Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group’s normative expectations. SOC (CRIMJ/CRIM) 406 Sociology of Deviance (3) (BA) This course meets the Bachelor of Arts degree requirements. Sociology of Deviance focuses on the theory and research in social construction of social norms, the violation of norms, and social reaction to the violation of norms. The course focuses on the role of social structure and power in the definition of deviance, on structural, cultural, and social psychological processes involved in deviant behavior, and the dynamics of social reaction to deviance. The course includes some content focusing on criminal deviance, but also emphasizes non-criminal deviance, as well as the role of social movements and social change in constructing and contesting deviance definitions. CRIMJ/SOC/CRIM 310 and CRIM/CRIMJ 250W are prerequisites. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the &quot;Crime&amp;quot; component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Prerequisite: SOC 012 , SOC 013 , or SOC 005 , or permission of program

Cross-listed with: CRIM 406, SOC 406

Bachelor of Arts: Social and Behavioral Sciences
CRIMJ 407: Victimology

3 Credits

This course will explore the legal, emotional, and social responses to the process of victimization by offenders and third parties. CRIMJ 407 Victimology (3) (US) Victimology studies the victim-offender relationship. Victimization is analyzed using the Bible, Anglo-Saxon Law, Common Law, and legal precedent as a historical development of the status of “victim.” Cultural changes during the 1950s and 1960s resulted in the reemergence of the victim and the designation of social services and community awareness for victims. Social scientific studies of the status of unique groups analyzed victimizations according to demographics and socioeconomic status. Political viability of victims in terms of restitution and community response are viewed in terms of Census data, the Department of Justice’s National Crime Victimization Survey and The Uniform Crime Reports, Morbidity Reports, Emergency Room Reports, and the Insurance Industry Reports. The above data is evaluated in terms of age, race, education, socioeconomic status, and gender. The development and merging of culture, sub-cultural liaisons, social relationships, leisure activities, and routine transactions are reviewed as they apply to personal and unique group victimizations. Comparative issues and transnational crime are addressed under the format of globalization, gender, economics, and cultural mores. Interdisciplinary evaluation of Victimology considers psychology, medicine, sociology, criminal justice, legal studies, and mass media. Documentaries, case studies, problem based learning, and popular films provide numerous activities for discussion, analysis, and integration in writing and for discussion.

United States Cultures (US)

CRIMJ 408: Police Administration

3 Credits

Principles of administration as they relate to a police organization; and policy development. CRIMJ 408 CRIMJ 408 Legal Aspects of Law Enforcement (3) This course is one of the law enforcement offerings directed at students interested in pursuing a career in the field. This course builds upon legal courses and the police administration course. It is intended to challenge students to comprehend the complexities of working within a litigious society where policing is often the target of simultaneous praise and criticism. Research is introduced to allow students to consider alternatives to conflicts and the court’s interpretation of the efficacy and constitutionality of such efforts. Civil liberties, use of force, use of technology, and communications have played significant roles challenging public safety. The consistent expansion of the role of law enforcement presents complexities that are often different according to the jurisdiction and community sentiment. Issues of hiring, training, education, accreditation, force, and racial profiling are the basis for assignments, research, and directed projects and class discussion.

Prerequisite: CRIMJ100 or CRIM 100 and CRIMJ210 or CRIM 210

CRIMJ 410: The Pennsylvania Court System

3 Credits

Tracing the steps of criminal cases through the investigative stage, arrest, trial, sentencing and appellate review in Pennsylvania.

Prerequisite: CRIMJ100, CRIMJ113

CRIMJ 412: Crime, Social Control, and the Legal System

3 Credits

Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.

Prerequisite: CRIM 012, CRIM 013, or SOC 005

Cross-listed with: CRIM 412

CRIMJ 413: Advanced Criminological Theory

3 Credits

This course provides an in-depth look at theories of crime and examines influential empirical studies designed to these theories. CRIMJ 413 CRIMJ (CRIM/SOC) 413 Advanced Criminological Theory (3) Advanced criminological theory is intended to extend and deepen students’ knowledge of core ideas in criminology. The course has four main emphases: 1) learning major schools of thought in criminology, 2) learning about the uses and construction of theory, 3) learning about approaches to integrating criminological theories, and 4) exploring how criminological concerns are grounded in and interrelated with core issues in sociology. The course is offered once a year with 50 seats per offering. CRIMJ/Crim/SOC 012 is a prerequisite. Students will be evaluated on research or analytical papers, written assignments on course readings, and/or in-class essay-style exams. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with a Deviance and Criminology specialization.

Prerequisite: CRIMJ012, CRIMJ250W

Cross-listed with: CRIM 413, SOC 413

CRIMJ 414: Criminal Careers and the Organization of Crime

3 Credits

Research on and theory of criminal careers and crime organizations, emphasizing recruitment and disengagement; offender characteristics and lifestyles; policy implications.

Prerequisite: CRIMJ012, or CRIMJ013, or SOC 005

Cross-listed with: SOC 414

Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 415: Drug Control Policy in Comparative Perspective

3 Credits

Examines the history of drug control policy in the United States; comparisons and contrasts with other countries’ experiences. CRIMJ 415 CRIMJ (PUBPL) 415 Drug Control Policy in Comparative Perspective (3) This course focuses on the history of drug control policy in the United States and the internationalization of drug prohibition. We also examine the experience of other countries with drug use, abuse and control, including alternative regulatory policies in Western Europe. This class is both historical and comparative in orientation; in tracing the roots of drug prohibition, and examining the experience of other countries, we seek to enrich our understanding of American style drug control and the feasibility of alternative approaches.

Prerequisite: CRIMJ200 or PL SC001 or PL SC014 or SOC 001

Cross-listed with: PUBPL 415
CRIMJ 420: Criminal Law and Procedure

3 Credits

Common law and statutory crimes; constitutional rights of accused persons, liability of criminal justice professionals.

Prerequisite: CRIMJ 113

CRIMJ 421: Violent Crime in the United States

3 Credits

The impact of violent crime on victims, their families, and communities; the police process as it relates to violent crime. CRIMJ 421 CRIMJ (CRIM) 421 Violent Crime (3) This course will examine the nature, frequency, and causes of violence, generally and of assault, robbery, rape, and homicide, specifically. Several different theoretical and research perspectives are reviewed, including biological, psychological, social, and cultural. The course also examines individual and societal responses to violence. Students are evaluated on three objective exams (25% each) and a series of short assignments (25%). CRIM/CRIMJ 421 may be used by both CLJBA and CLJBS degree candidates to satisfy a 400-level course requirement in the major. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ 012
Cross-listed with: CRIM 421

CRIMJ 422: Victimization

3 Credits

Examines the history, how victimization is measured/studied in social sciences, public policy implications of victimization movement in U.S. CRIM 422 / CRIMJ 422 Victimization (3) Victimology has emerged as an important area of study for the social sciences and an important arena for policy development. This course will familiarize students with the historical development of the research into victimization and the importance of the victims' movement to public policy. Areas explored will include the relationship between victim and offender, the cultural images of victims and their impact on the victim and the response of the criminal justice system to them, and how research has attempted to measure victimization. The course will be one of the supporting courses where the student must select 6 credits at the 400 level.

Prerequisite: CRIM 250W
Cross-listed with: CRIM 422

CRIMJ 423: Sexual and Domestic Violence

3 Credits

Legal, sociological, and psychological perspectives on sexual and domestic violence. CRIMJ 423 / CRIM 423 / WMNST 423 Sexual and Domestic Violence (3) (US) This course investigates violence against women, specifically domestic, sexual, and relationship violence. Students will examine some of the legal, sociological, and psychological perspectives about sexual, domestic, and relationship violence as well as the social and cultural roots of violence against women. Students will also gain an understanding of the experiences of victims of domestic and sexual violence as well as the issues presented by perpetrators. Students will be evaluated based on performance on exams, and two research papers. CRIMJ 423 / CRIM 423 / WMNST 423 is a supporting course in both the WMNST major and minor as well as a supporting course in the CLJ major. It may also be used to satisfy a GI requirement. This course is offered fall and spring semester with an enrollment of 60 students each semester.

Prerequisite: CRIMJ 100
Cross-listed with: CRIM 423, WMNST 423

CRIMJ 424: Drugs, Crime, and Society

3 Credits

Why do people take drugs? Why and how does society attempt to control drug use and distribution? What is the association between drugs and crime? Exploring questions such as these will be central in CRIM 424. The focus of this course will be examining explanations of drug use and the social construction of drug policies. We will begin by asking the question “What are drugs?” From there, we will discuss theories of drug abuse and the methods used to study patterns of drug use. We will also take an in-depth look at the histories, pharmacologies, and patterns associated with the most popular drugs in modern society. In the second half of the semester, we will focus on the social control of drugs and the connections between drugs and crime. At the heart of this discussion will be the causes and consequences of modern U.S. drug policies. We will conclude with a look at alternative drug policies and what the future may hold for drug use in America. Throughout the semester, you will be asked to think critically about material and evaluate its strengths and weaknesses. To foster critical thinking skills, you will have ample opportunities to discuss topics in class, analyze arguments in written assignments and in-class exercises, and apply ideas to real world situations through course projects and presentations.

Cross-listed with: CRIM 424

CRIMJ 424W: Drugs and Crime

3 Credits

Analysis of international narcotics trafficking in the twentieth century.

Prerequisite: CRIMJ 100

Writing Across the Curriculum

CRIMJ 425: Organized Crime

3 Credits

This course examines organized crime in terms of historical antecedents, structure, related theories, and policy issues. CRIM (CRIMJ) 425 Organized Crime (3) This course will provide students with a historical and theoretical overview of organized crime. Students will gain an understanding of the structure of organized crime as well as an understanding of the businesses associated with traditional and nontraditional organized crime groups. The course will also provide students with a detailed analysis of state and federal laws and policies regarding organized crime. Students will be evaluated by two mid-term exams (25% each), an essay final exam (40%), and class participation (10%). Crime, Law, and Justice students may use this course to satisfy a 400-level course requirement in the Bachelor of Arts and Bachelor of Science majors. This course will be one of the supporting courses from which students are required to select six credits.

Prerequisite: CRIM 100
Cross-listed with: CRIM 425
CRIMJ 426: Special Offender Types

3-6 Credits/Maximum of 6

Study of special offender types; relationships with criminal justice system (drug abuse, victimless crime, white collar crime considered different semesters).

Prerequisite: 3 credits in Criminal Justice or permission of program

CRIMJ 430: Alternatives to Incarceration

3 Credits

Control and treatment of offenders in the community, probation and parole organizations, diversion programs, innovative sentences, supervision techniques. This course introduces students to the system of "criminal justice" as defined and interpreted by the Supreme Court as well as lower courts. Students study the judicial process, the intricacies of opinion formation, the nature and extent of judicial power, the willingness of the courts to hear appeals, and the reality of criminal sanctioning and procedure. The adversarial process, the willingness of the courts to hear appeals, and the conflicting opinions of the court introduce students to the lack of conformity that is part of upholding Constitutional rights. Court attitudes and how the changing system is studied through stare decisis and case briefing. Particular cases and issues are critiqued such as capital punishment of the mentally ill, juveniles, and those who are mentally challenged. The tension between justice versus law is studied through cases, evaluation of court behavior, and changing attitudes towards racial inequities.

Prerequisite: CRIMJ100, CRIMJ113, CRIMJ230, or permission of program

CRIMJ 431: Offender and Prisoner Rights

3 Credits

The identification of correctional problems and the setting of objectives as reflective of court rulings, legislative change, and administrative law.

Prerequisite: CRIMJ100, CRIMJ113, CRIMJ230, or permission of program

CRIMJ 432: Crime and the American Court System

3 Credits

This course examines the American court system including structure and the way courts process offenders with special focus on sentencing. CRIM (CRIM) J 432 Crime and the American Court System (3) CRIM/CRIMJ 432, Crime and The American Court system, studies the courts from the lower courts to the Supreme Court and the various actors that play important roles in the functioning of the courts. First, the course studies the jurisdictions of the various courts and their organization in various state systems as well as the federal courts as well as the organization of state and federal administrative offices that manage the courts including the training of judges and the preparation of the court budget. Subsequent to the development of the basic understanding of the court jurisdiction and organization, the class studies the roles of the key actors in the day-in and day-out operation of the courts. In the spotlight are judges, prosecutors and defense attorneys although the role of the probation officers and clerk of courts are also intertwined with the processing of defendants. Of particular importance in this component of the course is the development of what is referred to as the court community and the focal concerns and goals that the court must consider as it processes cases. An, understanding of court community and focal concerns serves as crucial context for understanding the role of public policy as it attempts to shift or change the decision making of the court. One important dynamic of this course is the understanding that the court, although functioning as an institution to provide a neutral field on which accusations of criminality are to be played out, operates similarly to other organizations in that they are to be efficient (move cases with minimum overhead) and to be effective (provide justice, and protect the public). How the courts balance these competing demands and the informal processes that emerge in the processing of defendants is the key focus of the class. Finally, the course explores the attempts to reform the courts from the sentencing reforms such as determinate sentencing, mandatory minimums including "3 strikes" and sentencing guidelines. These issues highlight the political context of the courts and adaptability of the courts to attempts to change their values, and decisions. This course serves as one core 400-level course in the major. Each student must take two of the five core 400-level courses.

Prerequisite: CRIM 100
Cross-listed with: CRIM 432

CRIMJ 435: Border Security

3 Credits

This course provides knowledge about government organizations charged with American border security, guiding laws and policies.

CRIMJ 435 Border Security (3) The Border Security course provides depth of knowledge of key border issues for students of homeland security. The course achieves this goal by focusing on border integrity strategies, the motivation and nature of criminal and other organizations which violate borders, the policies established by governments to maintain border integrity, identification of the key players in maintaining the border, and the relevant legal issues in enforcing laws on the border. This course allows the student to apply principles and concepts of homeland security to a specialized and very relevant area.

Prerequisite: 6th semester standing

CRIMJ 439: The Politics of Terrorism

3 Credits

Analysis of political terrorism as a violent alternative for peaceful change and traditional warfare in the nuclear age.

Prerequisite: CRIMJ100 or PLSC 439
Cross-listed with: PLSC 439
Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 441: The Juvenile Justice System

3 Credits

Historical and contemporary view of the juvenile justice system. Focus on analyzing components of the system, interactions, processing, and handling of youths. CRIM 441 CRIMJ (CRIM) 441 Delinquency and Juvenile Justice (3) This course examines delinquency and the juvenile justice system from a variety of viewpoints. It looks at the problems the system is expected to address, how the problems have changed through the ages, how the current juvenile justice system developed, and the programs used to prevent and control delinquency and their effectiveness. By the end of the course, students should be able to think critically about the research and issues in the field. Evaluation methods include exams, brief writing assignments and a longer paper on policy issues. Students will be evaluated through brief written assignments, a
term paper, a mid-term essay, and essay final. This course will be offered twice a year with 60 seats per offering. Students in the major may select CRIM (CRIM) 441 as one of several required courses in either the BA or BS program. This course is one of the core courses in the curriculum from which students must choose six credits from five core courses offered. It also serves as one of the supporting courses in the curriculum from which the students must take six credits at the 400-level.

**Prerequisite:** CRIMJ100  
Cross-listed with: CRIM 441  
United States Cultures (US)

CRIMJ 441W: The Juvenile Justice System

3 Credits

Historical and contemporary view of the juvenile justice system. Focus on analyzing components of the system, their interactions, processing, and handling of youths.

**Prerequisite:** CRIMJ100 or permission of program  
Writing Across the Curriculum

CRIMJ 450W: Senior Seminar

3 Credits/Maximum of 6

Capstone course exploring past, current and future developments in criminal justice.

**Prerequisite:** CRIMJ100 or CRIM 100 and sixth semester standing or permission of program.  
Writing Across the Curriculum

CRIMJ 451: Race, Crime, and Justice

3 Credits

This course focuses on the significance of race, class, and ethnicity to criminal justice processing and criminal offending. CRIMJ 451 CRIMJ (CRIM) 451 Race, Crime, and Justice (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This class is designed to explore the relationship between the criminal justice system and racial minorities in the United States. Students will examine theoretical issues of race and justice, as well as empirical understandings of the relationship between race, crime, and the criminal justice system. Students will endeavor to understand some of the economic, political, and sociological reasons why racial minorities are over-represented in the criminal justice system. Students will also explore normative issues of justice and equity in broader social interactions that influence and are influenced by crime and the criminal process. This course may be used towards the additional courses requirements for the CLJ BS/BA and ADM J degrees. It will also satisfy the Intercultural/International competence (GI). Students will be evaluated by a midterm and final exam, a term paper and class participation. This course will be offered twice a year with 60 seats per offering.

**Prerequisite:** CRIMJ100  
Cross-listed with: CRIM 451  
Bachelor of Arts: Social and Behavioral Sciences  
United States Cultures (US)

CRIMJ 453: Women and the Criminal Justice System

3 Credits

This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US) The course will examine the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIMJ 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.

**Prerequisite:** CRIMJ100 or WMNST100  
Cross-listed with: CRIM 453, WMNST 453  
United States Cultures (US)

CRIMJ 455: Contemporary Issues in Law Enforcement

3 Credits/Maximum of 3

This course will examine some of the current and most pertinent issues facing law enforcement today. This course will examine some of the current and most pertinent issues facing law enforcement today. The course is designed to provide both insight and application of some of the fundamentals necessary to be successful as a law enforcement professional. An interactive and collaborative learning approach will focus on various topics of concern which are vital to effective law enforcement personnel. Examples of these topics may include; use of force, drug enforcement, search and seizure, interviewing and interrogation, stress in policing, as well as any other topics which may develop as an issue of concern for law enforcement.

**Prerequisite:** CRIMJ 100; CRIMJ 210

3 Credits

Although violent crime has generally been on the decline since the mid-1990’s, the subjects of gun ownership, gun violence, and gun control have become ubiquitous in election campaigns. This course explores the historical, legal, and cultural context of this debate. To address historical context, the course examines the US. Constitution, early U.S. history, and American gun culture. The course then shifts to modern history to outline what is known about gun ownership and gun crime today. With this background, students explore both sides of the gun control debate and resulting legislation from the 1800’s to the present. Current laws regulating gun ownership and purchase, conceal carry and self-defense are also addressed. Law enforcement efforts, including crime scene investigation, are explored. Lastly, the course highlights examples of international and transnational efforts related to gun control and trade. Students will have the opportunity to explore controversial gun-related topics in an independent course project. At the completion of this course, students will be able to: 1. Describe the early history of gun ownership in the U.S. 2. Detail the known trends in gun ownership and the life cycle of a gun. 3. List arguments for and against regulation of gun ownership.
4. Describe the laws regulating gun ownership, purchase, and conceal carry. 5. Detail law enforcement and legislative efforts to restrict or deter the use of guns in crime. 7. Identify examples of international and transnational attempts to address gun ownership and trade. 8. Detail and evaluate the future of a modern issue related to firearms and Criminal Justice.

**Prerequisites:** CRIMJ 100, CRIMJ 210 Recommended Preparations: SOC 207

CRIMJ 460: History and Function of Criminal Justice Components

3 Credits

Historical development of criminal justice system components (police, courts, corrections) related to formulation and function of the state.

Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 462: Comparative Criminal Justice Systems

3 Credits

A comparison of American and selected foreign justice systems to illustrate the variety of possible responses to crime.

**Prerequisite:** CRIMJ100 or permission of program

Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 465: Ethics in Criminal Justice

3 Credits

Ethical behavior in the criminal justice system.

**Prerequisite:** CRIMJ100 or permission of program

CRIMJ 467: Law and Society

3 Credits

Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials. SOC (CRIM/J) 467 Law and Society (3) (BA) This course meets the Bachelor of Arts degree requirements. Law and society teaches students' knowledge of key concepts and core ideas about the role of law in society. The course will cover the basics of key legal philosophies, major social science theories of law and society, research in law and society, the structure of the legal profession, and vital contemporary issues involving the role of law in society. CRIM/CJ 113 and CRIM/CJ 250W are prerequisites. The evaluations methods will include written assignments on course readings, and essay-style exams. Law and Society may be counted toward the credits required for the B.A. and B.S. in Crime, Law and Justice. It would fulfill one of the 400-level requirements in the "Law" component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

**Prerequisite:** CRIMJ100 or CRIMJ113 or permission of program

CRIMJ 469: Drugs and Drug Policy in the United States

3 Credits

Examines the history and dimensions of drug use and analyzes the impact of drug policy. CRIMJ 469 / HIST 469 Drugs and Drug Policy in the United States (3) For nearly a century, the United States has been waging its version of a hundred years' war on drugs, spending billions of dollars and incarcerating thousands of offenders while failing to significantly reduce the use of illicit drugs. This course examines drug use in a historical context while addressing the changing nature and dimension of drug use, including the pharmacology of drugs, patterns of drug use, and sentencing policies. Because drug control is inextricably linked to social, political, and public policy, the course will provide the student with a foundation for critical thinking and rational decision making relative to the efficacy of the various drug control initiatives. Since drugs seemingly permeate every level of American society and directly or tangentially touch most Americans' lives, issues such as drug testing in the workplace, the use of drug courier profiles, legalized medical marijuana, and needle exchange programs are evaluated. Students will be expected to learn the pharmacology of various drugs, the history of drug use in the United States since the colonial era, the evolution of federal drug agencies, and acquire knowledge about contemporary drug issues. They also will be expected to develop and strengthen their critical thinking skills as they assess the consequences of implementing particular anti-drug policies and their impact on reducing the use of illicit drug use. An example of the evaluation methods would be: students will be evaluated on the basis of three exams and four "think pieces" (requiring students' critical responses to an assigned topic) scheduled throughout the semester. Class attendance also will influence the grade. Faculty Member Proposing Course: John C. McWilliams

**Prerequisite:** CRIMJ100 or HIST 021

Cross-listed with: HIST 469

Bachelor of Arts: Humanities

CRIMJ 471: Legal Rights, Duties, Liabilities of Criminal Justice Personnel

3 Credits

Civil law issues within a justice agency and between criminal justice agencies and members of the public.

**Prerequisite:** CRIMJ100

Cross-Listed

CRIMJ 473: Criminal Procedure and Evidence in the Business Community

3 Credits

Law of evidence and proof, constitutional constraints on police procedures (arrest, search, etc.) in society and the business community.

**Prerequisite:** CRIMJ100

Cross-Listed

CRIMJ 482: Seminar, Criminal Justice Agency Administration

3 Credits

Relates organizational and public policy management approaches to police, courts, and correctional institutions. CRIM (CRIMJ) 482 Seminar, Criminal Justice Agency Administration (3) In this course, you will learn about the nature of criminal justice organizations, individual and group behavior within the system, and the issues involved in reforming the system. This course will NOT teach you how to become...
an administrator in the criminal justice system, but hopefully will teach
you about the issues and theories surrounding organizations and reform-
and most importantly, teach you to think and communicate (in both
written and verbal form). After taking this course, you should have a
more accurate perception of criminal justice organizations and have a
better understanding of the complexity surrounding the administration
and management of these organizations. Criminal Justice Agency
Administration may be counted toward the credits required for the B.A.
and B.S. in Crime, Law, and Justice.

Prerequisite: CRIM 100
Cross-listed with: CRIM 482

CRIMJ 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on
an individual basis and that fall outside the scope of formal courses.

Prerequisite: CRIMJ100

CRIMJ 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively
narrow subject that may be topical or of special interest.

CRIMJ 499: Foreign Studies

6 Credits

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Criminology (CRIM)

CRIM 12: Criminology

3 Credits

Explanations and measurement of crime; criminal law; characteristics of
criminals and victims; violent, property, white-collar, organized, and sexual
crimes. SOC (CRIM / CRIM) 012 Criminology (3) (GS) (BA) This course
meets the Bachelor of Arts degree requirements.Criminology is the study of
the causes of criminal behavior. As such this course is an introduction
to the topic with special focus on the major theories explaining criminal
behavior including differential association, anomie, control theory and
labeling theory. A key focus of the class is examining the most recent
scientific research testing the basic theories. The students learn the
various research techniques that have been used to study criminal
behavior including crime statistics such as the Uniform Crime Report
that serves as a monitor on crime trends. Several important areas of study
that link understanding criminal behavior and its distribution across
the social system are investigated including age, gender, race and ethnicity.
One goal of the course is to promote a more complete understanding of
crime and how it is enmeshed in human social life. The course concludes
by using the knowledge base generated in the course to study the link of
our understanding of criminal behavior and the emerging crime control
policies of the past few decades. Finally, the course reviews the impact
and effectiveness of some of these policies. Throughout the course, the
lectures as well as the readings emphasize the complexity of explaining
human behavior and criminal behavior in particular. One aspect of
the course is the use of a term paper on the objective and subjective
availability of crime to the student. This paper emphasizes the complexity
of the student’s social life and the role that these factors may have on
whether they have engaged in criminal behavior and their analysis of the
causes of their criminal behavior. This project personalizes the various theories and helps the student understand the importance of their social environment in whether they have or will engage in crime. Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail. Writing assignments, along with in-class examinations, are required in all sections. This course meets a General Education requirement in the Social and Behavioral Sciences for non majors, is required for the CLJBA and CLJBS majors, and may be used in the SOC majors and minors.

Cross-listed with: CRIMJ 12, SOC 12
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scienc (GS)

CRIM 12H: Honors Criminology
3 Credits

Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. This honors version of Introduction to Criminology is especially designed to be appropriately challenging for Schreyer Honors College students. A key focus of the course is examining the most recent scientific research testing the basic theories in criminology. Students learn the various research methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in criminology.

General Education: Social and Behavioral Scienc (GS)
Honors

GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

CRIM 100: Introduction to Criminal Justice
3 Credits

Overview of the criminal justice system, including legal foundations, processing and correction of offenders, extent and types of crime, victims. CRIMJ 100 CRIM (CRIM) 100 Introduction to Criminal Justice (3)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an overview of the criminal justice system in the United States. Topics to be covered include: the extent of crime in the United States; competing and complementary goals of the criminal justice system; sources of criminal law; the history and development of the system; the functions of police, attorneys, courts and correctional agencies; the interactions between different parts of the system; and the impact of crime on the victim. Students are evaluated on two exams (20% each), two written assignments (30%), and a final exam (30%). This course is a prescribed course in the CLJBA, CLJBS, ADM J BS and ADM J BA majors, and it is also a prerequisite for most 400-level courses in Crime, Law, and Justice.

Cross-listed with: CRIMJ 100
Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scienc (GS)

CRIM 113: Introduction to Law
3 Credits

Introduction to law in society with a focus on criminal law, judicial code, laws of sentencing and corrections, criminal procedure. CRIM (CRIMJ) 113 Introduction to Law (3) Introduction to the law is designed to provide CLJ majors with an introductory level of knowledge of the criminal law, and other legal codes such as the Judicial Code, laws of corrections, probation and parole, and the rules of criminal and appellate procedure. The course will serve as a gateway course to taking more advanced criminology and criminal justice courses. CRIMJ (CRIM) 113 is one of the Prescribed Courses in the CLJ curriculum and is used as a prerequisite for many 400 level courses including CRIM 467 AND 469.

Cross-listed with: CRIMJ 113
United States Cultures (US)

CRIM 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CRIM 201: Presumed Innocent? Social Science of Wrongful Conviction
3 Credits

Social science of how wrongful convictions occur; disparities in the criminal justice system; risks, factors, and policies.

Cross-listed with: SOC 201
General Education: Social and Behavioral Scienc (GS)

CRIM 225N: Organized Crime in Film and Society
3 Credits

IT 225N / CRIM 225N, Organized Crime in Film & Society, examines the relationship between criminological and justice theories regarding organized crime and the portrayal of the mafia in popular Italian American film. The course follows two simultaneous threads of inquiry: an examination of historical and theoretical models of organized crime in the United States and the state and federal laws that address them; and an analysis of how such models are depicted in American films and television about the the Italian American community. By the end of the course, students will gain key literacy skills by identifying varied definitions of organized crime and distinguishing between structural models, particularly La Cosa Nostra and network models. Students will also sharpen analytical and critical thinking skills through written and spoken interpretations of films and the scholarly approaches to studying organized crime (e.g. research methods). Throughout the semester students will also be able to apply knowledge of the social scientific aspects of organized crime to guide their observations and analyses of film and Italian American culture, thus refining Integrative Thinking across the humanities and social sciences.

General Education: Humanities (GH)
General Education: Social and Behavioral Scienc (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

CRIM 249: Criminology Theory and Evidence

3 Credits
This course provides criminology majors a more in-depth understanding of the theories, methodologies, and research results within the scientific discipline of criminology. Students will first focus on concepts and definitions associated with theory development and research methods prior to applying these to historical and present theories of criminal behavior. Sociological theories and methods will be given greater weight in the course. At the end of the course, students will apply what they've learned to theoretically motivate a testable research question and outline this in a short research proposal. Throughout the course, theoretical concepts and evidence will be connected to current and historical criminal justice policies. This course serves as the foundation for later courses on specific substantive criminological topics, such as violence, race, gender, and neighborhood crime. The course also provides students the theoretical and methodological background for completing CRIM 250W, Research Methods in Criminal Justice, which includes an empirical research paper component. The Criminology program learning objectives directly relevant for this course are: - Recognize the causes and consequences of crime at the micro and macro levels and match these with prominent criminological Course Justification perspectives. - Apply theories of crime to explain actual and hypothetical scenarios, behaviors, and trends. - Explain the various social science methods of inquiry and use these to test specific criminological research questions.

Prerequisite: CRIM 12; SOC 12 CONCURRENT: CRIM 100; CRIM 100H

CRIM 250W: Research Methods in Criminology

3 Credits
The purpose of this writing-intensive course is to engage students in the social scientific research process used by criminologists to answer empirical research questions. It is the second course (after CRIM 249) that overviews theory and research in criminology. Students learn to use social science research methods through instructor-led demonstrations and applications of research methods, data analysis exercises, and critical reading of published research. Students apply their research knowledge and skills to an empirical research project completed in a sequence of steps producing written drafts that receive instructor feedback. After completion of this course, students will have acquired the following knowledge and skills: (1) The ability to generate a research question and effectively and efficiently search and review the relevant research literature. (2) A working knowledge of how to apply social science research methods and research designs to answer research questions. (3) The ability to strategically read published research articles to extract different types of information. (4) An understanding of the inductive and deductive aspects of the research process. (5) The ability to collect, analyze, and interpret quantitative and qualitative data. (6) The ability to design a quantitative research project to test hypotheses of interest to criminologists. (7) The ability to summarize and explain in writing the methods used and results derived from studies seeking answers to a common research question. (8) An understanding of social science research methods needed to be critical consumers of research and claims about crime, criminal behavior, and social response to them. (9) A certified knowledge about ethical issues in social science research.

Prerequisite: CRIM 249, STAT 200
violation of norms, and social reaction to the violation of norms. The course focuses on the role of social structure and power in the definition of deviance, on structural, cultural, and social psychological processes involved in deviant behavior, and the dynamics of social reaction to deviance. The course includes some content focusing on criminal deviance, but also emphasizes non-criminal deviance, as well as the role of social movements and social change in constructing and contesting deviance definitions. CRIMJ/SOC/CRIM 012 and CRIM/CRIMJ 250W are prerequisites. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the "Crime" component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

**Prerequisite:** SOC 012, SOC 013, or SOC 005, or permission of program
Cross-listed with: CRIMJ 406, SOC 406
Bachelor of Arts: Social and Behavioral Sciences

CRIM 412: Crime, Social Control, and the Legal System

3 Credits

Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.

**Prerequisite:** CRIM 012, CRIM 013, or SOC 005
Cross-listed with: CRIMJ 412

CRIM 413: Advanced Criminological Theory

3 Credits

This course provides an in-depth look at theories of crime and examines influential empirical studies designed to these theories. CRIMJ 413/CRIM/SOC 413: Advanced Criminological Theory (3) Advanced criminological theory is intended to extend and deepen students' knowledge of core ideas in criminology. The course has four main emphases: 1) learning major schools of thought in criminology, 2) learning about the uses and construction of theory, 3) learning about approaches to integrating criminological theories, and 4) exploring how criminological concerns are grounded in and interrelated with core issues in sociology. The course is offered once a year with 50 seats per offering. CRIMJ 413/CRIM/SOC 012 is a prerequisite. Students will be evaluated on research or analytical papers, written assignments on course readings, and/or in-class essay-style exams. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with a Deviance and Criminology specialization.

**Prerequisite:** CRIMJ 412, CRIMJ 250W
Cross-listed with: CRIMJ 413, SOC 413

CRIM 421: Violent Crime in the United States

3 Credits

The impact of violent crime on victims, their families, and communities; the police process as it relates to violent crime. CRIMJ 421/CRIM (CRIM) 421 Violent Crime (3) This course will examine the nature, frequency, and causes of violence, generally and of assault, robbery, rape, and homicide, specifically. Several different theoretical and research perspectives are reviewed, including biological, psychological, social, and cultural. The course also examines individual and societal responses to violence. Students are evaluated on three objective exams (25% each) and a series of short assignments (25%). CRIM/CRIMJ 421 may be used by both CLJBA and CLJBS degree candidates to satisfy a 400-level course requirement in the major. This course will be offered twice a year with 60 seats per offering.

**Prerequisite:** CRIMJ 012
Cross-listed with: CRIMJ 421

CRIM 422: Victimization

3 Credits

Examines the history, how victimization is measured/studied in social sciences, public policy implications of victimization movement in U.S. CRIM 422 / CRIMJ 422 Victimization (3) Victimology has emerged as an important area of study for the social sciences and an important arena for policy development. This course will familiarize students with the historical development of the research into victimization and the importance of the victims' movement to public policy. Areas explored will include the relationship between victim and offender, the cultural images of victims and their impact on the victim and the response of the criminal justice system to them, and how research has attempted to measure victimization. The course will be one of the supporting courses where the student must select 6 credits at the 400 level.

**Prerequisite:** CRIM 250W
Cross-listed with: CRIMJ 422

CRIM 423: Sexual and Domestic Violence

3 Credits

Legal, sociological, and psychological perspectives on sexual and domestic violence. CRIMJ 423 / CRIM 423 / WMNST 423 Sexual and Domestic Violence (3) (US) This course investigates violence against women, specifically domestic, sexual, and relationship violence. Students will examine some of the legal, sociological, and psychological perspectives about sexual, domestic, and relationship violence as well as the social and cultural roots of violence against women. Students will also gain an understanding of the experiences of victims of domestic and sexual violence as well as the issues presented by perpetrators. Students will evaluate based on performance on exams, and two research papers. CRIMJ 423 / CRIM 423 / WMNST 423 is a supporting course in both the WMNST major and minor as well as a supporting course in the CLJ major. It may also be used to satisfy a GI requirement. This course is offered fall and spring semester with an enrollment of 60 students each semester.

**Prerequisite:** CRIMJ 010
Cross-listed with: CRIMJ 423, WMNST 423

United States Cultures (US)

CRIM 424: Drugs, Crime, and Society

3 Credits

Why do people take drugs? Why and how does society attempt to control drug use and distribution? What is the association between drugs and crime? Exploring questions such as these will be central in CRIM 429. The focus of this course will be examining explanations of drug use and the social construction of drug policies. We will begin by asking the question “What are drugs?” From there, we will discuss theories of drug abuse and the methods used to study patterns of drug use. We will also take an in-depth look at the histories, pharmacologies, and
patterns associated with the most popular drugs in modern society. In
the second half of the semester, we will focus on the social control of
drugs and the connections between drugs and crime. At the heart of
this discussion will be the causes and consequences of modern U.S.
drug policies. We will conclude with a look at alternative drug policies
and what the future may hold for drug use in America. Throughout the
semester, you will be asked to think critically about material and evaluate
its strengths and weaknesses. To foster critical thinking skills, you will
have ample opportunities to discuss topics in class, analyze arguments in
written assignments and in-class exercises, and apply ideas to real world
situations through course projects and presentations.

Cross-listed with: CRIMJ 424

CRIM 425: Organized Crime

3 Credits

This course examines organized crime in terms of historical antecedents,
structure, related theories, and policy issues. CRIM (CRIMJ) 425
Organized Crime (3) This course will provide students with a historical
and theoretical overview of organized crime. Students will gain an
understanding of the structure of organized crime as well as an
understanding of the businesses associated with traditional and
nontraditional organized crime groups. The course will also provide
students with a detailed analysis of state and federal laws and policies
regarding organized crime. Students will be evaluated by two mid-term
exams (25% each), an essay final exam (40%), and class participation
(10%). Crime, Law, and Justice students may use this course to satisfy
a 400-level course requirement in the Bachelor of Arts and Bachelor of
Science majors. This course will be one of the supporting courses from
which students are required to select six credits.

Prerequisite: CRIM 100
Cross-listed with: CRIMJ 425

CRIM 429: Seminar in Criminal Behavior

3-4 Credits/Maximum of 7

This course explores the study of the application of criminological
theories to our understanding of various forms of criminal behavior.
CRIM 429 Seminar in Criminal Behavior (3-4/maximum of 7) The course
is intended to provide in the curriculum an avenue for the faculty to
offer special focus courses on emerging forms of criminal behavior. For
example, during the past several years the criminal justice system has
had to respond to new forms of criminal behavior that have developed
as we have developed new technologies. Recent use of the Internet as
a means of committing crime has been the focus of federal and state
legislation. Thus, societies have developed new forms or new means to
old forms of criminal behavior through the use of technology. CRIM 429
will provide the faculty with the opportunity to develop special criminal
behavior topic courses on offenses such as these and many other topics
on our understanding and ability to explain criminal behavior. The course
can satisfy 400 level requirements for the students in the CLJ major.
This course will evaluate the students using a combination of written
assignments and oral presentations.

Prerequisite: CRIM 012

CRIM 430: American Correctional System

3 Credits

Study of corrections from probation, intermediate punishment, adult
and juvenile correctional institutions to parole. CRIM 430 American
Correctional System (3) This course examines the correctional system
from the sentencing decision to reentry or release from the correctional
system. The course focuses on the choices that decision-makers face in
sentencing, classification and responding to violations by offenders as
well as the problems that offenders face as they confront their treatment/
penalization. As part of the analysis, the course explores the persistent
conflicting expectations that society imposes on our correctional system
and the effectiveness of the system in rehabilitating, deterring and
incapacitating offenders. This course expands on the brief introduction of
the topic in CRIM/CRIMJ 100 and relies on the student’s understanding
of social science research developed in CRIM/CRIMJ 250W to critically
analyze what we know about corrections. This course provides the
opportunity for students to study in depth a major component of the
criminal justice system and is one of five classes students may select
from to meet a major core course requirement.

Prerequisite: CRIM 100, CRIM 250W

CRIM 432: Crime and the American Court System

3 Credits

This course examines the American court system including structure
and the way courts process offenders with special focus on sentencing.
CRIM (CRIMJ) 432 Crime and the American Court System (3) CRIM/
CRIMJ 432, Crime and The American Court system, studies the courts
from the lower courts to the Supreme Court and the various actors that
play important roles in the functioning of the courts. First, the course
studies the jurisdictions of the various courts and their organization
in various state systems as well as the federal courts as well as the
organization of state and federal administrative offices that manage the
courts including the training of judges and the preparation of the court
budget. Subsequent to the development of the basic understanding of
the court jurisdiction and organization, the class studies the roles of
the key actors in the day-in and day-out operation of the courts. In the
spotlight are judges, prosecutors and defense attorneys although the
role of the probation officers and the clerk of courts are also intertwined
with the processing of defendants. Of particular importance in this
component of the course is the development of what is referred to as the
court community and the focal concerns and goals that the court must
consider as it processes cases. An understanding of court community
and focal concerns serves as crucial context for understanding the role
of public policy as it attempts to shift or change the decision making of
the court. One important dynamic of this course is the understanding
that the court, although functioning as an institution to provide a neutral
field on which accusations of criminality are to be played out, operates
similarly to other organizations in that they are to be efficient (move
cases with minimum overhead) and to be effective (provide justice, and
protect the public). How the courts balance these competing demands
and the informal processes that emerge in the processing of defendants
is the key focus of the class. Finally, the course explores the attempts
to reform the courts from the sentencing reforms such as determinate
sentencing, mandatory minimums including &quot;3 strikes&quot; and
sentencing guidelines. These issues highlight the political context of the
courts and adaptability of the courts to attempts to change their values,
and decisions. This course serves as one core 400-level course in the
major. Each student must take two of the five core 400-level courses.
This course studies sentencing from prosecutorial charging decisions through revocation of probation, and the complex goals and responsibilities at sentencing. CRIM 433 Sentencing (3) This course focuses on the key decision in our court system—sentencing. The course covers the historical development of sentencing both within the United States and internationally as a backdrop to the reform efforts of the late 20th Century. The course explores how sentencing has changed from a judge-based discretionary system to a system where numerous restrictions to judicial discretion have been imposed by state and federal legislatures. Students will be evaluated on two essay exams (midterm and final) with the midterm worth 20 and the final 30 percent of the grade. A research analysis paper will be required that will be completed in three stages. The first stage will be the setting forth of a research problem and a scheme for analyzing the data (10%). The second stage will be an oral presentation of the findings (20%). The final stage will be a written term paper on the project (20%). This course will be used by CLJ majors as one of the six credits of 400-level elective credits required in the major.

**Prerequisite:** CRIM 100, CRIM 250W

CRIM 435: Policing in America (3) This course is designed to provide a basic knowledge of the structure of policing in America and to explore findings from research considering police behavior. Students will examine and discuss controversial issues relating to policing in American society. Current trends in policing philosophies and strategies will be identified and their effectiveness will be debated. The relationship between police and citizens will be stressed. CRIM 435 can be used to satisfy a core 400-level course requirement in the CLJBA and CLJBS majors.

**Prerequisite:** CRIM 100, CRIM 250W

CRIM 441: The Juvenile Justice System (3) This course examines delinquency and the juvenile justice system from a variety of viewpoints. It looks at the problems the system is expected to address, how the problems have changed through the ages, how the current juvenile justice system developed, and the programs used to prevent and control delinquency and their effectiveness. By the end of the course, students should be able to think critically about the research and issues in the field. Evaluation methods include exams, brief writing assignments, and a longer paper on policy issues. Students will be evaluated through brief written assignments, a term paper, a mid-term essay, and essay final. This course will be offered twice a year with 60 seats per offering. Students in the major may select CRIM (CRIMJ) 441 as one of several required courses in either the BA or BS program. This course is one of the core courses in the curriculum from which students must choose six credits from five core courses offered.

It also serves as one of the supporting courses in the curriculum from which the students must take six credits at the 400-level.

**Prerequisite:** CRIMJ 100

CRIM 451: Race, Crime, and Justice (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This class is designed to explore the relationship between the criminal justice system and racial minorities in the United States. Students will examine theoretical issues of race and justice, as well as empirical understandings of the relationship between race, crime, and the criminal justice system. Students will endeavor to understand some of the economic, political, and sociological reasons why racial minorities are over-represented in the criminal justice system. Students will also explore normative issues of justice and equity in broader social interactions that influence and are influenced by crime and the criminal process. This course may be used towards the additional courses requirements for the CLJ BS/BA and ADM J degrees. It will also satisfy the Intercultural/International competence (GI). Students will be evaluated by a midterm and final exam, a term paper and class participation. This course will be offered twice a year with 60 seats per offering.

**Prerequisite:** CRIMJ 100

CRIM 453: Women and the Criminal Justice System (3) (US) The course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US) The course will examine the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIM 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.

**Prerequisite:** CRIMJ 100 or WMNST 100

CRIM 459: Communities and Crime (3) This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US) The course will examine the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIM 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.

**Prerequisite:** CRIMJ 100 or WMNST 100

CRIM 459: Communities and Crime (3) This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US) The course will examine the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIM 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.
socioeconomic, demographic, spatial, and informal social control aspects of neighborhoods in promoting or buffering crime. We will address the patterns, concepts, theories, methods, and policies related to communities and crime. We will critically assess theory and research on the effects of neighborhood structure and social organization on crime, focusing in particular on the classic and contemporary thinking on poverty, social disorganization, disorder, collective efficacy, institutional trust, cultural heterogeneity, segregation, immigration and how they affect criminal behavior and victimization. Through readings, class discussions, and activities, writing projects, and presentations, you will be given the opportunity to reflect on what you are learning and to apply the theoretical concepts to real-life examples and to new contexts in and out of the class.

**Prerequisites:** SOC 12 or CRIM 12

Cross-listed with: SOC 459

CRIM 467: Law and Society

3 Credits

Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials. SOC (CRIM/J/CRIM) 467 Law and Society (3) (BA) This course meets the Bachelor of Arts degree requirements. Law and society teaches students' knowledge of key concepts and core ideas about the role of law in society. The course will cover the basics of key legal philosophies, major social science theories of law and society, research in law and society, the structure of the legal profession, and vital contemporary issues involving the role of law in society. CRIM/CRIMJ 113 and CRIM/CRIMJ 250W are prerequisites. The evaluations methods will include written assignments on course readings, and essay-style exams. Law and Society may be counted toward the credits required for the B.A. and B.S. in Crime, Law and Justice. It would fulfill one of the 400-level requirements in the "Law" component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

**Prerequisite:** CRIM/J100 or CRIM/J113 or permission of program

Cross-listed with: CRIM 467, SOC 467

Bachelor of Arts: Social and Behavioral Sciences

CRIM 469: Seminar in the Law

3-4 Credits/Maximum of 7

The focus of this seminar is the law such as the laws of sentencing, appellate course decisions and their impact. CRIM 469 Seminar in Law (3-4 per semester/maximum of 7) This seminar explores topics related to the law and will vary from semester to semester depending on current events, faculty research and other areas of study related to the criminal law. Evaluation methods will vary depending on the focus of the seminar, however, student evaluations will rely on techniques such as writing and presentations to enhance student presentation skills as well as evaluate their understanding of the course material. Students may take this course twice. This course serves as one of the supporting courses from which students must select 6 credits at the 400-level. It also serves as one of the additional courses from which students must select 18 credits under the Legal Studies Option.

**Prerequisite:** CRIM 113

CRIM 480: Research Topics in Crime, Law, and Justice

1 Credits

Students are exposed to a variety of research topics related to crime, law, and justice. CRIM 480H CRIM 480H Research Topics in Crime, Law, and Justice (1) This one-credit seminar is intended for Scholars in the fall semester of their third year who intend to complete their Honors thesis in Crime, Law, and Justice. Students are exposed to a wide variety of research topics related to crime, law, and justice. The specific topics depend on the interests of the students and on the current research being conducted by the faculty of the Crime, Law, and Justice program. Students read and summarize research reports, engage in discussions with Crime, Law, and Justice faculty, and attend lectures by visiting scholars. At the conclusion of the seminar, students select a research topic for their honors thesis and a CLJ

**Prerequisite:** CLJ major and admission to the Schreyer Honors College Honors

CRIM 481: Information Literacy in Crime, Law, and Justice

1 Credits

Students are exposed to a variety of information sources related to crime, law, and justice. CRIM 481H CRIM 481H Information Literacy in Crime, Law, and Justice (1) This one-credit seminar is intended for Scholars in the spring semester of their third year who intend to complete their honors thesis in Crime, Law, and Justice. This course surveys the structures of information, patterns of information retrieval, and the resources and technologies used to research topics related to crime, law, and justice. Students complete a series of assignments involving information retrieval and the effective use of information technologies. This includes working with their faculty supervisor and collecting information on the topic they have selected for their honors thesis. At the conclusion of the class, students present a research proposal for their honors thesis, including a review of the relevant literature and a schedule for completing the thesis during their fourth year.

**Prerequisite:** CLJ 480H Honors

CRIM 482: Seminar, Criminal Justice Agency Administration

3 Credits

Relates organizational and public policy management approaches to police, courts, and correctional institutions. CRIM (CRIM/J) 482 Seminar, Criminal Justice Agency Administration (3) In this course, you will learn about the nature of criminal justice organizations, individual and group behavior within the system, and the issues involved in reforming the system. This course will NOT teach you how to become an administrator in the criminal justice system, but hopefully will teach you about the issues and theories surrounding organizations and reform and most importantly, teach you to think and communicate (in both written and verbal form). After taking this course, you should have a more accurate perception of criminal justice organizations and have a better understanding of the complexity surrounding the administration and management of these organizations. Criminal Justice Agency Administration may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice.

**Prerequisite:** CRIM 100

Cross-listed with: CRIM/J 482
CI 185: Principles of Social Justice in Education

3 Credits

This course explores the tensions between theory and practical application and the work of public policy and administration. Students will be evaluated on essay exams and a term paper. This course is intended to be a capstone course for advanced undergraduates. The course will draw on the broad range of course work that students will have taken prior to taking this course to develop a course that takes what we know about the policies and the justice system and focus on public policy as it relates to these areas. The course may be used toward the six credits required at the 400 level under Additional Courses or as one of the courses under the Legal Studies Option.

Prerequisite: CRIM 100, CRIM 113, CRIM 250W, 6 credits of 400-level CRIMJ courses and 7th semester standing

CI 195: Early Observation Experience for Teacher Preparation

1-2 Credits/Maximum of 2

Early observational work in educational settings with a variety of age and grade levels.

CI 200: Peer Tutoring

1 Credits

Prepares students to develop successful practices as a peer tutor.

CI 210: Small Group & One-on-one Tutoring

1 Credits

The course gives students knowledge in one-on-one peer tutoring as well as in a small group setting.

CI 250: Education Research: Issues and Approaches

3 Credits

Introduction to frameworks and methods for education research, including classroom-based and non-classroom-based research. This course serves as an introduction to the major issues and traditions surrounding research in education. Educational research spans the full range of settings in which people learn and/or teach, including schools and classrooms but also non-school settings such as community, therapeutic, or workplace environments. This research is carried out within a broad range of intellectual traditions and using a diverse set of methodologies as well. Further, some educational research is carried out by practitioners as they engage in their daily work (such as teachers conducting classroom inquiry), while others study education from non-practitioner perspectives. This course will serve as an overview of major questions, frameworks, and methods that characterize educational inquiry, serving as an introduction to the broad set of frames for studying education. In addition, the course will address controversies surrounding the conduct and utility of educational research. The course is appropriate for undergraduate students interested in engaging in independent research, honors theses, or collaboration on faculty research projects - or those simply interested in becoming more informed consumers of research on education. Students will read examples of research in different education subfields, interact with faculty from various subfields in education, and consider how their own educational questions might be approached. Students will also learn about the dissemination of education research in journals and presentations. Upon finishing the course, students will be prepared to develop a research proposal suitable for an undergraduate project such as a thesis or capstone paper.
CI 280: Introduction to Teaching English Language Learners

3 Credits

Introduction to language, culture, instruction, assessment, and professionalism as they relate to teaching English Language Learners in U.S. schools. CI 280 focuses on the development of foundational knowledge to successfully assist English language learners in U.S. school contexts. The basic premise of the course is that teachers play an important role in creating a positive classroom learning environment and bringing school success for English language learners. This course is designed to develop essential dispositions, skills, and knowledge for teacher education students to fulfill their important role. Course objectives are to understand culture, language, learning contexts, and pedagogy. Culture focuses on a) sociocultural characteristics of English language learners, b) how English language learners' cultural communication and learning styles affect the learning process, c) how English language learners' cultural values affect their academic achievement and language development, d) negative effect of cultural bias in instruction, materials and assessments, and e) the importance of developing cross-cultural competence in interactions with colleagues, administrators, school and community specialists, students and their families.

Prerequisite: EDPSY 10; EDPSY 14; EDTHP 115
General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Key Literacies

CI 285: Active Engagement for Social Justice in Education

3 Credits

The course prepares students for pedagogical thinking and active engagement in social justice education in community and school-based contexts. This course is a core class of the Social Justice in Education minor and is taken either together with or subsequent to CI 185, Foundations of Social Justice in Education. It builds on the key theoretical content of the minor's Foundations course, introducing students to the major patterns of thought that have shaped the history of education and curriculum design in the United States, and guiding students through a process of curricular reasoning. Students will engage in argumentation to investigate ways in which theoretical concepts have implications for the design of curricular interventions. Case studies or 'live' examples of social justice-oriented advocacy or educational projects being implemented in the US and abroad will provide a space for analysis and discussion. Students will explore curricular assumptions, identify instructional objectives, and articulate learning outcomes based on the cases they explore. Additionally, an action research project conducted in a classroom or community group will ask students to identify and research a problem, and develop a preliminary plan of action in collaboration with community or school-based stakeholders. Students are introduced to ethnographic data gathering techniques, problem-posing, and pedagogical reasoning and documentation. Team-building, listening and communication skills, and reflective practices are emphasized. A final project encourages students to document and express their work through visual and digital technologies directed at both their peers and the community partners.

Concurrent Courses: CI 185

CI 295: Introductory Field Experience for Teacher Preparation

1-3 Credits/Maximum of 6

Selected observation of school situations with small group and tutorial participation.

Prerequisite: second-semester standing, Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm

CI 295A: Introductory Field Experience for Teacher Preparation

1-3 Credits

CI 295A Introductory Field Experience for Early Childhood Education (1-3)

CI 295A is designed to enable students interested in early childhood education as a potential major and career to gain experience observing and assisting in a variety of school and community settings. Students will be engaged in observing as well as tutoring individual children and small groups of children in pre-kindergarten settings as well as in kindergarten through fourth grade settings. As students have not yet been exposed to methods of instructional planning and delivery, their tutoring of individuals and small groups will be carried out under the direct supervision of a professional teacher. Through their observation and participation in these educational settings, students will develop an awareness of observation as a tool for understanding and analyzing educational environments, teaching and learning. They will develop an understanding of the nature of participant observation as well as a variety of frameworks and strategies that can be used for observation as well as the skills necessary to communicate observations professionally and ethically. Engaging in extended observations in educational settings provides students with an opportunity to enrich and deepen their understanding of a variety of educational concepts that they will encounter in prerequisite or concurrent courses including child development, English language learning and development, principles of human learning, individual differences in human ability including special needs students, cultural diversity, and contemporary issues in education and their impact on childhood educational settings. Finally, CI 295A will provide an opportunity for students to examine childhood education as a future career. They will be introduced to notions of teaching in general as a career as well as to specialized aspects of teaching in both pre-kindergarten and elementary school settings. Students will examine their own biographies as learners and the implications of their biographies for the development of a teacher identity and the potential suitability of childhood education as a career. Students will also be engaged in examining a variety of codes for professional and ethical conduct for educators. Through examining, critiquing and synthesizing these various articulations of professionalism, students will begin the development of a personalized code of ethical, and professional conduct.

Prerequisite: second semester standing; Concurrent: HD FS229or CI 280 or EDPSY014 or EDTHP115 or SPLAED400

CI 295B: Introductory Field Experience in Middle Level Education

1-3 Credits/Maximum of 3

CI 295B Introductory Field Experience for Middle Level Education (1-3)

CI 295B is designed to enable students interested in middle level education (Grades 4 to 8) as a potential major and career to gain experience observing and assisting in a variety of school settings. Students will be engaged in observing as well as tutoring individual children and small groups of children in middle level educational settings.
As students have not yet been exposed to methods of instructional planning and delivery, their tutoring of individuals and small groups will be carried out under the direct supervision of a professional teacher. Through their observation and participation in these educational settings, students will develop an awareness of observation as a tool for understanding and analyzing educational environments, teaching and learning. They will develop an understanding of the nature of participant observation as well as a variety of frameworks and strategies that can be used for observation as well as the skills necessary to communicate observations professionally and ethically. Engaging in extended observations in educational settings provides students with an opportunity to enrich and deepen their understanding of a variety of educational concepts that they will encounter in prerequisite or concurrent courses including child development, English language learning and development, principles of human learning, individual differences in human ability including special needs students, cultural diversity, and contemporary issues in education and their impact on middle level educational settings. Finally, CI 295B will provide an opportunity for students to examine middle level education as a future career. They will be introduced to notions of teaching in general as a career as well as to specialized aspects of teaching in both pre-kindergarten and elementary school settings. Students will examine their own biographies as learners and the implications of their biographies for the development of a teacher identity and the potential suitability of middle level education as a career. Students will also be engaged in examining a variety of codes for professional and ethical conduct for educators. Through examining, critiquing and synthesizing these various articulations of professionalism, students will begin the development of a personalized code of ethical, and professional conduct.

**Prerequisite:** second semester standing, HD FS229 or equivalent

CI 295D: **SPECIAL TOPICS**

3 Credits

CI 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CI 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CI 304N: Food, Farms & Justice: What’s Education Got To Do With Them?

3 Credits

This course intends to unite students’ minds, hearts, and bodies in an historical, sociological, and experiential exploration of food and farms and their educational possibilities. Students’ minds will be engaged as they explore the 20th century history, contributions, and legacy of industrial agriculture and the emergence of alternative approaches related to food and farming in recent decades. Students’ hearts will be engaged as they consider their own relationship to food, to soil and place, and to learning. Finally, students’ bodies will be engaged as they directly participate in farming/gardening and communal meal preparation and enjoyment. The uniting of mind, heart and body culminates as students become teachers - applying their embodied knowledge in the creation of learning activities that are taught to others. Guiding questions for students’ explorations include: (1) How is food - its cultivation, preparation and enjoyment - a cultural, ecological and moral activity? and (2) How might farm/garden based education cultivate abiding relationships between people and their places/communities, their soils, their bodies, and to more just and humane relationships to others? In the first half of the course, students will be introduced to influential writers representing diverse perspectives within the humanities. The aim is that students conduct a reckoning of industrial, large-scale and corporate orientations to agriculture. Why? To discern desirable alternatives that promote the health and well-being of people, soils, and communities. Students will discern a vision of a just, sustainable and meaningful life. In the second half of the course, students apply their understandings of food, farm, justice and sustainability to developing farm/garden based learning experiences for others. To this end students will be introduced to farm/garden based education; constructivist, student-centered learning theories; curriculum development approaches; and the design of performance assessments. Finally, having studied instructional/curricular theory and practice, students will apply their learning through a “field-based” teaching practicum, showcasing their skills in developing farm/garden based curriculum and instruction.

**General Education:** Humanities (GH)

**General Education:** Social and Behavioral Scienc (GS)

**GenEd Learning Objective:** Integrative: Interdomain

**GenEd Learning Objective:** Soc Resp & Ethic Reason

CI 333: Education and the Student in Recovery

3 Credits

This highly interdisciplinary course provides a broad exploration of how students accomplish abstinence from Alcohol Use Disorders (AUDS) and other Substance Use Disorders (SUDs) in high-risk environments with the support of Recovery High Schools and Collegiate Recovery Programs. In particular, the course examines the problem posed by alcohol and substance use disorders on high school and college campuses, and explains the benefits of expanding the continuum of student health services to include ongoing support for the major lifestyle changes required to sustain recovery from chronic health conditions. Educational environments can pose challenges to students in recovery, and without proper support, students often return to active use of alcohol and other substances, which often invites disastrous life consequences, including educational failure. With the proper supports in place, students often thrive across multiple domains. Recovery High Schools provide access to social systems, coping mechanisms, recreational activities, and pro-recovery peer groups. Collegiate Recovery Programs are expanding rapidly: they are typically low-cost, featuring small staff, a space on campus in which to meet, a peer-support community, and recovery-protective programming. A growing body of evidence suggests that these programs have very low relapse rates, low attrition, and higher GPAs than their host institutions. The course builds awareness of terminology, especially in relation to stigma-reduction and recovery messaging. It explores various theoretical contexts, including ecological theory and resiliency theory. It explores new paradigms in the management of chronic health conditions, through Recovery-oriented Systems of Care (ROSC) and the expansion of the continuum of care that colleges and universities offer their students to include ongoing support for recovery. Since participation in 12-step recovery programs is very high in RSHs and CRPs, we explore the known mechanisms of 12-step programs such as Alcoholics Anonymous and Narcotics Anonymous.
Anonymous. Building on these insights, the role of narrative in making “storied” identity changes is also explored. The course also examines the way in which educational and recovery curricula complement one another to bring about lasting personal transformations. Students will apply their understandings in the course by completing a final project in which they demonstrate various ways that the course content might inform the work of practitioners who work with students in recovery in healthcare, education, and beyond. This course is especially suited for students intending to work in schools and other education-related settings, including Recovery High Schools and Collegiate Recovery Programs.

CI 385: DC Social Justice in Education: Empowering Communities through Transformative Teaching

3 Credits

CI 385 is the first course in a two-part sequence, the "DC Social Justice in Education Experience." This course is ordinarily followed by a two-week teaching internship in Washington, DC (CI 395). Together, these courses aim to increase students’ capacity to understand diversity issues, while living and working in diverse, multicultural residential settings and workplaces. The experience infuses diversity issues, topics, and perspectives into a sequence for undergraduates that focuses on the skill set necessary for advocacy in educational equity and social justice. It is a hands-on experience that delivers a service learning opportunity for Penn State students to work with diverse, underserved communities in the District of Columbia. CI 385 is a required preparatory course for students who want to participate in the Washington DC CI 395 internship, and students are expected to enroll in CI 395 upon successful completion (a grade of a C or better) of CI 385.

CI 387: Education, Culture, and Society in Brazil and Colombia

3 Credits

Given the increasing need to instill students with global perspectives, students from a range of backgrounds and academic majors will benefit from an in-depth exploration of the educational systems, cultures, and societies of Brazil and Colombia – additionally, the course may also prepare students for (optional) summer travel to Brazil and/ or Colombia (provided they are interested in either of both of those opportunities). Students are invited to use their emerging understandings to reflect upon the U.S. educational system, its culture, and its society. Throughout the course, students will examine the structure of educational systems, educational policy, educational inequality across nations, education as a constitutional right, colonial histories, Dependency Theory, government corruption, urban and rural environments, labor issues, economics (i.e. Marxism, socialism, communism, inflation, currency devaluation, neoliberalism), politics, Colombia's ongoing civil war, and Brazilian culture (including music, beauty obsession, and sports). In addition, the course also provides a grounding in basic travel skills and basic Portuguese. Although the course’s main emphasis is on education, students from a broad variety of backgrounds and educational interests are encouraged to enroll, since they are likely to find a broad array of topics that will increase their international acumen considerably.

Honors

CI 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

CI 400: Introduction to Research Literature

3 Credits

Introduction to research literature and methodology; stress on interpretation, sources, and research reporting.

Prerequisite: student teaching or teaching experience

CI 405: Strategies in Classroom Management

3 Credits/Maximum of 3

Managing and coping with disruptive student behavior in instructional settings so that they support the teaching/learning process. EDLDR 405 / CI 405 Strategies in Classroom Management (3)This course has been designed to engage students in in-depth examination of the process of creating and sustaining a classroom learning community that fosters and enables success for all children. Emphasis is placed on understanding a variety of theoretical models of classroom management as well as observing and studying individual children to develop a better understanding of their needs. The result should be the development of a coherent set of beliefs concerning the creation of classroom learning environments that support learners and meet their individual needs.

Prerequisite: teaching experience or supervised practicum experience Cross-listed with: EDLDR 405

CI 444: Writing Support for IUG and Honors Scholars

3 Credits

he purpose of this course is to support IUG/Reading Specialist MEd students in writing their Master's papers as well as Schreyer Honors Scholars in The College of Education writing their Honors theses. The course provides an overview to the conventions of academic writing, and divides a major task into manageable sections. This class walks students through each section, provides models, and engages students in the actual practice of writing. Substantial working time is dedicated to writing the thesis. Students often have more faith in their ability to structure writing time into their week than is actually warranted. This course provides structured writing time, and students work in close proximity to other writers and to instructor feedback.

Prerequisite: 4th Semester Standing

Honors

CI 460: The Creative Child

3 Credits

This course will explore the relationships among the various arts and material inquiries and learning for children in the preschool and elementary years via research, theory, and pedagogical application. CI 460 is one component in the PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, art, children, and communities. Students will learn about theories of child art, creativity, and multimodal learning as they engage in their own creative processes
and plan to integrate the creative arts in early childhood and elementary classrooms.

**Prerequisites:** CI 295A and EDTHP 115

**CI 485: Social Justice in Education Capstone Course**

3 Credits

This capstone course is a culminating experience taken at the end of the Social Justice in Education minor. In this course, students apply theory toward action and develop meaningful partnerships with an appropriate community. It provides students the opportunity to revisit major ideas and themes learned during minor coursework. In doing so, students reflect on their learning journeys, synthesize key understandings, and complete a community-oriented project. Key components of the capstone project include manifesting theories into action; developing meaningful partnerships with community stakeholders; advocating for educational equity; and designing and implementing justice-focused curriculum for schools, community-based educational programs, or other non-traditional educational settings. Students will assess community needs, while working collaboratively to prepare a civic action plan/local initiative. Upon completion of the capstone experience, students present their final reflections to colleagues - presentations that examine their growth throughout their studies and lay out their trajectories as advocates for social justice in education.

**Prerequisites:** CI 185, CI 285 and one course from the list below AEE 100; AFAM 103; AFAM 431; AFAM 492; BBH 446; CED 375; CIED 440; CMLIT 100; CRIMJ 230; CRIM 453; EDTHP 200; EDTHP 440; ENGL 245; GLIS 101; GLIS 102; HDFS 410; PHIL 437; PLSC 428; PLSC 451

**CI 492: Identities, Power and Perceptual Pedagogies in Teaching and Learning**

3 Credits

Students will perform inquiries into the intersections of identities, power, and pedagogical formations in relation to urban teaching/learning contexts. AFAM 492 / CI 492 / EDTHP 492 Identities, Power and Perceptual Pedagogies in Teaching and Learning (3) In this course, students will take part in inquiries into the intersections of identities, power, and perceptual pedagogies, particularly as these phenomena pertain to methods of teaching and learning in urban contexts. To develop new knowledge and analytic skills, students will be introduced to perceptual and conceptual frameworks that assist deep engagements with youth- and teacher-centered case studies. These cases will depict actual lived experiences among racially and economically diverse students and teachers in urban contexts.

**Prerequisite:** 5th semester standing

Cross-listed with: AFAM 492, EDTHP 492

**CI 495: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

**CI 495A: Clinical Application of Instruction - PK-4**

1-6 Credits/Maximum of 6

CI 495A Clinical Application of Instruction – Early Childhood Education (3) The emphases in CI 495A are on meeting professional expectations of teaching professionals and planning and teaching lessons. Teacher candidates are placed in classrooms in the Central Region of Pennsylvania, which is an area within a 70-mile radius of State College. A university supervisor observes candidates on a weekly basis during this field experience. In addition to the on-going field experience, teacher candidates enrolled in CI 495A meet in weekly seminars. During seminars, candidates are engaged in discussions addressing lesson planning, differentiation of instruction, classroom management techniques, and teacher professionalism. CI 495A is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

**Prerequisite:** CI 295, EDPSY014, EDTHP115. Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm; Concurrent: regular professional methods courses in area of certification.

**CI 495B: Clinical Application of Instruction - Middle Level Education**

3-15 Credits/Maximum of 15

CI 495B Clinical Application of Instruction–Elementary and Kindergarten Education (3) CI 495B for Middle Level Education is a full-time teaching practicum. It provides an opportunity for teacher candidates to integrate concepts, theories, and ideas from their coursework. Specifically, CI 495B engages candidates in examining 1) what it means to be a professional and establish professional relationships with colleagues, students, and families, 2) how to use various tools (e.g., observation, writing, reflection, teaching, case studies, etc.) that are available to them in learning to be a teacher, 3) how to make connections across the various courses and experiences they are taking during the semester, and 4) how effectively they are developing their knowledge and skills as a beginning teacher and what sources of evidence they should use in judging their effectiveness. Teacher candidates in CI 495B are expected to achieve desired outcomes in four domains: 1) planning and preparing for student learning, 2) teacher, 3) inquiry and analysis of teaching and learning, and 4) fulfilling professional responsibilities. CI 495B is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

**Prerequisite:** CI 295, EDPSY014, EDTHP115. Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm; Concurrent: MTHED420, SCIED458, SS ED430W

**CI 495C: Clinical Application of Instruction -- Secondary Education**

3 Credits/Maximum of 3

Practicum situation for demonstration of selected instructional strategies and management skills acquired in professional training. To be offered only for Satisfactory/Unsatisfactory grading.

**Prerequisite:** CI 295, EDPSY014, EDTHP115. Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm; Concurrent: special methods course(s) in area of certification
CI 495D: Practicum in Student Teaching—Childhood and Early Adolescent Education
12 Credits/Maximum of 12
Full-time classroom instruction in early childhood and elementary education. Students supervised by University personnel and practicing teachers. No concurrent courses other than CI 495F permitted.
Prerequisite: CI 495A or CI 495B; a grade of C or higher in all specified and professional courses. Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm

CI 495E: Practicum in Student Teaching—Secondary Education
15 Credits/Maximum of 15
Full-time classroom instruction in secondary education. Students supervised by university personnel and practicing teachers. No concurrent courses permitted.
Prerequisite: CI 495C, seventh-semester standing, and grade of C or higher in all specified and professional courses. Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm

CI 495F: Professional Development Practicum
3 Credits/Maximum of 3
Instruction concurrent with student teaching practicum. Students focus on the solution of instructional problems identified at the practicum site.
Prerequisite: Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm; Concurrent: CI 495D

CI 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CI 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Cybersecurity Analytics and Operations (CYBER)

CYBER 99: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 100: Computer Systems Literacy
3 Credits
This is an introductory university-level course in computer systems literacy. The history, architecture and operation of computing systems and underlying computing theory are covered. The intent of this course is to ensure that students with diverse backgrounds can gain the information technology fundamental skills and understanding to succeed with subsequent in-depth courses in the Cybersecurity Analytics and Operations curriculum. At the same time the general nature of the introduction may make it useful for other programs that involve education in concepts and skills relating to information and computing systems.

Enforced Prerequisite at Enrollment: CYBER 100S and IST 140

CYBER 294: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CYBER 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CYBER 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 342W: Cyber Incident Handling and Response
3 Credits

Cyber Incident Handling and Response is an intermediate course appropriate for students who are majoring in Cybersecurity. This course provides the student with the background, experience and perspective that is required to document organizational preparation for cyber incidents, document cyber incident impact and resolution, document response strategies, as well as integrate business continuity planning into the organization. This is a writing intensive course, which requires each student to individually document cyber security incidents and communicate the impact of those incidents to the organization. Peer writing evaluation will help students to consider how effective their written communication skills are. Team writing assignments will provide students with the real-world experience of writing portions of organizational documents such as preparedness documentation, documenting the organization of computer incident response teams, documenting organizational disaster recovery plans, and documenting post-incident recovery plans. Students will receive peer feedback on their writing assignments, as well as direct feedback from the instructor with a goal of improving writing skills and conforming their writing styles to the expectations of organizations and industry.

Enforced Prerequisite at Enrollment: CYBER 262 and SRA 221 and SRA 231

Writing Across the Curriculum

CYBER 362: Cybersecurity Analytics Studio
3 Credits

Cyberattacks involve advanced and sophisticated techniques to infiltrate corporate computers, networks and enterprise systems and critical infrastructures. Types of attacks include advanced malware, zero day attacks and advanced persistent threats. Advance warning about attackers and intelligence about the threat landscape is considered by many security leaders to be essential features in cyber-defense. The massive increase in the rate of novel cyberattacks has made data-mining-based analytics techniques a critical component in detecting security threats. Big data analytics in security involves the ability to gather massive amounts of digital information to analyze, visualize and draw insights that can make it possible to predict and stop cyberattacks. This studio course teaches fundamental data-driven cybersecurity analytics skills using programming skills acquired in earlier courses. The course will be divided into three modules. The first module prepares students for security analytics, by refreshing or making them familiar with two popular data analytics programming languages (e.g., R and Python). The second module focuses on understanding the key cybersecurity analytics process including data exploration, data visualization and data preparation and examining popular data mining algorithms such as linear and logistic regression, decision trees, support vector machine, and neural networks and similar techniques for security analytics. In the third module, students use analytics process and methods for selected cybersecurity problems, such as security breaches, ZeroAccess Infection, Log Analytics, Access Analytics and Web Hacking Analytics. Through this studio course, the students will gain concrete understanding of security analytics processes, methodologies and how to apply these concepts and tools to real-world cybersecurity. A major component of the course will be several hands-on exercises and a final team-based project. Hands-on exercises provide students with knowledge, skills and hands-on experience of learning security analytics process and methodologies to address security problems. The team-based project allows students to apply what they have learned to address real world security threat. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Enforced Prerequisite at Enrollment: STAT 200 and IST 261 and CYBER 262 and enforced co-requisite SRA 365.

CYBER 366: Malware Analytics
3 Credits

Malware Analytics is an intermediate course required for students who are majoring in Cybersecurity Analytics and Operations. It is a three-credit hands-on course that teaches principles and practice of malware detection, analysis, and defense. The course begins by introducing the foundations of malware, including history, vulnerability, types, analysis methods, and defenses. It then builds on this foundation by teaching students how to address malware issues using analysis techniques such as reverse engineering and static program analysis, as well as how to use analytic approaches such as automatic malware trace classification and clustering. The course relies extensively on hands-on laboratory activities to help students obtain practical experience in malware analysis and analytics. Through this course, the students will gain concrete understandings on principles and practices of malware analysis and defense.

Enforced Prerequisite at Enrollment: IST 242 and IST 261 and CYBER 262

CYBER 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 440: Cybersecurity Capstone
3 Credits

Cybersecurity Capstone is an advanced, culminating course for students who are majoring in Cybersecurity. This course provides the student with a practical exercise, designed by the instructor. The initial weeks of the semester provide the student with an overview of several analytic...
frameworks that are used in cybersecurity shops and organizations. Then, the student reviews specific technical analysis methods in malware, static and dynamic analysis, file system exploration, security log file analysis and network analysis. The findings from these analyses are then integrated into the analytic framework, gaps are identified, further analysis is conducted to fill the gaps. In the final weeks of the semester, students construct a high level briefing that supplies appropriate levels of technical detail to top level executives.

**Enforced Prerequisite at Enrollment:** CYBER 342W and ENGL 202 and 7th semester standing.

**CYBER 494:** Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**CYBER 496:** Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**CYBER 497:** Special Topics
1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**CYBER 499:** Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**International Cultures (IL)**

**Dance (DANCE)**

**DANCE 100:** Dance Appreciation
3 Credits

Explore dance as a vital, communicative and performing art, reflecting social values and cultural beliefs. DANCE 100 Dance Appreciation (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. An introduction to dance as a vital, communicative and performing art reflecting social values and cultural beliefs. Through a combination of lectures, video samples, and active participation in scheduled movement classes, lecture demonstrations and live performances, this course will examine a wide range of dance across cultures and time periods. Students will learn to identify the key components of movement: time, space, shape and effort. Once identified, these elements will become the building blocks for further analysis and understanding of the myriad forms of movement that can be called dance. Emphasis will be placed on the integration of dance within various cultural belief systems and the relationship between dance and cultural identity. The influence of social and political values as they relate to the development of specific dance forms will also be examined. Students will be graded on their ability to clearly and intelligently articulate their observations and analysis through participation in threaded discussions and on-line quizzes. Students will also be graded on their level of participation in scheduled movement classes, lecture demonstrations and attendance at live performances. The mid term and final exams will assess the students ability to integrate and synthesize the experiential components of the course.

Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)
General Education: Arts (GA)

**DANCE 170:** Conditioning for Dancers
1.5 Credits/Maximum of 3

This course is designed to improve technique through strengthening, toning, improving coordination, increasing balance, and helping alignment. The course also addresses common areas of injury.

**Prerequisite:** and dance course

General Education: Health and Wellness (GHW)

**DANCE 199:** Dance Foreign Study
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**DANCE 220:** Mojah Fusion Dance
1.5 Credits/Maximum of 3

Mojah introduces intermediate/advanced level dance students to a unique dance technique that blends Horton, Dunham, West African and jazz movements in one form. DANCE 220 Mojah Fusion Dance (1.5 per semester/maximum of 3) DANCE 282 is an introduction to the Mojah dance form. Moja is a Swahili term meaning one. Mojah fuses various forms to create a unique style of modern African dance that blends Horton, Dunham, West African and jazz movements into one form. The objectives of the course include: learning/executing Mojah terminology and technique; and learning/executing the techniques from which Mojah is derived. Mojah is a dance course and is directly related to other dance courses, theatre/arts courses and African American studies courses.

**Prerequisite:** DANCE231, DANCE241 or DANCE261 or permission of the program

**DANCE 221:** Introduction to African Dance and Culture
1 Credits

An introduction to African dance based in a holistic approach integrating music, movement, drama, costume, and vocalization.

**DANCE 222:** Beginning Hip Hop Dance
1 Credits

Beginning Hip Hop dance introduces the student to Hip Hop culture through dance, free expression with the body/freestyle and choreography. DANCE 222 Beginning Hip Hop Dance (1) Hip Hop dance is designed for students with an interest in Hip Hop dance/culture. This class introduces students to Hip Hop through movement that includes freestyle dancing, locomotive movements, and choreography. In addition, this
An introduction to the techniques of ballet. DANCE 231 Beginning Ballet I (1) In DANCE 231, the student will learn the basics of ballet. These include the structure of a ballet class and the required focus and behavior of the successful student, as well as the fundamental positions and vocabulary of movement characteristic of ballet. The course is designed for any beginning student of ballet and, in particular, to instruct the first-year BFA Music Theatre candidate with a foundation of technique to support their success in the prescribed sequence of dance courses in that major. The student will be introduced to alignment exercises from the Zena Rommett floor barre technique and the Pilates technique to develop strength and flexibility in their execution of dance. The course also is designed to help the student develop greater physical self-awareness and discipline. The student’s grade is determined by their attendance, attitude, and progress. More than three absences or lateness will affect the grade. Their attitude should be positive, receptive to correction, and exhibit an eagerness to work, and their progress should reflect growth in their ability to perform the choreography and to know the terms used. The student will be required to identify and explain the meaning of the terms used in class, as well as perform choreography with confidence and a sense of character. Students enrolling in this course should have successfully complete DANCE 231 or have received the permission of the instructor. For the BFA Music Theatre candidate, this course serves as a prerequisite for DANCE 241, Beginning Jazz I. Part of the final exam for this course will be a performance juried by members of the School of Theatre Performance Faculty. Their evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance course sequence. Required dress for this course for women is black leotard, pink or tan tights, pink ballet shoes and for men is black tights, white t-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

Prerequisite: DANCE 231

DANCE 240: Jazz Dance

1.5 Credits

An exploration of jazz dance technique throughout history. DANCE 240 Jazz Dance (1.5 per semester/maximum of 6) (GA) (BA) This course meets the Bachelor of Arts degree requirements. DANCE 240 is an exploration of Jazz Dance. The course is designed for any student with
an interest in Jazz Dance and to support the Dance Studies Minor. This class explores the many styles and genres of jazz dance developed through American history. Emphasis is placed on the development of a personal jazz dance style, exploration, and self-expression. Jazz dance, as a technique class, has at its core, increasing the strength, alignment and flexibility of each dancer. Each semester the dancer will be introduced to different styles of jazz which will require a changing perspective of the body and its movement. Movement classes will be supported through viewing a variety of the dance styles being studied. In each style, daily movement experiences will be introduced to build coordination, flexibility and strength, as well as the understanding of the particular dance idiom. These experiences will take place in the center floor, across the floor accumulations, and culminate in a combination of all these experiences in a dance to develop their potential as a performer. Connections to the social aspect of jazz dance will be consistently addressed, as all dance forms are vernacular in origin. Jazz dance, being a true American dance form, has its roots in the late 1800s and early 1900s with a pre-history in Africa and West Indies. The desire for self-expression through physical movement drove the dance form to a formal art expression on the concert stage. This connection to the vernacular has been maintained in the jazz dance idiom. The exploration in Jazz Dance emphasizes the individual expression through movement in response to music particular to the style being presented in each semester.

Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 241: Beginning Jazz I
1.5 Credits

An introduction to the techniques of Jazz dance. DANCE 241 Beginning Jazz I (1) DANCE 241 is an introduction to basic jazz techniques. The course is designed for any beginning student with an interest in jazz dance, those who are BFA Music Theater candidates, and Dance Minors. The work will include awareness of space as related to the barre, floor, other dancers, and environment. The student will learn basic jazz dance vocabulary as well as the awareness of space to stage elements such as audience, direction, focus, and energy. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. This course serves as a prerequisite for DANCE 242. Together, the two semesters of jazz satisfy requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, t-shirt or muscle shirt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

Prerequisite: DANCE241

DANCE 250: Tap Dance
1.5 Credits/Maximum of 6

An exploration of tap dance technique throughout history. DANCE 250 Tap Dance (1.5 per semester/maximum of 6) (GA)(BA) This course meets the Bachelor of Arts degree requirements. DANCE 250 is an exploration of Tap Dance. The course is designed for any student with an interest in Tap Dance and to support the Dance Studies Minor. This class explores the many styles and genres of Tap Dance developed through American history. Emphasis is placed upon the understanding of the origins of tap, exploration, and self-expression. Tap Dance is grounded in rhythm, exploration and importance of improvisation and origins with a focus on the entertainment component. DANCE 250 will introduce the dancer to different styles of tap, which will require a changing perspective of rhythm and expression. In each style, daily movement experiences will be introduced to build coordination, stamina and flexibility with rhythms, as well as the understanding of the particular historical aspect of Tap Dance. These experiences will take place in the center floor, across the floor accumulations, and culminate in a combination of all these experiences in a dance to develop their potential as a performer. The origins and influences of tap are rich and deep, imbedded in the history of the country and the people. The richness of this history allows the dancer to take on a personal and individual style important to the further development of tap and dance in general. Tap Dance will emphasize this importance and assist the student in their exploration of this dance form.

Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 251: Beginning Tap I
1.5 Credits

An introduction to the technique of tap dance. DANCE 251 Beginning Tap I (1) DANCE 251 is an introduction to basic tap techniques. The course is designed for any beginning student with an interest in tap dance, those who are BFA Music Theater candidates, and Dance Minors. The
work will include awareness of space, sound, rhythm, and tempo. The work will also introduce counting, executing rhythm, and developing confidence for a beginner level tap dancer. The student will learn basic tap vocabulary as well as the awareness of space and stage elements such as audience, direction, focus, and energy. The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. This course serves as a prerequisite for DANCE 252. Together, the two semesters of jazz satisfy requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer’s body.

Prerequisite: DANCE232

DANCE 252: Beginning Tap II

1.5 Credits

A continuation of Beginning Tap I to augment technical proficiency. DANCE 252 Beginning Tap II (1) DANCE 252 allows the student who has successfully completed DANCE 251 to continue to broaden their knowledge of beginning tap dance. The course will emphasize a broader dance vocabulary and more complex dance combinations. The repetition and rehearsal techniques will be reinforced and intensified. The ability to communicate character and setting through dance is strongly emphasized. The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). They are responsible for learning and executing all material taught in class. Students enrolling in this course should have successfully completed DANCE 251 or have permission of the instructor. Tap DANCE 252 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer’s body.

Prerequisite: DANCE251

DANCE 260: Introduction to Modern Dance

1.5 Credits/Maximum of 6

Introduction to Modern Dance. DANCE 260 Intro to Modern Dance (1.5 per semester/maximum of 6) (GA) (BA) This course meets the Bachelor of Arts degree requirements. DANCE 260 is an introduction to modern dance and the many elements of this vast form of dance. The course is designed for any student with an interest in Modern Dance and to support the Dance Studies Minor. This class explores the many influences and components of modern dance developed through history. Emphasis is placed on the development of strong technique, performance and exploration. Each semester the dance will be introduced to different aspects of modern dance which will require in increasing awareness of modern dance and its impact on all of dance. Technique classes will be supported through viewing historical and contemporary dance footage. In every class, daily movement experiences will be introduced to build coordination, self-awareness, strength and flexibility, as well as the understanding of modern dance.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

DANCE 261: Beginning Modern Dance I

1.5 Credits/Maximum of 6

Introduction to modern dance as an art form; development of dance technique and composition; teaching methods for improvisational skills. DANCE 261 Beginning Modern Dance I (1.5) (GA) (BA) This course meets the Bachelor of Arts degree requirements. DANCE 261 is an introduction to Modern Dance. The course is designed for any student with an interest in Modern Dance and Dance Minors. This class explores the use of weight, time, space, and energy in relation to a release based modern dance technique. There is emphasis placed upon the development of a personal movement vocabulary, experimentation, and self-expression. Modern dance is grounded in somatic practices with importance placed upon finding organic or efficient ways to engage the body in movement. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. This class serves as a prerequisite for DANCE 262. Together these two semesters serve as core technique classes for all dance minors.

Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 262: Beginning Modern Dance II

1.5 Credits

A continuation of Beginning Modern Dance I to augment technical proficiency and to further comprehension of choreographic methods. DANCE 262 Beginning Modern Dance II (1.5) DANCE 262 is a continuation of Beginning Modern Dance I. The course is designed for any student with an interest in Modern Dance and Dance Minors. This class explores the use of weight, time, space, and energy in relation to a release based modern dance technique. There is emphasis placed upon the development of a personal movement vocabulary, experimentation, and self-expression. Modern dance is grounded in somatic practices with importance placed upon finding organic or efficient ways to engage
the body in movement. The students grade is based upon attendance, participation, attitude, progress, keeping a dance journal, setting dance goals, doing a mid-semester self evaluation, and attending a mid-semester “check-up” with the instructor. More than three absences (excused or unexcused) will automatically drop the final grade one letter. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. Beginning Modern Dance I and Beginning Modern Dance II serve as core technique classes for all dance minors.

Prerequisite: DANCE261

DANCE 270: Introduction to Bartenieff Fundamentals

3 Credits

Physical and theoretical approach to movement: facilitates efficiency, and expression through dynamic alignment, mobility, kinesthetic awareness; reduce physical injuries.

General Education: Health and Wellness (GHW)

DANCE 280: Dance Improvisation

1 Credits

Introduction to the concepts and techniques of dance improvisation.

Prerequisite: DANCE261

DANCE 285: Contemporary Dance Performance

1-2 Credits/Maximum of 8

Contemporary Dance Performance is designed to introduce the beginning performer to the choreographic and rehearsal process as preparation for performance. DANCE 285 Contemporary Dance Performance (1-2 per semester/maximum of 8) This is a dance course to introduce the beginning performer to the rehearsal process, creative process and performance experience. The class will develop around the building of an original dance piece, created on and for the participating students by the instructor of record. The students will perform this piece at the end of the semester in a formal performance situation, on a proscenium stage with full lighting and sound accompaniment. The instructor will create an original dance on students enrolled in this course which will provide the student with performance experience in a live dance concert. The student will learn original choreography, be responsible for retention of movement, experience and assist in the choreographic process, participate in discussions concerning choreography, expression, rehearsal expectations and roles. The student will keep a journal and complete written assignments which demonstrate cognitive understanding of the artistic process. Each student will be expected to execute the choreography at a level suitable for concert performance, show an understanding of the choreographic process through written work, demonstrate growth as a dancer and artist through performance and written work and participate fully in a concert performance of the dance work created in class.

DANCE 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DANCE 297: Special Topics

1-9 Credits/Maximum of 9

Intermediate Mojah continues instruction for intermediate level dance students and builds on the technical training of Beginning Mojah Fusion. DANCE 320 Intermediate Mojah Fusion Dance (1.5 per semester/maximum of 9) Intermediate Mojah Fusion Dance builds upon the foundations of Beginning Mojah dance. Moja is a Swahili term meaning one. Mojah fuses various forms into one to create a unique style of modern African dance based in Horton, Dunham, West African and jazz movements.

Prerequisite: DANCE220 or permission of the program

DANCE 331: Intermediate Ballet I

1.5 Credits/Maximum of 6

A continuation of the course work established in Beginning Ballet II. DANCE 331 Intermediate Ballet I (1) Dance 331 allows the student who has had a solid introduction to the fundamental movements and style of ballet to develop more strength and flexibility in their technique. The pace of the class is faster. Choreography is more complex and taught more quickly. The student is expected to know the elements that constitute a ballet class and is ready to embrace seriously the study of the skill and artistry required to perform ballet. The student is expected to be able to execute a double pirouette and simple beats in petit allegro. Interpretation of choreography taught for exams is emphasized more strongly than in the previous courses. The attitude should be positive, receptive to correction, and exhibit an eagerness to work, and the student’s progress should reflect growth in their abilities to perform the choreography and to know the terms used. The student will be required to identify and explain the meaning of the terms used in class, as well as perform choreography with confidence and a sense of character. Required dress for the course for women is black leotard, pink or tan tights, pink ballet shoes and for men it is black tights, white T-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

Prerequisite: DANCE230 or permission of the program
DANCE 332: Intermediate Ballet II

1.5 Credits/Maximum of 6

A continuation of the course work established in Intermediate Ballet I. DANCE 332 Intermediate Ballet II (1) Dance 332 allows the student who has successfully completed Beginning Ballet I to continue to broaden their knowledge of Intermediate Ballet Dance. The purpose of this course is to improve the student's knowledge of Intermediate Ballet Dance. The technique of the class will be strengthened, but performance and interpretation will be emphasized with the following in mind: to develop character, mood and ability to improvise and choreograph Ballet Dance. A variety of challenging choreographed dances ranging from pop, jazz, to musical theatre styles will be taught which the student will be expected to perform. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. A positive attitude and maintaining proper discipline and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). They are responsible for learning and executing all materials taught. Jazz Dance 342 satisfies the requirement for the BFA Music Theatre option and fulfills one of the requirements for the Dance Minor. The BFA musical theatre student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

Prerequisite: DANCE341

DANCE 341: Intermediate Jazz I

1.5 Credits

A continuation of the course work established in DANCE 242, Beginning Jazz I. DANCE 341 Intermediate Jazz I (1) Dance 341 allows the student who has successfully completed Beginning Jazz I to continue to broaden their knowledge of Intermediate Jazz Dance. The purpose of this course is to improve the dancer's technical aspect of Jazz Dance. Combinations will be taught at a faster pace. Techniques will be stressed, but performance and interpretation will be emphasized with the following in mind: to develop character, mood and the ability to improvise and choreograph Jazz Dance. A variety of challenging choreographed dances ranging from pop, jazz, to musical theatre styles will be taught which the student will be expected to perform. The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. A positive attitude and maintaining proper discipline and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). They are responsible for learning and executing all materials taught. Jazz Dance 342 satisfies the requirement for the BFA Music Theatre option and fulfills one of the requirements for the Dance Minor. The BFA musical theatre student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

Prerequisite: DANCE341

DANCE 342: Intermediate Jazz II

1.5 Credits

A continuation of the course work established in DANCE 341, Intermediate Jazz I. DANCE 342 Intermediate Jazz II (1) Dance 342 allows the student who has successfully completed Intermediate Jazz Dance I to continue to broaden their knowledge of Jazz Dance. The purpose of this course is to continue to improve the dancer’s technical
DANCE 366: Contemporary Movement Lab II

3 Credits

An intermediate level modern dance technique utilizing composition to enhance technical and performance issues: alignment, connection, balance, transition, expression, discovery. DANCE 366 Contemporary Movement Lab II (3) DANCE 366 is an intermediate level modern dance course utilizing improvisation as a tool for understanding technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also will gain self-awareness and begin to develop a personal dance vocabulary. Contemporary Movement Lab II will meet four hours a week, with an additional 1-hour studio lab for personal discovery. DML II is designed to further expose the intermediate level dancer to the style and techniques of modern dance as it uses improvisation for expression and performance. The student will not only develop greater flexibility, strength, and alignment, but also will gain self-awareness and further develop a personal dance vocabulary. Contemporary Movement Lab II will meet four hours a week, with an additional 1-hour studio lab for personal discovery. Contemporary Movement Lab I will meet four hours a week, with an additional 1-hour studio lab for personal discovery. CML I is designed to further expose the intermediate level dancer to the style and techniques of modern dance as it uses improvisation for expression and performance. The intermediate level dancer will be developed through more thorough movement requirements, floor work, and strengthening experiences with the support of improvisation as a tool. Full articulation of body, feet, and arms will be fostered through regular exercises, which will bring about stronger connections through the body to support complicated and difficult movement. Each class period will allow time to be spent in the traditional aspects of an intermediate modern dance technique class: floor warm-up and connection to center of weight, center floor balance and strengthening technique exercises and combinations, traveling sequences across the floor, and final cumulative combination. An equal amount of time will be spent in discovering the many theories and tools of composition: time, weight, space, rhythm/phrasing, theme based creative experiences, and dance as a tool for communication. Students will be expected to create a variety of studies regularly through individual and group work. Outside reading and follow-up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for opportunities to share and express levels of comfort and personal discoveries with various experiences.

Prerequisite: any 200 level technique course or program permission

DANCE 370: Anatomy for Performers

3 Credits

To provide performers with anatomical theory and concepts applicable to the disciplines of the performing arts.

Prerequisite: DANCE 270 or THEA 102
General Education: Natural Sciences (GN)

DANCE 370H: Anatomy for Performers

3 Credits

To provide performers with anatomical theory and concepts applicable to the disciplines of the performing arts.

General Education: Natural Sciences (GN)

DANCE 381: Dance Composition I

2 Credits

Introduction to the basic principles and craft of choreography. DANCE 381 Dance Composition I (2) This course is an introduction to the basic principles and craft of the art of choreography. The students will work with the principles and craft of choreography through practical methods to foster and enhance the creative process with relation to the solo form. Each student will develop an understanding of the architectural strengths of the proscenium stage and how best to use these for the solo form; gain knowledge of professional working methods through the exploration and use of the choreographic tools; develop an individual vocabulary through improvisational and choreographic elements; gain a knowledge of the craft for original creative expression; and demonstrate an overall understanding of the course by choreographing an original solo work as a culminating project.
DANCE 382: Music Theatre Dance--Style I

1.5 Credits

A practical study of dance styles from the 1890's to the 1990's. DANCE 382 Music Theatre Dance --Style I (1.5) DANCE 371 allows the student who has successfully completed two semesters of ballet (DANCE 231 and 232), two semesters of jazz (DANCE 241 and 242), and two semesters of Music Theatre Studio (THEA 223 and 224) to expand their capabilities of combining their skills of dancing and acting through the use of different stylistic approaches. In this semester, the BFA Music Theatre candidate will study and perform choreography characteristic of Vaudeville, Charleston, Ragtime, Ballet, Folk/Ethnic and elements of Modern and Jazz. In particular, Agnes deMille’s use of ballet and Jerome Robbins' use of Ballet/Jazz/Modern will be studied. The goals of the course include enabling the student to feel confident in identifying, performing, and competing in the professional audition venue using these styles. Also, the student should deepen their understanding of how the use of varied dance styles contributes to the development of character and/or the furthering of plot in Music Theatre. Successfully completing DANCE 371 is the prerequisite for DANCE 372.

Prerequisite: THEA 224

DANCE 384: Music Theatre Dance--Style II

1.5 Credits

A continuation of course work established in Music Theatre Dance Style I. DANCE 384 Music Theatre Dance --Style II (1.5) DANCE 372 allows the student who has successfully completed DANCE 371 to continue broadening their understanding and expanding their performance skills of different stylistic approaches to choreography. In this course the student will study and perform choreography using stronger Jazz and Folk/Ethnic/Social influences. In particular, the works of Jerome Robbins, Ron Field, Michael Bennett, and Bob Fosse will be studied. The goals of the course include enabling the student to feel confident in identifying, performing, and competing in the professional audition venue using these styles. Also, the student should deepen their understanding of how the use of varied dance styles contributes to the development of character and/or the furthering of plot in Music Theatre.

Prerequisite: DANCE382

DANCE 385: Leadership Practicum: Dance

1 Credits

Supervised experiences in teaching and assisting with the teaching of dance techniques.

Prerequisite: DANCE362

DANCE 399: Dance Foreign Study

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DANCE 410: Dance History

3 Credits

Survey of dance history concerning perspectives of culture, race, and gender with a focus on Nineteenth and Twentieth centuries. DANCE 410

DANCE 411: From Africa to Hip Hop- The Evolution of African American Dance History

3 Credits

From Africa to Hip Hop: Evolution of African-American Dance History will explore the history of African related dance from its beginnings in West Africa through the contemporary expressions of Hip Hop. DANCE 411 From Africa to Hip Hop- The Evolution of African-American Dance History (GH) From Africa to Hip Hop: Evolution of African-American Dance History will explore the history of African related dance from its beginnings in West Africa through the contemporary expressions of Hip Hop.

Prerequisite: DANCE261

General Education: Humanities (GH)

DANCE 412: Practical Applications of Movement in the Classroom

3 Credits

This course will guide the students in movement-oriented activities and explore how these activities relate to learning academic concepts. DANCE 412 Practical Applications of Movement in the Classroom (3) Moving and learning is the focus of this course. Classrooms vary in size, age, understanding, world experience and venue. Being able to recognize all these situations as learning opportunities is a talent built on experience. This class will challenge the students to see learning not just as an event that must happen in desk chairs with only the use of traditional classroom technology to support the &lsquo;lesson&rsquo; but also as an opportunity for expansion into the whole child, including the moving child. Experience in designing and applying movement ideas into curriculum ideas and concepts will be developed throughout the semester. The student will begin to see ideas and learning themes as opportunities to engage the child through their physicality while expressing ideas, challenging the expected way of learning and yes, even having fun. Teaching is a creative act, learning is a creative act, and designing moving opportunities to reinforce the act of learning creates a sense of knowing within the child that becomes embodied. Reading, discussion, classroom application of material, and critical assessment of self and others will create an environment, at times, modeling some of the potential venues in which the student may expect to find themselves. Using this information will be critical to their growth into visualizing movement as a viable option for teaching and learning.

Prerequisite: DANCE261 or HD FS229 or HD FS239

DANCE 422: Advanced Hip Hop Dance

1.5 Credits

Advanced Hip Hop Dance reinforces and expands concepts from Beginning Hip Hop Dance. Free expression of the body, freestyle, and
choreography are emphasized. DANCE 422 Advanced Hip Hop Dance (1.5) Advanced Hip Hop Dance is designed for the serious minded dance student with an interest in Hip Hop dance/culture. This class provides an intensive study of dance, choreography and culture. As in Beginning and Intermediate Hip Hop Dance, freestyle dancing, locomotive movements, and choreography are emphasized. In addition, this class includes lecture sessions and discussions about Hip Hop culture and its role in society. By the end of this course students should be able to articulate why Hip Hop is a culturally significant art form and choreograph and perform a Hip Hop dance combination. This course also enhances mind/body awareness, and provides choreographic and performance opportunities. This course is directly related to dance, theatre, African American studies and other arts based and humanities based courses.

Prerequisite: DANCE222

DANCE 431: Advanced Ballet I

1.5 Credits

An advanced ballet training course. DANCE 431 Advanced Ballet I (1)DANCE 431 allows the student who has successfully completed DANCE 232, or who has interviewed with the Instructor concerning their previous training in ballet, to develop greater profficieny in performing ballet. The barre work continues to emphasize proper alignment, supported by exercises using the Zena Rommett floor barre technique and the Pilates technique, and the floor work moves more quickly then in the beginning levels of study. The student will learn more complex steps requiring greater strength and coordination, and the class will move at a faster pace, thus enabling the student to learn choreography more quickly. The student will also develop their ability to communicate character and mood through their dancing. More advanced ballet terminology will be taught, and the student will learn the French terms, their English meanings, be able to identify the steps and perform them. DANCE 431 can satisfy one of the two semesters of advanced dance study required by the BFA Music Theatre degree option and can satisfy requirements for the Dance Minor. The student’s grade is determined by their attendance, attitude, and progress. Attendance is mandatory. More than three absences or lateness will affect the grade. The attitude should reflect a serious focus on improving their abilities with a positive approach to applying corrections to their dancing. Their progress will be assessed through observation of their classroom work and especially the video-taped performances of their mid-term and final exam choreography. There will be a final showing at the end of the semester with an invited audience. The exams will also include an oral section, covering the terms used in class. Required dress for class is - - for men, dance belt, black tights, white t-shirt, and black ballet shoes, and for women, pink or tan tights, leotard, and pink ballet shoes. All hair must be pulled back and secured away from the face. No sweat clothes may be worn, but leg warmers, belts, and suspenders are optional.

Prerequisite: DANCE232

DANCE 432: Advanced Ballet II

1.5 Credits

An advanced course in the techniques of jazz dance. DANCE 441 Advanced Jazz I (1)DANCE 441 allows the student who has successfully completed DANCE 242 to continue their study of jazz technique and performance. The focus of the course is to improve capability through learning and performing more challenging choreography at a faster pace. Eight combinations of choreography are taught, to music of various types -- pop, jazz, and musical theatre. Performing with confidence and a sense of character will be emphasized. The student will also become familiar with the fundamentals of the Pilates technique to improve alignment, strength, and flexibility. The student will also be given opportunities to develop confidence in improvisation. DANCE 441 enables the BFA Music Theatre candidate to satisfy one semester of advanced level dance training. For the Dance Minor and other students of dance, it provides challenges in technical execution and a greater range of jazz styles. The student’s grade will be determined by their attendance, attitude, and progress at learning quickly and performing the dance combinations, as well as the completion of two projects. Attendance is mandatory; more than three absences or lateness will affect the grade. The attitude should be focused, positive, receptive to correction, and eager. Progress will be assessed in frequent performance quizzes. The mid-term and final exams will be video-taped and viewed by the class. The two projects consist of paper and one minute of original choreography. The paper should consist of the student’s personal analysis of jazz dancing and their abilities, based on their past and present experience. The choreography should reflect work learned in class and be performed to instrumental music. The student will perform their choreography for the class. Required dress for DANCE 441 consists of dance belt, dance pants, t-shirt and jazz shoes for men and tights and leotard, jazz and character shoes for women. Dance sneakers are not appropriate for warm-ups and certain combinations.
**Prerequisite:** DANCE242

DANCE 442: Advanced Jazz II

1.5 Credits

A continuation of Advanced Jazz I to augment technical proficiency. DANCE 442 Advanced Jazz II (1)DANCE 442 allows the student who has successfully completed DANCE 441 to continue to broaden their knowledge of advanced jazz dance. The purpose of this course is to improve capability through learning and performing more challenging choreography at a faster pace. Technique will be stressed, but performance and interpretation will be emphasized with the following standard in mind: to develop character, mood, and ability to improvise and choreograph jazz dance. A variety of choreographed dances ranging from pop, jazz, to musical theaters styles will be taught. Students are responsible for learning and executing all material taught in class. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students enrolling in this course should have successfully completed DANCE 441 or have permission of the instructor. JAZZ 442 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, t-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

**Prerequisite:** DANCE441

DANCE 451: Advanced Tap I

1.5 Credits

An advanced course in the techniques of tap dance. DANCE 451 Advanced Tap I (1)DANCE 451 allows the student who has successfully completed DANCE 251 and 252, or has permission of the instructor, to continue to broaden their knowledge to tap dance. The work will include expanding the student's knowledge of tap vocabulary, rhythm, tempo and counting. The work introduces audition techniques from the dancer's perspective and expands the awareness of proper rehearsal discipline. Professional conduct and behavior is now cultivated into a useful marketing tool. Material is taught faster and with greater detail to reinforce audition techniques and equate professional challenges. Audition classes will be held at the instructor's discretion. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. Students enrolling in this course should have successfully completed DANCE 251 and 252 or have permission of the instructor. Tap DANCE 451 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer's body.

**Prerequisite:** DANCE252

DANCE 452: Advanced Tap II

1.5 Credits

A continuation of Advanced Tap I to augment technical proficiency. DANCE 452 Advanced Tap II (1)DANCE 452 allows the student who has successfully completed DANCE 451 to continue to broaden their knowledge of advanced tap dance. The course will emphasize a broader dance vocabulary and more complex dance combinations. The repetition and rehearsal techniques will be reinforced and intensified. The ability to communicate character and setting through dance is strongly emphasized. Material is taught faster and with greater detail to reinforce audition techniques and equate professional challenges. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or tardiness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. Students enrolling in this course should have successfully completed DANCE 451 or have permission of the instructor. Tap DANCE 452 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer's body.

**Prerequisite:** DANCE451

DANCE 461: Advanced Modern Dance I

1.5 Credits/Maximum of 9

Development of dance technique and movement combinations on the advanced level. DANCE 461 Advanced Modern Dance I (1.5) DANCE 461 is Advanced Modern Dance. This class continues the technique foundation from DANCE 261 & DANCE 262 of exploring the use of weight, time, space, and energy in relation to a release-based modern dance technique. DANCE 461 also works with focus, style, and performance techniques. Students should gain greater technical proficiency, flexibility, strength, and alignment. Understanding and demonstrating the different uses of weight and the concept of grounding is essential. Students should begin to develop as an individual mover (personal artistic voice) and gain greater confidence in using the body as a tool of expression and communication. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. This class serves as a prerequisite for DANCE 462. Together these two semesters serve as core technique classes for all dance minors.

**Prerequisite:** DANCE262 or permission of the program
DANCE 462: Advanced Modern Dance II

1.5 Credits/Maximum of 9

A continuation of Advanced Modern Dance I to augment technical proficiency. DANCE 462 Advanced Modern Dance II (1.5) is a continuation of Advanced Modern Dance I. This class continues the technique foundation from DANCE 261, 262, and 461 of exploring the use of weight, time, space, and energy in relation to a release based modern dance technique. DANCE 462 also works with focus, style, and performance techniques. Students should gain greater technical proficiency, flexibility, strength, and alignment. Understanding and demonstrating the different uses of weight and the concept of grounding is essential. Students should begin to develop as an individual mover (personal artistic voice) and gain greater confidence in using the body as a tool of expression and communication. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. DANCE 461 and 462 serve as core technique classes for all dance minors.

Prerequisite: DANCE 461 or permission of the program

DANCE 466: Contemporary Movement Lab III

3 Credits/Maximum of 6

An advanced exploration of modern dance techniques supported by the choreographic process. DANCE 466 Contemporary Movement Lab III (3 per semester/maximum of 6) is an advanced level modern dance course using the choreographic process and experience as a way to enhance and further understand technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also will gain ability for self-awareness and increase in personal dance vocabulary. Contemporary Movement Lab III will meet four hours a week, with a minimum additional 1-hour studio lab for personal discovery. CML III is designed to further expose the advanced level dancer to the choreographic process as a means of expression of modern dance as it influences the discovery of personal style and communication. The advanced level dancer will be further developed through higher levels of movement requirements: floor work, and strengthening experiences while exploring the connections of movement as a goal for communication and performance. Each class period will allow time to be spent in the traditional aspects of an advanced modern dance technique class: floor warm-up and connection to center of weight, center floor balance and strengthening technique exercises and combinations, traveling sequences across the floor, and final accumulative combination. An equal amount of time will be spent in discovering the choreographic process utilizing the tools of composition from Dance 366 and improvisation from Dance 365 to successfully communicate personal ideas or themes through fully explored dances. Students will be expected to create a number of dances/studies throughout the semester with the goal of producing one for the concert stage. Outside reading and follow up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for opportunities to express levels of comfort and personal discoveries with various experiences.

Prerequisite: DANCE 365, DANCE 366

DANCE 472: Introduction to Laban Movement Analysis

3 Credits

Observe and analyze movement elements by exploring concepts of Body, Effort, Shape, and Space to increase personal communication and expression. DANCE 472 Introduction to Laban Movement Analysis (3) is a method and language for describing, visualizing, interpreting and documenting all varieties of human movement. It is one type of Laban Movement Study originating from the work of Rudolf Laban. In addition, many derived practices have developed with great emphasis on LMA methods. This course focuses on elements known as Laban/Bartenieff Movement Analysis, which uses a multidisciplinary approach, incorporating contributions from anatomy, kinesiology, psychology, Labanotation and many other fields. It is used as a tool by dancers, actors, musicians, athletes, and occupational therapists, psychotherapy, peace studies, anthropology, business consulting, leadership development, health & wellness and is one of the most widely used systems of human movement analysis today. In this course, students will study and practice the basic categories of LMA: Body (Bartenieff Fundamentals, total-body connectivity), Effort (Energetic dynamics), Shape, and Space (Space Harmony). In addition, students will discover how LMA looks at the categories in terms of Phrasing and themes of opposites. The themes are: Mobility/Stability, Inner/Outer, Function/Expression, and Exertion/Recuperation.

Prerequisite: DANCE 261

DANCE 480: Choreographic Projects

2 Credits

Choreographic practicum experiences for concert performances. DANCE 480 Choreographic Projects (2) is a forum for choreographic practicum experiences for concert performances. This course will provide an opportunity for students to develop their artistic and creative abilities in the field of dance. The student will create a group choreographic work to be presented in concert dance. This course will cover skills for advanced group dances, the creative process, selection of music of dance, costuming for dance, lighting for dance, dance techniques, performance techniques, and organizational/leadership skills. Each student will submit a written proposal of the dance s/he intends to create, specifying the number of dancers, choreographic intent, and movement phrases as well as ideas for music, costumes, and lighting. The student will complete one choreographic dance to be performed in concert, which is presented each semester. The student must attend technical week prior to the concert, use past choreographic experiences gained from compositional study and be responsible for organizing weekly rehearsals. The student is required to hand in a self-evaluation paper reflecting on the original proposal and completed dance, and to maintain a journal throughout the semester documenting the choreographic process. This course will be offered fall semester with an enrollment of 10 students.

Prerequisite: DANCE 381

DANCE 485: Contemporary Dance Repertory

1-2 Credits/Maximum of 12

An advanced dance course in the choreographic process with emphasis on original choreography in performance. DANCE 485 Contemporary Dance Repertory (1-2) This is an advanced dance course in the choreographic process with emphasis on original choreography. The
instructor will create an original dance on students enrolled in this course which will provide the student with performance experience in a live dance concert. The student will learn original choreography, experience and assist in the choreographic process, participate in discussions concerning choreography, performance and style. The student will keep a journal and complete written assignments which demonstrate cognitive understanding of the artistic process. Each student will demonstrate proper rehearsal protocol and behavior, execute the choreography at a level suitable for concert performance, show an understanding of the choreographic process through written work, demonstrate growth as a dancer and artist through performance and written work and participate fully in a concert performance of the dance work created in class.

Prerequisite: permission of the program

DANCE 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DANCE 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DANCE 499: Dance Foreign Study
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Data Sciences (DS)

DS 97: SPECIAL TOPICS
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 99: Foreign Studies
1-12 Credits/Maximum of 999
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DS 120: Scripting for Data Sciences
1 Credits
Introductory course in computer-based scripting languages for use in data analyses. DS 120 Scripting for Data Sciences (1) This introductory course aims to teach practical skills in data manipulation and preprocessing scripting, including the fundamentals of an interpreted programming language for use in the data sciences. The goal of the course is to provide an accessible (no pre-requisites) and brief (1 credit) introduction, preparing students for hands-on data analytics assignments in DS 200 Introduction to Data Sciences. This practical course teaches fast manipulation of datasets on the Unix command line, scripting in spreadsheets, and fundamental control structures and data manipulation in a modern interpreted programming language. It is expected that students gain an overview of the available tools and techniques that allows them to acquire basic proficiency in select techniques in the course of applications in most other courses in Data Sciences.

DS 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

DS 200: Introduction to Data Sciences
3 Credits
Introduction to Data Sciences is an introductory survey course appropriate to a wide range of students. The course provides an overview of topics covered in more detail in advanced Data Sciences Courses. The course is multidisciplinary in nature, covering technical subjects such as basic aspects of machine learning, analyzing Big Data and visual analytics, but also examining the managerial aspects of data including data management and decision making, in addition to organizational and societal implications of increasing data collection and processing and their implications for privacy and security.

DS 220: Data Management for Data Sciences
3 Credits
This course has two components: (1) advancing students' knowledge on relational database and (2) introducing NoSQL databases. In the first component, the course will review the techniques learned in IST 210, strengthen students' skills in using SQL queries and introduce students about indexing and scalability issue in relational database. While relational database is still frequently used, the emergence of storage for big data and various types of data has driven a new of class of non-relational databases commonly referred to NoSQL database. This course will introduce the real-world needs for NoSQL databases and the characteristics that distinguish them from relational database. We will introduce both the concepts of NoSQL databases and how the concepts are implemented in the database systems. We will focus on three main NoSQL data models: key-value, column family, and document. Students will learn the concepts of these data models and know how to use them in the database systems. We will also introduce the concepts on graph database, hadoop system, and warehousing. Finally, we will present criteria that decision makers should consider when choosing between relationship between relational and non-relational databases and techniques for selecting the NoSQL database that best addresses specific use cases.

Enforced Prerequisite at Enrollment: CMPSC 121 and IST 210
DS 294: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

DS 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DS 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
DS 300: Privacy and Security for Data Sciences
3 Credits
The course provides students with the knowledge and skills to analyze and implement protection strategies for data privacy and security.

Enforced Prerequisite at Enrollment: DS 220

DS 310: Machine Learning for Data Analytics
3 Credits
The course teaches students the principles of machine learning (and data mining) and their applications in the data sciences. DS 310 Machine Learning for Data Analytics (3) The course introduces the principles of machine learning (and data mining), representative machine learning algorithms and their applications to real-world problems. Topics to be covered include: principled approaches to clustering, classification, and function approximation from data, feature selection and dimensionality reduction, assessing the performance of alternative models, and relative strengths and weaknesses of alternative approaches. The course will include a laboratory component to provide students with hands-on experience with applications of the algorithms to problems from several domains. Prerequisites for the course include basic proficiency in programming, elementary probability theory and statistics, and discrete mathematics.

Enforced Prerequisite at Enrollment: CMPSC 121 and STAT 318

DS 316: Data Integration
3 Credits
Recommended Preparations: DS 310 Modern data-intensive applications (healthcare, security, public policy, science, commerce, crisis management, education, among others) increasingly call for integration of multiple types of data from disparate sources. This course introduces students to the principles and the practice of data integration, with particular emphasis on relational, knowledge-based, graph-based, and probabilistic methods. Carefully crafted assignments will help enhance the students' mastery of both the theoretical underpinnings as well as practical aspects of data integration. The students will work in teams to solve representative data integration problems drawn from real-world applications. Upon completion of the course, students should be able design, implement, and evaluate data integration solutions to support data intensive applications.

Enforced Prerequisite at Enrollment: DS 220 and STAT 318. Recommended Preparation: DS 310

DS 330: Visual Analytics for Data Sciences
3 Credits
The course introduces visual analytics methods and techniques that are designed to support human analytical reasoning with data. DS 330 Visual Analytics for Data Sciences (3) Visual analytics is the science of combining interactive visual interfaces and information visualization techniques with automatic algorithms to support analytical reasoning through human-computer interaction. People use visual analytics tools and techniques to synthesize information and derive insight from massive, dynamic, ambiguous, and often conflicting data, and to communicate their findings effectively for decision-making. This course will serve as an introduction to the science and technology of visual analytics and will include lectures on both theoretical foundations and application methodologies. The goals of this course are for students to (1) develop a comprehensive understanding of this emerging, multidisciplinary field, and (2) apply that understanding toward a focused research problem in a real-world application or a domain of personal interest.

Enforced Prerequisite at Enrollment: DS 220

DS 340W: Applied Data Sciences
3 Credits/Maximum of 3
This course builds up the students' understanding of data sciences by discussing the fundamental principles in the context of real-world examples, and then shows specifically how the principles can provide understanding of many of the most common methods and techniques covered in previous data science courses. The course features three individual projects as well as a team project spanning the entire course. After taking this course, the students should be able to cover the entire pipeline of a data science project, from problem formulation to data science solutions. That is, start from a data driven problem, identify pertinent datasets to the problem and collect data, reason about the best techniques that should be used to solve the problem, implement algorithms and models, assess performance, and communicate actionable insights through both written reports and oral presentations. As one example, a fundamental principle of data science is that solutions for extracting useful knowledge from data must carefully consider the problem in the real world scenarios. This may sound obvious at first, but the notion underlies many choices that must be made in the process of data analytics, including problem formulation, method choice, solution evaluation, and general strategy formulation. Another fundamental principle is that predictive modeling can both inform and be informed by relevant knowledge (including theories, models, frameworks) of the relevant domains. This principle manifests itself throughout data science: in the specific design of many particular data sciences applications, and more generally as the basis for all intelligent solutions. In this course, this principle will be highlighted by case studies from multiple domains
so that students can be inspired to apply this principle to their term projects. Lastly, as most data science projects are delivered as solutions as opposed to software deliverables, the ability for data scientists to communicate their results through concise and actionable insights plays a critical role in a data science project. This course places a particular focus on developing student writing abilities, through formal project reports and presentations. The individual projects will offer an interactive experience for students through feedbacks on their reports provided by the instructor. The term-long project will also train students in writing in a collaborative environment.

**Enforced Prerequisite at Enrollment:** DS 300 and DS 310 or CMPSC 448. Recommended Preparation: DS 330.

**Writing Across the Curriculum**

**DS 396: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**DS 397: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**DS 399: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**International Cultures (IL)**

**DS 402: Emerging Trends in the Data Sciences**

3 Credits/Maximum of 9

This course exposes and trains students in the analysis of emerging trends in data sciences. DS 402 Emerging Trends in the Data Sciences (3) Data sciences is a rapidly evolving field affected by innovations in a variety of technical domains, including data generation, capture, storage, and processing. Staying abreast of new developments can be a daunting task but is critical for success. This course provides an in-depth analysis of a particular innovation, but starts with developing generally applicable skills for analyzing new technologies. In particular, the analytic framework considers the innovation’s technical aspects and potential for widespread adoption, but also its social, organizational and policy implications. As a course focused on a new data sciences technology or analytic innovation, it is repeatable. As such, the course enables students to be exposed to the cutting edge of data sciences, supporting a forward looking view of the field for students across the university.

**Enforced Prerequisite at Enrollment:** DS 220

**DS 410: Programming Models for Big Data**

3 Credits

Recommended Preparations: DS 310; CMPSC 448 This course introduces modern programming models and related software stacks for performing scalable data analytics and discovery tasks over massive and/or high dimensional datasets. The learning objectives of the course are that the students are able to choose appropriate programming models for a big data application, understand the tradeoff of such choice, and be able to leverage state-of-the-art cyber infrastructures to develop scalable data analytics or discovery tasks. Building on data models covered in DS 220, this course will introduce programming models such as MapReduce, data flow supports for modern cluster computing environment, and programming models for large-scale clustering (either a large number of data samples or a large number of dimensions). Using these frameworks and languages, the students will learn to implement data aggregation algorithms, iterative algorithms, and algorithms for generating statistical information from massive and/or high-dimensional data. The realization of these algorithms will enable the students to develop data analytic models for massive datasets.

**Enforced Prerequisite at Enrollment:** CMPSC 122 and DS 220. Recommended Preparation: DS 310 or CMPSC 448. Cross-listed with: CMPSC 410

**DS 440: Data Sciences Capstone Course**

3 Credits/Maximum of 3

This course provides a data sciences problem-solving experience, addressing realistic data science dilemmas for which solutions require teamwork and collaboration.

**Enforced Prerequisite at Enrollment:** DS 220. Recommended preparation: DS 310 or CMPSC 448.

**DS 494: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**DS 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**DS 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
participating in facility management including equipment selection and design of work units; 3. conducting a food preference survey and evaluating results in order to assess consumer needs and wants; 4. translating nutrition guidelines into menus for a target population; 5. participating in the procurement and inventory management of food and supplies for a food service unit; 6. participating in quality improvement, including systems and customer satisfaction for dietetic service; 7. participating in organizational change and planning and goal-setting processes. To complete the DSM 295A assignments students must be working in a hospital, nursing home, retirement facility or a school foodservice operation where they complete directed assignments under the supervision of a Registered Dietitian or a qualified mentor approved by the Dietetic Food Systems Management Program. The foodservice operation serves as the learning environment where students develop skills related to the planning, operation, and evaluation of a foodservice operation in an institutional setting. The course assignments are designed to develop problem solving and critical thinking skills as well. Students will complete a minimum of 40 hours of supervised practice in the foodservice setting and complete a minimum of six written assignments per credit. Students enrolled for 2-4 credits will spend 40 hours per credit in the practice setting and complete more in-depth projects and written reports related to the course objectives. Evaluation methods: students will be required to submit a written report, using guidelines provided by the course instructor, at the completion of each module/assignment. These written reports will be evaluated by the course instructor. In addition, the student’s mentor will evaluate the student’s performance using an evaluation form designed by the course instructor.

**Prerequisite:** D S M195 ; NUTR 251

DSM 295W: Professional Staff Field Experience

4 Credits

Methods of, and practice in, the client-oriented dietetic systems.

**Prerequisite:** D S M195 ; NUTR 251

Writing Across the Curriculum

### Digital Arts (DART)

DART 102N: Introduction to 2d Digital Art and Technology

3 Credits

DART 102N Introduction to 2d Digital Art and Technology (3) A General Education Integrative Studies, digital arts course introducing 2D graphics software through explorations of the 2d digital art medium. This is a General Education Integrative Studies, digital arts course introducing 2D graphics software through the creation of original digital artwork and the exploration of the 2d digital art medium. Course content explores technology, digital art, and visual culture, and concepts of identity, digital culture, and propaganda. Students create original artwork using graphic software such as Adobe Photoshop. They acquire skills and methods of research and development, creative production, critical review, reflection, and strategies for revision. Learning focuses on problem solving, exploration of creative options, visual communication, critique of images and ideas, and reflective writing. Students apply this process of visual research as a personal means of exploring topical issues and ideas, responding in informed ways to the images created by others, and reacting critically and creatively to the visual world around them. The course looks at topics such as the impact of technology on personal identity and community practices as they are represented in the mix of visual culture. Methods of visual expression and graphic communication such as advertising, messaging and propaganda are examined and critically analyzed as cultural practices that serve many purposes, from education, entertainment, marketing, and politics. The purpose of the course is to introduce students to the creative use of digital technologies in responding critically and imaginatively to this changing visual world of image, text and story in which they live. By developing original digital artwork, students learn to formulate and communicate their ideas related to the course topics from a personal perspective and build an understanding of how they make an impact on a world beyond the classroom.

GenEd Learning Objective: Key Literacies

DART 213: 3D Printing for Artists and Designers

3 Credits

DART 213 3D Printing for Artists and Designers (3) This course explores the potential of 3D printing as a vehicle for creative expression. Studio sessions include hands-on printing with materials both hard and soft, from bio-plastics to ceramics. The class is designed to be collaborative and interdisciplinary. We will investigate the role 3D printing can play in the working processes of Artists & Designers presently and in the future. We will ask questions about the potential of this technology and we will discuss our answers and opinions. Our class will spend a significant amount of time making and iterating designed objects and sculptural forms via 3D modeling, 3D scanning, and 3D printing. We will become familiar with 3d modeling software programs and printer control programs via course projects, tutorials, and one-on-one instruction. Our software and hardware choices will be focused particularly on tools that are open source and free, emphasizing a D.I.Y. approach to this emerging technology. We will also spend a great deal of time investigating a range of approaches to 3D printing from craft processes to industrial applications, large and small. Each week we will introduce a discussion topic and a hands-on project.

DART 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

DART 297: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

DART 302: Digital Painting Studio

4 Credits

DART 302 Digital Painting (4) A digital arts studio course that focuses on creating and critically evaluating digital painting. This digital arts studio course focuses on creating and critically evaluating digital painting
and builds upon previous digital arts studio courses by extending students experience with the creative exploration of the digital medium. This course will engage art and design students on the principles, techniques and relevant technologies to advance their skills and critical competencies in digital painting and concept art through hands-on studio production in collaboration with SoVA studio faculty. The course is for students enrolled in the Art BA, Art BFA, Art Education BS, Digital Arts and Media Design BDes or Photo BDes degree programs

Prerequisites: DART 202, ART 250

DART 305: Mobile and Touch Studio

4 Credits

DART 305 Mobile and Touch Studio (4) A studio course focusing on designing and developing interactive stories, games and expressive applications targeting mobile and touch screen devices. This course teaches students how to design and develop interactive applications for mobile and touch screen devices. Through lectures, discussions and exercises, students are exposed to the latest methods of gestural interface design. They produce through an iterative design process a series of short projects and learn to integrate interface elements, interactive storytelling techniques, and implement design patterns using a scripting language.

Prerequisites: DART 202, DART 205, and enrollment in the Art BA, Art BFA, Art Education BS, Digital Arts and Media Design BDes or Photo BDes degree program

DART 404: Animation Studio

4 Credits/Maximum of 8

DART 404 Animation Studio (4 per semester, maximum of 8) An in-depth digital arts production course focusing on exploring animation and time-based media through the development of self-initiated projects. This course will build upon previous digital arts studio courses and provide students with an in-depth studio experience to produce animated and time-based media works. In animation studio, students will explore animation and time-based media in relationship to their creative interests and studio practice while seeking to integrate course lectures, discussions and screenings into the realization of new work. This course is receptive to all forms of traditional and experimental animation techniques (analog, digital, hybrid) as well as creative and time-based media approaches.

Prerequisites: DART 303; DART 304; DART 314 Recommended Preparation: DART 204

DART 495: Internship

1-18 Credits/Maximum of 18

Supervised on or off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

DART 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

DART 497: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Digital Media, Arts, and Technology (DIGIT)**

DIGIT 100: Introduction to Digital Humanities

3 Credits/Maximum of 3

DIGIT 100 students will study the ways computation is shaping literary, political, and historical discourses.

General Education: Humanities (GH)

DIGIT 110: Text Encoding Fundamentals

3 Credits

DIGIT 110 teaches students standardized encoding techniques for archival quality data creation, storage, and analysis.

DIGIT 210: Large Scale Text Analysis

3 Credits

Course teaches students programmatic and algorithmic techniques and tools for accessing and analyzing unstructured text.

DIGIT 400: Digital Project Design

3 Credits

This course will introduce students to the tools and resources available to design and implement digital project.

Prerequisite: DIGIT100, DIGIT110, DIGIT210

DIGIT 409: Advanced Digital Creations

3-6 Credits/Maximum of 6

Students will develop 3d digital creation skills in relation to their field(s) of study. DIGIT 409: Advanced Digital Creations is a problem-based learning class that uses the digital media concepts and tools introduced in Art 168 to develop an in-depth understanding of 3d digital art. They will enhance their creative and philosophical sensibilities in the technology, software, and media relevant to the field(s) of study they are pursuing. Through a series of learning problems, students will synthesize advanced skills and knowledge needed to accomplish techniques used in the creation of digital 3d imagery. They will integrate 3d sculpting, modeling, animation, and/or painting practices with computer-based image processing for creative, and professionally oriented results. They will develop critical and conceptual sensibilities needed to discuss and evaluate their work and the work of others using these methodologies. Students will identify, research, and analyze effective professional and creative practices in the field of digital creativity with emphasis on developing skillful digital processing techniques. These practices include creating mockups of concepts, art-making practices for enhanced digital workflow, and choosing the 3d processing techniques most appropriate for the end-use of the work. The digital medium has a relatively short
Digital Multimedia Design (DMD)

DMD 100: Digital Multimedia Design Foundations

3 Credits

This course introduces students to concepts, skills, language and principles of practice in art and design, communication, and information sciences. DMD 100 Digital Multimedia Design Foundations sets a strong foundation of design process and thinking skills to support and facilitate creative and reasoned approaches to ambiguous and ill-defined problem spaces related to the fields of art and design, communication, and information sciences. Design leadership balances design management with creative vision to guide creative teams, frame complex issues, and effectively communicate. To prepare students for transformative design leadership roles, students will think, evaluate, and respond to local and global issues leveraging the digital medium and peer collaboration. In this course, students are exposed to basic concepts, skills, ethics, language, and other principles of practice by engaging in critical discussions, activities, projects, writing, and work presentation. Students will be introduced to a basic historical perspective of art and design, technology, and communications through case studies and readings. They will write critical reflections on current and historical issues, ethical quandaries, and social impacts in blog posts to generate peer discussion. Independent and collaborative activities will guide students through skill mastery and research-based design projects will reinforce a breadth of concepts including universal design principles, research methods, reasoning and decision making strategies, speculative design and forecasting, curation and remix, narrative and communication, community, tools and technology, and professionalism.

Prerequisite: ART 168

DIGIT 410: Data Visualization

3 Credits

In-depth understanding of techniques and software for data visualization. Students will be introduced to complex data sets and learn how to present findings in interactive and innovative ways.

Prerequisite: PSYCH200 or STAT 200

DIGIT 430: Simulations of Human Behavior

3 Credits

In Modeling and Simulation, students will develop an understanding of the systems, processes, tools, and implications of this field.

Prerequisite: 3 credits of programming; 3 credits of mathematics
Cross-listed with: GAME 430

DIGIT 494: Senior Project

3 Credits

DIGIT 494 is a senior capstone course that allows students to design, complete, and present an independent digitally based project.

Prerequisite: DIGIT100, DIGIT110, DIGIT400

DIGIT 495: Internship

3 Credits

A professional internship opportunity with a business, organization, or non-profit agency.

Prerequisite: DIGIT100, DIGIT110, DIGIT400

DMD 300: Digital Multimedia Design Studio

3 Credits

Students adapt skills and knowledge of digital media to solve problems and communicate ideas in producing collaborative multimedia projects. In DMD 300 Digital Multimedia Design Studio, students synthesize the concepts, theories, and applications acquired in the introductory courses and begin to think critically about their professional objectives. Students will work on projects aimed to help them understand available learning pathways and real world applications based on their scholarly and professional interests. Students will work collaboratively to investigate a problem space, conduct a needs assessment, write a design plan or proposal, develop deliverables, and implement and evaluate the final product(s). Students will develop a sense of stewardship over the project development process by completing project milestones that reinforce time management behaviors, participating in team building activities that facilitate discussion and interaction, co-authoring project proposals that prompt critical analysis, and distributing production tasks to encourage ownership in completing both defined and open-ended assignments. Students will also be required to thoroughly document and reflect on the production process and project impact through blogging and discussions. Through the duration of the course, students are encouraged to interact with industry advisors for feedback and direction as they work through real-world challenges in their selected digital tools and methodologies.

Prerequisite: DMD 100

DMD 400: Digital Multimedia Design Capstone

3 Credits

In this capstone, students develop portfolio projects by applying creative production concepts, tools, and approaches to a contemporary issue. DMD 400 Digital Multimedia Design Capstone is an advanced, senior-level capstone experience, students will synthesize the concepts, tools, and approaches learned throughout their studies and demonstrate competencies in creative and technical production in an applied human-centered thesis project. Students will work as change agents to address a critical, real-world, local or global issue or challenge and work through the design process to complete a capstone project. Students will explore processes in interdisciplinary problem spaces and connect to broader context of design decisions promoting agency over project outcomes, applications, deliverables, and knowledge-sharing. Student projects will include design proposals and/or implementations for digital or physical products and systems. To examine their understanding of design leadership, students will practice design thinking and production methods to generate project ideas, discover opportunities, and communicate intent; practice systems thinking to define the boundaries and impact of a problem space; and practice critical thinking to evaluate research issues, develop meaning, and inspire creative output. Students
will be able to deploy project management skills to ensure on-time delivery of final project, communicate project concepts through visual models, and will leverage a variety of digital resources and methods to disseminate work in online contexts including social media, websites, and others.

