to the Tai Chi Sword. The martial art aspects will enrich the students experience and demonstrate the interaction of the student’s chi with his or her environment.

Students are encouraged to practice daily outside of class and to record their practice and observations in a journal. At the end of the course they will be required to perform the Tai chi form and related exercises on their own.

Evaluation is based on participation, class journal and observations, and the final individual performance of the Tai Chi form and related exercises. No special facilities are required for this course. The department plans to offer one section every fall and spring semesters with an anticipated enrollment of 25 students per section.

KINES 077 (GHA) Yoga I (1.5) A course designed to give students an understanding of and proficiency in yoga.

KINES 077 Yoga I (1.5) (GHA)

(BA) This course meets the Bachelor of Arts degree requirements.

Kinesiology 077 introduces students to the performance of yoga as a lifelong activity that maintains and enhances physical health and psychological well-being. This course provides the information that the student needs to understand, organize, plan, and implement a wellness program that features yoga as a primary activity.

The centerpiece of this course is a series of activity classes that introduce students to classical yoga postures that address such needs as stress management, muscular tightness, skeletal alignment, and injury rehabilitation. In addition to posture instruction, each class begins with a period of breathing and meditation practice where students are taught to use various breathing techniques to calm the mind and focus mental energy on specific tasks. These activities are complemented by a series of classroom lectures on such topics as the historical and philosophical foundations of yoga, nutritional practices that enhance the value of a lifelong yoga program, and Eastern-based movement traditions that complement yoga practice. Students also have the opportunity to complete reflective essays on various aspects of yoga philosophy and lead a group-designed yoga class.

When a student completes Kinesiology 077, he or she will be able to identify the components of an effective lifelong wellness program and explain how yoga contributes to the success of this program; perform yoga to develop flexibility, strength, and cardiovascular endurance; select and perform yoga postures that address specific needs (e.g., stress management, muscular tightness); describe the philosophical and historical framework that supports yoga practice; and understand how effective breathing and meditation techniques promote physical and psychological well-being.

Various evaluation techniques will be used to assess students’ progress in Kinesiology 077. These techniques can include (but are not limited to) conventional objective testing; skill testing that evaluates the performance of specific yoga postures; reflective essays on aspects of yoga history and philosophy; and performance in a group-designed yoga class.

KINES 077A (GHA) Advanced Yoga (1.5) A course designed to expand on a student’s fundamental understanding of and proficiency in yoga.

The Pennsylvania State University
KINES 077A Advanced Yoga (1.5)  
(GHA)
Kinesiology 077A is a course based on a system of ultimate health created in India 5,000 years ago and now practiced by all contemporary societies throughout the world. Students who enter this course are introduced to a deeper and more detailed knowledge and practice of this ancient curriculum. Students will become familiar with the research data that supports that yoga is beneficial to muscular, endocrine, cardiovascular, digestive and skeletal systems of the body. Each class period is devoted to practicing yoga postures with the knowledge of their specific benefits. For instance, when learning the bridge pose students will learn that the bridge increases flexibility in the back and shoulders, strengthens the leg muscles and stimulates thyroid function. Students learn to integrate such knowledge into their personal practice of yoga outside of class. In addition to learning more about the development of a personal practice advanced yoga also provides the students with many opportunities to also practice yoga off of the yoga mat or in their own personal student life. In both written and verbal opportunities students share how yoga and the practice of yoga is "showing up" in their lives. Sanskrit is the Indian language of yoga. There are opportunities in Advanced Yoga to understand and translate the language and to be able to express Sanskrit in relationship to meditation techniques, energy center practices, temperament determination and application of specific yogic activities. When students complete the course they will be able to perform yoga to increase flexibility, strength and cardiovascular endurance. They will have studied and performed breathing techniques, and developed a daily yoga practice. They will also be able to perform new intermediate yoga postures and to perfect the beginning postures learned previous to this classroom experience. They will also have a basic knowledge of the energy systems of the body as described in Indian Ayurvedic medicine. Various evaluation techniques will be used to assess student's progress in Kinesiology 077A. These techniques can include (lesson plan and teaching to support certain postures and posture series, journal writing with verbal and written criteria, and portfolio construction.) There are no special facilities for this course. The Department plans to offer one section each fall and spring semester with a maximum enrollment of 30 students.

KINES 083 (GHA) Exercise for Stress Management (1.5) A course designed to identify the factors that contribute to student stress and develop strategies that will manage these factors. Students who receive credit for KINES 083 will not receive credit for KINES 082.

KINES 083 Exercise for Stress Management (1.5)  
(GHA)
Kinesiology 083 is a course designed to give the Penn State student an introductory understanding of the fundamental principles of stress management. This course will provide pertinent information the student needs to understand, organize, plan, and implement a preliminary stress management program.

In this course, the Penn State student will follow a four-part concept of stress management that encourages the student to identify the factors that contribute to their stress and to develop strategies that will allow the student to manage these factors more effectively. In the first part of the course, material is presented that relates to the importance of knowing oneself and then establishing vehicles for placing oneself in relationships, environments, and situations that consistently
support that "self." In the second part of the course, the student is introduced to the elements of fitness and the research data available to date that supports the idea of fitness prescriptions to enhance the relaxation response and/or produce relevant changes in hormone levels. In conjunction with this knowledge and application of such knowledge, the students learn nutritional facts that allow them to understand the chemicals that foods possess that can produce a calming or increased energy effect. Combining this knowledge, the students develop a personal program to incorporate these fitness and nutritional goals into their own lives. In the third part of the course, students are introduced to Eastern literature that indicates that a mind needs to be trained in order to provide a calming effect, increased concentration, and efficiency.

Students practice these skills to train their mind and be able to fully depend on their mind to perform more efficiently in time of stress. In the final part of the course, the students are introduced to the most current definitions of spirituality and are able to appreciate how their own spirituality is demonstrated in their lives. The course is taught through a variety of teaching methods which include lecture, workbook activities, and the repeated use of stress techniques demonstrated by the instructor and practiced by the students in class. This learning is supplemented and reinforced by listening to stress management audio tapes. The students reflect on specific stress concepts by writing self-reflection papers that allow them to reflect on how each concept is "showing up" in their own lives at the present time.

**KINES 084** (GHA) Fitness for Life (1.5-2) A course designed to give students an understanding of the fundamental principles of physical fitness. Students who receive credit for KINES 084 shall not receive credit for either KINES 061 or 081.

**KINES 084 Fitness for Life (1.5 - 2)**  
(GHA)

Kinesiology 084 is a course that has been designed to give the Penn State student a complete understanding of the fundamental principles of physical fitness. This course will provide all of the information the student needs to understand, organize, plan and implement a complete physical fitness program.

In this course the Penn State student will acquire the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Kinesiology 084 will challenge students to be active participants in their learning process. Students will as individuals or as part of a learning team be involved in classroom discussions of various fitness/wellness related topics. Learning teams will delineate key elements of various topics for classroom presentation. Student will participate in student surveys collecting data, interpreting results and formulating theories about those results. Kinesiology 084 will be an ideal forum in which students can explore their social behaviors as they related to the ethical consumption of resources with regard to health and fitness.

Various evaluation techniques will be used to assess student's progress in Kinesiology 084. These techniques shall include but not be limited to conventional objective testing, group and individual presentations; Web based information gathering, personal assessment inventories, and journaling assignments.

**KINES 088** (GHA) Varsity Sport Experience (2) A course designed to promote an active and healthful lifestyle through participation in a varsity sport sanctioned by Penn State.

**KINES 088 Varsity Sport Experience (2)**  
(GHA)

Kinesiology 088 introduces students to the rigors of the varsity sport experience. This course provides the information that the student needs to understand, organize, plan and thrive in the competitive environment of a collegiate sport program while integrating themselves into the university community. The "corner stone" of this course is the varsity sport experience itself. Under the tutelage of some of the best instructors in the nation these student-athletes will learn how to prepare for and engage in physical and psychological contests of the highest order. In addition to engagement with the finest physiological training students are taught to work collaboratively in small and large groups to solve complex movement problems. Critical thinking is stressed as students negotiate the complex real world problem of being a student athlete in a collegiate athletic program. Social behavior, community and scholarly conduct are continually addressed as the student-athletes attempt to integrate themselves into the university and local community.

When a student completes Kinesiology 088, he or she will be able to identify the components of an effective physical training program and explain how that program contributes to lifelong wellness; develop training goals and design programs to meet these goals; perform a variety of physical training techniques; and understand how the acquisition of sport specific skills and knowledge promotes psychological well-being.

The Pennsylvania State University
Members of the Department of Intercollegiate Athletics evaluate the successful completion of this program. Sport-appropriate training and performing venues are provided by Penn State. Enrollment will be based upon seasonal varsity sports.

KINES 089 (GHA) Student Wilderness Experience (3)  
Incoming student wilderness experience. Backpacking and one additional adventure: rock climbing, high ropes course/canoeing. One-day of community service.

KINES 089 Student Wilderness Experience (3)  
(GHA)

KINES 089 is a 6-day wilderness experience that is offered to incoming students during the summer before the onset of the fall semester. This course includes four days of backpacking and one day of an additional adventure: rock climbing, high ropes course or canoeing. Through these activities students learn the various skills associated with backpacking and wilderness living. Students are engaged in hours of physical activity as they hike between 6 and 8 miles per day on variable, rolling terrain with 30-40lb backpacks upon their backs. Students are placed into small groups of 8-10 students with Penn State students and graduate students who mentor and lead the wilderness experience. Small group discussions focus on life at Penn State, question and answer sessions for students and issues regarding outdoor leadership. KINES 089 emphasizes teamwork, group living skills, and wilderness ethics. Through the first five days of the program these various topics are addressed. Equipment for all activities is provided. Incoming students with all levels of experience may take this course. A community service project is also required. A follow-up classroom session takes place one to two months from the ending point of the program at which time students will turn in their class assignments. KINES 089 is offered in June, July and August prior to the onset of fall classes. Both sections of KINES 089 begin and end at the University Park campus. The course is offered at least twice every year, prior to the beginning of fall semester, with anticipated enrollment of 60 students each section.

KINES 090 (GHA) Introduction to Team Sports/Indoor (1-1.5)  
A course designed to introduce students to indoor team sports.

KINES 090 Introduction to Team Sports/Indoor (1-1.5)  
(GHA)

Kinesiology 090 is a course that has been designed to give the Penn State student an introduction to a selected indoor team sport such as, but not limited to, basketball, volleyball and/or team handball. The fundamental skills, strategies, and rules will be covered for the selected sport. Successful completion of the course will provide a foundation for participation in intramural activities, recreational activities, and provide a gateway to life long movement.

While Kinesiology 090 will focus on the skills, strategies and rules of a selected team sport, the underlying sub-focus of this course is the development of the social skills required to be a good team member. The commitment to a team sport requires students to encounter a collaborative atmosphere. As the students seek to solve complex movement problems they learn to co-operate to achieve various team goals. The improvement of individual skills is important, however, the successful integration of these individual skills into the team is a valuable life lesson. As the student leaves the university, the lessons learned in this class will prepare him/her for "team" membership in their various areas of professional practice.

Students in Kinesiology 090 will be evaluated by a combination of evaluation techniques which may include, but not be limited to, written reports, skills testing, tournament performance and subject evaluation of "team" work ethics.

KINES 093 (GHA) Masters Activity (Sport) (1.5 per semester/maximum of 12) A course that introduces students to
movement subcultures by providing the knowledge, habits, and skills for activity across the lifespan.

KINES 093 Masters Activity (Sport) (1 per semester/maximum of 12) (GHA)

The Masters Curriculum provides a unique approach to movement education. Rather than focusing on regimented skill
development over a period of a semester or less, KINES 093 requires students to incorporate activity into their weekly
schedules for a year or longer. Because this is a self-paced and self-designed curriculum, students must also take
responsibility for the kind, quality, and amount of activity they experience. By signing an activity contract with the master
teachers each semester and being required to demonstrate progress made through portfolio evaluations, students are
further encouraged to take responsibility for developing the habits of active living—not just fulfilling a requirement. The
curriculum is designed to bring a higher percentage of students into a movement subcultures higher percentage than can
be achieved in the shorter, instructor-directed, and more traditional educational setting. In order to achieve this in-depth
experience, students will be required to take two masters courses (1.5 credit each) in the same activity. Sequential
enrollment provisions will be needed, with a maximum of 3 credits counting toward General Education requirements. Each student will meet with the master instructor at the start of a semester to review a menu of activity opportunities (see outline above) in a specific movement domain. Students, in consultation with the instructor, will select a cluster of learning experiences to be encountered that semester. Each menu item chosen will be recorded on the contract along with the method or methods by which that item will be documented in the student's portfolio. The agreed upon documentation must be provided before credit is awarded. A completed contract will be signed by both the student and the master teacher. Regular communication between each student and instructor, consistent with the nature of the contract and the activities selected from the menu, will be assured. In addition, students will be required to become connected to a movement subculture by joining an appropriate organization and/or subscribing to relevant publications during that two-semester period of time needed for completing the requirement. When students have finished the 3 credits, they will be encouraged to continue with Masters development either as performers or as peer instructors for less experienced students. This length and intensity of involvement is designed to produce students who become bona fide members of a movement subculture by the time they leave the program. The expectation is that they will embody the habits, values, and attitudes needed for an active, healthy lifestyle.

General Education: GHA
Diversity: None
Bachelor of Arts: None
Effective: Spring 2003
Prerequisite: successful completion of relevant activity course or permission of the instructor

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 096 (GHA) Independent Study in Physical Activity (.5-3 per semester)**

This course is designed to meet the needs of students to expand Kinesiology experiences beyond the designed course curriculum.

**KINES 096 Independent Study in Physical Activity (1-3 per semester) (GHA)**

Students enroll in KINES 096 to take advantage of a unique movement experience in which they plan to participate. They enroll in KINES 096 by an application process. Students who feel that they would like to fulfill their Health Science and Physical Activity (GHA) requirement by pursuing a movement form outside of the normal curricular offerings apply to the department of Kinesiology. Applications will be screened to see that they fulfill the tenants of the GHA requirement. The topics for this course vary widely from student to student. A student may be working on a personal contract that has been designed to report the progress of experiences from hiking excursions in Nepal to a mountain biking course in Crested Butte, Colorado, to walking a mile in 15 minutes after major knee surgery. Therefore, many common topics are an exception rather than a rule during any given semester. Each student completes a proposal form that requires that they describe their need for this course. They are also asked to describe the experience that they have identified in detail and also a preliminary program and implementation plan for the detailed program. This proposal is then approved or denied by the faculty member facilitating the independent study program. After the proposal has been approved or denied the student will receive a letter notifying them of their status in the course. If they have received an approval letter they are instructed in the letter to meet one-on-one with the class instructor. At the initial meeting, the proposal is discussed and when there is an agreement with the student and instructor concerning the requirements for the student to complete the course successfully a contract is written and signed by both the instructor and the student. Weekly contact, at a minimum, with the instructor is required.

Student evaluation techniques shall include but not be limited to objective testing, individual projects, presentations, journals and subjective evaluation of effort involved in meeting the stated goals and objectives for the course.

There are no special facilities for this course. The department plans to offer this course every fall and spring semesters, with an enrollment of up to 25 students each semester.

KINES 100 The Cultural and Behavioral Foundations of Kinesiology (3)

This course introduces and integrates the philosophical, ethical, historical, cultural, and psychological foundations of kinesiology. Kinesiology is a dynamic, multi-disciplinary area devoted to the study of human movement. Kinesiology is unique in that it covers the “three cultures” of academia: the sciences, the social sciences, and the humanities. This foundational, entry-level survey course introduces students to social scientific and the humanistic approaches to sport, exercise, health, wellness, and physical activity. Topic areas include the psychology of exercise and sport, the history of sport and physical activity, and the philosophy and ethics of sport and physical activity. Throughout the course, applications and integration to human health, physical activity, and to health and fitness professions are provided.

The Philosophical & Ethical Foundations of Human Movement
This section introduces students to the philosophical and ethical aspects of kinesiology. This includes fundamental question of human movement, explorations of dualism and holism, ethical decision-making in sport, games and play, and an introduction to the ethical obligations of kinesiology and health/wellness professionals.

The Cultural Foundations of Human Movement
This section introduces to the historical, cultural, and social dynamics of kinesiology. Building off a philosophical foundation, it includes questions about why and humans move, the effects of historical and cultural influences on sport, physical activity, health, and human movement, as well as the roles that social identities play in these processes. In addition, this course module explores significant cultural considerations for kinesiology and health/wellness professionals.

The Psychological Foundations of Human Movement
This section introduces students to the psychological dimensions of kinesiology. This includes information about psychological orientations and enhancement in exercise and sport and foundations of health and psychological well-being. This section also addresses principles of behavior change, reinforcement, motivation, intervention, and performance enhancement and emphasizes psychological and health theories to explain physical activity behavior. It also includes information about the importance of sport and exercise psychology for kinesiology and health/wellness professionals.

KINES 101 The Biophysical Foundations of Kinesiology (3)

This course introduces and integrates the physiological, neural, anatomical and biomechanical foundations of kinesiology. Throughout the course, applications to human health, physical activity, and to health and fitness professions are provided.

The Physiological Foundations of Human Movement
This section introduces students to basic physiological principles that are necessary to understand exercise metabolism, adaptations to training, and changes that occur throughout the lifespan. This section builds important groundwork in exercise physiology to enable the student to understand the fundamental principles of energy metabolism and adjustments to energy metabolism as a result of acute and chronic exercise. Adaptations to chronic exercise training to the aerobic, anaerobic and muscular strength systems are a cornerstone of this section, but emphasis is also expanded to include functional capacity. The final section emphasizes the effects of exercise on chronic diseases, and takes a lifespan approach.

The Neural Foundations of Human Movement
This section introduces students to basic neural anatomy and physiology that serve as a basis for understanding neural control of movement. This includes the cellular, anatomical and functional organization of the central nervous system, and applications to clinical conditions. Students are introduced to sensorimotor processes, as a foundation for understanding human motor control and motor coordination, and associated dysfunction.

Anatomical Foundations of Human Movement
This section provides a survey of basic terms for describing human anatomy, including anatomical planes, axes, and directions, as well as an introduction to the major components of the musculoskeletal system. The fundamental structure and function of muscles and bones will be discussed with reference to their contributions to human movement.

Mechanical Foundations of Human Movement
This section introduces the physical principles that underlay the study of biomechanics. Students will learn how to properly describe human movement using terminology for linear and angular motion. Newton’s three laws of motion will
be introduced and used for as a basis for discussing the role of forces and torques in starting and stopping motion. This section will include discussions of the biomechanics of walking and the biomechanical causes and effects of movement disorders.

KINES 126 The Health Program for the Elementary School Child (1.5)

KINES 126 is an introductory course designed to prepare school-and community-based educators to implement health promotion and disease prevention educational programs to elementary-aged audiences. Emphasis of the course is on the coordinated school health program model; theory, content, methods, and practice.

Participation in this course will enable the student to:

a. Analyze the goals, roles, and responsibilities of the classroom teacher concerning the health of the school-aged child.
b. Identify appropriate educational resources related to school health.c. Describe the components of the coordinated school health program
d. Discuss the important of learning healthy life skills for elementary-aged learners.e. Organize and submit one modified health-based lesson plan for elementary-aged learners.f. Demonstrate competency in accessing health education resources from the World Wide Web.

Methods for Evaluation:
Written examinations 50%
Lesson Planning 30%
In-Class Participation 20%

KINES 127 The Physical Education Program for the Elementary School Child (1.5)

KINES 127 is an introductory course designed to introduce future classroom teachers to the conceptual framework of developmentally appropriate physical education. The class includes both theoretical and practical guidelines for analysis and implementation of children's physical education. The course focuses on applications of the Pennsylvania standards for elementary educators K-6. The components of KINES 127 include: concepts related to becoming and remaining physically active for a lifetime, physical fitness, motor development, movement and fitness concepts and fundamental motor skills, safety procedures, role and value of play, game and sports in child development. Students will gain experience teaching physical education lessons, as well as observing and participating in physical education experiences. Students will be introduced to multi-cultural dance and games. Students will understand the use of small and large equipment. Evaluation will include written examination, group peer teaching, and participation. The Department will offer 4 sections each Fall and Spring semesters with an anticipated enrollment of 30 students. The Department will offer 1 section per summer semester with an anticipated enrollment of 30 students.

Participation in this course will enable students to:

1. Define and develop a philosophy of elementary physical education.
2. Identify developmental characteristics and stages for children grades K-8.
3. Develop professional teaching techniques.
4. Apply activities for physical education, using proper safety procedures.
5. Discuss the importance of nutrition, personal wellness, and lifelong healthy habits.
6. Understand the human body and its systems.
7. Demonstrate competency in accessing physical education activities and resources from the World Wide Web.

KINES 135 Introduction to Athletic Training (3) Foundation of injury recognition and prevention; ethical, legal, and professional issues for the athletic trainer. A laboratory based course.

KINES 135 Introduction to Athletic Training (3)
Introduction to Athletic Training provides an overview of the field of athletic training exploring the breadth of athletic training terminology, issues, and injuries. After completing the course, the students will be able to describe the roles of the sports medicine team, understand the legal considerations for the athletic trainer as a health care provider, and identify the basics of physical conditioning and nutrition in reference to injury prevention. Students will be able to describe an emergency action plan for injuries, lightning safety, and provide a basic plan for dehydration and fluid replacement. Students will be able to identify basic use of therapeutic modalities and principles of therapeutic exercise programs. Students will gain an understanding of acute vs. chronic injury conditions and be able to describe the related anatomy, etiologies, pathologies, signs and symptoms, and general treatment and management for injuries of the foot, ankle, lower leg, knee, hip/groin, shoulder, elbow, wrist, hand, cervical spine, and head. A weekly taping laboratory is included and students are provided rationale and demonstrations for specific taping techniques for a variety of injuries. Students are also provided an overview of general medical conditions that may occur in the athletic arena. Students are evaluated through three (3) exams, six (6) quizzes, performance in taping lab and practical exam, development of a medical condition fact sheet and class presentation of the medical condition, in-class assignments, class participation, and class attendance. This course is offered every fall and spring semesters with a maximum enrollment of 35.

KINES 141 (US;IL) The Socio-Cultural Dynamics of Kinesiology (3) Evolution of cultural values in physical activity from antiquity to the present.

KINES 141 The Socio-Cultural Dynamics of Kinesiology (3)
(US;IL)
Physical activity involves the bodily processes that scientists explore, from chemical reactions to electrical impulses to muscular accelerations. Human bodies, however, do not just move in vacuums, they move in cultural and social environments as well as in laboratories and on force plates. The Introduction to the Socio-Cultural Dynamics of Kinesiology provides students with opportunities to explore the connections between sport, exercise, physical education, and fitness practices and the broader cultural, political, intellectual and economic patterns that have shaped human cultures from their origins to their contemporary manifestations. The class situates these themes within the context of kinesiology, the study of human movement and activity. The course begins with an introduction to the contemporary realities and historical development of kinesiology. The class offers a wide variety of perspectives, historical, philosophical, sociological, anthropological, and political, on the development and significance of physical activity in human cultures.

This course concentrates on three basic areas of physical activity. The course explores the history of sports, exercise, and fitness, the history of physical education systems, and the history of ideas and beliefs about physical activity and human nature. The class offers a special emphasis through the readings and lectures on the social construction of cultural, national, racial, gender, and class identities as well as other manifestations of human diversity in both the United States and around the globe.

This course introduces students to the fundamental ideas about how and why the human environments we inhabit shape our understandings of our movements, a subject that has long fascinated curious minds. Physical activities such as sport, play, and exercise—seem to be universal phenomena, occurring across the time-span of human history and in every known culture. In every human time and place, people have invented contests of physical of prowess, engaged in physical education, and developed ideas and beliefs about the relation of the body to human nature.

While curiosity about the processes, qualities, and meanings of physical activity may be universal, human movements and our ideas about those movements do not occur in timeless, placeless, ahistorical environments. Human movements and
our ideas about them always occur in particular places, at particular times, and in particular cultures. They might share a few universal characteristics but physical activities cannot be divorced from their social and cultural locations. This course surveys the connecting points between physical activities and socio-cultural dynamics.

**KINES 180 Introduction to Kinesiology (3)** The foundation course of the Kinesiology degree, providing an interdisciplinary approach to the study of movement through problem based learning.

**KINES 180 Introduction to Kinesiology (3)**
Kinesiology 180 is the foundational course of the Kinesiology degree, and aims to stimulate student's interest and value in the scholarly inquiry of human movement. Students will be introduced to the problems, and methods used to solve them, that are the domain of Kinesiology. The relevance of the study of human movement to different areas of professional practice will be emphasized, along with guidance on multiple possible career paths for Kinesiology undergraduate students (e.g. athletic training, ergonomics, fitness and wellness industry, medicine, occupational therapy, physical therapy, and teaching). To begin with, students will be introduced to the Kinesiology sub-disciplines: biomechanics, motor control, physiology, and psychology. Students will gain experience in different methods of inquiry through active learning, including laboratory-based activities that stress practical application of knowledge. During the later part of the course the sub-disciplines will be integrated in an interdisciplinary approach through student collaboration in solving authentic "real world" problems. Evaluation will include laboratory activities, Readiness Assessments Tests, and/or mid-term and final examination will be administered based on instructor discretion. The Department is planning to offer two sections every fall and spring semesters with an anticipated enrollment of 75 students per section. A technology room will be required. A technology room request form is attached.

The Pennsylvania State University
KINES 200 Muscle Training: Physiology, Programs, Techniques (3) Physiological basis of strength training emphasizing mechanisms of muscle contraction and growth, program and facility design, and individual exercise technique.

This course focuses on the concepts and applications of strength exercise science including relevant testing and evaluation of strength protocols. It explores the organization and administration of resistance training and conditioning facilities including the development of resistance training programs. The course also introduces students to exercise techniques. As a result of this course students will be able to work collaborative with others. They should be able to evaluate information for authority, relevance, currency and accuracy. They will understand the biomechanics of strength training, the physiological adaptations to muscle training and the mechanisms of change with varying populations. In addition they should be able to select and organize appropriate muscle testing protocols. They should be able to teach and demonstrate appropriate strength exercises to an individual or group as well as be able to identify and correct errors an individual might make. They should be able to prescribe the proper exercise and exercise sequence to strengthen a specific muscle or muscle group. And they should be able to design and organize a strength training facility. Knowledge and skills will be assessed by written tests, by laboratory work and by a variety of group projects and term papers. This course is linked to other courses in that it is the course in which students gain knowledge and experience in designing and prescribing resistance training exercises for individuals and groups. As such it contributes core content to the curriculum. The course requires a resistance training room with adequate equipment and computers, both available to students at both locations of the College.

KINES 201 Cardiorespiratory Training for Health and Performance (3) Exploration of the principles and practical applications of cardiorespiratory training for health and performance enhancement.

KINES 201 prepares students in understanding the process of developing a cardiorespiratory exercise prescription program. Exercise programming is scripted on an individual basis according to goals, national guidelines, age, interests, available time, and commitment. The benefits of physical activity are becoming increasingly documented. However, physical activity is not without risks. The proper cardiorespiratory exercise prescription is important to the safe participation for a wide range of populations. Students will be able to determine the differences between activity, fitness, and sport performance and be cognizant of the various components and modes of cardiorespiratory activity. Students will understand the different models of cardiorespiratory exercise prescription for health, fitness, and sport performance. Applying this knowledge, students will experience practical applications of cardiorespiratory exercise prescription on various training modalities applied to a wide range of settings. Homework assessments, laboratory activities and/or mid-term and final exams based on the discretion of the course instructor will reflect the pedagogical and practical application of cardiorespiratory exercise prescription concepts.

The Department is planning to offer one section every year with an anticipated enrollment of 25 students per section.

KINES 203 Medical Terminology for Allied Health Professionals (3) Comprehensive review of terms related to functions,
disorders, diagnosis, and treatment of body systems related to physical activity and movement.

**KINES 203 Medical Terminology for Allied Health Professionals (3)**

This course is designed for students who wish to enter an allied health field related to physical activity and human movement. This course will help students prepare for careers in physical therapy (PT), occupational therapy (OT), medicine (MD, DO), physician assistant (PA-C), pharmacy (R.Ph), dietary medicine (RD) and emergency care (EMT, EMT-P). Some of the allied health programs listed above requires a 3 credit course in medical terminology prior to admission into graduate school and this course fulfills that requirement.

The goal of this course is to help students develop an understanding of medical terminology related to physical activity and human movement used when dealing with the anatomy and physiology of the systems of the body, disease processes associated with each system, and pharmacology and clinical treatments associated with the pathology of the body systems. Students will appreciate the weights and measures, chemical symbols, diagnoses, procedures, and medical documentation used in allied health fields, especially in sports and human movement medicine.

**KINES 231 Athletic Training Clinical Practice I (3)**

Preparation in basic psychomotor skills required in the clinical practice of athletic training. This is a laboratory fee based course.

This course is designed to introduce students to basic skills required for the clinical practice of athletic training. The course will teach introductory content and skills related to injury and illness prevention and management. Specific topics include preventing environmental injuries and illnesses, taping and wrapping techniques, protective equipment, preparticipation physical examinations, preparing for emergencies in the athletic setting, and concepts of basic athletic injury management. The course will meet for one hour of lecture and two hours of lab each week. Assessments will include written and practical examinations, homework assignments, and demonstration of practical skills specific to the clinical proficiencies required to sit for the NATABOC exam (must be administered by an NATABOC approved clinical instructor per accreditation guidelines).

**KINES 232 Athletic Training Clinical Practice II (3)**

Preparation in advanced psychomotor skills required in the clinical practice of athletic training. This is a laboratory fee based course.

Athletic Training Clinical Practice II provides instruction in supervised practice of the basic skills required in the practice of athletic training. Topics include documentation of medical records, postural screening, assessment and improvement of flexibility, assessment, and improvement of strength, use of functional rehabilitation protocols, use of common therapeutic modalities, and description of the use of medications in sports medicine. Assessments will include written and practical examinations, homework assignments, and demonstration of practical skills specific to the clinical proficiencies required to sit for the NATABOC exam (must be administered by an NATABOC approved clinical instructor per accreditation guidelines). Students will also complete four-10-hour observations with senior athletic training students. This course provides the student with the opportunity to learn and practice clinical athletic training skills before beginning practicum experiences. The course will meet for 2-hours of lecture and 2-hours of lab each week.

KINES 261 Educational Gymnastics (1)

Provides an introduction to developmentally appropriate gymnastics for K-12 students.
This course is designed for physical education teacher candidates as an introduction to educational gymnastics. Educational gymnastics are developmentally appropriate and recognize differences in student abilities and levels of physical fitness. The course introduces students to the educational philosophy of this approach and contrasts it with Olympic gymnastics. After a review of safety and liability issues related to gymnastics, the majority of the course is devoted to learning to teach the content of educational gymnastics organized into the skill themes of traveling, jumping and landing, balancing, transferring weight and rolling. Teacher candidates are taught to develop gymnastics sequences and to guide students in developing their own gymnastics sequences. The course concludes with techniques for developing rubrics to assess student progress in educational gymnastics.

The course will be offered fall and spring semesters with an anticipated enrollment of up to 25 students. Evaluation includes a paper and poster, quizzes, written rubrics for assessment, and participation.

KINES 266 Adventure/Outdoor Recreational Activities (1) Introduction to adventure/outdoor recreational activities teaching and assessment strategies for K-12 and community groups.
KINES 266 Adventure/Outdoor Recreational Activities (1)

This course is designed to introduce the student to adventure activities for use with diverse populations within educational settings and recreational programming. Applied psychological theory along with effective educational practices will be woven into the adventure activities, skills and risk management needed to design and deliver quality, adventure based activities. An introduction to high-level adventure activities including climbing, high ropes, canoeing, and other selected activities will be included with a critical eye towards the use of this activity to create physically and emotionally safe environments that allow for transformational growth and learning.

KINES 303 (GHA) Emergency Care - First Aid/Safety/AED (3) Develop skills for First Responder Certification in CPR/AED, First Aid and Safety by American Red Cross or National Safety Council.

KINES 303 Emergency Care - First Aid/Safety/AED (3) (GHA)
KINES 303 is designed to provide students with the opportunity to acquire and develop the skills and competencies needed for First Responder Certification in CPR/AED, First Aid and Safety from the American Red Cross and/or National Safety Council. Students will understand the role of the Emergency Medical System (EMS) in a complex society and the importance of emergency care in our health care system. KINES 303 will foster the student's critical thinking skills and their ability to assess and evaluate life threatening and disabling injuries and illnesses and to respond with appropriate care and life saving action steps in variety of medical emergencies. Students will develop an understanding of the importance of emergency care, first aid and safety at all levels of society with emphasis on providing and improving the quality of emergency care practices in a wide variety of community organizations, occupations and professions including childcare, education, human services, geriatric care and disaster management. KINES 303 is taught through a variety of teaching methods. Students are prepared for proficiency through readings, classroom discussion, video presentation, practical skills, sudden illness and injury scenarios, group presentations and direct observation of EMS (Ride-Alongs). The course is practice-focused on developing the skills and competencies necessary for emergency scene management, CPR/AED and sudden illness and injury. Various evaluation techniques will be used to assess the students progress in KINES 303. These techniques shall include but not be limited to conventional objective testing, practical skill tests, sudden illness and injury scenarios, group presentation and written observation papers. Students who have already received credit for NURS 203 and/or KINES 233 may not enroll in this course due to duplication of material.
KINES 304 First Aid: Instructors (1) Competencies leading to certification for teaching American Red Cross Advanced First Aid and Emergency Care and American Heart Association Cardiopulmonary Resuscitation. Laboratory.

First Aid: Instructors (1)

KINES 321 Psychology of Movement Behavior (3) Basic concepts and application of psychological knowledge for organized sport, physical activity, and athletic training.

Psychology of Movement Behavior is designed to introduce students to the basic concepts and applications of psychological knowledge for organized sport, athletic training, and physical activity. The course content is divided into the following four categories. The first section includes an introduction to sport and exercise psychology and sport and exercise participants. The topics covered in this section are the history of sport and exercise psychology, sport and exercise psychology consultants' responsibilities (i.e., research, teaching, and service), and understanding sport and exercise participants' personality traits and motivation for participation. The second section contains topics for understanding of sport and exercise environments including an overview of competition, group dynamics, and the principles of feedback and reinforcement. The third section is dedicated to enhancing sport and exercise performance, and the topics discussed are related to psychological skills training and application (e.g., goal setting, imagery, and relaxation training). The fourth section focuses on enhancing sport and exercise participants' health and well-being. The topics covered in this portion of the class include an understanding addictive behaviors (e.g., exercise dependence, eating disorders, and substance dependence), body image, injury rehabilitation, and exercise initiation, maintenance, and adherence. The general objective of this course is to familiarize the student with the science and practice of sport and exercise psychology from both a theoretical and applied perspective. To achieve this objective, the student will: (a) develop an understanding of how various psychological factors influence athletic performance, physical activity participation, and overall health and well-being; (b) learn the methods used by athletes and exercisers of various skill levels to achieve peak performance; (c) understand the scientific and theoretical background of sport and exercise participation; and (d) comprehend how psychological skills are applied to sport and exercise environments to enhance peak performance and quality of life, and recognize the ethical principles of applying these psychological skills.

KINES 334 Mechanisms and Evaluation of Lower Body Athletic Injuries (3) Etiology of athletic injuries with scientific and practical rationales for evaluation of injuries to the lower extremity and lumbosacral spine.

This course will focus on: 1) the etiology of athletic injuries to the lower extremity and lumbosacral spine, and 2) evaluation techniques for assessing athletic injuries to the lower extremity and lumbosacral spine. The objectives of this course include: understanding the mechanisms of athletic injuries to the lower body; demonstrating proficiency in the objective and subjective assessment procedures of lower body athletic injuries; recognizing orthopedic, neurovascular, and medical emergencies associated with lower body athletic injuries; recognizing the normal and abnormal mechanics of the lumbosacral spine and lower extremity including the walking and running gait cycles; and integration of injury mechanisms into the treatment and rehabilitation plan of care for the injured athlete. This course includes lectures as well as hands-on laboratory sessions.

Assessment is based on student performance on written examinations, practical examinations, and written assignments. This course is required for students completing the athletic training option within the Kinesiology major. It is designed to be taken concurrently with either KINES 395F or 395G. The course is offered every spring semester.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
KINES 335 Mechanisms and Evaluation of Upper Body Athletic Injuries (3) Etiology of athletic injuries with scientific and practical rationales for evaluation of injuries to upper extremity, neck, head, and trunk.

This course will focus on: 1) the etiology of athletic injuries to the upper extremity, head, cervical spine, thorax, abdomen, and abdomen, and 2) evaluation techniques for assessing athletic injuries to the upper extremity, head, cervical spine, thorax, and abdomen. The objectives of this course include: understanding the mechanisms of athletic injuries to the upper body; demonstrating proficiency in the objective and subjective assessment procedures of upper body athletic injuries; recognizing orthopedic, neurovascular, and medical emergencies associated with upper body athletic injuries; recognizing the normal and abnormal mechanics of the cervical spine and upper extremity including the overhead throwing motion; and integration of injury mechanisms into the treatment and rehabilitation plan of care for the injured athlete. This course includes lectures as well as hands-on laboratory sessions.

Assessment is based on student performance on written examinations, practical examinations, and written assignments. A literature review paper detailing the pathoetiology of a specific athletic injury is required. This course is required for students completing the athletic training option within the Kinesiology major. It is designed to be taken concurrently with either KINES 395F or 395G. The course is offered every fall semester.

KINES 336 Medical Aspects of Athletic Training (3) Pathology, assessment, and treatment (including pharmacology) of general medical conditions commonly seen in physically active populations.

This course is designed to instruct students in general medicine content and skills related to the clinical practice of athletic training. Specific topics include pathology; pharmacology; physical examination of head, ears, eyes, nose, throat, pulmonary, cardiovascular, gastrointestinal, renal, genitourinary, and dermatological conditions commonly seen in athletes; exertional heat illness; diabetes and exercise; female athlete triad; injuries in athletes with physical disabilities; and psychosocial aspects of patient-provider relationships. Several lectures will be made by physicians who specialize in sports medicine. Lab activities will include the instruction, practice, and assessment of psychomotor skills related to the course content. The course will meet for three hours per week and will include a balance of both lecture and laboratory activities. Student assessment will include written and practical examinations, homework assignments, and demonstration of practical skills specific to the clinical proficiencies required to sit for the NATABOC exam (must be administered by an NATABOC approved clinical instructor per accreditation guidelines).

KINES 341 (US;IL) The Historical, Cultural, and Social Dynamics of Sport (3) Connections between sport and broader historical, cultural, political, intellectual, and economic contexts.

The Historical, Cultural, and Social Dynamics of Sport (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2016
Prerequisite: KINES 100 orKINES 141

Note: Students must have a C or better in:KINES 100 orKINES 141
KINES 345 Meaning, Ethics, and Movement (3) Development of philosophic reasoning skills to better understand the values of physical activity and ethics in a variety of performance settings.

KINES 345 Meaning, Ethics, and Movement (3)

The course focuses on the development of philosophic reasoning skills to better understand the values and ethics of physical activity in a variety of professional settings. Emphasis is placed on the practicality of good philosophy, on applying philosophic insights to the health and physical activity workplace. The course shows how philosophic commitments are unavoidable and thus, why it is better to formally consider these commitments and evaluate their worth than adopt professional standards and behaviors without critical reflection.

Specific course content emphasizes a number of learning outcomes. The first objectives are related to clarifying the nature of the philosophy of physical activity and relationships between the philosophy and science of human movement. The field of philosophy is described including the areas of metaphysics, epistemology, axiology, ethics and aesthetics. A variety of philosophic methodologies are identified and practiced including inductive, deductive and descriptive reasoning. Emphasis is placed on the varying degrees of confidence placed on the trustworthiness of philosophic methods and the validity of its conclusions. Students take a “philosophic readiness inventory” to determine their own philosophic tendencies and interests. Once the philosophy of physical activity is better understood, its methods and products are compared to the methods and outcomes of science. The course emphasizes a potential complementary relationship between the two where neither one is sufficient.

A major portion of the class is devoted to three rival interpretations of personhood that have significant implications for professional practice. Students review the strengths and weaknesses of dualism, materialism, and holism and see their impact on biomedical ethics, motivational strategies, professional-client relationships, and other facets of health and physical activity professions. The undergirding logic here is that practitioners must first understand what a person is before they can best determine how to intervene or otherwise provide services to them. Attention is also directed to the subject matter of Kinesiology—namely, skilled movement in general and physical abilities in work, exercise, sport, dance, games, and play more specifically. The nature and values of these different ways of moving are analyzed in terms of their ability to serve as “tools” (means to other ends) and “jewels” (ends in themselves). Issues of motivation, efficacy, safety, and other factors are analyzed in an attempt to determine whether a play-and-enjoyment or a work-and-duty philosophy should be emphasized in various professional settings. Quantity and quality of life are juxtaposed to show their interdependence and the variable roles they play in affecting allied medical, coaching, teaching, fitness, recreation, and other movement-related professions. Finally, the course addresses common ethical problems faced by athletes, as well as physical activity and health professionals.

KINES 350 Exercise Physiology (3) Structure and function of the human body as applied to health, wellness, exercise, and sports.

KINES 350 Exercise Physiology (3)

Exercise Physiology is a mid- to upper division course that will appeal to students with an interest in human biological adaptation. The course has two primary goals: First, students develop an understanding of the physiological adaptations that occur during and after endurance and resistance exercise. Second, students improve their comprehension of the differences between the acute exercise response and the changes that occur with chronic physical activity (exercise training). A major emphasis is placed on physiological systems as they relate to physical activity, exercise and health, and environmental stress; including, but not limited to, cardiovascular, respiratory, musculoskeletal, renal, neural, and metabolic. These systems are considered singly and in combination with regard to both exercise intensity and exercise duration. The depth of inquiry can range from molecular to organismal (whole-body). In addition, the mechanisms underlying the preventive and protective effects of exercise on human health and performance are discussed. The ability to apply concepts and principles of physiology to situations involving exercise, exercise training and decreased physical activity are highlighted, improving students’ abilities to develop and differentiate between paradigms that utilize exercise to improve athletic performance and those that utilize physical activity to promote health. Special topics of applied study may include aging; development; gender; body composition; disease and environmental extremes such as heat, cold, diving and altitude.

Students are required to demonstrate via assessment, knowledge and understanding of the acute physiological response to exercise and physiological adaptations to programs of chronic resistance and endurance exercise. Quantitative and analytical skills are emphasized, especially as they pertain to exercise testing and exercise program evaluation. The ability to interpret scientific data as they pertain to exercise physiology is required. Background knowledge in biology, chemistry, physics, and exercise science represent the knowledge base from which the class is built and contributes to the mastery of concepts presented. This course is required for Athletic Training and Kinesiology majors.
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 356 Activity and Disease (3)** Examination of hypokinetic disease on human wellness involving identification, assessment, research, and exercise design of human activity for disease prevention.

**KINES 356 Activity and Disease (3)**

Content in this course defines what physical activity, fitness, and lifestyle are. It covers the methodological and measurement assessment of physical activity and disease as well as exploring the relationships between physical activity and specific physical diseases, and between physical activity and various disorders of the mind. After this course students will be able to design and implement an exercise program to prevent or combat the effects of a specific disease on an individual. They will understand and be able to persuasively inform clients to the dangers of a sedentary lifestyle. They will know the strategies necessary to motivate and modify individual behavior so that it results in a more healthy lifestyle. And they will be able to design epidemiological research protocols to study the relationship between a specific disease and activity. Knowledge will be assessed by written evaluations, through the use of case studies in the case of exercise prescription skills, and through presentation of high quality group projects. This course will complement other courses in this curriculum but will be the only course devoted to a thorough investigation of the relationship between inactivity and various disease states. No special facilities are needed for the course which is anticipated to enroll between 15 and 25 students. It will be offered annually.

Material in this course and experience in the lab cover the conceptions and applications of strength exercise science. It also addresses testing and evaluation of strength protocols including selecting appropriate tests, organizing testing procedures, and individual testing protocols and procedures. Students will be introduced to material which overviews the organization and administration of resistance training and conditioning facilities. They will also learn the design principles of resistance training programs as well as exercise techniques. After this course, students will understand the biomechanics of strength training, the physiological adaptation to muscle training, and the mechanisms of change with varying populations. They will be able to select and organize appropriate muscle testing protocol. They will be able to teach and demonstrate appropriate strength training exercises to individuals and groups, including being able to identify and correct errors.

**KINES 358 Ergogenic Aids (1)** Skills development including research identification and evaluation of work-enhancing methods and devices as related to human performance and wellness.

**KINES 358 Ergogenic Aids (1)**

In this course students will learn about the research identification and evaluation of work-enhancing methods and devices as they relate to human performance and wellness. The course will overview historical and ethical issues associated with the use of ergogenic aids, as well as the mechanisms that delineate how they affect body systems. Ergogenic aids will be classified as hormonal, pharmacological, psychological, physiological, mechanical and nutritional. In the course students will also look at various restorative and accelerate healing agents. As a consequence of this course students, will be able to identify specific ergogenic aids, their actions, their legality, advantages, disadvantages, and safety concerns. Students will also understand the research issues involved with ergogenic aids, as well as developing a philosophy for dealing with clients who approach them interested in these kinds of enhancements. Student learning will be evaluated by exams, by the preparation of a mock experiment, and by various written assignments. This course will take an in-depth look at an important area reviewed only superficially in other courses. Because of the topic's relevance to work in this field, this course gives students knowledge necessary to function effectively as a professional. No special facilities are needed to teach the course and it will be offered annually to approximately 15-25 students.

**KINES 360 The Neurobiology of Motor Control and Development (3)** The neurobiological foundations of human movement, with an emphasis on applications in rehabilitation and athletics.

The Pennsylvania State University
KINES 360 The Neurobiology of Motor Control and Development (3)

This 3 credit lecture course provides a rigorous presentation of the neuroscientific foundations of human movement control and coordination. This course introduces students to the cellular basis of neurophysiology, while emphasizing the contributions of both sensory and motor systems to motor control, coordination, and development. The course provides an in-depth presentation of systems neuroscience, with a special emphasis on the spinal, brainstem, and cortical contributions to movement. The course introduces the physiology and functional anatomy of the major sensory systems, motor systems, and sensorimotor integration networks, of the spinal cord, brainstem, and hemispheric structures in the central nervous system. The course includes spinal circuitry underlying reflexes and central pattern generators, basal ganglia organization and functional networks, cerebellar organization and functional networks, primary, secondary, and tertiary cortical areas associated with sensory and motor functions, neural tracts associated with ascending and descending sensory and motor systems, and cortical-subcortical loops. Students are introduced to dysfunction in these systems from both disease and traumatic processes, due to development disabilities such as cerebral palsy, degenerative processes including Parkinson’s Disease, vascular disease including stroke, as well as traumatic brain injury. The overall objective of this course is to prepare Kinesiology students with a foundational level preparation in neuroscience, as required for understanding control of human movement, motor coordination, motor development and dysfunctions in these processes. This course forms one of four 300-level core courses that provide the basic science foundations that underlie the study of human movement, including exercise physiology, biomechanics, and the psychology of movement behavior. Neuroscience represents the fourth foundational discipline that contributes to human movement science. This course is presented from a hierarchical perspective, that introduces the cellular basis of neural communication, as well as cortical, brainstem, and spinal systems that underlie sensorimotor functions. It provides a thorough introduction to the central nervous system, focusing on a systems level approach to sensory and motor physiology and its impact on motor control and coordination, as well as both developmental, degenerative, and traumatic disorders in these processes. Considerations of applications of the material to the fields of athletics and rehabilitation medicine are often provided.

KINES 362 Teaching Individual Activities (1.5) This course introduces teacher candidates to the spectrum of individual activities being taught in the K-12 school setting.

KINES 362 Teaching Individual Activities (1.5)

Teaching Individual Activities introduces the future physical educator to the spectrum of individual activities being taught in the school setting. As a result of taking this course, the students will be able to:

a) Find and use references and resources from the World Wide Web and other sources specific to an individual sport/physical activity.
b) To create a professional handbook specific to the individual activity in which they choose to become an expert.
c) To organize and conduct an introductory clinic that provides a thorough and enjoyable overview of an individual sport/physical activity that they have chosen.
d) To select, organize, and sequence skills from simple to complex for the individual sport/physical activity that they have chosen.
e) To select and create mini-games or activities that will assist K-12 students with the skills of their chosen individual sport/physical activity.

This course is taken in conjunction with Teaching Group Activities and KINES 366. The students are required to teach two 50-minute clinics of their classmates. The students will demonstrate competency in basic motor skills and physical activities, content knowledge, and disciplinary concepts during their participation in the clinics. Students will teach the clinics using appropriate instructional cues and prompts for basic motor skills and physical activity. The students will identify, select, and implement appropriate learning/practice opportunities based on expected progressions and related to ranges of individual variations and levels of readiness, while teaching their clinics. The students will demonstrate an understanding of group and individual motivation and behavior by creating a safe and positive learning environment. The clinics can be any individual activity that they choose, within established boundaries. Examples of clinics: Canoeing, Fly Fishing, Golf, Tennis, Pilates, Diving, Bowling, and Badminton. Evaluation of the course is based on: Clinic Presentation, Clinic Handbook, Participation, Final Notebook, and Electronic Portfolio. The course is offered Fall and Spring semesters with a maximum enrollment of 25.

KINES 366 The Process of Teaching Physical Education (3)
Analysis of pedagogical skills and methods applied to K-12 physical education.

KINES 366 The Process of Teaching Physical Education (3)
The purpose of this course is to introduce teacher candidates to the pedagogical processes used in teaching K-12 physical education. Physical education instruction techniques related to classroom management, creating effective learning environments, analysis of motor skills, providing effective feedback, content development, creating active learning experiences and systematic analysis of effective instruction comprise the foundation of this class. These pedagogical skills will be practiced and analyzed throughout the semester. Specifically, students will be required to demonstrate the ability to use, analyze and critique these techniques in micro-teaching situations with their peers. The primary focus of the class is to develop a repertoire of effective teaching skills based upon research of teacher effectiveness that enables teacher candidates to become reflective physical educators with the ability to deliver, analyze and modify their teaching to provide developmentally appropriate instruction for elementary, middle and high school students. The content of this course also addresses the physical education teaching standards developed by the National Association for Sport and Physical Education (NASPE), the national accrediting body for physical education teacher education programs that works in conjunction with the National Council for Accreditation of Teacher Education (NCATE) to certify physical education teacher education programs throughout the United States.

Assessment of student performance in the course includes:
1. Participation in laboratory experiences (10%)
2. Performance on knowledge tests (35%)
3. The ability to correctly and effectively demonstrate a repertoire of pedagogical skills in simulated teaching situations (35%)
4. Teaching reflections based on class teaching experiences and analyses and observations of teaching (20%)

KINES 384 Biomechanics (3) Basic mechanical knowledge required to understand human movement.

KINES 384 Biomechanics (3)

Biomechanics examines biological phenomena from a mechanical perspective; this class examines predominantly human movement from this perspective. The class aims to introduce students to the mechanical principles that underpin biomechanics, and to the measurement procedures used in biomechanics. Students will examine these principles for a variety of activities including; walking, running, jumping, quiet standing, throwing, striking, and reaching. Laboratory activities emphasize the qualitative and quantitative analysis of human movement. These sessions require students to work effectively in groups to collect data, and then work independently to analyze and interpret their data. Students use Newton's laws, basic algebra and trigonometry in the analysis of their data, and produce reports about these laboratory activities.

The lectures provide the framework for all class activities. They aim to link the student's knowledge of anatomy with mechanics to provide an understanding of how movement is produced in both health and disease. The lectures provide information about the history, scope, and impact of biomechanics. Students are introduced to the pertinent kinematic variables required for the analysis of human movement. Newton's laws are used to understand both linear and angular human motion. Basic principles from aerodynamics are introduced as they may apply to man and the implements he or she may use. The examination of aerodynamic factors is augmented by examining the mechanics of balls spinning, and bouncing. Approaches for the determination of the inertial properties of human body segments are examined in detail, with a view to understanding the strengths and weaknesses of the various approaches. The theory, methodology, and protocols for image-based motion analysis are introduced as common methodology used in biomechanics. The principles behind force measurement are presented, using force plates as the core example. Students are taught the basics of the interpretation of ground reactions forces, using the impulse-momentum relationship. Contractile muscle mechanics are studied to under the influences of muscle fiber activation, length, and velocity on the production of force are presented. The mechanical properties of tendon are presented (stress-strain relationship), and its role in human movement. Potential and kinetic energy are introduced, along with the concept of energy storage and its application in the analysis of human movement examined. The principles governing modeling are introduced, and approaches for modeling human movement are established and then used to understand the coordination of human movement.

The Pennsylvania State University
KINES 395F Practicum in Athletic Training (3) Practical experience in the athletic training room and with selected sports activities under direct supervision of the medical staff.

KINES 395F Practicum in Athletic Training (3)

This course is designed to give students practical experiences in a variety of clinical settings in which certified athletic trainers are commonly employed. Students will accumulate approximately 100-150 clinical hours learning under the supervision of certified athletic trainers in a variety of clinical settings. These settings include but are not limited to: intramural sports, club sports, outpatient sports medicine clinics, high schools, and intercollegiate athletic training rooms. In addition to clinical experiences there is also a didactic portion of this course which emphasizes students gaining proficiency in important clinical skills. There are also weekly written assignments. The objectives of this course include demonstrating proficiency in: the evaluation of an unconscious athlete; the recognition of cerebral concussion and closed head injury; the recognition of acute injury to the cervical spine; the recognition of fractures and dislocations; the assessment of neurovascular function; the recognition, treatment, and prevention of heat illnesses including heat cramps, heat exhaustion, and heat stroke; the use of splints, stretchers and spine boards in the management of injured athletes; the application of taping and wrapping techniques commonly used in the prevention and management of common athletic injuries; and in obtaining a medical history.

Assessment is based on student performance on written examinations, practical examinations, written assignments, and performance in students’ clinical rotations. This course is required for students completing the athletic training option within the Kinesiology major. It is a prerequisite for more advanced athletic training practicums (KINES 395G, 395I, 495F) and it should be taken concurrently with KINES 334 or 335. It is designed to be taken the first semester following admittance to the athletic training option. This course is offered every fall and spring semester.

KINES 395G Practicum in Athletic Training (3) Practical experience in the athletic training room and with selected sports activities under direct supervision of the medical staff.

KINES 395G Practicum in Athletic Training (3)

This course is designed to provide students didactic and practical clinical experiences in a variety of practice settings in which certified athletic trainers are commonly employed. This is the second clinical assignment after a student is admitted to the Athletic Training option within the Kinesiology major. Students will complete a minimum of 200-250 clock hours under the supervision of a certified athletic trainer in a variety of clinical settings. These settings include but are not limited to: outpatient sports medicine clinics, interscholastic athletic settings, and intercollegiate athletic settings. The objectives of this course include demonstrating proficiency in: assisting lower level students in developing athletic training skills and mastering level-appropriate competencies; demonstrate proficiency in evaluation and documentation of common athletic injuries; assist in the development and documentation of a plan of care for common athletic injuries; demonstrate proficiency in the development and documentation of clinical progression through a plan of care; participate in the application of therapeutic modalities and therapeutic exercise under the supervision of a certified athletic trainer.

In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date and as required by the program option up to the current semester. This practicum has a prerequisite requirement of KINES 395F and is a prerequisite for the subsequent athletic training practicum, KINES 395I. Assessment is based on student performance written examinations, practical examinations, written assignments, and performance assessments by supervising athletic trainer(s). The course is designed to be taken the second semester following admittance to the athletic training option. It is offered every fall and spring semester with an enrollment of 15-20 students.

KINES 400 Adapted Physical Education (3) Basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments.

KINES 400 Adapted Physical Education (3)
This is an undergraduate level course teaching students the basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments. This course will help the student to become more aware of the physical needs of children with disabilities and of the possibilities to professionally deal with these needs. The course requires the student to complete a 10-hour practicum, providing the opportunity to work with children with a disability. The practicum will be conducted in cooperation with physical education staff members working with various schools in State College. The children's difficulties may range from emotional problems to severe physical and mental handicaps. Students are free to identify alternative practicum sites (e.g., work with a friend or family member with a disability). The requirements for the practicum may include: select a child who has a physical, sensory, or intellectual disability; write an Individualized Education Program (IEP) using the guidelines presented in the textbook; implement the IEP in a two-on-one teaching situation (two students, one child); keep a log of all the practice sessions; after completing the 10-hour practicum, write a final report based on the IEP, this final report should state the definition of the problem.
the etiology, the general characteristics, the teaching techniques specific to the disability, an evaluation of the actual teaching strategies and an evaluation of the outcome of the practice (did it work?); and, present the findings orally (10-15 minute talk).

The student will generally be evaluated by exam, teaching activity, an oral presentation, and a final report.

Theoretical and practical aspects of emergency medical techniques as applied in the pre-hospital environment.

**Emergency Medical Technology (4)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 1998
Prerequisite: KINES 303 and/or current advanced first aid and cardiopulmonary resuscitation certification

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 404 Emergency Medical Technology Instructor (2)**
Educational concepts and skills necessary to present instruction in emergency care; lesson planning, methods of instruction, and evaluation techniques.

**Emergency Medical Technology Instructor (2)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1997
Prerequisite: KINES 403 with current Pennsylvania Emergency Medical Technician certification

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 410 Physical Growth and Motor Development (3)**
Study of biologically programmed growth processes and environmental influences leading to attained adult form and biomechanical function.

**Physical Growth and Motor Development (3)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2013
Prerequisite: KINES 180

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 411 Introduction to Musculoskeletal Injury and Rehabilitation (3)**
This course is designed to provide an overview of common musculoskeletal injuries and rehabilitation for pre-allied health and fitness professionals.

**KINES 411 Introduction to Musculoskeletal Injury and Rehabilitation (3)**

This course is designed to provide an overview of basic orthopaedic injuries and related musculoskeletal system dysfunctions as well as rehabilitation of those injuries and dysfunctions. Common orthopaedic injuries of all major musculoskeletal structures and tissues are discussed moving up the kinetic chain from the feet up the lower extremities, through the spine and out the upper extremities to the hands. Common injuries such as sprains, strains, fractures,
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 420 Psychosocial Dimensions of Physical Activity (3)**
Discussion of theoretical and empirical findings, structuring a frame of reference for exploring man's involvement in physical activity.

**Psychosocial Dimensions of Physical Activity (3)**

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: KINES 321 or 3 credits in psychology or sociology

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 421 Exercise Psychology (3)**
Psychological antecedents and consequences of physical activity behaviors.

**Exercise Psychology (3)**
Exercise Psychology is designed to introduce students to the psychological antecedents and consequences of exercise behaviors. The antecedents of exercise behaviors are the psychosocial and cognitive factors (e.g., beliefs, attitudes, personality traits) that facilitate and/or inhibit exercise behaviors. The consequences of exercise behavior are the physical, psychosocial, and cognitive outcomes (e.g., self-efficacy, body image, mental health) of exercise participation. The antecedents and consequences of exercise behaviors will be presented within the context of contemporary conceptual and theoretical models in exercise psychology. This course is designed to provide students with an overview and foundation of the important psychosocial phenomena related to these antecedents and consequences of exercise behaviors. Students will have the opportunity to apply their knowledge in selected areas within exercise psychology through class discussions and assignments.

**KINES 422 Physical Activity Interventions (3)**
Principles of designing, planning, and implementing theory- and evidence-based physical activity interventions.

**Physical Activity Interventions (3)**
This course is designed to acquaint undergraduate students with the application of major theories and models used to design and guide the development of contemporary physical activity interventions. Students will be familiarized with...
empirically-supported principles of behavior change and will gain an understanding of the basic strategies and methods used in designing, planning, implementation, and evaluation of physical activity interventions. The course will cover a variety of approaches to physical activity promotion, ranging from clinical and community-based interventions to population-based approaches, while discussing practical strategies and concrete examples of contemporary, evidence-based physical activity interventions. The goal of the course is for students to demonstrate the ability to formulate well-conceived physical activity interventions across a variety of settings and participant populations and learn how to apply theoretical principles and research findings to intervention development.

KINES 423 Psychology of Sports Injuries (3) Psychological causes and consequences of sports related injuries in athletes.

Using lectures/whole class discussion formats, this course is intended to provide the students with the basic knowledge regarding psychological causes and consequences of sport-related injuries, including concussions. Specific course objectives include: (1) developing the proficiency in initiating interviews and observations of athletes suffering from sport-related injuries; (2) assessing psychological impact of injury on athletes; (3) developing critical-thinking skills related to the probability of developing of psychological trauma in athletes with injuries; (4) developing specific skills of psychological assessment of injured athletes; (5) stimulating thinking about temporary research questions as related to psychology of injury. Evaluation will be based on active engagement in class discussions and administration of quizzes and written examinations according to course syllabus. This class extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

KINES 424 Women and Sport (3) An interdisciplinary approach to contemporary issues related to women and sport from historical, physiological, psychological, and sociological perspectives.

Women and Sport (3)

KINES 425W Physical Activity in Diverse Populations (3) An examination of the social, cultural, political, and environmental influences on health and physical activity promotion among diverse populations.

Physical Activity in Diverse Populations (3)

KINES 426 Physical Activity and Public Health (3) Examines the role of physical activity in public health. Includes population level strategies for promoting physical activity in communities.

Physical Activity and Public Health (3)
national policies related to physical activity will be discussed in detail. Students will debate the scientific foundation for current issues in the field, including fitness vs. fatness as a predictor of health outcomes and comparing behavior vs. objectively measured variables. The role of physical activity in preventing cardiovascular disease, type 2 diabetes, obesity, and cancer, colon and prostate cancer will be discussed. We will focus on large scale epidemiologic studies that highlight prevention.

The second half of the class will focus on a social ecological framework for promoting physical activity and will address population level approaches through policy and environmental strategies, following the Centers for Disease Control and Prevention Task Force for Community Preventive Services guidelines. We will study how features of the built environment can encourage or discourage walking and biking and refer to current research in the field that examines these relationships in different populations (urban/rural, youth/older adults). We will learn about the challenges associated with assessment and measurement at a population level. Policy level approaches to physical activity promotion; including local, state and national; will also be discussed. We will discuss various community level approaches including: point-of-decision prompts, mass media campaigns, enhancing access to physical activity opportunities and other strategies outlined in the guidelines. Lastly, we will examine how physical activity promotion is addressed in other countries through community, policy and environmental strategies in Canada, Australia, Brazil and throughout Europe.

General Education: None

Bachelor of Arts: None
Effective: Summer 2014
Prerequisite: KINES 321

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 427 (HD FS 427) Developmental Sport & Exercise Psychology (3) Developmental changes in the antecedents and consequences of physical activity across the lifespan.

KINES (HD FS) 427 Developmental Sport & Exercise Psychology (3)
Change is constant with physical activity - our reasons for being active change across the lifespan and our experiences with physical activity change how we view ourselves and others around us. Developmental Sport & Exercise Psychology focuses on developmental changes in the psychosocial antecedents and consequences of physical activity across the lifespan. Specific course objectives include (1) describing theoretical frameworks and methods used to study physical activity-related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, (3) explaining how contextual factors influence developmental processes associated with physical activity, (4) identifying age-related differences in activity-related antecedents and consequences of physical activity, and (5) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students' engagement in the class. It extends but does not duplicate existing courses in the Department of Kinesiology, Human Development & Family Studies, and Psychology.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: PSYCH 100 andKINES 321 orHD FS 129 orPSYCH 212

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 428 Motivation and Emotion in Movement (3) Theories of motivational and emotional processes and their applications in movement settings.

KINES 428 Motivation and Emotion in Movement (3)
Motivation & Emotion in Movement will focus on the psychological processes underlying human motivation and emotion in movement settings. Special attention will be directed to social manipulations that can enhance motivation and emotion, and the consequences thereof. This course will be valuable for students whose career goals relate to education, personal training, rehabilitation, coaching, or psychology. Specific course objectives include (1) distinguishing between motivation and emotion, (2) understanding psychological mechanisms underlying common motivational and emotional processes in movement settings, (3) identifying existing applications of motivation and emotion theories in movement settings, and (4) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to motivation and emotional processes in movement contexts. It extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

KINES 434 Rehabilitation of Injuries to the Lower Extremities (3) Theoretical foundation and laboratory experience in manual therapy techniques and therapeutic exercises for the lower extremities.

KINES 435 Rehabilitation of Injuries to the Trunk and Upper Extremities (3) Theoretical foundation and laboratory experience in manual therapy techniques and therapeutic exercises for the trunk and upper extremities.

KINES 439 Psychology of Sport Performance (3) Psychological theories of talent development and performance enhancement in sport.

Psychology of Sport Performance will provide a psychological perspective on the phenomenon of superior motor performance. The course will cover nature of superior performance, talent development processes, sources of performance crises, and self-regulation strategies used by athletes, coaches, and psychologists to enhance performance. This course will be valuable for students whose career goals involve training athletes or other performers involved in socially-evaluative performance domains. Specific objectives include (a) distinguishing the antecedents and consequences of subjective and objective performances, (b) conceptualizing motor performance and performance problems in a psychological context, and (c) matching psychologically-based performance problems with theoretically-based intervention strategies. It extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 435 Rehabilitation of Injuries to the Trunk and Upper Extremities (3)

Rehabilitation of Injuries to the Trunk and Upper Extremities is a 3-credit course offered each fall semester with an enrollment limit of 40 students. The course provides students who have been accepted into the undergraduate athletic training option in the Department of Kinesiology with the theoretical foundation for application of manual therapy techniques and therapeutic exercises in the treatment of musculoskeletal injuries sustained by physically active individuals. Laboratory instruction and guided practice in performing manual therapy techniques and therapeutic exercises will also be provided. At the end of this course students: 1) can identify five components of a comprehensive plan of care for an injured athlete; 2) have a working knowledge of the effects of therapeutic exercise on tissue repair and return to activity; 3) have a working knowledge of the impact of pain on programs and therapeutic exercise; 4) are able to perform selected manual therapy techniques and integrate them into a comprehensive plan of care; 5) understand the psychological response to injury and therapeutic exercise; 6) can develop a plan of rehabilitation utilizing principles of tissue healing, therapeutic exercise and manual therapy; and 7) instruct patients in home programs of therapeutic exercise. This course will focus on the basic principles of therapeutic exercise and rehabilitation of injuries to the lower extremities.

This course will be offered every Fall semester with an anticipated enrollment of 25. Evaluation includes quizzes, rehabilitation plan of care, proficiency notebook, mid-term and final practical exams, and written mid-term and final exams.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 439 Psychology of Sport Performance (3)

This course is offered every spring semester with an anticipated enrollment of 25. Evaluation methods include quizzes, written and practical exams, rehabilitation plan of care and proficiency notebook.

KINES 436 Therapeutic Modalities in Athletic Training (4) Lecture and laboratory course exploring physiological principles and clinical evidence to the use of therapeutic modalities in athletic training.

KINES 436 Therapeutic Modalities in Athletic Training (4)
Introduction to Therapeutic Modalities is a 4-credit course offered each spring semester with an enrollment limit of 40 students. The course provides students who have been admitted into undergraduate athletic training option in the Department of Kinesiology with the theoretical foundation for the application of contemporary therapeutic modalities in the treatment of musculoskeletal injuries sustained by athletic individuals. At the end of this course students will: 1) have a working knowledge of the inflammatory response to tissue injury, pain perception and the body's analgesic mechanisms; 2) understand the physical principles of thermal, acoustic, electrical, light and mechanical modalities; 3) understand the physiological response to thermal, acoustic, electrical, light and mechanical modalities; 4) be able to search for and appraise clinically relevant trials involving modality application and; 5) apply these understandings and thermal, acoustic, electrical, light and mechanical modalities in the safe and effective manner. Students are evaluated through written examinations, laboratory examinations and submitted written reviews.

KINES 438W Administration and Issues in Athletic Training (3) Theoretical and practical aspects for management of an Athletic Training professional practice and identifying contemporary issues related to the profession.

KINES 438W Administration and Issues in Athletic Training (3)
This course is designed to instruct students in the concepts and skills required for successful administration of an athletic training program and to understand and discuss contemporary professional issues attendant to the Athletic Training profession. General topics to be covered include theoretical basis of management, program management, human resource management, financial resource management, facility design and planning, information management, athletic injury insurance, legal aspects of sports medicine, ethical considerations in sports medicine, preparticipation physical and drug-testing, professional preparation issues, professional practice issues, and clinical practice issues. Experts from the community are brought in to lecture on several of the topics. The course meets for three hours per week and utilizes both lecture and discussion formats. Student assessment includes written examinations, written homework assignments, class participation and debates. This is a writing intensive course. Writing will be used to facilitate critical thinking about course material. Written assignments are based on the technical writing requirements of an athletic training administrator and are graded on both their content and quality.

KINES 439W Ethics in Sport and Sport Management (3) Analysis of moral dilemmas in sport and sport management utilizing the tools of ethics.

KINES 439W Ethics in Sport and Sport Management (3)
Effective: Spring 2001
Prerequisite: KINES 345 or 3 credits in humanities

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 440 Philosophy and Sport (3) An examination of human nature from the perspective of our participation in sport.

Philosophy and Sport (3)
General Education: None

KINES 441 (US) (AM ST 441) History of Sport in American Society (3) Background, establishment, and growth of sport in America from colonial times to the present.

KINES (AM ST) 441 History of Sport in American Society (3)
Study of the background, establishment, and growth of sport in America from colonial times to the present, and the role of American sports in American culture and society. The course will examine the ways that sports have operated in the United States as the country has developed into a modern, mass society. Issues of national identity, commercialism, race, ethnicity, class, and gender will be discussed in relation to the popularity of sports. Another set of issues will center on language and media; students will employ methods of analysis such as ethnography and rhetorical criticism that emphasize the multiple layers of meaning inherent in sports culture. The course satisfies the "area" requirement in "society" for American Studies majors. It is offered once every two years and enrolls approximately 30 students.

General Education: None
Diversity: US
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: KINES 141 or 3 credits of United States history

KINES 442 (IL) (CAMS 442) Sport in Ancient Greece and Rome (3) An examination of the continuity of sport in ancient Greek and Roman societies.

KINES (CAMS) 442 Sport in Ancient Greece and Rome (3)
This course examines the continuity of sport in ancient Greek and Roman societies. It investigates the role of athletic festivals in both cultures as well as the value placed on physical activity as part of the educational process.

The objectives of the course are to enable students to gain an appreciation for the continuous involvement of the ancient Greeks in the areas of competitive athletics and gymnastics[Kinesiology] as an important part of their value system. Moreover, the course will provide a comparison of Greek and Roman attitudes of athletics and gymnastics.

Typical topics include athletics during the Minoan /Mycenaean Bronze Age, Athenian and Spartan philosophies regarding education, the importance of spectator sports in Roman society and their link to politics.

KINES 446 (IL) History of Sport in the Modern World (3) History of sport in modern world, ca. A.D. 1500 to present; concentrates on role of sport in societies outside United States.

History of Sport in the Modern World (3) (IL)

The History of Sport in the Modern World introduces students to the connections between sporting practices and the broader cultural, political, intellectual and economic patterns that shape societies during the modern period in world history (ca. A.D. 1500 to the present). The course begins with a foray into the transition from traditional to modern forms of sport and society and covers the development of a wide variety of athletic games and pastimes from the sixteenth through twentieth centuries. Students will encounter a variety of historic conceptions of sport and explore the role of sport in the development of European, North American, Latin American, Asian, African and Pacific cultures. Students will learn how sports have been shaped by and have shaped by multiple factors, including modern ideas, science, class structures, gender roles, constructions of race, urbanization, nationalism, political conflicts, international relations, and economic institutions.

This is a senior-level course that fills an important historical gap in the Kinesiology Department's sequence of offerings on the history of sport. Other courses in the sequence cover ancient sport, sport in American society, and the Olympic Games. While crucial American developments that impact sports in the modern world are incorporated into this course, this class offers students a global focus that concentrates on the role of sport in societies beyond the borders of the United States. This course also relates to the offerings in the philosophy of sport program by exploring the history of ideas about sport in modern thought. Additionally, the course connects to the science-based offerings in Kinesiology by providing students with and introduction to the history of the scientific study of human performance.

The course introduces students to basic readings and knowledge of the history of sport in the modern world. The class provides opportunities to practice the critical reading and thinking techniques that shape the historian's approach to knowledge. This course will be taught once every year with an anticipated enrollment of 50 students. Evaluation methods that test reading and critical thinking skills are employed. No special facilities are required.

General Education: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.
KINES 448 Coping with Life After Sport (1) Psychosocial concerns affecting student-athletes as they enter the transition period following sport disengagement, focusing on coping interventions.

KINES 448 Coping with Life after Sport (1)

KINES 448 is designed for student athletes who have exhausted their eligibility for or will no longer be participating in their respective sport due to injury or other issues. It is also relevant for students in athletic training or those who plan to pursue a career in coaching. The focus of the course is on the identification of issues and stressors affecting the transition and the development of strategies and coping skills to deal with life after sport. This can often be a very emotional and difficult time for student athletes. Discussion is focused on intervention and coping strategies, goal setting, decision making, career planning, and transferable skills. Student athletes will be able to recognize how their athletic experience has helped them to acquire numerous skills and characteristics highly valued in the workplace. Two sections of the course will be offered each semester. Students will be required to submit a weekly reaction paper, do a review of literature, and compile a comprehensive career plan. The class will be highly interactive with regular in-class assignments and projects.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 452 Applied Cardiovascular Physiology (3) In-depth study of cardiovascular regulation during postural, environmental, and exercise stress.

KINES 452 Applied Cardiovascular Physiology (3)

First, the course begins with an intensive review of hemodynamics and basic cardiovascular control mechanisms (neural, hormonal, and local regulation).

Second, students compare and contrast these general principles in six important circulations: splanchnic, renal, cerebral, coronary, cutaneous, and muscle.

Third, they examine the three stresses which affect the circulation: posture (gravity), environment (especially heat) and exercise. For each stress, students identify the regional circulation(s) most affected and how they contribute to an integrated (systemic) cardiovascular response that is unique for each stress.

Finally, combinations of posture, heat, and exercise stress are considered to illustrate competing cardiovascular control mechanisms.

At each step students are introduced to seminal research papers illustrating the concept being studied.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 453 Environmental Physiology (3) This course examines physiological function of humans at rest and during prolonged or maximal exercise in conjunction with environment stress (heat, cold, altitude, hyperbaria).

Environmental Physiology (3)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 454 Women’s Health and Exercise Across the Lifespan (3) In-depth study of the physiological role of exercise in modulating the health of girls and women during different phases of the lifespan.

KINES 454 Women’s Health and Exercise Across the Lifespan (3)

First, the course begins with a review of general principles of research conduct and publication, themes that will be carried throughout all material covered in this class. A review of the historical aspect of women’s health research and a review of the state of knowledge in women’s health in the wake of the contemporary scientific endeavors such as the Women’s Health Initiative will also be explored. Second, students will learn physiology of puberty, menstrual function and bone health and the impact of exercise on these processes. Third, students will learn current concepts of exercise related to the female athlete and clinical implications of alterations in normal physiology. The impact of oral contraceptives on health and exercise performance will also be discussed. Fourth, students will learn menopausal physiology, alterations in clinical status associated with this life stage, and review current research related to the Women’s Health Initiative. Finally,
a discussion of the effects of gender differences on health and exercise will be discussed. At each step students will be
exposed to relevant research methods issues, and introduced to seminal research papers illustrating the concept being
evaluated.

This course is designed for students who wish to develop a richer understanding of the physiological role of exercise in
modulating the health of girls and women during different phases of the lifespan. Particular attention will be given to the
physiological role of exercise in modulating the health of girls and women during different phases of the lifespan,
including but not limited to childhood, adolescence, adulthood and later adulthood.

The course will expose students to the rich research literature in women’s exercise and health across the lifespan.
Students will improve their ability to read and summarize original research literature through in depth presentation and
discussion of seminal studies. Moreover, students will develop an understanding of how research has informed the state
of knowledge on issues covered in this class and students will develop “language understanding” appropriate for
interpreting and reading research papers.

General Education: None

KINES 455 Physiological Basis of Exercise as Medicine (3) Reviews the physiological basis of exercise for enhancing health
and protecting against chronic diseases.

KINES 455 Physiological Basis of Exercise as Medicine (3)

This course is designed for students interested in developing a deeper understanding of the physiological mechanisms
behind exercise as medicine. Course content will consist of a mixture of selected book chapters as well as contemporary
review and primary research articles. This course begins with an overview of the current exercise deficiency problem,
including the societal, behavioral, and economic changes of the past century which have contributed to the modern day
epidemic of chronic inactivity-related disease. After developing an appreciation for the scope of these problems, students
will be introduced to the “tools” needed to critically evaluate the association between exercise and/or inactivity on health
and the mechanisms by which these associations may occur, including: basic principles of epidemiology,
searching/reviewing scientific literature, and experimental design. The remainder of the course will be focused on how
exercise/physical activity modifies molecular/tissue-level and integrative physiological function, and describes the extent
to which these modifications confer either preventative or therapeutic benefit. This will be accomplished through a
combination of lectures, in-class/take-home assignments, as well as student-led discussions. Students will also use the
“tools” that they learned at the beginning of the semester to demonstrate and share knowledge with others; integration of
this information may include a thorough analysis of a chronic condition including the pathophysiology, strength of
evidence for exercise is medicine, and physiological actions of exercise in prevention or treatment. Students may also be
given the opportunity to translate their knowledge from this course into educational materials (e.g., flyers, pamphlets,
screensavers, fitness center displays, social media, etc) for use during “Exercise is Medicine” week.

KINES 457 Exercise Prescription and Case Studies (3) Principles of exercise prescription; application of fitness appraisal
based on current practices using evaluation and discussion of case studies.

KINES 457 Exercise Prescription and Case Studies (3)
The major purpose of this course is to provide those students interested in allied medical careers (e.g., cardiac rehabilitation, hospital testing, wellness centers, corporate fitness centers, physical therapy) with skills and practical knowledge regarding exercise diagnostics and prescription. Particular emphasis is placed on clinical diagnostic procedures, interpretation and terminology and this course directly contributes to the knowledge base expected for future employment in this area. At the conclusion of KINES 457, the students will be able to demonstrate on written examinations and in discussions, a knowledge and understanding of basic exercise prescription principles for apparently healthy, at risk and diseased populations, with special emphasis on the cardiac patient. Inherent in the course goals is an understanding of the chronic physiological adaptations that occur as a result of programs of endurance and resistance exercise in apparently healthy, at risk and diseased populations.

This course includes lectures as well as hands-on laboratory sessions. Evaluation is based on student performance on written examinations, written and oral case study presentations, and written assignments. This course will be taken after students have completed KINES 456 and will complete the learning scheme involving fitness appraisal and subsequent prescription of exercise programs.

The course is offered fall and spring semesters with an enrollment of 35 students.

KINES 460 Movement Disorders (3) Major peripheral and central movement disorders and methods of their treatment.

KINES 461W Preparation for Research Project (2) Planning and preparation for research project.

This course prepares students to conduct a research project in KINES 462W. Students will begin by critically examining different research approaches. They will explore the development and assessment of research topics paying special attention to both scientific and philosophical justifications. They will learn how to identify research populations and how a human subjects review protects those involved in research studies. They will identify and critique the various inventories and assessment tools available for the kind of research they propose. Students will complete a research proposal including review of literature and method section, and submit an application to the Institutional Review Board. These goals will be achieved through a series of writing assignments.

Students are expected to demonstrate the following outcomes:
1) Communicating and writing ideas relevant to the field of Kinesiology.
2) Understanding and describing the major issues in the field.
3) Understanding the principles of how to conduct research in wellness, fitness and/or associated practice.
4) Understanding and communicating the methods of scientific discovery.

Students are evaluated on their research proposal (50% of final grade) which is drafted and revised during the semester. Further writing assignments (50%) assess and enhance student’s competency in research methods and statistics. The course is offered every fall semester with a total enrollment of 25 each semester.

KINES 462W Research Project (2) Completion of research topic.

During this course students will collect and analyze data for a research project. They will trouble shoot any data collection problems and learn how to use computerized programs for statistical analysis of data. They will learn about various presentation modes relevant to the written and oral presentation of research data. Students will prepare and be evaluated on a research paper that reports on their research project. In addition, they will present their work orally in showcase sessions.
sessions to which fellow students and faculty members are invited. The goal is for students to produce as close as possible to publishable papers. This course is part of a two-course sequence and can only be taken upon successful completion of KINES 461W. It, along with the internship experience, are the culminating experiences in the Exercise Science - Science Emphasis. Facilitates needed will be determined based on the individual research project. This course will be offered only in the spring semester of each year. Enrollment will vary from 1 to 25.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 463 Acquisition of Motor Skills (3)
Examination of principles of motor learning; the application of strategic factors such as: practice types, schedules, augmented information, and motivation.

KINES 463 Acquisition of Motor Skills (3)
This course is intended for students interested in the principles of motor learning (learning, retention and transfer) and the application of specific learning strategies such as, practice, feedback, demonstrations, and instructions. Through lectures, discussions, and course readings in addition to writing assignments, the goal is for students to develop a unified conceptual framework for motor learning and its facilitation through intervention strategies.

The evaluation for the final grade will be based upon a synthesis of assessment in three areas: a) Term Project (30% of final grade) - a report on a learning experiment or a synthesis paper on a learning principle or a learning strategy; b) Mid-Term Exam (30% of final grade) - questions requiring short 2-3 sentence answers; and, c) Final Exam (40% of final grade) - requiring essay length answers to selected questions that integrate key issues from all the course material.

This course will build on the concepts outlined in KINES 171 and 360. It will represent the culminating upper level undergraduate course in motor learning. This course will be an elective available to students who have completed the required KINES 360 course. It can be used to fulfill requirements for the Kinesiology major and the Movement Science, Teacher Preparation, and Athletic Training Options.

This course will be available to students outside of the Kinesiology major who may, upon approval, substitute the KINES 360 prerequisite requirement. The course will be offered every spring semester.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 464 Children’s Physical Education Curriculum and Practicum (3)
Curriculum for elementary school physical education emphasizing the skill theme approach.

KINES 464 Children’s Physical Education Curriculum and Practicum (3)
The purpose of this course is to introduce teacher candidates to the skill theme approach and developmentally appropriate physical education for children. Appropriate planning, instruction, and assessment make-up the foundation of this course. These techniques are then applied when they teach small groups of children from a local elementary school. Specifically, students will develop and implement developmentally appropriate lesson plans with children and then analyze and reflect on their teaching effectiveness. A primary focus of the class is using the skill theme approach to guide children to reach appropriate cognitive, affective and motor objectives as stated in state and national standards. Students also develop curricular scope and sequence overviews that are used to guide curriculum and lesson development from grades K-5.

Assessment of student performance in the course includes entrance and exit slips based on assigned readings, class lectures and discussion, and laboratory experiences. Students are also graded on their planning, analysis and reflection of their teaching in elementary schools. There is also a final exam that requires students to translate theory into practice as applied to elementary school physical education.

Assessment:
Enterance and exit slips 15%
Teaching in the schools 40%
Final exams 15%
Project 15%
Laboratories 15%

The Pennsylvania State University
KINES 465 Neurobiology of Sensorimotor Stroke Rehabilitation (3)
This course is designed to expose students to the recent topics in motor stroke rehabilitation research through literature.

KINES 465 Neurobiology of Sensorimotor Stroke Rehabilitation (3)
This 3-credit course is designed to expose students to the most recent topics in motor stroke rehabilitation research through reading of current literature. The course addresses the neurobiological foundations of motor deficits in stroke, including contralesional and ipsilesional effects, current research on mechanisms of motor recovery, and the most current research on intervention strategies, such as constraint induced therapy, robot aided rehabilitation, virtual reality therapy, and sensory motor interventions. The purpose of the course is to provide an understanding of the neurophysiological and biomechanical foundations of motor deficits that occur with stroke, and of current treatment approaches.

Stroke presents a significant social problem that is emphasized in current statistics reported by the American Heart Association indicating that each year, about 780,000 people in the United States experience a new or recurrent stroke. While stroke can produce deficits in perceptual, cognitive, and motor processes, this course is focused on sensorimotor deficits and associated rehabilitation interventions that tend to be employed by physical and occupational therapists in the rehabilitation environment.

Sensory-motor strokes often result in weakness and deficits in voluntary movement of the limbs on the opposite side of the body as the damaged hemisphere (Contralesional). These motor deficits currently receive primary focus in occupational and physical therapy treatment for stroke. However, regardless of improvements in contralesional arm function, most patients also show deficits in coordination of the ipsilesional arm that is on the same side of the body as the damaged hemisphere. For many hemiparetic patients, functional recovery relies heavily on this arm. This class will focus on understanding both ipsilesional and contralesional motor deficits in stroke. Physiological and biomechanical mechanisms of dysfunction will be emphasized. Recovery of function will be addressed through analysis of physiological and biomechanical measures that are used to track changes in neural function. In addition, current research that is focused on developing rehabilitation intervention protocols that systematically address remediation of dysfunction, and facilitation of recovery will be discussed.

Students will be guided in reading, critiquing, and presenting primary scientific manuscripts and review articles. Active discussions of presented material are encouraged, and grades are based on presentations, quizzes, and participation in class.

KINES 466 Assessment and Evaluation in Physical Education and Health Education (2)
KINES 466 Assessment and Evaluation in Physical Education and Health Education (2) Explores measurement as an important and distinct component in a variety of physical education and health education contexts.

KINES 466 Assessment and Evaluation in Physical Education and Health Education (2)
This course addresses measurement as an important and distinct component of other processes such as assessment and evaluation in a variety of physical education and health education contexts (i.e. student performance, teacher performance, program outcomes). Teacher candidates will explain the inter-relationships among objectives, learning activities, and measurement strategies. They will design performance-based and standards-based measurement plans and tools that are necessary when assessing, evaluating, researching or making decisions about performances in physical education and health education. These plans will be performance-based, include select response and constructed response measurement instruments; measure what matters most in all learning domains; and demonstrate that instruction and assessment are seamless. These performances can range from constructed-response or non-traditional performance tasks like motor skill performance, fitness assessments, oral presentations, written reports, portfolios, program evaluation, and teaching effectiveness. Teacher candidates will be expected to recognize many and develop a few authentic and traditional measurement techniques/tools (including peer and self-assessments). These techniques and tools will assess student understanding and performance, provide feedback, and communicate student progress. These tools will measure what matters most and be valid and reliable. These tools are to be embedded with instruction and used by self, peer and instructor. When available, these tools will be integrated with technology to enhance the management of data. In this course, teacher candidates will recommend strategies for implementing results of a measurement by identifying implications from findings for future curricula, instructions, and other activities. They will differentiate between formative and summative measurements and describe ways the lesson/unit/curricula can be improved based on measurement results. Teacher candidates will also demonstrate their ability to interpret results and infer implications from the findings. For example, identifying instructional gaps between learning activities and objectives and using learning and performance data to make informed curricular and/or instructional decisions. In doing so, teacher candidates will contrast the results of norm- and criterion-referenced evaluation. This course will complement existing Methods courses (field experiences) in our teacher preparation curriculum by aligning instructional planning and implementation with measurement of these learning experiences. Teacher candidates will be evaluated with quizzes, assessment plans, measurement tool development, data collection and data interpretation. One section of this course will be offered each
KINES 467 The Science of Performance Enhancement (3)

Students will describe and evaluate the evidence base for substances and methods used to improve aerobic power, strength, body composition, metabolism and thermoregulation as they relate to exercise and physical activity.

Students will study and develop a rating scheme to describe the quality of evidence and recommendation to use ergogenic aids. This rubric will be utilized throughout the course to evaluate recent and proposed techniques to enhance athletic performance. Topics include, but are not limited to:
- Blood boosting: Enhancement of oxygen transport
- Androgens, prohormones, and anabolics
- Substrate manipulation to increase strength
- Nutraceuticals to improve athletic performance and recovery.

General pacing of these topics may be modified depending on class interest and issues that emerge in the popular press.

Consideration will be given to the regulatory and ethical aspects of their use. Students will develop an understanding of the World Anti-Doping Code, administered by the World Anti-Doping Association and its subsidiaries. Prior familiarity with ethics is essential.

Science of Performance Enhancement is designed to emphasize team and individual scholarship in multiple domains, with emphasis on quantitative, qualitative and analytical skills.
KINES 468W Health Instruction in the School-Content and Method (3) Skills and methods to design comprehensive preschool through twelfth health instruction using interactive learning activities that lead to health literacy.

Health Instruction in the School-Content and Method (3)

General Education: None

KINES 469W Curriculum Development in Health and Physical Education (3) The content and process of K-12 school health and physical education curriculum development for public school students.

Curriculum Development in Health and Physical Education (3)

The purpose of this course is to prepare prospective health and physical education teachers to plan and design curricular content that meets the needs of students in grades K-12 and aligns with state and national standards. The philosophical and theoretical basis for curricular decision-making will be explored.

Instructional Objectives:
1. design a physical education curriculum outline for a selected school setting (elem, middle, secondary)
2. design a health education curriculum outline for secondary or middle school health
3. assess a current HPE program and the extent to which the program is consistent with good practices, national standards, and state standards

Relationship of course to other courses:
This is the only course that addresses Health and Physical Education Curriculum Design. Students take this course after or concurrently with three--methods--intensive courses. This course serves as the capstone course in the Teacher Preparation option. It applies pedagogical content knowledge in health and physical education to curriculum models and design. Students take this course the semester before student teaching.

Projected offering and enrollment: this course is offered every semester and has an enrollment limit of 30

**KINES 488 Mechanics of Locomotion (3)** This course examines the forces and motions characteristic of locomotion, with emphasis on walking, the most common human activity.

**KINES 488 Mechanics of Locomotion (3)**

- General Education: None
- Diversity: None
- Bachelor of Arts: None
- Effective: Summer 1996
- Prerequisite: seventh-semester standing

Walking has been described as the most commonly performed human activity. Diseases or injuries that reduce the ability to walk independently and efficiently are especially likely to adversely affect quality of life. Kinesiology 488 introduces students to the elements of normal walking and how walking motions are affected by changes in age, walking speed, and pathological conditions. Advanced topics covered in this course include other forms of locomotion, including running and cycling, and the use of mathematical models to understand phenomena related to locomotion.

Students enrolled in this course learn the particulars of human locomotion, but in so doing they also gain an understanding of kinematics and kinetic analysis, joint mechanics, and the clinical treatment of movement disorders. Basic principles of mechanics are applied to establish how walking motions result from forces produced by muscles, gravity, and contact with the ground. Students planning to pursue graduate study in movement biomechanics or in clinical areas such as physical therapy are especially likely to benefit from the focus on these areas.

The requirements for Kinesiology 488 include two mid-term tests and a final examination, four laboratory reports, and a literature review. Laboratories (held during regularly scheduled class periods) introduce students to current experimental methods used to measure motions, forces, and muscle activity during locomotion. Completion of several case studies during the semester gives students practical experience with the interpretation of motion analysis data, the factors that influence clinical decisions in the treatment of movement disorders, and ethical considerations in biomechanics research.
Effective: Summer 2002
Prerequisite: KINES 384 or previous coursework in biomechanics (or mechanics) and musculoskeletal anatomy

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

KINES 492W Programming for Business and Agencies (3) Fundamentals of program development applied to corporate and private physical fitness businesses.

KINES 492W Programming for Business and Agencies (3)
This course will use an experiential approach to acquire knowledge and skills necessary to assess, plan, implement and evaluate health/wellness/fitness programs within a business/corporate setting. Students will actively participate in a process-oriented, student-centered learning environment that includes cooperative learning, critical thinking, effective communication, assessment, and problem solving. Students will assess, plan, implement and evaluate a health-related program (i.e., wellness fair, career fair, road race, fitness programs). Students will write business letters, operating plans, mini-grants, budgets, flyers, press releases, newspaper articles, surveys, and other written communication projects relevant to the fitness/wellness business. Students will access and evaluate health/wellness resources (i.e., agencies, Internet, media, speakers).

As indicated by the “W”, this is a writing intensive course and will follow university guidelines for such courses. Most of the assignments will involve group-based problem solving. This course is offered Spring Semesters with a maximum enrollment of 35.

General Education: None

KINES 493 Principles and Ethics of Coaching (3) Integration of the practical and theoretical knowledge necessary for effective coaching through classroom and field experiences.

KINES 493 Principles and Ethics of Coaching (3)
The Principle and Ethics of Coaching examines the challenges of today’s coaching profession through societal norms and expectations from the past and present. The course begins with a study of the coaching profession covering past and current coaches who have experienced success and failure in the profession. Students learn how the profession has developed as a result of changing values, demands, emphasis and expectations in the athletic world. Students will learn how to work with Title IX, parents, high school and collegiate regulations, season structures and the various roles and responsibilities of today’s coach. The course is a senior-level course providing students in Kinesiology with an in depth study of the profession that has historically been associated with careers in Kinesiology. This course relates to other courses in sport ethics, sport philosophy and history of sport as they provide the theoretical background for coaching decisions. In addition, this course demonstrates practical implementation of theories from nutrition as well as activity courses. The course offers students an in depth study of sport and gender specific differences as they relate to the coaching profession. The students observe, question and study current coaches while examining their own backgrounds to develop set of principles to handle today’s coaching issues. A coaching experience is an optional opportunity afforded to students while writing skills must be demonstrated by all students through written exams, papers and/or projects. Enrollment is optimal at 20-25 students, however, larger numbers may be accommodated. The course will be taught during Fall and Summer semesters. The emphasis on class discussion and interaction with various athletic coaches introduces students to realities of today’s coaching profession and the challenges of the 21st century coach. Video and power point enhance the multi media approach to this course and further enhance the learning environment. Evaluation of the students requires an understanding of assigned readings; class discussion, and the student’s ability to demonstrate critical thinking skills.

KINES 495A Practicum in Student Teaching (12)
Supervised teaching of health and physical education in K-12 public schools with seminars focused on transition from student to professional.

The teacher candidate will be placed in either an elementary or secondary school setting for the first 8 weeks of the student teaching experience, followed by placement in the level not selected first for the last 7 weeks. The teacher candidate will be teaching both health and physical education during each placement. The teacher candidate will be assigned on-site cooperating teachers will be supervised by a university faculty member who makes a minimum of four on-site visits, plus review of teaching via two videotapes.

During the 15-week semester, there are four seminars of approximately 5 hours each, during which all teacher candidates meet with the coordinator of the student teaching program to discuss topics related to the multiple roles of teachers in public schools and the transition to becoming a professional teacher. In addition, some time in each seminar is devoted to experience sharing and collaborative problem solving. The following topics are covered during the seminars: legal liability and sexual harassment, electronic portfolios, resume and cover letter writing, health and physical education professionals, preparation for employment, interviewing, best teaching practices and sharing, classroom management, and technology in physical education. In addition, the student teachers are required to complete a variety of assignments including: a professional portfolio, unpaid service activity reflection, daily notebook, videotapes and reflection, and Pennsylvania teaching application and essay.

KINES 495B Field and/or Research Practicum in Kinesiology (6)
Participation under supervision in a field or research practicum.

This course places students in the workplaces or research settings with the expectation that these experiences will allow them the opportunity to apply and integrate content from all their courses in the program. They will be placed at a variety of sites, including but not limited to research laboratories, professional fitness centers, rehabilitation facilities, senior centers, community health and wellness programs, and hospitals. They will learn the day-to-day requirements of being "on the job" or "in the lab," including professional management practices and ethical considerations. Practicum work will be evaluated on an ongoing basis with the student intern, work place supervisor, and faculty member involved in the process. The course will take place off campus as work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.

KINES 495C Exercise Science Practicum (3 per semester/maximum of 6)
Participation under supervision in a health and fitness setting.

This course places students in the work place with the expectation that the experience will allow them the opportunity to apply and integrate content from all the courses in the program. They will be placed at professional fitness centers, rehab facilities, senior centers, and wellness centers. They will learn the day-to-day requirements of being "on the job" such as time management, record keeping, client interactions, feedback delivery, fitness program establishment and implementations, business and management practices as well as ethical considerations. Their field experience will be focused on four in-class days during which students will collectively explore work place issues. Practicum work will be evaluated on an ongoing basis with the student intern, work place supervisor, and faculty member involved in the process. The course will take place off campus as work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.
KINES 495D Expanded Field and/or Research Practicum in Kinesiology (1-6) Additional participation under supervision in a field or research practicum.

This course, in combination with KINES 495B, places students in the workplaces or research settings with the expectation that these experiences will allow them the opportunity to apply and integrate content from all their courses in the program. They will be placed at a variety of sites, including but not limited to research laboratories, professional fitness centers, rehabilitation facilities, senior centers, community health and wellness programs, and hospitals. They will learn the day-to-day requirements of being "on the job" or "in the lab." including professional management practices and ethical considerations. Practicum work will be evaluated on an ongoing basis with the student intern, work place supervisor, and faculty member involved in the process. The course will take place off campus at work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.

KINES 495E Advanced Professional Development in Kinesiology (3) Professional development preparation focused on knowledge, skills and abilities to complete national certification; obtain internships, employment or graduate school admission.

This course is designed to provide undergraduate students the opportunities of fitness professional pre-certification preparation via lecture format, professional travel to acquire hands-on skills at a top caliber training facility, and an expert panel round table discussions. Throughout the course, students will have exposure to professional communication with faculty through formats including, but are not limited to the following: faculty/professional/expert discussions, lectures, training sessions, quizzes and examinations that are designed to prepare students to pass a national certification. Students will enhance skills needed to develop exercise leadership characteristics, communicate information effectively, and build a foundation of exercise testing and prescription guidelines which are safe, effective and motivating to clientele. Other class foundational principles include but are not limited to Exercise Programming; Health Risk Assessment; Serial Testing; Metabolic Calculations; Nutrition and Weight Management and Facility Administration. Students will take practical experience and knowledge gained from this professional course and apply principles into their proposed field of study in a safe and effective manner.

KOR 110 Level Two Korean B (4) This is the fourth semester course of sequenced Korean study at Penn State. It is the Advanced-Intermediate course.

This is the second part of intermediate Korean and a continuation of Korean 3 offered at Penn State. Classroom activities will be built around the textbook lessons and all activities will be designed such that students will have multiple opportunities to practice listening, speaking, reading, and writing. Pedagogical materials also include the use of multi-media based authentic language samples from a variety of modalities (spoken, written, and computer mediated) produced for Korean nationals (e.g., tv dramas, movies, magazines, internet sites and blogs, essays, short stories, magazine articles, advertisements). These will supplement the textbook and will provide insights into daily life in Korea, sociocultural values of the Korean people, as well as a broader representation of Korean language, history, literature, and culture. Students will also work within various genres of Korean discourse and literature and learn to recognize and accurately use the particular language styles that are associated with those genres.