**Prerequisite:** DMD 100, DMD 300

### Earth and Mineral Sciences (EMSC)

**EMSC 100S: Earth and Mineral Sciences First-Year Seminar**

3 Credits

Writing, speaking, and critical thinking skills applied to topics of general interest in Environmental and Materials Science. EM SC 100S Earth and Mineral Sciences First-Year Seminar (3) (GWS;FYS) The EMS First-Year Seminar is designed to encourage students to begin the important process of "thinking for a living," "The primary focus of the seminar is to promote critical reading and thinking skills, and to help students develop effective written and oral arguments. Students learn the importance of reading, sharing ideas and collaborating, through independent and group research, discussion and debate. We want our students to think about some of the major issues facing the world today, the role that science and technology have played in defining and addressing these issues, the way in which present-day thinking has been shaped by the past, and the development of scientific thought. The Seminar's content focuses on communication skills, but these are addressed within the context of issues relevant to the disciplines represented in EMS. As such, the discussions range across topics such as the Earth and its resources; scientific and technical aspects of global habitability; development of the advanced materials necessary for sustaining and advancing civilization in the 21st century; and the social, economic, and political factors that shape and constrain society's view of the Earth system. Students undertake three to five major writing projects throughout the semester, as well as several smaller ones to two paragraph written assignments. Grades are determined from their performance on the written papers, oral presentations, and in-class participation. The Seminar is a required course for all EMS first-year students at the University Park campus and, together with English 015 and either English 202 or Speech Communications 100, will satisfy the Writing and Speaking requirements of General Education.

First-Year Seminar
General Education: Writing/Speaking (GWS)

**EMSC 101: Resource Wars**

3 Credits

Resource Wars" presents an analysis of natural resources and how competition for them shapes national and international cultures and geopolitics. EM SC 101 Resource Wars (3) (US;IL) The faculty of the College of Earth and Mineral Sciences are uniquely qualified to teach "Resource Wars," a course that presents an analysis of natural resources and how competition for them shapes contemporary and historical culture and geopolitics. "Resource wars" will examine the extent to which the Gulf War of 1991, the explosive conflict between the United States and Islamic extremists, and present engagement in Iraq are manifestations of a foreign policy that comes from a desire for resource security. While the current Iraq war is the most recent manifestation of the clash between US and IL cultures, there are many examples of past resource wars in world history.

Although the present conflict in the Middle East is about petroleum, past conflicts involve the entire spectrum of natural resources from gold and diamonds to rubber and tea to water, clean air, and living space. Class discussion will meld the technical aspects of discovery and extraction with its impact on society from a cultural and geopolitical points of view (US & IL). Technical analysis starts with the geology of the natural resource. The extraction, harnessing, or mining of that natural resource and resource transportation come next. The use of that natural resource as a material follows. Of course, short term and long climatic instability may play roles. The human elements (US & IL) involved in the trading and development of the resource lead to both armed interstate conflicts and intrastate disputes. Cultural questions might include how the digital age impact resource control and trade, how global resource distribution impacts energy security and utilization, and how international resource competition impacts the climate. Ultimately, the class is led to an understanding about how scarcity has impacted cultures throughout human history (US & IL). The tentative plan is that each lecture period consists of two parts starting with a moderator (the lead faculty member throughout the entire semester) who summarizes the resource under discussion in a 10-15 minute introduction. Then, appropriate EMS faculty will offer detailed accounts of their particular expertise. This format requires two 75-minute classes per week (30 per semester). The moderator shall be responsible for grading the class including the discussion and written responses in a large classroom format (50+ students) taught in one lecture hall. Active learning shall include discussion sessions with a wireless response pad technology for in-class interaction between student and instructor.

International Cultures (IL)
United States Cultures (US)

**EMSC 121: Minerals and Modern Society**

3 Credits

Production and use of mineral resources in modern society with an emphasis on the interrelationships and their effect on the Earth system.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

**EMSC 150: Out of the Fiery Furnace**

3 Credits

A history of materials, energy and man, with emphasis on their interrelationships. For nontechnical students.

Cross-listed with: STS 150
Bachelor of Arts: Humanities
Bachelor of Arts: Natural Sciences
International Cultures (IL)
General Education: Natural Sciences (GN)

**EMSC 240N: Energy and Sustainability in Contemporary Culture**

3 Credits/Maximum of 3

In this course students are guided through an engaging exploration and the critical evaluation of selected media (e.g., books, film) in contemporary culture on topics related to energy and sustainability. Three selections are used each term, typically two books and one film. Students consider the subject matter in light of humanistic values,
where the science, ideas and history presented in the selected media are critically evaluated relative to the viability of our planet’s ability to support life. Opening lessons cover the foundational science of energy and sustainability, with a global perspective and consideration of the human dimension. The science is presented without technical jargon or advanced mathematics, to promote a genuine and sound understanding of these essential concepts for college-level students of all academic backgrounds. Learning units are devoted to each media selection, with all content, activities and assessments within the unit contributing to this concentrated focus. After completing this course, students will possess the foundational science knowledge necessary to evaluate contemporary topics related to energy and sustainability, from the perspective of universal humanity on a planet of finite resources. This knowledge prepares students to develop observations, questions and opinions on topics related to energy and sustainability and to self-express them, in both written and oral presentations, to others with different backgrounds and points of view. Students will have the foundational knowledge necessary to be skilled critical readers of energy and sustainability subject matter, knowing how to raise (and answer) questions related to scientific clarity and soundness and how to test assumptions and scope of arguments, especially as related to inclusion of humanistic values and planetary limits. This knowledge prepares students to be willing and able to avoid entrenched ideology-based positions on issues related to energy and sustainability and to develop, instead, a personal position based in science and data with a humanistic perspective. Students will gain the knowledge of credible resources and organizations for ongoing research related to energy and sustainability and be prepared to participate in public dialogue on some of the most challenging and complicated issues of our time, including activities such as letters to the editor, online commenting, political engagement, and public advocacy.

Bachelor of Arts: Humanities
Bachelor of Arts: Natural Sciences
General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

EMSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EMSC 302: Orientation to Energy and Sustainability Policy

1 Credits

Orientation to goals of the Energy and Sustainability Policy program and resources available to help students succeed. EM SC 302 Orientation to Energy and Sustainability Policy (1) EM SC 302 provides an orientation to the goals of the Energy and Sustainability Policy (ESP) degree program, helping students to successfully prepare for the five program learning outcomes. The course is conducted as a group seminar, with topics that are designed to provide an initial understanding of program outcomes: energy industry knowledge, global perspective, analytical skills, communication skills, and sustainability ethics. Students are expected to actively participate in discussions and work hands-on with online tools in activities that will allow them to gain an understanding of what it means to successfully participate as an ESP student in different educational and course contexts. Students are evaluated based on active class participation, written assignments, and class presentations. This course is intended to be taken during the first semester after being admitted to the ESP program.

EMSC 420: Energy and Modern Society

3 Credits

Technology and economics of energy resources, production, and consumption; environmental factors, exhaustion, new technology.

Prerequisite: 3 credits in Sociology

Cross-listed with: SOC 420, STS 420
Bachelor of Arts: Social and Behavioral Sciences

EMSC 440: Science Diving

4 Credits

Advanced scuba diving skills applied to underwater research. EM SC 440 Science Diving (4) EM SC 440 is a four credit intermediate science diving course for students already holding a basic open water scuba diving certification from an internationally recognized certification agency (e.g. PADI, NAUI, CMAS, YMCA, SSI etc.). Scientific diving is concerned with the observation of underwater phenomena and the acquisition of scientific data. This course introduces students to advanced scuba diving skills following the standards established by the American Academy of Underwater Sciences (AAUS) – with a significant emphasis on diver safety. The course covers theoretical aspects of the physics of diving, dive physiology, and underwater environments. There is a strong emphasis on diver safety with theoretical and practical training in cardiopulmonary resuscitation, diving-related first aid, accident management and dive rescue. The course will cover advanced recreational diving techniques, including deep diving and enriched air (nitrox) diving. A significant component of the course will involve scuba diving accident analysis, the focus of the course textbook. The course will also include an introduction of advanced underwater sign language. The course will include classroom sessions, pool sessions, and open water dives focusing on underwater skills development for eventual application in research settings. Each government or university underwater research program certifies its own divers based on standards that, at a minimum, conform to those of the AAUS. Successful completion of the course will allow the student diver in training to enroll in EM SC 441, Advanced Science Diving. Successful completion of EM SC 441 will allow the student diver in training to apply for science diver certification from the Penn State Science Diving Program. Certification is also dependant on a medical examination and is at the discretion of the University Dive Safety Officer; it is not automatically offered on completion of the course. The course is usually offered once a year in the spring semester and will involve several day trips (usually at weekends) to various river, lake, and quarry locations within the state. There will be an additional fee charged to cover the costs of the open water dives and administrative charges for recreational dive certifications.

Prerequisite: basic open water SCUBA certification and approval of program

EMSC 441: Advanced Science Diving

4 Credits

Advanced scuba diving skills applied to underwater data collection and research. EM SC 441 Advanced Science Diving (4) EM SC 441 is a four credit advanced science diving course for students who have completed EM SC 440 (Science Diving), an equivalent course at a recognized
AAUS member institution, or have been approved by the University Dive Safety Officer based on acceptable demonstration of practical and academic dive experience. Students must have a minimum of 20 logged dives beyond their basic open water certification dives by the start of the course. Scientific diving is concerned with the observation of underwater phenomena and the acquisition of scientific data. This course introduces students to some of the basic skills and techniques used in scientific diving, following the standards established by the American Academy of Underwater Sciences (AAUS) – with a significant emphasis on diver safety. The course covers theoretical aspects of science diving techniques. The course will focus on advanced techniques in underwater ecology, geology, paleontology and archaeology, leveraging expertise from PSU faculty in these disciplines. The course will include classroom sessions, pool sessions, and open water dives. The classroom and pool sessions and the open water dives will involve skills development and their application in research settings. Research will involve a variety of projects (e.g. fish surveys, lake sediment sampling for climate reconstruction, underwater mapping) -and the exact nature of which will vary depending on the areas of expertise of the faculty and students involved. Each government or university underwater research program certifies its own divers based on standards that, at a minimum, conform to those of the AAUS. Successful completion of the course will allow the student diver in training to apply for science diver certification from the Penn State Science Diving Program. Certification is also dependant on a medical examination and is at the discretion of the University Dive Safety Officer; it is not automatically offered on completion of the course. The course is usually offered once a year in the fall semester and will involve several day trips (usually at weekends) to various river, lake, and quarry locations within the northeastern United States. There will be an additional fee charged to cover the costs of the open water dives and administrative charges for recreational dive certifications.

**Prerequisite:** successful completion of EMSC 440 or waiver by University Dive Safety Officer based on acceptable demonstration of practical and academic dive experience.

**EMSC 470: Undergraduate Collaborative Research in Earth and Materials Sciences**

1-6 Credits/Maximum of 6

Interdisciplinary research seminar involving students in the process of discovery, writing, and debate on issues of broad interest to Earth and Materials Sciences.

**Writing Across the Curriculum**

**EMSC 494: Research Project Courses**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**EMSC 494H: Research Project Courses**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**Honors**

**EMSC 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Earth Sciences (EARTH)**

**EARTH 2: The Earth System and Global Change**

3 Credits

An interdisciplinary introduction to the processes, interactions and evolution of the earth's biosphere, geosphere and hydrosphere. EARTH 202 Gaia - The Earth System (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. EARTH 002 is a broad introduction to the Earth and to the forces and processes that shape the present-day global environment. The course focuses on global-scale changes, both natural and human-induced. These include: global climate change, destruction of stratospheric ozone, and tropical deforestation, species extinction, and the loss of biodiversity. The discussion of these modern environmental issues occupies about 40% of the course. Unlike other &quot;environmental&quot; courses, this one sets these issues in the context of the long-term evolution and natural variability of the Earth systems. Thus, the course is structured around three major themes— the issues of global change, time scales of change, and understanding the Earth as a system. By the end of this course, we expect students to: 1) Recognize that - the Earth operates as a complex system, there is considerable interaction between the different components of this system (e.g. atmosphere, oceans, solid Earth, and biota), changes in one part of the system can be expected to impact all others to a greater of lesser degree. 2) Develop an understanding of how the Earth system operates at the global scale, and the consequences this has for regional variability. 3) Understand how this system has evolved through time. 4) Understand how to use systems and graphical analyses to predict system response to perturbations. As a result of this course, we expect students to: 1) Synthesize this information to better appreciate the complexity of modern global change issues. 2) Be in a position to make more informed judgments on the nature and seriousness of these issues.

**Bachelor of Arts: Natural Sciences**

**General Education: Natural Sciences (GN)**

**EARTH 100: Environment Earth**

3 Credits

Natural processes and their relationship to anthropogenic influences. General principles of global cycles and the role they play in natural hazards, global warming, ozone depletion, etc. EARTH 100 Environmental Earth Science (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. "Environment Earth" sets these issues in the context of the long-term evolution and natural variability of the Earth systems. Thus, the course is structured around three major themes—the issues of global change, time scales of change, and understanding the Earth as a system. By the end of this course, we expect students to: 1) Recognize that - the Earth operates as a complex system, there is considerable interaction between the different components of this system (e.g. atmosphere, oceans, solid Earth, and biota), changes in one part of the system can be expected to impact all others to a greater of lesser degree. 2) Develop an understanding of how the Earth system operates at the global scale, and the consequences this has for regional variability. 3) Understand how this system has evolved through time. 4) Understand how to use systems and graphical analyses to predict system response to perturbations. As a result of this course, we expect students to: 1) Synthesize this information to better appreciate the complexity of modern global change issues. 2) Be in a position to make more informed judgments on the nature and seriousness of these issues.
opinions on complex problems. To achieve these goals, grades are based on examinations, homework assignments, written reports and oral presentations. Exams use a traditional multiple choice format and are based on the lecture and readings. However, questions are designed to test a student's knowledge of the principles and interrelationships discussed rather than memorization of facts and terms. Homework assignments are given on approximately a weekly basis. Questions cover the most important concepts of the text and lecture and encourage consistent reading to complement lectures. These exercises have two purposes. First, the short answer nature of questions provides practice in writing logical, concise paragraphs while ensuring the student understands key concepts. Second, assurance that students are reading chapters concurrent with the lecture topics allows the instructor to interact with the class more effectively during class discussions. Two written reports are given to test a student's ability to comprehend scientific articles and explain the science and its implications for environmental policy. A wide variety of topics are suggested based mainly on newspaper and magazine articles on environmental issues, but students can select almost any topic related to the environment with prior instructor approval. Students must then research the science behind the media coverage via library and web-based resources. The class web site (http://www.geosc.psu.edu/People/Faculty/FacultyPages/Kubicki/earl100.html) is designed to facilitate searches related to course topics. Papers are judged based on the clarity of writing, the quality of scientific data included, and discussion of the implications of the research. Oral presentations debating two sides of environmental issues will be conducted. Small teams (4-5 students) will be assigned one side of an issue and each member will participate in a debate against another team. These debates will develop students' speaking and team-building skills. Although each student will be responsible for a section of the debate, factual research will be carried out as a group to present the best overall case.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

EARTH 100H: Environment Earth: Environment and Energy
3 Credits

Examination of climate change and energy issues. EARTH 100H Environment Earth: Environment and Energy (3) (GN) In this course, students will be asked to investigate the natural processes that affect the Earth's climate and their effects on Life on Earth. Once a fundamental understanding of natural processes is developed, then an examination of the anthropogenic atmospheric changes covers the increases in greenhouse gases mainly due to fossil fuel use and agriculture. After discussing the potential environmental and economic impacts of increased greenhouse gases on Man and Nature, the major energy sources will be studied for their potential to meet increasing energy needs and their possible ability to mitigate climate change.

General Education: Natural Sciences (GN)
Honors

EARTH 101: Natural Disasters: Hollywood vs. Reality
3 Credits

Analysis of the causes and consequences of natural disasters; comparison of popular media portrayal of disasters with perspective from scientific research. EARTH 101 Natural Disasters: Hollywood vs. Reality (3) (GN;US) (BA) This course meets the Bachelor of Arts degree requirements. This course investigates a variety of natural hazards and disasters. We will use the popular media as a starting point for discussions and development of tools for analyzing the causes of disasters. Using excerpted segments of "disaster films" in conjunction with scientific treatments, we can identify the causes, consequences and public perceptions of natural hazards. Small group discussions and cooperative research held &quot;real time&quot; in the classroom will be a major component of this course. The goal is to help students develop both an understanding of natural hazards and disasters, and enhance their understanding of scientific approaches to problem solving. During the course approximately four to five topics selected from the list of volcanoes, earthquakes, hurricanes, tornadoes, flooding, bolloids (e.g., asteroid) impacts, and tsunami (tidal waves) will be covered. For each topic, we will incorporate the following activities: (a) short edited excerpts from disaster movies (or equivalent) of approximately 10 minutes each; (b) discussions by small groups of students (approximately 10 per group) to identify scientific issues to be addressed; (c) development of scientific background and tools via faculty lectures, tutorials, and library or web-based activities; (d) cooperative learning activities by small student groups--each group working together to address one of the identified scientific issues; (e) group presentations of results of the cooperative learning activity; and (f) individual writing activities producing focused reports on specific scientific issues. A typical topic will be covered in three weeks (six class meetings) with approximately 50 percent of the time (in class) allotted to group activities and discussion; lecturing by the faculty will involve approximately 25 percent of the time, with the remaining 25 percent of the time used for video and Web-based presentations. Grades will be based on participation in &quot;breakout&quot; group discussions and cooperative activities, writing assignments (two to three pages each) associated with each topic, and an annotated &quot;disaster diary&quot; of natural disasters which have occurred during the course. Each writing assignment will be aimed at a client audience (e.g., municipal government, businesses, or the general public) and written to explain the exposure to natural hazards or potential for disaster faced by the client. This course has no prerequisites and should be accessible to all students. Through cooperative activities, students can benefit from the range of expertise brought to the course by their colleagues and thus address scientific issues beyond the reach of any individual.

Bachelor of Arts: Natural Sciences
United States Cultures (US)
General Education: Natural Sciences (GN)

EARTH 103: Earth in the Future: Predicting Climate Change and Its Impacts Over the Next Century
3 Credits

Climate predictions for the coming century are utilized to examine potential impacts on regions, sectors of society, and natural ecosystems. EARTH 103 Earth in the Future: Predicting Climate Change and Its Impacts Over the Next Century (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. The United States is actively working on national assessment of the impacts of the climate change predicted to occur over the next century. The U.S. National Assessment has developed three major documents, an Overview written for Congress, a Foundation document giving the sources of information and their interpretation, and a series of regional (e.g. Northeast, Midwest, etc) and sector (water, health, agriculture, forests, and coastlines) reports. These reports present an exceptional opportunity to connect advances
in the natural sciences to society. The course has four major objectives: (1) to gain an understanding of climate science and of the possible scenarios of how climate may change in the future. [the basis for these scenarios and their limitations will be an important element]; (2) to analyze the linkages between climate and major human and natural systems (e.g. agriculture, human health, water, coastal ecosystems, and forests), necessary to assess the potential impacts of climate change; (3) to demonstrate that the impacts of climate change, and the way in which society responds, is dependent on factors such as age, economic capability, lifestyle (e.g. urban vs. rural), generational differences, and cultural differences; and (4) to understand the different types of responses that humans may have to climate change, including adaptations to change and possible mechanisms to mitigate the factors that are forcing change to occur. The course includes smaller enrollment computer laboratory/discussion sessions designed to (1) provide hands-on data analysis and interpretation and the exploration of climate linkages to natural and human systems; (2) promote discussion and formal debate around key issues; and (3) develop tools to assess class perceptions of vulnerabilities and appropriate responses. Several of these elements will be developed with a team or group approach. Grading will be based primarily on a student record, or portfolio, stemming from a combination of lab exercises, written material, and debate materials. Tests on lecture material will be a secondary evaluation mechanism. This course fulfills a Natural Sciences General Education requirement, as well as course requirements for the Earth major. It provides a natural partner to Earth-as-a-System (Earth 002) that focuses on Earth system concepts and the scientific evidence for a changing planet throughout Earth history and into the future.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

EARTH 104: Climate, Energy and Our Future

3 Credits

This course presents the past, present, and possible future response of Earth's climate to human energy use. EARTH 104 Climate, Energy and Our Future (3) (GN) This class explores how we can shift our society to a sustainable energy system that improves our quality of life, our economy, and our natural environment. Energy provides well-being, jobs and about 10% of our economy, while powering the rest. But, energy is also the least sustainable part of our economy; we rely on fossil fuels that we are burning about a million times faster than nature saved them for us. These fossil fuels, mostly coal, oil and gas, help us grow food and avoid some environmental disasters, but the limited fossil-fuel supplies mean we must move toward a more sustainable system. And, we will be better off by avoiding damaging climate changes from fossil-fuel CO2 if we move before all of the fossil fuels are gone. The warming influence of fossil-fuel CO2 is shown by physics known for more than a century and really refined by the US Air Force after WWII. History, data, and models confirm the physics, giving us high confidence that burning much of the remaining fossil-fuel resource and releasing the CO2 will cause much larger climate changes than we have experienced so far. This class will explore the big issues in energy, including the value of burning oil rather than whales, and other historical insights. Then, after looking at the basic science and engineering of our energy system and how it affects climate, we will examine the multitude of options for the future, including alternative energy sources, conservation, and intentionally manipulating the climate. The economics, policies and ethics of these options will help us consider how to build a sustainable energy system that will encourage economic growth and improved quality of life, while at the same time defending against potentially catastrophic future climate change.

General Education: Natural Sciences (GN)

EARTH 105N: Environments of Africa: Geology and Climate Change

3 Credits

Significant natural features of Africa as related to human endeavor; case studies include the Nile, climate change, and natural resources. EARTH 105N Environments of Africa: Geology and Climate History (3) (GN/GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Environments of African: Geology and Climate History investigates the interrelationships between geology, hydrology, land use, societies and human development in several areas of Africa. We focus primarily on regions north of the equator, although there is a brief segment on South Africa mining. Specific topics include the Nile River (sources of the Nile, agricultural practices, effects of damming the Nile, hydropolitics), the Sahara and Sahel (salt mines, climate change, drought, water resources), and natural resources and their role in politics (gold, diamonds, oil, and gas). The theme of climate change cuts across the entire semester. The qualitative and analytical components of the course involve working through a combination of map exercises and data manipulations (flood stage, groundwater age, rainfall and temperature records). Writing exercises are conducted both individually (essays, analysis of readings) and in collaborative teams (climate change analysis). Readings for the course come from the popular scientific literature; current refereed research journals, and transcribed oral histories of African people. Faculty lectures will comprise ~30% of the course, and student presentations ~20%, with the remainder of the time devoted to in-class collaborative exercises. There are no pre-requisites for this course. It will be offered annually with a maximum enrollment of 100 students. The goals of the course are to (1) explore the relationship between human society and the natural world; (2) develop quantitative and scientific reasoning skills; (3) introduce the scientific study of Africa. The topics that we explore (e.g., global climate change, allocation of limited water resources) are important political issues that affect people in developed and developing countries throughout the world. It is crucial that the next generation of citizens be informed as to how scientific data is obtained, presented, and interpreted by scientists as well as politicians. Students will work individually and (more commonly) in teams to analyze real data from natural African systems, and will then report their findings to the class both orally and in writing. Examples of the data sets include 100-year records of monthly rainfall and temperature from stations throughout the continent, fossil suites from ancient lake cores in the modern Sahara, and historical writings of Nile flood levels from pre-Biblical times. Through these exercises students will gain an appreciation of the scope of geological time and change, and will be able to incorporate this new long-term perspective into identification and resolution of modern questions.

Bachelor of Arts: Natural Sciences
International Cultures (IL)

GenEd Learning Objective: Key Literacies
EARTH 106: The African Continent: Earthquakes, Tectonics and Geology

3 Credits

Study of earthquakes and seismic waves to learn about the geology and plate tectonics of the African continent. EARTH 106 Shaking Up Africa: The Geology and Tectonics of Africa (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Earthquakes are natural phenomena that can cause immense human suffering because of intense ground shaking, and are consequently of great societal importance.

Earthquakes are also important because the seismic waves that generate the ground shaking provide scientists with important information about Plate Tectonics and geology, in particular information about the structure and composition of our planet and how the insides of the planet are deforming. In this course, earthquakes in Africa and the seismic waves they generate are used to help students to learn about the geology of Africa and how the earth beneath the African continent is being deformed by Plate Tectonics. EARTH 106 is designed in four modules. Modules, in turn, are divided into weekly lessons. Offered in a hybrid format, each weekly lesson includes a single face-to-face class meeting, complemented by online reading assignments, self-check learning activities, and discussions. The online, hands-on learning activities are similar to the labs conducted in similar courses that are offered solely in face-to-face environment, including the manipulation of geographic data, map reading exercises, and rock and mineral identification activities. They are designed to help students learn skills and knowledge that they then apply to a course project. While the weekly lesson activities involve working with seismic data from East Africa, the course project requires students, working in small groups, to apply their skills and knowledge to another geographic area of the African continent. In addition to the weekly lesson activities and the course project, students are required to complete weekly quizzes that assess comprehension of the online reading assignments. Quizzes that come at the end of a module also assess the skills and knowledge addressed in the lesson learning activities for that module. This course is a general education offering in natural sciences (GN) and is open to all students regardless of academic major.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

EARTH 109: The Fundamentals of Shale Energy Development

3 Credits

Energy is a critical component of modern society, yet we face significant challenges associated with balancing energy demands, energy security, environmental sustainability, and stable economics with sound regulations and policy. Unconventional energy development from shale formations has been a game changer for the fossil fuel industry over the past decade and is projected to continue to grow over the next several decades. But there are still many uncertainties on how to optimally develop these largely untapped resources to maximize the social benefits while minimizing environmental impacts. This course covers key topics needed to provide students with an overview of the science, engineering, environmental impacts, geopolitics, economics and societal impacts of shale energy development. These topics include geology, resource assessment, drilling technology, hydraulic fracturing methods, environmental impacts, economics, workforce needs, infrastructure, utilization trends, regulation, energy policy, energy exports, international geopolitics, societal considerations, and the future of unconventional energy and its relationship with other energy forms. The class is geared toward a broad audience of students to provide a big picture view of the shale energy landscape. The course is structured in four parts. The course begins with the geology of shale (part 1), then examines engineering and environmental aspects of shale energy production (part 2), then explores relevant economic, geopolitical and societal issues (part 3) and ends with a capstone project (part 4). Shale energy development in a key U.S. shale basin is used in parts 1-3 to provide examples and illustrate concepts, impacts and problems. In the capstone project, students will learn about the shale energy development in another basin of their choosing and present their findings to the class, thereby developing further the students’ understanding of the core course content while gaining an overview of shale energy development beyond the U.S. shale basin presented in the course.

GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
EARTH 111: Water: Science and Society

3 Credits

Investigation of water behavior and occurrence, its relevance to life, human activities, politics, and society. EARTH 111 Water: Science and Society (3) (GN;US) The Earth is often called "The Blue Planet"; a reference to the fact that over two-thirds of its surface is covered by water. Despite its apparent abundance, water is a valuable and limited resource; less than 2.5% of the water on the planet is fresh, and only one third of that is potable. And that's not all - the small fraction of Earth's water that is usable to humans is distributed very unevenly. As a result, conflicts over water occur from the local level, for example: pitting rancher against developer to the global level, at which nations square off against one another in war and use water as a mechanism for imposing sanctions. The dire situation in some regions has spurred numerous research and technological endeavors, such as water desalination, genetic engineering of crops, and major overhauls of agricultural practice. In this course, we will explore the relationships between water and human populations, with emphasis on water resources and quality in the Western U.S., and how these have shaped history and modern politics. We will focus first on developing the scientific underpinnings of water's unique properties, behavior, movement, occurrence, and quality. With this background, we will then discuss key issues relating to modern and historical conflicts, human impacts on the natural world, and human engineering accomplishments driven by our thirst for this valuable resource. We will discuss historical examples from the American West, specifically the development of water resources in Colorado and California. We will also explore modern and historical conflicts between stakeholders. Major themes will include political and economic conflicts over (1) water resources - for example, balancing agricultural and urban demands in the American West in the Denver and Los Angeles metropolitan areas, (2) water quality - for example, considering the impact of economically profitable human activities on water quality and transmission of disease, and (3) human impacts on natural processes, specifically connecting human activity with our cultural history of water use and exploration in the American West. Our approach is to include a substantial component of student-initiated learning. The course will include critical evaluation and discussion of assigned reading and films, a series of laboratory exercises and field trips to illustrate concepts and stimulate discussion, and a major research paper.

United States Cultures (US)
General Education: Natural Sciences (GN)

EARTH 112: Climate Science for Educators

3 Credits

Concepts of climate sciences highlighted by evidence-based explanations and scientific discourse in preparation for K-6 science teaching. This introductory, multidisciplinary course will focus on the interactions among physical science concepts, earth science concepts, and scientific practices to develop understandings about Earth's climate system. The course is primarily intended for prospective elementary school teachers (Childhood and Early Adolescent Education, PK-4 and 4-8 majors), although it is available to other non-science majors. The development of models is an integral part of the course as a means to facilitate climate systems thinking by serving as a means to explain phenomena and predict outcomes. In addition, students in the course consider how what they are learning applies to teaching by offering opportunities to think about how they might extend their knowledge to teaching contexts. This course consists of integrated lectures and laboratory investigations in class meetings each week, with work on collaborative projects outside of class.

Cross-listed with: SCIED 112

EARTH 150: Dinosaur Extinctions and Other Controversies

3 Credits

Dinosaur extinctions and other major and controversial events in the history of life. EARTH 150 Dinosaur Extinctions and Other Controversies (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. One of the most dramatic developments in the Earth sciences is the suggestion that extinction of the dinosaurs was caused by a meteorite impact. Evidence for and against this controversial idea is just one of the subjects addressed by this course, dealing broadly with the history of our planet, the evolution of life upon it, and the sometimes rocky development of our understanding of Earth history. In addition to dinosaur extinction, we will discuss issues relating to catastrophic vs. gradual theories about the Earth's history, fossils and the history of life, and mass extinctions, including whether or not we're in the middle of one now. How are scientific discoveries made? What distinguishes a scientific argument from a non-scientific one? What roles do social and historical factors play in the construction and acceptance of scientific theories? Questions such as these will permeate the course. Readings will include selected texts by leading scientists, with supplements from the primary scientific literature, including current discoveries published in Science and Nature.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

EARTH 155N: Scientific Controversies and Public Debate

3 Credits

EARTH 155N Scientific Controversies and Public Debate is an introduction to critical thinking about the messages consumers get from public relations (PR) on behalf of industry, and from scientists regarding environmental health risks. Because such messages may be contradictory, the course seeks to help students understand the extent to which message communication influences our perception of risk. The course is designed to familiarize students with science topics that, because of message manipulation, are (or historically were) perceived as controversial (e.g., smoking, secondhand smoke, flame retardants, nuclear energy, the ozone hole, global climate change, acid rain, junk science, rBGH milk, biosolids, pesticides, vaccines, and endocrine disrupting chemicals). Students will learn the science and environmental health risks underlying several controversial topics. They will be guided to consider how industry and science messaging has shaped their own perceptions of risk. Then, using tools for effective communication, and avoiding communication pitfalls and deceptive tactics, students will combine accurate science content with compelling storytelling in a professional-quality video to inform the public about a targeted environmental health risk and persuade the public to avoid that risk. EARTH 155N focuses on the intersection between science and communication in the realm of environmental health. The course guides students to closely examine controversial environmental health topics, learn the science to understand public health risks, learn strategies to identify false or misleading arguments, and then think critically about industry and science messaging, including the impact of such messaging on their own lives. EARTH 155N Scientific Controversies and
Public Debate is an interdomain course that integrate GN environmental health topics with GH message evaluation. It has no prerequisites, and is designed for students who may be unfamiliar with, or have only introductory knowledge of controversial environmental health topics, the norms of science communication, and public relations techniques.

General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking

EARTH 240: Coral Reef Systems

4 Credits

The geography, geology, biology ecology and chemistry of coral reef ecosystems; threats to reef environments; and techniques for reef surveying and monitoring; with local geologic and distant modern field studies. EARTH 240 Coral Reef Systems (4) (GN) The course introduces students to coral reef environments, past and present. It describes the processes that control the distribution, growth, and morphology of reefs and introduces students to the complexity of the coral reef ecosystem. The course emphasizes the role that reefs play in the natural environment and examines their importance to society both globally (e.g. in terms of biodiversity and its potential benefits) and locally in terms of, for example, food supply and tourism. We then look at the natural disturbances (such as disease, storms, sea surface temperature variations) that affect the reef, as well as ways in which reefs are threatened from human impacts, with an emphasis on global climate change and the long-term outlook for reef survival. Students will work in groups to research elements of the system, first at a global scale, and then focusing specifically on one region – the Bahamas platform. Students will look at the history of the Bahamas platform and its relationship to the present nature and distribution of coral reefs. They will then examine these in the context of their social, cultural, and economic importance to local communities.

A third component of the course will concentrate on the identification of vertebrate and invertebrate species and substrate conditions that are important indicators of reef health. There will then be a one-week field trip to a coral reef system to conduct reef surveys. The surveys follow the Reef Check protocol (a volunteer, community-based monitoring protocol designed to measure the health of coral reefs on a global scale). Reef Check is administered out of the University of California at Los Angeles. The coral reef surveys will be conducted on scuba and the field trip and participation in the survey are required elements of the course. Students who are not scuba certified will be given the opportunity to obtain open water scuba certification as part of the course, through Penn State's Science Diving Program (The PSU Science Diving Program is a member of the American Academy of Underwater Sciences). There will be an additional charge for the scuba certification course and the field trip. Student assessment will be through group presentations, term papers, 3 exams and their contribution to the field program. The course satisfies part of the field requirement for the University's Marine Science Minor and serves as an introduction to the Science Diving Program.

Prerequisite: Prerequisite or concurrent: KINES045 or Nationally Recognized Scuba Certification
General Education: Natural Sciences (GN)

EARTH 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EARTH 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EARTH 400: Earth Sciences Seminar
3 Credits

Interdisciplinary study of environmental problems in the earth sciences.

Prerequisite: seventh-semester standing in the Earth major

EARTH 402: Modeling the Earth System
3 Credits

Earth 402 is a course that focuses on modeling Earth systems with a focus on the climate system, including the economic and policy aspects of energy and carbon emissions. By building and experimenting with numerical models of these systems, students gain insight into the dynamics of these systems, including the future consequences of different policy decisions that impact the climate system.

Prerequisite: EARTH 2; EARTH 103 MATH 140; MATH 110; MATH 83; CHEM 110

EARTH 495: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

EARTH 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EARTH 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EARTH 498: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Economics (ECON)

ECON 14: Principles of Economics

3 Credits

ECON 14 Principles of Economics (3)(GS)(BA) This course meets the Bachelor of Arts degree requirements. Economics is the study of how people satisfy their wants in the face of limited resources. Economics is a consistent set of methods and tools that is valuable in analyzing certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Microeconomics deals with the behavior of individual households and firms and how that behavior is influenced by government. Macroeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth. This course is designed as a general education course in basic economics for non-majors. An important goal of this course is to take each student as far down the road of "thinking like an economist" as possible. The course begins by studying microeconomic topics, including supply and demand, elasticity, and market efficiency. The course then switches course to macroeconomic topics, including GDP, income, growth, inflation, unemployment, fiscal policy, and monetary policy. A variety of mechanisms is used to assess student performance. These evaluation methods typically include exams, quizzes, and homework assignments. Students who have completed ECON 102 or ECON 104 or who are registered in the College of Business Administration may not schedule this course.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ECON 102: Introductory Microeconomic Analysis and Policy

3 Credits

Methods of economic analysis and their use; price determination; theory of the firm and distribution. ECON 102 Introductory Microeconomic Analysis and Policy (3)(GS)(BA) This course meets the Bachelor of Arts degree requirements. Economics is the study of how people satisfy their wants in the face of limited resources. One way to think about economics is that it is a consistent set of methods and tools that is valuable in analyzing certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Microeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth. Microeconomics deals with the behavior of individual households and firms and how government influences that behavior; it is the subject of this course. More specifically, ECON 102 is an introduction to microeconomic analysis and policy. The principal objective of the course is to enable students to analyze major microeconomic issues clearly and critically. Students will be introduced to the methods and tools of economic analysis, and these analytical tools will be applied to questions of current policy interest. Learning these methods and tools and applying them to interesting policy questions and issues is sometimes called "thinking like an economist." An important goal of this course is to take each student as far down the road of "thinking like an economist." An important goal of this course is to take each student as far down the road of "thinking like an economist." A variety of mechanisms are used to assess student performance. These evaluation methods typically include exams, quizzes, and homework assignments. ECON 102 is an introductory course in economics and as such, serves as a prerequisite for several microeconomics-oriented 300-level courses. It is also a required course for all majors and minors in economics, and meets requirements for a General Education (GS) or Bachelor of Arts social science course. Students who have completed ECON 302 may not enroll in this course.

Bachelor of Arts: Social and Behavioral Sciences

ECON 104: Introductory Macroeconomic Analysis and Policy

3 Credits

This course meets the Bachelor of Arts degree requirements. Economics is the study of how people satisfy their wants in the face of limited resources. One way to think about economics is that it is a consistent set of methods and tools that is valuable in analyzing certain types
of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Microeconomics deals with the behavior of individual households and firms and how that behavior is influenced by government. Macroeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth; it is the subject of this course. More specifically, ECON 104 is an introduction to macroeconomic analysis and policy. The principal objective of the course is to enable students to analyze major macroeconomic issues clearly and critically. Students will be introduced to the methods and tools of economic analysis, and these analytical tools will be applied to questions of current policy interest. Broadly, the course focuses on the determination of national income, on unemployment, inflation, and economic growth in the context of a global economy, and on how monetary and fiscal policy, in particular, influence the economy. Learning the methods and tools of economics and applying them to interesting policy questions and issues is sometimes called "thinking like an economist." An important goal of this course is to take each student as far down the road of "thinking like an economist" as possible. A variety of mechanisms is used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, and group projects. ECON 104 is an introductory course in macroeconomics, and as such, serves as a prerequisite for 300-level courses in intermediate macroeconomic analysis, international economics, and money and banking. It is also a required course for all majors and minors in economics, and meets requirements for a General Education or Bachelor of Arts Social Science (GS) course. Students who have completed ECON 304 may not enroll in this course.

ECON 106: Statistical Foundations for Econometrics
3 Credits
Basic statistical concepts used in economics. Topics include probability distributions, expectations, estimation, hypothesis testing, correlation, and simple regression. Students who have completed ECON 306 may not schedule this course.

Bachelor of Arts: Social and Behavioral Sciences

ECON 106H: Statistical Foundations for Econometrics (Honors)
3 Credits
Statistical Foundations for Econometrics Honors (ECON106H) teaches basic statistical concepts used in economics, specifically in the area of econometrics. Econometrics is a field of economics where quantitative methods are used to study economic data. Topics studied in this course include probability distributions, expectations, estimation, hypothesis testing, correlation, and simple regression. Since probability and statistics is a mathematical subject, it is nearly impossible to study it without using mathematical tools such as sets and functions. Therefore, students are expected to be comfortable with, or at the minimum open to, using algebra and mathematical arguments. Some concepts from calculus (e.g. derivatives and integrals) are important to understand continuous probability distributions such as the famous normal distribution. Therefore, the course will spend some time reviewing important concepts and results from calculus as needed. Students will also learn and other probability distributions and density functions, and be able to apply them in practice. Students will use computer programs to model randomized experiments and run regressions on datasets for analysis. Interpreting the findings of the regressions are key to understanding what the data shows, and depending on the data, the results may also have important policy implications. ECON106 is a required course for all majors in economics. This honors version of the course is designed to provide the opportunity to pursue this course at a more in-depth and mathematically rigorous level. It is a natural preparation for taking an honors section of Econometrics (ECON306), which is an introductory course on econometrics. Students who have completed ECON306 may not schedule this course.

RECOMMENDED PREPARATIONS: MATH 110 or MATH 140
Bachelor of Arts: Social and Behavioral Sciences
Honors
ECON 197: Special topics
1-9 Credits/Maximum of 9

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

ECON 302: Intermediate Microeconomic Analysis
3 Credits
ECON 302, Intermediate Microeconomics (3 credits) (GS) (BA). This course teaches microeconomic theory at an intermediate undergraduate level, taking a more mathematical approach. Major components of the course are constrained maximization, the theory of the consumer, the theory of the producer, general equilibrium, market structures, and game theory. The goal of this course is to give the student the fundamentals of microeconomics that will be applied widely to upper level courses in economics. The course begins by developing a model of consumer behavior. This model is extended to derive a consumer’s demand for a good, and then numerous applications of this model are investigated, including income and substitution effects of a price change, as well as the determination of relative prices in a general equilibrium framework. The supply side of the market is then discussed. The theory of the firm is developed, and students will explore firm behavior and welfare analysis in various market settings including perfectly competitive markets, monopoly, and oligopoly with strategic interaction between firms. Economics is an analytical subject. Students will learn to use inductive reasoning and other scientific methodology necessary to understand this and other (social) sciences. In short, students will learn to think like an economist. The goal of this course is to extend student understanding of the topics introduced in the principles-level class to the way they are applied in the upper level courses in economics.

Prerequisite: ECON 102
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
weaknesses of each theory are considered relative to the business cycle data.

**Prerequisite:** ECON 104

ECON 304H: Intermediate Macroeconomic Analysis (Honors)
3 Credits

Analysis of forces that determine the level of aggregate economic activity. ECON 304H Intermediate Macroeconomic Analysis (Honors) (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. There are two branches within the discipline of economics: microeconomics, focused on the behavior of individual economic actors (consumers, firms, and government) and macroeconomics, focused on economic aggregates (e.g., inflation, unemployment, aggregate economic growth). There are four core courses in economics that are required of all majors and minors: introductory and intermediate courses in microeconomics and macroeconomics. This course is the upper-level core course in macroeconomic analysis. Students will learn, at a deeper level than that covered in the beginning macroeconomics course (ECON 004), and with extensive use of calculus and economic models, about the measurement and structure of the national economy, long-run economic performance and the factors that influence it, business cycles and macroeconomic policy, and the environment and institutions that are pertinent to macroeconomic policy. Students will develop their analytical skills for analysis of macroeconomic issues. These skills, in turn, will be required for several 400-level macroeconomics-oriented courses. This course is a follow-on to the introductory course in macroeconomic analysis, its prerequisite going more deeply into the material covered in that introductory course in macroeconomic analysis, and making extensive use of calculus and formal models. It is, in turn, a prerequisite for a number of macroeconomics-oriented courses at the 400 level. This honors version is designed to provide the opportunity for stronger students to pursue this key course at a more rigorous and in-depth level.

**Prerequisite:** ECON 104 and MATH 110 or MATH 140
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
Honors

ECON 306: Introduction to Econometrics
3 Credits

The implementation of statistical techniques to analyze data and address economic questions. Econometric results are produced and assessed.

**Prerequisite:** ECON 106

ECON 306H: Introduction to Econometrics
3 Credits

The implementation of statistical techniques to analyze data and address economic questions. Econometric results are produced and assessed. ECON 306H Introduction to Econometrics (3) In this course students learn basic quantitative methods used in applied economics, focusing on linear regression models and their applications. The course will cover topics similar to those covered in ECON 306 but with more mathematical rigor (i.e., using calculus). Following an introduction and reviews of probability and statistics, the course will focus on: (1) the statistical properties of commonly-used estimators and test statistics in regression models, (2) how to use them in practice for statistical inference, and (3) the issue of endogeneity and instrumental variables. Students will study both practical and theoretical aspects of econometrics, by which they will be able to implement the basic methods in practice and to understand the limitations of these methods. This course is an honors version of the second quantitative course in economics that is now required of all economics majors. As noted above, students will learn both theoretical and practical aspects of econometrics, so that they will be able to carry out econometric analyses of data. Evaluation of student performance will be based on homework assignments, midterm exams, and a final exam. Typically, the homework assignments would account for 20 percent of the overall course grade, each of two midterm exams would count for 25 percent of the grade, and the final exam would count for the remaining 30 percent of the grade. This course has ECON 106/106H, Statistical Foundations for Econometrics, as a prerequisite, and will use calculus. Further, the course is a prerequisite for advanced course work in econometrics, such as ECON 465W, ECON 466W, and ECON 483W, as well as other 400-level courses requiring econometrics.

**Prerequisite:** ECON 106 or ECON 390 ; MATH 110 or MATH 140 Honors

ECON 315: Labor Economics
3 Credits

Labor Economics, ECON 315 (3 credits) (GS) (BA). This course is designed to develop the concepts and techniques of labor economic theory and its applications. Key questions to consider for the course include: Why do some people earn more than others? When would people choose to work or not? When would someone choose to further his or her education? Do earnings differences necessarily mean discrimination? To answer these questions, students will begin the course by learning the basics of the labor market, including labor demand and labor supply. Employment and earnings are then discussed, including the definition of unemployment, different types of unemployment, and reasons individuals would choose to work or not. Data is used to examine labor market trends and their implications. The course also explores human capital, wage determination, collective bargaining, wage differentials, discrimination, and related government policies. Considerable emphasis will be placed on problem solving and the application of labor economics to selected public policy issues and current economic events. Knowledge and understanding will be assessed through exams, homeworks, and a final project. This course is one of several 300-level electives which can used toward the Economics major and meets requirements for a General Education (GS) or Bachelor of Arts social science course.

**Prerequisite:** ECON 102
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ECON 323: Public Finance
3 Credits

ECON 323, Public Finance (3) (GS) (BA). This course examines contemporary fiscal institutions in the United States, public expenditures,
public revenues, and the incidence of major taxes such as the personal income tax, the corporate income tax, and consumption taxes. We also discuss intergovernmental fiscal relations in a federal system of government, and public debt (or deficit financing). We explore the economic rationale for, the current data, and status of the political debate on these topics and others as time permits. Some of the key topics discussed in the lectures include externalities and solutions to market failure associated with them, efficient provision of public goods, and cost-benefit analysis as a nonmarket way to allocate scarce resources. We also devote a substantial amount of time to the market for health care and the role of government in the provision of health care in the United States. In addition to government’s role in health care, we spend a great deal of time on other major federal government spending programs including social security and a number of spending programs targeted at low income citizens. The later includes the Temporary Assistance for Needy Families (TANF) and the Supplemental Nutrition Assistance Program (SNAP). Here, students are expected to critically analyze the major effects of these programs on poverty as well as incentives to work. On the revenue side of public finances, we focus on both the redistributive and efficiency effects of taxation. We discuss the statutory and economic incidence of consumption taxes, the personal income tax, and the corporate income tax. The last part of the course includes two major topics: deficit financing and intergovernmental fiscal relations. In the deficit-financing chapter, we focus on the federal government debt. Students learn about the different measures of public debt, which include gross national debt, intergovernmental debt, and debt held by the public. Under intergovernmental fiscal relations, we discuss the delineation of spending responsibilities between the federal and state governments. We also discuss major funding sources for states and local governments in the United States.

**Prerequisite:** ECON 102

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

**ECON 333: International Economics**

3 Credits

ECON 333, International Economics (3 credits) (GS) (BA). This course applies the knowledge from Introductory Microeconomics (ECON 102) and Introductory Macroeconomics (ECON 104) into International trade. Students will learn about why nations trade and the effects of trade on both consumer and producer. Some people will gain and some people will lose from trade and students will learn how to measure gain and loss from trade. This class also introduces trade barrier policies imposed by the government such as tariff, quota, subsidy and other commercial policy such as dumping and countervailing duty. The creation of the international organizations, such as the World Trade Organization (WTO) and General Agreement on Tariffs and Trade (GATT) are discussed. Later in the course, the Macroeconomics side of the international trade is discussed as well as the Balance of Payments, which is a way to summarize and measure a countries trade with the rest of the world. Students will also examine some of the basics of the foreign exchange market and the relationship with the interest rates. Toward the end of the course, the lessons will cover the International monetary systems, which include the gold standard, Bretton Woods system, fixed exchange rates, and flexible exchange rates

**Prerequisite:** ECON 102, ECON 104, or ECON 014

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

**ECON 342: Industrial Organization**

3 Credits

Industrial Organization (3 credits) (GS) (BA) Industrial Organization focuses on the study of markets with imperfect competition. After reviewing the Perfect Competition model, the assumptions of that model are systematically relaxed, allowing us to focus on market failures that result, and how they might be remedied. The Structure-Conduct-Performance paradigm is followed. The structure of an industry affects the behavior of firms in that industry, which in turn affects the performance of that industry, evaluated from an efficiency standpoint. Much current material is discussed, especially potential mergers in certain industries and how they might affect market outcomes. Attention is given to oligopolies, using game theory as a tool with which to analyze the performance of these types of markets. Pricing strategies, asymmetric information, advertising, and antitrust law are also covered. The course is designed to provide students with a theoretical background with which to understand current market structures and events. Empirical data is discussed to test the models and theories presented in class.

**Prerequisite:** ECON 102

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

**ECON 351: Money and Banking**

3 Credits

Money, credit, commercial and central banking, financial intermediaries, treasury operations, monetary policy. Students who have already taken ECON 451 may not schedule this course. ECON 351 Money and Banking (3)(BA) This course meets the Bachelor of Arts degree requirements. In this course, students learn all about the Federal Reserve and the conduct of monetary policy: both conventional and unconventional. Students will examine many different interest rates and learn how they are determined. Students will study the importance of the Federal Reserve’s dual mandate and become familiar with business cycles in the US economy since 1970 and the associated Fed policy during these episodes. Term structures of interest rates are analyzed as well as the risk structure of interest rates. The Taylor Rule and various specifications of the Taylor Rule are applied to these topics. Students also study the efficient market theory and the determination of stock and bond prices. The course finishes by engaging students in the topics of futures, options, and futures options and hedging with futures and options. The objective of the course is help students get a better understanding of macroeconomic and monetary topics and policy. Upon successful completion of this course, students will be able to contribute to any discussion about the U.S. economy and Federal Reserve policy, analyze real world events as they relate to U.S. monetary policy, and share their newly acquired human capital with others. The prerequisite for this course is ECON104. Students who have taken ECON451 cannot schedule ECON351.

**Prerequisite:** ECON 104

Bachelor of Arts: Social and Behavioral Sciences
ECON 395: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Social and Behavioral Sciences

ECON 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

ECON 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

ECON 400: Honors Seminar in Economics
3-12 Credits/Maximum of 12
Readings, discussion, and oral and written reports on selected topics in economics.
Prerequisite: ECON 302 or ECON 304, fifth-semester standing, admission into Honors program
Bachelor of Arts: Social and Behavioral Sciences
Honors
Writing Across the Curriculum

ECON 401: History of Economic Thought
3 Credits
Survey of economic ideas from Greco-Roman times to the present.
Prerequisite: ECON 302 or ECON 304
Bachelor of Arts: Social and Behavioral Sciences

ECON 402: Decision Making and Strategy in Economics
3 Credits
Development and application of the tools for decision making under uncertainty and for game theoretic analysis of economic problems.
Prerequisite: ECON 302 and ECON 106 or SCM 200 or STAT 200
Bachelor of Arts: Social and Behavioral Sciences

ECON 404: Current Economic Issues
3 Credits
An analytical survey of significant problems of current economic policy and the application of economic analysis to important social issues. The specific topics chosen will reflect the academic and research interests of the instructor who will be qualified to provide an extremely detailed course and lesson plan related to the issues.
Prerequisite: ECON 302 or ECON 304

ECON 404W: Current Economic Issues
3 Credits
An analytical survey of significant problems of current economic policy and the application of economic analysis to important social issues.
Prerequisite: ECON 302 or ECON 304
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

ECON 406: The Economics of Social Conflict
3 Credits
Economic theory of the resolution of social conflicts: social choice theory, voting, noncooperative games, voluntary trade, and allocation by force.
Prerequisite: ECON 402, and MATH 110 or MATH 140

ECON 407: Political Economy
3 Credits
Applications of the tools of game theory to analyze topics in collective decision making.

ECON 407W: Political Economy
3 Credits
Applications of the tools of game theory to analyze topics in collective decision making. ECON 407W Political Economy (3) The course covers two main topics. First, the course will analyze elections as a mechanism to aggregate preferences of the electorate. It will be shown that elections provide a good tool to strike a compromise between all members of the electorate if the scope of disagreement in the electorate is one-dimensional. A simple model of taxation in which citizens'
preferences over tax rates are "one-dimensional" in the above sense will be developed. This model will be used to predict how tax rates in
democratic countries change with the income distribution. It will be
shown next that no satisfaction mechanism of preference aggregation
exists in a slightly more general model of taxation. This result is a
special case of the famous Impossibility Theorem by Arrow.Secondly,
conditions will be given under which elections are a good mechanism
to aggregate information that is spread throughout the electorate. It
turns out that theories of information aggregation yield a convincing
theory about abstention. A model in which the less informed voters
delegate the decision to the more informed voters by simply abstaining
will be discussed. The discussion of political debates and the media
will be framed in terms of an information aggregation model. Finally,
the potential of information aggregation theories to explain social
movements will be discussed.Game theory provides a framework to
think about many issues in the social sciences. This particular course
focuses on some applications of game theory to politics. The first, and
very specific goal, is to use the lens of game theory to understand the
workings of various political institutions. The second, more general, goal
is to enable students to apply game-theoretic reasoning to a wide range
of topics in the social sciences. The third is to make the research frontier
in the field of political economy as accessible as possible. It is hoped
that students would get a better understanding of what graduate school
would be like.This course has as its broad objective to expose students
to the use of the tools of game theory to analyze collective decision
making. Students will learn how to use economic theory to analyze
real-world situations of collective decision making. They will develop
their analytical skills as well as their skills in writing in economics.The
writing-intensive course is one of a series of 400-level writing intensive
seminars that the Economics Department is offering to its advanced
undergraduates in seven different area of economics. This seminar is in
the area of microeconomic theory. The course will count toward the major
and the minor in economics as a 400-level course. Further, it will count
toward completion of a module (specialization) in the area of theory and
quantitative methods.

**Prerequisite:** ECON 402

Writing Across the Curriculum

ECON 408: Intellectual Property

3 Credits

A comparative and cost-benefit analysis of intellectual property that
examines patents, copyrights, governmental supported research, and
prizes.

**Prerequisite:** ECON 402 or ECON 444

ECON 408W: Intellectual Property

3 Credits

A comparative and cost-benefit analysis of intellectual property that
examines patents, copyrights, government supported research, and
prizes.

**Prerequisite:** ECON 402 or ECON 444

Writing Across the Curriculum

ECON 409W: Economics of Terrorism

3 Credits

Terrorism throughout history; economic causes, costs, sources, and
consequences. ECON 409W Economics of Terrorism (3)This
microeconomics seminar examines the economics of terrorism.
Beginning with a survey of terrorism through history and extending to
terrorism in the 21st century, economic tools are deployed to better
understand the causes and sources of terror. Terrorism imposes
substantial economic costs, but there are also significant costs with
policies to combat terrorism. A society is better off if the threat of
terrorism can be reduced, or even eliminated, just as it is better off if the
threat of crime can be reduced or eliminated. There are some economic
roots of terrorism, but these have more to do with the incentives and
constraints that individuals and organizations face than with any specific
set of easily quantifiable factors that push people toward involvement in
terrorist organizations. This suggest that policy responses to terrorism
need to multi-faceted and flexible. Security policies, for example, need
to be more cost effective, in order for both to achieve results and to
limit the negative consequences of devoting excessive resources to
security purposes. Similarly, aid policies need to concentrate on
achievable objectives, both to obtain positive results and to provide a
more representative and optimistic outlook on the future. Policies need to
be targeted at filling in the voids left by weak states and shifting incentive
structures within societies away from the use of violence.

**Prerequisite:** ECON 402

Writing Across the Curriculum
ECON 410: Economics of Labor Markets

3 Credits

Economic analysis of the employment relationship from the microeconomic perspective, with emphasis on current labor-market problems and public policy issues.

Prerequisite: ECON 102

ECON 411: Behavioral Economics

3 Credits

Topics in behavioral economics; selected games; evolutionary models of social behavior, herding, overconfidence.

Prerequisite: ECON 402 or ECON 444

ECON 411W: Behavioral Economics

3 Credits

Topics in behavioral economics; selected games; evolutionary models of social behavior; culture and social behavior; herding; overconfidence. ECON 411W Behavioral Economics (3)Behavioral economics examines recent evidence from experiments that seems to violate the hypotheses of economic rationality in traditional microeconomic theory. The course considers, among others, the following three topics: (1) Altruism in human behavior, as demonstrated, for example, in public goods experiments where people typically contribute some positive amount, even with the individually optimal strategy being to contribute nothing. (2) The prevalence of co-operative behavior in societies, which seems essential to their functioning, but which is hard (but not impossible) to explain on the basis of the actions of purely self-interested individuals. (3) Fairness in distribution: for example, people do not try to extract everything that their partners or opponents can give even when they are in a position of power (as in being the proposer of a take-it-or-leave-it offer). Students play some well-known games with each other to generate examples of their own behavior in multi-person interaction contexts; the results of the games are analyzed to detect regularities in the observed behavior; and the class discusses possible explanations drawn from economics, evolutionary biology and psychology as to why people (specifically the students) played the way they did in these games. Overall, then, students will learn about various aspects of behavioral economics, including several games and evolutionary models of social behavior, and how these aspects square with conventional economic theory. Students will develop the skill of analyzing behavior from a behavioral economics perspective. This course is a 400-level seminar, part of the Economics Department’s offerings, many of them writing-intensive, for our advanced students in each of seven broad areas of economics. This writing-intensive seminar is in the area of microeconomic theory. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 402 or ECON 444

Writing Across the Curriculum

3 Credits

Advanced topics in labor economics: theory, empirical evidence, and policy. ECON 412 Labor Economics and Labor Markets: Theory, Evidence, and Policy (3)This course is an advanced course in labor economics. Its coverage of topics overlaps somewhat with the topics covered in ECON 315, but typically the treatment of the topics considered will be distinctly more rigorous for this 400-level course. The broad areas that will be focused on in the course include labor supply, investment in human capital, labor demand, wage determination, search and unemployment, and earnings inequality. The objective of this course is to introduce students to topics in labor economics with a rigorous and advanced analytical approach. For each topic, the course will consider the underlying theory, pertinent empirical evidence, and implications for public policy. The instructional and educational objectives are to provide students with a strong background in labor economics. This will allow them to take advanced seminar courses in the labor field. This course is an advanced introduction to labor economics, and as such has a prerequisite of either ECON 302 or ECON 315. In turn, this course will serve as a gateway to advanced seminar courses in labor economics at the 400 level that the Economics Department is in the midst of creating. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 306 and ECON 302 or ECON 315

Bachelor of Arts: Social and Behavioral Sciences

ECON 413: Economic Growth and the Challenges of World Poverty

3 Credits

Challenges imposed by poverty; growth; growth rates; microfinance; foreign aid.

Prerequisite: ECON 304

ECON 413W: Economic Growth and the Challenge of World Poverty

3 Credits

Economic prosperity in historical perspective; recent successes (East Asia, China, India); ongoing challenges (the bottom billion; sub-Saharan Africa). ECON 413W The Challenge of World Poverty (3)This course will first consider economic growth and the spread of economic prosperity in historical perspective. Then contemporary success stories, including the East Asian miracle and growth in China and India, will be studied. The last part of the course focuses on the poor worldwide, and examines poverty traps in Africa, why aid doesn’t work, and why globalization hasn’t helped. Students are expected to learn about the barriers to reducing world poverty and proposals aimed at alleviating poverty. Students will also learn about the growth and diffusion of economic prosperity, with both historical and contemporary examples. Students will develop analytical skills as well as writing skills. This course is one of a series of 400-level seminars, many of them writing-intensive, for our advanced students in each of seven broad areas of economics. This writing-intensive seminar is in the area of economic growth and development. The course will count toward both the major and the minor in economics. Students will read four books about world poverty, write short book summaries, and write a term paper focuses on one feasible solution to alleviating poverty in Africa. In addition, there will be a midterm exam and a final exam.

Prerequisite: ECON 471

Writing Across the Curriculum
ECON 414: The Economic Way of Looking at Life
3 Credits

Economics/life according to Gary Becker: criminal behavior; economics of the family (marriage, divorce, intrahousehold resource allocation, bequests), policy issues.

Prerequisite: ECON 302 or ECON 315

ECON 415: The Economics of Global Climate Change
3 Credits

Evidence on climate change; economic models of the environment and market failure; cost-benefit analysis of policy options; carbon markets.

Prerequisite: ECON 302 and ECON 306

ECON 415W: The Economics of Global Climate Change
3 Credits

Evidence on climate change; economic models of the environment and market failure; cost-benefit analysis of policy options; carbon markets. ECON 415W The Economics of Global Climate Change (3)The first part of the course reviews the scientific evidence on global climate change (IPCC studies). This is followed by an analysis of market failure in the production of greenhouse gas emissions, and consideration of carbon markets as a policy response. A cost-benefit study of the control of greenhouse gases (the Stern Report) is examined, and the concluding part of the course looks at a computer model of economic activity and the environment. Students will learn about the scientific evidence on global climate change, and the associated economic implications, market failures, and policy options to mitigate those market failures. Students will develop skills to assess policy options in this area, and they will become conversant with applied cost-benefit analysis and a computer model of economic activity and the environment. This course is one in a series of 400-level seminars, many of them writing-intensive, for advanced economics students in each of seven broad areas of economics. This writing-intensive seminar is in the area of applied microeconomics. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 428
Writing Across the Curriculum

ECON 417: The Economics of Uncertainty
3 Credits

Uncertainty and Risk as related to finance, insurance, health, labor, industrial organization, and macroeconomics.

Prerequisite: ECON 302

ECON 417W: The Economics of Uncertainty
3 Credits

Uncertainty is examined in contracts, with an emphasis on limited liability. Asymmetric information and economic puzzles are also considered. ECON 417W The Economics of Uncertainty (3)This course studies the allocation of resources under uncertainty. Decisions without perfect information require the use of probability theory and expected utility preferences. The seminal work of Arrow and Debreu is used as a starting point. Probability and utility theory are then used to interpret insurance contracts. Limited liability is introduced and the Modigliani-Miller Theorem is applied to loan guarantees, deposit insurance, and insurance claims. Finally, asymmetric information is discussed and the resulting problems of moral hazard and adverse selection are addressed. The course objectives are to introduce students to the theoretical framework used by economists to study uncertainty and to apply that framework in order to explain various regularities observed when decisions are made without complete information, to examine the empirical evidence, and to consider policy issues in this area. The course will count toward both the major and a minor in economics.

Prerequisite: ECON 402 or ECON 444
Writing Across the Curriculum

ECON 421: Analysis of Economic Data
3 Credits

There are many data sets but the information contained within them for economic analysis is often unclear without substantial investigation. The broad course objectives are 1) to familiarize students with the deficiencies of real-world data and 2) teach students how to address those deficiencies. Specific topics addressed include the reliability of data sources, the ambiguity in variable definitions, the miscoding of variables, and missing data. In addition, truncation and censoring from the data collection methodologies are examined. The econometric methods of linear regressions and instrumental variables are used to analyze the results of a model with and without the data errors. The results are studied to predict how the missing data can alter model outcomes and policy choices. Several economic data sets are examined to illustrate the concepts. Specific examples of datasets include microeconomic data such as industry growth and profits, elasticity and revenue estimates from pricing choices, output of homogenous goods such as gold and oil, consumer subscription rates to services such as cell phone and internet service and discount memberships, and the efficacy of new drugs in tests. Macroeconomic data topics include discussions regarding unemployment and job data forecasts and how this can relate to future monetary and fiscal policy. Other topics discussed include sample bias and low response rates to surveys, in which the numerical values of dataset itself were not manipulated, but gathered from samples which will give an inaccurate result. These issues can affect polling and predictions in elections. This course is an applied course in the field of econometrics and will seek to provide students with the analytical methods for understanding the economic content of data. The instructional and educational objectives are to expose students to the practical details of analyzing economic data in the context of an advanced seminar. The course will count toward both the major and minor in economics.

Prerequisite: ECON 302 and ECON 306

ECON 422: Applying Monetary Theory and Monetary History
3 Credits

This course provides a framework for the analysis of monetary history. The course objectives are to introduce students to the theoretical framework used by economists to study monetary theory, and to apply that framework in order to explain various monetary systems that have existed in the past. We will examine the empirical evidence, and also consider policy issues in this area. There is scope for re-examining existing analyses of many of those historical systems. Topics discussed in the course include the Federal Reserve control of the money stock, the demand for money, money as part of economic activity, economic
indicators and monetary policy, the Lucas critique, interest rates and the frequency at which they are changed, the creation and purpose of central banking, and private banking regulations. Historical monetary events to be discussed include monetary policy before and during the Great Depression, monetary policy during the Great Recession of 2007-2009, the gold standard monetary system, the Bretton Woods system, and the termination of these standards. Among all topics, both current and historical, we will examine the incentives of individuals, firms, banks, borrowers, and lenders, and governments as responses to monetary policy changes. Finally, advances in monetary theory based on macroeconomic events, both national and global, will be analyzed. The course will count toward both the major and minor in economics.

**Prerequisite:** ECON 302

**ECON 422W: Applying Monetary Theory to Monetary History**

3 Credits

Monetary history is examined. Special attention is paid to commodity-based systems, private money, and government monopolies on currency. This course provides a framework for the analysis of monetary history. In the past, there have been many advances in monetary theory. Some of the advances are directly inspired by the varieties of monetary systems that have existed in the past - for example, systems in which private banks issue currency (bank-notes). There is scope for reexamining existing analyses of many of those historical systems in the light of advances in monetary theory. The course objectives are to introduce students to the theoretical framework used by economists to study monetary theory, and to apply that framework in order to explain various monetary systems the have existed in the past. We will examine the empirical evidence, and also consider policy issues in this area.

**Prerequisite:** ECON 451

**Writing Across the Curriculum**

**ECON 424: Income Distribution**

3 Credits

Inequality and poverty in the United States, measurement problems, determinants of inequality, arguments for and against equality, impact of redistributive policies.

**Prerequisite:** ECON 302, ECON 315, or ECON 323

**Bachelor of Arts: Social and Behavioral Sciences**

**ECON 425: Economics of Public Expenditures**

3 Credits

Analytic and policy aspects of public expenditure decisions; applications from areas of contemporary public interest.

**Prerequisite:** ECON 302 or ECON 323

**Bachelor of Arts: Social and Behavioral Sciences**

**ECON 427: Economics of Energy and Energy Security**

3 Credits

Energy economics studies topics related to the supply, energy markets, and environmental impacts of energy use.

**Prerequisite:** ECON 302
ECON 436: Economics of Discrimination

3 Credits

Analysis of the economic characteristics of women and minorities, with examination of race and sex discrimination and related government policies.

**Prerequisite:** ECON 302 or ECON 315

ECON 436W: Economics of Discrimination

3 Credits

Analysis of the economic characteristics of women and minorities, with examination of race and sex discrimination and related government policies. ECON 436W Economics of Discrimination (3) (US) (BA) This course meets the Bachelor of Arts degree requirements. This course constitutes an examination of the economics of discrimination. More precisely, the course will focus on economic theories of discrimination and on efforts by economists to measure the extent of labor market discrimination. An important objective of the course is thus to learn how economists conceptualize and study discrimination. This, in turn, requires that we examine how economists view and study economic differences by race, ethnicity, and gender (these are the types of discrimination that will be focused on in the course, although we will also consider other types of discrimination). Following the existing economic literature, much of our emphasis will be on labor market discrimination, but we will also consider discrimination in education and in housing. The first substantive section of the course outline below involves examination of data on the economic characteristics of women and blacks in relation to white males, considering both the current situation and recent trends. Data on Hispanics will also be presented. This work will be done by the students, working in groups. We will look at how mainstream economists conceptualize economic differences by gender and by race/ethnicity, respectively. Then we will focus on formal models of discrimination and empirical issues in attempting to measure discrimination, and we will also examine an alternative approach to understanding economic inequality. The concluding section of the course will examine public policy issues related to discrimination. The course will count toward either a major or a minor in economics, and will meet the writing requirement for students in economics.

**Prerequisite:** ECON 302 or ECON 315

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

Writing Across the Curriculum

ECON 437: Multinationals and the Globalization of Production

3 Credits

Globalization entails many dimensions: trade, migration, FDI, offshoring, cross-border licensing of technologies.

**Prerequisite:** ECON 302 or ECON 333

ECON 437W: Multinationals and the Globalization of Production

3 Credits

This course will focus on trade, multinationals and offshoring, and explore their implications for the U.S. and developing countries. ECON 437W Multinationals and the Globalization of Production (3) This seminar examines the international economy and the effects of multinational activity on globalization. Some of the key questions that will be examined include: Is globalization really a new phenomenon? Is it irreversible? What are the effects on wages and inequality? What are the effects on production and innovation? These questions will be addressed through a careful reading of the historical timeline, an extensive analysis of capital flows, multinational enterprises and development. Students are expected to synthesize their findings into a final paper and present what they have learned to the class. The Economics Department seeks to provide students with a series of seminar courses in each of seven broad fields in the discipline; this is a course in the field of Trade.

**Prerequisite:** ECON 433

Writing Across the Curriculum

ECON 438: Winners and Losers from Globalization

3 Credits

**Prerequisite:** ECON 306, ECON 302 or ECON 333

Writing Across the Curriculum

ECON 438W: Winners and Losers from Globalization

3 Credits

The economic effects of globalization on individuals, governments, nation-states and business. ECON 438W Winners and Losers from Globalization (3) This seminar explores the various effects of globalization on individuals in the United States and abroad. It integrates material from a variety of sub-disciplines in economics, including international trade, international finance, growth theory, labor economics, industrial organization, and political economy. Discussion of each core topic is model-based and informed by empirical evidence from the recent economic literature. The objectives of the course are to (1) deepen students' understanding of the basic forces at play as globalization takes place, and their implications for individuals' well-being; (2) sharpen students' ability to critically evaluate policy issues, both theoretically and empirically; and (3) develop students' ability to craft tightly reasoned economic reports. This course is an applied seminar in international economics. The impact of globalization is explored from a cost-benefit perspective. Winners and losers are identified using the tools and framework of economics. The instructional and educational objectives are to provide in-depth analysis of the consequences of globalization in the context of an advanced seminar. The course objectives are to analyze the winners and losers from globalization. This is a course in the field of international economics. The course will count toward both the major and minor in economics.

**Prerequisite:** ECON 433 and ECON 490

Writing Across the Curriculum

ECON 442: Managerial Economics

3 Credits

Application of economic theory to managerial decision making; risk, uncertainty; models and statistical techniques.

**Prerequisite:** ECON 102
ECON 443: Economics of Law and Regulation
3 Credits
An economic analysis of property rights, contractual arrangements, illegal activities, and regulation; competitive problems due to externalities and market failure.

Prerequisite: ECON 302 or ECON 342
Bachelor of Arts: Social and Behavioral Sciences

ECON 444: Economics of the Corporation
3 Credits
Coordination and incentive issues within a corporation. Topics include employment contracts, performance incentives and pricing of financial assets.

Prerequisite: ECON 302
Bachelor of Arts: Social and Behavioral Sciences

ECON 445: Health Economics
3 Credits
Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives.

Prerequisite: ECON 302, ECON 315, or ECON 323
Cross-listed with: HPA 445
Bachelor of Arts: Social and Behavioral Sciences

ECON 445W: Health Economics
3 Credits
Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives. ECON (H PA) 445W Health Economics (3) The healthcare sector comprises a set of markets that differ in some significant ways from the textbook model. In the US, this sector performs well in some respects and questionably in others. Notably, there has been sustained improvement over time in life expectancy and other indicators of the effectiveness of health care for most people, but the resources devoted to producing this improvement have been growing considerably faster than GDP. The goal of this course is to examine several broad questions raised by these facts. The course begins with an overview of evidence on wealth, health expenditure, and life expectancy across countries, and then examines increasing life expectancy and medical expenditures in the US and their causes. Issues in measuring the value of medical expenditures are addressed, and an overview of the industrial organization of health care is provided. A major component of the course covers the economics of health insurance, and the course also examines medical R&D and the pharmaceutical industry as well as issues in the financing of medical care for the elderly. The course seeks to introduce students to the economic analysis of health care. It is in the area of applied microeconomics, and deals with issues relating to labor markets and public finance, in particular. This writing-intensive course will be one of several 400-level W seminars that the Economics Department is seeking to establish, with the broad objective of exposing our advanced undergraduate students to economic analysis in a seminar setting requiring significant writing by the students. The course counts toward the major and the minor in economics, as a 400-level course, In addition, it also counts toward a "module".

ECON 446: Economics of Industry Evolution
3 Credits
Dynamics of industry evolution; empirical evidence and theoretical modeling of firm entry, growth, and exit; entrepreneurship; investment and strategic behavior.

Prerequisite: ECON 302 and ECON 306

ECON 446W: Economics of Industry Evolution
3 Credits
Dynamics of industry evolution; empirical evidence and theoretical modeling of firm entry, growth, and exit; entrepreneurship; investment and strategic behavior. ECON 446W Economics of Industry Evolution (3) Industries are not static entities. They continually evolve as new products and production techniques are developed. In response to changes in demand and technology, new firms enter while existing firms grow, decline, and exit. This course studies the dynamics of industry evolution using both empirical tools and theoretical models of firm decisions to analyze the following broad questions: How does a new entrant establish a foothold in an industry? How does the entry process differ between industries built around new products versus industries for well-established products? What is the role of entrepreneurship and human capital? How do firms affect their growth and survival prospects by investing in R&D and other types of innovation? How does the life-cycle of high-tech industries differ from consumer products or capital-intensive manufacturing or services? The roles of antitrust policy and regulation in affecting firm turnover and industry evolution are also addressed. This course will seek to provide students with both theoretical and empirical methods to analyze the economic forces underlying the evolution of industries. Students will develop analytical and writing skills in the course. This course is one of a series of advanced, writing-intensive seminars in each of seven broad fields in economics; this is a course in the field of industrial organization. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 444 and ECON 490
Writing Across the Curriculum

ECON 447: Economics of Sports
3 Credits
Topics in sports; demand, owners, ticket resale, leagues, markets, efficiency, antitrust, discrimination, collegiate sports.

Prerequisite: ECON 302 or ECON 306
Bachelor of Arts: Social and Behavioral Sciences

ECON 447W: Economics of Sports
3 Credits
Examination of economic issues pertaining to professional and collegiate sports, including analysis of industrial organization, labor markets, and local economies. ECON 447W Economics of Sports (3) Sports play a
prerequisite: ECON 302 or ECON 444 and ECON 490

writing across the curriculum

ECON 444: economics of collusion

3 credits

Theoretical and empirical analysis of collusion among firms, case studies of cartel behavior, bidding behavior at auctions and procurements.

ECON 449W: Economics of Collusion (3) Collusion by firms – the explicit suppression of interfirm rivalry – is profitable. However, it is often difficult to accomplish meaningfully. This course provides frameworks to analyze interfirm interactions, both theoretically and empirically. In addition, several case studies of cartel behavior in the U.S., Europe, and elsewhere are presented. Bidder behavior at auctions and procurements will also be examined to understand some of the underlying issues of collusion. Following an introductory section, the course examines first the law regarding collusion and then the history of collusion, focusing on notable cases in the U.S. and Europe. Economic models of collusion are then reviewed, along with the distinction between tacit and explicit collusion. The final substantive section of the course examines issues encountered in prosecuting collusion. The broad objective of the course is to use the tools of economics to analyze the interactions of firms in settings where collusion may occur. Educationally, then, the course seeks to expose students to the application of economic analysis in a context with major economic and legal implications. This is an advanced undergraduate course in the field of Industrial Organization (IO), and hence will add to our offerings in the IO field (our beginning IO course is ECON 342).

Econometrics (ECON 490) is also a prerequisite because of the empirical analyses that will be an important component of the course. The course is one that may be used to satisfy requirements for the major and the minor in economics, as a 400-level course. It may also be used to complete a module (area of specialization) in the Economics of Business and Law. And it will serve as one of the Economics Department’s writing-intensive 400-level seminars. Student performance will be evaluated via two midterm exams and a substantial term paper. The exams will each count for 15% of the overall course grade, and the term paper will count for the remaining 70% of the course grade.

Prerequisite: ECON 302 or ECON 342, and ECON 490 or permission of instructor

writing across the curriculum

ECON 451: monetary theory and policy

3 credits

Monetary and income theory; monetary and fiscal policy.

Prerequisite: ECON 304 or ECON 351

Bachelor of Arts: Social and Behavioral Sciences

ECON 452: economics of the financial crisis

3 credits

This course studies the economics of financial crises with special emphasis on 2008.

Prerequisite: ECON 304

ECON 452W: financial crises

3 credits

Examination of causes and consequences of financial crises; asset pricing theory; market efficiency; speculative bubbles; policy considerations. ECON 452W Financial Crises (3) This course focuses on the causes and consequences of financial crises. We study famous
crashes from the South Sea Bubble to Long-Term Capital Management, as well as international financial crises such as the Asian Crisis of 1997-98 and the Argentine Crisis of 2001. We examine both the history of the crises and the economic factors that are the fundamental causes, in part with a view to determining if these crises were the inevitable outcome of speculative markets, or the result of regulatory error. The instructional and educational objectives of the course are to provide students with the opportunity to explore financial crises in a small, advanced seminar setting. The course objectives are to provide students with a theoretical framework for examining financial crises, to examine evidence on historical and more recent financial crises using that theoretical framework, and to consider policies aimed at avoiding and/or alleviating the effects of financial crises in light of the theoretical framework and the empirical evidence. The course is part of a curriculum overhaul of 400-level courses in economics, in which advanced seminar courses are being created in seven broad areas of economics. This seminar is in the area of macroeconomics. This course may be used to meet major or minor requirements.

**Prerequisite:** ECON 451

Writing Across the Curriculum

ECON 454: Economics of Mergers

3 Credits

It is not uncommon for two separate and distinct corporate entities within an industry to merge and become one firm. This course includes topics that examine the economics of mergers as well as economic policy with regard to mergers. There are often both pro-competitive and anti-competitive effects of mergers. In the U.S. the Federal Trade Commission has primary responsibility for assessing the balance between effects. Along with the FTC, the antitrust division of the department of justice can analyze potential mergers using economic data and forecasts with tools such as the HHI and four-firm concentration ratio. Legality of non-competitive markets and mergers is also analyzed using the Clayton and Sherman antitrust acts. Topics discussed related to pro-merger economic effects include reduction in the duplication of costly capital, economies of scale, reducing costs by cutting management, human resources, payroll, and other jobs not directly related to production of output. Further, some firms may contend that they are non-viable as a small business, but can survive as a larger competitor as the result of a merger. Finally, mergers may have positive implications for shareholders who effectively own the company. Negative effects of mergers topics are discussed, including a reduction in the number of competing firms, increase in market power, higher prices, reduction in consumer choice, and increased lobbying power of larger firms. This course examines unilateral effects and coordinated effects as identified in the horizontal merger guidelines. Vertical mergers are analyzed as well, where multiple parts of the production process of a final good come under the same ownership. Econometric issues associated with the measurement of unilateral and coordinated effects are discussed. The course concludes with ex-post merger reviews. This course is an applied microeconomics seminar in the field of industrial organization and will seek to provide students with the analytical methods of both the theoretical and empirical analysis of mergers. The course will count toward both the major and the minor in economics.

**Prerequisite:** ECON 302 and ECON 306

ECON 455: Economics of the Internet

3 Credits/Maximum of 3

Economics of the Internet: electronic commerce and network economics; pricing issues; intellectual property.

**Prerequisite:** ECON 402 or ECON 444

ECON 455W: Economics of the Internet

3 Credits

Economics of the Internet: electronic commerce and network economics; pricing issues; intellectual property. ECON 455W Economics of the Internet (3) The Internet has become an important part of the economy in the United States and worldwide. Often we think of the information available on the Internet as a free good, much like the air we breathe. However, the Internet is an active marketplace with unique characteristics. Internet access providers sell keywords and advertising space by means of special auction and exchange mechanisms. Intellectual property is an important and evolving concept within the Internet, especially given its worldwide application. This course is an applied microeconomics course and will seek to provide students with the analytical methods of both the theoretical and empirical analysis of the economics of the Internet. The course will count toward both the major and minor in economics. This proposal is part of a broader curriculum overhaul to 400-level economics courses. The Economics Department seeks to provide students with a series of advanced seminar courses in each of seven broad fields in the discipline; this is a course in the field of applied microeconomics.

**Prerequisite:** ECON 402 or ECON 444

Writing Across the Curriculum

ECON 457: Economics of Organizations

3 Credits

Consumers, Firms, Utility Maximization, Profit Function, Equilibrium, Firm Distribution.

**Prerequisite:** ECON 302 or ECON 401

ECON 457W: Economics of Organizations

3 Credits

An advanced course in the economics of organizations. The focus is on coordination, incentives, contracts, and information in corporations. ECON 457W Economics of Organizations (3) An advanced course in the economics of organizations. The focus is on coordination, incentives, contracts, and information in corporations. The goal of the course is to analyze coordination, incentives, contracts, and information in corporations. The formal tools used in the course will be drawn from game theory, contract theory, mechanism design, and information economics. All students are required to have taken Strategy prior to enrollment.

**Prerequisite:** ECON 402 or ECON 444

Writing Across the Curriculum
ECON 460: Issues in Sports Economics

3 Credits

Economic analysis of professional and collegiate sports: organization, input and output markets, the public sector, decision-making, and public policy. ECON 460 Issues in Sports Economics (3) This course is designed to provide students the opportunity to examine and understand the sports industry. The course integrates the perspectives of various economic areas (i.e., industrial organization, managerial economics, labor economics, public economics) with those of marketing, finance, and accounting into a single approach to industry analysis. It provides students with an appreciation for the unique realities of the professional and amateur sports enterprise. Case studies and assignments are developed so students can apply theoretical and statistical concepts to real sports activities and/or policies. Students have the opportunity to complete case analyses in teams, present their results and suggestions to the class, and respond to questions and critical reviews by their peers.

Prerequisite: ECON 102; credit can be earned from taking ECON 447 or ECON 460 but not both.

ECON 463: Economic Demography

3 Credits

Microeconomics of demographic behavior; interrelationships between demographic and economic factors, in developing and industrialized economies; economic welfare and policy implications.

Prerequisite: ECON 302 or ECON 304; or 9 credits in demography Bachelor of Arts: Social and Behavioral Sciences International Cultures (IL)

ECON 463W: Economic Demography

3 Credits

Microeconomics of demographic behavior; interrelationships between demographic and economic factors, in developing and industrialized economies; economic welfare and policy implications. ECON 463W Economic Demography (3) Economic demography is concerned with the interrelationships between economic phenomena and demographic phenomena. Fundamental demographic variables - fertility, mortality, migration, age composition - are related to economic factors, as both consequences and determinants. This course uses an economic perspective to study population phenomena and issues, with a focus on both theoretical and empirical analysis of demographic questions. Indeed, a major objective of the course is to provide you with the analytical tools from economics that are useful in analyzing issues in demography. The instructional and educational objectives of this course are to teach students about economic demography in an advanced, writing-intensive seminar. The objective of the course is to provide a disciplinary perspective from economics on numerous issues in the multidisciplinary field of demography. This course is an advanced course that touches on topics in two different fields of economics: labor economics and growth and development. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 412 or ECON 471 or 9 credits in demography Writing Across the Curriculum

ECON 465: Cross Sectional Econometrics

3 Credits

Econometrics, simultaneous equations, discrete choice, sample selection.

Prerequisite: ECON 106 and ECON 306

ECON 465W: Cross Sectional Econometrics

3 Credits

Discrete choice models, censored and truncated regression models, longitudinal models, applications. ECON 465W Cross Sectional Econometrics (3) This course extends the econometric analysis of Introduction to Econometrics (ECON 490) to consider three broad categories of models: discrete choice models, censored and truncated regression models, and longitudinal models. Approximately three-quarters of the course will consist of examination of models in these three areas and the issues that those models address. The last four weeks of the course will then focus on applications of these models. Discrete choice models are used for the analysis of decisions by economic agents facing a fixed number of choices (whether to work or not, which to buy, etc.). Students will learn how economists model such decision problems and how they can be analyzed empirically. Censored and truncated regression models can arise for multiple reasons, e.g., because economic agents are generally constrained to consume a nonnegative amount of a given product, which introduces nonlinearities into the relationship of interest. Students will learn how economists model such problems and how they can be analyzed empirically. Longitudinal models are, e.g., used to analyze durations of (un)employment spells. Students will learn how to analyze such data sets empirically. Overall, then, students will learn advanced econometric techniques for dealing with discrete choice models, censored and truncated regression models, and longitudinal models. The skills to be developed consist in being able to apply these techniques in practical applications of data analysis. This course is one of a series of 400-level seminars, many of them writing-intensive, for our advanced students in each of seven broad areas of economics. This writing-intensive seminar is in the area of econometrics. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 302 and ECON 490 Writing Across the Curriculum

ECON 466: Panel Data Models

3 Credits

Random and fixed effects, endogeneity, balanced and unbalanced panels, censoring of spells, differences in differences, applications.

Prerequisite: ECON 302 and ECON 306

ECON 466W: Panel Data Models

3 Credits

Random and fixed effects, endogeneity, balanced and unbalanced panels, censoring of spells, differences in differences, applications. ECON 466W Panel Data Models (3) Panel data sets, consisting of repeated interviews over time of a panel of individuals (in effect, a time series of cross-sectional data on the same individuals) offer multiple opportunities for sophisticated econometric analyses, while at the same time posing some unique problems. This course will cover advanced
explore the development of the Russian economy in the Tsarist period, we will utilize both an economics and a history perspective. We will combine historical narrative with formal economic analyses to provide a review of peculiarities of economic and institutional development of the country. Russian economic history together with main concepts explaining the juxtaposition is unique. The aim of the course is to provide a review of Russian economic history and geopolitical superpower but not an economic superpower. This remains dependent on natural resources. Russia is a literary, nuclear and geopolitical superpower but not an economic superpower. This has had a vast imperial experience, and its economy has proven capable of producing nuclear weapons and space exploration. Yet, its economy has had a vast imperial experience, and its economy has proven capable of producing nuclear weapons and space exploration. Because data are often not available for the same set of (e.g.) individuals at all points in time, care must be taken to deal with such unbalanced panels, especially when such data are absent because of actions of the individuals. In addition, since this is a writing-intensive course, an additional objective is to provide students with the opportunity to develop their skills in writing in economics. This course is one of a series of 400-level seminars, many of them writing-intensive, for advanced students in each of seven broad areas of economics. This writing-intense seminar is in the area of econometrics. The course will count toward both the major and the minor in economics.

**Prerequisite:** ECON 302 and ECON 490

Writing Across the Curriculum

ECON 470: International Trade and Finance

3 Credits

Economic analysis of why nations trade, barriers to trade, the international monetary system, and macroeconomic policy in an open economy.

**Prerequisite:** ECON 102 or ECON 104

International Cultures (IL)

ECON 471: Growth and Development

3 Credits

Problems of capital formation, institutional considerations, theories of economic growth.

**Prerequisite:** ECON 302 or ECON 304

Bachelor of Arts: Social and Behavioral Sciences

ECON 472N: Russian Economic History

3 Credits

Russia is the largest country on earth. It has had a major influence on world events, especially during the Soviet period. The Soviet period represents the greatest economic experiment ever undertaken. Russia has had a vast imperial experience, and its economy has proven capable of producing nuclear weapons and space exploration. Yet, its economy remains dependent on natural resources. Russia is a literary, nuclear and geopolitical superpower but not an economic superpower. This juxtaposition is unique. The aim of the course is to provide a review of Russian economic history together with main concepts explaining the peculiarities of economic and institutional development of the country. The course combines historical narrative with formal economic analyses. We will utilize both an economics and a history perspective. We will explore the development of the Russian economy in the Tsarist period, the abolition of serfdom and Russian industrialization before the Russian Revolution, and we will explore the economic history of the Soviet period. We will also explore the interaction of economic history with social history. The course will conclude by examining the myriad economic and social difficulties encountered in transitioning from a socialist to capitalist economy.

International Cultures (IL)

ECON 474: Experimental and Behavioral Economics

3 Credits

Experimental methods and experimental design and uses this framework to inform a careful examination of the strengths and limitations of economic theory in explaining actual human behavior in economic situations. When economic theories do not seem to fit the data, the course draws on findings from other social sciences such as psychology and sociology to explore reasons for divergence of theory and practice. The content begins with a brief history of experiments in economics. Then it outlines key features of experimental design and an introduction to the basics of game theory, which are commonly utilized in experiments. After establishing the basics, the course investigates decision making under uncertainty and compares how various theoretical explanations predict actual human decisions. We then discuss bargaining experiments and bargaining theory. The course concludes with a description of common behavioral influences and biases in judgment and decision making. There is a common theme throughout the course showing how theory and experiments can be used in conjunction to improve understanding of economic behavior.

**Prerequisites:** ECON 102, ECON 104

ECON 475: Migration and Development

3 Credits

Human Capital Approach to Migration; Economics of Family Migration; Evidence: Micro and Macro Perspectives; Migration Policies.

**Prerequisite:** ECON 306 and ECON 302 or ECON 304

Penn State University
ECON 475W: Migration and Development

3 Credits

Human Capital Approach to Migration; Economics of Family Migration; Evidence: Micro and Macro Perspectives; Migration Policies. ECON 475W Migration and Development (3) This course introduces students to migration in the developing world. What factors influence such migration, and how does migration affect economic development? The course provides a theoretical framework for examining migration (a human capital approach), and takes into consideration aspects specific to migration in the developing world, family considerations, and different types of migration. Immigration and remittances are also considered. The course examines empirical evidence on migration, and considers public policies that seek to influence migration and development. The course objectives are to provide students with a theoretical framework for examining human mobility and economic development, to examine evidence on migration using that theoretical framework, and to consider policies aimed at influencing migration and development in light of the theoretical framework and the empirical evidence. The integration of these three activities will develop student's skills in economic analysis and the writing aspect of the course will enhance their writing skills. This course is one of a series of writing-intensive seminars in seven broad areas of economics. This seminar is in the area of economic development, with relevance as well to labor economics. This course may be used to meet major or minor requirements.

Prerequisite: ECON 471 or ECON 412; ECON 490
Writing Across the Curriculum

ECON 477: Labor Markets in Developing Countries

3 Credits

In the system of economic development, labor markets emerge and evolve. While some elements of standard labor market analysis, such as the emphasis on demand for labor and supply of labor, remain most relevant here, there are also institutional aspects that are specific to developing countries. The course begins with a short review of the traditional labor market variables (labor force participation, employment and unemployment, earnings) before viewing specific topics relevant to developing countries. These topics include rural vs. urban labor markets and the factors that influence individuals in each setting, industry regulation by national and international law, efficiency wages in growing industries, worker safety, compensating wage differentials, and comparative advantage. Particular emphasis will be placed on the unique aspects that each of these issues may face in developing countries compared to developed countries. These unique issues include microloans, mercantilism, economic nationalism, the effects on conflict on economic growth, growth models exhibiting high marginal productivity of capital and technology, growth indicators, sector-specific growth, industrialization and deindustrialization, balanced growth theory (Ragnar Nurkse), foreign investment, trade barriers, tariffs, and exchange rates. The course is an advanced seminar in the broad area of development economics. The course objectives are to enable students to learn about labor markets in developing countries, how they are different from as well as similar to those in industrialized countries, and the problems and policy issues that pertain to these labor markets. Students will develop their analytical skills in this area. Students will study these topics and learn with theory and case studies why some countries become industrialized while others remain in developing status. The course will count toward both the major and the minor in economics.

Prerequisite: (ECON 302 or ECON 315) and ECON 306

ECON 479: Economics of Matching

3 Credits

There are many resource allocations that are not unilateral decisions but instead require approval from two sides of the market. This course provides the theoretical constructs for the analysis of matching in market environments. Following a review of game theory, the course develops the theory of matching. The topic at large is introduced by the seminal paper in matching "College Admissions and the Stability of Marriage" by Gale and Shapley. Other peer-reviewed literature on the topic will be discussed. Topics that follow include economic applications in the areas of employment, marriage, college admissions, human organ donations, medical residents, and other current topics. Within each of these topics, analysis is performed to study the following questions: 1) What are the preferences and incentives of all of the market participants involved in the matching market? 2) What was the method in which matching occurred? 3) Is this end result Pareto efficient and stable? 4) If the result isn't Pareto efficient, could another method or algorithm be used to improve efficiency? 5) Does the efficient outcome yield equal (or near equal) gains to all market participants involved, or is there a large discrepancy in the utility of the participants post-matching? For example, in a marriage matching algorithm, do women end up much happier than men? In medical residencies, do hospitals end up with larger gains than the doctors? Within certain topics, specific models are also discussed, including the Beveridge curve, Cobb-Douglas matching functions, labor market frictions, Nash bargaining games, feasibility sets, disagreement points, egalitarian and non-egalitarian bargaining solutions, and risk aversion. This course is an applied economics course with relevance to the areas of microeconomics, macroeconomics, and labor economics. The course objective is for students to learn the analytical methods for understanding the economics of matching. Students will develop skills in applying matching models and analysis to practical situations. The course will count toward both the major and minor in economics.

Prerequisite: ECON 302

ECON 479W: Economics of Matching

3 Credits

Economic application of matching to employment, marriage, organ markets, and medical residents. ECON 479W Economics of Matching (3) There are many resource allocations that are not unilateral decisions but instead require approval from two sides of the market. Examples include employment and marriage. This course provides the theoretical constructs for the analysis of matching in market environments. Two applications of current interest - human organ allocations and medical resident employment - are given special attention. Following a review of game theory, the course develops the theory of matching. This is followed by economic applications, in the areas of employment, marriage, human organs, and medical residents. This course is an applied economics course with relevance to the areas of microeconomics, macroeconomics, and labor economics. The course objectives is for students to learn the analytical methods for understanding the economics of matching. Students will develop skills in applying matching models and analysis to practical situations. The course is one of a series of 400-level writing-intensive seminars in each of seven broad fields in economics; this is a course with relevance to microeconomics, macroeconomics, and labor economics. The course will count toward both the major and minor in economics.
Prerequisite: ECON 402 or ECON 412 or ECON 444

ECON 490: Introduction to Econometrics

3 Credits

Use of simple and multiple regression models in measuring and testing economic relationships. Problems including multicollinearity, heteroskedasticity, and serial correlation. ECON 490 Introduction to Econometrics (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed for a wide range of students, including those interested in a variety of fields in business (e.g. finance and management studies) and economics, to those in the sciences and engineering who are interested in learning about data analysis and regression techniques. The course is also a good starting point for learning about empirical economics, and may thus be useful for those intending to pursue graduate studies in economics and business. Economics 490 is designed to reach a large audience, and the ultimate goal of the course is to show students that the "application of statistics to the study of economics" is not only fun, but also indispensable for a well rounded economics education. Put another way, the primary focus of the course is on applied or empirical economics. Learning about empirical methods in this course entails extensive computer work which focuses on the analysis of economic data using currently available software packages (some completely mouse driven), such as SAS, EASYREG, GAUSS, STATA, and EVIEWS. Computer analysis ranges from constructing and interpreting plots of economic data, to forming, fitting, and interpreting regression models. In addition to the computational component of the course, students are familiarized with numerous tools used in applied work, such as means and variance, hypothesis testing (using statistics with t-, F-, and Chi-Squared distributions), regression model building, regression model estimation, and coefficient analysis. All of the tools learned throughout the course are used in the computational exercises. Completion of this course is useful particularly for students pursuing careers in business, economics, government, banking, insurance, finance, management, consulting, and academics, for example.

Prerequisite: MATH 110, ECON 390
Bachelor of Arts: Social and Behavioral Sciences

ECON 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

ECON 494A: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

ECON 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
Honors

ECON 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

Bachelor of Arts: Social and Behavioral Sciences
Full-Time Equivalent Course

ECON 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

ECON 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

ECON 499: Foreign Study--Economics
2-6 Credits/Maximum of 6
Study in selected countries of economic institutions and current economic problems.

Prerequisite: ECON 102, ECON 104

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

Education (EDUC)

EDUC 99: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDUC 100: First-Year Seminar in Education
1-3 Credits
This seminar explores theories of teaching and learning, the education of teachers and other school employees, issues of professional practice, and selected topics in national educational policy. The seminar also supports students’ transition to college through small group discussions and other activities. Class sizes are limited; the frequency of offering and evaluation methods vary by location and instructor.

First-Year Seminar

EDUC 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDUC 199: Foreign Studies
1-12 Credits/Maximum of 12
Study of educational topics in a country other than the United States.
International Cultures (IL)

EDUC 205N: Critical Race Theory in the Humanities and Social Sciences
3 Credits
This course closely examines the place and power of race in America. By tracing the history of how race works in particular American institutions, such as public education, criminal justice, and federal housing, students will gain a deep sense of how social categories and understandings shape material conditions and human welfare. Through the study of policies, court cases, memoirs, documentary films, and freedom struggles, this course will interrogate the many “Americas” that race has created and their implications for democracy and justice. Not only will this course focus on making race visible, but also the many ways that race intersects with class, gender, and sexuality and how these concepts empower and marginalize at the same time. All the while, students will use Critical Race Theory methods to reach empathy and strengthen social (GS) and historical (GH) literacies. Discussion, writing, critical reading, and primary source analysis will be integral to this class. Class sessions will include whole- and small-group discussion where active listening and thoughtful participation will be taught and required. Students will be encouraged to explore their own conceptions of race and how those ideas shape knowledge and experience. Ultimately, this is a course that will weave data, theory, and story as we encourage students to move toward empathy through comprehensive understandings of race. This course therefore examines race as both deeply personal and structural.

Recommended Preparations: ENGL 15, CAS 100
Cross-listed with: CRIMJ 205N, SOC 205N

General Education: Humanities (GH)
General Education: Social and Behavioral Sciern (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

EDUC 294: Research Project Courses
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

EDUC 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
EDUC 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDUC 302: Basic Preparation for Teaching
3 Credits

Philosophical, psychological issues in education; instructional objectives, lesson planning; evaluation, grading procedures; assessment, instruction of individual children. Field experience.

Prerequisite: admission into Elementary Education Major

EDUC 303: Inclusive Practices in General Education Classrooms
3 Credits

This course is designed to examine the procedures, characteristics and strategies for working with special learners in the elementary school.

EDUC 303 Inclusive Practices in General Education Classrooms (3)

This course examines the foundations and strategies for educating exceptional learners and for including students with disabilities in general education classrooms /inclusive settings, grades PK-4 and 4-8. Students will gain the knowledge and skills to respond effectively to learners with varying abilities and diverse needs in inclusive classrooms. Course content will address the following: foundations for inclusive education including legal provisions, ethical principles and policies; characteristics of various disabilities; the special education process including evaluation, IEP and service delivery models; assessment of student learning in a standards aligned system including diagnostic, formative, benchmark and summative assessment; pre-referral intervention, including universal screening and response to intervention; evidence-based instructional strategies that are effective in meeting the needs of students with disabilities in inclusive settings including universal design, accommodations, modifications and adaptations of curriculum and instruction, differentiated instruction, improving memory, attention and independent learning; and partnerships including effective communication and collaboration, teaming, co-teaching and communication with families. The course format will include discussion, collaborative group work, student presentations, simulations, classroom observations, case studies, online activities, review of research and some lectures.

Prerequisite: seventh-semester standing in Elementary Education Major

EDUC 304: Classroom Organization and Management
3 Credits

Organization, integration of the elementary school day; classroom management, control techniques; audio-visual techniques.

Prerequisite: sixth-semester standing in Elementary Education Major

EDUC 305: Creative Arts
3 Credits

Experiences in self-expression through a variety of visual and performing arts. Techniques for guiding school children in artistic expression.

EDUC 305 Creative Arts (3) This is an arts education course for elementary education majors. The course is designed to provide pre-service teachers with knowledge of the elements of the performing arts and the visual arts. Today’s public school population is diverse, and teachers encounter heterogeneous groups of students with unique interests, distinctive strengths, special needs, and varied languages. The arts provide a beneficial bridge to assist teachers in connecting with all persons. Not only do the arts enhance the quality and depth of lesson content, each of the arts contains the possibility of reaching students of all levels and backgrounds no matter what their cognitive ability, learning style, or native language. The purpose of this course is to equip students with the necessary tools to implement meaningful and effective arts education into the regular education curriculum.

Prerequisite: admission into Elementary Education Major

EDUC 313: Field Observation
2 Credits

Observation techniques; classroom observation and participation.

Prerequisite: admission into Secondary Teacher Certification Program. Prerequisite or concurrent: EDUC 314

EDUC 314: Learning Theory and Instructional Procedures
3 Credits

Theories of learning in relation to instructional practices. Analysis of motivation, transfer of learning, and retention. Field practicum.

Prerequisite: admission into Secondary Teacher Certification Program.

Prerequisite or concurrent: EDUC 313

EDUC 315: Social and Cultural Factors in Education
3 Credits

Critical examination of how different experiences linked to race, ethnicity, religion, gender, and sexual orientation influence education.

Prerequisite: admission into Elementary Education Major or Secondary Teacher Certification Program

United States Cultures (US)

Writing Across the Curriculum

EDUC 320: Methods in Teaching Beginning Readers
3 Credits

Concepts, methods, and materials for developing beginning reading abilities, with emphasis on personalized instruction through diagnostic teaching.

Prerequisite: sixth-semester standing in Elementary Education Major

EDUC 321: Methods in Teaching Intermediate and Advanced Readers
3 Credits

Concepts, methods, and materials for personalizing reading instruction with emphasis on extending personal and functional reading abilities beyond beginning reading.

Prerequisite: EDUC 320
EDUC 322: Adolescent Literature and Developmental Reading

3 Credits

Adolescent literature materials, reading principles, and practices suitable for an English class. EDUC 322 Adolescent Literature and Developmental Reading (3) This course is designed to prepare candidates with the objectives, content, methods and knowledge necessary to teach adolescent literature in today’s secondary language arts classrooms in middle and high schools. Candidates will gain understandings of adolescent literature in contemporary sociocultural life and how it can be used to develop critical literacy perspectives, reading strategies, and communication that is developmentally appropriate for 21st century literacy. Particular emphasis will be placed on instructional methods to comprehend, interpret, evaluate, integrate prior experience, and apply a range of texts (print, non-print, digital, and multimodal) in authentic contexts; developing and struggling adolescent readers will be highlighted. Course readings include research-based, adolescent literacy publications as well as a selection of adolescent literature. Adolescent literature selections include social and cultural issues relevant to adolescent development and diverse student populations. Candidates will compose and discuss critical responses to readings, participate in and contribute to the design of literature circles to discuss adolescent literature selections, and develop research-based lesson plans consistent with Commonwealth of Pennsylvania Common Core standards (PACC) and NCTE/IRA Standards for the English Language Arts. This course adheres to professional and content area standards and practices from: National Council of Teachers of English (NCTE), the National Writing Project (NWP), International Reading Association (IRA), and National Center for Literacy Education (NCLE).

Prerequisite: admission into Secondary English Certification Program or Elementary Education 4-8 Language Arts/English Option

EDUC 352: Teaching Language Arts

3 Credits

Teaching the writing process, including speaking and listening skills in relation to oral and written composition.

Prerequisite: sixth-semester standing in Elementary Education Major

EDUC 353: Teaching Elementary Social Studies

3 Credits

The theory and practice of elementary social studies instruction.

Prerequisite: seventh-semester standing in Elementary Education Major

EDUC 371: Teaching Music in the Elementary School

3 Credits

Music methods course for elementary education majors; students will learn elements of music, and instructional techniques.

Prerequisite: seventh-semester standing in Elementary Education Major

EDUC 385: Professional Development in Teaching

3 Credits

This course addresses practical issues central to the profession of teaching and, in some cases, specific to Pennsylvania.

Prerequisite: eight-semester standing, approval of program

EDUC 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDUC 399: Foreign Studies

1-12 Credits

Courses offered in foreign countries by individual or group instruction

International Cultures (IL)

EDUC 400: Diversity and Cultural Awareness Practices in the K-12 Classroom

3 Credits

This course addresses diversity, cultural awareness and sensitivity about cultures, concepts and methods in society, communities and educational settings. EDUC 400 Diversity and Cultural Awareness Practices in the K-12 Classroom (3)This course is an examination of diverse cultures, stereotypes, concepts and issues that impact the way individuals interact with one another in society. In relation to EDUC 315, it takes students to the next level as they experience cultural attributes from a media perspective, as well as being immersed into diverse settings throughout the course. It is designed for students to develop sensitivity and awareness of cultural influences in America and the public school systems. An emphasis is placed on sociopolitical aspects of the United States and other world cultures, sources of cross-cultural conflict, and approaches to cross-cultural conflict resolution as they relate to P-12 settings, their communities and the communities in which they teach. Cultural awareness is concrete and/or visible in society and is necessary for promoting sensitivity and respect of cultural beliefs and values amongst teachers, administrators and students. Course participants will be required to demonstrate knowledge of with regard to developing sensitivity and awareness of cultural influences on behavior as these relate to the community, society and schooling processes. Course participants will be required to analyze methods of teaching Multicultural Education and its various camps including: Culturally Responsive Pedagogy, Critical Multiculturalism, and Anti-Racist Pedagogy. The creative tension between dominant and subordinate voices will lead to both visual and written responses. The major goal of the course is to help students identify their diversity in American society and to develop their own creative voices, while drawing on issues of race, ethnicity, gender, geographical location, sexual identity, age, ability, social class, social status and other cultural attributes that make individuals uniquely diverse.

EDUC 401: Early Childhood Education

3 Credits

Organization, methodology, and materials for nursery school and kindergarten programs.

EDUC 402: Early Learning: Language and Concept Development

3 Credits

Examining the development of language and self-expression in young children, and the role of children’s literature in facilitating development.
EDUC 402 Early Learning: Language and Concept Development (3) This course examines foundations and strategies related to encouraging language development and concept acquisition of young children infant through age five. Students will gain the knowledge and skills to design relationships, environments, activities, and responses to young children at varying stages of early language and conceptual development. Course content will address the following: foundations for approaches to early learning including young children’s characteristics, multiple factors that influence child construction of language and concept development, the importance of teacher child relationships, the emerging nature of children’s learning patterns, and the benefits of providing books and experiences that support present knowledge levels while challenging new learning. Students will gain knowledge to use to design supportive relationships, documentation of observation, other assessment tools, and intentional instructional strategies that encourage early development of vocabulary and content concepts. Students will design instruction that encourages child awareness of concepts of receptive language, such as phonemic awareness; concepts of self-expression, such as vocabulary, concepts of comprehension, such as read aloud recall; concepts of early writing, such as alphabet and phonics; and concepts related to reading, such as illustrations and meaning. In science, students will design instruction that encourages child awareness of the value of questioning, observing and experimenting for answers about life science, earth science and physical science issues. In mathematics, students will design instruction that encourages child awareness of numbers, operations, geometry, measurement, patterns, and data representation. In social studies, students will design instruction that encourages child awareness of concepts related to families, communities, early economics, and local geographical characteristics. In the arts, students will design instruction that encourages child awareness of ways to express self with drawings, paintings, sculpture, drama, music and dance. In the areas of social and emotional skills, students will design instruction that encourages child sensitivity to social and emotional skills that do and do not work well in group settings. Emphasis will be placed on the need to differentiate instruction for each young learner and the need to differentiate relationship interactions with each family. The course format will include discussion, collaborative group work, student presentations, simulations, child care classroom observations, case studies, online activities, review of research and some lectures. In addition, each student will design and complete a teacher inquiry.

EDUC 403: Curriculum for Early Childhood

3 Credits

Examining early childhood programs and methodology, focusing on areas of social studies, mathematics, and science.

EDUC 404: Young Children’s Behavior: Observation and Evaluation

3 Credits

Observation, recording and evaluation of student behaviors, and the use of prescription techniques for early childhood students with special needs.

EDUC 408: Administration of Early Childhood Education Programs

3 Credits

The role of the early childhood administrator as it relates to regulations, staffing, management, funding and curriculum.

**Prerequisite:** EDUC 401

EDUC 410: The Child and Social Institutions

3 Credits

The effects of the family on a child’s development, especially in the infancy and preschool years.

EDUC 415: Teaching Secondary Social Studies

3 Credits

Study of the objectives, content, methods, and evaluation of procedures of social studies. Students design units and lesson plans. EDUC 415 Teaching Secondary Social Studies (3) This course is designed to prepare social studies candidates with the teaching methods and content knowledge required to teach the many social studies subjects at the middle and high school level. Stressing a constructivist approach, students learn to utilize various instructional strategies to meet learning goals and objectives based on the National Council for the Social Studies (NCSS) thematic strands and relevant PA Academic and Core Standards. Long and short range planning of teaching units address content, assessment, technological integration, historical connections, equity for all students, ELL, and adaptations for special needs students. Students engage in focused classroom discussions on assigned readings and analyze critical issues in teaching social studies in order to develop a coherent and relevant social studies teaching and assessment philosophy. Students are evaluated based on lesson planning competence, the knowledge of and ability to promote NCSS thematic strands and PA standards in both planning and teaching, leading discussions on relevant social studies topics and readings, implementing a preplanned lesson to the class, and the development of a complete middle level or high school level unit of study.

**Prerequisite:** EDUC 315W and admission into Teacher Education Programs

EDUC 416: Teaching Secondary English and the Humanities

3 Credits

Study of the objectives, content, and methods of English and humanities courses. EDUC 416 Teaching Secondary English and the Humanities (3) This course is designed to prepare candidates with the objectives, content, methods and knowledge necessary to teach English in today’s secondary classrooms in middle and high schools. The pedagogical approaches, dispositions, and skills appropriate for adolescent learners will be highlighted. Instructional strategies include multiple types of texts, genres, and modes to address diverse learners’ needs and 21st century literacies in society and the workplace. Developmentally appropriate practices and theories will be discussed and modeled. Course content, strategies, and dispositions are consistent with literacy research, adolescent development, best practice pedagogy, and content and professional standards appropriate for English language arts candidate preparation. This course adheres to professional and content area standards and practices from: National Council of Teachers of English (NCTE), the National Writing Project (NWP), International Reading Association (IRA), and National Center for Literacy Education (NCLE). Candidates will design a range of learning experiences for their future students consistent with Commonwealth of Pennsylvania Common Core standards (PACC) and NCTE/IRA Standards for the English Language Arts. Candidates will engage with constructivist learning practices that center on collaboration, authentic learning, critical
reflective practice, ongoing assessment, instructor coaching, and peer review.

**Prerequisite:** EDUC 315W and admission into Teacher Education Programs

EDUC 417: Teaching Secondary Mathematics

3 Credits

Study of the objectives, content, methods, and evaluation procedures of mathematics. EDUC 417 Teaching Secondary Mathematics (3) This course is designed to prepare students with the methods and knowledge necessary to teach mathematics in today’s middle level and secondary classrooms. The pedagogical approaches and content needed to teach with a focus on understanding will be highlighted. Learning theories and their role in the mathematics classroom will be discussed and sample teaching strategies will be modeled. Discussions will also be based on field experiences and case study analyses. The National Council of Teachers of Mathematics standards addressed in the Principles and Standards for School Mathematics (2000), the Common Core State Standards for Mathematics (2010), the PA Core Standards in Mathematics (2013), as well as the Pennsylvania Standards Aligned System will be emphasized and demonstrated throughout the course. Long and short range planning of teaching units will address content, assessment, technological integration, historical connections, equity for all students, ELL, and adaptations for special needs students. A problem-solving/constructivist approach to learning and assessment will be emphasized. Students will be engaged in cooperative learning experiences, use manipulatives and technology, and be assessed through both formative and summative evaluations. The content and processes of mathematics emphasized throughout this course will be presented with three principal goals in mind: to inform students about current research related to teaching mathematics, to enhance students’ pedagogical mathematical knowledge and skills, and to help students develop as competent mathematics teaching professionals.

**Prerequisite:** EDUC 315W and admission into Teacher Education Programs

EDUC 418: Positive Classroom Climate for Positive Attitudes About Learning

3 Credits

Participants will learn strategies for creating classroom climates which encourage positive attitudes toward learning while preventing and correcting student misbehavior.

**Prerequisite:** permission of program

EDUC 421: Children’s Literature

3 Credits

Knowledge of literature appropriate for elementary school children and utilization of literature-related activities in teaching reading.

**Prerequisite:** admission into Elementary Education Major

EDUC 422: Literature for Children and Adolescents

3 Credits

Literature for children and adolescents, approaches for using such literature in the school curriculum. EDUC 422 Literature for Children and Adolescents (3) This course is required for students enrolled in the Reading Specialist Program and those who wish to complete the language arts option in the Teaching and Curriculum Program. It is designed to assist Pre K through grade 12 educators who are interested in incorporating children’s and/or adolescent literature into the curriculum. The course will focus on an in-depth exploration of selecting, evaluating, and using a wide range of contemporary (published in the last ten years) literature for children and young adults. This course will provide participants the opportunity to explore reader response theory and its relationship to classroom teaching practices, in particular to reading and literacy instruction. The study and application of principles and techniques of integrating literature circles, discussion strategies and literature extension projects will be addressed.

EDUC 425: Literacy Assessment

3 Credits

This course emphasizes alternative literacy measures focusing on portfolio assessment and performance assessments.

**Prerequisite:** permission of the program

EDUC 432: Children’s Literature in Teaching Writing

3 Credits

Introduction to introduces methods for transferring writing skills and literary devices from literature to student writing in all subject areas.

EDUC 435: Addressing the Needs of Special Learners

1 Credit

An examination of attitudes toward, barriers experienced by, and special needs of special learners in the schools.

**Prerequisite:** eighth-semester standing in Secondary Teacher Certification Program

EDUC 436: Inclusion Practices in Education

3 Credits

The educational, social, and political foundations for inclusion practices in public education.

**Prerequisite:** permission of program

EDUC 440: Educational Statistics and Measurements

3 Credits

Descriptive statistics, correlation, reliability, validity, scaling techniques, and introduction to item analysis.

EDUC 450: Current Topics in Education

1-15 Credits/Maximum of 15

No description.

EDUC 452: Teaching Writing

3 Credits

Techniques for teaching the writing process, kindergarten through grade 12, including writing in content areas; workshop format.
EDUC 458: Behavior Management Strategies for Inclusive Classrooms

3 Credits

Provides knowledge and skills essential for designing positive learning environments in secondary classrooms with the inclusion of exceptional learners. EDUC 458 Behavior Management Strategies for Inclusive Classrooms (3) Well-organized and effectively managed classrooms provide task-focused instructional environments where students are actively engaged in learning. The inclusion of exceptional learners in the general education classroom has brought the need for a unique set of knowledge and skills to promote student task engagement and prosocial behavior. Topics to be addressed include: characteristics and specific (or unique) needs of exceptional learners and their effect on student learning; components of effective classroom organization and management; principles of applied behavior analysis and research-based behavior management strategies appropriate for use with exceptional learners in the secondary classroom. This course will be a required course for all Secondary English, Math, and Social Studies students seeking initial certification. Course delivery methods will include lectures, reflections, online discussions, projects, class presentations, library research, and other relevant media.

Prerequisite: admission to teacher education

EDUC 459: Strategies for Effective Teaching in Inclusive Classrooms

3 Credits

Course examines effective strategies for accommodating and adapting instruction for exceptional learners in secondary classrooms. EDUC 459 Strategies for Effective Teaching in Inclusive Classrooms (3) This course will examine strategies for teaching exceptional students in inclusive secondary classrooms. The course will focus on academic assessment; instructional planning, development and implementation; and strategies for making the curriculum more accessible, flexible and supportive for diverse learners. Topics to be addressed include the following: multidisciplinary evaluation and programming for exceptional learners; designing instruction based on assessment data; progress monitoring; technology for teaching and learning as a way to promote access to curriculum; designing appropriate and legally acceptable accommodations and/or modifications to promote access to the standards-based curriculum for students with exceptional learning needs; research-based instructional strategies to facilitate literacy development and instruction across academic content areas and collaborative structures to support exceptional learners in general education classrooms. This course will be required for all Secondary English, Math, and Social Studies Education students seeking initial certification and will be offered during the 8th semester (student teaching) to optimize performance of students during their student teaching experience. Course delivery methods will include lectures, reflections, online discussions, projects, class presentations, case studies, and other relevant forms of media.

Prerequisite: admission to Teacher Certification Program or Approval of program

EDUC 462: Computers for Classroom Teachers

3 Credits

An introduction: microcomputers and their educational applications.

Prerequisite: admission into Elementary Education Major

EDUC 463: Teaching With Modern Web Technologies

3 Credits

Relates educational theory and practice to applications of the modern Web, applying content from educational foundations, curriculum, and research. EDUC 463 Teaching With Modern Web Technologies (3) This course focuses on the World Wide Web as a valuable resource for P-12 education. Designed for teachers, curriculum supervisors, and building administrators, this course relates educational theory and practice to applications of the Web and Web 2.0 technologies in classrooms and schools. Class participants apply resources available through the Web to content from the fields of educational foundations, learning theories, curriculum development, educational assessment and evaluation, and educational research. The impact that the Web and technology in general has had on the educational experience of both teachers and students, including the working relationship between the two, is also a main focus. Students maintain a documentation of weekly assignments that form the basis for the final project: the development of a web-based teaching portfolio. Students also complete a mid-term project that entails the design of an online learning activity for students that utilizes Web technologies. This activity requires the student to apply principles of learning theory to web-based resources identified and evaluated to support an identified classroom learning objective or set of objectives. The final project consists of a technology-based teaching portfolio, demonstrating application of the key concepts covered in the course.

EDUC 464: Technology and the Learning Process

3 Credits

Evaluates the relationship between technology-based resources and learning theories through design, implementation, and evaluation of online instructional modules. EDUC 464 Technology and the Learning Process (3) Designed for teachers, curriculum supervisors, and building administrators, this course examines and evaluates the relationship between technology-based resources and learning theories. Students explore learning theories in terms of how technology may or may not support implementation of those theories in the classroom. Students also examine problem-based learning approaches and how they can be combined with technology, resulting in what has been defined by Dr. Bernie Dodge as a “WebQuest” for classroom use. In the WebQuest development process, students identify a real life problem for their students to solve. They correlate that problem to their academic standards and district curriculum. They then design, implement, and evaluate instructional modules with integrated technology resources designed to lead to a solution of the identified problem, while promoting student acquisition of higher order thinking skills. Through this experience, students must plan for their students’ learning tasks and activities, resource needs, performance evaluation and rubrics. As a culminating experience, students design an action research project related to the implementation of their learning module in the classroom setting.

Prerequisite: EDUC 462 or EDUC 463 or permission of program

EDUC 465: Serving Culturally and Linguistically Diverse (CLD) Learners

3 Credits

The course provides teachers with knowledge, understandings, and skills to engage culturally and linguistically diverse (CLD) students in mainstream classrooms. EDUC 465 Serving Culturally and Linguistically Diverse (CLD) Learners (3) This course is designed to encourage
understandings and appreciation for linguistic and cultural diversity, and to enhance the knowledge and skills of teachers working with culturally and linguistically diverse learners, their families, and their communities. The six areas of emphasis within EDUC 465 are as follows: a) the legal, historical, and cultural implications of ESL, which explores the legal and historical bases of ESL and analyzes the differences among home and school cultures, especially as they relate to language; b) multicultural education, which focuses on helping teachers acquire knowledge, develop cultural sensitivity, and identify educational strategies that address the needs of multilingual and multicultural learners and their families; c) a brief overview of first and second language acquisition theories; d) developmentally appropriate teaching strategies for culturally and linguistically diverse learners specifically related to their speaking, listening, reading, and writing skill development; e) Pennsylvania and TESOL standards and the Pennsylvania ELL assessment systems; and f) the integration of language components across the curriculum. This course aims to provide theoretical understandings of culturally responsive teaching and pedagogical strategies for CLD learners.

EDUC 466: Foundations of Teaching English as a Second Language

3 Credits

Overview of various legal, historical, and socio-cultural implications of teaching and learning English as a Second Language. EDUC 466 Foundations of Teaching English as a Second Language (3) EDUC 466 is the first course in a four-course sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for the ESL Program Specialist endorsement. EDUC 466 addresses the legal, historical, and socio-cultural issues related to non-native speakers of English, and the implications for ESL curriculum, instruction, and assessment within the K-12 school setting. The course is designed: (1) to encourage understanding and appreciation for language diversity and culture, and (2) to enhance the knowledge and skills of teachers working with culturally and linguistically diverse learners, their families, and their communities. The course specifically addresses two of the PDE competencies necessary for a teacher to acquire in order to be endorsed as an ESL Program Specialist: PDE Competency IV-Developing cultural awareness/sensitivity. The four areas of emphasis within EDUC 466 are: a) The legal, historical, and cultural implications of English as a Second Language, which explores the legal and historical bases of ESL and analyzes the differences among home and school cultures, especially as they relate to language; b) Fundamentals of developing English language skills, which provides an introduction to the structure of the English language, grammar, and pronunciation, including lexical, morphological, syntactical, and phonological components; c) An overview of second language acquisition, which introduces the topics of linguistic skill development, and first and second language acquisition; and d) Multicultural education, which focuses on helping teachers acquire knowledge, develop cultural sensitivity, and identify educational strategies that address the needs of multilingual and multicultural learners and their families.

Prerequisite: permission of program

EDUC 467: English Language Structure for English as a Second Language Teachers

3 Credits

An in-depth study and review of general linguistic concepts and their application to ESL pedagogy. EDUC 467 English Language Structure for ESL Teachers (3) EDUC 467 is the second course in a four-course, 12-credit sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for an ESL Program Specialist Certificate. The 12-credit sequence which has previously been approved by PDE has been offered as Special Topics courses. The 12-credit sequence is consistent with other approved ESL certificate programs. EDUC 467 introduces students to general linguistic concepts and their application to ESL pedagogy and practice. The course provides an intensive study and review of major linguistic concepts and issues, including but not limited to: phonetics, phonology, morphology, syntax, semantics, pragmatics and discourse analysis, sociolinguistics and dialectology, historical linguistics and world languages, and writing systems. The course specifically addresses two of the PDE competencies necessary for a teacher to acquire to meet the minimum requirements as an ESL Program Specialist: PDE Competency I-English usage and developing linguistic awareness; and PDE Competency II-English language learners (ELLs) language and language services knowledge. The three areas of emphasis within EDUC 467 are: a) Language and communication, which explores the use of dictionaries, English use and usage, social conventions and English usage, American English variations, meaning and significance. b) Grammar, pronunciation, literacy development for second language learners, which focuses on the significance of these areas for ESL learners; and c) Evaluative classroom instruments to measure student progress in grammar, pronunciation and English language structure, which highlights the incorporation of linguistic tools in the assessment of ESL learners' language skills and needs.

Prerequisite: EDUC 466 or permission of program

EDUC 468: Language Acquisition for English as a Second Language Teachers

3 Credits

Study of the theory, research, and processes involved in first and second language development, acquisition, and assessment. EDUC 468 Language Acquisition for ESL Teachers (3) EDUC 468 is the third course in a four-course sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for an ESL Program Specialist Certificate. The 12-credit sequence has previously been approved by PDE. The 12-credit sequence is consistent with what other PDE-approved ESL certificate programs offer. This course builds upon EDUC 466, Foundations of Teaching English as a Second Language, and EDUC 467, English Language Structure for Teachers, with an emphasis on the processes involved in second language acquisition. EDUC 468 explores first and second language learning, socio-cultural contexts and learner variables, and the issues related to cognition and developmental psycholinguistics. The course specifically addresses two of the PDE competencies necessary for a teacher to acquire to meet the minimum requirements as an ESL Program Specialist: PDE Competency I-English usage and developing linguistic awareness; and PDE Competency III-English language learners (ELLs) language and language services knowledge. The four areas of emphasis within EDUC 468 are: a) Learning a first language, which provides an in-depth study of the process involved in the acquisition and development of first language interrelations between psycholinguistics and cognition, as well as understanding of the processes involved in the acquisition and development of language in human species. b) Learning a second language, which explores the interrelationships between psycholinguistics and cognition, and first and second language acquisition, as well as identifying issues related to developmental psycholinguistics. c) Differences in how children, adolescents and adults learn language, major contributions of leaders in the field of the psychology of language learning. d) Evaluative classroom instruments to measure student progress in listening, speaking, reading.
and writing, which identifies linguistic tools that can be used to assess the language skills and needs of ESL learners.

**Prerequisite:** EDUC 466 and EDUC 467, or permission of program

EDUC 469: Teaching Methods and Assessment of English as a Second Language

3 Credits

Integration of theory, research, and practice about ESL curriculum, instructional methods, assessment, and literacy development. EDUC 469 Teaching Methods and Assessment of English as a Second Language (3) EDUC 469 is the fourth and final course in a four-course sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for an ESL Program Specialist Certificate. The 12-credit sequence has previously been approved by PDE. The 12-credit sequence is consistent with what other PDE-approved ESL certificate programs offer. The emphasis in EDUC 469 is to learn and integrate curricular, instructional, and assessment theories and practices into the K-12 classroom setting to promote language and literacy development. The course specifically addresses three of the PDE competencies necessary for a teacher to acquire to meet the minimum requirements as an ESL Program Specialist: PDE Competency I-English usage and developing linguistic awareness; PDE Competency II-English as a Second Language-instructional materials/development, and PDE Competency III-English language learners [ELLS] language and language services knowledge. The three areas of emphasis within EDUC 469 are: a. English as a Second Language methods and collaboration with academic content areas, which focuses on: the preparation for ESL teaching by exploring trends, major theories, methodologies, and assessment in second language learning; the study of second language teaching approaches applicable to elementary and secondary students; materials development and evaluation; and the development of a broad base of knowledge and skills that will enhance teacher effectiveness in meeting the needs of diverse learners through appropriate instructional, curricular, and behavioral strategies; b. Assessment and evaluation of English Language Learners (ELLs), which explores: the use of multiple measures of assessment to evaluate academic achievement; the development and implementation of authentic assessment tools; and various approaches and challenges to classroom assessment; and c. Literacy development, which focuses on elementary and secondary ESL students by exploring ways in which to enhance English language learning in elementary students and to enrich content-area instruction for secondary ESL students.

**Prerequisite:** EDUC 466, EDUC 467, EDUC 468, or permission of program

EDUC 470: Higher-Order Thinking for Educators

3 Credits

Presentation of strategies, techniques, and principles of higher-order thinking which are grounded in relevant research and practice will be presented. EDUC 470W Higher Order Thinking for Educators (3) This required course for elementary education majors focuses on three primary objectives. The first objective is to develop students' metacognitive, critical thinking, creative thinking, decision making, problem solving and reflection skills. A second objective is for students to become aware of ways to increase the higher order thinking of children in the elementary classroom. The third objective is to improve the students' ability to write critical thinking/reflection papers on educational problems and issues. This course serves as one of the foundation courses for the Elementary Education Program as one of the goals of the program is to develop reflective practitioners. Students are evaluated on the quality of eight writing samples, the quality and quantity of their contributions during whole class discussions, and the quality of their performance during cooperative group activities.

**Prerequisite:** admission into Elementary Education Major Writing Across the Curriculum

EDUC 471: Best Practices in Literacy

3 Credits

An application of best literacy practices to classroom instruction and assessment of reading, writing, listening, and speaking. EDUC 471 Best Practices in Literacy (3) This course is offered to support the Masters of Education degree in Teaching and Curriculum at Penn State Harrisburg by providing an application of research in best language arts. It is a required course in the Reading Specialist Certification Program. The course acquaints students with an instructional and assessment framework that has been embraced by the educational community on a nationwide basis. Objectives for the course include the following: (1) Students will demonstrate an understanding of the theoretical underpinnings of the established best practices in literacy. (2) Students will demonstrate the ability to implement effective literacy practices. (3) Students will be able to assess and evaluate student performance according to established best practices. Evaluation methods will include: (1) attendance and participation in class discussion and exercises (10%); (2) a 5-7 page paper dealing with the use of children's books to teach reading and writing (25%); (3) a 5-7 page paper on the most current methods of assessing students' reading, writing, speaking, and listening skills (25%); and (4) the creation of an integrated Thematic Unit for instruction (40%).

**Prerequisite:** EDUC 320 or EDUC 321

EDUC 472: Teaching Reading Through the Content Areas

3 Credits

Designed to enable teachers of content areas to improve the reading/study skills needed by their students.

EDUC 475: ESL Leadership, Research and Advocacy

3 Credits

Teachers will develop their skills as instructional leaders and researchers by conducting school-based action research projects. EDUC 475 ESL Leadership, Research and Advocacy (3) EDUC 475, the capstone course in the ESL Specialist and Leadership Certificate program (now the online SCOPE program), is a hybrid course involving online readings and discussions and field-based action research in PreK-12 educational settings with English Language Learners. ESL faculty will provide mentoring/coaching in the field. This course is designed to familiarize ESL candidates with the processes for developing, implementing, and evaluating action research projects. The ESL candidates will explore best practices in ESL pedagogy through implementation of various models of action research. The four areas of emphasis within EDUC 475 are as follows: a) the principles of ethical and methodologically sound action research related to ELLs; b) culturally and linguistically inclusive best practices supported by ESL research; c) collaborative partnerships between school and community to advocate for ELLs and their families; and d) ESL research, evaluation, and assessment for dissemination of research findings, professional development, and continuous quality improvement within ESL programs. ESL faculty will coach and mentor ESL candidates in the field while they conduct action research. By the conclusion of this course, ESL candidates will have gathered, analyzed,
and summarized their data into a research paper for potential publication, as well as developed either: a) a workshop training presentation for their school or district; or b) a draft of a conference proposal for a national, regional, or state conference. By conducting action research projects and subsequently disseminating the results of their research through professional development presentations and potential publications, candidates are expected to become instructional leaders in the ESL field. This course is the final capstone 3-credit ESL course for the ESL Specialist and Leadership Certificate program.

**Prerequisite:** EDUC 469

**EDUC 477: Teaching Struggling Readers and Writers**

3 Credits

A comprehensive overview of learning problems and effective strategies for teaching K-12 students who have difficulties reading and writing. EDUC 477 Teaching Struggling Readers and Writers (3) EDUC 477 is a required course in the M. Ed. in Literacy Education Program. The primary goals of the course are to increase the participants’ understanding of special learning problems and to provide participants with teaching techniques for helping struggling K-12 readers and writers. Emphasis is placed on improving these students’ reading, writing, listening, and speaking skills.

**EDUC 478: Secondary Transition for Students with Disabilities**

3 Credits

Process and procedures for successful transition of secondary students with disabilities.

**Prerequisite:** EDUC 459

**EDUC 484: School Law for Teachers**

3 Credits

This course will focus on increasing teacher awareness of law and how it impacts on daily performance and job security.

**Prerequisite:** permission of program

**EDUC 490: Student Teaching**

1-12 Credits/Maximum of 12

Observation and teaching in selected elementary or secondary schools under direction of cooperating classroom teachers and University supervisors. Regular seminars. GPA 3.0 or higher. Passing scores on required Praxis I tests. EDUC 490 Student Teaching (1-12) This course fulfills one of the certification requirements established by the Commonwealth of Pennsylvania. Students are assigned for a period of twelve weeks to teach in either an elementary or secondary school. Students have the option of selecting either the primary or intermediate level in elementary education, or the middle or high school level in secondary education. Cooperating classroom teachers provide the day-to-day direction, evaluation and mentoring, and an assigned university supervisor makes weekly visits and observations. Students are phased into the full responsibilities of a classroom teacher, with the ultimate goal being, the assumption of all duties and responsibilities for a period of several weeks. Students plan, implement, evaluate and reflect on a variety of instructional activities throughout their experience. In addition to planning and implementing instruction, students assume responsibilities for classroom management, assessing student progress, communicating with all stakeholders, and participating in professional and co-curricular activities. Student teacher evaluations are based on clearly defined expectations and criteria. The assessment criteria are linked to Commonwealth and national standards.