**KOR 401 (IL)** Level 3 Korean A (4) KOR 401 is the first semester of third-year Korean, which is equivalent to Advanced-Intermediate Korean I.

**KOR 401 Level 3 Korean A (4)
(IL)**

Korean 401 is the first half of the 3rd year Korean (or Advanced-Intermediate Korean I). KOR 401 is designed for the learners who have background in KOR 110 or equivalent. The medium of instruction will be Korean. The students in this course will explore various topics and styles in Korean and further improve their skills of listening, reading, speaking, and writing in Korean to be able to better comprehend Korean culture and society.

The Pennsylvania State University
The objectives in this course are 1) to review, reinforce, and expand the basic grammar, 2) to expand knowledge of vocabulary and idioms, 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions, 4) to be able to read and understand simple essays and stories, and 5) to be able to write short compositions in Korean.

As an advanced-intermediate Korean language course, it does not only strive to enable the students to interact successfully in Korean, but it also encourages them to deepen their understanding of Korean culture and society. In addition, it aims to cultivate students’ knowledge and awareness of the similarities and differences between Korean and American culture, by introducing cultural values, tradition, beliefs, and customs of Korea during the course and also promoting discussion on the topics. It is expected that through enhanced Korean language proficiency and cultural knowledge of Korea, students can increase their ability to locate and evaluate information about Korea for their further academic and/or professional needs.

The course is designed to be suitable for the students who have successfully completed Korean 110 (or its equivalent, through such means as study abroad). This course is designed to meet the Korean minor requirement and also count as an IL (“International Cultures”).

Labor Studies and Employment Relations (LER)

LER 083S (GS) First-Year Seminar in Labor Studies and Employment Relations (3) Critical approaches to the dimensions and direction in Labor and Employment Relations.

LER 083S First-Year Seminar in Labor Studies and Employment Relations (3) (GS;FYS)

(BA) This course meets the Bachelor of Arts degree requirements.

In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of the community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests.

Students will write essay exams, and critique a published study on the relevant topic of their own choices in teams. Class participation is required.

The course will provide students with the opportunity to study Labor and Employment Relations in their first semester at the University. This experience will serve as a preparation for additional courses in Labor and Employment Relations as well as an introduction to college-level study generally. The course fulfills both a first-year seminar and a general education or Bachelor of Arts social/behavioral science requirement. Class periods stress discussion of assigned readings, debates, and collaborative research projects.

General Education: GS
Diversity: None

LER 100 (GS) Employment Relations (3) Introductory analysis of the employment relationship and of the interrelated interests of managements, workers, unions, and the public.

LER 100 Employment Relations (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of this course is to introduce students to the employment relations process in the U.S. and to the institutions that participate in this process. This will be done by examining the areas: the evolution of labor-management relations in this country, including the history of workers' attempts to organize unions, management's response, and government's role; the institutions that participate in the employment relations process--unions, management, and government; the process of employment relations, including organizing a union, negotiating a contract, and administering that contract; outcomes of collective bargaining, public sector/international employment relations, and current issues/trends in employment relations.

Employment relations is a process studied from a multi-disciplinary perspective. This course will, therefore, draw on a number of social and behavioral science disciplines including economics, history, psychology, political science, and sociology.

This course will also incorporate active and collaborative approaches to learning. Through recitation sections, students will have an opportunity to gain experience in taking responsibility for learning and in working with others in a team situation. Students will be evaluated on the basis of exams, group activities, written assignments, and class participation.

This course is the introductory course in Labor Studies and Employment Relations (LER) curriculum. It will help prepare
students for all subsequent courses in the LER B.A. and B.S. majors and serve as a prerequisite for some advanced LER courses. This course is required for the LER B.A. and B.S. majors and the LER minor. It also counts toward the fulfillment of the general education or Bachelor of Arts social/behavioral science requirement.

LER (WMNST) 136 Race, Gender, and Employment (3) (US)
(BA) This course meets the Bachelor of Arts degree requirements.

To accomplish the goals of the course, students will participate in a variety of in-class and out-of-class exercises designed to expose them to issues of inequality generally, and more specifically, to inequalities relating to employment. Activities are designed to connect real world experiences to class readings and discussion. For example, students may be asked to conduct their own job evaluation in conjunction with a reading on gender bias in job evaluation systems. The course also relies heavily on student participation via the reporting of the results of their activities, and in discussion of assigned readings. A semester-long group project will enable students to focus their interests and become experts in one sub-area. Group projects include a collaboratively written paper as well as a class presentation designed to inform the class about a topic previously not covered through class readings, discussions, or lectures.

LER 201 (GS) Employment Relationship: Law and Policy (3) An examination of basic legal principles underlying the employment relationship and their social, political, and economic bases.

LER 201 Employment Relationship: Law and Policy (3) (GS)

(BA) This course meets the Bachelor of Arts degree requirements.

LER 201 provides students with an overview of the employment law relationship in the United States.

The course begins with a study of the legal principles which affect the creation, development, and implementation of employment law. Several of the most fundamental employment law principles, such as the Master/Servant relationship and the theory of Agency, are adopted from the English common law. Students review the United States Constitution and the constitutional principles necessary to understand employment laws are examined.

Students will study several federal and state statutes, including Worker's Compensation laws (with an emphasis on the Pennsylvania Worker's Compensation statutes), the Social Security Act, the Fair Labor Standards Act, the National Labor Relations Act, and Equal Employment Opportunity laws. As appropriate, the history, politics, and policies underlying these statutes are discussed. The necessity of understanding not only the legalities of EEO laws but also the societal need to eliminate discrimination results in a thorough study of Title VII of the Civil Rights Act of 1964, the Age Discrimination in Employment Act, the Civil Rights Act of 1991, and the Americans with Disabilities Act. Successful completion of this course equips students with a competency in employment law, transferable to an entry-level human resources or management position.

Students write reviews of various involving different employment laws, including case law and precedents, evidence and interpretation. The course content naturally lends itself to gathering and analyzing information. Students analyze the application of law to various cases, judging the logical consistency between the principle of the law and the case to which it is applied. Library resources are an essential component; on-line resources increasingly are used. The course deals exclusively with laws regulating employment practices and relations among employees in the U.S. workplace. It concentrates on discrimination, equity, due process, social and civil conduct.

LER 400 (IL) Comparative Employment Relations Systems (3) Analysis of structure and elements of employment relations systems in developed and developing areas.

LER 400 Comparative Employment Relations Systems (3)
(IL)
(BA) This course meets the Bachelor of Arts degree requirements.

This course explores contemporary topics in employment relations in the world. The course examines seven examples of employment relations systems, each carefully chosen to illustrate important variations in employment relations practices.
It also provides an overview of economic globalization and its impact on employment relations. Topics include global sweatshops, child labor, the diffusion of human resource practices, and corporate social responsibility. The first country case is Germany, which provides an example of a country with strong national unions and a highly developed system of works councils. The Swedish case exemplifies a long-tradition of centralized bargaining and tripartite relations that is now in transition. The third case, Japan, illustrates some of the initial experiences with team work, just-in-time production, and employee commitment through job security and training. China offers an example of a socialist system in transition that has become an economic powerhouse through massive export processing zones, government controlled unions, and wage competition. Brazil provides an important example of a Latin American country with a state dominated employee relations system. South Africa offers a case of highly politicized employment relations in a country in transition from extreme racial segregation to a democracy. Finally, India represents Asia's other economic powerhouse, with an English speaking workforce that is drawn to the booming call center industry and export-oriented production. The second half of the course looks at broader themes related to the topic of globalization. Sweatshops in Mexico and child labor in India examined alongside the diffusion of high-end human resource practices in Brazil. In this section, student will also study inter-governmental institutions such as the World Trade Organization, and the International Monetary Fund. The final unit of this section examines the topic of Corporate Social Responsibility (CSR), recent attempts by corporations -at times in coordination with labor unions--to establish basic sets of rules or standards for their employees wherever units of the corporation might be located in the world today.

LER 401 The Law of Labor-Management Relations (3) Development of Anglo-American law regulating collective bargaining, with emphasis on American labor-management relations under Wagner, Taft-Hartley, and other acts.

LER 401 The Law of Labor - Management Relations (3)
(BA) This course meets the Bachelor of Arts degree requirements.

This course will examine the evolution of labor law in the United States. The N.L.R.A. itself, and the decisions of the National Labor Relations Board (N.L.R.B) and the courts, will be examined in order to gain an understanding of the current legal framework underpinning our system of labor-management relations. Major issues to be examined include the rights of employees to union representation; the formation of bargaining units; the conduct of organizing campaigns and elections; the duty to bargain; strikes, striker's rights, and lockouts; picketing, boycotts, and related activity; the enforcement of collective bargaining agreements and the duty to arbitrate; union members' rights and responsibilities, the duty of fair representation; and federal-state relationships in labor relations. Also covered in the course will be the legal framework for public sector labor-management relations, with specific attention paid to Pennsylvania Acts 111 and 195. The course will be taught from a liberal arts perspective, meaning that societal factors influencing the law--history, politics, and economics--will be emphasized. Student performance will be evaluated by means of tests, short papers, and such reports as may be required. This course is complementary to others in Labor Law, including LER 434, Collective Bargaining and LER 435 Labor Relations in the Public Sector. The course requires no special facilities or equipment; however, students enrolled are expected to have computer skills sufficient for communication and word processing purposes.

LER 403 (IL) International Human Resource Studies (3) Course exploring human resource management from an international perspective.

LER 403 International Human Resource Studies (3)
(II)

(BA) This course meets the Bachelor of Arts degree requirements.

This course on International Human Resource Management expands beyond the traditional disciplines of HRM through a broader consideration of the impact of national contexts on these areas of organizational practice. The first question addressed is whether 'HRM' actually means the same thing in different countries, especially given that the term 'HRM' was developed from US management practice and scholars. This opens the discussion as to how institutions and culture at the national level help to shape management practice. As organizations become increasingly global, these issues of national culture and institutions can often stand in the way of a seamless progression of HRM across national boundaries.

From a national culture perspective, the course compares how people in different countries see themselves and others around them, and how expectations, values and beliefs can differ in the workplace. This understanding is drawn from frameworks of national culture which describe the culture's multiple dimensions. This enables students to identify why
and how it may be different working with colleagues from other cultures, as well as understanding the implications this can have for designing appropriate HRM practices.

From a national institutions perspective, the course compares how institutions such as legislation, state intervention, trade union influence, education systems, and the respective power of shareholders versus stakeholders can impact on patterns of HRM and employee relations practices in different countries. For example, comparisons are made between economies with very high levels of employment regulation, explaining local employee rights and benefits, and those in which firms have more autonomy to choose how to manage their employees.

From a strategic perspective, the course looks at how multinational enterprises are managing this cultural and institutional complexity, making strategic choices in international HRM to ensure they achieve the ultimate balancing act of thinking global but acting local. It considers different strategies firms might take (from complete standardization of HRM to complete localization) and how this then translates into different roles and activities for the IHRM function. This section also explores how these firms manage their international staff (expatriates), as well as finally exploring ethical issues around outsourcing activities to lower-cost countries, and the impact of a more globalized workforce on diversity and work-life balance issues.

LER 409 (OLEAD 409) Leadership Development: A Life-Long Learning Perspective (3) The course examines the continuing influence of social and environmental factors in shaping leadership and leadership development.

LER (OLEAD) 409 Leadership Development: A Life-Long Learning Perspective (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Current social conditions, such as financial crises, ineffective solutions to local, national, and international problems and corrupt leaders, call for more effective and ethical leadership on a broad scale. The positive and moral transformation of social institutions requires active participation and leadership of more authentic transformational leaders. This course will discuss authentic transformational leadership development from a life span developmental perspective. More specifically, it will focus on how an individual develops his/her leadership skills, potential, and capacity in his/her childhood, school, social organizations, colleges, and work organizations.

The primary purpose of this course is to help students understand how family, educational, and other environmental factors have helped and/or will help them develop their transformational leadership potential and leadership effectiveness, in addition to gaining a better understanding of their strengths and weaknesses in respect to personality, individual difference, motivation, values, emotions, self-awareness, and identity.

The fundamental objectives of this course are to help students 1) increase self-awareness; 2) to help students to know more about their sense of self, including self-identity, self-awareness, self-efficacy, and other types of self-concepts; 3) to understand the effect of life span influences in an individual’s leadership development.

LER 424 Employment Compensation (3) Development and management of employee compensation systems.

The Pennsylvania State University
LER 424 Employment Compensation (3)

Employment Compensation provides an overview of compensation programs, practices, and strategies. This course examines various compensation systems, that serve as an integral component of human resource management operations. Upon completion of this course, students will have a better understanding of compensation program design and development, the criteria used to compensate employees, and challenges that compensation professionals may encounter. Requirements for this course include regular attendance and participation, completion of three case studies, three project assignments, and three examinations which will consist of short answer and multiple choice questions.

LER 425 Employee Benefits (3)

This course is a comprehensive survey of the programs, principles and trends in planning and administering employee benefit programs for private and public employers. The objectives for this course are to provide students with an understanding of employee benefit programs and their broad implications for the workplace, the role of employee benefits in motivating and retaining employees, and the recent trends in employee benefit offerings and cost containment approaches.

Topics covered include strategic and tactical planning considerations used in implementing and changing benefit programs, discretionary and mandatory benefits, Social Security, health insurance structures, disability and life insurance programs, workers’ compensation, retirement programs, executive benefits, paid-time off programs and accommodation and enhancement programs.

This course builds on introductory general foundation courses in human resources and labor relations. It provides students with a working knowledge of employee benefits and its important role in human resources and labor relations careers.

Students must select and write a research paper on a benefits topic of special interest. Course grades will be determined from examinations and the research paper.

LER 434 Collective Bargaining and Contract Administration (3)

Theory, practice, and economic impact of collective bargaining, including administration of the collective bargaining agreement.

BA This course meets the Bachelor of Arts degree requirements.

Upon completing the course, students should be able to identify and explain the concepts, principles and practical application of various types of negotiations between labor and management, understand the basic legal framework governing collective bargaining in the U.S. and the rights of the parties under the law, explain the typical processes of collective bargaining as practiced in industrial, service and public sectors in the U.S., prepare for negotiations/collective bargaining, and negotiate issues. The course will also help students to develop concrete negotiation skills and provide them with the opportunity to apply those skills, with the benefit of observation and feedback. Lastly, the course will introduce students to the contract administration process utilized by unions and employers. Students will become familiar with
with grievance procedures and arbitration processes and begin to develop basic skills in resolving disputes over the
application and interpretation of labor agreements.

LER 435 Labor Relations in the Public Sector (3) Analysis of labor relations problems within different areas of public
employment.

LER 435 Labor Relations in the Public Sector (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Upon completing this course, students should be able to identify the legal frameworks that govern collective bargaining
between employers and unions in federal, state, and local governments. Students should also be able to explain the
process of collective bargaining in the government sector and the special circumstances that make public sector
bargaining different from private sector bargaining. At course end, students should be able to identify the parties
involved in public sector bargaining, including those involved in dispute resolution, and explain their priorities in the labor
relations process. Students should come to understand and articulate the reasons why it is important to study and more
fully comprehend the public sector labor relations process. Together, we will explore the distinctions between public and
private sector employers that impact labor relations in the public sector, in order to better understand those distinctions.
Also, we will explore the principal historical differences between negotiations in the public and private sectors, in order
that students can better articulate those differences. In addition, we will work to understand the principal arguments for
and against the right to strike for public sector employees, as well as other impasse resolution processes. Finally, we will
work to identify and discuss the challenges facing public sector labor relations in the near term and in the intermediate terr

LER 437 Workplace Dispute Resolution (3) Dispute resolution practices and procedures used in the workplace and
employment law settings.

LER 437 Workplace Dispute Resolution (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines dispute resolution procedures in unionized and nonunion workplaces. The course begins with an
examination of grievance procedures in unionized workplaces and the system of labor arbitration. Students will read labor
arbitration decisions and learn how to research arbitration issues. The second major theme of the course is an
examination of the design and use of nonunion workplace dispute resolution procedures. Students will read descriptions
and analyses of examples of nonunion grievance procedures. Finally, the course will look at procedures for resolving
employment law disputes and the major public policy debates surrounding mandatory nonunion arbitration procedures.
Students will read some of the major legal cases in this area of the law and perspectives both for and against mandatory
arbitration. A key objective of the course is to enable students to both understand and think critically about different
alternative dispute resolution procedures and their role in employment relations. As part of achieving this objective, the
course will include simulated dispute resolution exercises to provide students with experience in using techniques such as
arbitration, mediation, and peer review. Additional course requirements include regular class attendance and
participation, and paper assignments based on each of three main sections of the course. This course builds on and is
complementary with other coursework in Labor and Employment Relations in the areas of employment relations,
employment and labor law, and human resource management. It also compliments courses in other departments in the
area of dispute management and resolution, including the Minor in Dispute Management and Resolution. LER 437 may
also be taken as an elective by students in the MS in Human Resources and Employment Relations and compliments
coursework in the graduate program.

LER 444 Workplace Safety and Health: Principles and Practices (3) The role of employees, unions, employers, and
government in dealing with work-related safety and health issues.

LER 444 Workplace Safety and Health: Principles and Practices (3)

(BA) This course meets the Bachelor of Arts degree requirements.

Workplace Safety and Health: Policies and Practices focuses on the roles of employees, unions, employers, and government in addressing work-related safety and health issues. The course will introduce students to the three interrelated fields of workplace safety, workplace health, and environmental protection. Students will be provided with an overview of key issues within these fields and gain an appreciation for their importance within the workplace. Students will also become familiar with the fundamental concepts involved in the management of workplace safety and health issues.

LER 444 satisfies requirements within the Labor Studies and Employment Relations major and may be taken as an elective. LER 444 is complementary to other courses dealing with employee relations and legal principles within the workplace.

LER 445Y (US) (AF AM 445Y, PL SC 445Y) Politics of Affirmative Action (3) Examines history, politics, and economics of the use of special programs to advance racial interests in the U.S.

LER (AAA S/PL SC) 445Y Politics of Affirmative Action (3)

(US)

(BA) This course meets the Bachelor of Arts degree requirements.

The objectives of this course are to introduce students to the relationship between affirmative action and other policies purportedly designed to end racial inequality in the U.S. This course approaches the study of affirmative action in the context of the historic racial discrimination and inequality that Black Americans have faced since the founding of the Nation. The purpose of this course is to help students think about how contemporary and historic affirmative action policies relate to race, concepts racial inequality, the historic and continuing causes for racial inequality, public opinion, American politics and economic thought. The course materials will lead students through scholarly and popular articles, books and video presentations on the topic. It is hoped that students will become familiar with the history of affirmative action from its conception. Students will gain an intimate understanding of affirmative action economic and social outcomes on various racial groups. No prior knowledge is assumed, however a knowledge of civil rights history, quantitative methods, and constitutional law will be useful. The Politics of Affirmative Action satisfies the requirements for major and minor electives for the African American Studies, and major and minor electives for Political Science, and Labor Studies and Industrial Relations. Students are evaluated on the basis of an examination, term paper, class participation and class presentations of papers.

LER 458Y (US) (HIST 458Y) History of Work in America (3) A study of selected problems in the history of work in the United States, especially since 1877.

LER (HIST) 458Y History of Work in America (3)

(US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course will address economic, technological, social, cultural and political aspects of employment and self-employment. Major topics of concern will include methods of producing goods and services, work time and working conditions, the composition of the workforce, the changing functions of managers of labor, the role of the state in shaping labor markets and regulating employment relations, the formation and operation of unions and other representative bodies, and the relation of work to the family and other social institutions. Course requirements include regular attendance and participation, three essay exams and one term paper of a minimum of 10 pages. The essay exams and term papers will serve as instruments for gaining a fuller understanding of the subject matter by directing the students to examine and discuss major substantive problems in the field. In addition, some students will undertake original research in primary sources, thereby learning something of historical research methods. Writing will be treated as
a process; besides regular encouragement of students to submit a paper proposal and bibliography, a paper outline, a rough draft, and a final draft. In addition, they are advised that the instructor will read and comment on as many additional drafts as they care to submit.

**LER 460 Human Resources Ethics (3)** Ethics of human resources management.

**LER 460 Human Resource Ethics (3)**

*(BA)* This course meets the Bachelor of Arts degree requirements.

This course is designed for students who have received an introduction to human resources management and would like to spend some time thinking about the ethics of using various human resources practices. Students will devise their own personal codes of ethics, review the codes of others, and apply them to human resources situations. The course has limited enrollment to ensure participation in class discussions. Course work involves class discussion and presentations, outside reading, written in-class and out-of-class assignments, group and individual projects. All students are required to have completed a human resources or personnel management course, because the course assumes knowledge of this material for the students to be able to evaluate the ethical implications of human resources management decisions.

**LER 464 (OLEAD 464) Communication Skills for Leaders in Groups and Organizations (3)** Theory-and research-based communication skills for leaders dealing with work-related problems in contemporary groups and organizations.

**LER 464 Communication Skills for Leaders in Groups and Organizations (3)**

*(BA)* This course meets the Bachelor of Arts degree requirements.

LER 464 Communication Skills for Leaders in Groups and Organizations is a survey of theory, research, and practice related to the communication processes by which individuals in groups and organizations exercise influence, whether or not they occupy positions of acknowledged leadership, and may be taken as part of an Labor and Industrial Relations major or minor, or as an elective by students in other disciplines. The course is offered once each academic year and has an enrollment limit of 40 students per offering. The course requires no special facilities. It extends to other courses in the major primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses focusing on groups and organizations in Sociology, Psychology, Management, and Engineering. During the course, students are exposed to a variety of theoretical perspectives on the study of leadership, learn about research illuminating its functions, and become acquainted with communication practices derived from and/or suggested by such theories and research that contribute to the exercise of influence and, thereby, effective group and organizational performance. These terminal outcomes define the objectives of the course. Focus will be on leadership as both role-related behavior and goal-directed behavior, regardless of roles that members of groups and organizations occupy.

LER 465 (OLED 465) Collective Decision Making (3) Application of theories of decision making to work-related issues in groups and organizations requiring collective resolution and action.

LER 465 Collective Decision Making (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course presents a broad overview of theories, research, and practices in decision making as related to work-related choice making in groups and organizations and is open to students majoring or minoring in Labor and Industrial Relations, as well as to students who may wish to use the course as an elective. The course is offered once each academic year and has an enrollment limit of 40 students per offering. It requires no special facilities. LIR 465 extends to other courses in the major, primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses dealing with decision making in groups and organizations in sociology, psychology, and management. Of particular interest are decision making practices, as well as theories that account for them, in single-motive situations (in which participants in the process are pursuing a common goal) and mixed-motive situations (in which two or more of the participants are competitively related, but must cooperate to achieve their objectives). Hence, the course deals both with (1) conventional decision making, as in the case of boards, task forces, problem-solving groups, and quality circles or teams, appropriate to single-motive situations and (2) processes, such as bargaining, negotiation, and dispute management/resolution, appropriate to mixed-motive situations. The course also deals with the influence of organizational culture on decision-making in both types of situations. Upon completing LIR 465, students will have been exposed to a broad array of theoretical perspectives on decision making in groups and organizations, will be familiar with research testing these theories, and be aware of decision making practices suggested by theory and research that are useful in situations requiring collective choice and action. These terminal outcomes of the course reflect the objectives.

LER 472 (WMNST 472) Work-Life Practices and Policies (3) Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved.

LER 472 Work-Life Practices and Policies (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The interdisciplinary field of work-family and work-life developed as a result of middle-class women's entry into the labor force, a movement that generated conflict between family and paid work commitments. Overall, the course addresses the reasons the field developed, relevant theoretical perspectives regarding the issues, and related problems as well as proposed solutions at both the public and private sector levels. The overarching objectives of the course are to expand students' understanding of conflicts between work and family commitments, and how these might be resolved through private and public sector initiatives. Specifically, the course concerns how individuals, families, and organizations interact to help hinder the achievement of balance between work and life commitments, and relevant effects on those involved.
The changing demographics of the family, laws and trends around working time, father and mother time with children, the expanded need for elder care, work-life programs such as flextime, concierge services, paid parental leave, part-time careers, paid time-off banks, and the role of unions, corporations and government legislation are covered. The course attempts to link the likely future needs of students to broader trends in society and how balance could be achieved at the level of individuals, families, other stakeholders in the community, and for society as well. Fields of research relevant to the course include labor studies, women's studies, Industrial/Organizational psychology, the sociology of work and of family, and child development. Students will be evaluated on the basis of class participation, through two in-class examinations, and through a final written or oral project providing a chronology and analysis of an adult's work-family history. The course is offered most fall and spring semesters, and typically 30 students are enrolled.

**LER 475H (GEOG 475H) Labor in the Global Economy: U.S. and South African Perspectives (3)**  
This course focuses on how the nature of work is changing in the global economy, and the implications for economic opportunity and inequality in both .

**LER (GEOG) 475H Labor in the Global Economy: U.S. and South African Perspectives (3)**  
This seminar focuses on how the nature of work is changing in the "new economy", and the implications for economic opportunity and inequality in both the United States and South Africa. Sections of the course examine: theoretical approaches to understanding contemporary process of labor restructuring, including globalization, rise of an information economy, and growth in service sector employment; case studies of restructuring processes in different industrial sectors in both the U.S. and South Africa; and innovative labor organizing initiatives at a local, regional and global scale. This course aims to develop a framework for understanding the nature of contemporary processes of economic restructuring and its impact on the world of work. Drawing on research in both a South African and U.S. context, key case studies in the changing nature of work will be examined. This will provide a deeper understanding of how broad macro-level changes in the nature of contemporary capitalism are mediated by a variety of technological, political, and socio-economic factors in particular industries and geographic contexts. Finally, an in-depth look at workers' responses to these changes at different scales (local, regional, global) will help deepen our understanding of the contested nature of workplace restructuring while exploring promising strategies for improving working conditions. This is a reading-intensive course dealing with the theoretical literature on rapid economic restructuring and how this is shaping work and employment. It is run in collaboration with the Sociology of Work Program at the University of Witwatersrand in Johannesburg, South Africa, with video-conference discussions linking the two courses.

**LER 480 Current Issues in Human Resources (3)**  
Examines current issues in the field of human resource management, including innovative work schedules, telecommuting, non-traditional office environments, etc.

**LER 480 Current Issues in Human Resources (3)**  
Students will study current trends that are shaping human resources management. These trends include information technology, internationalization, new organizational forms, changing demographics, and competitive landscape. Examples of topics include use of social media in human resource management, virtual work, managing an aging workforce and working across international boundaries. The course is case based and as such explores experiences of actual companies. Students will study and discuss the strategies, successes and failures of companies and how these issues and challenges relate to the human resources function. Timely readings that expose students to theoretical structures underlying these changes will be part of this course. In addition, because this is a current issues class, students will be expected to actively follow trending news in the business world through news media and critically examine how it is shaping the human resource management practices. This course will serve as a complement to MGMT 100, 341, 441 and LER 100, 201, 401 and 434.

**LER 485 The Business Side of Human Resources (3)**

Students will examine the interface between HR, the business model, and other aspects of the business organization.

**LER 485 The Business Side of Human Resources (3)**

Students will have the opportunity to learn about important business issues in human resource management that will introduce them to the interface between human resources and other areas of the operation of a business. This course will focus on subject matter that will better prepare students for the broader role that human resource managers are being requested to play in terms of contributing to the profitability of their employers. In the investigation of the course material, students will be exposed to real life examples and experiences, interaction with outside human resource professionals and guest speakers that will broaden their understanding of the concepts learned in their previous course work in human resources and labor relations.

Some examples of the subject matter that will be addressed in this course are: Human resource and business ethics; Basic introduction of the interrelationship of human resources and business finance and accounting; Human resource metrics; Employment process; Leadership and relationship building; Communication in the workplace; Professional networking; Business etiquette; Human resource culture in business.

The course is best designed for senior and graduate students who have serious interest in pursuing employment in human resources and/or labor relations.

LER 497F (HPA 497D) Human Resource Management in a Social Welfare Context: The Swedish Experience (1) This course explores human resource management (HRM) in a social welfare context through trip preparation and intensive field experience in Sweden. Topics covered during the course will provide a cultural and historical perspective of Sweden; describe human resource management in Sweden; and provide examples of particular policies related to employment. Pre-trip learnings will provide a background for students to begin to understand the current challenges and opportunities of HRM in Sweden, Sweden culture and history (compared with the US and other cultures); the Swedish (social welfare) business context; and traditions of HRM in Sweden. The students will have four seminars, after which a reflection paper will be submitted via ANGEL.

Landscape Architecture (LARCH)

LARCH 060 (GA;US;IL) History of Design on the Land (3) A survey of the historical development of outdoor space in relationship to allied arts from early beginnings to this century.

LARCH 060 History of Landscape Architecture (3) (GA)

(BA) This course meets the Bachelor of Arts degree requirements.

LARCH 060 is an introductory survey course of the historical development of designed outdoor space in relationship to the allied arts from early beginnings to present day. Although the profession of architecture was not named until 1858, with the award-winning design of Central Park by Frederick Law Olmsted and Calvert Vaux, the art of design on the land has been practiced since the beginning of time. It is the creation of human environments, inevitably expressing the creator's perception of the relationship between humanity and nature.

As with all art, the design of outdoor spaces reveals a culture’s beliefs, values, and aspirations. If one studies design in different cultures and time periods, one can learn a great deal about that society. One can also begin to see history holistically, to detect trends, to relate yesterday to today, and to question the present and future. In the course we explore the outdoor spatial designs of history, with emphasis upon what these designs reveal about cultural attitudes toward nature, humanity and art. While we will address middle and far-eastern landscapes, the course focuses upon western civilizations with the second half focusing on American landscapes.

The objective of this course is to present a concise analysis of the design of outdoor space with special emphasis on American design from 1800 to date. It is hoped that students will gain an increased awareness of landscape architecture as an art, and of their own built environment as a product of cultural values.

Grades are based upon three examinations: two during the course and one during final exam period. Each examination is worth 33 1/3% of your final grade. Each exam will consist mostly of multiple-choice questions some of which may be based on slides; there may also be short answer questions. The specific format will be announced prior to each exam. Both lecture content and reading packet material will be covered on the exams. Computer tutorials are available and designed to aid in your understanding of the reading packet. As well, the lectures are taped and are available for review through the University's Classroom Recording unit. To further aid you in understanding course content, a study guide will be posted every week at the web address.

The Pennsylvania State University
LARCH 065 (GA;US;IL) Built Environment and Culture (3)
(3) Investigates the relationship between socio-cultural practices and the development and organization of contemporary built environments.

(LA) This course meets the Bachelor of Arts degree requirements.

This interdisciplinary course is based on the premise that space is an active structuring element of human experience. Using theoretical orientations from landscape architecture, architecture, urban planning, geography, sociology, and cultural anthropology this course will investigate how social structures are spatially embedded in contemporary built environments. It will do so by examining environments at three scales (house, street, and city) in different parts of the world. It will explore both western and non-western environments with emphasis on environments that students are likely to be unfamiliar with. Within each scale and region it will focus on the spatial experience of different groups based on racial, ethnic, gender, class, and other identities.

This course will equip students with the necessary skills to understand and analyze the relationship between existing social and power structures of society and the organization of specific built environments. It will enable them to compare their experience of environments with those of other groups in society. It will also introduce students to the aesthetics of everyday environments in both national and international contexts. There are no prerequisites for this course. This course will complement LARCH 060 and other courses related to human settlements and urbanization offered by various departments/programs like Architecture, Art History, Geography, History, and Sociology.

Students will be evaluated through low stakes testing (a series of three exams), frequent quizzes, leading of discussion sessions, and a group project. Peer evaluation will also be part of the final grade.

LARCH 112 Introductory Design Studio (3)
(3) Provides students with an interdisciplinary introduction to studio work in landscape design.

LARCH 112 Introductory Design Studio (3)

This course provides an introduction to landscape design. Students will create studio work that investigates, from a variety of disciplinary understandings, basic issues and problems in the arts and design disciplines. The course is thematically linked to LARCH 121S: Landscape Architecture Orientation Seminar taken in the preceding semester and will be team-taught to provide an interdisciplinary structure. This course will foster interdisciplinary awareness and provide students with a common language (or several common languages) with which they can communicate with other students in the design disciplines. Ways of learning about design through projects and assignments that incorporate various technologies will be included in the course. The course will integrate a variety of methodologies and approaches rather than teach discipline-specific subject matter.

Bachelor of Arts: None
Effective: Fall 2011
Prerequisite: admission into the Department of Landscape ArchitectureLARCH 121S andLARCH 151

LARCH 121S Landscape Architecture Orientation Seminar (1) Introductory seminar involving readings on significant issues
LARCH 121S Landscape Architecture Orientation Seminar (1)

LARCH 121S is a seminar course, the first of many in an entering student’s Penn State career. Seminar classes offer the opportunity to read, think, share ideas through informal discussion, and refine personal thoughts reflection. The seminar is a common and useful tool to explore important ideas and develop critical thinking skills. The design and theory sequence begins with the freshman seminar, LARCH 121S, which introduces students to landscape architecture issues.

In this seminar students read and discuss the challenges and opportunities faced by contemporary landscape architects. This is the first of a ten-seminar sequence addressing theory and issues. As an introductory course, LARCH 121S is a "stand-alone" seminar - all those in the professional core of the program are linked to design studios.

To support student explorations, the class undertakes a series of readings of seminal works in landscape architecture and allied field that students carefully consider, question, and discuss. As a major part of student evaluation, they maintain a journal of their evolving ideas about the course content.

Entering landscape architecture majors sometimes have a restricted notion of the wide variety of career directions that face them within the field of landscape architecture. This class proposes that the principal role of the landscape designer and planner is to make "place" - a combination of physical, cultural and compositional cues that imbue built and natural forms with meaning. The goal of this first-year seminar class is for students to understand the type, or types, of place that landscape can be. The course introduces students to concepts of landscape as place, and asks them to ponder, explore, and respond to ideas about various perspectives on landscape "place." This introduces them to the broad range of issues and activities that are addressed in the seemingly simple term, "landscape architecture."

Course Objectives:

a) To become familiar with important issues in contemporary landscape architecture.
b) To exercise and hone skills in critical thinking.
c) To exercise and hone skills in speaking and writing persuasively.
d) To begin to explore roles as future "place makers."

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

LARCH 151 Introduction to Design Visualization (3) Provides students with an introduction to visualization techniques for landscape architectural design and planning.

The complexity and scale of most design projects and the collaborative nature of design work necessitate the use of graphic images to develop and communicate design ideas from the very early conceptual stage to the final construction documents. These "design drawings" are an integral part of the problem solving and design process. They require a good eye, a creative imagination and a skilled hand.

Developing skill at design drawing and visualization starts with an understanding of basic concepts of seeing, perception, and principles of communication. It requires becoming familiar with and skilled at using a graphic vocabulary of drawings and symbols that are commonly used in the design disciplines to communicate with one another. And of course, although concepts and theory are important, practice is essential. As Paul Laseau says in Graphic Thinking For Architects And Designers, "The knowledge that drawing and thinking are important to [landscape] architecture is not sufficient. Natural drawing talent is not enough. To sustain the necessary lifetime effort of learning and perfecting graphic thinking, we need to find pleasure in drawing and thinking."

The goal of this class is for students to begin developing their visual communication skills using a range of media and to start on a "lifetime effort" of enjoyable and productive graphic thinking and communication. Both concepts and techniques will be stressed.

Students work on exercises that develop facility with basic conventions. The tools and principles introduced in this class feed directly into the more advanced and computer-aided visualization and presentation methods emphasized in the following class, LARCH 251: Design Visualization and Graphics I.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2008

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

LARCH 197 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Special Topics (1-9)
LARCH 199 (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.

LARCH 211 Design and Theory I: Introduction to Principles of Landscape Architectural Design (4) An introduction to design theories and principles of landscape architecture. LARCH majors only.

Course Objectives:
a) Achieve working knowledge of the three critical building blocks that will underpin the student's future design experiments: space, experiential function, and intent.
b) Acquire a working knowledge of spatial composition - both the vocabulary and the design impact of compositional elements and principles.
c) Develop an introductory understanding of the space making potential of vegetation, landform, and structure.
d) Gain experience in model building and understanding of its usefulness in spatial design.
e) Develop the student's skills in design criticism.
f) Introduce the iterative process of landscape architectural design, including the importance of independent design decision-making based on a variety of criticism.
g) Experience visual note taking and understand its usefulness in the design process.
h) Develop the habit of self-reflection about the individual's design process.

LARCH 212 Design and Theory II: Introduction to Issues of Place (4) Studio design addressing issues of nature and culture; application of theories, processes, and presentation methods learned in course and concurrent courses. LARCH majors only.

LARCH 212 Design and Theory II: Introduction to Issues of Place (4)

The course follows LARCH 211 and continues to develop the fundamental concepts and basic skills of landscape architectural design. The particular emphasis of this class is on introduction to site analysis encompassing both natural and cultural...
elements of place. The studio project types are small to moderate in scale and have basic programs. In many cases, second-year site design projects include community projects (i.e. parks) with real human issues and sites. Group discussions and critiques will be important activities in the studio.

This course will build upon the ideas explored in LARCH 211 of composition with the basic design elements (landform, vegetation, structures) of landscape design and the ecology of site from LARCH 241. Via a series of studio projects, charrettes (intensive applied workshops) and field trips, LARCH 212 will engage students with design challenges on real sites in the State College/University Park community. Students will be challenged to develop the comprehensive understanding of site and activities (program) required to become an effective landscape architect. Included in the most important parts of that comprehension are natural, social, historical, and aesthetic site conditions; functions, activities and program requirements; site and community context; and relevant design concepts, theories and examples.

The subsequent challenge for students will be the development of design processes necessary to integrate site and program understandings into unified, successful design.

Course objectives:
- To explore the iterative and self-critical design process essential to all design activities.
- To clearly and effectively communicate design proposals, graphically and verbally.
- To master graphic techniques and composition needed for competent presentation.
- To practice written and oral presentation skills, culminating in public presentation of student designs to audiences including community representatives.

LARCH 221 Design Theory Seminar (1) Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 211.

LARCH 222 Design Theory Seminar (1)

Each of the four design studios that constitute the core of the professional curriculum has a companion seminar that provides the vehicle for structured exploration of the theoretical and philosophical framework within which we design and plan. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design.

LARCH 222 is the first of a four-class sequence of design seminars. LARCH 221 is focused on landscape architectural design.

Landscape architectural principles and issues are introduced through studies of design precedents, corollary readings in the sociological, psychological and cultural contexts of design and small-group discussions - the latter frequently related to topics under investigation in the companion studio, LARCH 211. As the curriculum progresses, the issues explored become increasingly complex and build upon prior seminars.

The second-year theory seminar content is introductory in nature. The fall semester (LARCH 221) covers introductory writings addressing the broadest principles of landscape design processes, discussions of fundamental ordering principles, and philosophical positions on the interrelationships of landform, plants and structure. They introduce place-awareness through concepts such as genius loci, ordering principles such as the golden section, and experiential responses to landscape from phenomenological viewpoints.

Course Objectives:
- To become familiar with important issues in contemporary landscape architecture.
- To exercise and hone skills in critical thinking.
- To exercise and hone skills in speaking and writing persuasively.
- To begin to explore the issues that impinge upon and shape "place."

LARCH 222 Design Theory Seminar (1) Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 212.

LARCH 222 Design Theory Seminar (1)
LARCH 222 is the companion seminar to the design studio LARCH 212. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. Topics in LARCH 222 reflect the projects being explored in the companion studio but, in general, move beyond exploration of basic design concepts to include an emphasis on both natural and cultural elements of place and provides essential background to the processes and principles of site analysis in as much as those reflect the technological and cultural biases that are brought to design.

Landscape architectural principles and issues relevant to the design topics being pursued in LARCH 212 are introduced through studies of design precedents, corollary readings in the sociological, psychological, and cultural contexts of design and small-group discussions - the latter frequently related to topics under investigation in the companion studio, LARCH 212. As the curriculum progresses, the issues explored become increasingly complex and build upon prior seminars.

The second-year theory seminar content is introductory in nature. The spring semester (LARCH 222) continues to cover introductory writings addressing the broadest principles of landscape design processes, discussions of fundamental ordering principles, and philosophical positions on the interrelationships of landform, plants and structure - increasingly in the context of the design types being explored in LARCH 212. They introduce place-awareness through concepts derived from sociology, social psychology and cultural anthropology.

Course Objectives:
- To increase familiarity with important issues in contemporary landscape architecture.
- To continue to develop skills in critical thinking.
- To continue to build skills in speaking and writing persuasively.
- To bring focused attention to the issues that impact the design of small, private and public spaces.

Bachelor of Arts: None
Effective: Spring 2009
Prerequisite: LARCH 251

The Pennsylvania State University
LARCH 241 Ecological Principles for Landscape Design (3) The development of basic ecological knowledge that becomes the basis for sensitive ecological design.

LARCH 241 Vegetation Ecology and Landscape Design (3)
Landscape architecture is so thoroughly in and of the environment that ecological concerns permeate every aspect of practice. Students encounter ecological concepts throughout the curriculum, in the context of social and cultural systems and ecologies as well as the more familiar natural system ecology. The curriculum’s entry-point to considering ecology as a fundamental shaper of design and planning is LARCH 241, Ecological Principles for Landscape Design, which introduces students to the basic concepts in ecology such that they will be able to apply ecological knowledge in landscape design and management.

The course focuses on basic ecological principles and concepts at all scales, with special emphasis on the small-scale site and the larger, regional-scale landscape. Key concepts explored in the class include: population, community, ecosystem and landscape. Students will learn the characteristics of healthy ecosystems and will begin to cover the adverse impacts that can result from failure to apply sound ecological principles in design and planning. The principles learned in this class provide the foundation for later explorations that include responses to overlying patterns of human land use and development.

The course achieves the above through a variety of learning activities. The core of the class comprises traditional assigned readings and lectures delivered in the classroom (copies of the readings and PowerPoint slides from lectures are available on-line on ANGEL). The class also includes numerous field experiences, both in the immediate campus area and the close-by off-campus locations. The instructor leads several different types of field experiences - some oriented to ecology and restoration, others focused on natural history and site comprehension.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2010
Prerequisite: LARCH majors only or permission of the program.

LARCH 251 Design Visualization and Graphics I (3) Advanced visualization principles and techniques; computer-aided design, image processing, color theory and application; visual thinking and problem solving. For Landscape Architecture majors only.

LARCH 251 Design Visualization and Graphics II (2)
The products of landscape architectural design and planning are inherently visual, and our visual sense is most important in assessment and evaluation of the qualities the environment, or future environments, presents to us. Direct illustration of the world is traditionally accomplished through tools and approaches such as hand-sketching and figure drawing, and draws upon understandings of color theory and perspective.

Increasingly, those tools are being supplanted by computer-based tools, especially as the representation of future scenarios becomes a bigger part of community and professional decision-making processes. Technical drawing is increasingly supplemented by visual simulation, modeling, animation and other advanced techniques.

While visual communication is tightly woven into the heart of design and planning studios, LARCH 251 provides students with an introduction to several types of hand drawing and computer-aided drawing and animation techniques. Students work on both basic drafting conventions and more creative graphic-rendering techniques. The tools and principles introduced in this class are used extensively throughout the program. Computer-aided visualization and presentation methods are emphasized, including the fundamentals of 2-D and 3-D illustrative rendition.

Course Objectives:
- Achieve working knowledge of basic illustration principles: line, color, shading, perspective.
- Master the basics of 2-D and 3-D representation in both hand- and computer -media.
- Acquire a working knowledge of spatial composition and its expression through both traditional and computer-based media.
- Develop an introductory understanding of data formats for computer illustration and modeling, and the integration of multiple data types and formats into presentations.
- Gain experience in 3-D computer model building and understanding of its usefulness in spatial design.

LARCH 272 Landscape Architecture Field Trip (1) A week-long class trip to visit recent projects, offices, and outstanding...
During their first and second years in the landscape architecture program, students are introduced to ways of looking at the landscape that are quite new to them—to look at the visible landscape as representation of its past cultural, political, bio-physical, and geological influences. Through design studios and methods classes, students have been exposed to design approaches addressing aesthetic and experiential goals, and to others that employ engineering strategies for land shaping and management of water resources. They have taken general education classes that focus on soils, history, cultural geography and communications. The second year ends with a field trip that places students in settings where all of these influences are seen at work together and asks them to reflect on that integration of influences. The trip emphasizes the importance of regional context and diversity by traversing a cross-section of physiographic regions of the Mid-Atlantic States—typically from the Maryland shore to the edge of Lake Erie.

LARCH 272 is a one-credit course that serves to immerse students in an understanding of how diverse influences, some planned, others not, coalesce to form the vital changing landscapes of the Mid-Atlantic region. The course comprises a field trip to representative ecosystems across the physiographic regions of New Jersey and Pennsylvania, linking the Mid-Atlantic and Great Lake geographic regions. Through hiking, canoeing and driving, students experience selected physical, biological and spatial conditions in these landscapes in order to compare and contrast their origins, processes, structures and patterns, and potentials for landscape design and planning.

Course Objectives:
• To become familiar with notable regional ecosystems;
• To experience, record and respond to representatives sites;
• To trace the connection between physical and biological processes and plant communities
• To understand these sites as dynamic and beautiful places that are concurrently being nurtured and threatened by humans;
• To relate these experiences to landscape design, planning and management

LARCH 311 Design and Theory III: Regional Planning and Landscape Systems (4)

An introduction to site planning, management, and design.

LARCH 311 Design and Theory III: Site Planning and Design (4)

During the third year of this professional curriculum, design and theory references build upon the second-year experiences and expand to both broader (regional) and more detailed (site) investigations. The fall semester design studio and seminar classes (LARCH 311 and 321 respectively) cover regional context as a preamble to large-scale master planning.

LARCH 311 considers the broader landscape and systems within the landscape. There are two very good reasons to learn to work at the broader landscape scale: to make informed planning, design and management recommendations at that level, and to enlighten site-scale design with a regional perspective. Students begin exploring ways to understand and address issues of regional context before focusing on local-scale site design in the spring semester. Projects from the fall include an emphasis on regional analysis, site and program analysis, and site design in the regional context. Studio work involves research and report writing and medium- to large-scale projects where site design and program are directly influenced by regional factors. Topography, geomorphology, land use, transportation, regional ecology, demographics, landscape history, visual analysis, etc., are introduced, all bound into current technological formats using such tools as Geographic Information Systems.

Students explore ideas about landscape-scale conservation, linkages and recreational programming - important types of regional-scale work with which landscape architects are involved. They apply knowledge of the landscape in considering public planning, design and management interventions, including exploration of alternatives for landscape conservation and recreation. Students become involved, through community outreach projects, with interactive and real (e.g. sometimes messy) public dialogue that may help build community-wide enthusiasm for a landscape project of regional significance.

Course Objectives:
- To further student understanding of place and landscape experience as an interaction of those features and processes at the human scale.
- To introduce students to basic approaches and techniques for analyzing landscape systems and features as a primary basis for identifying issues and discovering design and planning opportunities.
- To introduce Geographic Information Systems (GIS) as a primary tool in regional analysis and planning, and to integrate GIS into a broadly based approach to managing data, developing concepts and communicating ideas.
- To develop student ability to use landscape and spatial data as the basis from which to draw conclusions and identify opportunities and actions.
- To continue to develop skills in integrated oral, verbal and graphic communication.

LARCH 312 Design and Theory IV: Site and Community Design (4)

An introduction to master planning and community design. For landscape architecture majors only.

LARCH 312 Design and Theory IV: Site and Regional Planning (4)

In the spring semester of the third year, LARCH 312 and 322 continue the students' progress in working with regional contextual factors, but with an emphasis on site design at a variety of scales. Project types include a progression from small- through large-scale design with increasingly complex programs, human issues, and ecological parameters. Implementation is strongly integrated into this site-design context. This class constitutes a capstone to the professional core of the curriculum and accomplishes the first comprehensive integration of the student's technical and communication skills, their ecological and socio-cultural knowledge, and their developing skills as designers.

LARCH 312 directly references the understanding of the regional context from the preceding LARCH 311 to take students into community master planning issues. An introduction to those issues and the issues of sprawl and landscape history then allows a transition to community form and housing-type topics. In this class, students gain an understanding of designing communities and everyday human habitat - at several scales, including the interrelationships of natural, cultural and economic factors on the past, present and future development of communities. They develop awareness that even small, individual site design requires an understanding of larger environmental and cultural contexts. To this end, they learn to assess physical and cultural geographies at regional and local scales and their implications for community design at the site scale.

Course Objectives:
- To further develop expertise in the analysis and assessment of the natural, cultural, social and experiential facets of sites and their surroundings.
- To refine understanding of the role of data gathering, research, and analysis in design.
- To explore issues of land use planning and develop an understanding of logical interrelationships among different land uses.
- To develop skills in meshing the attributes of a site with the expectations of a program and the feature of actual buildings.
- To practice and refine site design skills, from functional/technical aspects (building location, circulation, orientation,
drainage, grading, planting, materials) to experiential facts (spaces, sequences, view, character).
- To practice and refine skills in place making, drawing upon local context, site, and program to create a responsive and memorial design.
- To enhance confidence and skill in developing a design vision through independent design decision-making.

LARCH 321 Design Theory Seminar (1) Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 311.

LARCH 321 Design Theory Seminar (1)

LARCH 321 is the companion seminar to the design studio LARCH 311. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design.

Topics in LARCH 321 reflect the projects being explored in the companion studio. During the third year, theory references build upon the second-year experiences and expand to broader regional investigations. The fall semester (LARCH 311 and 321) covers regional context as a preamble to large-scale master planning in land-use issues. In the seminar, students read broadly about the genesis of regional context as a construct of cultural, as well as biophysical influences. The concept of "reading" the landscape is fully explored, introducing students to the clues and cues by which the origins of the existing landscape can be discerned.

Themes in the third-year theory seminars become increasingly sophisticated. The regional landscape is the setting for some of our most pressing public debates - landscape restoration vs. agro-industry; landscape as economic resource vs. spiritual renewal; landscape as repository of cultural history vs dynamic reflection of current values. These themes are explored through readings that include the fundamental influences of topography; geology; regional ecology and hydrology; the human overlays of land use; transportation; demographics; and the cultural influences and responses seen in landscape history, cultural and visual analysis, etc., are introduced.

Course Objectives:
- To explore the political and philosophical influences that shape the regional landscape.
- To expose students to important debates on the future of the regional landscape.
- To continue to develop the ability to engage in public debate of these issues.
- To continue to build skills in speaking and writing persuasively.

Concurrent: LARCH 311

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

LARCH 322 Design Theory Seminar (1) Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 312.

LARCH 322 Design Theory Seminar (1)

LARCH 322 is the companion seminar to the design studio LARCH 312. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design.

Topics in LARCH 322 reflect the projects being explored in the companion studio. During the third year, theory references build upon the second-year experiences and expand to broader regional investigations. The spring semester (LARCH 312 and 322) covers site design issues within a regional context. In the seminar, students gain an understanding of communities and the complex of values that shape them, including the interrelationships of natural, cultural and economic factors on the future development of communities. Habitat management, watershed management, real-estate values, zoning and planning ordinances, individual and community rights are topics of discussions in this seminar. Students develop awareness that even small, individual site design requires an understanding of larger environmental and cultural contexts, and that success in planning at that large scale depends on implementation of wise planning at the site scale. Readings and discussion are supplemented by research and report writing that address contemporary debates on policy and planning.

LARCH 322 also provides a setting for joining ideas presented in the context of both small-scale and large-scale design to engender in students a comprehensive view of the world of landscape design as an integrated whole where concepts developed at small scale become the framework and guiding principles for larger scale, vice versa.

Course Objectives:

The Pennsylvania State University
LARCH 331 (IL) Landscape Architectural Design Implementation I (3) Introduction to landscape construction materials and their use in design; includes principles and techniques for detailed design of site elements. For Landscape Architecture majors only.

LARCH 331 Landscape Architectural Design Implementation III (3)

The landscape architect calls upon a rich array of materials to construct the built elements of landscape—walls, ground surfaces, overhead structures and furniture systems. The functional success and durability of many historical and traditional construction methods is based on a learned appreciation of the qualities and behaviors of materials in use in the landscape. Students develop understanding of the fundamental structural qualities of materials and use that knowledge to devise and illustrate their own design details. The same understanding of material behaviors will be used to investigate the qualities of novel construction materials, and will guide the development of construction details that respond to new constraints and opportunities.

The main focus of 331 will be on materials and construction detailing, with emphasis on techniques appropriate for an array of design situations. Representation of design ideas using computer-aided-drafting is expected in this class.

Lecture topics:
- Material qualities; physical, chemical, structural
- Construction details and specifications
- Control of moisture penetration
- Issues of health, safety and welfare (danger, security, observation)
- Design behavior / people spaces
- Site furniture—selection, layout etc.
- Site layout/staking plan
- Paving—patterns and materials
- Fountains and water features
- ADA and Universal Design
- Trees in Urban Design
- Material selection in the urban environment
- Outdoor lighting
- Public art and sculpture
- Stairs, walls and elevation changes
- Sustainable design and construction
- Site utilities

LARCH 332 Landscape Architectural Design Implementation II (3) Introduces the principles and techniques of planting design, including instruction in proper construction documentation. For Landscape Architecture majors only.

LARCH 332 Landscape Architectural Design Implementation II (3)

Plants and planting design are critical elements of the education of a landscape architect. LARCH 322 is designed to develop students’ appreciation of plants in the landscape while advancing knowledge and skills in planting design techniques, and documentation as a distinct-but-integral part of the landscape development and stewardship process. The focus of the course on both plant association and individual species will continue to consider the landscape architect’s palette, as well as the realities that sustain life on and around a landscape site. The class constitutes the third part of a sequence of LARCH 241, 341 and 332 that provides a comprehensive introduction to plants in their role within the ecosystem, as naturally occurring and interdependent plant communities, and in this third class as the representation of deliberate design decisions that seek to achieve the integrity of the natural systems that inspire them.

This practical step-by-step studio-format course will enable students to see plants less as simplistic design objects and more as complex living elements that grow, die and regenerate, that are inherently part of larger biophysical and aesthetic...
landscape systems, and that ultimately contribute to the quality of human life.

Course Objectives:
- Confirmation of planting objectives within the context of the given overall project goals.
- Analysis of the site and its context from the interrelated perspectives of general planting design principles and site-specific planting design objectives.
- Application of the given planting program that reflects project goals and site analysis.
- Research and development of a planting palette and demonstrated implementation of approaches to sustainable plant communities, with emphasis on soil-plant relationships, microclimatic and vegetation management considerations.
- Conceptualization, studio critique, and refinement of a planting design through the application of planting design principles: spatial, visual/sensory, ecological, horticultural, functional, and educational.
- Preparation of a refined and realistic working drawing package using computer-aided drafting that includes planting plans, installation details, plant establishment notes, and other directions to the contractor.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2012
Prerequisite: LARCH 331

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

LARCH 341 Plants, People and Place: Plants in Landscape Architectural Design (3)

LARCH 341 is concerned with the key roles of plants and plant communities in the design, planning and management of the land. Students study the ecology and dynamics of native communities including plant geography, plant/soil/water relationships, plant community succession, forest ecosystem dynamics, plant/wildlife relationships, invasive non-native plants, and landscape restoration. Another focus of the course, bearing upon the role of plants in creating place, will be to study the cultural history and human ecology of the use of native and non-native plants. The course will also address the management and protection of sensitive native plant communities, the value of plants in the management of storm-water and the protection of soil resources, and the critical role of plants in sustainable design.

The design suitability of native and non-native ornamental woody and herbaceous plants will be studied through fieldwork, case studies, hand and computer rendering, and digital and photographic resources. Students will study plant taxonomy and the use of identification keys. Using these tools, they will be expected to develop a personal handbook of planting design resources, including an illustrated collection of plant species characteristics, based on their field work experiences, for use in later courses and professional practice. They will record their observations on the cultural values and meaning of plants, as well as their uses in design. This course is part of the preparation for later courses in planting design in the landscape architecture professional curriculum.

Planting design is shaped by the availability and distribution of woody and herbaceous plants and seeds. Students will be provided an overview of the processes of production, installation and management of plants in the landscape, with special reference to regionally native materials, and including visits to nurseries, greenhouses, and seed production farms as well as guest speakers from horticulture and agronomy. Methods of plant and seed installation will be reviewed and field trips to landscapes under construction will be arranged in order to observe those processes directly. The use of mulches, geo-textiles, mycorrhizal inoculation, soil management and amendment, site protection, and arboricultural protection in the establishment and management of contemporary landscapes systems will be studied.

Course Objectives:
a) To develop an understanding of the functional and ecological contribution of native and non-native plants and plant communities to the contemporary landscape.
b) To explore such areas as bioremediation and hydrology
c) To expose students to the therapeutic values of plants and plant communities
d) To investigate the use of vegetation in noise and pollution control

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

LARCH 361W Historic Issues in Landscape Architecture (3)

LARCH 361W, Historical Issues in Landscape Architecture, is a writing-intensive course that enables a more thorough investigation of historic issues as they relate to design. The dual goal of this course is to introduce students to a variety of ways that landscape architects address and use history in their work, and to develop their skills in verbally...
communicating ideas on this subject through presentations, reports, and proposals.

The course is devoted to a wide range of relevant issues and topics confronting the profession and discipline of landscape architecture in the 21st century. It investigates the modern designed landscape as a distinct mode of cultural production—with its own materials, medium, codes, ethics, and concerns—in the context of landscape architectural theory’s interconnection to evolving societal constructions of nature, social issues, environmentalism, and the city. It begins with the emergency of a modern sensibility about landscape in the late 13th century and trade developments through modernism postmodernism, and into post modernism. Information dissemination will be by lectures and student explorations through short papers.

This writing-intensive course provides third-year landscape architecture students a grounding in contemporary theoretical issues that impact landscape architecture, from social to environmental theories, both by landscape architects and by other theoreticians. The goal is to provide students an understanding of contemporary ideas that influence the work of landscape architects.

Course Objectives:
• To expand the student’s knowledge of contemporary landscape architectural practice.
• To enable the student to gain a better understanding of the conceptual frameworks within which exemplary work has been and is currently being produced.
• To identify and describe the interactions between social formations, landscape theory, and built work.
• To introduce landscape architectural theory as a practice which occupies the space between the binary opposites of cultural/nature, architecture/landscape, and art/science.
• To illustrate the means by which theory can explain, frame, and situate design work in the past, present, and future.
• To allow the student to refine his or her critical abilities relative to built works and writings in contemporary landscape architecture.

General Education: None

LARCH 382 Professional Practice (3) An investigation of current professional and business practices in the field of landscape architecture. For Landscape Architecture majors only.

LARCH 382 Professional Practice (3)

LARCH 382 has a three-part role. It comprises an introduction to the variety of practice opportunities in landscape architecture, their opportunities and drawbacks; it provides an introduction to critical office management practices; and it assists students in the employment application process through coaching on interview technique and guidance on the preparation of supporting material.

It is the overarching intent of this course to help students understand what it will mean to be a professional practicing in the new millennium and in a constantly changing marketplace of ideas. Topics covered include ethics, public relations, office and project-related practices, personal and professional development, and legal aspects of practice: contracts, specifications, liability insurance. Through active participation in the course, students will come to realize the diversity inherent in the profession.

Course objectives:
• To introduce a range of practice types—small, private practice, large-scale corporate practice, federal and state agencies, not-for-profit organizations, and other non-governmental organizations;
• To discuss relations with other professionals, including the formation of teams and other strategic alliances, and negotiation of professional fees;
• To outline and illustrate the various roles and responsibilities individuals might have both in and outside of an office, including situations of personal vs corporate responsibility; and
• To investigate the inherent values or point of view of principals and others that effect how decisions are made and change occurs.

LARCH 414 Design and Theory V: Advanced Landscape Architectural Design (5 per semester/maximum of 15) Review of landscape architectural theories and issues; supports development of comprehensive design study and/or independent honors (Thesis-Based) design projects. LARCH Majors only.

Design and Theory V: Advanced Landscape Architectural Design (5-15)

Fourth- and fifth-year design studios are designated "depth" studios. Each studio is aligned with one of the department's associated research centers or pursues special topical content and continues the development of site-scale planning and design skills for landscape architecture students with larger and more complex sites and programs. Students select a topic from the range of options. Students may choose to take a given topic on a maximum of two occasions.

Topics are related to issues that have been introduced in previous studios and are as varied as possible from studio to studio. This allows students to select a topic of interest to explore with great intensity and detail. The studio alternatives offered each year are based on faculty expertise and student interest, and are chosen by the department head's review of faculty proposals. To date, studio topics have ranged from historic preservation to recreational landscapes, urban ecology to community planning. The type of project is determined on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product.

Project types include regional master planning, large-scale site planning and medium-scale community/housing design. The design issues emphasize urban form, community identity and open-space systems in the United States as a follow-up to urban patterns experienced during the student's previous study abroad. The project types may include such topics as inner-city locations with mixed-use and complex programs that progress from research and planning to site-scale design.

Course Objectives:
• To develop an in-depth understanding of one or another aspect of landscape architecture.
• To be exposed to the rigor and challenges of developing and implementing one's own design expertise in the context of a specific environmental concern.
• To exercise the design principles, technological tools and communication strategies developed during the course of the specific design studios.

LARCH 424 Design Theory Seminar (3 per semester/maximum of 9) Inquiry-based reading and discussion of design theory literature relevant to contemporary landscape architecture issues. Topics vary each semester.

LARCH 424 Design Theory Seminar (1-3)
LARCH 424, Design Theory Seminar, is a companion to the depth studios, LARCH 414. However, unlike the seminars offered during second and third years, LARCH 424 is not tied topically to any particular depth studio. Instead, this seminar provides a vehicle for rigorous and structured exploration of the theoretical and philosophical issues that face landscape architectural designers and planners. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design.

These seminars, offered to fourth- and fifth-year students, enable professors and students to take their investigations to greater depth. Seminars are offered by different professors each semester and the content is expected to be somewhat aligned with the faculty member’s research and scholarship or pursues special landscape architectural topical content of the faculty’s choosing. Students select seminars from the range of options offered. This allows students to select a topic of interest to explore with great intensity and detail. Students are required to take up to three seminars to achieve a minimum of three credits.

Topics are related to issues that have been introduced in previous studios and seminars and the department ensures that students have access to the widest range of topics. The seminar alternatives offered each year are based on faculty expertise and student interest, and are chosen by the department head’s review of faculty proposals. Seminar topics related to our research centers include historic preservation, urban ecology, community planning and watershed stewardship. From time to time topics independent of our research centers, such as the impact of technology on design or the impact of public policy on design and planning, will be addressed. The type of seminar outcome is determined by instructors on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product.

Course Objectives:
- To further develop an in-depth understanding of the theoretical or socio-political context for one or another aspect of landscape architecture.
- To challenge students to articulate their own values in the context of a specific environmental concern.
- To examine the means by which designers reconcile their own, their clients’, and society’s values in the pursuit of particular design or planning goals.

LARCH 450 Geodesign: Geospatial Technology for Design (3) Interactive geodesign and digital design studio.

LARCH 450 Geodesign: Geospatial Technology for Design (3)

This course addresses the role of continually evolving information technologies in landscape architectural research and practice by reference to long legacy of theoretical contributions from the field that have sought to reconcile and benefit from integrating the sciences of society and environment with art, design, and planning. This interactive digital design course is an advanced geodesign methods and principles class that applies digital tools to landscape research, modeling, analysis and design. This course presents a digital process for analyzing, managing, and ultimately designing landscape systems by allowing students to inventory, analyze and evaluate complex spatial datasets. Students will learn to critically evaluate and implement the interplay between various factors and design alternative futures.

Lectures will introduce key geodesign principles and techniques. The goal is to investigate an array of geospatial software as a powerful design tool in a broad and integrated manner for all the activities of the landscape architect, designer, planner and architect. Using a variety of geospatial and digital tools, students will develop a process to study, analyze, and plan landscape systems. They will utilize activities from each lesson to develop primary and alternative strategies for their proposed project. The problem-based approach used by this course will encourage cross-cultural contexts for student projects.

The Pennsylvania State University
Geospatial design computing technology enables many alternate approaches to problem-solving, so that students will customize their own learning experiences within the concrete structure of the course. This course brings advanced geospatial and digital analysis and evaluation into the design process, where concepts and ideas are vetted for suitability against a wide array of physical and social, place-based information. This on-the-fly suitability analysis provides a framework for design, giving landscape architects, architects, land-use planners, and others involved with design the tools to directly leverage geospatial information within their design workflows.

**LARCH 499E** (IL) People and Protected Areas (3) LARCH 499E is a three-credit seminar that aims to introduce students to key issues associated with communities, community design, biodiversity conservation, and the interface of people and conservation in the vicinity of Udzungwa Mountains National Park in south-central Tanzania. The format of the course is reading and discussion, where students read assigned literature and then contribute to discussions led by faculty, both to demonstrate their understanding of the reading assignments and to begin to explore key issues introduced by those readings. Students also write two papers, the first examining the interface of rural land use planning, community design, and biodiversity conservation; and the second focusing on biodiversity conservation in the context of human settlement near Udzungwa Mountains National Park. Students evaluation is based on seminar participation and the two papers.

LARCH 499F (IL) Community Design in the Vicinity of Udzungwa Mountains (5) LARCH 499F is a five-credit course that focuses on student research projects associated with communities along the eastern boundary of Udzungwa Mountains National Park. We have purposefully maintained a general definition for the course to allow students to design projects that best suit their interests and skills. For example, some students may focus on evaluating existing village configurations and propose new designs that help villagers better meet their daily needs. Other students, in turn, may focus on developing a more marketable park that attracts larger numbers of visitors who stay in or near the park for longer periods of time—generating more income that ultimately will find its way, in part, to local communities.

LARCH 499G (IL) The Contribution of Service-Learning to Students and Community (1) LARCH 499G is a one-credit course designed to enable students to reflect on what for most will be their first opportunity to visit and work in rural East Africa. It involves the development of daily journals to record reflections on their evolving awareness of Tanzania and the challenges that people and conservation face in the less-developed country. The journals provide a foundation for reflections about one or more issues that interest each—maybe (though not necessarily) something close to the focus of the specific education abroad experience involved (e.g., the relationship between people and protected areas in south-central Tanzania), maybe international development in general, or maybe another topic. The journals also should be important personally: In all likelihood, this six-week period will expose students to places, people, and challenges that they have never seen in person.

LL ED 400 Teaching Reading in the Elementary School (3) Introduction to the reading program; acquaintance with materials and techniques; observations of reading instruction; correlation with human growth and development.

LL ED 400 Teaching Reading in the Elementary School (3)

LLED 400 is intended to help teacher candidates become knowledgeable users of theory and language about language, literacy and culture; and to think through instructional problems thoroughly, using multiple sources of information to experiment with alternative solutions. Dealing specifically with reading, we recognize that text goes beyond print texts to include multimodal visual, auditory, digital, movement, and artifactual texts. In LLED 400, candidates learn to understand how children develop as readers and users of literacies in and out of school. Candidates learn how to teach in ways that support children’s successful development and uses of multiple kinds of literacy, including reading. Literacy teaching is both an intellectual and practical matter in which teachers work with students in ways that recognize the complexities of language and its social uses, learning and its cultural contexts, and schooling as organizational phenomena. Children enter schools with multiple types of literacy knowledge and cultural experiences. Coming to understand these complexities requires the coordination of both theoretical awareness and applied knowledge. Candidates’ practice is developed as they learn to address the puzzles children present as they construct their knowledge of language, literacy, and literature in various social situations. Developing practical strategies to teach literacy requires a dedication of head, hand, and heart to treat all people with dignity, acknowledging the contributions of all cultural groups and respecting diversity as it honors ideals of social justice.

In LLED 400, teacher candidates develop a repertoire of organizational, instructional, and evaluative strategies that are based on research and best professional practices. Candidates work on projects independently and in collaborative groups. Content is presented by the instructor through a combination of lectures, weekly readings and reflections on readings, class discussion, activities and demonstrations, and viewing and analyzing video. Projects include an analysis of children as readers and curriculum planning.
LL ED 400 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, children, and communities.

LL ED 401 Teaching Language Arts in Elementary School (3)
Principles, problems, materials, and techniques involved in teaching speaking, listening, writing, and reading in the elementary school.

The purpose of LLED 401 is to acquaint teacher candidates with theories and practices of teaching writing. Candidates are immersed in the study and experience of workshop and strategic models of writing instruction. Basic goals of this course are to help candidates to use language well and thoughtfully concerning writing instruction, literacy, literature and culture; and to think through instructional problems thoroughly, using multiple sources of information to experiment with alternative solutions. We also expect candidates to understand the roles which culture plays in literacy practices, literature, identifications of “ability,” and schooling; to learn how people function effectively in groups; and to develop a repertoire of organizational, instructional, and evaluative strategies.

LL ED 401 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, children, and communities.

LL ED 402 Teaching Children's Literature (3)
Survey of children's literature with an emphasis on the importance of literature in the development of the elementary school curriculum.

The purpose of LL ED 402 is to familiarize teacher candidates with different theories and practices of teaching literature. Candidates are immersed in the study and experiences of literature and strategic models of literature instruction. Understanding that belief systems inadvertently determine the models of literature instruction educators adopt. LL ED 402 asks candidates to be mindful of the diverse nature of our communities, and encourages them to strive to create literary communities that respect, value, and encourage multiple modes of expressions. The basic course goals are to help candidates to understand the importance of story in all human lives; to exhibit a wide repertoire of flexible strategies for interpreting literature; to understand socio-cultural influences upon writing and literature; to know and be able to use basic reference tools and selection guides for research; to become familiar with different genres, diverse texts, and styles; to read for sequence and for secrets; to articulate responses to literature across a variety of media; to weave into the exploration of each of these goals a struggle to understand and to accept human difference; and to understand the role that literature plays in the school curriculum.

The course presents theories of teaching literature and models of literature instruction that place at the center socio-cultural practices typical of democratic literary communities. This requires knowledge of how literature and texts work in real life and in a variety of social and cultural contexts. Informed by research, standards and current practices, LL ED 402 exhibits the power of literature, the complexities of students’ learning and experiences with texts, and the problem solving character of teaching.

LL ED 402 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, children, and communities.
LL ED 411 Teaching Language Arts in Secondary Schools I (3) Exploration of language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools.

LL ED 412W Teaching Language Arts in Secondary Schools II (3) Exploration of language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools.

Teaching Language Arts in Secondary Schools II (3)

This three-credit course addresses the theory, practice, and implications of teaching the English language arts at the secondary level. The course is the discipline-specific component of the Secondary Education block taken by majors in Secondary Education prior to student teaching. In this course, students explore issues in language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools. Through in-class and out-of-class activities completed both independently and in collaboration, students read about, talk about, and practice teaching all of the language arts—reading, writing, speaking, listening, and thinking. Activities highlight ways of planning for instruction and ways of assessing student learning as teachers implement those plans. In addition, students will take up the professional issues facing beginning teachers of the English language arts—issues of professionalism and the teaching role, relationships with students, and how teaching can fit into a life. The course builds upon content developed in other courses in the major, including theories of reading, composition, media literacy, and pedagogy. Students engage in a variety of writing tasks both in support of developing course content and as a means of making their work public. This writing includes (but is not limited to) lesson planning, reflective writing on experiences both in the course and in related field experience, and the development of a professional portfolio. During class sessions, informal writing is used for a variety of purposes such as brainstorming, facilitating collaborative work, or framing discussion. Throughout the semester, students draft and receive feedback on a variety of portfolio components, which are revised and incorporated into a final version of the portfolio due at the end of the course. Portfolio contents vary according to instructor, but examples might include statements of educational philosophy, analysis of student writing from field experience, commentary on unit and lesson materials, reflective writing on reading and writing processes, and professional documents such as lesson plans and letters to mentors and potential employers.

LL ED 450 Content Area Reading (3)

LL ED 450 is designed to explore the roles of texts and literacies within the daily lives of middle school age students. We will examine both in-school and out-of-school literacy practices related to meaning-making in specific communities of practice. In doing so, we will work from a broader definition of "text" that includes print, images, sound, hybrid combinations and artifacts from popular culture. In school, we examine how literacies are involved in the learning of content, emphasizing how social practices of thinking in different ways about the world have been organized into school subjects and how teachers can help students to engage productively in those practices. Out of school, we look at the ways in which this age group uses text and other forms of literacy to make sense of and in their lives. Toward that end, we look closely at the media that they use and the types of texts that are produced for and by them. Although we honor the traditional practices of academic disciplines, we recognize how new texts and tasks for those boundaries in order to pose and address school and everyday problems.

The basic goals of this course are to help teacher candidates to use language well and thoughtfully concerning literacy, text, and culture; and to think through instructional problems thoroughly, using multiple sources of information to experiment with alternative solutions. We also expect candidates to understand the roles that culture plays in literacy practices, texts, schooling and assessments of "ability"; to learn how people function effectively in groups; and to develop a repertoire of organizational, instructional, and assessment strategies.

This course considers how intermediate grades and middle schools are communities of practice that connect disciplines through the use of language and texts to make sense of the world. The communities surrounding schools influence these uses, and this course follows the students' learning outside the classroom and schools as well as within.

LL ED 450 Content Area Reading (3)

LL ED 462 The Art of the Picturebook 3 An in-depth study of picturebooks as art objects providing aesthetic experiences and contributing to our aesthetic development in literacy education.

LL ED 462 The Art of the Picturebook (3)

The Art of the Picturebook explores a wide range of picturebooks with the idea that illustrations are visual art evoking thoughts and feelings. Because picturebooks provide aesthetic experiences and contribute to aesthetic development, they are rich and important sources for literacy education. This course provides opportunities to extend students' repertoire of strategies for making sense of picturebooks, to deepen knowledge about picturebooks and the artists who create them, and to consider ways to help children become more sophisticated readers of picturebooks.

While picturebooks are often emphasized as integral to the literacy development of young children, they can be engaging and desirable for older children as well. Course topics include picturebooks for the very young, as well as picturebooks that could appeal to elementary and middle school children. Whether picturebooks appear relatively simple and straightforward or contain innovatively complex or metafictive design elements, close readings of them with an understanding of terminology offer opportunities to express and discuss reactions and interpretations. The Art of the Picturebook provides students a forum for exploring preferences, ideas, insights, and questions about selected picturebooks, along with curricular and pedagogical considerations. Course readings include interviews with illustrators, selections about creating picture compositions, and scholarly essays presenting theoretical perspectives and ideas about picturebooks as literature and art for children's literacy development.

This course emphasizes that reading and interpreting picturebooks is an active, creative process that is socially, culturally, and historically situated. Authors and illustrators are influenced by culture, so their art reflects values of that culture, consciously or unconsciously. A reader's experience with a picturebook is also influenced by cultural and social contexts in a given moment. Because engaging in aesthetic experiences is an active, creative process, reading picturebooks is, as Jane Doonan (1993), author of Looking at Pictures in Picture Books, asserts, a form of play. The Art of the Picturebook approaches picturebooks as sources of deep play.

The course also provides opportunities to research selected illustrators, both for class discussions and an illustrator study project (e.g., a Wiki page). The culminating illustrator study project involves an in-depth investigation of a key children's book illustrator and a process of sharing works-in-progress with classmates for collaborative editing.

LL ED 464 Nonfiction Literature for Children and Adolescents (3) A study of nonfiction literature for children and adolescents with an emphasis on inspiring curiosity and agency.

LL ED 464

LL ED 464 Nonfiction Literature for Children and Adolescents (3)

Nonfiction Literature for Children and Adolescents explores a wide range of nonfiction literature in a variety of subject areas including social studies, math, science, and the arts. This course takes the position that reading nonfiction literature can inspire curiosity and a life-long love of learning, shape inquiry, nourish empathy and compassion, and inform agency.

Topics include nonfiction as literature, resources for locating nonfiction literature, nonfiction literature in different subject areas, nonfiction literature as a catalyst for inquiry, creative nonfiction and hybrid texts, biographies and autobiographies, and nonfiction literature for agency.

This course also examines techniques of writing nonfiction literature to develop an understanding of strategies that published authors use to create engaging works to inform readers and provide pleasurable reading experiences. This understanding can help adults who work with children and adolescents recognize and identify the qualities that they find desirable for selecting and sharing nonfiction literature with children and youths, whether shared for reading or serving specifically as mentor texts for writing.

LL ED 465 Fantasy Literature for Children (3) A study of fantasy literature for children looking at a variety of fantasy stories and examining them from different perspectives.

LL ED 465 Fantasy Literature for Children (3)

Fantasy Literature for Children explores a range of fantasy literature including literary fairy tales, toy fantasies, ghosts/horror/suspense, science fiction, reworked fairy tales, low fantasy, and high fantasy. This course will consider different rationalizations for fantasy literature and will examine some of the key stories that illustrate fantasy from different perspectives, such as literary, social, and psychological angles.

This course will look at, first, the beginnings of modern fantasy with the fairy tales of Hans Christian Andersen and Carlo Collodi's classic, Pinocchio. Then the course reading will include ghosts and other supernatural fantasy stories, and "reworked" fairy tales, a current trend in fantasy literature. Despite of some scholarly debates on science fiction, that is, whether it should be categorized into fantasy or not, this course will consider science fiction as being similar enough to fantasy for it to be included. The course will also include a study of fantasy books currently popular with school-age readers.

Fantasy can be divided into two main groups: low fantasy and high fantasy. Several of the stories to be read in the course are perhaps best categorized as low fantasies, not because of what they are, but because they are not high fantasy, which has a mythic quality to it. High fantasy seems to go beyond the particulars of its story to explore the nature of good and of evil. Though high fantasies can be humorous at times, the overall tone is serious. Often characters are on quests and the stakes of success or failure usually involve saving the world from some great evil or preventing the tyranny of some powerful and evil ruler.

Reading the different types of fantasy literature and the literary critiques and analyses of those works, this course will be wrestling with the overall importance of those books in the lives of children by pondering imagination and its role in the lives of children throughout the course.

LATIN 101 Introductory Latin (4) Introduction to Latin forms, syntax, and vocabulary.

LATIN 101 Introductory Latin (4)

The aim of LATIN 101 is to introduce students to the fundamentals of classical Latin as soon as possible. Classical Latin is the literary dialect spoken and written by Romans from the first century BCE to the second century CE. This is the language that the classical Roman authors wrote, poets such as Catullus, Virgil, Horace, Ovid, Lucan, and Seneca and prose writers such as Caesar, Sallust, Cicero, Livy, Petronius, Tacitus, and Suetonius. The purpose of the course is to teach students the morphology, syntax, and vocabulary of classical Latin and train them to read and translate simple and complex sentences. The course consists of short weekly presentations of new grammatical and lexical content, vocabulary to be memorized, drills to practice forms and concepts, exercises in reading sentences, homework assignments translating sentences from Latin into English and English into Latin, and regular quizzes and tests to ensure retention and comprehension of material. The goal of the course in the first semester is for students to be able to read short passages of continuous prose based on classical Latin models. The course focuses on reading, translating, and writing rather than speaking, although students will be expected to be able to read Latin aloud with correct pronunciation. LATIN 101 prepares students for Latin 102, the second semester of Introductory Latin, which in turn prepares students to take a 400-level course in Latin.

Diversity: None
Bachelor of Arts: None
Effective: Summer 2007

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

LATIN 102 Advanced Latin (4) Advanced study of Latin grammar, syntax, and vocabulary.

LATIN 102 Advanced Latin (4)

LATIN 102 continues from LATIN 101, which is a prerequisite for enrollment. Students who have taken at least three years of high school Latin may qualify to enroll in the course if they have performed well on either a Latin A.P. exam (minimum grade of 3) or a placement exam set by the instructor. LATIN 102 pursues the advanced study of the forms of syntax of classical Latin, the literary dialect spoken and written by Romans from the first century BCE to the second century CE. This is the language that the classical Roman authors wrote, poets such as Catullus, Virgil, Horace, Ovid, Lucan, and Seneca and prose writers such as Caesar, Sallust, Cicero, Livy, Petronius, Tacitus, and Suetonius. The purpose of the course is to equip students with the grammatical rules to read and write complex sentences in Latin. The course consists of short weekly presentations of new grammatical and lexical content, vocabulary to be memorized, drills to practice forms and concepts, exercises in reading sentences, homework assignments translating sentences from Latin into English and English into Latin, and regular quizzes and tests to ensure retention and comprehension of material. The goal of the course in the second semester is for students to be able to read longer passages of continuous Latin prose that has not been adapted. The course focuses on reading, translating, and writing rather than speaking, although students will be expected to be able to read Latin aloud with correct pronunciation. LATIN 102 will also continue to introduce students to Roman civilization and prepares students to take a 400-level course in Latin.

LATIN 203 Latin Reading and Composition (4)
The course reviews Latin grammar, syntax, and vocabulary and introduces students to classical Latin poetry and prose.

LATIN 203 Latin Reading and Composition (4)
This four-credit course is at the intermediate-level and follows LATIN 003 or LATIN 102. It satisfies the 12th-credit foreign language requirement and prepares students to take 400-level Latin courses. The course is concerned with perfecting the knowledge of Latin grammar, which in the Middle Ages was considered to be the mother of the other Liberal Arts. This is accomplished by the review of grammatical rules and by the reading and explanation of Latin authors. The course reviews the forms, syntax, and vocabulary of Latin, and gives students practice exercises that improve translation skills. Equally important, students are introduced to the principles of Latin style by learning how to translate English into Latin. The review of Latin grammar and the introduction to Latin prose composition provide students with the competence to read representative Roman authors in poetry and prose. Rudimentary Latin readings, supported by school commentaries, are intended to familiarize students with famous examples of classical Roman literature while exemplifying the principles of classical Latin style. For the Republican period, students read selections of Caesar's Gallic Wars or a speech by Cicero and selections of Catullus's love poetry. For the Imperial period, one investigates different accounts of the rape of Lucretia by Livy and Ovid, in poetry and prose, respectively. These readings not only show how exemplary authors write in different styles, but how Latin language and literature lay the linguistic and cultural foundations of western civilization. Evaluation methods include assessment of students through in-class oral and written drills, in-class translation of Latin into English and English into Latin, weekly translation assignments, biweekly quizzes, two tests, and a final exam. These methods are intended to promote the learning of Latin vocabulary and grammar, to increase the comprehension of the assigned readings, and to foster an appreciation of the stylistic virtuosity of Rome's greatest writers.

Latina and Latino Studies (LTNST)

LTNST 100 (GH;US) Introduction to Latina/o Studies (3) This course provides an interdisciplinary introduction to the study of Latinas/os in the U.S.

LTNST 100 Introduction to Latina/o Studies (3)
(GH;US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides an interdisciplinary introduction to the study of Latinas/os in the U.S. It begins with a historical overview of the major events in the U.S. southwest, Mexico, and the Caribbean that led to the creation of Latina/o communities in this country; we explore in this historical context the reasons for migration and the effects on identity of movement between countries and within the U.S. The course then moves to a consideration of the social protest movements of the 1960s, including Chicano and Puerto Rican nationalism, the farmworker movement, and Latina feminism. It then proceeds to present-day issues as they affect the major Latina/o groups in the U.S., attending to both similarities and differences within and between the major groups. The goal is to show that “Latino” is not a monolithic category but that it does unite various populations (Chicano, Dominican, Cuban, Puerto Rican, etc.) for strategic purposes. The class addresses Latina/o participation/incorporation in the economy, the political system and public education, with attention to how public sphere participation is shaped by language, legal status, and connection to countries of origin. The class analyzes how Latina/o families are shaped by these social issues, with particular emphasis to how generation shapes life experiences. Finally, the course considers Latina/o cultural production, analyzing how artists across genres such as literature, film, performance, and music represent their cultures and respond creatively to the issues discussed throughout the semester.

LTNST 127 (US) (HIST 127) Introduction to U.S. Latina/o History (3) This course introduces students to the history of U.S. Latinas/os, including Puerto Ricans, Dominicans, Chicanos, Cubans, and Central Americans.

LTNST (HIST) 127 Introduction to U.S. Latina/o History (3)
(US)

This course introduces students to the history of U.S. Latinas/os, drawing on the multiple experiences of Puerto Ricans, Dominicans, Chicanos/Mexicanos, Cubans, and Central Americans. Course content features the divergent development of U.S. Latina/o cultural and political identities rooted in the Caribbean, Mexico, Central American, and the United States. Students will understand the formation of racial and class hierarchies within U.S. Latina/o communities; the processes of (international) migration; gendered hierarchies and responses to sexism; and the complexities of U.S. Latina/o identity. Lectures are supplemented with discussion days in which students respond to readings under the guidance of a graduate teaching assistant. Grading stresses proficiency in analytical, historical writing.

**LTNST 300 (US) (WMNST 300)** Latinas in the US: Gender Culture and Society (3) This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latina feminisms in the United States.

**LTNST (WMNST) 300 Latina Feminisms (3) (US)**

This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latina feminisms in the United States. It shows the connections to as well as the divergences from Latin American feminism by beginning with an analysis of how the Spanish conquest, the imposition of Catholicism, and subsequent years of colonialism shaped gender and sexual identities. It examines the contemporary effects of these historical issues and inquires into the common concerns of Latin American feminists and Latina feminists. It asks how theories and practices have diverged given different geographies, both between the U.S. and Latin America and within the U.S. The course then moves to the 1960s and 1970s in the U.S., when Chicano and Puerto Rican nationalist movements also gave rise to a feminist consciousness amongst Latinas; the conjuncture of race, ethnicity, gender, and sexuality is considered, with attention to how Latinas critiqued Anglo feminism’s narrow focus on gender. The next unit focuses on family formations, considering social science and feminist discourse on the issues of patriarchy. How have Latina feminists valued yet also rearticulated the traditional family? What critiques have made been against heterosexism? How have lesbians and gays formulated new kinds of families? How does migration shape family relations? The final section of the course explores how Latina artists in different genres have responded to and resisted traditional gendered and sexual roles. Literature, film, performance art, and hip hop are all examined for their diverse representations of sexual desire.
LTNST 315 (GH;US) (SPAN 315) Spanish and Spanish-speakers in the U.S. (3) In this course, we investigate various aspects of the language(s) and language behaviors of U.S. Latinos.

LTNST (SPAN) 315 Spanish and Spanish-speakers in the U.S. (3)
(GH;US)

The course is premised on the idea that language is a crucial component in the formation of identity. To understand Latina/o identity formation in the U.S., then, one must analyze what role languages—Spanish and English—have played in identity formation. The class commences with a brief historical assessment of the various U.S. Latino communities, including Mexican-American, Cuban-American, and Puerto Rican communities. Such a historical purview proves significant in the study of the cultural traditions that persist in these communities, chief among these, the Spanish language. In exploring the Spanish language in U.S. Latino communities, we consider several major sets of questions, among them the following: In what ways do the languages of U.S. Latino communities differ from those of monolingual Spanish- (and English-) speaking communities? What factors contribute to the maintenance and loss of Spanish in these communities? How does language contribute to the creation of individual and societal identity? How is language exploited in the representation of other U.S. Latino cultural traditions? We consider these questions across a variety of genres: poetry, prose (autobiography in particular), film, art, television, and music. These texts reveal how social environments determine language use as well as how artists have used language to reshape social environments, through, for example, the development of new language practices such as Spanish-English code switching. The course also connects these cultural practices to debates on Spanish in public life and policy.

LTNST 403 (US) (CMLIT 403) Latina/o Literature and Culture (3) Literary and other forms of cultural expression (film, music, art, and theater) are compared across different Latina/o communities.

LTNST (CMLIT) 403 Varieties of Latina/o Cultural Expression (3)
(US)

(BA) This course meets the Bachelor of Arts degree requirements.

This course provides students with a multi-faceted comparative view of Latina/o literature in relation to other forms of cultural expression. First, the course presents a variety of cultural expressions to students in an effort to teach them the different ways that form affects content. Each text will be studied in its historical context as well, thereby providing students with a sense of Latina/o cultural history. Second, this course compares works from within the same genre, allowing students to recognize the ways that Latina/o culture has worked to build identity, to deconstruct identity, and to challenge cultural stereotypes. Such comparison further facilitates comparison of the ways that different cultural forms have been used by diverse Latina/o communities. Third, this course compares cultural forms, allowing students to see how Latina/o poetry affects music or how Latina/o theater affects novels Fourth, this course will include texts that represent a variety of linguistic and national contexts, including many countries in Latin America, thereby allowing students to see the relationship between history, culture, language, geography, and identity. These are all themes that are at the center of both Latina/o Studies and Comparative Literature. A comparative perspective facilitates appreciation of the vast and varied ways that Latina/o communities have used cultural expression. A particular point of contact between Latina/o Studies and Comparative Literature is the influence of hybridity. A central issue explored in this course concerns the intricate connections between multiple ways of expressing identity, in the arts, literature, music, etc., in diverse circumstances, such as locations where Latina/o cultures may be in the mainstream (such as in Latin America) and in the minority (in the U.S.). Drawing upon approaches offered by comparative literature and theories such as post-structuralism,
feminism, and post-colonialism, we will examine the complex process through which Latina/o culture has been defined, disseminated, contested, and commercialized. Of particular interest from a comparative perspective are the ways that Latina/o cultures are created through hybridization, processes of mutual borrowing and differentiation, as well as through transnational processes of migration, urbanization, and cultural contact. The course's objective is to show not only how complex societies consolidate a shared culture but also how diverse Latina/o communities have produced a multiplicity of cultures that have been expressed via a broad range of cultural registers. These communities often span vast geographical areas, not only in the U.S. but across the Americas as people continue to look to their countries of origin for artistic inspiration.

**LTNST (SPAN) 479 U.S. Latina/o Culture en Espanol (3)**  
This is an overview of literature and culture, in Spanish, created within the United States. We will read fiction, essays and film, but also consider poetry, travel accounts, visual art and performances, and cultural practice and sociological issues (like “quinceañeras” and soccer leagues) in order to discuss some of the following themes particular to the Hispanic experience within the U.S.: immigration and transnationalism; the imaginary homeland; families and assimilation; conflicted identity; language and a sense of place. We will emphasize two basic tools of literary analysis: "close reading," and library research. However, the class project will have quite a bit of creative latitude.

Learning Design&Tech (LDT)

LDT 100 (GS;IL) World Technologies and Learning (3) This course explores e-learning in international contexts and the impact of these new learning options on cultures.

LDT 100 World Technologies and Learning (3)  
(GS;IL)

LDT 100 examines the sociocultural impacts of learning technologies of various sorts on world cultures. The course will examine several international cases of learning technologies, such as email, online learning, telecommunications, and wireless computing, as they are used for education and learning and implemented in several world cultures such as the US, UK, India, China, Africa, Europe, and Oceania. The primary objective of the course is to help students understand how learning technologies impact other cultures, and their own; how learning technologies bring dramatic change; and how
these changes can be predicted, understood, and planned for.

The course may offer an important introduction to the area of Learning, Design, and Technology, but it is otherwise not related to specific programs of study. It contributes to the General Education requirements for undergraduates.

LDT 101 Effective Communication for Educators (3) Introduction to communication for educators, principles of pedagogical communication including educational communication technologies.

LDT 101 Effective Communication for Educators (3)
This course introduces future teachers to effective communication specific to educators’ needs. Educators will learn skills for informational lesson planning, persuasive speaking and motivational presentations. This is an introduction to these skills such as lesson planning and effective parent communication, which are then honed later in methods courses. This course will address issues of civic engagement and broad communication for educators focused on educational issues. Included will be the design and presentation of individual communications, email, social media, new media, videos, digital photography, and other forms of emerging educational communications technologies. Assessment includes short quizzes, product review (to include lesson plans, speeches and presentations), online discussion participation, and other activities focused on building the specific skills needed for educators.

LDT 400 Introduction to Instructional Technology for Educators (3) Use of computers, video, and other media in education; models use technologies including video, audio, print, computer, and phone.

LDT 400

LDT 400 Introduction to Instructional Technology for Educators (3)
This course introduces educators to technology and its educational applications. It is an introductory-level course and instruction is based on the premise that participants are novices. Participants will learn how to work in an online environment. They then work in that environment to develop the skills and perspectives needed for the effective
application of technology in education, which involves becoming familiar with a wide range of additional educational computing applications and issues.

Although it is important for students to develop technology skills, technology must be viewed as more than simply a new subject in the curriculum. Teaching students to use technologies well is a means to a much more important set of ends. Today's technologies offer teachers and their students a powerful means for addressing learning-related issues, and potentially redefining teaching and learning.

LDT 441 Design, Development, and Evaluation of Internet Resources (3) Design, production, and evaluation of instructional materials for delivery on the Internet.

LDT 441

LDT 441 Design, Development, and Evaluation of Internet Resources (3)

This course is designed to provide you with a conceptual and experiential overview of the process of creating stand-alone computer or web-based instruction to facilitate your understanding of the role and potential of Internet technologies as learning systems. This course would be useful to anyone charged with providing online learning, is appropriate as a foundational overview for multi-media developers, and also would be valuable for supervisors of instructional designers and developers. A main feature of the course is a hands-on lesson project carried on throughout the course where you will identify, design, develop, and then evaluate an online stand-alone lesson (e.g., a learning object). Emphasis will be placed on the following goals: Demonstrate research-based message design principles, including navigation, screen design, and the use of color and visuals. Demonstrate basic skills and competencies related to developing instructional materials to be delivered using Internet/intranet technologies to understand the current requirements and also limitations of these approaches. Describe the role of the instructional designer in Internet-based instruction. Describe the advantages and limitations of Internet delivery in order to make informed instructional design decisions. Apply an instructional design model during the design and development of Internet-based instructional materials.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2016 Future: Fall 2016
Prerequisite: Bachelor’s degree or equivalent; or 5th semester standing; or permission of instructor.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

LDT 447 Instructional Design for Multimedia Technologies (3) This is an applied skill course about producing and implementing multimedia in instruction and training.

Instructional Design for Multimedia Technologies (3)

General Education: None
LDT 449 Video in the Classroom (3) This is an applied skill course about production and use of video technologies in educational settings.

The course is intended for teachers and trainers who would like to acquire fundamental theory and skills in designing and producing video and multimedia to support teaching and learning. It introduces the tools of media production (i.e. video, audio, and lighting) and develops basic skills, including production and editing techniques, storyboarding and project planning.

Participants in this course will demonstrate: a basic proficiency in the operation and handling of media production tools, including video and audio editing; an understanding of appropriate media use for classroom use; a basic knowledge of the production processes, including conceptualization, storyboarding, scripting, and project management; and a basic proficiency in producing effective educational videos.

LDT 467 Emerging Web Technologies and Learning (3) This course examines emerging Web technologies and explores their application to learning and education.

This course examines current and emerging web tools and evaluates their impact on learning and teaching. The growth of online social networks and collaborative technology tools is allowing individuals to become active participants and creators of content and content dissemination. This unprecedented level of participation and interaction has resulted in the formation of online “communities” around specific topics and interests, with an increased and visible use of tools to support knowledge building and sharing. Students will engage with various web tools as participants and observers, assess the specific practices of learning and knowledge sharing supported by individual tools, and apply that knowledge to their specific professional context.

LDT 471 Introduction to Educational System Design (3) Investigates systems theory and how components of educational systems interact; develops insights on current issues and models in Educational System Design.

This course focuses on a systems theory view of public school systems. With an eye toward significant changes in the entire system and examining ways that technology (understood broadly) can be utilized as a lever for significant school change, this course asks learners to examine former waves of educational reform, inform their understanding with a firm grasp of systems theory, and apply those ideas to future suggested K-12 changes.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**LDT 496** Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**LDT 497B** (ADTED 497B, CI ED 497A) Culture, Education and Technology in Peru (1-9) This course focuses on current issues in culture, technology, and development in education. We will concentrate on how to apply research to practice within the Peruvian educational context. Along with a seminar to discuss current research in international education development, students will have 2 weeks of embedded experience in Peru with the opportunity to set up a small technology facility for a village school. We will examine broad education development models, including specific readings associated with development, technology, identity, and change, and apply them to the case of Peru, which serves as a case to learn about education and development "on the ground" and to provide a real service for a Quechua community. Through this work, students will experience how to bridge research and practice.

**L A 100S** Contemporary Legal Issues (3) An introduction to law-related issues with a focus on current legal topics viewed
Contemporary Legal Issues is an across discipline, first-year seminar designed to introduce students to the foundational framework of law as a major social institution. The essential role of research in an academic community will be highlighted. The cross-disciplinary perspective from the humanities and social sciences provides an opportunity for students to consider the social and cultural contexts that distinguish legal studies as a scholarly field. Issues for exploration are determined by the instructor and student interest. Students will utilize university learning tools and engage in academic experiences that are essential for the development of academic skill sets. By the end of the seminar students will have a better sense of what insights a law and society perspective provides.

L A 101H Honors Rhetoric and Civic Life (4) Within a liberal arts framework and with attention to public discourse--speaking, writing, online communication, and visual presentation--this course instructs students in the arts, practices, and principles of rhetoric.

This course offers students comprehensive training in oral, written, visual, and digital communication for the twenty-first century. It unites these various modes under the flexible art of rhetoric and uses the pedagogies associated with the rhetorical tradition both to strengthen communication skills and to sharpen critical awareness of the challenges and advantages presented by oral, written, visual, and digital modes. Students will read about and discuss rhetorical concepts and situations and put their knowledge immediately to use by analyzing civic rhetoric on campus and in their communities (including their networked communities), by researching current issues, and by developing and presenting arguments in oral, written, visual, and digital form.

The course is designed (although not required) for first-year Schreyer Honors College students and Paterno Fellows aspirants in the College of the Liberal Arts. In other words, it appeals to students with well developed communication abilities who might otherwise take English 30 and/or CAS 100H. It is aimed at developing students’ skills in composing and delivering purposeful and effective texts. Whether or not those discourses are delivered verbally or visually (on paper, electronically, or orally), students will draw on established rhetorical canons of invention, arrangement, style, memory (tapping the resources of stored knowledge, such as the library), and delivery. Students will also become fluent in the rhetorical appeals of ethos, logos, and pathos in order to shape texts that are ethical yet purposeful. To meet these goals, students will meet in small classes (of no more than twenty students), where they will receive guided instruction in writing, public speaking, and the use of technology in order to learn the distinctive features of oral, written, visual, and electronic rhetoric. Staff for the course will be experienced full time faculty and advanced doctoral candidates in rhetoric drawn from English and CAS.