**Prerequisite:** eight semester standing, approval of program

**EDUC 494: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**EDUC 494H: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**Honors**

**EDUC 495: Internship**

1-15 Credits/Maximum of 15

Supervised off-campus, non-group instruction including individual field experiences, practicums or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

**EDUC 495A: Junior Field Experience**

1 Credits

EDUC 495A Junior Field Experience (1) This course is designed to provide Elementary Education majors with an intensive field experience that acquaints the student with the real world of elementary education in a suburban setting. The experience will be under the direction of a certified elementary teacher in a suburban Harrisburg setting. Students will have an opportunity to actively work at the primary (K-3) and/or the intermediate (4-5) level, and will be directed to accomplish specific field tasks assigned by their course instructors. These tasks are directly related to each course in which the student is enrolled. Students are assigned a university supervisor who observes and consults with the students throughout the experience. Specific activities will vary depending on the grade level and the school district’s curriculum. Students are evaluated by both the cooperating teacher and the university supervisor, and the evaluations are based on classroom observations. This course is offered each semester and is required of all students enrolled in the Elementary Education program.

**Prerequisite:** prior approval of proposed placement by instructor.

**EDUC 495B: Senior Field Experience**

1 Credits

EDUC 495B Senior Field Experience (1) This course is designed to provide Elementary Education majors with an intensive field experience that acquaints the student with the real world of elementary education in an urban setting. The experience will be under the direction of a certified elementary teacher in the Harrisburg or Steelton-Highspire School Districts. Students will have an opportunity to actively work at the primary (K-3) and/or the intermediate (4-6) level, and will be directed.
to accomplish specific field tasks assigned by their course instructors. These tasks are directly related to each course in which the student is enrolled. Students are assigned a university supervisor who observes and consults with the students throughout the experience. Specific activities will vary depending on the grade level and the school district’s curriculum. Students are evaluated by both the cooperating teacher and the university supervisor, and tile evaluations are based on classroom observations. This course is offered each semester and is required of all students enrolled in the Elementary Education program.

**Prerequisite:** prior approval of proposed placement by instructor.

**EDUC 495C: Early Childhood Field Experience**

1 Credits

EDUC 495C Early Childhood Field Experience (1) This course is designed to provide Early Childhood Education majors with an intensive field experience that acquaints the student with the “real” world of early childhood education in an urban setting. The experience will be under the direction of a certified elementary teacher in an urban Harrisburg setting. Students will have an opportunity to actively work at the primary (K-3) level and will be directed to accomplish specific field tasks assigned by their course instructor. These tasks are directly related to early childhood courses in which the student was previously enrolled. Students are assigned a university supervisor who observes and consults with the students throughout the experience. Students are evaluated by both the cooperating teacher and the university supervisor. The evaluations are based on classroom observations and the completion of learning activities correlated with the required text. This course is offered each semester and is required of all students enrolled in the Early Childhood Education program.

**Prerequisite:** prior approval of proposed placement by instructor and completion of all four early childhood prerequisite courses.

**EDUC 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**EDUC 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**Education Mathematics - CA (EDMTH)**

**EDMTH 301: Mathematics in Elementary Education I**

3 Credits

Survey of content, pedagogy, and psychology of mathematics instruction relating to numbers, operations, and algebraic thinking for pre-school through eighth grade. EDMTH 301 Mathematics in Elementary Education I (3) The course will provide candidates the opportunity to explore and develop research-based practices needed to teach elementary mathematics in alignment with national and state content standards. This course will focus on the big ideas and learning trajectories associated with the mathematical content strands of numbers and operations and algebraic reasoning and functions across grades PK - 8. Course content will also focus on curriculum materials and considerations, planning effective lessons, pedagogical practices, and assessment of students’ knowledge related to these mathematical content areas. The course will also emphasize the use of manipulatives and technology to represent the essential understandings needed to help students make sense of mathematical operations and make mathematical connections. Throughout the course, teacher candidates will engage in mathematical tasks and mathematical discussions, and observe videos of elementary mathematics classes to explore the focus, coherence, and rigor needed across PK-8 grade levels relative to the content strands of numbers and operations and algebraic reasoning and functions. They will also learn about various formative and summative assessments strategies to identify students’ misconceptions and learn various intervention strategies to clarify students’ understanding. The course will also emphasize instructional approaches designed to help students develop the mathematical behaviors associated with the Common Core Mathematical Practices across grade levels.

**Prerequisite:** prior course in college mathematics and formal admission into the Teacher Certification Program

**EDMTH 302: Mathematics in Elementary Education II**

3 Credits

Survey of content, pedagogy, and psychology of mathematics instruction relating to geometry, measurement, statistics, and data for pre-school through eighth grade. EDMTH 302 Mathematics in Elementary Education II (3) The course will provide candidates the opportunity to explore and develop research-based practices needed to teach elementary mathematics in alignment with national and state content standards. This course will focus on the big ideas and learning trajectories associated with the mathematical content strands of geometry, measurement, statistics, and data analysis across grades PK - 8. Course content will also focus on curriculum materials and considerations, planning effective lessons, pedagogical practices, and assessment of students’ knowledge related to these mathematical content areas. The course will also emphasize the use of manipulatives and technology to represent the essential understandings needed to help students make sense of mathematical operations and make mathematical connections. Throughout the course, teacher candidates will engage in mathematical tasks and mathematical discussions, and observe videos of elementary mathematics classes to explore the focus, coherence, and rigor needed across PK - 8 grade levels relative to the content strands of geometry, measurement, data analysis, and probability. They will also learn about various formative and summative assessments strategies to identify students’ misconceptions and learn various intervention strategies to clarify students’ understanding. The course will also emphasize instructional approaches designed to help students develop the mathematical behaviors associated with the Common Core Mathematical Practices across grade levels.

**Prerequisite:** EDMTH301

**EDMTH 441: Geometry and Measurement Across the K-12 Curriculum**

3 Credits

The course presents participants with investigations of reports, research, and recent trends related to teaching geometry and measurement. EDMTH 441 Geometry and Measurement Across the K-12 Curriculum (3) This course addresses the areas of Geometry and Measurement as...
defined by the National Council of Teachers of Mathematics (NCTM) standards and the Pennsylvania academic standards. Designed for graduate students who teach mathematics in K-12 grades or are leaders in mathematics education, the course focuses on discussions and teaching practices related to the fundamental concepts of geometric and measurement. Also, participants will become familiar with current research, reports and recent trends related to the teaching of a geometry or measurement topic.

**Prerequisite:** permission of program

**EDMTH 442: Algebra and Functions Across the K-12 Curriculum**

3 Credits

The course presents participants with investigations of reports, research, and recent trends related to teaching algebra and function concepts.

**EDMTH 442 Algebra and Functions Across the K-12 Curriculum (3)**This course addresses the areas of Algebra and Functions as defined by the National Council of Teachers of Mathematics (NCTM) standards and the Pennsylvania academic standards. Designed for graduate students who teach mathematics in K-12 grades or are leaders in mathematics education, the course focuses on current research and recent trends related to teaching algebra. The course will also focus on teaching algebraic concepts and algebraic reasoning from patterns, mathematical modeling, and variables of change using manipulatives, graphical representations, and technology.

**Prerequisite:** permission of program

**EDMTH 443: Data Analysis and Probability Across the K-12 Curriculum**

3 Credits

The course presents participants with investigations of reports, research, and recent trends related to teaching data analysis and probability concepts.

**EDMTH 443 Data Analysis and Probability Across the K-12 Curriculum (3)**This course covers the concepts of Data Analysis and Probability as defined by the National Council of Teachers of Mathematics (NCTM) standards and the Pennsylvania Academic Standards. Designed for K-12 teachers of mathematics or mathematics leaders, the course focuses on discussions related to the teaching of data analysis and probability through problem sets, written assignments, classroom-based projects and research. Topics will also include incorporating activities to address teaching probability and statistics to diverse populations. Also, participants will become familiar with current research and recent trends related to the teaching of a topic on data analysis and probability. Attention will be given to practices utilizing manipulatives, writing, problem solving, technology, and simulations.

**Prerequisite:** permission of program

**EDMTH 444: Numbers and Operations Across the Curriculum**

3 Credits

The course focuses on investigating reports, research, and recent trends related to teaching number and operation concepts K-12. A student who has passed MATH 200 may not take EDMTH 444 for credit.

**EDMTH 455: Current Issues in Mathematics Education**

3 Credits

An examination and analysis of contemporary trends and concerns in the teaching of mathematics.

**Prerequisite:** EDMTH302 or EDUC 417

**Educational Psychology (EDPSY)**

**EDPSY 10: Individual Differences and Education**

3 Credits

Relationships between learner differences and physical, cognitive, language, social, and cultural development; emphasis on ethnicity, gender, special needs; schooling implications. EDPSY 010 Individual Differences in Education (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. This course is an overview of the major theories and significant research on the development and explanation of individual differences and how those differences affect the education of school-age children. Specific topics include physical, cognitive, language, social-emotional, and cultural development in children and youth ages 3-20. By its very nature, the course will include a diversity focus, with special attention to ethnic, cultural, and gender issues as well as the needs of special populations. Within each topic area, the course will pay special attention to theoretical and empirical work on how and why variations occur, how they are to be interpreted and measured, and the implications those variations have for society, especially for schooling. Traditional and alternative practices in schools will be examined to see which approaches best meet the needs of an increasingly diverse American society. While the course will focus on individual differences in education it will not be exclusively oriented toward future teachers. The course will also help parents (or future parents) understand the nature of development and individual differences of students as they progress through the educational system.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

**EDPSY 11: Educational Implications of Individual Differences in Childhood**

3 Credits

This is a course about individual differences in learners that may stem from biological and environmental influences on development and wellness. This course addresses the ways in which we consider these differences as we design environments for learners in early and middle childhood. Course content includes cognitive, language, social-emotional, moral and physical development of students in pre-elementary through middle school settings. Content also includes understanding and promotion of health and wellness in educational settings, as well as individual differences that stem from gender, ethnic, racial, and other forms of diversity in children and youth. Both primary and secondary sources serve as foundational readings for the course. Readings share research on how and why variations occur, how to measure and interpret them, and what implications such variations have on traditional and non-traditional educational environments with emphasis on developmentally appropriate and individually appropriate educational practice. Specific applications for teacher certification are included.
EDPSY 14: Learning and Instruction
3 Credits
Psychology of human learning applied toward the achievement of educational goals; evaluation of learning outcomes.

EDPSY 14H: Learning and Instruction
3 Credits
Psychology of human learning applied toward the achievement of educational goals; evaluation of learning outcomes. This course is designed to give honors students an applied introductory course in learning and instruction, particularly for students who may work in an educational setting. The honors section is designed to give students a more in-depth look at content in learning and instruction and the principles underlying learning theory and effective instructional processes. The class uses a seminar approach to discuss readings related to topics in learning theory, classroom management, effective instruction, student motivation, and applied assessment. Class discussions will focus on deeper understanding of the principles of learning and instruction with a focus on how one would apply those principles in teaching others.

Honors
EDPSY 99: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

EDPSY 101: Analysis and Interpretation of Statistical Data in Education
3 Credits
An introduction to quantitative methods in educational research emphasizing the interpretation of frequently encountered statistical procedures.
Bachelor of Arts: Quantification
General Education: Quantification (GQ)

EDPSY 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

EDPSY 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EDPSY 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EDPSY 298: Introduction to Statistics in Educational Research
3 Credits
The foundations of statistical techniques used in educational research; distributions, central tendency, variability, correlation, regression, probability, sampling, hypothesis testing.

EDPSY 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

EDPSY 400: Introduction to Statistics in Educational Research
3 Credits
Common techniques (parametric) covered through two-factor analysis of variance (independent samples); hypothesis testing, confidence interval, power, robustness; MINITAB frequently used. 
Prerequisite: EDPSY400 or STAT 200

EDPSY 406: Applied Statistical Inference for the Behavioral Sciences
3 Credits
The foundations of statistical techniques used in educational research; distributions, central tendency, variability, correlation, regression, probability, sampling, hypothesis testing.

EDPSY 408: Meeting Instructional Needs of English Language Learners with Special Needs
3 Credits
The course content and activities focus on instruction and assessment for English Language Learners with special needs. EDPSY (SPLED) 408 Meeting Instructional Needs of English Language Learners with Special Needs (3) The purpose of this course is to bring together two bodies of research to prepare future teachers of learners with special needs who are also English language learners to be effective teachers. The course has been developed to fulfill requirements of Pennsylvania Department of Education and in recognition of the growing number of English Language Learners (ELL) in the general population and thus in special education settings. The course presents (1) theory and research on the instructional needs of English Language Learners (ELLs) and (2) the knowledge base on effective instruction for students with special needs and assists students to integrate the two. Major topic areas include principles and issues in second language acquisition; ELL characteristics including linguistic and cultural factors that affect second language acquisition; techniques and methods of research-based instruction for English Language Learners with special needs; lesson planning and instructional modifications for ELLs with special needs; and appropriate assessment practices for ELLs with special needs. A major objective of this course is for students to be able to develop or modify instructional plans that reflect evidence based practices for adapting for the needs of ELL learners with special needs. Evaluation will be based on a combination of methods including, tests and quizzes, analyses of videos and case studies and reports of observations and interviews.
Prerequisite: EDPSY010, EDPSY014, Prerequisite or concurrent: SPLED395W, SPLED425
Cross-listed with: SPLED 408

EDPSY 421: Learning Processes in Relation to Educational Practices
3 Credits

An introduction to the empirical study of variables and conditions that influence school learning.

Prerequisite: EDPSY014 or PSYCH212

EDPSY 450: Principles of Measurement
3 Credits

Scale transformation, norms, standardization, validation procedures, estimation of reliability.

Prerequisite: EDPSY400, PSYCH100, or PSYCH200; STAT 200

Bachelor of Arts: Social and Behavioral Sciences

EDPSY 475: Introduction to Educational Research
3 Credits

Scientific method; classes of variables in educational research; the measurement of classroom behavior; survey, predictive, and experimental studies.

Prerequisite: EDPSY400

EDPSY 493: Child Maltreatment and Advocacy Studies: Capstone Experience
1-3 Credits/Maximum of 3

This course serves as the capstone experience for students enrolled in the Child Maltreatment and Advocacy Studies minor.

Prerequisite: CMAS 258 or HD FS258; Concurrent: CMAS 465 or HD FS465, CMAS 466 or NURS 466

Cross-listed with: CMAS 493

EDPSY 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EDPSY 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

International Cultures (IL)

EDTHP 115: Education in American Society
3 Credits

Introduction to the development of educational institutions, with emphasis on historical, philosophical, and sociological forces, and on problems of equity.

United States Cultures (US)

EDTHP 115A:Competing Rights: Issues in American Education
3 Credits

An examination of educational issues relevant to democratic citizenship; emphasis is on understanding the relationship among politics, schools, and society. EDTHP 115A Competing Rights: Issues in American Education (3) (GS;US)(BA) This course meets the Bachelor of Arts degree requirements. This course offers students a chance to practice solving skills necessary for active and responsible citizenship. Because the course requires students to engage in detailed analysis of contested issues, students will: acquire information about the history and governance of public schools; develop an understanding of ideologies underlying existing schools and proposed reforms; and, as a result, be better equipped to make informed choices as voters. Major topics include curriculum design; school accountability; education of minority populations; the conflict between students' rights and the need of a school to maintain order; and the teaching of values. The course will require extensive reading, discussion (in-class and/or on-line), writing, and field research, to include such activities as interviewing teachers and politicians, or attending a school board meeting. Readings may include editorials, proposed legislation, court decisions, chapters from texts, essays and scholarly articles, and material from web sites of interested organizations (such as the National Education Association, the Christian Coalition, or the American Civil Liberties Union). After readings, analysis and discussion, students will prepare and defend a position on each issue, either individually or in groups, formally or informally, in speech or in writing. Students will be graded on their ability to support a particular stance with credible evidence, and on their ability to articulate the ideology underpinning a stance. Therefore, the ability to identify credibility of sources is inherent to success in the course. In general, this course draws upon concepts and information from history, political science, economics and philosophy as well as from education. As a General Education course, it seeks to help students broaden their perspective on social issues; to offer them practice in informed decision-making; and to understand and accept the responsibilities of active citizenship. The course might be particularly useful to social science majors because it will reveal interdisciplinary connections, while it will also be useful to the wider student body as a form of civic education.

EDTHP 200: Educational Reform and Public Policy
3 Credits
The course uses an interdisciplinary approach to explore the reforms that shape the nation’s largest social institutional-public education. EDTHP 200 Educational Reform and Public Policy (3) (GS)This course is designed an an introduction to the major "Education and Public Policy". The course explores fundamental questions about the United States by examining the nation’s largest social institution-public education. Drawing from multiple social science disciplines, the course uses these questions to explore how ideologies, institutions and social groups have interacted to shape formal schooling and how schooling reflects the conflicting, interests, and beliefs of its citizens. Several case studies of past and present reforms will be analyzed to interpret the relations of schools to historic changes in legal norms, the distribution of power and resources in public institutions, and the access of different social groups to leadership and leverage in the political process of American society. The course has no prerequisites. The lectures and readings are designed for students interested in the uses of social science disciplines for studying public policy. Discussion sections are intended to lead to informed interpretation of educational policy dilemmas.

General Education: Social and Behavioral Scien (GS)
EDTHP 234: Honors Leadership Jumpstart
3 Credits
Intensive survey of contemporary leadership theory joined with practice, team-building skills, policy formation and influence, and service leadership. EDTHP 234H Honors Leadership Jumpstart (3) This is an intensive honors course for incoming First-Year students in the Schreyer Honors College with an interest in leadership. It provides introductory skills, perspective and background to prepare for and participate in a variety of leadership roles at Penn State and in the university community. Contemporary leadership theory joined with increasingly complex practice situations will be introduced. Content matter will include personal assessments, team building skills, organizational leadership, collaborative leadership, civics and diversity, policy formation and influence, and lessons about service learning and public scholarship. Considerable reading, writing, and discussion, as well as a first-year orientation project and a semester-long team service project will be required.

Prerequisite: first-semester Penn State student in the Schreyer Honors College
EDTHP 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.
EDTHP 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)
EDTHP 394: Professional Development in Education and Public Policy
3 Credits
This course develops professional skills and opportunities to prepare students for field placement and future employment or study. EDTHP 394 Professional Development in Education and Public Policy (3)This course focuses on the development of personal understanding of educational policy in a wide range of governmental, private, and civic organization with interest in educational policy, broadly defined. Students are provided opportunities to discover their policy interests, develop their professional communication and research skills, and design an on-site research project to be implemented during a summer field experience. The culminating project, the Field Experience Proposal, synthesizes readings, research, professional presentation, and details of the field placement. This becomes the blueprint for the students’ summer field experience in EDTHP 395.
EDTHP 395: Field Experience in Education and Public Policy

3 Credits

This course structures a summer field experience, research project, and service in an off-site educational policy organization. EDTHP 395 Field Experience in Education and Public Policy (3)This course structures a summer semester field placement for EPP majors in a non-profit, governmental, or civic organization with an educational policy component. Students gain hands-on, real-world experience implementing their Field Experience Plan (created in EDTHP 394) while serving internships in regional and national settings. Student-directed Field Placement Plans include identification of a policy issue relevant to the placement, implementation, evaluation, and analysis and can apply to broad topics such as diversity, multiculturalism, social justice, and educational equity in rural, suburban, and urban settings. Communication, assignment submission, and instructor assessment will take place on the ANGEL Course Management System.

Prerequisite: EDTHP394

EDTHP 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDTHP 401: Introduction to Comparative Education

3 Credits

Origins, nature, scope, basic literature, and methodology of comparative education. Study of sample topics. CI ED 401 CI ED (EDTHP) 401 Introduction to Comparative and International Education (3) (IL) The course introduces undergraduate students to global issues in education and provides a survey of schooling practices used in various educational systems around the world. Students will have the chance to create an individual research project that will allow them to explore one country and one global educational issues in depth. Students are required to attend all classes, participate in the discussion sections, and take notes on the films shown. These films play an integral part in the course and provide students with views into classrooms and schools around the world. Students will also have access to international databases and be expected to make use of these databases in developing their projects. Finally, in-class discussions will focus on how comparative educational studies have been used by politicians to influence educational reform around the world. In this course, we will survey the state of public education in the world today. Each student will focus on one nation and provide a synopsis of educational practice in that nation. We will then move on to focus on global or cross-national issues such as how competition between "core" nations like Singapore and the U.S. drives reform (GOALS 2000 or No Child Left Behind). Other issues will include power differences between north and south, education for democracy, barriers to girls and women's education in developing nations, as well as education and national identity.

Prerequisite: 5th semester standing or higher

Cross-listed with: CIED 401

International Cultures (IL)

EDTHP 412: Education and the Status of Women

3 Credits

An examination of the relationship of education to the status of women in American society.

Cross-listed with: WMNST 412

EDTHP 416: Sociology of Education

3 Credits

The theoretical, conceptual, and descriptive contributions of sociology to education.

Cross-listed with: SOC 416

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

EDTHP 420: Education and Public Policy

3 Credits

Focus on the development and analysis of education policy, and policy's influence on schools. EDTHP 420 Education and Public Policy (3) This course examines the inherently political process in which educational policies are developed and implemented. It also considers how these formal policies interact with the practice of teaching and learning in U.S. schools. In this course, students will be expected to actively participate in classroom discussions and activities as we examine the development of policies and their implementation, with a focus on understanding pressing policy dilemmas in education today. Course evaluation includes quizzes, a midterm paper analyzing a policy issue, and a series of final exam essays.

Prerequisite: six credits in social/behavioral sciences

EDTHP 427: Intelligence and Educational Policy

3 Credits

This course explores the concept of intelligence and its assessment from historical, psychological, educational and policy perspectives. EDTHP 427 Intelligence and Education Policy (3) In this course, we will focus on two main content areas. First, we'll explore the concept of intelligence and its assessment from historical, psychological, educational, and policy perspectives: What does intelligence look like in different cultures and at different points in history? What forces help to shape conceptions of intelligence? Second, we will consider the ways in which conceptions of intelligence influence students' opportunities to learn. For example, how are students assigned to higher-level or remedial classes and on what bases should admission to elite educational programs be allocated? What policies govern such decisions? The study of intelligence has been a controversial one. This course will touch on several controversies associated with the topic, including the "nurture/nurture" debate and the "merit/affirmative action" debate. Readings and discussion will draw on opposing sides of these issues.

Prerequisite: EDTHP115 or 6 credits in social/behavioral sciences
EDTHP 430: History of Education in the United States

3 Credits

American educational ideas and practice critically examined in terms of their historical development and contemporary significance.

EDTHP 434: Honors Teaching Experience in Leadership Jumpstart

1 Credits/Maximum of 3

Guided instruction and practical experience for teaching assistants to the Honors Leadership Jumpstart course (EDTHP 234H). EDTHP 434H Honors Teaching Experience in Leadership Jumpstart (1) This course trains and supports the teaching assistants (TAs) who work with the first-year students in the Leadership Jumpstart course (EDTHP 234H). The TAs help guide the first-year students through their course by assisting in the design, implementation, and evaluation of the course and the student projects, providing feedback for what worked and what did not work, and providing important perspective from when they were first-year students. The TAs are expected to be a role model, assist in the instruction of the course, assist in the functional elements of the course, be a confidant/mentor to new students, and occasionally serve as an evaluator of students’ work. The TAs’ grades will be based on attendance at all class sessions and interactive assistance and leadership during the EDTHP 234H course and on the TA’s reflections on the course, its effectiveness to achieve the objectives, and possible improvements.

Prerequisite: EDTHP234H and permission of program Honors

EDTHP 435: Child Labor and Education in the Global Economy

3 Credits

The legal instruments and social science theories useful for understanding and combating child labor through education policy and practice.

EDTHP 440: Introduction to Philosophy of Education

3 Credits

Introduction to the examination of educational theory and practice from philosophical perspectives, classical and contemporary. CI ED 440 CI ED (EDTHP) 440 Introduction to Philosophy of Education (3) The major objective of EDTHP (CI ED) 440, Introduction to Philosophy of Education, is to broaden and deepen the students’ understanding of the nature of education. Such a study involves exploring the ends as well as the means of education. It includes both an examination of some of the distinctive or defining characteristics of “educated persons” as well as the different elements of the learning experience (including curricula, pedagogies, and evaluative processes) that encourage the development of such persons. As part of developing an understanding of the educational enterprise, this course will introduce students to some of the important ideas and theories that comprise the rich tradition of educational philosophy. In the design of a course of this nature with constraints established by space, time, and the background of the student, it is necessary to confront the task of making judicious selections from the vast literary wealth accumulated over the centuries. In doing so, the decision made has been to focus primarily on the literary contributions of western philosophers of education. In the interest of making the sample varied and interesting, however, an effort has been made to include writings of some philosophers of education from different cultural contexts. The educational thoughts of A.S. Neill, John Dewey, Eliot Wigginton, Maxine Greene, Paolo Freire, Mohandas Karamchand Ganddhi, David Orr, Ivan Illich, and Wendell Berry, among others, will be explored in this class. The exposure to diverse, rich, and provocative ideas of the educators included for study here will, it is hoped, stimulate students to re-examine and further develop their own philosophy of education into a more comprehensive, coherent, and consistent one.

Prerequisite: ENGL 015

Cross-listed with: CIED 440

EDTHP 441: Education, Schooling, and Values

3 Credits

Studies in education and schooling as problems in value; axiological problems and positions; examination of practical applications, including moral education.

EDTHP 447: Ethnic Minorities and Schools in the United States

3 Credits

Analysis of the social and cultural factors which affect educational outcomes among minority pupils, especially Blacks, Hispanics, and Indians.

Cross-listed with: SOC 447

United States Cultures (US)

EDTHP 492: Identities, Power and Perceptual Pedagogies in Teaching and Learning

3 Credits

Students will perform inquiries into the intersections of identities, power, and pedagogical formations in relation to urban teaching/learning contexts. AFAM 492 / CI 492 / EDTHP 492 Identities, Power and Perceptual Pedagogies in Teaching and Learning (3) In this course, students will take part in inquiries into the intersections of identities, power, and perceptual pedagogies, particularly as these phenomena pertain to methods of teaching and learning in urban contexts. To develop new knowledge and analytic skills, students will be introduced to perceptual and conceptual frameworks that assist deep engagements with youth- and teacher-centered case studies. These cases will depict actual lived experiences among racially and economically diverse students and teachers in urban contexts.

Prerequisite: 5th semester standing

Cross-listed with: AFAM 492, CI 492

EDTHP 496: Individual Studies

1-18 Credits/Maximum of 18

Creative projects supervised on an individual basis and which fall outside the scope of formal courses.

EDTHP 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.
Electrical Engineering (EE)

EE 8: Introduction to Digital Music

1 Credits

First-year seminar that discusses digital music from an electrical engineering perspective; topics include sampling, digital filtering, compression, and music synthesis. E E 008S Introduction to Digital Music (1) (FYS) E E 008S is a lab-oriented first-year seminar course aimed at students interested in the field of digital music. Specifically, this course covers how the various digital music formats (and other types of digital audio) relate to the electrical engineering sub-discipline of digital signal processing. Students will come out of this course with a more technical understanding of the digital audio formats that they listen to every day. This course is structured to have alternating periods of lecture and lab. New concepts are first covered in the lectures and then reinforced with a variety of laboratory activities. In the laboratory experiments, students will use various computer programs and will also get exposure to standard test equipment used by electrical engineers. Topics covered in the lectures/labs include investigating the physics of sound, sampling and quantization of music signals, generating audio special effects through the use of digital filters, compression techniques used in digital audio, and mathematically synthesizing instrument sounds. Current popular digital audio formats such as compact disc audio, WAV, MP3, and MIDI will also be investigated throughout this course. No musical experience/talent is necessary.

First-Year Seminar

EE 9: First-Year Seminar in Electrical Engineering

1 Credits

First-year seminar covering a variety of Electrical Engineering topics that vary from year to year. E E 009S First-Year Seminar in Electrical Engineering (1) (FYS) The overall objectives of Engineering First-Year Seminars are to engage students in learning about engineering and orient them to the scholarly community in a way that will bridge to, and enhance their benefit from, later experiences in the College and the University. Seminars adhere to the two specific goals identified below by including one or more of the three strategies following each goal: (1) Introduce students to a specific field, or encourage their exploration of a number of fields, of study in engineering; familiarization with the engineering majors and career options and with the objectives of general education and other components of the curriculum; development of a particular topic, contemporary issue, emerging or interdisciplinary field of concentration, or professional responsibilities in engineering; plant tours or demonstrations of engineering facilities (2) Acquaint students with tools, resources and opportunities available to them in the department(s), College and University; exposure to learning support services and career development resources.

First-Year Seminar

EE 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EE 200: Design Tools

3 Credits

A working knowledge of electrical engineering design tools and hardware realization of electrical engineering systems. E E 200 Design Tools (3) E E 200 provides students with a working set of design tools that are required to complete subsequent courses in the electrical engineering design curriculum. This course directly builds upon circuit analysis/design concepts in the required introductory courses in electrical circuits, digital systems and computer programming. Specific topics covered in this course include automated instrument control, hardware realization using field programmable devices, hardware realization using embedded microcontroller systems, circuit simulation and printed circuit board layout. Student performance is evaluated using exams, homework assignments, and projects. Concepts introduced in lecture are reinforced with hands-on experience provided by laboratory projects.

Prerequisite: E E 210, CMPEN270 or CMPEN271 and CMPEN275, CMPSC201 or CMPSC212; Prerequisite or concurrent E E 310

EE 210: Circuits and Devices

4 Credits

Introduction to electrical circuit analysis, electronic devices, amplifiers, and time-domain transient analysis.

Prerequisite: PHYS 212. Prerequisite or concurrent: MATH 250

EE 211: Electrical Circuits and Power Distribution

3 Credits

D.C. and A.C. circuits, transformers, single and three-phase distribution systems, A.C. motors and generators.

Prerequisite: PHYS 212

EE 212: Introduction to Electronic Measuring Systems

3 Credits

Electronic devices and characteristics, amplifiers and feedback, electronic instruments and recording systems. Designed for non-electrical engineering students.

Prerequisite: PHYS 212

EE 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EE 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

EE 300: Design Process

3 Credits

Introduction to the electrical engineering design process, project teaming and management, and technical communication. E E 300W Design Process (3) E E 300W course will introduce students to the electrical engineering design process, project teaming, and project management in preparation for conducting a senior design project. In the lab, students will get practice managing a project from pre-definition to completion within constraints of customer needs, technical parameters and budgets. The principles of systems engineering will be introduced. The student-engineer will gain professional skills (in areas such as technical communication, teaming, conflict resolution and life-long learning) important for a successful career in a wide range of engineering environments. There will also be discussion of engineering ethics and the responsibilities of the engineer in the emerging global marketplace. A series of lectures by outside speakers will provide perspectives on life as an engineer.

Prerequisite: E E 200 Concurrent: ENGL 202C
Writing Across the Curriculum

EE 310: Electronic Circuit Design I

4 Credits

Properties of fundamental electronic devices, analysis of DC, AC small-signal and nonlinear behavior, analog and digital circuit design applications.

Prerequisite: E E 210 or E E 315

EE 311: Electronic Circuit Design II

3 Credits

Electronic circuit design with consideration to single and multi-device subcircuits, frequency response characteristics, feedback, stability, efficiency, and IC techniques. E E 311 Electronic Circuit Design II (3) E E 311 is intended to provide competency in the application of basic electronic principles to design with operational amplifiers and integrated circuits. The course will include passive and active filter design, and feedback principles and non-ideal aspects of operational amplifiers (op-amps) including compensation, stability, and sensitivity needed for advanced design with op-amps, as well as some nonlinear op-amp circuits including comparators, Schmitt triggers, pulse width modulators, and waveform generators.

Prerequisite: E E 310 ; E E 350 or E E 352

EE 312: Electrical Circuit Analysis

3 Credits

Circuit analysis techniques; mutual inductance; frequency response; FOURIER series; LAPLACE transform.

Prerequisite: E E 210

EE 313: Electronic Circuit Design II

4 Credits

Design/analysis of electronics circuits including: single/multistage transistor amplifiers, op amp circuits, feedback amplifiers, filters, A/D and D/A converters. E E 313W Electronic Circuit Design II (4) The prerequisite course, E E 310 - Microelectronics I, covers the basic operation of microelectronic devices and their use in logic circuit design. This course focuses on the design of electronic circuits for amplification, filtering, and A/D and D/A conversion. Advanced circuit design concepts, such as IC biasing, feedback, and frequency response, are covered. This course is designated as writing intensive, and students are required to produce a variety of technical documents based on laboratory work.

Prerequisite: E E 310
Writing Across the Curriculum

EE 314: Signals and Circuits II

3 Credits

Circuit analysis including op-amps, and ideal transformers; one/two port network models; three-phase and industrial loads; engineering professionalism.

Prerequisite: E E 210 ; CMPSC201 or CMPSC121

EE 315: Electrical Signals and Circuits with Lab

5 Credits

Introduction to circuits, signals, energy, circuit analysis; frequency response, Bode diagrams, two-port networks; Laplace transforms, Polyphase circuits.

Prerequisite: or concurrent: MATH 250

EE 316: Introduction to Embedded Microcontrollers

3 Credits

Introduction to microcontrollers in electronic and electromechanical systems. Hardware and software design for user/system interfaces, data acquisition, and control.

Prerequisite: CMPSC201 or CMPSC121 ; CMPEN271; Concurrent: E E 310

EE 317: Circuits II and Data Acquisition

2 Credits

E E 317 Circuits II and Data Acquisition This course is a follow up to the introductory circuit analysis course. The first part of this course is devoted to the study of multi-phase circuits, magnetic coupling, two-port networks and their applications. The second part of the course is devoted to automated instrument control with emphasis on data acquisition and processing, and printed circuit boards manufacturing. Student performance is evaluated using exams, homework assignments, and projects. Concepts introduced in lecture are reinforced with hands-on experience provided by laboratory projects.

Prerequisite: E E 210; CMPSC 201 or CMPSC 121 or CMPSC 101
EE 320: Introduction to Electro-Optical Engineering

3 Credits

An introduction covering several fundamental areas of modern optics, optical PROCESSES, AND DEVICES.

Prerequisite: E E 330

EE 330: Engineering Electromagnetics

4 Credits

Static electric and magnetic fields; solutions to static field problems, Maxwell's equations; electromagnetic waves; boundary conditions; engineering applications.

Prerequisite: E E 210 or E E 315 ; MATH 230

EE 331: Electromagnetic Fields and Waves

3 Credits

Electromagnetic field theory and applications; Maxwell's equations; plane wave propagation; boundary conditions; basic antenna theory; impedance matching. E E 331 Electromagnetic Fields and Waves (3)

Prerequisite: E E 210 , MATH 230

EE 340: Introduction to Nanoelectronics

4 Credits

Introduction to the physics and technology of nanoelectronic devices. E E 340 Introduction to Nanoelectronics (4) This is a required course for junior-level electrical engineering students. The first part of the course provides an introduction to the key aspects of electronic materials, quantum mechanics, and solid state physics needed to understand nanoelectronic devices. The second part is devoted to the fundamental theory of carrier transport including ballistic transport, drift, diffusion, and recombination/generation. The third part of the course applies the fundamentals to describe the operation of several basic semiconductor devices: p-n junctions, metal-semiconductor junctions, and metal oxide semiconductor field effect transistors (MOSFETs), and provides an introduction to fabrication methods used to create these devices. This portion of the course also highlights contemporary concepts in thin film electronics, optoelectronic devices, and solar energy conversion. The course includes several in-class demonstrations and also web-based remote device measurement laboratories. One of the in-class demonstrations uses a Breeze interface to link a field emission scanning electron microscope session to the classroom. The students can see and communicate with the microscope operator to visualize real nanoelectronic materials and devices at different levels of magnification. The remote device measurement laboratories use web-based labview software to collect device characteristics from silicon p-n junctions and MOSFETs fabricated in the senior level device technology class. The students are given microscope images of the devices and an assignment to analyze the device performance. This allows the students to compare ideal text book performance to non-ideal device response.

Prerequisite: PHYS 214 , E E 210

EE 341: Semiconductor Device Principles

3 Credits

Quantitative description of properties and behavior of materials with application to integrated circuits, photonic devices, and quantum well devices.

Prerequisite: E E 210 or Prerequisite or concurrent: E E 315

EE 350: Continuous-Time Linear Systems

4 Credits

Introduction to continuous-time linear system theory: differential equation models, sinusoidal steady-state analysis, convolution, Laplace transform and Fourier analysis.

Prerequisite: E E 210 , MATH 220 , MATH 250

EE 351: Discrete-Time Linear Systems

3 Credits

Introduction to discrete-time signal processing: sampling, linear time-invariant systems, discrete-time Fourier transform and discrete Fourier transform, Z transform.

Prerequisite: E E 210

EE 352: Signals and Systems: Continuous and Discrete-Time

4 Credits

Transient response, frequency response, Bode plots, resonance, filters, Laplace transform, Fourier series and transform, discrete-time signals/systems; sampling z-transform. E E 352 Signals and Systems (4) E E 352 is a course designed to study the characteristics of continuous and discrete time linear systems. These include signal and power input/output relationships in both domains, impulse responses, and the differential equations that describe these systems. Convolution is an essential component of any linear systems course, therefore several classes will be devoted to this topic in order that students fully understand the concept. Fourier series is used to determine the spectral content of periodic signals thus illustrating how a signal is distributed in frequency. This is very important when determining bandwidth requirements. There will be a brief refresher on the trigonometric Fourier series then the exponential series will be studied extensively. The Fourier transform can be used to determine the spectral content of virtually any signal encountered in the undergraduate curriculum, aperiodic, or periodic. It is also valuable in determining the frequency response characteristics of linear systems. Some filter theory is included in the course along with the Laplace transform. Much of the signal processing performed today is done digitally so the remainder of the course will approach most of the aforementioned topics from the viewpoint of the discrete domain with a strong emphasis on sampling and aliasing. Finite impulse response filters will be introduced along with recursive filters using the bilinear transform method.
EE 353: Signals and Systems: Continuous and Discrete-Time

3 Credits

Fourier series and Fourier transform; discrete-time signals and systems and their Fourier analysis; sampling; z-transform. E E 353 Signals and Systems: Continuous and Discrete Time (3) is a core course taken by all computer engineering students that provides exposure to a variety of topics in linear systems. The material in this course is needed for further study in image processing and data communications, both of which are major areas of specialization within the computer engineering curriculum. This course is divided into three main sections: continuous-time linear system analysis, sampling and reconstruction, and discrete-time (digital) linear system analysis. Although the material covered in the first and last sections is similar, fundamental differences between continuous- and discrete-time exist. One of the goals of this course is to make the student aware of these differences. The first part of the course discusses continuous-time linear system analysis. It begins with basic time-domain mathematical descriptions of various signals and systems. The bulk of the analysis, however, is in frequency domain approaches such as the Fourier Series and the Fourier Transform. Applications such as modulation and multiplexing are understood much easier using frequency-domain analysis approaches. The middle part of the course deals with the bridge between continuous- and discrete-time, namely signal sampling and reconstruction. Theoretical and practical approaches to sampling/reconstruction are covered. Finally, the Nyquist sampling theorem, which is the key to all digital signals, is developed. At this point, students are ready to study discrete-time systems. The final part of this course revisits system analysis, although now discrete-time (or digital) systems are considered. As in the continuous-time case, both time-domain and frequency-domain approaches to the analysis problem are discussed. The course ends with select topics in the z-transform, which is the digital counterpart to the Laplace transform.

Prerequisite: E E 210; CMPSC201 or CMPSC121; MATH 250

EE 360: Communications Systems I

3 Credits

Generic communication system; signal transmission; digital communication systems; amplitude modulation; angle modulation. E E 360 Communications Systems (3) is a junior-level elective course in the electrical engineering curriculum that provides a detailed foundation of communications systems, expanding on the topics covered in a standard linear systems class. The first part of the course deals with analog communications. First, analog amplitude modulation (AM) is presented, covering double-sideband suppressed carrier, double-sideband large carrier, single sideband, and vestigial sideband modulation formats. Detection techniques for these modulation schemes are also covered. The phase-locked loop for coherent carrier tracking is also presented. Second, analog angle modulation is presented in the forms of frequency modulation (FM) and phase modulation (PM). Estimating the bandwidth of the angle modulated carrier is covered, as well as various generation and detection methods. After analog communications are covered, the basics of digital modulation are presented. Sampling theory and analog-to-digital conversion are covered. Particular attention is paid to the signal-to-noise ratio and the aggregate bit rate at the output of the digital modulator. The principles of Nyquist pulse shaping are presented. Particular topics include intersymbol interference, line coding, and power spectral density. A presentation of emerging digital communications technologies concludes the course. Topics may include mobile radio, high-definition television, broadband services, video compression, and high-speed local area networks.

Prerequisite: E E 350 or E E 352

EE 362: Communication Networks

3 Credits

Data transmission, encoding, link control techniques; communication network architecture, design; computer communication system architecture, protocols. CMPEN 362 CMPEN (E E) 362 Communication Networks (3) CMPEN 362 is an elective course in both the electrical and computer engineering curricula which provides an overview of the broad field of data and computer communications. First, a general model of the communication task is presented, including the layered concept by which each layer provides services for the layer above. First, the lowest (physical) layer is studied. This involves signal design, Fourier analysis representations, bandwidth concepts, transmission impairments and communication media properties. Then the next higher (link) layer is considered which involves organizing bits into frames, data link and error control methods (including frame sequence numbering and error detection principles). Multiplexing to share a link is studied, including frequency division multiplexing, dedicated time division multiplexing, and statistical time multiplexing. At the network layer level, there are two categories: broadcast (usually local area) and switching networks. Broadcast and local area network studies include bus, tree and star topologies, Ethernet, optical fiber bus networks, ring networks, and medium access control protocols. Switching and routing concepts for networks are explained, including both circuit and packet switching, datagrams and virtual circuits. Properties of frame relay and asynchronous transfer mode (ATM) networks are described. Internetworking frame structures, routing and protocols are studied. Also, bridge routing for local networks is described. At the still higher transport (network end-to-end control) layer, transport protocols, including TCP/EP, are described.

Prerequisite: CMPEN270 or CMPEN271; Concurrent: STAT 301 or STAT 318 or STAT 401 or STAT 414 or STAT 418 Cross-listed with: CMPEN 362

EE 380: Introduction to Linear Control Systems

3 Credits

State variables; time-domain and frequency-domain design and analysis; design of feedback control systems; Root Locus.

Prerequisite: MATH 220; E E 350 or E E 312

EE 383: Signals and Controls Laboratory

1 Credits

Design, computer simulation, and practical implementation of systems in the areas of filtering, digital signal processing, and controls. E E 383 Signals and Controls Laboratory (1) in this course, students will be exposed to designing, simulating and implementing practical circuits for filtering of signals, digital signal processing, and control of physical processes. The design aspect of the course will be a direct extension of the two associated lecture courses (E E 352 and E E 380). The simulations will use industry standard software tools (e.g., MATLAB, Hyperception, C/C++) while the actual implementation will be accomplished using PC based DSP hardware in addition to analog circuitry. This will be a hands-on laboratory intended to augment the
material presented in E E 352 and E E 380. Students will be expected to do a large portion of pre-lab work before starting the laboratory session.

**Concurrent:** E E 352; E E 380

EE 387: Energy Conversion

3 Credits

Modeling of induction machines, synchronous machines, transformers, and transmission lines. E E 387 Energy Conversion (3) E E 387 is an electrical engineering technical elective course intended for students with an interest in energy conversion in electrical, electromagnetic, electromechanical, and electrochemical systems. The course begins with a review of static and quasi-static electromagnetics. In particular, methods of determining electromagnetic forces and torques will be discussed in detail. The course will then present methods of developing models for electromagnetic, electromechanical, and electrochemical systems and discuss the use of these models in the analysis and design of devices such as inductors, transformers, actuators, transducers, and rotating machines. Furthermore, fundamental concepts related to the operation of power electronic circuits, which often interface with these types of devices, will be presented. The course includes a lab component where students gain experience with the analysis and design of energy conversion systems. E E 350, Continuous-Time Linear Systems, is a prerequisite for this course.

**Prerequisite:** E E 350 or E E 312

EE 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

Full-Time Equivalent Course

EE 396: Independent Studies

1-4 Credits/Maximum of 4

Junior-level honors course involving special individual projects under the direction of an electrical engineering faculty member.

**Prerequisite:** junior standing

Honors

EE 397: Special Topics

1-9 Credits/Maximum of 9

**FORMAL COURSES GIVEN INFREQUENTLY TO EXPLORE, IN DEPTH, A COMPARATIVELY NARROW SUBJECT THAT MAY BE TOPICAL OR OF SPECIAL INTEREST.**

EE 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EE 400: Engineering Design Concepts

3 Credits

Engineering design and modelling, engineering economy, project planning, capstone project selection, and technical communication skills. E E 400 Engineering Design Concepts (3) This course prepares senior electrical engineering students for industrial engineering design and project management. It covers the engineering design process, project planning and evaluation, engineering ethics, and engineering economy.

In addition, students select, specify, and start their capstone design project which is completed in the follow-up course, EE BD 481. Students are expected to carry out a group design project that is on par with industrial expectations. Upon completion of this course a student should have a solid understanding of the engineering design process, a clear capstone project description, should have completed some preliminary design work, and be adequately prepared to complete the project in E E 401.

**Prerequisite:** E E 313W; E E 316; E E 352; E E 380; seventh-semester standing

EE 401: Electrical Design Projects

3 Credits

Group design projects in the areas of electronics and electrical/computer systems. E E 401 Electrical Design Projects (3) In this course students complete their senior design project started in E E 400. Design groups meet regularly with a faculty advisor to report progress and resolve design issues. Oral and written progress reports are expected at selected times. The class culminates with a final technical defense of the project.

**Prerequisite:** E E 400; eighth-semester standing

EE 403: Capstone Design

3 Credits

Design projects in the various areas and subdisciplines of electrical engineering, with an emphasis on technical communication skills. E E 403 Capstone Design (3) will give electrical engineering students a "real-world simulation" of a total design experience. Students will address design challenges in one of several ways: a. Projects submitted by corporate sponsors which emphasize teaming and interaction with a customer and with professional engineers in a pseudo-professional engineering environment. Some of these projects require multi-disciplinary teams.

b. Projects in "Special Focus" sections in which all of the projects will loosely deal with a particular electrical engineering topic. Examples of Special Focus topics include: Microwave engineering, RF engineering, Acoustics and Microcontrollers. Small-team projects or class-wide projects will be offered at the discretion of the instructor.

c. "Projects with Faculty" are arranged on the initiative of individual students or student teams, who solicit a mentoring relationship with faculty in an area of shared interest. Projects with faculty may include research projects, projects associated with internship experiences, and projects associated with student organization competitions or activities. In addition to the completion of a capstone project, EE 403 includes an emphasis on technical communication and professional behavior. Students will develop their skills at conveying technical information through technical writing, oral presentation and graphics (such as a project poster or web page). Students will be expected to conduct themselves in a professional manner during project-related interactions with fellow students, faculty, and practicing engineers. Student work is evaluated
on the technical merit of the completed project and the degree to which
constraints and priorities (as expressed in the engineering requirements)
are acknowledged throughout the design process.

**Prerequisite:** E E 300; ENGL 202C
Writing Across the Curriculum

**EE 405: Capstone Proposal Preparation**
1 Credits

Performing the initial research needed for the capstone course, and the
preparation of the written project proposal. E E 405 Capstone
Proposal Preparation (1) The capstone design course will incorporate
engineering standards and realistic constraints including most of the
following considerations: economic, environmental, sustainability,
manufacturability, ethical, health and safety, social, and political. While
engineering constraints are included in the earlier courses, the senior
capstone design requires integration of the appropriate engineering
constraints into the capstone design course. This course will mimic the
problems encountered by an engineer working in commercial, industrial,
and governmental entities. This basically requires that students in the
Electrical Engineering BS program select a topic prior to starting the
semester of their capstone design course, do the initial research for the
topic, prepare a timeline, and prepare a well written proposal that would
make a suitable capstone project. The time devoted to the careful topic
selection, research, timeline, and proposal preparation, makes for a much
better capstone design experience.

**Prerequisite:** senior level standing; ENGL 202C ; CAS 100

**EE 406: Electrical Engineering Capstone Design**
3 Credits

Project designs of analog and digital systems, interfacing, and relevant
electronic circuits, with an emphasis on technical communications skills.
EE 406 Electrical Engineering Capstone Design(3) is designed with the
following goals and objectives: * The students will enter the course with
a well-defined capstone design proposal and a timeline for which the first
task will be to write the specifications. Upon the specifications’ approval,
the student teams will begin designing and building the projects. * Each
student will maintain a laboratory notebook that documents the day-
to-day activities of the project in a style that could be used for patent
documentation. * Team members will provide short oral and written
reports every week for the first five to six weeks, and then, every two
weeks until the end of the semester. * The students will incorporate
engineering standards and constraints, i.e., consideration of economic,
environmental, sustainability, manufacturability, ethical, safety, etc.,
in their project and final report. * A draft copy of the final report will
be collected, critiqued, and returned to students with comments and
suggestions for changes. * A final project oral report (20 - 25 minutes)
will be given by the project team during the last week of the semester.
* An extensive well-written report describing the project that has been
designed and built, is the major outcome of the capstone design
course. This course is a required course in the Electrical Engineering BS
curriculum and is intended to be taken by seniors as the capstone course
for the major. As such, the course integrates materials from many of the
undergraduate electrical courses in addition to related math, engineering,
and science courses.

**Prerequisite:** E E 405
Writing Across the Curriculum

**EE 410: Linear Electronic Design**
3 Credits

Linear circuit design via integrated circuit processes; A/D converters,
switched capacitor filters, phase lock loops, multipliers, and voltage-
controlled oscillators. E E 410 Linear Electronic Design (3) is a technical elective intended for electrical engineering students who
wish to specialize in semiconductor circuits, especially in linear circuit
design. The course emphasizes integrated circuit process-compatible
circuit design techniques in recognition of the amazing synergy that has
characterized the relationship between modern circuits and integrated
circuit processing technology. This course is the third in a series of three
courses dealing with the analysis and design of electronics circuits,
following E E 310 and E E 311. E E 410 includes three lectures and a
two-hour laboratory each week. E E 410 begins with a deeper look into
several key concepts previously considered in earlier course work, such
as node voltage and mesh current methods for solving circuits, which are
emphasized throughout the course. The small-signal method is revisited
and thoroughly examined. The more advanced Ebers-Moll bipolar junction
transistor model is introduced and the metal oxide semiconductor
field effect transistor device model is reviewed. The next phase of the
course introduces the vertical geometries of integrated circuit devices
commonly used in linear circuits. Unwanted parasitic devices that are
introduced as a result of the integrated circuit processes are revealed
and their effects on circuit sign techniques operation are discussed. Both
the limitations and the opportunities provided by integrated circuit
technology are examined, particularly in the light of de used to minimize
the problems and to take advantage of the features. The last half of the
course is devoted to applications of linear circuits, especially those which
students have not previously encountered. The first topics in this series
are analog-to-digital and digital-to-analog conversion. Various methods
of accomplishing each of these functions are examined. The inverse
relationship between speed and accuracy is emphasized. These topics
are followed by studies of switched capacitor filters, phase lock loops,
analog multipliers, and voltage-controlled oscillators. The emphasis of
the laboratory component of the course is to successfully accomplish
a student-chosen linear circuit design project. Students work in two-
or three-person teams to select their project and do the design and
evaluation. A three-way methodology is emphasized; mathematical
analysis by hand, computer simulation, and laboratory breadboarding
and measurement. At the end of the project students give an oral
presentation and submit a formal engineering report.

**Prerequisite:** E E 311

EE 413: Power Electronics
3 Credits

Switch-mode electrical power converters. Electrical characteristics and
thermal limits of semiconductor switches. E E 413 Power Electronics
(3) E E 413 is an elective course taken by undergraduate and graduate
electrical engineering students. The objective of E E 413 is to introduce
techniques for the analysis, design, and application of the switch-
mode power converters that are used in power supplies, motor and
actuator drives, and the interface between power distribution systems
and emerging energy sources such as fuel cells, photovoltaics, and
superconducting magnetic energy storage systems. Several laboratory
experiments provide an opportunity to characterize the switching
behavior of semiconductor devices, build and test various dc/dc and ac/
dc converters, and consider alternatives for gate/base drive and feedback
isolation circuits required to build practical converters. This course
draws upon the students’ background in time-domain circuit analysis, electronic devices and circuits, Fourier analysis, and use of software such as PSPICE and MATLAB. It does not require a background in power or electric machinery, although students with such a background will be able to appreciate many of the applications more fully. The course is divided into four major areas: rectifiers and phase-controlled converters, dc-to-dc converters, inverters, and design considerations for practical converters. The focus in each of the first three areas is to determine the relationship between the magnitude of the fundamental frequency component and/or average value of the voltages and currents at the two ports of the particular converter. Additional harmonic or ripple components are then considered and design guidelines for the switching and reactive components are derived. The fourth area encompasses the study of power device characteristics, the design of gate drive and feedback circuits, and the analysis/design of elementary controllers. As the name implies, students interested in either electronics or power will find this course worthwhile. Electronics students will gain a new perspective on the operation and analysis of electronic circuits as well as an opportunity to discover what has powered the circuits that they have studied up until this course. Power students will see how and why power electronics are revolutionizing motor control and power distribution as well as the power quality issues associated with electronic power conversion.

Prerequisite: EE 310; EE 350 or EE 352

EE 416: Digital Integrated Circuits

3 Credits

Analyses and design of digital integrated circuit building blocks, including logic gates, flip-flops, memory elements, analog switches, multiplexers, and converters. CMPEN 416/CMPEN 416 Digital Integrated Circuits (3) CMPEN 416 is a technical elective available to electrical and computer engineering students. It is intended for students who wish to specialize in the field of digital circuits. This course introduces the basic concepts involved in the design of digital circuits, which find practical application as logic and memory circuits in computers and other digital processing systems. The course emphasizes integrated circuit process-compatible circuit design techniques in recognition of the amazing synergy that has characterized the relationship between computer circuits and integrated circuit processing technology. This course includes three lectures and a two-hour laboratory each week. The only prerequisite is EE 310, a basic circuits course required for both electrical engineering and computer engineering students. CMPEN 416 begins with a review of the bipolar junction transistor (BJT) device and proceeds into the more advanced Ebers-Moll device model. This is followed by an examination of a series of BJT-based saturating and non-saturating digital circuits of ever increasing complexity illustrating the evolution of the modern bipolar logic circuit families. The next phase of the course reviews the metal oxide semiconductor field effect transistor (MOSFET) and proceeds along the same path taken for the bipolar transistor circuits. Various MOSFET logic circuit families are introduced and analyzed. Computer semiconductor memory circuits are considered next. Both BJT and MOSFET versions of both static and dynamic read-write and read-only memories are considered. The cell array, memory addressing circuits, and sense amplifier designs are all examined in detail. This is followed by the related subject of programmable logic arrays, the final topic. The emphasis of the laboratory component of the course is to compare the performance of representatives of each class of circuits to computer simulations of the same circuits. Parameters such as input-output voltage transfer characteristics, noise margins, and propagation delays are evaluated by building and measuring laboratory models. Most of the laboratory exercises require the student to evaluate a specified circuit, but the final exercise requires the student to design a circuit to meet a predefined set of specifications, then to prove that the design meets the requirements by measuring the circuit performance. Students are required to write a formal engineering report detailing the results of each laboratory exercise.

Prerequisite: EE 310

Cross-listed with: CMPEN 416

EE 417: Digital Design Using Field Programmable Devices

3 Credits

Field programmable device architectures and technologies; rapid prototyping using top down design techniques; quick response systems. CMPEN 417/CMPEN (EE) 417 Digital Design Using Field Programmable Devices (3) Field Programmable Gate Arrays (FPGAs) and Complex Programmable Logic Devices (CPLDs) are widely used for rapid prototyping and quick response-time designs. The objective of this course is to introduce the student to digital design using Field Programmable ICs, and to provide an understanding of the underlying technologies and architectures of these Integrated Circuits. The course begins by introducing design alternatives for modern electronic systems identifying and classifying alternative system solutions, and evaluating when particular design solutions are optimal. These alternatives include microprocessors, microcontrollers, off-the-shelf digital ICs, Programmable logic ICs (FPGAs and CPLDs), and various forms of Application Specific Integrated Circuit (ASIC) designs. A homework assignment requires the student to quantitatively evaluate the cost, complexity, packaging, and time-to-market issues for a complex system design specification. Next, the underlying Field Programmable Logic IC architectures and technologies are studied in detail. Following a broad survey of available programmable IC vendors and on-chip programming technologies (and their cost/performance trade-offs), several specific case studies are presented in the class. The first is the Xilinx XC4000xl line, because of the target boards used in the CAD laboratory component for this class. The initial lab portions of the class help the students to specify their design using various forms of design entry tools and also allows them to see how their design map on to the underlying FPGA architecture. The students also learn the underlying algorithms used by the design software they use in their Labs. Next, the systematic top-down method for specifying complex designs using VHDL is introduced. Students are given a supporting homework assignment to develop high-level behavioral models for a simple digital system to reinforce this segment of the course. VHDL behavioral synthesis is now introduced as a preferred path to go from high-level system behavior to actual implementation on the FPGA. The strengths and weaknesses of synthesis are discussed, as are the emerging CAD tool trends. Additional VHDL-based homework assignments reinforce behavioral design and synthesis using commercial CAD tools. The final segment of the class covers special topics that identify current trends in digital system architecture and programmable logic design. These include such topics as partially reconfigurable architectures and dynamic reconfiguration techniques, system design for testability, and field programmable analog arrays. Applications of FPGAs in special purpose computing environments such as signal processing, Java acceleration and image processing are also introduced. In the laboratory, student design project assignments explore larger and more complete system specifications of such things as controllers, CPU and memory design, and signal processing blocks. These assignments reinforce the lecture content as the students model, synthesize and implement their digital designs on the target Xilinx FPGA boards.
EE 421: Optical Fiber Communications

3 Credits

Operational principles of optical components, including sources, fibers and detectors, and the whole systems in optical fiber communications. E E 421 Optical Fiber Communications (3) E E 421 is an introduction course to fiber optic communications. This course is designed as an elective course for both the E E senior undergraduate students and E E graduate students. Students are expected to have a general knowledge on fiber optic communications after taking this course. The content of this course focuses on the engineering aspects of fiber optic communications. This course is offered once a year. This course basically consists of four major parts: The first part introduces the motivations of using fiber optic communication systems, which include the huge bandwidth, low attenuation, immune from the electromagnetic field interference, et al. (1 week) The second part of this course deals with light propagation in the optical waveguides. Both the simple geometrical approach and wave optics approach are used to calculate the light propagation in the optical fiber. The geometrical approach (i.e., total internal reflection) provides an intuitive feeling about light propagation in the fiber while the wave optics approach (i.e., Maxwell’s equations) provides more accurate solutions. In particular, it can explain important concepts such as the conditions for single mode fiber and intramodal dispersions in single mode optical fiber. With the help of popular calculation software (e.g., Matlab, Mathcad), students are required to solve waveguide equations for single shape optical fibers (such as step index fiber). (5 weeks) The third part of this course introduces some critical components that are needed in fiber optic communication systems. This includes the optical transmitter (laser diode), optical receiver (i.e., photodetector), modulators and demodulators (such as driving current approach and optical waveguide modulators), optical coupler (how to connect more than two fibers together), optical amplifier (including the basic principle of erbium doped fiber optic amplifiers), fiber optic gratings (a critical component for the multiple wavelengths fiber optic network systems), dispersion compensation device (such as chirped fiber optic grating based device) et al. (6 weeks) The fourth part of this course talks about fiber optic networks. The major contents include fiber optic network architectures (such as star connect), multiplexing techniques in fiber optic networks (such as wavelength division multiplexing and time division multiplexing), connection fiber optic networks with non-fiber optic networks (such as copper wire based networks), current trends in fiber optic networks, et al. (2 weeks).

Prerequisite: E E 320; E E 350; E E 340 or E E 341 or E SC 314

EE 422: Optical Engineering Laboratory

3 Credits

Hands-on experience covering areas of optical transforms, electro-optics devices, signal processing, fiber optics transmission, and holography.

Prerequisite: E E 320

EE 424: Principles and Applications of Lasers

3 Credits

Principles of lasers—generation, propagation, detection and modulation; applications in fiber optics communication, remote sensing, holography, optical switching and processing.

Prerequisite: E E 330, E SC 400H, or PHYS 400

EE 430: Principles of Electromagnetic Fields

3 Credits

Laws of electrodynamics, boundary value problems, relativistic effects, waves in dielectrics and ferrites, diffraction and equivalence theorems.

Prerequisite: E E 330

EE 432: RF and Microwave Engineering

3 Credits

Transmission line and waveguide characteristics and components; design of RF and microwave amplifiers, oscillators, and filters; measurement techniques; design projects.

Prerequisite: E E 310, E E 330

EE 438: Antenna Engineering

3 Credits

Radiation from small antennas, linear antenna characteristics, arrays of antennas, impedance concepts and measurements, multifrequency antennas, and aperture antennas. E E 438 Antenna Engineering (3) E E 438 is an electrical engineering technical elective course intended for students with a specialization in electromagnetics. This course presents antenna engineering concepts including in-depth studies of various antennas and arrays and computer modeling of antennas for analysis and design. The course has three lectures each week as well as an additional period for demonstrations and discussions of outside lab and computer projects. This course requires E E 330, the undergraduate electromagnetics course, as a prerequisite. E E 438 begins with a review of electromagnetics which leads into an introduction of antennas. A lecture is given which shows how the evolution of a guided wave on a transmission line eventually leads into a device that can act as a wave launcher or antenna. A series of lectures are then given introducing the various classes and types of antennas. Performance parameters such as input impedance, radiation patterns, directivity, gain, polarization, and efficiency are then discussed. Examples and pictures of many antennas and their respective patterns are shown as part of these lectures. Next, extensive lectures are given which describe definitions and antenna parameters in detail. Much time is spent on how to visualize radiation patterns and beamwidth. Derivations are carried out for directivity and gain adhering to IEEE standard definitions. Theorems are discussed on the subject of reciprocity and how it can be related to practical measurements of patterns. Another lecture deals with the subject of
electrical performance by carrying out a set of electrical tests. Throughout the course, students are introduced to and utilize an advanced antenna computer modeling software package for carrying out assigned projects and use in homework problems. They are also assigned a group design project during the last third of the course where extensive use of the software package is required. Each group gives an oral presentation of the project and the results during the last week of class and turns in a final report.

**Prerequisite:** E E 330

**EE 439: Radiowave Propagation in Communications**

3 Credits

Radiowave propagation in mobile, terrestrial, and satellite communications; applications at microwave and lower frequencies.

**Prerequisite:** E E 330

**EE 441: Semiconductor Integrated Circuit Technology**

3 Credits

An overview of fundamentals of processes involved in silicon integrated circuit fabrication through class lectures and hands-on laboratory. E E 441 Semiconductor Integrated Circuit Technology (3) E E 441 is an elective electrical engineering course typically taken by seniors and graduate students from various majors including electrical engineering, materials engineering, engineering science, physics, and chemistry. Its objective is to introduce students to the processes and procedures involved in the manufacture of advanced silicon integrated circuits (IC) using tools and methods of semiconductor nanotechnology. In the sequence corresponding to the order of IC fabrication steps, the lecture portion of the course covers fundamentals of the formation of single-crystal silicon wafers, epitaxial deposition of thin silicon layers, fundamentals of thin film semiconductors, dielectric and metal deposition techniques, patter definition by photolithography and etching, dopant introduction, and finally, contact and interconnect metallization. In selected cases theoretical considerations regarding manufacturing steps discussed are supported by process simulation using dedicated software. Besides the specific objectives listed above this course has a more general goal. Manufacturing methods and tools used to process nanochips represent the most advanced technology across a broad range of engineering domains. Experiences gained in this course advance students knowledge and understanding of state-of-the-art manufacturing technology that is applicable in several other domains such as nanomaterials, including nanowires, nanotubes, and nanodots, MEMS fabrication, as well as in bioelectronics, molecular electronics, spintronics, and other. In addition to lectures, EE 441 has a laboratory portion that gives students an opportunity to gain hands-on experience with key processes used to manufacture advanced silicon integrated circuits. The laboratory experience helps students appreciate the intricacies of the integrated circuit fabrication procedures as well as establish connection between theoretical concepts and the outcome of the real-life manufacturing process. In the course of ten laboratory sessions students first process from scratch a simple MOS integrated circuit and then test its performance by carrying out a set of electrical tests.

**Prerequisite:** E E 310 ; E E 340 or E E 341 or E SC 314

**EE 442: Solid State Devices**

3 Credits

The physics of semiconductors as related to the characteristics and design of solid state electronic devices. EE 442 Solid State Devices (3) The objective of E E 442, an electrical engineering elective course taken by seniors and graduate students, is to develop a rigorous introduction to the relevant concepts in quantum mechanics and statistical mechanics pertaining to understanding the key physical mechanisms that govern the electrical, optical and even mechanical behavior of semiconductor materials and devices. This course explicitly deals with the physics of operation of electronic and optoelectronic devices, and expounds on the practical aspects of device design given the inherently non-ideal nature of semiconductor devices in real life. The course typically features a couple of invited guest lectures from leading experts involved in the state-of-the-art research on semiconductor materials and devices so that seniors and first year graduate students learn about the recent advances in electronic and optoelectronic devices which reside outside the scope of the recent text books. Nanoelectronics today is a very broad discipline that extends the traditional solid-state devices such as transistors, diodes, resistors, capacitors, photodetectors, laser diodes commonly found in electronic and optoelectronic integrated circuits to a variety of emerging technologies such as large area flexible electronics, energy conversion devices, chemical and biological sensors, microelectromechanical devices. A continuous trend of fundamental breakthroughs at the materials and device architecture level keeps this field exciting and opens up new application space hitherto unexplored. The opportunity exists for the students taking this course to get introduced at a broad level to each of these areas. This course will serve as a cornerstone of the students' electronics education should they join the 275 billion dollar global semiconductor industry or should they decide to pursue graduate education in the area of advanced materials and devices.

**Prerequisite:** E E 310 ; E E 340 or E E 341 or E SC 314

**EE 453: Fundamentals of Digital Signal Processing**

3 Credits

Design of FIR and IIR filters; DFT and its computation via FFT; applications of DFT; filter implementation; finite arithmetic effects. E E 453 Fundamentals of Digital Signal Processing (3) The objective of E E 453, an electrical engineering elective course taken by seniors and graduate students, is to develop a rigorous, yet elementary, introduction to the fundamentals of one-dimensional discrete-time (digital) signal processing. The main topics in the course are the analysis and design of finite impulse response (FIR) and infinite impulse response (IIR) digital filters, the discrete Fourier transform (DFT) and its computation via the fast Fourier transform (FFT), and error analysis due to the constraints of finite arithmetic. The emphasis on the analysis and design of linear time-invariant discrete-time filters rests on the background acquired in the time as well as transform domain analysis of continuous-time and discrete-time signals and systems interfaced via the Shannon sampling theory. The students are alerted about topics outside the main thrust of the course mentioned above and these peripheral issues (that lead to more advanced subject matter pursued in depth in subsequent signal processing courses) include interpolation, decimation, and multirate digital signal processing. There is also a laboratory portion of E E 453 that exposes students to the use of digital signal processing workstations – a collection of hardware and software that is used to acquire, digitize, filter, analyze, and display a variety of real-life signals. This hands-on
experience helps the student appreciate and understand theoretical concepts covered in class like the sampling and reconstruction of continuous-time signals, IIR and FIR filter design, and error analysis.

**Prerequisite:** E E 351 or E E 352 or E E 353

**EE 454: Fundamentals of Computer Vision**

3 Credits

Introduction to topics such as image formation, segmentation, feature extraction, matching, shape recovery, object recognition, and dynamic scene analysis. CMPEN 454/CM PEN 454 Fundamentals of Computer Vision (3) CMPEN 454 is an introduction to computer vision. The goal of computer vision is to make computers understand and interpret visual information. Computer vision systems bring together imaging devices, computers, and sophisticated algorithms for solving problems in areas such as industrial inspection, medicine, document analysis, autonomous navigation, and remote sensing. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of computer vision and introduces low-level image analysis techniques for binary images. Binary vision systems are useful when the silhouette of imaged objects convey enough information to recognize them. Examples can be found in optical character recognition, chromosome analysis and recognition of industrial parts. Moreover, many techniques developed for binary systems can be applied to gray level or color images. Next, the course covers image segmentation and contours. These topics are the foundation of most computer vision techniques. For an image to be correctly interpreted, it must be partitioned into regions that correspond to distinct objects or parts of objects. First, region-based techniques such as thresholding, split and merge, region growing and texture analysis are introduced. Next, edge-based techniques using gradient and Laplacian operators are discussed. Finally, contour representations and curve approximations linking edges into region boundaries are studied. Next, depth from vision, with emphasis in stereo vision, is considered. Calculating distances to and among various points in the scene is important in many computer vision tasks such as inspection, robot manipulation, and autonomous navigation. In this part of the course the geometry of stereo systems and how to obtain depth maps from stereo image pairs is studied. Also, alternative 3D imaging sensors such as laser-based range finders and radars are discussed. Following stereo, the topic of computer vision is broadened to understand sequences of images over time. In this section techniques using information on spatial and temporal changes are used to design computer vision systems capable of coping with moving and changing objects, changing illumination and changing viewpoints. Visual motion is important primarily for two reasons. First, motion is a very important cue to understand the scene structure. Second, biological systems do use motion to infer properties of the surrounding world with very little a priori knowledge. Finally, the topic of 3D object recognition is discussed. Object recognition entails two main issues: object identification and object localization. Identification determines the objects being imaged while localization determines their position in the world and with respect to the sensors. This topic builds upon all the different techniques discussed until this point.

**Prerequisite:** MATH 230 or MATH 231; CMPSC121 or CMPSC201

Cross-listed with: CMPEN 454

**EE 455: An Introduction to Digital Image Processing**

3 Credits

Overview of digital image processing techniques and their applications; image sampling, enhancement, restoration, and analysis; computer projects. E E (CMPEN) 455 An Introduction to Digital Image Processing (3) E E/CMPEN 455, a technical elective available to both electrical and computer engineering seniors and graduate students, discusses many current techniques for processing and manipulating digital images. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of digital image processing systems and digital image fundamentals. During this unit, important elements of human visual perception are reviewed; these ideas help motivate many of the computer-based techniques described in subsequent units. Also, the standard model for a digital image, in addition to the concepts of sampling and quantization, are described. Finally, basic topological concepts between digital image pixel are discussed. The next unit considers image transform analysis, with a primary focus on Fourier-based techniques. The one-dimensional Fourier transform is reviewed, and then two-dimensional Fourier transform analysis is discussed. To bridge the gap from the continuous world to the digital world, the sampling theorem is introduced. Next, the Discrete Fourier Transform and its properties are described. Fourier-based filtering techniques, such as the ideal low-pass and Butterworth filters are then introduced. The Fast Fourier Transform is also discussed. Finally, the Discrete Cosine Transform, used later in JPEG and MPEG, is introduced. The next unit discusses techniques for image enhancement and segmentation. These techniques include point-based techniques based on histogram analysis. They also involve linear and nonlinear mask-based methods for noise reduction and region sharpening. Further, techniques of mathematical morphology, which involve an application of set-theoretic concepts to image processing, are described. Finally, image segmentation methods, based on edge detection and thresholding, are described. The final unit considers the concept of image compression. Techniques for image encoding and decoding are discussed. A brief model of the encoding-decoding process is described. Next, compression techniques, such as run-length encoding and Huffman coding, are described. Finally, the multimedia image-compression methodologies, JPEG and MPEG, are discussed.

**Prerequisite:** E E 350 or E E 353; CMPSC201 or CMPSC121

Cross-listed with: CMPEN 455

**EE 456: Introduction to Neural Networks**

3 Credits

Artificial Neural Networks as a solving tool for difficult problems for which conventional methods are not applicable. E E (E SC/EGEE) 456 Introduction to Neural Networks (3) This course is in response to students needs to learn Artificial Neural Networks (ANN) as a solving tool for difficult problems for which conventional methods are not available. The objective of this course is to give students hands-on experiences in identifying the best types of ANN, plus developing and applying ANN to solve difficult problems. Students will be introduced to a variety of ANN and will use their training skills to solve their own applications. During this course the students will develop a final project, in which they will apply ANN to widely varied problems. Examples: I) students from E E may be interested in applying ANN to solve control problems; II) students from Material Sciences may be interested in applying ANN to predict the pitting corrosion of components; III) students from Petroleum Engineering may be interested in applying ANN to characterize the life of
a reservoir; IV ) students from Agricultural Engineering may be interested in applying ANN to sort apples automatically, etc.

**Prerequisite:** CMPSC201 or CMPSC202 ; MATH 220
Cross-listed with: EGE 456, ESC 456

EE 458: Digital Image Processing and Computer Vision

3 Credits

Principles of DSP and computer vision, including sensing preprocessing, segmentation, description, recognition, and interpretation. E E (CSE) 458 Communication Networks (3) E E (CSE) 458 is an elective course in both the electrical and computer engineering curricula which provides an overview of the broad field of data and computer communications. First, a general model of the communication task is presented, including the layered concept by which each layer provides services for the layer above. Next, the lowest (physical) layer is studied. This involves signal design, Fourier analysis representations, bandwidth concepts, transmission impairments and communication media properties. Then the next higher (link) layer is considered which involves organizing bits into frames, data link and error control methods (including frame sequence numbering and error detection principles). Multiplexing to share a link is studied, including frequency division multiplexing, dedicated time division multiplexing, and statistical time multiplexing. At the network layer level, there are two categories: broadcast (usually local area) and switching networks. Broadcast and local area network studies include bus, tree and star topologies, Ethernet, optical fiber bus networks, ring networks, and medium access control protocols. Switching, and routing, concepts for networks are explained, including both circuit and packet switching, datagrams and virtual circuits. Properties of frame relay and asynchronous transfer mode (ATM) networks are described. Internetworking, frame structures, routing and protocols are studied. Also, bridge routing for local networks is described. At the still higher transport (network end-to-end control) layer, transport protocols, including TCP/IP, are described.

**Prerequisite:** E E 352

Cross-Listed

EE 460: Communication Systems II

3 Credits

Probability fundamentals, digital/analog modulation/demodulation, system noise analysis, SNR and BER calculations, optimal receiver design concepts, introductory information theory, E E 460 Communication Systems Performance Analysis (3) E E 460 is an elective course in the electrical engineering curricula that provides detailed performance analysis of communications systems studied in E E 360. First, a review of axiomatic approach to probability theory is presented, including review of random variables, their statistics, central-limit theorem and correlation function. This is followed by a review of the theory of random processes including power spectral density, multiple random processes, their transmission through linear systems and band-pass random processes. Then, behavior of analog systems in the presence of additive white Gaussian noise (AWGN) is analyzed. As a benchmark, signal-to-noise ratio is derived for a base band system. This is followed by a performance assessment of amplitude modulated and frequency modulated systems and comparison is made to the base band system performance. Concepts of optimum pre-and de-emphasis systems are explained. Behavior of digital communication systems in AWGN is studied. This includes optimum threshold detection and general analysis of optimum binary receivers. Performance of carrier modulation systems ASK, FSK, PSK and DPSK is derived in terms of average bit error rate (BER) as a function of bit-energy-to-noise density height. M-ary communications systems are analyzed. Synchronization issues are discussed. This is followed by the theory of optimum signal detection; geometrical representation of signals and signal spaces, Gaussian processes, optimum receiver and equivalent signal sets are illustrated by several examples. BER performance analysis of complex digital modulated systems is demonstrated, using the developed signal space concepts.

**Prerequisite:** E E 360

EE 461: Communications I

4 Credits

Element of analog and digital communication systems, AM, FM, and digital modulation techniques, receivers, transmitters, and transmission systems, noise.

**Prerequisite:** E E 352

EE 466: Introduction to Software-Defined Radio

3 Credits

An overview of the principles of software-defined radio systems with laboratory component.

**Prerequisite:** E E 351 or E E 352 or E E 353 , E E 360 or E E 461

EE 471: Introduction to Plasmas

3 Credits

Plasma oscillations; collisional phenomena; transport properties; orbit theory; typical electric discharge phenomena.

**Prerequisite:** E E 330 or PHYS 467

Cross-listed with: AERSP 490, NUCE 490

EE 472: Space Astronomy and Introduction to Space Science

3 Credits

The physical nature of the objects in the solar system; the earth's atmosphere, ionosphere, radiation belts, magnetosphere, and orbital mechanics.

**Prerequisite:** E E 330 or PHYS 400

Cross-listed with: AERSP 492

EE 474: Satellite Communications Systems

3 Credits

Overview of satellite communications systems, principles, space platforms, orbital mechanics, up/down links and link budgets, modulation techniques. E E 474 Satellite Communications Systems (3) This course is designed to give seniors and graduate students an overview of the principles of satellite communications systems. Building on junior-level courses in electromagnetics and communications, it shows how complex satellite systems operate and provide services that we depend on, such as telephone, television, weather forecasting, and global positioning. Specific topics include: historical background on how satellite systems came to be, present uses of satellite systems, and future trends in satellite systems design, construction, and uses; orbital mechanics and
launch systems and vehicles; earth stations; radio propagation and link analysis; signals and satellite access methods. Student performance is evaluated via exams, homework assignments, and projects. Hands-on experience in the design of satellite communications links is gained through the use of industry-standard satellite system analysis software. In their design, the student must achieve specific goals of satellite accessibility, earth coverage footprint, orbital launch and stability, and communications link budget.

**Prerequisite:** E E 330 and E E 360

EE 477: Fundamentals of Remote Sensing Systems

3 Credits

The review of fundamental physical properties leads into discussions of various techniques, including imaging, spectroscopy, radiometry, and active sensing.

**Prerequisite:** E E 330 or METEO436

Cross-listed with: METEO 477

EE 480: Linear Systems: Time Domain and Transform Analysis

3 Credits

Signals and systems representations, classifications, and analysis using; Difference and Differential equations, Laplace transform, z-transform, Fourier series, FT, FFT, DFT. E E 480 Linear Systems: Time Domain and Transform Analysis (3) Linear Systems: Time Domain and Transform Analysis, is a recommended graduate level course for the Master of Engineering in Electrical Engineering at Capital College, since it is a prerequisite for most of the E E prefixed courses offered at this location. The major topics covered in this course include; Signals and Systems representations, classifications, and analysis using; Difference and Differential Equations, Laplace Transform, z-transform, Fourier series, Fourier Transform, Fast Fourier Transform (FFT), Discrete-Time Fourier Transform (DTFT) and Discrete Fourier Transform (DFT). The objective of this course is to develop intuitive and practical understanding of the essentials in signals and systems. The stress is on fundamentals of representation, and analysis of signals and their applications to systems in both discrete and continuous time and frequency domains. This course is designed to prepare the graduate students for more advanced work in broad range areas including communications, control systems, power systems, computer engineering, signal processing and image processing. The quality of students’ performances and therefore their course grades are determined via their performance in a midterm exam, a comprehensive final exam, homework assignments, and a course project in accordance with the university’s grading policy.

**Prerequisite:** graduate standing

EE 481: Control Systems

4 Credits

Classical/modern approaches to system analysis/design; time/frequency domain modeling, stability, response, optimization, and compensation. E E 481 Control Systems (4) This course presents both classical and modern approaches to the modeling, analysis and control system design for continuous time systems. Students learn how to model both mechanical and electrical systems in the time and frequency domains using differential equations, transfer functions, state space methods and frequency domain (Bode) techniques. The goal of developing linear system models is to facilitate system analysis and control design. Modeling is followed by an in-depth study of systems analysis, including stability, transient response and steady state characteristics. The study of stability involves examining the effects of pole and zero placement, and the Routh criterion is used extensively. In the consideration of transient response characteristics, students investigate rise time, peak time, overshoot, and settling time. The primary steady state feature studied is the error between the reference signal input and the system output, and students learn to characterize steady state error through the determination of system type and computation of the error constants. Design of control systems focuses on altering one or more of the system characteristics by adding compensation. Students employ a variety of root locus techniques, proportional-plus-integral-plus-derivative (PID), state feedback, and frequency response methods. Students begin with simple proportional, closed-loop control and examine pole migration through root locus plots. They then learn to apply more robust pole placement techniques using proportional and derivated (PD) control. Next, PID controllers are examined with a number of opportunities for design. After learning the classical control techniques, students then concentrate on state feedback control methods, including the design of partial- and full-order observers. Finally, students learn the relationship between time domain analysis and design and frequency domain (Bode) analysis of both magnitude and phase. This course includes a laboratory in which students use MATLAB and Simulink for modeling, analysis and control system design. A minimum of seven laboratory exercises offer students the opportunity to experiment with nearly every concept in a powerful simulation environment. To be successful in this course, students should have a solid background in differential equations, Laplace transform techniques, Bode analysis, linear algebra, complex variables, and they should have a familiarity with MATLAB.

**Prerequisite:** PHYS 211 ; E E 352

EE 482: Introduction to Digital Control Systems

3 Credits

Sampling and hold operations; A/D and D/A conversions; modeling of digital systems; response evaluation; stability; basis of digital control; examples. E E 482 Introduction to Digital Control Systems (3) E E 482 introduces fundamental concepts that will enable the student to analyze, design, and synthesize closed-loop systems that contain a digital computer. In order to successfully complete this course the student must have a foundation in classical control (E E 380 or equivalent) and discrete-time system concepts (E E 351 or equivalent). Problem solving is emphasized. Concepts introduced in lecture are reinforced by a series of laboratory projects and weekly problem sets. Through these exercises the student will acquire competence in analytical and computer aided analysis techniques. The course covers several topic areas including modeling of sampled-data systems, system identification using the batch least squares method, time response characteristics, stability analysis techniques, discrete-time approximation of continuous-time controllers, classical design methods based on root locus and frequency response, and modern design methods including state and observer feedback design. Laboratory projects include system identification and control design based on the root locus, frequency response, and state-feedback methods. Each project involves the use of either a servomechanism or a fluid testbed. Laboratory projects and problem sets will develop the student's appreciation for computer aided control system analysis and design techniques. Student performance is assessed using homework, laboratory projects, hour exams, and a final exam.

**Prerequisite:** E E 380 ; E E 351 or E E 352
EE 483: Introduction to Automation and Robotics Systems
3 Credits
Introduction to robotics systems with emphasis on robotic motion and control, and robotic components such as actuators and sensors.
Prerequisite: E E 481
EE 484: Control System Design
3 Credits
Analysis and design of automatic control systems using time, frequency domain and state variable methods.
Prerequisite: E E 481
EE 485: Energy Systems and Conversion
3 Credits
Overview of energy alternatives available, and study of theory of operation and models of major energy conversion devices. E E 485 Energy Systems and Conversion (3) The course is designed to give students an overview of available energy alternatives, and to study the fundamental theory of operation and system models for major energy conversion devices. The topics covered give students the tools to assess the viability of various energy options, their applications, and their impact on the environment. Various forms of raw energy sources used in powering conventional electric generating plants such as coal, natural gas, oil, and uranium will be studied, along with worldwide distribution and reserves. The analytical tools for determining quantities of energy that could be extracted from the wind, water, falls, and solar energy sources using practical devices will be presented in the course as well as various case studies. The state of the art in energy storage technology and its impact on electrical vehicle range will be presented in the course as well as various case studies. The second half of the semester’s devoted to studying the theoretical fundamentals and applications of major energy conversion devices. Magnetic circuits covers the electrical circuit model and analog for studying energy transfer involving magnetic systems. The link to a direct application - power transformers is established, and then to rotating magnetic machines in general. The poly-phase AC induction motor circuit model, energy flow, and selection for various load types will be covered. Modern speed control techniques using inverters will also be covered. The principles of operation of the synchronous energy converter will be explored and its unique features. The power angle characteristics and its relationship to stability of a power system will be covered. Presentation on theory and applications of classical DC motors and generators, and the newer permanent magnet (PM) machines with their superior performance characteristics and energy density will conclude the semester.
Prerequisite: E E 314 or E E 315 ; MATH 250
Cross-Listed
EE 487: Electric Machinery and Drives
3 Credits
Analysis of variable-speed drives comprised of AC electric machines, power converters, and control systems. E E 487 Electric Machinery and Drives (3) This course is a technical elective intended for seniors and graduate students interested in electromechanical systems. The first part of the course (approximately two thirds) is devoted to fundamental theory in the modeling and analysis of power converters and AC electric machines. The second part is devoted to the theory and implementation of two specific control schemes: simple volts-per-hertz control applied to the induction machine and high-performance field-oriented control applied to the induction machine and to the permanent magnet machine. The course includes a significant laboratory component consisting of hands-on experience with DSP-based control of drives. Each station in the Electric Machinery and Drives Laboratory is comprised of a dynamometer, an induction machine, a permanent magnet machine, a 3-phase inverter with built-in diode rectifier, a 3-phase power supply, and a DSP-based controller. The DSP-based controller is programmed in the MATLAB/ Simulink graphical environment, allowing a student to modify control algorithms easily. Separate computer software allows easy access to controller variables for modification and display. This course builds upon basic knowledge of continuous-time linear systems theory and electric machine modeling. The materials in this course has applications in hybrid/electric vehicles and other transportation systems, industrial processes and automation, and power generation/energy storage systems.
Prerequisite: E E 387
EE 488: Power Systems Analysis I
3 Credits
Fundamentals, power transformers, transmission lines, power flow, fault calculations, power system controls.
Prerequisite: E E 387 or E E 485
EE 489: Power Systems Analysis II
3 Credits
Symmetrical components, unbalanced networks, unsymmetrical faults, unbalanced operation of rotating machines, transient transmission line modeling, system protection.
Prerequisite: E E 488
EE 494: Senior Thesis
1-9 Credits/Maximum of 9
Students must have approval of a thesis adviser before scheduling this course.
EE 494H: Senior Thesis
1-9 Credits/Maximum of 9
Students must have approval of a thesis adviser before scheduling this course.
Honors
EE 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Prerequisite: prior approval of proposed assignment by instructor
Full-Time Equivalent Course
Electrical Engineering Technology (EE_T)

Electrical Engineering Technology (EET)

EET 2: Introduction to Engineering Technology

1 Credits

Introduction to engineering technology and the use of computer methods for analyzing and solving engineering technology problems; microcomputer fundamentals, word processing, spreadsheet, and database software packages. EET 2 Introduction to Engineering Technology (1) The primary objective of this course is to teach basic computer skills and the use of basic computer word processing and spreadsheet applications, as well as the fundamentals of formal report writing. More specifically, students learn to use Microsoft Word (word processing) and Excel (spreadsheet) for the preparation of laboratory reports and business documentation. In addition to these applications, the course should also address as many of the following topics as possible: * Windows operating system * Selection of a personal computer * Communication through electronic mail (e-mail) * Use of the World Wide Web * Preparation of professional letters and reports * Use of an HTML editor to create web pages and use of File Transfer Protocol * Integration of drawing, image, and spreadsheet files into word processing documents * Technical problem solving The course should also provide the student with an introduction to the field of engineering technology, with a discussion of job and educational opportunities in the field. Homework and other exercises should, wherever possible, allow the student to investigate the different aspects of engineering technology, or to interact with other faculty, students, or professionals involved with engineering technology.

First-Year Seminar

EET 100: Electric Circuits, Power, and Electronics

3 Credits

AC and DC circuits; machinery; controls; and introduction to electronic devices, circuits, and instrumentation. EET 100 Electric Circuits, Power, and Electronics is a course for non-major students who will be working with electronic equipment in industry. This course starts with basic knowledge of DC and AC components and concepts used in industrial electrical work. Topics such as circuits, electromagnetism, sources, energy conversion and electrical instruments prepare students to continue with topics in electronics. Beginning with the basics of semiconductors and moving through diodes and transistors, the student is prepared to learn the concepts of rectification and amplification. These form a foundation for the completion of the course with a look at understanding the concepts and use of analog and digital circuitry found in Programmable Logic Control (PLC) systems used in industry today.

Prerequisite: MATH 082 or MATH 041

EET 101: Electrical Circuits I

3 Credits

Fundamental theory of resistance, current, and voltage; capacitance, inductance. Direct current and alternating current concepts through series/parallel circuits. EET 101EET 101 Electric Circuits I (3) Electric Circuits I has been designed to accomplish several related goals. A basic understanding of voltage, electric current and resistance is established early in the course. Then resistance becomes a focal point of the course as resistance of copper and other materials is examined. Resistance as a function of temperature is also considered. Efficiency, electric energy and electric power concepts are developed. A considerable effort is devoted to resistors in series, parallel and series parallel arrangements. Voltage sources in series and parallel are also considered. Resistive circuits with one voltage source are considered. Branch circuit analysis using Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL) receives considerable attention. The basic nature of Capacitance and Inductance is examined in great detail. Transient analysis of resistive-capacitive circuits and resistive-inductive circuits is covered. Sinusoidal waveforms, frequency and phase relations are introduced. Complex and polar numbers are introduced, as tools for AC circuit analysis. AC circuits with resistance, capacitance and inductance are explored. Power factor and power in AC circuits also receive considerable attention. Throughout the course, computer software is utilized for circuit analysis and evaluation.

Prerequisite: or concurrent: MATH 081

EET 105: Electrical Systems

3 Credits

Introduction to the study of electrical systems, with a focus on applications in our society. EET 105 Electrical Systems (3) is an introductory course in electrical systems and circuits. It is an entry level course intended to give students the big picture of the electrical technology spectrum. The course will cover the fundamentals circuit analysis such as: Kirchoff's laws, parallel and series circuits, and superposition. The course then applies this knowledge to various commonplace electrical systems (toaster, electric toothbrush, fan, etc.). The course also gives students a broad, limited exposure to the breath of electrical systems by including components and topics such as resistors, capacitors, inductors, switches, relays, fuses, amplifiers, transformers and motors. Topics covered include: * Electrical Safety and House Wiring * Electrical Science * Electrical Generation and Utilization * Electrical Circuits and Analysis * Electrical Instrumentation and Measurements * Electronics - Electrical Systems - Electrical Machines The course will emphasize the basic concepts, principles, and analytical models used
by engineers and technologists to design, develop and test electrical systems. The course does so from a top-down, non-detailed systems perspective. Upon completion of this course, students will have a broad perspective of the electrical technology spectrum as they gain a deeper focused knowledge in subsequent courses. Lectures will be supported by laboratory exercises in which the student learns about electrical instrumentation and performs electrical measurements on circuits and systems. Students will also be required to complete an electrical system project of their choosing. Students will be required to prepare written laboratory reports outlining the laboratory activity. Reports will be graded based on their technical quality and their grammatical and professionalism. Students in EET 105 will be required to use computers in both class and laboratory exercises to simulate electrical circuits and systems and also produce high quality laboratory reports.

**Prerequisite:** MATH 021 or greater placement

**EET 109: Electrical Circuits Laboratory I**

1 Credits

Use of basic electrical instruments to measure AC and DC voltage, current, power, resistance. Introduction to report writing. EET 109 Electric Circuits Laboratory I (1) Electric Circuits Laboratory I provides a variety of experiences building electric circuits and utilizing voltmeters, ammeters, ohmmeters and oscilloscopes to take electrical readings. Emphasis is placed on using computer spreadsheet software and computer analysis software. Throughout the course, technical writing is utilized to describe electrical experiment results. Concepts presented in EET 101 are utilized through this course. Experiments related to resistor color code, the ohmmeter and Ohm’s Law provide a elementary understanding of resistance as well as the measurement of voltage, electric current and resistance. Experiments with resistors in series, parallel and series-parallel arrangements provide experience with electric circuit construction and electric circuit analysis in a laboratory situation. Kirchhoff’s Voltage Law (KVL) and Kirchhoff’s Current Law (KCL) receive considerable attention. Capacitors are studied in charging and AC circuits. The oscilloscope and signal generator are introduced and utilized in later experiments. AC resistive-capacitive circuits and resistive-inductive circuits are built and analyzed.

**Prerequisite:** or concurrent: EET 101

Writing Across the Curriculum

**EET 114: Electrical Circuits II**

4 Credits

Direct and alternating current circuit analysis including Thevenin and Norton Theorems, mesh, node analysis. Capacitance, inductance, resonance, power, polyphase circuits. EET 114 ELECTRICAL CIRCUITS II (4) Electrical Circuits II is the second of two circuit courses aimed at developing fundamentals of electrical circuit operation and analysis. It covers topics in graphical analysis of circuit operation; capacitive, inductive, and magnetic circuits; and sinusoidal excitation and AC reactance due to inductors and capacitors. EET 114 is normally taken in the second semester of the freshman year concurrently with a coordinated lab course, EET 118. Completion of EET 114 provides a student with all the circuit analysis fundamentals that will be needed for later courses in electronics and AC machinery.

**Prerequisite:** EET 105, MATH 026

**EET 118: Electrical Circuits Laboratory**

1 Credits

Use of basic electrical instruments to measure AC and DC voltage, current, power, resistance, and lab reporting. EET 118 Electrical Circuits Laboratory II (1) Electrical Circuits Laboratory is typically taken concurrently with EET 114. The course is a 1 credit course that meets for one 2-hour session each week. Exercises in the lab guide are coordinated with materials being covered in the EET 114 course. All lab exercises involve hands-on work with equipment, and many of the labs are supported by computer activities that help the student collect and interpret data. The computer exercises are coordinated with the lab guide materials. Students are required to submit formal, written lab reports for many of the exercises. Material covered in the EET 118 lab include exercises in graphical circuit solutions, charging and discharging characteristics of capacitors, reactance and impedance measurements in AC circuits, and circuit resonance. The EET 118 lab is the first lab in which students gain significant exposure to the oscilloscope, function generator, and other more sophisticated laboratory equipment.

**Prerequisite:** EET 105; Concurrent: EET 114

**EET 205: Semiconductor Laboratory**

1 Credits

Laboratory study of semiconductor devices and circuits. EET 205 Semiconductor Laboratory (1) Semiconductor Laboratory is the experimental laboratory course that supports EET 210, the first linear electronics course. The lab meets each week in a single 2-hour session during which students work with the actual devices and circuits discussed in the EET 210 lectures. Students build and test the actual circuits analyzed in class, which gives them an opportunity to understand, first-hand, the practical implications of the theory and the limitations of the analytical models covered in class. Circuits that are typically tested in EET 205 include inverting and non-inverting amplifiers, comparators, integrators and differentiators, low- and high-pass filters, and timer and oscillator circuits.

**Concurrent:** EET 210

**EET 210: Fundamentals of Semiconductors**

2 Credits

Semiconductor and circuit theory including power supplies, amplifiers, power amplifiers, oscillators, and introduction to op-amps. EET 210 EET 210 Fundamentals of Semiconductors (2) Fundamentals of Semiconductors is the first of a 2 course sequence that examines the physics and operation of the four basic forms of linear amplifier circuits. It does so by examining the operation and modeling of typical circuits built from operational amplifiers, including inverting and non-inverting amplifiers, transconduction and transresistance amplifiers, voltage followers, instrument amplifiers, summing amplifiers, and other circuits capable of performing mathematical functions. The course also examines a variety of practical non-linear electronic circuits, including integrators, differentiators, log function amplifiers, filters, and oscillators. Issues of frequency response, circuit stability, negative feedback, and compensation are covered in the course. The course also touches on problems of D-to-A and A-to-D conversion and electronic communication. In all areas, issues related to device characteristics and their impact on circuit operation and device selection are covered.
Prerequisite: EET 114, MATH 082

EET 212: Op Amp and Integrated Circuit Electronics

4 Credits

Analysis and design of amplifier, rectifier, filter, comparator, oscillator, and other practical circuits using op amps and integrated circuit devices. EET 212W Op Amp and Integrated Circuit Electronics (4) EET 212W provides students with a basic understanding of the operation and functions of general-purpose linear and non-linear electronic circuits typically found in industrial applications. The course provides background on the basic operating characteristics of key semiconductor devices (diodes, transistors, FETs, etc.); however, the emphasis is on the operation, analysis, design, and application of circuits that use op-amp's and various linear integrated circuit devices to perform typical electronic functions. Topics covered include: - Open- and closed-loop amplifier operation and feedback concepts - Inverting, non-inverting, differential, and instrumentation amplifiers - summers, comparators, clippers, clampers, and function generator circuits - Integrators and differential circuits - Filter and oscillator circuits - Rectifier and regulator circuits

The course will emphasize the concepts, principles, procedures, models, and computations used by engineers and technologists to analyze, select, specify, test, maintain, and design modern electronic systems. Particular emphasis will be given to circuits and applications prevalent in modern instrumentation and control systems. Modeling detail and the sophistication of mathematical analyses will emphasize the application of standard methods with the aid of computers. Lectures will be supported by laboratory exercises in which students will investigate actual operating characteristics of devices and circuits explained in the classroom. Lab activities will emphasize comparisons of theoretical and actual performance. Students will also be expected to develop proficiency in making electronic circuit measurements using standard laboratory instruments. Laboratory activities will also form the basis for the "W" designation assigned to this course. Students will be required to use standard analysis and reporting tools to prepare formal, written laboratory reports for a substantial portion of all laboratory activities undertaken in the class. Reports will be graded based both on their technical and grammatical quality and on their professionalism. A complete understanding of the electronic circuits covered in this course requires the use of computers. Thus, students in EET 212W will be required to use computers in both class and laboratory exercises to model and simulate the relevant performance of circuits studied.

Prerequisite: EET 114, ENGL 015, MATH 022 or MATH 040 or MATH 082

Writing Across the Curriculum

EET 213W: Fundamentals of Electrical Machines Using Writing Skills

5 Credits

AC and DC machinery principles and applications; introduction to magnetic circuits, transformers, and electrical machines including laboratory applications. EET 213W Fundamentals of Electrical Machines Using Writing Skills (5) EET 213W is devoted to the study of ac and dc electrical machines and power conversion equipment. The course teaches fundamental concepts of electromagnetic circuits as they relate to the physical forces that act on electrical conductors moving in magnetic fields, and the electrical currents and voltages induced in those conductors by that same motion. The course covers characteristics of magnetic materials and how they influence the operation of electrical machines, and investigates how these properties and principles are used to develop simple yet practical models of various electromotive and power conversion devices. Presentation of principles and theory will be relatively rigorous; however, the level of modeling detail and the sophistication of mathematical analyses of machine operation will be limited to first order (i.e., linear) and some simple second-order (non-linear) approximations. Students in EET 213W should gain a sound understanding of how and why ac and dc motors and generators, and single phase ac transformers work as they do. The understanding should extend to cover most types of motors, generators, and transformers commonly used in industry today. Students should also understand and be able to apply the basic mathematical and electrical models developed in the course to determine the power requirements, power capability, efficiency, operating characteristics, control requirements, and electrical demands of these machines when used in typical applications. Students will also gain a general knowledge of how motors, generators, and transformers are constructed, and understand the reasons behind the various construction techniques that are used. EET 213W is also a "writing-intensive" course, which means one of the course objectives is to teach students to prepare formal, written documents about technical subjects. Thus, students will be required to do a significant amount of writing in the course.

Prerequisite: EET 114, EET 118, ENGL 015

Writing Across the Curriculum

EET 214: Electric Machines and Energy Conversion

3 Credits

Fundamental operating principles, characteristics, and analysis of electric machines, transformers, and power systems. EET 214 Electric Machines and Energy Conversion (3) The purpose of EET 214 is to introduce students to the electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The course teaches fundamental concepts of electromagnetic circuits as they relate to the induced voltages and physical forces acting on electrical conductors within magnetic fields. The course covers characteristics of magnetic materials and how they influence the operation of rotating electrical machines and transformers, and investigates how these properties and principles are used to develop simple yet practical models of various power conversion devices. Basic control of AC motors, such as starting, reversing, plugging, and variable speed operation using volts per hertz is discussed in the course. Following the study of the basic components of the power system (motors, generators, and transformers), the course will provide an introduction to power systems engineering. This introduction shall include any the following topics: power distribution fundamentals and protection, power flow, analysis and load flow studies of small power systems, and computer solutions for larger power system studies. Topics covered include: - Magnetics: energy conversion principles, motor and generator action - Transformers: Single-phase, 3-phase, and autotransformers; per-unit representation - Induction Machines: construction, operation, modeling, characteristics, and basic control methods - Synchronous Machines: construction, operation, modeling, characteristics, motor and generator operation, power factor control, power delivery - Power System Representation - Power System Analysis

Presentation of the principles and theory will be relatively rigorous; however, the level of modeling detail and the sophistication of the mathematical analyses of machine operation will be limited to first order (i.e. linear) and some simple second-order (non-linear) approximations. Students in EET 214 should gain a sound understanding of how and why electrical machines and transformers and their models, and this knowledge should be extended so that the models are used in the analysis of power systems. Students should be able to apply the basic mathematical and electrical models developed in the course to determine power
requirements, power capability, efficiency, operating characteristics, and electrical demands of these components when used in typical applications. The course will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary.

**Prerequisite:** EET 114, EET 118

EET 214H: Electric Machines and Energy Conversion

3 Credits

Fundamental operating principles, characteristics, and analysis of electric machines, transformers, and power systems. EET 214 Electric Machines and Energy Conversion (3) The purpose of EET 214 is to introduce students to the electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The course teaches fundamental concepts of electromagnetic circuits as they relate to the induced voltages and physical forces acting on electrical conductors within magnetic fields. The course covers characteristics of magnetic materials and how they influence the operation of rotating electrical machines and transformers, and investigates how these properties and principles are used to develop simple yet practical models of various power conversion devices. Basic control of AC motors, such as starting, reversing, plugging, and variable speed operation using volts per hertz is discussed in the course. Following the study of the basic components of the power system (motors, generators, and transformers), the course will provide an introduction to power systems engineering. This introduction shall include any of the following topics: power distribution fundamentals and protection, power flow, analysis and load flow studies of small power systems, and computer solutions for larger power system studies. Topics covered include: - Magnetics: energy conversion principles, motor and generator action - Transformers: single-phase, 3-phase, and autotransformers; per-unit representation - Induction Machines: construction, operation, modeling, characteristics, and basic control methods - Synchronous Machines: construction, operation, modeling, characteristics, motor and generator operation, power factor control, power delivery - Power System Representation - Power System Analysis Presentation of the principles and theory will be relatively rigorous; however, the level of modeling detail and the sophistication of the mathematical analyses of machine operation will be limited to first order (i.e. linear) and some simple second-order (non-linear) approximations. Students in EET 214 should gain a sound understanding of electrical machines and transformers and their models, and this knowledge should be extended so that the models are used in the analysis of power systems. Students should be able to apply the basic mathematical and electrical models developed in the course to determine power requirements, power capability, efficiency, operating characteristics, and electrical demands of these components when used in typical applications. The course will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary.

EET 215: Electric Machines and Energy Conversion Laboratory

1 Credits

Laboratory study of electric machine applications, transformers, and power systems. EET 215 Electric Machines and Energy Conversion Laboratory (1) The purpose of EET 215 is to provide students with practical experience with electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The laboratory experiments in this course will demonstrate empirically the concepts introduced in the companion lecture course, EET 214. Topics covered include: - Magnetics: energy conversion principles, motor and generator action - Transformers: single-phase, 3-phase, autotransformers; per-unit representation - Induction machines: operation, modeling, characteristics, basic controls - Synchronous machines: motor, generator, power factor control - Power system representation and analysis Laboratory activities will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary. Students will be expected to develop proficiency in instrumentation using standard lab equipment, and will be required to use standard analysis and reporting tools to prepare formal laboratory reports and oral presentations.

**Prerequisite:** EET 114, EET 118; Concurrent: EET 214

EET 215H: Electric Machines and Energy Conversion Laboratory

1 Credits

Laboratory study of electric machine applications, transformers, and power systems. EET 215 Electric Machines and Energy Conversion Laboratory (1) The purpose of EET 215 is to provide students with practical experience with electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The laboratory experiments in this course will demonstrate empirically the concepts introduced in the companion lecture course, EET 214. Topics covered include: - Magnetics: energy conversion principles, motor and generator action - Transformers: single-phase, 3-phase, autotransformers; per-unit representation - Induction machines: operation, modeling, characteristics, basic controls - Synchronous machines: motor, generator, power factor control - Power system representation and analysis Laboratory activities will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary. Students will be expected to develop proficiency in instrumentation using standard lab equipment, and will be required to use standard analysis and reporting tools to prepare formal laboratory reports and oral presentations.

EET 216: Linear Electronic Circuits

3 Credits

Theoretical study of linear electronic devices and circuits, including field effect transistors, integrated circuits, and operational amplifiers. EET 216 Linear Electronic Circuits (3) Linear Electronic Circuits is the second course in a 2-course sequence that examines linear electronic circuits using semiconductors. The course picks up where EET 210 leaves off and delves into the actual devices used to develop amplifiers and op-amp devices. This includes study of the biasing and operation of diodes, zeners, bipolar junction transistors, junction and metal-oxide field effect transistors, and thyristors. The design and operation of CE, CB, and CC transistor amplifiers and CS, CD, and CG FET amplifiers are covered in detail. Students are introduced to the fundamental theory of operation of the devices and circuits and are provided with practical models to analyze their operation. Questions of amplifier gains, power efficiency, and frequency response are covered for these devices and circuits just as they were for the op-amp circuits covered in EET 210. A portion of the
Prerequisite: EET 210

EET 216H: Linear Electronic Circuits

3 Credits

Theoretical study of linear electronic devices and circuits, including field effect transistors, integrated circuits, and operational amplifiers. EET 216 Linear Electronic Circuits (3) Linear Electronic Circuits is the second course in a 2-course sequence that examines linear electronic circuits using semiconductors. It picks up where EET 210 leaves off and delves into the actual devices used to develop amplifiers and op-amp devices. This includes study of the biasing and operation of diodes, zeners, bipolar junction transistors, junction and metal-oxide field effect transistors, and thyristors. The design and operation of CE, CB, and CC transistor amplifiers and CS, CD, and CG FET amplifiers are covered in detail. Students are introduced to the fundamental theory of operation of each of the devices and circuits and are provided with practical models to analyze their operation. Questions of amplifier gains, power efficiency, and frequency response are covered for these devices and circuits just as they were for the op-amp circuits covered in EET 210. A portion of the course also examines class A, AB, and B power amplifiers and power regulation circuits.

EET 221: Linear Electronics Laboratory

1 Credits

Laboratory study of transistors; study of differential and operational amplifiers. Emphasis is placed on circuit design. EET 221 Linear Electronics Laboratory (1) Linear Electronics Laboratory is the experimental laboratory course that supports EET 216, the second electronics course. The lab meets each week in a single 2-hour session during which students work with the actual devices discussed in the EET 216 lectures and build and test the circuits analyzed in class. This gives them an opportunity to understand, first-hand, the practical implications of the theory and analytical models covered in class. Experimental topics that are covered in EET 221 include diode and rectifier circuits, BJT and FET biasing techniques, common BJT and FET amplifier designs, power supply circuits, and IC power supply regulators. Many lab exercises are supported by computer simulations using industry-standard simulation software.

Prerequisite: EET 205; Concurrent: EET 216

EET 275: Introduction to Programmable Logic Controls

3 Credits

Principles of industrial control, programming, interfacing, input/output devices, and applications. EET 275 Introduction to Programmable Logic Controls (3) Introduction to Programmable Logic Controls is a required course for sophomore-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. Programmable Logic Controllers are one of the fastest growing multi-billion dollar segments of industry. This course provides an in-depth introduction to these devices and their use in modern process industries. Starting with an overall look at the block and modular type PLC, digital inputs, digital outputs and devices such as pushbuttons, pressure switches, motors, and indicators demonstrate the elementary application and system design to which they are applied. Ladder logic programming techniques encompass gate logic, contact/coil logic, timers, counters, arithmetic functions and number comparisons. An introduction to analog input and output applications, along with study of the Proportional + Integral + Differential (PID) process function, and PLC communication networks prepares the technologist for advanced courses on these topics. The lab component of this course provides live experience with all these concepts along with industrial problem solving experience by using indicating and actuating real-time positional and process applications.

Prerequisite: CMPET117, CMPET120

EET 280: System Integration Project

1 Credits

Schematic design, circuit board layout and fabrication, mechanical housing fabrication.

Prerequisite: EET 212W; Prerequisite or concurrent: EG T 119

EET 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EET 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EET 311: Alternating Current Circuits

4 Credits

EET 311 Alternating Current Circuits (4) EET 311 is intended to provide competency in analysis of circuits and application of basic electrical principles including equivalent circuits and models, power and energy, and signal/energy transfer. The course will introduce ideal amplifier models, ideal op-amps and ideal transformers as circuit elements and one-port networks (Thevenin, Norton, and driving point impedance), and two-port networks (Z, Y, H, G, T, and I) as equivalent circuits. Since this is the first required course taken by all upper division electrical engineering technology students, ethics and professionalism will be discussed by and expected of the students. This course requires calculus through integral and differential calculus of transcendental functions. It provides the circuit analysis skills required in almost every other EET course and is a specific prerequisite for analysis of signals and systems (EET 312) and understanding semiconductor models and electronic circuits (EET 330).

Prerequisites: EET 114 Concurrent COURSE MATH 140, (PHYS 150; PHYS 211; PHYS 250)

EET 312: Electric Transients

4 Credits

EET 312 Electric Transients (4) This course is designed to provide students with a strong foundation in transient circuit analysis in addition to introduction to signals and systems. The primary objective of the course is to reinforce continuous-time system fundamentals in order to prepare the students for more advanced work in a broad range of areas including communications, control, signal processing and image processing. The topics covered in this course include: Applied differential equations; Transient analysis of RC, RL, and RLC circuits,
using differential equations; Complex frequency; Network functions; Bode plots and frequency response; Filter networks and resonant circuits; Laplace transform pairs and their applications in circuit analysis; Fourier analysis techniques and their applications in circuit analysis; State-variable circuit analysis. This course is a required course in the Electrical Engineering Technology BS curriculum and is intended to be taken by students who have completed their first circuits course requirements.

**Prerequisites:** (EET 311; EE 314; EE 315) Concurrent Courses: MATH 141, (PHYS 151; PHYS 212; PHYS 251)

EET 315: Linear and Discrete System Analysis

3 Credits

Introduction to the principles and operation of linear and discrete systems. EET 315 Linear and Discrete System Analysis (3) Linear and Discrete System Analysis is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to introduce the students to linear system analysis, primarily using Laplace transforms. Students learn the concept of a transfer function, and are able to analyze both the transient and steady state response of a system. Students then learn about discrete time systems, including Z-transforms, difference equations, and basic digital filters. Laboratory exercises reinforce concepts developed in lecture.

**Prerequisite:** CMPET301. Prerequisite or concurrent: MATH 250 or MATH 211

EET 320: Industrial Electricity and Electronics

3 Credits

Basic circuit theory applied to DC/AC circuits containing resistors, inductors, capacitors; magnetic circuits; power; control; electronic applications. EET 320 Industrial Electricity and Electronics (3) This course is designed to offer non-electrical students the opportunity to become familiar with the theory and operation of electrical, electronic, and electromechanical devices that are widely used in practice. The course concentrates on the most important concepts, rather than in-depth treatment of any individual area. The number of units covered depends on the class background. The topics covered in this course include: 1. Introduction 2. DC Networks 3. AC Networks 4. Magnetics 5. DC & AC Machinery 6. Selected topics depending on class background (if time permits): Basic electronic devices and their applications; Integrated circuits and their applications; Power Distribution; Transducers & signal conditioning; Control Systems Electronic Instrumentation.

**Prerequisite:** MATH 140, PHYS 150 or PHYS 250 or PHYS 211

EET 330: Wireless Communications Systems

3 Credits

Wireless communications technology, transceivers, modulation techniques, serial communications, and applications. Personal area networks, local area networks, RFID systems. EET 330 Wireless Communications Systems (3) Wireless Communications Systems is a required course for junior-level students pursuing the Electrical Engineering Technology (EET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The course provides a foundation in spectrum analysis, filtering, serial communications, analog modulation and demodulation, and digital modulation and demodulation. The course discusses applications utilizing infrared (IR) and radio frequency (RF) technologies. Applications for wireless networking include the development of personal area networks (PAN) and local area networks (LAN). The course also introduces radio frequency identification (RFID) systems and applications. Laboratory exercises reinforce concepts developed in lecture.

**Prerequisite:** EET 341, CMPET301; prerequisite or concurrent: EET 315, MATH 211

EET 331: Electronic Design

4 Credits

Analog/Digital and Digital/Analog Converters; advanced and nonlinear Op-Amp circuit design; noise analysis; Active Filters and Waveform Generators. EET 331 Electronic Design (4) EET 331 is intended to provide competency in the application of basic electronic principles to design with operational amplifiers and integrated circuits. The course will include analog-to-digital and digital-to-analog conversion techniques; introduction to the feedback principles and non-ideal aspects of operational amplifiers including noise; needed for advanced design with op-amps; some nonlinear op-amp circuits - including comparators, Schmitt triggers, pulse width modulation, and ideal rectifiers, active filter design and waveform generator design. Grades will be based on 3 or 4 exams including a final exam (65%), laboratory work, computer projects requiring the use of circuit simulation software, spreadsheets, and math packages, and homework (30%), and student professionalism (5%). The IEEE code of ethics and the Penn State policy on academic integrity will be applied in the instructor's judgment of student professionalism. This course requires calculus through integral and differential calculus of transcendental functions, advanced circuit analysis techniques (EET 311, E ENG 354, or E ENG 352), and knowledge of frequency response analysis techniques (EET 312). It provides the electronic circuit analysis and design skills required in the Electronics, Systems, and Technical Electives of the General Electrical Engineering Technology Option and the Applications and Technical Electives in the Computer Engineering Technology Option.

**Prerequisite:** EET 311 or E E 314 or E E 315; EET 205 and EET 210 or concurrent E E 310; Concurrent: EET 312

EET 341: Measurements and Instrumentation

3 Credits

Measurement concepts, transducers, electronic-aided measurement, mechanical and electrical measurements. Intended for electrical engineering technologists. EET 341 Measurements and Instrumentation (3) Measurements and Instrumentation is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to understand the principles of measurement systems. The course enables students to design software for programming PC-based data acquisition (DAQ) systems, understand various sensors, design signal conditioning circuits for interfacing sensors to DAQ systems, and design various types of measurement systems. Laboratory exercises reinforce concepts developed in lecture.

**Prerequisite:** CMPET117, EET 212W. Prerequisite or concurrent: MATH 141 or MATH 210
EET 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

EET 402: High-Frequency Circuit Design

4 Credits

This course provides students in Electrical Engineering Technology with fundamentals of high frequency (RF and microwave) circuit design concepts. The main objective is that students gain familiarity with the high frequency circuits design topics including but not limited to: limitations of lumped elements at high frequencies, parasitic effects, transmission line and distributed circuits, Smith Chart, impedance matching, resonators and filters, scattering parameters, multiport networks, power divider and combiners, directional couplers, and RF and microwave circuit modeling through computer aided design (CAD). The lab portion of the course provides the students with the opportunity to learn the operation of high frequency test equipment such as network analyzer and spectrum analyzer, and be able to build and test high frequency and transmission line based circuits. The course topics are supported by weekly CAD or experimental labs.

Prerequisite: EET 312

EET 408: Communication System Design

4 Credits

This course is for students in Electrical Engineering Technology to gain understanding of the fundamental concepts and components of communication systems, supported by hands on experiments. Fundamentals of communication systems are covered and include signal analysis, noise, main building blocks and circuit components, effect of nonlinearities, signal generation, concepts of modulation and demodulation, analog modulation schemes such as AM, DSB, SSB, FM, and PM, transmitter and receivers architectures, and, if time permits, an introduction to digital communication schemes. After overviewing basic terminology and concepts such as signal spectrum, bandwidth, filtering, harmonics, power, and signal to noise ratio in communication systems, this course, in two parts, will expose students to two distinct aspects of communication technology. In the first part, the students will learn about the main components such as filters, resonators, amplifiers, mixers, oscillators, and phase locked loops. The second part will cover the main amplitude and angle modulation schemes and familiarize the students with modulator and demodulator circuits for those schemes. Topics covered in the course are supported by hands on labs performed each week during a lab session.

Prerequisite: EET 312

EET 409: Power System Analysis I

4 Credits

This course will help students to understand power generation units, transmission lines, distribution systems and load flow. The main power system elements will be studied in detail. These elements include: generators (to generate electricity), transformers (to step up/down voltage levels for transmission purposes), transmission lines (in order to transmit the power from one location to another with minimum dissipation), and distribution systems (in order to distribute the transmitted power to customers). The course also helps students to learn the concept of fault analysis, the effect of line length on transmission lines, and the calculation of losses in synchronous generators. The basic theory of complex numbers will be used to simplify the analysis and calculations. Students will understand the typical operating principles for different types of power plants including: nuclear, coal, gas, wind, and solar.

Prerequisite: EET 312

EET 410: Power System Analysis II

4 Credits

Power System Analysis II follows up the material from Power System Analysis I with more details on the analysis and calculation during faults or transients. Students will understand symmetrical faults such as three-phase and single-phase short circuits. Next, symmetrical components in power system will be introduced and impedance loads, series impedances, three-phase transmission lines, rotating machines, and transformers will be modeled. This course (Power System Analysis II) helps students to understand unsymmetrical faults such as single line to ground, double line to ground, and line to line faults. Furthermore, students will understand how to analyze the power system components under different fault conditions. Protection and relaying play an important role in a power system. Having equipment such as generators or transformers in power grids, engineers and power system planners should protect these expensive devices from faults or any transients. Relays and breakers are the best tools for protection. Relays sense the currents/voltages in multiple locations. If the measured current/voltage is not within the limit, they send the command to the breakers to disconnect the circuit and protect the equipment. Students in Power System Analysis II will analyze the protection devices and operation principles of relays. The last topic in this course is the transient stability of synchronous machines using equivalent dynamic model and generator control. This course will help students to model the generators in power systems and apply various control mechanisms such as: voltage, frequency, or power control to the synchronous generator model.

Prerequisite: EET 409

EET 413: Optoelectronics

4 Credits

Principles and applications of optoelectronics including sources, detectors, imagers, transmitters, fiber optics, systems and integrated optics. This course is designed as an elective course for the EET senior undergraduate students. This course introduces some critical components that are needed in fiber optic communication systems. This includes optical transmitters (Light emitting diode, and laser diodes), optical receivers (i.e., photodetector), modulators and demodulators, optical couplers (how to connect more than two fibers together), and optical amplifiers (including the basic principle of erbium doped fiber optic amplifiers). The topics covered in this course include Optics Review, Lightwave Fundamentals, Measuring Light, Optical Waveguides, Light Sources and Detectors, Couplers and Connectors, Noise and Detection, and System Design. Relevant laboratory experiences are used to reinforce the topics covered in class.

Prerequisite: EET 312
EET 414: Biomedical Instrumentation

4 Credits

Introduction to transducers and circuits used to detect and process medical physiological data with focus on cardiovascular and respiratory systems.

Prerequisite: EET 312, EET 331

EET 415: Thermal and Fluids Design

3 Credits

Introduction to basic electrical engineering technology concepts and applications of thermodynamics, heat transfer, and fluid power in electrical/electronic systems. EET 415 Fluid and Thermal Design in Electrical Systems (3) Fluid and Thermal Design in Electrical Systems is a required course for senior-level students pursuing the electrical engineering technology (EET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to teach principles of thermal sciences with an emphasis on electrical/electronic system applications. The course enables students to understand fundamental principles of thermodynamics, heat transfer, and fluid mechanics as they apply to thermal management of electronic systems. These principles include the first law of thermodynamics, the continuity equation, basic principles of system pressure loss and fans, the three modes of heat transfer, resistance analog for heat flow, and the finite difference method for analyzing two-dimensional heat flow. Specialized CFD software is used to analyze temperatures in electronic systems. Laboratory exercises reinforce concepts developed in lecture.

Prerequisite: EET 315; MATH 211 or MATH 231, MATH 250

EET 419: Project Proposal Preparation

1 Credit

This course is required for all senior students in the Bachelor of Science in Electrical Engineering Technology (BSEEET) program. It is the first course in a two-semester sequence that comprises the capstone design experience. In this course, students work in teams to develop an idea for an innovative product or system, including the determination and weighting of customer requirements, design constraints, applicable standards, engineering specifications, a functional decomposition (block diagram), work breakdown structure (WBS), project schedule, and proposed project budget. The culmination of the course is a proposal that guides the project into the second semester, which is the implementation phase. In the proposal, students will also provide background information on the history of relevant technologies, state of the practice in similar products and the life cycle of related products. Weekly presentations focus on important components of the proposal and drafts of these components are submitted for review on a regular basis.

Prerequisite: ENGL 202C, CAS 100

EET 420: Electrical Design Project

3 Credits

Design, construction, and testing of a project either selected by the students with approval or assigned by the instructor. EET 420W Electrical Design Project (3) This course is designed with the following goals and objectives: 1. The students will enter the course with a well-defined project proposal and a timeline for which the first task will be to write the specifications. Upon the specifications' approval, the student teams will begin designing and building the project. 2. Each student will maintain a laboratory notebook that documents the day-to-day activities of the project in a style that could be used for patent documentation. 3. Team members will provide short oral and written reports every week for the first five to six weeks, and then every two weeks until the end of the semester. 4. The students will incorporate engineering standards and constraints, i.e., consideration of economic, environmental, sustainability, manufacturability, ethical, safety, etc., in their project and final report. 5. A draft copy of the final report will be collected, critiqued, and returned to students with comments and suggestions for changes. 6. A final project oral report (20-25 minutes) will be given by the project team during the last week of the semester. 7. An extensive, well-written report describing the project that has been designed and built is the major outcome of the project course. Grades for the course will be based on: Weight Factor a. Written specifications for the project b. General conduct in the laboratory including lab notebook c. Oral and written progress reports including question-and-answer sessions d. Final oral and written reports including question-and-answer sessions. This course is a required course in the Electrical Engineering Technology BS curriculum and is intended to be taken by seniors as the capstone course of the major. As such, the course integrates materials from many of the undergraduate electrical courses in addition to related math, engineering technology, and science courses. This course should be taken during the last semester (prior to graduation).

Prerequisite: EET 312, EET 331, EET 419, ENGL 202C

Writing Across the Curriculum

EET 431: Advanced Electronic Design

4 Credits

Applications of analog and digital integrated circuits; introduction to analog and digital communication techniques.

Prerequisite: EET 331

EET 433: Control System Analysis and Design

4 Credits

Classical and modern control analysis and design approaches, such as Laplace and state-space, aided by analog and digital computers.

Prerequisite: EET 312

EET 440: Applied Feedback Controls

3 Credits

Analysis and design of analog and digital feedback control systems. EET 440 Applied Feedback Controls (3) Applied Feedback Controls is a required course for senior-level students pursuing the electrical engineering technology (EET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to teach principles of feedback control systems. The course enables students to understand different elements of a feedback control system. System stability is determined, including phase and gain margin, through the use of Bode analysis techniques. Different control schemes are investigated, with emphasis on PID control. Laboratory exercises, including the construction of various control systems, reinforce concepts developed in lecture.

Prerequisite: EET 315
almost any manufacturing environment. PLCs are employed wherever rugged design and ease of programming enables PLCs to operate in workhorse of the automation and process control industry. Their Logic Controllers (3) Programmable logic controllers (PLCs) are the automation and process control. EET 475 Intermediate Programmable

3 Credits

EET 475: Intermediate Programmable Logic Controllers

Introduction to robotic systems and automation. Emphasis includes robot motion, control, and components, as well as programming PLCs. EET 456 Automation and Robotics (4) The objective of this course is to use a hands-on approach to introduce the basic concepts in robotics, focusing on mobile robots and illustrations of current state of the art applications. The course is offered at the senior undergraduate level with emphasis on kinematics, dynamics and control of robot arms. Course materials are tied to lab experiments in which students will work in teams to build and test mobile robots (such as LEGO-based robots).

Prerequisite: EET 331, CMPET403; Prerequisite or concurrent: MATH 220, EET 433

EET 458: Digital Signal Processing

3 Credits

Continuous and discrete time signals, Fourier series and transform, z-transform, sampling, FIR and IIR filters, FFT, DFT, and applications. EET 458 Digital Signal Processing (3) Digital Signal Processing is a technical elective course for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. This course will introduce the student to digital signal processing, DSP, using both mathematical and real signal generation. The applications of DSP are quite varied, ranging from cell phones to motor control systems. DSP signals and systems topics for discussion include but are not limited to: mathematical representation of signals, sampling and aliasing, FIR filters, z-transforms, and spectrum representation & analysis. The lab component of the course will allow students to explore DSP topics of interest using various hardware and software programming tools.

Prerequisite: EET 315, CMPET355

EET 461: Power Electronics

3 Credits

Fundamentals of power electronic circuits, semiconductor power devices, power conversion equipment. Circuit topologies, closed-loop control strategies, equipment design consideration. EET 461 Power Electronics (3) Power electronics is a technical elective for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The course introduces students to the different topologies used to convert electrical power via the use of solid state switching. Specifically, the course presents ac-dc, ac-ac, dc-dc and dc-ac converters. The different switching devices used (diodes, SCRs, MOSFETs, etc.) are discussed. Laboratory exercises complement the lecture material. Relevant topics such as power quality, EMI and applications of power electronics are presented.

Prerequisite: EET 212W, EET 214, EET 315

EET 475: Intermediate Programmable Logic Controllers

3 Credits

Application of programmable logic controllers (PLCs) to data acquisition, automation and process control. EET 475 Intermediate Programmable Logic Controllers (3) Programmable logic controllers (PLCs) are the workhorse of the automation and process control industry. Their rugged design and ease of programming enables PLCs to operate in almost any manufacturing environment. PLCs are employed wherever measurement equipment and computers are needed to control large electrical equipment such as motors and actuators. In this course, students apply their knowledge of basic PLC programming to see how the PLC can be used to communicate with other equipment, sense and react to external stimuli, and provide both open loop and closed loop system control.

Prerequisite: EET 220 or EET 275 and EET 315

EET 478: Digital Communication Systems

4 Credits

Discrete signal analysis, A/D conversion, digital modulation techniques, encoding, decoding, data communication, noise.

Prerequisite: CMPET403

EET 480: Electrical and Computer Systems Senior Seminar

1 Credits

Concepts of career development; project management; engineering design documentation; industrial design examples. EET 480 Electrical and Computer Systems Senior Seminar (1) Electrical and Computer Systems Senior Seminar is a required course for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to introduce students to the practices associated with managing an industrial-based project. Student teams begin working on a capstone project. Project definition, specification development, scheduling, engineering constraints, and budgeting of both time and money are discussed. Other issues of career development are presented, such as interviewing, resume preparation, and career opportunities. Ethical issues related to the discipline are discussed. Engineering economy is introduced.

Prerequisite: EET 341, EET 330 or CMPET333, CMPET355, ENGL 202C. Prerequisite or concurrent: ECON 102 or ECON 104

EET 490: Electrical/Computer Senior Design Project

3 Credits

Individual or group design projects in electrical and computer engineering technology. EET 490W Electrical/Computer Senior Design Project (3) The Electrical/Computer Senior Design Project is a required course for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to have teams of senior students continue the senior design project they had started the prior semester in their Senior Seminar. The course focuses on project-based work where teams design, build, test and document the results of their senior design project effort. The course integrates and applies prior knowledge learned throughout the curriculum.

Prerequisite: EET 480

Writing Across the Curriculum

EET 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experience, practica or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
EET 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on
an individual basis and which fall outside the scope of formal courses.

EET 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively
narrow subject that may be topical or of special interest.

Electro-Mechanical Engineering
Technology (EMET)

EMET 100: Computation Tools for Engineering Synthesis
1 Credits/Maximum of 1

EMET 100 is a first semester course intended to introduce first-year
EMET students to a core set of computational tools and simulation
software that will be used repeatedly throughout the EMET curriculum to
investigate engineering/technical problems. The course is conducted in a
computer-based laboratory format to ensure that students gain hands-on
experience with the tools, learn the capabilities and limitations of each,
and come to understand the types of problems best handled by each tool.

EMET 215: Manufacturing Engineering
3 Credits/Maximum of 3

EMET 215 is intended to introduce the student, in both a lecture and
site visit setting, to production planning, and production routing for
the purpose of part creation and assembly, manufacturing process
and equipment layout required for an assembly of artifacts from raw
materials to shipping, including material handling. The course will
provide students with a thorough understanding of the manufacturing
processes and material handling necessary to formulate a facility layout for producing an assembly of artifacts. Additionally,
EMET 215 is intended to provide the student, in both a laboratory and
site visit setting, learn the skills necessary to design, manufacture, and
assemble a simple engineered product. The course will provide
the experience and interactions to give them the knowledge necessary to
develop basic hands-on skills for processing and assembly operations, 3D printing, operating and programming CNC machinery. Course activities
will be based upon equipment/resources available at each campus.
It is suggested that students observe manufacturing processing and
assembly operations during site visits to local companies, based on
availability.

Prerequisite: MET 105; or IET 101 COREQUISITE: EGT 114

EMET 222: Applied Mechanics
3 Credits/Maximum of 3

The purpose of this course is to give students the ability to calculate
engineering stresses, strains, and deflections in members subjected to
different types of loading using the applied forces and reactions obtained
from static equilibrium calculations. Various types of components are
analyzed such as rods subjected to axial loading, shafts subjected to
torsion, and beams of various cross-sectional geometries subjected
to bending moments. Additionally, members under combined loadings
are analyzed to determine principal stresses and maximum shear
stresses using stress transformation equations and Mohr¿s circle. For all
applications, free body diagrams will be used in order to relate external
and internal reactions.

Prerequisite: MCH 111; Concurrent: MATH 083 or MATH 140

EMET 225: Applied Dynamics
2 Credits/Maximum of 2

This course is designed to provide engineering technology students with
knowledge in solving problems using fundamental laws and equations
of motion that are applied to particles and rigid bodies. Dynamics is
typically broken into two categories: (1) kinematics (the study of motion
without considering the causes of the motion; and (2) kinetics (the study
of motion due to applied external forces). Topics addressed in dynamics
for technology include: kinematics of particles, application of Newton's
laws to particles and rigid bodies, energy and momentum of particles,
kinematics of rigid bodies, impact of particles and rigid bodies, and
energy and momentum for rigid bodies.

Prerequisite: MCHT 111; and ( MATH 83; or MATH 140)

EMET 230: Computerized I/O Systems
3 Credits

Introduction to concepts of structured programming, data acquisition,
computerized interfaces, and graphical user interfaces. EMET 230
Computerized I/O Systems (3) EMET 230 is designed to provide the
students with the knowledge of steps and issues to be addressed when
deciding on computerized input-output systems. Understanding the
basics property, classification and types of signals, significant figures,
rounding off, etc. Steps in choosing hardware and understanding the
principles used in the software design to develop friendly user interfaces.