This course will satisfy the Gen Ed Writing/Speaking (GWS) requirement for Schreyer Honors College students and aspiring Paterno Liberal Arts Fellows. Because this four-credit course will substitute for the six-credit ENGL 015/030 plus CAS 100 requirement, students who complete LA 101 will need to take an additional two credits somewhere in order to complete graduation requirements.

L A 200 Business and the Liberal Arts (1) Introduction to business careers and concepts for students enrolling in the Business and the Liberal Arts minor.

**L A 200 Business and the Liberal Arts (1)**

The Business and the Liberal Arts course, designed to introduce students to the possibilities of the Business and the Liberal Arts Minor, is organized around a set of topics and modules. Each module introduces students to specific topics related to the minor and to the business world, with an emphasis on how the Liberal Arts can be used to understand business, and how a liberal arts degree can be used in business careers. While the course will of course be faculty-led, we expect that many modules will be enhanced by the participation of prominent alumni in business careers who hold degrees in the Liberal Arts. Each module will include readings and discussion; when possible, these will be supplemented by these alumni classroom visits.

L A 201W Experiential Learning Portfolio (3) Students will learn how to assemble a portfolio that reflects their progress, knowledge, and insight into college-level study.

**L A 201W Experiential Learning Portfolio (3)**

This course will instruct students in what has become a distinctive model of performance assessment – a learning portfolio. Students will learn to assemble the components required to demonstrate their progress, articulate their knowledge, and gain insight into the qualities of learning that are expected of college-level study. Students will utilize active engagement and questioning of how we know what we know. The course is designed to assist learners in contextualizing what they have learned and provide them with the skills to contextualize what they learn in the future. By the end of the course, students will have developed an experiential learning portfolio.

Linguistics (LING)

LING 001 (GS;US;IL) The Study of Language (3) A non-technical introduction to the study of human language, and its role in human interaction. Students who have successfully completed LING 100 may not enroll in LING 001.

LING 001 The Study of Language (3)
(GS;US;IL)

(BA) This course meets the Bachelor of Arts degree requirements.
LING 001 examines the nature of human language and its links to human culture. A major focus of this course is on examining how languages are structured, how all languages are similar, how they differ, and how a language affects and is affected by the culture of its speakers and the sociopolitical context in which it is situated. The course begins by discussing the essential characteristics of every human language. It ends by examining the factors that have put languages at risk throughout history and what is causing them to become increasingly endangered. The course examines such issues as: speakers attitudes toward language through an examination of phenomena close to home, like African American Vernacular English and various regional accents, how shared Linguistic practices create unity (South Africa, The Americas, Asia), what role languages play in maintaining difference and, indeed signaling socio-political diversity (Serbian versus Croatian, Hebrew, Yiddish, Afrikaans, Taiwanese, The Linguistic Geography of Africa), and how language reflects human origins, migrations, and history.

LING 001 is a core course for the minor in Linguistics and it may also be used for the General Education requirement in Social/Behavioral Science, for a B.A. Social/Behavioral Science requirement, for the General Education Intercultural/International Competence requirement.

The course is offered two times a year. It meets three hours per week and the total enrollment each semester is limited to 75 students. Assessment is based on two examinations, five problem assignments that require short essays (around 2 pages), one problem assignment that requires a more extended analytical essay (around 4-5 pages), and participation in class and group discussions.

LING 100 (GS) Foundations of Linguistics (3) Systematic study of linguistic structures in a variety of the world's languages; an overview of language, and its organization.

LING 100 Foundations of Linguistics (3)
(GS)
This course meets the Bachelor of Arts degree requirements.

Linguistics is, broadly, the scientific study of language. At the heart of linguistics is the search for the unconscious knowledge that humans have about language(s), an understanding of the structure of language, and knowledge about how languages differ from each other. Speakers of all languages know a great deal about their language, usually without knowing that they possess such knowledge. For example, a speaker of American English possesses knowledge about word order: s/he understands that “Sarah admires the teacher” is grammatical, while “Admires Sarah teacher” is not, and also that “The teacher admires Sarah” means something entirely different. A speaker knows that when someone asks a “yes-no question”, s/he typically reverses the order of words at the beginning of the sentence and that the voice goes up at the end of the sentence, as, for example, in “Are you going”? Speakers also possess knowledge about the sounds of their language, e.g. which consonants can go together in a word. For example, speakers know that “slint” could be an English word, while “sbint” or “srint” could not. In addition, speakers know the rules of language use, such as when to issue a command (“Get me a glass of water”) and when to ask a question (“Could I have a glass of water, please”)? Furthermore, they recognize dialects which are different from their own, and they can recognize earlier stages of their own language, as in a Shakesperian quotation, or a liturgical formula.

This course equips students with the tools to investigate these aspects of language and language use. As a scientific discipline, linguistics employs strict methodologies to approach issues like the ones above. Students learn to transcribe speech phonetically, then to analyze the raw data into phonological statements about the sound system of languages. Likewise in word structure, students are equipped with the tools to segment words into their significant parts (called morphemes), which reveals interesting facts about how words are stored in memory. Through the study of syntax students learn about the unimaginable complexity of syntactic rules, and are taught the basics of how to unravel the mysteries of sentence structure. And when the whole complex of sounds, words and sentences is put together, rules of meaning are brought to bear, and the sentence is assigned a semantic reading. How this happens is discussed in the section on semantics.

Linguistics 100 introduces these topics and provides enough information for students to understand the basics of the discipline.

LING 102 (GH) Introduction to Historical Linguistics (3) How languages change and evolve over time; language families; effects of borrowing and language contact.

LING 102 Introduction to Historical Linguistics (3)
(GH)

(BA) This course meets the Bachelor of Arts degree requirements.

Introduction to Historical Linguistics is designed to introduce the basic theories, methods, and data linguists used to study ancient languages and the connections between seemingly diverse peoples and cultures. The diversity of human language has been a topic of speculation since ancient times, popularly accounted for by similar stories and legends across cultures and religions. The course will survey these ideas and combine them with the major trends of philological thinking from antiquity to the present day. An important aspect of this course is in reviewing the philological record to examine the importance, and at times even sacredness, of the written word to various cultures. The course reviews in particular the works of the Greek, Latin and Sanskrit scholars, the anonymous Icelandic grammarian, and the influential work of the 19th century European philologists. It also examines how spoken language, in particular, leads us to an understanding of how different societies can be linked a common source for their language.

LING 402 Syntax I (3) Principles of grammatical analysis in the generative framework; an overview of syntactic structures across languages.

LING 402 Syntax I (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The aim of this course is to provide students with the background needed to understand advances in modern generative syntactic theory and to encourage them to do creative and informed research in this area on English or other languages that they might know. The course provides a historical overview of the development of generative syntax. We explore in depth a number of topics that challenge any syntactic theory and we attempt to propose testable hypotheses concerning language structure.

LING 404 Phonology I (3) The analysis of the sound systems of human languages; focus on common phonological processes across languages and on phonetics-phonology interface.
LING 404 Phonology I (3)

This course meets the Bachelor of Arts degree requirements.

This course is about sound patterning in language. In particular, we will learn how human speech sounds are produced and how they function together as a system. We will learn the International Phonetic Alphabet applied to English. We will discuss phonological data from many different languages to seek common phonological processes that occur despite the apparent surface diversity of languages. We will do extensive work on phonological problems in order to master basic phonological analysis.

Effective: Fall 2001

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

LING 429 (PSYCH 426) Language and Thought (3) Relations between language and cognition; cognitive implications of normal and impaired language development; cognition and bilingualism.

LING (PSYCH 426) 429 Language and Thought (3)

This course meets the Bachelor of Arts degree requirements.

Is language a special and uniquely human ability that develops and functions independently of other cognitive processes? Do individuals who speak different languages also have different concepts about the meaning of objects and ideas? Does language development depend on exposure to spoken language? In this course we will examine the relation between language and thought by considering evidence on language and cognition in both children and adults. Topics to be covered include the typical development and use of language as well as language and cognition in individuals whose language and/or cognition is impaired in some form. The latter include individuals with aphasia who have sustained brain damage following stroke or head injury, schizophrenics whose language reflects aspects of their disorder, children diagnosed with Williams Syndrome who appear to have good or even precocious language abilities in the face of severe cognitive impairment, and Alzheimer’s patients in whom semantic memory has begun to deteriorate. The course will also discuss the acquisition of sign language among deaf individuals and the consequences of bilingualism for children raised with two languages and for adults with proficiency in more than a single language.

The purpose of this course is to provide a survey of current scholarship on the relation of language and thought, including a review of recent developments in the primary literature. The necessary background is covered in introductory Psychology and Linguistics courses, which serve as alternative prerequisites. Students will learn about the consequences of typical and impaired development for relations between cognition and language ability. It is distinguished from PSYCH 457, Psychology of Language, by a focus on the implications of language, language development, and language impairment, for cognitive processes. It covers some topics also addressed by current courses in Linguistics and in Communications Sciences and Disorders, but is distinguished from those courses by its focus on perspectives and theories from cognitive psychology. This course may be used toward the 400-level PSY requirements of the PSYBA and PSYBS majors, and toward the PSY minor. Students typically will be assessed on the basis of class participation and discussion (20%), four papers (total 60%), and an in-class presentation based on reading original research literature (20%). The course typically will be offered once each year at the University Park campus with an enrollment limit of 50.

LING 446 (PSYCH 427) L1 Acquisition (3) How children learn their first language; psycholinguistic aspects of lexical, syntactic, semantic, and phonological development.

LING 446 (PSYCH 427) L1 Acquisition (3)

This course meets the Bachelor of Arts degree requirements.

This course focuses on how children learn their first language from the theoretical perspectives of imitation theories, social construction theories, and innateness theories. In addition, the course covers the various stages of language acquisition including phonological (sound system), morphological (word meaning), syntactical (grammar) and semantic (meaning) development from birth to adulthood. Other related subfields covered in the course include the acquisition of Pidgin and Creole languages, bilingual and multilingual acquisition, and language acquisition and linguistic change.

General Education: None

LING 447 Bilingualism (3) Explores the social and psychological aspects of bilingualism; topics include languages in contact, transfer, maintenance, and loss.

LING 447 Bilingualism (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course presents a panoramic view of the major questions, research methods and results in bilingualism research. We will cover the following topics, in addition to those topics that emerge from students' research: bilingualism in society; political and social results of language contact; effects of social attitudes on bilinguals; how bilingualism affect language: transfer, code-switch, language contact and language change; the bilingual brain, psycholinguistic effects of having two grammars in sentence production, phonological perception and lexical storage; childhood bilingualism; developmental and educational consequences of bilingualism.

LING 448 Sociolinguistics (3) Issues in the study of language in its sociocultural context; analysis of social dialects and speech styles.

LING 448 Sociolinguistics (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course investigates sociolinguistics variation and linguistic change. We will be concerned with identifying the mechanisms by which changes come about and are transmitted within a linguistic system. The course contrasts traditional studies of change and variation which concentrate on linguistic internal factors to those that are based on sociolinguistic factors. Research from a wide variety of languages and cultures will be examined.

LING 449 Semantics I (3) The study of meaning in human language; methods of analysis; study of sense, reference, compositionality, quantification, presupposition, and sentence-level meaning.

LING 449 Semantics I (3)

(BA) This course meets the Bachelor of Arts degree requirements.

This course examines our best understanding of how humans produce and understand utterances to have particular meanings. This course examines lexical semantics, which is concerned with word meaning, phrasal semantics, which examines phrase meanings and with pragmatics, the study of meaning in contexts. Because meanings cannot always be built up or deduced from the combined meaning of smaller elements, students will attempt to divulge the semantic principles at work in human language through a wide variety of problems and activities.

General Education: None
Diversity: None
Bachelor of Arts: Social and Behavioral Science

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

LING 457 (PSYCH 457) Psychology of Language (3) Overview of psychological research and theory on language processes, including speech perception, word recognition, meaning representation, comprehension, and language acquisition.

LING (PSYCH) 457 Psychology of Language (3)

(BA) This course meets the Bachelor of Arts degree requirements.

How do we process language? Why do we easily adjust to a speaker with a foreign accent? How do young children come to speak the language to which they are exposed? Why is it difficult to learn a second language as an adult? This course
focuses on the cognitive processes engaged by language use. Topics to be covered include speech perception, word recognition, representation of word meaning, comprehension of sentences, spoken production of words and sentences, and first and second language acquisition. In addition, the role of language in the study of thought and the role of biological mechanisms in theories of language learning will be discussed, as well as ways in which research on the language of special populations (e.g., deaf signers, dyslexics, aphasics) can inform theories of language processing and representation.

**LING 493 Field Methods (3)**  
*Primary linguistic investigation of a language different from English; field work with a native speaker; data gathering; linguistic analysis.*

**BA** This course meets the Bachelor of Arts degree requirements.

In this course, students work directly (in groups) with a native speaker of a foreign language with which no one in the class has any prior familiarity. The students will work to uncover the set of sounds relevant to the language in question by winnowing down possible sound contrasts made in human languages. They will begin to construct a lexicon (vocabulary) built with a phonetic alphabet to discover how words are formed in the language. They will refine their techniques of questioning their research participant based on principles of linguistic field work. Finally, groups will present their findings for discussion and revision.

Management (MGMT)

MGMT 001S Business Leadership (3) The aim of this course is to introduce fundamental concepts of business management and leadership.

MGMT 001S Business Leadership (3) (FYS)

MGMT 001S aims to introduce students to the academic discipline of management through the study of leadership and management principles and practices. The course is intended for First Year students enrolled in the Smeal College of Business Administration and other First Year students as recommended by their advisor.

The course will cover a variety of concepts pertinent to leadership and management. We will begin by focusing on Leadership Theory and the practical manifestation of leadership in business and society. We will discuss how different leadership styles have appropriate application, and attempt to identify current leadership practices. We will also trace the evolution of management theory in this century, and distinguish between facts and fads in management. The class will then investigate the current business/industrial trend toward "Teams" and group problem solving, and will participate in experiential team-building exercises.

The course format will consist of lectures, outside reading, small-group discussion, class discussion and projects, and experiential exercises. Students will be, required to use multiple University resources, including the libraries, the computer center, class list-serve and e-mail, the internet, and the CDPC. Projects will include investigation of various disciplines within the broad area of business as exemplified by the variety of majors and options in the Smeal College of Business Administration.

The term grade for this course will be determined by a weighted average of essay exams, written assignments, and class participation. The weights are as follows: mid-term 35%, writing assignments 15%, participation 15%, and final exam 35%.

This course is also intended to fulfill the First Year Seminar requirement for students in the Smeal College of Business Administration. The course will accomplish this goal by conforming to the Criteria for First Year Seminars as spelled out in the Faculty Senate Legislation of 1998.

**MGMT 215** Entrepreneurial Mindset (3) This course provides the opportunity to learn to think like an entrepreneur in the
broader context of social entrepreneurship, intrapreneurship, creative problem solving, opportunity recognition, and innovation.

MGMT 215 Entrepreneurial Mindset (3)

An entrepreneurial mindset can be applied to different situations such as social entrepreneurship, intrapreneurship, creative problem solving, opportunity recognition, technology management, innovation and career development, etc. The skills and attributes of an entrepreneurial mindset can be used to expand career options and career paths for students in any major. Students will develop self-efficacy, leadership, recognition of new opportunities, resourcefulness, creativity and comfort with ambiguity. Further, this course will help students develop an appreciation for mistakes and failure as valuable learning opportunities.

Through experiential exercises and problem based learning the student will be afforded the opportunity to study, apply and absorb an entrepreneurial mindset as an approach to viewing the world, to recognizing opportunities and to developing novel solutions.

After taking this course the student, regardless of a student's major or college, will have a greater understanding of how to apply entrepreneurial thinking to problems and adopt entrepreneurial solutions to those problems to transform them from problems into opportunities.

**MGMT 301 Basic Management Concepts (3)**

Study of fundamental principles and processes available to the understanding of management. Not available to students who have taken B A 304.

**MGMT 301H Basic Management Concepts (3)**

Basic Management Concepts, is a three credit course offered each semester across Penn State. MGMT 301 exposes undergraduate students to the fundamental principles and basic concepts of management, with emphasis on organizational design, management processes, leadership, motivation, and managing teams and individuals in a global business environment. Understanding these principles and concepts is extremely important for students preparing for and entering the business profession.

Managers plan, organize, lead, and control. These functions provide a foundation for MGMT 301 and are included in all course topics and modules. Typical modules include: An Overview of Management; Strategy and Structure; Organizational Behavior; and Group/Organizational Dynamics. The overview of management focuses on the manager’s role and function, decision making, ethics, and managerial oversight. Topics covered in a strategy and structure module will include culture, environmental influences, strategy, organizational structure, globalization, and innovation. Organizational Behavior focuses on how decision making is influenced by various stakeholders who have formal and informal authority and control in a business. What motivates individuals and who are leaders in an organization is discussed along with group dynamics. Understanding team processes, conflict, adaptation to change, and various levels of group and one-on-one communication is important and will be covered by reviewing traditional management strategies and structures along with discussions on current and evolving management issues.

**MGMT 301W Basic Management Concepts (3)**

Examination of fundamental principles and processes applicable to the understanding of management.

The topics covered in this course will provide both the breadth and depth of understanding of various topics including organizational structure, strategy, culture, leadership styles, ethics, and staffing that fall under the domain of Management & Organization. In addition, specific challenges faced by managers in contemporary organizations such as managing teams, globalization, and diversity are also incorporated. These topics are covered using lectures, independent research, case analyses and experiential exercises that will help you develop in-depth domain knowledge as well as managerial skills. In addition, the course will facilitate the development of research and analytic skills through the inclusion of individual presentations of current topics that represent critical issues in organizations. A team project will further enhance knowledge acquisition of specific issues facing organizations and, since teams are prevalent across most organizational settings, also help develop teamwork skills.
study of management. Not available to students who have taken B A 304.

MGMT 301W Basic Management Concepts (3)

MGMT 301W, Basic Management Concepts, is a three credit course offered each semester across Penn State. MGMT 301W exposes undergraduate students to the fundamental principles and basic concepts of management, with emphasis on organizational design, management processes, leadership, motivation, and managing teams and individuals in a global business environment. Understanding these principles and concepts is extremely important for students preparing for and entering the business profession.

Managers plan, organize, lead, and control. These functions provide a foundation for MGMT 301W and are included in all course topics and modules. Typical modules include: An Overview of Management; Strategy and Structure; Organizational Behavior; and Group/Organizational Dynamics. The overview of management focuses on the manager's role and function, decision making, ethics, and managerial oversight. Topics covered in a strategy and structure module will include culture, environmental influences, strategy, organizational structure, globalization, and innovation. Organizational Behavior focuses on how decision making is influenced by various stakeholders who have formal and informal authority and control in a business. What motivates individuals and who are leaders in an organization is discussed along with group dynamics. Understanding team processes, conflict, adaptation to change, and various levels of group and one-on-one communication is important and will be covered by reviewing traditional management strategies and structures along with discussions on current and evolving management issues.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2013
Prerequisite: ENGL 015 or ENGL 030; ECON 102 or ECON 104; MATH 021 or higher or satisfactory score on the mathematics placement examination

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 321 Leadership and Motivation (3) Applies organizational behavior theories, concepts, and skills to leading and motivating individuals and groups.

Leadership and Motivation (3)

General Education: None

Bachelor of Arts: None
Effective: Spring 2001
Prerequisite: B A 304 or MGMT 301 or 3 credits of psychology sociology or cultural anthropology

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 326 Organizational Behavior and Design (3) Concepts, theories, and methods of managing people and designing organizations.

MGMT 326 Organizational Behavior and Design (3)

This introductory course covers the concepts, theories, and methods of managing people and designing organizations. Issues and challenges of managing at different organizational levels (individual, group, project, and total organization) are discussed and illustrated with real-world examples. Students learn about the latest means of designing high-performing organizations, including how to change an organization. This course will serve as a foundation for taking advanced management courses. The primary method of evaluation is an examination after each of the four major parts of the course, but class participation and short papers may also be used for evaluation.

MGMT 409 Project Management for Engineers (3) The course provides a real-time experience to students in engineering and engineering technology in project management with a focus on leadership behavior and decision making.

Project Management for Engineers (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: 7th semester standing

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 410 Project Management (3) A problem-based, interdisciplinary course in project management skills and techniques needed to manage projects in a modern business environment.

Project Management (3)

Project Management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course would greatly aid business majors, as companies are in great need of a trained cadre of qualified project managers who can allow the business firm to operate to its highest potential.

The role of the instructor in this course is to train students in the wide variety of demands and skills for which they must be qualified: the ability to exert leadership in managing project teams, an understanding of people and behavioral skills, and the ability to effectively use computer-based scheduling and tracking software to keep timetables and schedules.

The course itself would be set up around semester-long projects, either developed by the instructor, or developed (in collaboration with the instructor) by students involved in business enterprises. As a result, students would have real-time experience in the challenges of creating a unified team, solving problems, tracking their projects, and presenting a final paper and presentation on the process.

General Education: None

MGMT 415 Project Portfolio Management and Organizations (3) An advanced course in project management focusing on portfolio planning and control within the context of specific organizational challenges.

MGMT 415 Project Portfolio Management and Organizations (3)
Project Portfolio Management (PPM) is a strategically-focused course on the management of projects, programs, and portfolios in organizations. The management of individual projects is a complex, multi-level challenge involving myriad issues of planning, organizing, and controlling all project elements. Project portfolio management addresses a more strategic need; namely, the process of project selection in order to develop a balanced portfolio of projects designed to support organizational initiatives. As a result, this course addresses the critical issues of maximizing value in a portfolio, linking projects to organizational strategy, understanding the critical organization effects of structure, environment, and culture on project success, and creating a coherent PPM framework for the firm.

Because the focus is more strategic, the role of the instructor in this course is to go beyond the mechanics of planning and controlling a single project to training students how to think strategically where projects and programs are concerned; to recognize their role in creating a PPM plan for an organization, selecting projects for value, rebalancing a project portfolio, and maintaining this focus within the organization.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2013
Prerequisite: SCM 301 or MGMT 409 or MGMT 410

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 418 Project Planning and Resource Management (3) Advanced course in project management focusing on a more in-depth approach to project planning and scheduling and resource management.

Project Planning and Resource Management is a more in-depth look at some of the most important aspects of project management; the ability to accurately plan and schedule projects using the latest and most accurate methods. Further, the course addresses resource management within the context of planning, noting the important linkage between these two elements. Accurate planning can be done through a variety of techniques, including CPM, PERT, simulation, linear programming and other optimization methods. Students will learn when each of these methods are most useful, benefits and drawbacks of various planning and resource management techniques, and how to apply these techniques to their projects. In addition, students will learn about different types of project risks, and techniques for analyzing and managing these risks.

Because the focus is hand-on and problem-based. The role of the instructor in this course is to demonstrate these analytical techniques through classroom exercises and assignments and software packages, including MS Project, simulation, and Analytic Hierarchical Process (AHP).

MGMT 425 (IST 425, ENGR 425) New Venture Creation (3)

Via problem-based learning, teams define new business ventures to meet current market needs, develop business plans, and present to investors. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT (IST/ENGR) 425 Introduction to Entrepreneurship (3)

The goal of MGMT (IST/ENGR/ENTR) 425 is to better prepare undergraduate students to be business leaders in adaptive, globally-minded, technology-savvy companies. The course is structured so students develop skills that are of high value in any workplace: they develop improved leadership skills, higher self-efficacy, creativity, and the ability to deal with ambiguity. On course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience and producing a convincing executive summary for internal or external financing and launch. Students who want to augment the skills and knowledge from their major with the ability to refine a new product/service process in an interdisciplinary team will find MGMT (IST/ENGR/ENTR) 425 a valuable course.

This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active learning happens in this course because students develop ownership in their new business venture concept and are fully responsible for the genesis of the idea. The course leverages the on-line course management system (ANGEL) to define weekly learning objectives, support electronic delivery of assignments, robust video content with entrepreneurs is provided on CD-ROM or via ANGEL, providing additional insights into entrepreneurship. The technology or business segment focus of the class is easily adapted by using different case studies and course mentors.

This will be one of two courses in the new two-course sequence for business students in entrepreneurship. This course will be accepted as a supporting course in the Engineering Entrepreneurship Minor (E-SHIP) and in the Engineering Leadership Development Minor (ELDM). MGMT (IST/ENGR/ENTR) 425 can be used as a technical elective in many of the engineering departments. It will be accepted as a Support of Option course for the Information Sciences and Technology (IST) major.

This course will be offered each Fall and Spring semester with two sections each semester. Class enrollment per section will be set at 60 total.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2011
Prerequisite: ECON 102 or ECON 104 or ECON 014; CAS 100

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 426 (ENGR 426, IST 426) Invention Commercialization (3)

Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path each technology. This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor.

Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. NOTE: Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property Agreement For Students - For Use When Assigning Intellectual Property to The Pennsylvania State University. The form can be viewed at http://guru.psu.edu/policies/RAG13.html

The course will be offered both Spring and Fall semesters with an enrollment of 40 students.

The Pennsylvania State University
MGMT 427 Managing an Entrepreneurial Start-Up Company (3)

Managing an Entrepreneurial Start-Up Company (3)

Start-up companies have a high failure rate. Acquiring and balancing limited resources, changing direction quickly, building a coherent team, managing intellectual property, and creating new markets all test a wide range of managerial skills not usually demanded in one person within a larger organization. Whereas a large company has a strong and well-defined structure and ample resources to deal with unexpected challenges, a start-up usually has insufficient resources, or management experience and yet must deal with daily important and often unpredictable forces. It is the tenacity of an entrepreneur that can take a company through the valleys of despair to eventually succeed.

Students will be exposed to these tensions and experience through problem-based learning methods what it is like to start and grow a new company. The course will provide students with knowledge and experience to increase the likelihood of success whether as a principal in a small company or an investor representative.

MGMT 433 Leadership and Team Building (3)

Leadership and Team Building (3)

Team-based learning approach to developing conceptual knowledge, skills sets, and personal competencies needed for leading and managing organizations.

To lead effectively and to manage others in contemporary work contexts requires mastery not only of conceptual knowledge, but also of the intra- and inter-personal competencies and skills sets that are vital to successful performance in a work environment. This course emphasizes an experiential-based learning approach that is designed to impart skill sets and competencies in areas such as leadership, teambuilding, negotiating, communicating, valuing diversity, managing conflict, and more. The course thus uses assessment exercises, role playing techniques, group problem solving exercises, and other experiential-based learning techniques in order to provide students with a framework for better understanding their own strengths and weaknesses, to enable them to practice, enhance, and to gain confidence in their competencies in these various areas, as well as to enable students to better appreciate when and how to effectively apply these skills sets and competencies in the workplace.

MGMT 441 Organizational Staffing and Development (3) This course focuses on the skills and methods managers need to manage staffing and development activities in organizations.

MGMT 441 HRM Professional Seminar (Part 1): Staffing and Development (3)

The purpose of this course is to give students the skills and knowledge they need to contribute to organizational staffing and development activities. Students will learn technical and organizational aspects of making hiring decisions, designing and implementing training programs, and developing career management initiatives. Topics include strategic human resource management, HR planning, the contingency workforce, HR information systems and technologies, job design, recruitment, selection, employment legislation, diversity, training, management development, career planning, and the like. This course is normally taken in the first semester of the senior year. It builds on information introduced in MGMT 341 (Human Resources Management) and moves beyond survey-level material to more specialized knowledge and skill. The course is taken concurrently with MGMT 442 (HRM Part One) and is typically taken as a precursor to MGMT 443 (HRM Proseminar, Part Two) and 444 (HRM Practicum, Part Two). These courses together constitute the core of the HRM Option for Management majors.

MGMT 443 Performance Management (3) This course focuses on skills and methods managers need to enhance the contribution of employees to organizational performance and effectiveness.

MGMT 443 HRM Professional Seminar Part Two: Performance Management (3)

The purpose of this course is to give students the skills and knowledge they need to enhance the contribution of employees to the performance and effectiveness of the organization. Students will learn technical and organizational aspects of performance planning, goal setting, performance and feedback, compensation and reward systems, incentive systems, high performance work organizational change, and the like. This course is normally taken in the second semester of the senior year. It builds on information introduced in MGMT 341 (Human Resources Management) and moves beyond survey-level material to more specialized knowledge and skill. The course is taken concurrently with MGMT 444 (HRM Practicum, Part Two) and is typically taken after students have completed MGMT 441 (HRM Proseminar, Part One) and MGMT 442 (HRM Practicum, Part One). These courses together constitute the core of the HRM Option for Management majors.

MGMT 445 (US) Managing a Diverse Workforce (3) This course focuses on developing knowledge and skills for managing demographic, functional, occupational and identity-based differences within and among organizations.

MGMT 445 Managing a Diverse Workforce (3)

This course focuses on developing knowledge and skills for managing differences within and among organizations. It provides an in-depth look at the sources of diversity-related conflicts in organizations, constructive approaches for managing these conflicts, and how corporations can leverage diversity for competitive advantage. The overall objective is to provide students with an understanding of the business case for diversity, the legal requirements surrounding the
management of diversity in organizations, the structural dimensions of implementing diversity programs, skills for managing diversity in teams, as well as a general sensitivity to the kinds of issues that create conflicts within and between firms. Students will explore legal requirements including: EEOC, affirmative action, and the Americans with Disabilities Act and the implications of these for selection, compensation, promotion and dismissal. Examples of specific steps corporations have taken to address demographic, functional, occupational, and identity-based differences will be provided. Through the use of interactive case studies and experiential exercises, students will be given opportunities to learn about and appreciate their own and others' cultural heritages, reflect on constructive approaches for handling diversity-related conflicts (including those stemming from functional, occupational and identity-based differences as well as demographic ones) and for designing human resource management systems that capitalize on diversity and promotes inclusion.

MGMT 453 Creativity and Innovation (3) Analysis of the process of innovation in organizations and of how creativity and other variables influence the process.

MGMT 453 Creativity and Innovation (3)
Creativity and Innovation analyzes the process of innovation in modern business organizations and the variables that influence the process. The relationship between creativity and innovation is investigated and individual, organizational and environmental influences on both the creative and innovation processes are examined. Special attention is given to organizational architectures that are conducive to innovation. A major objective of the course is to help students develop the competencies necessary for managing innovative organizations.

MGMT 466 Organizational Learning and Knowledge Management (3)
Examination of the social processes through which organizations continuously develop, acquire, interpret, and apply information and knowledge for performance enhancement and continuous improvement.

The primary focus of this course is to examine critically the social structures and processes through which organizations continuously acquire, develop, organize interpret, distribute and apply information and knowledge for performance enhancement and continuous improvement. Topics such as single-loop learning, double loop learning, and deuterolearning (i.e., learning how to learn) are considered, particularly as they apply to self managed work teams, process-based and network structural design, employee involvement approaches, impact of organizational culture and leadership practices. A second focus of the course is to examine the social processes and structures through which the key outcome of the learning process -- organizational knowledge -- usually expressed in terms of improved core competencies, and intellectual capital, can be leveraged across products, functions, business units, geographical regions, and competitive environments to improve organizational performance and competitive advantage and provide added value for customers. Particular emphasis is placed on knowledge management in support of the organization's competitive strategy, with a focus on the exchange of tacit, person-to-person knowledge that is difficult to codify and store. Additional emphasis is placed on the mechanisms available for organizational members to gain access to needed knowledge.

MGMT 471 Strategic Management (3)
Issues that influence the competitive performance of the firm are identified and examined.

This course focuses on the management of the firm using a strategic perspective. The strategic perspective emphasizes the firm as the unit of analysis (e.g., analyzing how a firm competes in its industry), and it addresses key decisions that have a long-term impact on the structure and performance of the organization (e.g., diversifying into a new business or changing the company's strategy). The course draws heavily on prior business courses in accounting, marketing, finance, and international management. Key topics include industry analysis, competitor analysis, company analysis, corporate-level strategy, business-level strategy, strategy implementation, and firm performance. The course is normally taught using the case methods, but the course may include a computer simulation and/or oral group presentations.

MGMT 471W Strategic Management and Business Policy (3)
Study of strategic management and business policy formulation and implementation processes.

MGMT 475W Strategic Product Development (3)
Study of an organization, industry, and evaluation of the introduction to a product.
MGMT 475W Strategic Product Development (3)

This course is the first of a two course sequence that will provide a capstone experience for the Interdisciplinary Business and Engineering BS degree. The tools of strategic management and cross-functional collaboration will be introduced and serve as a background for the design, development, and implementation of a new product within an existing corporation. Student teams will be provided with an industry concept and work toward the objectives of a firm sponsoring the product concept. During the first semester, the evaluation of the product including feasibility of the product, design, manufacture, and intellectual property will be evaluated by student teams and presented to the firm. The final document will include a complete written assessment of each of the components of feasibility.

Prerequisite: MGMT 475W ; 8th semester standing

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 483 Compliance and Fairness in Organizations (3) Compliance with employment laws with respect to managing human resources and fair treatment in employer-employee relationships.

MGMT 483 Compliance and Fairness in Organizations (3)

This course is intended for undergraduate students who want to learn more about the laws governing the employment practices introduced in the survey course in human resource management. This course will clarify the legal context within which businesses in general, and managers in particular, manage their employees. Students will learn about the legal rights and responsibilities of both employers and employees. Objectives of the course include learning how to comply with workplace laws and regulations, learning how to legally and effectively implement these requirements in an organization, and, as managers of human resources, knowing how to run a safe and fair workplace. To accomplish these objectives, students will evaluate and analyze federal employment laws and regulations, state employment laws (where applicable), and U.S. Supreme Court rulings. The emphasis will be on providing an informed legal context for managerial behavior. Student achievement of these learning objectives will be evaluated using several methods: students will summarize, interpret, and analyze employment law cases, write and develop a portfolio of critical essays of corporate employment practices, research and present (with team members) a project analyzing a current legal challenge to a specific company employment practice, and prepare a comprehensive written examination of material covered in the course.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007
Prerequisite: MGMT 341

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 489 Seminar in Management (3) A capstone course in management for students of high academic achievement. Emphasis on in-depth research of current interest.

Seminar in Management (3)
MGMT 494 Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 494H Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 495 Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Internship (1-18)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 496 Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Independent Studies (1-18)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 496A Strategic Management and Business Policy (1-6) Study of strategic management and business policy formulation and implementation processes. Student will write three reports using strategic management theory to evaluate the family seed business.

Strategic Management and Business Policy (1-6)

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MGMT 496B Organizational Theory (1-6) Research oil industry following the analyzing the organization model in...
Undergraduate Bulletin Archive - June, 2016

textbook "Organizational Theory, Design and Change" by Gareth R. Jones. Will write series of three reports.

Organizational Theory (1-6)

MIS 204 Introduction to Business Information Systems (3) Introduction to the use of information systems in business organizations.

MIS 204 Introduction to Business Information Systems (3)

Introduction to Business Information Systems is an applications-oriented course that provides an overview of (1) the role of information systems in business process design, (2) the current technologies used for obtaining, storing, and communicating information in support of operations and decision-making within a business organization, and (3) the concepts and principles for programming, developing, and using popular spreadsheet and database tools. Applications focus on important problems and issues found in business disciplines, including accounting, finance, marketing, supply chain operations, and general management.

The evaluation of students will be based on tests, programming projects, and hands-on exercises. This course is a prescribed course for Smeal Business students. MIS 204 will be offered in the fall, spring and summer semesters, and enrollment per annum of approximately 1, 200 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2007

MIS 204H Honors Introduction to Management Information Systems (3) Introduction to the use of information systems in business organizations.

MIS 204H Honors Introduction to Management Information Systems Honors (3)

This honors section of MIS 204, will provide enhanced, in depth learning for Schreyer Honor students. MIS 204 is an applications-oriented course that provides an overview of (1) the role of information systems in business process design, (2) the current technologies used for obtaining, storing, and communicating information in support of operations and
decision-making within a business organizations, and (3) the concepts and principles for programming, developing, and using popular spreadsheet and database tools. Applications focus on important problems and issues found in business disciplines, including accounting, finance, marketing, supply chain operations, and general management.

The responsibility to understand and recognize opportunities to use information systems belongs to all managers in an organization, not just the information technology managers. As future business managers in diverse functional areas, our students begin their journey to understand the foundations of information systems and how managers are using these systems to increase the competitiveness of their organizations.

As an introductory course, students should be able to come into the class without any prior experience. However, even students with experience will hopefully learn something new. Students will develop a general understanding of how a business functions, understand how information and technology is used within a business and develop new student IT skill sets. In summary, we aim to provide an opportunity for all undergraduate business majors to use IT in their current or future jobs in such a way to ensure the success of their organization.

In addition, the Schreyer Honor students will also be exposed to business data mining, a highly intelligent application of information technology in a variety of business contexts that often lead to core competitive advantages.

General Education: None

MIS 307 Algorithmic Concepts (3) Using state-of-art programming language; concepts, program structure and design, documentation, file handling, and elementary data structures are introduced.

MIS 307

MIS 307 Algorithmic Concepts (3)

MIS 307, Algorithmic Concepts, is a required course for information systems majors in the business program. The objective of the course is to present students with the principles of object oriented design and programming using a state-of-the-art programming language such as C++ or Java. Concepts include algorithm development, programming structure, documentation, UML modeling, file management, and elementary data structures such as arrays.

This course requires the students to demonstrate their mastery of object oriented design and programming through a series of individual programming assignments. In addition, students are assigned a team project to foster problem solving, communication, and team skills required in the Information Technology work force.

MIS 307 will be offered once per semester with multiple sections based on student enrollment and demand.

General Education: None

The Pennsylvania State University
MIS 336 Database Management Systems (3) Theory and utilization of database management systems in organizations, including data modeling and applications development.

MIS 345 Introduction to Data Analytics (3) An introduction to data analytics including data preparation, data visualization, dimension reduction, modeling techniques, and applications in different domain areas.

MIS 387 Website Design and Administration (3) Applied, hands-on, interdisciplinary website design/administration course. Acquired concepts, techniques and tools are exercised in individual and team projects.

MIS 390 Information Systems Management and Applications (3) Specification, design and implementation of information systems directed at aiding decision making in organizations.

INFSY 390, Information Systems Management & Applications, is a required course for Information Systems and Business students. The course covers topics and concepts in Management Information Systems (MIS) and information technology management. Upon successful completion of this course, students will have a broad knowledge of contemporary issues and applications of MIS in business.

INFSY 390 will be offered once per semester with multiple sections based on student enrollment and demand.
INFSY 391 Principles of E-Commerce (3)

INFSY 391 provides an introduction to the fundamental concepts of e-commerce and serves as a foundation for business undergraduate students to understand e-commerce application and management in modern organizations. The course is designed to appeal to all business undergraduate students. Upon successful completion of this course, the student will have an understanding of the various types of e-commerce utilization and management in organizations throughout the world.

INFSY 391 is an elective in the Business program. INFSY 390, Information Systems Management & Applications, is a required course for Information Systems and Business students and is a prerequisite for INFSY 391. In INFSY 391, Business students will continue to explore the inter-relationship between information technology and organizational functions and management.

In addition to examinations, students will be assigned to project- and team-based assignments where students will actively examine e-commerce applications as well as management cases and the impact of e-commerce on the modern organization. Student performance will be evaluated using both examinations and team project assignments.

INFSY 391 will be offered once per semester with multiple sections based on student enrollment and demand.

MIS 397 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

MIS 398 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Foreign Studies (1-12)

MIS 404 Introduction to ERP and Business Processes (3)

Enterprise Resource Planning (ERP) a group of integrated software modules used to run virtually all business processes in an organization. The course explains and demonstrates how business processes such as sales logistics, production/material management, procurement, and human resources are supported in an ERP software package.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010
Prerequisite: MIS 204 or 1st Level Programming Course or with the permission of the program

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MIS 405 Supply Chain Information Systems with Oracle (3) Strategic design and implementation of Oracle supply chain management information systems in an ERP environment.

MIS 405 Supply Chain Information Systems with Oracle (3)

This course involves extensive discussion and study in the design and understanding of supply chain information systems. The vast majority of business data is generated through the use of supply chain information systems. Successful program managers and business analysts must understand how the data is generated, and how this strategic data is used to integrate various business functions. This course will focus on the implementation and management of supply chain information systems, and will include topics in the following areas:

- Inventory Management
- Purchasing and Materials Management
- Bills of Material and Engineering
- Master Scheduling and Material Requirements Planning

This course will include a special focus on Oracle eBusiness suite applications and numerous hands-on exercises that will ensure participants understand implementation strategies, supply chain information system processes, and data analysis.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010
Prerequisite: SCM 301MIS 204

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MIS 406 Customer Information Systems with Oracle (3) A technology-based exploration of the various Oracle Order Management and Customer Relationship Management tools.

MIS 406 Customer Information Systems with Oracle (3)

This course provides a detailed explanation of customer relationship and order management within the organizational supply chain. The course demonstrates how Order Management process flows, application functionality, and organizational requirements are utilized to manage and control sales order fulfillment. Additionally the course will demonstrate how Oracle's integrated Customer Relationship Management (CRM) solution provides information-driven sales, service, and marketing support to the organization. Extensive use of state-of-the-art Oracle business software technology is employed.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2010

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MIS 407 Enterprise Integration with Oracle (3) This is a technology course focusing on software development in an Oracle eBusiness ERP Environment.

MIS 407 Enterprise Integration with Oracle (3)

The Oracle Enterprise Integration course will cover the primary functionality of core business application modules and the flow of data through the major database tables. Students will perform SQL queries of critical Oracle ERP tables. Students will develop PL SQL program units which are the foundation of Oracle business modules. The open interfaces for Oracle Inventory and Oracle Purchasing will be demonstrated via programming sessions.

General Education: None
Diversity: None
MIS 410 Health Informatics Capstone (3) Develop understanding of concepts in Health Information Systems including current trends and issues in using, designing and managing Health systems.

MIS 413 Interface design for Information Systems Applications (3) The study of interface design emphasizing application and user requirements, development and testing techniques, and information processing issues.

In order to design an information system, the designer must undertake a thorough task analysis to determine the proper functionality of the system. The designer must give attention to system reliability, security, standardization, portability, integration, and many other issues. While these issues are important, they do not directly address the needs of the system's users. The system's interface is the vehicle with which users interact with the system. It is, in essence, the system from the users' standpoint. A poorly-designed interface will deter people from using the system, while a well-designed interface will encourage system usage.

MIS 415 Social Media Management and Analytics (3) Students gain experience and in-depth analysis of social media management, digital marketing, SEO/M, and analytics of current digital business practices.

With the rise of social media as a management, marketing and analytics tool, students need to learn how to use these tools to communicate better with customers as well as analyze important data that can help marketers solve digital marketing challenges. In this course, students will learn about the changing nature of digital business practices and will be able to gain experience with social media management, digital marketing, SEO, SEM, and analytics. In-depth analysis will be given on current practices and this course will build a framework from which students can pioneer their own ideas in the growing field of digital marketing. They will also be able to understand current issues in digital marketing and have the tools they need to assess those issues and further strengthen their understanding of this important, emerging field.

MIS 420 Business Process Management (3) This course introduces students to concepts, approaches, and design principles used to identify, model, assess, and improve business processes.

The course builds the foundation for process analysis by focusing on key aspects of business processes, including collaboration, information flow, people, roles and business rules. The main objective is to provide an introduction to various techniques and tools of process analysis and workflow management including process mapping techniques and simulation. The course will utilize cases and examples to strengthen the student's understanding of business processes. At the end of the term students are expected to have the competency required to model and analyze current processes and develop coherent and well thought out improvement plans for redesigning organizational processes.
MIS 430 Systems Analysis (3) Information analysis and the logical specification of the system.

Systems Analysis (3)

MIS 431 Business Data Management (3) Management of data including large, complex sets to support business analytics, strategy, and operations.

MIS 432 Business Information System Analysis (3) The analysis of business information systems and the requirements specifications of redesigned systems.
ranging from 25 to 40 students.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2016 Future: Fall 2016
Prerequisite: Prerequisite or Concurrent:MIS 431

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MIS 432 Business Information System Analysis (3) The analysis of business information systems and the requirements specifications of redesigned systems.

MIS 432 Business Information System Analysis (3)
Business Information Systems Analysis introduces concepts underlying computer based information systems development. The course focuses on object-oriented concepts, project management and principles of systems development using standard UML diagram methodologies. The course develops a solid understanding of information systems development through the analysis of current information systems and the requirement specifications of a redesigned system, and also provides significant hands on experience using current technologies.

After completing this course, the student should have the knowledge, skills, and abilities to be able to:
• define and document an existing information system;
• analyze an existing information system and specify the requirements for a replacement system;
• use a specific Computer-Aided Software Engineering (CASE) tool to assist in Systems Analysis;
• understand alternative approaches to systems development;
• understand the purpose, context and commonly expected “deliverables” of systems analysis and create a substantial project and prepare a professional report

The evaluation of students will be based on tests, lab work, and homework. This is a prescribed course for the M I S major and a support-of-major course for Smeal students M I S 432 will be offered in the fall and spring semesters in sections ranging from 25 to 40 students.

MIS 434 Internet Technologies (3) Technical foundations and web applications to support internet-based commerce.

MIS 434 Internet Technologies (3)
The course examines important issues faced by businesses resulting from evolving internet technologies, such as mobile platforms, cloud services, and analytics tools and techniques. The evaluation of students will be based on tests, class participation, and both individual and team assignments, which include lab work, homework, and projects. All required software can be accessed from the university computer labs. You are expected to acquire the necessary skills independently to do hands-on computer work.

MIS 434 Internet Technologies (3)
The course examines important issues faced by businesses resulting from evolving internet technologies, such as mobile platforms, cloud services, and analytics tools and techniques. The evaluation of students will be based on tests, class participation, and both individual and team assignments, which include lab work, homework, and projects. All required software can be accessed from the university computer labs. You are expected to acquire the necessary skills independently to do hands-on computer work.

The Pennsylvania State University
MIS 435 Systems Design and Implementation (4) Logical and physical design of information systems and implementation.

MIS 435 Systems Design and Implementation (3)
Current systems development methods involve a use-case based, and iterative and incremental approach. This is the approach generally used on object-oriented systems development projects and is the approach taught in this course. Design aspects of the course will emphasize design patterns and their application to systems design using the standard software design notation—The Unified Modeling Language. An Agile (light-weight) approach to systems design will be emphasized. Implementation aspects of the course will focus on object-oriented programming using a modern object-oriented programming language.

MIS 441 Business Intelligence for Decision Making (3) Application of Information Technology based methods and tools to analyze business data and support decision making.

MIS 441 Business Intelligence for Decision Making (3)
Business intelligence encompasses the IT tools for exploring, analyzing, integrating, and reporting business data for fact-based, intelligent decision making. This course primarily investigates methods and tools for exploring and analyzing large amounts of business data also called "Big Data." Learning methods emphasize active learning in the application of methods and tools to real data and the presentation of the results. Students will be exposed to a variety of methods for analyzing both structured and unstructured data and they will work with business data sets to understand the value that can be extracted from large data sets. They will also learn how to classify and associate data to discover business rules that can be used to support decision making. The course will also cover methods to analyze social media information and about tools that can facilitate such analysis and discovery. Again they will get a chance to work with data from real social networks to gain an appreciation of how value can be obtained from such networks. Finally, they will learn about techniques for visualizing, presenting and communicating information in a useful way, e.g. through dashboards and with other technologies on various platforms.

MIS 442 Business Information Systems Design (3) Object-oriented concepts such as: object, instance, class, inheritance, polymorphism; application of these methodologies and design patterns to business system analysis.

MIS 442 Object Oriented Business Systems (3)
Business Information System Design provides an introduction to the logical and physical design of computer based business information systems. The course represents a natural progression from the Business Information Systems Analysis course (MIS 432). Emphasis is placed on object-oriented development paradigms for translating the system analysis results into detailed design specifications for the follow-up system implementation. The course develops a comprehensive understanding of different aspects of business information systems development, including project management, design specification, human interface design, new development methodologies, as well as the practical issues regarding system implementation, operation, and maintenance. The course also provides significant hands-on experience using current software development technologies in team-based real system development projects.

After completing this course, the student should have the knowledge, skills, and abilities to be able to:
• Explain and apply fundamental principles of systems design, implementation, operation, and maintenance in the business context.
• Effectively use system design languages and concepts to produce detailed design specifications based on system analysis outputs.
• Understand the entire life cycle of business information systems and perform effective management throughout the cycle.
• Describe basic elements of advanced topics such as outsourcing, rapid development, extreme programming, and major system development environments.

The evaluation of students will be based on tests, lab work, homework, and course project. This is a prescribed course for the M I S major. M I S 442 will be offered in the fall and spring semesters in sections ranging from 25 to 40 students.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MIS 446 Information Technology and Business Strategy (3) Strategic use and management of information technology in the digital global economy.

MIS 446 Information Technology and Business Strategy (3)
This course introduces the basics on the interplay between information technology and business strategies. The course starts with the general topic of strategic use of information technology in business (as enabler, differentiator, and disruptor) using examples from a variety of industries, followed by detailed coverage of the information technology strategy in individual industries including e-logistics, e-tailing, e-marketing, e-finance. The course also covers basics on the business information technology infrastructure and environments (Internet, Web, service-oriented computing, and security and risks). Towards the end, the course discusses the role of information technology in the global economy, business value of the explosively growing digital social networks, and other emerging trends and new technology opportunities.

Topics include:
- Information technology strategy, IT-business strategy alignment; IT as enabler, differentiator, and disruptor.
- Internet and Web infrastructure; extranet, intranet, hosting strategies; platform independence; eBusiness technology standards; open versus proprietary technologies; interoperability.
- Web Services for implementing business applications; software as a service; Services science and services oriented architectures.
- E-logistics and supply chain: Analysis of Dell model; Internet auctions, eBay; e-hubs; i-mode, GPS, RFID.
- E-tailing: Amazon, eBay, Walmart, recommendation systems, reputation systems.
- E-marketing: search engine advertising (Google AdWords/AdSense, Yahoo Search Marketing); database marketing (precision targeting).
- E-finance: online brokerage (Schwab, E*Trade), wealth management (e-strategy, technology for churn prediction and customer acquisition/retention), payment technologies (paypal), computational trading strategies.
- Collaboration/Community technologies: Blogs, MySpace, Facebook, YouTube, Voice over IP, videoconferencing, RSS, etc.; Impact on business communication and media industry.
- Need for security in ecommerce – threats and solutions.
- Globalization and IT. Offshoring and outsourcing.
- Emerging trends and technology opportunities.

MIS 446 Information Technology and Business Strategy (3)

This course introduces the basics on the interplay between information technology and business strategies. The course starts with the general topic of strategic use of information technology in business (as enabler, differentiator, and disruptor) using examples from a variety of industries, followed by detailed coverage of the information technology strategy in individual industries including e-logistics, e-tailing, e-marketing, e-finance. The course also covers basics on the business information technology infrastructure and environments (Internet, Web, service-oriented computing, and security and risks). Towards the end, the course discusses the role of information technology in the global economy, business value of the explosively growing digital social networks, and other emerging trends and new technology opportunities.

Topics include:
- Information technology strategy, IT-business strategy alignment; IT as enabler, differentiator, and disruptor.
- Internet and Web infrastructure; extranet, intranet, hosting strategies; platform independence; eBusiness technology standards; open versus proprietary technologies; interoperability.
- Web Services for implementing business applications; software as a service; Services science and services oriented architectures.
- E-logistics and supply chain: Analysis of Dell model; Internet auctions, eBay; e-hubs; i-mode, GPS, RFID.
- E-tailing: Amazon, eBay, Walmart, recommendation systems, reputation systems.
- E-marketing: search engine advertising (Google AdWords/AdSense, Yahoo Search Marketing); database marketing (precision targeting).
- E-finance: online brokerage (Schwab, E*Trade), wealth management (e-strategy, technology for churn prediction and customer acquisition/retention), payment technologies (paypal), computational trading strategies.
- Collaboration/Community technologies: Blogs, MySpace, Facebook, YouTube, Voice over IP, videoconferencing, RSS, etc.; Impact on business communication and media industry.
- Need for security in ecommerce – threats and solutions.
- Globalization and IT. Offshoring and outsourcing.
- Emerging trends and technology opportunities.

MIS 447 Data Warehousing (3)

This course focuses on fundamental principles and applications of data warehousing. Issues related to data warehouse planning, design, and implementation are also covered in this course. Through case studies in various business domains, course exercises and projects, students will learn practical dimensional modeling techniques, extract/ transformation/ load (ETL) logic, ETL design considerations, and report generation. Essentially, students will learn how to align multiple sources of data through data warehousing architectures for deriving valuable business insights through subsequent business intelligence operations.

The course begins by reviewing basic database modeling principles, and then introduces dimensional modeling in the context of the various data warehousing architectures (e.g., Kimball, Corporate Information Factory, hybrid architectures). Key concepts related to data warehousing including dimensional table characteristics, fact table characteristics and granularity, types of dimensions, types of fact tables, dimension attribute hierarchies, consolidated fact tables, slowly changing dimension techniques, and multivalued dimensions and weighting factors are covered in the course. Also, key advanced database management techniques such as views, procedures, and triggers will be introduced. Building on these core concepts, the course also covers related concepts including the role of online analytical processing (OLAP) and packaged analytic solutions, enterprise data warehouse business architecture and matrix, data warehousing lifecycle, ETL subsystems and tasks, ETL system planning, ETL design and development process and tasks, and data modeling best practices for big data.

Case studies from various business domains and processes are included throughout the course. Examples of these domains include retail sales, order management, procurement, accounting, healthcare, insurance, transportation, and telecommunication. The case studies are used to illustrate the concepts as well as provide a context for hands-on
exercises. Through course assignments and group projects, students have an opportunity to gain hands-on experience
with data warehouse design, development, and prototype implementation.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2015
Prerequisite: MIS 336 or equivalent approved course

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details
check the specific course syllabus.

MIS 448 Business Telecommunications (3) Introduces telecommunication concepts, its evolution, and present applications
in business. Discusses the software and hardware components of telecommunication networks.

Business Telecommunications (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MIS 390

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details
check the specific course syllabus.

MIS 450 System Design Project (3) A project in the design, specification, and programming of a system in an application
area.

MIS 450 System Design Project (3)

MIS 450, Systems Design Project, is a required course for information systems majors in the business program. MIS 450 is
the capstone course. The primary objective of this course is for students to develop Information Systems (IS) solutions to
real-life problems by following the entire systems development lifecycle (SDLC). The course allows students to
demonstrate their mastery of the SDLC methodologies and analytical skills. Students develop a team project to foster
problem solving, communication, and team skills. Individual assessment is evaluated through demonstration of the
understanding of IS skills (i.e. application development, oral presentations, and written communication). Individuals are
required to prepare professional written documents (i.e. definition document, the solution proposal, and the design
document). Then students develop a solution prototype matching the criteria outlined in their requirement documents.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2009
Prerequisite: MIS 307MIS 465;MIS 448 ; 3 additional credits of MIS at the 300- or 400-level; seventh or eighth semester
standing

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details
check the specific course syllabus.

MIS 461 Web Technologies (3) Fundamentals of Web development for e-business and related project management.

MIS 461 Web Technologies (3)

The objectives of this course are to enable students to fully understand the purpose, structure, and components of
technologies utilized for e-business applications; to gain substantial hands-on experience, creating applications for
e-business; understand how XML and other technologies are revolutionizing the Web and what it will do for complex
real-world applications; to make students aware of research issues that apply to Web development; and to strengthen
collaborative skills related to project development and management.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: MIS 307 andMIS 465

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details
check the specific course syllabus.

MIS 465 DataBase Management (3) Provides a comparison of techniques, methodology of systems, limitatins, and
applications of various data base management systems.

MIS 465 Database Management (3)

INFSY 445, Database Management, is a required course for information systems majors in the business program. The
objective of the course is to present database design and development, specifically relational database management
systems (RDBMS), along with project work on developing database systems. The course coverage includes conceptual data
modeling, relational data model, structured query language (SQL), data normalization, database integrity, and database administration. Advanced topics such as distributed databases and data warehousing are also discussed briefly. The course prerequisite is CMPBD 204 or CMPSC 101 or CSE 103 and INFSY390.

This course is centered on a group project involving the design and development of a relational DBMS. Student groups also work on case and homework problems related to database design. A suitable relational database package, like ORACLe, is used by students in the group project. Database design and development involving the creation of tables, queries, forms, and reports are the center piece of the group project.

INFSY 445 will be offered once per semester with multiple sections based on student enrollment and demand.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: CMPSC 102 or CMPSC 101 or CMPSC 121 and MIS 390

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MIS 466 Business Programming for the WEB (3) Advanced programming for WEB-based applications.

MIS 466 Business Programming for the Web (3)
The objective of this course is to teach students how to create and maintain business applications on the WEB. Students will learn how to use tags, scripting, and a low-level programming language to support business applications.

Students will be encouraged to use the above mentioned tools to provide useful and well-designed content to the WEB community. The course assumes knowledge of an object-oriented programming language and some introduction to HTML. A state-of-the-art programming language will be used to facilitate learning for project development. Team skills and problem solving, as an important part of the development process, will be emphasized and integrated into project development activities. To be successful in such a work environment, students need to learn how to work together to design, implement and test projects. Electronic commerce, employee training and development, accounting, and finance applications are typical of application areas that will be emphasized.

Specific goals of the course are to:
1) expose students to concepts and principles necessary to provide well-designed and useful content on the WEB
2) teach students how to apply programming in a WEB-based environment
3) show students how these techniques increase productivity of complex systems, and
4) further student development of team skills when programming complex systems

INFSY 435 is an elective in the Information Systems program. INFSY 307 or the equivalent, required of all Information System majors.

Student performance will be evaluated by means of assignments, examinations, and team-based projects.

It is expected that this changed course will be offered two times during each academic year.

General Education: None
Diversity: None
Bachelor of Arts: None

MIS 479W Enterprise Information Systems (3) Management and implementation of enterprise information systems for business integration and supply chain management.
MIS 479W Enterprise Information Systems (3)

This course examines enterprise-wide information systems architecture for the business setting and examines current commercial systems, with a special focus on SAP R/3 development tools and techniques.

Topics include:

- The acquisition, installation and operation of Enterprise Information Systems (EIS), formerly referred to as Enterprise Resource Management (ERP) systems
- The strategic decisions regarding approaches business organizations select for the acquisition and integration of EIS components and how executive level support for such endeavors is obtained
- The overall management and coordination techniques used in the design, development and implementation of an organization's EIS, including the role that software vendors and other third party's play in the acquisition and implementation of enterprise systems.
- The coordination and control of multi-party relationships. Specific analysis and design techniques are taught, including tools and methodologies for analyzing business processes in preparation for implementation of EIS, as well as database and data warehousing requirements.
- The methods of determining data communication network requirements
- The practical implementation concerns are addressed, such as preparing internal organizational units for migration to a new EIS architecture and to the maintenance and operation of EIS including concerns involving security and control.
- The managerial and technical issues involved in the developing and testing of applications and user interfaces and customization of commercial packages.
- The career planning issues and ways of obtaining training for specialization and advancement in careers involving EIS.

This course is writing intensive. As such, student evaluations will consist of, at a minimum: examinations, position papers, case studies (written and oral), and assignments. Both individual and group assignments will be used. The objective is to enhance writing ability relevant to students preparing for careers in business. Group report writing, brief technical writing, technical documentation, end-user documentation, and memo writing will be covered. The major group writing assignments will be required throughout the semester, as well as individual assignments that will be prepared in preparation for the group. Peer assessments and instructor feedback and evaluation will be provided on a regular basis. This is a prescribed course for the MIS major.

MIS 489 Seminar in Information Systems (3) Covers new trends and concepts in information/processing technology and their applications and impact on computer information systems.

MIS 489 Seminar in Information Systems (3)
INFSY 489, Seminar in Information Systems , is an elective course for information systems majors in the business program. Information Systems is a rapidly changing discipline and students must be aware of these changes. This course covers new trends and concepts in information/processing technology and their applications and impact on computer information systems. In this course, students are introduced to new methods, tools, applications and terminology. The students develop key skills in the ability to assess new technologies, and the ability to incorporate these technologies into complex information systems.

Students learn how to work with business applications in the latest prevalent technology. They work both individually and in groups on problems related to the topic addressed in the seminar. Topics for the seminar can differ with each offering of the course. This course is designed to provide the flexibility to coverage current issues and trend in the Information Technology world. Such topics could be (but not limited to) : advanced networking, mobile computing, wireless infrastructure, security, ERP, SAP, and others...

The course prerequisites are INFSY 307 & INFSY 445

INFSY 489 will be offered once per semester based on student enrollment and demand. The topics will vary upon it offering.

**MKTG 301 Principles of Marketing (3)** Focuses on customer behavior, product, channels of distribution, promotion, and pricing with emphasis on a culturally diverse environment. Not available to students who have taken B A 303.

**MKTG 301 Principles of Marketing (3)**

MKTG 301 Principles of Marketing is a three credit course offered each semester across Penn State and covers terminology and important concepts related to marketing in the business environment. Domestic and international environments that impact marketing are included, with particular emphasis on the marketing environment, segmentation, positioning and targeting. MKTG 301 course objectives include providing an overview and introduction to marketing; demonstrating the relationship of marketing to other functions and processes in a business organization on an integrated basis; providing real world examples of challenges and issues related to marketing; and explaining and discussing important concepts and analytical tools in marketing.

Major themes embedded in the foundation of MKTG 301 include domestic and global economic factors influencing current marketing environments; how consumer, business and organizational customers are segmented and targeted; how marketing research and information systems are used to create and guide marketing strategies; how products are developed to serve customers, businesses and organizations; how service products are developed and managed to meet customer needs; how customers are reached through various conventional and technological channels and how these sales management processes are managed; how people in the United States and other nations are influenced by marketing in the non-profit sector; how products and services are marketed to other businesses and organizational customers; how marketing communications programs, which include advertising, publicity, sales promotion and web sites, are designed to reach domestic and international customers; how pricing strategies support corporate objectives in various economic climates; and how marketing programs adapt to shifts towards global markets.

**MKTG 301H Principles of Marketing (Honors) (3)** This course emphasizes fundamental marketing concepts (e.g., segmentation, targeting, and positioning) and the use of marketing research to inform managerial decision-making.

**MKTG 301H Principles of Marketing (Honors) (3)**

Marketing begins and ends with the customer, from determining wants and needs to providing customer satisfaction. This course will emphasize fundamental marketing concepts, such as segmentation, targeting, and positioning, and the 4 P’s (product, price, place, and promotion). In addition, the course will emphasize the use of marketing research to inform managerial decision-making. The overarching goal of this course is to introduce you to a) the role of marketing within business organizations and society, and b) the concepts and activities in marketing that create and deliver value to customers. At the conclusion of this course, students will be able to: 1) explain the fundamental concepts of marketing and the role of marketing in business; 2) apply marketing concepts and analysis tools to managerial decision-making; and, 3) provide real-world examples of challenges and issues in marketing.

Major themes embedded in MKTG 301H include: domestic and global socioeconomic factors that influence marketing environments; the use of marketing research and information systems to create and guide marketing strategies; how consumers, businesses and organizational customers are segmented and targeted; how products are developed to serve customers, businesses and organizations; unique issues in the marketing of services versus goods; how customers are reached through conventional and technological channels; the sales function, including how sales processes are managed; how marketing communications programs (including advertising, publicity, sales promotion and new media) influence customers; how pricing strategies support corporate objectives, and how consumers respond to pricing; the roles of non-profit and social marketing; corporate social responsibility and sustainability in marketing; and the impact of marketing on society.

MKTG 302 Marketing Techniques for Electronic Commerce (3) Explores methods to implement/adapt marketing methods to the Internet; builds upon introductory marketing classes to examine what does/doesn’t work.

MKTG 302 Marketing Techniques for Electronic Commerce (3)

This course examines the role of commerce and marketing with special focus on Internet commerce topics including: the commerce value chain, business strategies and business strategies for the global marketplace. Several Internet business models are examined. These include: business-to-business (B2B); business-to-consumer (B2C); consumer-to-consumer (C2C); and government-to-consumer (G2C); and other permutations of these models. Marketing fundamentals include market segmentation and product life cycle, and similar topics are reviewed with the emphasis on Internet implementation. Specific methods for conducting market research using the Internet as well as methods to determine who is the “average” Internet user are examined. Advertising methods for the Internet vs. the traditional advertising mediums of TV, radio, and print, and methods to measure advertising success on the Internet are discussed. The Internet removes existing roadblocks and adds new roadblocks for businesses, thus requiring different pricing strategies. Distribution channels and methods of supply—chain management are studied. How marketers utilize e-mail, site commissions, cookies, filters, and databases is examined. Security, privacy, and ethical issues, e.g., consumers’ rights to privacy and sale of consumer information, are reviewed. Finally, a market plan to migrate business functions to the Internet is developed.

MKTG 441 Sustainability in Marketing Strategy (3) This course examines sustainability in marketing strategy, including real-world applications, green solutions, and using marketing principles to solve social issues.

MKTG 441 Sustainability in Marketing Strategy (3)

This course will examine the growing trend of sustainability and its implications for marketing in today’s world and in the future. It will explore how businesses develop and implement marketing strategies to promote sustainability, and analyze how companies are performing.

Businesses are increasingly applying the concepts of sustainability to their decision-making for marketing strategy. Some firms are leaders in the sustainability movement, and are motivated by ethical conviction to do well for society and the environment. Others find themselves forced by pressure from shareholders, customers, governmental regulation, and peers.

Given this increased attention to the concepts of sustainability by stakeholders, businesses are also looking for future employees with an understanding of the phenomenon.

MKTG 443 Sports Marketing (3) This course will focus on how companies develop, execute and measure marketing strategies and tactics to use sports teams, families, leagues and other organizations to market their products and services domestically and internationally to consumers and business partners. The course will examine the marketing strategies employed by sports teams and leagues.

MKTG 443 Sports Marketing (3)

“Sports Marketing” is designed to explore how various types of businesses and other organizations market products and/or service related to sports as well as how sports are used as marketing platforms for non-sports products. Unique aspects of the sports business will be explored including how strategies and tactics related to marketing in this sector differs from other industries. The purpose of this course is to provide an overview of various aspects of sports marketing. This will include the use of sports as a marketing tool for other products, the marketing of sports products and emerging considerations that are relevant for both marketing through and the marketing of sports. Since sports involves consumers, businesses and other organizations, this course will cover B2C as well as B2B marketing.

How product, distribution, pricing and promotional programs are developed particular to this industry will be one of the primary focuses. Relationship marketing, the role of technology, sponsorships, ambush marketing, partnership leveraging, endorsements, venue naming rights, licensing and emerging legal and ethical issues will also be important focuses.
A guest speaker series will provide additional professional perspectives on a variety of unique aspects of marketing particular to sports. Reading Sports Business Journal, the most highly regarded source of news by sports industry employees, will further expand this knowledge base as will current news events related to the industry. Students will be provided an opportunity to network with guest speakers and those interested in considering sports among their job search, will also be able to receive internship and career counseling from the instructional team. Students enrolled in this class will also be able to submit resumes and requests to be interviewed for internships with various sports organizations being arranged in cooperation with the Smeal College Corporate and Career Services Office.

Students will apply what is being learned in the class to the development of a project related to sports marketing, with the added benefit of having a deliverable which can be used to further the search for jobs and/or internships in the sports business.

MKTG 445 (IL) Global Marketing (3) Role of international marketing in the global environment; political, economic, geographic, historical, cultural conditions; developing and implementing international marketing strategies.

MKTG (I B) 445 Global Marketing (3) (IL)

MKTG/I B 445 focuses on the wide range of issues, which face enterprises as they develop and execute marketing strategies and tactics, designed to support business activities in markets outside their home country. This course deals directly with these issues as they apply to firms, which concentrate on a few markets closer to home, or on many markets throughout the world, including via the Internet. This course also deals with the important role played by governments in shaping the global marketing environment, including through trade policies, treaties and marketing supports. Students successfully completing this course also gain a greater understanding of the cultural, technological, economic, political and social environments which international businesses and global marketers face as they seek to expand their product and/or service offerings into other nations. Understanding this important part of the challenge facing international businesses and global marketers is achieved through the text, lectures, and student group projects and presentations including some focused on specific countries, including both major trading partners of the United States and select emerging new markets. This course is designed for students who have an interest in these topics and/or who plan to enter fields such as international business or global marketing and/or who expect to work for businesses, which are active internationally. Class discussions and projects are designed to help students explore these topics in greater depth. A series of small group assignments and presentations will further help students apply what is being learned via problem-based learning. This is an interactive class. Therefore, a portion of the grade each student achieves will be based on class attendance and participation. Students are also expected to pay attention to examples of the issues discussed in class that they encounter during the semester in print broadcast, and online communications. Along with material from lectures and the text, issues discussed in class will be included in the exam.

MKTG 475 Innovation and Product Management (3) This course is an application-oriented interdisciplinary course on new product development concepts, and innovation management.

MKTG 475 Innovation and Product Management (3)

This course is designed to provide students the opportunity to examine and understand the new product development process. It takes the process from the strategy and ideation stage to the after-market product launch. The course blends the perspectives of marketing, management, and engineering into a single approach to product development. It provides students with an appreciation for the realities of industrial new product development practice. Therefore, case studies and
other in-class assignments are designed in a way that students can apply the theoretical/abstract concepts to the real life phenomenon. The new product development projects are assigned to teams in real life, students have the opportunity to complete the case analyses and assignments in teams. Course aims to integrate micro level new product development issues (e.g., firm-level product strategy) to macro level issues (e.g., anti-trust regulations and legislations).

**MKTG 480 Intermediate Social Media Marketing (3)** Social Media Marketing tools, techniques, and strategies to build brands and customers.

**MKTG 480 Intermediate Social Media Marketing (3)**

In today's business world, marketers must become more creative in the ways in which they present their company on an Internet based platform such as Twitter, Facebook, and Linked-In in order to present increasingly relevant products and services to a more receptive customer base. The course, Intermediate Social Media Marketing, is designed to provide hands-on experiences with the use of Social Media Marketing tools and techniques while adhering to socially acceptable and ethical standards and protocols.

The technology tools and platforms include but not limited to: Facebook, LinkedIn, Twitter, YouTube, Google+, Pinterest, Foursquare, Friendster, Technorati, Blogs, Vlogs, Podcasts, Hootsuite, Radian6, various search engines, and QR codes. These social media tools can be used to find, reach, connect, and automate marketing messages to efficiently and effectively build relationships, stronger brands and loyalty. These technologies may be utilized with or without a fully realized marketing automation structure, allowing ideas to be shared on a global platform.

Students will learn and apply the major categories of Social Media tools, the how's and why's of their use, and decide what venues to use to reach the social media marketing objectives of firms, which may include improving the content to increase online presence, brand awareness, fan likings, customer inquiries, and sales.

During this course, students will devise a social media marketing plan for a local firm (or firms) that addresses (1) platform, (2) content, and (3) interaction. This course will achieve academic excellence by having students research the latest techniques and practices of social media, mobile, and direct marketing to build a social media marketing plan for a local firm (or firms) to expand its markets. Students will be analyzing a firm’s current traditional and social media marketing practices, and short-term and long-term goals for its target markets.

**Materials Engineering Technology (MAE T)**

**MAE T 201** Introduction to Materials Engineering Technology (3) An introduction to Materials Engineering Technology emphasizing relationships between structure and properties of engineering materials.

**MAE T 201 Introduction to Materials Engineering Technology (3)**

This course provides an overview of the basic science and technology of materials to two year associate degree students. The objective is to provide students with an understanding of how structure/property/processing relationships are developed and used for different types of materials with an emphasis on ferrous based metal alloys. Knowledge of these basics is needed to provide a foundation for study of the fundamentals and applications of powder metallurgy.

The course begins with a general introduction to materials science and materials engineering. Here the student is expected to gain an appreciation for the importance of studying materials. The first major topic covers the fundamental basis of the science of materials - atomic structure and bonding. Basic chemistry is reviewed, including the structure of atoms, chemical bonding, types of bonds, and the relationship of bonding to arrangement in the periodic table. The next topic addresses crystal structure and crystal geometry. Crystal structures for common metals are presented using the hard sphere model. The concepts of space lattice, unit cells, crystallographic directions, crystallographic planes, and polymorphism are discussed. Following crystal structures, the basic science of solidification is introduced and some common processing techniques used for fabricating metal components are presented. This includes direct pour ingot casting, semicontinuous casting, continuous casting, and growth of single crystals. Crystalline imperfections in solids and how these imperfections can influence material properties are discussed. The phenomenon of diffusion in solids is covered so that students may gain a quantitative understanding of the kinetics of rate processes and the effects of temperature on diffusion. A few practical industrial applications of diffusion processes are presented. An important topic covered in this course is interpretation of binary phase diagrams. The student is expected to understand the concepts of phase diagram, Gibb’s phase rule, binary isomorphous alloy systems, lever rule, nonequilibrium solidification, binary eutectic alloy systems, binary peritectic alloy systems, and binary monotectic systems. In addition, invariant reactions and phase diagrams with intermediate phases and compounds are discussed. The last topic covers engineering alloys with emphasis on iron and steel alloys. Steel processing, alloy designation, phases, constituents, and invariant reactions in the iron-iron carbide phase diagram are reviewed. The student is introduced to isothermal transformation diagrams and learns how to predict microstructures formed during common heat treatments. Alloy steels are presented, including classification of alloy steels, effects of alloying elements, and hardenability testing.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MAE T 202** Materials Testing (3) A review of industrial methods and testing standards used for mechanical property testing and evaluation of engineering materials.

The Pennsylvania State University
MAE T 202 Materials Testing (3)

This course provides an overview of testing of engineering materials to two year associate degree students. The objective is for students to gain familiarity with common methods of testing for the properties of materials. A broad knowledge of materials testing is needed in dealing with the specification and acceptance of materials fabricated using powdered metal (P/M) technology.

This course begins with a short introduction on the role of testing in controlling material properties. The first major topic is metrology. This gives the students a review of standard gauges used for dimensional measurement. The next topic covers statistics and data analysis. Here it is important for the student to gain an understanding of how to record and present numerical data. The concepts of mean, standard deviation, coefficient of variation, grouped data, frequency polygon, ogive, cumulative percent, and histogram are reviewed. Following statistics, the basic principles of mechanical behavior are presented. The concepts of stress, strain, elasticity, strength, and ductility are introduced. Tensile testing is covered in considerable depth and includes details of the testing apparatus, test specimens, test procedures, and data interpretation. Other common mechanical tests used in engineering work are presented. This includes compression testing, hardness testing, shear testing, bend testing, and impact testing. The student is introduced to standard procedures used in materials testing as described by the American Society for Testing and Materials (ASTM) and by other literature published by the Metal Powder industries Federation (MPIF). Fatigue testing is introduced to the student using stress vs. cycles to failure curves. This also includes various types of fatigue testing apparatus, test specimens, and test procedures. Nondestructive testing (NDT) techniques are discussed. The emphasis here is on how surface and subsurface structural flaws (i.e., cracks) may be detected in components without physically destroying them.

A major shift in topics occurs when scanning electron microscopy (SEM) is presented. The SEM is an important topic because of its use in fractography and failure analysis. Elements of fracture mechanics are covered to give insight into why and how fracture may occur in components at stress levels well below the ultimate tensile strength due to the presence of a critical sized flaw. The final topic in the course is failure analysis. Case histories of actual part failures are discussed, and suggested guidelines in carrying out failure analysis are presented.

MAE T 203 Introduction to Powder Metallurgy (3) A comprehensive study of powdered metal technology including production, characterization, compaction, sintering, and finishing operations.

MAE T 203 Introduction to Powder Metallurgy (3)

This course is comprehensive study of powdered metal technology for two year associate degree students. The objective is for students to gain familiarity with fundamental concepts associated with powdered metal (P/M) technology. Topics include powder sampling, powder characterization, test methods/techniques, compaction, sintering, finishing operations, and powder fabrication.

This course starts with a brief introduction to powder metallurgy that covers the historical development and industrial need for P/M engineered components. The first major topic is powders. Different ways to obtain a representative sample of powder from a large storage container are discussed. Powder characteristics such as average particle size, particle shape, flow ability, and particle size distribution are covered in some detail. Other important properties of loose powder covered include apparent (Hall) density, Arnold density, and tap density. The student is introduced to standard procedures used in powder testing as described by the Metal Powder Industries Federation (MPIF). The next major topic is powder compaction. This starts with a short description of the different types of presses used in classical "die press and sinter" P/M processing. Different types of die press set ups are reviewed along with compaction tooling requirements. Compressibility of loose powder is discussed with an emphasis on the factors for predicting, both qualitatively and quantitatively, that influence the green density of powder compacts. The effect of lubricants on compressibility is included here. A milestone topic in this course is on sintering theory. Material transport mechanisms that may occur during sintering and their effects of densification are presented from a theoretical viewpoint. Variables that influence densification during sintering are emphasized. Liquid phase sintering and activated sintering are included. Practical examples and microstructures of sintered engineering materials are presented. Sintering furnaces are discussed with the comparative advantages and disadvantages of different types of sintering atmospheres used. The effect of the sintering atmosphere on the composition, microstructure, and mechanical properties of powder compacts is discussed. The next topic is finishing operations that are used to modify components after they have been sintered. This includes operations like refinishing, sizing, coining, steam oxidation, tumbling, and machining. The last topic covered in this course is powder fabrication. Four basic methods of producing metal powders are discussed: mechanical fabrication, electrolytic fabrication, chemical fabrication, and atomization. Typical examples of the resulting powders are given along with how fabrication method affects the size, shape, microstructure, chemistry and cost of the powder.

MAE T 204W Structure Characterization Laboratory (3)
A hands-on experience course with emphasis on equipment and lab techniques used for microstructural evaluation of metals.

MAE T 204W Structure Characterization Laboratory (3)
This is a laboratory course for two year associate degree students with emphasis on equipment and techniques used for microstructural evaluation of metals. The objective is to provide students with practical laboratory skills in metallography and optical microscopy needed to observe and interpret microstructures of various metal alloys. Furthermore, the student gains valuable writing experience in preparing concise and effective technical reports.

Lectures, videotapes, and demonstrations are used to introduce students to fundamental concepts and special techniques used in metallography and microstructural analysis of metals. The course begins with a brief overview of metallography and a discussion of safety in the laboratory. Elements of good technical report writing are introduced. Metallographic principles are presented using reference brochures and videotapes. This includes sectioning, mounting, coarse grinding, fine grinding, rough polishing, final polishing and microetching. Added topics cover the fundamentals of metallographs and photomicrography.

A review of the iron-iron carbide system is given based upon material presented in MAE T 201 taught in the third semester of the materials program. Supplementary material on copper alloys is introduced latter in the course so that the physical metallurgy of brass and bronze can be better grasped by the student.

This course has three laboratory experiments: (1) specimen preparation and optical microscopy, (2) characterization of powdered metal (P/Ni) iron and carbon steel alloys, and (3) characterization of wrought brass, wrought bronze, and sintered bronze alloys. Each experiment requires that the students prepare a technical report that is graded for its grammar, spelling, technical accuracy, and completeness. The student gains valuable experience in preparing metallographic specimens and appreciates the importance of achieving a representative structure. Laboratory work requires observing and interpreting microstructures of both wrought and porous P/N4 iron and carbon steel alloys. Quantitative metallography is used by students to estimate the carbon content of a selected P/M carbon steel alloy. Special metallographic techniques are learned for preparing porous P/1/4 alloys to reveal their true pore structure. The student develops experimental skills in measuring the density P/M samples and the surface hardness of polished metallographic samples. Also, experience at identifying microconstituents in non-ferrous based alloys is of particular value to the student. The technical reports require the presentation of Rockwell hardness and Knoop microhardness data in the form of tables and graphs.

MAE T 205 Powder Metallurgy Laboratory (4)
A capstone course emphasizing hands-on laboratory experience in powder metallurgy and semester project; field trips to nearby P/M industries.

MAE T 205 Powder Metallurgy Laboratory (4)
This is a capstone course emphasizing hands-on laboratory experience in powder metallurgy. Students carry out routine engineering tests on powdered metal materials and document experimental data in a laboratory notebook. Each student is assigned a semester project and prepares a final written report and oral presentation on their findings. Class field trips give students direct exposure to local industries that use P/M technology.

The course begins with a brief introduction covering course requirements and lab safety rules. A review of technical writing is presented which addresses elements of effective workplace writing, technical business letters, resumes, cover letters, and use of the Penn State library. A general discussion and demonstration is given for various metal powder testing methods. This is based upon material presented in MAE T 203 taught in the third semester of the materials program. The student is referred to the published procedures described in the standard test methods for metal powders and powder metallurgy products established by the Metal Powder Industries Federation (MPIF). Supplementary material on stainless steel alloys is introduced since this type of powder is used for the in-class demonstrations by the instructor. Students are required to participate in a class exercise in characterizing a selected stainless steel powder. This exercise covers powder sampling, flowability, apparent density, tap density, sieve analysis, average particle size and powder shape. The exercise also covers powder compaction behavior by requiring the students to fabricate transverse rupture specimens and measure the resulting green density associated with a given loading pressure. Each student learns how to record their data in their own laboratory notebook using a standard format. One unique feature of this course is the scheduled class field trips to nearby P/M industries and the particulate matter laboratory at State College.

A major turning point occurs when each student is assigned a semester project and allowed to work independently on their project for the remainder of the semester. This project requires that the student contact a vendor and order metal powder for evaluation. The student performs engineering tests on this powder and prepares a written report on their findings. An outline for the content and depth of discussion for written reports is provided by the instructor. The last scheduled day of class is used for student presentations on their semester project to peers and industry representatives.

Materials Science and Engineering (MATSE)

MATSE 081 (GN;IL) Materials in Today’s World (3) A survey of the properties, manufacture, and uses of polymers, ceramics and metals in today’s world with emphasis on modern developments and new materials.

MATSE 081 Materials in Today’s World (3)
(GN;IL)

(BA) This course meets the Bachelor of Arts degree requirements.

MATSE 081 presents the basic science and technology of materials to non-science students. The course concentrates on "Materials in Today’s World" but frames the discussion in a relevant historical framework. The lectures are built around "The Central Paradigm of Materials Science and Engineering" which links processing to structures to properties to performance.

The fundamental basis of the science of materials, structure, is addressed first. Beginning at the sub-atomic level, the students are introduced to the intrinsically simple concept of metals and non-metals, and to a fundamental understanding of The Periodic Table. From these conceptual ideas, ceramics and electronic materials are rationalized or the basis of their electronic structures.

The properties of materials, e.g., mechanical, thermal, electronic and photonic are developed directly from a knowledge of the structures discussed in earlier lectures. The concept of materials’ design is introduced with respect to the properties of density, melting point and hardness. "Young’s modulus design" is also described.

There are as many processing routes as there are materials. Hence, the slate of lectures on processing, investigates prototypical examples of: metals - steel; ceramics - vitreous ceramics; and polymers-polyethylene. Current practices for e.g., the processing of steel and vitreous ceramics are compared with those, which were employed in antiquity.

The performance of materials is a constant theme that permeates all the lectures. For example, during the “firing of clay
ceramics”, the question “how does the temperature of firing affect both performance and utility?” is addressed.

The great thinkers of the physical sciences are introduced via vignettes that are presented, often at the beginning of class. Giants such as Aristotle and Newton are described, warts and all, in an effort to make science a broader part of the human experience. The professor also uses many examples from his own scientific experiences, and his interaction with some of the more (in) famous of the modern scientists.

General Education: GN
Diversity: IL
Bachelor of Arts: Natural Sciences
Effective: Summer 2005

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 090H High-Tech Materials (1) A series of introductory seminars concerning the most important aspects of modern materials technology; some laboratory visits will be included.

High-Tech Materials (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1994

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 091 (GN) Polymers, Life and Society (3) An exploration of the science and use of polymer materials and their impact on society using a case study approach.

MATSE 091 Polymers, Life and Society (3) (GN)

Over the course of the last 100 years, polymeric materials have transformed the way we live. Modern transportation systems, much of contemporary medicine and the entire electronics and computer industry would not be possible without polymers. In order to understand the nature of these materials and why they are ubiquitous in modern society, this course will provide students with a basic knowledge of the structure, synthesis and properties of these materials, starting with atoms and molecules and proceeding through basic elements of the chemistry and physics of these materials. Students will discover the commonalities and differences between synthetic polymers, such as polyesters and nylons, and natural or biological polymers, such as cotton and silk. In order to provide a narrative thread, the course will be structured in terms of "case studies" in the history of the development of specific materials (e.g., nylon) and ideas about their structure, starting from a consideration of the fundamental nature of matter. This approach will not only give students an overview of the nature and properties of polymer materials, but also show them how the discipline fits into the larger context of the nature of scientific discovery and the interplay of innovation, vision, luck, perseverance, and personalities involved in this development. Last but not least, the course will make students aware of a number of contemporary global concerns about the use of polymers in general and some polymers (and additives) in particular, again through the medium of specific case studies.

The intended audiences include undergraduates at Penn State, as well as adult learners who need to have a broader knowledge of polymer materials. Learning and discovery will be facilitated by a broad range of interactive programs and animations developed over the last five years by faculty in the Department of Material Science and Engineering. A self-contained CD incorporating this material and structured as a complete self-learning tool will be used in instruction. The course material is being constructed using the Macromedia program Director, which allows versions of the CD that run on Windows and the Mac platform to be made available. Students will also need access to the internet, as they will also use on-line resources to discover and analyze material. Interactive on-line quizzes will provide instantaneous feedback and allow students to assess their progress. Overall student assessment will be based on a combination of quizzes of this type, term projects and an "open-book" final exam.

MATSE 091 will be offered three times each year, in the Fall, Spring, and the first-six week summer session, commencing Fall 2005.

General Education: GN

Energy and the Environment (3)
**MATSE 101A (GN;IL) (EGEE 101A) Energy and the Environment (3)** Energy utilization and technological development, energy resources, conversion and consequences on the local and global environment, and future energy alternatives.

**MATSE 112 (GN) Applied Materials Chemistry for Engineers (3)** Chemistry of materials with emphasis on intermolecular forces between atoms, molecules, ions, and dense materials and inorganic and organic physical chemistry. In most majors, this course is not a substitute for CHEM 013 or CHEM 112.

**MATSE 201 Introduction to Materials Science (3)** Concepts of relationships between structure and thermal, optical, magnetic, electrical, and mechanical properties of metals, ceramics, glasses, and polymers.

**MATSE 202 Introduction to Polymer Materials (3)** The materials science of organic or soft materials with an emphasis on synthetic and natural polymer.
Prerequisite: CHEM 202 MATH 231

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 259 Properties and Processing of Engineering Materials (3) Relationship of structure and processing variables to the properties and service behavior of metals, polymers, and ceramics.

Properties and Processing of Engineering Materials (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: E MCH 213 or E MCH 210

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 297 Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Special Topics (1-9)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 1994

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 400 Crystal Chemistry (3) Principles of crystal chemistry applied to structures, structural defects and properties of organic, inorganic, intermetallic, and metallic crystals.

Crystal Chemistry (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014
Prerequisite: MATSE 201 MATE 202 MATH 220 MATH 231 MATH 251

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 401 Thermodynamics of Materials (3) Review of equilibrium thermodynamics and applications to metallurgical and material systems.

Thermodynamics of Materials (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2012
Prerequisite: CHEM 112

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 402 Materials Process Kinetics (3) A treatment of process kinetics including chemical reaction kinetics and momentum, energy and mass transport.

Materials Process Kinetics (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2012
Prerequisite: MATH 251

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 403 (BME 443) Biomedical Materials (3) Describe properties of materials and composites and their in vivo interactions.

MATSE 403 (BIOE 443) Biomedical Materials (3)

Metals, polymers, and ceramics, and their composites, which are capable of emulating the functions of hard and soft
tissues, are the subjects of this course. The subject matter shall be confined to implanted materials; external appliances, such as casts, braces, etc. are not considered. The topical content of this course will be grouped into four areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphasis will be placed on polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition, and function, the immune responses to implanted materials, the resorption of bone (osteoarthritis) and the development of caries. The perspective placed on these topics will be that of materials science.

The selection of ceramics for hard tissue prosthesis will be discussed. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses and pyrolytic carbons. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glassionomer cements will also be considered as ceramics. Hydroxyapatite, Hap-based composites and Hap-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and vitallium, used in prosthetic applications, will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particular debris in the vicinity of an implant will be discussed in particular. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications it is desirable that a polymeric material biodegrade while in others property retention is desirable.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATSE 404** (IL) (BME 444) Surfaces and the Biological Response to Materials (3) Focus is on the special properties of surfaces as an important causative and mediating agent in the biological response to materials.

**MATSE 404** (BIOE 444) Surfaces and the Biological Response to Materials (3)

This course factors the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent. Biophysical mechanisms are emphasized that lead to formulation of structure property relationships and the biological response to materials. Contact activation of the blood plasma coagulation cascade, bioadhesion, and protein adsorption are used as example biological responses to material surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kind and intensity of biological responses to surface and interfacial energetics will be compared and contrasted through a process that will quantify important surface thermodynamic properties of materials. The hydrophobic effect and related phenomena, especially as this pertains to water solvent effects in biology, receives special emphasis. Course materials are drawn from a selection of relevant library reserve texts.

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATSE 409** (NUC E 409) Nuclear Materials (3) Nuclear reactor materials: relationship between changes in material properties and microstructural evolution of nuclear cladding and fuel under irradiation.

**MATSE (NUC E) 409 Nuclear Materials (3)**

MATSE/NUC E 409 provides a background on the types of materials used in nuclear reactors and their response to neutron irradiation. Most of the materials problems encountered in the operation of nuclear power reactors for energy production are discussed here. The objective of the course is to give nuclear engineering students a background in materials so they understand the limitations put on reactor operations and reactor design by materials performance. In the first part of the course, we review basic concepts of physical metallurgy, to develop a mechanistic and microstructurally based view of material properties. In the second part of the course, we present the methods to calculate displacement damage to the material produced by exposure to neutron irradiation. The microstructural evolution that results from the reactor exposure (including radiation damage and defect cluster evolution, and changes) is described. The aim is to create a linkage between these changes at the atomic level and the changes in macroscopic behavior of the material. Special attention is given to property changes that affect fuel performance and operational safety. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is instructed by experimental data. Students use the TRIM and SPECTER codes to quantitatively evaluate neutron damage, as well as learn simple analytical models that describe microstructural evolution and property changes under irradiation.

**MATSE 410 Phase Relations in Materials Systems (3)**

Phase rule; construction and interpretations of equilibrium diagrams; importance of nonequilibrium in materials.

This course integrates three core components of materials science and engineering: thermodynamics, kinetics, and interface crystallography in understanding processing and development of inorganic materials. It is the key course bridging the fundamentals to practical materials processing. Phase equilibria, phase diagrams, phase transformations and heat treatments are addressed in great detail through nucleation, transformation kinetics, crystal interface and diffusion. The complexity of materials is discussed in hierarchy from pure elements, binaries, ternaries to multicomponents.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2014
Prerequisite: MATSE 201

**MATSE 411 Processing of Ceramics (3)**

Principles of ceramic processing, including powder preparation and characterization, forming operations, and the basic phenomena underlying these operations.

This course covers the scientific and engineering principles of manufacturing of ceramic products. The course covers powder synthesis and characterization; surface and colloid chemistry; fabrication; and densification by sintering. There is an emphasis on the physical chemistry of particulate systems as relates to the various stages processing. The course is offered every fall semester and is required for BS graduates of the Ceramic Science and Engineering option in Materials Science and Engineering.

The course objectives are for the student to (1) become knowledgeable of all steps involved in ceramic manufacture from powder synthesis through final densification by sintering, (2) understand the rationale and compromises for selecting a given processing route, (3) understand and be able to apply the parametric relations for manufacture of a ceramic with a specified microstructure, and (4) understand the physical chemistry fundamentals responsible for the unique properties of fine powders.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2005
Prerequisite: MATSE 400

**MATSE 412 Thermal Properties of Materials (3)**

Generation of high temperatures, measurement of temperature, heat transfer and furnace design, thermal stability of ceramic materials, applied thermodynamics.

The fundamentals of achieving, measuring, and controlling high temperature for materials processing are addressed. The crystal physics underlying heat capacity, internal energy, phonon and photon conduction, and thermal expansion is used to rationalize the behavior of a wide variety of ceramic and metallic materials in severe thermal environments. Micro- and macroscopic transport, thermal shock and fatigue behavior, and thermochemical durability are addressed insofar as their impact on the design of, and with, high performance materials in thermostructural applications.

Case studies on materials selection and design using the fundamentals of inorganic crystal chemistry, physics, thermodynamics, kinetics, elastic, and mechanical properties are widely employed. Students interested in disciplines such as metallurgy, ceramic science, electronic and photonic materials, mechanical engineering, aerospace engineering, industrial engineering, engineering science, and chemical engineering will benefit significantly from this course.
MATSE 413 Solid-State Materials (3) Structures of metallic, ionic, and covalent solids, amorphous materials, and surfaces; electronic structure; electronic properties of solids and their manipulation.

MATSE 415 Introduction to Glass Science (3) Composition, melting, fabrication, properties, and uses of glass; combinations of glass with metals and other materials.

MATSE 417 (E SC 417) Electrical and Magnetic Properties (3) Electrical conductivity, dielectric properties, piezoelectric and ferroelectric phenomena; magnetic properties of ceramics.

MATSE (E SC) 417 Electrical and Magnetic Properties (3)

MATSE 417 is designed to provide students with a fundamental understanding of the different responses a material can have to applied electrical or magnetic fields. Important properties are introduced and correlated with knowledge of material chemistry, crystal structure, and microstructure to provide an understanding of the mechanisms responsible for controlling the observed properties, as well as the ways in which properties can be engineered. Electronic and magnetic properties encompass dielectric, ferroelectric, conductor, superconductor, and ferromagnetic materials. Material properties and structures are related to sensors, energy storage and conversion devices, biomedical devices and electronic components in telecommunications.
MATSE 419 Computational Materials Science and Engineering (3) Introduction to computational material science and engineering. Overview of the computational methods for materials, from atomistic to the continuum scale.

MATSE 419 Computational Materials Science and Engineering (3)

Modeling is a critically important tool in the field of materials. This course is designed to inform students about all areas of materials modeling, and to explore the use of modeling in different research areas. This is a hands-on undergraduate level course, mandatory for all MATSE students, covering current methods for modeling soft and hard matter, at the atomistic, meso and continuum scale levels. It consists of an overview of individual techniques of modeling from atomistic molecular dynamics and Monte Carlo, coarse-grained molecular dynamics, and multiscale modeling, to the continuum (e.g. SAFT, CALPHAD). It also includes a computer laboratory component with hands-on exercises. At the conclusion of the course, students will understand the physical basis and basic procedures of each technique. Students will be able to understand the general literature in modeling and its connection with experimental work, as well as to communicate with experts in the field. From the laboratory practices, they will learn how the individual modeling techniques contribute to knowledge in each area, and to interconnect them with experimental information.

MATSE 421 Corrosion Engineering (3) Industrial forms of corrosion and preventive methods, and their description in terms of basic thermodynamic and kinetic considerations.

MATSE 421 Corrosion Engineering (3)

This variable 2 or 3-credit course is an introduction to the corrosion field and more broadly to the principles of electrochemistry and to the electrode reactions that occur during the undesirable corrosive degradation of metal, and also in various important commercial processes such as electroplating, electroless plating, battery and fuel cell operation, aqueous extraction metallurgy and corrosion prevention techniques. The objectives of this course are to introduce the student to the (1) principles of electrode reactions, (2) nature of commercial corrosion resistant alloys and their compositions, (3) various forms of corrosion and preventative measures, and (4) design of electrochemical laboratory and field procedures for detecting corrosion processes and determining their rates. Thermodynamic and rate data are used to make engineering decisions relative to the occurrence of corrosion, to the effectiveness of the various preventative measures, and to electrochemical design. Corrosion processes and electrode reactions more generally are primarily concerned with the surface properties of materials, but the bulk properties, such as microstructure, grain size, hardness, and composition, are discussed in terms of their impact on materials degradation. In-class closed-book exams and problem sets, and homework that allow student collaboration, are used for evaluation. Computer access to the course is available and includes all lecture material, old exams with answers, home works, and syllabus on the Web. This course is offered every year with typical class size of less than 20 students. The 2-credit version is required in the Metals Science and Engineering curriculum. The 3-credit version includes additional lecture material and some laboratory demonstrations; evaluation included a lab report.

MATSE 422 Thermochemical Processing (3) Physico-chemical aspects of high temperature extraction and processing of metals and alloys. Design and evaluation of processes and process options.

MATSE 422 Thermochemical Processing (3)

An important goal of materials engineering is to efficiently produce metals and alloys of specific composition. Familiar examples include the tonnage production of metals and alloys, the production of ultra high purity electronic materials such as silicon and germanium, and the deposition of thin films for various applications. In this course the students get an understanding of the physical and chemical principles underlying these operations and how these principles are applied in industrial practice. The students get ample opportunities to apply thermodynamics, kinetics, and transport phenomena to understand why the processes currently in use work. Furthermore, they learn how to marshal information for the design of projected new processes and process options.

Broadly stated, the topics include solid-state reactions, production of liquid metals, and processing, all carried out at high temperatures.
temperatures. The topics are covered in a set of lecture notes available from the instructor. The lectures are accompanied by about fifteen problems sets in the form of home work and class work so that the students experience first-hand how the principles of thermodynamics and rate processes are applied in solving important problems in thermochemical processing.

**MATSE 425 Processing of Metals (3)** Modern methods of shaping metals in liquid and solid states: casting, joining, powder and deformation processing. Design of new technology.

This course focuses on how metals and alloys may be processed into different shapes and how those processing procedures affect the metallurgical microstructure and properties. Consideration of shape, the alloy composition, and property goals are all factors in selecting an optimum processing "window". Such carefully selected processing conditions not only produce the desired component shape in a cost-efficient manner but also ensure acceptable properties and safe in-service performance. This course surveys the following metal processing procedures: (a) solidification processing, (b) heat treatment processing, (c) welding, (d) deformation processing, and (e) powder metallurgy.

**MATSE 426 (MN PR 426) Aqueous Processing (3)** A study of the chemical and engineering principles pertinent to metal processing in aqueous systems: hydrometallurgical extraction, plating, materials preparation.

This 3-credit course deals with the chemical and engineering principles underlying the aqueous processing of metals: metal extraction from primary and secondary sources, electroplating, and metal finishing, powder synthesis, energy storage and conversion, and treatment of recycling of metal-containing toxic wastes.