Concurrent: EET 212W

EMET 325: Electric Drives
3 Credits

Study of operation, application and specification of AC/DC electrical
drive motors, servos, actuators, control units and power converters.
EMET 325 Electric Drives (3)EMET 325 provides students with a basic
understanding of the operation, capabilities, limitations, and selection
of electrical drive devices and drive controls typically found in industrial
manufacturing and production systems. The course provides background
on the basic operating characteristics of variety of drive devices, both
AC and DC; however, the emphasis is on the practical limitations and
typical application of these devices. Particular emphasis will be given
to concepts and topics important to the selection, implementation and
operation of electrical drives in common industrial applications. Lectures
will be supported by classroom demonstrations of setup, connection,
and operating characteristics of devices covered in lectures. These
demonstrations will emphasize typical uses of the devices studied.

Prerequisite: EET 212W

EMET 326: Mechanical Drives
3 Credits

Transmission of force and motion using linkages, cams, gears, belts,
and hydraulic and pneumatic drives. EMET 326 Mechanical Drives
EMET 326 is designed to provide the students with the knowledge of various mechanical drives used in engineering. The course introduces the concepts displacement, velocity, and acceleration analysis of linkages, cams, gears, and belts. Instructor may employ purely geometric methods or combine it with vector approaches. Differential and integral calculus for some of the topics and may considering using techniques of optimizations for mechanism synthesis. Static and dynamic force analysis of linkages is studied.

**Prerequisite:** EMET 322 or EMET 222

**EMET 330: Measurement Theory and Instrumentation**

3 Credits

Fundamentals of measuring, transmitting, and recording temperature, pressure, flow, force, displacement, and velocity; laboratory component emphasizes systems used in manufacturing. EMET 330 Measurement Theory and Instrumentation

(3) The purpose of EMET 330 is to familiarize students with the measurement and instrumentation systems typically used in automated manufacturing and automated process industries. The primary focus of the EMET degree program is the technology of automated control, and measurement and instrumentation systems are essential elements in the control of any industrial or manufacturing process. This course is designed to cover those topics in process measurement, data monitoring, signal conditioning, and data acquisition that are typical in such control systems. The majority of industrial instrumentation systems involve measurement of position, displacement, velocity, force, flow, pressure, or temperature. EMET 330 will cover the common techniques used to make these types of measurements. Measurement systems also require signal conditioning and amplification to convert primary sensor signals into practical analogs that can be used in electronic controls. EMET 330 will also cover fundamentals of signal conditioning and amplification, including analog and digital data acquisition techniques, D-to-A and A-to-D conversion methods and equipment, and fundamentals of automated data acquisition and instrumentation-computer interfacing. Finally, accurate application of any measurement requires an understanding and proper application of basic statistical methods of data reduction. EMET 330 will include coverage of these topics as well. EMET 330 is also a lab-based course. Thus, students in the course will be required to conduct lab exercises in which they actually use industrial-quality sensors, transmitters, signal conditioning equipment, and data acquisition systems to gain experience with how these devices actually perform.

**Prerequisite:** EMET 230 ; Prerequisite or concurrent: MATH 211 or MATH 250

**EMET 350: Quality Control, Inspection, and Design**

3 Credits

Fundamentals of quality including statistics, probability, and design of experiments. EMET 350 Quality Control, Inspection, and Design

(3) The purpose of EMET 350 is to familiarize students with the use of statistical methods to measure, describe, and control the quality of products and processes. This will be done by teaching students the statistical and probabilistic methods that are applied to quality monitoring and quality control; the typical methods used to monitor, describe, and control quality; and the accepted methods for designing effective statistical experiments to characterize quality. Specific topics that will be covered include: ◆ Basic statistical concepts, measures, and tools ◆ Basic concepts of continuous and discrete probability, probability distributions, populations, and samples ◆ Standard sampling methods ◆ Data presentation tools, including histograms, frequency charts, stem-leaf plots, Pareto charts, etc. ◆ Control charting tools and methods as applied to both variables and attributes, including x-bar/R charts, x-bar/s charts, median/R charts, trend charts, charts of non-conformities or nonconforming items, etc. ◆ Standard measures of process capability ◆ Acceptance sampling techniques, methods, and tools ◆ Concepts of gage control ◆ Methods and tools for design of statistical experiments. The course will also introduce students to standard computer tools for statistical and quality control computations.

**EMET 394: EMET Student Design Competition**

1-3 Credits/Maximum of 3

Students collaborate on research and design of appropriate solutions to real-life problems and projects.

**Prerequisite:** junior-level standing

**EMET 395: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

**EMET 396: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**EMET 397: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**EMET 402: Fundamentals of Engineering Review**

2 Credits

Overview of the topics covered on the Fundamentals of Engineering Exam administered by the NCEES for the purpose of earning a Professional Engineering license. EMET 402 Fundamentals of Engineering Review

(2) EMET 402 Fundamentals of Engineering Review is intended to provide students with an overview of topics covered on the morning portion of the Fundamentals of Engineering Exam. Passage of the exam, administered twice per year by the National Council for Examiners for Engineering and Surveying (NCEES), is the first step toward Professional Engineering licensure. Since students have already taken courses that cover all of the subject areas, this course merely serves as a review of these topics in order to help the student prepare for the exam.

**Prerequisite:** seventh semester standing

**EMET 403: Electromechanical Design Project Preparation**

1 Credits

This course involves the planning and preliminary design activities for the capstone electro-mechanical design project. EMET 403 Electromechanical Design Project Preparation
Electromechanical Design Project Preparation, involves the planning and development of a design plan for a project to be completed in the capstone electro-mechanical project design course, EMET 440, which is required for all Electro-Mechanical Engineering Technology baccalaureate degree students. Both EMET 403 and EMET 440 require formal report writing, project documentation, and group presentations. In EMET 403, students will present design plans to a faculty panel for review and approval. In this planning and design development process, students will be required to follow a rigorous design methodology. To support the process, EMET 403 will include instruction in the use of project management software, and students will undergo the typical process of periodic design reviews and critiques as their plans evolve. Finally, EMET 403 is a team-based course. All project designs will be prepared by teams of two or more students. Generally, these same teams will be maintained through actual completion of the project in the following project design course, EMET 440. Because of this linkage of EMET 403 and EMET 440, both in design plans and team structure, it is essential that students schedule EMET 403 in the semester immediately prior to the semester in which they will register for EMET 440.

Prerequisite: seventh semester standing

EMET 405: Fluid Mechanics and Heat Transfer
3 Credits

Introduction to the principles of fluid mechanics and heat transfer with emphasis on the application to practical problems. EMET 405 Fluid Mechanics & Heat Transfer (3) This course is designed to provide students with knowledge in fluid statics, fluid dynamics, and heat transfer. The emphasis of the course is to introduce them to the fundamental laws and principles of these engineering sciences, and to give them experience in solving problems using these laws and principles. The instructor may employ methods of differential and integral calculus as a part of selected topics. The fluid mechanics portion of the course introduces the students to fluid statics (e.g. hydrostatic pressure on submerged surfaces) and to fluid dynamics (e.g. continuity equation, energy equation, and laminar and turbulent flow). The heat transfer portion of the course introduces the three modes heat transfer: conduction, convection and radiation. It also covers an important type of heat transfer equipment, the heat exchanger.

Prerequisite: EMET 326 and MATH 211 or MATH 250

EMET 410: Automated Control Systems
4 Credits

Introduction to analog feedback control theory and computer simulation and analysis using Matlab; laboratory study of feedback systems. EMET 410 Automated Control Systems (4) Automated Control Systems is a required course for senior-level students in the Electro-Mechanical Engineering Technology (EMET) baccalaureate degree program. The main goal of the course is to teach students the concepts of automated control by coupling theory, industrial practices, and appropriate laboratory activities. The course demonstrates that physical processes can be represented by differential equations and hence, Laplace transforms. It teaches students how to measure and modify a system's performance in a variety of ways as well as how to make use of time-domain techniques, root locus and Bode plots. Improving student communication skills is also a goal of this course. The specific EMET program outcomes addressed by the course are: OUTCOME 1: * Students will readily recognize the availability of and be able to apply electrical, fluid and mechanical analogues for use in system models. * In laboratory exercises, students will correctly design and test control systems as applied to integrated electrical and mechanical systems. OUTCOME 2: * Students will develop linear, constant coefficient, ordinary differential equations from electromechanical system models, and solve them using Laplace transform techniques. OUTCOME 6: * Students will correctly analyze and design analog control systems to meet performance requirements by using computer tools to perform root locus, frequency domain, and time domain analysis and design. OUTCOME 8: * Students will correctly design and test analog control systems, including proportional, integral and derivative (PID) feedback control and other compensators in laboratory exercises. This includes tuning PID controllers.

Prerequisite: MATH 211 or MATH 250 ; Prerequisite or concurrent: EMET 330; Concurrent: EMET 330

EMET 430: Programmable Logic Controls II
3 Credits

A second course in PLCs covering sequencing/shift instructions, program flow control, data and math instructions, PID loops, and machine communication. EMET 430 Programmable Logic Controls II (3) The objective of EMET 430 - Programmable Logic Controls (PLC) II course is to give students an in-depth understanding of the advanced control, programming, I/O, communications, and distributed processing capabilities of modern PLCs. The objective is achieved through coordinated lecture and laboratory activities. Lectures cover theoretical and operational concepts; laboratory exercises will require students to apply lecture concepts to actual control problems using real equipment. EMET 430 is a senior-level elective in the Electro-Mechanical Engineering Technology program. It is intended for those students who want to expand their PLC knowledge beyond the basics covered in required courses in the EMET curriculum. Students must have prior knowledge of basic PLC capabilities, ladder logic programming, and general methods of interfacing PLCs with external devices. This background is typically obtained via the EE T 220 - Programmable Logic Controls (or equivalent) course. By building on prior concepts of ladder logic and simple relay/contactor style programming, EMET 430 can focus on the applications, programming, and use of specialty I/O modules and advanced control technologies available in state-of-the-art PLCs. The following major topical areas will generally be covered: ◆ advanced programming instructions related to program flow control, data manipulation, mathematical computations, and timing/sequencing functions; ◆ use of specialty processor and I/O modules (viz., analog current and voltage I/O, digital I/O, thermocouple and RTD interface devices, specialized motor controls, etc.); ◆ advanced technology that adapts PID capabilities to PLC systems permitting them to be used when circumstances require dynamic, closed-loop feedback control; and ◆ standard installation and safety practices for PLC installations. Programming tasks in the course will be carried out using modern operator interface equipment and software to ensure that students understand the capabilities and limitations of those systems. The course will also examine the capabilities, flexibility, and limitations of computer-linked, distributed PLC systems, including study of the communication technologies and systems currently used by industry. Generally, a capstone student project will be used to tie all these concepts together and to give students direct, hands-on experience with actually setting up and operating a PLC-based control system. Performance in the lecture portion of the course will typically be evaluated by a combination of major exams, short quizzes, and out-of-class problem and programming assignments. Performance in the laboratory will typically be evaluated based on a series of both formal and
informal lab reports documenting programming solutions to assigned control problems.

**Prerequisite:** EET 220 or EET 275

EMET 432: Electromechanical Devices for Biomedical Instrumentation

3 Credits

A study of electromechanical devices, transducers, and instrumentation used in the biomedical field. EMET 432 Electromechanical Devices for Biomedical Instrumentation (3) This course concentrates on electromechanical devices and equipment (used in a hospital setting) that involve determining information about a patient’s health or controlling treatment. Basic components of such equipment include transducers that convert physiological events to electrical signals, imaging devices such as charge coupled arrays, electronic control systems, and mechanical systems such as pumps. The design and use of such equipment will be demonstrated. Upon completion of this course, the student should be able to: describe basic human physiology and systems; explain how various biomedical instrumentation functions and how biomedical measurements are made; explain how a variety of biomedical transducers work and how they are interfaced to biomedical equipment; describe various physiological signals such as ECG and EEG; perform various mechanical and electrical calculations that are used in biomedical instrumentation; complete and explain a block diagram for the design process of biomedical instrumentation; design electronic amplifier circuits used in biomedical instrumentation; explain how various regulatory agencies such as the FDA, FCC, IEC, and UL are involved in the regulation of biomedical equipment. This course is a 400 level technical elective course in the EMET program. Students will use their knowledge in math, science, and physics to understand biomedical instrumentation and devices and systems. This course will apply previous knowledge in measurement theory and instrumentation to various devices and measurements in the biomedical field. In addition, this course will look at total systems for biomedical instrumentation, including transducers, data acquisition, analysis and feedback. System design that includes both digital and analog circuits will be covered in detail. The type of required equipment that should be demonstrated and explained should include: electrodes, sensors, cardiovascular measurement devices such as EKG equipment, respiratory therapy equipment, and ultrasound equipment. In addition, a study of the electrical, mechanical, and system schematics should be included. A hospital demonstration tour should be included for larger radiological equipment. Students’ academic achievement will be evaluated using exams, quizzes, term paper and/or research project.

**Prerequisite:** EMET 330; PHYS 151, or PHYS 212, or PHYS 251, or equivalent

EMET 440: Electro-Mechanical Project Design

3 Credits

Planning, development, and implementation of electro-mechanical design project; includes formal report writing, project documentation, group presentations, project demonstrations. EMET 440 Electro-Mechanical Project Design (3) Electro-Mechanical Project Design is to provide students with theoretical and practical experience associated with the integration of the various disciplines within the field of electromechanical engineering technology. Students working in teams will employ previously developed and approved design plans to construct, demonstrate, and document an integrated, electromechanical system. Plans for designs will come from the results of the project design preparation course, EMET 403, conducted in the immediately preceding semester. Thus students in EMET 440 are expected to have participated in the design development process that occurred in that same offering of EMET 403. Projects will be required to use a variety of electromechanical equipment, including such items as robots, machine vision systems, programmable logic controllers, personal computers, electric motors, CNC equipment, etc. Appropriate project documentation exercises, project presentations, progress reporting, budgeting and scheduling, system performance to specifications, and development of final design reports will be required elements of the course.

**Prerequisite:** EMET 325, EMET 326, EMET 410, EMET 403

EMET 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

EMET 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EMET 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Elementary Education in Multicultural Settings (ELED)

ELED 395: **SPECIAL TOPICS**

2 Credits/Maximum of 6

**Prerequisite:** C I 295, EDPSY 014, EDTH P 115; Concurrent: SPLED 444, ELED M 400, ELED M 401 A, or ELED M 402

Writing Across the Curriculum

ELED M 400: Schools, Families and Communities

3 Credits

Cultural and ethnic dimensions of family-school-community communications and the resultant impact on student-teacher relations. ELED M 400 Schools, Families and Communities (3) This course examines the cultural and ethnic dimensions of multicultural schools, families, and communities. It examines some of the contextual challenges of multicultural schools in several communities and their impact upon students and teachers. In response to these challenges, the course explores specific strategies for making classrooms responsive to diverse learners. Thus, the course is designed to help prospective teachers begin to formulate a comprehensive understanding of the challenges facing diverse learners and develop knowledge-based responses to those challenges that promote success for the learners. A major emphasis of the course is upon the strengths of diverse learners and the school’s responsibility for building upon those strengths in order to enhance student learning. This course also emphasizes the
importance of families, schools, and communities working together to support students' development. It is expected that this course will help prospective teachers develop understandings, skills, and positive attitudes that will enable them to work successfully with diverse learners in the elementary grades. This course requires extensive reading, in-class discussion, writing, research, and weekly field experiences. The latter provides opportunities to observe and interview teachers and work closely with small groups of students. Readings may include chapters from texts, scholarly articles, and materials from appropriate web sites. After readings, analysis and discussion, students will conduct a final research project that includes a research paper and an oral presentation. The purpose of the project is to provide a description and analysis of a multicultural community. The paper must include a detailed history of the community, a description of the community today, major changes that have taken place and their impact upon the quality of life for its residents. This project provides students an opportunity to discover first hand the nexus between schools and communities. Students must present their research in class during the last week of the semester. Because of the interactive nature of the class, active participation is expected. As the first required major course in the Elementary Education in Multicultural Settings (ELEDM) program, it contributes to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners. This course is offered fall semester only at the Delaware Campus. Because of the weekly field experiences, the interactive nature of the class, and the need to provide students with detailed feedback on their assignments, class size should not exceed 20-25. Student performance will be assessed by objective midterm and final examinations; projects showing extensions and applications; student participation in class; and practicum assessment (concurrent).

**Prerequisite:** ELEDM400; Concurrent: ELEDM395W, ELEDM401B, ELEDM401C

**ELEDM 401A: Teaching Reading in Multicultural Elementary Schools**

3 Credits

An exploration of current research, practices, strategies, and materials in the development of reading skills in multicultural schools. ELEDM 401A Teaching Reading in Multicultural Elementary Schools (3) This course provides an exploration of current research, practices, strategies and materials in the development of reading skills in multicultural elementary schools. The development of literacy skills is fundamental to learning at the elementary school level. Thus, it is critical that prospective teachers develop the knowledge, skills, and attitudes that foster the development of successful strategies for teaching reading skills. Among the topics explored in the course are: principles of reading instruction, balanced literacy instruction, word identification strategies, directed reading activities, comprehension strategies, guided reading, language experience activities, and literature-based reading programs. Particular emphasis is given to cultural and linguistic diversity, learning differences/special needs/gifted. A major requirement of the course is the development of lesson plans for teaching reading. Lesson plans must incorporate state literacy standards. Students are expected to implement some of their reading plans during their weekly field experiences and receive feedback from their mentor teacher as well as their university supervisor. It is the combination of intensive coursework and concurrent field experiences that enable prospective teachers to acquire some of the knowledge, skills, and attitudes needed to successfully teach diverse learners. This course is part of a three-course literacy focused program of study ELEDM 401A, TEACHING READING, ELEDM 401B TEACHING LANGUAGE ARTS, and ELEDM 401C CHILDREN'S LITERATURE. Each of these courses is taken during the spring semester of the junior year along with the field experience course. They contribute to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners. The objectives of ELEDM 400, 401A, 401B, 401C, 402, and 403 are consistent in that each course develops understandings, skills, and positive attitudes toward the multicultural/urban/multilingual learner. From the research literature on theoretical and pedagogical orientations, ELEDM students acquire a theoretical appreciation of a research base, unique to each of the ELEDM courses, that permits knowledge-based responses to special contextual problems. In addition, processes inherent in multicultural schooling, committees, and related institutions highlight the impacts of these orientations on multicultural learners. Finally, the courses identify the implications of these orientations for schools, families, programs, staff development, the assessment of children, and the reporting of assessment results. Because of the weekly field experiences, the interactive nature of the class, and the need to provide students with detailed feedback on their assignments, class size should not exceed 20-25. This course is offered during the spring semester. Student performance will be assessed by objective midterm and final examination; projects showing extensions and applications; student participation in class; and practicum assessment (concurrent).

**Prerequisite:** ELEDM400; Concurrent: ELEDM395W, ELEDM401B, ELEDM401C

**ELEDM 401B: Teaching Language Arts in Multicultural Elementary Schools**

3 Credits

An exploration of current research, practices, strategies, and materials in the development of language arts skills in multicultural schools. ELEDM 401B Teaching Language Arts in Multicultural Elementary Schools (3) This course explores current research, practices, strategies, and materials in the development of language arts in multicultural schools. The course enables prospective teachers to apply research in literacy to the development of teaching methods in the language arts. The course emphasizes the principles, problems, materials, and techniques involved in teaching reading, writing, listening, and speaking in the elementary schools. Particular attention is given to the nature of literacy development and teaching language arts in multicultural schools. This course requires extensive reading, discussion, writing, research, and weekly field experiences. The latter provides opportunities to observe teachers and work closely with small groups of students on a variety of language arts activities. Readings may include chapters from texts, scholarly articles, and materials from appropriate web sites. After readings, analysis and discussion, students will conduct a final research project explaining how they will teach language arts. Their paper must summarize relevant research and ideas from the course and describe how they plan to teach listening, reading, speaking, and writing. Finally, students must describe a lesson they taught at their practicum site. Students are also expected to develop a thematic unit and present it in class. This course is part of a three-course literacy focused program of study ELEDM 401A, TEACHING READING, ELEDM 401B TEACHING LANGUAGE ARTS, and ELEDM 401C CHILDREN'S LITERATURE. Each of these courses is taken during the spring semester of the junior year along with the field experience course. They contribute to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners. The objectives of ELEDM 400, 401A, 401B, 401C, 402, and 403 are consistent in that each course develops understandings, skills, and positive attitudes toward the multicultural/urban/multilingual learner. From the research literature on theoretical and pedagogical orientations, ELEDM students acquire a theoretical
appreciation of a research base, unique to each of the ELEDM courses, that permits knowledge-based responses to special contextual problems. In addition, processes inherent in multicultural schooling, committees, and related institutions highlight the impacts of these orientations on multicultural learners. Finally, the courses identify the implications of these orientations for schools, families, programs, staff development, the assessment of children, and the reporting of assessment of results. Because of the weekly field experiences, the interactive nature of the class, and the need to provide students with detailed feedback on their assignments, class size should not exceed 20-25. This course is offered during the spring semester. Student performance will be assessed by objective midterm and final examination; projects showing extensions and applications; student participation in class; and practicum assessment (concurren).

Prerequisite: ELEDM 400; Concurrent: ELEDM 395W, ELEDM 401A, ELEDM 401C

ELEDM 401C: Teaching Children’s Literature in Multicultural Elementary Schools

3 Credits

Survey of children’s literature with an emphasis on multicultural literature and its application in multicultural elementary classrooms. ELEDM 401C Teaching Children’s Literature in Multicultural Elementary Schools (3) This course provides a survey of children’s literature with a particular emphasis upon multicultural literature and its application in elementary classrooms. This course enables prospective teachers to recognize books that appeal to children, analyze and evaluate children’s literature, use literature to affirm cultural diversity, develop greater sensitivity to biases and cultural assumptions in children’s books, and learn about significant authors, illustrators and trends in the field of children’s literature. Readings, class discussions, and weekly field experiences provide some of the major learning experiences of the course. In addition, students are expected to create book files consisting of five children’s books from each of six genre (i.e. picture books, poetry, fantasy, contemporary realistic fiction, and non-fiction). To improve their reading skills, students are required to perform a dramatic reading and tape themselves reading a children’s book. This course is part of a three-course literacy focused program of study: ELEDM 401A, TEACHING READING, ELEDM 401B TEACHING LANGUAGE ARTS, and ELEDM 401C CHILDREN’S LITERATURE. Each of these courses is taken during the spring semester of the junior year along with the field experience course. They contribute to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners. The objectives of ELEDM 400, 401A, 401B, 401C, 402, and 403 are consistent in that each course develops understandings, skills, and positive attitudes toward the multicultural/urban/multilingual learner. From the research literature on theoretical pedagogical orientations, ELEDM students acquire a theoretical appreciation of a research base, unique to each of the ELEDM courses, that permits knowledge-based responses to special contextual problems. In addition, processes inherent in multicultural schooling, committees, and related institutions highlight the impacts of these orientations on multicultural learners. Finally, the courses identify the implications of these orientations for schools, families, programs, staff development, the assessment of children, and the reporting of results. As a required course in the ELEDM program, this course contributes to the body of knowledge and the practicum courses designed for students interested in working with multicultural learners. This course complements other major courses in ELEDM program and does not duplicate other courses. This course is offered fall semester only. Because of the weekly field experiences, the interactive nature of the class, and the need to provide students with detailed feedback on their assignments, class size should not exceed 20-25. Student performance will be assessed by objective midterm and final examinations; projects showing extensions and applications; student participation in class; and practicum assessment (concurrent).

Prerequisite: A ED 303; MUSIC 241; ELEDM 400; Concurrent: ELEDM 395W

ELEDM 403: Using Science and Mathematics Knowledge and Assessment in Urban Settings

6 Credits

Knowledge, skills, and assessment pertaining to science and mathematics education in urban schools.
Energy and Geo-Environmental Engineering (EGEE)

EGEE 101: Energy and the Environment

3 Credits

Energy utilization and technological development, energy resources, conversion and consequences on the local and global environment, and future energy alternatives. EGEE (MATSC) 101 Energy and the Environment (3) (GN;IL)(BA) This course meets the Bachelor of Arts degree requirements. Energy is the life-blood of any society. The information and principles learnt in this course will allow the students to make sound judgments in the area of "personal energy choices." There is increasing concern about the influence of human activities, particularly energy use, on global climate change. This has an impact on global business aspects. Students in all walks of life need to be exposed to the basic concepts to appreciate the positions of policymakers, scientists, and industry over the interrelationship between greenhouse gas emissions and global climate change. The students will acquire knowledge, which will enable them to critically evaluate any energy-related concerns of the society. This is important for any college graduate for responsible citizenship and stewardship. The main objectives of this course are to: provide basic understanding and appreciation of energy and environmental concepts and interconnectedness; analyze energy consumption patterns; discuss various energy resources that power the modern society; examine the energy conversion processes; explore interrelationships between energy use and industrial progress and environmental consequences; discuss future energy alternatives.

Student performance will be evaluated continuously through homework assignments, exams, group activities, class participation and a final examination. Position papers or term papers may be used in lieu of homework assignments in some sections. This course is a stand-alone General Education course. The course is currently offered in four sections every semester (Spring and Fall) with a total target enrollment of approximately 200-250 students per semester.

The students will acquire knowledge, which will enable them to critically evaluate any energy-related concerns of the society. This is important for any college graduate responsible citizenship and stewardship. The main objectives of this course are to: provide basic understanding and appreciation of energy and environmental concepts and interconnectedness; analyze energy consumption patterns; discuss various energy resources that power the modern society; examine the energy conversion processes; explore interrelationships between energy use and industrial progress and environmental consequences; discuss future energy alternatives.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Honors

EGEE 102: Energy Conservation for Environmental Protection

3 Credits

Exposure to energy efficiency in day-to-day life to save money and energy, and thereby protect the environment. EGEE 102/EGEE 102 Energy Conservation for Environmental Protection (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. Energy is a vital component of modern society. Much of the general population believes that the energy sources we depend on are perpetual. While people believe that the energy use is the culprit for environmental damage, they are not aware of the methods and principles by which energy conversion devices operate. This general education course provides students with necessary knowledge and information on the main operating principles of devices/apparatuses that are in common use and information on which to make the right decision in selecting the most energy efficient and economical choice. These devices are day-to-day appliances such as refrigerators, washers and dryers, ovens, etc., and home heating or cooling and transportation choices. The course also provides necessary information on heating furnaces, insulation, doors and windows, lighting, and air conditioning principles. The objective of the course is to expose students to energy efficiency in day to day life in order to save money and energy and thereby protect the environment. This education is very important for all college students to turn them into environmentally-responsible individuals of this Global Village. Students will be doing two energy related projects and one presentation in class. This honors course also requires two additional home activities compared to a regular course. This honors class is designed to be more discussion based.

EGEE 110: Safety Science for the Rest of Your Life

3 Credits

Survey of applications and technologies associated with safety in our everyday life with associated review of scientific principles and economic, social and political impacts. EGEE 110 Safety Science for the Rest of Your Life (3) (GN) Safety is an applied field with many aspects. It has engineering, science, psychology and management components. For an understanding of how humans interact with their working and living environment, one has to understand the basic sciences of physics, biology, chemistry, mathematics and psychology as well as some of the traditional engineering disciplines. This general education course is intended to provide students with a basic understanding of how these science and engineering principles are applied in a safety context to everyday life, products, hobbies, finances and human interaction. The material that will be discussed, presented, assigned, tested, etc. is the fundamental science and engineering principles behind each applied safety-related activity discussed. The history discussion will include bacteria exposure and ergonomic aspects (such as cumulative trauma, impact on the body of hot environments, long shifts, etc.) of meat packers, railroad workers and miners. It will include discussion of air pollution associated with industry's early development and toxicological effects of exposure to methyl iso-cyanate associated with Union Carbide's 1984
incident in Bhopal, India. Ventilation, water influx and collapse hazards associated with the mining industry (e.g., Quecreek) are discussed. The science of finding the right drill shaft location for air and rescue at Quecreek will be discussed. Economic coverage will include the societal costs of inadequate safety measures. The hazards and control sections will cover structural and impact resistant aspects of sports equipment and the biomechanics of sports injuries. The inner workings of smoke detectors, how fires progress through a home, fire extinguishers, quenching, smothering, combustion reaction interruption mechanisms of fire suppression will also be covered. In fleet safety, applied physics concepts such as friction, acceleration, momentum and force will be presented. Electrical concepts such as static generation, grounding, current flow, etc. will be covered in a safety context. Emergency response issues from catastrophic incidents (natural or purposeful attack) will be addressed and practiced. This course will be offered in the spring and fall semesters. Performance assessment will be through on-line quizzes, a short individual and a longer group analytical and reflective paper and a group presentation of the results of an outside deductive analysis activity.

General Education: Natural Sciences (GN)

EGEE 120: Oil: International Evolution

3 Credits

Survey of the commercial development of the world petroleum industry from various international, historical, business, and cultural perspectives. EGEE 120 Oil: International Evolution (3) (GS;US;IL) Oils is the world’s most important commodity. Access to oil was decisive in the great military struggles of the 20th century. The economic and strategic value of oil has led to the evolution of a fascinating array of business, political, and strategic alliances around the world. The objective of this course is to describe this evolution and the technological, commercial, and political innovations shaping its current face. This knowledge is vital in achieving a more complete understanding of the role of oil in international affairs and economic development. The course begins with a discussion of the development of the American and European oil industries during the 19th century and the formation of the first great industrial oil monopolies. The emergence of oil as a strategic commodity prior to and during World War I will then be discussed. The economic and technological reasons for the recurring boom-bust cycles of oil markets and the political arrangements developed to cope with their effects is the third major topic of the course. The focus then shifts back to military affairs with a discussion of the role of oil in the battles of World War II. We then examine the social and cultural roots of the post-war dissolution of company ownership and the nationalization of oil reserves. Also in the policy arena, is a discussion of the policy response of western governments to a growing dependence upon low-cost oil from the Middle East, Africa, and South America. The analysis then focuses on the ideology and strategy behind the formation of the Organization of Petroleum Exporting Countries (OPEC) and the motivations and execution of their strategies to drive up oil prices during the 1970s and early 1980s. The last part of the course discusses the emergence of oil as a commodity traded in open commodity market exchanges, the development of reserves in deep water and in Africa, and the relationship between oil policy and the war on international terrorism. The course will be offered during the spring semester and will include a field trip to the Pennsylvania oil region. Evaluation and assessment of student performance will rely on grading on-line quizzes and assignments, team papers and presentations, and examinations.

International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)

EGEE 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EGEE 210: Technological Legacy of Pennsylvania Coal

3 Credits

Survey of coal technologies with a review of scientific principles and economic, social, and political impacts. EGEE 210 Technological Legacy of Pennsylvania Coal (3) (GN) Pennsylvania Coal, a natural resource, has touched many lives from past to present with profound influence on employment, economic growth, social and political relationships, culture, and the natural environment in the state. The heritage and legacy of Pennsylvania coal weave the story of the Industrial Revolution in the U.S., including technological, social, and environmental aspects. Coal continues to be an important natural resource for electricity generation and metallurgical coke production to manufacture iron and steel. In 2000, approximately 80 million tons of coal was mined in Pennsylvania, most of which was used to generate electricity (approximately 62% of total electricity generated in Pennsylvania). Development of new technologies addresses the challenges of preserving and protecting the environment while mining and burning large quantities of coal. Health and safety of U.S. coal miners have been improved significantly over the past century. However, the recent Quecreek Coal Mine incident in Somerset, Pennsylvania reminded that underground coal mining is still a dangerous profession. Many PSU students have personal links to the coal industry through family members who have been engaged in coal related careers over several generations. This course will provide an opportunity to study coal mining practices in Pennsylvania that their parents and previous generations experienced with a review of recent improvements in these practices. This course will survey the development of the science and technologies (utilizing a multi-disciplinary approach) of coal formation, coal mining, coal transportation, and coal utilization. The integrated EGEE 211 course will study the social and environmental aspects of coal technologies to focus on labor-management relationships, immigration, culture, and environmental pollution. EGEE 210 and EGEE 211 will be held in the same classroom to integrate natural science and social science education. This course will be offered during both fall and spring semesters and will include a field trip to the Pennsylvania anthracite region. There are no in-class exams. Evaluation and assessment of student performance will rely on grading minute papers, analytical and reflective essays, individual and team papers, on-line quizzes/ assignments, team presentations/discussions, and on-line learning portfolios.

General Education: Natural Sciences (GN)
EGEE 211: Social Legacy of Pennsylvania Coal

3 Credits

Survey of coal technologies with economic, social, and political impacts discussed with historical, cultural, and international perspectives. EGEE 211 Social Legacy of Pennsylvania Coal (3) (GS;US) Pennsylvania Coal, a natural resource, has touched many lives from past to present with profound influence on employment, economic growth, social and political relationships, culture, and the natural environment in the state. The heritage and legacy of Pennsylvania coal weave the story of the Industrial Revolution in the U.S., including technological, social, and environmental aspects. Coal continues to be an important natural resource for electricity generation and metallurgical coke production to manufacture iron and steel. In 2000, approximately 80 million tons of coal was mined in Pennsylvania, most of which was used to generate electricity (approximately 62% of total electricity generated in Pennsylvania). Development of new technologies addresses the challenges of preserving and protecting the environment while mining and burning large quantities of coal. Health and safety of U.S. coal miners have been improved significantly over the past century. However, the recent Quecreek Coal Mine incident in Somerset, Pennsylvania reminded that underground coal mining is still a dangerous profession. Many PSU students have personal links to the coal industry through family members who have been engaged in coal related careers over several generations. This course will provide an opportunity to study coal mining practices in Pennsylvania that their parents and previous generations experienced with a review of recent improvements in these practices. This course will survey the development of the science and technologies (utilizing a multi-disciplinary approach) of coal formation, coal mining, coal transportation, and coal utilization. The integrated EGEE 211 GS course will study the social and environmental aspects of coal technologies to focus on labor-management relationships, immigration, culture, and environmental pollution. EGEE 210 GN and EGEE 211 GS will be held in the same classroom to integrate natural science and social science education. This course will be offered at the University Park campus during both the Fall and Spring semesters and will include a field trip to the Pennsylvania anthracite region. There are no in-class exams. Evaluation and assessment of student performance will rely on grading minute papers, analytical and reflective essays, individual and team papers, on-line quizzes/assignments, team presentations/discussions, and on-line learning portfolios.

United States Cultures (US)
General Education: Social and Behavioral Scien (GS)

EGEE 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

EGEE 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EGEE 302: Principles of Energy Engineering

3 Credits

Basic engineering calculations and mathematical methodologies on material and energy balances and reaction rates during chemical transformations in energy systems. EGEE 302 Principles of Energy Engineering (3) This introductory energy engineering course enables students to identify and apply fundamental principles of chemistry and physics, as they pertain to energy and fuels, and mathematics to describe materials and energy flow through a process. Examples of the processes studied will include stoichiometry in combustion and other reactions and material flows with recycle streams. This course also enables students to describe the energy transformations in energy systems. The examples of the processes we would be applying energy conservation principles to include calculation of adiabatic flame temperature during combustion of fuels. In addition, the course will present an introduction to chemical kinetics with an overview of solid, liquid and gaseous fuel transformations. This is a required introductory course to the BS in Energy Engineering degree program. It will be a prerequisite to several of the 400 level energy engineering curriculum courses. Students will be evaluated based on homework, projects, class participation, and mid term and final exams.

Prerequisite: CHEM 112 and MATH 141

EGEE 304: Heat and Mass Transfer

3 Credits

Introduces the fundamentals of heat and mass transfer. Conduction, convection, radiation, and diffusion mass transfer will be emphasized. EGEE 304 Heat and Mass Transfer (3) This course will emphasize the modes of heat and mass transport in energy engineering systems. Students will know, understand, and solve heat transfer problems that involve conduction, convection, and radiation. The course will provide an integrated treatment of heat, mass and momentum transfer by convection and mass transfer by diffusion. Students will also learn and use software that will enable them to solve problems that involve exploratory, what-if, and parameter sensitivity considerations. The course will also assist students to understand the design and operation of different types of heat exchangers. This course also enables students to identify and describe the energy transformations in energy systems. The examples of the processes we would be applying energy conservation principles to include power plant, geothermal energy systems, and industrial reactors and combustors. This is an essential and required thermal science course in the BS in Energy Engineering degree program. Students will be evaluated based on homework, projects, class participation, and mid term and final exams.

Prerequisite: EME 301 and EGEE 302

EGEE 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

EGEE 401: Energy in a Changing World

3 Credits

Energy is in transition, with increased international energy demand and increasing environmental pressures. Energy transitions, approaches, and
outcomes are addressed. EGEE 401 Energy in a Changing World (3) The role of energy is increasingly important with increasing environmental constraints, transitioning energy policies, supply disruption, international pressure on climate change compliance and competition for energy. This course evaluates the existing energy infrastructure and energy/fuel use, both domestic and international, along with evolving technologies, implementation and challenges in meeting energy demands. The class provides a holistic view and serves all students interested in an energy or energy-related career. Students will understand the interrelationship between legislative, technology, environmental, and international factors associated with energy production, processing, distribution and utilization.

**Prerequisite:** EGEE 101 or EGEE 102 or CHEM 112

EGEE 411W: Energy Science and Engineering Lab

3 Credits

A comprehensive introduction to classic and modern laboratory skills and experimentation of relevance to energy science and engineering practice.

**Prerequisite:** F SC 401 or EGEE 302 or permission of program

EGEE 412: Green Engineering & Environmental Compliance

3 Credits

Material and energy flows as they relate to industrial systems, environmental concerns, pollution prevention, and the development of clean technologies. EGEE 412 Green Engineering & Environmental Compliance (3) The primary objective of EGEE 412 is to introduce students to how engineering and industrial decisions affect the environment and how clean technologies can reduce environmental impact. Students will also be exposed to global mass and energy flows from an environmental perspective that relate to both industrial and natural systems. Students will be exposed to environmental concepts, principles, and evaluation techniques within the framework of green engineering, pollution prevention, and environmental sustainability. The course is for students with a general science or engineering background. By examining mass and energy flows on the unit operation, plant-wide, local and regional scale, students will understand the interaction of anthropogenic flows with natural cycles of materials and energy. Students will understand how environmental concerns and regulations provide the motivation and incentive behind reducing pollution during the design phase rather than as an add-on; or &quot;end of pipe&quot; treatment technology. Students will evaluate plant flow sheets to identify engineering means by which to reduce plant-wide environmental impact.

**Prerequisite:** EGEE 302

EGEE 420: Hydrogen and Fuel Cells

3 Credits

Course will cover the fundamental principles of electrochemical engineering, hydrogen production and storage, and the design and application of the main types of fuel cells. EGEE 420 Hydrogen and Fuel Cells (3) The primary objective of the course is to help students understand the fundamental principles of electrochemistry, the production and storage of hydrogen from biomass and fossil fuels, and the design and operation of different types of fuel cells. Students will begin with electrochemistry and electrochemical engineering systems including fuel cells. The chemical and biochemical methods used for producing hydrogen for fuel cells applications and the current technologies available for hydrogen storage will follow next. Students are expected to be able to apply their knowledge and understanding in the analysis of fuel cell systems. Students are also expected to be able to distinguish between the design, operation, and advantages and disadvantages of the different types of fuel cells available. This is an elective course for the energy engineering major. It complements the required course on electrochemical energy conversion in the energy engineering curriculum.

**Prerequisite:** EME 301

EGEE 430: Introduction to Combustion

3 Credits

Concepts related to laminar and turbulent premixed and non-premixed combustion with applications to propulsion and stationary systems. EGEE (M E) 430 Introduction to Combustion (3) This course provides an introductory treatment of combustion science. The objectives of the course are to develop in the students an understanding of combustion kinetics, combustion thermochemistry, flame dynamics, flame stability, and pollutant formation. Coverage includes laminar and turbulent flames, premixed and diffusion flames, and detonations. Emphasis is placed on the role that Kinetics, heat transfer, mass transfer, and fluid dynamics have on flame structure and flame stability. The course includes some laboratory demonstrations of flat flame and diffusion flame burners, and incorporates numerical calculations of thermodynamic and kinetic combustion phenomena. The course begins with a review of transport phenomena, physical gas dynamics, and thermochemistry. Then, the concept of the laminar flame speed is introduced in the context of a one-dimensional flame and a propagating chemical wave. Issues of premixed flame structure and stability are presented along with a discussion of flammability limits. Next, laminar diffusion flames are presented via the Burke-Schumann analysis. From laminar flames, the emphasis shifts to turbulent premixed and diffusion flames, and the concepts of flame stretch and strain. Detonations are considered, with emphasis on thermodynamic analysis of the detonation and the structure of the detonation wave. Details of chemical kinetics for the hydrogen-oxygen and hydrocarbon-air reaction systems are presented, with linkage back to earlier topics such as flame stabilization and flammability limits. After kinetic phenomena, the course then considers pollutant formation focusing on soot and NOx. The fundamental aspects of combustion are applied to analysis of the combustion process and pollutant formation in international combustion engines and catalytic combustors. The course wraps up with discussion of atmospheric chemistry, the fate of pollutants, and the formation of secondary pollutants.

**Prerequisite:** M E 201 or M E 300 or EME 301

Cross-listed with: ME 430

EGEE 433: Physical Processes in Energy Engineering

3 Credits

Introduces fluid flow, heat transfer, phase equilibrium and mass transport phenomena in energy separation processes. EGEE 433 Physical Processes in Energy Engineering (3) The objective of the course is to expose students to the physical flow and separation processes that occur in energy engineering systems. Students will be exposed to gas, liquid and solid phase separation processes. The heat, mass and momentum phenomena involved will be discussed. In particular, phase equilibria and mass transfer in the behavior and performance of gas,
liquid and solid fuels will be emphasized. Students will be exposed in the class to the operation and design of absorption, adsorption, fluidization, size reduction, filtration, dissolution, entrainment, and heat exchange units. Students will understand the differences between chemical processes that involve chemical reactions and transformations and physical processes that involve mainly phase changes and separation. This is an elective course for the energy engineering major. It will be offered once per year in the spring semester with an estimated enrollment of 40. Assessment of student performance will be based on homework, student projects, mid-term exams, class participation, and final exam.

Prerequisite: EGEE 304 or concurrent

EGEE 436: Modern Thermodynamics for Energy Systems

3 Credits

Thermodynamics of external fields, theory of stability and fluctuations, irreversible and non-linear thermodynamics, and bifurcation theory and their applications in energy and environmental processes are discussed. EGEE 436 Modern Thermodynamics for Energy Systems (3) This course will be an advanced thermodynamics class that will expose students to the thermodynamics of irreversible processes and the thermodynamic analysis of dynamic systems. Students will learn to analyze the thermodynamics of conductivity, diffusion, gravitation, electrochemical systems, stability, fluctuations and critical phenomena. Students are expected to be able to understand and apply their knowledge to analyze problems involving fuel cells, membrane potential in electrolysis systems for hydrogen production, and other fuel and environmental processes. This is an elective course in the energy engineering major and will be offered once a year in the spring semester to about 40 students. Student performance will be evaluated based on homework, mid term exams, class participation, project, and final exams.

Prerequisite: EME 301, EGEE 302, MATH 231, and MATH 251

EGEE 437: Design of Solar Energy Conversion Systems

3 Credits

A review of fundamental concepts in solar energy conversion including photovoltaic (PV) and solar thermal conversion systems. EGEE 437 Design of Solar Energy Conversion Systems (3) The course examines the principles of solar energy conversion to build a foundation for explaining the basic concepts and implementation of conversion processes. It reviews the properties and availability of solar radiation and geometric relationship of sun/collector, principles of photovoltaic conversion and properties of materials used in PV systems, designing PV systems, procedures for solar thermal engineering calculations, and thermal power plants for electricity generation. This course will complement the existing courses on fossil fuels and other renewable energy sources. Students will be engaged to actively participate in learning through team projects, semester papers, class presentations, and field trips.

Prerequisite: EGEE 304, or permission of program

EGEE 438: Wind and Hydropower Energy Conversion

3 Credits

Principles of sustainability and renewable energy conversion with emphasis on wind and hydrokinetic energy resources. EGEE 438 Wind and Hydropower Energy Conversion (3) This course examines the principles of sustainability and renewable energy conversion with emphasis on wind and hydrokinetic energy resources. Concentration is placed on the relationships between the renewable resources, conversion technology and economic feasibility along with consideration of the associated risks and environmental impacts. It will complement existing energy engineering courses on fossil fuel and solar energy conversion. Students will actively participate in learning through team projects, semester papers, class presentations, and field trips. This is a required course in the energy engineering major. The course will be offered every spring with an expected enrollment of 60 students.

Prerequisite: EGEE 302, EME 303

EGEE 439: Alternative Fuels from Biomass Sources

3 Credits/Maximum of 3

This course will examine the chemistry of technologies of bio-based sources for power generation and transportation fuels.

Prerequisite: general chemistry CHEM 110

EGEE 441: Electrochemical Engineering Fundamentals

3 Credits

Course covers fundamental principles of electrochemistry, including electrochemical thermodynamics, kinetics, catalysis, and corrosion and focuses on applications such as fuel cells, batteries, and photovoltaics. Each application covers: principles of method, criteria determining performance, present state of development, and advantages/disadvantages. Laboratory demonstration of the performance (current-voltage) measurements of an electrochemical converter is scheduled in this course. EGEE 441 Electrochemical Engineering Fundamentals (3) The course will cover the fundamental principles of electrochemistry, including electrochemical thermodynamics, kinetics, catalysis, and corrosion. Students will be exposed to the application of these principles in fuel cells, batteries, and photovoltaics. Students will be able to perform efficiency analysis in these systems. They will also be able to understand the differences between types of fuel cells and distinguish between electrochemical and chemical energy systems. For each of the above application areas students will learn the criteria used to determine their performance, their current state of development, and their advantages/disadvantages. Laboratory demonstration will help to enhance student knowledge and understanding. Student performance will be evaluated through problem sets, quizzes, midterm, project papers, class participation, and final examination. This is a required course in the energy engineering major.

Prerequisite: EME 301 and EME 303 or CH E 220 and CH E 330 or M E 300 and M E 320, or MATSE401 and MATSE402

EGEE 442: Electrochemical Methods

3 Credits

This course is for senior undergraduates, graduate students and professionals to learn electrochemical techniques and data analysis. EGEE 442 Electrochemical Methods (3) This course is (1) for undergraduate and graduate students in engineering who have already knowledge of electrochemical engineering/electrochemistry fundamentals but would like to understand how the electrochemical techniques can be used, and (2) for professionals who would like to be trained in electrochemical methods and learn how to correctly treat the obtained data.
Prerequisite: EGEE 441

EGEE 451: Energy Conversion Processes

3 Credits

Emphasizes processes for conversion of fossil fuels, nuclear and biomass to other fuel forms as transportation fuels and electricity. EGEE 451 Energy Conversion Processes (3) The primary objective of this course is to expose students to the principles of chemical and nuclear reactions that underlie most major energy conversion processes, particularly with reference to the conversion of energy resources such as fossil and nuclear energy to fuels and electric power. The emphasis of the first major unit of the course is on fundamental reaction chemistry including nuclear. The second objective is to connect chemical and nuclear principles to practical energy conversion processes by an analysis of case studies used as examples of such processes as ethanol via fermentation, biodiesel via transesterification, formation of light liquids by pyrolysis, coal gasification and Fischer-Tropsch synthesis, direct coal liquefaction, fissionable and fertile isotopes chain reactions, breeding cycles and reactors, and electric power from nuclear reactions. This is a required course for the energy engineering major and will be offered in fall semester with an enrollment of about 50. Student performance will be assessed through weekly homework, mid-term tests, student projects and final exam.

Prerequisite: F SC 431

EGEE 455: Materials for Energy Applications

3 Credits

Overview of key principles and technologies for materials relevant to energy applications, including membranes, catalysis, supercapacitors, adsorbents, and semi-conductors. EGEE 455 Materials for Energy Applications (3) The primary objective of this course is to introduce engineers and scientists to key principles in the design of materials relevant to energy applications. Application areas will include separations, catalysis, adsorption, semi-conductors, and photovoltaics. Students will be able to understand and apply principles in solid state chemistry/physics, material science and engineering, adsorption, surface science, and catalysis in analyzing materials for energy applications. Introductory information will be followed by case studies, state of the art review of current materials, and research needs for development. Students will be evaluated on their ability to understand and apply basic concepts in material science, solid state chemistry, and surface chemistry; report on an in depth study of one surface characterization technique; perform literature search and understand basic technical concepts in one application area. Term projects will provide an opportunity to apply concepts and skills to real world applications, and require students to report on current ‘state of the art’ technology and research needs. Groups of three or four students will be asked to choose from a variety of applications and then asked to present their findings. This is an elective course for energy engineering majors with particular interest in materials for energy applications.

Prerequisite: EGEE 302, MATSE201

EGEE 456: Introduction to Neural Networks

3 Credits

Artificial Neural Networks as a solving tool for difficult problems for which conventional methods are not applicable. E E (E SC/EGEE) 456 Introduction to Neural Networks (3) This course is in response to students needs to learn Artificial Neural Networks (ANN) as a solving tool for difficult problems for which conventional methods are not available. The objective of this course is to give students hands-on experiences in identifying the best types of ANN, plus developing and applying ANN to solve difficult problems. Students will be introduced to a variety of ANN and will use their training skills to solve their own applications. During this course the students will develop a final project, in which they will apply ANN to widely varied problems. Examples: I) students from E E may be interested in applying ANN to solve control problems; II) students from Material Sciences may be interested in applying ANN to predict the pitting corrosion of components; III) students from Petroleum Engineering may be interested in applying ANN to characterize the life of a reservoir; IV) students from Agricultural Engineering may be interested in applying ANN to sort apples automatically, etc.

Prerequisite: CMPSC201 or CMPSC202; MATH 220 Cross-listed with: EE 456, ESC 456

EGEE 464: Energy Design Project

3 Credits

A team and capstone design project on an industrial energy-related problem.

Prerequisite: seventh-semester standing in energy engineering or chemical engineering, ENGL 202C Writing Across the Curriculum

EGEE 470: Air Pollutants from Combustion Sources

3 Credits

Generation of pollutants in combustion chambers; reduction by combustion control; pre- and post-combustion treatment of fuels and effluents.

Prerequisite: EME 301

EGEE 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EGEE 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

EGEE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EGEE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
EGEE 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

Energy and Mineral Engineering (EME)

EME 301: Thermodynamics in Energy and Mineral Engineering
3 Credits
Treatment of classical thermodynamics targeted to the needs of students in the Department of Energy and Mineral Engineering.
Prerequisite: CHEM 112 and PHYS 212; MATH 250 or MATH 251

EME 303: Fluid Mechanics in Energy and Mineral Engineering
3 Credits
Treatment of fluid mechanics targeted to the needs of students in the Department of EME.
Prerequisite: MATH 250 or MATH 251 and PHYS 211

EME 407: Electrochemical Energy Storage
3 Credits
Electrochemical concepts in energy storage devices, cell construction and materials involved in batteries and capacitors, electrochemical testing methods and applications.
Prerequisite: EME 301 or M E 300 or CH E 220 and EME 303 or M E 320 or CH E 330 or their equivalent

EME 432: Energy Policy
3 Credits
Analysis, formulation, implementation, and impacts of energy-related policies, regulations, and initiatives.
Prerequisite: E B F200, EGEE 120, PL SC490
Cross-listed with: GEOG 432

EME 444: Global Energy Enterprise
3 Credits
Industry perspective on the resources, technologies, engineering approaches and externalities involved in satisfying worldwide energy demand profitably and sustainably.
Prerequisite: ECON 102 and MATH 022 or equivalent

EBF 200: Introduction to Energy and Earth Sciences Economics
3 Credits
Resource use decisions and their effect on local, national, and global development. EBF 200 Introduction to Energy and Earth Sciences Economics (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. Facing the challenge of ever-increasing demand for energy, and limited energy resources to meet those demands, will be one of the great problems/opportunities of the 21st century. This class will help students understand and discuss the current event items you hear about every day, and help to prepare many of you to work to address this challenge. This class introduces the economic method of analysis to the environmental and resource questions facing society. It introduces a "paradigm," a way of thinking, that has four elements: What advantages can be gained by using market forces? What are the drawbacks of the market ("market failures") that may lead to a rationale for government intervention? What are the drawbacks of using government intervention ("government failure")? How do you apply these three concepts to real-world situations? Examples are drawn from both the United States economy and from the worldwide community. Both analytical and quantitative methods are used to understand the environmental and resource challenges faced by modern society.
Prerequisite: ECON 102 and MATH 022 or equivalent
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

EBF 301: Global Finance for the Earth, Energy, and Materials Industries
3 Credits
The aim of this course is to introduce fundamental concepts of financial management and illustrate their global applications.

EBF 304: Global Management for the Earth, Energy, and Materials Industries
3 Credits
This class is designed to introduce students to modern management and organization strategies for resource businesses.
Prerequisite: E B F200
Writing Across the Curriculum
EBF 306W: Energy Land Contracts

3 Credits

In almost every country in the world, governments own the mineral resources under the ground. The United States is the exception to this rule. In the U.S. landowners are free to extract value resources beneath the soil. In addition, the "rule of capture" applies, so landowners do not have to worry about where particular resources that they have extracted were located originally. This combination of property rights and the legal rule of capture as led the creation of the field of energy land law in the U.S. For petroleum and natural gas firms, especially in Pennsylvania, understanding these legal rules and what they imply are crucial to the success of drilling operations. This course addresses three areas of energy land law. In the first, using the law and economics approach, it examines the economics of energy land law contracts. It first examines the rule of capture and the challenges to that rule in Pennsylvania law. It then focuses specifically on the use of contracts to protect the sunk costs inherent in investment in energy production. The second part of the course addresses the negotiation questions that are imbedded in energy land law. Students are taught the fundamentals of negotiation through classroom simulations that model energy negotiation challenges. Classroom simulations include negotiations dealing with common pool problems, acquiring energy leases, and recontracting among production companies. The third part of the class examines the ethical issues related to energy land contracts. These problems are generally addressed to questions of who owns pieces of information and who has the authority to release that information. Students are also taught the importance of establishing a strong reputation for honesty for themselves. The writing component of this class requires students to compose essays on a series of classroom experiment that are designed to replicate challenges in the area of energy land contracts. Students will be required to write essays that show that they understand the underlying economics of the various challenges in negotiating these contracts. In the course final project, students will be required to create and describe their own classroom experiment.

Prerequisites: BLAW 243; BA 242
Writing Across the Curriculum

EBF 401: Strategic Corporate Finance for the Earth, Energy, and Materials Industries

3 Credits

The objective of this course is to give students a working knowledge of the major tools used by financial managers for making investment and financing decisions. Topics include, but are not limited to: time value of money, trade-off between risk and expected return, Capital Asset Pricing Model, valuation and role of debt and equity, capital budgeting/project evaluation techniques, cost of capital, cash flow estimation, real and financial options, company valuation, and capital structure decisions. As an illustration of the theory, we will discuss examples and cases, with a focus on the energy industry. Students will learn the fundamentals of capital budgeting and structure analysis; how capital structure decisions affect the value of the firm; and how to develop financial statements for energy projects.

Prerequisite: E B F 200 and E B F 301 and EME 460; E B F 472 or STAT 200 or STAT 301 or STAT 401 (Junior or Senior standing)

EBF 402: Energy Law and Contracts

3 Credits

An examination of the law that applies to acquiring the property rights for exploration and drilling of energy sources. E B F 402 Energy Law and Contracts (3) This course examines the area of energy law and contracts, which is crucial to successful drilling in natural gas and oil properties. The course begins with a description of ownership and rights in the mineral estate, and how those rights have evolved over time. Students will be instructed in the how different types of land affect legal rights, and the details of the law of capture. They will also review the Statute of Frauds and examine how it applies to land drilling contracts. The second part of the course presents the basic tenets of real estate law, examining the seminal cases in this area. It will review the standard oil and gas lease used in the United States. Issues reviewed will include the nature of lease clauses and implied covenants, as well as farmout and joint operating agreements. It will also examine how royalty payments can be structured. Environmental regulation is a critical component of energy exploration. To address this topic, students will be introduced to the regulatory process. They will study regulatory compliance and how to deal with government officials. They will also be instructed in corporate liability for property clean up and pollution, and in strategies for minimizing both that liability and harm to the environment. In addition, the course will review topics of environmental due diligence and the joint and several nature of environmental liability.

Prerequisite: B LAW243

EBF 410: Petroleum and Natural Gas Operations

3 Credits

The course is designed to instruct energy land management option students of the EBF major in the drilling of petroleum and natural gas wells and the challenges in that process. E B F 410 Petroleum and Natural Gas Operations (3) Energy landmen graduating from the energy land management option (ELMO will work directly with natural gas and petroleum engineers on drilling projects. This course will present the basics of natural gas and petroleum operations, so that ELM graduates will be able to assist engineering and other personnel in solving drilling operating problems. After taking this course, ELM students will have the background to move to a production company and start their training in assisting at a well site. The challenges students will be introduced to include (i) being able to develop plans for oil and gas field drilling, as well as for product recovery and treatment, (ii) coordinating the installation, maintenance, and operation of mining and oil field equipment, (iii) assessing costs and estimating production capabilities and economic value of oil and gas wells, (iv) evaluating the economic viability of potential drilling sites, and (v) participating in the completion and evaluation of wells, well testing, or well surveys. Students will also have an understanding of several other important facets of drilling operations, including (i) maintaining records of drilling and production operations, (ii) writing reports on the success or lack thereof of particular wells, and (iii) becoming aware of the challenges involved in the removal of drilling equipment, the removal of any waste, and the safe return of land to structural stability when wells are exhausted.

Prerequisite: PHYS 211 or PHYS 250 , GEOSC001
EBF 411: Petroleum and Natural Gas Geology for Land Professionals

3 Credits

This course provides energy land students with a knowledge base, as well as a set of notes and references, that they can draw on during a career in the petroleum industry. E B F 411 Petroleum and Natural Gas Geology for Land Professionals (3) The aim of this course is to provide students with a knowledge base, as well as a set of notes and references, that they can draw on during a career in the petroleum industry. This course will cover most aspects of geology and petroleum geology that students are likely to encounter in their professional endeavors. Open note examinations will encourage students to take well organized and thorough notes that can be used as a future reference. Two class projects are designed to reinforce the petroleum systems concept, which is probably the single most important concept in this course. Throughout the course, key concepts will be illustrated with examples from the Pennsylvania portion of the Appalachian Basin. This is an active petroleum province, and many oil and gas companies in the Pittsburgh area are involved in exploration and production in this field setting. This course does not cover petroleum engineering. The course begins with an overview of the geologic subdisciplines that are most pertinent to petroleum geology. In the second part of the course, the petroleum system is reviewed. The third part of the course is designed to introduce students to the various roles that geologists play at petroleum companies. Finally, the concept of the petroleum system is extended to unconventional plays, which will play an increasingly large role in the petroleum industry in the coming decades. Depending on time constraints, the course may include some discussion of the world’s remaining petroleum reserves.

Prerequisite: GEOSC001

EBF 472: Quantitative Analysis in Earth Sciences

3 Credits

Quantitative analysis of decision making in atmospheric/geophysical sciences: exploratory data analysis, quantification of uncertainty, parametric/non-parametric testing, forecasting, time series analysis.

Prerequisite: MATH 110 or MATH 140

EBF 473: Risk Management in Energy Industries

3 Credits

All major firms engage in financial risk management. In this course, we will learn the basics of how firms can use financial instruments to manage their financial risk. In particular, we will focus on risk management with respect to threats to financial viability from the weather. Specific topics to be covered include the structure and pricing of options, the theory of arbitrage, financial statistics and the use of options to hedge financial risk.

Prerequisite: MATH 140; (ECON 102 and MATH 230) or (E B F 200 and E B F 301); (E B F 472 or STAT 301 or STAT 401)

EBF 483: Introduction to Electricity Markets

3 Credits

This course is designed to teach students about the structure of the electricity industry, the regulatory institutions that oversee the industry, and the new market institutions that have been put into place since electricity restructuring. Much of the focus will be on the U.S. electricity industry. Since Pennsylvania has been a national leader in electricity restructuring, we will place particular emphasis on events in the Mid-Atlantic region, but will also discuss other market structures in the U.S. and in other countries. Specific topics covered will include cost models for power generation, transmission and distribution; rate of return regulation for electric utilities; the process of electricity restructuring and creation of electricity markets; Locational Marginal Pricing of electric energy; financial risk management in electric power; and detecting and mitigating market power.

Prerequisite: MATH 140; and (ECON 102 and MATH 230) or (E B F 200 and E B F 301); and (E B F 472 or STAT 200 or STAT 301 or STAT 401)

EBF 484: Energy Economics

3 Credits

What is the role of energy in the economic system? What are the implications of the energy transformation on economic welfare? How can we efficiently meet new demand while also addressing the myriad social, environmental, and regulatory challenges related to the energy system? This course will examine these questions from an intermediate microeconomics perspective. The course covers topics in the organization and conduct of firms operating in energy markets, measuring and detecting the manipulation of energy markets, and regulating the environmental impacts of energy production, delivery and consumption.

Prerequisite: (ECON 102 and MATH 230) or (E B F 200 and E B F 301); and (MATH 110 or MATH 140); and (E B F 472 or STAT 200 or STAT 301 or STAT 401)

EBF 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EBF 499: Foreign Study

1-15 Credits/Maximum of 15

This course is designed to enable students to study in EBF study abroad programs.

International Cultures (IL)

Engineering (ENGR)

ENGR 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENGR 100: Introduction to Engineering

1 Credits

A seminar providing information about different engineering majors, coping with college life, and exploring educational and career goals. ENGR 100S ENGR 100S Introduction to Engineering (1) (FYS) Engineering 100 is a First-Year Seminar designed as an introduction to the majors available to students in engineering. There are three main goals: 1. To introduce students to the areas of study that the college has to offer - this
is to assist students in deciding whether engineering is for them. It also helps students decide which major within engineering is for them. This introduction is accomplished through homework exercises and guest speakers - graduates in industry, graduate students, department heads, faculty, and current undergraduates. 2. To introduce students to the university in general - what resources are available and what it means to be a student at a university instead of high school. This is accomplished through guest speakers, lectures by your professor, and homework exercises. 3. To provide students with an opportunity to interact with faculty members, academic advisers, and other students. The class meets twice a week. All sections meet together once a week to listen to presentations from people representing each major. On the other class day, sections meet separately with their professor for presentations and activities unique to that instructor.

First-Year Seminar
ENGR 110: Introduction to Engineering for Educators
3 Credits

This course focuses on physics content, engineering design principles, and elementary science education pedagogy.

Cross-listed with: SCIED 110
ENGR 111: Introduction to Cross-Cultural Communication for Engineers
1 Credit

Introduction to theoretical approaches and practical applications of intercultural communications for engineering students.

International Cultures (IL)

ENGR 118: Impact of Culture on Engineering in China
3 Credits

Study of engineering in the context of cultural, historical, societal, political, and environmental considerations to understand the relationship between Chinese culture and engineering projects and policies; brief introduction to the basic engineering principles underlying the engineering projects and their design. ENGR 118 Impact of Culture on Engineering in China (3) (GS; IL) This summer-session course is delivered in China. Chinese culture, history, society, environment, politics, population, economics, and policies are related to engineering practice, design, manufacturing, processes, engineering education, and transportation. Exposure to Chinese cultural components and how they influence engineering project implementation are presented and demonstrated through site visits and participation in relevant activities. Sites and activities in China are selected to expose students to examples that illustrate the impact of Chinese culture on engineering in an integrated manner. For example, ancient engineering projects, such as the Great Wall, Forbidden City, and Terracotta Warriors, and modern engineering projects, such as the Three Gorges Dam, Hangzhou Bay Bridge, the Shanghai Dongtang Eco-city project, may be selected. In addition to site visits and local cultural and transportation experiences, the course includes guest lectures, documentaries, readings, class discussions, and projects. This course is designed to provide basic understanding of Chinese culture and to relate it to historical and contemporary applications of technology. A program fee is charged for course costs that are not covered by tuition. Students are required to participate in all aspects of the course: scheduled site visits, presentations, lectures, readings, and cultural experiences. An interest in technical applications and not necessarily a technical background is required. However, engineering and technical principles are presented.

Prerequisite: ENGR 111
International Cultures (IL)
General Education: Social and Behavioral Scien (GS)

ENGR 120N: Design Thinking and 3D Printing in Engineering and Healthcare
3 Credits

Design Thinking and 3D Printing in Engineering and Healthcare (ENGR 120N) is an introductory general education interdomain course. The course will introduce basic concepts of design processes, engineering, and medicine. The course will assist students in realizing the power of creativity and imagination as it is applied to the use of emerging technologies to solve design dilemmas at the local, regional, national, and international levels. Students will be encouraged to secure an interdisciplinary and collaborative foundation through an exploration of topics including basic engineering, human anatomy and health, design (proportion, structure, integrity, design, scale, manufacturing, iteration), Design Thinking concepts (empathize, define, create, prototype, and test), problem-solving processes (brainstorming, free thought, think aloud, reverse engineering), 3D production processes, Bioprinting (use of biofilm to create human tissue and organs), Engineering, Medicine, and Microprinting (creating works of art from photos taken from microscope slides). Students will be encouraged to view projects from the User/Patient perspective. Promotion of integrative thinking will be encouraged throughout the coursework with the goal of increasing the incorporation of design, problem-solving, engineering and medicine in the disciplines of study for individual students. Integrative thinking will be assessed through student involvement in online discussions, case studies, class conversations encompassing ethical/legal/financial considerations to design issues, studio time, image production and manipulation, internet file sharing, materials/properties selection, production processes, and interdisciplinary individual and team-based projects encompassing creative expression and science. By the end of the course, students will be furnished with basic knowledge and strategies to evaluate the role of design in the world and to independently act on the information. This course will fulfill 3 credits of the General Education requirements addressing the interdomain fields of Art (GA) and Natural Sciences (GN). No prerequisites are required for the course. This course will serve as an introduction to the basic ideas of design, creativity, imagination and problem-solving to complement development in science disciplines across the university community.

General Education: Arts (GA)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

ENGR 194: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
ENGR 195: Engineering Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Full-Time Equivalent Course
ENGR 195A: Engineering Internship
1 Credits/Maximum of 4
A supervised work experience in a professionally relevant position in research, industry or government. ENGR 195A Engineering Internship (1 per semester/maximum of 4) This course provides students the opportunity to apply fundamental skills and academic concepts in a professional laboratory, industry, or government agency setting within the United States. The final grade (SA/UN) will be based on the final report submitted by the student and a mid-term and final evaluation submitted by the employer. This course will be offered fall, spring, and summer semesters, and may be repeated.

Full-Time Equivalent Course
ENGR 195I: Engineering International Internship
0.5-1 Credits/Maximum of 4
A supervised work experience in a professionally relevant position in research, industry, government or service sector. ENGR 195I Engineering International Internship (1 per semester/maximum of 4) (IL) This course provides students the opportunity to apply fundamental skills and academic concepts in a professional laboratory, industry, or government agency setting outside of the United States. The final grade (SA/UN) will be based on the final report submitted by the student and a mid-term and final evaluation submitted by the employer. This course will be offered fall, spring, and summer semesters, and may be repeated.

International Cultures (IL)
ENGR 196: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ENGR 197: Special Topics
1-9 Credits
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ENGR 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ENGR 201: Structures and Society
3 Credits
Historical study of structures in the contexts of cultural, artistic, societal, and technological considerations; brief introduction to the scientific principles underlying their design.

General Education: Humanities (GH)

ENGR 295: Engineering Co-Op Work Experience I
1-3 Credits/Maximum of 3
A supervised work experience where the student is employed in an engineering position in industry or government. (To be offered only for SA/UN grading.)

Prerequisite: CHEM 110, CMPSC122, MATH 140, MATH 141, or PHYS 211

Full-Time Equivalent Course
ENGR 295A: Engineering Cooperative Education
1 Credits/Maximum of 1
ENGR 295A Engineering Cooperative Education (1) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting in the United States. This course is the first in a series that provides progressive semesters of career-related experience in the Cooperative Education Program (defined as two or more work semesters). The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of-semester evaluations submitted by the employer and student. This course will be offered fall, spring, and summer semesters.

Full-Time Equivalent Course
ENGR 295I: Engineering International Cooperative Education
1 Credits/Maximum of 1
ENGR 295I Engineering International Cooperative Education (1) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting outside of the United States. This course is the first in a series that provides progressive semesters of career-related experience in the Cooperative Education Program (defined as two or more work semesters). The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of-semester evaluations submitted by the employer and student. This course will be offered fall, spring, and summer semesters.

International Cultures (IL)

ENGR 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
ENGR 297: Special Topics

0.5-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENGR 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ENGR 310: Entrepreneurial Leadership

3 Credits

This course develops leadership and entrepreneurial skills using collabora-tive, problem-based projects, with engineering and business students working in teams. ENGR 310

ENGR 312: Sustainable Energy Entrepreneurship

3 Credits

Three interrelated modules guide students through technical, global/ business, and entrepreneurial aspects of sustainable energy. ENGR 312 Sustainable Energy Entrepreneurship (3) ENGR 312 examines three integrated components of the sustainable energy business: technical adaptability, financial structure, and entrepreneurial. The technical component of the course provides an overview of the concept of energy and sustainable forms of energy, energy auditing process, as well as, the integration between supply, capacity, demand, and usage technology. Technical calculations of the power capacity of sustainable energy systems and the technical limitations, specifications, and feasibility studies of energy systems are also addressed. The business component of the course provides an overview of the market and finance aspect of sustainable energy systems. Students will study the feasibility of sustainable energy systems from a business perspective, as well as perform quantitative cost-benefit analyses that include depreciation of sustainable energy systems and return on investment. Students will also evaluate existing energy business plans. The entrepreneurial component focuses on the skills needed to perform a feasibility study of market opportunities related to sustainable energy, including entrepreneurial risk and sustainability ethics. Government incentives and the impact of policy issues on business decisions for sustainable energy systems will also be addressed. Students will learn how to take a global view in the assessment of market needs and they will gain in-depth knowledge of ways to obtain public and private financing for a prospective venture. A justification of sustainable energy applications, including environmental impact, will also be discussed. The capstone project will link all three components of the course by requiring students to create their own energy business plan for a residential or commercial site of their choice. The energy business plan will focus on the best technical and economic practices in the sustainable energy marketplace.

Prerequisite: EGEE 102, E B F200

ENGR 320: Materials Properties Measurement I

3 Credits

Measurement and experimental procedures determination of the mechanical properties of engineered materials under deflection, compression, tension, fracture and fatigue conditions. ENGR 320 Materials Properties Measurement I (3) Materials Laboratory I introduces students to the experimental procedures in determining mechanical properties (elastic modulus, shear modulus, Poisson’s ratio, and fracture toughness) of engineered materials. Students gain hands-on experience in strain gage mounting and material properties measurement using strain gages. In conjunction with mathematical modeling software, finite element analysis is used to analyze engineering components subjected to mechanical and thermal loading (static and dynamic). Experiments and lectures are designed to demonstrate the theory and practice of mechanical measurement of material. Students utilize state-of-the-art equipment for experimentation in conjunction with advanced modeling software such as ANSYS to predict and evaluate material behavior under mechanical and thermal loading.

Prerequisite: E MCH213; ENGR 350, E MCH407, Prerequisite or concurrent: E MCH461

ENGR 320Y: Design for Global Society

3 Credits

An interdisciplinary study of the engineering design process and the influence of society and culture on design.

Prerequisite: ENGL 202

International Cultures (IL)

United States Cultures (US)

General Education: Social and Behavioral Scien (GS)

Writing Across the Curriculum

ENGR 350: Computational Modeling Methods

3 Credits

Theoretical and hands-on experience of mathematical modeling in mechanical systems; 2D thermal stresses, beam elements, solid modeling and vibrations. ENGR 350 Computational Modeling Methods (3) Computation and Modeling Methods is intended to introduce students to strategies in mathematical modeling of physical phenomena using ANSYS. The course provides theoretical understanding and hands-on experience of the modeling techniques used in engineering practice and allows students to apply these skills to engineering computational problems. Modeling of engineering processes requires users to have a working knowledge of ANSYS and modeling techniques such as mesh construction and analysis. This course teaches the principles of mathematical modeling of various physical phenomena and allows students to learn the basic strategies of mathematical modeling and advanced mesh analysis on topics involving structural, thermal, and materials engineering.

Prerequisite: E MCH 213; M E 300 or EME 301; CMPSC 201 or CMPSC 200

ENGR 394: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
ENGR 395: Engineering Co-Op Work Experience II
1-3 Credits/Maximum of 3
A supervised work experience where the student is employed in an engineering position in industry or government. (To be offered only for SA/UN grading.)
Prerequisite: ENGR 295
Full-Time Equivalent Course

ENGR 395A: Engineering Cooperative Education
1-2 Credits/Maximum of 2
ENGR 395A Engineering Cooperative Education (1-2) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting in the United States. This course is the second in a series that provides progressive semesters of career-related experience in the Cooperative Education Program. The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of-semester evaluations submitted by the employer and student. This course will be offered fall, spring, and summer semesters.
Prerequisite: ENGR 295A or ENGR 295I
Full-Time Equivalent Course

ENGR 395I: Engineering International Cooperative Education
1-2 Credits/Maximum of 2
ENGR 395I Engineering International Cooperative Education (1-2) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting outside of the United States. This course is the second in a series that provides progressive semesters of career-related experience in the Cooperative Education Program. The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of-semester evaluations submitted by the employer and student. This course will be offered fall, spring, and summer semesters.
Prerequisite: ENGR 295A or ENGR 295I
Full-Time Equivalent Course

ENGR 396: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ENGR 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ENGR 397F: Special Topics - InterDomain
3 Credits/Maximum of 9
Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GS/GN GenEd course.

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Sci (GS)
General Education - Integrative: Interdomain

ENGR 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ENGR 405: Project Management for Professionals
3 Credits
Covers the essential concepts and skills needed to make effective contributions on projects, on time and within budget. WF ED (ENGR) 405 Project Management for Professionals (3) Professionals in the workplace carry out many different projects every day ranging from somewhat small tasks, e.g., planning events and designing courses, to big projects, e.g., launching an enterprise wide system. Project Management for Professionals is a practical "hands-on" course designed for mid-career adult students and covers the essential concepts and skills needed to make effective contributions and have an impact on the successful accomplishment of projects on time and within budget. Project management principles and techniques are presented with an emphasis on how they are applied to real world workforce development projects. Topics include the project management life cycle and process; techniques for planning, scheduling, budgeting, and controlling project performance; project manager responsibilities and skills; project team development and effectiveness; project communication; and organization structures.
Prerequisite: two years of work experience, or fourth-semester standing, or prior approval by instructor
Cross-listed with: WFED 405

ENGR 407: Technology-Based Entrepreneurship
3 Credits
Technology innovation coupled with business planning and development.
Prerequisite: ECON 102 or ECON 104
Cross-Listed

ENGR 408: Leadership Principles
3 Credits
A project-based exploration of theories and principles of engineering leadership applicable to technical careers. This leadership course provides the basic theories, principles, skills, and relevant literature germane to leadership within the engineering discipline in particular. Leadership in an engineering context will be explored. This will range from developing awareness of personal leadership strengths to analysis of corporate mission, vision, values, and strategies. Students will apply
these to semester-long team projects. Lectures, assignments, and group projects develop knowledge of the impacts of globalization, different cultural values, traditions, beliefs, and customs to develop leaders ready to impact an international workforce. Students will apply leadership theory to the global engineering industry through the following: - Describe leadership concepts, principles, and theories in the context of global engineering business practices - Demonstrate knowledge of how leadership behaviors impact cross-cultural teams (US) - Analyze their own personal leadership strengths and weaknesses through course projects - Evaluate and critique engineering leadership effectiveness displayed by others through project work and current event analysis - Demonstrate appreciation for life-long learning of leadership and teaming skills Course assignments and projects align with the current nature of a global market and require that students cultivate awareness of social identity such as ethnicity, race, class, religion, gender, physical/mental disability, age, or sexual orientation (US). Students are also evaluated on interpersonal communication through team projects, presentations, and written assignments as they apply to interactions within a culturally diverse team completing a semester-long project (US). Application of learning objectives will occur within a small team environment through the completion of a semester-long project dedicated to developing an engineering leadership solution to a challenging problem. The course will be offered each fall and spring semester.

**Prerequisite:** 5th semester standing or program approval  
United States Cultures (US)

ENGR 409: Leadership in Organizations  
3 Credits

Development of leadership skills essential for engineers to guide colleagues or an organization in a productive direction.

United States Cultures (US)

ENGR 411: Entrepreneurship Business Basics  
3 Credits

Three critical entrepreneurship skills are covered for non-business majors: business finance, intellectual property, and marketing. Untitled Document  
Prerequisite: three credits in economics or economics-related course

ENGR 415: Technology Launch for Entrepreneurs  
3 Credits

Development of a technology-based product or service that includes creative ideation, concept evaluation, market and sales analysis, prototyping, and manufacturing with potential for commercialization.

**Prerequisite:** ENGR 407 and either MGMT 215 or ENGR 310 and 5th semester standing

ENGR 421: Materials Properties Measurements II  
4 Credits

Materials powder characterization, compaction and densification techniques, density measurements, micro structural evaluation, thermal and electrical properties of materials. ENGR 421 Materials Properties Measurement II (4) Materials property measurement II introduces students to experimental procedures in the determination of thermal properties (heat transfer/conduction and thermal expansion) and electrical properties (resistance and dielectric measurements) of materials through demonstrations and experiments. Lectures provide a theoretical understanding of the characterization techniques and provide information for the design and interpretation of experimental results. This laboratory complements lectures in materials characterization, materials processing and materials design courses allowing students to apply theoretical knowledge to experimental processes. Students gain hands-on knowledge of testing equipment and experience in data acquisition and interpretation. Students gain experience in the processing of material (powder characterization, consolidation, and densification), the analysis of material microstructures and investigations of structure property relationships.

**Prerequisite:** ENGR 320, MATSE201, MATSE400

ENGR 422: Leadership of International Virtual Engineering Teams  
3 Credits

ENGR 422 provides students with the opportunity to develop intercultural engineering collaboration skills. The course focuses on developing leadership competence in cross-cultural teaming through a virtual learning environment. Students will team with students from other countries on completing a project with socially relevant solutions. Students will work virtually with students from other institutions outside the US to complete a project throughout the semester. Students completing this course will: Acquire and apply a theoretical foundation in appropriate engineering design across cultural and international boundaries; Discuss contemporary international engineering development, ethics, and project leadership principles as they relate to intercultural communication in engineering teams; Demonstrate engineering project collaboration and leadership skills in the context of virtual cross-cultural interdisciplinary teams; Assess business and leadership skills displayed by others and critically evaluate current international events and assigned reading material. Students will be evaluated on these learning objectives through a variety of methods such as presentation of a semester long team project, critiques and reflection of relevant literature, papers, and peers reviews. This course is part of the international track within the engineering leadership development minor.

**Prerequisite:** ENGR 408  
International Cultures (IL)

ENGR 425: New Venture Creation  
3 Credits

Via problem-based learning, teams define new business ventures to meet current market needs, develop business plans, and present to investors. ENGR 425 (MGMT/IST/ENTR) 425 Introduction to Entrepreneurship (3) The goal of ENGR (MGMT/IST/ENTR) 425 is to better prepare undergraduate students to be business leaders in adaptive, globally-minded, technology-savvy companies. The course is structured so students develop skills that are of high value in any workplace: they develop improved leadership skills, higher self-efficacy, creativity and the ability to deal with ambiguity. On course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience and producing a convincing executive summary for internal or external financing and launch. Students who want to augment the skills and knowledge from their major with the ability to refine a new product/service process in an interdisciplinary team will find ENGR (MGMT/IST/
ENGR 426: Invention Commercialization

3 Credits

Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path for each technology. ENGR 426 ENGR (MGMT/IST/ENTR) 426 Invention Commercialization (3) The goal of ENGR (MGMT/IST/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, and is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - not invented here; Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome. This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinement, prototyping support, and (if appropriate) making technology suggestions to the inventor. Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. NOTE: Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property Agreement For Students - For Use When Assigning Intellectual Property to The Pennsylvania State University. The form can be viewed at http://guru.psu.edu/policies/RAG13.html The course will be offered both Spring and Fall semesters with an enrollment of 40 students.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104 or ECON 14) and CAS 100
Cross-listed with: IST 425, MGMT 426
ENGR 450: Materials Design and Applications

3 Credits

Engineering design considerations for materials selection, organization of property trends of materials families, materials design strategies and property compatibility. ENGR 450 Materials Design and Applications (3) ENGR 450 introduces students to the process of materials organization and selection for application needs. Students select materials for applications based on desired properties, materials compatibility, and economic factors and learn how to design materials (composites) to fulfill critical materials requirement of an engineering application. The course facilitates students with the understanding of the engineering design process to make educated decisions on the materials selection and/or design for industry application needs. Students learn to understand trends in property characteristics associated within given families of materials, i.e. metals, ceramics and polymers, and to balance engineering needs and economic considerations with the application design process.

Prerequisite: ENGR 350, E MCH407 or E MCH461 ; ENGR 421
ENGR 451: Social Entrepreneurship

3 Credits

Students develop business models and implementation strategies for social ventures in diverse world regions. ENGR 451 Social Entrepreneurship (3) Social Entrepreneurship is about pursuing direct action to address a social problem in a manner that leads to a truly sustainable solution. A similar perspective on social entrepreneurship is based on Jean-Baptiste's definition of entrepreneurs as permanent value creators. If the primary objective of value creation is positive social change, then the entrepreneur can be categorized as a social entrepreneur. Sustainability and scalability of the venture to create social change on a larger scale is essential. Metaphorically, while conventional entrepreneurs might pursue the creation of multi-million dollar enterprises, social entrepreneurs strive to create multi-million dollar enterprises, while understanding that their ability to expand their social returns bears a dynamic interdependence with their economic bottom line. The mission of the venture must be strongly aligned with the measured outcomes, and this emphasis on measuring social and economic impact is crucial to the efficacy and success of social enterprises. The theory and praxis of social entrepreneurship is constantly evolving within the complex framework of political, economic and social changes occurring at the global, national and local levels in the US and other countries. Students study the dynamics of social challenges, approaches to address them, and the conceptual framework of social innovation and social entrepreneurship from theoretical and practical perspectives. Students explore technology solutions to
addressing global social problems with a systems thinking approach. Case studies of successful and failed social ventures from diverse world regions and fields like healthcare, energy, food and agriculture, education, income generation, and access to capital are employed. There is an emphasis on the opportunities and challenges to multi-sectoral collaboration to address social challenges. Students learn how to develop appropriate business models and implementation strategies for a "sustainable" social venture. Sustainability, in this regard, refers to ventures that are technologically appropriate, environmentally benign, socially acceptable and economically sustainable. There is a specific emphasis on understanding the customers and their context and economic sustainability of the ventures. The course draws heavily from cases to understand the diverse business structures and execution strategies used by social entrepreneurs and the varied challenges faced by them. Students work in multidisciplinary cross-functional teams to develop a business/implementation model for a social venture in diverse world regions. These are real ventures that are connected to other Humanitarian Engineering and Social Entrepreneurship (HESE) course offerings.

Prerequisite: 5th semester standing

ENGR 455: Humanitarian Engineering and Social Entrepreneurship Reflection and Research Dissemination

3 Credits

This post-fieldwork course focuses on reflection on ethical issues and grassroots diplomacy challenges, and workshops on research dissemination. ENGR 455 Humanitarian Engineering and Social Entrepreneurship Reflection and Research Dissemination (3) The HESE Reflection and Research Dissemination course provides students an opportunity to reflect and build upon their experiences following the EDSGN 454 class involving travel to the partnering community to advance their HESE venture. There are three intertwined themes. One theme explores the ethical intricacies of conducting research and advancing entrepreneurial ventures in developing communities. The grassroots diplomacy theme delves into the complicated and delicate challenges of working in developing communities in a harmonious and effective manner. The research dissemination theme provides students with just-in-time information and skill-sets necessary for developing their research manuscripts into refereed publications. Post-travel reflection on ethical issues: This theme explores the ethical intricacies of conducting research and advancing entrepreneurial ventures in the context of developing communities. The ethics-related discussions help students reflect on their experience and develop a mindset where they want to make better ethical decisions because they are emotionally engaged and can effectively assess the implications of their actions. Grassroots Diplomacy: During their field experience, HESE students interact with diverse parties including local communities, non-governmental organizations, governmental and UN agencies, religious organizations, political groups, bureaucrats, local industry, US corporations, tourists, etc. Students observe and experience ego and community tensions and dynamics. They might get asked for grease payments or be propositioned for dowry. They might experience conflict or observe other groups, or their own group, compromise the core concept of self-determination. Workshops in the grassroots diplomacy theme delve into the complicated and delicate challenges of working in developing communities in a harmonious and effective manner to catalyze social change with their technology-based ventures. Research Dissemination: HESE students are engaged in an IRB-approved research study related to their venture, for which they gather data during the summer field experience. This workshop series provides students with just-in-time information and skill-sets necessary for developing their research manuscripts. The workshops lower the barriers to the scholarly dissemination of their work. Sharing designs, business/implementation strategies, and lessons learned is extremely important for the praxis of HESE worldwide. For examples, published designs for low-cost greenhouse can help people in many world regions. A paper on the non-technical challenges to the growth of the small-scale wind power industry in Kenya served as a starting point for a windmill venture.

Prerequisite: EDSGN454

ENGR 460: Teaching Intern Seminar

0.5 Credits

This course prepares students for the responsibilities involved in serving as Teaching Interns in the College of Engineering. Topics addressed in the course include: Individual differences and implication for learning, preparing for and conducting office hours, grading and assessment, instructional design, effective teaching practices, and faculty careers. Findings from research on how people learn and strategies for increasing student engagement are integrated into the course discussions. Issues related to academic integrity and ethical aspects of teaching are addressed as they evolve from in-class discussions.

ENGR 467Q: Robots and Their Role in Society

3 Credits

This course explores and critically analyzes the growing influence and impact of robots and automation on society. In particular, the course introduces students to the ever widening role that intelligent robots are playing and will come to play in our workplaces, on our battlefields, and in our homes. Emphasis will be placed on understanding and critically analyzing how the technical, computational, and systems role of the machine effect the behavior and values of individuals and segments of society. The course is not technical in its treatment of robots and robotics, rather the focus is on critically investigating how the development of robotic technologies have impacted society in the past, present, and future. This is an honors course.

Prerequisites: 5th Semester standing

General Education: Humanities (GH)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
Honors
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

ENGR 475: Space Systems Engineering Seminar

1 Credits

Seminar overviewing the systems engineering approach as applied to practical space systems. ENGR 475 Space Systems Engineering Seminar (1) As a requirement for the Space Systems Engineering (SPSYS) Certificate, this course is offered to students in the Certificate and others interested in Space Systems and more broadly in systems engineering. The course exposes students to the systems engineering approach as applied to practical space systems. The goal of this course is to prepare the student to understand and implement the systems approach to designing, building, testing, and flying space systems. The course begins with a series of lectures and discussions on the systems approach to
engr 486 business opportunities in engineering
2 credits
business principles, leadership and management strategies, accounting fundamentals, engineering and business ethics, creativity, and personal character as a formula for success. engr 486 business opportunities in engineering (2) this course focuses on business principles that will help engineering students transition from academia to the business world. engineers can be highly successful and climb the corporate ladder or transition to entrepreneurship. awareness of what is needed to succeed in business is the key to success. this course opens the horizon to new ideas, business opportunities, and profitability. fundamental aspects of accounting including budgeting, cash flow, profit-loss statements, job cost ledgers, overhead and fringe computation are examined. creativity, critical thinking methods, and ethics as applied to engineering and business are studied in conjunction with case studies. business plan structure and content are analyzed along with case histories of successful companies. students will learn how to articulate a business viewpoint, create a mission or vision statement, and present a creative idea clearly and concisely using an \"elevator ride\" or \"billboard\" approach via essays, proposals, and business plan preparation and presentation. students will learn leadership and management strategies that will be applicable immediately.

prerequisite: 5th semester standing or higher. this course is not open to business students.

engr 486h: business opportunities in engineering
2 credits/maximum of 2
business principles, leadership and management strategies, accounting fundamentals, engineering and business ethics, creativity, and personal character as a formula for success.

honors

engr 487: business opportunities in engineering: the business plan
1 credits
essential elements, development, and presentation of the business plan from both an engineering and business point of view. engr 487 business opportunities in engineering: the business plan (1) this course focuses on business opportunities in engineering. students will learn about the essential elements of the business plan and the value of, and methods for, developing and presenting a business plan to start a business. topics include the business, marketing, financials, supporting material, writing and presentation tips and practice, and case studies. aspects of creativity, winning business plans, strategies, strengths, competition, litigation, insurance, marketing, distribution, sales, and funding will also be discussed. this course complements business opportunities in engineering that must be taken as a prerequisite or in conjunction with this course.

prerequisite: or concurrent: engr 486

engr 490: senior design i
1 credits
analysis of environmental impacts on a design, designing products for the global environment and discussion on engineering ethics and professionalism. engr 490w senior design i (1) senior design i provides students with experience in solving engineering problems independently and/or working in groups on an open-ended design problems. students refine skills in information gathering, analysis of market and technical considerations, critical thinking of project/design scope and effective communication of project/design objectives. this course builds on previous knowledge and applies it to a global consideration of design criteria to a specific projects provided by relevant faculty. the course is the first installment of a senior capstone program in which students start to understand the global aspects of the engineering design process with respect to individual/group projects. students gain perspective on project selection and research expectations from faculty and gather the relevant technical knowledge required to initiate the project. projects are appropriately scoped for undergraduate research and are faculty initiated sponsored by regionally based industry (similar to the learning factory experience at up). faculty provides research opportunities and external industry collaborations to students for selection based on common interest.

prerequisite: prerequisite or concurrent: engr 350, e mch407, e mch461 or m e 461

writing across the curriculum

engr 491: senior design ii
3 credits
capstone of research projects from conception to prototype through industry sponsored collaboration on common technical interests between faculty and student. engr 491w senior design ii (3) senior design i provides students with experience in solving engineering problems independently and/or working in groups on an open-ended design problems. students refine skills in information gathering, analysis of market and technical considerations, critical thinking of project/design scope and effective communication of project/design objectives. this course builds on previous knowledge and applies it to a global consideration of design criteria to a specific projects provided by relevant faculty. the course is the first installment of a senior capstone program in which students start to understand the global aspects of the engineering design process with respect to individual/group projects. students gain perspective on project selection and research expectations from faculty and gather the relevant technical knowledge required to initiate the project. projects are appropriately scoped for undergraduate research and are faculty initiated sponsored by regionally based industry (similar to the learning factory experience at up). faculty provides research opportunities and external industry collaborations to students for selection based on common interest.

prerequisite: prerequisite or concurrent: engr 350, e mch407, e mch461 or m e 461

writing across the curriculum
Engineering Design (EDSGN) provides students with experience in solving engineering problems independently and/or working in groups on an open-ended design problems. Students refine skills in information gathering, analysis of market and technical considerations, critical thinking of project/design scope and effective communication of project/design objectives. This course builds on previous knowledge and applies it to a global consideration of design criteria to a specific projects provided by relevant faculty. The course is the first installment of a senior capstone program in which students start to understand the global aspects of the engineering design process with respect to individual/group projects. Students gain perspective on project selection and research expectations from faculty and gather the relevant technical knowledge required to initiate the project. Projects are appropriately scoped for undergraduate research and are faculty initiated sponsored by regionally based industry (similar to The Learning Factory Experience at UP). Faculty provides research opportunities and external industry collaborations to students for selection based on common interest.

**Prerequisite:** ENGR 490W
Writing Across the Curriculum
ENGR 493: Individual Leadership Experience
1 Credits
Approved individual project or internship for students to practice the leadership skills developed in the Engineering Leadership Development Minor.

**Prerequisite:** Prerequisite or concurrent: ENGR 408
Cross-Listed
ENGR 494: Research Project Courses
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
ENGR 494H: Research Project Courses
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors
ENGR 495: Engineering Co-Op Work Experience III
1-3 Credits/Maximum of 3
A supervised work experience where the student is employed in an engineering position in industry or government. (To be offered only for SA/Un grading.)

**Prerequisite:** ENGR 395
Full-Time Equivalent Course
ENGR 495A: Engineering Cooperative Education
1-3 Credits/Maximum of 3
ENGR 495A Engineering Cooperative Education (1-3 per semester/maximum of 3) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting outside of the United States. This course is the third in a series that provides progressive semesters of career-related experience in the Cooperative Education Program. The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of-semester evaluations submitted by the employer and student. This course will be offered fall, spring, and summer semesters.

**Prerequisite:** ENGR 395A or ENGR 395I
International Cultures (IL)
Full-Time Equivalent Course
ENGR 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
ENGR 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
ENGR 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
Engineering Design (EDSGN)
EDSGN 11: Explorations in Design First-Year Seminar
1 Credits
Students explore topical issues in engineering design.

First-Year Seminar
EDSGN 12: Solar Racers First-Year Seminar
1 Credits
Students explore solar energy engineering by designing, building, testing, and racing a model car powered by a photovoltaic panel. EDSGN 012S
Solar Racers First-Year Seminar (1) This engineering First-Year Seminar, Solar Racers, is intended as a topical introduction to the field of solar engineering with a focus on solar electricity. Through hands-on activities, readings, and research, students explore the application of solar energy to power a model car (and by extension, solar electricity generation in general). Working in small teams, students design, build, and test a model solar-powered car. This seminar emphasizes active learning via project-oriented teamwork. Solar principles to be demonstrated include solar angles, solar resource, and conservation of energy. Students also use spreadsheets and computer models to perform parametric studies as an aid in the design process. Classes typically begin with a review and overview of the topics for that day. Class time is spend discussing new material, recent assignments, and working in the lab. Students also serve as mentors and advisors for local middle school students who will also be building and racing similar model solar cars.

First-Year Seminar

EDSGN 13: Ethics of Star Trek First-Year Seminar

1 Credits

The Star Trek television series is used as an introduction to ethics, with application to student life and engineering practice. EDSGN 013S Ethics of Star Trek First-Year Seminar (1) In this first-year seminar, The Ethics of Star Trek, students explore ethical issues that arise in various episodes of Star Trek, from The Original Series with Captain James T. Kirk and company, through The Next Generation, with Captain Jean Luc Picard. Students learn how to methodically approach tough ethical decisions in their lives, especially those in professional life. This course helps them to identify, understand, and examine their moral values, and especially to plan actions that are consistent with these values. The class explores the current thinking on the responsibilities of engineers to society, community, family, and themselves. This is a discussion and application oriented course with emphasis placed on applying key concepts to realistic problems and on developing skills such as teamwork, argumentation, and communication skills. Underpinning the viewing of Star Trek episodes, the course starts with a foundation on moral and ethical theory. After discussing the ethical issues faced by the Star Trek crews, the class investigates similar situations faced by students and by engineers. Teams analyze and solve progressively more complex ethical cases in engineering and in general. The goal of the course is for students to develop their moral imagination and to understand how to make the best choices in difficult circumstances.

First-Year Seminar

EDSGN 15: Transformations by Design: First-Year Seminar

1 Credits

Examination of the social and environmental transformations that follow engineering design, and of the transformations of students by higher education. EDSGN 015S Transformations by Design: First-Year Seminar (1) Engineering design is a diverse field of study with many emerging topics and applications. The goal of this first-year seminar course is to introduce first-year students to engineering design. In turn, design is set within the essential dynamic context of technology: the transformation of the environment and society. Hence, doing design well means creating a better world and a sustainable environment. Students examine the global networks of product life cycles from extraction to disposal that is triggered by engineering design and how it affects people's lives and the environment. Since much engineering design is integrated design that brings together the disciplines and people necessary to achieve a design solution to a given problem, this FYS provides students with a vivid glimpse of engineering careers. This is developed further by student presentations that focus on their life goals and how their expected career in a given field of engineering will help them to achieve their goals. This course will combine lectures, discussions, teamwork, projects, and hands-on activities, with an emphasis on active learning and an examination of the transformations of technology from transducers to product life cycles. In addition to introducing first-year students to design topics and careers in engineering, this seminar course will help incoming students develop success skills and become acclimated to University life. But higher education is also presented to the students as a transformative process that reshapes their social relationships and determines much of their future. The course will be offered once a year in the fall semester.

First-Year Seminar

EDSGN 100: Introduction to Engineering Design

3 Credits

Introduction to engineering design processes, methods, and decision making using team design projects; design communication methods including graphical, verbal, and written.

EDSGN 100H: Introduction to Engineering Design Honors

3 Credits

Introduction to engineering design processes, methods, and decision making using team design projects; design communication methods including graphical, verbal, and written.

EDSGN 100S: Introduction to Engineering Design

3 Credits

Introduction to engineering design processes, methods, and decision making using team design projects; design communication methods including graphical, verbal, and written.

EDSGN 110: Spatial Analysis in Engineering Design

2 Credits

Spatial analysis techniques using advanced computer-aided drafting and design systems, with an emphasis on engineering concepts, analysis and design. EDSGN 110 Spatial Analysis in Engineering Design (2) EDSGN 110 is a continuation of EDSGN 100, moving toward an introduction to computer-aided engineering. Emphasis is on the design of mechanical systems using two-dimensional (2D) drawings and three-dimensional (3D) solid modeling techniques commonly used in the mechanical design and structural systems. This course covers spatial relationships using the advanced functionality of computer-aided drafting and design systems. Students will be able to: (1) create and interpret advanced 2D engineering models and drawings; (2) create and manipulate 3D solid models; and (3) use these techniques in practical engineering design problems. Students will become proficient in the use of computers for the simulation of mechanical systems, design documentation, network storage and retrieval, and presentation technologies. The student will create and interpret advanced 2D engineering drawings which may include auxiliary views and working
drawings. Using the engineering design process and solid modeling software, the student will create and manipulate 3D solid models and assemblies to aid in the design and documentation of simple mechanical systems.

Prerequisite: EDSGN100

EDSGN 130: Architectural Graphics and CAD
3 Credits

Principles of architectural drawing; spatial relations with architectural applications; introduction to computer graphics (CAD) with project.

EDSGN 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDSGN 210: Tolerancing and Spatial Models
2 Credits

Tolerances; form and size; unilateral, bilateral, and symmetric; form control, critical fits, tolerances specifications precedence; applications in spatial models. EDSGN 210 Tolerancing and Spatial Models (2) Professional parametric solid modeling software will be applied to produce complete, industry-typical and standard working drawings, including part detail drawings and various types of assembly drawings; to implement the appropriate tolerance design of interfacing components and to explore advanced productivity-enhancing add-in modules. Students will be introduced to the variety and relative precedence of specifications for feature tolerances, and to the basic differences between form and size tolerance. Topics covered include: unilateral, bilateral and symmetric size tolerances, form control and tolerances, calculations for critical fits, specification precedence for tolerances, e.g., stock size vs. size directly specified in the drawing field vs. title block tolerances vs. drawing notes, etc. Laboratory assignments will include: part drawing with standard three orthographic views, complete dimensions, and a section view; part drawing with complete dimensions and a broken view; part drawing with complete dimensions and a primary auxiliary view; part drawing with complete dimensions and a secondary auxiliary view; part drawing with complete dimensions and removed detail view(s); detail drawing with correct limit tolerances on features which are critical for fit and function, assembly file with separate subassemblies, assembly drawing (with part identification balloons and a bill-of-material) which uses sectional views to expose fine internal detail and part interrelationships, assembly drawing (with part identification balloons and a bill-of-material) which is based upon an exploded view, assembly drawing of a tooling fixture (with part identification balloons and a bill-of-material) which shows the subject workpiece transparently with phantom lines, Configured part file with tabulated drawing, welding of an assembly using advanced software capabilities and production of a welding drawing with correct symbols, production of an injection mold cavity from the subject part file, exploration of the functionality of sheet metal modules, applications of top down design and layout sketches, application of motion-simulating modules and functionality. The differences between coordinate tolerancing and geometric tolerancing are included in the course. The American Society of Mechanical Engineers Y14.5M will be referenced. The following topics will be covered: Eight key GD&T terms, GD&T modifiers and symbols, Rule #1 and #2, concepts of GD&T, introduction to the flatness control, straightness control, circularity control, perpendicularity control, angularity control, parallelism control, concentricity control, symmetry control, the datum system (planar datum, introduction to datum targets, FOS datum specifications (RFS), FOS datum specifications (MMC).

Prerequisite: EDSGN110

EDSGN 294: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EDSGN 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EDSGN 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDSGN 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDSGN 395: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique or activity required.

EDSGN 397: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDSGN 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDSGN 401: Engineering Systems Design
3 Credits

Design requirements for complex systems; trade-offs between market opportunities and technology; translation of priorities and needs into an operational concept. EDSGN 401 Engineering Systems Design (3) This course provides the knowledge and skills necessary to translate needs and priorities into system requirements, and develop derived requirements, which together form the starting point for engineering of complex systems. Students will develop an understanding of the
larger context in which requirements for a system are developed, and learn about trade-offs between developing mission needs or market opportunities first versus assessing available technology first. Techniques for translating needs and priorities into an operational concept and then into specific functional and performance requirements will be presented. Students will assess and improve the usefulness of requirements, including such aspects as correctness, completeness, consistency, measurability, testability, and clarity of documentation. The course explores the role of techniques such as decision analysis, cost-benefit analysis, and risk assessment. Students will understand the limitations of the way that current systems engineering is practiced in terms of dealing with complexity, lifecycle uncertainty and other factors.

**Prerequisite:** EDSGN 100, 4th Semester standing

EDSGN 402: Materials and Manufacturing

4 Credits

Students will study principles and properties of engineering materials and manufacturing processes with a focus on their appropriate selection in design. Based on these principles and properties, as well as hands-on laboratory experiences, students will develop systematic methods for matching material and process choices to the mechanical, thermal, electro-magnetic, and environmental constraints set by the technical requirements of a design problem or project. Knowledge of current manufacturing processes is required to align appropriate processes and materials with the requirements of designed products. Students will develop basic, practical knowledge and skills in operating manual and CNC machine tools. Both subtractive and additive manufacturing processes will be explored, and students will learn best practices for making informed choices between them based on design needs. Computer aided manufacturing will be introduced to provide background for future courses (e.g., senior capstone projects).

**Prerequisite:** CHEM 110, EMCH 211, EMCH 213, CMPSC 200; CMPSC 201; CMPSC 121, EDSGN 401

EDSGN 403: Product Realization

3 Credits

This course provides students with practical experience in the product design and development process. Computer aided design and a variety of related analytical tools are employed in team-oriented design activities, as well as defined in-class team interactions. Team progress will be monitored through weekly team check-ins, during which two project status communication tools will be reviewed and an updated Gantt Chart and a Weekly Project Activity Plan document. The hands-on design activities will culminate in the presentation and demonstration of a functioning engineering system. In working toward this goal, students will employ several industry-standard product design tools and techniques. In addition to Gantt charts for project management, they will employ formal ideation techniques, such as 6-3-5 Brainwriting, and Mind Maps. Conceptual designs will be communicated through morphological charts, preceding the process of reconciling conflicting Customer Needs via deterministic engineering design techniques. They will utilize the House of Quality to implement Quality Function Deployment. The hands-on aspect of the course will utilize programmable manufacturing equipment, both one additive manufacturing technique (3D printing) and three subtractive manufacturing techniques (CNC milling, water-jet, and laser cutting). Design Verification Testing will be conducted in the context of design-build-test iterations of their functional engineering prototype.

**Prerequisite:** (EDSGN 402; IE 312 ) and ( EE 316; ME 357 ) CONCURRENT: ENGR 490W

EDSGN 410: Robotics Design and Applications

4 Credits

Introduction to robotics, with emphasis on the design of robotics systems through multidisciplinary integration of electrical, mechanical, and software components. EDSGN 410 Robotics Design and Applications (4) The objective of this course is to apply the basic concepts of electrical, mechanical, and software technologies to analyze, design and test a robotics system. This course will draw from skills in prior coursework in electricity and electronics, statics and dynamics, and software design. The course includes a discussion of present applications and future directions of robotics in such areas as manufacturing, science, transportation, military, healthcare, and entertainment. Students will be introduced to mechanical systems analysis, sensors, software development, electrical systems, control algorithms, testing, prototyping, design, modeling, and simulation of robot systems. Students will work in teams to design and prototype a robot to perform a task and to satisfy a set of design requirements. Professional communication and documentation will be included in the course experience. This course is a multi-disciplinary, project-based course and will have a substantial laboratory component supporting team-based design, integration and testing of a robot system.

**Prerequisite:** ( EE 316; CMPEN 472 ) and ( CMPSC 200; CMPSC 201; CMPSC 121 ) and ( EE 310 ) and ( EMCH 212 )

EDSGN 420: Advanced Robotics Design and Applications

3 Credits

The objective of this course is to apply advanced topics in robotics. It serves as the second course of a possible two-course sequence in robotics design and applications. This second course will enable students to explore advanced topics not covered in the first course, or to continue a complex robot system design that would incorporate advanced topics and span two semesters in duration. One or more advanced topics, such as computer vision, artificial intelligence, biologically-inspired robots, multi-robotics, collaborative robots, human-robot interface, advanced navigation, or others, will be introduced based on background of the instructor. Students will work in teams to design and prototype a robot that integrates the advanced algorithms and technology and satisfies a set of design requirements. Laboratory exercises will provide experience in key areas to support the design and implementation process. Professional communication and documentation will be included in the course experience. This course is a multi-disciplinary, project-based course and will have a substantial laboratory component supporting team-based design, integration, and testing of an advanced robot system.

**Prerequisite:** EDSGN 410

EDSGN 452: Projects in Humanitarian Engineering

2 Credits

Multidisciplinary student teams engage in integrated design of real-world humanitarian ventures. EDSGN 452 Projects in Humanitarian Engineering (2) EDSGN 452 is intended to promote civic responsibility and enhance the student’s abilities to engage in research and design, project management, communications, professional conduct and the understanding of user needs. This is accomplished by students.
undertaking team-based engineering projects in community service with partner community organizations. The projects offer real-world engineering design experience, from problem formulation through performance assessment. The project offerings will include a mix of local and international offerings. Students work on multidisciplinary teams with a project supervisor (i.e., faculty or practicing engineer) and a representative from the partner community organization. Projects are selected based on academic content, potential significance to the partner community, commitment of the partner community organization, and student safety. Students also examine the politics of technology, the relationship between engineering and communities (either domestic or international), and ethics in engineering practice. This includes the ways that engineering can be used positively and negatively in development. In the course of their work, the students will examine the ways that economic, social, cultural, political, and other contextual considerations are implicated in engineering design. Students are challenged to think critically about how engineering can be done most effectively to support community goals, and how engineering can weaken community efforts if done insensitively. These issues are explored through discussions of the relevant scholarly theory and through their manifestation in the course projects.

**Prerequisite:** 5th semester standing; Concurrent: EDSGN453

EDSGN 453: Design for Developing Communities

1 Credits

A seminar series related to the context and integrated design of Humanitarian Engineering and Social Entrepreneurship ventures in developing communities. EDSGN 453 Design for Developing Communities (1) The Design for Developing Communities seminar course grounds students in EDSGN 452, BIOE 401, and other related courses in the basics of user-centered / context-driven design, extreme affordability, systems thinking, research ethics, privilege systems, travel and fieldwork, and related issues for technology-based social ventures in developing communities. These seminars directly help students across various classes and professional programs with their Humanitarian Engineering and Social Entrepreneurship (HESE)-related ventures. Typically, three sections of this course are offered: one focusing on international ventures, one on local ventures and an honors section focusing on international ventures. Designing appropriate products for customers inherently requires a thorough understanding of their needs. However, what happens when your target customers live in a developing country and have radically different needs than what you are accustomed to? Similarly, what happens when your audience lives in the United States, but in an unfamiliar environment? How do you know your product will be used by your intended customers? What pre-existing systems must your product work in harmony with? Open to students of all majors, the seminar class prepares students working on HESE ventures to create sustainable enterprises in resource-constrained environments. Students are introduced to the contextual factors that must be taken into consideration throughout their design process. Relevant philosophies and methodologies that relate to the integrated design, business and implementation strategy development of social enterprises are introduced to the students in the seminar class. The objective is to light a fire and not fill a pail. The relevant methodologies and philosophies are then reinforced in an experiential manner in the concurrent design classes (like EDSGN 452, BIOE 401, etc.) where students work on their ventures. Through the use of open discussion, videos, pictures, stories, and lectures, the course covers concepts such as systems-thinking, user-centered design, value creation, and effective communication. The seminar is highly interactive; students are encouraged to ask questions and provide examples of real-world situations that relate to the topics of conversation.

**Prerequisite:** 5th semester standing

EDSGN 454: Humanitarian Engineering and Social Entrepreneurship Field Experience

0.5 Credits

A hands-on integrated learning research and entrepreneurial engagement experience for students working on various humanitarian projects. EDSGN 454 Humanitarian Engineering and Social Entrepreneurship Field Experience (0.5) The Humanitarian Engineering and Social Entrepreneurship (HESE) Field Experience is a hands-on integrated learning, research and entrepreneurial engagement experience for students engaged in HESE ventures in the EDSGN 452 and allied courses (e.g. BIOE 401, ME 440W). Students travel to project site(s) for three weeks to advance their ventures by conducting field-testing of their technologies, testing their preliminary business models, and gathering data for research projects. They work closely with community members and various partnering agencies during the course. The partnering agencies range from community members to non-profits, community-based organizations, and governmental and United Nations agencies. Students work in cross-national cross-functional teams and make several presentations to community members, potential partners and investors. In the past, HESE students have worked in Kenya, Tanzania, Rwanda, India, El Salvador, Jamaica, Ecuador and other countries. There is no set schedule for the three weeks in the partnering community. A (two-hour long) debriefing meeting is held every evening to discuss progress made by all the teams on that day and decide the action plan for the next day. Administrative issues, technological challenges, ethical or diplomatic issues are also discussed in this meeting and solutions are developed by consensus. The field experience is also a rich environment for students to explore the ethical intricacies of engaging in projects in international contexts. Students engage in debates on ethical issues related to science, technology and society in an applied setting and the people are real, the ethical dilemma is real and most importantly, a consensus is required to address the ethical issue and decide on the further course of action. A collaborative and integrated approach of system design, business strategy, and implementation strategy development is employed. The process of operationalizing the design and the business / implementation strategies is as important as the product itself. This integrated design and implementation process encompasses conceptualization, validation, design, field-testing, implementation, and evaluation, all done in an iterative fashion. Several tools, from literature, industry (like the IDEO Human-Centered Design toolkit) and those developed by our teams (like the E-Spot Canvas) are employed during fieldwork. Student evaluation is by a reflective essay written 3-4 weeks after the completion of the trip.

**Prerequisite:** EDSGN453

EDSGN 460: Multidisciplinary Capstone Design Project

3 Credits/Maximum of 6

Course provides multidisciplinary industry-sponsored and service-based senior design projects in conjunction with the Learning Factory.

**Prerequisite:** BIO E, CH E, CMPEN, E E, I E, or M E; BME 440 or E E 300W or I E 302, I E 305, I E 323, I E 327, I E 330, I E 405 or M E 340

Writing Across the Curriculum
EDSGN 468: Engineering Design and Analysis with CAD

3 Credits/Maximum of 6

This course delivers methods and techniques necessary to become proficient in applying CAD as a design tool for engineering design and analysis. Students will gain a deep understanding in principles, best practices, and strategies for solid-model representation of engineering designs. The use of CAD as a design tool will prepare students to effectively develop, analyze, and communicate engineering designs. Learning is reinforced through lectures, tutorials, quizzes, laboratory assignments, design projects, and online design portfolios. Students will learn how to recognize and capture design intent by using symmetry and parametric associativity; virtually test fit, form, and function of assembled components; analyze and improve models using analysis tools (e.g., finite element analysis); obtain, edit, and integrate existing non-native file formats; prepare models for stereolithography apparatus and other CNC machinery for prototyping; produce and manage part family models, and prepare technical drawings and illustrations. Through all these, students will be able to master special techniques for engineering design and analysis with CAD. The exercises, laboratory assignments, quizzes, midterm design projects, final design projects, and online design portfolios will enhance students' understanding of how engineering design and analysis efforts are supported through the use of CAD as a design tool and will prepare students to effectively develop, analyze, and communicate engineering designs with the use of CAD. The course will be taught in each semester with different sections utilizing different CAD packages, such as AutoCAD, CATIA, and SolidWorks. The course may be repeated if taken to learn a second software package. Credit toward the major will not be granted a second time for taking the course with the same CAD package.

Prerequisite: EMCH 210, EMCH 211

EDSGN 479: Human Centered Product Design and Innovation

3 Credits

Consumer product design for a global market, incorporating human factors principles and user desires in a multicultural perspective. EDSGN (I E) 479 Human Centered Product Design and Innovation (3) This course will focus on consumer product design for a global market, incorporating human factors and ergonomics principles as well as user needs and emotional desires. The students will be led through product design process, various product design strategies, product planning, managing the development process, product evaluation, decision making tools, and market entry. Special emphasis will be placed on user centered design, incorporating user characteristics, user needs and emotional desires, including Kansei engineering approaches, survey methodology, and usability testing. To emphasize the multicultural perspectives in today's global product design, interdisciplinary teams from two universities on opposites of the globe will apply these principles on actual industrial product designs for leading consumer product manufacturers.

Prerequisite: I E 408 or I E 419 or equivalent

Cross-listed with: IE 479

EDSGN 485: Engineering Design Portfolio

1 Credits

Positions in engineering design typically require a portfolio representing an applicant's best work. In preparation for this requirement, students in this course will develop the skills needed to design a portfolio that represents the depth and breadth of their engineering design training, by collecting, sorting, and sequencing visual information from relevant previous design experiences. The material will be presented through a series of Web-based modules. The objectives of this course include organizing a collection of graphics and text to effectively communicate engineering design experiences and development, summarizing both the depth and breadth of design experiences, analyzing and interpreting information for presentation to third party readers, and using modern engineering graphics and text communication methods to present information. Students will be evaluated on their ability to visually, textually, and sequentially present their design work in a design portfolio. The course will be taught once a semester as an online-course. The course is required for students pursuing the Engineering Design Certificate.

Prerequisites: (EDSGN 100 7th Semester standing or higher)

EDSGN 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

EDSGN 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors

EDSGN 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

EDSGN 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EDSGN 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDSGN 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction. International Cultures (IL)
Engineering Graphics Technology (EGT)

EGT 60: 3D Visualization and Spatial Development
1 Credits

Supplemental course designed to improve spatial skills through the use of interactive hands-on activities, such as clay modeling and multimedia software. EG T 060 3D Visualization and Spatial Development (1) The ability to visualize objects and situations in one's mind, and more specifically the ability to manipulate those visualizations is an important skill for those in the engineering field. For example, EG T 120 Introduction to Graphics and Solid Modeling requires strong visualization skills to create orthographic (2D) and isometric (3D) representations of mechanical parts. Students must also be able to sketch an object 3-dimensionally from a 2D drawing and vice-versus. Strong visualization skills are also essential to successfully model 3D parts in a solid modeler, such as Pro/ENGINEER. In addition, research has shown students with poorly developed spatial skills, especially women, tend to become discouraged and drop out of engineering altogether if they are struggling in their very first &quot;engineering&quot; course. EG T 060 is designed to improve these spatial skills through the use of interactive hands-on activities, such as clay modeling (building a 3D object from a 2D drawing), snap cubes, and multi-media software specifically designed to improve these skills.

EGT 101: Technical Drawing Fundamentals
1 Credits
Technical skills and drafting room practices; fundamentals of theoretical graphics; orthographic projection including sectional and auxiliary views; dimensioning.

EGT 102: Introduction to Computer Aided Drafting
1 Credits
A first course presenting an intensive study utilizing a computer assisted drafting and design system to obtain graphic solutions.

EGT 114: Spatial Analysis and Computer-Aided Drafting
2 Credits
Spatial relations of applications in engineering technology with more advanced functionality of computer-aided drafting and design systems. EG T 114 Spatial Analysis and Computer-Aided Drafting (2) The EG T 114, Spatial Analysis and CAD course is a continuation of CADD (Computer Aided Drafting and Design) and an introduction to CAE (Computer Aided Engineering) with an emphasis on the state-of-the art 2-D drawing and 3-D solid modeling techniques commonly used in mechanical design and analysis of structural systems. This course is also designed to cover spatial relations of applications in engineering technology, with more advanced functionality of computer-aided drafting and design systems. Building on the knowledge and experience of Design Engineering from prior courses, the student will be able to: understand, create and interpret more advanced 2-D Engineering drawings; understand, create and manipulate 3-D solid models; use these two techniques in practical Engineering Design problems. Having an understanding of computer systems, students will become proficient in the use of computers for the simulation of mechanical systems, design documentation, network storage and retrieval, and presentation technologies. With a basic understanding of 2-D drawing software, the student will also be able to understand, create and interpret more advanced 2-D Engineering drawings, which may include auxiliary views and working drawings. Finally, having an understanding of the Engineering Design process and a basic understanding of solid modeling software, the student will be able to understand, create and manipulate 3-D solid models and assemblies to aid in the design and documentation of simple mechanical systems.

Prerequisite: EDSGN100
EGT 119: Introduction to CAD for Electrical and Computer Engineering
2 Credits
Introduction to computer-aided drafting (CAD) for Electrical and Computer Engineering Technology students with a focus on three dimensional assemblies. EG T 119 Introduction to CAD for Electrical and Computer Engineering (2) This course is intended to teach Electrical and Computer Engineering Technology students to use a 3-D CAD software package to communicate their ideas so that they may transfer their ideas to others including engineers, designers, and lay people. Students will successfully create 3-D objects such as rectangular solids, spheres, and cylinders. Those 3-D objects will then be employed to create actual samplings of electrical and electronic components (such as resistors, capacitors, transformers, etc), as well as electro-mechanical components (such as relays, motors, solenoids, etc), enclosures (chassis), and operator interfaces (knobs, buttons, displays, etc) and similar items. Students will successfully create 3-D assemblies. Students will successfully create working drawings of components and assemblies. The designated course outcomes are as follows: visualize mechanical part(s) 2-D to 3-D and vice versa; incorporate design intent into solid models using extrusions, revolves, shells, ribs, chamfers and rounds; construct datum references (e.g. planes and axes) to facilitate solid modeling; properly execute duplicating operations to create circular and linear patterns of features and mirrored features; use mathematical relations to drive solid models; create a detail drawing of a mechanical part; create 3-D assemblies.

Prerequisite: MATH 081
EGT 120: Introduction to Graphics and Solid Modeling
3 Credits
Development of visualization skills; introduction to parametric solids modeling techniques with constrained and unconstrained geometry, and assemblies.

EGT 121: Applied Solid Modeling
3 Credits
Creation of working drawings from solid models; dimensioning, GD&T, fastener, weld and finish symbols, layouts and bill of materials.

Prerequisite: EG T 120
EGT 201: Advanced Computer Aided Drafting
2 Credits
Application of the principles of engineering graphics; preparation of working drawings; details, examples, and bill of material using CAD. EG T 201 Advanced Computer Aided Drafting (2) Professional parametric solid modeling software will be applied to produce complete, industry-typical and standard working drawings, including part detail drawings.
and various types of assembly drawings; to implement the appropriately
toleranced design of interfacing components; and to explore advanced
productivity-enhancing add-in modules. Additionally, students will be
introduced to the variety and relative precedence of specifications
for feature tolerances and to the basic differences between form and
size tolerancing. Topics that will be covered in the course include:
Unilateral, bilateral and symmetric size tolerances, Form control and
tolerances, Calculations for critical fits, Specification precedence for
tolerances, e.g., stock size vs. size directly specified in the drawing
field vs. title block tolerances vs. drawing notes, etc. The following
laboratory assignments will include: Part drawing with standard three
orthographic views, complete dimensions, and a Section View, Part
drawing with complete dimensions and a Broken View, Part drawing
with complete dimensions and a Primary Auxiliary View, Part drawing
with complete dimensions and a Secondary Auxiliary View, Part drawing
with complete dimensions and removed Detail View(s), Detail drawing
with correct limit tolerances on features which are critical for fit and
function, Assembly file with separate sub-assemblies, Assembly Drawing
(with part identification balloons and a bill-of-material) which uses
Sectional Views to expose fine internal detail and part interrelationships,
Assembly Drawing (with part identification balloons and a bill-of-
material) which is based upon an Exploded View, Assembly Drawing of
a tooling fixture (with part identification balloons and a bill-of-material)
which shows the subject workpiece transparently with phantom lines,
Configured part file with tabulated drawing. Welding of an assembly using
advanced software capabilities and production of a welding drawing
with correct symbols, Production of an injection mold cavity from the
subject part file, Exploration of the functionality of sheet metal modules,
Applications of Top Down Design and Layout Sketches, Application of
motion-simulating modules and functionality. The differences between
coordinate tolerancing and geometric tolerancing are included in the
course. The American Society of Mechanical Engineers Y14.5M will be
referenced. The following are among the topics that will be covered:
Eight key GD&T terms, GD&T modifiers and symbols, Rule #1 and #2,
Concepts of GD&T, Introduction to the flatness control, straightness
control, circularity control, perpendicularity control, angularity control,
parallelism control, concentricity control, symmetry control, The datum
system (planar datums, Introduction to datum targets, FOS datum
specifications (RFS), FOS datum specifications (MMC).

Prerequisite: EDSGN100, EG T 114

EG T 205: Transition From 2-D CAD to Solid Modeling

1 Credits

Supplemental course designed to introduce students (primarily transfer)
to a solid modeling program. EG T 205 Transition From 2-D CAD to Solid
Modeling (1) This is a one credit course in parametric solid modeling.
Students will learn how to do basic geometry creation as well as how
to create and use reference geometry such as points and planes.
Duplicating features though the use of patterns and mirroring will be
covered. More advanced geometry creation such as sweeps and blends
are introduced, as well as the use of top-down as well as bottom-up
modeling techniques. Assembly modeling and detailing topics are
covered. Evaluation is done through both weekly homework assignments
and a final, comprehensive project. This course is designed to bring
students (especially transfer students who already have taken EG T 201)
up to a base level of proficiency on the specific CAD package used in
MET 306.

Prerequisite: EG T 201

---

**Engineering Mechanics (EMCH)**

**EMCH 210: Statics and Strength of Materials**

5 Credits

Equilibrium of particles, rigid bodies, frames, trusses, beams, columns;
stress and strain analysis of rods, beams, pressure vessels. EMCH
210 E MCH 210 Statics and Strength of Materials (5) This course is a
combination of EMCH 211 and EMCH 213. Students taking EMCH
210 may not take EMCH 211 or 213 for credit, or vice versa. Students
will learn how forces and moments acting on rigid and deformable
bodies affect reactions both inside and outside the bodies. Students will
study the external reactions, and their inter-relationships; the discipline
of statics (EMCH 211), as well as the associated internal forces and
deformations, quantified by their corresponding stresses and strains;
the discipline of strength of materials (EMCH 213). The student will be
able to analyze and design simple structural components based on
deflection, strength, or stability. Students will be prepared to analyze
and design simple structures and take upper division courses in mechanics
of materials and structural analysis and design. Students will communicate
their analysis through the use of free-body diagrams and logically
arranged equations.

**Prerequisite:** or concurrent: MATH 141

**EMCH 210H: Statics and Strength of Materials, Honors**

5 Credits

Equilibrium of particles and rigid bodies, frames, trusses, beams, columns;
stress and strain analysis of rods, beams, pressure vessels. E MCH
210H E MCH 210H Statics and Strength of Materials, Honors
(5) This honors course is a combination of E MCH 211 and E MCH 213.
Students taking E MCH 210H may not take E MCH 211 and 213 for credit,
or vice versa. The same general topics are covered as in E MCH 210,
but in a more advanced fashion and with more advanced applications.
Students will learn how forces and moments acting on rigid and
deformable bodies affect reactions both inside and outside the bodies.
Students will study the external reactions, and their inter-relationships
the discipline of statics (EMCH 211), as well as the associated internal
forces and deformations, quantified by their corresponding stresses and
strains - the discipline of strength of materials (EMCH 213). The student
will be able to analyze and design simple structural components
based on deflection, strength, or stability. Students will be prepared to
analyze and design simple structures and take upper division courses in
mechanics of materials and structural analysis and design. Students will communicate
their analysis through the use of free-body diagrams and logically
arranged equations.

**Prerequisite:** or concurrent: MATH 141

---

**Honors**

**EMCH 211: Statics**

3 Credits

Equilibrium of coplanar force systems; analysis of frames and trusses;
noncoplanar force systems; friction; centroids and moments of inertia.
EMCH 211 E MCH 211 Statics (3) Engineering Mechanics is the
engineering science that relates forces and moments to the motion
(displacement, velocity, acceleration) of bodies. The understanding
of the concepts of force, moment, and motion is essential to design
efficient engineering components ranging from a bridge to a wing strut.
to a robot arm to the mother board of a computer. Statics (E MCH 211) is the foundational course for both Dynamics (E MCH 212), which is the study of motion and the forces causing motion, and Strength of Materials (E MCH 213), which is the study of deformation and strength design of solids. Statics will provide students with the tools and guidance to master the use of equilibrium equations and Free Body Diagrams (FBD's) and to solve real engineering problems. Students should leave this class with the ability to logically approach a variety of static engineering problems, to translate a physical situation into an analytic model, and to use various mathematical tools to determine desired information. Course topics include: introduction and vectors, problem solving, force vectors, particle equilibrium, moments/couples, equivalent systems, distributed loads/FBDs, rigid body equilibrium, trusses, frames and machines, 3-D equilibrium, friction, centroids and center of gravity, and moments of inertia.

**Prerequisite:** or concurrent: MATH 141

**EMCH 212: Dynamics**

3 Credits

Motion of a particle; relative motion; kinetics of translation, rotation, and plane motion; work-energy; impulse-momentum. E MCH 212 E MCH 212 Dynamics (3) Dynamics (E MCH 212) is the study of forces causing motion and, at least in engineering, its primary goal is the determination of loads on moving structures for the purpose of design. Dynamics will provide students with the tools and guidance to analytically model a wide variety of mechanical and structural systems. In Dynamics, this is done by drawing free-body diagrams of the relevant parts of the system and then applying the laws of Newton and Euler, laws governing material behavior, and equations describing the geometry of motion of points and bodies (kinematics) to those free-body diagrams to obtain the equations governing the motion of the system. Once a system has been modeled, Dynamics will also provide students with the tools to obtain desired information from those models by solving the equations governing the motion of the system. Topics covered in Dynamics include: kinematics of particles, application of Newton's laws to particles, energy and momentum methods for particles, kinematics of rigid bodies, application of the laws of Newton and Euler to rigid bodies, and energy and momentum methods for rigid bodies. In addition to what is done in Dynamics (E MCH 212), students in Honors Dynamics will typically do a project in which they design an experiment and use what they have learned to compare theory with experiment. They will also make use of modern mathematical software to solve the nonlinear differential equations obtained in their analysis of mechanical and structural systems to obtain further understanding of the behavior of these systems.

**Prerequisite:** E MCH211, E MCH210H, or E MCH210; MATH 141

Honors

**EMCH 213: Strength of Materials**

3 Credits

Axial stress and strain; torsion; stresses in beams; elastic curves and deflection of beams; combined stress; columns. E MCH 213 E MCH 213 Strength of Materials (3) In this elementary course on the strength of materials the response of some simple structural components is analyzed in a consistent manner using i) equilibrium equations, ii) material law equations, and iii) the geometry of deformation. The components analyzed include rods subjected to axial loading, shafts loaded in torsion, slender beams in bending, thin-walled pressure vessels, slender columns susceptible to buckling, as well as some more complex structures and loads where stress transformations are used to determine principal stresses and the maximum shear stress. The free body diagram is indispensable in each of these applications for relating the applied loads to the internal forces and moments and plotting internal force diagrams. Material behavior is restricted to be that of materials in the linear elastic range. A description of the geometry of deformation is necessary to determine internal forces and moments in statically indeterminate problems. The underlying mathematics are boundary value problems where governing differential equations are solved subject to known boundary conditions. Students will be able to: a) Identify kinematic modes of deformation (axial, bending, torsional, buckling and two dimensional) and associated stress states on infinitesimal elements and sketch stress distribution over cross sections b) Analyze determinate and indeterminate problems to determine fundamental stress states associated with kinematic modes of deformation c) Apply strength of materials equations (and formulas) to the solution of engineering and design problems d) Recognize and extract fundamental modes in combined loading and do the appropriate stress analysis e) Extract material properties (modulus of elasticity, yield stress, Poisson's ratio) from data and apply these in the solution of problems f) Calculate the geometric properties (moments of inertia, centroids, etc) of structural elements and apply these in the solution of problems which will enable them to solve real engineering problems.

**Prerequisite:** E MCH211

**EMCH 213D: Strength of Materials with Design**

3 Credits

Stress and deformation in members under axial, bending, and torsional loads, combined stress; columns. Design with a project. E MCH 213D Strength of Materials with Design (3) Strength of Materials with Design adds depth and breadth to the traditional course material, provides an understanding of how the course topics are applied in engineering, introduces the student to information resources crucial to doing
Engineering and requires teamwork, research and decision-making. The student is expected to learn: the fundamentals of strength of materials which include the ability to analyze stress and strain structural elements under axial, bending, torsional and multi-axial behavior and predict the onset of buckling in columns. These objectives are the same for E MCH 213, the traditional course. Distinguishing features of E MCH 213D, Strength of Materials with Design, are: application of fundamental analysis to design of simple structures, application of the design process, research for data in the library and on the web, team-work, organization and writing a report which consists of a design drawing, supporting data and calculations.

**Prerequisite:** E MCH211, ED&G 100

EMCH 296: Independent Studies

1-18 Credits

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EMCH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EMCH 302H: Thermodynamics, Heat Conduction, and Principles of Modeling, Honors

4 Credits

EMCH 302H is a required course for engineering science students. This course presents the fundamental principles of classical thermostatics, thermodynamics, and heat transfer with relevant engineering applications. The students are expected to develop skills necessary to apply these principles to common engineering problems involving properties of matter, energy, non-reacting mixtures, and energy transport. The classical thermostatics and thermodynamics instruction will typically take 9 weeks. Control volume analysis techniques are introduced for closed and open systems undergoing both quasi-static and dynamic processes. The techniques are applied to analyze common power and refrigeration cycles, including gas and vapor systems. Diffusion in fluid and solid mixtures will also be considered. Special attention will be devoted to the notions of Helmholtz and Gibbs free energies as well as enthalpy. Use and significance of these concepts constitutive theories of gas, fluid, and solid materials systems will be discussed. The heat transfer component of the course will typically take 4 weeks. Instruction on heat transfer, will cover the three classical modes of heat transfer: conduction, convection, and radiation. Heat exchangers and heat transfer from extended surfaces are presented at a very basic level. Two weeks will be devoted to an introduction to statistical thermodynamic concepts in which a thermodynamic system is viewed as an ensemble whose state can be characterized in phase space. Enough background will be provided to compare and contrast the classical and statistical notions of entropy.