1. Physico-Chemical Principles - Thermodynamic, chemical kinetic and transport factors which control hydrochemical processes (leaching; precipitation; adsorption; solvent extraction; ion exchange; electrowinning, electrefining and electroplating; membrane processes; energy storage and conversion); graphical representation of homogeneous and solid/solution equilibria; chemical reagents.
2. Engineering Principles - Reactor design and staged operations; ideal batch, continuous stirred-tank and plug-flow reactors; fluidized bed reactors; electrochemical reactors; multistage separation processes (solid-liquid, liquid-liquid, and gas-liquid systems).
3. Process Synthesis - Design of metal separation (extraction, refining, waste treatment) materials synthesis, metal finishing, and energy storage/conversion processes and system-integration of unit operations, industrial practice. Emphasis on closing circuits to minimize or eliminate waste effluents.

**MATSE 427 Microstructure Design of Structural Materials (3)** Phase transformations in ferrous and nonferrous metal alloys and structural ceramics; processing, structure, and property relationships; heat treatment of structural metals; microstructure development.

The Pennsylvania State University
MATSE 430 Materials Characterization (3) Elements of crystallography and the characterization of crystalline and non-crystalline materials using x-ray diffraction, electron microscopic, and other instrumental techniques.

This course will introduce students to characterization techniques for quantifying microstructure, chemistry and atomic structure of solid state materials. Elastic and inelastic interactions of radiation (e.g. electromagnetic and electrons) with solid state materials are the basis for most characterization techniques. Utilizing these interactions it is possible to obtain structural and chemical information from materials, often at small length scales. In this course, students will be introduced to the most common imaging, diffraction and spectroscopy techniques used for materials characterization. They will develop an understanding of the underlying physics behind the techniques to enable interpretation of the data. The course will be beneficial for any student interested in solid-state materials, as it provides a key component of the processing-structure-properties process.

Prerequisite: MATSE 400

MATSE 436 Mechanical Properties of Materials (3) Fundamental relationships between structure and mechanical behavior of materials.

Mechanical Properties of Materials (3)

The topics covered in this course are essential to students in the Materials Science and Engineering options, and these are also required for materials engineering courses nationally accredited by the professional societies. The course is taught at the 400 level because it requires the fundamental courses in mathematics and physics to be completed. The course also requires completion of an introductory course in materials science. This new course typically fits into the junior or senior year, when students in the major are understanding how properties of materials can be changed by controlling the structure of materials. The course has also been designed such that students in other engineering majors can take this course as a technical elective. Some of the information in this course is used in laboratory courses for the major. The course is not required as a prerequisite for other courses.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 444 Solid State Properties of Polymeric Materials (3)

Prerequisite is PLMSE 406. Understanding relationships between structure and properties in the bulk solid state of polymers is important in designing and utilizing polymers in many applications. In trying to understand 'structure' we also need to define what is meant by and important in 'structure' and review tools used to measure desired structural features.

Two-thirds of the course addresses accepted general features of the polymeric solid state, with particular emphasis on characterization of semicrystalline polymers since semicrystalline polymers represent approximately 75% of industrially important polymers. In this portion of the course, we will be particularly concerned with defining and measuring percentage crystallinity and with defining and measuring orientation in polymers. Both of these parameters play important roles in establishing physical characteristics of polymers, in particular in mechanical properties. Mechanical properties continues to be an important feature for polymers since polymers posses the widest available range of mechanical properties of any material. The remainder of the course covers new and/or continuing topics selected from composition-branching distribution; barrier properties of thin films and recycle-degradation of polymers.

MATSE 448 (CH E 442) Polymer Processing Technology (3) Basic principles of polymer melt processing are reviewed and subsequently applied to the most important industrial processing operations.

MATSE 448 (CH E 442) Polymer Processing Technology (3)

MATSE 448 involves both lectures and laboratory experiments illustrating the interrelations between structure, processing conditions, and physical properties of industrial polymer products. Students apply engineering fundamentals and principles of polymer melt rheology to analyze industrial processing operations. Unlike typical polymer processing courses offered at most U.S. universities, MATSE 448 covers detailed analyses of individual processing operations, rather than dwelling on underlying polymer science fundamentals that are covered elsewhere in our curriculum. Students learn to optimize processing variables, given a particular set of materials and conditions, establishing how processing conditions impact the physical properties of finished polymer products. We explore the physics governing processing operations including extrusion, mixing, calendering, blow molding, thermoforming fiber spinning compression molding, injection molding, and nanolithography.

MATSE 455 Properties and Characterization of Electronic and Photonic Materials (3) Materials characterization in general; electrical properties of crystals, contacts, films; optical properties of single phase materials, waveguide, and multilayer stacks.

Properties and Characterization of Electronic and Photonic Materials (3)

General Education: None
MATSE 460 Introductory Laboratory in Materials (1) An introduction to comparative physical properties and characteristics of various materials including mechanical, electrical thermal, and structure/morphology.

MATSE 460 Introductory Laboratory in Materials (1)
This is a lab course whose goal is to provide an integrated approach to materials science and engineering. Any individual lab will consist of a number of elements, initially students will be provided with a presentation summary of the proposed lab. This could be film, video, web delivery, hard copy or live presentation. Presentation time will be limited but should be reviewed before students attempt the hands-on lab. All labs will examine a variety of different materials including metal, ceramics and polymers. Labs will be integrative in the sense that they will include use of spreadsheets, data plotting, and presentation of results as written reports and/or as a "PowerPoint" presentation. The labs selected have been chosen specifically because they cut across all current basic materials disciplines. These labs are intended to provide students with a broad appreciation of the range and contrast of material structures and properties, in order that students more fully appreciate the breadth of material science and engineering.

MATSE 462 General Properties Laboratory in Materials (1) An introduction to comparative physical properties of various materials including mechanical, thermal electrical properties and the measurement of said properties.

MATSE 462 General Properties Laboratory in Materials (1)
This is a lab course whose goal is to provide an integrated approach to physical property measurements in materials science and engineering. Any individual lab will consist of a number of elements, initially students will be provided with a presentation summary of the proposed lab. This could be film, video, web delivery, hard copy or live presentation. Presentation time will be limited but should be reviewed before students attempt the hands-on lab. All labs will examine a variety of different materials including metal, ceramics, polymers and composites. Labs will be integrative in the sense that they will include use of spreadsheets, data plotting, and presentation of results as written reports and/or as a "PowerPoint" presentation. The labs selected have been chosen specifically because they cut across all current basic materials disciplines. These labs are intended to provide students with a broad appreciation of the range and contrast of material properties and the measurement of such properties, in order that students more fully appreciate the breadth of material science and engineering.

MATSE 463 Characterization and Processing of Electronic and Photonic Materials Laboratory (1) Provides experience with key processing methods for EPM materials and advanced characterization methods for EPM materials and simple device structures.

Characterization and Processing of Electronic and Photonic Materials Laboratory (1)
This course will demonstrate to students the experimental techniques by which the key powder characteristics and powder
processes are determined, how to analyze the data from the measurements, and to reveal the interaction between
properties, processing and structure. The course concentrates on the importance of powder characterization, forming
techniques, sintering and microstructure characterization in the processing of ceramics.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2009
Prerequisite: MATSE 462

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details
check the specific course syllabus.

MATSE 471 Metallurgy Laboratory I (1) A laboratory integrating experimental aspects of material contained in MATSE 402,
413, and 410, e.g. phase diagram determination, solidification micro-structures, etc.

MATSE 471 Metallurgy Laboratory I (1)

This course is largely an introduction to basic laboratory characterization techniques (optical microscopy, scanning
electron microscopy, image analysis, hardness testing, thermal analysis). However, it also applies those characterization
techniques in the context of Design of Experiments. This laboratory class also contains significant drills in technical
writing.
General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2005
Prerequisite: MATSE 430

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details
check the specific course syllabus.

MATSE 472 Metallurgy Laboratory II (1) Application of principles of mechanical metallurgy, pyroprocessing, corrosion and
metal processing.

MATSE 472 Metallurgy Laboratory II (1)

This course provides a range on laboratory experiences ranging from metals processing to alloy properties. A primary
course objective is to demonstrate important relationships between the processing, microstructure, and properties of
metals. The individual laboratory practices include the following: powder metallurgy, metal casting, mechanical property
testing and analysis, welding and weldment characterization, non-destructive testing, failure analysis and fractography,
computational processing design, corrosion, and aqueous processing. The course requires hands-on involvement by the
students in the design and planning of experiments as well as data acquisition and analysis of results. Students work in
groups, and written reports are the primary basis for grading.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2006
Prerequisite: MATSE 410MATSE 471

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details
check the specific course syllabus.

MATSE 473 Polymeric Materials Laboratory--Synthesis (1) Principles and practices of polymerization, including
condensation, free radical (bulk, solution, suspension, emulsion), ionic, and Zeigler-Natta procedures.

MATSE 473 Polymeric Materials Laboratory--Synthesis (1)

This laboratory course provides students exposure to a variety of synthetic techniques basic to Polymer Science. From the
polymerization of styrene to the preparation of urethane foams, students will see the role varied synthetic methods and
chemistries play in determining the final form and properties of a given polymer. Students also learn the polymer
structure characterization by examining the produced polymers with proper tools and instruments.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2003
Prerequisite: MATSE 443

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details
check the specific course syllabus.

MATSE 474 Polymeric Materials Laboratory--Characterization (1) Principles and practices involved in determination of
properties, structure and morphology, employing thermal, mechanical, spectroscopic, viscometric and computer
techniques.
Prerequisite for the course is MATSE 443. This course introduces the student to a series of simple physical and physical-chemistry tests on polymers that are the basis for a wide range of more complex tests routinely carried out in industry. In addition to the tests listed below students are also instructed in preparation of lab reports and in some of the typical problems associated with presenting data. A final report utilizes data collected by a number of different student teams throughout the course of the lab. Finally, students are demonstrated a number of state-of-the-art characterization tools used specifically to determine properties of interest in the polymer area. Grading is based on written lab reports (10% for each of 8 separate reports and 20%) for a final comprehensive report using data from other groups as well as the student's own group.

Course content

Injection Molding - students work with a simple injection molder to find optimum molding conditions to prepare sample bars for mechanical testing.

Static Mechanical Testing - an Instron is used to determine modulus, yield, and elongation to break for samples prepared above and for other materials.

Izod Impact Test - injection molded samples are used to measure notched impact tests on what are typically tough materials.

Dilute Solution Viscometer - standard solution viscosity tests are used to measure intrinsic viscosity of polymer solutions and (viscosity average) molecular weight.

Melt Viscometer - melt index and 'die swell' are easily measured with a simple ram and die 'melt indexer' as a measure of processibility.

Optical Microscopy - some semi-crystallizable polymers produce large enough spherulities that rate of crystallization can be followed optically.

Elasticity - a simple experiment measuring the retractive force of an elastic band as a function of temperature shows the entropic origin of elasticity.

Copolymerization Computer

A computer program (VI) allows students to try a wide variety of 'what if' experiments to measure the effects of a range of copolymerization parameters.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2003
Prerequisite: MATSE 443

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 475 (E SC 475) Particulate Materials Processing (3) Fundamentals of processing particulate materials including production, characterization, handling, compaction, and sintering of metal, carbide, intermetallic, and composite powders.

Particulate Materials Processing (3)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2008
Prerequisite: EMCH 315E SC 414 or MATSE 259

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATSE 483 (E SC 483) Simulation and Design of Nanostructures (3) Introduction to computer simulation techniques and their applications at the physical/life sciences interface.

MATSE (E SC) 483 Simulation and Design of Nanostructures (3)

Students will learn the simulation techniques and the design rules of nanostructures. Basic concepts of computer modeling will be introduced using quantum and classical approaches. Fundamental physical phenomena encountered in the molecular fields of computational physics, chemistry, and biology will be studied. Applications are drawn from a broad range of fields including soft and condensed matter to build an understanding of nanostructures.

The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of nanostructures and their design rules.

Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a computer code generation and implementation component. Students will use commercial or educational computer codes (e.g. Matlab, Mathematica, AMBER, CHARMM, VASP, etc.) which are available at our high performance computing clusters (http://gears.aset.psu.edu/hpc/). Students will use the computing clusters to perform simulations.
The principal objectives of the course is to learn the fundamental physics of nanostructures and to design them with computer simulations. This approach starts from classical molecular dynamics that apply on the large scale biological and synthetic assemblies and encompasses quantum mechanics for the molecular and atomic sizes. This course will give a broad scientific picture of simulation techniques in the area of nano-science and technology.

**MATSE 484W (IL) International Internship in Materials: Research Definition and Methodology (3)**

A course focused on international research, specific design and methodology, facilitated through the International Internship in Materials and Program.

**MATSE 484W International Internship in Materials: Research Definition and Methodology (3) (IL)**

The objective of this course is to enrich our students' preparation for careers in materials science and engineering in a global environment. The course will emphasize the development of international communication skills as well as an appreciation of cultural and technical issues associated with conducting research in overseas laboratories. Students will select a research topic in collaboration with a Materials Science and Engineering faculty mentor and a mentor from an overseas laboratory or University. Students will perform and document a literature review encompassing the technical, economic, manufacturability, sustainability, environmental, safety/health, social and political issues of relevance to the topic, with emphasis on the cultural, social, and scientific differences and similarities in performing the research in an international venue. Students will articulate and document a research hypothesis, experimental approach and methodology necessary to comprehensively evaluate the topic, and commence laboratory research under the supervision of the mentor at the host institution.

**MATSE 485W (IL) International Internship in Materials: Experimentation and Documentation (3)**

A course focused on international research, specifically experimentation and documentation, facilitated through the International Internship in Materials Program.

**MATSE 485W International Internship in Materials: Experimentation and Documentation (3) (IL)**

The objective of this course is to enrich students' preparation for careers in materials science and engineering in a global environment. The course is intended as a follow-up to MATSE 484W: International Internship in Materials: Research Definition and Methodology, in which the student will complete the research and documentation on the topic developed in that course. It may be used as a direct substitution for MATSE 494W: Research and Design Senior Project in the degree requirements for Materials Science and Engineering. The course will continue the student's development of international communication skills and appreciation of cultural and technical issues associated with conducting research in overseas laboratories. Students will complete their research experimentation, data analysis and interpretation under the supervision of a Materials Science and Engineering faculty mentor and a mentor from their host overseas laboratory or University. Students will compile a written thesis encompassing their technical findings, with specific emphasis on the economic, manufacturability, sustainability, environmental, safety/health, social and political issues of relevance to the topic. It is expected that the students will carefully and comprehensively articulate and consider the cultural, social, and scientific differences and similarities they experienced in performing the research in an international venue.

General Education: None

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATSE 492W**

Materials Engineering Methodology and Design (3) Designed to familiarize students with the literature and technology developments in the use of, and design with, materials in industrial applications.
MATSE 492W Materials Engineering Methodology and Design (3)

The objective of this course is to teach students the skills to solve realistic problems related to the use of materials in industrial practice. This will be accomplished by considering alternatives for materials design or selection and proposing the most effective scientific or engineering solutions. The methodology will take into account other forces acting on the design process, such as economic, environmental, sustainability, manufacturability, ethical, health and safety, social and political concerns. Students will develop these design skills by working in teams on projects defined by industry, and will learn to communicate their solutions in verbal and written form. Students will also learn the key features needed in developing a team approach to solving problems.

Typically, evaluation is based on written reports, performance in presentations, and instructors's assessment of the student's participation in design team activities. At the conclusion of the course, each student will select a design or independent research topic for their capstone senior-year design project.

MATSE 493W Materials Science and Engineering Multidisciplinary Capstone Design Project (3) This course focuses on multidisciplinary industry-sponsored and community service-based design projects offered in conjunction with the College of Engineering's Learning Factory.

MATSE 493W Materials Science and Engineering Multidisciplinary Capstone Design Project (3)

This course will provide students with the opportunity to learn the design process in the context of an industry-sponsored or community service-based design project that demands they produce a working solution. The design projects in this course will be structured for students from two or more different engineering majors, as defined by the project sponsors in collaboration with the instructor and departmental project coordinators. The project sponsor will provide the technical expertise for the project, a clear definition of all project deliverables that are expected, and the financial support to cover needed materials and supplies and travel costs. Project sponsors will be invited to attend the Project Kickoff at the start of the semester to present their ideas and answer questions from the students as well as the Design Showcase at the end of the semester where teams display their results to the project sponsors and the public. The Center for Engineering Design and Entrepreneurship (CEDE) in Hammond Building and the Bernard M. Gordon Learning Factory will provide the facilities where the design teams can work together to develop the design concept and prototype solutions. Faculty members in the School of Engineering Design, Technology, and Professional Programs (SEDTAPP) will administer the course, including reading, evaluating, and grading the final project report, provide lectures on topics including on project management, design, product manufacturing, intellectual property, engineering ethics, societal/global/contemporary/professional issues, and related technical topics, and organize invited technical lectures related to industry projects. In accordance with standard Learning Factory procedures, specific multidisciplinary projects will be selected for this course to provide challenging senior-year design experiences for all students, and the Director of the Learning Factory will coordinate the selection of these projects with the course instructor prior to the start of each semester of the course offering. Multidisciplinary teams will be formed based on specific project needs (i.e., expertise from two or more disciplines based on the project scope).

MATSE 494W Research and Design Senior Project (1-3) Continuation of a research problem in materials culminating in a bound thesis describing the work.

MATSE 494W Research and Design Senior Project (2)

This course continues the senior thesis research topic addressed by the student in MATSE 493W. This is a capstone research/design project which integrates: a) background literature search with articulation of a research hypothesis, b) design and implementation of an experimental plan to test the hypothesis, and c) conclusions regarding the validity of the hypothesis based on the experimental data obtained in the course of the research.

The main characteristic of this course is the performance of the research plan articulated in MATSE 493W, followed by interpretation of the data in the context of the original hypothesis(es). Laboratory research is generally performed in collaboration with faculty and graduate research assistants, using equipment and facilities in a wide range of laboratories throughout campus. Occasionally, the nature of the research may require the student to collaborate with researchers outside of Penn State, perhaps even spending some time in residence at other facilities.

The course culminates in the preparation of a bound thesis detailing the relevance and findings of the research. Assessment of the student’s progress is via grading of all components of the thesis (literature review/background, statement of the problem, design of the experimental plan, results and discussion, conclusions, recommendations for future work, and references/appendices), as well as the diligence of the student in performing the experimental research in a professional and timely fashion. The course is offered each semester to allow for differing schedules for students following the conventional MATSE curriculum versus those who have elected to participate in the Cooperative Education program.

MATH 033 (GQ) Mathematics for Sustainability (3) Mathematical analysis of sustainability; measurement, rates of change, risk and probability, networks; examples.

MATH 033 Mathematics for Sustainability (3)
This course is intended to be one of several offered by the mathematics department with the goal of helping students from non-technical majors partially satisfy their general education quantification. It is designed to provide an introduction to various mathematical modeling techniques, with an emphasis on examples related to environmental and economic sustainability. The course may be used to fulfill three credits of the GQ requirement for some majors, but it does not serve as a prerequisite for any mathematics courses and should be treated as a terminal course.

The course will provide students with the mathematical background and quantitative reasoning skills necessary to engage as informed citizens in discussions of sustainability related to resources, pollution, recycling, economic change, and similar matters of public interest. These include the four key ideas of "measuring" (representing information by numbers, problems of measurement, units, estimation skills); "changing" (quantities changing with time, rates of change, the distinction between stocks and flows, simple models, interest and discount rates); "risking" (probability, expectation, skew distributions and upside vs downside risks, uses and limitations of cost-benefit analysis, risk v. uncertainty); and "networking" (graphs, social networks, the strength of weak ties, social capital).

**Note:** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 140E (GQ)** Calculus with Engineering Applications I (4) Functions; limits; analytic geometry; derivatives; differentials, applications; integrals, applications.

**MATH 140E Calculus with Engineering Applications I (4)**

(MG)

MATH 140E enriches the regular MATH 140 syllabus by adding weekly applied problems, a small number of laboratory sessions, and a major group project for which both written and oral presentation is required. It is a rigorous calculus course with additional motivation and applications in the engineering sciences. The core material is the same as MATH 140.

MATH 140E provides an alternative to the regular MATH 140 for engineering majors. This course addresses the additional needs of engineering majors with regard to problem formulation and the interpretation of their mathematical solutions.

The prerequisite for the course is MATH 022, 026; or MATH 040, 041; or satisfactory performance in the mathematics proficiency examination. Six sections of this course are offered every Fall semester.

Course evaluation is based on quizzes, weekly applied problems, two midterms, a group project, and a final examination.
MATH 140E (GQ) Calculus with Engineering Applications I (4) Functions; limits; analytic geometry; derivatives; differentials, applications; integrals, applications.

MATH 140E Calculus with Engineering Applications I (4) (GQ)

MATH 140E enriches the regular MATH 140 syllabus by adding weekly applied problems, a small number of laboratory sessions, and a major group project for which both written and oral presentation is required. It is a rigorous calculus course with additional motivation and applications in the engineering sciences. The core material is the same as MATH 140.

MATH 140E provides an alternative to the regular MATH 140 for engineering majors. This course addresses the additional needs of engineering majors with regard to problem formulation and the interpretation of their mathematical solutions. The prerequisite for the course is MATH 022, 026; or MATH 040, 041; or satisfactory performance in the mathematics proficiency examination. Six sections of this course are offered every Fall semester.

Course evaluation is based on quizzes, weekly applied problems, two midterms, a group project, and a final examination.

MATH 140G (GQ) Calculus with Earth and Mineral Sciences Applications I (4) Functions, limits, analytic geometry; derivatives, differentials, applications from the earth and mineral sciences; integrals, applications from the earth and mineral sciences. Students may only take one course for credit from MATH 110, 140, 140A, 140B, 140E, and 140G.

MATH 140G Calculus with Earth and Mineral Sciences Applications I (4) (GQ)

This course is the first in a sequence of three calculus courses designed for students in the earth and mineral sciences and related fields. Topics include limits of functions, continuity; the definition of the derivative, various rules for computing derivatives (such as the product rule, quotient rule, and chain rule), implicit differentiation, higher-order derivatives, solving related rate problems, and applications of differentiation such as curve sketching, optimization problems, and Newton's method; the definition of the definite integral, computation of areas, the Fundamental Theorem of Calculus, integration by substitution, and various applications of integration such as computation of areas between two curves, volumes of solids, and work. The typical delivery format for the course is four 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments.

MATH 140G (GQ) Calculus with Earth and Mineral Sciences Applications I (4) Functions, limits, analytic geometry; derivatives, differentials, applications from the earth and mineral sciences; integrals, applications from the earth and mineral sciences. Students may only take one course for credit from MATH 110, 140, 140A, 140B, 140E, and 140G.

MATH 140G Calculus with Earth and Mineral Sciences Applications I (4) (GQ)

This course is the first in a sequence of three calculus courses designed for students in the earth and mineral sciences and related fields. Topics include limits of functions, continuity; the definition of the derivative, various rules for computing derivatives (such as the product rule, quotient rule, and chain rule), implicit differentiation, higher-order derivatives, solving related rate problems, and applications of differentiation such as curve sketching, optimization problems, and Newton's method; the definition of the definite integral, computation of areas, the Fundamental Theorem of Calculus, integration by substitution, and various applications of integration such as computation of areas between two curves, volumes of solids, and work. The typical delivery format for the course is four 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments.
MATH 140H Honors Calculus with Analytic Geometry I (4)

This course is the first in a sequence of three calculus courses designed for students in engineering, science, and related fields. Topics include limits of functions, continuity; the definition of the derivative, various rules for computer derivatives (such as the product rule, quotient rule, and chain rule), implicit differentiation, higher-order derivatives, solving related rate problems, and applications of differentiation such as curve sketching, optimization problems, and Newton's method; the definition of the definite integral, computation of areas, the Fundamental Theorem of Calculus, integration by substitution, and various applications of integration such as computation of areas between two curves, volumes of solids, and work.

The typical delivery format for the course is four 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments.

In contrast to the non-honors version of this course, the honors version is typically more theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.

MATH 200 (GQ) Problem Solving in Mathematics (3) Fundamental concepts of arithmetic and geometry, including problem solving, number systems, and elementary number theory. For elementary and special education teacher certification candidates only. A student who has passed EDMTH 444 may not take MATH 200 for credit.

MATH 200 Problem Solving in Mathematics (3)
(GQ)
This is a course in mathematics content for prospective elementary school teachers. Students are assumed to have successfully completed two years of high school algebra and one year of high school geometry. Students are expected to have reasonable arithmetic skills. The content and processes of mathematics are presented in this course to develop mathematical knowledge and skills and to develop positive attitudes toward mathematics. Problem solving is incorporated throughout the topics of number systems, number theory, probability, and geometry, giving future elementary school teachers tools to further explore mathematical content required to convey the usefulness, beauty and power of mathematics to their own students.

General Education: GQ
Diversity: None
Bachelor of Arts: Quantification

MATH 201 (GQ) Problem Solving in Mathematics II (3) A continuation of MATH 200, this course studies the foundations of elementary school mathematics with an emphasis on problem solving.

MATH 201 Problem Solving in Mathematics II (3)
(GQ)
Problem Solving in Mathematics II studies the foundations of elementary school mathematics with an emphasis on problem solving. Mathematical ways of thinking are integrated throughout the study of probability, statistics, graphing, geometric shapes, and measurement. This course is designed for prospective teachers not only to gain the ability to explain the mathematics in elementary school courses, but also to help them comprehend the underlying mathematical concepts. Gaining a deeper understanding will enable them to assist their young students in the classroom since effective mathematical teaching requires understanding what students know, what they need to learn, and then helping them to learn it well.

General Education: GQ
Diversity: None
Bachelor of Arts: None
Effective: Spring 2012
Prerequisite: completion of MATH 200 is suggested

MATH 210 (GQ) Calculus with Engineering Technology Applications (3) Topics in calculus with an emphasis on applications in engineering technology.

MATH 210 Calculus with Engineering Technology Applications (3)
(MATH 210 is a three-credit course to be taken either after the MATH 081, 082, 083 sequence or after a semester of college-level calculus. The content of the course is geared toward the needs of engineering technology majors and places a large emphasis on technology and applications. The course provides mathematical tools required in the upper division engineering technology courses. A primary goal is to have students use technology to solve more realistic problems than the standard simplistic ones that can be solved by "pencil and paper." Student evaluation will be performed through exams, quizzes, graded assignments, and a cumulative final exam. It is expected that MTHBD 210 will be offered every semester with an enrollment of 44-80 students.)
MATH 211 Intermediate Calculus and Differential Equations with Applications (3) Topics in ordinary differential equations, linear algebra, complex numbers, Eigenvalue solutions and Laplace transform methods.

MATH 211 Intermediate Calculus and Differential Equations with Applications (4)

MATH 211 is a three-credit course to be taken after MATH 210. The content of the course is geared toward the needs of engineering technology majors and places a large emphasis on technology and applications. The course provides mathematical tools required in the engineering technology courses at the sixth semester and above. A primary goal is to have students use technology to solve more realistic problems than the standard simplistic ones that can be solved by "pencil and paper." Student evaluation will be performed through exams, quizzes, graded assignments, and a cumulative final exam.

MATH 220 Matrices (2-3) Systems of linear equations; matrix algebra; eigenvalues and eigenvectors; linear systems of differential equations.

MATH 220 Matrices (2-3) (GQ)

(BA) This course meets the Bachelor of Arts degree requirements.

Systems of linear equations appear everywhere in mathematics and its applications. MATH 220 will give students the basic tools necessary to analyze and understand such systems.

The initial portion of the course teaches the fundamentals of solving linear systems. This requires the language and notation of matrices and fundamental techniques for working with matrices such as row and column operations, echelon form, and invertibility. The determinant of a matrix is also introduced; it gives a test for invertibility.

In the second part of the course the key ideas of eigenvector and eigenvalue are developed. These allow one to analyze a complicated matrix problem into simpler components and appear in many disguises in physical problems. The course also introduces the concept of a vector space, a crucial element in future linear algebra courses.

This course is completed by a wide variety of students across the university, including students majoring in engineering programs, the sciences, and mathematics. (In case of many of these students, MATH 220 is a required course in their degree program.)

MATH 220H Honors Matrices (2-3) (GQ)

(BA) This course meets the Bachelor of Arts degree requirements.

This course is intended as an introduction to linear algebra with a focus on solving systems for linear equations. Topics include systems of linear equations, row reduction and echelon forms, linear independence, introduction to linear transformations, matrix operations, inverse matrices, dimension and rank, determinants, eigenvalues, eigenvectors, diagonalization, and orthogonality.

The typical delivery format for the course is two 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments.

The Pennsylvania State University
In contrast to the non-honors version of this course, the honors version is typically more theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.

MATH 310 Elementary Combinatorics (3) Fundamental techniques of enumeration and construction of combinatorial structures, permutations, recurrences, inclusion-exclusion, permanents, 0, 1-matrices, Latin squares, combinatorial designs.

Elementary Combinatorics (3)
General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 1985
Prerequisite: MATH 220

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Concepts in Combinatorics - Recitation (1)
General Education: None

The Pennsylvania State University
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 2013
Prerequisite: MATH 220
Concurrent: MATH 310H

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 310H Honors Concepts of Combinatorics (3) Honors version of elementary and enumerative combinatorics.

MATH 310H Honors Concepts of Combinatorics (3)

Math 310 introduces students to the fundamental techniques (i.e., addition, subtraction, multiplication, and division) and structures (i.e., permutations and combinations) of counting. An emphasis is placed on understanding the combinatorial interpretations of these objects and using these interpretations to prove various identities (as opposed to using mathematical induction). By the end of the semester, the successful student will be able to apply these methods to a complete set of distribution problems (distributing distinct/identical objects to distinct/identical boxes).

While Math 310H will introduce the student to the same fundamental techniques and structures, more of an emphasis will be placed on a variety of different counting techniques. Students will be exposed to the principle of inclusion-exclusion, the transfer-matrix method, bijective proofs, and see a much more in-depth treatment of generating functions. The successful student will be able to apply these techniques to a much broader spectrum of combinatorial problems than what is seen in Math 310.

Concepts of Geometry - Recitation (1)

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2012
Prerequisite: MATH 140HMATH 311M
Concurrent: MATH 313H

Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 313H Concepts of Geometry (3) Development thorough understanding and technical mastery of foundations of modern geometry.

MATH 313H Concepts of Geometry (3)

The central aim of this course is to develop thorough understanding and technical mastery of foundations of modern geometry. Basic high school geometry is assumed; axioms are mentioned, but not used to deduce theorems. Approach in development of the Euclidean geometry of the plane and the 3-dimensional space is mostly synthetic with an emphasis on groups of transformations. Linear algebra is invoked to clarify and generalize the results in dimension 2 and 3 to any dimension. It culminates in the last part of the course where six 2-dimensional geometries and their symmetry groups are discussed.

This course is a a part of a new "pre-MASS" program (PMASS) aimed at freshman/sophomore level students, which will operate in steady state in the spring semesters. This course is directly linked with a proposed course Math 313R, its 1-credit recitation component. It is highly recommended to all mathematics, physics and natural sciences majors who are graduate school bound, and is a great opportunity for all Schreyer Scholars.

The following topics will be covered: Euclidean geometry of the plane (distance, isometries, scalar product of vectors, examples of isometries: rotations, reflections, translations, orientation, symmetries of planar figures, review of basic notions of group theory, cyclic and dihedral groups, classification of isometries of Euclidean plane, discrete groups of isometries and crystallographic restrictions, similarity transformations, selected results from classical Euclidean geometry); Euclidean geometry of the 3-dimensional space and the sphere (distance, isometries, scalar product of vectors, planes and lines in the 3-dimensional space, normal vectors to planes, classification of pairs of lines, isometries with a fixed point: rotations and reflections, orientation, isometries of the sphere, classification of orientation-reversing isometries with a fixed point, finite groups of isometries of the 3-dimensional space, existence of a fixed point, examples: cyclic, dihedral, and groups of symmetries of Platonic solids, classification of isometries without fixed point: translations and screw-motions, intrinsic geometry of the sphere, elliptic plane: a first example of non-Euclidean geometry); Elements of linear algebra and its application to geometry in 2, 3, and n dimension (real and complex vector spaces, linear independence of vectors, basis and dimension, eigenvalues and eigenvectors, diagonalizable matrices, classification of matrices in dimension 2: elliptic, hyperbolic and parabolic matrices, orthogonal matrices and isometries of the n-dimensional space); Six 2-dimensional geometries (Projective geometry, affine geometry, inversions and conformal geometry, Euclidean geometry revisited, geometry of elliptic plane, hyperbolic geometry).

The achievement of educational objectives will be assessed through weekly homework, class participation, and midterm
MATH 314H PMASS Problem Solving Seminar (1) Group work on challenging problems, discussions and project presentations.

MATH 314H PMASS Problem Solving Seminar (1)

A 1-credit Problem Solving Seminar will feature group work on challenging problems which require only elementary techniques for their solution. Each student of the PMASS program will be required to participate in two individual or group projects. Unlike those in MASS Program, the projects will not be necessarily closely related to the courses, although the course instructors will be encouraged to offer topics and supervise the work. Some projects will grow out of the work of the problem solving seminar, and the seminar will be a venue for the students to discuss their research projects.

This course is a part of a new “pre-MASS” program (PMASS) aimed at freshman/sophomore level students, which will operate in steady state in the spring semesters. This course is linked with other PMASS courses, and is highly recommended to all mathematics, physics and natural sciences majors who are graduate school bound, and is a great opportunity for all Schreyer Scholars.

Each student of the PMASS program will be required to participate in two individual or group projects. The achievement of educational objectives will be assessed through evaluations of the project presentations.

MATH 315 Foundations of Mathematics (3) A consideration of selected topics in the foundations of mathematics, with emphasis on development of basic meaning and concepts.

Foundations of Mathematics (3)

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 2007

MATH 401 Introduction to Analysis I (3) Review of calculus, properties of real numbers, infinite series, uniform convergence, power series. Students who have passed Math. 403 may not schedule this course.

Introduction to Analysis I (3)

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Fall 1983
Prerequisite: MATH 230 or MATH 231

MATH 403 Classical Analysis I (3) Topology of Rn, compactness, continuity of functions, uniform convergence, Arzela-Ascoli theorem in the plane, Stone-Wierstrass theorem.

Classical Analysis I (3)

General Education: None
MATH 403H Honors Classical Analysis I (3) Development of a thorough understanding and technical mastery of foundations of classical analysis in the framework of metric spaces.

The central aim of this course is to develop thorough understanding and technical mastery of foundations of classical analysis in the framework of metric spaces rather than multidimensional Euclidean spaces. This level of abstraction is essential since it is in the background of functional analysis, a fundamental tool for modern mathematics and physics. Another motivation for studying analysis in this wider context is that many general results about functions of one or several real variables are more easily grasped at this more abstract level, and, besides, the same methods and techniques are applicable to a wider class of problems, e.g. to the study of function spaces. This approach also brings to high relief some of the fundamental connections between analysis on one hand and (higher) algebra and geometry on the other.

This course is a sequel to Math 312H; it is highly recommended to all mathematics, physics and natural sciences majors who are graduate school bound, and is a great opportunity for all Schreyer Scholars.

The following topics will be covered: Metric spaces (topology, convergence, Cauchy sequences and completeness); Maps between metric spaces (continuous maps and homeomorphisms, stronger continuity properties: uniform continuity, Hölder and Lipschitz continuity, contraction mapping principle, points of discontinuity and the Baire Category Theorem); Compact metric spaces (continuity and compactness, connectedness, total boundedness, coverings and Lebesgue number, perfect metric spaces, characterization of Cantor sets, fractals); Function spaces (spaces of continuous maps, uniform continuity and equicontinuity, Arzela-Ascoli Theorem, uniform approximation by polynomials. Stone-Weierstrass Theorem).

MATH 404 Classical Analysis II (3) Differentiation of functions from R^n to R^m, implicit function theorem, Riemann integration, Fubini's theorem, Fourier analysis.

MATH 405 Advanced Calculus for Engineers and Scientists I (3) Vector calculus, linear algebra, ordinary and partial differential equations. Students who have passed MATH 411 or 412 may not take this course for credit.

MATH 406 Advanced Calculus for Engineers and Scientists II (3) Complex analytic functions, sequences and series, residues, Fourier and Laplace transforms. Students who have passed MATH 421 may not take this course for credit.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 408 Advanced Calculus (3) Differential and integral calculus of functions of several variables, line and surface integrals, infinite series, series of functions, power series.

Advanced Calculus (3)

General Education: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 410 Complex Analysis for Mathematics and Engineering (3) Complex analytic functions; Cauchy-Riemann equations; complex contour integrals; Cauchy’s integral formula; Taylor and Laurent series; residue theory; applications in engineering.

MATH 410 Complex Analysis for Mathematics and Engineering (3)

A succinct stand-alone course description (up to 400 words) to be made available to students through the on-line Bulletin and Schedule of Courses.

This is a complex analysis course designed for students in mathematics, applied mathematics, engineering, science, and related fields. Topics include complex numbers; analytic functions, complex differentiability, and the Cauchy-Riemann equations; complex exponential, logarithmic, power, and trigonometric functions; complex contour integrals; Cauchy’s theorem; Cauchy’s integral formula; Taylor and Laurent series; residue theory; and various applications in areas of science and engineering.

This course focuses on the definitions, concepts, calculation techniques, supporting theory, and examples of applications suited to the usage of complex analysis in mathematics, applied mathematics, science, and engineering.

Students who have passed MATH 406 or MATH 421 may not take this course for credit.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Summer 2014
Prerequisite: MATH 230 or MATH 232

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 411 Ordinary Differential Equations (3) Linear ordinary differential equations; existence and uniqueness questions; series solutions; special functions; eigenvalue problems; Laplace transforms; additional topics and applications.

Ordinary Differential Equations (3)

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Fall 1983
Prerequisite: MATH 230 or MATH 231; MATH 250 or MATH 251

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 412 Fourier Series and Partial Differential Equations (3) Orthogonal systems and Fourier series; derivation and classification of partial differential equations; eigenvalue function method and its applications; additional topics.

MATH 412 Fourier Series and Partial Differential Equations (3)

(BA) This course meets the Bachelor of Arts degree requirements.

The purpose of MATH 412 is to introduce students to the origins, theory, and applications of partial differential equations. Several basic physical phenomena are considered - including flows, vibrations, and diffusions - and used to derive the relevant equations. The fundamentals of the mathematical theory of partial differential equations are motivated and developed for the students through the systematic exploration of these classic physical systems and their corresponding equations: the Laplace, wave, and heat equations.

In addition to treating the physical origins of the equations, this course focuses on solving evolution equations as initial value problems on unbounded domains (the Cauchy problem), and also on solving partial differential equations on bounded domains (boundary value problems). There is not one but many techniques for solving these equations, and the course presents some aspect of the expansion in orthogonal functions (including Fourier series), eigenvalue theory, functional analysis, and the use of separation of variables, Fourier transforms, and Laplace transforms to solve PDEs by
converting them to ordinary differential equations.

This course currently serves a cross-section of students at the university with interests or the need for this advanced subject mathematics, including students majoring in the engineering program, meteorology, physics, and mathematics. This typically includes the most advanced physics, engineering, and meteorology students, as well as mathematics majors with interests in applied mathematics.

General Education: None

**Stochastic Modeling (3)**

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 1984
Prerequisite: MATH 318 or MATH 414; MATH 230

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 417 Qualitative Theory of Differential Equations (3)**

(6A) This course meets the Bachelor of Arts degree requirements.

The main objective of the course is the qualitative theory of ordinary differential equations such as existence and uniqueness of solutions, dependence on initial data and parameters, and basic stability of solutions for both linear and nonlinear equations. It is designed to introduce students to modern concepts including the bifurcation theory, intermittent (transitional) and chaotic behavior of solutions and dynamical system approach to differential equations. Along the way, a number of applications are discussed and students get familiar with some basic examples illustrating main principles of the theory, such as Lorenz attractor, predator-prey models, etc.

The course is completed by students majoring in engineering programs, the sciences, and mathematics.

The Pennsylvania State University
MATH 418 (STAT 418) Introduction to Probability and Stochastic Processes for Engineering (3) Introduction to probability axioms, combinatorics, random variables, limit laws, and stochastic processes. Students may take only one course from MATH(STAT) 414 and 418 for credit.

This course gives an introduction to probability and random processes. The topics are not covered as deeply as in a semester-long course in probability only or in a semester-long course in stochastic processes only. It is intended as a service course primarily for engineering students, though no engineering background is required or assumed. The topics covered include probability axioms, conditional probability, and combinatorics; discrete random variables; random variables with continuous distributions; jointly distributed random variables and random vectors; sums of random variables and moment generating functions; and stochastic processes, including Poisson, Brownian motion, and Gaussian processes.

MATH 449 Applied Ordinary Differential Equations (3) Differential and difference equations and their application to biology, chemistry, and physics; techniques in dynamical systems theory.

MATH 449 Mathematical Modeling (3)

Many phenomena that arise in the natural sciences, such as the motion of pendulum or signal conduction in neurons or oscillations in certain chemical reactions, can be modeled using nonlinear differential equations. This course will develop the mathematical techniques needed to investigate such differential equations. These techniques include the study of equilibria, stability, phase plane analysis, bifurcation analysis and chaos. The course will assume prior knowledge of ordinary differential equations at the MATH 250/251 level; this is the only prerequisite for the course. We will focus on understanding and interpreting the behavior of the solutions to the differential equation models rather than on deriving the model equations themselves. Evaluation will be based on midterm exams, a final exam, graded homework, and graded longer projects which may involve computer work. The course should be of interest to any science or engineering major and some models will be chosen to reflect the fields of interest of the class. The goal is for the students to be able to apply the techniques learned in the course to mathematical models that they will encounter in other classes or situations. The class will be offered every other year with an expected enrollment of 10-15 students.

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 2007
Prerequisite: MATH 250 or MATH 251

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 450 Mathematical Modeling (3) Constructing mathematical models of physical phenomena; topics include pendulum motion, polymer fluids, chemical reactions, waves, flight, and chaos.

MATH 450 Mathematical Modeling (3)

The purpose of the course is to introduce mathematical modeling, i.e., the construction of mathematical structures which capture relevant physical phenomena. The course will systematically explore mathematical ideas and tools used to study the natural world. Particular emphasis will be placed on the process of creating a mathematical model starting from a physical scenario. Typically this process will begin with an experiment either demonstrated in the W. G. Pritchard Lab or performed by the students in class.

The Pennsylvania State University
Once a particular model has been developed, students will use mathematical analysis and experimentation to determine the properties and relevance of the model, and to make predictions. Often the model can be satisfactory; however, many times one also finds new features of the system that are not adequately accounted for in the model, and the process begins again. It is this cycle the course will focus on. For a given phenomenon (e.g., flow of viscous fluid, pendulum motion) several models may be compared and contrasted, and possible simplifications will be discussed.

A significant aspect of the course is its laboratory component, in which the students will perform experiments or observe demonstrations. However, the main emphasis will be placed on creating and rigorously analyzing the mathematical aspects of the models. Instead of presenting a finely tuned model for a given phenomenon, this course will try to convey some of the heuristic, intuitive, and mathematical ideas employed in modeling.

Examples of physical systems to be considered include: simple and compound pendulum motion, chemical oscillations, water waves, and elastic behavior of polymer solutions.

The course is open to a wide range of undergraduate as well as graduate students with majors in mathematics, biology, chemistry, engineering, and physics. The course should be accessible to students with some basic knowledge of mathematical analysis and differential equations. Main topics include: modeling with ordinary differential equations; bifurcation theory and stability; traveling waves in epidemics, chemical reactions, free fluid surfaces, and polymer solutions; fluctuations in nature, stochastic differential equations and chaos.

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 2008
Prerequisite: CMPSC 201; CMPSC 202 or CMPSC 121; MATH 220; MATH 230 or MATH 231

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 456 (CMPSC 456) Introduction to Numerical Analysis II (3)** Polynomial and piecewise polynomial approximation, matrix least squares problems, numerical solution of eigenvalue problems, numerical solution of ordinary differential equations.

**Introduction to Numerical Analysis II (3)**

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 2008
Prerequisite: MATH 455

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 457 Introduction to Mathematical Logic (3)** Propositional logic, first-order predicate logic, axioms and rules of inference, structures, models, definability, completeness, compactness.

**MATH 457 Introduction to Mathematical Logic (3)**
Logic forms the foundation of all mathematical reasoning. To prove a mathematical theorem, one deduces them step by step from basic principles, called axioms, or from other statements previously deduced. Each step of a proof has to be a logically valid rule, such as, for example, the modus ponens: "If A holds, and A implies B, then B holds."

In Math 457, students will learn how concepts such as axiom, theorem, proof, and truth can be formulated as a mathematical theory, that is, logical reasoning will be studied as a mathematical subject.

The simplest kind of logical system is propositional logic. Here, the basic components are whole statements which are either true or false, and which can be combined using logical connectives such AND, OR, or NOT to form new statements. Its simple nature makes propositional logic a good system to introduce many of the basic ideas: syntax and semantics, proof systems, completeness and compactness.

However, propositional logic does not capture mathematical reasoning adequately. Therefore, one considers (first-order) predicate logic. Students will learn how formulas are formed according to syntactical rules. They will also study how a mathematical theory is defined as a set of formulas, how a proof is formally defined, and what constitutes a proof system.

The syntactical notions above are contrasted with mathematical semantics, which considers structures over which formulas can be interpreted. This way, one can rigorously define whether a formal statement is true in a given mathematical structure, in which case we say the structure is a model of the statement. For example, the integers with addition are a model of the statement "for every x there exists a y such that x+y =0".

A central goal of mathematical logic is to explore how the syntactical side (formulas, axioms, proof systems) and the semantical side (mathematical structures such as the additive group of integers) interact. Two fundamental results in this regard will be covered: the completeness theorem says that one can prove a statement from a set of axioms if and only if the statement is true in any structure satisfying all axioms. The compactness theorem, in turn, is an important consequence of the completeness theorem. It has profound implications for the existence and construction of mathematical structures.

Students who would like to enroll in Math 457 are required to have some knowledge of mathematical proofs as provided in Math 311W.
Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 467 (CMPSC 467) Factorization and Primality Testing (3) Prime sieves, factoring, computer numeration systems, congruences, multiplicative functions, primitive roots, cryptography, quadratic residues. Students who have passed MATH 465 may not schedule this course.

Factorization and Primality Testing (3)

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 1995
Prerequisite: MATH 311W

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 468 Mathematical Coding Theory (3) Shannon's theorem, block codes, linear codes, Hamming codes, Hadamard codes, Golay codes, Reed-Muller codes, bounds on codes, cyclic codes.

Mathematical Coding Theory (3)

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Fall 1983
Prerequisite: MATH 311W; advanced calculus

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 470 Algebra for Teachers (3) An introduction to algebraic structures and to the axiomatic approach, including the elements of linear algebra. Designed for teachers and prospective teachers. Students who have passed Math 435 may not schedule this course.

Algebra for Teachers (3)

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Fall 1988
Prerequisite: MATH 311W

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 471 Geometry for Teachers (4) Problem solving oriented introduction to Euclidean and non-Euclidean geometries; construction problems and geometrical transformations via "Geometer's Sketchpad" software. Intended primarily for those seeking teacher certification in secondary mathematics. Students who have passed MATH 427 may not schedule this course.

Geometry for Teachers (4)

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 1996
Prerequisite: MATH 311W

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 475W (US;IL) History of Mathematics (3) A global survey of the history of mathematics as viewed as a human response to cultural, political, economic, and societal pressures.

MATH 475W Introduction to the History of Mathematics (3)

The primary goal of this course is to explore where mathematics comes from, how it was labored on, how ideas were preceived, and how theories developed: Development in algebra, geometry, arithmetic and calculus will be discussed.

The secondary goal is to help students understand the importance of written communication in mathematics and to provide opportunities for students to improve the quality of their writing. The primary means for accomplishing this goal will be four papers, 4-8 pages in length. These will be written for an audience of mathematically-knowledgeable readers. In addition, each quiz will contain at least one essay question.

Students will be evaluated on quizzes, homework, papers, and a final exam. Quizzes will total 250 points, the papers 200 points, and the final exam 150 points.
This course is a required course in the Mathematical Science (MA SC) BS curriculum. This course is also available as an elective for students in the Computer Science (COMP) program.

No special facilities are required for this course. This course will be offered once per year, with an expected enrollment of 25-40 students.

General Education: None
Diversity: US;IL
Bachelor of Arts: Quantification
Effective: Spring 2012
Prerequisite: MATH 315 or MATH 311W

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 479 (PHYS 479) Special and General Relativity (3) Mathematical description, physical concepts, and experimental tests of special and general relativity.

MATH (PHYS) 479 Special and General Relativity (3)
This course is intended as an elective course (within the undergraduate Physics program) for Physics majors to be taken in their senior year. Intended to be cross-listed with MATH, it can also be used in support of a Mathematics minor and, in some options, within the Math program as a program elective as well. The course significantly expands upon the introduction to Special Relativity (SR) seen in PHYS 237, including discussions of experimental tests of SR and applications to relativistic mechanics. It then introduces students to the mathematical machinery required to understand General Relativity (GR), starting with the description of curved spacetimes and geodesics. It discusses solutions to the Einstein equations and surveys the classic tests which established the validity of General Relativity. It concludes with applications of GR in such areas as black hole physics, the generation and detection of gravitational waves, other topics (such as cosmology, relativistic astrophysics, etc.).