**Prerequisites:** CHEM 110, PHYS 211, MATH 230; or MATH 231 Honors

EMCH 315: Mechanical Response of Engineering Materials

2 Credits

Mechanical response measures and design theories for engineering materials; elastic and plastic response as affected by stress, strain, time, temperature. E MCH 315 E MCH 315 Mechatanical Response of Engineering Materials (2) The main goal of E MCH 315 is to present mathematical models to describe mechanical behavior of materials and develop skills relevant to understanding the mechanical response of an engineering design using realistic materials. Engineering analysis is emphasized by introducing various material responses to external factors including static loading, cyclic loading, and elevated temperatures. The student will gain a broad base in this area that serves as a foundation for subsequent employment in systems design and testing, or further study in engineering analysis, mechanical design, materials engineering or materials selection. E MCH 315 is an extremely useful and versatile class that has many applications in all engineering disciplines. The general topics include: elastic, viscoelastic, plastic, and creep deformation; temperature effects, stress based failure criteria for ductile and brittle material behavior; creep rupture; fracture mechanics prediction of brittle failure; and failure by fatigue.

**Prerequisite:** E MCH213, E MCH210H, or E MCH210

EMCH 316: Experimental Determination of Mechanical Response of Materials

1 Credits

Experimental techniques for mechanical property measurement and structural testing. E MCH 316 E MCH 316 Experimental Determination of Mechanical Response of Materials (1) The objective of EM CH 316 is to introduce students to the relevant technology and methods used to determine the mechanical responses of engineering materials and structural components. Student teams will apply stress and strain measurement techniques; conduct tensile, torsion, creep, internal pressurization, and fatigue tests; then characterize mechanical behavior and explain the material parameters obtained. The laboratory assignments are designed to complement the lecture course E MCH 315, which must be taken as a prerequisite of concurrently.

**Prerequisite:** or concurrent: E MCH315

EMCH 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EMCH 400: Advanced Strength of Materials and Design

3 Credits

Combined stresses; energy methods; special problems in bending and torsion; plates; thin-walled structures; buckling and stability; design projects.

**Prerequisite:** E MCH213, E MCH210H, or E MCH210
EMCH 402: Applied and Experimental Stress Analysis
3 Credits
Experimental design of structural and machine components; photoelasticity, electrical resistance strain gauge techniques, Moiré techniques, interferometry, holography.
Prerequisite: EMCH213, EMCH210H, or EMCH210
EMCH 403: Strength Design in Materials and Structures
4 Credits
Determination, interpretation, significance, and application of mechanical properties such as plastic flow, fatigue strength, creep resistance, and dynamic properties.
Prerequisite: EMCH315, EMCH316
EMCH 407: Computer Methods in Engineering Design
3 Credits
Computer methods in mechanical design: solid modeling, graphics, surface smoothing/interpolation and underlying numerics: simultaneous equations, quadrature, eigen problems, discrete models. EMCH 407 teaches computer methods and the use of modeling tools for doing mechanical design and the underlying numerical methods necessary to design, design analysis and development of design-related computer tools. The programming tool used in the course is MATLAB. EMCH 407 provides preparation for study of finite element analysis and professional practice. It is well suited to students who expect to work in design, manufacturing and/or project engineering. EMCH 407 is not a typical numerical methods course; for example, it treats solution of differential equations using finite differences only as minor application. Nonetheless the mathematics is at times rather abstract. Course Objectives (labels for ABET criterion met are appended to each objective). Students will be able to: Apply methods prerequisite to finite element analysis to well-defined problems (a, e, f, g, i, k) Generate splines and curves for the smoothing of surfaces (a, b, e, f, g, h, i, j, k) Write computer code to do computer graphics and object manipulation (a, c) Do solid modeling, create rapid-prototypes, generate meshes using a commercial package (c, e, h, j, k) Calculate eigenvalues/eigenvectors and plot mode shapes (a, e, j, k) 2. Evaluation Methods include homework, mini-project submittals, midterm and final exams. 3. Special Facilities: EMCH 407 is taught in classrooms with computers. 4. Frequency of Offering/Enrollment: EMCH 407 is offered every spring semester. Enrollment is limited to the number of computers in the classroom.
Prerequisite: CMPSC201, CMPSC202, or E SC 261M; EMCH213, EMCH210H, or EMCH210
EMCH 409: Advanced Mechanics
3 Credits
Continuation of EMCH 012; Euler’s equations for the rotation of a rigid body, gyroscopic motion, impulsive motion, Lagrangian mechanics.
Prerequisite: EMCH212 or EMCH212H; MATH 230
EMCH 416: Failure and Failure Analysis of Solids
3 Credits
Examination and analysis of the various modes of failure of solid materials.
Prerequisite: EMCH213, EMCH210, or EMCH210H
Honors
EMCH 440: Nondestructive Evaluation of Flaws
3 Credits
Methods and limitations of nondestructive evaluation of mechanical flaws; optical, acoustical, electromagnetic, x-ray, radiography, thermography, and dye techniques.
Prerequisite: EMCH213, EMCH210H, or EMCH210
Cross-listed with: MATSE 440
EMCH 446: Mechanics of Viscoelastic Materials
3 Credits
Nature of viscoelastic materials, constitutive relations, thermorheological materials, viscoelastic stress analysis, rubber elasticity, viscoelastic liquids, experimental techniques for material characterization.
Prerequisite: EMCH315, EMCH316
EMCH 461: Finite Elements in Engineering
3 Credits
Computer modeling and fundamental analysis of solid, fluid, and heat flow problems using existing computer codes. EMCH (M E) 461 Finite Elements in Engineering (3) This is an introductory course in the Finite Element Method. Through this course, students gain knowledge in finite element theory and problem modeling. The mathematical formulation of the method is presented and then applied to problems in elasticity and heat transfer. Projects are assigned to demonstrate the finite element method in simplified problems using hand-calculations and computer programs such as Matlab. The use of commercial FEA programs is introduced and problems of increased complexity are assigned to demonstrate their use in a computer lab. Finally, problems of realistic complexity are assigned such that students can practice solving, documenting and presenting their use of commercial FEA programs.
Prerequisite: EMCH213, EMCH210H, or EMCH210; CMPSC200, CMPSC201 or CMPSC202
Cross-listed with: ME 461
EMCH 470: Analysis and Design in Vibration Engineering
3 Credits
Application of Lagrange’s equations to mechanical system modeling, multiple-degree-of-freedom systems, experimental and computer methods; some emphasis on design applications. In this course, students will learn basic techniques for modeling and analyzing linear multidegree-of-freedom (MDOF) mechanical systems, and will learn how to use these techniques for mechanical design. Students will learn to obtain equations of motion using energy methods (Lagrange’s equations), with emphasis on the efficient formulation and reduction to the linear case. The basic theory of MDOF systems will be presented, including: eigenvalue problems; natural frequencies and normal modes; superposition and
modal analysis; and frequency response. Numerical methods for solving static, dynamic and eigenvalue problems will be presented. Introductions to the theory of linear continuous systems and experimental methods of vibrations will be presented. A substantial portion of the course will be spent discussing design applications of the basic theory, such as: finite element numerical analysis and experimental modal analysis of beams and plates; vehicle suspension design; and vibration isolation and absorption.

**Prerequisite:** E MCH212 or E MCH212H; M E 370 or E SC 407H
Cross-listed with: ME 470

EMCH 471: Engineering Composite Materials
3 Credits

Properties, manufacture, forms of composites; micromechanics; orthotropic lamina properties; laminate analysis; theories; failure analysis; thermal, environmental effects.

**Prerequisite:** E MCH213, E MCH210H, or E MCH210; E MCH315, E SC 414M, or MATSE201

EMCH 473: Composites Processing
3 Credits

An introduction to the principles of mechanics governing manufacturing, computer-aided design, and testing of composite materials and structures.

**Prerequisite:** E MCH471
Cross-listed with: AERSP 473

EMCH 480: Mechanism Design and Analysis
3 Credits

Design and analysis of mechanical linkages including kinematic synthesis and dynamic analysis. Linkages for a variety of applications are considered. M E 480 Mechanism Design and Analysis (3) The student who takes this course will develop a basic understanding of the analysis and synthesis of planar linkage mechanisms. Students will develop the ability to model real linkage mechanisms using kinematic diagrams, including identification of links and joints. They will also learn to use Gruebler's equation to calculate the mobility or number of degrees of freedom of linkages based on the kinematic diagram. Students will also become familiar with real mechanism applications in the context of mechanism synthesis, where they will learn to determine the required dimensions of a mechanism for a specific application. Students will apply these dimensional synthesis methods in a design project which includes building a simple linkage prototype. They will learn kinematic analysis methods, i.e., analysis of position, velocity, and acceleration of planar linkages. These methods consist of graphical, algebraic, and complex number approaches. Students will also learn to use commercial software packages, e.g., Working Model, to predict position, velocity, and acceleration of planar linkages, and will compare their predictions to those using analytical approaches. Finally, students will learn to do dynamic force analysis of planar linkages to predict joint forces and motor torques. They will use commercial software packages to predict joint forces and motor torques of planar linkages, and will compare their predictions to those using analytical approaches.

**Prerequisite:** E MCH212. Prerequisite or Concurrent: CMPSC200

EMCH 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EMCH 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Engineering Science (ESC)**

ESC 97: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ESC 120: Design for Failure--First-Year Seminar
1 Credits

This seminar, through the utilization of commonly used examples, discusses the engineering principles which are exploited by such designs. ESC 120 Design for Failure (1) (FYS) Although an important facet of engineering design is to minimize the possibility of failure of a system component, there are many devices which actually protect a system by their controlled failure. Further, some components are designed to "work" through failure. In the former situation are such devices as: a shear pin in an outboard motor driveline, a fuse in an electrical circuit, a valve actuated by heat in a sprinkler system. In the latter situation, "tab tops" allow one to open a beverage can, perforations cause the paper towel to "tear" in a prescribed manner, plasticity/elasticity allows stamped parts, such as automobile hoods, to retain their new shape following stamping.

First-Year Seminar

ESC 121: Science/Engineering Fiction and the Engineering Sciences--First-Year Seminar
1 Credits

Examines the technology predictions of authors in view of the engineering sciences on which the underlying devices of their stories are based. E SC 121 S Science/Engineering Fiction and the Engineering Sciences (1) (FYS) From the times of Jules Verne, books, then movies and TV, have utilized engineering/science and pseudo-engineering, in envisioning devices which were not then available, but perhaps became so in later times. From Verne's nuclear driven submarine to his voyage to the moon; to Mary Shelly's electrically created monster; to Dick Tracy's wrist radio (cell phone); to the warp speed of the Jedi, there are successes and failures as to predictions of what would some day be possible. These are examined and discussed.

ESC 122: Weird, Wild, and Wonderful Materials and Devices—First-Year Seminar

1 Credits

First-year seminar that surveys the use of novel materials and material systems to create practical devices. E SC 122S Weird, Wild, and Wonderful Materials and Devices (1) (FYS) There are many materials whose response to a particular stimulus (mechanical, thermal, electrical, etc.) is of a completely different type. For example, if a piezoelectric material is mechanically squeezed, (stimulus) the response is the creation of an electrical signal. Birefringent (photoelasticity) materials change their optical properties under mechanical displacement. Thermoluminescent remember their configuration under certain environmental combinations, to which they will abruptly return when these same combinations are repeated. This seminar surveys many classes of such materials and material systems and provides examples of engineers utilizing their behavior for sensors, transducers, and actuators. Examples include acoustic refrigerators, phonograph cartridges, door openers, and stress concentration locators.

First-Year Seminar

ESC 123: Catastrophic Failures—First-Year Seminar

1 Credits

First-year seminar that explores design deficiencies through the study of case histories of a number of famous failures. E SC 123S Catastrophic Failures (1) (FYS) Engineered Systems sometimes fail in catastrophic ways. Bridges collapse, buildings burn, airplanes explode, ships break in two, spontaneous combustion occurs, automobiles crash, etc. Virtually all such failures occur because the designers, builders, and or the users have overlooked some unexpected combination of inputs (they seldom fail due to simple overload). For example, a bridge designer may have overlooked (a) the potential danger of aerodynamic loading and mechanical resonance; (b) having a bridge mooring struck by a tugboat; or, (c) the possibility of an earthquake. The ship designer may not have expected a combination of very cold weather and large waves or bad materials, etc. This seminar explores design deficiencies through the study of cash histories of a number of famous failures such as the explosion of the Challenger (modern era) and the sinking of the Titanic that caused catastrophic loss of life. A primary objective of reliving such failures is to alert students to the myriad factors that must be considered for a safe and effective engineering system, and to encourage them to broaden their education so that they will not repeat the mistakes of the past in their own careers.

First-Year Seminar

ESC 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ESC 211: Material, Safety and Equipment Overview for Nanotechnology

3 Credits

Nanotechnology processing equipment and materials handling procedures with a focus on safety, environment, and health issues. E SC 211 Material, Safety, and Equipment Overview for Nanotechnology (3) This course overviews basic material properties as well as environment, health, and safety (EHS) issues in equipment operation and materials handling in "top down" and "bottom up" nanofabrication. The chemical and physical materials properties underlying nanotechnology are surveyed. EHS topics arising from the processing and disposal of these materials are addressed including: cleanroom operation, OSHA lab standard safety training, health issues, biosafety levels (BSL) guidelines, and environmental concerns. Specific safety issues dealing with nanofabrication equipment, materials, and processing will also be discussed including those pertinent to wet benches, thermal processing tools, vacuum systems and pumps, gas delivery systems and toxic substance handling and detection.

Prerequisite: CHEM 101, MATH 081, PHYS 150 or PHYS 250

ESC 212: Basic Nanotechnology Processes

3 Credits

Step-by-step description of equipment and processes needed in top-down, bottom-up, and hybrid nanotechnology processing. E SC 212 Basic Nanotechnology Processes (3) This course is an overview of the broad spectrum of processing approaches involved in "top down", "bottom up", and hybrid nanofabrication. The majority of the course details a step-by-step description of the equipment, facilities processes and process flow used in today's device and structure fabrication. Students learn to appreciate processing and manufacturing concerns including safety, process control, contamination, yield, and processing interaction. The students design process flows for micro- and nano-scale systems. Students learn the similarities and differences in "top down" and "bottom up" equipment and process flows by undertaking hands-on processing. This hands-on overview exposure covers basic nanofabrication processes including deposition, etching, and pattern transfer.

Concurrent: E SC 211

ESC 213: Materials in Nanotechnology

3 Credits

The processing of materials in nanotechnology as well as the unique material properties available at the nano-scale. ESC 213 Materials in Nanotechnology (3) This course is an in-depth, hands on exposure to the producing and tailoring of the materials used in nanofabrication. The course will cover chemical materials production techniques such as colloidal chemistry; atmosphere, low-pressure and plasma enhanced chemical vapor deposition; nebulization; and atomic layer deposition. The course will cover chemical materials production techniques such as colloidal chemistry; atmosphere, low-pressure and plasma enhanced chemical vapor deposition; nebulization; and atomic layer deposition. It will also cover physical techniques such as sputtering, thermal and electron beam evaporation, and spin-on approaches. This course is designed to give students experience in producing a wide variety of materials tailored for their mechanical, electrical, optical, magnetic, and biological properties.

Concurrent: E SC 211, E SC 212

ESC 214: Patterning for Nanotechnology

3 Credits

Pattern transfer techniques from photolitography to nanoimprinting and nanomolding. ESC 214 Patterning for Nanotechnology (3) This course is a hands-on treatment of all aspects of advanced pattern transfer and pattern transfer equipment including probe techniques; stamping and embossing; e-beam; and optical contact and stepper systems. The course is divided into five major sections. The first section is an overview of all pattern generation processes covering aspects from
substrate preparation to tool operation. The second section concentrates on photolithography and examines such topics as mask template, and mold generation. Chemical makeup of resists will be discussed including polymers, solvents, sensitzers, and additives. The role or dyes and antireflective coatings will be discussed. In addition, critical dimension (CD) control and profile control of resists will be investigated. The third section will discuss the particle beam lithographic techniques such as e-beam lithography. The fourth section covers probe pattern generation and the fifth section explores imprinting lithography, nano-molding lithography, step-and-flash, stamp lithography, and self-assembled lithography.

**Concurrent:** E SC 211, E SC 212

ESC 215: Nanotechnology Applications

3 Credits

Applications of nanotechnology including those in medicine, biology, electronics, energy, and materials. E SC 215 Nanotechnology Applications (3) This course covers the applications of nano-scale devices and systems and the material chemical, physical, biological, or multiple-property requirements necessitated in these applications. Material modifications to meet these requirements will be addressed including structure control, composition control, surface property control, strain control, functionalization, and doping.

**Concurrent:** E SC 211

ESC 216: Characterization, Testing of Nanotechnology Structures and Materials

3 Credits

Measurements and techniques essential for controlling device fabrication. E SC 216 Characterizeration, Testing of Nanotechnology Structures and Materials (3) This course examines a variety of techniques and measurements essential for testing and for controlling material fabrication and final device performance. Characterization includes electrical, optical, physical, and chemical approaches. The characterization experience will include hands-on use of tools such as the Atomic Force Microscope (AFM), Scanning Electron Microscope (SEM), fluorescence microscopes, and fourier transform infrared spectroscopy.

**Concurrent:** E SC 211, E SC 212

ESC 261: Computational Methods in Engineering

3 Credits

Computational methods for solving engineering problems using C++ and MATLAB. Reports on root finding, systems of algebraid equations. E SC 261M Computational Methods in Engineering (3) E SC 261M covers programming language fundamentals (organization strategies) and language grammar (syntax) of C++, MATLAB software libraries and packaged tools, and the following numerical methods: root searching techniques, solvers for systems of algebraic equations, curve fitting methods. E SC 261M is taught in a modern technology classroom. E SC 261M is essential for courses on advanced computational methods for engineers, finite element methods, and for all the other engineering courses which rely on computational methods and computer programs to analyze and interpret experimental data.

**Prerequisite:** or concurrent: MATH 141

ESC 312: Engineering Applications of Wave, Particle, and Ensemble Concepts

3 Credits

The engineering applications of the wave and ensemble pictures of the physical world. E SC 312 Engineering Applications of Wave, Particle, and Ensemble Concepts (3) This course covers the engineering applications of wave based and ensemble-formulated pictures of the physical world. It begins by discussing criteria for the applicability of geometrical optics and of physical optics and moves into a general discussion of wave phenomena. An introduction to the formalism of physical optics is then given along with examples of its use in engineering applications. The course then moves to discussing the criterion for the applicability of classical mechanics and of quantum mechanics. The parallelism between the geometrical optics/physical optics and classical mechanics/quantum mechanics criteria is underscored. An introduction to the formalism of quantum mechanics is then undertaken followed by a discussion of engineering applications of quantum mechanics. The impact of quantum mechanics on particle, quasi-particle, and cooperative phenomena is discussed. The course then treats the problem of determining the physical properties of ensembles of particles and quasi-particles. Statistical mechanics concepts are introduced and the effects of quantum mechanics on ensemble predictions is covered. Fermi-Dirac, Bose-Einstein, and Boltzmann statistics are developed and discussed. The connection is also made between statistical mechanics and thermodynamics. Engineering applications of statistical mechanics are presented and discussed. The objective of this course is to give engineering students a broad technical picture of physical concepts that will affect much of the engineering advances of this century. Students will be exposed to the duality of the wave-particle picture and to that picture’s critical engineering important to the fields of optics and mechanics. They will be taught the influence of quantum mechanics on physical properties and the need for ensemble approaches for predicting the expected values of those properties for many particle systems. The impact of wave and ensemble approaches on engineering applications will be stressed and the students will be given hands-on exposure to this impact in three laboratory experiences. Evaluation methods to be used in this course will be two in-class examinations and one final period examination.

**Prerequisite:** PHYS 214

ESC 313: Introduction to Principles, Fabrication Methods, and Applications of Nanotechnology

3 Credits

Principles, fabrication methods and applications of nanoscale. E SC 313 Introduction to Principles, Fabrication Methods, and Applications of Nanotechnology (3) This course coveres the unique opportunities provided by the nano-scale and focuses on the engineering issues of fabricating and applying structures designed to take advantage of these opportunities. The course begins with defining nanotechnology and
nanofabrication. It then moves to the unique features available in nano-scale structures such as large surface-to-volume ratios, quantum size effects, unique chemical bonding opportunities, dominance of physical optics, surface control of reactions and transport, and the creation of structures on the same size scale as basic features in living cells. With this understanding of the uniqueness of the nano-scale, the course progresses into the fabrication methods used in nanotechnology and then into nanostructure applications. The various nanofabrication approaches found in top-down, bottom-up, and hybrid fabrication approaches are explained and discussed in the lecture format. The principles behind the application of structures fabricated at the nano-scale are then addressed in more depth. This section of the course includes an introduction to nano-scale electronic devices, an introduction to nano-scale sensing devices, an introduction to nano-scale optics and optical devices, an introduction to material property modification at the nano-scale, and an introduction to the biology/nano-scale interface. Specific applications of the structures made using various combinations of top-down and bottom-up fabrication techniques are overviewed in various applications including sensors, nano-electronics, molecular electronics, photonics, nano-optics, information storage and computing, materials, nano-mechanics, and nano-biotechnology and medicine. The course concludes with an introduction to the manufacturing issues encountered when fabricating, assembling, and interfacing nano-scale structures as well as with an overview of health, environmental, and societal issues The objective of this course is to give a broad technical picture of nanotechnology to engineering students from various engineering disciplines. In so doing, the course will develop a sound background for making informed judgments concerning the potential of nanotechnology for various technical applications and a sound background for assessing the societal and health issues as well as environmental impact of nanotechnology. The course objectives are to have students be able to consider nanotechnology solutions to technical problems, be able to fabricate these nanotechnology solutions in a manufacturable manner, be able to determine if there are any potential health or environmental issues involved in their solutions, and be able to assess the societal impact of their solutions. The course will require a college-level chemistry and physics background. Evaluation methods to be used in this course will be two in-class examinations and one final period examination.

Prerequisite: PHYS 212

ESC 386: Engineering Principles of Living Organisms

3 Credits

This course will explore how engineering principles apply to living organisms. E SC 386 Engineering Principles of Living Organisms (3) This course uses an engineering approach that applies basic physical and mathematical principles to the fundamental problems living organisms encounter. The objectives of the course are to understand the role of scaling in size and construction trade-offs in living organisms, how diffusion shapes and limits cellular processes, the role of electrical fields and concentration gradients in signaling, the statistical mechanics of ion channel and receptor gating, how the dynamics of transcriptional interactions can generate genetic circuits, the role of mechanical amplification in hearing. At the completion of the course, students will have insight into how to use quantitative techniques from engineering and the physical sciences to analyze biological systems.

Prerequisite: CHEM 110, MATH 251 and PHYS 214

ESC 400: Electromagnetic Fields

3 Credits

Irrotational and solenoidal fields, potentials, vector and scalar field and wave equations, harmonic and wave functions in various coordinates, radiation. E SC 400H Electromagnetic Fields (3) E SC 400H is a required senior-level course for students pursuing a bachelor’s of Engineering Science. At the conclusion of this course, students will be able to: 1. Apply the basic principles of electrostatics, such as Coulomb’s Law, electric field intensity, electric flux density, Gauss’s Law, the concepts of divergence and gradient, and potential functions to solve basic and applied problems. 2. To compute resistance and capacitance for a variety of geometric configurations. 3. They will apply the basic principles of
steady magnetic fields, such as the Biot-Savart Law, Ampére’s Circuit Law, magnetic flux and flux density, Stoke’s Theorem and the concept of the curl and Maxwell’s equations for static electric and steady magnetic fields to solve basic and applied problems. 4. Compute self and mutual inductance for a variety of geometric configurations. 5. Understand the necessary modifications of Maxwell’s equations for time-varying fields including Faraday’s Law and the concept of displacement current and apply these to solve basic and applied problems. 6. Understand the solutions of the reduced wave equation, for time-harmonic excitations, for plane wave propagation in both perfect and lossy dielectrics, the concepts of skip depth and wave polarization, plane wave reflection at planar boundaries, Snell’s Law, Brewster’s angle, and the concept of standing wave ratio and apply these to solve basic and applied problems. 7. Understand the basic principles of waves on transmission lines and apply these to solve basic and applied problems. Topics include: Vector Analysis; Coulomb’s Law and Electric Field Intensity; Electric Flux Density, Gauss’s Law, and Divergence; Energy and Potential; Conductors, Dielectrics, and Capacitance; Poisson’s and Laplace’s Equations; the Steady Magnetic Field; Magnetic Forces, Materials, and Inductance; time-Varying Fields and Maxwell’s Equations; the Uniform Plane Wave; Waves at Boundaries and in Dispersive Media. A typical course assessment includes homework assignments, mid-semester examinations and a final examination. The course is offered, in a lecture format, each spring at the University Park Campus. A typical enrollment is 25-30 students. This course is not a prerequisite for other courses.

**Prerequisite:** E E 210 , MATH 250

Honors

ESC 404: Analysis in Engineering Science

3 Credits

Unified application of coordinate transformations; Laplace’s, heat, and wave equations to boundary value problems and problems of continua in engineering.

**Prerequisite:** MATH 250 or MATH 251

Honors

ESC 406: Analysis in Engineering Science II, Honors

3 Credits

Application of complex variable theory, integral equations, and the calculus of variations to engineering problems.

**Prerequisite:** E SC 404H

Honors

ESC 407: Computer Methods in Engineering Science, Honors

3 Credits

Numerical solution of differential equations including fundamentals: roots of single nonlinear and simultaneous (Matrix) equations, least squares fitting and staistical goodness, interpolation, finite differences, differentiation, integration, eigensolutions. E SC 407H Computer Methods in Engineering Science, Honors (3) The overall objective of this course is the creation of mathematical continuum models in the form of differential equations and the application of numerical methods to solve them. To reach this goral, fundamental methods dealing with numerical approximation, specifically starting with Taylor’s series, are covered: differentiation, integration, and root search of single nonlinear equations. Mathematical models are transformed into discrete models using the finite difference method, hence the solution of simultaneous algebraic equations in matrix and iterative forms is also covered. In addition, eigenvalue problems are also covered in order to characterize models, both continuous and discrete. The concept of vector-variable and vector-valued functions are used to form algorithms, cast them into computer code, in a language of student choice, usually Mathematica or MATLAB because graphical output is required in doing assignments. This course relates to programs of study in most engineering disciplines based upon the physics of solids and fluids. Evaluation methods include assessment of written reports, at least one midterm examination and either a final examination or a final report.

**Prerequisite:** CMPSC201 or CMPSC202 , or E SC 261M; Concurrent: MATH 220

Honors

ESC 409: Senior Research and Design Project Preparation, Honors

1 Credits

Preliminary identification and planning for the senior year research and design project. ESC 409 Senior Research and Design Project Preparation, Honors (1) is the first of a three-part series of courses that constitute the Engineering Science honors capstone research and design project. Engineering Science students participate in projects in all engineering disciplines and employ design principles before, during, and after analysis, experimentation and/or simulation. The resulting designs of systems, components or processes are then tested and refined by changing material, geometric, stochastic or other parameters, as required. Students will spend the first few weeks of the course investigating various areas of research being conducted at the university. They will then interview key faculty and graduate students in several research groups and ultimately select one area to be the focus of their senior thesis research. After obtaining the agreement of a faculty member to supervise the thesis project, they will spend time familiarizing themselves with the people, equipment, materials, and software available in their selected research group as well as reading and summarizing key literature in preparation for conducting research. As an end product of this 1 credit course, students will develop a detailed set of project objectives and create a timeline for the year-long project. Class time will be spent exposing students to a variety of different research areas. In addition, time will be given for students to support each other through facilitated discussions to share their success stories as well as difficulties encountered in the process of identifying and selecting their research topics. Students will also be given the opportunity to present the preliminary details of their intended research topic. ESC 409 (1 credits) will be followed by ESC 410 (3 credits) where students will conduct their research, subsequently followed by ESC 411 (2 credits) where students will complete their research and prepare a written honors thesis. Through these combined 6 credits, students will integrate the scientific principles of research, design, and analysis and apply them to a particular field of engineering.

**Prerequisite:** E SC 433H , E SC 414M

Honors

ESC 410: Senior Research and Design Project I, Honors

3 Credits

Design and synthesis in the context of a specific design project undertaken during the senior year. ESC 410 Senior Design Project, Honors (3) is the second of a three-part series of courses that constitute the Engineering Science honors capstone research and design project.
Engineering Science students participate in projects in all engineering disciplines and employ design principles before, during, and after analysis, experimentation and/or simulation. The resulting designs of systems, components or processes are then tested and refined by changing material, geometric, stochastic or other parameters, as required. ESC 410 is the continuation of ESC 409 and constitutes the core effort in the honors senior research and design project for Engineering Science majors. It is followed by ESC 411. All three courses are required of Engineering Science majors and together they comprise the capstone research and design project, which integrates the scientific principles of research, design, and analysis and applies them to a particular field of engineering. In-class lectures and discussions on a wide range of topics such as design, engineering ethics, international relations, engineering management, safety, government and public policy, environmental issues, workforce preparation and graduate school occur in tandem with the students’ development of their individual topics.

**Prerequisite:** ESC 409H

**Honors**

ESC 411: Senior Research and Design Project II, Honors

2 Credits

Design and synthesis in the context of a specific design project undertaken during the senior year. ESC 411 Senior Research and Design Project II, Honors (3) is the third of a three-part series of courses that constitute the Engineering Science honors capstone research and design project. Engineering Science students participate in projects in all engineering disciplines and employ design principles before, during, and after analysis, experimentation and/or simulation. The resulting designs of systems, components or processes are then tested and refined by changing material, geometric, stochastic or other parameters, as required. ESC 411 is the continuation of ESC 409 and ESC 410. All three courses are required of Engineering Science majors and together they comprise the capstone research and design project, which integrates the scientific principles of research, design, and analysis and applies them to a particular field of engineering. In-class lectures and discussions on a wide range of topics such as design, engineering ethics, international relations, engineering management, safety, government and public policy, environmental issues, workforce preparation and graduate school occur in tandem with the students’ development of their individual topics.

**Prerequisite:** ESC 409H

**Honors**

ESC 412: Nanotechnology: Materials, Infrastructure, and Safety

3 Credits/Maximum of 999

Cleanroom based nano/micro fabrication and related environmental health and safety issues. The nanotechnology consumer products market currently has more than 1,000 nanomaterial-containing products varying from makeup, sunscreen, food storage products, appliances, clothing, electronics, computers, sporting goods, and coatings to drug delivery systems. These products exist in the market place and are expanding in number because nano-scale materials and structures can have properties that are very different from larger size-scale versions of the same materials and structures. These property differences at the nano-scale can make nanotechnology products unique and desirable for specific applications. However, the uniqueness of the nano-scale can also affect toxicity and environmental repercussions due to differences in physicochemical properties arising from size but also from shape, chemistry, surface properties, agglomeration, bio-persistence, solubility, and charge, as well as from differences caused by attached functional groups, as outlined in this course. The greater surface-area-to-mass ratio of nanoparticles makes them generally more reactive than their macro-sized counterparts. These properties that make nanomaterials unique and valuable in manufacturing many products also make manufacturing at this scale an endeavor which must be studied and appreciated for its potential safety, health, and environmental impact. Practicing engineering at the nano-scale requires awareness of the nanotechnology safety, health concerns, and environmental issues laid out in ESC 412.

**Prerequisite:** 7th semester standing

ESC 414: Elements of Material Engineering

3 Credits

Structure and imperfections in engineered materials; their influence on properties, behavior, and processing. Applications of metals, ceramics, polymers, and composites. ESC 414M Elements of Material Engineering (3) This course is a junior-level, writing-intensive engineering science course designed to introduce students to the fundamentals of materials science and engineering. In the early part of this honors course, structure property relationships in materials are explored. The student will examine how atomic structure and bonding influence engineering properties such as strength and electrical properties Next, solidification, strengthening mechanisms, and phase diagrams for some common engineering materials are discussed to further examine structure property relationships and to provide the basis for the study of more complex materials The second half of the course introduces properties and attributes of each of the major classes of materials (metals, ceramics, polymers, and composites) to acquaint the student with the wide array of material properties and choices available for design. Next, electrical, optical, and thermal properties of the various classes of materials are introduced Finally, the course closes with an introduction to the topics of materials selection and design Throughout the course, integrated writing assignments allow the student to explore the properties of a specific material or materials process in detail and gain insight the design process.

**Prerequisite:** EMCH213, EMCH210H or EMCH210 . Prerequisite or concurrent: ESC 312 or PHYS 237

**Honors**

Writing Across the Curriculum

ESC 417: Electrical and Magnetic Properties

3 Credits

Electrical conductivity, dielectric properties, piezoelectric and ferroelectric phenomena; magnetic properties of ceramics. ESC 417 / MATSE 417 Electrical and Magnetic Properties (3) is designed to provide students with a fundamental understanding of the different responses a material can have to applied electrical or magnetic fields. Important properties are introduced and correlated with knowledge of material chemistry, crystal structure, and microstructure to provide an understanding of the mechanisms responsible for controlling the observed properties, as well as the ways in which properties can be engineered. Electronic and magnetic properties encompass dielectric, ferroelectric, conductor, superconductor, and ferromagnetic materials. Material properties and structures are related to sensors, energy storage and conversion devices, biomedical devices and electronic components in telecommunications.

**Prerequisite:** MATSE400 , MATSE413; Concurrent: MATSE402

Cross-listed with: MATSE 417
ESC 419: Electronic Properties and Applications of Materials

3 Credits

The course covers the electrical, optoelectronic, dielectric, and other electron-based properties of solids, semiconductors in particular, and their engineering/ device applications. E SC 419 Electronic Properties and Applications of Materials (3) This course is designed primarily as a Foundation Elective for Engineering Science majors. It covers the electron-based properties of materials and their engineering applications. Building upon the strong foundation of wave, particle and ensemble concepts covered in the prerequisite course (E SC 312), it will offer an advanced introduction to the behavior of electrons in crystalline as well as non-crystalline solids, and its impact on properties. A comprehensive treatment of electrons in solids is essential to understand the electronic, optical, thermal, magnetic and other properties of materials and their incorporation in functional devices. The topics will address many facets of electrons in solids, their interaction with fields, cooperative phenomena and low-dimensional effects, and lead up to a broad range of elementary device applications. It will draw upon the results of quantum mechanics and band theory of solids that will provide the broad umbrella needed for understanding the properties of materials and designing them into practical devices and nanosystems. The importance of structure on material properties will be emphasized, so as to bring forth the importance of artificially synthesized structures and emergence of new phenomena. Along with a detailed coverage of semiconductors due to their widespread applications and their dominance in modern micro- and optoelectronics, dielectric, magnetic and superconducting materials will also be discussed in the course. The role of defects, impurities and interfaces on electrical, optical, dielectric and other properties will be discussed, along with corresponding applications in device structures. The broad topical coverage will prepare students for advanced studies in a variety of fields including micro- and optoelectronics, functional nanosystems and synthesized nanostructures. The course will provide a solid background for senior technical electives such as E SC 481 (Elements of Nano/Micro-electromechanical Systems Processing and Design) E SC 445 (Semiconductor Optoelectronic Devices) offered in ESM, as well as Electrical Engineering and Materials Science and Engineering Courses. It will also complement (and be independent of) E SC 414M that encompasses atomic structure and mechanical properties of materials.

Prerequisite: E SC 312

ESC 430: Advanced Biofabrication Processes

3 Credits

This course covers advanced biofabrication processes used in tissue engineering, regenerative medicine and drug testing, and provides fundamental statistical concepts and tools that are required to analyze biofabrication process data. Topics include: Introduction, Review of Basic Statistics, Statistics for Analysis of Experimental Data, Hypothesis Testing with Two Sample, Introduction to Biofabrication, Traditional Manufacturing Processes for Tissue Engineering, Micro-patternning and Molding, Microfluidics in Tissue Engineering, Scaffold-free Tissue Fabrication, Modular Assembly and 3D Printing in Tissue Engineering. The course also includes utilization of software packages, hands-on laboratory homework assignments.

Prerequisite: At least 7th semester classification so that students have a technical background before taking the course.

ESC 433: Engineering Science Research Laboratory Experience

1 Credits

Hands-on lab experience and exposure to campus-wide interdisciplinary experimental research. Experimental probability and statistics. Application across all Engineering Science disciplines. E SC 433H Engineering Science Research Laboratory Experience (1) This course provides an introduction to experimental research, including hands-on laboratory experience. In addition, students take part in campus-wide laboratory tours that illustrate the variety of experimental practice, as well as the strongly interdisciplinary nature of contemporary experimental research in Engineer Science. Lab tours involve laboratories in a variety of disciplines, both within the Department of Engineering Science and Mechanics, and in other departments with related interdisciplinary activities. The classroom content focuses on the fundamentals of experimental probability and statistics, including: the experimental process; probability distributions and error; statistical estimators; least squares; and confidence limits and hypothesis testing. Applications of the statistical analysis of experimental data are drawn from across all Engineering Science disciplines and illustrated in the labs and lab tours. There will be three hands-on laboratories. Each lab will include additional introductory lecture material, specific handouts, and readings A report will be required for each lab that represents a significant writing component to the class, and includes both descriptive and analytical components. Assessment for the course is based on the laboratory reports, which include analytical and descriptive components, as well as exercises involving the material discussed in lectures.

Prerequisite: MATH 251

Honors

ESC 445: Semiconductor Optoelectronic Devices

3 Credits

The course will present the basic engineering science and technology involved in modern semiconductor optoelectronic devices. E SC 445 Semiconductor Optoelectronic Devices (3) This course deals with the optoelectronic properties of semiconductors and their application in functional devices for detection, emission, amplification and conversion of optical and electrical signals. A comprehensive introduction to the various optical absorption and emission processes in semiconductors is followed by an outline of specific properties of important optoelectronic semiconductors. The physical basis of detectors operating in the visible and near-visible regions is covered with an exploration of various photon detection phenomena present in solids. The devices discussed at length include intrinsic and extrinsic photodiode detectors, reverse and Schottky detectors, p-i-n and heterojunction devices, avalanche photodiodes and photomultiplier detectors, and light emitting and laser diodes. Novel structures based on variable gap and superlattice structures are also discussed. The course is based on the laboratory reports, which include analytical and descriptive components, as well as exercises involving the material discussed in lectures.

Prerequisite: E SC 419 or E SC 314 or E E 368
ESC 450: Synthesis and Processing of Electronic and Photonic Materials

3 Credits

The materials science of applying thin film coatings, etching, and bulk crystal growth; includes materials transport, accumulation, epitaxy, and defects.

Prerequisite: MATSE201 or E SC 414H , sixth semester standing
Cross-listed with: MATSE 450

ESC 455: Electrochemical Methods Engineering and Corrosion Science

3 Credits

The objective of the course is to give students hands-on experience in assessing environmental degradation of engineering materials. E SC 455 E SC 455 Electrochemical Methods in Corrosion Science and Engineering (3)The objective of the course is to give students hands-on experience in assessing environmental degradation of engineering materials. Students will be introduced to a variety of experimental electrochemical methods and will use their training to evaluate corrosion of steel, stainless steel, and aluminum. Techniques that will be used in this laboratory-intensive course include potentiodynamic and potentiostatic polarization, galvanic corrosion measurements, localized corrosion measurements (scratch, critical pitting temperature, and metastable pitting experiments), evaluation of sensitization (double-loop electrochemical potentiokinetic reactivation), cyclic voltammetry, and electrochemical impedance spectroscopy of painted and unpainted specimens.

Prerequisite: MATSE259 or E SC 414M or EGEE 441
Cross-Listed

ESC 456: Introduction to Neural Networks

3 Credits

Artificial Neural Networks as a solving tool for difficult problems for which conventional methods are not applicable. E E (E SC/E GEE) 456 Introduction to Neural Networks (3) This course is in response to students needs to learn Artificial Neural Networks (ANN) as a solving tool for difficult problems for which conventional methods are not available. The objective of this course is to give students hands-on experiences in identifying the best types of ANN, plus developing and applying ANN to solve difficult problems. Students will be introduced to a variety of ANN and will use their training skills to solve their own applications. During this course the students will develop a final project, in which they will apply ANN to widely varied problems. Examples: I) students from E E may be interested in applying ANN to solve control problems; II) students from Material Sciences may be interested in applying ANN to predict the pitting corrosion of components; III) students from Petroleum Engineering may be interested in applying ANN to characterize the life of a reservoir; IV) students from Agricultural Engineering may be interested in applying ANN to sort apples automatically, etc.

Prerequisite: CMPSC201 or CMPSC202 ; MATH 220
Cross-listed with: EE 456, EGEE 456

ESC 460W: Multidisciplinary Design Project

3 Credits

This course will provide students with the opportunity to learn the design process in the context of an industry- or government-sponsored or service-based design project that demands delivering a working solution. The design projects in this course will be structured for students from two or more different engineering majors, as defined by the project sponsors in collaboration with the instructor and departmental project coordinators. While the projects may be supplied/supported/initiated by industry, topics may be related to the cutting-edge multidisciplinary research areas represented by the strengths and diversity of the Engineering Science faculty, such as nanotechnology, biomaterials, and other areas requiring cross-discipline collaboration. The project sponsor will provide the technical expertise for the project, a clear definition of all project deliverables, and the financial support to cover needed materials and supplies and travel costs. Project sponsors will be invited to attend two key events each semester. Project Kickoff in week 1 of the semester to define the project and answer questions from the students as well as the Design Showcase in week 15 of the semester, when teams present their project results to sponsors, faculty, other students, and the public. The College of Engineering will provide the facilities where the design teams will work together to develop the design concept and prototype solutions. Faculty members in the Department of Engineering Science and Mechanics will administer the course, including reading, evaluating,
and grading the final project report, provide lectures on topics including on project management, design, product manufacturing, intellectual property, engineering ethics, societal/global/contemporary/professional issues, and related technical topics, and organize invited technical lectures related to industry projects. In accordance with standard procedures, specific multidisciplinary projects will be selected for this course to provide challenging design experiences for all students. The selection of these projects will be done by the course instructor prior to the start of each semester of the course offering. Multidisciplinary teams are be formed based on specific technical elements of the project and project scope.

Prerequisite: CHEM 110, MATH 140, MATH 141, MATH 250; or MATH 251, PHYS 211; or PHYS 212

Writing Across the Curriculum

ESC 475: Particulate Materials Processing

3 Credits

Fundamentals of processing particulate materials including production, characterization, handling, compaction, and sintering of metal, carbide, intermetallic, and composite powders.

Prerequisite: E MCH315, E SC 414, or MATSE259

Cross-listed with: MATSE 475

ESC 481: Elements of Nano/Micro-electromechanical Systems Processing and Design

3 Credits

Interdisciplinary fundamentals of nano/microelectromechanical systems (NEMS/ MEMS), including design, fabrication and machining of miniature systems. Draws from mechanics, science and materials. E SC 481 Elements of Nano/Micro-electromechanical Systems Processing and Design (3) The objective of the course is to introduce students to the theory and technology of nanofabrication. This objective is realized via the study of materials and devices for NEMS as well as nano-system’s design, manufacture and packaging. Emphasis on the interrelationships between material properties and processing, device/system structure, and the mechanical, electrical, optical, or (bio)chemical behavior of devices/systems. As taught, the course is multidisciplinary and requires adequate background in materials science, mechanics, and device physics. The course comprises lecture presentations and laboratory demonstrations. Students attending this course come from different engineering majors, physics, and materials science. The students are assessed using a combination of homework assignments, class presentations, group projects, and written quizzes and exams.

Prerequisite: E MCH213, or E MCH315, or E SC 312

ESC 482: Micro-Optoelectromechanical Systems (MOEMS) and Nanophotonics

3 Credits

Principles and applications of Micro-Optoelectromechanical and Nanophotonic devices and systems. E SC 482 Micro-Optoelectromechanical Systems (MOEMS) and Nanophotonics (3) E SC 482 provides the engineering student with a unifying and multifaceted description of MOEMS and nanophotonics. Students will learn the fundamental principles behind many novel micro- and nanophotonic devices and systems and their practical applications in the fields of communication, sensor and image technology. The course starts with an overview of the fundamental physics of semiconductors with emphases on silicon, III-V and II-VI compound semiconductors due to their important applications in MOEMS and active nanooptoelectronic devices. Semiconductor nanostructures, such as epitaxial grown quantum wells and quantum dots, and chemically synthesized nanowires and colloidal nanocrystals will be introduced through discussions on their unique electronic structures, carrier transport and excitonic dynamics. In addition to inorganic materials, the structures and critical characteristics of electro-optic and light emitting polymers will also be reviewed for their fast-growing applications in display technology, sensory and information processing systems. The general principles for the design and operation of MOEMS and nano-optoelectronic devices will be discussed in the frame of geometrical optics, electromagnetic theory, and semiconductor physics. The reflection of light at dielectric interfaces will be reviewed to reveal the critical features of optical waveguide structures and to introduce the concept of surface plasma waves. In-depth descriptions will be given for the interband-and intraband electron transition and exciton emission process in semiconductor quantum structures. Important instances of applying the "quantum confinement;&quot; in nanostructures to tailor their optical and optoelectronic properties will be underscored during the mechanism-analysis of laser diodes, detectors and modulators. The new concept of &quot;photonic crystals;&quot; will be introduced through the analysis of parallelism between electron transport in semiconductor lattices and light propagation in periodic dielectric media. Following a brief survey of the state-of-the-art technologies for the fabrication of MOEMS and nanophotonic devices, the course topics will move to their application examples in the fields of communication, sensor and image technology. For each application example, analysis will be carried out on the design, fabrication, and characterization issues of the involved systems/devices. Their merit-of-performance will be linked to the application practice to illustrate how the introduction of MOEMS/nanophotonic devices advances the technology in each specific field. Important topics to be covered in this part include micromachined lightwave systems, microcavity light emitting devices, fiber based biological nanosensors, nanoparticle enhanced surface plasma resonance sensors, microspectrometers, and digital micromirror device (DMD)-based projection display engine.

Prerequisite: PHYS 212, PHYS 214

ESC 483: Simulation and Design of Nanostructures

3 Credits

Introduction to computer simulation techniques and their applications at the physical/life sciences interface. E SC (MATSE) 483 Simulation and Design of Nanostructures (3) Students will learn the simulation techniques and the design rules of nanostructures. Basic concepts of computer modeling will be introduced using quantum and classical approaches. Fundamental physical phenomena encountered in the molecular fields of computational physics, chemistry, and biology will be studied. Applications are drawn from a broad range of fields including soft and condensed matter to build an understanding of nanostructures. The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of nanostructures and their design rules. Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a computer code generation and implementation component. Students will use commercial or educational computer codes (e.g. Matlab, Mathematica, AMBER, CHARMM, VASP, etc.) which are available
at our high performance computing clusters (http://gears.aset.psu.edu/hpc/)! Students will use the computing clusters to perform simulations which are accessible from any classroom or laboratory at Penn State. The principal objectives of the course is to learn the fundamental physics of nanostructures and to design them with computer simulations. This approach starts from classical molecular dynamics that apply on the large scale biological and synthetic assemblies and encompasses quantum mechanics for the molecular and atomic sizes. This course will give a broad scientific picture of simulation techniques in the area of nano-science and technology.

**Prerequisite:** PHYS 214 or ESC 312, MATH 230

Cross-listed with: MATSE 483

ESC 484: Biologically Inspired Nanomaterials

3 Credits

Advances in biomolecular-based Science and technology at the physical/ life sciences interface. ESC 484 Biologically Inspired Nanomaterials (3) Students will learn the concepts of molecular engineering and the advances in biomolecular-based science and technology at the physical/life sciences interface. Basic concepts of protein structure and function will be introduced. Applications from a broad range of fields, including condensed and living matter to build an understanding of device applications including biologically-inspired molecular-scale devices will be introduced. The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of molecular structures and their design rules. Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a substantial writing component. Students will prepare bio-science and technology reports. The principal objective of the course is to learn and analyze molecular engineering technologies at the bio and nano interface. This course will give a broad technological picture of emerging protein technologies in the area of biomolecular materials.

**Prerequisite:** PHYS 214, MATH 230

ESC 494: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ESC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Engineering Technology (ET)**

ET 2: Engineering Technology Orientation

1 Credits

Introduction to computer methods for analyzing and solving engineering technology problems; microcomputer fundamentals, word processing, spreadsheet, and database software packages. ET 002 ET 002 Engineering Technology Orientation (1) Engineering Technology Orientation is one of the first technology-related courses taken by EE T students. It is a 1 credit, 2-hour combined laboratory and lecture course designed to develop basic computer skills in engineering technology students. Students are exposed to the basic concepts and features of computer hardware and operating systems, including key topics in software operation and file management. They are then taught basic word processing, spreadsheet, and database skills and are introduced to electronic communications and information retrieval via the Internet, World-Wide-Web, and e-mail. All topics are presented in the context of how they can and will be used in coming technology classes. The course concludes with an introduction to electronics simulation software (e.g., PSpice, Electronic Workbench, etc.) that students will be obligated to use in future courses.

ET 200: Graphic Communications

3 Credits

The study of graphic communications relating to the design and construction industry.

**Prerequisite:** 2-credit drafting course

ET 300: Mechanics I: Statics

3 Credits

Equilibrium of coplanar force systems; analysis of frames and trusses; shear and moment diagrams; friction; centroids and moment of inertia. ET 300 Mechanics I: Statics (3) This course is intended to provide the students with both the theory and application of the fundamental principles of static analysis by introducing free-body diagrams as a tool for solving statics problems. Students gain knowledge of Vector Mechanics, representation of physical quantities by a vector notation. Grasp the meaning of magnitude and direction of a vector; understand the definition of a unit vector. Master the mechanics of Vector Algebra. Emphasis will be placed on equations of equilibrium for particles and rigid bodies. Students are able to understand the physical meaning of a force and moment equilibrium. Master the balance of forces and moments to ensure equilibrium for 2D and 3D structures. This will be followed by analyzing internal forces in cables and bending moments in beams.

**Prerequisite:** MATH 140
ET 321: Dynamics
3 Credits

Motion of a particle, relative motion; kinetics of translation; rotation and plane motion; conservation of energy and momentum. ET 321 Dynamics (3) The students will be introduced to the fundamental concepts of dynamics for particles motion along straight and curved paths. The students will learn and utilize concepts in particle kinematics and study the relationship between the forces acting on a body, the mass of the body and the motion of the body by using Newton’s second law of motion, the principle of work and energy and the principle of linear momentum and impulse. This will be followed by analyzing the rotation of a rigid body about a fixed axis, and extending kinematic concepts to plane motion of rigid bodies. The concepts of work, energy, linear momentum and angular momentum of a rigid body in plane motion will be introduced. The students will learn how to apply the principle of impulse/momentum to solve rigid-body planar kinetic problems that involve force, mass, velocity and time, and the principle of work/energy to solve problems that involve force, mass, velocity and displacement. Dynamics course will also provide students with the tools to obtain desired information from those models by solving the equations governing the motion of the system. Topics covered in Dynamics include: kinematics of particles, application of Newton’s laws to particles, energy and momentum methods for particles, kinematics of rigid bodies, application of the laws of Newton and Euler to rigid bodies, and energy and momentum methods for rigid bodies.

Prerequisite: EMCH 211 or ET 300 or MCH T111

ET 322: Strength of Materials
3 Credits

Axial, torsional, bending, and combined stress analysis; deformation and deflection analysis of cables, shafts, and beams; column design and analysis. ET 322 Strength of Materials (3) Strength of materials deals with the relationship among the external forces acting on a body, the resulting stresses (intensity of internal forces) and the deformation (change of size or shape). The determination of proper sizes and material of construction of mechanical components and structural members to satisfy strength and deformation requirements are important topics of strength of materials. The students will be introduced to the concept of stress—normal, shear and bearing stress, and relate strain to stress using material properties. The students will develop an understanding of design parameters such as design stresses, factors of safety for axial loads, transverse loads and torsional loads, to design components such as beams and circular shafts satisfying strength and deformation requirements. The students will also learn to calculate moments of inertia, centroids and apply parallel axis theorem for moment of inertia. The students will be introduced to the concept of combined stresses and their analysis using graphical and analytical methods. Finally, the concept of buckling in columns will be introduced.

Prerequisite: ET 300, E MCH211 or MCH T211

ET 323: Strength of Materials Laboratory
1 Credit

Measurement of mechanical properties of materials, structural testing. ET 323 Strength of Materials Laboratory (1) The objective of the strength of materials laboratory is to demonstrate the basic principles in the area of strength and mechanics of materials to the undergraduate students through a series of experiments. Students will be conducting experiments using Universal Testing Machines to calculate tensile strength of steel and aluminum samples and experiments to measure hardness of non-heat treated and heat treated steels. Students will also test steel samples in single shear, double shear and impact loading, followed by experiments on the torsion testing machine to calculate torsional strength of aluminum samples and the strut apparatus to analyze different modes of buckling in a slender aluminum column. The laboratory demonstrates important concepts from the strength of materials theory course.

Prerequisite: or concurrent: ET 322, E MCH213 or MCH T213

ET 495: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written or oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

ET 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

English (ENGL)

ENGL 1: Understanding Literature
3 Credits

Explores how major fiction, drama, and poetry, past and present, primarily English and American, clarify enduring human values and issues. ENGL 001 Understanding Literature (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. In ENGL 001 students will study a wide variety of genres of literature — poetry, novel, short story, drama, perhaps even genres like the comic book — from different time periods and cultures to gain a better understanding of how literature explores human values and issues. These readings will be organized around important issues that relate to each other, or are in tension with each other, such as &quot;Love,&quot; &quot;Violence,&quot; and &quot;Recuperation,&quot; asking basic questions about how the different genres convey meaning, and how they ask significant questions about human relationships and ideals. For instance, readings including works by Toni Morrison, Shakespeare, J. M. Coetzee, August Wilson, Art Spiegelman, selections from each year’s new Best American Short Stories, and others might raise questions about victimization and responsibility in times of extreme violence (like American slavery, South African apartheid, or the Holocaust), and speak to how we can judge violent acts during violent times, or how love can flourish or languish in the face of such horrors. Throughout the course, students will use the texts to ask such questions as: of what value is a play, a novel, a poem, or a short story? Is literature worthwhile for its ability to tell a good story or for its questions that do not lend themselves to easy answers? Are we &quot;better&quot; for having experienced literature? The course will also take advantage of literary events occurring on campus each semester—such as poetry readings, dramatic performances, even films relating to the course — to enrich the experience both of literature and of campus life. By addressing issues of contemporary significance, the course will not only prepare students for other literature courses, but
ENGL 2: The Great Traditions in English Literature

3 Credits

Major works of fiction, drama, and poetry from the Middle Ages to the twentieth century expressing enduring issues and values. ENGL 2 The Great Traditions in English Literature (3)(GH)(BA) This course meets the Bachelor of Arts degree requirements. Students are expected to learn fundamental skills of close textual analysis in the context of established literary texts of English and Irish fiction, drama, and poetry from the Middle Ages to the twentieth century that address large questions of ethical and social value. They are also expected to learn to talk and write clearly about the issues and ideas generated by the texts that they are directed to read. ENGL 2 will require all students to confront the major interpretive problems found in their assigned readings and to participate actively in the various forms of critical thinking required to comprehend and resolve those problems. ENGL 2 will require all students to participate in an assessment of the social behavior and other values, both communal and scholarly, relevant to the texts being read and discussed in the course. This course fulfills a General Education humanities requirement or a Bachelor of Arts humanities requirement.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ENGL 2H: The Great Traditions in English Literature Honors

3 Credits

ENGL 2 is a lecture/discussion course that addresses major works of English and Irish fiction, drama, and poetry from the Middle Ages to the twentieth century. The course is designed to give students an introductory appreciation of a wide range of established works of literature written in English. The goal of this course is not only to give students a sense of literary history, but also to encourage students to question how such texts express larger concerns about issues and values central to human experience. English 2 is designed to prepare students for additional college-level literature courses and to help students learn the fundamental skills of close textual analysis vital to all humanistic study. This Honors section is enriched by more rigorous requirements (longer papers, and a research component to each paper where the student is required to cite and engage critical sources and conversations). Participation requirements are also enhanced, making for a richer honors experience.

Bachelor of Arts: Humanities
General Education: Humanities (GH) Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ENGL 4: Basic Writing Skills

3 Credits/Maximum of 6

Intensive practice in writing sentences and paragraphs and instruction in grammar, usage, and punctuation. Designed for students with deficient preparation. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

ENGL 5: Writing Tutorial

1 Credits

Tutorial instruction in composition and rhetoric for students currently enrolled in ENGL 4 or ENGL 15. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

ENGL 6: Creative Writing Common Time

1-8 Credits/Maximum of 8

Required one hour a week meeting time; readings, professional development, advising, community-building. ENGL 006 Creative Writing Common Time (1 per semester/maximum of 8) This course is to be required of all B.F.A. in Creative Writing majors at Penn State Erie as long as they are students in that degree program. This means that every semester they are working toward the B.F.A. in Creative Writing they must sign up for this course, and they must complete it successfully. Successful completion is based on regular attendance at the various functions, all held at the same one hour time period each week. The purpose of this course is to provide students with the necessary experience of listening to the writers of national stature brought to campus through The Smith Series, to provide them with lectures by both faculty and outside experts to help them develop professionally as writers, to allow for essential group advising for successful completion of the major, and to foster a sense of community among the student writers in the program.

Bachelor of Arts: Humanities

ENGL 15: Rhetoric and Composition

3 Credits

Instruction and practice in writing expository prose that shows sensitivity to audience and purpose.

Prerequisite: ENGL 004 or satisfactory performance on the English proficiency examination

General Education: Writing/Speaking (GWS)
ENGL 15A: Rhetoric and Composition

3 Credits

Instruction and practice in writing expository prose that shows sensitivity to audience and purpose.

Prerequisite: ENGL 004 or satisfactory performance on the English proficiency examination
United States Cultures (US)
General Education: Writing/Speaking (GWS)

ENGL 15E: Rhetoric and Composition Enhanced

3 Credits

ENGL 15E Enhanced prepares students to understand the functions of and produce a variety of texts for public and academic audiences. Class size is limited to 18 (as opposed to the regular 24) and provides individualized instruction, regular engagement with peers, and weekly online tutorials. The combination of these resources helps familiarize students with conventional genres and practices of usage and style written discourse. The course is cohort-based and paced, which means that there is an established start and end date, and that students will have weekly deadlines to meet throughout the term.

General Education: Writing/Speaking (GWS)
GenEd Learning Objective: Effective Communication

ENGL 83: First-Year Seminar in English

3 Credits

Critical approaches to the dimensions and directions in English/American literature and rhetoric.

Bachelor of Arts: Humanities
First-Year Seminar
General Education: Humanities (GH)

ENGL 88: Australian/New Zealand Cultural Perspectives

3 Credits

Australian and New Zealand cultural and social perspectives, with emphasis on the historical development of intellectual, aesthetic,
and humanistic values. ENGL 88 Australian/New Zealand Cultural Perspectives (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. Students are expected to learn fundamental skills of close textual analysis in the context of the study of a variety of works by authors from Australia and New Zealand. Studying a range of novels, poems, plays, and works of non-fiction, students will discuss the development of Australian and New Zealander literatures in historical context and gain understanding of the historical development of societal values in nations other than the U.S.A. The course aspires to relate geography and history to emerging social and cultural developments as the state and status of the two countries changed during the nineteenth and twentieth centuries, and to track their increasing separation from the "Mother Country"; (i.e. Great Britain) as they developed a sense of themselves as different and separate from European societies. The process was neither comfortable nor easy, nor steadily progressive, but the record of it is an often fascinating story of human endeavor and struggle, very frequently against great odds and disappointments, which in turn affected the development of national character if such a thing can be said to exist. The literatures reflect some of the attitudes and qualities that emerged as the two societies were coming into being and forging their own unique identities.

Bachelor of Arts: Humanities  
ENGL 100: English Language Analysis  
3 Credits  
An examination of English sounds, words, and syntax using traditional, structural, and transformational grammar.

Bachelor of Arts: Humanities  
ENGL 103: The Great Traditions in American Literature  
3 Credits  
Fred Lewis Pattee's career at Penn State marks the beginning of a heyday for the study of American literature. By the 1930s, prominent American critic Granville Hicks hailed what he dubbed "the great tradition of American literature" as a series of key themes in American writing, including folk traditions, politics, business, labor, social critique, fugitives, and flight. Since Hicks's time, literary scholars have contested the very notion of any "great tradition," because so many different authors have always participated in the American literary scene. This course examines American literature by looking at the dynamic and varied literary productions that, across time, have comprised the American literary canon, even as it calls into question the notion of whether America ever had a single literary canon, whether historically or in the present day. Students will learn how access to educational institutions, to writing equipment, and to printed and graphic materials all influenced who might become an author, and who, a reader. They will also learn how changing political and cultural institutions influenced writers' literary production and literary achievements. With text selection at the instructors' discretion, students will study poetry, fiction, non-fiction, oratory, and drama, and they will examine many of the most enduring themes in American literature: religion; moral and ethical ideals; the lure of mobility, especially upward mobility (or absence of it); gender dynamics; enslavement, abolitionism, and emancipation; race and ethnicity; the lure (and social complications) of the American West; American pragmatism; love and loss; hope and despair. Students will be asked to take up such questions as the following: Who has had a voice in American literary history? Why are some writers more frequently studied than others? Who determined what should be considered "great" literature inside the academy? In what ways does the study of American literary history uphold American values of freedom and freedom of expression? Who had access to publication, when, and under what circumstances? How does the publishing marketplace influence readers' choices regarding "great" American literature? How do educational institutions influence readers' choices? The course aims to provide a foundation for further study of American literature by equipping students with an understanding of the American literary past and its complex relationship to American culture and to American educational, political, and marketing institutions. Instructors might examine one or two key themes in the tradition, or they might ask students to learn about sweeping literary movements across time.

ENGL 104: The Bible as Literature  
3 Credits  
Study of the English Bible as a literary and cultural document. ENGL 104 The Bible as Literature (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. The purpose of this course is to acquaint students with the literature of the Bible. Throughout this course, students will examine the language, thought, images, and structures of the book that has arguably proved the central text of Western literature. Students will also actively explore the ways in which the Bible has shaped the literature of English-speaking cultures. Students will read substantial portions of the Old and New Testaments, learning to read critically and to interpret the Bible as they would any other literary text. They will also learn about the historical construction of the Bible and contemplate the competing versions of existing Biblical texts. Students will be asked to complete at least three writing assignments.

Cross-listed with: JST 104  
Bachelor of Arts: Humanities
ENGL 105: American Popular Culture and Folklife

3 Credits

Survey of popular culture, folklife, and ethnicity, synthesizing material from such areas as literature, media, entertainment, print, music, and film. AMST 105 / ENGL 105 American Popular Culture and Folklife (3) (GH;US) (BA) This course meets the Bachelor of Arts degree requirements. AMST 105 / ENGL 105 covers a broad scope of materials, which may range from early to contemporary American folk and popular cultures. While selected topics for reading and discussion often vary from class to class, all courses focus on a critical examination of a variety of popular and folk cultures in order to produce an enriched understanding of America and its inhabitants. To meet this goal, popular and folk cultures will be examined from a variety of perspectives, including literature, history, politics, film, race, gender, class, and geography. Course requirements frequently include: essay exams, papers, journal entries, vigorous class discussion, and course talk participation. Technology is often incorporated into the class well, this course (or AMST 100) is a requirement for the American Studies major and minor, and offers students valuable experience in critical thinking, analysis, and writing. Non-American Studies majors and minors may use this course to fulfill a general education or Bachelor of Arts/Humanities credit. AMST 105 / ENGL 105 serves as a broad introduction to American popular and folk cultures as well as interpretive strategies relevant to the study of cultures and individuals. The course, as a result, provides preparation for more advanced courses in American studies, American literature, and American history.

ENGL 106: The Lynd Ward Graphic Novel Prize

1 Credits/Maximum of 3

This course is offered in tandem with The Lynd Ward Graphic Novel Prize, sponsored and administered by Penn State University (the first prize of its kind in the United States). The Lynd Ward Prize is awarded annually to the best graphic novel, fiction or non-fiction, published in the previous calendar year by a living U.S. or Canadian citizen or resident. The course provides background for the history of the graphic novel in the United States, with a focus on Lynd Ward’s woodcut novels from the 1930s. Students also study the winning book, attend the award ceremony and public talk from the creator(s), and meet with the creator(s) to discuss their work. This is a one-credit course with limited meetings.

ENGL 110: Newswriting Practicum

2 Credits/Maximum of 6

Practice in writing and editing articles for the campus newspaper.

Bachelor of Arts: Humanities

ENGL 111: The Possibilities of English

2 Credits

This course familiarizes students with the range of professional possibilities offered by the English major.

ENGL 112: Pennsylvania Literature

3 Credits

An introduction to the literature that has been written by Pennsylvania authors from the colonial era through the present day. ENGL 112 Pennsylvania Literature (3) (GH;US) The purpose of this course is to introduce students to the variety of literature that has been written and published by Pennsylvania authors from the colonial era through the present day. This course explores how the literature written in Pennsylvania relates to historical developments within the Commonwealth, and to literary, cultural, and historical developments across the United States and throughout the world. Toward that end, the course provides a chronological survey of developments in the literature of Pennsylvania through readings from the work of Pennsylvania authors whose work illuminates developments in literary history and exemplifies important aspects of Pennsylvania history and culture.

United States Cultures (US)
General Education: Humanities (GH)

ENGL 115N: Arts of Love

3 Credits

This course will familiarize students with expressions of love in Western arts and literature. Students will analyze the artistic, philosophical and literary representations of courtship, friendship, homoeroticism, sexuality, marriage, adultery, and familial bonds and explore how the preceding phenomena are inflected by gender roles, race and miscegenation, and class and religious differences. We will also trace the way particular narratives about love have been adapted by different artistic media. Love is a universal human experience and its study transcends disciplinary boundaries. It is a linchpin of human existence, uniting and enriching nearly any subject worthy of serious study.

ENGL 128: The Holocaust in Film and Literature

3 Credits

Thematic, formal, and historical analysis of filmic and literary representation of the Holocaust. CMLIT (J ST/ENGL/GER) 128 The Holocaust in Film and Literature (3) (GH;US;IL) This course provides an introduction to the film and literature of the Holocaust through a historical survey of these traditions: key texts, figures, and themes. Both US and international texts and traditions will be covered, as will both fictional and nonfictional treatments of the Holocaust. The course will focus on the defining aspects of the literature and film and
ENGL 129: Shakespeare

3 Credits

ENGL 129 constitutes a broad introduction to Shakespeare's dramatic works from a variety of thematic, historical, formal, and/or generic vantages. Students will practice close reading Shakespeare's language while also learning how his plays reflect upon the social and theatrical conventions of the historical period in which they were written and performed. Approaches taken to the plays will vary from class to class, but may include a chronological introduction to the development of Shakespeare's plays, a consideration of a principal Shakespearean theme or themes through a number of plays from across Shakespeare's career, a consideration of Shakespeare's protagonists through a number of plays from across Shakespeare's career, or a consideration of a number of Shakespeare's plays in historical context. The class will attend to issues such as gender, social class, politics, sexuality, and race, and students will learn how Renaissance perspectives on these issues differed from their own. In order to analyze how Shakespeare's plays continue to be adapted and transformed, the class may also involve the study of modern stage and film performances of Shakespeare. Time allotted for the discussion of each play will vary, but students should expect to read, on average, one play every 1-2 weeks. This class will prepare students for advanced courses in early modern literatures as well as other academic courses that engage in the verbal and written analysis of complex written texts.

ENGL 130: Reading Popular Texts

3 Credits

Popular texts (printed, visual, and aural texts) and their social, political, and cultural significance in the contemporary world. ENGL 130 Reading Popular Texts (3) (GH) ELISH 130: Reading Popular Texts explores a variety of popular texts with the goal of enabling students to sharpen their ability to interpret the social, political, and cultural significance of such texts in the contemporary world. For the purposes of this course, the term "texts" is defined broadly, to include printed texts (books, periodicals, and hypertext), visual texts (film, television, visual arts and graphics), and aural texts (music, sound, and spoken word). Since these texts are primarily examples of popular culture-pervasive, self-replicating, commercialized artifacts of the contemporary scene-they are familiar to the general student outside the classroom. Too often, however, students have not seen such texts subjected to the same kind of critical reading as more elite cultural forms (e.g., canonized literature, art, and music). As a result, the general student in particular benefits from learning that cultural phenomena to which she or he is exposed on a daily basis have layers of significance as yet unexplored or unrealized. The purpose of the course is fulfilled if such students come away from it with a sharpened awareness of the role that popular texts play in their daily lives and the means to discuss and explain their influence in short, to read their culture more critically.

Prerequisite: ENGL 015 or ENGL 030H
Bachelor of Arts: Humanities
General Education: Humanities (GH)

ENGL 132: Jewish American Literature

3 Credits

A historical and thematic survey of Jewish Literature of the United States. ENGL (J ST) 132 Jewish American Literature (3) (GH;US) This course will provide an introduction to Jewish American literature through a historical survey of the tradition's key texts, figures, and themes. The course will focus on the defining aspects of the literature and on what
the literature "thinks" about Jewish American culture and identity. But rather than assuming a unity to Jewish-American culture, this course will use Jewish literature to seek ways of articulating and representing both the points of cohesion and the points of divergence that characterize Jewish life in America. the United States has absorbed large numbers of Jewish immigrants hailing from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions. Moreover, Jews have settled and made homes in a wide variety of American communities. This course aims to explore Jewish American culture's marked diversity by offering a literary window onto the major fault-lines running through Jewish American culture: lines demarcated by gender, by political affiliation, by geography, by pre-immigration community by religious practice, by attitude toward world Jewry, by national allegiance, and by minhag (or custom), to name just a few. The class therefore provides an opportunity to consider the constitution, origin, and development of Jewish American's identity and social formations by looking at how that identity and those social formations exist and what they "do" in literature written by and about Jews in America. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film. Course methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies and English, and it will satisfy the GH and US requirements. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English a valuable, sustained introduction to an important U.S. and world sub-culture.

ENGL 133: Modern American Literature to World War II

3 Credits

ENGL 133 Modern American Literature to World War II (3) (GH)(BA)(US)
This course meets the Bachelor of Arts degree requirements. ENGL 133 will constitute a wide ranging study of modernist American literature, and may include novels, short stories, poems, plays, and non-fictional prose, written roughly between the turn of the 19th century and the end of the Second World War. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of modernist American literature, a consideration of a principle theme or themes common to modernist American literature through a number of works from across the period, a consideration of a number of modernist works in the context of historical events central to the period, such as the American participation in the First World War and/or the effect on American literature of the ensuing world-wide economic depression. This class will prepare students for advanced courses in modernist literatures as well as other academic courses that engage in the verbal and written analysis of complex written texts. The course may be used as English Major elective credit or as credit towards the English Minor. Non-English majors may use this course to fulfill a general education, U.S. cultures, or Bachelor of Arts/Humanities requirement.

ENGL 137H: Rhetoric and Civic Life I

3 Credits

Rhetoric and Civic Life (RCL) is a year-long honors course offering comprehensive training in oral, written, visual, and digital communication. It unites these various modes under the flexible art of rhetoric and uses rhetoric both to strengthen communication skills and to sharpen...
This course builds rhetorical skills in oral, written, visual, and digital contexts and introduces deliberation and advocacy in civic and disciplinary spheres. CAS (ENGL) 138T Rhetoric and Civic Life II (3) (GWS)ENGL/CAS 138T, Rhetoric and Civic Life II, expands knowledge and aptitudes built in ENGL/CAS 137H by asking students to use rhetorical skills and principles to develop strategies for persuasion and advocacy in the context of civic issues. The course continues the multimodal emphasis—the focus on oral, written, visual, and digital communication—used in 137H and adds new components as well. Students will develop a repertoire of communication skills through hands-on practice at composing and delivering speeches and essays, and they will work with digital media to create multimedia texts, podcasts, and websites. Students will reflect on these different modes as themselves rhetorical choices. The course’s civic and ethical components take center stage as students learn how to deliberate important public issues thoughtfully and with civility and respect. They will learn the difference between persuasion and advocacy and develop strategies for both in the context of pertinent local, national, and global issues. They will participate in a public deliberation forum on topics they generate and vote on. The forum will be organized to allow small deliberative action groups as well as large forum-style meetings. The course focuses on ethics in many contexts, e.g., community action and public deliberation; ethics of persuasion; ethical controversies in the disciplines. Students will be encouraged to explore percolating disciplinary interests and to share knowledge in online disciplinary communities. Students will work throughout the semester to design and build a final electronic portfolio that represents their academic work with an eye to their imagined professional futures. The portfolio assignment is designed to permit assessment of learning outcomes and encourage students to move toward qualifying for the College of the Liberal Arts Excellence in Communication Certificate (http://laus.la.psu.edu/current-students/paterno-fellows-program/excellence-in-communication-certificate), a mechanism which helps students hone their communication abilities throughout their Penn State careers by creating and perfecting an online portfolio.

ENGL 141N: African American Read-In Engaged Learning Experience
1-3 Credits/Maximum of 6

This course will allow students to study African American literature, culture, history, and arts in connection with an annual public event, the African American Read-In (AARI). The AARI, promoting literacy and appreciation of African American literature, is a national event established in 1990 under the auspices of the National Council of Teachers of English. It has become a regular feature of Black History Month celebrated by community, neighborhood, and church groups as well as schools and institutions of higher education throughout the United States and elsewhere on a given Sunday and Monday in February, attracting more than a million participants annually. This course offers students an engaged learning experience in which they will produce original intellectual and artistic content to be presented publicly at an AARI event on campus. Students will study texts from a range of historical periods and/or genres, and thus gain a solid introduction to the African American literary tradition. At the same time, the primary organizing principle of the course will be a particular theme that both allows a broad and coherent overview of a significant cultural or historical topic and engages issues of cultural diversity in the United States. The specific theme, thus, will bring the study of African American literature into a broader interdisciplinary context that intersects with African American culture, history, identity, and the struggle for equality. Students will study texts that relate to this annual theme and participate in a relevant field trip (museum, theater, cultural site, library, etc.) to deepen their understanding of the significance and contexts of social, historical, cultural, artistic aspects of these materials and this theme. They will then develop this knowledge through creative and critical engagements into exhibitions, presentations, or performances to communicate their insights about a particular author, text, or topic in the African American literary tradition. As shapers of the AARI program on their campus, class members will also have a voice in designing and planning the AARI as well as a stake in its overall success. As this course necessarily spans semesters, students who enroll in the Fall course will be expected to enroll in the Spring course in order to present their projects at the AARI in February. Only students who were enrolled in the Fall course will be permitted to enroll in the Spring, as it is the culmination of the same course.

ENGL 142N: Science in Literature
3 Credits

The course explores two streams in parallel. Students will examine selected historic landmarks in science (e.g. evolution, atomic energy/ weapons, climate change, biotechnology), with a focus on common misconceptions about the facts and practice of science. The course will also examine the development of literary and popular portrayals of science and scientists in their political, economic, social and cultural contexts, paired to these particular scientific developments. By considering past and current scientific problems, students will refine their quantitative and analytical skills. By considering scientific writing, novels, short stories, graphic novels, cinema, poetry, and other forms, students will refine their critical and reflective writing and speaking about both the rhetorical and discursive practices of science writing, and the social and cultural impact of literature in popular understandings of science.

ENGL 145: Modern Irish Literature
3 Credits

Irish literature in the twentieth century and beyond; focus on the interplay of political, social, and cultural, forces on literature. ENGL 145 Modern Irish Literature (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 145, Modern Irish Literature, will concentrate on Irish literature, history, and politics from the early twentieth century to the present. The course will begin with the socio-political implications of the Home Rule movement and the important figures associated with the rise of the Irish Literary Renaissance. Instructors will spend much of the course focusing on canonical figures of modern Irish Literature
(such as Joyce, Yeats, Synge, Beckett, Shaw, O'Casey, O'Flaherty, and Lady Gregory). The course will introduce students to the political context and themes of Irish Literary Renaissance (Irish Literary Renaissance), including the notion of cultural nationalism. Instructors may draw upon contemporary literary critics, such as Declan Kiberd, Seamus Deane, and Terence Brown, by way of introduction to the ILR. The class will then move on to Post-World War II Irish Literature. In this component of the course, instructors will select literature from writers who began publishing in the Post-War era. These authors may be examined as they follow the legacy of the ILR, or as they challenge it and forge new courses for Irish literature. In other words, these authors can be writing within or against the traditions and themes of ILR artists; or, more likely, doing both things at once. This component of the course will help students see the enduring legacy of the themes and forms of the ILR, as Irish authors continually reckon with its massive political and cultural inheritance. The course fulfills IL requirements in its emphasis on postcolonial relationships between Irish identity and culture and issues of British colonial occupation and the influence of American popular culture in the later twentieth century. The interpretive framework of postcolonial studies will inform the instructor's approach to the literature. Postcolonial studies seeks to examine the conditions and tropes of colonial and post-colonial writers and peoples. While postcolonial studies offers broad theories and concepts that can be applied to any postcolonial scene, the movement nonetheless has an interest in studying and honoring the regional particularities and the specific reaction of its writers to the postcolonial moment. This interplay of the unifying, international experience of colonialism with the particularity of individual nations and writers helps students to become sensitive to ideas of nation, unity, and difference. More so, the tropes of postcolonial literature; and Irish literature especially—focus on concepts of hybridity, the Other, contact zones, modernity vs. tradition, national identity, and personal identity, all on which seek to understand the self and others within an intercultural context. The literature of the IRL also explores the corrosive effects of British imperialism, which helps students to consider whether might makes right; and interrogate various forms of cultural imperialism, then and now. The literature of the IRL also promotes themes of intercultural understanding, featuring examples of reconciliation and compromise between tradition and modernity, and, more importantly, between Irish, American, and British characters. Students will be evaluated through writing assignments (about 15 pages of formal writing; the instructor can decide upon the number of papers and page length for the assignments), a midterm and final exam that feature essay responses, and class participation, which may include an online discussion forum (on ANGEL) and group presentations. These assignments will help students focus on issues of identity construction, and social and political conflicts within and between cultures (Ireland in relationship to British and American culture and influence) within a post-colonial context.

ENGL 162N: Communicating Care
3 Credits/Maximum of 3

Communicating Care ENGL 162N / SOC 162N / CAS 162N What do we talk about when we talk about health? Our states of well-being and illness are topics that, like the weather, drive our daily conversations, but we rarely have time to study and practice these vital exchanges. Spoken in emergency rooms or on long-distance calls, by medical professionals, family members, or strangers making small talk, the languages we use to share pain and recovery require our knowledge of long-established scripts and our willingness to improvise. By exploring how these encounters draw from and work as textual and dramatic performances, this course will guide students to achieve a new level of literacy in the most essential communicative art of caring. Students will analyze health conversations in literary texts, such as short stories, poems, memoirs, and graphic novels. They will explore real-life scenarios drawn from their own experiences, fieldwork, social science theories, and published case studies. Developing skills in the humanities (GH), they will see how subjective, often individual experience, historical perspectives, and creative expression help people to communicate about health and care. Developing their abilities in the social and behavioral sciences (GS), they will see how theory provides insights to predict and understand health and practices of care, investigate objective perspectives and recognize the contributions of fieldwork and data-driven studies to analyzing and improving communication when health is a main concern. They will integrate these methodologies especially to pursue these fields’ common goals of making beneficial connections between individuals and groups, and managing private and public life.

RECOMMENDED PREPARATION: ENGL 15; ENGL 30
General Education: Humanities (GH)

GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

ENGL 163N: Defining the Animal
3 Credits

Is it possible to comprehend the mind of another species? Can humans communicate with other animals? Do they have anything to say? In 1859, the publication of Darwin’s The Origin of Species set the stage for the scientific investigation of animal minds. This course studies both scientific and non-scientific approaches to the study of thinking and emotion in animals. Students contemplate what researchers, artists, philosophers, writers and filmmakers learn by investigating the minds of animals, focusing on breakthroughs as well as misconceptions. Students conduct their own research on such topics as animal cognition and intelligence, animal language, anthropomorphism, animal testing and bioethics. Examples will be drawn from a range of disciplines in an effort to answer the central question: what is an animal, and what is a human?

GenEd Learning Objective: Soc Resp and Ethic Reason

ENGL 165N: Work and Literature
3 Credits

If you get a job out of college, work eight hours a day, fifty weeks a year, and retire at age 65, at that point you have will spent roughly one third of your adult, waking life at work. And that is just paid work. Add in
housework, childcare, and other forms of unpaid labor and the share of your waking hours devoted to work creeps closer to one half. And these calculations may actually underestimate the influence work has over your life. What you do will determine where you live, how you live, and, perhaps, whether you believe you have ultimately done something meaningful with your life. With work playing such an outsized role in life, you may as well understand it as best you can. Hence this class. In it, we approach the question of work from the perspective of two disciplines: labor and employment relations and literature. The field of labor and employment relations asks about the social and economic forces-markets, compensation, globalization, immigration, etc.-that shape work. By contrast, the discipline of literature takes a more subjective approach to the question of work. Very broadly speaking, it shows how the forces that shape work play out in individual lives. In short, it shows how individuals feel about the work they do or, in the case of the unemployed, they do not do. Together, the two disciplines provide a global and personal perspective on one of the most important parts of our lives. Students registering for the course will read representative selections from both domains, engage in course discussions, take exams, and write essays as they explore the variety of ways both labor and employment relations and Literature can prepare them for their work lives and help them understand the place of work in culture and society.

ENGL 179: Exploring the Literature of Food: Current Trends in American Food Writing and Environmentalism
3 Credits
Examines historical and contemporary American food literature.
United States Cultures (US)
General Education: Humanities (GH)

ENGL 180: Literature and the Natural World
3 Credits
This course is an introduction to literature that takes as its subject the natural world. Students will practice the methods of ecologically oriented literary analysis (eco-criticism) and they will learn to contextualize the major historical periods, movements, and arguments for the necessity of literature about the natural world as it intersects with environmental studies. The course can cover anything considered “literature,” but namely fiction, poetry, nonfiction, and drama. Students will examine not only strategies of description, but also literature’s unique ability to showcase conflict, reflection, and insight when it comes to protecting our environment. The course should include literature that addresses the human impact on nature. Students should learn about familiar environments and unfamiliar environments. Students should also come to understand the motivations of the authors.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

ENGL 181A: Adventure Literature: Exploring the Chesapeake Bay
4.5 Credits
Examines the interconnection of culture and nature in the Chesapeake Bay region through the literature of the region. ENGL 181A Adventure Literature: Exploring the Chesapeake Bay (4.5) The course focuses on a specific place—the Chesapeake Bay and its watershed—that has generated a distinctive regional identity and literature from its natural and social context. The course begins consideration of the concept of watershed, both as a geographical concept and a literary metaphor, before turning to an examination of the culture(s) and nature of the largest and most important tributary of the Bay, the Susquehanna River. Students will read texts associated with the history and the development of the Susquehanna, with some emphasis on logging, rafting, mining, and hydropower development. Readings here should aim at helping students see how a regional cultural identity has evolved from the river’s geography and economics. Focus on the Bay itself, students can learn similar lessons. We begin by looking at the rich native cultures that occupied the region before the advent of Europeans and then move to initial European exploration and settlement. The class might then focus on development (agricultural, cultural, and industrial) of the Bay and Bay Region generally, through readings that might include regional histories and literary works like James Michener’s Chesapeake: A Novel. Significant attention should be devoted to the sub-culture of the Chesapeake waterman, a regional identity that has generated its own mythology and folklore and has been the focus for numerous writers. Texts might be chosen to show the role nostalgia plays in conceptions of the Bay or the ways in which issues of race, class, and gender are raised by examining representations of the waterman culture. What students should see is how literature and culture are transformed over time, while resonances of former place identities remain. Finally, the course will turn to the Bay as it is today and how the representation of place and regional identity in literature has changed over time. This course was designed to include out-of-the-classroom educational experiences on the Susquehanna River and other tributes of the Bay and on the Chesapeake Bay itself. The trips should provide students opportunities to fully understand the interconnections of nature and culture in the Bay region. They should also allow students the chance to travel in the footsteps of the writers they read in venues throughout the region. The goal is to both see how a distinctive culture derived from the natural circumstances of the Chesapeake and to understand how that culture might continue (or not) into the future.

ENGL 181B: Adventure Literature: Exploring Cape Cod
4.5 Credits
Examines the interconnection of culture and nature on Cape Cod through considerations of texts in various literary genres that have contributed to development of a distinctive regional identity and culture. ENGL 181B Adventure Literature: Exploring Cape Cod (4.5) The purpose of this course
is to teach students how natural and cultural contexts contribute to the production of meaning in literary texts. In this case, the locality that serves as the focus of study is Cape Cod, arguably the most written-about locale in the United States. The course begins with classes devoted to the Cape's natural history and its formation and the ever-present effect of wind and water; and then moves to its early human history. Readings in the first part of the course will focus on the period just before and after European settlement and readings could include selections from William Bradford's Of Plymouth Plantation or Mourt's Relation, both contemporaneous accounts of the Pilgrim's landing and on exploration of the Cape and appropriate chapters from Paul Schneider's history of the Cape, The Enduring Shore, and Nathaniel Philbrick's excellent account of the Pilgrim adventure, Mayflower. These readings could be enhanced with selections on the European settlement of the Cape in Robert Finch's anthology of writing about the Cape, A Place Apart. This introductory material will lead to the major part of the course, which will be devoted to reading and study of classic literature about the Cape, such as Thoreau's Cape Cod, Henry Beston's The Outermost House, Wyman Richardson's The House on Nauset Marsh, and John Hay's The Great Beach, as well as selections of poetry poets associated with the Cape. Each of these works, in its time, represents the writer's attempt to somehow capture and come to terms with the landscape and natural exigencies of the Cape. The focus will then turn to representations of the Cape in the work of contemporary writers, and might include work by Michael Cunningham, Annie Dillard, David Gessner, Cynthia Huntington, and Mary Oliver among others. The course ends with a brief look at Cape Cod's literary and natural future as it has been imagined over the last 140 years. This course was designed to include an out-of-the-classroom education experience on Cape Cod. The trip to the cape should include experiences related to the cultural and natural history of the region, and it should provide students the opportunities to walk in the footsteps of William Bradford, Thoreau, and Beston, as well as opportunities to see for themselves how the natural features that have inspired the classic and contemporary writers of the Cape will continue to inspire future generations of artists.

United States Cultures (US)
General Education: Humanities (GH)

ENGL 181C: The Beach: Exploring the Literature of the Atlantic Shore
4.5 Credits

Examines the interconnection of culture and nature in coastal areas of the Atlantic seaboard. ENGL 181C The Beach: Exploring the Literature of the Atlantic Shore should begin with some exploration of the dynamic forces at work on the barrier beach, with special attention to the ways in which great literature has taken what is described in the scientific literature and turned it into art. Examples for discussion could be drawn from the work of such writers as Henry Beston, Rachel Carson, and Jan DeBlieu. The general concerns of the course then move to environmental ethics, specifically as ethical questions are embodied in literature's representation of the human relationship with the other-than-human world. General ethical questions then lead to specific treatments of human and wild animal interaction by various writers. The point is to explore how writers represent the optimal sort of relationship humans can have with the wild world, and what such representation might mean to the ways we personally interact with nature. From these opening considerations, the course turns to an examination of the way in which writers who focus on a specific region of the coast--South Atlantic barrier islands, for example--establish a sense of the place in their writing. The course would then narrow its focus even more, moving from a consideration of a regional cultural identity to that of specific towns or narrowly defined areas within the general region. The subject of the narrower focus should then be explored in specific detail, beginning with pre-European cultures, the first explorers and settlers and then moving on to other aspects of the American culture history that make the subject area distinctive. For example, a course on the Low Country of South Carolina might start with the accounts of John Lawson, who published his journal of his own trip up the Santee River in 1701, move to accounts of the rice culture so important to the region in the nineteenth century and to the an examination of the Gullah Geechee culture established by West African slaves on Low Country plantations, and then move to writing from more recent writers, all of which help to define the area's distinctive cultural and particularly its literary identity. This course was designed to include an out-of-the-classroom education experience. The enhancement trip should include experiences related to the cultural and natural history of the region. It should provide opportunities to walk in the footsteps of writers whose work is discussed in the classroom. There could be a course fee in addition to tuition for such enhancement experiences.
ENGL 182C: Literature and Empire

3 Credits

Literature written in English from countries that were once part of European empires, e.g., India, Canada, South Africa, and others.

ENGL 182C Literature and Empire (3) (GH, IL, BA) This course meets the Bachelor of Arts degree requirements. English 182C will constitute a wide ranging study of literature written in English, including novels, short stories, poems, plays, and prose, from countries that were once part of the British Empire or some other European empire. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Chinua Achebe, Buchi Emecheta, Alan Paton, David Malouf, Robertson Davies, Ngugi Wa Thiongo, J. M. Coetzee, R. K. Narayan, Amitabha Ghosh, Salman Rushdie, Christina Stead, Thomas Keneally, Jill Ker Conway, V. S. Naipaul, Wilson Harris, and Michael Ondaatje. Topics under consideration will vary from class to class, but the course will often discuss matters of race and ethnicity, as well as matters of religion, gender, sexual orientation and global context, where appropriate. The principle emphasis of the works in this course will be the recognition of non-European/non-American societies and the differences between their culture and that of Europeans or Americans. The conflicts generated by clashing cultures will drive the choice of readings. By the end of the course, students will have studied works from a minimum of five different cultural perspectives. This class will also prepare students to consider social and cultural problems from a variety of cultural perspectives. Students will be evaluated by means of essays written in and out of class, essay exams, term-long reading journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as English Major elective credit or as credit towards the English Minor and will be offered once a year, when staffing restrictions permit, with 35 seats per offering.

ENGL 183Z: Adventure Literature

3-4.5 Credits/Maximum of 12

Adventure Literature (ENG 183Z) students not only read Thoreau, but like him, they travel to the mountains, the river, or the seashore; they hike, climb, and/or kayak; they interview residents with a stake in the area; and they synthesize their experiences through writing. In this course, students analyze works of fiction, poetry, and nonfiction (including scientific and historical texts) that interrogate human relationships with a specific natural environment or region. As part of the course, students visit the region that inspires that literature—they explore its wild places on foot and/or by water, and meet authors, activists, and experts invested in its continued legacy. The course combines physical adventure with intellectual rigor; students of all majors will hone their writing and close reading abilities, enhance their analytical and integrative thinking skills, and gain unique insight into diverse US values, traditions, beliefs, and customs rooted in place and environmental practice. This linked course is listed concurrently and must be taken with KINES 1Z/RPTM 1Z (Outdoor Pursuits) in the same semester.

Prerequisite: ENGL 15; ENGL 30 or ( ENGL 137H, ENGL 138T )

Concurrent: KINES 1Z or RPTM 1Z

ENGL 184: The Short Story
3 Credits

LECTURES, DISCUSSION, READINGS IN TRANSLATION, WITH PRIMARY EMPHASIS ON MAJOR WRITERS OF THE NINETEENTH AND TWENTIETH CENTURY.

Cross-listed with: CMLIT 184
Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

ENGL 184S: The Short Story
3 Credits

Lectures, discussion, readings in translation, with primary emphasis on major writers of the nineteenth and twentieth centuries. ENGL 184S The Short Story (3) (GH,FYS)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to introduce students to the art of the short story and to acquaint them with some of its most talented writers. During the semester we will read short stories from various cultures and countries, ranging from stories written in the early nineteenth-century to those written within the last few years. Readings will include works from authors such as Hawthorne, Melville, Toivoto, Dostoevsky, Gogol, Bierce, Chekhov, Kafka, Chopin, Crane, Gilman, James, Cather, Joyce, Woolf, Faulkner, Hemingway, Lawrence, Orwell, O’Connor, Baldwin, Olson, Silko, Erdrich, Ondaatje, Cooper, Baft, Bathelme, DeLillo, Atwood, Mukherjee, Walker, Tan, Calvino, Garcia Marquez, and Cortiñazar. All readings will be in English. We will usually read one story for each class meeting and it is important that the story is read in advance of our discussion. This course is intended to help one learn how to read fiction, how to understand it, and how to talk about it. The desire to tell stories and to be told stories is one of the most basic human needs, and all cultures have been defined in part by the stories they hear and the stories they tell. We are not born, however, knowing how to read the short story or any fiction for that matter. Rather it is a skill that one acquires, and the more one does it, like playing tennis or any other activity, the better one becomes at it, for we learn what to look for. We will also explore the historical development of the short story genre, and examine how historical contexts relate to the content and style of the stories under discussion. We become familiar with how stories are put together and with the vocabulary that is used to discuss fiction—terms such as plot, narrative, character, tone, language, closure, irony, imagery, and so forth. Students will be evaluated by class participation, a group oral presentation on the historical contexts of a story, small group problem solving exercises, out of class essays, a reading response journal, and in-class exams (such as a mid-term and a final). ENGL/CMLIT 184 will complement a wide variety of offerings in the English curriculum, especially those examining fiction or prose narratives. Non-majors may use this to fulfill a humanities requirement. This course may be used as English Major elective credit or as credit towards the English minor. This course may be used as English Major elective credit or as credit towards the English minor. Non-majors may use this to fulfill a humanities requirement. ENGL/CMLIT 184 is not required for the Comparative Literature major but may be selected to fulfill one of the course requirements for the major or the World Literature Minor. This course also fulfills the General Education Humanities requirement and the Bachelor of Arts Humanities requirement. It will be offered two times per year, with 60 seats per offering.

Bachelor of Arts: Humanities
International Cultures (IL)
First-Year Seminar
General Education: Humanities (GH)

ENGL 185: World Novel
3 Credits

Development of the modern novel in the last century (outside the British Isles and the United States); lectures, discussions, readings in translation. CMLIT 185 CMLIT(ENGL) 185 The Modern Novel in World Literature (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. In this course, which is cross-listed with English, students will read examples of the modern novel from around the world. Focusing on novels written outside of America and England, this class will explore the development of the modern novel as a genre across a number of world cultures. As an example, moving from the beginnings of literary modernism (the late nineteenth century) through the early and mid twentieth century, the course will consider works by writers such as the following: Chinua Achebe, Italo Calvino, Albert Camus, Simone deBeauvoir, Fyodor Dostoevsky, Isak Dinesen, Marguerite Duras, Natalia Ginzburg, Herman Hesse, James Joyce, Thomas Mann, Gabriel Garcia Marquez, Kenzaburo Oe, and Marcel Proust. This course will address the ways in which the world novels under consideration constitute examples of various literary forms and styles. The class will examine the differences and distances between literary movements such as social realism and magical realism, modernism and postmodernism. The goals of this course will be to hone students’ critical reading and writing skills while granting them the ability to think about the modern novel as a distinct genre in a comparative global context. Students will be asked to read a minimum of five to six novels, spending an average of two weeks studying each work. They will be asked to complete at least three writing assignments including at least two kinds of writing such as the essay, essay exam, or semester-long reading journal. This course will prepare students for additional college-level literature courses by helping them to develop the analytical skills necessary to analyze complex written texts. This course fulfills a General Education Humanities requirement.

Cross-listed with: CMLIT 185
Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

ENGL 189: Modern Drama
3 Credits

Playwrights who set the world’s stage for twentieth-century drama; issues that continue to shape the contemporary theatrical world. CMLIT (ENGL) 189 The Founders of Modern Drama (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT/ENGL 189 will constitute a wide-ranging study of plays by authors often credited with the making of modernist drama. The class will approach these plays from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Ibsen, Strindberg, Chekhov, Shaw, Wilde, Galsworthy, O’Neill, Beckett, and Yeats. Topics under consideration will vary from class to class but may include a chronological introduction to the development of modern drama, a consideration of a principal theme or themes in modern drama through a number of plays, or a consideration of plays in the context of historical events or formal or aesthetic elements. Time
ENGL 190Q: Medievalism
3 Credits

In English 190Q / INART 203Q students will gain an understanding of medievalism, defined by Leslie J. Workman in 1987 as "the study of the Middle Ages, the application of medieval models to contemporary needs, and the inspiration of the Middle Ages in all forms of art and thought." As this definition suggests, understanding medievalism means, and thus, the popular works students know, such as Game of Thrones and Lord of the Rings, benefit from learning something about the Middle Ages and the reach of its re-mediation across various kinds of expression. Therefore, ENGL 190Q / INART 203Q begins by introducing students to medieval works and a few of the forms that characterize it. More particularly, the medieval works to be studied are those combining more than one genre, media, and/or form. For example, students will read and listen to (or sing!) medieval lyrics, read and perform short medieval plays such as Robin Hood, be introduced to manuscripts of the bestiary with its illuminations, historiated letters, and scribal copying. They also will be introduced to Romanesque and Gothic architecture. The first medievalist remediations—works adapted in other media—to be examined will be Book I of Spenser’s Faerie Queene, with the woodcut of the Redcrosse Knight and Dryden/Purcell's King Arthur, which will introduce students to Early Modern English medievalism and how it reflects prevailing values in new combinations of old and new artistic forms. Still greater emphasis will be placed on the English Medieval Revival of the nineteenth century, including John Ruskin and the PreRaphaelites, poetry, paintings, and essays, as well as William Morris’s poetry, painting, and Arts and Crafts Movement. Then, as now, medievalism served multiple purposes, including aesthetic, political, and social. To put into practice what students learn and to engage their creativity, one assignment involves hand crafting an art project to be accompanied by an artist statement. In the last part of the course, the focus shifts to contemporary medievalist arts and theory. In keeping with the contemporary direction, another assignment asks students to remediate their handcrafted medievalist work, or to create a new one, using digital resources to engage both their creativity and understanding of key medievalist concepts.

General Education: Arts (GA)
General Education: Humanities (GH)
General Education - Integrative: Interdomain
Honors
GenEd Learning Objective: Effective Communication

ENGL 191: Science Fiction
3 Credits

Science fiction as the literature of technological innovation and social change—its development, themes, and problems.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

ENGL 192: The Literature of Fantasy
3 Credits

Literature(s) of fantasy from early forms through a variety of contemporary traditions. ENGL 192 The Literature of Fantasy (3) (GH)(BA)
This course meets the Bachelor of Arts degree requirements. Perhaps more than any other genre of speculative fiction, fantasy is richly varied. This course examines the development of literary traditions in fantasy literature from their earliest origins in mythology and folklore, through the historical development of classic fantasy works, into the books, movies, and other fictions of the modern day. The course also explores different critical and theoretical approaches to the student of fantasy literature and related artistic traditions, as surrealism and magical realism, and in addition to completing primary readings, students will engage in weekly lecture/discussions of materials. Evaluation for the course includes essay exams and a course project. English 192 satisfies the GH requirement. The course can count toward the major and toward the minor in English. Class size, frequency of offering, and evaluation methods will vary by location and instructor.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

ENGL 193N: The Craft of Comics
3 Credits

This course combines the literary analysis of comics and graphic novels with the creative practice of making comics. Students will learn through an integrated and ongoing process of interpreting select comics texts and also making their own work in that same medium. Students will gain a technical vocabulary for discussing and assessing comics, which they will then apply to formal analysis of compositional and narrative elements in select assigned texts. This analysis will occur first in class discussion, facilitated by the instructors, and then through a sequence of individual written assignments. At the same time, students will receive formal instruction in making comics as they create their own work over the course of the semester, working with peers and instructors as a way of gaining further insight into the creative and technical processes of the studied texts. Formal analysis and creative work will be coordinated and progressive across the course of the semester. The culmination of this collaborative learning would be an integrated understanding and appreciation of comics art.

General Education: Arts (GA)
General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
ENGL 194: Women Writers

3 Credits

Short stories, novels, poetry, drama, and essays by English, American, and other English-speaking women writers. ENGL (WMNST) 194 Women Writers (3) (GH;US;IL;FYS)(BA) This course meets the Bachelor of Arts degree requirements. English 194 will constitute a wide ranging study of works by American, British, and other English-speaking women writers, including novels, short stories, poems, plays, and prose. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Bradstreet, Wollstonecraft, C. Rossetti, M. Shelley, Austen, C. Bronte, E. Bronte, G. Eliot, D. Wordsworth, Dickinson, Wharton, Stowe, Freeman, Jewett, Fuller, H.D., Moore, Sitwell, Bishop, Brooks, Plath, Cather, Woolf, Stein, Lessing, Bowen, O'Connor, Welty, Porter, Oates, Olsen, Sarton, Gordimer, Atwood, Morrison, Kinkaid, McCarthy, and Churchill. The course seeks to make students aware of the extensive body of literature written by women through the analysis, evaluation, and appreciation of specific works by women writers. The course also seeks to help students understand the female perspectives-the varying values and interests of women-reflected in the texts at hand and to position these perspectives within wider social, historical, and political contexts. The course also seeks to make students aware of the special problems faced by both women writers and the female inhabitants of the societies they describe in their work. As a course in women's literature, ENGL/WMNST 194 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of women's literature, a consideration of a principle theme or themes common to women's literature through a number of works from across a number of historical periods, a consideration of a number of women's works in the context of historical events central to their creation, a consideration of a number of women's works in the context of formal or aesthetic elements common to those works and their various effects. Time allotted for the study of the works under consideration will vary. This class will prepare students for advanced courses in women's literature as well as other academic courses that engage in the verbal and written analysis of complex written texts. Students will be evaluated by means of essays written in and out of class, essay exams, term-long reading journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as English Major elective credit or as credit towards the English Minor and will be offered once a year with 60 seats per offering.

ENGL 194S: Women Writers

3 Credits

Short stories, novels, poetry, drama, and essays by English, American, and other English-speaking women writers. ENGL 194S Women Writers (3) (GH;US;IL;FYS)(BA) This course meets the Bachelor of Arts degree requirements. English 194 will constitute a wide ranging study of works by American, British, and other English-speaking women writers, including novels, short stories, poems, plays, and prose. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Bradstreet, Wollstonecraft, C. Rossetti, M. Shelley, Austen, C. Bronte, E. Bronte, G. Eliot, D. Wordsworth, Dickinson, Wharton, Stowe, Freeman, Jewett, Fuller, H.D., Moore, Sitwell, Bishop, Brooks, Plath, Cather, Woolf, Stein, Lessing, Bowen, O'Connor, Welty, Porter, Oates, Olsen, Sarton, Gordimer, Atwood, Morrison, Kinkaid, McCarthy, and Churchill. The course seeks to make students aware of the extensive body of literature written by women through the analysis, evaluation, and appreciation of specific works by women writers. The course also seeks to help students understand the female perspectives-the varying values and interests of women-reflected in the texts at hand and to position these perspectives within wider social, historical, and political contexts. The course also seeks to make students aware of the special problems faced by both women writers and the female inhabitants of the societies they describe in their work. As a course in women's literature, ENGL/WMNST 194 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of women's literature, a consideration of a principle theme or themes common to women's literature through a number of works from across a number of historical periods, a consideration of a number of women's works in the context of historical events central to their creation, a consideration of a number of women's works in the context of formal or aesthetic elements common to those works and their various effects. Time allotted for the study of the works under consideration will vary. This class will prepare students for advanced courses in women's literature as well as other academic courses that engage in the verbal and written analysis of complex written texts. Students will be evaluated by means of essays written in and out of class, essay exams, term-long reading journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as English Major elective credit or as credit towards the English Minor and will be offered once a year with 60 seats per offering.

ENGL 196: Introduction to American Folklore

3 Credits

A basic introduction to verbal and non-verbal folklore stressing the basic procedures of collection, classification, and analysis. AMST 196 / ENGL 196 Introduction to American Folklore (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. English 196 is an introduction to the verbal and nonverbal folk traditions characteristic of several American subcultures, including Native Americans, Hispanic Americans, African Americans, and immigrants. It will cover important genres of folklore, including folk speech, folk narrative, beliefs and religious experiences, use of space, and material culture. Topics under consideration will include ethnicity and cultural identity, the ways in which verbal and material cultures have influenced the literary, political, and economic development of the United States. Students will learn strategies for "reading" and valuing the folklore of subcultures other than their own. This class will prepare students to be able to perform well in future courses that deal with analyzing written, oral, and nonverbal texts and being able to analyze their significance within the subculture that produced them. By the end of the course, students will be able to recognize the cultural, political, and historical implications of such traditions. Additionally, they will have received first-hand practice in compiling a fieldwork project from first-hand interviews and site observations, combined with archival research. Students will be evaluated on the basis of class discussion, oral presentation and group exercises, in-class examinations, and a fieldwork portfolio, based on the fieldnotes, research, and analysis done as part of their project. This course may be used by English majors for English Major elective credit or as credit toward the English Minor, and (as AMST 196) also by American Studies majors in the same way. Non majors may use this course to fulfill a general education or Bachelor of Arts Humanities requirement. ENGL 196 will be offered twice a year with 60 seats per offering.

Honors

ENGL 200W: Introduction to Critical Reading
3 Credits

Responses to a variety of literary texts written in English that evoke different approaches. ENGL 200W Introduction to Critical Reading (3)(BA) This course meets the Bachelor of Arts degree requirements. When we read a work of literature, how do we determine what it means? Why do readers and critics come up with different interpretations of the same work? How do we decide if a literary work is valuable or not? This course addresses these and other questions by introducing students to the variety of literary questions on which critics and scholars base their interpretations of literature. Each theory poses different questions about a literary text’s meanings and focuses our attention on different aspects of a text’s language and background. We will examine the theory and practice the application of the following schools of criticism: formalism, psychoanalytic criticism, new historicism, Marxism, and feminism. We will apply different methods to particular literary texts, and students will practice different types of approaches in in-class writing assignments as well as in four papers (4-5 pages each). At the end of the semester, each student will put together a portfolio containing careful revisions of three of those papers as well as an introductory commentary of 1-2 pages.

Prerequisite: 6 credits of ENGL, ENLSH, or LIT
Bachelor of Arts: Humanities
Writing Across the Curriculum
ENGL 201: What is Literature

3 Credits

Acquaints students with theory and practice relevant to studies of narrative, lyric poetry, and drama. ENGL 201 What is Literature (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. English 201 will familiarize students with theories and practices that are foundational for thinking about literature, and for studying narrative fiction, poetry, and drama. The course will pose such questions as "what is narrative fiction?" "what is poetry?" and "what is drama?" It will introduce students to how conventions of literary genres operate, how they generate meaning, and how they require and manipulate readers' responses. English 201 will also encourage students to explore whether or not literary discourse, as instantiated in the genres that have been named, can be distinguished from other written or spoken discourses. While asking such questions, the course will acquaint students with technical vocabularies used by literary scholars and literary historians, and will provide students with sample scholarly rationales for hypothesizing the singularity of literary discourse, for constructing literary history, and for understanding literature's relation to life. It will teach students close analytic practices of reading, both those that have shaped the discipline of English studies and those emerging currently. Students will be evaluated in English 201 by means of essays written in and out of class, essay exams, and class participation. The course will be required of all English majors and will be a part of their 36 credit degree requirement. The course will be offered in both Fall and Spring semesters with 25 seats per offering.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 202C: Effective Writing: Technical Writing

3 Credits

Writing for students in scientific and technical disciplines. (A student may take only one course for credit from ENGL 202A, 202B, 202C, and 202D.)

Prerequisite: ENGL 015 or ENGL 030; fourth-semester standing
General Education: Writing/Speaking (GWS)

ENGL 202D: Effective Writing: Business Writing

3 Credits

Writing reports and other common forms of business communication. (A student may take only one course for credit from ENGL 202A, 202B, 202C, and 202D.)

Prerequisite: ENGL 015 or ENGL 030; fourth-semester standing
General Education: Writing/Speaking (GWS)

ENGL 208N: The Music of the Beatles and American Popular Culture

3 Credits

The Beatles are the most significant musical group in the history of popular music. Their songs are derived from diverse sources, such as rhythm 'n' blues, rock 'n' roll, country 'n' western, Motown, soul, folk music, folk rock, the British Music Hall, and European and Indian classical music traditions. Two ideas define their work: an emphasis on freedom, and how song texts can be interpreted in different ways. The Beatles had a great impact not only on American popular music during their heyday in the 1960s but also on the country's popular culture in which they were considered philosopher kings. Beatles albums mirrored changing trends in the culture, from the pre-Vietnam War youthfulness of A Hard Day's Night, to the psychedelia of Revolver and Sgt. Pepper, to the countercultural mindset of The White Album. This inter-domain course will focus on how the Beatles influenced American popular culture from the 1960s to the present day. It will examine how the Beatles were a part of a mid-twentieth-century British youth subculture that was shaped by the cultural attitudes of American rock 'n' roll. The course will then
turn its attention to the seismic shift initiated by the Fab Four in both music and pop culture in the US from 1964 to 1970, demonstrating how it has permeated the popular culture of the 1970s to the present day. The course will enhance the appreciation of the Beatles and their music through its interdisciplinary focus, contextualizing the Fab Four’s work in order to show how both popular music and culture can influence one another. One way the course will facilitate this goal is through the inclusion of selected readings from English literature and popular culture upon which students will write reflection essays.

3 Credits

Examination of the relation between fiction and nonfiction; practice in principles common to all writing.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 211: Introduction to Writing Studies

3 Credits

This course introduces students to the most salient issues and theories in writing studies. Students explore contemporary theories and issues about writing in order to understand writing as a skill and a complex object of study in various professional contexts.

Prerequisite: ENGL 015 or ENGL 030; third semester standing

ENGL 211W: Introduction to Writing Studies

3 Credits

This course introduces students to the most salient issues and theories in writing studies. Students explore contemporary theories and issues about writing in order to understand writing as a skill and a complex object of study in various professional contexts. ENGL 211W Introduction to Writing Studies (3) Most students know that writing is something one does; they are less aware that writing is something one studies, and that doing so is a challenging and fascinating intellectual endeavor. In this class, students explore the multifaceted nature of writing. As the list of major topics indicates above, students study a broad range of contemporary theories and issues, from the socially-constituted self in the act of writing, to plagiarism as it is variably defined in professional settings, to the role of the writer in social change. The course is designed for both breadth and depth. Breadth is achieved through the many topics described above. The exams are designed to encourage students to make connections from one topic to another, to see how each builds on and interweaves with others. For example, early semester study on a writer’s individual agency is later complicated by issues of power determined by race, class, and gender. Writers’ ethical choices are made more challenging when confronted with questions of ideology and social justice. Depth is achieved through the written essays. Each essay requires that students examine a narrow topic in depth, building on an assigned reading with limited and manageable primary and secondary research. For example, students may study their own writing as intertextual, drawing conclusions about originality and creativity in the process. Throughout the course, students are encouraged to apply issues and theories to real-world situations, in such realms as professional settings, politics, media, and social justice. Several speakers come to class throughout the semester to expose students to the many kinds of writing professional writers do, the expectations and standards required of professional writers, and the avenues to success as professional writers.

Prerequisite: ENGL 015 or ENGL 030; third semester standing
Writing Across the Curriculum

ENGL 212: Introduction to Fiction Writing

3 Credits

Written exercises and short readings in the elements of fiction writing; the writing of at least one short story.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 213: Introduction to Poetry Writing

3 Credits

Written exercises and short readings in the components and techniques of poetry writing in conjunction with selected readings.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 214: Introduction to Creative Nonfiction Writing

3 Credits

Introduces lyric and narrative forms in memoir writing and the personal essay. ENGL 214 Introduction to Creative Nonfiction Writing (3) Creative nonfiction borrows techniques from fiction and poetry while adhering to but also sometimes questioning notions of truth. It stretches the bounds of literary or narrative journalism by asking the reader to consider it as art, primarily, versus as testimony, fact, or information-delivery. Students taking this course will explore the genre’s influences in fiction, research, and poetry; critical analyses will complement this exploration, and formal experimentation will prepare students to imagine novel relationships between form and content. Discussing traditional storytelling technique, the course introduces students to story rudiments including the inciting episode, rising and falling action, climax and denouement and the so-called swerve ending. The course also introduces students to the possibilities of the nonlinear “lyric essay” as outlined in Seneca Review and elsewhere, as well as to the “modular” essay; uses of blank space for communicating the unsayable; and how poetic style can circle elusive meaning. In exploring issues of nuance and implied or glanced-at meaning, the course also discusses the place of truth in nonfiction - differing constructions and conceptions of truth; reader expectations for factuality in a work of nonfiction; and the complications of unreliability
when the fallibility of memory or a multiplicity of perspectives color testimony. Finally, the course examines the role of nontraditional structure in conveying a postmodern understanding of subjectivity, for instance by looking at the use of multiple voices and personae in the works of certain contemporary authors. While ENGL 215 teaches skills for the journalist in developing feature-style journalism and narrative personal essays, ENGL 214, alternatively, will explore and exploit the influence of fiction, poetry, and other lyric forms. Students in this course will produce writing more appropriate to a literary journal than a news magazine; their writing will concern broad, sometimes disjointive themes, and stray away from the nut-graf, news-hook, or even an obvious narrative focus.

ENGL 215: Introduction to Article Writing
3 Credits
Written exercises in, and a study of, the principles of article writing; practice in the writing of specific articles.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 221: British Literature to 1798
3 Credits
Introduction to literary history and analysis; Beowulf and writers such as Chaucer, Shakespeare, Donne, Milton, Swift, Pope, and Fielding.

ENGL 221 British Literature to 1798 (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. Focusing on major writers and their cultural contexts, English 221 surveys British literature to 1798. A remarkable amount of important work was produced over this period. Students will read major texts like Beowulf, Romeo and Juliet, and Tom Jones; learn about renowned authors such as Chaucer, Shakespeare, and Fielding; and be introduced to influential literary forms, such as the epic, the revenge tragedy, and the picaresque novel. The tradition of British literature evolved over periods of significant upheaval and change. Students will also learn about the shifting historical and ethical orientations that energized this tradition, from rising industrialization and changing class and gender relations as manifested in Romanticism, Modernism, and Postmodernism. As an introductory survey of British literature, ENGL 221 welcomes non-majors; no previous course in literature is required. By reading and discussing some of the best-known works in British literature, students will sharpen their skills of interpretation while surveying important literary traditions and gaining crucial critical insight into an international culture that literally influenced-through its imperial reach-countries around the world.

ENGL 222: British Literature from 1798
3 Credits
Focusing on major writers and their cultural contexts, ENGL 222 surveys British literature from 1798 to the present. A remarkable amount of important literature was produced during this period. Students will read major texts like Pride and Prejudice, Hard Times, and Jane Eyre; learn about renowned authors such as William Blake, Charles Dickens, and Virginia Woolf; and be introduced to influential literary forms, such as the dramatic monologue, the gothic novel, and stream-of-consciousness narrative. The tradition of British literature since 1798 evolved over periods of significant political and cultural upheaval and change. Thus students will also learn about the shifting historical and ethical orientations that energized this tradition, from rising industrialization and changing class and gender relations as manifested in Romanticism, Modernism, and Postmodernism. As an introductory survey of British literature, ENGL 222 welcomes non-majors; no previous course in literature is required. By reading and discussing some of the best-known works in British literature, students will sharpen their skills of interpretation while surveying important literary traditions and gaining crucial critical insight into an international culture that literally influenced-through its imperial reach-countries around the world. This is a WAC course.

ENGL 223N: Shakespeare: Page, Stage, and Screen

3 Credits

This course will explore the relation between literary analysis and both film and theatrical performance by asking students to approach a limited set of plays from multiple perspectives, using texts, film, and theatrical performance to integrate these methodologies. Students will work closely with Shakespearean texts, practice textual and poetic analysis, and will also examine critically different forms of performance: film and live theatre. In particular, the course will explore the interrelation of these elements, revealing a deeper imaginative understanding of works that continue to influence English-speaking literature and culture.

ENGL 224N: Authors and Artists

3 Credits

This course explores the many links between modern art and literature, including fiction about artists, illustrations of fiction and poetry, efforts to write in the styles associated with modern art, and practices of ekphrasis (the evocation of visual art in language). These links between authors and artists have exerted a formative influence on the development of modern fiction and poetry as authors and artists in various avant-garde groupings collaborated and competed to generate modes of artistic expression appropriate to modernity. This course examines these interactions. Course objectives are to bring together for comparative examination: * Formal or generic relationships between texts and images at particular historical moments; under this rubric we will consider issues such as ekphrasis. * Creative collaboration and cross-pollination between writers and artists, which have been crucially important in the history of literature and poetry; examples include Pre-Raphaelite poetry and painting, Virginia Woolf and Post-Impressionism, Gertrude Stein and Cubism * Conceptions of creativity as these have been expressed by writers using the figure of the artist; texts in this category range from Balzac's The Unknown Masterpiece, through Hawthorne's The Marble Faun, to Paul Auster's appropriation from the performance artist Sophie Calle This course explores the ways knowledge of literature and skills in critical reading can be rewardingly brought to bear on the visual arts, and considers how visual art can illuminate the workings of literature both for individual readers and in the classroom.

ENGL 225N: Sexuality and Modern Visual Culture

3 Credits

ENGL 225N / ARTH 225N / WMNST 225N Sexuality and Modern Visual Culture (3) (GA;GH) An examination of the visual expression of gender and sexual identities in English-speaking cultures since the late nineteenth century. The terms "feminist" and "homosexual" were invented by the Victorians and reflect profound shifts in conceptions of identity. Another invention of the nineteenth century was the idea of the literary and artistic "avant-garde" as a minority contingent with politically and/or aesthetically advanced views. These ideas of minority culture were deeply enmeshed with one another, and have exerted profound influence ever since. This course explores that history with the objectives of expanding students' knowledge of modern art and literature, and of fostering more sophisticated understandings of how evolving socio-political ideas affect our sense of who we are and how we relate to texts and images. The course is relevant to students of American and English studies, art, art history, and women's, gender and sexuality studies.

ENGL 226: Latina and Latino Border Theories

3 Credits

ENGL 226 Latina and Latino Border Theories (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on contemporary Latina/o cultural production, placing it in historical context and analyzing it through the framework of borders. We make connections between Latina/o groups, showing both similarities and differences. We examine the politics of representation, asking how artistic texts define community and individual identities that are coherent yet also embody the complexity of these identities. The texts cross and claim borders&dash;cultural, sexual, gender, geographical, generational, spiritual, and institutional. We will ask how these art forms work to claim border spaces: How are cultural differences retained without constructing hierarchies of exclusion? What models of identity do these artists propose in response to structures of domination? We'll read novels, short stories, poems, history, and theoretical essays; we will also watch several films. Throughout the course, we will attend to particular histories and cultures of Latina/o groups; it is crucial to both maintain the specificity of each culture (Chicana/o, Puerto Rican, Cuban-American, and Dominican-American) and their connections to each other as Latinas/os in the U.S. Inquiring into these intersections leads one to ask the following: how can Latinos unite against the assault on immigrants and bilingual education without erasing very important differences among Latina/o populations? How can Latinas unite against ongoing sexism and homophobia within their communities and the U.S. in general? How should we view the marketing category &ldquo;Hispanic;&rdquo; and/or &ldquo;Latino;&rdquo; and how do artists offer alternative conceptions of group identity?

ENGL 227: Introduction to Queer Theory
3 Credits

ENGL 227 Introduction to Sexuality Studies (3) (GH;US) This course focuses on the body of critical writings known as queer theory in order to analyze issues of sexuality and gender since 1969. The course interrogates sexual norms and their deviations, with a particular focus on the relationships between sexuality, imagination, and ethics in the making of sexual communities and fostering activism around sexuality and gender. We will study how class, race, and gender have been shaped, and themselves shape, the production of and resistance to sexual norms. Queer Theory engages issues "queer space" and "queer time," related concepts that relate bodies and environments to history and memory, and to fantasy, imagination, and utopianism. We will also explore the ways marginalization, shame, and criminalization have been transformed into visionary acts of "world-making" that have changed contemporary understandings of bodies, identities, social formations, literature and visual culture. Throughout, our focus will be on the relationships between sexuality and ethics, and how both shape the history of queer culture and activism.

ENGL 229: Digital Studies
3 Credits

An introduction to concepts, methods, and resources for the computer-assisted study of language and textual culture, including literature, in the English language.

ENGL 231Y: American Literature to 1865
3 Credits

This course offers students a broad introduction to key moments and authors in the literary traditions that shaped US literature up to 1865. While individual authors and works discussed in class will vary, the course addresses the overall development of literatures in the United States by time periods and genres that may range from pre-Columbian oral traditions to American fiction and poetry published until the end of the Civil War. The class may feature the study of representative examples of both oral traditions and written works. In addition to highlighting enduring literary voices, the class may also highlight the development of specific genres (such as slave narratives), literary movements (such as Transcendentalism), periods of literary production (such as the American Renaissance) or other groupings of authors (such as the Fireside Poets) over the course of US literary history. Likewise, the class may include works both by authors who were popular at the time when they published their works (and thus able to impact American literature and culture during their lifetime) and those whose contributions to literary history were recognized only later. While it should be expected that no version of this course will be able to cover all authors whose works emerged before 1865, selected authors and works might include the following: examples of Native American, African American, and other oral traditions; excerpts from works by authors such as Anne Bradstreet, Edward Taylor, Cotton Mather, Phillis Wheatley, Samson Occom, Benjamin Franklin, Washington Irving, James Fenimore Cooper, Harriet Beecher Stowe, William Cullen Bryant, Henry Wadsworth Longfellow, John Greenleaf Whittier, James Russell Lowell, Oliver Wendell Holmes, Frederick Douglass, Harriet Jacobs, Edgar Allan Poe, Nathaniel Hawthorne, Henry David Thoreau, Ralph Waldo Emerson, Margaret Fuller, Herman Melville, Walt Whitman, or Emily Dickinson.

**ENGL 232: American Literature from 1865**

3 Credits

Introduction to literary history and analysis; writers such as Mark Twain, James, Cather, Frost, O'Neill, Faulkner, Hemingway, Hughes, and Morrison. ENGL 232 American Literature from 1865 (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. Focusing on major writers and their cultural contexts, English 232 surveys American literature from 1865 to the present. A remarkable amount of important literature was produced during this period. Students will read major texts like The Great Gatsby, The Grapes of Wrath, and Beloved; learn about renowned authors such as Ernest Hemingway, Flannery O'Connor, and James Baldwin; and be introduced to influential literary forms, such as the imagist poet, the modernist novelist, and New Journalism. The tradition of American literature since 1865 evolved over periods of significant upheaval and change. Students will also learn about the shifting historical and ethical orientations that energized this tradition, from Naturalism to Modernism and Postmodernism. As an introductory survey of American literature, English 232 welcomes non-majors: no previous course in literature is required. By reading and discussing some of the most important works in American literature, students will sharpen their skills of interpretation while surveying an important literary tradition.

**Prerequisite:** ENGL 015; ENGL 030; ENGL 137H; or ENGL 138T
Bachelor of Arts: Humanities
General Education: Humanities (GH)

**ENGL 232W: American Literature from 1865**

3 Credits

Introduction to literary history and analysis. Writers such as Mark Twain, James, Cather, Frost, O'Neill, Faulkner, Hemingway, Hughes, and Morrison.

**Prerequisite:** ENGL 015 or ENGL 030
Bachelor of Arts: Humanities
Writing Across the Curriculum

**ENGL 233N: Chemistry and Literature**

3 Credits

This pedagogically innovative course will be team taught by an instructor from the English department and one from the Chemistry department. Both instructors will be present in the classroom throughout the semester, providing joint presentations and leading discussions. The integration of humanities and natural sciences domain content will encourage students from humanities and natural science backgrounds, as well as other interested students, to take the course and learn how to integrate these two domains of knowledge in their education and their lives after leaving Penn State. This course teaches both basic concepts of chemistry and their cultural elaboration in literature, and it models a critical assessment of the implications of chemistry and literature emerging from a shared cultural field, rather than autonomously from two separate cultures. The course seeks to provide students with a nuanced understanding of how literature and science inform each other and negotiate cultural, religious, and political tensions. Understanding the origin and development of these ideas, perspectives, and discoveries is an essential component of science and scientific achievement, but too often our methods of teaching science focus almost exclusively on teaching facts and theories at the expense of the historical discovery, creation, and development of those facts and theories. This course teaches both the scientific facts and theories and the contexts of their production in order to sharpen students' abilities at critical evaluation of facts. The literary and scientific focus will vary from class to class, but may include writings by literary authors such as Mary Shelley, Edward Bulwer-Lytton, Bram Stoker, H. G. Wells, Garrett Serviss, Aldous Huxley, Roald Hoffmann, Carl Djerassi, Don DeLillo, William Butler Yeats, Arthur Machen, D.H. Lawrence, A. E. Waite, Aleister Crowley, Arthur Conan Doyle, Camille Flammarion, and Rachel Carson, and scientific texts by scientists such as T.H. Huxley, William Crookes, William Ramsay, Frederick Soddy, Ernest Rutherford, Wilhelm Conrad Roentgen, Henri Bequerel, J.J. Thomson, Niels Bohr, and Marie Curie. Key concepts of environmental chemistry. The specific focus of this class will vary from class to class, but all sections will spend approximately 40% of the class on units specifically devoted to key concepts in basic chemistry, 40% of the class on literary interpretations of and influences upon concepts in chemistry in specific historical periods, and 20% of the class on significant methods of theorizing the boundaries between and interrelationships of science and culture, and on the concept of the "culture of science." However, these subjects will be interwoven throughout the semester. Indeed, the pedagogy of the course depends upon the literature and the science not being neatly separated from each other. Instead, students will learn up-to-date science while exploring the origins, development, and cultural dimensions of that science, and will learn to integrate their understanding of the domains of science and the humanities through the course. The course will be offered once every year with approximately 20-35 seats per offering.

**ENGL 234: Sports, Ethics, and Literature**

3 Credits

Exploration of social and ethical issues in sports through a variety of literary texts. ENGL 234 Sports, Ethics, and Literature (3) (GH) A passing glance at a newspaper sports page is enough to confirm how ethically fraught the sports world is. This course explores the ethical issues that arise in a culture of competition, and it uses a variety of literary texts to ground that exploration. It seeks to provide students with a nuanced understanding of how dependent sports are on narratives, and how a variety of ethical issues underwrite existing narratives about sports. With a focus on "the big three" (baseball, basketball, and football), the course has a U.S. focus but also has opportunities for students to
write about other sports and in non-U.S. contexts. The course connects issues in literature to issues that arise in real time as the semester unfolds. Through the readings, students will develop a heightened awareness of how different a sport can look from the "inside," as an athlete or coach. The literature, that is, develops ethical imaginations and helps students think in a more complicated way about one of the most talked-about phenomena in American culture: athletics, at all levels. Units on baseball, basketball, and football focus on issues specific to those sports (e.g., the basketball unit features texts and discussions about Title IX and gender equity in sport; football on violence, injury, and athlete expendability. The course seeks to equip students to have more sophisticated conversations about sports issues, and to be more discerning as spectators and consumers of sports.

General Education: Humanities (GH)

ENGL 235: From Folk Shouts and Songs to Hip Hop Poetry

3 Credits

The origins, forms, and function of the oral folk tradition of African Americans. ENGL 235 / AFAM 235 From Folk Shouts and Songs to Hip Hop Poetry (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This course contemplates connections between African oral traditions and contemporary trends in Black poetry including hip-hop and spoken word poetry. The central objective of the course is to examine the degree to which the most contemporary forms of African American poetry continue to function as folk expression; it provides an opportunity for students to examine the oral roots of African American literature in general and contemporary hip-hop and spoken word poetry, in particular. Music, particularly the Blues and Jazz, will be a prominent feature of this class as we try to discover the peculiarities of Black poetry. Students will begin by comparing African and African American folk forms such as proverbs and epic poetry, continue with early African American poets such as Phyllis Wheatley, George Moses Horton, Frances Ellen Watkins Harper, and Paul Laurence Dunbar, and continue through the 20th century with the poetry of the Harlem Renaissance and Black Arts Movement to contemporary Hip Hop and Spoken Word, including Def Poetry Jam recordings. Background readings will include important essays (such as James Weldon Johnson's "Preface to the Book of Negro Poetry" and Langston Hughes's "The Negro Artist and the Racial Mountain") that reveal the kinds of aesthetic issues African American artists faced in crafting their art in the face of a dominant culture that consistently questioned their capacity for artistic production. Students will listen as Margaret Walker reads her famous poem, "For My People," and they will consider the importance of the Black Arts Movement, its poets and critics to the development of contemporary hip-hop and spoken word poetry. Other course materials will include videotaped interviews and poetry readings. Readings would come from an appropriate anthology and/or a combination of other appropriate texts selected by the instructor.

ENGL 236N: Inequality: Economics, Philosophy, Literature

3 Credits

The Cubists were a group of painters including George Bracques, Pablo Picasso, working in Paris in the 1910s who, in addition to other painterly innovations, depicted objects not from one perspective but from multiple perspectives simultaneously. The final painting could sometimes look like a blur, but, or so the theory went, such multiplicity of perspectives could offer a truer, more complete representation of reality than any single perspective. In this class, we shall adopt a Cubist strategy of taking multiple perspectives. But instead of a guitar or a nude, our object of study will be inequality, and the multiple perspectives will not be different angles of seeing but different disciplines: economics, sociology, education, philosophy, and literature. How does each discipline define inequality? What does each have to say about it? And what does each argue, if anything, should be done about it? The class will mostly focus on economic inequality, but as you will discover, discussions of economic inequality quickly involve discussions of other forms of inequality (principally race and gender) besides economic inequality, and we shall consider those as well.

General Education: Humanities (GH)

ENGL 237N: Reading and Writing Documentary Poetry

3 Credits

You've probably heard of documentary photographs and documentary films, but you may not be familiar with documentary poetry. In this course, we will discuss how poets can use letters, diaries, transcripts, and other materials to create poems that capture historical events and everyday life in order to bear witness to particular moments in time. An important element of the course will be the role of documenting our world in terms of social justice and ethical responsibility. Whether focusing on public education, poverty, race, class, disability, gender, environmentalism, or other subjects, documentary poets personalize issues that are typically represented with broader brushstrokes. As Paul Metres observes, documentary poets invite "the real life outside the poem" into the poem itself, thereby "testing the boundaries of what Wallace Stevens called "the pressure of reality." We will begin by viewing and discussing documentary poetry within the context of photography and filmmaking. Next, we will read and discuss documentary poems, including persona, collage, and erasure poems. These readings will also include interviews with select documentary poets about their processes. An overview of poetry terminology, research methods, and the ethics of documentary art will provide you with the basis for composing your own documentary poems. The last third of the course will be spent writing and workshopping your original documentary poems.

ENGL 240: Exploring Literary Traditions

3 Credits/Maximum of 6

The examination of specific literary traditions in English-language texts and an inquiry into the question of tradition itself. (Section subtitles may appear in the Schedule of Courses.)

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 245: Introduction to LGBTQ Studies

3 Credits

An introduction to the dominant themes in Lesbian, Gay, Bisexual, Transgender, and Queer Studies, with an emphasis on both literary & cultural studies. This course explores the history of modern, western ideas about sexual identity as manifested in literature, theater, film, and other narrative forms of popular culture. Drawing on the substantial body of "queer theory" generated by scholars in the humanities since the 1990s, this class examines sexuality not as a "natural" or consistent phenomenon, but as a set of beliefs that have changed over time and manifest themselves differently in different cultural and historical contexts. Starting in the late nineteenth century, scientific and medical authorities began categorizing individuals into sexual types based on their manifestations of gendered characteristics and their erotic attractions and practices. This medical typology corresponded with the development of subcultures associated with deviance from sexual norms; these subcultures produced a rich variety of texts, images, performances, and social forms, many of which became central to both popular and high culture. This course explores this rich archive, moving among media. It investigates constructions of sexual conformity and how sexual nonconformists positioned themselves in relation to cultural and medical group identities. It examines how distinctions between gendered, raced, and classed bodies were historically produced and culturally contested. It considers what commonalities gay identities may - or may not -- share with lesbian identities and how transgender and other identities have altered perceptions of sexual identity. The course also explores the relationship of the avant-garde to the mass media and how sexual subcultures have shaped literary and other cultural forms of expression. Comparative study of issues of sexual mobility beyond and between the borders of the United States expands the course's critical scope beyond dominant forms of western culture. This course does not propose definitive answers to the questions of identity it addresses. Instead it negotiates the ways sexualities have enabled individuals to articulate -- and disarticulate -- themselves within social bodies past and present. This course, therefore, has wide relevance for students interested in how group identities come into being and transform over time in dynamic relation to other historical forces. Exploring a wide variety of cultural forms associated with the history of sexual identity as well as a variety of interpretations of that history, this course opens students to an archive of literature, theater, film, and other narrative arts with the potential to inform and enrich their understandings of many kinds of challenges to regimes of normativity today.

ENGL 250: Peer Tutoring in Writing

3 Credits

Introduction to skills and attitudes required for successful peer tutoring in writing. Provides internship experience in a writing center.

Prerequisite: ENGL 202A , ENGL 202B , ENGL 202C , or ENGL 202D ; approval of department
Bachelor of Arts: Humanities

ENGL 261: Exploring Literary Forms

3 Credits/Maximum of 6

The examination of specific genres in English-language texts and an inquiry into the question of genre itself. (Section subtitles may appear in the Schedule of Courses.)

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 262: Reading Fiction

3 Credits

ENGL 262 examines the critical, theoretical, and practical issues that readers face when reading fiction. Students will examine critical concepts ranging from fundamental analytical concerns such as plot structure, characterization, and themes, to broader ethical, philosophical, social, and political questions raised by fiction. As a genre course, ENGL 262 will pay special attention to the critical issues and problems raised by reading fiction, as opposed to reading poetry, drama, or non-fiction. Authors might include the following: Defoe, Richardson, Fielding, Walpole, Burney, Sterne, Smollett, C.B. Brown, Austen, J.F. Cooper, Hawthorne, Melville, Child, Chopin, Shelley, the Brontes, G. Eliot, Dickens, Hardy, Thackeray, James, Joyce, Woolf, Bellamy, Faulkner, Hemingway, Morrison, Delillo, Reed, Barthe, Cooper, Ellison, Nabokov, Wright, Welch, Erdrich, and others.

Prerequisites: ENGL 15; ENGL 30 or ( ENGL 137H, ENGL 138T )
Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ENGL 263: Reading Poetry

3 Credits

Elements of poetry including meter, rhyme, image, diction, and poetic forms in British, American, and other English-language traditions.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities
General Education: Humanities (GH)

ENGL 265: Reading Nonfiction

3 Credits

Reading Nonfiction will provide students with a historical context and the reading skills necessary for this "fourth genre" of creative writing, with an emphasis on memoirs and the essays that have defined the genre
across different eras. Biographies, autobiographies, travel narratives, science writing, and political writing could be included along with hybrid nonfiction such as graphic memoir and the video essay. As a reading (not writing) class, content will focus on the implicit contract of truth between the writer and the reader, with discussions to focus on the impact of a “true story,” told creatively. What must the writer accomplish on the page in order for a reader to become engaged with this genre? The course will bring to the table questions of ethics and morals when applied to our latest understanding of the fallibility or reliability of memory and how authors use their memories to write nonfiction. Later weeks in the course will examine publishing trends in nonfiction and identify career paths for students wishing to further explore the scholarship of nonfiction.

**Prerequisites:** ENGL 15; ENGL 30; or ( ENGL 137H, ENGL 138T )
Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

ENGL 268: Reading Drama

3 Credits

Reading Drama is a course that will cover elements of drama including plot, character, dialogue, staging, and dramatic forms in primarily British, American, and other English-language traditions. Students will explore different techniques for reading drama through a literary lens, including the overlap of reading for history, reading for theory, reading for pleasure, and reading as a preparation for the eventual staging of drama. Students can expect to encounter a range of drama presented in such a way that learning outcomes explore historical trends, artistic movements, critical reception, and drama’s effect on culture, society, politics, and art. Students will by the end of the course have a solid foundation in comparing and contrasting styles of drama and will also be able to engage in the scholarly dialogue of analyzing dramatic literature to a depth that goes beyond appreciating the entertainment value of a good play.

**Prerequisites:** ENGL 15; ENGL 30; or ( ENGL 137H, ENGL 138T )
Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

ENGL 281: Television Script Writing

3 Credits

An introduction to the writing of scripts for television production.

**Prerequisite:** ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 282: TV Script Writing 2

3 Credits

This creative writing course will further explore the specialized techniques and requirements of television script writing. Students will complete a first draft of a pilot episode (begun in ENGL281) and then revise the draft, focusing especially on the main character’s story arc, plot structure, adding multiple narrative lines, scene and dialogue revision, and developing larger narrative lines for future episodes. Through script readings, discussions, writing exercises, and workshopping, students will come to understand the revision process and develop skills that can be applied to future scriptwriting.

**Prerequisite:** ENGL 281

ENGL 294: Research Topics

1-12 Credits/Maximum of 12

Individual or small group instruction.

Bachelor of Arts: Humanities

ENGL 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

ENGL 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

ENGL 297E: Special Topics - InterDomain

3 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GH GenEd course.

General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain

ENGL 298: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GH GenEd course.

General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain

ENGL 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

ENGL 301M: Honors Seminar in English: Pre-1800s literature

3-12 Credits/Maximum of 12

This course offers honors students the opportunity to explore in depth a period of early English literature before 1800. Topics will vary from year to year, but may include Beowulf and Anglo-Saxon literature and
culture, late medieval authors such as Chaucer, Gower, and Langland, sixteenth-century lyric poets, Shakespeare, Shakespeare and film, Elizabethan dramatists, authorship and book history, early women authors, seventeenth-century writers such as Donne, Herrick, Wroth, and Bacon, writers of the English Revolution, Milton, and eighteenth-century writers such as Pope, Dryden, and Swift. Assignments will include extensive primary and secondary reading, participation in class discussion, and a substantial paper or final project.

**Prerequisite:** (ENGL 15 or ENGL 30) or (ENGL 137, ENGL 138)
Bachelor of Arts: Humanities
Honors
Writing Across the Curriculum

ENGL 310: Honors Thesis in English
3 Credits
Research paper or creative project on a topic approved by the Departmental Honors Committee.

**Prerequisite:** 9 credits of ENGL 300H
Bachelor of Arts: Humanities
Honors

ENGL 311: The Canon and Its Critics
3 Credits
History and formation of literary canons, and challenges to canon ideology by writers and critics, through readings in English and American literature.

**Prerequisite:** ENGL 015 or ENGL 030H
Bachelor of Arts: Humanities

ENGL 312: Globality and Literature
3 Credits
Examines relationships between literature and culture, through the study of major texts in English by writers of various cultures.

**Prerequisite:** ENGL 015 or ENGL 030H
Bachelor of Arts: Humanities

ENGL 312H: Globality and Literature
3 Credits
Examines relationships between literature and culture, through the study of major texts in English by writers of various cultures.

Bachelor of Arts: Humanities

ENGL 395: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor
Bachelor of Arts: Humanities

ENGL 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

ENGL 399: Foreign Study--English
3-6 Credits/Maximum of 6
Advanced studies in English language and/or literature.

Bachelor of Arts: Humanities

International Cultures (IL)

ENGL 400: Authors, Texts, Contexts
3 Credits/Maximum of 6
Styles, cultural milieus, critical perspectives toward particular English-language authors and/or movements they represent, and the idea of authorship. (Section subtitles may appear in the Schedule of Courses.)

**Prerequisite:** ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 401: Studies in Genre
3 Credits/Maximum of 6
English-language texts exemplifying particular genres, with attention to critical theories, historical development, rhetorical strategies, and social, cultural, and aesthetic values. (Section subtitles may appear in the Schedule of Courses.)

**Prerequisite:** ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 401W: Creative Writing Theory
3 Credits
Theories of art and creativity which inform the making of literary works.

**Prerequisite:** ENGL 200 ; ELISH201 , ELISH209 , ENGL 212 , or ENGL 213
Bachelor of Arts: Humanities
Writing Across the Curriculum

ENGL 402: Literature and Society
3 Credits/Maximum of 6
Texts confronting social, political, technological, or other issues in the English-speaking world. (Section subtitles may appear in the Schedule of Courses.) ENGL 402 Literature and Society (3)(BA) This course meets the Bachelor of Arts degree requirements. One variation will focus on Literature and Censorship by first considering general arguments for and against censorship and then by examining texts by writers who sought publication in their own country but whose books were censored or banned. The course will consider such questions as, Are there ever legitimate grounds for censorship? How do standards of censorship differ between countries? What is the relation between censorship on political and on moral grounds? What does artistic merit have to do with concern about moral or political subversion? Works from England, South Africa and the United States will be read and discussed, and where available,
Excerpts from trial transcripts will be read in order to examine arguments for and against publication. Readings will include works by Milton, D. H. Lawrence, Alan Paton, Nadine Gordimer, Athol Fugard, Eugene O'Neill, Henry Miller, and Alan Ginsberg. Another variation will focus on war and gender in 20th century American literature by examining the ways male and female authors write about war. Texts will vary from battlefield experiences to repercussions of war to the symbolic implications of war. Questions will be raised about literary authority: Does one need to be combatant to write about war? If not, how does one find the authority to speak, particularly as a woman? How does race or ethnicity complicate one’s perceptions of American participation in war? Readings will include works by Ernest Hemingway, William Faulkner, Joseph Heller, Cynthia Ozick, Leslie Marmon Silko, Norman Mailer, Bobbie Mason, Tim O’Brien, and Toni Morrison. Another variation will focus specifically on the writings which emerged from the postwar African-American struggle for civil rights. The course will include not only fiction and poetry but also those speeches, sermons, editorials, and other forms of discourse to have emerged from the era. The emphasis will be both traditional literary concerns as well as on the various rhetorical strategies involved in each work. Ideally, the course would make visible to students the difficulties attendant upon any attempt to separate the concerns of rhetoric and persuasion too firmly from the concerns of literature. The course could conclude with a look at some of the various biographies, autobiographies, and histories written over the last twenty-five years, which attempt to shape our national memory. Other variations include literature as a response to Newtonian science or to Darwinism or to the American Depression or to postwar technology or to new dystopias or to AIDS or, as in the sample outline, the Civil Rights movement.

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

**ENGL 403: Literature and Culture**

3 Credits/Maximum of 6

Historical, theoretical, and practical issues within cultural studies in relation to English-speaking texts. (Section subtitles may appear in the Schedule of Courses.) ENGL 403 Literature and Cultural Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. Topics covered in this course will vary from semester to semester, but a broad framework will be to introduce students to literary and other texts read in relation to cultural studies. Individual instructors may take up different historical periods, while other versions may suggest ways cultural studies draws on different theoretical discourses such as rhetoric, deconstruction, feminism, or the New Historicism for its problems. All Reading Culture courses should serve as an introduction to cultural studies, moving from theoretical to practical readings of literature and culture. In any case, a common goal would involve examining cultural studies as constituted by plural theories and ends.

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

**ENGL 404: Mapping Identity, Difference, and Place**

3 Credits/Maximum of 6

Ethnicity, gender, class, race with reference to theoretical inquiry into identity, difference, and place in English-language literatures. (Section subtitles may appear in the Schedule of Courses.)

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

**ENGL 405: Taking Shakespeare From Page to Stage**

3 Credits

Students experience a Shakespeare play as a text to be explicated and as a script to be performed.

**Prerequisite:** permission of program

Bachelor of Arts: Humanities

**ENGL 406M:** Honors Course in English: General Topic in Recent Literature

3-12 Credits/Maximum of 12

This advanced Honors Seminar in literature, rhetoric, and cultural studies allows students to explore and research a topic related to recent literary culture. Topics will vary depending on the course instructor but may include the study novels, poetry, drama, theory, film, nonfiction, or rhetoric. Recent topics have included Alfred Hitchcock, contemporary novels, prison narratives, authors and artists, and apocalyptic fiction. Assignments will include extensive primary and secondary reading, participation in class discussion, and a substantial paper or final project.

**Prerequisites:** Approval of the departmental Honors Committee and ENGL 15; or ENGL 30; or (ENGL 137, and ENGL 138)

Bachelor of Arts: Humanities

Honors

Writing Across the Curriculum

**ENGL 407: History of the English Language**

3 Credits

This course provides an accessible overview of the English language from its earliest beginnings as an insular language to its current place as a global language. One central issue will be the ways in which the external history (culture, political power, geography) of the language has impacted its internal history (spelling, pronunciation, dialect) over time. In the process, we will examine several representative English texts which illustrate significant moments in this long process of language change. Other topics will include the traces of early English vocabulary and structures in modern English, sound changes and pronunciation, English’s heavy lexical borrowing from other languages, the politics of language and language use, longstanding debates over what constitutes standard English, the impact of prescriptive language guides, varieties of spoken and written English, the English language and colonialism, English as a global language, and the influence of technologies.

**Prerequisite:** ENGL 100; ENGL 202A, ENGL 202B, ENGL 202C, or ENGL 202D

Bachelor of Arts: Humanities

International Cultures (IL)

**ENGL 408M:** Honors Seminar in English: General Topic in Post-1800 Literature

3-12 Credits/Maximum of 12

This advanced Honors Seminar in literature and literary and cultural history allows students to explore and research a topic related to post-18th century literary culture. Topics will vary depending on the course instructor but may include the study 19th- or 20th-century novels, poetry, drama, theory, film, nonfiction, or rhetoric. Recent topics
have included critical medical humanities, historical novels, Victorian underground literature, spiritual biography, and the 1890s.

**Prerequisites:** Approval of the departmental Honors Committee and ENGL 15, or ENGL 30, or (ENGL 137, and ENGL 138)

Bachelor of Arts: Humanities
Honors
Writing Across the Curriculum

ENGL 409: Composition Theory and Practice for Teachers
3 Credits

An overview of the theory and practice of writing for teachers, with emphasis on the writing process. ENGL 409 Composition Theory and Practice for Teachers (3)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 409 is intended to help teachers improve their writing instruction by immersing them in composition theory and providing them with the opportunity to learn the writing process through personal experience. On completion of the course, participants will be able to: Articulate and test composition theory in written works Work through each phase of the writing process in assigned essays Develop strategies for writing effectively in various genres and styles, including journal writing Implement recommendations for effective revisions Provide responsive feedback to peers’ written work Develop a précis for a model lesson

Evaluation: Students will be evaluated on their knowledge and understanding of instructional objectives, demonstrated in written assignments, class discussions and other projects.

**Prerequisite:** permission of the program; Concurrent: EDUC 452

Bachelor of Arts: Humanities

ENGL 411M: Honors Seminar in English: Creative Writing
3-12 Credits/Maximum of 12

Advanced Seminars in Creative Writing focus on a particular genre and/or topic. Genres include poetry, fiction, graphic novel, memoir, creative non-fiction, essay, or drama. Topics vary. Students work as apprentice writers, reading the work of published and expert authors, experimenting within the genre, engaging in structured peer review and group workshops, and preparing texts for publication and contest submission. Students discuss a number of issues relevant to the practice of creative writing and the production of literature, such as innovation and circulation, and numerous techniques, including the establishment of voice, creation of character plot development, pacing, and principles of prosody. Students may also consider the responsibilities of literary citizenship and the ethics of artistic representation. The courses offer an intense investigation of creative writing craft. Students develop skills in close, critical reading through the examination of exemplary works of contemporary literature and craft analysis, often reading an entire book per week. They also learn to read analytically and practically in workshop critiques of peer writing. In workshop discussion, students engage in a range of critical and editing tasks from close reading to broad conceptualization; they develop the ability to communicate ideas clearly and extemporaneously, and to negotiate meaning with others. Students experiment with and hone various writing techniques by executing focused exercises and drafting and developing pieces for final submission. They apply critical and analytical reading skills to revise and strengthen their own writing. The final project may include drafts and polished versions of two to three stories or essays, and up to a dozen poems.

**Prerequisite:** (ENGL 15 or ENGL 30) or (ENGL 137 or ENGL 138)

Bachelor of Arts: Humanities Honors
Writing Across the Curriculum

ENGL 412: Advanced Fiction Writing
3 Credits/Maximum of 12

Advanced study of the techniques of fiction writing; regular practice in writing the short story; group discussion of student work.

**Prerequisite:** ENGL 212

Bachelor of Arts: Humanities

ENGL 413: Advanced Poetry Writing
3 Credits/Maximum of 12

Advanced study of the techniques of poetic composition; regular practice in writing poetry; group discussion of student work. ENGL 413 Advanced Poetry Writing (3 per semester/maximum of 6)(BA) This course meets the Bachelor of Arts degree requirements. Students enrolled in the Advanced Poetry Workshop will have successfully completed ENGL 213, Introduction to Poetry Writing. In the advanced course, they continue their study of prosody through the close reading of published poems, including entire volumes of poetry by a single author. Students will also study articles and books that discuss various elements of craft. They can expect to prepare written reading responses and formal classroom presentations on the assigned readings. They will also draft approximately one new poem or revision each week, in addition to completing various writing exercises in or outside of class. All students will prepare for and engage in the workshop critiques; participation in these conversations is essential and subject to assessment. The writing, revision, and workshop process prepare the student to compile a portfolio of 8-10 poems, which they will submit as a final project for the course.

**Prerequisite:** ENGL 213

Bachelor of Arts: Humanities

ENGL 414: Biographical Writing
3 Credits

Writing of biography and autobiography, character sketches, "profiles," and literary portraits; analysis and interpretations of source materials.

**Prerequisite:** ENGL 200 , ENGL 202B , ENGL 210 , ENGL 212 , or ENGL 215

Bachelor of Arts: Humanities

ENGL 415: Advanced Nonfiction Writing
3 Credits/Maximum of 12

Advanced study of the principles of nonfiction; substantial practice in writing and submitting magazine articles for publication.

**Prerequisite:** ENGL 212 or ENGL 215

Bachelor of Arts: Humanities

ENGL 416: Science Writing
3 Credits/Maximum of 6

Prepares scientists and writers to gather, interpret, and present scientific information to the layman with clarity and accuracy.
**Prerequisite:** COMM 260W, ENGL 202C, ENGL 210, ENGL 215, or ENGL 421
Bachelor of Arts: Humanities

**ENGL 417: The Editorial Process**

3 Credits

The process of editing from typescript through final proof.

**Prerequisite:** ENGL 202A, ENGL 202B, ENGL 202C, ENGL 202D, ENGL 210, ENGL 215
Bachelor of Arts: Humanities

**ENGL 418: Advanced Technical Writing and Editing**

3 Credits/Maximum of 6

Preparing and editing professional papers for subject specialists and for others interested in careers as writers or editors.

**Prerequisite:** ENGL 202A, ENGL 202B, ENGL 202C, ENGL 202D, or ENGL 215
Bachelor of Arts: Humanities

**ENGL 419: Advanced Business Writing**

3 Credits

Preparing and editing reports and presentations common to business, industry, and government.

**Prerequisite:** ENGL 202A, ENGL 202B, ENGL 202C, or ENGL 202D
Bachelor of Arts: Humanities

**ENGL 420: Writing for the Web**

3 Credits

Analysis and composition of informative, persuasive, and "creative" Web texts, based on rhetorical principles; no prior Web writing experience required. ENGL 420 Writing for the Web (3)(BA) This course meets the Bachelor of Arts degree requirements. This course, designed for writers and potential writers, will explore the unique opportunities and constraints of writing for the Web. As a writing course, it should appeal to students in the Humanities; however, because of the growing importance of Web texts in fields such as business and the social sciences and given the opportunity to compose/construct a variety of fictional and non-fictional &quot;creative&quot; and informative/persuasive Web texts, this course should be of value to students across the college. In this course, students will survey a wide variety of Web texts--webs, electronic journals and books, learning to analyze these as to their efficacy in light of each text's rhetorical situation. As students learn to compose and construct such texts themselves, rhetorically based principles of audience awareness and persuasive appeal will be emphasized. Rather than focusing on writing HTML codes and Java scripts, this course will build on the rhetorical principles taught in first-year writing courses, teaching students how to apply those principles to more sophisticated, multi-sensory, multi-media hyper textual writing. The course will be taught primarily in a hands-on workshop environment in a PC computer lab or laptop-equipped classroom. Although no prior Web writing experience is required, some experience with Web navigation and computer word processing will be helpful. Students will be evaluated on the basis of their participation/attendance in the course's workshop environment, written web analyses, and constructed web texts.

**Prerequisite:** ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

**ENGL 421: Advanced Expository Writing**

3 Credits

Develops skill in writing expository essays, with particular attention to style. Intended for liberal arts majors.

**Prerequisite:** ENGL 202A, ENGL 202B, ENGL 202C, or ENGL 202D
Bachelor of Arts: Humanities

**ENGL 422: Fiction Workshop**

3 Credits/Maximum of 6

Practice and criticism in the composition of the short story and the novel.

**Prerequisite:** ENGL 412
Bachelor of Arts: Humanities

**ENGL 423: Poetry Writing Workshop**

3 Credits/Maximum of 6

Extensive practice in writing poetry; consideration of contemporary poetic forms; selected readings.

**Prerequisite:** ENGL 413
Bachelor of Arts: Humanities

**ENGL 424: Creative Writing and the Natural World**

3 Credits

Creative writing workshop focused on the environment and related issues. ENGL (ENVST) 424 Creative Writing and the Natural World (3) American literature includes a long and rich tradition of writing that focuses on the natural world. From the oral stories of indigenous people to the journals of the first European settlers, many have looked for a way to understand their own place in the world based upon their relationship to the earth and its creatures. While Puritans often discerned the pleasure or wrath of God in the environmental changes they experienced, Transcendentalists like Henry David Thoreau and Ralph Waldo Emerson sought out moments of spiritual enlightenment by immersing themselves in the natural order. More recently, such poets as Galway Kinnell, James Wright, and Robert Bly have attempted to connect with the depths of collective unconsciousness by exploring the natural world, while others, like Mary Oliver, Dan Gerber, Jim Harrison, Gary Snyder and Wendell Berry, have used transcendental thought and melded it with Christian and Buddhist insights. Still others, like Gary Paul Nabhan, Rachel Carson, and Alison Hawthorne Deming have brought science to bear upon the riches that nature, art, and scientific exploration may offer when joined in the pursuit of a deeper understanding of, and relationship with, the natural world. This course will acquaint students with the tradition of American nature writing, as well as contemporary nature writing, in the genres of nonfiction, poetry and fiction. Students will be introduced to issues of style, philosophy, and content, as they produce their own essays, poems, and stories. The course culminates in the production of a portfolio of nature writing. Much of this work will begin in class with specific assignments, which will include field work, and feedback from other students in the class. As a workshop course in creative writing, the emphasis will be upon the production of literary texts that interact with the natural world and upon the revision of those texts.
An in-depth study of Chicana/Chicano literature, film, and music from the inception of the Chicano Movement (1965-1975) to the present. ENGL 426 Chicana and Chicano Cultural Production: Literature, Film, and Music (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 426 will constitute an in-depth study of Chicano/a literature, film, and music from the inception of the Chicano movement (1965-1975) to the present. In addition to primary aesthetic texts, students will read historical, political, and theoretical essays designed to situate the Chicano/a cultural texts in historical and political context. The aim of the course is to give students a better understanding of Chicano/a cultural production by situating these works of art against other U.S. artistic traditions and within wider historical and political movements. Authors and artists under consideration in this class will vary, but will likely include Luis Valdez, Tomas Rivera, Estella Portillo Trambley, Oscar Zeta Acosta, Corky Gonzales, Gloria Anzaldua, Norma Alarcon, Cherrie Moraga, Richard Rodriguez, Dagoberto Gilb, Rolando Hinojosa, Alfredo Vea, Charlie Trujillo, Diego Vasquez Jr., Joe Rodriguez, Tomas Almaguer, Jose Esteban Munoz, Manuel Ramos, Lucha Corpi, Rudolfo Anaya, Michael Nave. This class will prepare students for advanced courses in Latin/a literatures as well as other academic courses that engage in the verbal and written analysis of complex texts. Students will be evaluated by means of essays written in and out of class, essay exams, group projects, term-long journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as ENGL major elective credit or as credit towards the ENGL minor and will be offered once a year with 40 seats per offering.

**Prerequisite:** 3 credits in English

Cross-listed with: LTNST 426

Bachelor of Arts: Humanities

United States Cultures (US)

ENGL 427: Topics in Jewish American Literature

3 Credits/Maximum of 9

An in-depth examination of important themes, writers, and/or historical developments in Jewish Literature of the United States. ENGL (J ST) 427 Topics in Jewish American Literature (3) This course will provide sustained examination of major themes, texts, and figures in the Jewish American literary tradition. The course will focus on depth rather than breadth in its analysis of the defining aspects of the literature and on what the literature reveals about Jewish American culture and identity. The United States has absorbed large numbers of Jewish immigrants from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions, and moreover Jews have settled and made homes in a wide variety of American communities. Close analysis of literature will therefore provide an opportunity to consider the constitution, origin, and development of Jewish America’s wider cultural, political, and social contexts. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film, and the methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies, English, and Comparative Literature. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English and Comparative Literature a valuable, sustained introduction to an important U.S. and world sub-culture and literature.

**Prerequisite:** ENGL 015 or ENGL 030

Cross-listed with: JST 427

ENGL 428: Asian American Literatures

3 Credits/Maximum of 6

A seminar on the literatures and cultures of Asian America, with attention to forms of geographic, historical, and ethnic diversity.

Cross-listed with: AAS 428

Bachelor of Arts: Humanities

United States Cultures (US)

ENGL 429: New Media and Literature

3 Credits

New media literary genres; critical discussion of creative works in digital media.

Cross-listed with: CMLIT 429

Bachelor of Arts: Humanities

ENGL 430: The American Renaissance

3 Credits

Studies in the works and the interrelationships of writers such as Emerson, Hawthorne, Poe, Thoreau, Whitman, Melville, and Dickinson. The course will cover Transcendentalism and the authors who contributed to this movement, many of whom lived in Concord, MA. Though the class will feature the works of Emerson, Hawthorne, and Thoreau, it can also branch out to address other authors such as Margaret Fuller, Jones Very, and Elizabeth Peabody. Departing from Concord, the course will explore Walt Whitman and Emily Dickinson, both of whom read and were inspired by Emerson. Finally, the course will include works by Herman Melville, who formed a friendship with Hawthorne prior to writing Moby-Dick. Though literature constitutes the center piece of this course, iterations of the course may bring in other parts of the cultural, social, and political landscape: slavery, abolitionism, Jacksonian Democracy, western settlement, art, science, and technology.

**Prerequisite:** ENGL 015 or ENGL 030

Cross-listed with: AMST 470

Bachelor of Arts: Humanities
ENGL 431: Black American Writers
3 Credits/Maximum of 6

A particular genre or historical period in the development of Black American literature. ENGL 431 / AMST 475 Black American Writers (3) (US) A study of a particular genre or historical period in the development of Black American literature. This course will allow faculty and students to focus a semester's study on a particular genre, theme, or problem in African-American literature. The flexibility of the course will allow faculty a forum in which to share current scholarship or to relate issues in African-American literature to larger school-wide themes in a classroom environment. Because of the potential variety of topics and faculty members, specific evaluation methods will be determined by the instructor and specified in the syllabus. The course will be offered once every two years with an expected enrollment of 25 students. The course satisfies the "area" requirement in culture for American Studies majors.

Prerequisite: ENGL 015 or ENGL 030
Cross-listed with: AMST 475
Bachelor of Arts: Humanities

ENGL 432: The American Novel to 1900
3 Credits

Such writers as Hawthorne, Melville, Stowe, Mark Twain, James, Crane, Chopin, and others.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 433: The American Novel: 1900-1945
3 Credits

Such writers as Wharton, Dreiser, Cather, Fitzgerald, Faulkner, Hemingway, Hurston, Wright, and others.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 434: Topics in American Literature
3 Credits/Maximum of 99

Focused study of a particular genre, theme, or problem in American literature. (May be repeated for credit.) ENGL 434 / AMST 472 Topics in American Literature (3) This course will allow faculty and students to focus a semester's study on a particular genre, theme, or problem in American literature. The flexibility of a topics course will allow faculty a forum in which to share current scholarship or to relate issues in American literature to larger school-wide themes in a classroom environment. Because of the potential variety of topics and faculty members, specific evaluation methods will be determined by the instructor and specified in the syllabus. The course will be offered once every two years with an expected enrollment of 25 students. The course satisfies the "area" requirement in culture for American Studies majors.

Prerequisite: 6 credits of ENGL, ENLSH, or LIT
Bachelor of Arts: Humanities

ENGL 435: The American Short Story
3 Credits

Development of the short story as a recognized art form, with emphasis on major writers.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 436: American Fiction Since 1945
3 Credits

Representative fiction by such writers as Barth, Bellow, Ellison, Heller, Mailer, Morrison, Nabokov, Oates, O'Connor, Pynchon, Updike, Walker.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 437: The Poet in America
3 Credits

American poets such as Bradstreet, Taylor, Poe, Emerson, Whitman, Dickinson, Frost, Eliot, Stevens, Hughes, Brooks, Moore, Williams, Plath, Rich, Lowell.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 438: American Drama
3 Credits

Development from the colonial period to playwrights such as O'Neill, Wilder, Hellman, Miller, Williams, Albee, Shepard, Norman, Wilson, and others.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 439: American Nonfiction Prose
3 Credits

Major prose writers such as Franklin, Emerson, Thoreau, Fuller, Henry Adams, Mailer, Baldwin, McCarthy, Dillard, Didion, Angelou, and others.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 440: Studies in Shakespeare
3 Credits

Intensive study of a single genre, topic, or critical approach to selected plays.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 441: Chaucer
3 Credits

This course surveys the literary career of Geoffrey Chaucer, perhaps the most celebrated English-language poet of the medieval era. The course primarily examines Chaucer's own writings, with consideration
of the several international authors and traditions that informed his own literary productions. Selections may vary, but students will read texts from across Chaucer's career, including from major works like Troilus and Criseyde and The Canterbury Tales. Readings from Chaucer's sources and models may include translated selections from Boethius's Consolation of Philosophy or from Guillaume de Lorris and Jean de Meun's Romance of the Rose, and/or examples from relevant literary genres such as romance, fabliaux, beast fable, sermon, tragedy, and exemplum. Accordingly, students will develop a knowledge and appreciation of how Chaucer shaped (and was shaped by) his continental influences and the ways in which he developed a poetic tradition in English that proved deeply influential for many centuries.

**Prerequisite:** (ENGL 15 or ENGL 30) or (ENGL 137, ENGL 138)

ENGL 442: Medieval English Literature

3 Credits

Study of major works and genres of medieval English literature, exclusive of Chaucer.

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

ENGL 443: The English Renaissance

3 Credits

Such writers as More, Sidney, Spenser, Shakespeare, Donne, Jonson, Bacon, and Marvell.

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

ENGL 444: Shakespeare

3 Credits

Selected tragedies, comedies, and histories.

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

ENGL 445: Shakespeare's Contemporaries

3 Credits

Selected plays by Shakespeare's major predecessors and contemporaries: Kyd, Marlowe, Jonson, Webster, Marston, Middleton, and others.

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

ENGL 446: Milton

3 Credits

Analysis of principal poems and their background.

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

ENGL 447: The Restoration and the Eighteenth Century

3 Credits

The neoclassical age (1660-1776). Such writers as Dryden, Congreve, Swift, Pope, Fielding, Goldsmith, Sheridan, Boswell, Johnson.

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

ENGL 448: The English Novel to Jane Austen

3 Credits

Novelists such as Defoe, Richardson, Fielding, Smollett, Sterne, and Austen.

**Prerequisite:** ENGL 015 or ENGL 030

Bachelor of Arts: Humanities

ENGL 449M: Honors Seminar in English: Pre-1800s literature

3-12 Credits/Maximum of 12

This course offers honors students the opportunity to explore in depth a period of early English literature before 1800. Topics will vary from year to year, but may include Beowulf and Anglo-Saxon literature and culture, late medieval authors such as Chaucer, Gower, and Langland, sixteenth-century lyric poets, Shakespeare, Shakespeare and film, Elizabethan dramatists, authorship and book history, early women authors, seventeenth-century writers such as Donne, Herrick, Wroth, and Bacon, writers of the English Revolution, Milton, and eighteenth-century writers such as Pope, Dryden, and Swift. Assignments will include extensive primary and secondary reading, participation in class discussion, and a substantial paper or final project.

**Prerequisite:** (ENGL 15 or ENGL 30) or (ENGL 137, ENGL 138)

Bachelor of Arts: Humanities

ENGL 450: The Romantics

3 Credits

Writers of the British Romantic period (roughly 1790 to 1832) often made sweeping claims for the power of poetry and imagination. Percy Bysshe Shelley contended that poets are the unacknowledged legislators of the world, while John Keats declared that beauty is truth, truth beauty. Against the background of political revolution in France, the rise of industrialization and empire, and increasing social instability, Romantic writers turned to nature as a source of the self and looked back to childhood as a site of both innocence and ambivalence. Others turned their efforts to the supernatural and the gothic, hoping to inspire what Samuel Taylor Coleridge called that willing suspension of disbelief for the moment which constitutes poetic faith. This course is designed to provide an introduction to the richness and diversity of Romantic-era literature. It is not intended to be an exhaustive overview of the entire period, but rather an introduction to the best known Romantic ideas of which many of which still influence the way we think about art and literature in the present day, as well as an invitation to further study and engagement. In that spirit, we will not work from a predetermined definition of romanticism, but instead will build a collective, working understanding of the concept.

**Prerequisite:** ENGL 137, ENGL 138
Bachelor of Arts: Humanities
International Cultures (IL)

ENGL 451: Literary Modernism in English
3 Credits
Survey of literary modernism in English and English translation in a variety of genres, including poetry, fiction, and drama.

Prerequisite: ENGL 015 or ENGL 030 or ENGL 137 or CAS 137 and ENGL 138T or CAS 138T
Bachelor of Arts: Humanities

ENGL 452: The Victorians
3 Credits
Poets such as Tennyson, Browning, Arnold, and Hopkins; also prose by writers such as Carlyle, Mill, Ruskin, and Arnold.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 453: Victorian Novel
3 Credits
Novelists such as the Brontes, Thackeray, Dickens, George Eliot, Meredith, and Hardy.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 454: Modern British and Irish Drama
3 Credits
From Wilde and Shaw to the present season. ENGL 454 Modern British and Irish Drama (3)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 454 will introduce students to some of the most exciting playwrights and important trends in modern British and Irish drama from the late nineteenth century to the present. The course will examine a number of plays, exploring not only how they work formally, but also how changing cultural and historical contexts helped to shape the plays and British and Irish drama more generally. Authors under consideration will vary from class to class, but may include writers such as Oscar Wilde, George Bernard Shaw, John Synge, Lady Gregory, William Butler Yeats, Sean O'Casey, Samuel Becket, Denis Johnston, Brendan Behan, Brian Friel, Tom Murphy, Martin McDonagh, Noel Coward, John Osborne, T. S. Eliot, Robert Bolt, Harold Pinter, Caryl Churchill, and Tom Stoppard. The course will explore such topics as the role of drama in the Irish Revival, nationalism, and the revolution, the use of myth and folklore in drama, the emergence of realism, the function of Wilde and Shaw's humor in their plays, drama's response to the decline of the British empire, the modernist verse drama, post-modernism in drama, issues of stagecraft and performance, and the political function of such theaters as the Abbey Theatre or the Field Day Company. Students will write at least two papers on particular plays, and can expect to take a mid-term exam and a final exam. The course may be used as English Major elective credit or as credit towards the English minor, and will be offered once a year with 40 seats per offering.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 454: Modern British and Irish Drama (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will allow faculty and students to focus a semester's study on a particular genre, theme, or problem in British literature. The flexibility of a topics course will allow faculty a forum in which to share current scholarship or to relate issues in British literature to larger School-wide themes in a classroom environment. Offering such focused studies under a British literature umbrella will allow majors to apply these offerings to their upper-level British literature requirement. Because of the potential variety of topics and faculty members, specific evaluation methods will be determined by the instructor and specified in the syllabus. This course will be offered once every two years, with an expected enrollment of 20-25 students.

Prerequisite: 6 credits of ENGL, ENLSH, or LIT
Bachelor of Arts: Humanities

ENGL 455: Topics in British Literature
3 Credits/Maximum of 99
Focused study of a particular genre, theme, or problem in British literature. (May be repeated for credit.) ENGL 455 Topics in British Literature (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will allow faculty and students to focus a semester's study on a particular genre, theme, or problem in British literature. The flexibility of a topics course will allow faculty a forum in which to share current scholarship or to relate issues in British literature to larger School-wide themes in a classroom environment. Offering such focused studies under a British literature umbrella will allow majors to apply these offerings to their upper-level British literature requirement. Because of the potential variety of topics and faculty members, specific evaluation methods will be determined by the instructor and specified in the syllabus. This course will be offered once every two years, with an expected enrollment of 20-25 students.

Prerequisite: 6 credits of ENGL, ENLSH, or LIT
Bachelor of Arts: Humanities

ENGL 456: British Fiction, 1900-1945
3 Credits
Major writers such as Conrad, Lawrence, Mansfield, Forster, Joyce, Woolf, Waugh, Greene, Bowen, Beckett, and others.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 457: British Fiction Since 1945
3 Credits
Readings in British fiction since World War II.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 458: Twentieth-Century Poetry
3 Credits
Poets writing in English such as Yeats, Pound, Eliot, Frost, Auden, Stevens, Plath, Bishop, Brooks, H.D., and others.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 460: Business and Literature
3 Credits
An investigation into how writers and the cultures in which they write have represented business and those engaged in it. For many people, literature and business could not have less to do with each other. According to this view, literature escapes from reality to the imaginary, while nothing could be more focused on the real than business and its buying and selling of commodities and services. The problem is that no one told literary writers of this mutual incompatibility. For centuries, writers have peered into the world of business and brought back stories intended to document, inspire, and warn. True, writers have often, and sometimes unthinkingly, condemned business and those who follow it, but they have just as often had genuine insights into its workings. In this course, we will follow the relationship between literature and business
over the course of modern history. Although one version of the course would begin with literature that dates back to the invention of capitalism in (more or less) the sixteenth century, our course will begin at the turn of the nineteenth century with the Industrial Revolution in England and the United States and follow the literature of business up to the present. Our aim in reading is not just to understand how writers have represented business and those who pursue it, which, it has to be admitted, has often been with contempt. But, rather, in reading more sympathetic works, to understand the drama of business, why those who pursue it find it so invigorating. Money, of course, is one answer to that question, but it is neither the only nor the most important one. Texts may vary, but they are almost certain to include Charles Dickens's Dombey and Son (1847); Herman Melville's "Bartleby the Scrivener" (1853); the "Economy" chapter of Henry David Thoreau's Walden (1854); Anthony Trollope's The Way We Live Now (1875); Thorstein Veblen's Theory of the Leisure Class (1899); George Bernard Shaw's Major Barbara (1905); Theodore Dreiser's The Financier (1912); Sinclair Lewis's Babbitt (1922); Edwin Lefèvre's Reminiscences of a Stock Operator (1922); James M. Cain's hardboiled masterpiece Mildred Pierce (1941); F. Scott Fitzgerald's unfinished novel The Love of the Last Tycoon (1941); Arthur Miller's Death of a Salesman (1949); Sloan Wilson's The Man in the Gray Flannel Suit (1955); Ayn Rand's Atlas Shrugged (1957); Ken Kesey's Sometimes a Great Notion (1962); Joseph Heller's Something Happened (1974); William Gaddis's J R (1975); David Mamet's Glengarry Glen Ross (1984); Michael Lewis's Liars Poker (1987); and Richard Powers' Gain (1998).

Prerequisite: ENGL 015 or ENGL 030, or ENGL 462, or ENGL 463

ENGL 461: The Vernacular Roots of African American Literature
3 Credits

The relationship between oral tradition and literary texts and the double consciousness of African American voice in "print."

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities
United States Cultures (US)

ENGL 462: Reading Black, Reading Feminist
3 Credits

Female identity and its construction in textual representations of gender, class, color, and cultural difference in English-language literatures. ENGL (WMNST) 462 Reading Black, Reading Feminist (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ENGL/WMNST 462 provides two important learning opportunities for undergraduate students. The first is to examine the construction of female identity in the textual representations of gender, class, color, and cultural differences by black American women. The second is to identify, explore, and analyze the major issues concerning the discovery and development of a black feminist literary tradition. Authors under consideration will vary from class to class, but may include writers such as Frederick Douglass, Harriet Jacobs, Harriet Wilson, E. Genovese, Hazel Carby, Francis Harper, J. Faustet, Nella Larsen, Zora Neale Hurston, Gwendolyn Brooks, Margaret Walker, Nikki Giovanni, Sonia Sanchez, Maya Angelou, Lorraine Hansberry, Adrienne Kennedy, E. Brown-Guily, Toni Morrison, S. A. Williams, Alice Walker, Paula Marshall, and Octavia Butler. The course will focus on the complex relationships of slavery and post-slavery black experience to the literary imagination of African American women, and of issues of gender in black identity in America. Topics covered will vary, but will include issues of the legacy of slavery, the development of black feminist thought, nineteenth-century conceptions of black womanhood, women's roles in the Harlem Renaissance, representations of black womanhood by male writers, and self-representation by female writers, women &quot;Black Power&quot; poets, black female playwrights, neo-slave narratives, the aesthetics of contemporary black feminism, and postmodernism and the challenge to understandings of canonicity posed by black women's writing, and the like. This class will prepare students for advanced courses in African American and feminist literature, as well as other academic courses that engage in the verbal and written analysis of complex written forms. Students will be evaluated by class participation, a group oral presentation, small group problem solving exercises, three out-of-class essays (of 5-8 pages each), and an in-class final examination consisting of essays and short answers. In addition to satisfying requirements for students emphasizing in African American literature within the English major, this course will be important in the offerings of African/African American Studies, American Studies, Women's Studies, and History. The course may be used as English Major elective credit or as credit towards the English minor, and will be offered once every other year, with 40 seats per offering. The course can be used to complete the major and minor in Women's Studies Arts and Humanities area and it also satisfies the Women of Color (WOC) sub-requirement.

Prerequisite: ENGL 015 or ENGL 030
Cross-listed with: WMNST 462
Bachelor of Arts: Humanities
United States Cultures (US)

ENGL 463: African American Autobiography
3 Credits

The African American literary quest for identity and its adaptation to Euro-American culture and autobiographies. ENGL 463 African American Autobiography (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. Starting with the slave narratives which initiate the literary quest of African Americans for identity, this upper-division course will examine the trope of writing (the &quot;write&quot; of passage into the dominant Euro-American culture. The course will identify, describe, and analyze how the major elements of the &quot;quest&quot; found in the slave autobiographies have been adapted as textual strategies by many contemporary African American writers of autobiography, semi-autobiography, and fictional autobiography. Authors under consideration will vary from class to class, but may include writers such as Frederick Douglass, Harriet Jacobs, W. E. B. Du Bois, Ida B. Wells, Richard Wright, Zora Neale Hurston, Maya Angelou, Martin Luther King, Alex Haley, Harriet E. Wilson, James Weldon Johnson, and Ernest Gaines. Topics explored will vary from class to class, but will likely consider slave narratives, the role of autobiography in the fashioning of identity and self, gender issues, genre questions, and the historical development of the genre and its shifting preoccupation from slave times through the early twentieth-century, the pre-Civil Rights era, the Civil Rights Movement, the Black Power Movement, and the present. The course will prepare students for other courses that engage in the verbal and written analysis of complex written texts, and will also prepare students to consider the social and cultural issues involved in the role of race in American history. Students will be evaluated by means of essays written out of class, essay and short answer exams, a term-long reading journal reflecting upon issues of the student's own &quot;autobiography&quot; and oral presentation, and class participation. The course may be used as English Major elective credit or as credit towards the English Minor and will be offered once a year, with 40 seats per offering.
This advanced Honors Seminar in multicultural literature, rhetoric, and cultural studies allows students to explore and research a topic related to race, gender, ethnicity, sexuality, queer theory, post-colonialism, disability, minority literature, women's literature, world rhetorics, or other literatures reflecting the diversity of cultures and perspectives important to the English major. Topics will vary depending on the course instructor. Recent topics have included disability and literature, post-racial America, revolutionary writing, cognitive disability in literature, and early modern women authors.

**Prerequisites:** Approval of the departmental Honors Committee and ENGL 15; or ENGL 30; or (ENGL 137, and ENGL 138)
Bachelor of Arts: Humanities
Honors
Writing Across the Curriculum

**ENGL 466: African American Novel I**

3 Credits

This course examines the origins of the African American novel and follows the genre's evolution into the early twentieth century, outlining the relationships among the texts that form the body of African American narrative as well as the relationships of those texts to the constantly shifting cultural and political realities surrounding their writing. From the earliest novels, written during the period of slavery, through the Reconstruction era, the nadir of Black Codes and Jim Crow Supreme Court decisions, and into the Renaissance heralded by Alain Locke and others, course readings encompass a broad range of styles and genres, from early proto-documentary modes, through the realism and naturalism of a later time. The course takes up Robert S. Levine's claim that "the history of the early African American novel is not fixed or stable" by mapping the genre's early history and by developing an understanding of the novel as genre according to both early African American authors and later scholars. It addresses the fact that this history continues to be updated and that some texts whether in part or in whole remain lost. Authors covered in the course might include William Wells Brown, Frederick Douglass, Frank J. Webb, Julia C. Collins, Hannah Crafts, Martin Delany, Frances Ellen Watkins Harper, Charles Chesnutt, Pauline Hopkins, Paul Laurence Dunbar, Sutton Griggs, James Weldon Johnson, Oscar Micheaux, Nella Larsen, Jessie Fauset, and others. Scholarly readings accompany primary texts in order to give students a sense of the critical work that has gone into and continues to go on in the study of African American literature. Course topics may include the issue of firsts; the challenges of publication and the attendant realities of early African American print cultures; questions of tradition and influence; and the political, social, religious, and philosophical aims of early African American novels. Readings and discussions also attend to questions of form, specifically regarding intertextuality and generic blurring and hybridity. The study of early African American novels necessarily includes attention to issues of race, identity, nation, diaspora, and the question of authenticity, and each is taken up in turn. Course assignments and discussions engage students in critical work that demands careful attention to both content and context in order that all students might strengthen their close reading capabilities and engage with course figures and materials within their historical milieus.

**Prerequisite:** ENGL 015 or ENGL 030
Cross-listed with: AFAM 466
Bachelor of Arts: Humanities
United States Cultures (US)

**ENGL 467: African American Novel II**

3 Credits

This course examines the African American novel, its forms, and its traditions starting during the Harlem Renaissance. It follows the genre's evolution into the twenty-first century, outlining the relationships among the texts that form the body of African American narrative as well as the relationships of those texts to the constantly shifting cultural and political realities surrounding their writing. From the Renaissance heralded by Alain Locke, through the Civil Rights and Black Power Movements-and their attendant Black Arts Movement-and into the era of the Movement for Black Lives, course readings encompass a broad range of styles and genres, from realism, naturalism, and naturalist primitivism, through the experimental forms, magical realism, and "posttrace aesthetics" of later times. The course invites students to think critically about the African American novel as a socially and politically engaged form, and to identify and analyze the long tradition of resistance that variously informs its development. Authors covered in the course might include major figures such as Claude McKay, Zora Neale Hurston, Nella Larsen, Wallace Thurman, Richard Wright, Ralph Ellison, Ann Petry, James Baldwin, Ishmael Reed, Earnest Gaines, Alice Walker, Toni Morrison, Toni Cade Bambara, Octavia Butler, Gayle Jones, Samuel Delany, Charles Johnson, John Edgar Wideman, Colson Whitehead, and others. Still, the course gives due attention to lesser known/studied materials from the period, including graphic novels, satire, speculative fiction, performance novels, and various other experimental forms. Course readings and instruction give particular attention to how African American novels of the twentieth and twenty-first centuries variously engage social identity categories, like race, gender, class, and sexuality, and how they engage and resist various literary conventions associated with naturalism, modernism, and postmodernism. The course also traces the development of new thematic and aesthetic interests in a generation of writers whose fiction has been influenced by the explosion of interest in the graphic novel, the popularity of cultural forms such as hip hop, and the ascendancy of the digital age. Scholarly readings accompany primary texts to give students a sense of the critical work that has gone into and continues to go on in the study of African American literature. In this course, students learn how to analyze literature, do close and careful readings of texts, conduct related research, and write persuasively about literary works. Assignments and discussions are designed such that students may engage with course figures and materials within their historical milieus.

**Prerequisite:** ENGL 015 or ENGL 030
Cross-listed with: AFAM 467
Bachelor of Arts: Humanities
United States Cultures (US)

**ENGL 468: African American Poetry**

3 Credits

Meta duEwa Jones argues, "We cannot afford to continue to treat black poetry and poetics as loose change among the more highly valued paper currency of fiction and nonfiction prose. . . . The myriad aesthetic forms
and concomitant political functions of black poetry and poetics should be seriously considered as grounds for broader and more nuanced theoretical and sociocultural claims." This course takes as its subject matter these aesthetic forms and political functions of the poetry of black America. It surveys the broad history of African American poetry and poetics, tracing the evolution of formal structures and aesthetics, but also taking a critical view of the reception of African American verse. Whether reading Phillis Wheatley or the contemporary poet Ed Roberson, all the poets included in this course have contended within the writing itself with the racially stratified nature of the literary spaces they occupy. Course readings may come from poets including Wheatley, Frances Ellen Watkins Harper, Paul Laurence Dunbar, Alice Dunbar Nelson, Claude McKay, Langston Hughes, Robert Hayden, Melvin Tolson, Gwendolyn Brooks, Amiri Baraka, John Coltrane, Ishmael Reed, Nathaniel Mackey, Rita Dove, Maya Angelou, Audre Lorde, Natasha Tretheway, Sonia Sanchez, Nikki Giovanni, Nikky Finney, Roberson, Claudia Rankine, and others. The course addresses works by many of the key figures of this American literary tradition so that students may develop an understanding of the various contributions and legacies of formal, musical, cultural, critical, political of African American poetry from the eighteenth century to today. Scholarly readings accompany primary texts to give students a sense of the critical work that has gone into and continues to go on in the study of African American poetry and poetics. The course surveys early African American poetry through works from the Harlem Renaissance and the Black Arts Movement, and through contemporary movements and formations. Topics will cover a range of thematic and formal issues relevant to individual poets, to major movements and periods, to regions, and to various smaller organizations and collectives. Course assignments, lectures, and discussions engage students in critical work that requires careful attention to form, content, and context such that all students might strengthen their explication skills and approach course figures and texts from an informed, analytical perspective.

**Prerequisites:** ENGL 15 or ENGL 30 or ( ENGL 137 and ENGL 138 )
Cross-listed with: AFAM 468
Bachelor of Arts: Humanities
United States Cultures (US)

ENGL 469: Slavery and the Literary Imagination

3 Credits

The impact of slavery on the petitions, poetry, slave narratives, autobiographies, and novels of African Americans. ENGL 469 / AFAM 469 Slavery and the Literary Imagination (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 469 / AFAM 469 provides an opportunity for undergraduate students to examine African American petitions, poetry, slave narratives, autobiographies, and novels as literary reconstructions of the economics, politics, ethics, and poetics of slavery. Authors under consideration will vary from class to class, but may include writers such as Paul Laurence Dunbar, Phillis Wheatley, F. Harper, James Weldon Johnson, Langston Hughes, Claude McKay, Sterling Brown, Booker T. Washington, Harriet Jacobs, W. W. Brown, Harriet Wilson, Margaret Walker, Arna Bontemps, D. Bradley, S. A. Williams, Toni Morrison, Ishmael Reed, and Charles Johnson. The course will focus on the complex relationship of slavery to the literary imagination of Americans of African descent as they increasingly discovered the limitations and possibilities of reading and writing themselves into freedom, literacy, and wholeness as human beings and American citizens. Topics covered will vary, but will include issues of the legacy of slavery in the west; the political aims and rhetorical conventions of African-American autobiography; the myths and realities of slavery; economic, political, ethical, and aesthetic issues of the representation of slavery; understandings of black consciousness and black culture on the road from slavery to freedom; the rise of African American realism as a response to the legacy of slavery; Black Feminism and issues of slavery; the role of history and memory in the construction of slavery; post-modern configurations of slavery; and the like. This class will prepare students for advanced courses in African American literature, as well as other academic courses that engage in the verbal and written analysis of complex written forms.

**Prerequisite:** ENGL 015 or ENGL 030
Cross-listed with: AFAM 469
Bachelor of Arts: Humanities
United States Cultures (US)

ENGL 470: Rhetorical Theory and Practice

3 Credits

Application of certain rhetorical principles to problems in composition. Writing exercise. Designed as preparation for the teaching of composition.

**Prerequisite:** ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 471: Rhetorical Traditions

3 Credits/Maximum of 6

(Course content may vary by instructor). This class will introduce you to communication theories developed in classical Greece and China. Economic globalization and the increased world travel have brought Americans into direct contact with East Asian peoples and their cultures. At the same time, individuals with an East Asian linguistic and cultural background are making a strong presence in the United States. The urgency to understand East Asian peoples-their cultures, their languages, and their ways of reasoning-is being felt by a majority of Americans. This class will focus on the rhetorical traditions that have grown out of classical Greece and China. We will not only read ancient and modern texts but also watch movies produced in China and the United States to understand their philosophies, literatures, and communication arts. All readings are in English.

**Prerequisite:** ENGL 137 and ENGL 138
Bachelor of Arts: Humanities
International Cultures (IL)

ENGL 472: Current Theories of Writing and Reading

3 Credits/Maximum of 6

Investigates models of textual production and reception current within English studies. (Section subtitles may appear in the Schedule of Courses.)

**Prerequisite:** ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 473: Rhetorical Approaches to Discourse

3 Credits/Maximum of 6

Practices the criticism of written texts from selected rhetorical perspectives. (Section subtitles may appear in the Schedule of Courses.)
Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 474: Issues in Rhetoric and Composition

3 Credits/Maximum of 6

Examines selected topics in the field of rhetoric and composition. (Section subtitles may appear in the Schedule of Courses.)

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 475: Comics Studies

3 Credits

This course introduces students to the academic field of Comics Studies, that is, the scholarship of comics and graphic novels. The course surveys different methodologies and focuses of comics scholarship, with historical representation of different theorists and critics. In addition to reading widely in comics scholarship, students will also read several comics and graphic novels, for which they will produce their own analyses and criticism. Overall, the course provides a foundation in Comic Studies, with broad reading across primary and secondary texts.

Prerequisites: ENGL 15; ENGL 30 or (ENGL 137H, ENGL 138T)
Bachelor of Arts: Humanities

ENGL 477: Teaching Children's Literature

3 Credits

Teaching Children's Literature in light of recent literary pedagogy, the history of childhood, and critical approaches to Children's Literature. ENGL 477 Teaching Children's Literature (3) This course explores the teaching of Children's Literature. Beginning with students' own interpretations of the children's books we read, we develop critical concepts through which to understand and teach children's literature. The course presumes that books written for children have an intrinsic importance as literary and cultural artifacts and so demand serious consideration. Because this course is offered as an English course, we will concentrate on such things as the formal characteristics of the works we study, the kinds of audiences they seem to solicit, their implied authors, their ideologies, and so forth. The emphasis of the course is on teaching Children's Literature as literature; the course assumes that teaching literature is teaching reading and writing. Students are evaluated according to their participation in class discussion and three required papers—one on the teaching of a particular work of Children's Literature, one on some aspect of the history of childhood, and one that analyzes a children's book.

Prerequisite: ENGL 202
Bachelor of Arts: Humanities

ENGL 478: Grant Writing

3 Credits

Grants can do many things. Let's say you are a student who has always dreamed of combining help for food-insecure people with support for the mentally ill homeless. You've written papers about it for classes; you've read lots of research that points to past pitfalls and future innovative possibilities—but now you want to make it real by finding funding for the program you've envisioned. Or maybe you have your sights set on finding an existing non-profit foundation that might serve as a fiscal conduit for grants that will feed the cause you feel passionately about. These scenarios and many others call for finding and winning a grant. Here's what grants can't do: Write themselves. Given that writers of grants do not have one how-to professional manual to rely on, professional grant-seekers must learn to have flexible responses to a variety of writing situations. Every grant proposal is different, as is every population with a problem to solve, and every organization hoping to help with the solution. A successful grant-writer achieves confidence with hands-on practice-confidence earned from mastering the underlying principles of effective research and outreach; feasible and complete content-generation; and the writing of precise, clear, audience-centered prose. ENGL 478 will provide you with the basic knowledge and practice needed to get you on your way to professional confidence. Six Main Learning Goals: * Comprehensive understanding of the grant-writing field * Strategic use of research skills to match program to foundation, need to grant-maker * Beginning mastery of all elements of the basic proposal, including: mission match, objectives that fill a proven need, evaluation strategies that reliably measure outcome, a feasible budget, and proof of capacity and sustainability * Practice of skills most needed in the current economic and political climate, including collaboration, diversified funding, and innovation within an established organization * Practical use of social media and cultivation skills for sustainability of project * Mastery of applied rhetorical style emphasizing clarity and precision

Prerequisite: ENGL 15; or ENGL 30; or (ENGL 137, ENGL 138) and (ENGL 202A; or ENGL 202B; or ENGL 202C; or ENGL 202D)

ENGL 479: Business or Technical Writing Practicum

1-3 Credits

Practical experience applying business or technical writing principles, working with advanced business, science, or engineering students on classroom projects. ENGL 479 Business or Technical Writing Practicum (1-3) English 493 enables students to bring their skills as writers and their knowledge of the requirements and conventions of business or technical writing to bear on a team project assigned in an advanced business, technical, or science course. The course requires students to work with the other members of the team on all aspects of the project where they are expected to contribute their skills to writing the final report that will constitute the primary means of communicating the results of the project to an appropriate audience. The major objective of the course is to provide students with opportunities to apply the writing skills they have mastered in previous or concurrent courses to projects of the kind that they would encounter in a professional writing situation. Thus, they will learn to work effectively in a team, to contribute to the overall objectives of the project, to serve as writing &quot;consultants&quot; to the group, and to work with others in perfecting the final written product. Their skills in organizing, editing, assessing the audience's needs, and finding the most effective ways to meet these needs will be tested in &quot;real life&quot; situations. Evaluation of the student's contributions and effectiveness will be made by the instructor in charge of ELISH 493 and the cooperating instructor in the business, technical, or scientific course. Evaluation methods could include (but not be restricted to) a journal kept by the student during the course project, observations by one or both instructors of the team in operation, peer evaluations by other student members of the project, and evaluation of the final written product by one or both of the cooperating instructors.

Prerequisite: Prerequisite or concurrent: ENGL 418 or ENGL 419
Bachelor of Arts: Humanities
ENGL 480: Communication Design for Writers

3 Credits

This course explores visual design, non-verbal communication, and software packages used in professional settings to most effectively present written communications. ENGL 480 Communication Design for Writers (3) ENGL 480 is a course designed to familiarize students with an integrated theory of the roles that visual, verbal, and non-verbal communication play in the production of professional documents using the technologies and software applications most widely used in many organizational settings. To this end, the course will focus on employing non-verbal design elements (color, photographs, graphics, page layout, typography, paper) to develop effective communications tailored to a variety of media, audiences, and purposes using software packages such as Quark XPress, Photoshop, Illustrator, InDesign, Excel. Emphasis will be placed on producing clear, insightful, polished, professional documents, both individually and as part of a team. As part of the course, students can expect to:

1. Understand the theories, elements, and principles of visual and non-verbal communication.
2. Appreciate the roles of the audience, purpose, and context in planning and composing documents.
3. Value the role of ethos, pathos, and logos when planning and composing documents.
4. Learn basic skills in a variety of software packages most widely used in the professional world.
5. Design and compose a variety of documents for a variety of audiences that display their writing and design skills.
6. Demonstrate through their documents an understanding of the theories of visual, verbal, and non-verbal communication.
7. Assess their own strengths and weaknesses as writers and designers.
8. Demonstrate the ability to reflect critically on their own and others’ discourse practices.
9. Gain an understanding of the role and scope of other professionals and other disciplines in creating professional communications.

Prerequisite: ENGL 015 or ENGL 030 ; ENGL 200A , ENGL 200B , ENGL 202C or ENGL 202D ; 7th semester standing or higher Bachelor of Arts: Humanities

ENGL 481: Literary Theory: Historical Perspectives

3 Credits

Selected topics in the history of literary criticism and theory within the English-language tradition.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 482: Contemporary Literary Theory and Practice

3 Credits/Maximum of 6

Contemporary literary theories and their implication for critical practice as applied to British, American, and other English-language literary works.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 482W: Contemporary Literary and Cultural Theory

3 Credits

Contemporary literary and cultural theories and their implication for critical practice as applies to a variety of texts, e.g. literary, linguistic, visual, multimedia, and/or popular.

Prerequisite: ENGL 015 or ENGL 030H ; ENGL 200

Bachelor of Arts: Humanities

Writing Across the Curriculum

ENGL 483: Problems in Critical Theory and Practice

3 Credits

Intensive study of one or more recent theoretical approaches as applied to British, American, and other English-language literary works.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 484: James Joyce

3 Credits

Analysis of principal works and their background.

Prerequisite: ENGL 002 ; ENGL 015 or ENGL 030
ENGL 485: Australian and New Zealand Literature and Culture

3 Credits

Questions of nationality, identity, gender, race, class, colonialism, and postcolonialism in these literatures.

Prerequisite: ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

ENGL 486: The World Novel in English

3 Credits

Studies in the novel, written in English, by writers outside of the United States and Great Britain. ENGL 486 The World Novel in English (3) (IL) This course examines the nature of the novel as written in English by writers outside of the United States and Great Britain. Such a study necessarily involves both an aesthetic and a political perspective, in that the tradition of the novel in these landscapes so often involves the aesthetic and political suppression of native literary forms and voices. Thus, this course looks at the novel as written both by the colonizer and by the colonized. It considers the politics of the aboriginal author writing in an adopted language, and the ways in which such an adoption bears upon related ethnic and gender matters; it also considers the sorts of artistic and political tensions that emerge in the work of writers who write in what might be called the dominant English tradition. This course also studies the work of what might be called the multi-cultural writer, or the writer performce extracted from a native, non-English-speaking culture and placed within a larger, colonial, English-speaking culture. Matters of novelistic form, as they are related to ethnic and cultural identity, are also discussed. One intent of the course is to reveal the cultural, racial, and gender diversity that naturally adheres to these particular literary traditions.

Prerequisite: ENGL 002 ; ENGL 015 or ENGL 030
Bachelor of Arts: Humanities

International Cultures (IL)

ENGL 487: Senior Seminar

3 Credits

Issues, themes, periods, critical theories, etc., that invite students to use prior English studies, limited to seniors majoring in English.
Prerequisite: six credits of 400-level courses in English
Bachelor of Arts: Humanities
Writing Across the Curriculum
ENGL 488: Modern Continental Drama
3 Credits
From Ibsen to the drama of today: Strindberg, Chekhov, Hauptmann, Pirandello, Ionesco, Beckett, Genet, and others.

Prerequisite: ENGL 015 or ENGL 030
Cross-listed with: CMLIT 488
Bachelor of Arts: Humanities
International Cultures (IL)
ENGL 489: British Women Writers
3 Credits
A study of selected British women writers. ENGL (WMNST) 489 British Women Writers (3) This course provides the opportunity to study writing by British Women from a historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will address the question of the role gender plays in the selection of literary forms and the development of character, theme, symbols, and rhetorical strategies. It will also explore what particular dimensions British women writers have brought to the British literary tradition. Students will be active learners through keeping reading journals, presenting background reports on the history of women in England, participating in small-group discussions about the texts, and writing 2 shorter essays and one longer research essay for the class. This course focuses on an area of British literature, which more traditionally structured courses tend to obscure. The course will be attractive to students from a variety of programs, including English majors, Women’s Studies minors, and Interdisciplinary Humanities students. The course will be offered once every two years. Estimated class size 20.

Prerequisite: 6 credits of ENGL
Cross-listed with: WMNST 489
Bachelor of Arts: Humanities
ENGL 490: Women Writers and Their Worlds
3 Credits
American and British literature written from the perspective of women. ENGL (WMNST) 490 Women Writers and Their Worlds (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. ENGL/ WMNST 490 covers particular aspects of American and British literature written from the perspective of women. The courses stress the diversity of women’s authorial worlds, both through time and/or space. The readings and specific focus vary from semester to semester. ENGL/ WMNST 490 seeks to make students aware of the extensive body of literature written by women, but, unlike ENGL 194, which is a survey course of women’s literature, ENGL/WMNST 490 can be a more intensive course, focusing on selected themes and topics of particular concern to women as reflected in the poetry and fiction of twentieth-century American and British women writers. The class can also be taught in relationship to earlier periods, dealing, for instance, with English women novelists from 1775-1865. In such a class, readings would include fiction by Fanny Burney, Mary Wollstonecraft, Ann Radcliffe, Jane Austen, Mary Shelly, Emily Bronte, Elizabeth Gaskell, and George Eliot. The course would then place each novel in its historical, social,
ENGL 492: American Women Writers

3 Credits

A study of selected American women writers. ENGL 492 / AMST 476 / WMNST 491 American Women Writers (3) A study of selected women writers, this course provides the opportunity to study writing by American women from an historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will raise the question of the role that gender—as well as other differences such as race, class, and ethnicity—play in the selection of literary forms and the development of character, theme, symbol, and rhetorical strategy. It will also explore the dimensions American women have brought to the American literary tradition. The course satisfies the area requirement in culture for American Studies majors and is open to all majors meeting the prerequisite requirements. The course will be offered once every two years and enrollment is 25.

Prerequisite: 6 credits of ENGL
Cross-listed with: AMST 476, WMNST 491
Bachelor of Arts: Humanities

ENGL 493: The Folktale in American Literature

3 Credits

A survey of the literary uses of the folktale and legendary materials, with particular concentration on the literature of America.

Prerequisite: ENGL 015 or ENGL 030
Cross-listed with: AMST 493
Bachelor of Arts: Humanities

ENGL 494: Senior Thesis in English

1-6 Credits/Maximum of 6

Senior English (ELISH) majors write a thesis arranged with in-charge person and submit it to a faculty committee for appraisal. ENGL 494 The Capstone Course in Professional Writing (3) English 494 is the capstone writing course for the Professional Writing degree program. Its overall purpose is to provide students with the opportunity to reflect on and integrate academic coursework, co-curricular activities, and internship experiences through the design and development of print and electronic professional portfolios. To this end, students will analyze and evaluate their own professional texts as well as the texts of their peers, focusing on rhetorical analysis, content, organization, and expression. Emphasis will be placed on producing clear, insightful, polished, professional documents for inclusion in both paper and digital portfolios. As part of the course, students can expect to: a) demonstrate the ability to reflect critically on their own and others’ discourse practices b) assess their own strengths and weaknesses as writers and evaluate their writings for inclusion in the portfolios c) compile both paper and electronic portfolios that integrate relevant material from academic courses, internships, and other co-curricular learning experiences d) demonstrate the ability to employ technology in the development of the portfolios e) design materials that display their writing skills and rhetorical knowledge for a professional audience f) develop a finished professional resume and application letter g) discuss and demonstrate a variety of strategies for securing a professional writing position.

Prerequisite: seventh-semester standing
Bachelor of Arts: Humanities

ENGL 494H: Senior Thesis in English

1-6 Credits/Maximum of 6

Senior English (ELISH) majors write a thesis arranged with in-charge person and submit it to a faculty committee for appraisal.

Prerequisite: seventh-semester standing
Bachelor of Arts: Humanities
Honors

ENGL 495: Internship

3-12 Credits/Maximum of 12

Supervised practicum in fields appropriate to the English major.
Bachelor of Arts: Humanities

ENGL 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Bachelor of Arts: Humanities

ENGL 499: Foreign Study—English

3-6 Credits/Maximum of 6

Studies abroad in English language and/or literature.
Bachelor of Arts: Humanities
International Cultures (IL)

English as a Second Language (ESL)

ESL 4: ESL Composition for American Academic Communication I

3 Credits

For undergraduate students who are beginning-intermediate level non-native speakers of English to improve their grammar and writing skills in preparation for future American academic writing assignments. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program. ESL 004 ESL/Composition for American Academic Communication I (3) This course is for undergraduate students who are beginning-intermediate level
non-native speakers of English. The course is designed to improve their grammar and writing skills in preparation for future American academic writing assignments. Topics to be covered include the following: (a) subject-verb agreement; (b) verb tenses; (c) adjectives and adverbs; (d) independent and dependent clauses; (e) essay and paragraph organization; (f) paragraph development; editing and proof-reading. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

ESL 5: Writing Tutorial
1 Credits/Maximum of 1

This course supplements ESL 015, providing focused instruction for non-native English speaking students in English composition and academic writing. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program

Concurrent: ESL 015

ESL 15: ESL Composition for American Academic Communication II
3 Credits

ESL 15 ESL/Composition for American Academic Communication II (3) This course is for undergraduate students who are intermediate-advanced level non-native speakers of English. Students will become familiar with the various stages in the process of writing and develop strategies for reading and writing various models of American academic discourse. Students will be able to use what they have learned in this course to participate successfully in academic reading and writing tasks throughout their university experiences in the United States. Students will participate in a variety of reading and writing tasks that will enable them to: (a) define the subject, purpose, audience, and appropriate organizational structure for written compositions; (b) revise and reshape their writing to improve ideas, organization, language use, vocabulary and mechanics; (c) identify and correct structural and grammatical errors within their written texts; (d) select sources, take notes, and acknowledge sources to support ideas, using the library to conduct library research; and, (e) become better writers in preparation for their college careers.

Prerequisite: a grade of C or higher required in ESL 004
General Education: Writing/Speaking (GWS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ESL 114G: American Oral English for Academic Purposes
3 Credits

Instruction in ESL for graduate students, focusing on the use of oral language skills in an academic setting. ESL 114G American Oral English for Academic Purposes (3) This course is designed for graduate students who are non-native speakers of English in order to develop and improve their oral communication skills for effective interaction in social, as well as academic settings in English-speaking environments. Activities will include: (a) a pre- and post-testing of oral proficiency for diagnostic and achievement purposes; (b) a series of in-class oral presentations which will be audio-taped and videotaped for self, peer, and instructor evaluation; (c) participation in group discussions, role plays, and impromptu speeches; and, (d) various oral language assignments, including listening and pronunciation activities, transcriptions of recorded speech, and the creation of an audio-taped oral dialogue journal.

ESL 115G: American Oral English for ITAs I
3-9 Credits/Maximum of 9

Initial course in American Oral English for preparation of international teaching assistants. ESL 115G American Oral English for ITAs I (3 per semester/maximum of 9) This course is designed for non-native speakers of English who wish to improve their overall speaking and listening skills in English. Through various oral and aural language activities, students will increase the intelligibility of their speech by improving their pronunciation of American English. They will also develop academic speaking skills in order to engage critically and constructively in the exchange of ideas during discussions of academic content. They will improve their overall listening comprehension, as well as their discrimination of particular sounds in English. By the end of this course, students will have improved their overall speaking and listening skills, in particular their fluency, to participate successfully in academic settings.

Prerequisite: score below 150 on the American English Oral Communicative Proficiency Test (AOECP)

ESL 116G: ESL Composition for Academic Disciplines
3 Credits

For international students at the graduate level to engage in scholarly activity in their academic disciplines. ESL 116G ESL Composition for Academic Disciplines (3) This course is designed for international students at the graduate level who are preparing to engage in scholarly activity in their academic disciplines. Through reading and writing selected rhetorical models of academic discourse, students will be able to analyze and use the organizational structure of various models of academic texts. They will engage in contextualized language activities, which will enable them to match appropriate English linguistic forms to specific rhetorical purposes. Students will be expected to gather appropriate sources, organize information, and compose various models of academic essays and research papers. By the end of the course, students will be able to translate their research activities into written reports that conform to the expectations of the English-speaking academic community.

ESL 117G: American Oral English for ITAs II
3-9 Credits/Maximum of 9

Intermediate course in American Oral English for preparation of international teaching assistants. ESL 117G American Oral English for ITAs II (3 per semester/maximum of 9) This course is designed for intermediate level non-native speakers of English who need to improve their communication effectiveness in order to become teaching assistants (TAs). Through various language related activities, students will increase the intelligibility of their speech by improving their pronunciation of American English. Students will also develop oral presentation skills necessary for different types of classroom interaction. In addition, they will learn about American cultural traits as they pertain to communication in the university-level classroom. By the end of this course, students will have improved their overall communication effectiveness to participate successfully in a variety of future teaching assistant responsibilities.
Prerequisite: score of 150-199 on the American English Oral Communicative Proficiency Test (AEOCPT) or a grade of A- required in ESL 115G

ESL 118G: American Oral English for ITAs III

3 Credits

Advanced course in American Oral English for preparation of international teaching assistants. ESL 118G American Oral English for ITAs III (3) This course is designed to provide English language instructional support for advanced non-native speakers of English who need to improve their communication effectiveness in order to become teaching assistants. Through various language related activities, students will increase the intelligibility of their speech by improving their pronunciation of American English. To do this, they will develop an acute awareness of their own strengths and weaknesses as a communicator in real and simulated instructional contexts. They will also develop effective oral communication strategies necessary for interaction with individual students, small groups, and large classes. Students will learn about American cultural traits and underlying assumptions as they pertain to communication in the university-level classroom. By the end of this course, students will have improved their overall communication effectiveness to carry out their future teaching assistants responsibilities successfully.

Prerequisite: score of 200-249 on the American English Oral Communicative Proficiency Test (AEOCPT) or a grade of A- required in ESL 117G

ESL 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Entomology (ENT)

ENT 202: The Insect Connection

3 Credits

An introduction to the diversity of insects and the ways in which they interact with humans and impact our world.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ENT 216N: Plagues Through the Ages

3 Credits

This interdomain, general education course examines the major plagues of human history from both a scientific and societal lens. The course will be co-taught by instructors with biology and political science backgrounds who will help the students to integrate across those disciplines. Each week during a single lecture, students will learn the etiology, mode of transmission and treatment/control measures of a different disease. In parallel, students will also read popular press articles on how these diseases had particular cultural, economic or political impacts. These readings, in conjunction with guide questions, will prepare students for a weekly discussion during the second lecture run by both instructors. During the course, students will develop their ability to think critically about diseases and society and demonstrate this skill by designing a novel response to an emerging pathogen in a particular cultural context. This course will develop student communication skills, both oral and written.

General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

ENT 222: Honey Bees and Humans

3 Credits

This course explores the unique biology and behavior of bees, examining our relationship with them through time and across cultures. ENT 222 Honey Bees and Humans (3) (GN) This course will discuss the uniqueness of honey bees – no other insect, except perhaps the silk moth, has been harnessed so effectively to benefit mankind. Students will explore topics of biodiversity, behavioral ecology, sociobiology, insect physiology, infectious diseases, host-parasite interactions, food security, the development of agricultural practices across cultures and time, conservation and the art of communicating science to the public. Students will be provided an understanding of (1) honey bee behavior (particularly their complex and sophisticated social systems), biology, and health, (2) the important contributions honey bees and their pollination services make to maintaining natural ecosystems and increasing productivity of many of our key agricultural crops; and (3) the global history of humans’ interactions with honey bees, and how people from many cultures have managed bees to provide honey, wax, and pollination services.

General Education: Natural Sciences (GN)

ENT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ENT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENT 313: Introduction to Entomology

2 Credits

Introduction to basic entomology, covering insect diversity, identification, structure and function, and principles of management. ENT 313 Introduction to Entomology (3) This course is an introduction to entomology addressing issues of insect diversity, morphology and physiology, and identification of the most common groups of adult and immature insects. This course will highlight the beneficial and detrimental roles insects in human society along with responsible methods of pest management. Other topics such as insects as vectors of disease and the ecological and agricultural impact of exotic insect species introduction and climate change will be discussed.
Prerequisite: 3 credits of natural science

ENT 314: Management of Insect Pests of Ornamentals

1 Credits

Diagnosis and management of insect pests on shrubs and trees in the landscape or production nursery.

Prerequisite: ENT 313

ENT 316: Field Crops Entomology

1 Credits

Laboratory-based approach to identification and management of insect pests of agronomic crops.

Prerequisite: ENT 313

ENT 317: Turfgrass Insect Pest Management

3 Credits

Introduction to entomology and management of insect pests of cool- and warm-season turfgrass. ENT 317 ENT 317 Turfgrass Insect Pest Management (3) This course will introduce students to a thorough understanding of insects and their relatives, IPM, and control strategies. The course will provide the students the opportunity to review EPA registered turfgrass insecticides and respective Material Safety Data Sheets, the effects of turfgrass insecticides on nontarget organisms, and the Food Quality Protection Act and how this legislation has altered public perception of insecticides. Students will be provided with a fundamental understanding of the ecology, ethology, life history and development of IPM plans for the key surface and subsurface pests of cool- and warm-season turfgrass. Students will be introduced to a wide array of commercial, educational and government web sites to strengthen their understanding of turfgrass entomology. Students also will be encouraged to develop a web based notebook which they can utilize upon completion of the course. Students will be invited to share their experiences with pest problems and methods they deployed to manage turfgrass insect species in the turfgrass environment. Students will be evaluated by the use of class assignments, quizzes, two hour exams and a final exam, refereed journal reading assignment, and an IPM class project. The course will be offered in the spring semester with expected enrollment of 50-58 students.

Prerequisite: TURF 235, CHEM 101 or CHEM 110

ENT 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ENT 402: Biology of Animal Parasites

3 Credits/Maximum of 3

An introduction to animal parasitology. Emphasis placed on host/parasite interactions, parasites of zoonotic importance, control programs and taxonomy. VB SC 402W Biology of Animal Parasites (3) This course provides students an opportunity to obtain an introduction to the field of animal parasitology. Material presented emphasizes life cycle patterns of animal parasites, host-parasite interactions and pathology, disease patterns and zoonotic potential of parasites to human disease, economic importance of parasitic diseases, taxonomy and parasite control programs. Information presented in this course will be useful to students interested in pursuing a career in veterinary medicine or careers dealing with animal care and management. Evaluation of student performance is achieved by 6 quizzes, three examinations and 3 writing assignments. The course is offered each spring semester with an enrollment of 15 to 25 students.

Prerequisite: BIOL 110

Cross-listed with: VBSC 402

Writing Across the Curriculum

ENT 410: Insect Structure and Function

3 Credits

Integrated physiology and anatomy of insects; emphasis on unique adaptations, genetic regulation of development, insects as model systems, environmental physiology.

Prerequisite: BIOL 110, BIOL 220W, BIOL 230W, BIOL 240W

ENT 420: Introduction to Population Dynamics

3 Credits

Principles of population regulation, demographic analysis, modeling of dynamic processes are discussed; laboratories involve the exploration of population growth models.

Prerequisite: BIOL 110, BIOL 220W

ENT 424: Sensory Biology of Insects

3 Credits

This course provides students an understanding of insect sensory systems contributing to behaviors performed for survival and reproduction.

Prerequisite: BIOL 110

ENT 425: Freshwater Entomology

3 Credits/Maximum of 3

Collection and identification of insects and other arthropods in freshwater ecosystems; field study of habitats.

ENT 432: Insect Biodiversity and Evolution

4 Credits

In this course students learn insect taxonomy, evolutionary history, collection and preservation techniques, morphology, fossils, and natural history. ENT 432 Insect Biodiversity and Evolution (4) In this course students learn insect taxonomy, evolutionary history, collection and preservation techniques, morphology, fossils, and natural history. Lab work focuses on adult forms, especially of insects found in Pennsylvania. Students learn how to handle specimens, use diagnostic keys, and identify insects by sight. Collecting techniques will be honed during field trips. Upon completion of this course students should be able to: (1) teach others how to collect, preserve, and transport insect specimens, (2) name and sight-identify all insect orders and several common local families, (3) label a generalized insect diagram with external anatomy terms, (4) draw a phylogenetic tree of relationships between insect orders, (5) teach others how to read a phylogenetic tree, what kinds
of data are used to estimate trees, how those data are analyzed, and what it means to be monophyletic. (6) describe key innovations and life history strategies of major insect lineages, (7) solve taxonomic problems and describe how species and other taxa are named and described, i.e., understand the fundamentals of taxonomic practice, (8) name and briefly describe the latest developments in insect biodiversity research, (9) describe how hexapods inform us about biodiversity and influence our conservation decisions.

**Prerequisite:** ENT 313

ENT 445: Evolution of Insect Societies

3 Credits

Basic principles of Darwinian theory and their application to understanding the evolution of complex social behavior in insects are addressed. ENT 445 Evolution and Insect Societies (3) This course addresses basic principles of Darwinian theory and their application to understanding the ultimate and proximate mechanisms underlying the evolution of complex social behavior in insects, especially bees, ants and wasps. This course will highlight the remarkable diversity of social organization across these groups. Topics will include the role of cooperative behavior, mating systems, parental care, natural history, communication, and molecular groundplans in the evolution of higher-level biological organization.

**Prerequisite:** BIOL 110 or equivalent

ENT 450: Medical Entomology

3 Credits

Transmission of human and animal pathogens by insects, mites and ticks, including emergent pathogens, envenomization, and forensic entomology. This course presents principles of transmission of human and animal pathogens by insects, mites and ticks. Non-transmission based aspects of medically important arthropods such as envenomization, forensic entomology and genomics will be discussed also. Basic arthropod biology with special attention to biological properties of vectors and their interactions with pathogens will be presented. We will cover basic components of arthropathogen disease cycles and principles of pathogen transmission dynamics. The major groups of arthropod–borne pathogens and vectors will be discussed. Special topics will include emergent pathogens, vector genetics, traditional and modern disease control strategies and venomous arthropods.

**Prerequisite:** ENT 313, or BIOL 011 and BIOL 012, or BIOL 110 or BIOL 220W

ENT 457: Principles of Integrated Pest Management

3 Credits

Integrated study of pest complexes and their management, emphasizing ecological principles drawing on examples from a range of agricultural, forestry and urban systems. This course is designed for sixth, seventh, and eighth semester students and graduate students. AGECO 457 / ENT 457 Principles of Integrated Pest Management (3) The goal of this course is to introduce upper level undergraduates and graduate students to the principles and practices of integrated pest management (IPM). This course addresses IPM issues concerning insects, plant diseases, and weeds in agriculture, natural systems and urban environments. Rooted in ecology, IPM also addresses the influence of human social, economic and regulatory systems in pest management. Emphasis is placed on the basic tactics and tools of IPM including biological, cultural, legal, mechanical and chemical controls, host plant resistance, pest monitoring and decision making. The overarching goals of environmental protection, economic viability and social welfare are considered throughout the course. In addition, students will learn about IPM program implementation both domestically and internationally, including pest population modeling and the use of internet resources to inform decision makers. Several projects will provide real-world examples. These may include field trips and a semester-long project where students research and solve an actual pest management problem.

**Prerequisite:** Must take two or more of the following: ENT 313, PPEM 405, PPEM 318, or HORT 238

Cross-listed with: AGECO 457

ENT 484: Insect Behavior

3 Credits

Insects are one of the most ecologically successful and diverse taxonomic groups on the planet, and their success is attributed to the amazing range and complexity of the behaviors they exhibit. This course provides an introduction to fundamental concepts and processes in the study of animal behavior, with an emphasis on insect examples, insect diversity and a theoretical and empirical overview of insect behavior. The course is structured around four complementary categories to study behavior based on their development, adaptive value, function, and evolution. Students will learn how scientists study insect behavior, why insects behave the way they do, what functions these behaviors serve, and how behavior is shaped by the evolutionary forces of natural and sexual selection.

**Prerequisite:** ( BIOL 110 or BIOL 110H ) and ( BIOL 230W or BIOL 230M or BIOL 220W or BIOL 220M )

ENT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ENT 496H: Independent Studies

1-18 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

ENT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Entrepreneurship (ENTR)

ENTR 300: Principles of Entrepreneurship
3 Credits
Overview of the fundamental principles and processes of entrepreneurship including idea generation and opportunity analysis.
Prerequisite: ACCTG211, ECON 102

ENTR 320: Entrepreneurship and New Venture Creation
3 Credits
Explores the process for starting and growing a new venture including the development of a business plan.
Prerequisite: ENTR 300

ENTR 400: Financing Entrepreneurial Ventures
3 Credits
Overview of alternative forms of financing including seed capital, valuing a company, going public, partnerships, and acquisitions.
Prerequisite: B A 243 or B LAW243, ENTR 320, FIN 301

ENTR 410: Entrepreneurial Marketing
3 Credits
Principles of Internet marketing and strategies for marketing new ventures on the Web.
Prerequisite: ENTR 320, MIS 204, MKTG 301

ENTR 430: Entrepreneurship and New Product Development
3 Credits
Examines the process of designing, testing and launching new products, and developing a strategy for commercialization of the technology.
Prerequisite: ENTR 300

ENTR 440: Entrepreneurship and Franchising
3 Credits
Overview of the entire franchising process with a focus on licensing and distributorship, trade marks, strategy, and growing the enterprise.
Prerequisite: ENTR 300

Environmental Engineering (ENVE)

ENVE 301: Environmental Microbiology
3 Credits
Fundamentals of microbial ecology and environmental microbiology with an emphasis on aspects of these fields important to environmental engineers. ENVE 301W
Prerequisite: CHEM 110 and CHEM 111

Writing Across the Curriculum
ENVE 401: Occupational Safety and Environmental Health
1 Credits
Regulations, management practices, hazard identification, exposure assessment, monitoring, employee protection, and program management for occupational safety and health. ENVE 401
Prerequisite: CHEM 301 and ENVE 301W

ENVE 411: Water Supply and Pollution Control
3 Credits
Water supply, wastewater characteristics, design of unit processes for water and wastewater treatment, sludge processing, and related new technologies. ENVE 411 Water Supply and Pollution Control (3)
Providing safe drinking water to the public and decontamination of wastewater before discharge are the two main functions of municipal water system. Properly designing and operating municipal water and wastewater systems allows safe and sustainable use of this limited resource. This course introduces students to design concepts used in water and wastewater treatment processes. Concepts will be categorized into physical, chemical, and biological processes, and presented through a series of lectures, readings, and problem solving. Subjects covered include: water and wastewater characteristics and flows; unit processes for drinking water treatments, including coagulation, flocculation, sedimentation, water softening, filtration, and disinfection; and unit processes for wastewater treatments, including preliminary headwork, primary sedimentation, secondary treatment, tertiary nutrient removal, final clarifier, and residual digestion and management. After completion of this course, students should have the basic knowledge necessary to select and design water and wastewater treatment processes.
Prerequisite: C E 370 or graduate standing

ENVE 413: Operation and Control of Treatment Systems
3 Credits
Wastewater treatment, water treatment, solids handling, hazardous waste site control and operations, operator certification, report writing. ENVE 413W
Prerequisite: ENVE 411; Concurrent: ENVE 416
Writing Across the Curriculum
ENVE 415: Hydrology
3 Credits
Watershed response to rainfall events; hydrologic systems; ground water flow. ENVE 415 Hydrology (3) Hydrology is the study of water's
movement over the earth and in the atmosphere, with a particular focus in the class on the processes of precipitation, infiltration and runoff. The general public focuses on hydrology when there either is too much water (floodings) or too little water (drought). Engineers working in the hydrology arena focus on evaluating the timing and location of potential floods, designing structures and sites to minimize the impacts of the site on the hydrologic behavior of an area, and evaluating potential sources of water supply during drought times so that the public impact of a drought is minimal. This course builds on concepts learned in the hydraulic design course in terms of conveyance system design. Course topics include determination of the safe yield of a water supply, calculation of hydrographs in ungaged watersheds, the hydraulics of groundwater wells, and the design of storm water management structures to minimize flooding. The students use currently available models from the U.S. Department of Agriculture, the U.S. EPA and the U.S. Army Corps of Engineers in their watershed evaluations and design of storm water control practices.

Prerequisite: ENVE 417; and STAT 301 or STAT 401

ENVE 416: Treatment Plant Design

3 Credits

Design of treatment facilities for water and waste water based on regulatory requirements and standards. ENVE 416 Treatment Plant Design (3) This capstone design course will teach students how to integrate various design concepts they have learned from other environmental engineering courses, including ENVE 411 Water Supply and Pollution Control, ENVE 415 Hydrology, ENVE 417 Hydraulic Design, and ENVE 425 Hazardous Waste Management. Additional design and design related concepts will be introduced through a series of lectures, seminars, tours, case studies, and design projects. Subjects covered include unit processes for water and wastewater treatment, hydraulic design, sludge handling and disposal, chemical storage and safety, project bidding and management, plant design and retrofitting, and engineering ethics and society impacts. After completion of this capstone design course, students should have basic knowledge in selection and design of conventional and modern environmental systems, especially water and waste water treatment processes and application of knowledge they learned from various environmental engineering courses in solving real world engineering problems.

Prerequisite: ENVE 411; Concurrent: ENVE 417

ENVE 417: Hydraulic Design

3 Credits

Design of water and waste water conveyance systems and storage facilities. ENVE 417 Hydraulic Design (3) The delivery of clean drinking water and the collection of wastewater are two of the fundamental activities of municipal or regional governments. Installing new systems or rehabilitating old ones are expensive, large-scale infrastructure projects. Therefore, it is important that these projects be designed correctly and address both current population needs and growth projections for the design life of the project, typically 25 or more years. This course builds on the concepts learned in fluid mechanics and applies them to the design of municipal water conveyance systems. Students learn to apply the appropriate pipe flow equations (Darcy-Weisbach, Hazen-Williams, or Chezy-Manning) to the design of the conveyance system (e.g., drinking water supply, sanitary sewer collection and storm sewer collection systems). Their projects focus on the design of small conveyance systems and use currently available EPA models for water supply, sanitary sewer, and stormwater piping design. Students also learn to perform basic population projections, design water storage towers and design appurtenances such as manholes and storm sewer inlets. Culvert weir and orifice design also are covered in the class.

Prerequisite: CE 360

ENVE 424: Solid Waste Management

3 Credits

Solid waste collection and disposal techniques; recycling and design optimization; including content analysis, legislation, and planning.

Prerequisite: CE 335

ENVE 425: Hazardous Waste Management

3 Credits

Overview of regulations, risk assessment, waste minimization and pollution prevention, treatment of hazardous waste, and remediation of contaminated sites. ENVE 425 Hazardous Waste Management (3) This course covers concepts and techniques for managing hazardous wastes. Subjects covered include hazardous waste fundamentals (hazardous waste characteristics, regulations, fate and transport, and toxicology), current management practices (environmental audits, and pollution prevention), treatment and disposal methods (physicochemical processes, biological methods, stabilization and solidification, thermal methods, and land disposal) and site remediation (site characterization, and remedial technologies). Additional hazardous waste management related concepts will be introduced through a series of lectures, tours, case studies, and design projects. After completion of this course, students should have basic knowledge in identifying hazardous wastes, understand physical, chemical, and biological factors governing the fate of a compound in the environment, know the fundamental physical, chemical, and biological processes used to treat hazardous wastes.

Prerequisite: ENVE 411

ENVE 430: Sustainable Engineering

3 Credits

A course on engineering which uses ecological principles to minimize waste and maximally use input materials. ENVE 430

Prerequisite: Permission of program

ENVE 460: Environmental Law

3 Credits

This course provides a survey of Federal and State environmental laws, including statutory, common and administrative law. May not be taken for graduate credit by Dickinson School of Law students in the concurrent J.D./EPC programs. ENVE 460

Prerequisite: Senior standing, graduate standing or permission of program.
ENVE 470: Air Quality

3 Credits

Overview of air quality issues with regard to the sources, measurements, effects, transport and control of potential air contaminants. ENVE 470 Air Quality (3) The protection of clean air is vital for the health of people. Air pollution has been linked to increased cases of asthma, lung cancer, and other lung diseases. This course, building on concepts covered in the Introduction to Environmental Engineering course, provides an overview of air quality issues with regard to the sources, measurements, effects, transport and control of potential air contaminants. Specifically, the students will learn the fundamental concepts of air pollution generation, modeling and control, plus the impacts of air pollution on human and environmental health and welfare. They will understand the fundamental concepts of acid rain and global climate change. They will learn/be updated on the current regulations that exist to address air quality concerns. Through homework and projects, they will examine and perform preliminary designs on common types of air pollution control equipment. They also will participate in discussions of contemporary air pollution issues (global warming, mobile and stationary air pollution source control, airshed issues in the Chesapeake Bay watershed).

Prerequisite: CE 370

ENVE 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ENVE 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Environmental Resource Management (ERM)

ERM 150S: ERM First Year Engagement

1 Credits

This First Year Engagement course is for first-year students intending to major in Environmental Resource Management at University Park campus. First year DUS students may also enroll. Students will explore environmental science, natural resource, and sustainability issues and research methodologies through literature review, library searches, field studies, critical thinking exercises, and exposure to Penn State faculty. Students will also be introduced to the breadth of University resources at their disposal.

First-Year Seminar

ERM 151: Careers and Issues in Environmental Resource Management

1 Credits

Career opportunities and topical issues in the environmental sciences. E R M 151 Careers and Issues in Environmental Resource Management (1) The course is designed to introduce students to the environmental resource management field early in their academic experience. The course is the first required E R M course for students in the major and the minor. Weekly presentations are made by E R M graduates and Penn State faculty and student interns. Course objectives include: discuss topical issues in environmental sciences and resource management; familiarize students with career opportunities for E R M graduates; provide feedback from graduates to students on enhancing their Penn State experience; enhance critical thinking and communication skills; create an opportunity to address student questions about the E R M program. Two types of writing assignments (PIT and PDP) are designed to enhance the learning process and to serve as a basis for awarding a course grade. The PIT (Putting It Together) is written by each student during the last 10 minutes of each class period, and requires the student to focus on one point made by the speaker and to either explain how the point contributes to the students understanding or explain why they disagree with or have questions about the point. Students are instructed to consider the audience for their PIT to be lay people and that the PIT should simulate a letter to the editor or an Op Ed piece. The PDP (Personal/Professional Development Plan) is developed by each student throughout the semester. It is designed to facilitate the establishment/refinement of career goals and objectives, and to be an action plan for their Penn State experience. Students receive feedback on their draft PDP early in the semester. Student progress is assessed by evaluating the PDPs and the PDPs. The course grade is weighted 48% PITS; 17% draft PDP, and 35% final PDPA conventional auditorium-style classroom that can accommodate up to 100 students is required. The course is offered each fall semester at the University Park campus. Current and projected enrollments are 75-100 students. The course could be offered at other Penn State campuses utilizing distance learning technologies.

ERM 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ERM 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ERM 210: Environmental Factors and Their Effect on Your Food Supply

3 Credits

An exploration of how urban environmental problems influence our ability to obtain food and natural resources. E R M 210E R M 210 Environmental Factors and Their Effects on Your Food Supply (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Environmental Factors and Their Effect on Your Food Supply will study links between environmental issues and the agricultural systems from an urban perspective. Insects, one of the most diverse groups of organisms, will be used to provide examples of human impact on ecosystem structure and function. Differences between sustainable and non-sustainable systems, along with efforts to create sustainable human systems, will be explored. This course looks at the Earth as a single ecosystem composed of interacting biological, chemical and physical systems. The social and economic dimensions of issues will be discussed. We will focus on how non-human systems interact with each other and with
the human population. The course focus will be on the principles and concepts from biology, chemistry, geology and physics. Specific topics treated within the context of this interdisciplinary course include but are not limited to: human response to (insecticide use) and influence on (reduction in diversity) insects, the unique and life-giving properties of water, nutrient cycles, energy flows, species diversity, the dose-response relationship, risk assessment and perception, global climate change, and conservation of energy and matter. We will also be learning about how the use of the scientific method an interdisciplinary setting. Scientific situations found in everyday life will be used to explore and practice how to ask questions, gather data, and reach conclusions. Evaluation of student performance will be based upon critical thinking exercises, class discussion, short in-class writing assignments, and examinations. The critical thinking exercises will be assessed by written material submitted by the student. The written material will include the steps undertaken in the exploration (methods), the observations made (results) and description of what was learned (conclusions). These explorations will help students learn to solve problems and think critically using information they have discovered. The explorations will require students to supplement their observations with information found on the Web and in the Library. Students will be required to participate in class discussions using CourseTalk. Contributions will be evaluated for content and quality. Short, in-class, written student feedback will be collected frequently to determine the level of understanding and attendance. Two midterm evaluations and a comprehensive final will be given. These exams will consist of higher-order thinking questions requiring the student to synthesize information to solve problems. Self-quizzes will accompany each unit to help the student determine when they understand the concepts being learned. Environmental Factors and Their Effect on Your Food Supply is an introductory level, general education science course without prerequisites. This course is not a prerequisite for any other course. An introductory level course in sustainable environmental systems will provide a useful context for future course work. Recitation sections will be used to increase the student’s understanding of concepts discussed during lecture. Computer exercises develop specifically for this course, the textbook CD-ROM, and data found on the Web will be used to aid students in their understanding of course concepts. The course will be offered annually in the spring. Expected enrollment is 100 students.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ERM 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ERM 300: Basic Principles and Calculations in Environmental Analysis
3 Credits
This course will teach basic problem solving skills while using examples taken from environmental media—air, water, and soil. ERM 300 Basic Principles and Calculations in Environmental Analysis (3) Students will be provided a contextual link between chemical, biological and physical principles learned in their basic science courses and the advanced environmental concepts presented in later required Environmental Resource Management (ERM) courses. This course will demonstrate the dependence of environmental science on biology, chemistry and physics. Students will integrate the knowledge from each of these disciplines into an interdisciplinary framework. This course will teach Environmental Resource Management students basic problem solving skills while using examples taken from environmental media - air, water, and soil. Students will have many opportunities to examine, manipulate, and solve quantitative problems related to the environment. This is a required course for Environmental Resource Management majors.

Prerequisite: 3 credits in BIOL; CHEM 111; MATH 110 or MATH 140; PHYS 250 or PHYS 211

ERM 309: Measurement & Monitoring of Hydrologic Systems
3 Credits
Introduction to measurement and monitoring equipment/techniques commonly used in analyses and design of hydrologic systems. ASM 309 / ERM 309 Measurement & Monitoring of Hydrologic Systems (3) This course will provide students the opportunity to learn and apply basic measurement techniques that serve as critical tools in professional practice in water resources. Mapping development and use serves as a critical aspect of water resources engineering and planning, and a major portion of this course will focus on the fundamentals of surveying and translation of surveyed data into useful maps and engineering drawings. Students will learn the theory that underpins basic surveying and then apply this theory in actual survey practice. Autocad serves as a primary software tool used in engineering design and water resources planning, and students will be afforded opportunities to use Autocad to present and process various watershed- and survey-based data. Geographic information system (GIS) techniques will also be investigated as a tool to process, record, analyze, and display various spatial data commonly used in water resources planning and engineering design. Students will learn the basic techniques and processes used to transfer data between GIS and Autocad, both of which are commonly used in practice. The course will also investigate the instrumentation, techniques, and theory involved in common water resources measurements including weather conditions (which serve as the principle driving conditions in water resources), flow monitoring, basic soil properties, water movement in soils, and water quality sampling and analyses. Students will conduct hands-on exercises that will focus on the use of various instruments and techniques commonly employed to conduct such measurements. Data collected will be processed and analyzed within the context of professional practice case studies. The various aspects of the course will coalesce around the concept of the watershed being the basic unit of water resources analyses and design, and students will experience how various measurement techniques and approaches are necessary tools for practicing professionals. This course will be useful to any undergraduates seeking degrees in a major related to water resources planning, engineering, or technology.

Prerequisite: PHYS 211 or PHYS 250, CHEM 110
Cross-listed with: ASM 309

ERM 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

ERM 402: Foundations of Sustainable Business

3 Credits

Emphasis on understanding business strategies for enhancing sustainable operations, including issues related to the natural environment and corporate social responsibility. ERM 402 / BRS 402 Foundations of Sustainable Business (3) This course will provide students with an understanding of how environmental and sustainability issues are impacting business strategies and ultimately profits. We will also examine the external stakeholders, such as environmental groups, policy-makers, and "green" consumers, that impact business management. Business students will benefit by a better understanding of environmental/sustainability issues that impact their operations and strategies. Non-business students will benefit by understanding how business decisions can impact the natural environment. An emphasis will be on a thorough understanding of making a business case for sustainability. We will also discuss the triple bottom line and its use. Some Specific Issues to Cover:

1. How are organizations shifting business models to work with sustainability trends?
2. How can we make a business case (justification) for being "green"?
3. Can firms differentiate themselves by being responsible/sustainable? Do consumers and other stakeholders care?
4. Thorough understanding of stakeholders and how they impact operations.
5. How can the "business" side of the world work with the "environmental" side?
6. Use of packaging as an example of where parts of the supply chain are working together to be more sustainable.
7. How "waste" in its many forms can be seen as a surrogate for unsustainable practices.
8. Pros and cons of metrics used to measure sustainability.
9. Impacts of business operations on the environment.

Prerequisite: AG BM 101 or ECON 102 or ECON 104 and 7th semester standing
Cross-listed with: BRS 402

ERM 411: Legal Aspects of Resource Management

3 Credits

Legal systems and lawmaking processes; property rights in land, water, and wildlife resources; jurisdictional problems in planning resource use. E RM 411 Legal Aspects of Resource Management (3) This course provides a survey of the basic legal principles, regimes, and issues related to environmental protection and natural resource management. The course is designed for students interested in environmental resource management and related careers, providing them with a basic grounding in core principles of environmental law and regulation. The course will offer instruction, discussion, and practical application of theories of environmental law and basic legal and regulatory regimes related to water, air, and land. Focus will be on core federal legal regimes and statutes and their application in Pennsylvania. These legal regimes will be explored through topical case studies, such as Chesapeake Bay restoration, Marcellus Shale natural gas extraction, and climate change. During the latter half of the course, practical application of environmental legal issues will be demonstrated in a hands-on manner where students will represent private, nonprofit, or government sectors in a hypothetical land development proposal, and will be expected to perform tasks they may be asked to perform during their environmental careers: preparing permit applications, public comment documents, writing permit conditions, and challenging and defending final agency decisions.

Prerequisite: ECON 102 or AG BM101; and prerequisite or concurrent: ERM 151, ERM 152, or EBM 200

ERM 412: Resource Systems Analysis

3 Credits

The concept of systems; techniques of analysis, including input/output, mathematical programming, and simulation; application to resource systems. ERM 412 Resource Systems Analysis (3) ERM 412 is a course in problem solving, as it relates to environmental and resource related issues. The course covers a variety of problems within an environmental context, including mass balance, steady-state, and dynamic problems. Students will gain experience in making assumptions and testing those assumptions in the application of biological, chemical, and physical principles to problem solving. The course is designed to develop experience in quantitative problem solving using spreadsheets, modeling tools, and computer-based statistical analysis.

Prerequisite: BIOL 220W, ERM 151, ERM 300, and STAT 240; MATH 111 or MATH 141

ERM 413: Case Studies in Ecosystem Management

3 Credits

Application of biological, physical, and social science principles to ecosystem management problems; introduction to environmental impact analysis and review.

Prerequisite: BIOL 220W, SOILS101. Prerequisite or concurrent: ERM 412

Writing Across the Curriculum

ERM 413W: Case Studies in Ecosystem Management

3 Credits

Application of biological, physical, and social science principles to ecosystem management problems; introduction to environmental impact analysis and review.

Prerequisite: BIOL 220W, SOILS101. Prerequisite or concurrent: ERM 412

Writing Across the Curriculum

ERM 426: Nutrient Management Specialist Preparation

1 Credits

Students in the College of Agricultural Sciences may wish to have professional certifications and licenses related to their anticipated area of employment. This course will assist students as they prepare for certification to write nutrient management plans for agricultural production and livestock operations. Professionals in the field will provide study materials and guide students as they study and prepare to complete the certification process. This course and successful completion of certification will make the student more employable than students that have not obtained this professional certificate. Upon completion of this course, students can take the licensing exam for Nutrient Management Specialist Certification offered by the Pennsylvania Department of Environmental Protection and Pennsylvania Department of Agriculture.

Prerequisite: SOILS 101 and SOILS 102.
ERM 430: Air Pollution Impacts to Terrestrial Ecosystems

3 Credits

Overview of the direct and indirect effects of air pollutants on terrestrial plants and ecosystems. E R M (PPEM) 430 Air Pollution Impacts to Terrestrial Ecosystems (3) Pollutant sources, transport, meteorology, and temporal and spatial trends of pollution dispersion and deposition are introduced. An overview is presented of the direct and indirect effects of air pollutants on terrestrial ecosystems with an emphasis on plant life. The effects of ozone, sulfur dioxide, nitrogen oxides, particulate matter, halogens, and combined pollutants leading to acidic atmospheric depositions are presented. Emphasis is placed on air pollutants as plant pathogens leading to symptoms and eventual long-term accumulative effects to entire ecosystems. Methods of diagnostics, factors affecting plant response, ecosystem decline and resiliency, pest interactions, assessment of loss and cost/benefit analysis leading to abatement follows. Final parts of the course include perspectives of public awareness, development of National Ambient Air Quality Standards, compliance prevention of significant deterioration, and the Clean Air Act reforms of 1990.

Prerequisite: BIOL 220W or for 308
Cross-listed with: PPEM 430

ERM 431: Environmental Toxicology

3 Credits

Effects of pollutants on animal health at the chemical, physical, and cellular level.

Prerequisite: BIOL 110, CHEM 110, CHEM 112
Cross-listed with: VBSC 431

ERM 433: Transformation of Pollutants in Soils

3 Credits

The course provides the chemical and biological basis for understanding, predicting and controlling the fate of pollutants added to the soil. The material falls distinctly into two major sections: Section I discusses the fundamental concepts of soil science as they relate to the fate of pollutants in soil systems. Section II provides specific coverage of important classes of soil pollutants. The environmental impacts associated with soil enrichment of these pollutant groups are discussed. Primary emphasis is given to pollutants having adverse effects on human health via water and the food supply, namely, trace elements, trace organic contaminants, pathogens, and radionuclides. The major plant nutrients, nitrogen and phosphorus, warrant coverage because of their potential negative impacts on aquatic systems. Salts can harm soil productivity and structure and thus represent a third distinct pollutant category.

Prerequisites: CHEM 111, CHEM 112, SOILS 101

ERM 435: Limnology

3 Credits

Biogeochemistry and natural history of freshwater ecosystems. W F S (E R M) 435 Limnology (3)This course will define and describe major principles (physical, chemical, biological, and ecological) that govern the structure and function of freshwater ecosystems (ponds, lakes, and rivers). Current scientific literature will be critically reviewed and discussed in relation to comparative philosophy, methodology, and case studies that cover a range of topics in limnology. The objectives of E R M (W F S) 435 are to familiarize students with the major physical properties, chemical cycles, taxonomic groups of organisms, and ecological interactions that define and describe the natural function of aquatic ecosystems. The course will use case studies to illustrate and examine pertinent issues (e.g., excessive material loading, introduction to exotic species, habitat fragmentation, and climate change) that can alter the structure and function of aquatic ecosystems. Knowledge of these basic ecosystem principles will be applied towards formulating real-life resolutions to the issues identified in class, in order to better manage aquatic resources (methods to reduce material loads, transport controls of exotic species, habitat restoration, and reduction of global gases). This course will be useful to both undergraduate and graduate students seeking degrees in Environmental Resource Management, Wildlife and Fisheries Science, Ecology, and other related subjects. At the undergraduate level, the course will serve as a 400-level selection in both the Environmental Resource Management and Wildlife and Fisheries Science degree programs. At the graduate level, the course will compliment several Wildlife and Fisheries courses that form the compliment of that degree program. Moreover, the course can satisfy the course requirement for ecosystems ecology in the inter-college Ecology graduate program and serve as a breadth course in Water Resources for graduate students in the Watershed Stewardship program.

Prerequisite: BIOL 110, BIOL 220W , CHEM 110
Cross-listed with: WFS 435

ERM 436: Limnological Methods

3 Credits

Application of current methodologies to evaluate the biological, chemical, and physical characteristics of aquatic ecosystems. E R M (W F S) 436 Limnological Methods (3)Limnological Methods will instruct students to apply state of the art analytical measurements in order to gain an understanding of how and why ecosystems support specific biodiversity and biogeochemical cycles. The course will help students define key ecological elements (e.g., ecosystem metabolism, resource limitation, predator-prey relations) in both qualitative and quantitative terms, thereby making them tangible, tractable, and readily understandable. The course will use an instructional rubric to integrate conceptual, analytical, and communicative exercises in order to instruct students about how to evaluate variation in natural ecosystems. This course provides experiential training in the scientific process (rubric), so students can learn by doing, thereby internalizing their knowledge. Course content is organized into three 5-week sections, each of which will emphasize one component of the biogeochemical cycle (physical, chemical, biological). In each section, students will carry out a focused group study designed to evaluate how a pertinent environmental perturbation can affect that component of the aquatic biogeochemical cycle. The course content in each five-week block will have students: 1) review the experimental design and hypothesis, 2) implement the experimental design in the field or laboratory, 3 and 4) process and analyze samples in the laboratory, and 5) make statistical and graphical evaluations of the experimental results relative to their hypothesis (in class) and present these findings in written form. Knowledge of these basic ecosystem principles will be applied towards formulating real-life solutions to the issues identified in class, in order to better manage aquatic ecosystems. This course will be useful to undergraduate students seeking degrees in Environmental Resource Management and Wildlife and Fisheries Science, as well as graduate students pursuing degrees in Ecology, Forest Science, Wildlife and Fisheries Science, Watershed Stewardship, and other related subjects. At the undergraduate level, the course will serve as a 400-level elective
in Environmental Resource Management degree program, Wildlife and Fisheries Science degree program, and the inter-college Marine Science option. At the graduate level, the course will complement several Forest Science and Wildlife and Fisheries courses. Moreover, the course can also satisfy the requirements for the ecosystems ecology focus in the inter-college Ecology graduate program. Grades will be based on three research papers, and a final laboratory practical.

**Prerequisite:** BIOL 110 and CHEM 110
Cross-listed with: WFS 436

ERM 440: Chemistry of the Environment: Air, Water, and Soil

3 Credits

A global perspective of the chemical principles, composition and processes that operate within and between air, water, and soil environments. ERM 440 Chemistry of the Environment: Air, Water, and Soil (3) This course provides a global perspective of the chemical principles, composition and processes that operate within and between air, water and soil environments. The course is designed to develop knowledge of chemistry fundamentals as applied to the principles and concepts used in environmental chemistry. Upon completion of this course, students will have an understanding of soil, water, and air chemical principles and their applications. Specifically designed for juniors and senior undergraduates, the course will link theoretical chemistry concepts to real-world environmental problems. Students will be evaluated on examinations, homework, and class participation.

**Prerequisite:** CHEM 110, CHEM 111, CHEM 112; CHEM 202 or CHEM 210

ERM 444: Environmental Biophysics

3 Credits

Analysis of the interaction of living organisms and their microenvironment by applying biophysical principles and engineering methods. ERM 444 Environmental Biophysics (3) This course trains students in the analysis of the interaction of living organisms and their microenvironment by applying biophysical principles and engineering methods. Students will learn to describe the physical environment surrounding the organism (wind, temperature, radiation, humidity) and to calculate biophysical responses of the organisms to these variables in terms of transfer of mass (liquid water, gases) and other processes. Practical examples and accompanying calculations are fundamental components of the course as the students learn to quantitatively explore the links between the environment and features of living organism such as the shape and color of leaves and canopies, the distribution of the rooting system, or the thickness of an animal fur. A laboratory section complements the lectures and introduces the students to basic techniques and equipment utilized in this discipline. This course can be helpful for students in the areas of plant and animal sciences, ecology, entomology, environmental sciences, and agricultural and environmental engineering.

**Prerequisite:** BIOL 110; MATH 110 or MATH 140; PHYS 250 or PHYS 211

ERM 447: Stream Restoration

3 Credits

Stream restoration including fluvial geomorphology, stream classification, impairment, sediment transport, stable stream design, and watershed assessment. ERM 447 Stream Restoration (3) Stream restoration will focus on understanding stream impairment by evaluating the stream channel, its floodplain, and the watershed supplying runoff to the stream. A wide variety of stream assessment tools will be introduced along with several stream classifications systems. Students will be expected to understand stream stability and evolution and how human activities and our infrastructure impact the health of a stream. Various restoration approaches designed to restore impaired stream reaches to stable channels will be introduced. Stream stability and the role of sediment transport in the context of pebble-count data will be introduced along with several sediment transport models. Stream biology, especially macro-invertebrates, the role of riparian buffers, and desirable plant populations will be introduced. The laboratory experiences will focus on stream assessment tools and stream surveys needed for the stream restoration design process. Students will be responsible for assessing a stream and developing a preliminary design for restoring an impaired local stream reach.

**Prerequisite:** A S M 327 or A B E 307 or C E 361

ERM 448: Rural Road Ecology and Maintenance

3 Credits

Roads are ubiquitous throughout the landscape and this course is intended for students who anticipate working in natural resource management fields. This course provides students with the fundamental understanding of the interaction of natural systems with unpaved and low volume paved roads in order to economically maintain roadways with minimum impact on the environment. The major focus area will be the road/stream interface, including the fundamentals of hydrology, geology, soils, and erosion processes as they pertain to roads and streams. It is expected that the student will gain a practical understanding of rural road maintenance in order to provide a foundation for real-world application. Emphasis is placed on Environmentally Sensitive Maintenance (ESM) practices for rural roads that are used throughout Pennsylvania. The goal of ESM practices is to minimize the environmental impact of the existing road network by maintaining proper road drainage in order to keep road materials out of the adjacent streams and surrounding landscape. Upon completion the student will be ESM certified under Pennsylvania's Dirt, Gravel and Low Volume Road Maintenance Program.

**Prerequisites:** MATH 22 and MATH 26; or MATH 41; or MATH 110 or MATH 140 Concurrent Courses: ASM 327 or BE 307 or CE 335 or CE 370 or FOR 308 or FOR 470

ERM 449: Sustainable Water Management: Economics and Policy

3 Credits

Water resource management is of fundamental importance to human societies and natural ecosystems. Yet, despite millennia of human experience in managing water resources, water shortages and water quality degradation harmful to the health and prosperity of people and to ecosystems are common, and stresses on water are expected to increase globally in coming years. Growing populations and incomes are increasing the demand for scarce water while creating new stresses on water quality. Climate change and changes in land use and land cover that accompany population growth and climate change are affecting water supplies and water quality. Addressing existing and emerging water problems requires understanding the underlying causes, and the development and implementation of remedies that are effective, efficient, resilient, fair. This is a multi-disciplinary problem. This course introduces students to the methods and contributions of economics as a behavioral and decision science to the task. Topics include water
supply costs, water demands, ecosystem services and values provided by water, efficiency and fairness in water use, water rights institutions, water markets, water pricing, effluent taxes, pollution permit trading, and methods of water project and policy evaluation.

**Prerequisites:** (MATH 22 or MATH 110 or MATH 140) and (AGBM 101 or ECON 102) Recommended Preparation: CED 201 or EBF 200

ERM 450: Wetland Conservation

3 Credits

Wetland types, classification, functions and values; hydrology, soils, and plants; introduction to wetland identification and delineation; wetland regulations. ERM (W F S) 450 Wetland Conservation (3) Wetlands are unique ecosystems, differing in many ways from both terrestrial and aquatic environments. They provide recognized values and functions to society, although these values and functions remain difficult to quantify. The study of wetlands is interdisciplinary, requiring background knowledge in science, management and policy disciplines. This course will explore the variety of wetland types and functions, and emphasize the diverse hydrological, biological, chemical, and physical interactions that occur within wetlands. Because wetlands are recognized as valuable assets in the landscape, issues surrounding wetland management and regulation have taken on increased importance; we will address these issues as well. Topics will also include the restoration of degraded wetlands and wetland creation, along with the construction of wetlands for pollution abatement. Students will become familiar with different wetland types and how they are classified, and will develop skills in understanding the interactions between wetland hydrology, hydric soils and hydrophytic vegetation. They will also develop an understanding of important national and state policies and regulations pertaining to wetlands and their protection and delineation. Classroom assessment will be based on three cumulative exams, homework assignments, and a final project. The course will fulfill 3 credits of electives or technical selections in the Wildlife and Fisheries Science major. Other students university-wide may be interested in the course, and the intention is to develop a course that is accessible to a wide variety of traditional and non-traditional students. For proper instruction, a technology classroom with computer projection equipment will be required. ERM 450 will be offered each fall semester. Enrollment will be limited to 60-80 students.

**Prerequisite:** ERM M300 or WFS S209
Cross-listed with: WFS 450

ERM 494: Undergraduate Research in Environmental Science

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisite:** permission of the Environmental Resource Management program

ERM 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of an ERM honors thesis.

**Prerequisite:** Junior or senior status in the Schreyer Honors College and permission of the ERM honors advisor

ERM 495: Internship

1-12 Credits/Maximum of 12

A supervised practicum in the environmental field. To be offered only for SA/UN grading.

**Prerequisite:** prior approval of assignment by instructor

Full-Time Equivalent Course

ERM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ERM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ERM 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered with a component in foreign countries, by individual or group instruction.

International Cultures (IL)

**Environmental Science (ENVSC)**

ENVSC 200: Introduction to Environmental Science

3 Credits

This team-taught course is designed to be the entrance/introduction to major course in Environmental Science. The course consists of seven modules. The first module is an introduction to research methods, and is designed to teach students the fundamentals of searching the primary literature, reading scientific research papers, and accessing and using available environmental databases. Modules 2–6 address various large issues in environmental science. Each of these issues manifests across spatial and temporal scales from local/short-term to global/long-term. Information in each module will be conveyed via assigned readings from a textbook, student presentations of case studies, computer laboratory exercises in which students will access existing databases with the goal of downloading and analyzing some small data set, reviews of 1–2 papers from the primary literature, and discussions of the readings. These modules cover the breadth of environmental science including population growth/control, climate science and climate change, water resources, energy issues, and pollution. The last module specifically addresses communication skills, science-based policy and resource management, and the critical importance of communication between scientists and non-scientists. This module will include writing exercises and presentation skills. At the end of the course, local environmental professionals (lawyers, regulatory personnel, health department officials, urban planners) will be invited to participate in a panel discussion of careers options.

**Prerequisite:** BIOL 110, CHEM 110
ENVSC 294: Research in Environmental Science
1-3 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small group basis.

ENVSC 296: Independent Studies in Environmental Science
1-3 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ENVSC 297: Special Topics in Environmental Science
1-3 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENVSC 400W: Case Studies in Environmental Analysis and Problem-Solving
3 Credits
A writing-intensive environmental science course comprising review and analysis of field, lab, policy, and management aspects; investigative methods; and projects.  
**Prerequisite:** BIOL 402W, CHEM 202, GEOSC 300/400 level, ENGL 202C, any PL SC or ECON

Writing Across the Curriculum

ENVSC 457: Industrial Hygiene Measurements
3 Credits
Industrial hygiene is the discipline devoted to the anticipation, recognition, evaluation, and control of hazards in the workplace. This course provides an overview of the most common industrial hygiene measurement techniques used to evaluate exposure to chemical, physical, and biological agents in the workplace. Topics will include coverage of basic definitions, exposure standards, and guidelines, and an introduction to the different types of sampling equipment and analytical methods used most often in the evaluation of airborne exposure to gases, vapors, and aerosols. Interpretation of quantitative sample results will be an area of emphasis and students will become familiar with different types of exposure distributions, appropriate sampling strategies, and different statistical tools available for making decisions in occupational exposure assessment.  

ENVSC 494: Research in Environmental Science
1-3 Credits/Maximum of 9
ENVSC 494 is an experiential course that allows undergraduates to design, complete and present a research project in environmental science.  
**Prerequisite:** 3 credits of 400-level coursework; Junior or senior standing

ENVSC 495: Internship in Environmental Science
1-3 Credits/Maximum of 9
ENVSC 495 is an off-campus internship experience with a local, regional, or national environmental organization, government agency, or private-sector business.  
**Prerequisite:** 3 credits of 400-level coursework; Junior or senior standing

ENVSC 496: Independent Studies in Environmental Science
1-3 Credits/Maximum of 9
Creative projects or specialized coursework, supervised on an individual basis, that falls outside the scope of formal ENVSC coursework.  
**Prerequisite:** 3 credits of 400-level coursework; Junior or senior standing

**Environmental Studies (ENVST)**

ENVST 100: Visions of Nature
3 Credits
An interdisciplinary introduction to environmental studies, including perspectives from ethics, economics, public policy, art, literature, history, geology, biology, and ecology. ENVST 100

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

ENVST 200: Research Methods in Environmental Studies
3 Credits
Focus on interdisciplinary research methodologies from biology, social sciences, and humanities for the study of environmental issues and problems. ENVST 200  
**Prerequisite:** BIOL 110, ENGL 015, ENVST100

ENVST 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.  

ENVST 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.  

ENVST 395: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.  
**Prerequisite:** prior approval of proposed assignment by instructor
ENVST 400: Senior Seminar in Environmental Studies

3 Credits

Writing-intensive study of a specified topic in environmental studies integrating approaches and research from a variety of disciplines. ENVST 400W

Prerequisite: ENVST 200
Writing Across the Curriculum

ENVST 424: Creative Writing and the Natural World

3 Credits

Creative writing workshop focused on the environment and related issues. ENGL (ENVST) 424 Creative Writing and the Natural World (3) American literature includes a long and rich tradition of writing that focuses on the natural world. From the oral stories of indigenous people to the journals of the first European settlers, many have looked for a way to understand their own place in the world based upon their relationship to the earth and its creatures. While Puritans often discerned the pleasure or wrath of God in the environmental changes they experienced, Transcendentalists like Henry David Thoreau and Ralph Waldo Emerson sought out moments of spiritual enlightenment by immersing themselves in the natural order. More recently, such poets as Galway Kinnell, James Wright, and Robert Bly have attempted to connect with the depths of collective unconsciousness by exploring the natural world, while others, like Mary Oliver, Dan Gerber, Jim Harrison, Gary Snyder and Wendell Berry, have used transcendental thought and melded it with Christian and Buddhist insights. Still others, like Gary Paul Nabhan, Rachel Carson, and Alison Hawthorne Deming have brought science to bear upon the riches that nature, art, and scientific exploration may offer when joined in the pursuit of a deeper understanding of, and relationship with, the natural world. This course will acquaint students with the tradition of American nature writing, as well as contemporary nature writing, in the genres of nonfiction, poetry and fiction. Students will be introduced to issues of style, philosophy, and content, as they produce their own essays, poems, and stories. The course culminates in the production of a portfolio of nature writing. Much of this work will begin in class with specific assignments, which will include field work, and feedback from other students in the class. As a workshop course in creative writing, the emphasis will be upon the production of literary texts that interact with the natural world and upon the revision of those texts.

Prerequisite: ENGL 050 or ENVST 100
Cross-listed with: ENGL 424

ENVST 424H: Creative Writing and the Natural World

3 Credits/Maximum of 3

Creative writing workshop focused on the environment and related issues. Environmental Systems Engineering (ENVSE)

ENVSE 400: Safety Engineering
3 Credits/Maximum of 3
An introduction to the application of engineering principles for the promotion of safety for workers, consumers, and the public.

Enforced Prerequisite at Enrollment: CHEM 110 and PHYS 211 and MATH 141

ENVSE 404: Surface and Interfacial Phenomena in Environmental Systems
3 Credits
Principles underlying surface and interfacial phenomena with application to mineral processing and environmental systems.

Enforced Prerequisite or Concurrent at Enrollment: CHEM 110 and MATH 141 and PHYS 212 and EME 301

Writing Across the Curriculum

ENVSE 406: Sampling and Monitoring of the Geo-Environment
3 Credits
Issues of sampling, analysis, monitoring and control techniques for effective environmental management in the extractive industries.

Enforced Prerequisite or Concurrent: MNPR 301

ENVSE 408: Contaminant Hydrology
3 Credits
Mobility of contaminants in aquifers; multiphase flow, transport, retardation and attenuation, vapor mobility, aquifer characterization, mathematical models and aquifer remediation.

Enforced Prerequisite at Enrollment: GEOSC 452

ENVSE 412: Environmental Systems Engineering Laboratory
1 Credits
A laboratory study of the principles involved in the characterization and remediation of process wastes with an emphasis on physical separations.

Enforced Prerequisite at Enrollment or Concurrent: MNPR 301

ENVSE 420: Fire Safety Engineering
3 Credits
Overview of the history and behavior of fire, hazards and risk identification, detection and suppression systems, and emergency evacuation procedures.

Enforced Prerequisite at Enrollment: CHEM 110 and MATH 141 and PHYS 212

ENVSE 427: Pollution Control in the Process Industries
3 Credits
Development of multimedia pollution control strategies for the mineral, metallurgical processing, and fossil fuel industries.

Enforced Prerequisite at Enrollment: CHEM 110 and CHEM 112 and MATH 141 and MNPR 301

ENVSE 440: Industrial Ventilation for Contaminant Control
3 Credits
Overview of toxicology, epidemiology, exposure assessment, industrial hygiene, environmental laws, and engineering approaches to protecting workers and the environment.

Enforced Prerequisite at Enrollment: CHEM 110

ENVSE 450: Environmental Health and Safety
3 Credits
Overview of toxicology, epidemiology, exposure assessment, industrial hygiene, environmental laws, and engineering approaches to protecting workers and the environment.

Enforced Prerequisite at Enrollment: CHEM 110

ENVSE 457: Industrial Hygiene Measurements
3 Credits
Industrial hygiene isthe discipline devoted the anticipation, recognition, evaluation, and control hazards in the workplace. course provides an overview the common industrial hygiene measurement techniques used evaluate exposure chemical, physical, and biological agents in the workplace. will include coverage basic definitions, exposure standards, and guidelines, and an introduction the different sampling equipment and analytical methods used often in the evaluation airborne exposure , vapors, and aerosols. Interpretation quantitative sample will be an area emphasis and will become familiar with different exposure distributions, appropriate sampling strategies, and different statistical available for making decisions in occupational exposure .
statistical tools available for making decisions in occupational exposure assessment.

**Enforced Concurrent at Enrollment:** ENVSE 457

ENVSE 470: Engineering Risk Analysis
3 Credits/Maximum of 3

Quantitative methods of systems analysis, probabilistic risk and reliability analysis, as well cost-benefit, and value of information analysis.

**Enforced Prerequisite at Enrollment:** MATH 251

ENVSE 480: Environmental Systems Engineering Process Design
3 Credits

An integrated problem-based learning experience that utilizes fundamental concepts covered in the curriculum to design a geo-environmental system.

**Enforced Prerequisite at Enrollment:** ENVSE 427 and seventh semester standing or higher in Environmental Systems Engineering (ENVSE_BS) major

ENVSE 494: Senior Thesis
1-6 Credits/Maximum of 6

Independent research and/or design projects under the supervision of the Environmental Systems Engineering program.

**Enforced Prerequisite at Enrollment:** Seventh semester standing or higher in Environmental Systems Engineering (ENVSE_BS) major Honors

ENVSE 495: Environmental Health and Safety Engineering Internship
2 Credits

Students work with an advisor to prepare technical memos and a final report summarizing the experiential education gained through employment in industry.

**Enforced Prerequisite at Enrollment:** Fifth semester standing or higher

ENVSE 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

FIN 100: Introduction to Finance
3 Credits

The nature, scope, and interdependence of the institutional and individual participants in the financial system. May not be used to satisfy Penn State Business baccalaureate degree requirements. Not available to students who have taken B A 301 or FIN 301.

**Prerequisite:** third-semester standing

FIN 108: Personal Finance
3 Credits

Personal management of budgets, bank accounts, loans, credit buying, insurance, real estate and security buying. May not be used to satisfy Smeal College baccalaureate degree requirements.

**Prerequisite:** third-semester standing

FIN 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

FIN 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FIN 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FIN 301: Corporation Finance
3 Credits

This course provides a basic understanding and framework of how firms acquire, allocate, and control their financial resources. It covers the acquisition and management of corporate capital; analysis of operations, forecasting capital requirements, raising capital, and planning profits. This is a core finance course focusing on basic financial principles and practices essential to managing a business. In addition, this course also covers financial markets, institutions, organizational forms and investments. It relies heavily on accounting and economic principles with a strong emphasis on problem solving and decision making. One objective of this course is to be able to assess the past and present performance of the firm. This can be achieved through vertical and horizontal analysis of the financial statements as well as ratio analysis. Another aspect of this course is the financial planning process. This includes concepts such as pro forma statements, developing the statement of cash flows, as well as the budgeting process through the preparation of the cash budget. Another facet of this class is to understand how financing and investment decisions are made. Students will learn about the value of money as well as fundamental techniques for valuing financial assets such as stocks and bonds. Additionally, capital budgeting techniques such as the net present value and internal rate of return are explained. Other important objectives include the management of working capital, the determination of the cost of capital, operating and financial leverage, and risk and return. The concepts and tools covered in this class allow the student to gain a fundamental understanding of how the finance function works within the business environment. The course promotes critical thinking and
will enable the student to better integrate the individual functions of a business in order to make good business decisions. A student may receive credit toward graduation for only one of the following: BA 301, FIN 100, FIN 301, or FIN 301H.

**Prerequisites:** (ENGL 15 or ENGL 30 or ESL 15 or ENGL 137H or CAS 137H) and ACCTG 211 and (ECON 102 or ECON 104) and (SCM 200 or STAT 200)

**FIN 301H: Corporation Finance (Honors)**

3 Credits

FIN 301H honors course provides insight into real world issues that are needed to effectively run a business. Students will utilize the fundamental concepts learned in finance (integrated with accounting, marketing, management, logistics, operations, and business law/ethics) as a foundation for running a business in the classroom. The "product" in this business will be a comprehensive strategic business plan for a real, live local, state, national, or international business that will serve not only as an articulation of understanding of core course concepts, but also as a supplement to the existing core package of introductory business courses. The honor students in this course will be building their strategic business plan products in electronic format in closely-knit, high performance teams. The strategic plan product development process in this course inherently involves integration across the functional areas of business: marketing, logistics, finance, and management. There is also inclusion and integration of courses in accounting, business law, management information systems, and statistics as applicable. Each student team will allocate product development responsibilities according to areas of expertise and interest. An appropriate balance of students from several majors will be assigned to each group. Class time will involve exchanging information within and across groups and coordinating activities between groups where necessary. Students will periodically meet with individual and team-based corporate mentors who will provide one-on-one advice on an as-needed basis. Students will also receive specialized training in team-based processes, leadership, and technology tools required to implement the products under development. Select members of the Penn State faculty and Smeal College alumni will be on hand at times to provide this specialized training and consulting expertise. Company owners and principals will provide periodic (monthly) reviews of honor students' work to assist them in the development of a first-class, professional business plan product.