General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 2007
Prerequisite: PHYS 237 PHYS 400 PHYS 419; MATH 250 or MATH 251; MATH 230 or MATH 231

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 482 Mathematical Methods of Operations Research (3) Survey of linear and nonlinear programming; mathematics of optimization; queues; simulation.

Mathematical Methods of Operations Research (3)
General Education: None

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MATH 485 Graph Theory (3) Introduction to the theory and applications of graphs and directed graphs. Emphasis on the fundamental theorems and their proofs.

Graph Theory (3)
General Education: None
Diversity: None
Bachelor of Arts: Quantification
Effective: Spring 1987
Prerequisite: MATH 311W

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details...
MATH 486 Mathematical Theory of Games (3)
This course covers several major classes of models and methods for analyzing multi-party strategic interactions, i.e. games. Specific topics include extensive and strategic form games, continuous games, cooperative games, strictly competitive games, repeated games and adaptive learning, and evolutionary models. The effects on outcomes of information, communication, and other modeling assumptions are discussed. Real-world examples drawn from economics, biology, anthropology, management and everyday life are discussed in detail. When appropriate, computer algebra systems are incorporated in the course. The course typically meets during either two 75-minute periods each week or three 50-minute periods each week. Evaluation methods may vary by instructor, but will typically include a combination of examinations, quizzes, homework, and projects.

MTHED 411 Teaching Secondary Mathematics I (3) Conditions for learning mathematics; problem solving; subject matter types; curriculum; learning goals; nature and history of mathematics at secondary level

MTHED 411 Teaching Secondary Mathematics I (3)

This is the first of two secondary mathematics methods courses. In this course, participants look at mathematics teaching and learning from a teacher's perspective as well as from a student's perspective. Course participants engage in mathematical problem solving and in the study of the history and nature of mathematics as the foundation for understanding current curriculum and standards. Lesson planning follows from the consideration of different types of mathematical content, including skills and concepts. Looking specifically at the learning of mathematics and questioning to promote higher-level thinking prepares students for field experiences in subsequent semesters.

The goals for the course are:
- To improve understanding of some of the mathematical concepts which are important in secondary school mathematics.
- To improve understanding of the nature of mathematics: what is important, how it is practiced, how mathematical validity is determined.
- To improve understanding of the historical development of selected topics from secondary school mathematics.
- To develop a vision of good school mathematics.
- To see mathematics, mathematics learning, and mathematics teaching as problematic and to develop an inquiry approach to and an ability to reflect on these domains.

The Pennsylvania State University
To increase understanding of secondary school students' mathematical thinking and understanding.
- To increase ability to specify subject matter involved in a specific mathematics topic and make distinctions among them.
- To improve understanding of various teaching strategies and their strengths and weaknesses.
- To increase ability to choose among lessons and curriculum materials based on the intended mathematical subject matter and the current understandings of the students.
- To increase insight into creating a thriving, supportive mathematics classroom culture.

Students are evaluated through written assignments, examinations, classroom performance, presentations, and lesson plans.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Spring 2007
Prerequisite: acceptance into Secondary Education/Mathematics Option certification program; C I 295; a grade of C or better in CMPSC 101 MATH 140 MATH 141 MATH 220 MATH 230 MATH 311 W
Concurrent: MTHED 427

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MTHED 412W Teaching Secondary Mathematics II (3) Assessing learning and instruction; methods of evaluation and grading; long-term planning; accommodating needs of diverse learners; connecting theory and practice.

MTHED 412W Teaching Secondary Mathematics II (3)

MTHED 412 is an inherently cumulative experience. This course builds upon ideas developed in MTHED 411 and MTHED 427. In particular, students continue to consider types of subject matter, problem solving, lesson planning, technology use, questioning, history and nature of mathematics, and curriculum and standards. MTHED 412 then links understanding of mathematics education with other education courses and with field experiences as well as with understanding of K-16 mathematics. Students focus on lesson and unit development and implementation, assessment and evaluation, classroom management and organization within school communities, and continued professional growth as reflective practitioners. Students are encouraged to draw whenever possible on education psychology, adolescent psychology, educational theory and policy, mathematics, and other bodies of knowledge. In other words, course participants live as teachers with a wealth of knowledge and responsibility to draw on that knowledge in the service of their students.

Student goals are to:
- Develop an expanded view of the process of teaching mathematics;
- Develop a deeper understanding of what it means to learn mathematics and the processes by which mathematics is learned;
- Be able to reflect on the instruction and one's learning in MTHED 412 and to relate it to students' learning of secondary mathematics;
- Be able to plan and teach appropriate mathematics lessons and reflect on one's teaching;
- Be familiar with and be able to draw on a variety of teaching resources;
- Investigate current issues influencing evaluation in the secondary mathematics curriculum;
- Choose goals and content for middle school and high school mathematics courses;
- Develop strategies for assessing and evaluating what students have learned;
- Create and implement assessment instruments for middle school and high school mathematics courses;
- Develop insights into student understanding, especially in relationship to exceptional students as well as to mathematically talented and challenged students;
- Identify the needs of diverse learners and to develop strategies to address these needs;
- Create classroom environments that are conducive to learning; and
- Incorporate appropriate technology in the teaching and learning of mathematics.

Students are evaluated through written assignments, examinations, classroom performance, unit lesson and evaluation plans. Throughout the course writing is a process to help students learn course content as well as to help students learn ways of writing needed in the work of the secondary mathematics teacher.

The course is offered each Fall and Spring semester with typical enrollment of 20-25 students in each of 1 or 2 sections. Through co-requisite course, CI 495C, students spend approximately five full weeks in secondary school classrooms.

MTHED 420 Teaching Mathematics in the Elementary Schools (3) Strategies for teaching mathematics at the elementary school level; analysis of the philosophy and content of contemporary programs of instruction.

MTHED 420 Teaching Mathematics in the Elementary Schools (3)

MTHED 420 is designed to help teacher candidates: 1) to come to see mathematics, mathematics learning, and
mathematics teaching as complex and to develop an inquiry approach to these domains; 2) to improve their understanding of the mathematical concepts and procedures they will teach, and to improve their understanding of children's mathematical learning and thinking about these concepts and procedures; 3) to increase their ability to choose among tasks, lessons, and curriculum materials from a variety of print and electronic sources based on intended mathematical understandings; 4) to develop a productive mathematics culture in the classroom; and 5) to explore key educational issues, such as equity, assessment, and technology, with respect to mathematics teaching and learning.

In the course, teacher candidates explore important mathematical ideas and their development. They will become familiar with important pedagogical principles and questions. To help candidates develop an inquiry approach toward teaching mathematics, course assignments engage them in reflecting on readings and class discussions, their previous experiences as a learner of mathematics, and their ongoing experiences observing and teaching in classroom settings. MTHED 420 is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

General Education: None
Diversity: None

MTHED 427 Teaching Mathematics in Technology-Intensive Environments (3) Interaction among pedagogy, content, and technology in mathematics teaching and learning in technology-intensive environments; secondary, early college curricula; laboratory experience.

MTHED 427 Teaching Mathematics in Technology-Intensive Environments (3)

Students should expect to learn something about each of several common types of mathematics software, new things about secondary school mathematics, and a lot about how to make decisions about how to use technology as an effective mathematics teacher. Students will also use communication software (e.g., word processors, e-mail, PowerPoint) not as objects of our discussion but in simple ways to generate and share products, assignments, and ideas.

The course has a significant lab component. Students will be assessed based on written assignments, lesson plans, oral presentations, class participation, and examinations. The course is offered each fall and spring semester with an approximate enrollment of 20 students per semester. Students must enroll concurrently in MTHED 411.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

MTHED 428 Fundamentals of Middle Grades Mathematics 1 (3) This course develops essential understanding of number and algebra for teaching middle grades mathematics and builds on earlier mathematics courses.

MTHED 428 Fundamentals of Middle Grades Mathematics 1 (3)

MTHED 428 builds upon experiences in early undergraduate courses to enhance prospective and/or practicing teachers’ mathematical knowledge by supporting them to build deep and connected understandings of rational number, ratio, proportion, variable, expressions, and equations and be able to call upon those understandings in order to interpret grades 4-8 students’ mathematical understandings. In particular, students in this course will learn that rational number arise as an extension of whole numbers and can be represented in many forms and interpreted as ratios, measures, quotients, operators, and part-whole relationships. Students will also build understandings of equivalence and the mathematical concepts and relationships that underlie previously learned computational algorithms. Students will understand that ratios involve coordinating two quantities and multiplicative relationships, and that a proportion is a
statement of equality between two ratios. Students will learn how number concepts in prekindergarten–grade 4 connect to algebra topics in grades 4-8. Topics in this area include different views and uses of variable, the nature of and use of algebraic expressions and how expressions and equations differ, multiple strategies for manipulating and representing algebraic expressions and equations, and how expressions and equations can be used to represent real-world situations.

Students will also learn what research has documented about how the concepts of rational number, ratio, proportion, variable, expressions, and equations develop in grades 4-8; the challenges that grades 4-8 learners face in learning this content; connections to previously-learned mathematical content from grades PreK-3; and how grades 4-8 students’ understandings of the targeted concepts form essential foundational understandings for mathematical learning in grades 9-12. Students will engage in mathematical reasoning and justification and utilize technological tools appropriate for use in grades 4-8 mathematics.

**MTHED 431 Data Analysis in Secondary School Mathematics (3)** Intense development of foundations of data analysis for secondary mathematics as a process using statistical concepts for predictions and inferences.

**MTHED 431 Data Analysis in Secondary School Mathematics (3)**

As prospective secondary mathematics teachers, students will develop broad and deep understanding of measures of and representations for center, measures of spread, distribution, and correlation. They will become fluent in using dynamic statistics programs, various physical models, and representations to convey the essence of these statistical concepts to secondary school students. They will compare various statistical methods and measures and make and defend claims both in terms of the discipline and in terms of how these ideas unfold for learners in school mathematics. They will connect these statistical concepts to the broader study of secondary school mathematics.

In particular, students will see data analysis as a process. It involves the systematic application of statistical techniques, as well as logical techniques, to summarize, interpret, and compare data. Although the emphasis of the course will be on statistical concepts, one of the main themes of the course will involve understanding mathematical structure of these statistical concepts. For example, students should be able to answer, from a mathematical perspective, why some data analysis techniques are more useful than other techniques.

Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. In particular, it helps to build prospective teachers’ understanding of statistics as a vital part of secondary mathematics. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, dynamic statistics environments, and graphing calculators), as appropriate.

Students in this course would be expected to complete weekly assignments and exams and to participate in classroom investigations of statistical concepts. Course grades depend on students’ performance on all of these measures.

**M E 101S Toy Fundamentals: First-Year Seminar (1)**
First-Year Seminar focusing on toy design and manufacture.

**M E 101S Toy Fundamentals (1)**
*(FYS)*

Toy Fundamentals is a First-Year Seminar intending to be an introduction to engineering design and prototyping through a product type everyone has used: toys! This five-week class explores the history of toys, marketing, toy design for different ages, and includes toy dissection, design, prototyping and field testing. It will run in the first 5 weeks of the semester.

The Pennsylvania State University
**ME 102S** Smart Lego Robots & Design (1) First-Year Seminar focusing on the development of technology exploration kits for middle-school-aged children.

**ME 102S Toys for Technology Exploration: First-Year Seminar (1)**

This is a First-Year Seminar that focuses on an important sub-group of toys. "Learning-by-doing" is a recognized method for improving student's learning in grades K-12 (and in college!). As part of "Toys for Technology Exploration", existing hands-on kits used for science and math education for ages 10-14 will be reviewed. The new standards for science and technology education in Pennsylvania are used to guide new hands-on kit designs, and these designs will be prototyped and field-tested with public school students.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ME 105S** Product Dissection A: Bicycles--First-Year Seminar (1) A First-Year Seminar in which students analyze and disassemble a multi-speed bicycle.

**ME 105S Product Dissection A: Bicycles (1) (FYS)**

Students are led through the disassembly, testing, troubleshooting and re-assembly of 10- and 15-speed bicycles. Routine maintenance, common problems, and fundamental design principles are addressed. Also, manufacturing and design issues such as material selection, fabrication technology, and reliability will be discussed. Students may supply their own bicycle, or use one from our supply.

**ME 106S** Product Dissection B: Household Appliances--First-Year Seminar (1) A First-Year Seminar in which students analyze and disassemble household appliances.

**ME 106S Product Dissection B: Household Appliances (1) (FYS)**

Students will disassemble, analyze and re-assemble a series of small household appliances such as telephones and electric drills. Lectures will discuss issues of design and manufacturing as well as consumer product testing. Students will conceive, design, and carry out a consumer product testing program.

**ME 107S** Product Dissection C: The Enigmatic Engine--First-Year Seminar (1) A First-Year Seminar in which students analyze and disassemble a single-cylinder lawnmower engine.

**ME 107S Product Dissection C: The Enigmatic Engine (1) (FYS)**

Students are led through the disassembly of a single cylinder lawn mower engine. Students work with faculty and student
helpers to understand concepts of operation, manufacturing and assembly. Then the engines are reassembled and started. Guest speakers will lead discussions regarding the use of fossil fuels, design for manufacturing, and marketing.

M E 300 Engineering Thermodynamics I (3) Basic thermodynamics concepts, properties of pure substances, first and second law analysis of systems and control volumes.

Engineering Thermodynamics I (3)

This course is designed to develop an understanding of thermodynamic concepts and their application for the student by providing an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass and energy conservation and fundamental ideal gas and non-ideal working fluids concepts to fundamental engineering systems. These systems include basic spark-ignition engines and turbojet engines as well as basic and extended Rankine and refrigeration cycles. Emphasis is on creating engineering models of these systems and indicating how the idealized versions of these systems can be extended to more realistic descriptions. Besides these mass and energy conservation concepts the course introduces the basic concepts of heat transfer and mass flow, providing a foundation in these subjects to be further expanded in later courses. The course aims to develop knowledge and initiate skills for "thinking like an engineer."

M E 302 Engineering Thermodynamics and Heat Transfer (4) Thermodynamics and Heat Transfer with pertinent applications to devices important in mechanical engineering. For students in engineering science.

Engineering Thermodynamics and Heat Transfer (4)

M E 302, Engineering Thermodynamics and Heat Transfer, is a required course for engineering science students. This course presents the fundamental principles of thermodynamics and heat transfer. The students are expected to develop skills necessary to apply these principles to common engineering problems involving properties of matter, energy, and energy transport. The scope of the thermodynamics instruction, which constitutes approximately three quarters of the course, is limited to the classical viewpoint as opposed to the statistical viewpoint. Control volume analysis techniques are introduced for closed and open systems undergoing steady or transient processes. The techniques are applied to analyze common power and refrigeration cycles, including gas and vapor systems. Instruction on heat transfer, limited to approximately one quarter of the course, includes an overview of the three modes (conduction, convection, and radiation), with consideration of forced and free convective heat transfer for both internal and external flows. Heat exchangers and heat transfer from extended surfaces are presented at a very basic level.

**M E 340 Mechanical Engineering Design Methodology (3)** The design process; problem definition, conceptual design, system design, detail design, evaluation and test, implementation, documentation and communication.

**M E 340 Mechanical Engineering Design Methodology (3)**

This course is intended to provide mechanical engineering students with the fundamental tools to produce an effective design solution in a realistic professional environment with conflicting customer needs and technical capabilities. The students will identify the system design targets through interaction with the "customer", develop multiple conceptual designs, select the best design solution and produce a functional prototype. The course is project driven with significant input from the students in defining the work objectives and goals. Initially several mini-projects will be assigned with specific objectives such as identifying customer needs, quantifying technical design specifications and decision making. The course culminates with a student team based design competition. The competition provides an opportunity to apply the design process to an open-ended mechanical engineering problem.

M E 345 Instrumentation, Measurements, and Statistics (4) Fundamentals of statistics, sensors, instrumentation, and measurement of mechanical phenomena such as temperature, flow, pressure, force, stress, displacement, and acceleration.

M E 345 Instrumentation, Measurements, and Statistics (4)
This course is required for all mechanical engineering students, and is taken in the junior year. It serves as an introduction to the fundamental principles of instrumentation and measurement, along with statistics, and integrates and applies what the students have learned in their electrical engineering course.

The course includes a 3-hour-per-week hands-on laboratory where students apply the material learned in the lecture. For many students this is the first time they have actual hands-on experience with electronics and measurement equipment, such as oscilloscopes, breadboards, function generators, digital data acquisition systems, integrated circuits strain gages, displacement meters, thermocouples, tachometers, dynamometers, filters, volume flow meters, velocity meters, pressure transducers, etc. Students learn not only how to use these devices in the lab, but also the fundamental principles of their operation. Statistical analysis is integrated into the course, especially in the hands-on laboratories, where statistics is used to analyze and interpret acquired data.

M E 347 Computer-Aided Engineering (3) Introduction to the tools and techniques of computer-aided design, including CAD, spreadsheets, numerical methods, and finite element analysis.

M E 347 Computer-Aided Engineering (3)
In this course students learn how to use a variety of computer tools for engineering analysis and design. These tools include Computer-Aided Design software such as solid modeling, spreadsheets, numerical methods, and finite element analysis. A major emphasis of the course is the development and solution of mathematical models of engineering systems or components. Students see how simplified analysis diagrams (free-body diagrams, block diagrams and control volumes) can be developed for real systems and components, and how these diagrams can be used to develop the mathematical models. Numerical techniques for solving these models, including systems of equations, non-linear equations, ordinary and partial differential equations, numerical differentiation and integration, and curve fitting are discussed. Students are also taught how to learn a new computer package with minimal formal instruction. Students are evaluated through the use of written exams during the semester, a comprehensive written final, weekly homework assignments, and a design project. This course is required in the Mechanical Engineering program, integrates material from a number of previous courses, and provides the student with tools that will be used in a number of subsequent courses. It is offered annually in the fall semester.

M E 349 Intermediate Mechanics of Materials (3)
This course introduces students to intermediate and applied topics in mechanical behavior of materials with an emphasis on design and computation. This course will give students the tools to do practical analysis and the foundation needed to prepare them for other mechanical engineering courses in design and other elective courses. Subjects covered include
stress analysis, deformation & deflection, material failure and finite element analysis. Stress analysis includes the study of stress concentrations, stress transformations and principal stresses. Stress-based static failure theories for brittle and ductile materials are investigated. Two-way bending of beams is covered as well as torsional deformation of non-circular cross sections. Buckling and pressure vessels are introduced as separate topics while the finite element analysis is introduced as a computational tool to study stress and deformation. Throughout the course students will use a commercial finite element program to verify and visualize results from analysis of the various topics. During the course, students are introduced to the basic theory of the finite element method.

M E 355 Dynamic Systems Laboratory (1) Experimental investigation of simple position, velocity, and temperature control systems with analog and digital controllers.

M E 355 Dynamic Systems Laboratory (1)
The objective of the Dynamic Systems Laboratory is to enable students to experimentally investigate the calibration, response characteristics, modeling, and control of mechanical and fluid systems.

This course is intended to allow students to develop some hands-on experience and working knowledge of basic dynamic and control systems. Specifically, to

1. Identify the actuators, sensors, plants, and controllers of physical control systems.
2. Calibrate encoders, temperature, laser displacement, and flow sensors.
3. Measure steady state, step, and frequency response of thermal, fluid, and mechanical systems.
4. Compare simulation and experimental results to validate theoretical model.
5. Design PID controllers for thermal, fluid, and mechanical systems.
6. Implement and test PID controllers for thermal, fluid, and mechanical systems.

M E 357 System Dynamics (3) Mathematical modeling and analysis of linear dynamic systems; performance and design of simple controllers.

M E 357 System Dynamics (3)
This course is to explore the modeling of linear systems via transfer functions and state-space models; analysis of systems in the time and frequency domain using transfer functions and stat-space models; development of control techniques based on PID. The use of software Matlab and Simulink is another emphasis. Students are evaluated through the use of written exams during the semester, a comprehensive written final, weekly homework assignments, and a design project. This course is required in the ME BD program at Behrend, integrates material from a number of previous courses, and provides the student with tools that will be used in a number of subsequent courses.

M E 360 Mechanical Design (3) Specification of components such as shafts, bearings, and power transformers; optimal designs for operational, environmental, and manufacturing requirements.

M E 360 Mechanical Design (3)
This course is required for all mechanical engineering students, and is taken in the junior year. It is an introduction to analysis and design of mechanical components. It helps provide practical insight into theory provided by prerequisites in engineering mechanics and materials science. Students initially perform yielding and fatigue failure predictions for general structural elements and then focus on specific mechanical components such as gears, fluid film bearing, rolling element bearings, screws, shafts and springs. Use and interpretation of finite element analyses (FEA) are also introduced. The
overall goals are for students to learn to make basic design decisions regarding the suitability of different materials in mechanical components (e.g. steel versus aluminum); and to make basic design decisions regarding the suitability of different components in a mechanical system (e.g. ball bearings versus fluid film bearings).

M E 365 Materials Testing Laboratory (1) Laboratory for materials testing, property identification and modification, failure analysis, and metallurgical testing.

M E 365 Materials Testing Laboratory (1)
This laboratory course provides an integrated approach to materials science and engineering. The laboratory examines the important relationships between processing, microstructure, and the properties of materials. The course provides an introduction to basic characterization techniques for materials, such as microscopy, hardness testing, fracture testing and analysis, fatigue testing, and impact testing. In addition, material selection and heat treatment topics are covered. The course requires hands-on involvement by the students in the planning of experiments as well as data manipulation and analysis of results. The laboratory exercises are intended to provide students with a broad appreciation of the breadth of material science and engineering and the principles behind material characterization and property modification. Students work in groups, and written reports are the primary basis for grading.

M E 367 Machine Design (3)
This course introduces students to the process for selection, design and failure analysis of various common machine elements. This course will give students the foundation to design mechanical systems and the tools to design, select, or analyze machine components for practical applications necessary for their senior design projects and other mechanical engineering electives. Subjects include the reliability, safety factors, and the design of machine elements including shafts, roller bearings, brakes, clutches, gears, belt and chain drives, and additional topics such as screws, springs, journal bearings, and connections. Both static and cyclic loading are considered as part of the design and analysis process. Extensive use is made of material properties, design tables, figures and graphs to assist in the design and analysis process. The course includes a comprehensive project that incorporates several of the topics covered in the course in the design of a mechanical system. The goal of the project is for students to learn how various machine components and procedures are used in the Machine Design process as well as giving them further experience in teamwork and presentation skills.

M E 370 Vibration of Mechanical Systems (3) Modeling and analysis of vibration characteristics of mechanical systems with single degree and multiple degrees of freedom. Vibration control by isolation, absorption and balancing.

M E 370 Vibration of Mechanical Systems (3)

The course studies vibration characteristics of mechanical systems and vibration control. It is divided into four main topics. Fundamental aspects of mechanical vibrations are studied first. Types and causes of various vibratory motions are described. The concepts of mathematical modeling of the vibratory systems are presented. Model elements including mass/inertia, spring and damper elements and their corresponding describing equations are studied. Single degree-of-freedom vibrations are modeled and analyzed. Equations describing free vibrations of undamped and damped systems are derived. Natural frequency and damping ratio are defined and their physical significance discussed. Harmonically excited vibrations are studied with many practical application problems; resonance and its physical significance are emphasized. The theoretical aspects of general periodic vibrations and non-periodic vibrations are formulated by means of Fourier analysis and convolution integral. Vibrations of multiple degrees-of-freedom systems are studied. Mathematical models governing free vibrations are formulated. Equations determining the natural frequencies and mode shapes of the system are derived with relation to eigenvalue problems. Harmonically excited vibrations are analyzed with practical applications. Vibration control in relation to engineering design is the last topic studied. Various vibration control concepts and techniques are presented including vibration isolation, vibration absorption and balancing to reduce the intensity of the source of excitation.

M E 380 Machine Dynamics (3) Kinematic analysis of mechanisms such as linkages, flywheels, cams and gears. Dynamic forces and vibrations of mechanisms.

M E 380 Machine Dynamics (3)

In this course students learn how to apply the techniques of dynamics to analyze both the motion and forces associated with planar mechanisms. Students learn how to model and solve for the position, velocity, acceleration and forces on linkages using vectors. They also study the kinematics of gears, flywheels and cams. Machine vibrations is introduced as an integral part of Machine Dynamics. Students learn how to model simple mechanical systems as vibrating systems and then analyze the vibratory response of these systems. Once these analytical skills have been developed, the students can apply these skills to the design of linkages, internal combustion engines, gears, shafts and cams. Several in-class exams are used to evaluate students' performance. Computer problems are assigned so students can experience the solution methods to some of the more complex problems. This required course integrates material from calculus and dynamics to provide the student with tools that can be used to analyze the motion of machinery and can be used in the design of machinery and machine components. It is offered annually in the Fall semester and occasionally in the Spring semester.

**M E 400 Thermodynamics of Propulsion and Power Systems (3)** Analysis and modeling of propulsion and power systems, including combustion, compressible flow through nozzles, chemical equilibrium, and moist air systems.

This course is specifically designed to take advantage of the senior level standing of the student by providing an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass, momentum, and energy conservation to relatively complex systems. These systems include spark-ignition and diesel engines, gas-turbine engines for power production, and turbojet engines. The integration of the topics of combustion, compressible flow, and psychrometrics allow these systems to be analyzed in their totality. Emphasis is on creating engineering models of these systems. The course aims to integrate previous knowledge and develop skill in "thinking like an engineer."

**M E 402 Power Plants (3)** A study of fossil-fuel steam generation and utility plants, including cogeneration, gas turbine, and combined cycles.

**Power Plants (3)**

This course serves as an introduction to fossil-fuel plants for both steam generation and electricity production. Following an overview of an entire plant and an introduction to combustion processes, each subsystem of a fossil-fuel plant will be considered. The subsystems include fuel preparation and handling, boiler types and the fundamentals of steam generation, water systems (condensate-feedwater, makeup, cooling, and waste), and turbomachinery. Consideration will be given to environmental aspects of steam and power generation as well as operations, maintenance, and controls issues. Students will spend time at the West Campus Steam Plant (WCSP) to observe the various systems discussed in class. Data taken from the WCSP will be used in problem solving and in an assessment of the plant.

Course Objectives:
To acquaint students with both steam generation and electricity production and to present some of the engineering calculations encountered in practice.

Objectives that students will meet at the end of the course:
1. list the subsystems of a plant, indicating the function of each subsystem
2. sketch typical subsystems of a power plant (example: sketch the coal and ash handling system)
3. perform basic analyses associated with each subsystem
4. sketch the flow of water-steam, fuel, and air through a plant
5. analyze a heat balance, perform an availability analysis, and interpret the results of those analyses
6. select the type of plant appropriate for a given application
7. perform an energy audit on the auxiliary systems
8. perform a water audit on the plant
9. use DoE Best Practices (or equivalent program) to assess a steam plant

The Pennsylvania State University
Students will be required to draw on material from core undergraduate courses in thermodynamics (M E 030 and M E 031), fluid mechanics (M E 033), and heat transfer (M E 412). Students must be able to:

- sketch the configuration and draw a T-s diagram for a Rankine cycle and a Brayton cycle
- indicate the general trends for the ideal cycles (example: for a Brayton cycle, how does the efficiency depend on the pressure ratio, inlet temperature, etc.)
- define the basic modifications to the simple Rankine cycle and simple Brayton cycle
- discuss the significance of the modifications
- state the definition of the adiabatic efficiency for turbines and pumps
- perform an energy balance given a particular cycle
- use the Darcy-Weisbach equation to determine the friction losses in pipes and ducts
- perform simple analysis of a heat exchanger

**M E 403 Polymer Electrolyte Fuel Cell Engines (3)**

Introduction to Fundamentals of Polymer Electrolyte Fuel Cells (PEFCs). Includes fundamentals of electrochemistry, thermodynamics, fluid mechanics, heat transfer materials, and manufacturing issues of PEFCs. A brief survey of other fuel cell types is also included.

This course is intended for the engineering student interested in obtaining a fundamental background required for polymer electrolyte fuel cell (PEFC) modeling and diagnosis. Those students with interest in the basic design, operation, and characteristics of PEFC systems should also benefit.

This course serves as an introduction to the fundamental principles of electrochemistry, thermodynamics, heat and mass transfer, materials and manufacturing issues related to PEFC engines. The various types of PEFC components and technologies are dissected in detail, including direct inject alternative fuel systems. A survey of cutting-edge issues in fuel cell technology including the future direction of PEFC technology will be presented as time permits. The student will also participate in an experimental lab study to aide in the understanding of these systems, a computer-based simulation project, and a group-based fuel cell system design project. Issues of specific interest to mechanical engineers, including water management and heat and mass transfer in thin film porous media, will be dealt with in depth. A brief survey of other fuel cell types is also presented.

**M E 404 Gas Turbines (3)**

Thermodynamic cycles relating to gas turbines; analysis and performance of compressors, combustion chambers, single- and multi-stage turbines; recent developments.

This course enables students with the proper background to gain specialized knowledge as a step towards becoming practitioners in the field of gas turbines. The information imparted covers from basic cycles to properties of materials required to put together these impressive machines. Competent course performance requires knowledge of basic thermodynamics, fluids and heat transfer. The homework is carefully graduated in order to highlight key aspects already covered in the lectures, with new thinking an unavoidable part. As an optional part of the course, students can run and acquire data in an actual gas turbine. Additionally, those with a strong background in fluids can design blades and study the flow around them with CDF.

Course Objectives: Upon completion of this course, students should be able to:

1. Analyze cogeneration plants.
2. Analyze turbofans, jets and turbojets.
3. Specify a typical gas turbine installation, including auxiliaries.
4. Carry out conceptual design of gas turbine engines for different applications.
5. Specify construction materials to withstand typical operating conditions.
6. Demonstrate professionalism in interactions with colleagues, faculty, and staff.

Program Objectives: This course covers the following program objectives:

1. demonstrate ability to solve differential equations
2. demonstrate familiarity with linear algebra
3. perform analysis of thermal/fluids components

The Pennsylvania State University
4. perform analysis of thermal/fluids systems
5. work effectively on multidisciplinary teams
6. demonstrate ability to communicate effectively with the written word
7. demonstrate ability to communicate effectively in oral communications
8. demonstrate professionalism in interactions with colleagues, faculty, and staff

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: M E 320 or M E 302

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

M E 405 Indoor Air Quality Engineering (3)
Prediction of the motion of contaminants (both gaseous particulate) in gas streams; analysis of ventilation systems and air pollution control systems; comparison of experimental sampling techniques.

Course Objectives:

a. Demonstrate the ability to analyze and compare risks associated with various activities and with exposure to hazardous chemicals.
b. Demonstrate a working knowledge of the physiology and function of the respiratory system, including diseases of the lung.
c. Demonstrate the ability to estimate pollutant emission rates using emission factors and fundamental mass balance techniques.
d. Analyze practical problems of general and local ventilation requirements.
e. Design local ventilation systems using standard guidelines from ACGIH and ASHRAE.
f. Predict the motion of particles in air, and analyze pollution control devices which remove particles from the air.
g. Demonstrate professionalism in interactions with colleagues, faculty, and staff.

Program Objectives:

a. demonstrate knowledge of chemistry
b. demonstrate ability to solve differential equations
C. demonstrate familiarity with statistics
d. perform analysis of thermal/fluids components and thermal/fluids systems
e. demonstrate an appreciation of the economic, global, social, and ethical context of their work
f. demonstrate professionalism in interactions with colleagues, faculty, and staff
g. make effective use of spreadsheets as an analysis and design tool
h. use software such as Matlab and MathCAD to solve engineering problems including ODE’S, systems of linear equations, and numerical integration

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: M E 320 or equivalent

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

M E 406 (NUC E 406) Introduction to Statistical Thermodynamics (3)
Statistical description of systems composed of large numbers of particles in the context of classical and quantum mechanics; basic concepts of probability theory and thermodynamics as they relate to statistical mechanics.

The Pennsylvania State University
M E (NUC E) 406 Introduction to Statistical Thermodynamics (3)

This course is an introduction to probabilistic and statistical concepts in the physical sciences, which we refer to as "statistical thermodynamics." In areas such as design and processing of electronic devices, materials engineering, chemical engineering, and combustion engineering, the science of statistical mechanics is a particularly necessary, powerful, and important tool for the engineer. The underlying foundation of statistical mechanics is developed by (1) reviewing the basic ideas from probability theory, (2) deriving the binomial, Poisson, and Gaussian probability distributions, and (3) using these models to analyze several examples taken from science and engineering. To make a connection between macroscopic quantities and the corresponding probabilistic representation, classical thermodynamics is reviewed using the internal energy, entropy, and free energy functions in the context of the first and second laws. Statistical mechanics for classical and quantum-mechanical systems is presented via the micro-canonical, canonical, and grand canonical ensembles using the associated partition functions. During the syntheses of ideas, applications from various branches of science are presented. Some examples of applications are the Einstein crystal, the Debye crystal, the ideal gas, and black body radiation.

This course covers the following program objectives:
1. Demonstrate knowledge of basic chemistry and physics.
2. Demonstrate a knowledge of atomic and nuclear physics.
3. Demonstrate a knowledge of thermodynamics, heat transfer, and fluid flow.
4. Understand and apply the basic concepts of particle transport.
5. Understand and apply thermodynamics and heat transfer principles to the analysis of nuclear power components and systems.

Diversity: None
Bachelor of Arts: None
Effective: Fall 2007
Prerequisite: M E 300 or M E 201 or M E 302 or CH E 303; MATH 230 or MATH 231

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

M E 408 Energy Systems (3) Theory, analysis, design, selection, and application of energy conversion systems.

M E 408 Energy Systems (3) Theory, analysis, design, selection, and application of energy conversion systems.

M E 408 Energy Systems (3)

This course is intended for mechanical engineering students to reinforce the topics taught in thermodynamics, fluid mechanics, and heat and mass transfer; gives students familiarity with energy conversion systems using traditional and renewable energy sources which are typically encountered by mechanical engineers, and improves students' analytical and design skills. Coverage of materials include heat exchanger analysis, selection, and design with respect to heat transfer, pressure drop, and fluid pumping requirements; analysis and design of power cycles based on thermodynamic principles; fundamentals of combustion processes; introduction to wind energy and wind turbine aerodynamic analysis; fuel cell fundamentals and analysis of fuel cell problems and systems based on thermodynamics and heat transfer principles. Students will be evaluated by homework assignments; individual and small team projects; and exams.

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

M E 410 Heat Transfer (3) Thermal energy transfer mechanisms: conduction (steady, transient), convection (internal, external), radiation; lumped parameter method; heat exchangers; introduction to numerical methods.

M E 410 Heat Transfer (3)

M E 410, Heat Transfer, is a required course for mechanical and nuclear engineering students. The course presents the three modes of heat transfer: conduction, convection, and radiation. One-dimensional steady and transient conduction is studied for planar, cylindrical, and spherical geometries. The lumped capacitance analysis is used for transient conduction when appropriate. Analytical and numerical methods are presented for two-dimensional conduction problems, including the analysis of extended surfaces. Convection heat transfer is studied in both internal and external geometries and under laminar and turbulent flow regimes. External flows include cooling on flat plates due to laminar and turbulent boundary layer flows, and cooling of cylinders due to cross flow. The convection heat transfer analysis in internal flows considers laminar and turbulent pipe flows. Free convection is also considered where heat transfer is due to flow induced by fluid buoyancy. Boiling and condensation considers the effect of two-phase flows on surface heat transfer. Radiation heat transfer is studied by considering both the general characteristics of radiation as well as the properties of radiating surfaces and radiation heat transfer between surfaces. Methods for solving multi-mode heat transfer are presented throughout the course. Heat exchangers and heat transfer from extended surfaces are two applications studied in the cours.
M E 411 Heat-Exchanger Design (3) Thermal design and application of different heat-exchanger types, including surface selection and design optimization.

M E 420 Compressible Flow I (3) Introductory compressible flow (gas dynamics), mathematical background, and physical concepts of isentropic flow, shock waves, expansion waves, and applications.

M E 421 Viscous Flow Analysis and Computation (3) Apply analytical and computational methods to solve the differential equations describing fluid flow. Incompressible external flows past objects and internal flows in pipes and ducts are some problems considered.

M E 422 Principles of Turbomachinery (3) Application of Newton's laws of motion and basic laws of thermodynamics to analysis of fluid flow in turbomachinery.
Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**M E 427 Incompressible Aerodynamics (3)**

The primary objective of this course is to teach students how to determine aerodynamic lift and drag using a variety of techniques, including potential flow theory, viscous flow analysis, and wind tunnel testing. Students also learn the limitations of each technique and how they can be used together to obtain better results. Fundamental concepts in aerodynamics are also discussed, including lift, drag, aerodynamic moment, induced drag, viscous drag, pressure drag, separation, stall, circulation, downwash, camber, thickness ratio, and lift distribution. Students should be able to use knowledge gained in this course to solve aerodynamic design problems.

Students will be evaluated through the use of written exams during the semester, a comprehensive written final, and weekly homework assignments. This course is a technical elective in the Mechanical Engineering program and allows students who have completed ME BD 240, Elementary Fluid Mechanics, to improve their understanding of fluids by covering the subject in more detail and applying it specifically to aerodynamics problems. It will usually be offered annually in the spring semester.

**M E 428 Applied Computational Fluid Dynamics (3)**

The purpose of this course is to teach students how to use a commercial CFD code to solve real-world engineering fluid flow problems. The definition of appropriate problem domain, set of governing equations, boundary conditions, and fluid properties is discussed. Sufficient theory of CFD is covered so that students are able to select appropriate elements or interpolation techniques and options, mesh size, pressure-correction technique and solution technique. Students are also taught how to interpret the results of a CFD simulation, including determination that the solution is physically realistic, conforms to the governing equations, is converged and grid independent, and determination of important engineering quantities such as net force, pressure drop and flow rate. Students are evaluated through the use of written exams during the semester, a comprehensive written final, weekly homework assignments, and a semester project. This course is a technical elective in the Mechanical Engineering program and allows students who are interested in fluid mechanics and heat transfer to further their study. It is offered periodically.

**M E 430 (EGEE 430) Introduction to Combustion (3)**

This course provides an introductory treatment of combustion science. The objectives of the course are to develop in the students an understanding of combustion kinetics, combustion thermochemistry, flame dynamics, flame stability, and pollutant formation. Coverage includes laminar and turbulent flames, premixed and diffusion flames, and detonations. Emphasis is placed on the role that kinetics, heat transfer, mass transfer, and fluid dynamics have on flame structure and flame stability. The course includes some laboratory demonstrations of flat flame and diffusion flame burners, and incorporates numerical calculations of thermodynamic and kinetic combustion phenomena. The course begins with a review of transport phenomena, physical gas dynamics, and thermochemistry. Then, the concept of the laminar flame speed is introduced in the context of a one-dimensional flame and a propagating chemical wave. Issues of premixed flame structure and stability are presented along with a discussion of flammability limits. Next, laminar diffusion flames are presented via the Burke-Schumann analysis. From laminar flames, the emphasis shifts to turbulent premixed and diffusion flames, and the concepts of flame stretch and strain. Detonations are considered, with emphasis on thermodynamic analysis of the detonation and the structure of the detonation wave. Details of chemical kinetics for the
hydrogen-oxygen and hydrocarbon-air reaction systems are presented, with linkage back to earlier topics such as flame stabilization and flammability limits. After kinetic phenomena, the course then considers pollutant formation focusing on soot and NOx. The fundamental aspects of combustion are applied to analysis of the combustion process and pollutant formation in international combustion engines and catalytic combustors. The course wraps up with discussion of atmospheric chemistry, the fate of pollutants, and the formation of secondary pollutants.

General Education: None
Diversity: None
Bachelor of Arts: None
Effective: Fall 2009
Prerequisite: ME 201 or ME 300 or EME 301

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

ME 431 Internal Combustion Engines (3) Thermodynamic aspects of internal combustion engine design and performance; two- and four-stroke cycle, supercharged and non-supercharged, diesel and spark-ignition types.

ME 431 Thermodynamics of Propulsion and Power Systems (3)
This course is specifically designed to take advantage of the senior level standing of the student by providing an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass, momentum, and energy conservation to relatively complex systems. These systems include spark-ignition and diesel engines, gas-turbine engines for power production, and turbojet engines. The integration of the topics of combustion, compressible flow, and psychrometrics allow these systems to be analyzed in their totality. Emphasis is on creating engineering models of these systems. The course aims to integrate previous knowledge and develop skill in "thinking like an engineer."

ME 440W Mechanical Systems Design Project (3) Design and analysis of mechanical components and systems. Application of fundamental design and analysis methods to open ended engineering problems.

ME 440W Mechanical Systems Design Project (3)
Students develop and practice skills and techniques for managing and executing engineering design projects. These skills are applied to an industry-sponsored project. Project teams perform all facets of product and process design. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, and analysis and documentation of results. Students will visit industrial sites to gain an understanding of existing processes and problems and to assess the customer's needs. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages, and reports.

The Pennsylvania State University
M E 441W Thermal Systems Design Project (3) Design of thermal systems through component design and/or selection, system simulation and optimization. Assessment of system economics and energy efficiency.

M E 442W Advanced Vehicle Design I (2) Part one of a two course sequence; applications of design and analysis methods to open-ended advanced transportation vehicles. Two semester course; satisfies Senior Design or ME Technical Elective requirements (when combined with M E 443W).

M E 443W Advanced Vehicle Design II (1) Part two of a two course sequence; applications of design and analysis methods to open-ended advanced transportation vehicles. Two semester course; satisfies Senior Design or ME Technical Elective requirements (when combined with M E 442W).
M E 443W Advanced Vehicle Design II (1)

Students develop and practice skills and techniques for managing and executing engineering design projects. This is done in the context of an international University-level engineering design competition that is sponsored by government agencies and/or by industry. The competitions are structured to span a full calendar year, with the competition itself taking place in late Spring. For that reason, the course is spread over two semesters. In the Fall semester, there is approximately equal emphasis on classroom lectures and hands-on laboratory activities; in the Spring semester, the emphasis is on hands-on laboratory activities. The focus is advanced powertrain technology for personal transportation vehicles. Broader aspects of energy efficiency, security, and sustainability also will be discussed. The specific technologies that are targeted will evolve with time to remain ahead of what is available in current production vehicles. Project teams perform all facets of product and process design. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, and analysis and documentation of results. Students also will participate in broader aspects of the design competition. This may include securing sponsorship and funding, participating in outreach and public relations events, developing a business plan, developing a web site, and traveling to competition workshops and to the annual competition. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages, and reports.

M E 444 Engineering Optimization (3) Problem formulation, algorithms and computer solution of various engineering optimization problems.

M E 444 Engineering Optimization (3)

Students will learn to formulate and solve a variety of engineering optimization problems. Basic concepts, problem formulation, scaling, use of different optimizers, effect of tuning parameters and starting points and solution interpretation will be taught. Example problems will be taken from mechanical, aerospace, nuclear, civil, chemical, electrical and other engineering disciplines. This course will complement other engineering design courses, such as capstone design. Students will learn how optimization can reduce product turnaround time, and to make decisions involving weight, stiffness, strength, performance, energy utilization, and other attributes. Pedagogy will focus on hands-on experience through computational problem-solving and graphical understanding. Technology classrooms and computer labs for instruction will be used. A by-product of this course is increased math and computer skills.

M E (NUC E) 446 Reliability and Risk Concepts in Design (3)

The course covers materials reliability in design including mechanical, electrical and system aspects. Five main topics will be studied. The course starts by introducing engineering risk and reliability, highlighting its interdisciplinary nature and its significance in system design. The concept of reliability as a probability is introduced and the basic laws of probability are reviewed. The discussion centers on the mathematics needed to understand and analyze complex systems including components in series and parallel. The topics include the independence, mutual exclusivity, truth tables and Venn diagrams. These concepts are then applied to simple systems consisting of one, two and three components in various
configurations. The equivalency of the various methods is discussed. The effect of maintenance on a system’s reliability is presented along with discussions of various maintenance strategies. Then, the failure modes and effects analysis is introduced and examples discussed. The concept of fault trees and event trees and their application to reliability analysis are presented. Risk analysis is then introduced as a case study in the application of reliability analysis. A nuclear power plant system is analyzed to quantify the risk to the public from its operation.

M E 448 Engineering Design Concepts (3) Engineering design and modelling, engineering economic analysis techniques, technical communication skills, project planning and design.

M E 448 Engineering Design Concepts (3)

This course is the first of a two-part sequence of courses that make up the capstone design experience in the ME BD major (the second course is M E 449, Mechanical Design Projects). In this course students study the engineering design process, begin working on their senior design project, and learn about professional topics related to industry. Topics in the engineering design process include customer needs identification, development of engineering specifications, concept generation, concept selection, costing, and project planning. Professional topics include communication, team work, ethics, safety, sustainability, globalization, and engineering economics. Students are evaluated on the design process and professional topics through assignments and quizzes. A major component of the course is to begin work on a capstone design project. Students work in teams of 3 to 4 on an industrially-sponsored project or other project approved by the faculty. The student teams work with the sponsor to develop specifications and a project plan, perform background research necessary to fully understand the project, begin to solve the problem, and make two presentations during the semester. The first presentation is a formal project proposal; the second presentation at the end of the semester is a progress report. Students are evaluated on both their technical and presentation skills, as well as their ability to function as a team. This course is required in the Behrend Mechanical Engineering (ME BD) program, and integrates material from a number of previous courses.

M E 450 Modeling of Dynamics Systems (3)

This course covers modeling, analysis, and control of single and multiple degree-of-freedom dynamical systems, including mechanical, electrical, thermal, fluid systems and their combinations (mixed systems). The processes of energy storage and dissipation, which are common for different kinds of dynamic systems, will be emphasized in investigating general principles for modeling various dynamic systems. Basic concepts in system theory such as state variables and stability notions will be introduced. Most of the content will be restricted to linear-time-invariant systems (LTIs); however, local linearization around nominal operating points will be taught to analyze nonlinear systems. Introduction to classical control analysis and design methods will also be given.

M E 456 (I E 456) Industrial Robot Applications (3) Introduction to robotics, with emphasis on robot selection, programming, and economic justification for manufacturing applications.

M E (I E) 456 Industrial Robot Applications (3)

This course is a technical elective, and is normally taken by students in their Senior years. In this course, students learn about present and future status of robot applications, and are required to apply fundamental knowledge of physics and mathematics to develop software to analyze and control robots.

The course deals with mechanics and control of robot manipulators and wheeled mobile robots. First, students are taught to analyze 3-D kinematics, statics and dynamics of robot manipulators. Then, control algorithms for robot manipulators are presented. Sensors, actuators and softwares used in industrial robots are discussed. In the end, kinematics and control of wheeled mobile robots are presented. During this course, application of computer, particularly Matlab, is emphasized as much as possible.

M E 461 (E MCH 461) Finite Elements in Engineering (3) Computer modeling and fundamental analysis of solid, fluid, and heat flow problems using existing computer codes.

M E (E MCH) 461 Finite Elements in Engineering (3)

This is an introductory course in the Finite Element Method. Through this course, students gain knowledge in finite element theory and problem modeling. The mathematical formulation of the method is presented and then applied to problems in elasticity and heat transfer. Projects are assigned to demonstrate the finite element method in simplified problems using hand-calculations and computer programs such as Matlab. The use of commercial FEA programs is introduced and problems of increased complexity are assigned to demonstrate their use in a computer lab. Finally,
problems of realistic complexity are assigned such that students can practice solving, documenting and presenting their use of commercial FEA programs.

**M E 462 Lubrication in Machine Design (3)** Lubricants and lubrication with applications to design aspects of machines and mechanisms including bearings, gears, cams, and automotive engines.

The course covers interdisciplinary materials on lubrication in machine design including mechanical, mechanics and chemistry aspects. Six main topics will be studied. The course starts by introducing engineering tribology, highlighting its interdisciplinary nature and its significance in machine design. Surfaces of machine components in contact are studied, including surface physiochemistry, surface topography, topographical measurements and characterization and classification of regimes of lubrication. Lubricants used in machine design are discussed in length, including types of industrial lubricants, properties of lubricating oils: compositions, viscosity and additives, synthetic lubricants and engine oils. The course will develop the theory of fluid-film lubrication, including the mechanisms of pressure generation, configuration of tribo-contacts and the Reynolds equation. Hydrodynamic lubrication is studied. The topics include the machine components with hydrodynamic lubrication, thrust bearings, journal bearings and design considerations of these devices. The last topic to be covered is the theory and application of Elastohydrodynamic lubrication (EHL). First, the machine components with concentrated contacts are introduced. Then, the Hertz theory of contact in studied and the governing equations for EHL are derived. Thermal EHL and traction are studied, and design calculations for rolling bearings, cams and gears are developed in relation to the geometrical and kinematic features of these components.

**M E 465 Introduction to Manufacturing Laboratory (1)** A laboratory-based introduction to manufacturing processes including material removal, forming, casting and joining for metals and non-metals.

This laboratory course provides an integrated approach to Manufacturing Science and Engineering. The laboratory examines common techniques for fabricating parts; providing an introduction to several basic processes for creating both metallic and polymeric parts. As a part of this course, students will be exposed to compressive, tensile, sheet, bending, casting and powder metal processes. Using basic material science principles, students will examine concepts such as material flow, springback, and cold working. The course requires hands-on involvement by the students in the planning of experiments as well as data manipulation and analysis of results. The laboratory exercises are intended to provide students with a broad appreciation of the breadth of Manufacturing Science and Engineering. Students work in groups. Written reports and in-class exercises are the primary basis for grading.

This course is a technical elective.