**Prerequisites:** (ENGL 15 or ENGL 30 or ENGL 137H or ESL 15 or CAS 137H) and ACCTG 211 and (ECON 102 or ECON 104) and (SCM 200 or STAT 200)

**Honors**

**FIN 302: Introductory Financial Modeling**

3 Credits

This course applies spreadsheets to build financial models and solve numerically intensive problems in finance. FIN 302 Introductory Financial Modeling (3)This course is designed to provide students with an understanding and practical application of spreadsheet skills needed in Finance. The course will introduce students to spreadsheet models and tools to solve finance problems. It will also introduce students to finance databases and data preparation for analysis. These technical skills are necessary for Finance majors to effectively apply concepts learned in advanced finance courses and be successful in their careers. The course is intended to be an introductory level so that students can apply the skills in other courses.

**Prerequisite:** ACCTG211, ECON 102, MATH 110 or MATH 140, and SCM 200 or STAT 200; Concurrent: FIN 301

**FIN 305: Financial Management of the Business Enterprise**

3 Credits

Development of advanced practices of financial management and their application to decision making in business firm. FIN 305 Financial Management of the Business Enterprise (3) The objective of this course is to give students an understanding, and working knowledge of the major decisions faced by corporate financial managers. In general, the course will emphasize three major areas: investment and capital budgeting, financing and capital structure, dividend policy and corporate growth. A basic understanding of financial analysis and valuation will be provided. Basic corporate securities markets will be described. Determinants of securities prices, yields, and returns will be discussed. Special emphasis is placed on the role of the capital markets in financing corporate operations and investment, in facilitating corporate reorganizations and financial restructuring, and in reflecting owners wealth and evaluating the performance of corporate management. Within the general framework, a number of special topics will be covered, including mergers and acquisitions and the market for corporate control, international financial management, derivative instruments and their applications to corporate risk management. Students taking, the course should have a working knowledge of elementary statistics, and a basic understanding of accounting and financial statements.

**Prerequisite:** BA 301 or FIN 301

**FIN 305M: Financial Management of the Business Enterprise (Honors)**

3 Credits

Development of advanced practices of financial management and their application to decision making in a business firm. FIN 305M Financial Management of the Business Enterprise (Honors) (3) The objective of this course is to give students an understanding, and working knowledge of the major decisions faced by corporate financial managers. In general, the course will emphasize three major areas: investment and capital budgeting, financing and capital structure, dividend policy and corporate growth. A basic understanding of financial analysis and valuation will be provided. Basic corporate securities markets will be described. Determinants of securities prices, yields, and returns will be discussed. Special emphasis is placed on the role of the capital markets in financing corporate operations and investment, in facilitating corporate reorganizations and financial restructuring, and in reflecting owners wealth and evaluating the performance of corporate management. Students taking, the course should have a working knowledge of elementary statistics, and a basic understanding of accounting and financial statements. As an Honors course, students will study the impact of corporate activities on the market value of its stock, so a common stock pricing model is needed that accounts for factors that matter to investors. FIN 305M looks at these issues through topics such as, time value of money, risk and return, and valuation of stocks and bonds. The course concludes with topics related to specific business activities, such as capital budgeting, capital markets, capital structure, and dividend policy. The level of discussion and critical analysis expected in FIN 305M compliments the expected level of performance for honors students.
Prerequisite: B A 301 or FIN 301
Honors
Writing Across the Curriculum
FIN 305W: Financial Management of the Business Enterprise
3 Credits
Development of advanced practices of financial management and their application to decision making in a business firm.

Prerequisite: B A 301 or FIN 301
Writing Across the Curriculum
FIN 306: Investment Valuation
3 Credits
Approaches to investment strategy, investment decisions; valuation of corporate securities, including the impact of dividend policy and capital structure.

Prerequisite: FIN 301
Writing Across the Curriculum
FIN 330: Personal Financial Planning
3 Credits
Developing financial plans including cash budgets, credit purchases, investments, and insurance.

Prerequisite: third-semester standing or permission of instructor
FIN 340: Insurance Planning
3 Credits
Introduction to personal insurance including homeowner’s, auto, life, disability, health, and Social Security.

FIN 362: Intrieri Family Student Managed Fund - Associate Analyst Practicum
1-4 Credits/Maximum of 4
In this course, students will provide research support for the Officers and Lead Analyst for the Intrieri Family Student Managed Fund, an actual investment fund that currently holds a stock portfolio of approximately $250,000. The student will serve as economic, industry, and security financial analysts and portfolio managers in concert with the Standards of Practice Handbook from the CFA Institute. These standards are integral to the curriculum for all three levels of the Chartered Financial Analyst exam.

FIN 395A: Nittany Lion Fund - Associate Fund Manager Practicum
3 Credits/Maximum of 6
FIN 395A Nittany Lion Fund - Associate Fund Manager Practicum (3 per semester/maximum of 6) While the Lead Fund Manager is accountable for all work done by a given sector, an Associate Manager often does much of the behind the scenes work. Specific assignments include: putting together the weekly reports for investors, creating reports that are sent out to the Nittany Lion Fund (NFL), and providing assistance with pitches. In general, an Associate Manager is supposed to be well informed about the sector’s current holdings and with that, an Associate should be able to provide support for the Lead Manager during a stock pitch or class discussion. Although Associate Fund Managers are the workhorses of the fund, often performing some of the more tedious tasks, the position offers the opportunity to learn from the Lead Managers as well as make an impression by delivering quality work. While Lead Managers are responsible for and have the final say in stock pitches and sector strategies, it is highly encouraged that the Associates provide their Lead Managers with pitch ideas as well as inform them of their opinions about current market trends. Ultimately, the Associate Manager position is more detail and task oriented than the Lead Fund Manager position. However, there is always room to provide high quality insight into the market by asking thought provoking questions during pitches and staying current on market news. Students use financial software, such as Bloomberg Professional, Reuters Station, TradeStation, and FactSet, and must have working knowledge of various forms of financial modeling. The Penn State Investment Association (PSIA), which co-exists with the Nittany Lion Fund, LLC (NFL) assists the NFL in ensuring students are appropriately trained in these skills. The PSIA is open to students of all majors and experience levels and is the starting point for students interested in participating in the NFL.

Prerequisite: permission of program
FIN 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
FIN 405: Advanced Financial Management
3 Credits
An examination of the development and application of decision rules for major long-term financial and investment problems of the firm.

Prerequisite: FIN 305W
FIN 406: Security Analysis and Portfolio Management
3 Credits
Advanced valuation theory; fundamentals of security analysis; portfolio construction and management.

Prerequisite: B A 301 or FIN 301
FIN 406H: Security Analysis and Portfolio Management (Honors)
3 Credits
Advanced valuation theory; fundamentals of security analysis; portfolio construction and management. FIN 406H - Security Analysis and Portfolio Management (Honors) Finance 406 is about how to invest money in stocks, bonds and derivative securities. The course focus is on creating portfolios of assets rather than on picking individual assets for investment. To create a portfolio of assets, the portfolio manager must have knowledge of the assets available for purchase, the markets the assets are traded in, and the statistical and mathematical techniques needed to assign weights to the assets within the portfolio. The manager must also be able to predict changes in the economy that justify changes in the portfolio, as well as be able to evaluate the performance of the portfolio relative to standard benchmark portfolios such as the S&P500. The course begins with a review of the structure of the asset
markets, basic pricing formulas, fundamental and technical analysis, and the tools from previous statistics, economics, and calculus classes needed. Different models relating risk and return such as the CAPM and arbitrage pricing model are covered. These models exemplify how investors are willing to trade-off the variance in returns from investments with the expected value of the investment. The students then learn how to choose the weights to assign to each asset available to maximize the expected return while minimizing risk of the portfolio using the portfolio theory of Markowitz. While the focus of this section of the class is on investing in equities, the portfolio theory learned is applicable to all types of assets. Because there are important differences between stocks and bonds, the next section of the class focuses on the unique characteristics of fixed income securities. Models explaining the different risk and return characteristics of bonds are examined. Because fixed income securities prices and returns are directly linked to changes in interest rates, theories of what determines interest rates are presented and applied to evaluating the performance of portfolios including fixed income securities. The course concludes with an overview of investment in options and futures contracts. The basic pricing models for these types of assets are reviewed as well as practical concepts of investing in derivatives such as margin accounts and creating synthetic returns using combinations of different types of options. As an Honors course, the level of research and academic investigation is enhanced with outside journal readings in topics such as portfolio theory, anomalies and market efficiency, overpricing, and current topics in Portfolio Management as material is published. This material is incorporated into class discussions and course exams beyond what is covered in the standard version of the class.

**Prerequisite:** B A 301 or FIN 301

FIN 407: Multinational Financial Management

3 Credits

Analysis of the international aspects of managerial finance; emphasis on the impact of the international financial environment on firm operations.

**Prerequisite:** FIN 305W

Cross-Listed

FIN 408: Financial Markets and Institutions

3 Credits

Functional analysis of major credit institutions; sources and uses of funds; impact of government regulation.

**Prerequisite:** B A 301 or FIN 301

FIN 408H: Financial Markets and Institutions (Honors)

3 Credits

Introduction to bonds, equities, derivatives, and financial institutions including insurance, pension funds and mutual funds. FIN 408H - Financial Markets and Institutions (Honors) (3) Finance 408H is about financial institutions and markets. The markets section will include approximately 9 classes on debt markets, and another nine classes on equity markets (e.g. NYSE, NASDAQ) and derivatives (options and futures). The primary institutions covered in this course include insurance companies, mutual funds, pension funds, securities firms, and investment banks. We hope to include an analysis of personal financial planning issues as well. Reading assignments at various web sites will be made. The course will include weekly spreadsheet assignments that focus on the course concepts presented in class. These assignments ought to provide a rigorous understanding of the concepts recently presented in class and they will develop and improve the students’ Excel skills. The overarching objective is for each student to develop an understanding of markets and institutions that will provide lifetime enjoyment.

**Prerequisite:** B A 301 or FIN 301

Honors

FIN 409: Real Estate Finance and Investment

3 Credits

The sources and uses of credit; instruments and methods of financing; the theory and practice or real estate investment analysis. FIN (REST) 409 Real Estate Finance and Investment (3) Real Estate financial markets are rapidly changing, with new instruments and ideas introduced every day. Therefore, the emphasis of this class will be on preparing the students to tackle any new instrument that might be introduced to the market, understanding why and how people make money in the field, and be able to understand and utilize the innovations that have been introduced and are still being developed. The course will provide a broad coverage of real estate investment, finance, and valuation. We will study different measures of investment performance, the impact of the financing decision on real estate investment risks and return, and various real estate financing techniques. Specific topics include: legal considerations in real estate finance, present value concepts, fixed rate mortgage loans, adjustable rate and variable payment mortgages, underwriting and financing residential properties, income-producing properties and valuation fundamentals, leases, projecting cash flows, investment value, investment and risk analysis, financial leverage and financing alternatives, disposition and renovation of income properties, financing corporate real estate, real estate capital markets, the secondary mortgage market and REITS.

**Prerequisite:** B A 301 or FIN 301

Cross-Listed

FIN 410: Derivative Markets

3 Credits

Functions, techniques, and impact of speculation conducted through forward markets; the nature of speculative transactions, pricing, and methods of trading.

**Prerequisite:** FIN 406

FIN 413: Risk Management of Financial Institutions

3 Credits

Measuring and managing risk faced by financial institutions. FIN 413 Risk Management of Financial Institutions (3) This course focuses on measurement and management of risk faced by managers of modern financial institutions. Students will be introduced to various tools and techniques used to measure and analyze risk from traditional balance sheet activities (such as credit risk, liquidity risk, indolvency risk, interest rate risk and market risk) and from off-balance sheet activities. In addition, students will learn strategies for controlling and managing the risks to achieve the best risk-return outcome. This course is designed to be an upper level, undergraduate course. Students will have opportunities to apply fundamental concepts learned in other finance classes. It is
recommended for business students, especially finance majors, who wish to have careers in financial service firms or non-financial firms that use financial assets.

Prerequisite: B A 301 or FIN 301

FIN 414: Financial Trading and Applications

3 Credits

The focus of this course is the application of financial theory and technology to the practice of financial trading. The first half of the class examines tools for constructing and evaluating trading strategies. After a short review of probability and statistics, attention turns to the analysis of models for valuing options, credit default swaps, and other financial instruments. Emphasis is placed on the assumptions underlying these models and the application of these models in the real-world. This discussion includes approaches for estimating volatility and the use of the models when underlying assumptions do not hold. The first half of the course concludes with a discussion of value-at-risk and tools for evaluating performance. The analysis of these topics highlights commonly used measures of performance and the potential pitfalls using these measures. The second half of the class examines trading strategies commonly used by hedge funds. Strategies discussed include merger arbitrage, relative value, momentum, index arbitrage, and other quantitative based strategies. Students also study accounting based and fundamentally based trading strategies. Application of these strategies in both the equity and fixed income markets is examined. Attention is also paid to the impact of trading on market prices and other aspects of market microstructure. Throughout the second half of the course, students participate in a project in which they form into teams of fund managers who analyze market data with the purpose of constructing and managing a portfolio that applies various trading strategies. The fund is managed using market simulation software that allows students to execute all trades using real-time market prices and allows them to go long or short equity, commodity, fixed income, and foreign exchange instruments, as well as derivative securities. Upon completion of the project, students make a pitch to a group of potential investors (the class) in which they summarize the themes underlying their strategies, provide performance metrics for their fund, and discuss their primary trading strategies if they were to continue as fund managers. The course pedagogy is lectures, case assignments, trading and valuation simulations, and a trading project. The class will make extensive use of Bloomberg, Reuters, trading software, basic programming languages for financial software, and other technology available.

Prerequisites: FIN 305W and FIN 406

FIN 414H: Financial Trading and Applications

3 Credits/Maximum of 3

This course focuses on financial modeling and analysis of trading strategies. Bloomberg, Reuters, spreadsheets and trading simulations are used extensively.

Honors

FIN 415: Advanced Financial Modeling

3 Credits

Develop financial models using spreadsheets, VBA programming, and trading room applications such as Bloomberg and @Risk. FIN 415 Advanced Financial Modeling (3) Students will develop financial models using spreadsheets, VBA programs, and trading room applications such as Bloomberg and @Risk. Students learn Excel's financial functions, shortcuts, web queries, data analysis capabilities, and optimization techniques. Students use @Risk software to define variable distributions and correlations to run Monte Carlo simulations to evaluate stochastic processes. Students access market data through the internet and proprietary providers such as Bloomberg. Students build models to construct optimal portfolios of securities and asset classes. Students estimate asset returns using CAPM, multi-factor models, and fundamental analysis. Students estimate asset volatility using exponential weighting, GARCH, and Black-Scholes implied volatility. Students model and optimize bond portfolios using portfolio duration, convexity, leverage, and income. Students value options using Monte Carlo, Black-Scholes, and binomial option pricing models. Students learn to apply Brownian motion models to asset returns and prices. Students construct and test delta-hedging strategies for option portfolios. Students use matrix algebra and Excel matrix functions to compute portfolio return and volatility. Students write VBA functions and macros using VBA code, objects, array functions, loops, matrix operations, and data types. Achievement is measured by assignments, computer-based exams, and a final assignment.

Prerequisite: FIN 406

FIN 418: Introduction to Energy Finance

3 Credits

This course provides an introduction to the physical and financial energy markets, along with concepts important to managing risk.

Prerequisite: FIN 301 or equivalent approved course

FIN 419: Advanced Energy Finance

3 Credits

This course provides an investigation of energy products; energy commodity price formation; credit, counterparty, country risk assessment, and ethics.

Prerequisite: FIN 418

FIN 420: Investment and Portfolio Analysis

3 Credits

Investment and risk, types of security investments, sources of investment information, the broker, the stock market, portfolio management.

Prerequisite: FIN 301

FIN 427: Derivative Securities

3 Credits

Introduction to futures contracts and options, leading to a working understanding of their importance in financial management applications.

Prerequisite: FIN 420 or approval of program

FIN 428: Fixed Income Securities

3 Credits

This course develops a framework for the analysis of fixed income securities, one of the largest segments of global financial markets.
Valuation and risk-return characteristics of these instruments are examined, in addition to trading and portfolio strategies for bonds, forwards, swaps, and repurchase agreements. Students examine these securities with regard to duration, convexity, credit risk, and formal term structure models. Various data sources and financial software, including Bloomberg Professional®, are used to integrate theoretical concepts with practical applications. The aim of this course is to provide you with an introduction to the valuation of fixed income securities and the management of fixed income investment portfolios. In their simplest form, fixed income securities are characterized by pre-determined cash-flows that occur at fixed points in time, thus the term “fixed income”. Coupon bonds are the most widely recognized fixed income securities. We will start with the basics of bond pricing - the relationship between the price of a bond, measures of return on the bond, and measures of risk. The tools for the valuation of bonds, fixed income derivatives and credit derivatives will be covered. With these building blocks in place, we will discuss bond portfolio management and construction.

**Prerequisites:** FIN 301 and FIN 420

FIN 430: Estate Planning

3 Credits

Liquidity planning, titling and transfer of property, trusts, federal unified tax system, gifting, incapacity planning, legal documents. FIN 430 Estate Planning (3) This course addresses estate planning issues for individuals as part of an overall personal financial plan. Personal financial planning encompasses budgeting, credit management, insurance, taxes, investments and retirement planning in addition to estate planning. The objective of this course is identifying and quantifying the goals of an individual regarding their final wishes and determining how best to meet those goals given the current applicable laws and the individual's situation. The estate administration and probate process are discussed along with common estate documents. The titling and transfer of assets as well as asset valuation are covered. Methods used to provide estate liquidity are presented. Common forms of trusts that are used in estate planning are introduced along with an overview of basic methods of transferring family owned businesses. Case studies are emphasized since estate planning is unique to each individual's situation. Some legal research is commonly incorporated into the course because estate planning is based on federal and state law. Student evaluation generally consists of examinations, individual and group assignments, quizzes, and case studies. Students desiring a career in financial services, law, or tax accounting should consider incorporating this course into their program of study.

**Prerequisite:** FIN 330 and ACCTG310 or ACCTG405

FIN 450: Retirement Planning

3 Credits

Retirement planning: qualified and non-qualified plans, characteristics, provisions, regulations administration, application approach with case studies. FIN 450 Retirement Planning (3) This course presents retirement planning from the perspective of a financial services practitioner. Students will develop a working knowledge of both qualified and non-qualified company retirement plans including plan characteristics, provisions, applications, and qualifications. Individual retirement plans will also be covered. Exposure to the regulatory and legal basis for plans will be provided. Application case studies will be integrated throughout the course. Emphasis will be placed on designing an appropriate plan given either an individual or a company situation.

3 Credits

Case studies are used to develop skills in solving a variety of financial management problems. FIN 451 Intermediate Financial Management (3) This course is designed to reinforce and extend the principles from its prerequisite, FIN 301, Corporation Finance. It is a required course for the Finance major. It will also serve as a business supporting course for students in other School of Business majors. Students will develop skills necessary to solve a variety of complex financial problems by applying statistical and analytical techniques and utilizing electronic spreadsheets. The course will enable students to develop a firm foundation in the principles of financial management and an understanding of how concepts in financial management are used in the valuation process. The topics are consistent with the knowledge required to prepare students for the relevant portions of Level I of the Chartered Financial Analysts (CFA) Exam. The course will address important financial management topics, including the methods of analyzing capital budgeting decisions and the unique problems they pose, long-term capital structure and dividend policy decisions, corporate financial analysis and forecasting, working capital management, and additional special topics in financial management.

**Prerequisite:** FIN 301

FIN 456: International Capital Markets

3 Credits

This course develops understanding of international capital markets by striking a balance between institutional details, theoretical foundation and practical application. FIN 456 International Capital Markets (3) (IL) This course extends the issues of international finance into a framework for international investing. It is designed for students aspiring to be money managers and investors operating across national boundaries. Foreign travel enables students to contrast the micro-structure of financial markets in the United States with those in other centers that play important roles in our global financial system. Students are also given an opportunity to learn about business, cultural, and political aspects of international investment. Besides class meetings on campus, students are assigned readings, videos, and research projects to be completed before the foreign experience component of the course. While abroad, students visit specific sites and attend specific lectures that will enable them to complete further course work upon their return to the United States. Topics include the case for international asset diversification, international asset pricing, international stock, fixed-income, and derivative markets, and the process of international investing. Other materials will be specific to the foreign business center visited during the course. (The initial offering of this course included a visit to London where students toured the stock exchange and financial firms, attended lectures, and met with financial executives; this gave students exposure to a major international financial institution and the largest currency market in the world.) The travel portion requires additional costs to the student beyond tuition.

**Prerequisite:** FIN 301

International Cultures (IL)
FIN 460: Real Estate Financial Analysis

3 Credits

Debt and equity financing, capital structure, "creative financing," risk analysis, corporate asset management. FIN (R M) 460 Real Estate Financial Analysis (3) The objective of this course is to provide in-depth coverage of real estate investment and financing decisions. The focus is on the private market, including corporate asset management. Investment analysis moves from the basics of forecasting cash flows, through advanced topics including the impact of real option value on investment and development decisions. Risk measurement is given particular attention with a focus on sensitivity and simulation analysis. There is some coverage of asset pricing models like the Capital Asset Pricing Model, which is critically analyzed with respect to its applicability in real estate markets. The impact of illiquidity, management costs, and the suspicion of non-normally distributed returns are explored, as are the implications of relative market inefficiency. The financing module begins with the basics of mortgage debt mathematics, which is then extended to include comparisons of various repayment programs. Included are interest-only, balloon, shared appreciation, growing equity, graduated payment and reverse annuity loans, as well as various creative financing of commercial properties. The latter include participating mortgages, convertible mortgages, and mezzanine debt. Featured in the corporate asset management section is the lease/buy decision. Other topics may be addresses based on current events. It is anticipated that guest speakers will be invited where appropriate.

Prerequisite: FIN 305W or R M 303 or R M 330W
Cross-listed with: RM 460

FIN 461: Portfolio Management and Analysis

3 Credits

Investment policy and process, modern portfolio theory, portfolio construction, and portfolio performance measurement and evaluation. FIN 461 Portfolio Management and Analysis (3) The course provides a mix between theories and applications of portfolio management. The content is divided into five sections: (1) implications of the efficient market hypothesis and behavior finance in portfolio management, (2) investment policy and process, (3) diversification and modern portfolio theory, (4) portfolio performance measurement and evaluation and (5) bond portfolio management. After completing the course, students are expected to (1) demonstrate the importance of portfolio management under the efficient market hypothesis and behavior finance, (2) write an investment policy statement, (3) create an optimal portfolio, (4) manage bond and equity portfolios, and (5) measure and evaluate portfolio performance.

Prerequisite: FIN 420

FIN 462: Intrieri Family Student Managed Fund - Fund Officer / Lead Analyst Practicum

1-3 Credits/Maximum of 4

Students provide leadership as an Officer or Lead Analyst for the Intrieri Family Student Managed Fund. Students conduct economic, industry, and company financial analysis to recommend investment portfolio decisions. In this course, students will provide leadership as an Officer and/or Lead Analyst for the Intrieri Family Student Managed Fund, an actual investment fund that currently holds a stock portfolio of approximately $250,000. The student will serve as economic, industry, and security financial analysts and portfolio managers in concert with the Standards of Practice Handbook from the CFA Institute. These standards are integral to the curriculum for all three levels of the Chartered Financial Analyst exam.

Prerequisite: FIN 461 or approval of program

FIN 470: Real Estate and Capital Markets

3 Credits

Analysis of publicly-traded real estate of both the equity, (REITs) and debt (MBSs) sides. The course also provides international perspectives. FIN 470 / RM 470 Real Estate and Capital Markets (3) The objectives of this course are to expose the student and explore the issues associated with the analysis of "public" ("Wall Street") real estate, including both equities (such as Real Estate Investment Trusts or REITs) and debt vehicles (such as Mortgage-Backed Securities or MBSs). In addition, the course will focus on the increasingly globalization of real estate capital markets as the real estate sector becomes integrated into the global financial system. The differences between private and public real estate analysis will also be explored, including the suitability of traditional asset pricing models for real estate analysis. Topics include the growing impact of institutional real estate forces on the real estate sector, the use of modern financial economics methods to real estate including the concept of market efficiency, modern portfolio theory applications, market measures of risk and return, the use of option-based models, and other advances. The rise of Wall Street’s interest in real estate securities is an important institutional development and serves as the underlying background for the analysis of MBSs using fixed-income security techniques. As globalization has spread, the real estate sector has moved with these changes and prospects for a global real estate market are examined and evaluated. This course serves as a compliment to FIN 460, which emphasizes traditional financial analyses of individual real estate projects. In FIN 470, real estate securities are viewed as a natural extension towards the complete integration of real estate and capital markets. In this sense, these courses will enable traditional and modern analyses of the real estate sector for years to come.

Prerequisite: FIN 305W or R M 303 or R M 330W
Cross-listed with: RM 470

FIN 471: International Finance

3 Credits

Financial decision making in an international environment. Emphasis on topics relevant to small businesses and entrepreneurs. FIN 471 International Finance (3) This course provides an understanding of the basic terminology, structure, and importance of international finance for corporations. It will also help enhance analytical and critical thinking skills. Topics of study include foreign exchange (FX), FX markets, FX instruments, FX risk, hedging of these risks, international debt and equity markets, etc.

Prerequisite: FIN 301

FIN 475: Financial Decision Making

3 Credits

Problems and cases in financial decision making for non-financial corporations and financial institutions. FIN 475 Financial Decision Making (3) The objective of this course is to tie together the various topics in finance such as corporate finance, investments, and financial
institutions & markets. Using the variety of different analytical tools and techniques that students have been exposed to, they will: - Evaluate the relationship between profitability and solvency of a firm. - Project the need for short term and long term financing. - Evaluate the various sources of financing and recommend the optimal. - Budget the capital that is raised to identify the profitable projects that capital should be invested in. - Evaluate different dividend policies to maximize value of a firm. - Carefully examine the risk-return tradeoff that portfolio managers face. - Study the relationship between assets and liabilities of financial institutions. - Critically evaluate synergies that are created in mergers and acquisitions.

**Prerequisite:** FIN 302, FIN 420 and senior standing

**FIN 476: Financial Ethics**

1 Credits

In this one credit course, we explore ethical standards for financial analysts and portfolio managers as a part of the Standards of Practice Handbook from the CFA Institute. In this one credit course, we explore ethical standards for financial analysts and portfolio managers as a part of the Standards of Practice Handbook from the CFA Institute, which also serves as a part of the curriculum for all three levels of the Chartered Financial Analyst exams and both levels of the Chartered Alternative Investment Analyst (CAIA) exams.

**Prerequisite:** FIN 301

**FIN 481: Advanced Financial Analysis**

3 Credits

Capstone course integrating financial analysis coursework. This course is based on the case study method which provides a challenging setting in which to apply business concepts. FIN 481 Advanced Financial Analysis (3) It is a required course for the Finance major. Students are expected to develop a working knowledge of several advanced topics in financial analysis sufficient to help prepare them for the relevant portions of Level I of the Chartered Financial Analysts (CFA) Exam. They also are expected to demonstrate their ability to integrate the tools and knowledge developed in their previous coursework by completing cases. Each class is devoted to discussion of firms in various situations. Class participants are challenged to apply financial concepts and concepts from other disciplines. This course requires extensive, detailed pre-class prep for each class. Use of spreadsheets is required. The course objectives include the following: *Application of financial concepts and related tools. *Further develop decision making skills. *Enhance critical thinking skills. *Augment written and oral communication skills.

**Prerequisite:** ACCTG 426, FIN 405

**FIN 489: Seminar in Finance**

3 Credits

In-depth study of new trends, concepts, and practices in financial or portfolio management. FIN 489 Seminar in Finance (3) New financial institutions or practices are created to address the needs of financial managers and investors as a result of changes in economic conditions, government legislation and regulation, geopolitical events, or financial markets. Examples of changes during the past decade that effect financial managers are elimination of the Glass-Steagall Act that separated commercial and investment banking activities, evolution of nation-wide branch banking, development of financial derivatives markets that can be used to manage financial risk exposure, creation of the European Monetary Union and the Euro currency, and growth of private (defined contribution) pension plans. The Seminar will give students the opportunity to rigorously examine one of these current developments before they are included in textbooks and regular courses. As such, the Seminar will rely primarily on recent publications in academic and practitioner journals. The Seminar will start by studying the problems that motivated financial innovation. Students will consider the economic difficulties that existed, or would have existed, in the absence of the financial innovation(s) covered by the Seminar. This will be followed by comparing methods of financial management before and after the financial innovation. In examining innovative practices in financial management, Seminar participants will study the strengths and weaknesses of the specific financial institutions that facilitate the innovations they examine, such as the organized exchanges where financial derivatives are traded. Participants will also learn the nature of related government regulation and judge the effectiveness of this regulation. In the case of financial derivatives a federal regulatory agency oversees the operation of financial derivatives markets. An important component of the Seminar is the study of specific practices for utilizing financial innovations. Business firms have developed sophisticated methods for using financial derivatives. These practices will be carefully assessed from the standpoint of the practitioner.

**Prerequisite:** FIN 301 or equivalent; 3 additional credits of course work in Finance

**FIN 491: Financial Planning Capstone**

3 Credits

Critical thinking and decision-making about personal financial planning topics in the context of the financial planning process. FIN 491 Financial Planning Capstone (3) This capstone course is designed to reinforce and extend the principles from each of its prerequisite courses. The CFP Board of Directors are requiring the addition of this financial plan course as a requirement to CFP Board's educational standards to enhance the knowledge, skills and abilities of individuals seeking to attain the CFP®reg; certification to deliver professional and competent financial planning services to the public. This course will engage the student in critical thinking and decision-making about personal financial planning topics in the context of the financial planning process. The purpose of this course is to both refine and develop the skills needed to become successful financial planners when working with individuals, families, and business owners in helping them to meet their financial needs and goals. This course will address the important financial planning topics listed in the previous section.

**Prerequisite:** FIN 330, FIN 420, FIN 430, FIN 450

**FIN 494: Research Projects**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**FIN 494H: Research Projects**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
Honors

FIN 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

FIN 495A: Lead Fund Manager Practicum
3 Credits/Maximum of 6
FIN 495A Nittany Lion Fund – Lead Fund Manager Practicum (3 per semester/maximum of 6) A Lead Fund Manager is accountable for sector performance as well as sector output. This means that while the Lead Fund Manager has to be an effective delegator of work to his or her Associate(s), the manager must also have great attention to detail when reviewing all aspects of pitches, weekly reports, and earnings reports. A Lead Fund Manager focuses more on knowing the big trends in his or her overall sector and in each subsector. The Lead is the strategist for the sector. He or she has the responsibility of choosing what stocks to pitch in class and at PSIA meetings. This means that the Leads must constantly reevaluate not only their current portfolio, but the sector as a whole, in order to find where to best allocate their respective funds. Another major responsibility that a Lead Fund Manager has is to lead a group of anywhere from 10-50 PSIA members. While there are weekly educations for the PSIA analysts, it is one of the most important responsibilities of a Lead Fund Manager to provide support for the PSIA analysts to help them with their PSIA certification assignments. In addition to helping the analysts understand their weekly assignments, the Lead Fund Managers are also responsible for holding weekly sector meetings to give sector-specific educations to a smaller group of PSIA analysts. The goal for any Lead should be to get as many PSIA analysts as involved and interested as possible in PSIA. The interest generated should draw PSIA analysts to apply for entrance into the Nittany Lion Fund. PSIA is the feeder system for the NLF and making sure there are intelligent and motivated applicants each semester ensures that the investment group will continue to have a strong class going forward. Consequently, once the Lead Manager has developed analysts’ interest in applying for the NLF, it is an unwritten responsibility of the Lead to help the applicants to become as best prepared as possible for the interviews (Associates are encouraged to help new applicants as well). In total, the role that the Lead plays is not just that of a figurehead, the Lead must be well informed of current events and trends within their sector, and they must be able to speak eloquently of their investment strategy when speaking in class, at PSIA meetings, or to investors at the yearly investment meeting.

Prerequisite: FIN 395A and permission of program

FIN 495B: Nittany Lion Fund - Executive Board Practicum
3 Credits/Maximum of 6
FIN 495B - Nittany Lion Fund - Executive Board Practicum (3 per semester/maximum of 6) The Executive Board practicum affords students with intense practical experience in oversight and performance of the Nittany Lion Fund (NLF). Executive Board members and Directors are accountable for all aspects of the NLF. An Associate Fund Manager is responsible for all work that is presented to his or her Lead Fund Manager and in turn, a Lead Fund Manager is responsible for all work that is submitted for the Nittany Lion Fund (NLF) to view. While those are certainly tremendous responsibilities, an Executive Board Member is ultimately responsible for any and every document that leaves the Nittany Lion Fund, most of which are delivered to investors. It is the responsibility of the Executive Board to make sure that both the weekly news, and quarterly performance releases are flawless. Additionally, although the Lead Fund Managers are responsible for their individual sector’s performance, the Executive Board is held responsible for the overall performance of the Nittany Lion Fund. This means that the Executive Board must do a number of things to keep performance awareness and accountability at high levels. Students in these executive positions are expected to ask excellent questions during stock pitches and be, in a sense, a devil’s advocate for each pitch, making sure that there was proper due diligence and thought put into the strategy of the pitch. With regard to being accountable to investors, the Executive Board is responsible for conducting weekly conference calls with the NLF’s investment committee as well as leading the yearly investor meeting. As for the PSIA, the Executive Board is responsible for booking locations for meetings, handling the funds for all club transactions, and developing and implementing the education for the analysts to become PSIA certified. Education is a very large part of the Nittany Lion Fund. An Executive Board Member is expected to utilize their past experience to provide helpful influence to other members of the Nittany Lion Fund as well as the large group of PSIA members. While the members of the Executive Board all have different responsibilities, in aggregate the group is responsible for the performance of Nittany Lion Fund as a whole, as well as being individual figureheads and spokesmen for the NLF.

FIN 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FIN 496A: **SPECIAL TOPICS**
1-6 Credits

FIN 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FIN 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Financial Services (FINSV)

FINSV 400: Investment Valuation for the Financial Services Professional
3 Credits
Approaches to investment strategies, investment decisions, and the valuation of corporate securities. FINSV 400 Investment Valuation for the Financial Services Professional (3) FINSV 400 is one of the required courses for the the Financial Service Option of the Bachelor of Science in Business (BSB) degree program. The purpose of FINSV 400 is to attain an understanding of investment analysis and portfolio management. A key
focus is given to the study of the pricing of corporate securities and the relationship between investment risk and return.

**Prerequisite:** FIN 301

FINSV 411: Federal Income Taxation for the Financial Services Professional

3 Credits

Tax regulations, tax policy, tax determination, and tax planning applicable for personal/business decision making; emphasis on taxation of individuals. FINSV 411 Federal Income Taxation for the Financial Services Professional (3) The purpose of this course is to attain an appreciation of and a familiarity with the Federal Income Tax Code as well as develop the analytical skills to evaluate potential tax liability and tax planning on a situational basis. Furthermore, the student should attain a working knowledge and comfort level in the use of tax software. This will be accomplished via a five module approach. The modules are: a. Module 1 An Introduction to United States Taxes and the Basic Tax Model: An introduction to both income taxation and other types of United States taxes. The purposes of the Federal tax law are examined and the legislative, administrative, and judicial sources of Federal tax law are analyzed. Module 1 concludes with the introduction of the basic tax model for the individual taxpayer. b. Module 2 Gross Income: Presents the income component of the basic tax model. Included in this module are the determination of what is income and the statutory exclusions that are permitted in calculating gross income. c. Module 3 Deductions: Presents the deduction component of the basic tax model. Deductions are classified as business versus–non-business, "for" versus "from", employee versus employer, active versus passive, and reimbursed versus unreimbursed. The effect of each of these classifications is analyzed. The presentation includes deductions that are permitted, limitations and disallowances associated with deductions, and the treatment of losses. d. Module 4 Tax Computation Methods, Payment Procedures, and Tax Credits: Presents several topics that relate to tax liability determination. The calculation of tax liability, the use of tax credits to reduce calculated tax liability, and the timing of the payment of the calculated tax liability are discussed. e. Module 5 Property Transactions: Presents the tax treatment of sales, exchanges, and other dispositions of property. Included are the determination of the realized gain or loss, recognized gain or loss, and the classification of the recognized gain or loss as capital or ordinary. The topic of basis is evaluated both in terms of its effect on the calculation of the gain or loss and in terms of the determination of the basis of any subsequent acquisition of property. The use of a tax software program is embedded within each module.

**Prerequisite:** ACCTG211

FINSV 420: Estate Planning for the Financial Services Professional

3 Credits

Studies the processes relating to the use, conservation, and transfer of an individual's wealth; emphasizing investments, insurance and taxation. FINSV 420 Estate Planning for the Financial Services Professional (3) This course examines the why and how people plan for their retirement. The course examines the various aspects of estate planning: wills and trusts, estate and gift tax planning, estate administration and taxation. The course guides the student in a step-by-step process through the entire estate planning process. Critical to the process is gathering the necessary financial facts, setting realistic objectives, and planning the requisite income tax and investment strategies. Students will utilize a range of personal financial statements and planning forms to assist in the gathering, organization, and use of pertinent data. This course has four objectives: (1) To understand the motives for why people plan for their retirement. Related to retirement planning is the disposition of the residual value of their estate in a financial and tax prudent manner. (2) To understand the process by which individuals explore the various decision options. The most frequently cited motivation for estate planning is to minimize the tax burden on beneficiaries and to maintain the integrity of the planning process. (3) Students are motivated to understand how estate planners manage their client's wealth portfolios. The increasing wealth of the baby-boomer generation and those that follow make this process more important than for earlier generations. (4) To help students prepare for the Certified Financial Planner certification exams. FINSV 420 is an additional course in the Financial Services Option of the Bachelor of Science in Business (BSB) program. It is a relatively sophisticated course and students who select FINSV 420 will complete it only after completing courses in investments, insurance, and taxes. Evaluation will normally take the form of examinations, a research project, and class participation. At most campuses, the course will be offered once per year.

**Prerequisite:** FINSV400, FINSV411

**First-Year Seminar (CAP)**

CAP 100: Orientation to the Undergraduate Experience

1 Credits

To facilitate transition of new students through active engagement and introduction to university and campus resources. CAP 100s CAP 100S Orientation to the Undergraduate Experience (2) This course, CAP 100S, which is a one-credit course, completes the Penn State Capital College's first-year seminar. The overarching goal of the FYS is to provide students with an introduction to Penn State culture and resources, information literacy and collaboration skills needed for academic success, as well as an introduction to majors and careers relevant to the discipline. These core elements of the FYS will aid students in the professional/academic community both inside and outside Penn State University. The instructor will place emphasis on having students work in collaborative groups on academically themed project(s) deemed relevant to the discipline.

**First-Year Seminar**

CAP 110: First-Year Seminar for Capital College, The School of Behavioral Sciences and Education

1 Credits

Introduction to Penn State culture, information literacy and collaboration skills, and introduction to majors and careers relevant to the discipline. CAP 110S CAP 110S First-Year Seminar for Capital College, The School of Behavioral Sciences and Education (1) This course is a one-credit course, completes Penn State Capital College's first-year seminar for The School of Behavioral Sciences and Education. The overarching goal of the FYS is to provide students with an introduction to Penn State culture and resources, information literacy, and collaboration skills needed for academic success, as well as an introduction to majors and careers relevant to the discipline. These core elements of the FYS will aid students in the professional/academic community both inside and outside Penn State. The instructor will place emphasis on having students work in collaborative groups on academically themed project(s) deemed relevant to the discipline.
First-Year Seminar

CAP 120: First-Year Seminar for Business

1 Credits

Introduction to Penn State culture, information literacy and collaboration skills, and introduction to majors and careers relevant to the discipline. CAP 120S CAP 120S First-Year Seminar for Business (1) This course, which is a 1 credit course, completes the Penn State Capital College's first-year seminar for the School of Business Administration. The overarching goal of the FYS is to provide students with an introduction to Penn State culture and resources, information literacy and collaboration skills needed for academic success, as well as an introduction to majors and careers relevant to the discipline. These core elements of the FYS will aid students in the professional/academic community both inside and outside Penn State. The instructor will place emphasis on having students work in collaborative groups on academically themed project(s) deemed relevant to the discipline.

First-Year Seminar

CAP 140: First-Year Seminar for Humanities

1 Credits

Introduction to the discipline including: ethics, research methods, communications, career opportunities/issues and applied technology.

First-Year Seminar

CAP 150: First-Year Seminar for Capital College, The School of Public Affairs

1 Credits

Introduction to Penn State culture, information literacy and collaboration skills, and introduction to majors and careers relevant to the discipline. CAP 150S CAP 150S First-Year Seminar for Capital College (1) This course, which is a 1 credit course, completes the Penn State Capital College's first-year seminar for the School of Public Affairs. The overarching goal of the FYS is to provide students with an introduction to Penn State culture and resources, information literacy and collaboration skills needed for academic success, as well as an introduction to majors and careers relevant to the discipline. These core elements of the FYS will aid students in the professional/academic community both inside and outside Penn State. The instructor will place emphasis on having students work in collaborative groups on academically themed project(s) deemed relevant to the discipline.

First-Year Seminar

CAP 160: First-Year Seminar for Capital College, The School of Science, Engineering and Technology

1 Credits

Introduction to Penn State culture, information literacy and collaboration skills, and introduction to majors and careers relevant to the discipline. Untitled DocumentCAP 160S First Year Seminar (1) This one-credit course, CAP 160S, is the Penn State Capital College's first year seminar for the School of Science, Engineering and Technology. The overarching goal of the FYS is to provide students with an introduction to Penn State culture and resources, information literacy and collaboration skills needed for academic success, as well as an introduction to majors and careers relevant to the discipline. These core elements of the FYS will aid students in the professional/academic community both inside and outside Penn State University. The instructor will place emphasis on having students work in collaborative groups on academically themed project(s) deemed relevant to the discipline.

First-Year Seminar

Food Science (FDSC)

FDSC 105: Food Facts and Fads

3 Credits

This course is an introduction to the central role of food and food production in all areas of human life. The social and technological bases of various food systems are examined from the hunter-gatherer to the agrarian to the modern industrial system and its discontents. The course also considers how different types of food (e.g., meat, milk, cereals, chocolate) are preserved and distributed, examining both the effects of the development of the science and technology on society and vice versa. The roles of various food components (e.g., proteins, carbohydrates, fats, and vitamins) are examined both within the foods as determinants of quality, and also in terms of human nutrition and health. Finally, various other ways food may be considered appropriate or inappropriate will be studied including scientifically based reasons (e.g., safety, taste, adulteration) and non-scientifically based reasons (e.g., ethical, legal, religious).

Cross-listed with: STS 105
Bachelor of Arts: Social and Behavioral Sciences
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

FDSC 150S: Food Science First Year Engagement

2 Credits

This first year seminar course was designed to facilitate transition into college with a particular emphasis on food sciences. This course is structured into two main modules, (1) general academic requirements (such as expectations) and (2) the field of food science. Topics related to fulfilling academic requirements provides students with resources related to academic advising, time management, student support services, getting to know the college, and student affairs. In the first module, our aim is that (1) students will able to identify and understand opportunities that exist within academic-related support services at Penn State and (2) become familiar with major requirements and understand as well as interpret degree audits. In the first module, our aim is that (1) students understand what food science is, (2) identify and understand extracurricular and curricular opportunities within food science, and (3) identify and understand career opportunities within the food science field. Specific examples of topics related to module two are faculty huddle assignments (series of faculty-driven guest speaker series), hands-on activities related to food microbiology and safety, food engineering, food chemistry, and food choice, and team building challenge tasks (e.g., Chef Microbe and The Food Waste Challenge).

First-Year Seminar
FDSC 200: Introductory Food Science

3 Credits

General overview and principles; food constituents and properties; quality and safety; preservation methods; processing animal and plant products.

Prerequisite: CHEM 110

FDSC 201: Introductory Food Science Practicum

1 Credit

Demonstration to illustrate actual chemical reactions in food systems and visits to campus and area food processing operations.

Prerequisite: or concurrent: FD SC200

FDSC 205: Food Plant Sanitation

3 Credits

Organization and administration of food plant sanitation with emphasis on the production and maintenance of safe, wholesome food products.

Prerequisite: FD SC200

FDSC 206: Improving Food Quality

3 Credits

Modern philosophies coupled with practical information on improving product quality, including topics on HACCP, SPC, recall procedures and customer relations.

Prerequisite: FD SC200

FDSC 207: Animal Products Technology

2 Credits

Composition, safety, palatability, preservation, and processing of foods from animals, impact of animal production and handling practices on product properties. FDSC 207 / ANSC 207 Animal Products Technology (2) This course is intended to give students knowledge and understanding of production and processing of foods derived from animals (meat, milk, and eggs). Upon completion of this course students will be able to describe and explain the physical and biochemical characteristics of muscle foods, milk, and eggs. Students will be able to describe and compare harvesting, processing, and preservation procedures used in preparation of animal products for human consumption. Students will be prepared to predict the impact of variations in animal production, handling, harvesting, and product processing on meat, milk, and egg product characteristics. This is one of a group of courses dealing with foods from animals. Related courses offered in Animal Science covers animal growth and development and evaluation of animals and meat products. Related courses in Food Science cover food microbiology, food chemistry, and meat and dairy processing technology. The content of this course is intended to emphasize the connection between animal production and the resulting food products. FDSC 207 / ANSC 207 is intended to be of general interest to people who produce or eat animal products and thus is an integral part of the Animal Sciences major. This course will also be useful for strengthening meat industry knowledge for students in Food Science. FDSC 207 / ANSC 207 will be offered one semester per year. Student performance will be evaluated through written exams, quizzes, and written reports.

Cross-listed with: ANSC 207

FDSC 208: Animal Products Technology Laboratory

1 Credit

Harvesting and processing of foods from animals; hands-on and demonstration exercises; industry procedures for processing meat, milk, and egg products. FDSC 208 / ANSC 208 Animal Products Technology Laboratory (1) This laboratory is intended to be taken along with or following Animal Products Technology lecture. Providing students with an opportunity to experience the procedures involved in harvesting and processing foods from animals. Upon completion of this course students will be able to describe, demonstrate, and explain procedures commonly used in harvesting and processing of muscle food, milk, and egg products. Students will be able to recognize and predict the impact of incorrect procedures for harvesting and processing muscle food, milk, and egg products. The course includes hands-on exercises and demonstrations that allow students to experience the "look and feel" of industry procedures used in harvesting and processing meat, milk, and egg products for human consumption. Focus on issues related to food safety and food quality. Student performance is evaluated through weekly written reports, and a final lab exam.

Prerequisite: or concurrent: AN SC207

FDSC 209: Food, Values, and Health

3 Credits/Maximum of 3

Introduction to the principles of wine production emphasizing basic wine grape biology, fermentation science, wine chemistry, and wine perception. FDSC 233 / HORT 233 provides an interdisciplinary treatment of the science of grape growing, vinification, and wine consumption. Students will learn how viticultural practices translate to wine chemistry, and how key variables associated with that conversion affect consumer perception. The course will cover topics such as basic grapevine physiology, vineyard management practices, vinification, domestic and international wine styles, and consumer interactions with wine (e.g., sensory evaluation, health aspects of wine). Although the course is considered to be introductory, students must have a basic grounding in university-level chemistry and biology. Course material will be primarily transmitted through lectures, reading assignments to be completed outside of class, and brief practical exercises in the Sensory Evaluation Center (Department of Food Science).

Prerequisite: CHEM 110 or BIOL 110

Cross-listed with: HORT 233

FDSC 210: Food Plant Sanitation

3 Credits

Focus on issues related to food safety and food quality. Student performance is evaluated through written exams, quizzes, and written reports.

Cross-listed with: ANSC 208

FDSC 211: Food Science (FDSC)
FDSC 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FDSC 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

FDSC 400: Food Chemistry
4 Credits

Chemical properties of food constituents as influenced by processing and storage. FD SC 400 Food Chemistry (4) Students successfully completing this class will be able to describe the properties of food in terms of the underlying chemistry. They will be able to conduct simple laboratory investigations of the major reactions and report the results in an acceptable scientific format. Achievement of these goals requires both an accumulation of facts and the development of an analytical approach to food. In the context of a degree in Food Science this course builds upon core science courses to allow students to apply chemical principles to food. By understanding the important underlying chemistry of foods, students will be able to study food processing in terms of the science as well as technology involved. While the course is primarily designed as a requirement of the Food Science major, it is also expected to be useful for non-food science students as a practical application of chemical principles. The course prerequisites are B M B 211 and B M B 212 and students are expected to be familiar with the structures of the key biomolecules (i.e., proteins, lipids, carbohydrates).

Prerequisite: CHEM 202. Prerequisite or concurrent: B M B 211, B M B 212, FD SC 200, FD SC 201

FDSC 402: Supervised Experience in Food Science Teaching
1-3 Credits/Maximum of 5

Theories and experiences of teaching and learning relevant to food science and to the work of a teaching assistant. This course provides an introduction to the ways topics in food science can be effectively taught to diverse populations. Students will serve as a teaching assistant in a food science course and in addition meet regularly as a group to reflect on their experience as learners and teachers in the context of readings from the educational literature. The focus on the class is on the teaching of food science topics, so special attention will be given on laboratory and project based learning as well as teaching to industry short courses and in the context of cooperative extension. This course is only available to students currently serving as undergraduate teaching assistants in food science and enrollment is by permission of the instructor.

Prerequisite: Junior or senior standing in food science. Permission of

FDSC 403: Sensory Data Collection & Analysis
3 Credits

The field of Sensory and Consumer Science is primarily focused on responses of consumers to food products and non-food fast-moving consumer goods (e.g., shampoo). These responses may be sensory/ perceptual (i.e., how sweet, how bitter, how smooth) or affective (i.e., liking / preference), with the assumption that the former generally drives the latter. Numerous tools have been developed by sensory practitioners over the last 70 years, with additional influences from experimental psychology. The course also addresses contemporary research on pedagogy that indicate applied statistics are best taught in context to the field in which students will apply the statistical concepts. Here, students will gain practice applying introductory statistical topics (t-tests, Analysis of Variance, etc) to sensory and consumer data collected from human participants.

Prerequisites: STAT 250 or STAT 240 or STAT 200

FDSC 404: Sensory Evaluation of Foods
3 Credits

Sensory evaluation of food, methods of test analyses, panel selection and training, taste sensation theory, consumer testing methods. FD SC 404 Sensory Evaluation of Foods (2) This course is designed to demonstrate how the senses function in the perception of tastes, flavors, and textures of foods and how sensory tests are used to measure human perceptions. Students will have the opportunity to design sensory tests and apply statistical methods when interpreting sensory test results. The overall objective of this course is to learn the theories and practical applications of sensory evaluation that will enable students to conduct valid sensory tests and use the test results in the decision making process in food product development. Evaluation will be based on written essay exams, group reports, and written lab reports in which they will be expected to demonstrate their understanding of theoretical issues regarding sensory testing and how to use statistical procedures to effectively interpret the test results. This course is a support course for the Food Science major.

Prerequisite: STAT 250, Junior standing

FDSC 405: Food Engineering Principles
3 Credits

Engineering principles of importance to food manufacturing, including units, dimensions, mass and energy balance, fluid flow, rheology, heat transfer, and psychrometrics. FD SC 405 Food Engineering Principles (3) Food engineering will discuss the principles of the various unit operations used in the food processing and manufacturing industry. Topics covered will include: units, dimensions, mass and energy balance, fluid flow, rheology, heat transfer, psychrometrics. Through lectures, the student will learn the principles of fluid flow, heat transfer and mass transfer as applied to food processing and manufacturing operations. Through practicum sessions, the student will be exposed to practical applications in the above three areas. Additionally, they will learn to analyze experimental data, organize and communicate thoughts in a logical fashion through cooperative and collaborative learning strategies, and to write effective lab reports. Through practicum sessions, they will also learn numerical problem solving and to size and select equipment for fluid flow, heat transfer and drying operations within the food industry. Student evaluation within this course will be conducted through weekly quizzes, home works, lab write-ups and three exams. This is a required course for the food science major. This course serves as a prerequisite for several 4th year required courses within the food science major.

Prerequisite: MATH 110, PHYS 250. Prerequisite or concurrent: FD SC 200, FD SC 201
FDSC 406: Physiology of Nutrition
3 Credits
Physiological mechanisms involved in thirst and appetite, digestion, absorption, utilization of nutrients, respiration, and body temperature regulation.

Prerequisite: FD SC 200, FD SC 201, B M B 211 CONCURRENT: FD SC 200; FD SC 201
Writing Across the Curriculum

FDSC 407: Food Toxins
2 Credits
Microbiological and chemical aspects of food poisoning; toxicological principles; case histories and prevention of problems.

Prerequisite: senior standing in food science or related majors

FDSC 408: Food Microbiology
3 Credits
Food Microbiology focuses on the application of microbiological principles to foods and food ingredients. Topics covered include: potential for microbial growth in a particular food or food ingredient based on the following parameters - biological structure, nutrient composition, naturally occurring inhibitors, pH, water activity, oxidation reduction potential, temperature, atmosphere conditions and humidity; choice of appropriate microbial detection methods for groups of organisms and foodborne pathogens; identification of types and the consequence of growth of pathogens and non-pathogens associated with particular commodities; evaluation of the effect of different processing conditions on the destruction, survival and growth of spoilage and pathogenic microorganisms; identification of significant factors affecting the association of pathogens with food and food ingredients, events leading to infection and/or intoxication, and prevention and control of foodborne illness; comprehension of the importance of food microbiology in everyday living. Student knowledge will be evaluated through examinations and other class activities.

Prerequisite: MICRB 201, FD SC 200, FD SC 201 CONCURRENT: FD SC 200, FD SC 201

FDSC 409: Laboratory in Food Microbiology
2 Credits/Maximum of 2
Methods of isolation, detection of spoilage, pathogenic microorganisms in foods; effects of processing and preservation on survival of food microorganisms. FD SC 409W Laboratory in Food Microbiology (3) Food Microbiology Laboratory is intended to demonstrate microbiological concepts through the appropriate use of equipment and laboratory procedures. The laboratory focuses on the practical application of microbiological principles to foods and food ingredients based on the following experiences: development of proficiency in using selected microbiological techniques currently employed in regulatory, quality control and research laboratories; performance of specific microbiological analyses of foods to assess numbers and kinds of spoilage organisms or foodborne pathogens; evaluation of the effects of several processing methods on growth and survival of microorganisms. The course emphasizes problem solving and critical thinking as manifested by communication skills (such as writing); scientific analysis of data, including statistics where applicable; and usage of primary scientific sources in the food microbiology literature. Practical laboratory skills are assessed through measurement of proficiency. Evaluation will be conducted via projects and examinations throughout the semester. This course is required for Food Science majors. Practical laboratory skills are assessed using written lab reports, projects, and examinations.

Prerequisite: MICRB 202 Prerequisite or concurrent: FD SC 200, FD SC 201, FD SC 408
Writing Across the Curriculum

FDSC 410: Chemical Methods of Food Analysis
3 Credits
Qualitative and quantitative determinations of food constituents.

Prerequisite: B M B 212, FD SC 400. Prerequisite or concurrent: FD SC 200, FD SC 201

FDSC 411: Managing Food Quality
3 Credits/Maximum of 3
Principles and applications of Hazard Analysis Critical Control Points. Statistical tools for the control and improvement of food quality. FD SC 411 is an introduction to organizational and HACCP concepts related to quality food production. FD SC 200, FD SC 201, STAT 250 and FD SC 408 are the prerequisite courses for FD SC 411. It is expected that students will have a understanding of the following statistical concepts: measures of central tendency and variability, use of histograms, discrete probability distributions (binomial, Poisson), random variables, continuous probability distributions (the normal distribution), the Central Limit Theorem, confidence interval estimation, means comparison, correlation, simple linear regression, use of scatter diagrams, intrinsic and extrinsic factors governing microbiological growth, the basis of food preservation techniques, knowledge of specific food-borne pathogens and the products they are commonly associated with, and basic microbial testing procedures. The course will include practice in the form of problem sets and "mini-labs" and provide time for recitation. In addition, it will allow the students to pursue the following topics: root cause analysis (1 period), design of experiments (5 periods), and shelf life determination (4 periods).

Prerequisite: FD SC 200, FD SC 201, FD SC 408, STAT 250

FDSC 413: Science and Technology of Plant Foods
3 Credits/Maximum of 3
Investigate the physical and chemical behavior of plant-based raw materials and ingredients, with emphasis on parameters influencing finished product quality. FD SC 413 Science and Technology of Plant Foods (3) This course focuses on the unique importance of foods produced from plants to human health and wellness. The influence of cultural practices, harvesting and handling methods and processing technology on quality and safety of whole, fresh and processed food products using minimal processing and fermentation to preserve food products from plant sources will be emphasized.

Prerequisite: FD SC 200, FD SC 201. And at least 2 of the following 400 level courses: FD SC 400, FD SC 405; FD SC 408; FD SC 410
FDSC 414: Science and Technology of Dairy Foods

3 Credits/Maximum of 3

Investigate the physical and chemical behavior of dairy-based raw materials and ingredients, with emphasis on parameters influencing finished product specifications. FD SC 414 Science and Technology of Dairy Foods (3)FD SC 414 provides students with information about the composition, properties and physiochemical aspects of milk and milk products and an understanding of the changes that occur in milk during processing into a variety of dairy products. Laboratory exercises are held weekly and complement the topic being addressed in lecture. A semester-long group project is conducted during the course to help students integrate knowledge gained throughout the Food Science Curriculum. The project focuses on a "real life" product development problem and requires students to develop problem statements, design experiments, design formula and processing schemes, obtain ingredients and actually manufacture a product. Time is allotted in the laboratory schedule for some group activities; other are scheduled outside of class.

Prerequisite: FD SC 200, FD SC 201. And at least 2 of the following 400 level courses: FD SC 400; FD SC 405; FD SC 408; FD SC 410

FDSC 415: Science and Technology of Muscle Foods

3 Credits/Maximum of 3

Investigate the physical and chemical properties of muscle food commodities, with emphasis on muscle-based ingredients in formulated foods. FD SC 415 Science and Technology of Muscle Foods (3)This course applies food science and technology to the processing, storage and handling of red meat, poultry, and seafood products. The course includes two lectures and one lab session each week. The laboratory sessions are conducted in the Meat Laboratory located on Porter Road. Student performance is evaluated based on exams, lab reports, and homework exercises. Course objectives are set to: 1. help students understand the nature and importance of structure, compositional and quality differences among muscle food ingredients and their impact on product manufacturing, 2. inform students of the basic steps of primary processing for livestock, poultry and seafood species and their impact on meat properties, 3. give students first-hand experience with typical manufacturing steps and processes for fresh, cured, smoked, fermented, dried or cooked meats and help them understand how variations in processing will affect finished product properties, and 4. give students practice in applying the scientific method in answering questions or solving problems that may arise during the manufacture of muscle foods products. Course activities draw on the students' prior knowledge of food chemistry, food engineering, food microbiology and food analysis, applying concepts from those disciplines in the manufacture and evaluation of meat products. Course topics cover the range from meat science through technical and practical aspects of meat product manufacture including product quality, safety, profitability and regulatory issues. There is emphasis on meat industry practices including traditional and recent technology. Through laboratory exercises and independent group projects students gain experience in application of the scientific method for solving product development problems.

Prerequisite: FD SC 200, FD SC 201. And at least 2 of the following 400 level courses: FD SC 400; FD SC 405; FD SC 408; FD SC 410

FDSC 422: Communicating Research in Agricultural Sciences

1 Credits

This course provides opportunities to develop effective communication skills within the context of scientific research. Students participating in independent studies with faculty mentors will use their independent research projects as the subject of a series of exercises that will enhance their abilities to share scientific ideals and findings with a variety of audiences including grant writing, poster presentations, and both technical and non-technical oral presentations about research topics. This course will prepare students for graduate school and, importantly, provide students with a set of skills that would be applicable to any career.

Cross-listed with: AG 422

FDSC 430: Unit Operations in Food Processing

3 Credits

Thermal processing, refrigeration, freezing, dehydration, and concentration in the food industry, including effects on food quality; food packaging; waste management. FD SC 430 Unit Operations in Food Processing (3)Unit Operations in Food Processing will discuss major unit operations used in the food processing and manufacturing industry. Topics covered will include: thermal processing, microwave heating, extrusion, food packaging and waste management. Through lectures, the student will learn the principles of selected unit operations in food manufacturing, and the effects of input and operational parameters on performance and food quality. Through practicum sessions, the student will be exposed to practical applications in the above areas. Additionally, they will learn to analyze experimental data, organize and communicate thoughts in a logical fashion through cooperative and collaborative learning strategies, and to write effective lab reports. Through practicum sessions, they will also learn numerical problem solving and to size and select equipment for food manufacturing operations. Student evaluation within this course will be conducted through weekly quizzes, home works, lab write-ups and two exams. This is a required course for the food science major.

Prerequisite: FD SC405 , FD SC400 , FD SC408

FDSC 444: Arguing about Food

3 Credits

The food science major seeks to educate students in the sciences and technologies important in the industrial manufacture of food and food scientists tend to value foods in this context. Food is good if it can be manufactured at scale, distributed and sold at a profit. The qualities of the food can be defined in largely physical terms (e.g., price and costs, free from pathogens, certain levels of defined nutrients, good sensory scores, stability, and uniform and predictable properties). However, deservedly or not, food attracts more ethical attention than other goods. For food scientists to fail to appreciate the different values, theirs and others, that impact arguments about food is harmful for (i) the food scientists themselves who may feel conflicted if they cannot resolve their personal preferences for food (perhaps local and organic) with the value set of their profession. (ii) the quality of the public conversation around food if scientists and technicians cannot usefully contribute their perspectives and (iii) the food companies that employ the scientists and who seek to make and sell products acceptable to a set of consumers. The first part of the course will focus on some foundational ideas
useful to all controversies. A background in toxicology (or, if most of the projects are around the healthfulness as opposed to the risks of food, nutrition), epistemology in science, critiques of sciences, science as a social construct, ethics. The second part of the course will use current controversies to examine the ways different values combine with empirical scientific facts to create arguments about foods. Students are not taught to win arguments but rather examine how they are structured and why they are appealing to different people. Students will use concepts from social science and philosophy (ethics, epistemology) to critique the strong normative opinions of guest speakers and readings. Throughout the course they will work in groups around projects on specific current controversies related to the formulation or manufacture of foods. They will collect and critique the scientific facts available and then respond to the speakers/readings by generating multiple different arguments reflecting the different perspectives (¿how might the speaker think about my case¿?).

**Prerequisite:** FDSC 200

FDSC 460: Food Production in Italy

1 Credits/Maximum of 1

Embedded study tour of food processing facilities abroad. D SC / INTAG 460 is designed to give upper level food science students an appreciation of how food is produced and processed abroad. Students participate in a number of production facility tours, interact with food scientists native to Italy, and gain valuable international experience. A major point of emphasis for the course is comparing and contrasting food production norms in the U.S. and in Italy. The course consists of pre-trip classes/meetings and a faculty-guided trip of Italy. Prior to the travel component of the course, students work in small groups to research a specific food product that is of economic and cultural importance to an Italian region of interest, then write reports to be presented in-country before a tour of the related product’s production facility. The course integrates and builds upon core concepts in food chemistry and food microbiology; as such, FD SC / INTAG 460 is targeted towards upper-level food science undergraduate students, as well as food science graduate students.

**Prerequisite:** FD SC 400, FD SC 408, or permission of program

FDSC 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a Food Science honors thesis.

**Prerequisite:** junior or senior status in the Schreyer Honors College and permission of the Food Science honors advisor

Honors

FDSC 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

Full-Time Equivalent Course
Food Consumers and Eaters. Each of these three-week modules will focus on 3-4 cases of change efforts either led from “above” through government policies or business initiatives or from “below” by grassroots groups or social movements. Cases will be selected to compare and contrast U.S. contexts with other international contexts and to highlight the diverse experiences and perspectives across racial-ethnic, class, cultural and gender differences within the food and agricultural system. The course will conclude by synthesizing ideas and insights about the limitations and potentials of different approaches to food systems change. In the last week of class, students will also give “lightning talks” distilling their learning about food systems change through an individual semester-long field project with a local or regional community group, business, agency, or farm.

Prerequisite: AG BM 170
Cross-listed with: CED 442

FDSYS 490: From Agriculture to Culture: Perspectives on your food from seed to plate
1 Credit

This course explores a diversity of contemporary topics of the food system, as well as current and emergent career opportunities. Emphasis is on the multi-disciplinary and interdisciplinary nature of work inherent to many careers throughout the food value chain. The food system has received greater public attention over the past 15-20 years as we face increasingly complex challenges of environmental resource quality and quantity; climate change impacts; health, hunger and malnutrition; and distributional equity and ethics of the food. Beyond growing public awareness and interest, the need exists for fuller knowledge about complexity and change across the food system. The course provides a framework where students see the food system as a comprehensive value chain encompassing producers, processors and distributors who jointly deliver food to consumers, and do so embedded in community, cultural, institutional and regulatory contexts that are variously supportive or constraining of the multiple goals for the food system. During the course, a combination of in-class presentations by food systems stakeholders, reading of relevant literature and reflection on students’ own immersive experiences in the food system will expose students to issues and opportunities along the entire value chain.

Prerequisite: FDSYS 495

FDSYS 495: Internship

1-18 Credits/Maximum of 18

FDSYS 495 is an internship experience with a food systems related organization or entity. This individualized course includes three components: a proposal of the individualized internship, developed in conjunction with the sponsor organization, to be approved by a supervising faculty member and the minor coordinator before registering for the course; the completion of the internship experience, monitored by the sponsor organization and supervising faculty member; and a written and/or oral presentation detailing the internship experience. The course is designed to help students refine their skills in problem solving, critical reflection, systems thinking, community engagement, and oral and written communication.

Prerequisite: INSTRUCTOR PERMISSION

Forensic Arts (FRNAR)

FRNAR 100: Introduction to Forensic Photography
3 Credits

This course will explore the principles of forensic photography and photographic methods, and discuss the procedures and standards that differentiate forensic photography from “artistic” photography and other methods of documentary photography. Through readings, analysis and photographic practice, this course will explore the fundamentals of photography, including lighting, image quality, composition, and more. Students will then apply and implement these fundamentals in forensic settings, for evidence documentation such as accidents, injuries, fingerprints, footprints, and bloodstains. Students will follow the standards and guidelines created by Scientific Working Groups in the taking of these images.

General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

Forensic Science (FRNSC)

FRNSC 100: Introduction to Forensic Science
3 Credits

Introduction forensic science. FRNSC 100 Introduction to Forensic Science (3) (GN) The course will review the application of the physical and social sciences as they apply to the forensic analysis of evidence. Students will gain an understanding of how forensic science and the law intersect to solve crimes. The course will track evidence recovered from the crime scene, as it moves to the crime laboratory where it is analyzed and into the courtroom where it is presented to a jury. The course will cover the most common types of physical evidence obtained in criminal and civil cases.

General Education: Natural Sciences (GN)

FRNSC 200: Introduction to Crime Scene Investigation
3 Credits

This course offers an exploration of the science, management, and investigative techniques for the field of crime scene investigation. FRNSC 200 Introduction to Crime Scene Investigation (3) (GN) Students will develop the intellectual skills needed to be able to plan for and organize a crime scene investigation. Each student will understand the nature and value of each kind of physical evidence and how to recognize, collect and preserve it. They will research all the topics in this course and provide their own evidence of competency in each in the form of a professional portfolio. A student who demonstrates competency in the subject matter of this course: *Employs the philosophies and practice of science; *Generates hypotheses of crimes based on evidence; *Can use deduction in a scientific manner; *Is tenacious when recovering and developing evidence; *Prescribes recovery and development cascades for: fingerprints; trace evidence; impression evidence; biological evidence *Prescribes and amends crime scene search plans; *Sketches crime scenes to scale; *Makes competent use of limited time, human and other resources; *Calculates: measurements for crime scene sketches; bullet trajectories; Angel of impact; and area of impact *Provides complete,
admissible reconstruction reports; *Understands and accounts for chain of custody

General Education: Natural Sciences (GN)

FRNSC 210: Essential Practices of Forensic Science

3 Credits

Practices of forensic science including documentation, microscopy, communication of results, and integration of concepts from other sciences, mathematics, and statistics. FRNSC 210 Essential Practices of Forensic Science (3) In this course, students will learn the essential practices of forensic science and criminalistics. The necessity of an objective, rigorous, scientific approach in a forensic investigation will be stressed. This course will prepare students to understand the foundation of forensic science practice including the basic knowledge required to understand the nature and origin of physical evidence, preservation of the physical evidence record, forensic microscopy, and communication of results. This course uses an intensive, problem-solving style and through practical exercises, students will be introduced to * Documentation techniques including measurements, notes, sketches, photography, and other techniques * Basic microscopy and forensic microscopy * Verbal and written communication of forensic findings The primary aims of the course are to * Introduce students to scientific philosophy, integrity, forensic science, criminalistics, basic practices of forensic science/criminalistics, and the role of the criminalist as they relate to a forensic investigation * Prepare students for advanced 400-level courses in forensic science and criminalistics.

Enforced Prerequisite at Enrollment: FRNSC 100 and CHEM 110 and CHEM 111

FRNSC 294: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

FRNSC 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

FRNSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

FRNSC 400: Courtroom Proceedings and Testimony

1 Credits

Introduction to courtroom proceedings and testimony as they related to forensic science. FRNSC 400 Courtroom Proceedings and Testimony (1) Classroom discussions will focus on the structure and procedures of the courtroom, the role of its members, admissibility issues, and how testimony is presented in court. Students will read transcripts from actual forensic cases, will discuss how the evidence was presented in court, and will have an opportunity to present data in mock proceedings. At the end of the course, students will have a strong understanding of how courts operate regarding the introduction of forensic evidence. The course is relevant to any forensic science student who has taken FRNSC 201 and 301, and should be taken either concurrent with or before FRNSC 401. Any student in the Forensic Science major who has an interest in obtaining employment in a private forensic company or a local, state or federal law enforcement agency will benefit greatly from this course. This is a 400-level forensics course for students in the Forensic Science major. It will also satisfy a requirement for accreditation by the Forensic Science Education Programs Accreditation Commission (FEPAC).

Enforced Prerequisite at Enrollment: FRNSC 411 and FRNSC 413

FRNSC 410: A Scientific Approach to Crime Scene Investigation

2 Credits

Principles of crime scene investigation with emphasis on scientific philosophy, concepts, and procedures. FRNSC 410 A Scientific Approach to Crime Scene Investigation (2) In this course, students will learn many of the essential principles and techniques of crime scene investigation. The necessity of a rigorous scientific approach will be stressed. This course uses an intensive, problem-solving style to teach scene management and the recognition, evaluation, enhancement, documentation, control, and collection of physical evidence. Students will be introduced to: * Scene management principles * Search techniques * Techniques to recognize, enhance, document, and collect various types of physical evidence * Communication of procedures and results * Scene reconstruction and its role in a scientific investigation The primary aim of the course is to immerse students in the scientific philosophy, integrity, scene investigation procedures, criminalistics, and role of the criminalist as they relate to scene investigation.

Enforced Prerequisite at Enrollment: FRNSC 210 and (STAT 200 or STAT 250)

FRNSC 411: Criminalistics: Trace and Impression Evidence

3 Credits

Laboratory-based examination of forensic evidence; microscopy, classification and identification. FRNSC 411 Criminalistics: Trace and Impression Evidence (3) Laboratory-based examination of physical evidence typically recovered from crime scenes. Examination of physical evidence will occur according to established forensic procedures, including the location of trace evidence and performance of presumptive and confirmatory tests. Students will establish a laboratory notebook to document their findings. Since forensic testing ultimately results in testimony in a courtroom, students will prepare written reports of their findings and learn how to present their findings in a courtroom setting. The course will concentrate on microscopy (stereo, transmitted light, polarized light, and comparison), physical and chemical techniques to classify evidence, and pattern matching techniques to individualize impression evidence. The course is relevant to any student majoring in Forensic Science or who has an interest in obtaining employment in local, state, or federal law enforcement agencies and crime lab facilities.

Enforced Prerequisite at Enrollment: FRNSC 210 and (STAT 200 or STAT 250) and (PHYS 212 or PHYS 251)

FRNSC 413: Criminalistics: Biology

3 Credits

Laboratory-based examination of forensic evidence; biological fluid identification, hair microscopy. FRNSC 413 Criminalistics: Biology
(3) Laboratory-based examination of biological evidence typically recovered from crime scenes. Examination of biological evidence will occur according to established forensic procedures, including the identification of biological evidence and the performance of presumptive and confirmatory tests. Students will establish a laboratory notebook to document their findings. Since forensic testing ultimately results in testimony in a courtroom, students will prepare written reports of their findings and learn how to present their findings in a courtroom setting. The course will concentrate on the analysis of biological such as human blood, semen, saliva, urine, fecal matter and hair, including the employment of chemical, biological, and biochemical techniques to classify evidence. The course is relevant to any student majoring in Forensic Science or who has an interest in obtaining employment in local, state, or federal law enforcement agencies and crime lab facilities.

**Enforced Prerequisite at Enrollment:** FRNSC major and FRNSC 210 and (BIOL 230W or MICRB 202 or BMB 251 or BIOL 240W)

FRNSC 415: Laboratory in Crime Scene Investigation

2 Credits

Laboratory course covering crime scene investigation with emphasis on scientific philosophy, concepts, procedures, problem solving, and hands-on activities.

**Enforced Prerequisite at Enrollment:** FRNSC 410 Writing Across the Curriculum

FRNSC 421W: Forensic Molecular Biology

4 Credits

Concepts and application of molecular biology techniques to analyze biological evidence collected at crime scenes. FRNSC 421W Forensic Molecular Biology (4) Classroom discussions will focus on the application of biochemistry and molecular biology techniques in forensic DNA analysis. The course will start with a history of forensic biology techniques and move quickly to modern day techniques (e.g., STR analysis). Laboratory analysis will include population and mock evidence samples. Students will expand their knowledge of population genetics and fine tune their practical laboratory skills. Students will learn about laboratory safety, quality assurance and control, and ethics. They will discuss how evidence is presented in court and have the opportunity to present their data in mock deposition proceedings. Laboratory exercises will result in the preparation of courtroom ready materials (data, documents, and reports). Many of the classroom discussions will be problem solving exercises designed to emphasize specific applications of laboratory analysis. At the end of the course, students will have a strong understanding of forensic STR analysis of biological evidence, and how to convey their findings in written format. In the laboratory, students will have analyzed different sample types, interpreted DNA profiles (including mixtures), prepared laboratory reports and case files, and presented the evidence in mock testimony proceedings. As a result, students will have the basic skills necessary to work in a forensic biology or DNA crime laboratory. The course is relevant to any Forensic Science major who has an interest in obtaining employment in a local, state or federal law enforcement agency and/or crime laboratory facility. This is a 400-level forensics course that is required for students in the Forensic Science major who elect to complete the biology option.

**Enforced Prerequisite at Enrollment:** BMB 400 and BMB 401 and BMB 442 and FRNSC 413 and Prerequisite or Concurrent: FRNSC 400 Writing Across the Curriculum

FRNSC 427W: Forensic Chemistry

4 Credits

Analytical and instrumental methods used in the forensic sciences with special emphasis on the analysis and characterization of trace evidence. Forensic chemistry is a classroom and laboratory based course designed to introduce the student to the forensic analysis of trace evidence according to established forensic procedures. The course will include a history of forensic chemistry laboratory. The course will rely heavily on the students' knowledge and skills that have been learned or acquired during their studies in the prerequisite course work. The prerequisite knowledge include, but are not limited to: algebra, calculus, general chemistry, organic chemistry, analytical chemistry, basic statistics, polarizing light microscopy, spectroscopy theory, chromatography theory, proper evidence handling practice, and good writing skills. All of these knowledge areas are represented in the required pre-requisite courses which are CHEM 213 AND CHEM 227 AND (FRNSC 411 OR CHEM 431W).

**Enforced Prerequisite at Enrollment:** CHEM 213 and CHEM 227 and (FRNSC 411 OR CHEM 431W) Cross-listed with: CHEM 427W Writing Across the Curriculum

FRNSC 475: Forensic Science Seminar

1 Credits

Presentation and discussion of special issues in forensic science; extension and application of background knowledge to unusual topics and cases.

**Enforced Prerequisite or Concurrent at Enrollment:** FRNSC 485

FRNSC 485: Coalescence of Forensic Science Concepts

4 Credits

Advanced concepts in criminalistics as they apply to criminal and civil investigations.

**Enforced Prerequisite at Enrollment:** FRNSC 411 and FRNSC 413 and FRNSC 415 or Concurrent: FRNSC 421W and FRNSC 427W Writing Across the Curriculum

FRNSC 494: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
FRSC 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
FRSC 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Forest Technology (FORT)

FORT 100: Introduction to Forestry
1 Credits
A general introduction to forest ecology, history, management, and practices.

First-Year Seminar

FORT 105: Forest Measurements
3 Credits/Maximum of 3
Measurement of forests and forest products. FORT 105 Forest Mensuration (3) FORT 105 is a first-year, three-credit course required for the completion of the associate degree in Forest Technology. The course covers the techniques, procedures, and equipment used to measure tree and forest parameters, including various forest products. The course also covers statistical concepts and sampling and includes the use of current computer software. The course includes lectures, and students improve their skills in weekly field lab exercises. The course objectives are for students to learn the principles and techniques used in forest mensuration, the use of tools and technology used in forest mensuration, the use of statistics as related to forest mensuration, to prepare and write comprehensive, professional reports, and to learn to work well as a member of a crew under field conditions by always performing accurate and safe work and by following directions and assignments of the instructor. Course grades will be based on lecture exams, a cumulative final, quizzes, lab reports, assignments, and attendance and participation in class.

FORT 110: Forest Inventories
3 Credits
Application of forest mensuration, mapping, GIS, sampling, and statistical analysis to the inventory of forest resources. FORT 110 Forest Inventories (3) FORT 110 is a three-credit, field-lab-oriented course that is a continuation of FORT 105 (Forest Mensuration) and builds upon other forestry, math, and English courses. Students will apply the principles of tree measurements to the inventory of forest resources. The major inventory systems will be covered as well as sampling techniques and statistical analysis of data. The management and stewardship of forest resources depend upon the collection, analysis, and conveyance of quantitative and qualitative data that describe forest resources. The data is used to make informed, science-based management decisions concerning the growth, health, and/or volume of forest resources. The basis of the course is learning how to plan, conduct, coordinate, and summarize forest inventories. The course objectives are for students to develop an understanding of sampling techniques and statistical analysis in the inventory of forest resources, learn how to use forest inventory systems currently used in natural resource management, conduct inventories that are cost-efficient and that meet predetermined sampling standards, learn to accurately and efficiently process and compute inventory data by hand and computer, learn to prepare and write comprehensive, professional cruise, and inventory reports for supervisors and/or clients, and learn to work well as a member of an inventory crew under field conditions. Conducting accurate and safe work, following directions, and the assignments of supervisors and instructors is imperative. Course grades will be based on lecture exams, cumulative final, quizzes, lab reports, assignments, and class attendance and participation.

Prerequisite: FORT 105

FORT 140: Forest Surveying
3 Credits/Maximum of 3
Plane surveying for forestry applications using compass, survey equipment, and GPS; topographic map reading, deed research, and land descriptions. FORT 140 Forest Surveying (3) FORT 140 is a three-credit, field-lab-oriented course that reinforces the skills gained in FORT 130 (Forest Mapping Systems) and MATH 081 (Technical Mathematics). Students will apply the principles of mapping and mathematics to land surveying techniques used by forest technicians and foresters. The course objectives are for students to learn to measure horizontal and vertical angles and distances in the field, perform boundary, topographic, and road surveys, use USGS topographic maps, and become proficient with deed and boundary research. Course grades will be based on exams, quizzes, lab reports, assignments, and class attendance and participation.

Prerequisite: MATH 021

FORT 150: Dendrology
3 Credits
Taxonomy, identification, ranges, and uses of important U.S. timber species and lesser vegetation of a regional nature. FORT 150 Dendrology (3) FORT 150 is a first-semester, three-credit course for students in the Forest Technology program as well as interested students in other academic programs. It is a field course that is focused on taxonomy, nomenclature, ecology, and silvics of common forest plant species. Students are exposed to native and introduced to plant species in south central Pennsylvania. Scientific names, common names, geographic ranges, and economic importance are taught. Students learn to identify plants by key characteristics: arrangement, bark, buds, flowers, fruits, general form, and leaves. Basic plant biology as well as ecological relationships are covered. Information learned in this course serves as the foundation for future courses, including FORT 110 (Forest Inventories) and FORT 160 (Silvicultural Practices). Course objectives are for students to gain an understanding of the rules of scientific nomenclature, to know the meanings of scientific terms used in dendrology, to identify 100-plus different woody plant species, to know ranges and site requirements for major species, and to know and be able to spell correctly the common and scientific names (family, genus, and species) of plants. Grading and course structure will be based on daily field quizzes, a mid-term examination, and field and written final examinations.
FORT 160: Silvicultural Practices

3 Credits

Principles and techniques of forest establishment, culture, and regeneration systems. FORT 160 Silvicultural Practices (3) FORT 160 is a second-semester, three-credit course in the Forest Technology program. It builds upon the knowledge of stand silvics introduced in FORT 150 (Dendrology). It combines the tools of FORT 105 (Forest Mensuration) with basic ecology and enables students to understand the processes and management alternatives in the forest ecosystem. This is a lecture class supplemented with weekly field laboratory sessions. The lab sessions allow students to experience silvicultural practices through design and implementation. The course objectives are for students to develop an understanding of silvics of North American forests, to understand silvicultural relationships, and to be able to write and administer silvicultural prescriptions. Course grading will be based on lecture exams, a cumulative final, lab reports, assignments, and attendance and participation.

Prerequisite: FORT 150

FORT 170: Forest Harvesting and Operations

3 Credits

Forest harvesting and intermediate operations: forest worker safety, hand and power tools, harvest planning, and best management practices. FORT 170 Forest Harvesting and Operations (3) FORT 170 is a three-credit, applied field-oriented course in the Forest Technology curriculum. The course is offered in the four-week summer intersession following completion of the second semester. Students will be introduced to woods safety and the identification of hazards; the safety and use of hand and power tools used in forest harvesting and intermediate operations; and logging equipment safety, maintenance, and operation. Axes, crosscut saws, chain saws, heavy logging equipment including logging skidder, bulldozer, and woods tractor will be used. Students will work in crews to complete a forest harvest or thinning operation from beginning to end including: forest inventory and stand analysis; the use of best management practices; the development of an erosion and sedimentation plan; harvest planning and layout; forest stand marking; and the harvest of the marked forest stand. Daily performance is evaluated based upon safety, effort, and motivation, skill improvement, cooperation, and attendance. Course grades will be based on quizzes, assignments, and daily performance.

Prerequisite: FORT 110, FORT 160, American Red Cross Standard First Aid and CPR

FORT 175: Forest Products Industry Tour

1 Credit

Field tour of local and regional forest product industries. FORT 175 Forest Products Industry Tour (1) FORT 175 is a 1-credit, field-based course in the Forest Technology curriculum. The course is offered in the 4-week summer intersession following completion of the second semester. It provides students with the opportunity to visit and tour forest products industries. Tours of sawmills, pulp and paper facilities, plywood factories, and other manufacturing industries are incorporated into a 3-to 4-day field trip in the Mid-Atlantic region. This course provides a basic understanding of forest products industries for FORT 250 (Forest Management Practices). The course objectives are for students to develop an understanding of general industrial and manufacturing sectors of forestry and to learn and apply basic concepts of business, economics, and management in relation to forest products. Course grades will be determined by the level of participation at each forest products industry visited and by the quality of trip reports.

Prerequisite: FORT 110, FORT 160

FORT 200: Wood Identification and Properties

1 Credit

Anatomy of wood and bark; cell wall formation and composition; and identification of wood by gross and microscopic qualities. FORT 200 Wood Identification and Properties (1) FORT 200 is a third-semester, one-credit course at Mont Alto. It will introduce students to the basic concepts of the anatomical properties of wood and bark cells. Students taking this class will learn: basic information on tree form and structure; basic information on cell wall chemical composition, formation, and structure. A significant part of the course will be learning to identify and differentiate selected hardwood and softwood species from gross and microscopic characteristics. The course objectives are for students to gain an understanding of wood formation and structure and to be able to identify assigned wood samples from gross and/or microscopic characteristics. Grades will be determined from weekly quizzes in wood identification and exams on lecture material.

FORT 210: Arboriculture

3 Credits

Selection, planting, care, and maintenance of woody ornamental plants and shade trees grown in urban, suburban, and rural landscapes. FORT 210 Arboriculture (3) FORT 210 is a third-semester, three-credit forestry elective in the Forest Technology curriculum. The course is recommended for students who have a basic knowledge of tree/plant identification and forestry but with the instructor's permission is open to third-semester-standing students interested in arboriculture. A significant portion of the course includes labs where tree-climbing skills are taught using climbing saddles, ropes, and applicable hardware. Course objectives include an understanding of the importance of the urban-community forest, the importance of trees and woody plants, how they grow and how to care for them. Students will gain the basic knowledge and experience needed for employment in the field of urban forestry and arboriculture. Course grades will be based on assignments, lecture exams, a final examination, lab performance, and reports and quizzes.

Prerequisite: second-year standing

FORT 220: Forest Ecosystem Protection

4 Credits

Principles and concepts involved in managing the forest ecosystem in regard to fires, insects, and diseases. FORT 220 Forest Ecosystem Protection (4) FORT 220 is a third-semester, four-credit course that builds upon information learned in FORT 150 (Dendrology) and FORT 160 (Silvicultural Practices). This course will provide students with tools to identify and understand the effects of insects, disease, and fire on individual trees, forests, and ecosystems. They will learn signs and symptoms of insects and disease, integrated pest management principles, tactics of fire suppression, and will complete the PA-130 wildland fire training course. Emphasis is placed on recognition, prevention, and control of insects and pathogens. A case-study approach is used for the major pest problems of the northeastern United States. Course objectives include development of assessment
and diagnostic skills for major plant pests, recognition of signs and symptoms of abiotic and biotic disease, knowledge of integrated pest management, basic fire behavior and control techniques, and development of verbal and written communication skills. Course grading will be based on scheduled lecture exams and quizzes, a final comprehensive examination, lab reports, and participation.

FORT 230: Introduction to Remote Sensing

2 Credits

Remote sensing technologies applied to forest resource analysis and management. FORT 230 Introduction to Remote Sensing (2) FORT 230 is a third-semester, two-credit course that explores the applications of aerial photography in forest and natural resource management. Both black-and-white and infrared photographs at diverse scales will be used. Photographic measurements of distance, area, and elevation will be studied. The use of aerial photos in ecological classification, forest vegetation mapping, and forest inventory will also be covered. Lab exercises will include forestry operations such as logging road layout, timber harvest mapping, and property boundary mapping. Linkages with global positioning system (GPS) and geographic information systems (GIS) will be stressed. The course objectives are for students to develop skills in interpreting and using aerial photos for forest resource management. Grading will be based on tests, quizzes, lab exercises, and student participation.

Prerequisite: GEOG 160, GEOG 161

FORT 240: Forest Soils and Hydrology

3 Credits

The study of forest soils and hydrology, especially as they are affected by forest management activities. FORT 240 Forest Soils and Hydrology (3) FORT 240 is a fourth-semester, three-credit course in the Forest Technology program. The course includes the study of soils and forest hydrology, especially as they are affected by forest management activities. Land reclamation activities in the reclamation and re-vegetation of disturbed sites found in the coal mining areas of Pennsylvania are also considered. This course uses outdoor and indoor labs to reinforce material discussed in lectures. Course objectives are for students to develop an understanding of the physical, chemical, and organic properties of soils, forest hydrology, and the impacts of forest management activities on the reclamation process and activities, and of the importance of soil and water resources and their conservation. Course grades will be based on scheduled quizzes, lab reports, assignments, lecture exams, a cumulative final, and attendance and participation.

Prerequisite: second-year standing

FORT 250: Forest Management Practices

3 Credits

Practical techniques for implementing management plans for forest stands under various ownerships and management regimes. FORT 250 Forest Management Practices (3) FORT 250 is a capstone course in the forest technology program taught in the fourth semester. It will give students the opportunity to use the various skills they have learned in other courses to develop management plans for forests managed with varying objectives. Concepts of valuation, timber procurement, and discounted cash flow will be covered. Regulatory, management certification, public sector, and private sector management issues will also be explored. The skills will be applied as students work on a semester-long management plan of a selected forest tract. The objective of the course is for students to develop skills in creating and executing forest management and timber harvesting plans in forest stands. Course grades will be based on quizzes, homework, laboratory exercises, management plans, and exams.

Prerequisite: FORT 110, FORT 160

FORT 260: GIS for Natural Resources Management

3 Credits/Maximum of 3

Geographic Information Systems technology including mapping and GIS data management procedures with emphasis on natural resource management applications. FORT 260 GIS for Natural Resources Management (3) In this course, students will acquire the basics of spatial data analysis using geographic information systems technology. The course will cover acquiring data, manipulating databases, and displaying the results to solve spatial analysis problems. Problems will come largely from natural resources sciences and forest management. GIS is rapidly becoming a standard technology in many disciplines that use data having a spatial component. Students with knowledge and experience in GIS may improve their job prospects significantly.

Prerequisite: GEOG 160, GEOG 161

FORT 295: Forest Technology Internship

1-4 Credits/Maximum of 4

Supervised field experience related to the student’s major.

Prerequisite: Permission of program

FORT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FORT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest

FORT 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Forestry (FOR)

FOR 150S: First-Year Seminar

2 Credits

The objectives of this first-year seminar course are to: (1) Engage and prepare first-year college students for academic success by orienting them to the scholarly community and introducing them to available academic resources. (2) Introduce students to Pennsylvania’s forests and some of the research and other activities currently underway at
Penn State that supports the conservation and management of these resources. (3) Introduce students to strategies they can use while at Penn State to prepare for careers related to forestry, wildlife/fisheries, and other natural resources disciplines.

First-Year Seminar
FOR 200: The Profession of Forestry
1 Credits
Introduction to the profession of forestry and related career opportunities.

Concurrent: FOR 203

FOR 201: Global Change and Ecosystems
3 Credits
This course will provide students with an understanding of the climate system, ecosystems, and feedbacks between the two. FOR 201 Global Change and Ecosystems (3) (GN) Ecosystems across the planet are facing unprecedented pressures and changes as society seeks to support continued population growth and increasing standards of living. Understanding how ecosystems in Earth’s biosphere interact with the climate system and how feedbacks alter the services that ecosystems provide is necessary to meet society’s demands. Global Change and Ecosystems is designed to provide students with a general understanding of the climate system, ecosystems, and feedbacks between the two. The goal of this course is to develop critical thinking skills related to understanding the many relationships between society and natural systems. In this course students are encouraged to think critically about these relationships and the information used to develop assessments. This course broadly covers: 1) global change factors, including climate change, land-use change, and pollution, 2) life on land, where we will explore the diversity of Earth’s biomes and major ecosystems, 3) global change impacts, where we will identify how global change factors are impacting our ecosystems, and 4) ecosystem services, where we will examine the coupling of human and natural systems. Students will complete this class with the ability to: 1) interpret scientific figures, 2) critically evaluate information about global change and ecosystems, 3) define what constitutes an ecosystem and the controlling factors, 4) describe Earth’s biomes and major ecosystems, and 5) describe the impacts of global change factors on ecosystems.

Prerequisite: 3 credits of science
General Education: Natural Sciences (GN)

FOR 203: Field Dendrology
3 Credits
Field identification of native and introduced trees and shrubs. FOR 203 Field Dendrology (3) This course establishes the basic skills of woody plant and tree species identification necessary for students of natural resource management, ecology, and natural history. The objectives of the course are for students to 1) recognize many of the common woody plant species encountered in Pennsylvania (and the region) and the taxonomic traits used in their identification, 2) employ the diagnostic skills useful for woody plant identification, including the use of dichotomous keys, and 3) identify resources for identification and continued study of woody plants in Pennsylvania and the region. This field-based course introduces native, ornamental, and invasive woody plant species in a diversity of landscapes including forested, urban, suburban, and riparian areas.

Cross-Listed

FOR 204: Dendrology
2 Credits
Taxonomic and silvical characteristics, ranges, genetic relationships, and uses of important forest tree species.

Prerequisite: FOR 203

FOR 228: Chainsaw Safety, Maintenance, and Operation in Forest Management
1 Credits
Safety, maintenance, skills, and techniques for effective chainsaw operation in forest management. FOR 228 Chainsaw Safety, Maintenance, and Operation in Forest Management (1) This course covers the detailed use of the modern chainsaw. The course begins with safety and personal protective equipment (PPE), Occupational Safety and Health Agency (OSHA) regulations, saw selection, and an introduction into safe saw handling skills and techniques. The course then transitions to saw maintenance and proper care of the chainsaw, and then to a hazard recognition, mitigation, and avoidance component that addresses both the work site and the resource being harvested and processed. Once these objectives have been understood, the remaining two-thirds of the course focus on the practice of chainsaw handling skills and techniques that are necessary for safe operation. This course has an extensive hands-on, experiential learning component in actual tree-felling and processing in the forest, including on-site discussion of harvesting as a forest management tool. The course concludes with training in proper log manufacturing, including scaling and grading of the harvested resource. Efficient recovery of the timber resource that minimizes damage on the residual stand is emphasized.

Prerequisite: FOR 203 and W P 203

FOR 242: Elements of Project Supervision in Forestry
3 Credits
Supervisory techniques developed through an understanding of the behavioral sciences applied to field forestry personnel management.

FOR 255: GPS and GIS Applications for Natural Resources Professionals
3 Credits
Using Global Positioning Systems (GPS) and Geographic Information Systems (GIS) for mapping and analysis of natural resources data. FOR 255 GPS and GIS Applications for Natural Resources Professionals (3) FOR 255, GPS and GIS Applications for Natural Resources Professionals, teaches students to apply Global Positioning Systems (GPS) and Geographical Information Systems (GIS) in the management of natural resources. Students learn how GPS works and how to use GPS to find locations in the field and to capture spatial data and transfer it to a GIS system. Students learn how GIS data are structured and how to find, use and edit existing GIS databases and to create new ones. They learn to use various software applications to work with and analyze GIS databases, including both spatial and non-spatial data, to address a variety of natural resources management questions and issues. Finally, they learn to present spatial information in a map that effectively
communications information relevant to a variety of natural resources situations.

Prerequisite: MATH 022 and MATH 026; or MATH 040; or MATH 041; or MATH 110; or MATH 140

FOR 266: Forest Resources Measurements
4 Credits
Measurement systems used in forest and wildlife management and urban forestry.

Prerequisite: FOR 203; FOR 255; MATH 022 and MATH 026; or MATH 040; or MATH 041; or MATH 110; or MATH 140; STAT 200; STAT 240; or STAT 250

FOR 295: Forestry Internship
1-4 Credits/Maximum of 4
Supervised field experience related to the student's major.

Prerequisite: Permission of program

FOR 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FOR 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FOR 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

FOR 303: Herbaceous Forest Plant Identification and Ecology
3 Credits
Survey of common herbaceous plant taxa occurring within forested habitats in Pennsylvania and eastern North America. Botanical characteristics, ecological interrelations, commercial importance, and field specimen collection methods are covered.

Prerequisite: 3 credits in plant or biological sciences

FOR 308: Forest Ecology
3 Credits
Effects of environment, spacing, and age on trees; forest influences; origin and development of forest communities. FOR 308 FOR 308 Forest Ecology (3) This class will provide the basic concepts of forest ecology and silvics. The class will emphasize (a) community concepts such as sampling, succession, productivity, disturbance, and animal factors, (b) ecosystem concepts such as nutrient and energy cycles and plant-soil relationships, and (c) environmental factors such as light, temperature, moisture, and pollution, and their effects on individual tree species and community structure and function. Other special topics of interest (allelopathy, seed behavior, tropical forests, etc.) will be included as time permits. The class will also include a field component that allows students to observe the effects of various conditions or treatments on forest community structure and growth, and to practice field methods commonly used to measure site factors and environmental processes in forest communities.

Prerequisite: or concurrent: FOR 203

FOR 320: Forest Fire Management
2 Credits
Principles and concepts involved in managing the forest ecosystem in regard to fire. FOR 320 Forest Fire Management (2) This course will cover the principles and concepts involved in managing forest ecosystems in regard to fire. It will enable students to think analytically and operationally about fire in forested landscapes, taking into account a complex of physical/biological factors, management objectives, and public interest. Wildland fire processes, fuels, and behavior, fire weather, fire ecology, the sociology of fire, fire presuppression, fire containment/ suppression, post-fire rehabilitation, prescribed fire, and fire management planning will be covered. Evaluation will be based on exams, individual assignments, and group assignments.

Prerequisite: FOR 308

FOR 350: Forest Ecosystem Monitoring and Data Analysis
3 Credits
Quantitative approaches for characterization, monitoring, and comparison of forest ecosystems. FOR 350 Forest Ecosystem Monitoring and Data Analysis (3) The overall goal of this course is to provide students with opportunities to develop a quantitative approach to the management and conservation of forest ecosystems. The course comprises three sections, each of a different length. The first section reviews descriptive statistics and basic concepts needed to understand sampling design in the context of forest ecosystem monitoring and data analysis. The second section addresses concepts and steps for designing a monitoring plan, and sampling designs for forest ecosystem monitoring. Sampling designs discussed include (but are not limited to): simple and stratified random sampling, double sampling, and cluster sampling. The third section covers data analysis and modeling tools. Students are expected to know two-sample inference, correlation analysis, analysis of variance and linear regression. The focus of this third section is on the application of these to forest ecosystem issues. The course also covers concepts of statistical model development, selection, and evaluation. Students will develop an understanding of strengths and limitations of using statistical models for forest ecosystem management and conservation. Finally, a broad overview of spatial statistical analysis will be offered. The objective is for the students to know about available tools and be able to look for more information. Major emphasis is placed on case studies and real-world data.

Prerequisite: STAT 200, STAT 240, STAT 250 or equivalent, with a C or higher grade.
Trees have physiological processes that are more adaptable than those of other plants. Height allows trees to successfully compete for light, but also creates transport and support problems. This course investigates the anatomy, morphology and physiology of growth, development, and responses of woody plants with particular consideration of the influence of environmental factors on physiological processes. To develop an understanding of tree physiology the following topics will be presented: Organization, development, and function of woody plant tissues Photosynthesis, respiration, and assimilation in forest trees Water relations and mineral nutrition. Tree growth responses to atmospheric and soil condition. Physiology variation among tree species. Herbicides and tree physiology. Methods and tools of tree physiology research.

**Prerequisite:** BIOL 110 or BIOL 127

FOR 410: Elements of Forest Ecosystem Management

3 Credits

Fundamentals of forest ecosystem management for goods and services.

**Prerequisite:** 3 credits in both ecology and biology

FOR 418: Agroforestry: Science, Design, and Practice

3 Credits

Agroforestry integrates trees in agricultural landscapes, and/or agriculture products into forested areas for multiple benefits. FOR 418 Agroforestry: Science, Design, and Practice (3) (US;IL) Agroforestry is the intentional design of land use systems that combine tree crops with plants and/or animals in a manner that seeks to promote ecological and economic benefits within the landscape. Two possible arrangements for such systems are (1) the integration of trees within non-forested settings; and/or (2) the introduction of high value 'crop' species into existing forestlands. The objective of the course is to foster a practical working knowledge of agroforestry as it is experienced both in Pennsylvania and throughout the world, so that students from a variety of backgrounds can integrate agroforestry practices and thinking into their own disciplines, interests, and lives. Although agroforestry is an ancient land use approach, it is new in many places, and improvements and adaptations to traditional practices are needed to meet local circumstances. This course will provide a framework for critical assessment and implementation within this context. One of the fundamental aspects of agroforestry is that it is a land use system that operates at a landscape or ecosystem scale. For agroforestry to succeed, many factors, including ones external to the agroforestry practice itself must be considered. Therefore the course is interdisciplinary in nature and topics in ecology, economics, sociology, and policy that are related to agroforestry practices will be discussed. In evaluating the students, the primary emphasis is on class discussion. Students will be expected to review and discuss papers and contribute to the ongoing dialogue and debate about agroforestry as a sustainable land use. Students will be required to carry out critical reviews of agroforestry papers and publications as well as design and develop an agroforestry project pertinent to their individual field of interest and expertise. The course will be offered every Spring semester.
FOR 421: Silviculture

3 Credits

The application of the principles of forest ecology to control of establishment, composition, and growth of forest stands.

Prerequisite: FOR 308, FOR 266

FOR 430: Conservation Biology

3 Credits

The application of biological principles to issues in the conservation of biodiversity. FOR (W F S) 430 Conservation Biology (3) This course applies basic principles of ecology and genetics to issues regarding the conservation forested ecosystems and their associated fisheries and wildlife. The objective of this course is to provide a broad appreciation of the concepts in conservation biology that are important to solving contemporary natural resources problems. Students will be exposed to the history of conservation biology, values of biodiversity, definitions of species concepts, protecting the genetic structure of species, extinction as a natural process, vulnerability to extinction, biodiversity at the community, ecosystem, and landscape levels, habitat fragmentation, metapopulations, legal aspects of conservation, ecosystem management, exotic species, pollution, human population issues, measuring genetic diversity, attitudes towards nature, ex-situ conservation, and ecosystem restoration.

Prerequisite: BIOL 220W or FOR 308 or W F S 209

Cross-listed with: WFS 430

FOR 439: Timber Sale Administration

3 Credits/Maximum of 3

Practical aspects of the logistical, environmental, managerial, and regulatory oversight of active and retired timber sales. FOR 439 Timber Sale Administration (3) This course provides hands-on experience with all of the activities associated with overseeing a timber sale, including the legal aspects of arranging a sale, marking timber and calculating volume, road and sale layout, best management practices, inspections, harvesting equipment, working with contractors and loggers, and liability issues. The objectives of the course are to 1) obtain and translate a property deed onto the ground and create a professional map of the timber sale area; 2) design a timber sale, including cutting boundaries, skid trails, haul roads, and landings such that site impact is minimized, harvesting efficiency and safety is maximized and productivity is maintained; 3) collect sufficient information for a professional timbersale prospectus, including which harvesting systems would be best suited to the situation; 4) complete an erosion and sedimentation plan, a stream crossing permit, and local harvesting ordinance requirements; 5) develop a timber sale contract and a landowner-consultant contract to protect all parties and address all possible legal scenarios; 6) work with, inspect, supervise and provide meaningful feedback to harvesting, road building and landscape contractors; 7) retire a timber sale area to prevent erosion, create habitat variety and/or recreational opportunities, and maintain aesthetic qualities. This course is offered every fall, and class size is restricted.

Prerequisite: FOR 203 and FOR 266; and prerequisite or concurrent: FOR 421

FOR 440: Forest and Conservation Economics

3 Credits

The role and application of economics and finance to forest resource conservation and management. FOR 440 economic and financial concepts and tools used in managing forests and natural resources. Specifically, they will: a) use financial tools including cost-benefit analysis to analyze forest investments, b) recognize forest-related business operations and management issues, c) apply economic principles to forest and natural resource management decisions including environmental and nonmarket valuation methods, and d) discuss current issues in forest management and economics such as climate change, bioenergy and tropical deforestation. Students will carry out a case study of a forest-related business.

Prerequisite: ECON 102 or ECON 104

FOR 450: Human Dimensions of Natural Resources

3 Credits

Addresses human needs and desires, from individuals to nations, for social, ecological, and economic benefits derived from natural resource decisions.

Prerequisite: 6 credits of social and behavioral sciences

Writing Across the Curriculum

FOR 455: Remote Sensing and Spatial Data Handling

3 Credits

Remote sensing systems, with emphasis on application to forest ecosystem analysis. Includes introduction to computer systems for spatial data handling. FOR 455. Remote Sensing and Spatial Data Handling imparts a basic understanding of remote sensing and related spatial data technologies such as geographic information systems (GIS) and digital elevations models (DEM) in a natural resources context. Lectures cover the nature of electromagnetic radiation, electronic remote sensing systems, air photo systems, photo grammetry, and GIS fundamentals. Laboratory work includes stereo viewing, basic photo grammetry, introductory photo interpretation, air photo mission planning, digital image analysis, topographic analysis and landforms, GIS mapping, and some basic GIS analysis. Emphasis is on learning by doing, with one lecture and two 2-hour labs each week.

Prerequisite: MATH 110, 3 credits in computer science, 6 credits in ecological and/or geological sciences

FOR 466: Forest Management and Planning

3 Credits

Rationale, process, and tools for forest management decision-making and planning. Developing and communicating forest plans for forested properties. FOR 466W Forest Management and Planning (3) Students learn the rationale, processes, and tools for forest management decision-making and planning. They learn to identify and obtain information needed for management decision-making and planning. They learn to develop management alternatives and to use appropriate data and tools to evaluate those alternatives. Students learn to apply financial analysis to evaluate the financial viability of stand-level forest management activities. Students develop and write forest management plans for small (&le; 250 acres) and large (&gt; 250 acres) forested properties. Students identify how alternative forest management objectives are balanced in
developing management plans. Students evaluate and critique public agency forest management plans.

**Prerequisite:** FOR 255, FOR 421, and FOR 440

Writing Across the Curriculum

FOR 470: Watershed Management

3 Credits

Management of wild land watersheds for control of the amount and timing of water yield, water quality, erosion, and sedimentation. FOR 470 Watershed Management (3) in FOR 470 Watershed Management students are expected to learn the fundamentals of watershed hydrology and how management of natural resources, especially forest resources, can be adapted to protect and enhance the natural flow, quantity and quality of water resources. Emphasis is placed on acquisition of available hydrologic and climatic data over the internet, solving basic hydrologic problems using the proper units, writing short essays summarizing assigned papers or lectures, and in-class tests on managing impacts of timber harvesting, road construction, application of forest chemicals, and other land uses activities. The course is primarily, but not exclusively, intended as a course for upper-level undergraduate and graduate students in forest resources and wildlife and fisheries majors or other majors such as ERM with related natural resources backgrounds and interests. The course is a Prescribed Course for Forest Resources undergraduates in the Forest Management and Watershed Management options and is a Water Science breadth course for students in the Graduate Option in Watershed Stewardship. A companion one-credit course FOR 471 - Watershed Management Laboratory - may be taken concurrently with or following FOR 470. This course is offered each Spring Semester and generally has an enrollment of about 80-90 students.

**Prerequisite:** 3 credits in Soils

FOR 471: Watershed Management Laboratory

1 Credits

Introduction to hydrologic and climatic measurements and computations useful in watershed management.

**Prerequisite:** or concurrent: FOR 470

FOR 475: Principles of Forest Soils Management

3 Credits

Effect of current forest management practices on the properties and productive capacity of forest soils.

**Prerequisite:** FOR 308, 3 credits in soils

FOR 480: Policy and Administration

3 Credits

Forest resources policy objectives; criteria and goals of society; policy implementation by ownership classes; planning, administration, and evaluation of programs.

**Prerequisite:** 3 credits of social or behavioral science

FOR 488: Global Forest Conservation

3 Credits

Ecological, economic, technological, and political aspects of forested ecosystems in a global context, emphasizing tropical and developing countries. FOR 488Y Global Forest Conservation (3) Forested ecosystems cover one third of world’s land area, and about two billion people depend on forest products for their livelihood. Students in this course will learn about trends in global forest cover, human demands on forests in different parts of the world, and how national and international institutions and policies regulate forest use. Topics covered include tropical deforestation, biodiversity, climate change, poverty, forest production and trade. Students come away from the course with an understanding of the diversity of forestry practices around the globe.

**Prerequisite:** 3 credits in natural sciences, and 3 credits in social and behavioral sciences

International Cultures (IL)

Writing Across the Curriculum

FOR 494: Undergraduate Research

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisites:** Permission of the Forest Ecosystem Management Program

FOR 494H: Honors Thesis Research

1-6 Credits/Maximum of 999

Independent study directed by a faculty supervisor that culminates in the production of a Forestry honors thesis. This course is the means by which Forest Ecosystem Management honors students receive credit for thesis research. The course involves research and other scholarly activities (such as writing) necessary for completion of an approved honors thesis.

**Prerequisite:** Enrollment in the Schreyer Honors College and permission of a Forest Ecosystem Management honors adviser

Honors

FOR 495: Forestry Internship

1-6 Credits/Maximum of 6

Supervised field experience related to the student’s major.

**Prerequisite:** approval of proposed assignment by instructor prior to registration.

Full-Time Equivalent Course

FOR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
FOR 051: Elementary Intensive French I for Graduate Students
3 Credits

Intensive introduction to French: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. FR 051 Elementary Intensive French I for Graduate Students (3) This is the first in a series of three courses designed to give students an intensive introduction to French. This is the first half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the French vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: FR 050 or equivalent, and graduate standing

FR 052: Elementary Intensive French II for Graduate Students
3 Credits

Intensive introduction to French: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. FR 052 Elementary Intensive French II for Graduate Students (3) This is the second in a series of three courses designed to give students an intensive introduction to French. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the French vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: FR 051 or equivalent, and graduate standing

FR 053: Intermediate Intensive French for Graduate Students
3 Credits

Continued intensive study of French at the intermediate level: reading, writing, speaking, listening, cultural contexts. FR 053 Intermediate Intensive French for Graduate Students (3) This is the third in a series of three courses designed to give students an intensive knowledge of French. Continued intensive study of French at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: FR 052 or equivalent, and graduate standing

FR 83: First-Year Seminar in French
3 Credits

Critical approaches to the dimensions and directions in French/ Francophone literatures and cultures. FR 083S First-Year Seminar in French (3) [GH; FYS; IL](BA) This course meets the Bachelor of Arts degree requirements. Through the reading of texts, discussions (in-class, study groups, listservs), debates, and collaborative research projects, students are introduced [a] to French/Francophone literatures and/or cultures; [b] to the humanities and to the nature of research and scholarship; [c] to cross-cultural issues (international); and [d] to scholarly conduct and responsibilities. Students develop international competence by cultivating curiosity about and empathy for other cultures; by recognizing that social variables, such as age, gender, social class, religion, ethnicity, race, sexual orientation, and place of residence, affect the way people view the world, behave, and communicate; and by developing the ability to locate, organize, and evaluate information about culture(s) from a variety of sources (print, electronic, people, personal observations). The points of departure for the development of all of these competencies are literary and cultural texts from France and French-speaking regions/counties of the world. All texts are in translation, and knowledge of the French language is not required. Students will be evaluated through written essays, quizzes, class discussions, and a collaborative group project. This course will prepare the students for other courses in the humanities by giving them the opportunity to gain insights into the study of the humanities through literary and cultural texts. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. The Department of French plans to offer three (twenty student limit per seminar) first-year seminars per academic year.
The course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. This course does not require any special facility or equipment to be taught effectively.

**Bachelor of Arts: Humanities**  
International Cultures (IL)  
First-Year Seminar  
General Education: Humanities (GH)

FR 111: Elementary French  
6 Credits  
Acquisition of basic skills in the active use of French: listening, speaking, reading, and writing.

**Bachelor of Arts: 2nd Foreign/World Language (All)**  
Bachelor of Arts: Humanities

FR 112: Intermediate French  
6 Credits  
Reinforcement of basic skills previously acquired in the active use of French in FR 111.

**Bachelor of Arts: 2nd Foreign/World Language (All)**  
Bachelor of Arts: Foreign/World Lang (12th Unit)

FR 121G: Fundamentals of Reading French  
3 Credits  
Instruction in fundamental skills required for reading expository French prose, primarily for research purposes. (This course may not be used to satisfy any baccalaureate degree requirements. No graduate credit is given for this course.)

**Prerequisite:** seventh-semester standing  
Bachelor of Arts: Humanities

FR 122G: Practice in Reading French  
3 Credits  
Development and reinforcement of basic reading skills, with emphasis on the individual student’s area of research. (This course may not be used to satisfy any baccalaureate degree requirements. No graduate credit is given for this course.)

**Prerequisite:** FR 121G  
Bachelor of Arts: Humanities

FR 137: Paris: Anatomy of a City  
3 Credits  
Survey of the cultural, artistic, literary, and social life of the city of Paris from Gallo-Roman times to the present. FR 137 Paris: Anatomy of a City (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. FR 137, taught in English, is an introductory survey of the cultural, artistic, literary, and social life of the city of Paris. We will explore painting, sculpture, architecture, music, dance, theatre, literature, as well as the history and geography of this great city through the ages. Beginning with Gallo-Roman Paris and ending with the Paris of today, the course will explore the continuities as well as the changes in more than 2000 years of Parisian history. Students will read representative texts from every period and be exposed to the artistic movements through slides, films, and virtual tours. There will be extensive use of technology (CDs, DVDs, internet). In discussion sections, students will get a chance to discuss readings and fine-tune their analytical skills. In addition to the three examinations (short answer and essay), there will be short writing assignments and group research projects. This course will complement the Departments of Art History, Architecture, Comparative Literature, Geography, Music History, History. It will require a room equipped for technology and will be offered every semester.

**Bachelor of Arts: Humanities**  
International Cultures (IL)  
General Education: Humanities (GH)

FR 138N: French Culture Through Film  
3 Credits  
This course presents a survey of important cultural and historical moments in France with a special emphasis on the ways in which these moments are represented in film. The course has a dual focus: 1.) a chronological and historical overview of major moments in 20th and 21st century French history as they have been represented, imagined and presented through the selected films and 2.) the artistic and cinematic movements and concepts that inform our understanding of these films. Beginning with WWI, the historical trajectory outlined by the course will cover the Interwar period, the Occupation and Liberation, the consumer culture of France in 1950s, France as a former colonial power and the Algerian war, France in the 60s, May 1968, France in the 1970s and les trente glorieuses, Mitterrand’s 1980s, and Immigration and French identity. We will grapple with these historical moments as they have been filtered through the lens of cinema. Our attention will remain focused both on the historical time periods in which the films of the course were made as well as the moments they are representing. Our approach to the filmic corpus of the course will be one that seeks to understand and situate the films within the broader context of the aesthetic movements that have characterized film both within France and in world cinema. Movements and moments such as Poetic Realism, Neorealism, the French New Wave, Left-Bank filmmaking, cinema vérité, documentary filmmaking and le ciné du Look will serve as an artistic backdrop and provide a framework for understanding the cinematic choices of the directors studied. No prior coursework in film is required; FR 138 will introduce students to the special vocabulary and building block concepts that allow them to deeper comprehend and analyze film on a formal basis. Concepts covered include mise en scène, editing, approaches to narrative, dialogue and soundtrack, lighting, set pieces, characterization, camerawork, CGI special effects, and the technology of film making. Students can expect to come away with a set of tools to analyze not only other French films but also visual texts in general.

**Bachelor of Arts: Arts**  
**Bachelor of Arts: Humanities**  
General Education: Arts (GA)

GenEd Learning Objective: Key Literacies
FR 139: France and the French-speaking World
3 Credits
An introduction to the culture of France and its impact on the world.
FR 139 France and the French Speaking World (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. By studying the artistic, social and intellectual components of the French cultural ethos, the undergraduate student will develop an appreciation of a major Western European humanistic tradition and its impact and adaptation on several continents. The notion of a national culture, which has become an international phenomenon integrates a broad spectrum of subject areas in the arts, humanities, and social sciences. The elements to be articulated embrace: socioeconomic, linguistic, and demographic profiles, social stereotypes (internal, external, and colonial), social structures (family, gender, childhood/old age), and selected "high" and "popular" cultural themes (cuisine, architecture, dress, painting, social philosophy). Using today's metropolitan French culture as a point of departure, and its historical legacy, the course will explore the consequences of French cultural hegemony in various French-speaking areas (Belgium, Switzerland, North and West Africa, North America, Maghreb-Middle East, Orient). In brief, the course introduces Penn State students to the dynamics of cultural pluralism, a crucial acquisition in today's "global village."

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

FR 142: French Fiction, Drama, and Film (In English)
3 Credits
An introduction, in English, to French and francophone literature and cultural history through film, theater, and literature.
FR 142 French Fiction, Drama, and Film (in English) (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Taught entirely in English with no assumption of prior knowledge of French, this course is a broad introduction to French/francophone literature and cultural history through a selection from the best-known authors and famous masterpieces of the French-speaking world. The course promotes an informed reflection on narratives, plays, and films; develops critical methods for enjoying all three genres; and may be complemented with FR 137, 138, and/or 139. The course will satisfy a General Education humanities and International Cultures requirement for students in all majors except French and Francophone Studies.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

FR 199: Foreign Study--French
1-12 Credits/Maximum of 12
Intensive postintermediate grammar review, with emphasis on oral skills and vocabulary building.

Prerequisite: FR 003
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
International Cultures (IL)

FR 201: Oral Communication and Reading Comprehension
3 Credits
Emphasis on oral skills and reading for total comprehension.
FR 201 Oral Communication and Reading Comprehension (4) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to improve French language skills, with an emphasis on speaking and reading. It aims to hone students' ability to understand a wide array of native speakers and to expand their active vocabulary; to foster discussion and debate in a range of formats; to enhance the ability to analyze films and literary texts; and to increase awareness of historical and contemporary cultural issues. It also provides opportunities for reviewing selected grammatical points and for practicing writing short interpretive and imaginative exercises. Students draw on written texts, videos, the Web, and other media to explore cultural and literary aspects of France and the Francophone world from a variety of perspectives. Evaluation methods include individual oral and written exams (30%); formal debates (20%); quizzes and homework assignments (10%); class attendance and participation (20%); and a final oral presentation (20%).

Prerequisite: FR 003 or FR 112
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)

FR 202: Grammar and Composition
3 Credits
Grammar review and writing of short essays.

Prerequisite: FR 003
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
International Cultures (IL)

FR 270: Race and Gender in Literature Translated from French
3 Credits
A critical presentation, taught in English, of changing ideas and values on race and gender in French and Francophone literatures.
Cross-listed with: WMNST 270
Bachelor of Arts: Humanities

FR 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities
FR 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

FR 299: Foreign Study--French
3-12 Credits/Maximum of 12

Writing practice at postintermediate level. Cultural readings about French civilization.

Prerequisite: FR 199
Bachelor of Arts: 2nd Foreign/World Language (All) International Cultures (IL)

FR 301: Advanced Grammar And Conversation
3 Credits

FOR MAJORS, MINORS, AND OTHERS WITH ADEQUATE PREPARATION; INTENSIVE GRAMMAR REVIEW, COMPOSITION, AND CONVERSATION.

FR 316: French Linguistics
3 Credits

Survey of the theory and methods of linguistics as they apply to the major subfields. FR 316 French Linguistics (3) The goal of this course is to provide the undergraduate student with a solid overview of the theory and methods used by linguists seeking to develop a formal account of French grammar. Specifically, the student will become acquainted with the basic assumptions of the field (e.g. the prescriptive/descriptive distinction, the notion of competence versus performance, various methods of data collection, and the notion of Universal Grammar). In addition, a selection of the major subfields of linguistics will be surveyed (these include: phonetics, phonology, syntax, semantics, and morphology with the focus being on the linguistic rules found in the French language).

Prerequisite: FR 201 , FR 202

FR 331: French and Francophone Culture I
3 Credits

French and francophone history and culture from the Middle Ages until the French Revolution. FR 331 French and Francophone Culture I (3) (IL) This course, which fulfills the Humanities requirement within the Bachelor of Arts degree, will present a survey of French and francophone culture and civilization from the Middle Ages to 1789. It aims to familiarize students with major literary works of this time period through close textual reading and analysis. Taught in French, the course also aims to help students develop further facility in written and spoken French through a combination of readings, writing assignments, class lectures, conversation and in-class activities. The course is designed as a complement to the French literature survey sequence. In addition, it serves as an important basis for 400-level language, literature and culture courses.

Prerequisite: FR 201 , FR 202

FR 332: French and Francophone Culture II
3 Credits

French and francophone history and culture from the French Revolution through the Third Republic. FR 332 French and Francophone Culture II (3) (IL) This course, which fulfills the Humanities requirement within the Bachelor of Arts degree, will present a survey of French and francophone culture and civilization from the French Revolution to the collapse of the Third Republic with the onset of World War II. The course aims to familiarize students with the major events and themes in French and francophone history of this period; prominent artistic and other cultural developments; and French social and daily life. Students will gain a rich appreciation of this period through frequent exposure to web sites, films, music and other audio-visual materials. Taught in French, the course also aims to help students develop further facility in written and spoken French through a combination of readings, writing assignments, class lectures, conversation and in-class activities. The course is designed as a complement to the French literature survey sequence. In addition, it serves as an important basis for 400-level language, literature and culture courses.

Prerequisite: FR 201 , FR 202
International Cultures (IL)
FR 397: Independent Studies
1-18 Credits
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
FR 399: Foreign Study--French
3-12 Credits/Maximum of 12
Advanced training in the French language skills.
Prerequisite: FR 201, FR 202
Bachelor of Arts: Humanities
International Cultures (IL)
FR 401: Advanced Oral Communication
3 Credits
Emphasis on speaking and listening comprehension through discussion of current issues, using journalistic materials.
Prerequisite: FR 201, FR 202
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)
FR 402: Advanced Grammar and Writing
3 Credits
Prerequisite: FR 201, FR 202
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum
FR 402Y: Advanced Grammar and Writing
3 Credits
Prerequisite: FR 201, FR 202
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum
FR 408: French-American Business Translation
3 Credits
Translation from French to English of actual documents from the business world; theoretical consideration and systematic vocabulary building.
International Cultures (IL)
FR 409: Commercial and Technical Translation
3 Credits
Translation from English to French of commercial and technical materials; vocabulary building; writing of abstracts and summaries.
Prerequisite: FR 402Y
Bachelor of Arts: Humanities
International Cultures (IL)
FR 410: French Press
3 Credits
Extensive readings of selected French daily and weekly newspapers and magazines, along with newscast viewings. FR 410 French Press (3) (IL)
This course, which is taught in French, is designed to introduce students to the history and current state of French press and media (including newspapers, magazines, radio and television) while introducing them to French society and culture through media coverage of current and recent events. The course is also designed to help students perfect reading, writing and oral communication in French. The course starts with a brief history of the press in France, including the creation of dailies such as Le Journal de Paris and the impact of some well-known journalists or writers upon events such as the Dreyfus Affair. It will then focus more specifically upon the origins of high-circulation, contemporary newspapers and magazines. Quickly moving to the post-WWII period, students will be introduced to radio and television in France and, as they become more familiar with French and Francophone press and media, will be given several opportunities to study current or recent events of the French and Francophone world, in fields such as sports, politics, culture and economics. Library holdings and internet sites will allow the class to regularly read daily newspapers such as Le Monde and Le Figaro and view newscasts on channels such as TF1 and FR2. Once they are familiar with the available resources, students will share research with fellow classmates through oral presentations, for example in the form of simulated newscasts. Students will also develop with the guidance of the instructor an independent, final paper which will explore some aspect of the French press and media. One of several departmental offerings in the area of French Civilization, FR 410 course can be used to fulfill a 400-level requirement for the French Business, French-Engineering, Applied French, and French Language and Culture options, as well as for the French minor. By covering the way in which the range of social identities and the cultural beliefs and values of French-speaking peoples are reflected in various media, and by assisting students in finding and assessing information about current events in the Francophone world, the course can also fulfill an IL requirement. Evaluation methods include a series of short quizzes to cover historical and factual data; a short midterm paper based on primary research; a longer final paper based on primary and secondary research; other written work of a short-response nature; a group oral presentation summing up the previous week's news and events; and participation, including presence. The course is offered once a year, usually in the spring semester.
Prerequisite: FR 331 or FR 332
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
International Cultures (IL)
FR 417: French Phonology

3 Credits

A formal study of the sound pattern of French. FR 417 French Phonology (3) (IL) The goal of this course is to present an introduction to the linguistic analysis of the sound pattern of French as it is actually spoken by real speakers. By the end of the semester, the student should be able to: - transcribe French phonetically; - understand the articulatory characteristics of French and how these differ from English; - describe the relationship between French spelling and phonology; - examine what gives us accent in French; - discern patterns of pronunciation in different varieties of the language; - analyze real speakers' pronunciation on your own; - create your own teaching/learning unit about some aspect of French phonology.

Evaluative Methods: Student performance in this course is generally based on a series of assignments, quizzes, transcriptions, a research project and presentation, an evaluation of other students' presentations, and preparation/participation.

Prerequisite: FR 201, FR 202
Bachelor of Arts: Humanities
International Cultures (IL)

FR 418: French Syntax

3 Credits

A formal theory of word order and related issues in French grammar. FR 418 French Syntax (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide the upper level undergraduate student with the background needed to understand modern generative syntactic theory, as well as to eventually enable him or her to do creative and informed research in this area. Roughly three-quarters of the semester will be devoted to an in-depth overview of the historical development of generative syntax, focusing particularly on modern Chomskyan theory - the so-called Minimalist Program. The remainder will build upon and round out this knowledge of syntax by exploring in depth a number of topics that any syntactician must be familiar with in order to do informed research in the field. This section of the course will involve lectures based on close readings of articles and book chapters exploring such topics as the syntax of negation, raising verbs, auxiliary verbs, adverbs, middle constructions, and/or verb movement. (Only a subset of these topics will be discussed, selected on the basis of student interest.)

Prerequisite: FR 201 and FR 202
Bachelor of Arts: Humanities
International Cultures (IL)

FR 419: French Semantics

3 Credits

The study of meaning in human language with a special focus on how it is encoded in French. FR 419 French Semantics (3) The aim of this course is to provide upper level undergraduate students in French with a relatively informal introduction to the field of semantics as it applies to the French language. Semantics is the subfield of theoretical linguistics that seeks to make explicit the rules native speakers use to interpret stable aspects of the meaning of natural language sentences. The course will begin by comparing and contrasting semantic and pragmatic aspects of meaning; an important undertaking since only the former are assumed to be subject to invariable rules of grammar. The conclusions reached in this portion of the course will then be extended to account for a very special type of language - humor; in a particular context, France. That is, it will be shown that a more complete understanding of this linguistic behavior entails recognition of the relative contributions of pragmatics and semantics. We will then turn to a survey of the classic model-theoretic approach to lexical and compositional aspects of semantic meaning, with important (sociolinguistic) refinements to the standard approach to lexical semantics being discussed in detail. With a survey of the fundamentals of the field in place, we will then undertake an investigation of specific topics in semantics, looking first at the status of thematic roles in semantic theory (focusing on work by David Dowty). Here we will examine the important implications his work holds for the initial mapping of arguments into sentence structure, not only for primary transitive verbs, but also unaccusative and psych-verbs. We will then examine current analyses of causation in French, certain aspectual distinctions, and semantic, pragmatic, and syntactic approaches to negative and positive polarity items, n-words, and minimizers.

Prerequisite: FR 316
FR 426Y: French Literature of the Renaissance

3 Credits

Survey of key texts from sixteenth century France, with attention to historical and philosophical currents of French social thought.

Prerequisite: FR 351 or FR 352
Bachelor of Arts: Humanities
International Cultures (IL)

FR 430: Contemporary France

3 Credits

This course surveys contemporary French historical, cultural, economic, and political changes from the end of WW II to the present day. A significant portion of the course is devoted to examining key events and transformations of the time period. The second half explores major themes that emerge from the evolutions characterizing these tumultuous decades. Taught entirely in French, students will gain an understanding of and an appreciation for modern France through exposure to web sites, films, music, and authentic written texts.

Prerequisites: FR 331; or FR 332; or FR 332H
Bachelor of Arts: Humanities
International Cultures (IL)

FR 436: French and Francophone Theater

3 Credits

French Theater: From "classical unities: to Contemporary Performances.

Prerequisite: FR 351 or FR 352
Bachelor of Arts: Humanities
International Cultures (IL)

FR 440: Teaching of Romance Languages

3 Credits

Theories of second language acquisition. Current classroom practices in the teaching of Romance languages.
The new social and artistic geography of the capital? developments and the transforming profile of Paris? What was, in fact, arts, which flourished under the name of Art Nouveau, reflect both social restaurants, etc.? How did innovations in architecture and the decorative "places of pleasure" cafes, cabarets, cafes-concerts, theaters, racetracks, how the new Parisian space encourage the development of new Parisian landscape inspire the authors, artists et musicians of this era? we will attempt to answer questions such as: how did the changing (as well as art) and society at the end of the nineteenth century, and secondary texts, we will examine the complex rapport between literature discussions and through consideration of a wide range of primary and aesthetics and Nineteenth-Century history (political systems, education, social transformations, industries and technologies, etc.). Anthologies and complete texts will be used. 

Selected readings in romanticism, realism, and symbolism, including Balzac, Stendhal, Sand, Baudelaire, and others, with emphasis on cultural issues. FR 452Y Nineteenth-Century French Literature (3) (IL) This course offers an overview of Nineteenth-Century French literature. It includes reading material representative of the major literary movements of the period (romanticism, realism, symbolism). It also gives students a chance to examine a great variety of literary genres (novels, plays, short stories, poems, children's narratives among others). In addition to developing close textual reading skills, emphasis is placed throughout the semester on the larger relationship between literary production, and Nineteenth-Century history (political systems, education, social transformations, industries and technologies, etc.). Anthologies and complete texts will be used.

Interdisciplinary perspectives on the politics, society, and culture of France, 1880-1914. FR 453Y La Belle Epoque: Politics, Society, and Culture in France, 1880-1914 (3) (IL) The goal of this course is to present and analyze the period of extraordinary changes in all domains known as the "Belle Epoque." The starting point for an examination of these changes is Guy de Maupassant's novel, Bel-Ami (1885), which describes the social and professional ascension of an egotistical Parisian parvenu, Georges Duroy. The reading of this novel will allow us at the same time to study in detail one of the novel's protagonists: Paris. Through our discussions and through consideration of a wide range of primary and secondary texts, we will examine the complex rapport between literature (as well as art) and society at the end of the nineteenth century, and we will attempt to answer questions such as: how did the changing Parisian landscape inspire the authors, artists et musicians of this era? How did the new Parisian space encourage the development of new "places of pleasure" cafes, cabarets, cafes-concerts, theaters, racetracks, restaurants, etc.? How did innovations in architecture and the decorative arts, which flourished under the name of Art Nouveau, reflect both social developments and the transforming profile of Paris? What was, in fact, the new social and artistic geography of the capital?
literary techniques, and critical reading methodology. Contents will vary according to instructors' choices but balance between periods, movements, and genres is implied. Multi-media resources abound for the purpose of illustration and interdisciplinary considerations but the primary thrust is cultural/literary enrichment and the development of students reading and analytical skills in French. Web resources, excerpts, and shorter whole texts will be incorporated to the reading materials and will supplement the required books. Students are expected to read between ten and thirty pages according to the level of difficulty of the materials. No manual or anthology has been established a satisfactory choices for this course even though such tools exist, they generally do not treat the last third of the period properly. So FR 460 instructors have relied on a variety of primary texts to achieve as comprehensive yet coherent a survey of this overflowing century as possible. Occasionally a thematic approach has been attempted to introduce more cohesiveness in the selected readings but this must be combined with traditional, diacritical approaches so as to facilitate the students ability to see linkages between literature and history as well as other arts, as they pursue their French and other Liberal Arts majors.

**Prerequisite:** FR 351 or FR 352  
Bachelor of Arts: Humanities  
International Cultures (IL)

**FR 470: Race and Gender Issues in Literatures in French**  
3 Credits  
A critical presentation, taught in French, of changing ideas and values on race and gender in French and Francophone literatures. FR 470 Race and Gender Issues in Literature in French (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In addition to presenting subject matter that fosters an appreciation of literatures written in French while exploring racial and gender-related aspects of French and Francophone cultures, this course aims at developing a sophisticated, analytical outlook on peoples of different races and cultures and on women as authors, subjects, and literary &quot;constrictions;&quot; evolving over time. It provides a sense of the historical development of these questions and the interconnectedness of literature with society, and culture. One example of the issues and selections is the vindication of women - including Middle Eastern and Biblical figures- in Christine de Pisan's City of the ladies, in the early 15th c.; it is shown to have links with the 1970 modernistic and satirical text by Monique Wittig, Les Guirlbres. Other examples can be the famed surrealist negritude poetry of Aim Csaire of Martinique, or a classic saga of European Jews by Andr Schwarz-Bart, or the humorous narrative of an African boy in contemporary Paris by Calixthe Beyala. Evaluation is based on a balance of in-class and take home exams and a final paper. Participation is expected, including electronic communication with the instructor. Attendance and participation are assigned a significant proportion of the grade (20%) as is feasible and desirable in small classes with fifteen students or less. The class is led in French, the language of most materials presented, and it is designed primarily for French majors and minors. The literature is supported and illustrated with video excerpts and films available outside class. Internet research is encouraged and expected. It is offered every three or four years, alternating with FR 471 (Francophone Women in Literature and Culture), or special topics courses and period-bound, advanced literature courses in French.

**Prerequisite:** FR 351 or FR 352  
Bachelor of Arts: Humanities  
International Cultures (IL)

**FR 475: Women's History in Post-Revolutionary France**  
3-6 Credits/Maximum of 6  
Women's history and creativity in post-revolutionary France.

**Prerequisite:** FR 332 or FR 352

**FR 487: Topics in French Film History and Theory I: 1895-1945**  
3 Credits  
Provide background needed to understand the broad outlines of French film history and theory in their first fifty years (1895-1945). FR 487 Topics in French Film History and Theory I: 1895-1945 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide the upper level undergraduate student with the background needed to understand French film in the period up to the end of World War II. This will greatly aid the student in understanding French literature and culture of the period as well. Topics will include the invention of cinema and the early days of French film; adventure serials and commercial films; avant-garde and surrealist film of the 1920s and 30s; and finally, the period considered the &quot;golden age;&quot; of French film, the 1930s and 40s, and the so-called &quot;poetic realism;&quot; movement. Films will be supplemented with readings in criticism by writers and filmmakers of the period, as well as by the scholarship of critics and theorists writing today. The course would allow upper-level undergraduate students to partially fulfill the 400-level course requirement for French majors and minors. This course may also be used to fulfill a requirement in the newly proposed Film Studies minor. A student's performance in this course will normally be evaluated through an in-class expose, two in-class essay tests, and a short research paper. The class will be offered once a year with 50 seats per offering.

**Prerequisite:** FR 351 and FR 352 or COMM 250  
Bachelor of Arts: Humanities  
International Cultures (IL)

**FR 488: Topics in French Film History and Theory II: 1945-2002**  
3 Credits  
Provide background needed to understand the broad outlines of French film history and theory in their second half-century (1945-2002). FR 488 Topics in French Film History and Theory II: 1945-2002 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide the upper level undergraduate student with the background needed to understand French film in the period from the end of World War II to the present. This will greatly aid the student in understanding French literature and culture of the period as well. Topics will include the French commercial film of the early postwar period; the ground breaking film criticism of the 1950s, and the films it spawned (the early &quot;New Wave&quot;); the later, more experimental films done in the later 1960s and 1970s by other critics-directors; and, finally, films made in more recent years specifically concerned with the historical memory of social trauma-the Occupation and Holocaust and the possibility of the cultivation and preservation of this memory in and through the film medium. The analysis will include readings by critics (many of the filmmakers) writing at the time the films were made, as well as more recent scholarship and criticism. The course would allow upper-level undergraduate students to partially fulfill the 400-level course requirement for French majors and minors. It will be offered every other year. This course may also be used to fulfill a requirement in the newly proposed Film Studies minor. A student's performance in this course
will normally be evaluated through an in-class expose, two in-class essay tests that will determine the student's analytical skills; and a short research paper. This course will be offered once a year with 50 seats per offering.

**Prerequisite:** FR 351 and FR 352 or COMM 250  
Bachelor of Arts: Humanities  
International Cultures (IL)

FR 494: Research Project  
1-12 Credits/Maximum of 12  
Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities  
FR 494H: Research Project  
1-12 Credits/Maximum of 12  
Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities  
Honors  
FR 495: Internship  
1-18 Credits/Maximum of 18  
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.  

**Prerequisite:** prior approval of proposed assignment by instructor  
Bachelor of Arts: Humanities

FR 496: Independent Studies  
1-18 Credits/Maximum of 18  
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities  
FR 496H: Independent Studies  
1-18 Credits/Maximum of 18  
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors  
FR 497: Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities  

FR 499: Foreign Study--French  
3-12 Credits/Maximum of 12  
Advanced studies in French language and literature.  

**Prerequisite:** FR 201, FR 202  
Bachelor of Arts: Humanities  
International Cultures (IL)

**Fuel Science (FSC)**

FSC 401: Introduction to Fuel Technology  
3 Credits  
An introduction to the scientific and engineering principles of fuel technology. For non-fuel science majors; fuel science majors will not receive credit.  

**Prerequisite:** CHEM 112, PHYS 211

FSC 431: The Chemistry of Fuels  
3 Credits  
Nature and properties of fossil and other fuels, including aerospace, in relation to use; preparation of fuels; by-products; fuel analysis. FSC 431 The Chemistry of Fuels (3) The course deals with the formation, composition and properties of the principal naturally occurring fossil hydrocarbons (coal, petroleum, natural gas), and their refining, upgrading, and conversion chemistry. The objectives of this course are to equip students with a fundamental knowledge of the chemistry for the fossil hydrocarbon resources and their energy use for transportation and stationary fuels as well as their use as chemical feedstocks. It also helps to prepare students for the challenges, opportunities, and changes in the world of energy and resource-related enterprises. The primary emphasis is on petroleum, natural gas, coal, and liquid transportation fuels. This is a required course for the Energy Engineering Major.  

**Prerequisite:** CHEM 210; EGEE 302 or equivalent

FSC 432: Petroleum Processing  
3 Credits  
A study of physical and chemical processes to convert crude oil into desired products with an outlook from present to future.  

**Prerequisite:** CHEM 210  
Cross-listed with: CHE 432

FSC 494: Research Project  
1-12 Credits/Maximum of 12  
Supervised student activities on research projects identified on an individual or small-group basis.

FSC 494H: Research Project  
1-12 Credits/Maximum of 12  
Supervised student activities on research projects identified on an individual or small-group basis.

Honors
FSC 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Gaming (GAME)

GAME 140: Gaming and Interactive Media
3 Credits
Introduction to business and social aspects of interactive media, videogame and simulation industries. GAME 140 (COMM 190) Gaming and Interactive Media (3) The course is an introduction to the digital interactive media industries for students who may consider seeking employment in that sector, which includes video games and simulations, products for education, training, medicine, business, government/military, and virtual environments for a range of applications. Students will learn about industry structures, basic economics, business models, work flow, types of enterprises, job descriptions, and opportunities. It examines both the national and global markets. It provides students with a factually and theoretically informed appreciation of these industries. The course will build on the students’ personal and social experiences of these media, but it is not a course about playing or designing games or mastering individual applications. No special knowledge or experience in playing video games, using serious games, or experiencing virtual worlds is required. It will provide students with the foundation to make a well-informed choice about careers in this sector and respond to their natural curiosity about this pervasive part of their lives. The course is divided into five segments. The first provides general context: history, scale and scope of the field, information on industry structure, business models and operations, and types of skills required. The second focuses on the video game industry, including social, regulatory and ethical issues. Video games are now a major media industry, having surpassed in U.S. revenue both the movie and recorded music industries. The third section looks at serious games; A game designed for a primary purpose other than pure entertainment, such as education, scientific exploration, health care, emergency management, city planning, military, engineering, religion, etc. The fourth segment looks at simulations and virtual worlds and their multiple models and uses (entertainment, learning, business, research, etc.), and the development of related online communities. The final section will examine the interrelationship of these industries with the other entertainment industries in terms of planning, marketing, finance, production, etc. It will conclude with a look ahead at new technologies, markets, business models, advancements in artificial intelligence and the convergence of virtual and material worlds. The course will employ presentations, class discussions, outside readings, demonstrations, videos, class exercises, online explorations, guest experts (in person and via technology), and experiences in virtual worlds.

General Education: Social and Behavioral Scien (GS)

GAME 160N: Introduction to Video Game Culture
3 Credits
This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will survey major debates over the meaning and value of video games, and study some of the major theoretical terms and perspectives developed to elaborate the cultural and sociological value of video games. The course extends students’ skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production. Because the course is historically focused, it will spend significant time looking at the differential development of video games in three major regions: the United States, Europe, and East Asia (especially Japan).

GAME 180N: The Art and Science of Virtual Worlds
3 Credits
GAME 180N is a multidisciplinary course which introduces students to the theories, concepts, and technologies behind virtual worlds. This course will focus on the myriad ways that narrative arts and physical sciences relate to the development of technologically mediated virtual worlds. Designing the physical and narrative voyages of avatars through virtual worlds is necessarily a team-centered undertaking requiring recursive editing from a macroscopic and microscopic point of view to refocus project goals and deliverables. Besides learning the requisite computing and technical skills involved in virtual world development, students enrolled in this course will produce a world design proposal, and storyboards, interactive fiction graphics, or world maps for their virtual world; in this way, they will explore some of the ways that creative writing, particularly interactive fiction and storytelling techniques drawn from non-VR and VR gaming contribute to the planning, design, and execution of virtual worlds. Students will also learn about the basic science behind virtual world concepts such as the physical environment, physical processes (e.g. kinematics, motion), and light; ultimately, they will produce an immersive time-space experience in their proposed world and reflect on the complexity of integrating design elements in a way that creates a satisfying immersive experience. The objectives of the course include: (1) students will work in teams to design a proposed virtual world using world making principles found in interactive fiction narratology and physical principles that embody the avatar and allow it to move in a virtual world environment; (2) students will work in teams to construct a virtual scene, movement in time/space, from that world using computer software tools and mediated through virtual reality hardware; (3) students will be able to discuss developing immersive technology and applications of virtual worlds in business, society, and academia; (4) students will analyze and critique the virtual world designs of other student teams; (5) students will demonstrate comprehension of interactive fiction scene and level structures and world maps as they relate to designing the voyage of the avatar in a virtual world; and (6)
students will demonstrate comprehension of physical principles (e.g.,
kine matics, light) as they apply to virtual worlds. In addition to directed
readings, discussions, and quizzes in computing, narrative arts, and
physics (related to concepts inherent in virtual worlds), the course will
incorporate hands-on lab exercises and online discussions. A semester-
long team project will be the primary means of student evaluation.
During this semester-long team project students will design and create
their own virtual environment(s) and character(s) using software tools
and accepted world design principles. Students will apply a variety of
computing concepts in the world creation, including some combination
of programming, 360-degree video, and digital imagery. The course
will culminate in the oral and visual presentation of their creative and
 technological works. The semester-long team project will be heavily
integrated into the in-class experience and assessed using rubrics that
draw on examples and assignment descriptions provided to students.

GAME 220: Introduction to Game Design

3 Credits
Design of games as aesthetic objects and cultural artifacts that people
find meaningful and entertaining.

General Education: Arts (GA)

GAME 250: Technical Game Development

3 Credits
Introduction to the tools and techniques required to implement games
in a virtual environment. GAME 250 (CMPSC 208) Technical Game
Development (3) First, students learn about game and player elements
by creating characters and objects and the means of user interactivity.
Both orthographic and perspective views are introduced to assist in
character design. Objects and characters are created using fundamental
geometric primitives like scale, rotation, translation and extrusion.
The set operations, union, intersection, and subtraction, are applied to
create compound objects. Bezier and NURB curves are introduced to
create objects with irregular contours. Students also learn to design
graphical user interfaces (GUIs) and handle mouse and keyboard events
to support user interactions. Second, students are introduced to methods
of storytelling and guide them to build narratives for games. Methods
of proximity and collision detection in the environment are studied for
both static and dynamic objects. Dynamic objects are programmed to
move and behave in a deterministically, random, or probabilistically
under various lighting methods including ambient, directional, point and
diffuse lights are introduced. A number of particle systems are developed

GAME 430: Simulations of Human Behavior

3 Credits

In Modeling and Simulation, students will develop an understanding of the systems, processes, tools, and implications of this field.

Prerequisite: 3 credits of programming; 3 credits of mathematics
Cross-listed with: DIGIT 430

GAME 434: Psychology of Gaming

3 Credits

Upper level course examining the core psychological principles as they apply to the topic of games. GAME 434 / PSYCH 434 Psychology of Gaming (3) This course looks at how the field of psychology can be applied to understand and improve the world of games. This requires the application of theories and research based in experimental, cognitive and several other disciplines within psychology, including but not limited to cognitive, social, motivation & emotion, and experimental psychology. By applying different theories within these disciplines we can start to understand how humans interact with games and in turn how games have evolved as a result. This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. The course will fulfill a 400-level requirement for students in the PSYCH majors and minors as well as those in the GAME minor. Students typically will be evaluated by exams, research project, in-class activities, homework, and article discussions.

Prerequisite: 3 credits of psychology or 3 credits of a gaming course
Cross-listed with: PSYCH 434

GAME 450: Advanced Game Programming

3 Credits

Autonomously generating object behavior and content in games. GAME 450 Advanced Game Programming (3) The course is developed in two parts, creating programs to automatically generate object behavior and world content. Students are first introduced to the mathematical basis of vectors and transforms. This is necessary to create engaging characters that properly display behaviors and interact with the player and the world. These behaviors can range from orientating towards the player or pursuing/fleeing from some object in the game. In the presence of obstacles these behaviors require path finding algorithms like A* in order to navigate through the world. Students then learn how to create challenges that adapt their difficulty level based on the user’s proficiency and skill in the game. In order to reduce costs and meet the demand to get a product to market, the gaming industry is looking for ways to automate the content generation. Instead of hiring a room-full of artists to generate the layout of a city, a computer can be programmed to dynamically generate this content at run-time, saving not only the workload of the artists, but also the storage space necessary for the representation of the city. An optimization method like genetic algorithms is presented so that dynamically generated content like the layout of building and streets in a city can be produced at run-time. From the beginning of video games mazes and labyrinths have been a common theme and one of the first examples of run-time generated content. Students are introduced to a variety of maze generation methods using a variety of methods. Fractal geometry is introduced to provide a powerful tool to recursively generate natural looking content like plants and terrain. The mathematical basis of chaotic systems provides the theoretical background necessary to understand the limits of these methods as well as how to apply them to create new content. In addition to the technical content, students are required to demonstrate effective communication skills in these disciplines. Students are required to read and report out on a research paper of historical note or in an emerging field in content generation. Finally, a final project in the course will demonstrate the application of two or more of the concepts covered in the class.

Prerequisite: GAME 250 , CMPSC122 , and MATH 220

GAME 460: Video Game Lit Studies

3 Credits

A comparative look at the nature and history of video games as cultural artifacts, from Pong to online role-playing. CMLIT 490 Video Game Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. The video game industry is larger than the film industry, and yet the academic study of video games has only just begun. This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will learn basic narrative theory, and study its impact on game studies and game production. They will survey major debates over the meaning and value of video games, and review its history from Pong to contemporary games, including online world-based games. The course extends students’ skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production.

Prerequisite: GAME 160 , GAME 140 , or 3 credits in literature; Concurrent: GAME 160 or GAME 140 if desired
Cross-listed with: CMLIT 490
Bachelor of Arts: Humanities

GAME 480: Game Development Project

3 Credits

A team of students manages the production of a game from concept to implementation. GAME 480 Game Development Project (3) In this course students take the entire semester to creating a game that will be published. Students are assembled into teams and will be expected to create a game from conception to publication in a very short period of time. What will result from the completion of this course is a demonstration of the knowledge accumulated in previous GAME courses and in important components of your portfolio to enable you to obtain a job in the industry.

Prerequisite: 3 credits of 400 level GAME classes

GAME 495: Internship

3 Credits

Bachelor of Arts: Humanities

GAME 495: Internship

3-18 Credits/Maximum of 999

Supervised off-campus, non-group instruction including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: 3 credits of GAME courses. Prior approval of proposed assignment by instructor
**Geography (GEOG)**

**GEOG 1N: Global Parks and Sustainability**

3 Credits

This course uses parks and protected areas - both in the U.S. and globally - as a framework for exploring broad themes of sustainability, conservation, and socio-ecological systems. Case studies that exemplify U.S. and international parkscapes (i.e., parks and protected areas embedded within complex landscapes) are used to convey stories of evolving attitudes and approaches toward conservation and sustainability. These stories help explain the historical, transitioning, and future role of conservation in societies shaped by local ecologies, conflict, and change. The unique geographies of conservation parkscapes - past and future - reinforce and challenge a globally dynamic conservation discourse. Examining the sustainability of conservation activities themselves, as well as socio-ecological systems in which they are embedded, can provide a lens through which we can begin to understand other cultures, aesthetic values and value systems, and the diverse ecologies of Earth. In this course, we will: - Explore the history of parks and protected areas globally, including the development of the U.S. National Park system, and the globalization of conservation and sustainability policies and approaches - Examine globally representative case-studies to assess how parks and protected areas are part of both social and ecological landscapes (“parkscapes”) - Assess new challenges and opportunities for conservation in an era of rapid change and conflict - Evaluate the history, current socio-ecological condition, and future approaches in sustainability for a particular global parkscapes - By the end of the course students should be able to: - Describe why the idea of ‘wilderness’ is both influential and contested - Explain temporal and spatial trends in national and international conservation management - Compare and contrast contemporary conservation approaches - Illustrate a parkscapes as a coupled socio-ecological system - Identify key drivers of future ecological change affecting conservation management

**GEOG 2N: Apocalyptic Geographies: How can we prevent the end of the world?**

3 Credits

This course explores various visions of the apocalypse and their relevance for addressing major contemporary social, ecological, and economic issues. These issues include global climate change, nuclear war, the growing refugee crisis, the breakdown of democratic governance, economic recession and forms of everyday violence and social fracture. Students will develop and employ critical and analytical thinking skills to engage a diversity of texts from the humanities (e.g., historical and literary accounts, graphic novels, films and other historical and contemporary media) and contemporary popular culture in order to situate these apocalyptic visions in particular historical, cultural, and political contexts. Students will utilize integrative thinking skills and an interdisciplinary geographic approach to connect these visions with contemporary social issues in order to consider how we might address these complex problems while imagining and actualizing alternative futures. Students will practice global learning, drawing on course material that engages U.S. and cross-cultural perspectives in recognition of the global reach of the interconnected social, economic, political, and cultural systems that shape humanity’s shared fate.

**GEOG 3N: Food and the Future Environment**

3 Credits

GEOG 3 introduces students to the multiple connections of people and the environment through the dynamics of food and the places where it is produced, processed, and consumed. It introduces an integrated human-environment perspective on food systems in the United States, with emphasis on the Northeast and Western U.S., as well as in diverse locations around the world. The course offers a global perspective on the major challenges and opportunities facing food systems, including the sustainability of agriculture, organization of global food systems and local food initiatives, food insecurity, and the influence of modern diets on human health. This course promotes critical thinking regarding key concepts in Environment and Society Geography such as coupled human-environment systems, the Anthropocene; anthropogenic landscapes and domestication; carrying capacity; ecological footprint; life-cycle analysis; globalization; urbanization, dietary change and land use; soils and society; environmental and social justice; climate change and resilience; agrobiodiversity and adaptive capacity; human-environment interactions involving vulnerability; regional analysis; geography and culture of food systems; development and food security; and social-ecological systems. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in our own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide skills for the critical analysis and evaluation of the ways in which humans have transformed the environment in different parts of the world. Students will also learn how to assess what future pathways are sustainable and ethically sound. One key course goal is to help students increase their sensitivity, awareness, and knowledge concerning the global and international context of human interactions with nature. Upon completion of this course, students will be able to: 1. Survey and analyze environmental resources in relation to systems of food production, land use, and consumption; 2. Survey and analyze how human food systems significantly alter the earth’s environmental systems and landscapes; 3. Use environment and society geography to understand the resilience of agri-food systems in contexts of climate change, human population changes, and socioeconomic, cultural and policy factors.

GEOG 10: Physical Geography: An Introduction  

3 Credits / Maximum of 3

Survey and synthesis of processes creating geographical patterns of natural resources, with application of basic environmental processes in resource management. GEOG 010/GEOG 010 Introduction to Physical Geography (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to Physical Geography systematically examines the spatial patterns and interrelationships among physical elements at the earth's surface. Particular emphasis is given to developing an integrative view of how atmospheric, hydrologic, geomorphic, and biotic processes control the patterns of climate, water, landforms, soils, and biota across a local-to-global continuum. Those physical elements that influence and/or are influenced by people are the primary focus of study. Physical geography does not simply discuss the atmosphere, hydrosphere, lithosphere, and biosphere in isolation; instead, it concentrates on understanding the integration of these realms of the natural world. For example, the study of weathering processes demonstrates how the physical and chemical breakdown of Earth's surface material depends on the interaction of air, water, and biota with rock. The focus of physical geography is unlike the component disciplines from which it draws. On the one hand, meteorology focuses on the atmosphere above our heads. Hydrology focuses on water in isolation from people. Geology and soil science focus on the Earth beneath our feet. Biology and ecology focus on the plants, animals, and ecosystems in isolation from people. One the other hand, physical geography concentrates on the surface of the Earth where the atmosphere, hydrosphere, lithosphere, and biosphere intersect. Introduction to Physical Geography concerns with the human habitat-the life layer in which humans interact with their natural world. Like all geography, five recurring themes permeate Introduction to Physical Geography: location, place, regions, movement, and human-environment relationships. Physical geographers not only are interested in where natural phenomena are located on Earth's surface, but also they want to know the answers to such questions as: 1. What is special about the physical processes that take place in a location? 2. How does the physical geography of a place relate to other places in the region? 3. How does energy and mass flow into and out of a region? 4. How do biophysical processes change as we move up and down spatial scales? 5. How do people influence natural processes? How do these processes influence people? Other disciplines typically do not cover these spatial and nature-society themes systematically. Physical geographers have developed and adopted many tools to address these themes. Maps are obvious choices, but geographers also use a wide array of photographic and imaging technologies to study the distribution of Earth processes and the processes themselves. They use geographic information systems and computer models to manipulate, display, and analyze spatial data. Introduction to Physical Geography acquaints students with many of these tools. When the above points are taken together, physical geography emerges as a unique field of science. Introduction to Physical Geography provides a learning experience that students can get in no other discipline-one that takes an integrated view that makes the nature environment relevant.

Bachelor of Arts: Natural Sciences  
General Education: Natural Sciences (GN)

GEOG 10H: Physical Geography: An Introduction  

3 Credits

Survey and synthesis of processes creating geographical patterns of natural resources, with application of basic environmental processes in resource management.

Bachelor of Arts: Natural Sciences  
General Education: Natural Sciences (GN)  
Honors
GEOG 20: Human Geography: An Introduction

3 Credits/Maximum of 3

Spatial perspective on human societies in a modernizing world; regional examples; use of space and environmental resources; elements of geographic planning. GEOG 020

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)

GEOG 20U: Human Geography: An Introduction

3 Credits

Spatial perspective on human societies in a modernizing world; regional examples; use of space and environmental resources; elements of geographic planning.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)

GEOG 30N: Environment and Society in a Changing World

3 Credits

GEOG 30N "Environment and Society in a Changing World" introduces students to the relationships between humans and the natural environment, in addition to the theories and methods that geographers employ in addressing them. The course begins with an overview of theories and key concepts to examine the interactions between social and ecological systems, across settings in the United States and globally. The course will provide students with the opportunity to read and learn about the ways in which humans think about, use, and are affected by the natural environment. It will also provide skills for analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world through the integration of knowledge from the natural and social sciences. This class is designed to address big questions in human-environment interactions at the present time, while drawing upon their histories and key conceptual ideas. 1. What is a human-environment system? How does the geographic discipline contribute towards understanding human-environment systems and sustainability? 2. Why do we conserve what we conserve? Is it possible to conserve natural resources and also meet human needs? 3. What are ways to manage the effects of economic development upon the natural environment? Is sustainable development possible? 4. How is climate change impacting social and ecological systems? Can we adapt to the impacts of climate change? One of the hallmarks of the discipline of geography is attention to how social and ecological processes interact and spread across spatial scales. This means that specific events, such as the consumption of particular product or the emission of greenhouse gases, connect sites within countries and across the globe. GEOG 30N meets the definition for both a US and international cultures course by emphasizing how current human-environment systems developed over time in the U.S. and internationally. GEOG 30N examines how various political, economic, and cultural factors influenced the creation of the different forms of human-environment systems that exist today. Further, it teaches students to see nations, cultures, and social identities in relation to one another, exploring how decisions made in relation to a human-environment system in one place or by one group can impact other people or places.

GEOG 40: World Regional Geography

3 Credits

Introduction to the world as an interdependent community built from unique and independent regions and nations. GEOG 040 World Regional Geography (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. World Regional Geography examines a world that is undergoing political, economic and social transformations at many different spatial scales. Utilizing geographic concepts including scale, place, region, and location, this course examines international linkages, such as global capital, which help forge a world community. However, the course also examines local situations that contradict our understanding of a global community and examines a variety of &quot;voices&quot; struggling to be heard in the world: those embracing the global economy and an international culture and those rejecting a homogenizing global capital and culture because they see their resources being exploited. Concepts such as North and South, developed and developing, globalizing capital and homogenizing world culture, take on new meaning when they are explored at a regional level. Any student interested in how the world functions economically, politically, socially and culturally should enroll in World Regional Geography. For this reason, this course satisfies the General Education and the Intercultural course components of the Penn State student curriculum.

Bachelor of Arts: Other Cultures

GEOG 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 107N: Immersive Technologies - Transforming Society Through Digital Innovation

3 Credits/Maximum of 3

Immersive technologies are an emerging field. Although envisioned and available for several decades, technological challenges of the past made their application in education, research, and everyday life a rather specialized endeavor, restricted to research labs rather than being open to communities. This is changing with the advent of consumer grade VR headsets offered essentially by every major
tech company and smartphones becoming devices to augment any physical reality. We refer to these technologies as XR as they comprise everything from augmented to virtual reality. This development is occurring at an incredible pace and is opening new opportunities for the integration of this technology into every aspect of human life. XR is revolutionizing how humans communicate, how we experience spatially and temporally remote places, how we are able to view, understand, and analyze data, and how we train people. Instead of interacting with data on a 2D desktop screen, researchers and decision makers can immerse themselves in virtual environments where geospatial data are represented in intuitive, immersive, and flexible ways. In parallel to developments in XR we are witnessing an incredible increase in creating content for immersive experiences; with the ready availability of massive amounts of environmental data (e.g., LiDAR) and efficient 3D modeling technologies (e.g., SketchUp, CityEngine), realistic immersive scenarios are easier to create than ever before. We are seeing a paradigm shift which enables new methods of environmental decision making from urban planning to climate change. The combination of XR and automated 3D modeling enables models of real-world places to be integrated within data visualization workbenches. This course will provide students with the basics of what XR technologies are and what their history is, it will connect XR to recent developments in 3D modeling and environmental sensing as two sides of the same coin in that one is focusing on content creation and the other on accessing content. The course will theoretically address what the key features of XR are and introduce students to core concepts such as immersion, presence, and reality-trade off. Furthermore, the course will provide students with hands on experiences to create their own XR experiences focusing on entry level technologies such as 360 cameras, modeling using SketchUp, photogrammetry techniques such as structure from motion mapping, and Unity, a game engine flexible to cater to a broad range of needs.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking

GEOG 110: Climates of the World
3 Credits/Maximum of 3

Introduction to climatology, including principal processes of the global climatic system and their variation over space and time. GEOG 110

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

GEOG 110H: Climates of the World
3 Credits

Introduction to climatology, including principal processes of the global climatic system and their variation over space and time. GEOG 110

GEOG 115: Landforms of the World
3 Credits/Maximum of 3

Distribution of the world’s landform features and mineral resources; their characteristics, causes, and significance. Practicum includes correlated field trips and laboratory studies. GEOG 115

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GEOG 122: The American Scene
3 Credits

Historical perspectives on the social and cultural forces associated with the production of distinctive American landscapes. GEOG 122 The American Scene (3)(GH;US)(BA) This course meets the Bachelor of Arts degree requirements. The American Scene offers a broad introduction to the historical geography of the United States through analysis of distinctive elements of regional landscapes. Archival evidence and contemporary photography are utilized to assist in an understanding of "landscape," "place," and "region," and important frames for geographical inquiry. It offers an ahumanistic perspective on the transformation of the United States from land first occupied by Indian groups, then colonists from specific European realms, some supported by indentured or enslaved labor, as well as later immigrants in the national period, that pursue agricultural economies in an array of rural and urban settlements. Landscapes of modernity, associated with manufacturing, urban growth and new transportation systems, are also considered, as well as landscapes now emerging in the post-industrial era. At the conclusion of the course, students should have a deeper understanding of some of the issues involved in the analysis of place at a variety of spatial scales, and a better sense of the historical layering in the landscapes that they encounter each day and on their travels. The course is organized regionally and temporarily. Case studies are drawn from diverse regions, each emphasizing a different historical moment in the transformation of landscape since the end of the last Ice Age. Some examples draw on material at the scale of a single house or farm and others at the level of a multi-state industrial corporation such as US Steel in the early twentieth century. Any student interested in how the distinctive landscapes of the United States evolved to this point should enroll in The American Scene. It draws on scholarship in historical and cultural geography, as well as architectural history and art history.

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)

GEOG 123: Geography of Developing World
3 Credits

Patterns of poverty in poor countries; conventional and non-conventional explanations; focus on solutions; case studies of specific regions.

Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
General Education: Social and Behavioral Sci (GS)

GEOG 124: Elements of Cultural Geography
3 Credits

Locational analysis of changes in non-Western cultures. Problems of plural societies, economic development, population growth, and settlement. GEOG 124 Elements of Cultural Geography (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Elements of Cultural Geography provides an overview of the impact of cultural processes at multiple scales, from the global to the local. Class time will include lectures and discussions in relation to how social identities,
such as race and class, just to name a few, impact and are impacted by geographic concepts such as landscape, place and space. The course aims to survey and explore a range of perspectives on the nature of human integration with the environment and the manifestation of human culture on the landscape. The course will engage philosophical and metaphorical questions in addition to those of landscapes and place. The ultimate objective is for participants to develop a deep and multidimensional understanding of how social identities and the environment are inter-related. This course is a selection for majors; it has no prerequisites and is not a prerequisite for any other course. It provides a foundation for understanding human-environment interactions at a global scale, including the regional interactions involved.

Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
General Education: Social and Behavioral Scien (GS)

GEOG 124H: Elements of Cultural Geography

3 Credits

Locational analysis of changes in non-Western cultures. Problems of plural societies, economic development, population growth, and settlement.

General Education: Social and Behavioral Scien (GS) Honors

GEOG 126: Economic Geography

3 Credits

The geographic location and organization of economic activities and outcomes at global, national, regional, and local scales. GEOG 126 - Economic Geography (3) (GS;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introductory course on economic geography and serves as background for any course on international economics, economic development, international political economy, and international business management. It will provide a balanced view of contemporary globalization processes across the world through a geographical lens, focusing on a wide range of topics including the history of globalization, spatial structures of firms and business, international trade, and state interventions based on detailed case studies. The course consists of lectures, in class discussions, films, student presentations and exams.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)

GEOG 128: Geography of International Affairs

3 Credits

Contemporary international affairs in their geographical setting; geographic elements in the development of national power, political groupings, and international disputes. GEOG 128

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

GEOG 130: Environment, Power, and Justice

3 Credits

This course explores contemporary themes in human-environment relations through the lens of political ecology. GEOG 130 Environment, Power, and Justice (3) (GS) Relationships between human societies and their physical environments are a defining concern of geography. This course will give students an in-depth knowledge of contemporary human-environment studies in geography through an introduction to the field of political ecology. Political ecology is an interdisciplinary approach that combines environmental justice, cultural ecology, and other related approaches in order to undertake an integrated, holistic assessment of the relationships between social and ecological change, with a particular focus on issues of power and justice in the areas of environmental change and management. In particular, it analyzes the relationships between social and ecological marginalization and change; the social issues surrounding conservation of protected natural areas and species; the underlying causes of environmental conflicts; issues of justice and distribution as they relate to the production and consumption of environmental goods and services; and the role of environmental considerations in the formation of individual and group identities, including environmental social movements. Students in this course will gain familiarity with a wide range of theories and methods in central to contemporary human-environment geography, and increase their knowledge of the world in general, and of environmental policy challenges in particular, by learning how those theories and methods have been put to use in the analysis of case studies from many different countries and continents. Students will be evaluated based on the understanding of the course material they display in a midterm and final examination, and on their contribution towards a group research project.

General Education: Social and Behavioral Scien (GS)

GEOG 160: Mapping Our Changing World

3 Credits

Fundamental concepts of GIS, cartography, remote sensing, and GPS in the context of environmental and social problems. GEOG 160 Mapping Our Changing World (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. Mapping involves producing and using geographic data. Geographic datasppecify the locations and characteristics of people, the objects people create, and the various phenomena of the natural environment with which people interact. Geographic data are produced by several methods, including land surveying, aerial photography and photogrammetry, satellite remote sensing and positioning systems, and social surveys such as those conducted by the U.S. Census Bureau. Geographic information systems (GIS) and related technologies are used to turn data into maps, tables, and other kinds of information people need to make informed decisions. In a rapidly changing world, detailed, up-to-date geographic data are indispensable for governance, for commerce, and for research intended to improve our understanding of social and environmental systems. GEOG 160 helps students begin to develop the knowledge, skills, and dispositions that constitute geographic information literacy - the ability to recognize when information is needed and to locate, evaluate, and use effectively the needed information (ALA 1989). Geographic information science (GIScience) is an area that enterprise concerned with the design, development, and use of geographic information.
technologies to help institutions and individuals not only respond to, but ideally to predict, environmental and social change. GEOG 160 is an introduction to GIScience that provides students with the technical and contextual knowledge they need to become knowledgeable consumers of geographic data and information produced by government agencies, industry, and popular media. The course is intended to be of value not only to future specialists in the geographic information enterprise, but also to every student who is concerned with social and environmental research and policy-making. Like other information technologies, GIS is evolving rapidly. People who work with GIS understand that learning is a way of life, not just a prelude to a career. With this in mind, GEOG 160 aims not only to help students learn about geography and GIS, but also to develop the disposition to become effective lifelong learners.

Bachelor of Arts: Social and Behavioral Sciences
   General Education: Social and Behavioral Science (GS)
   GEOG 161: Applied Geographic Information Systems

1 Credits

An introduction to GIS (Geographic Information Systems) with emphasis on applications and analysis. GEOG 161/GEOG 161 Applied Geographic Information Systems (1) GEOG 161 is a one-credit two-hour laboratory course to be taken concurrently with GEOG 160, Mapping Our Changing World. GEOG 160 and GEOG 161 will be offered concurrently as a required course pair for the proposed Environmental Studies Option within the B.S. Science major (SCNBD) at Behrend College. The courses can also be chosen from the Supporting Courses and Related Areas list for the B.S. Science major's General, General Pre-certification, and Earth & Space Science Pre-certification options. The purpose of the course is to familiarize students with GIS and provide them with the ability to use GIS software commonly used by industry, academia, and government agencies. GEOG 161 will provide students with training and experience in computer-based practical applications of concepts and theory learned in GEOG 160. They will analyze and solve real-world problems using hands-on, problem-solving, and inquiry-based approaches to learning. Students will work individually and in small teams in a GIS software-equipped computer laboratory. Students will be evaluated based on the quality of laboratory reports/assignments and on a larger research project with a presentation conducted during the final five weeks of the semester. GEOG 161 will be offered at least once per year. Enrollment is expected to be 8-20 students.

Prerequisite: or concurrent GEOG 160

GEOG 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 197F: Special Topics - InterDomain

3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GS GenEd course.

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Science (GS)
General Education - Integrative: Interdomain

GEOG 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: prior approval of program

International Cultures (IL)

GEOG 210: Geographic Perspectives on Environmental Systems Science

3 Credits

This lecture, lab and field-based course explores Earth's physical environment and its interactions with human activities. While it is intended primarily for Geography majors and minors, the subject matter and approach are sufficiently broad to be relevant to any student with interests in the environmental and natural sciences. We survey the geographic patterns and physical processes attending Earth's environmental and landscape systems; its climate, hydrology, landforms, soils and vegetation, and their mutual interactions of energy and mass (water, sediment). We adopt both spatially map-able and temporal perspectives; for example, the evidence for causes of, and impacts from, past and contemporary environmental changes such as glaciations, pluvials (wet periods), and warming. An important emphasis involves human interactions with the natural environment; how human activities are constrained; yet also constrain processes and alter features of, the physical landscape across spatial and temporal scales. Representative topics include the burning of fossil fuels and emissions of greenhouse gases and particulates into the atmosphere, natural gas fracking and earthquakes, river diversion and dam construction, groundwater withdrawal and land subsidence, urbanization and the heat island effect, land clearance and deforestation, irrigated agriculture, wildland fire, the introduction of invasive species, and coastal over-development. Our examples will come from across the globe, from areas as diverse as tropical oceans to the polar deserts. An important outcome of the course is that students become better scientific observers of Earth's environmental system and its spatio-temporal variations.

RECOMMENDED PREPARATIONS: (ENGL 15 or ENGL 30 or ENGL 137 or CAS 137 or ESL 15) or EMSC 100

Bachelor of Arts: Natural Sciences
   General Education: Natural Sciences (GN)
   GenEd Learning Objective: Crit and Analytical Think
   GenEd Learning Objective: Integrative Thinking
   GenEd Learning Objective: Key Literacies

GEOG 220: Perspectives on Human Geography

3 Credits

Why are some countries richer than others? How do consumption patterns in one part of the world affect 'far flung' peoples and environments? How does global warming shape land use patterns and rates of hunger across different regions, and what are the political implications of these patterns? Why do rich economies around the world increasingly depend on the recruitment of low-wage immigrant workers, both "legal" and "illegal"? How do race and gender shape access to services, housing and employment in many large cities? In what ways does drone warfare change the nature of state power in the 21st century? These kinds of questions are ones that animate the work of human geographers. The purpose of this course is to introduce you to the breadth of contemporary human geography. We will explore
both the range of topics that geographers study, and some of the key concepts and methods used to study geographic topics. Major themes will investigate how cultural, economic, political, and environmental interactions relate to geographic processes. These general topics will be explored through a detailed examination of case studies in the United States and across the globe.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Science (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

GEOG 230: Geographic Perspectives on Environment, Society and Sustainability

3 Credits

Recommended Preparations: Completion of a basic rhetoric and composition course ( ENGL 15; ENGL 30; ENGL 137; CAS 137; ESL 15 )
OR completion of College of Earth and Mineral Sciences First-Year Seminar EMSC 100 is recommended. A major theme in the discipline of geography is the study of the relationships between humans and the natural environment. GEOG 230 introduces students to the multiple ways in which people and the environment are interconnected. From a dynamic systems perspective, we refer to this interconnectedness as coupled social-ecological systems. The course uses a geographic perspective to understand how differently these linkages are shaped in various ecological and cultural settings around the globe. The course follows an interdisciplinary approach, exploring from multiple angles major environmental and societal challenges such as climate change, genetically-modified food, over-consumption, disease, and environmental service provision in the industrialized North and the Global South. It promotes critical thinking regarding key concepts such as carrying capacity, ecological footprints, feedback, stability domains, and resilience. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in their own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate about the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide them with skills for critically analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world. They will also learn how to assess what future pathways are sustainable and ethically sound. One key goal of the course will be to help students increase their sensitivity to the global and international context of human interactions with nature. A discussion section allows students to explore controversial issues such as biotechnology, nature as a commodity, and global warming, and to develop critical positions on such issues.

Through attendance of lectures, participation in discussion sections, and completion of reading and writing assignments, successful students will:  
- build an interdisciplinary understanding of how biophysical and social environments are intertwined and shape one another, 
- comprehend the range and importance of different disciplinary approaches to researching human-environment systems, 
- develop a toolkit of key concepts and theories for understanding human-environment systems and evaluating questions of sustainability, 
- evaluate and critique different perspectives for intervening in human-environment interactions, including sustainable development, deep ecology and degrowth.

GEOG 260: Geographic Information in a Changing World: Introduction to GIScience

3 Credits

Recommended Preparations: Completion of a basic rhetoric and composition course ( ENGL 15; ENGL 30; ENGL 137; CAS 137; ESL 15 )
OR completion of College of Earth and Mineral Sciences First-Year Seminar EMSC 100 is recommended. In a rapidly changing world, detailed, up-to-date geographic data are indispensable for governing, commerce, security, public health, and many other domains. These data are also needed to support research intended to improve our understanding of social and environmental systems. Making data useful in these domains requires methods and tools that transform data to information and that make that information accessible where and when it is needed. Geographic data specify the locations and characteristics of people, and objects both natural and anthropogenic in nature. Geographic data are produced by several formal methods, including land surveying, aerial photography and photogrammetry, satellite remote sensing and positioning systems, and social surveys such as those conducted by the U.S. Census Bureau. They also are derived through informal methods that rely on the vast and growing array of location-enabled devices including cell phones, smart watches, credit card transaction records, and RFID tags on packages, along with volunteers compiling input to projects such as the Open Street Map. Geographic information systems (GIS) and related technologies are used to turn those data into the information people need to make informed decisions. Maps and related graphics generated on a wide array of devices from cell phones to large touchscreen displays then make the information more accessible and by doing so enable those decisions. Geographic Information Science (GIScience) is concerned with the design, development, and use of geographic information and technologies (also called geospatial technologies) to help institutions and individuals respond to, and ideally to predict, environmental and social change. This course provides a broad, practical foundation of Geographic Information Science methods and technologies for aspiring Geography majors and students pursuing the Geographic Information Science minor or undergraduate certificate.

GEOG 293: Honors Experiences in International Service Learning

1-3 Credits/Maximum of 3

Classroom instruction with supervised student activity on an honors international community service project. GEOG 293H/GEOG 293H
Honors Experiences in International Service Learning (1-3) GEOG 293H provides students with activities that integrate academic study with community service in an international context. The aim of service learning is to enrich traditional classroom-based education by getting students into a community, thereby engendering civic responsibility and simultaneously strengthening communities. GEOG 293H has five objectives: (1) to develop understanding of a set of issues in community development; (2) to learn and apply skills associated with those issues; (3) to develop and apply communication skills by speaking, writing, and/or desktop publishing; (4) to gain international experience at the community level; and (5) to reflect on personal and career interests in international development, science, the environment, public policy, or related areas. Thus, students will read, write, and talk about a set of issues of importance to a foreign community and engage in a project in that community. The specific service-learning projects will change each semester, although some projects will be ongoing and offered multiple times. Students can take GEOG 293H in one or more than one semester, to a maximum of four offerings. Depending on the topic of the international service-learning project, GEOG 293H can complement courses in most
The course explores the process of thinking geographically. As a discipline that draws on elements of four intellectual traditions - the physical sciences, the social sciences, the information sciences, and the humanities - geography offers an extensive palette of approaches to the study of the interactions among people, places, and environments. In addition to those traditions, geography also draws on key themes: setting events and activities into multiple spatial and temporal contexts; setting events and activities into multiple spatial scales from the local to the global; seeing complex, multi-way interactions between human and physical systems; recognizing the interconnectedness between places. In terms of methods, the fundamental building block is the idea of geospatial location and the associated spatially- or geo-referenced data. Data, both quantitative and qualitative in character, is increasingly available in terms of amounts and quality. Students must come to appreciate and be able to use this powerful way of thinking about the world. GEOG 301 assumes a beginning understanding of geography, in terms of basic content knowledge, and builds an understanding of how to think geographically, how to ask geographic questions, how to find geographic answers, how to assess the quality of those answers, and how to present and communicate those answers convincingly and compellingly in multiple formats. Students will learn how to think geographically and to appreciate the power, applicability, and limitations of the geographic approach. Each year the course is organized around a significant contemporary problem as a commonly shared case study. Students will work in small groups to analyze the case study, presenting their own portfolio of work for 60% of the course grade and collaborating with group colleagues for a collective presentation for 40% of the grade.

Work will be submitted in stages through ANGEL. GEOG 301 is required of all geography majors and will be offered Fall and Spring of each academic year with an annual enrollment of approximately 120 students. Preference will be given first to declared Geography majors, then to Geography minors, before places are offered to students from other programs. Geography 301 is a bridge between the knowledge that comes from the broad-based introductory geography courses and the detailed understanding that comes from the focused, advanced-level geography courses. It enables students to learn about and to practice geographical thinking in real-world contexts.

**Prerequisite:** GEOG 294: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
GEOG 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
GEOG 298: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Bachelor of Arts: Social and Behavioral Sciences
GEOG 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
**Prerequisite:** prior approval of program
International Cultures (IL)
GEOG 301: Thinking Geographically
3 Credits
Learning to think geographically. GEOG 301 Thinking Geographically (3) The course explores the process of thinking geographically. As a discipline that draws on elements of four intellectual traditions - the physical sciences, the social sciences, the information sciences, and the humanities - geography offers an extensive palette of approaches to the study of the interactions among people, places, and environments. In addition to those traditions, geography also draws on key themes: setting events and activities into multiple spatial and temporal contexts; setting events and activities into multiple spatial scales from the local to the global; seeing complex, multi-way interactions between human and physical systems; recognizing the interconnectedness between places. Geography 301 is a bridge between the knowledge that comes from the broad-based introductory geography courses and the detailed understanding that comes from the focused, advanced-level geography courses. It enables students to learn about and to practice geographical thinking in real-world contexts.

**Prerequisite:** GEOG 294, GEOG 302, GEOG 303, Prerequisite or concurrent: GEOG 160
GEOG 308: Research and Qualitative Inquiry in Geography
3 Credits
This course examines the theory and practice of research in geography, with particular emphasis on qualitative inquiry commonly used by human as well as environment-society geographers. Students will explore fundamental debates regarding methods and knowledge claims that underlie the research process. Students will also gain hands-on experience developing research questions and using secondary scholarly literature and primary data to explore their question(s) in written and oral formats. Particular emphasis will be paid to the ethics and practices associated with qualitative methods, including the approaches taken by geographers in the collection and analysis of interview, observational, and textual data. Course Objectives and Learning Outcomes By the end of this course students will be able to: - Explain and compare models of knowledge underlying distinct methodological approaches in Geography - Describe research design principles commonly used in qualitative research - Evaluate the appropriate use of interview, observational and textual sources of primary data - Employ qualitative data collection methods to collect interview, observational and textual data. - Explain the ethical dimensions of qualitative research and assess strategies to navigate these constraints both practically and ethically - Find and appraise scholarly, peer-reviewed literature in relation to the student's research topic - Develop a research question, justify it in relation to scholarly literature, and mobilize primary data to provide evidence for your analysis of the question. - Communicate research and analysis in written and oral formats.
GEOG 310: Introduction to Global Climatic Systems
3 Credits
This intermediate-level course in Climatology emphasizes geographic patterns of interannual climate variability (climate variations) and physical processes responsible for those variations (climate dynamics). Interannual climate variations include regional- to large-scale anomalies of temperature, precipitation, cloud cover, etc., that may manifest as extreme weather (drought, floods, heat and cold waves, etc.). The
physical processes associated with these fluctuations include the following: interactions among climate-system components (atmosphere, biosphere, hydrosphere); external forcing (e.g., solar variations, volcanic activity); and long-distance interactions involving coupled atmospheric-oceanic circulations, or teleconnections (El Niño Southern Oscillation (ENSO), the North Atlantic Oscillation (NAO), the Arctic Oscillation (AO), and the Pacific-North America (PNA) pattern). Climatic teleconnections manifest shifts in the atmospheric pressure "centers of action", storm tracks, long waves, jet stream positions, etc.

We study the patterns and processes of regional climate features such as the South Asian and West African monsoons, "nor-easter" snow storms, Arctic/Antarctic sea ice variations, the summer/winter transition in Mediterranean-type climates, the role of "blocking" in middle-latitude climate variations, etc. Also, the course examines the role of human activities in climate, particularly the "global warming" related to increases in greenhouse gases, biomass burning, desertification, deforestation and afforestation, urbanization, irrigation for agriculture, and jet aviation. A key issue addressed is the role of human activities in possibly altering the frequency and intensity of teleconnections, especially ENSO, and of severe storms (thunderstorms, tornadoes) and hurricanes. The possibilities for geo-engineering the climate are also considered. In understanding the physical processes of climate, students are better able to assess the extent humans are a factor in contemporary climate changes.

Course Objectives: 1. Understand how climate variables depict the characteristic patterns of climate and its variations on local/regional to hemispheric/global scales (climate diagnostics); 2. Evaluate the physical processes responsible for those climate and weather variations and their role in regional-scale phenomena (climate dynamics); 3. Assess the role of human activities in contemporary climate changes, on scales of the urban heat island to global warming (human impacts on climate).

Upon completing this course, students will understand the geographic patterns (regional to global) and physical processes associated with climate variations, trends and changes on seasonal through interannual to decadal/multi-decadal temporal scales.

Prerequisite: GEOG 210 or GEOG 10; or METEO 3; or METEO 201

GEOG 310W: Introduction to Global Climatic Systems

3 Credits

Introduction to global atmospheric circulation, including tropical, midlatitude and polar subsystems; ocean, land, cryospheric and urban climatic systems and interactions. GEOG 310W | GEOG 310W Introduction to Global Climatic Systems (3) Geography 310W is an advanced undergraduate course in Climatology that emphasizes study of the patterns of interannual climate variability (climate fluctuations) and the physical processes responsible for those variations (climate dynamics). Interannual climate variations include regional- to large-scale anomalies of temperature, precipitation, cloud cover, etc., that become manifest as drought, floods, heat and cold waves, etc. The physical processes associated with climate fluctuations include the following: interactions among the climate-system components (atmosphere, biosphere, cryosphere, hydrosphere); external forcing (e.g., solar variations, volcanic activity); and long-distance interactions involving the coupled atmospheric-oceanic circulations, or teleconnections (El Niño Southern Oscillation (ENSO), the North Atlantic Oscillation (NAO), the Arctic Oscillation (AO), and the Pacific-North America (PNA) pattern). Climatic teleconnections manifest shifts in the atmospheric pressure "centers of action", storm tracks, jet stream positions, etc. In addition to the study of these climate patterns and processes, the course examines the role of human activities in climate, particularly "global warming", desertification, deforestation and afforestation, urbanization, irrigation for agriculture, and aviation impacts. In this regard, a key issue that is addressed is the potential role of human activities on the frequency and intensity of teleconnections, such as ENSO, and of severe storms (thunderstorms, tornadoes) and hurricanes; possibly the result of modifications to the oceanic Thermo-Haline Circulation. Students write a term paper, as well as critiques of a number of published articles relating to the above topics in climate dynamics. There is a mid-term (essay) exam but no final exam.

Prerequisite: GEOG 010 or METEO003

GEOG 313: Introduction to Field Geography

3 Credits

Introduction to the methods and techniques for collecting spatial and environmental data for physical geography and ecological studies. GEOG 313 | GEOG 313 Introduction to Field Geography (3) This course explores a variety of methods used to acquire primary data from field locations. Aspects of physical, chemical, biological, and cultural factors are examined. Fieldwork is often an important component of research and it involves collecting and analyzing data, handling logistical concerns, developing sampling strategies and techniques, and addressing quality assurance and archiving issues. The course objectives are: to explore methods used to collect, analyze, and interpret field data; to expose students to techniques for sampling physical (geomorphologic, topographic, hydrologic), chemical (water and soil), and biological (flora and fauna) factors; and to explore ways to use field data to interpret geographical and ecological questions and hypotheses. Evaluation involves preparation of written laboratory reports, assignments, and tests. The course is offered every Fall semester with enrollment limited to the number of students supported in a laboratory section.

Prerequisite: GEOG 160

Bachelor of Arts: Social and Behavioral Sciences

GEOG 314: Biogeography and Global Ecology

3 Credits

Dynamics of plant and animal distributions on global, regional, and local scales; their causes and consequences.

Prerequisite: GEOG 010 or BIOL 110 or equivalent

Bachelor of Arts: Social and Behavioral Sciences

GEOG 315: Landforms and Geomorphic Systems in the Anthropocene

3 Credits

Geography 315 builds on concepts presented in the introductory physical geography course to explore the subfield of geomorphology from a geographic perspective. It surveys the various processes shaping Earth’s surface and the landforms resulting from those processes. The course relates these processes and landforms and their connection to human activity on Earth’s surface. By taking this course, students will be able to: 1. recognize basic geomorphic processes and the resulting landforms and landscapes; 2. identify the observations and measurements used to understand geomorphic processes and landforms; 3. explain the implications for human use and livelihood on Earth’s landforms and landscapes. For students who are not geography majors, GEOG 315 may satisfy a General Education Natural Science requirement or may be used
as a Natural Sciences selection for students pursuing a Bachelor of Arts degree.

**Prerequisites:** GEOG 210 or GEOG 10
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

GEOG 320: Urban Geography: A Global Perspective
3 Credits

For the first time in human history, urban dwellers came to outnumber rural residents in the year 2000. The influence of cities extends to nearly every point on the globe. Urban areas, however, differ dramatically in their physical structure, economic base, governance patterns and the lived experiences of their residents with diverse work patterns, striking inequalities in living conditions and varied cultural expression. In short, contemporary cities are vibrant and complex phenomenon formed by conflicting social forces and economic processes. This course examines urban settlements and analyzes the processes of urbanization from a global perspective.

**Prerequisite:** GEOG 20 or GEOG 220
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 323: GIS and Social Theory
3 Credits

Critical understanding of how to use GIS and tools of regional analysis in the context of postmodern social theory. GEOG 323/4 is an introductory-level, laboratory-intensive undergraduate course designed primarily for geography majors to provide a critical understanding of how to use GIS and other tools of regional analysis in the context of postmodern social theory. Fundamentals of GIS are taught alongside social theory to make students aware of both the value and pitfalls of using GIS tools. GIS and computer mapping are examined through three perspectives: Cartesian spatial analysis, relational analysis, and postmodern discourse theory. Cartesian spatial analysis is explained by using conventional tools of GIS such as map overlay and buffering, focusing on geographic locations of objects, that is, on “where” things are. Relational analysis looks at connections among variables and considers “how” things are connected regardless of “where”; geographical objects are connected regardless of “where”; they may be located. The focus here is on choice of variables that are included in the attributes tables of GIS. Postmodern discourse theory argues that categories such as race, class, ethnicity, poverty, community, and neighborhoods are not objectively given entities that are simply mappable, but that they are discursively constructed. We explore the implications of that argument to the mapping exercises in GIS. Since social categories are “constructed” by discourses about them, discourse is a vital part of what GIS produces through its mapping exercises. Discourse theory also argues that social problems arise in a complex nexus of relations that do not show obvious “root causes”; that are easily isolated. In fact, social problems are constituted from things that take place simultaneously at a large number of sites diffused throughout the larger society. To address social problems using discourse theory we require methodologies that can simultaneously analyze large quantities of data. So GIS is an ideal tool for looking at social problems using discourse theory. Thus GIS and discourse theory provide useful complements to each other in the analysis of social problems. These arguments are developed at length, by example, through a series of lab and homework exercises. Evaluations and grades are based on exercises, exams, and a final project.

**Prerequisite:** GEOG 160
Bachelor of Arts: Social and Behavioral Sciences

GEOG 324: Place, Space and Culture
3 Credits

Culture invokes diverse imaginaries of life, livelihood, modes of living, talking, entertaining, consuming, playing and eating. “Place, Space and Culture” provides an overview of the impact of cultural processes at multiple scales, from the global to the local. In this course, we will delve deeper to understand the “how” and “why” of culture, that is, how a particular cultural landscape, a mode of living, is produced and why. Most importantly, this course will examine how culture is not a stand-alone concept and intersects with other social processes such as politics and economics. Class time will include lectures and discussions in relation to how cultural identities, such as race and class, just to name a few, are mediated by geographic concepts such as place and space. The course aims to survey and explore a range of perspectives on the nature of human integration with the environment and the manifestation of human culture on the landscape. The course will engage philosophical and metaphysical questions in addition to those of landscapes and place. The ultimate objective is for participants to develop a deep and multidimensional understanding of how cultural identities and the environment are inter-related. Learning Outcomes: Through taking this course, students will be able to: 1. analyze the major themes and debates within cultural geography; 2. interpret representations of landscape, space and place in a variety of textual materials, such as academic readings, films, novels, newspaper articles and art; 3. evaluate the landscape, space and place as an expression of cultural forces.

**Prerequisite:** GEOG 020 or GEOG 220

GEOG 326: Geographic Perspectives on Economic Systems
3 Credits

This course builds on concepts presented in the introductory human geography course to explore the subfield of economic geography. It serves as a foundation for courses on economic development, political economy, and other offerings in geography. It will provide a balanced view of contemporary economic processes across the world through a geographical lens, focusing on a wide range of topics including the history of globalization, spatial structures of firms and businesses, international trade, and state interventions. The main objective of this course is to give students access to a geographer’s lens for analyzing, interpreting, and critiquing information related to the economy. By the end of the course, students should be able to evaluate the role of different abstract principles in the creation of the economic landscape and to incorporate important critiques of these abstractions into their understanding of how and why uneven development is produced in economic systems. This course will also develop students’ skills in formulating and presenting written and oral arguments based on their own knowledge in conjunction with various reference materials.

**Prerequisite:** GEOG 220 or GEOG 20
This course expands on concepts presented in the introductory human geography course, understanding geopolitics and international relations through an examination of the spatial relationships among political processes and institutions. It explores the problems, promises and paradoxes of international violence and the efforts to address violence through human rights initiatives and international peace movements. Particular emphasis is given to developing an integrative view of how global, national and local scale processes interact to produce patterns of peace and conflict. The course analyzes how individuals, the state and other political actors engage with geography to produce violent or peaceful outcomes. GEOG 328 does not simply explore issues of violence and peace from a "top-down" perspective that focuses on the nation-state and international, state actors. Rather, it focuses on the multiplicity of perspectives and actors that come together to create violent or peaceful conditions. As a result, this course explores violence and the broader movement to address violence through human rights initiatives. We will explore violence and peace in the 20th and 21st centuries, the ways the organization of space and place is linked to violence and peace, and how international efforts to address violence and war are linked through time and space. This course also dissects the definition of human rights, the idea of 'just war' and the way peace movements may both sustain and undermine efforts at ending violence. Course Objectives: The overarching goal of this course is to educate us about the legacies of violence and the struggle to construct a more just and peaceful world. At the end of the semester students should be able to: 1) Define and articulate different notions of violence and recognize how the definition of violence is related to diplomatic efforts at addressing human rights violations. 2) Understand the relationship between violence in one area of the world and resulting broader geopolitical power dynamics, especially the human-territorial considerations of violence and peace. Learning Outcomes: At the end of this course students should be able to: 1) Identify and define structural violence. 2) Explain the differences between positive and negative peace. 3) Define human rights, and explain their connection to geopolitics. 4) Explain how truth processes work, and identify their strengths and limitations. 5) Identify how the definition of peace changes at different scales.

Prerequisite: GEOG 220 or GEOG 20

GEOG 330N: Political Ecology

3 Credits

This course introduces students to political ecology as one approach to advanced human-environment studies in geography. Political ecology is an interdisciplinary approach that combines environmental justice, cultural ecology, and other related approaches to undertake an integrated, holistic assessment of the relationships between social and ecological change. In particular, it analyzes the power dynamics at play in social and ecological marginalization and change; the social issues surrounding conservation of protected natural areas and species and conflicts over natural resources; the underlying causes of environmental conflicts; and issues of justice and distribution as they relate to the production and consumption of environmental goods and services. Students will gain familiarity with a wide range of theories and methods central to contemporary human-environment geography, such as Marxist political economy, Foucauldian governmentality, feminist intersectionality, ethnography, and land change science. Students will increase their knowledge of the world in general, and of approaches to the challenges of environmental policy in particular, by learning how these theories and methods have been put to use in the analysis of case studies from many different countries and continents. They will develop their ability to conduct independent research, work collaboratively, and present their thinking verbally and in writing through a variety of exercises and assignments. Upon completing this course, students will be able to: 1. understand key theories in political ecology. 2. evaluate contemporary debates in human-environment studies using political ecology thinking. 3. apply political ecology theories and concepts to relevant topics. 4. use integrated thinking across the natural and social sciences to analyze and produce possible solutions to complex human-environment challenges.

Prerequisite: GEOG 230 or GEOG 30

Bachelor of Arts: Natural Sciences
Bachelor of Arts: Social and Behavioral Sciences

GEOG 332N: Science and policy of global greenhouse gas emissions and management

3 Credits

This interdomain course introduces students to the science and policy of greenhouse gas emissions. The course focuses on emissions from natural sources, energy production and food production. Policy components will introduce students to the fundamentals of environmental policy and examine key policy options for mitigating and managing emissions. Global in scope, the course will also address how emissions and policy options differ in developed and developing countries. Topics will include overviews of the global carbon cycle, agriculture and land use change emissions, history of global energy use and production, overview of global climate change policy, frontiers in climate, energy and agriculture policy, amongst others.

Prerequisite: ENGL 015.
Cross-listed with: ANSC 332N, METEO 332N

GEOG 333: Human Dimensions of Natural Hazards

3 Credits

An introduction to natural hazards, integrating physical and social science perspectives. GEOG 333 Human Dimensions of Natural Hazards (3)(BA) This course meets the Bachelor of Arts degree requirements. Natural hazards &dash; such as earthquakes, tsunamis, volcanoes, and floods &dash; are not simply forces of nature. Their impacts depend on the interaction between the hazardous events and the characteristics of people, their communities, and the human systems in which they operate. The physical dimensions of natural hazards require knowledge of physical science, and the human dimensions of natural hazards call for knowledge of social science. Nevertheless, understanding natural
hazards means not only that students know the physical and social sciences, but also that they know how nature and society work together to increase or decrease potential harm posed by these phenomena. This course introduces students to the topic by surveying the range of natural hazards and by applying important social science perspectives, such as risk, vulnerability, and the true costs of hazards, to each of the hazards. Because the study of natural hazards is interdisciplinary, readings, lectures, and discussions address crucial aspects of both natural and social sciences. GEOG 333 has two goals: (1) to develop understanding of a set of issues related to the human dimensions of natural hazards; (2) to develop and apply communication skills by discussing, writing about, and presenting on natural hazards. The specific content of the course will change with the instructor, but the focus on interactions between the natural and human worlds and on skill-development in writing and speaking will be constant. Students will be evaluated on both the course goals: (1) understanding of the human dimensions of natural hazards; (2) application of communication skills. Although exact procedures for determining grades will vary with instructor, the basis for grades will always include a combination of written exams based on lectures and readings, oral presentations and papers, and in-class discussion and participation.

**Prerequisite:** junior or senior standing
Bachelor of Arts: Social and Behavioral Sciences

GEOG 361: Cartography–Maps and Map Construction

3 Credits/Maximum of 3

The art and science of creating small-scale maps as a medium for communication and research. GEOG 361GEOG 361 Cartography - Maps and Map Construction (3)(BA) This course meets the Bachelor of Arts degree requirements. Mapping is crucial to exploring and understanding distributions of geographic phenomena. It is also an important phase of many database-intensive analyses because a map is often the best way to visualize results and show them to others. Emphasizes in this course will be on designing and producing both thematic and reference maps that use symbols and visual hierarchies which allow the content of the maps to be readily understood. In addition to principles of graphic design, students learn about map projections, generalization, and data classification, with the objective of becoming proficient mapmakers. Hands-on computer work for lab sections will involve working with varied digital data sources using GIS software. Maps are often built from existing data created by government mapping agencies, stored as geographic information systems (GIS) databases, and based on remotely-sensing imagery. The prerequisite for GEOG 361 is the 100-level mapping and Geographic Information Systems course. The remainder of the semester will be devoted to solidify understanding of radiation concepts central to the construction of remote sensing imagery.

**Prerequisite:** GEOG 160
Bachelor of Arts: Social and Behavioral Sciences

GEOG 363: Geographic Information Systems

3 Credits/Maximum of 3

Principles and use of geographic information; emphasis is on data acquisition and techniques for computer-aided analysis.

**Prerequisite:** GEOG 160
Bachelor of Arts: Social and Behavioral Sciences

GEOG 364: Spatial Analysis

3 Credits/Maximum of 3

Geographic measurement, scaling, and classification; analysis of spatial pattern and structure; geographic covariation and autocorrelation. GEOG 364GEOG 364 Spatial Analysis I (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 364 is an introduction to spatial analysis that focuses on statistical methods for geographers. You will have an opportunity in this course to:

**Prerequisite:** STAT 200 and 6 credits in social science
Bachelor of Arts: Social and Behavioral Sciences

GEOG 365: Introduction to GIS Programming

3 Credits

The rate at which geospatial data are being generated exceeds our ability to analyze them. These developments are quickly leading toward a data-rich but knowledge-poor environment. New challenges arise from an unprecedented access to massive amounts of data. Specialized algorithms are needed to address these scientific and computational
challenges and provide innovative and effective solutions to analyze these large, often multi-modal, spatio-temporal datasets generated by high-resolution sensors or computational models. Traditional computational frameworks are specialized to serve a single science application, and are not flexible to drive diverse models on changing computational platforms. GEOG 365 addresses this new challenge by introducing specialized algorithms and data structures to analyze and visualize large and rapidly changing Earth data science. The emphasis of this course is on specialized data mining algorithms suitable for spatial data and spatio-temporal data with geoscience and Earth science applications. This course teaches how to automate GIS tasks using scripting languages. Automation can make work easier, faster, and more accurate, and knowledge of a scripting language is a highly desired skill in GIS analysts. This course dedicates time to programming fundamentals so that the skills learned can be applied to languages. Increased ability to adapt to new technologies and programming languages will be the greatest benefit students gain from this course.

Course Objectives and Learning Outcomes By the end of this course, students should be able to: - Design and implement solutions using scripting languages to automate geoprocessing tasks. - Demonstrate an understanding of programming concepts, methods, and approaches such as debugging, error checking, and documentation. - Demonstrate an awareness of advanced concepts such as external libraries. - Be aware of and able to integrate content, examples, and libraries.

**Prerequisite:** GEOG 260 or GEOG 160

**GEOG 390: Professional Development Seminar in Geography**

1-3 Credits/Maximum of 4

This course equips geography students with a toolkit for career development as they explore the discipline, develop professional networks, and move into life "beyond" Penn State. It will help students develop a deeper understanding of the relationship between careers, research, experiential learning, civic responsibility, transferable skills, and the discipline of geography. Students will come away with a set of career-related competencies as well as a framework for achieving further professional development. Students will hone a resume, engage in professional networking via LinkedIn and informational interviews, and construct an e-portfolio to showcase their accomplishments.

**RECOMMENDED PREPARATIONS:** 3 credits in geography

**GEOG 397: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**GEOG 397F: Special Topics - InterDomain**

3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GS GenEd course.

**General Education:** Natural Sciences (GN)

**General Education:** Social and Behavioral Scien (GS)

**General Education - Integrative:** Interdomain

**GEOG 398: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**GEOG 398A: **SPECIAL TOPICS**

1-3 Credits

**GEOG 399: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**Prerequisite:** prior approval of program

**International Cultures (IL)**

**GEOG 410: Climatic Change and Variability**

3 Credits

This course introduces students to the physical dimensions of climate change and variability over a variety of temporal and spatial scales. The focus is on recent and future global warming, but we will spend some time looking at climate changes of the past, as context for the future. The emphasis is on the physical science behind questions of global and regional climate changes, but we will also pay some attention to shorter-period climate variations/teleconnections and their impacts on human systems (as possible analogs of future climate change). Because scientific discovery and analysis takes place within a particular social context, we will consider the values, ethics and responsibilities of scientists in general, and specifically in the contexts of geoengineering to minimize or reverse global climate changes. Climate change topics include radiative forcing, greenhouse gases and aerosols, scenario development using statistical and dynamical approaches, equilibrium GCMs versus time-dependent models. Important climate variation topics are droughts, floods, heat/cold waves, and the role of teleconnections; notably, the El Nino-Southern Oscillation, North Atlantic Oscillation and Arctic/Antarctic Oscillations. Because most professional research on climate change and variation involves collaborative science teams, this course emphasizes collaboration and participation. Course Objectives 1. Provide students a basic understanding of the climate system and the internal and external forcings that produces climate variability and change over varying time scales. 2. Introduce students to the tools of the trade: how statistical and global climate models work and why they are used. 3. Help students to think critically about global climate change projections and their implications for natural and human systems. 4. Improve students’ skills in communicating science concepts for a variety of audiences. Learning Outcomes As a result of taking the course, students should have an increased understanding of global climate change and its potential impacts on society, including: 1. Understand, and be able to explain to others, the physical basis for future global climate change. 2. Be able to set future changes in the context of past climate change and variability. 3. Understand the influence of national and international organizations in structuring climate change research and possible remedies. 4. Articulate their own values, ethics and world view and recognize how these frame their own understanding and perspectives on climate change issues.

**Prerequisite:** GEOG 310 or METEO 101 or METEO 201
GEOG 411: Forest Geography

3 Credits

This course studies processes that control spatial and temporal change in forests.

**Prerequisite:** GEOG 010, GEOG 314; or BIOL 220W
Bachelor of Arts: Social and Behavioral Sciences

GEOG 411W: Forest Geography

3 Credits

This course studies processes that control spatial and temporal change in forests.

**Prerequisite:** GEOG 010, GEOG 314; or BIOL 220W
Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

GEOG 412W: Climatic Change and Variability

3 Credits

Theories and observations of past, present, and future climatic change and variability; introduction to techniques used in climatic change research. GEOG 412W Climatic Change and Variability (3) (BA) This course meets the Bachelor of Arts degree requirements. GEOG 412W introduces students to the physical dimensions of climate change and variation. Climate change topics include radiative forcing, greenhouse gases, scenarios, equilibrium models, and time-dependent models. Important Climate variation topics are teleconnections and the El Nino-Southern Oscillation phenomenon. GEOG 412W would appeal to students with interests in Earth and atmospheric sciences, as well as environmental protection. As a writing-intensive course, GEOG 412W aims to help students improve their ability to communicate scientific information. The course devotes considerable class time to the mechanics of reading, writing, speaking, and especially report production. Students not only write, but also learn to edit and critique writing. Because most professional research on climate change and variation involves collaborative science teams, GEOG 412W focuses on collaboration and participation. Students form teams, conduct research, and compile formal collaborative reports on climate change and variation. Students document their individual contributions by producing portfolios.

**Prerequisite:** GEOG 110 or METEO 003
Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

GEOG 414: Principles and Applications in Landscape Ecology

1-3 Credits

Landscape ecology is a rapidly evolving discipline that is poised to address contemporary challenges in sustainability science, land management, and conservation. The focus of landscape ecology is on the controls, interactions and outcomes of spatial patterns and processes on ecological dynamics at multiple spatial scales. Landscape ecology explores how energy and nutrients flow across spatially variable patches, how dispersal and migration of aquatic and terrestrial organisms are affected by spatial networks, and how disturbances propagate across complex terrain. Grounded in related fields of ecology, geography, and spatial analysis, landscape ecology provides additional theoretical tools and approaches to guide applied conservation decision-making in a dynamically changing world. The objective of this course is for students to apply the methods, theories, approaches and practical applications of landscape ecology to inform landscape decision-making. Particular emphasis is placed on how humans modify landscapes and how species, ecological communities, and ecosystems have responded to these changes. These objectives will be met through lecture and discussion of prominent landscape ecology topics (scale, pattern quantification, agents of pattern formation, green infrastructure, and conservation biology), computer laboratory exercises, written papers, and group presentations. By the end of the course students will be able to (1) articulate in written and oral form the concepts of scale and pattern, (2) use landscape pattern metrics, spatial statistics, and models to characterize ecological pattern on landscapes, and explain how ecological patterns develop, and (3) apply knowledge of spatial pattern-process interactions to issues of sustainability, conservation, and landscape management.

**Prerequisite:** BIOL 110; BIOL 220; GEOG 314; FOR 308; WFS 209; LARCH 241

GEOG 417: Satellite Climatology

3 Credits

A discussion of the application of satellite data to current and planned large-scale climate experiments. GEOG 417 GEOG 417 Satellite Climatology (3) (BA) This course meets the Bachelor of Arts degree requirements. Geography 417 presents the theory and practice of satellite remote sensing as applied to the study of climate. Remote sensing refers to the acquisition of information about a target or phenomenon from a distance; climate is the low-frequency signal of weather that involves interactions among Earth's environmental systems (atmosphere, biosphere, cryosphere, hydrosphere). Combining these two disciplines into Satellite Climatology is logical because the fundamental basis of both remote sensing and climate is radiation transfer through Earth's atmosphere. The course emphasizes understanding the different techniques used to determine, from space-borne platforms, the atmospheric, oceanic and land surface conditions important to climate and its variations, and the interpretation of these remotely sensed data in the context of climate dynamics and synoptic climatology. Specific topics include the following: Satellite systems (platforms, sensors, orbits, data processing); Remote sensing clouds and cloud systems, Retrieval of atmospheric temperature, moisture, and precipitation, the Earth-atmosphere radiation and energy budgets, and Land-surface conditions and their modification by humans. In addition, examples of the different satellite-based climatologies, and their advantages and limitations with respect to conventional observations, are presented.

**Prerequisite:** GEOG 362
Bachelor of Arts: Social and Behavioral Sciences

GEOG 420: Comparative Urbanism

3 Credits

This course investigates selected urban issues through the lens of comparative urbanism. GEOG 420Y Comparative Urbanism (3) (US;IL) (BA) This course meets the Bachelor of Arts degree requirements. As an upper level urban geography seminar, this course investigates selected urban issues through the lens of comparative urbanism and requires active class participation. Examination of readings from the growing literature on comparative urbanism will introduce students not only to possible ways to design an effective comparative study but also to the varying goals of such work. Other readings, drawn from a wide variety of sources,
will target particular issues facing urban areas that may vary from year to year, such as economic restructuring, uneven urban redevelopment, transportation planning, historic preservation, arts districts, the social construction of race and ethnicity, aging in place, and urban poverty. Students in turn will be required to design and carry out a comparative research project focusing on a particular urban issue, highlighting both the similarities and the differences between their selected case study cities and placing them in local, regional, and global contexts. This course is reading and writing intensive and satisfies United States Cultures and International Cultures requirements, as well as the Bachelor of Arts Social and Behavioral Sciences Field.

**Prerequisite:** GEOG 120, GEOG 160
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
Writing Across the Curriculum

**GEOG 421: Population Geography**

3 Credits

This course examines key demographic characteristics of the U.S. population and how they are distributed in space. At the same time, we will look at how individuals come to be a part of a population and with what implications. The course will focus on the U.S. with a special emphasis on where people live in U.S. cities. Given this focus we will spend significant time on issues of segregation, gentrification, health disparities, environmental justice, and migration. The class includes a significant lab component and students will have the opportunity to conduct empirical analyses that are common in the fields of planning, epidemiology, social work, and other cognate professional fields. This course meets the social and behavioral components of the BA field.

The first goal of this seminar is to prepare students to think critically about the way demography and policy interact to produce outcomes that vary within and across populations and across space. Many of the most critical policy debates of our time hinge on an understanding of subgroups delineated by gender, age, race, and/or immigration status. Students will learn to identify the role of history, economics, culture and geography in shaping the contexts in which these policy debates now exist and will gain the critical capacity to evaluate changing conditions in the world around them.

The second key goal of this course is to train students in some of the basic techniques for analyzing populations. Being able to devise and execute a project that answers basic questions about the distribution of a population is a foundational skill for many careers that geographers might choose to follow, and can be powerful for engagement in the policy process. The emphasis here will be on applying statistical and GIS skills learned elsewhere to the messy world of real-life data. Students will achieve a better understanding of the possibilities and pitfalls of quantitative analysis of demographic information.

**Prerequisite:** GEOG 020; GEOG 220; SOC 001; R SOC 011 and GEOG 361; GEOG 362; GEOG 363; GEOG 364; SOC 207; CED 404

**GEOG 422W: Globalization, Migration, and Displacement**

3 Credits

This course explores the economic, political, legal, and socio-cultural dimensions of displacement and migration in the context of globalization. The substantive focus will be transnational low-wage labor migration and refugee flows of the late 20th-early 21st centuries, even as the course situates contemporary processes within histories and geographies of economic modernization, urbanization, and colonialism. At a conceptual level, students will engage key theories of migration from sociology, economics, geography, and demography, and they will closely explore how race and gender shape migrant experiences and policy debates. Topics to be examined include: political and economic drivers of labor migration; immigration and border policies and politics; refugee politics and policies; human trafficking; shifting social identities, cultures, and notions of belonging in sending and receiving communities; and the role of race, gender, class and nationalism in these processes. Upon completion of this course students will be able to: - Identify and describe the historical antecedents to contemporary cross-border labor migration and refugee flows - Analyze the economic, political, legal, and social-cultural dimensions of transnational labor migration. - Explain the causes and consequences of labor migration from sending regions - Discuss the causes and consequences of labor migration to regions of reception - Compare the factors generating refugee flows across distinct regions over the 20th century - Integrate scholarly understandings of migrant experiences and identities with broader structural forces generating cross-border flows. - Examine distinct politics and policies of refugee protection and resettlement. - Demonstrate how social hierarchies of race, gender, and class shape cross-border labor migration and refugee resettlement. - Apply theories of migration to specific case studies of cross-border mobility. - Develop a research paper that engages course themes and scholarly debates, linking class concepts and debates to a specific case study. - Demonstrate effective visual and oral presentation skills.

**Prerequisite:** GEOG 20 or GEOG 220 RECOMMENDED PREPARATIONS: Successful completion of an English composition course: ENGL 15; or ENGL 30; or ENGL 137; or CAS 137; or ESL 15
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

**GEOG 423: Historical Geography of North America**

3 Credits

Exploration, settlement, and changing patterns of human occupancy from the seventeenth century to the 1930s. GEOG 432Y Historical Geography of North America (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This is an upper-division, writing-intensive course that presents an overview of current scholarship on the evolving historical geography of the continent. It does this through a set of lectures given by the instructor, through directed readings that will be the basis of class discussion, and centrally through research essays that offer students the opportunity to research, write and argue about historical geographies. Research in historical geography is a process of engagement with partial evidence and with secondary material to open windows on aspects of past lives, past economies, and past places. Since an introductory level overview of the historical geographies of the continent is presented in GEOG 122: The American Scene, this class does not offer a comprehensive survey of regions and periods. Rather, it focuses on three themes: staples and the colonial era, local transformations in agricultural and industrial communities in the nineteenth and early twentieth century, and the packaging of memory; as a way to expose students to primary evidence and current debates. In the unit on the colonial era, the focus is on a variety of records that illuminate the development of economies based on staples such as fish, fur, tobacco, rice and iron, drawing on evidence from the Lords of Trade and Plantations in London, and from correspondence between merchants and planters, as well as scholarship on the material culture of houses, farms and settlements. For the unit on local change, workshops illustrate how to tease out information from the manuscript census, county atlases and corporate histories; students then pursue
similar material for a locale of their own choice and submit drafts of an evolving research essay. A short presentation to the class encourages the effective distillation of visual and data evidence to communicate research findings. On the packaging of memory, the class critically examines how historic sites are presented, and how interpretations have changed in response to shifting academic and popular concerns. Lectures are interspersed with discussions of readings, workshop demonstrations, and by student presentations. Eleven distinct writing exercises are used as the basis of allocating the overall grade.

**Prerequisite:** GEOG 122, 3 additional credits in geography or 6 credits American history
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
Writing Across the Curriculum

GEOG 424: Geography of the Global Economy

3 Credits

Focus on industrial location theory, factors in industrial location, studies of selected industries and problems of industrial development. GEOG 424 GEOG 424 Geography of the Global Economy (3) This class will conduct research on firms and industries engaged in the global economy. Students learn to conduct industry and firms analyses in the context of international regulation. Students learn about the competitive conditions, governmental context, and technological challenges facing selected industries.

**Prerequisite:** ECON 102, ECON 104, GEOG 126
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 424W: Geography of the Global Economy

3 Credits

This course examines the actors, processes, and policies relevant to understanding the global economic system. How does the global economy work? How is it changing? What are the pieces and how do they fit together? What can we do to shape outcomes within this system? In the first section of the course we examine these questions in the context of the 2009 World Development Report produced by the World Bank. The report has as its focus “Economic Geography” with a particular focus on the role of cities in development. We will emphasize the differing assumptions made by economists and geographers with regards to processes of economic development and the impact of globalization. In the second portion of the class we will focus on specific industries, firms, and regions in an attempt to put the broader concepts from Part 1 into an applied context. The focus of this section will be on identifying the complexity of the economic system. In Part 3 of the class we draw from the literature on alternative understandings of the global economy and its possibilities and link this literature to broader debates about global capitalism, international economic policy, and social welfare. Bringing together the broad themes from Part 1 and the applied responses and strategies gleaned from Part 2 we will attempt to synthesize both macro and micro-scale understandings of the present economic system.

**Prerequisite:** GEOG 326; GEOG 126; or ECON 102; or ECON 104; or EBF 200
Writing Across the Curriculum

GEOG 425: Geography of Race, Class, and Poverty in America

3 Credits

This class examines the spatial interactions of race, class and poverty in the United States. GEOG 425 Geography of Race, Class, and Poverty in America (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. The terms &quot;race&quot;, &quot;class&quot;, &quot;poverty&quot; are often discussed in the same breath in academic scholarship. Research portrays the interwoven relationships between economic status, economic security, and ethnic heritage. Despite this powerful and abundant literature, few scholars examine the spatial interactions among race, class, and poverty. The class introduces students to a range of literatures on the meaning of race, class, and poverty in the contemporary United States. We will situate these terms in their local spatial context and investigate how location influences perceptions of the meaning of race, class, and poverty. We will blend historical, contemporary, theoretical and empirical scholarship as we investigate the meaning, understanding and manifestation of race, class and poverty in the U.S. Beginning with history, we will move through the 20th century examining how economic and political cycles have influenced social understanding of these terms. There will be a particular focus on deconstructing the meaning and meaning of the terms and their use in public policy discussions based on perceptual understandings of the terms &quot;race&quot;, &quot;class&quot;, &quot;poverty&quot; and &quot;poverty&quot;; We will examine powerful historical and contemporary media images of race, class, and poverty as seen through the lens of place and identity.

**Prerequisite:** GEOG 126; ECON 102 or ECON 104
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

GEOG 426Y: Gender Geographies

3 Credits/Maximum of 3

Description and explanation of the links between gender relations and spatial structures; gender and work, social services, and neighborhood activism. WMNST (GEOG) 426Y Gender and Geography (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Until the 1970s women remained invisible in the analyses of social space: human geography was indeed just that—(hu)man. Recently, feminist geography began to challenge the implicit masculinity of the subject of geography; this course will examine the evolution of the feminist challenge. The course addresses gendered geographies across multiple scales, such as the body, home, public space, community, nation and globe. Students explore each of these through readings and will produce a series of essays throughout the semester. As a point of entry to discussion of place, space and gender, this course explores the diverse ways in which feminists have seen space as central both to masculine power and to feminist resistance. In particular we will explore arguments from interdisciplinary paradigms, stemming from cultural, post colonial, subaltern, sexuality, gender studies and critical race theory, all of which have influenced current debates across the field of geography.

**Prerequisite:** GEOG 020 or GEOG 126 or GEOG 120 or WMNST100
Cross-listed with: WMNST 426Y
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 427: Urban Historical Geography

3 Credits

Study of the development and transformation of the historical urban built environment. GEOG 427 Urban Historical Geography (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Close up, cities can be seen as sets of buildings - some that are places of work, and others that are places of cultural celebration. The streetscapes created by these sets of buildings can be decoded as a palimpsest of the past. Likewise, the patterns and names of streets, lanes and alleys between buildings contribute to morphological databases of property parcels and land use that help in the analysis of the historical transformations of urban form. Seen at a more distant scale, cities are also nodes - centers for surrounding regional trading systems, and partners with other places in national and global trading systems - that have evolved over a set of decades or even centuries. This course offers an investigation of such multiple frames on the urban past. Examples will be drawn from the Americas, but many will be from Europe, Africa and Asia. Imperialism and its associated colonial mercantile practices meant that variants of urbanism were mapped on to other parts of the world where they often created hybrid forms of cities over time. In the industrial era, new relations between cities and the countryside emerged, as new forms of production developed and resources were harnessed from a more global hinterland. Radically different types of cities have emerged in the past two centuries. Geography 427 will survey the global urban past and explore ways of decoding urban morphological complexity through historical cartographic record and extant landscape evidence. The ultimate objective is for students to develop an appreciation for the complexity of urban land and landscapes in times past and to understand some of the ways in which American urban forms adapt or draw distinction from urban forms elsewhere. At the same time, the course aims to enhance student oral and written communication skills. To enhance their oral communication skills, each student will be expected to make two presentations on their research and to participate in class workshops. To enhance their written communication skills, students are required to write two papers that include instructor feedback on interim drafts, to craft three article summaries, and to write short log responses to most lectures.

Prerequisite: 6 credits in geography, humanities, or social sciences

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 428: Political Geography

3 Credits

Geographical foundations of political phenomena; significant geographic factors in growth and development of states, boundary problems, population distribution, colonies, and internal and international regional problems.

Prerequisite: 6 credits in history or 6 credits in political science

Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

GEOG 428Y: Political Geography

3 Credits

Geographical foundations of political phenomena; significant geographic factors in growth and development of states, boundary problems; population distribution, colonies, and internal and international regional problems.

Prerequisite: 3 credits human geography (GEOG 020 or 120 or 122 or 123 or 124 or 126 or 128)

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 429: Geographic Perspectives on Global Urbanization

3 Credits

This course reflects critically on a number of issues related to global urbanization, including the culture and political economy of urban space. GEOG 429 Geographic Perspectives on Global Urbanization (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. One of the major themes in the discipline of geography is the study of the relationships between humans and the natural environment. GEOG 030 introduces students to the multiple ways in which people and the environment are interconnected. From a dynamic systems perspective, we refer to this interconnectedness as coupled social-ecological systems. The course uses a geographic perspective to understand how differently these linkages are shaped in various ecological and cultural settings around the globe. The course follows an interdisciplinary approach, exploring from multiple angles major environmental and societal challenges such as climate change, genetically-modified food, over-consumption, disease, and environmental service provision in the industrialized North and the Global South. It promotes critical thinking regarding key concepts such as carrying capacity, ecological footprints, feedback, stability domains, and resilience. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in their own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate about the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide them with skills for critically analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world. They will also learn how to assess what future pathways are sustainable and ethically sound. One key goal of the course will be to help students increase their sensitivity to the global and international context of human interactions with nature. A recitation section is crucial because it allows students to explore controversial issues such as biotechnology, nature as a commodity, and global warming, and to develop critical positions on such issues.

Prerequisite: GEOG 427, GEOG 126, or GEOG 120

Bachelor of Arts: Social and Behavioral Sciences

GEOG 430: Human Use of Environment

3 Credits

The human use of resources and ecosystems and social causes and consequences of environmental degradation in different parts of the world; development of environmental policy and management strategies. GEOG 430 GEOG 430 Human Use of Environment (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 430 examines the human use of resources and ecosystems, the multiple
causes and consequences of environmental degradation, and adaptive institutional and policy arrangements as prerequisites for resilient and sustainable management and development in different parts of the world. The major objective of this course is to help geographers, earth scientists, and other professionals to develop an awareness and appreciation of the multiple perspectives that can be brought to studies of human use of the environment and of the ways in which resource-management decisions are made in human society. This is a capstone course that encourages students to place their individual major and technical skills within the context of multiple approaches to environmental decision making and management in complex and dynamic social-ecological systems. GEG 430 is designed as a collective/social learning experience. This implies that the professor and students share responsibility for the learning process and take advantage of collective skills, insights, experiences, and efforts of each other. As in system dynamics, this requires both commitment and flexibility and the willingness to explore foreign territory. As part of this philosophy, learning consists not only of information flow from professor to student, but also from student to student and student to professor. The course follows a case study approach to explore real life lessons of adaptive management around the globe. To make this process work, attendance and active participation are imperative. The course is run more like a seminar than a lecture course and integrates lectures, in-class discussions, presentations, and interactive activities. Student performance is evaluated based on active participation in all of the above, individual short assignments, group projects, in-class quizzes and exams, and one major writing assignment, varying by faculty teaching. This course is offered every semester.

**Prerequisite:** GEOG 410 or GEOG 420 or GEOG 430 or GEOG 440 or GEOG 130 or permission of the program

Bachelor of Arts: Social and Behavioral Sciences

GEOG 431: Geography of Water Resources

3 Credits

GEOG 431 is designed for students to understand the natural processes of aquatic ecosystems, management of water resources, and threats to sustaining water quantity and quality, for all types of freshwater – surface, groundwater, rivers, lakes, wetlands. This course should appeal to water resource managers, geographers, ecologists, earth scientists, planners, other environmental professionals as well as non-science majors. This course will develop awareness and appreciation of the multiple perspectives about water as a precious resource, commodity, and sometimes hazard. Students in the course will first examine water Course Justification characteristics, sources, classification systems, and aquatic ecosystems. Next, we will examine water resource management, including issues surrounding irrigation; floods and dams; provision of safe potable water; threats to water quantity and quality including human and aquatic ecosystem effects; the water economy including virtual water and water footprints; water laws and policy; institutions for water management at the global, national, regional and local scale; and issues of water conflict, security, and climate change. When you successfully complete this course, you will be prepared to: - Identify the unique characteristics of freshwater. - Describe, with a geographic perspective, how and why freshwater is distributed unevenly in space and time around Earth. - Explain the natural processes of aquatic ecosystems. - Discuss why conflicts arise over the vital resource of freshwater. - Identify challenges facing water management in varied climate types around the world. - Compare how humans interact with aquatic ecosystems.

**Prerequisite:** (GEOG 10; or GEOG 210; or GEOG 30; or GEOG 230) ; or 6 credits natural science

Bachelor of Arts: Social and Behavioral Sciences

GEOG 431H: Geography of Water Resources

3 Credits

Perspectives on water as a resource and hazard for human society; water resource issues in environmental and regional planning.

Bachelor of Arts: Social and Behavioral Sciences

Honors

GEOG 432: Energy Policy

3 Credits

Analysis, formulation, implementation, and impacts of energy-related policies, regulations, and initiatives.

**Prerequisite:** E B F200, EGEE 120, PL SC490

Cross-listed with: EME 432

GEOG 433: Geographies of Justice

3 Credits

The justice concept has been a topic of interest within various academic and policy realms concerned with the inequities experienced by racial groups, socio-economic class, and ethnicity. The environment justice movement is generally understood to have begun in the early 1980s with a series of events that demonstrated the inequitable distribution of health hazards and risk. While much work in environmental justice has usefully focused on the disproportionate exposure of poor and minority populations to environmental hazards, conceptualizations of justice have expanded in recent years to include systematic and comparative research within urban and rural populations, industrialized and developing contexts, access to and control over resources, as well as unwilling exposure to hazards, processes and institutions of environmental governance. These trends have resulted in greater attention to the social processes that create and perpetuate inequality on the basis of race, gender, income, or other social categories. In exploring the "fast conceptual transfer" of the environmental justice concept to other settings, Walker and Bulkeley (2006: 655) suggest emerging interest in distribution between nation-states, an expansion of terms to include gender, age and future generations, and intersections with the vulnerability literatures to examine the threat of natural and produced risks. This course engages with the history and future of social and environmental justice. We begin by examining the emergence of the environmental justice movement in the United States and subsequent export of the justice concept to other topics, including sustainable development and climate change, and within other settings, including Sub-Saharan Africa and Latin America. In exploring the diverse ways that justice is being applied at the present time, we will also question...
the future viability for justice as a conceptual and organizational tool. Course Objectives This course has four primary objectives: 1) Examine the history of the concept of environmental justice and the environmental justice movement in the United States; 2) Consider multiple definitions of environmental justice such as procedural and distributive justice; 3) Examine the application of the environmental justice concept to other topics, including sustainable development and climate change, and within other settings, including Sub-Saharan Africa and Latin America; and 4) Consider future directions for environmental justice.

GEOG 434: Politics of the Environment

3 Credits

This course explores politics related to the use, transformation, valuation, and representation of the environment. GEOG 434GEOG 434 Politics of the Environment (3) Scholarship in geography and related disciplines has demonstrated that nature in general and specific environments in particular are unavoidably political. Environmental management can thus never be a purely scientific or technological challenge; it requires critical analysis of cultural, political, and economic contexts, factors, and effects. For instance, effective environmental management requires consideration of how culture shapes how we perceive and value our environments, who wins and who loses in any particular approach to environmental management, and what the relative advantages and disadvantages of competing institutional approaches to environmental management are. This course examines the development of environmental governance, with a primary focus on the United States. It explores both how various groups within society conceive of and value the environment, and multiple approaches to environmental governance and protection. It reviews the history of environmental movements and regulation, and contemporary issues and debates in environmental governance, with particular attention to the effects of institutional forms and social movements. In particular, it examines competing arguments for and against governance approaches centered on state action, market mechanisms, and prominent roles for NGOs and social movements. Students will be evaluated based on: 1) their participation in class discussions, based on critical engagement with material from course readings and lectures; 2) their performance on a midterm and a final examination; 3) an individual research project on a topic relevant to the course, to be designed and carried out under the supervision of the course instructor.

Prerequisite: 6 credits in social sciences or humanities

GEOG 436: Ecology, Economy, and Society

3 Credits

Analyses of major themes in ecology and economic development, poverty-alleviation, and sustainability. GEOG 436GEOG 436 Ecology, Economy, and Society (3) For many years, it was believed that there was a direct tradeoff between economic growth and a clean environment. Sustainable development has been proposed as an framework within which these two objectives can be pursued in harmony and actually can reinforce one another. This course focuses on sustainability issues at the broader (macroeconomic) level, as opposed to the operation of individual businesses (microeconomic, or industrial ecology) level. The course will have two main emphases: 1) to evaluate the major conceptual ideas surrounding natural resource management and sustainable development, including equity, poverty, fairness, power, knowledge, and community empowerment; 2) to use empirical case studies to examine the practical, material and policy relevance of these concepts. The first part of the semester will be used to untangle and clarify the ideological and theoretical bases (biases) of broad human-environment discourses as they pertain to community empowerment and resource development. The final part of the semester will be used to analyze case studies in order to assess the relevance of existing theoretical framework for resource empowerment and community development in industrialized countries and the Third World, especially Africa.

Prerequisite: upper-division standing

GEOG 438W: Human Dimensions of Global Warming

3 Credits

Human dimensions of climate change: human causes, human consequences, and policy implications of global warming. GEOG 438W - Human Dimensions of Global Warming (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 438W, the Human Dimensions of Global Warming, covers both the human causes and consequences of what many people view as the most significant problem facing society. Humans cause climate change primarily by emitting heat-trapping greenhouse gases through everyday activities associated with industrialized society (such as energy production and consumption, transportation, and manufacturing) and land transformation (such as agriculture and deforestation). People experience the consequences of climate change directly through reduced resources (such as food, fiber, forests, and fisheries) or increased natural hazards (such as droughts, floods, and intense storms). They also experience the consequences indirectly through such mechanisms as higher prices for food or larger insurance premiums. GEOG 438W does not address the physical science of climate change; instead, it concentrates on social science issues surrounding the topic. GEOG 438W has two goals: (1) to develop understanding of a set of issues related to the human dimensions of climate change; (2) to develop and apply communication skills by discussing and writing about the topic. The specific content of the course will change with the instructor, but the focus on the human causes and consequences of climate change and on skill-development in writing will be constant. Students will be evaluated on both the course goals: (1) understanding of the human dimensions of climate change; (2) application of communication skills. Although exact procedures for determining grades will vary with instructor, the basis for grades will always include a combination of written exams based on lectures and readings, regular written assignments with instructor feedback, and in-class discussion and participation.

Prerequisite: EARTH002, GEOG 010 or METEO003; GEOG 030

Bachelor of Arts: Social and Behavioral Sciences Writing Across the Curriculum

GEOG 439: Property and the Global Environment

3 Credits

This course reviews theoretical and empirical relationships between multiple legal, economic, and cultural approaches to property, and environmental quality and conflicts. GEOG 439GEOG 439 Property and the Global Environment (3) Property relations are among the most powerful and pervasive institutions in human societies. Fundamental rules governing and legitimating who can do what, and where, they shape and reveal interactions between human societies and physical environments, a concern at the heart of geography. Our own property relations are often all but invisible to us precisely because they are so deeply woven into our perceptions, consciousness, social structures, and everyday experiences of the world. It is thus easy to overlook the fact that we live within highly specific and contingent property arrangements.
and that changing circumstances are prompting important changes in contemporary property relations. This course explores these issues with a particular focus on their implications for environmental politics and regulation. We will address questions such as: Is the privatization and commodification of nature a recipe for ecological disaster, or the most effective means of preservation? Can we own the weather? What were the historical-geographical circumstances surrounding the development of major modern property forms, and are those forms adequate to the environmental problems we now confront? Are there property relationships outside of the law? How do property relations and conflicts change in response to changing human control over nature, and how can different kinds of property arrangements lead to, or help to solve, environmental and social problems? Readings will review debates over common property; the benefits and dangers of privatization of environmental goods; distinctions between formal and informal property rights; the development of zoning and other regulation of private property; and contemporary debates over intellectual property rights in nature, and relationships among trade, property rights, and environmental quality. The course will be of interest to students interested in environmental policy, land use planning and management, law, the areas of nature-society relations and historical geography, and environmental history. Students will gain a sophisticated understanding of the central underpinnings of much property and environmental regulation, and familiarity with many cutting-edge debates in these domains, both domestically and internationally. Evaluation methods will include examinations and an independent research paper and presentation by each student. The course will be offered every other year, with enrollment capped at 30 students.

Prerequisite: GEOG 444: African Resources and Development

Ecological and cultural factors in the geography of Africa; natural resources and development. GEOG 444 / AFR 444 African Resources and Development (3) (BA) This course meets the Bachelor of Arts degree requirements. This course is designed to analyze the ecological, economic, political and cultural factors, which influence development in sub-Saharan Africa. The traditional system, colonialism, modernization, post-colonial philosophies are four conceptual artifacts used to address some of these issues. Within these broad frameworks, the course focuses on existing debates surrounding key development ideologies and narratives in the region, including, poverty, conservation, population, debt, food security, land reform, foreign intervention and global politics. The topics and texts for the course are chosen carefully to provide general factual material as well as exposure to the major discourses surrounding the region’s development. The views of many Americans concerning Africa are often both unitary (Africa is a country) and unidimensional (Africa is a place of conflict, poverty, corruption and crisis). Assuming that a number of students are likely to join the class with this general background, the main objectives of the course will be: (i) to provide a broad geographic and historical tutorial to dispel myths and stereotypes about the region; (ii) to explore the literature, which analyzes the historical, geographic and political factors that underlie the region’s present status in the global economy; and (iii) to gain insights into the intellectual and ideological dimensions of the “raging” debates surrounding issues like environment, conservation, population, corruption, and poverty in the region. By the end of the semester, students should have acquired the skills to accomplish the following goals: *be able to interpret and analyze the internal (national, regional) dynamics of the region’s development; *be able to interpret and analyze the global factors, which influence the environment, economy, and politics of the region; *develop an informed background on the ideological narratives that guide policy in the region, for example, population, sustainable development, post-colonialism, “empire” (whether, American, European, Indian, Chinese, South African?).

Prerequisite: GEOG 010 or GEOG 020 or GEOG 030 or GEOG 123 or GEOG 124 or GEOG 130 or EARTH105 or AFR 105 or AFR 110 Cross-listed with: AFR 444 Bachelor of Arts: Other Cultures Bachelor of Arts: Social and Behavioral Sciences

GEOG 461: Dynamic Cartographic Representation

3 Credits

Theory and practice of mapping and geo-representation in a dynamic media context. Applications in science, policy, travel, and education. GEOG 461W GEOG 461W Dynamic Cartographic Representation (3)(BA) This course meets the Bachelor of Arts degree requirements. Most maps produced today are electronic, dynamic, and often ephemeral – with millions of maps generated on the web each day. At the same time, computer graphics technologies developed to enable scientific visualization generally, are being adapted and extended for applications with geographic information. The goal of this course is to provide students with both the conceptual understanding and practical experience needed to design effective dynamic representations and assess their effectiveness. During the term we will explore the potential and implications of recent advances in cartography, exploratory data analysis, and information visualization as they relate to the theory and practice of geographic visualization (geovisualization). A key focus of the course is on dynamic representations and assessment of their potential. Students will learn to use geographic information science tools and techniques to create dynamic maps, including maps for geographic information systems, geographic information databases, and for geographic information science research. Students will learn about the theory and practice of mapping and geo-representation in a dynamic context, with an emphasis on understanding the design and implementation of dynamic maps. The course will be of interest to students interested in environmental policy, land use planning and management, law, the areas of nature-society relations and historical geography, and environmental history. Students will gain a sophisticated understanding of the central underpinnings of much property and environmental regulation, and familiarity with many cutting-edge debates in these domains, both domestically and internationally. Evaluation methods will include examinations and an independent research paper and presentation by each student. The course will be offered every other year, with enrollment capped at 30 students.

Prerequisite: GEOG 461W GEOG 461W Dynamic Cartographic Representation

GEOG 462: Advanced Observation of Earth and Its Environment

3 Credits

Recommended Preparations: (GEOG 365 AND GEOG 464) OR prior exposure to R programming language. This course will provide the requisite materials to understand and apply techniques of remote sensing to study Earth and its environment using the R programming language. Every day numerous satellites from different countries acquire and transmit multispectral high resolution data of Earth and its environment. Such data are used for a variety of operational and
research applications, such as weather forecasting, national security, natural hazards, navigation, land use and land cover, surface temperature, climate change, urban planning and many others. Massive amounts of data are received, processed, stored and distributed by several centers around the world, giving an unprecedented access to global high resolution information. Such information can give new insights to study the complementary nature of different parameters of Earth’s environment. The first part of the course discusses the R programming language to analyze data, generate maps and plots and general remote sensing methodologies, products availability and characteristics, data types and formats. The second part of the course discusses remote sensing applications for specific tasks including natural hazards, global change, seasonal and interannual studies. Current research issues will be illustrated, including examples pertaining to the atmosphere, land masses, and oceans, and concluding with a survey of some problems that are at the current frontiers of remote sensing.

**Prerequisite:** Recommended Preparations: (GEOG 365 and GEOG 464) or prior exposure to R programming language Prerequisite: GEOG 362 or FOR 455 or METEO 477 or EE 477

GEOG 463: Geospatial Information Management

3 Credits

This course examines geospatial data representations and algorithmic techniques that apply to spatially-organized data in digital form.

**Prerequisite:** GEOG 363

Bachelor of Arts: Social and Behavioral Sciences

GEOG 464: Advanced Spatial Analysis

3 Credits

Skills and knowledge for applying quantitative methods to analyze information with spatial distributions. GEOG 464 GEOG 464 Analysis and GIS (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 464 is a course in methods for analyzing spatial data—methods that can and should be used when the geographic arrangement of a set of measured observations is thought to be of significance in explaining the values of those measurements. The methods of spatial analysis looked at in this course can be distinguished from conventional statistical analysis techniques, and also from many of the analysis functions programmed into many GIS packages. In fact several spatial analysis methods considered in this course the result of attempts to alter and extend conventional statistical techniques to take account of locational similarity and distance measurements (which is why Geography 364 or an equivalent primer in introductory statistical methods is a prerequisite). This means that the techniques that will be introduced in the course are often quite complex mathematically or statistically. Having said this, the overall goal of the course is to provide sufficient conceptual understanding and practical experience so that students become competent in selecting and applying methods appropriate to a variety of frequently-encountered analytical situations.

**Prerequisite:** GEOG 364

Bachelor of Arts: Social and Behavioral Sciences

GEOG 465: Advanced Geographic Information Systems Modeling

3 Credits

Before taking GEOG 465, students will have learned the fundamentals and principles of GIS. This course extends such knowledge to modeling geospatial scenarios. A GIS model simulates real-world phenomena, including environmental, physical and natural features, as well as social features such as demographic, transportation and origin-destination data. We will model raster and vector data types with an emphasis on multi-criteria GIS operations, using ArcGIS, R and potential other software packages. Upon completion of the course, successful students will have achieved the following objectives and learning outcomes: Students will be able to: a) discuss basic GIS modeling principles; b) find, use, store, retrieve and evaluate GIS datasets; c) describe capabilities and limitations of GIS methods and models; e) implement capabilities, tools and packages in ArcMap GIS and R environments; f) use R for programming tasks such as looping and branching; g) evaluate an external software program and create a model using this software; h) exhibit ability to design and carry out spatial analyses using GIS; i) communicate the results of geographic analyses to others, both in oral and in written form; j) analyze spatial data sets in terms of predictability and uncertainty; and k) calibrate models based on real-world datasets.

**Prerequisite:** GEOG 363

GEOG 467: Applied Cartographic Design

3 Credits

Project-based map production problems with emphasis on map design and advanced mapping tools in geographic information systems. GEOG 467 Applied Cartographic Design (3)(BA) This course meets the Bachelor of Arts degree requirements. The course objective is to immerse the student in applied problems of map production and geographic representation. Topics include advanced software methods for labeling and data editing; advanced symbolization and production of extended map series; conversion between software environments; and representation for multiple media, scales and purposes. The challenge of working with clients for mapping is often included in a project. Evaluation is based primarily on meeting draft deadlines, map project quality, written reports on project decisions, and an exam. The 300-level cartography course is a prerequisite for GEOG 467, and an introductory GIS course also provides useful background skills, though it is not a prerequisite.

**Prerequisite:** GEOG 361

Bachelor of Arts: Social and Behavioral Sciences

GEOG 468: Geographic Information Systems Design and Evaluation

3 Credits

Design and evaluation of Geographic Information Systems and other forms of integrated spatial data systems. GEOG 468 GEOG 468 Geographic Information Systems Design and Evaluation (3)(BA) This course meets the Bachelor of Arts degree requirements. This course teaches GIS design, project management and communication skills and an appreciation of the ethical, legal and social issues surrounding maps, GIS and geographical data. It also introduces some of the newer information-technology aspects of handling geographic information, such as location-based services and sensor webs, that affect how GIS data are accessed and used. The bulk of practical component of the course is taken up with a large group project (four to six persons per group). The project gives students the opportunity to engage in an exercise that spans the entire range of GIS design and implementation: from problem inception to solution testing. Outcomes revolve around the experienced gained by conducting a GIS project from inception to solution, including specification, design, implementation and evaluation, and specifically: 1. Practical experience with technical writing relating to GIS systems lifecycle, including interviewing, fact finding, description
of the contents of the various project deliverables and their importance. 2 An appreciation of legal and ethical issues surrounding GIS, maps and geographic including copyright, responsibility and liability and computing law. 3. An understanding of new technological innovations that will impact the access and use of geographic information, including: data sharing (interoperability), digital libraries and information portals, web services and grid computing. 4. A portfolio of practical systems development work, that documents all stages in the lifecycle of a GIS project.

**Prerequisite:** GEOG 363
Bachelor of Arts: Social and Behavioral Sciences

GEOG 469: Energy Industry Applications of GIS

3 Credits

Roles of geographic information systems in energy siting decisions focusing on electric energy transmission networks. GEOG 469 Energy Industry Applications of GIS (3) Over 2 million miles of oil and gas pipeline and nearly 200,000 miles of electric transmission grid currently traverse the U.S. Geographic information systems (GIS) are used to help maintain these far-flung and extremely expensive energy infrastructures. GIS is also used to help determine optimal routes for pipelines and transmission lines as energy demand and production increase, and as the grid is extended to connect to new energy sources and consumers. GEOG 469 provides students with an in-depth exploration of the complexities of siting decisions. The course introduces a variety of siting challenges that confront the energy industry and its customers and neighbors, but focuses on the siting of electrical transmission lines. The course also provides hands-on experience with a common decision support technology, and considers how the technology may be used to facilitate public participation in siting decisions. Students will undertake a term-length project in which they must propose, research, develop and implement a siting recommendation for an electrical transmission line. They will utilize activities from each lesson to develop primary and alternative routes. Using GIS, students will develop overlays, weights and rankings to determine the most suitable location for a proposed transmission line. Students will produce final product will be maps showing proposed routes based on the siting criteria and rankings developed to minimize the impacts associated with the various siting criteria used. To help students develop the critical thinking skills needed in the energy industry, students will learn to critique their peers’ work analyses systematically from the perspective of local stakeholders who are most affected by siting decisions. GEOG 469 is designed to help students achieve two of the programmatic educational objectives established for the Energy and Sustainability Policy degree. It fosters energy industry knowledge by illuminating the difficulties intrinsic to facilities siting decisions. And it nurtures analytical skills by familiarizing students with GIS methodology, and by teaching them how to critique GIS analyses systematically.

**Prerequisite:** GEOG 030 , EGEE 102 , EME 444

GEOG 479: Cyber-Geography in Geospatial Intelligence

3 Credits

Geospatial intelligence analysis of the geographic aspects of cyber data and observables, products for decision making, and impact of change. GEOG 479 Cyber-Geography in Geospatial Intelligence (3) This course examines various geospatial intelligence themes and issues such as the geographies of cyberspace, the geopolitics of cyberwar, techniques that might be employed in such a conflict and how they are related to censorship on the Internet, ideas on regulation and network architecture, the politics of censorship and hacking, the politics of grassroots activism enabled by cyber Internet Communication Technologies (ICT), and the role and use of geospatial intelligence in the cyber domain for disaster response and humanitarian relief. Students will interrogate a range of information systems, the emerging landscape defined by the &ldquo;geographies of the Internet,&rdquo; and the impacts as they concern the intersection of ICTs and intelligence. The course will be centered on a geospatial intelligence nexus with emphases on technology, information theory, and geopolitics.

**Prerequisite:** GEOG 160 , GEOG 482 , or permission of program

GEOG 480: Exploring Imagery and Elevation Data in GIS Applications

3 Credits

Using imagery and terrain data in typical application scenarios faced by the geospatial professional.

**Prerequisite:** GEOG 482 or equivalent professional experience

GEOG 481: Topographic Mapping with Lidar

3 Credits

Using airborne topographic lidar to create elevation models for GIS applications.

**Prerequisite:** GEOG 362 or GEOG 480 ; GEOG 160 or GEOG 482 ; or equivalent professional experience

Bachelor of Arts: Social and Behavioral Sciences

GEOG 482: Making Maps That Matter With GIS

3 Credits

Despite its widespread use in thousands of organizations worldwide, Geographic Information Systems (GIS) remains for many an obscure set of technologies and professional practices. Even practicing GIS professionals may have limited awareness of the breadth of the field and its impacts in government, industry, and non-governmental and non-profit organizations. The course uses case studies of meaningful applications of GIS to reveal key topics across the spectrum of industry sectors defined by the U.S. Department of Labor in its Geospatial Technology Competency Model (GTCM): Positioning and Data Acquisition, Analysis and Modeling, and Software and Application Development. Topics to be mastered include concepts like positioning frameworks, uncertainty, and geo-enablement, methods and techniques including the GPS positioning, spatial modeling, and geo app development, and relevant ethical, legal, and policy issues such as locational privacy. In addition to topical objectives, the course cultivates competencies associated with lifelong learning, a cornerstone of the GTCM. Students achieve educational objectives by searching, discovering, and evaluating information from a variety of sources, including, but not limited to, the Internet. Those with substantial professional experience are encouraged to share their perspectives. Students develop mastery through class discussions in which they collaboratively prepare to demonstrate individual mastery in tests. They also learn to craft case studies of their own by creating and presenting story-telling web apps using cloud-based GIS technology. They gain self-knowledge by assessing their individual competencies in relation to the GTCM. The awareness, knowledge and technical skills they gain prepare them for success in programs such as Penn State's Postbaccalaureate Certificate Program in Geographic Information.
Systems (GIS) and Master of GIS graduate degree program, and for professional growth.

**Prerequisite:** admission to the Master of GIS program or Certificate Program in GIS
Bachelor of Arts: Social and Behavioral Sciences

GEOG 483: Problem-Solving with GIS
3 Credits

How geographic information systems facilitate data analysis and communication to address common geographic problems. GEOG 483

**Prerequisite:** GEOG 482
Bachelor of Arts: Social and Behavioral Sciences

GEOG 484: GIS Database Development
3 Credits

Database design, creation, maintenance, and data integration using desktop GIS software. GEOG 484

**Prerequisite:** GEOG 483
Bachelor of Arts: Social and Behavioral Sciences

GEOG 485: GIS Programming and Software Development
3 Credits

The course focuses on solving geographic problems by modifying and automating generic Geographic Information System (GIS) software through programming. In GEOG 485, students use the Python programming language to write and modify scripts that add functionality to desktop GIS tools and to automate geospatial analysis processes. No previous programming experience is assumed. Core topics covered in this class include object-oriented programming, component object model technologies, object model diagrams, loops, if-then constructs, and modular code design, and situates these topics in the geospatial workflow through their integration with maps, layers, spatial data tables, and spatial analysis methods. Students who successfully complete the course can automate repetitive GIS tasks, customize GIS interfaces, and share their geospatial software development work with others.

**Prerequisite:** Permission of instructor or admission to the program
Bachelor of Arts: Social and Behavioral Sciences

GEOG 486: Cartography and Visualization
3 Credits

Theory and practice of cartographic design emphasizing effective visual thinking and visual communication with geographic information systems. GEOG 486

**Prerequisite:** GEOG 484
Bachelor of Arts: Social and Behavioral Sciences

GEOG 487: Environmental Applications of GIS
3 Credits

Real-world applications of GIS and spatial analysis to investigate a variety of current environmental issues. GEOG 487 Environmental Applications of GIS (3)GEOG 487 is an elective course in the Post baccalaureate Certificate Program in GIS and the Master of Geographic Information Systems (MGIS) degree program, both of which are offered exclusively through Penn State's World Campus. GEOG 487 consists of projects, associated readings, quizzes, and discussions related to environmental applications of GIS. Students are exposed to a variety of concepts, tools, data sources and formats, and environmental issues they are likely to encounter in a career involving GIS and environmental management. Like other courses in the GIS Certificate and MGIS programs GEOG 487 is offered in compressed 10-week terms that require a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October). GEOG 487 does not count toward the requirements of the resident B.A., B.S., M.S. or Ph.D. degrees in Geography, except by explicit permission of the student's graduate advisor and the Department of Geography's graduate officer.

**Prerequisite:** GEOG 484
Bachelor of Arts: Social and Behavioral Sciences

GEOG 488: Acquiring and Integrating Geospatial Data
3 Credits

Advanced technical, legal, ethical and institutional problems related to data acquisition for geospatial information systems. GEOG 488

**Prerequisite:** GEOG 484
Bachelor of Arts: Social and Behavioral Sciences

GEOG 489: Advanced Python Programming for GIS
3 Credits

In GEOG 489, you will learn advanced applications of Python for developing and customizing GIS software, designing user interfaces, and solving complex geoprocessing tasks using both proprietary and open source platforms. Students will also learn the use of version control software for code management and techniques for distributing geospatial Python applications to end users. The course consists of readings, applied projects, quizzes, and discussions about advanced GIS and spatial data science programming concepts and techniques, and it culminates with a term project. GEOG 489 is intended for students who already possess basic geospatial programming knowledge and skills via professional experience or completing GEOG 485. The technology covered in the course includes: Esri ArcGIS Pro/arcpy, Jupyter Notebook, Esri ArcGIS API for Python, QGIS, and GDAL/ogr.

**Prerequisite:** GEOG 485
Bachelor of Arts: Social and Behavioral Sciences

GEOG 493: Service Learning
3-12 Credits/Maximum of 12

Classroom instruction with supervised student activity on a group community service project. GEOG 493GEOG 493 Service Learning (3-12) GEOG 493, Service Learning, provides students with activities that integrate community service with academic study. The aim of service learning is to enrich traditional classroom-based education by getting students into a community, thereby engendering civic responsibility and simultaneously strengthening communities. GEOG 493 has five objectives: (1) to develop understanding of a set of issues; (2) to learn and apply skills associated with those issues; (3) to learn to interpret science issues for dissemination to the public; (4) to develop and apply communication skills by speaking, writing, and/or desktop publishing; and (5) to reflect on personal and career interests in science, the environment, public policy, or related areas. Thus, students will read,
write, and talk about a set of issues of importance to a community and
engage in a project in that community. The specific service-learning
projects will change each semester, although some projects will be
ongoing. In addition, more than one GEOG 493 project will be available
to students in most semesters and will have alphabetical designations (e.g.,
493A or 493B). Students can take GEOG in more than one semester, to
a maximum of 12 credits. Depending on the topic of the service-learning
project, GEOG 493 can complement courses in most colleges and their
majors. The course is available to all Geography majors as elective
credits; it is also available to all Geography Minors for credit toward
the minor. It counts for credit as an Advanced Physical/Environmental
Geography course in the Physical/Environmental Geography Option,
and counts for credit as an Advanced Geography course in the General
Geography Option. Students will be evaluated on four of the five course
objectives: (1) understanding of the issues, (2) learning and application
of skills, (3) interpretation of issues for public dissemination, and (4)
application of communication skills. Although exact procedures for
determining grades will vary with the instructor and service-learning
project, the basis for grades will include a combination of written work,
oral presentations, in-class participation, and outside-class participation.

Prerequisite: sophomore standing; 6 credits of social or environmental
science

GEOG 494: Research Project in Geography
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an
individual or small-group basis.

Prerequisite: prior approval of program

GEOG 494H: Research Project in Geography
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an
individual or small-group basis.

Prerequisite: prior approval of program

Honors

GEOG 495: Internship
1-13 Credits/Maximum of 13
Supervised off-campus, non-group instruction including individual field
experience, practicums, or internships. Written and oral critique of activity
required.

Prerequisite: prior approval of proposed assignment by instructor

Bachelor of Arts: Social and Behavioral Sciences

GEOG 495B: Geography Teaching Internship
1-10 Credits/Maximum of 10

GEOG 495B Geography Teaching Internship (1-10)(BA) This course meets
the Bachelor of Arts degree requirements. The Teaching Internship
provides undergraduate students with formal, supervised teaching
experience. Instructors recruit students who excel in a particular course
to serve as teaching interns (TIs) in subsequent offerings of the same
course. TIs may assist their peers as tutors or as laboratory assistants.
They may be assigned to assist faculty members by developing and
evaluating new course activities and materials. Although TIs may not
evaluate their peers’ class work, they can play important roles in the
formative course assessment by providing feedback in regular meetings
with instructors. In the process of developing the knowledge, skills and
dispositions needed to be effective in helping fellow students learn,
TIs gain experience that prepares them for leadership roles in their
professional careers. TIs also gain respect for the effort and imagination
involved in designing and conducting college classes.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 495C: Internship Supervision and Mentoring
1 Credits

GEOG 495C Internship Supervision and Mentoring (1)(BA) This course
meets the Bachelor of Arts degree requirements. GEOG 495C enables
MGIS students who participate at a distance through the University’s
World Campus to earn credit through contributions to the Department’s
residential programs. Qualified MGIS students will be encouraged to
earn one credit (up to a maximum of three) for every semester that
they supervise a resident Penn State Geography student in GIS-related
internship conducted in the MGIS student’s place of work. Qualifications
will be judged by MGIS students’ academic advisors. Advisors will help
MGIS students recruit qualified internship candidates. Advisors will also
evaluate the quality of supervision on the basis of the documentation
provided by both the MGIS student and the student intern he or she
supervised. MGIS students unable to provide internships may still
contribute by serving as mentors to students enrolled in the resident
course EM SC 300: Professional e-Portfolio Development, through the
University’s LionLink program.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 495G: Giscience Internship
1-10 Credits/Maximum of 10

GEOG 495G Giscience Internship (1-10)(BA) This course
meets the Bachelor of Arts degree requirements. GEOG 495G enables
MGIS students who participate at a distance through the University’s
World Campus to earn credit through contributions to the Department’s
residential programs. Qualified MGIS students will be encouraged to
earn one credit (up to a maximum of three) for every semester that
they supervise a resident Penn State Geography student in GIS-related
internship conducted in the MGIS student’s place of work. Qualifications
will be judged by MGIS students’ academic advisors. Advisors will help
MGIS students recruit qualified internship candidates. Advisors will also
evaluate the quality of supervision on the basis of the documentation
provided by both the MGIS student and the student intern he or she
supervised. MGIS students unable to provide internships may still
contribute by serving as mentors to students enrolled in the resident
course EM SC 300: Professional e-Portfolio Development, through the
University’s LionLink program.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on
an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences
GEOG 497: Special Topics
1-9 Credits/Maximum of 18
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 498: Special Topics
1-9 Credits/Maximum of 18
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 498A: **SPECIAL TOPICS**
1-3 Credits
Bachelor of Arts: Social and Behavioral Sciences

GEOG 498B: **SPECIAL TOPICS**
2-3 Credits
Bachelor of Arts: Social and Behavioral Sciences

GEOG 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Prerequisite: prior approval of program

International Cultures (IL)

Geosciences (GEOSC)

GEOSC 1: Physical Geology
3 Credits
Earth processes and their effects on the materials, structure, and morphology of the earth's crust. Practicum includes field work, study of rocks, minerals, dynamic models, and topographic maps. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

GEOSC 2: Historical Geology
3 Credits
History of the earth and its life; fundamentals of evolution, correlation, and paleogeography; practicum includes field trips, study of geologic maps, geologic problems, and fossils, with emphasis on Appalachian geology. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

GEOSC 10: Geology of the National Parks
3 Credits
Introduction to geology, geological change, and environmental hazards, as seen in the National Parks. GEOSC 010

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

GEOSC 20: Planet Earth
3 Credits
Nontechnical presentation of earth processes, materials, and landscape. Practicum includes field trips, study of maps, rocks, and dynamic models, introduction to geologic experimentation. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

GEOSC 20H: Planet Earth
3 Credits
Nontechnical presentation of earth processes, materials, and landscape. Practicum includes field trips, study of maps, rocks, and dynamic models, introduction to geologic experimentation. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

General Education: Natural Sciences (GN)
Honors

GEOSC 20L: Planet Earth
3 Credits
Nontechnical presentation of earth processes, materials, and landscape. Practicum includes field trips, study of maps, rocks, and dynamic models, introduction to geologic experimentation. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

GEOSC 21: Earth and Life: Origin and Evolution
3 Credits
Introduction to the origin and evolution of life on Earth from the perspective of geologic time and the fossil record. GEOSC 021

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GEOSC 30: Volcanoes

3 Credits

Basic concepts in Volcanology and Geosciences are explored through a series of virtual field trips to historic eruptions. GEOSC 030 Volcanoes (3) (GN) Since the dawn of history, humankind has been faced with the destructive power of volcanoes. Volcanic eruptions can wipe out entire populations, destroy food supplies, and alter the Earth's climate for years at a time. At the same time, volcanoes provide fertile soil for growing crops and natural geothermal energy. This course uses virtual field trips to one pre-historic and five historic volcanic eruptions to introduce basic concepts in geosciences and volcanology. Each visit a different type of volcano with unique characteristics and impacts &ndash; a shield volcano, a cinder cone, a fissure, a strato-volcano, a lava dome, and a supervolcano. We will examine the tectonic driving forces behind these volcanoes as well as their hazards and environmental impacts. Students will use real data from active volcanic fields, as well as original data collected during home experiments, to calculate physical properties of magmas and to interpret the potential impacts of various volcanic hazards. Sidebars will delve into the less obvious interactions between humans and volcanoes from the perspective of mythology, art, and history. Observations and ideas will be logged in virtual field notebooks.

General Education: Natural Sciences (GN)

GEOSC 40: The Sea Around Us

3 Credits

Introduction to marine sciences and the world ocean, including physical, chemical, biological, and geological aspects of oceanography. GEOSC 40 The Sea Around Us (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The Sea Around Us introduces students to the basic workings of the ocean and is offered both Fall and Spring terms at the University Park campus. The course covers the origin of ocean basins, the evolution of their coastlines, the motion of currents, waves and tides and their destructive power, the source and composition of seawater, marine life and the marine food chain, and the role of the ocean in local and global climate. The majority of Earth's surface is covered by water and thus it seems likely that the human race will become increasingly dependent on oceanic resources in the future. This course seeks to illuminate how the ocean will respond to increased anthropogenic pressure. Students are shown how such issues can be addressed through detailed understanding of the complex interplay between the physical, chemical and biological properties of the ocean. Lectures focus on fundamental principles of natural sciences as related to the ocean using extensive graphics, video clips and demonstrations. GEOSC 40L can be taken concurrently or independently from GEOSC 40P

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

GEOSC 40L: The Sea Around Us

2 Credits

Introduction to marine sciences and the world ocean, including physical, chemical, biological, and geological aspects of oceanography. GEOSC 40L The Sea Around Us (2) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The Sea Around Us Lecture introduces students to the basic workings of the ocean and is offered both Fall and Spring terms at the University Park campus. The course covers the origin of ocean basins, the evolution of their coastlines, the motion of currents, waves and tides and their destructive power, the source and composition of seawater, marine life and the marine food chain, and the role of the ocean in local and global climate. The majority of Earth's surface is covered by water and thus it seems likely that the human race will become increasingly dependent on oceanic resources in the future. This course seeks to illuminate how the ocean will respond to increased anthropogenic pressure. Students are shown how such issues can be addressed through detailed understanding of the complex interplay between the physical, chemical and biological properties of the ocean. Lectures focus on fundamental principles of natural sciences as related to the ocean using extensive graphics, video clips and demonstrations. GEOSC 40L can be taken concurrently or independently from GEOSC 40P

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

GEOSC 40P: The Sea Around Us

1 Credits

Introduction to marine sciences and the world ocean, including physical, chemical, biological, and geological aspects of oceanography. GEOSC 040P The Sea Around Us (1) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The Sea Around Us Lab introduces students to the basic workings of the ocean and is offered both Fall and Spring terms at the University Park campus. The course covers the origin of ocean basins, the evolution of their coastlines, the motion of currents, waves and tides and their destructive power, the source and composition of seawater, marine life and the marine food chain, and the role of the ocean in local and global climate. The majority of Earth's surface is covered by water and thus it seems likely that the human race will become increasingly dependent on oceanic resources in the future. This course seeks to illuminate how the ocean will respond to increased anthropogenic pressure. Students are shown how such issues can be addressed through detailed understanding of the complex interplay between the physical, chemical and biological properties of the ocean. Lectures focus on fundamental principles of natural sciences as related to the ocean using extensive graphics, video clips and demonstrations. Students work in small groups for the laboratory exercises featuring team-based experiments, discussion, and simple problem sets designed to solidify key concepts and topics for oceans. GEOSC 40P can be taken concurrently or independently from GEOSC 40L

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GEOSC 71: Physical Geology for Engineers

3 Credits

Principles of physical geology, with emphasis on the engineering point of view; practicum includes field work, study of rocks, minerals, dynamic models, and topographic maps. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

Prerequisite: CHEM 110

GEOSC 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 107N: Rocks, Minerals, and the History of Art

3 Credits

This online course investigates select rocks and minerals used in the production of art between the Prehistoric Era and the Early Modern period. Topics covered include chemical and physical properties, occurrence in nature, the processes by which natural materials are acquired and worked, their symbolic and monetary value, and specific works of art in which they are found. Each material (ochre, garnet, lapis lazuli, rock crystal [quartz], igneous rocks [basalt, diorite and porphyry], alabaster and marble) is addressed in a 2-week unit. The seven units are split equally between scientific analysis of the materials and art historical case studies. A final project integrates Geosciences and Art History topics to investigate the use of a chosen natural material in a specific work of art. Each material addressed in the course plays a crucial role in the history of art, and each one was particularly prized for its physical and material properties (color, hardness, etc.). Ochre was the first known pigment, and was in use by early humans for bodily adornment and for drawing and painting in caves and shelters as early as 100,000 years ago for bodily adornment and 40,000 years ago in cave art. Its availability worldwide and in multiple strong colors made it a desirable choice. Lapis lazuli, by contrast, was difficult to obtain, and difficult to refine as a pigment. It was first used to make small sculptures and cylinder seals in the Ancient world, and was prized for its brilliant blue color. The difficulty in grinding and purifying blue pigment from lapis lazuli made it one of the most expensive pigments in the Medieval and Renaissance world—it was worth its weight in silver! Pure blue lapis pigment, when found in a painting, is always a sign of great expense and importance. Rock crystal was valued for its clarity and purity, and its extreme brittleness meant that works made from it were valued for their intricacy and fragility. Nero reportedly destroyed two elaborate crystal goblets in a rage, and in so doing, deprived future generations of their intricate banding and translucency made it a favorite material for thin-walled bowls and vases in the Ancient Near East, Ancient Egypt, and in the Classical world. Later, in Early Christian and Medieval Italy, it was used for windows instead of glass—sun shining through alabaster casts a golden glow into a church interior. By the Late Gothic period, alabaster was being exploited as an easily sculpted material throughout Europe, with major quarries and workshops in England (Nottingham), France, and Northern Spain.

GEOSC 109H: Earthquakes and Society

3 Credits

Introduction to earthquakes and seismology, and their relationship to society, including monitoring for nuclear weapons and seismic hazards. GEOSC 109H

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN) Honors

GEOSC 110: The Science of Gemstones

3 Credits

An exploration of the geological uses of gems and of the physical and chemical properties underlying their brilliance and color. GEOSC 110H

Prerequisite: high school chemistry and trigonometry

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN) Honors

GEOSC 111: Forensic Geoscience

3 Credits

Covers fundamental geoscience concepts such as stratigraphy, mineral and soil identification, seismology, and geochemistry within the context of forensic investigation. GEOSC 111 Forensic Geoscience (3) (GN) In this course, we will look at the fundamental principles of geoscience and how they can be applied in the context of criminal or liability investigation. Students will learn how to use a stratigraphic column to determine a sequence of events, either in the geologic record or as basalt and diorite in order to ensure that those works would survive for centuries. Imperial porphyry, an igneous stone with a rich red-purple color, came from a single remote quarry in the Egyptian mountains. Its use was reserved just for the Imperial family in Rome, and it was used for carved sarcophagi, for columns, for colored veeners on floors and walls, etc., as a sign of Imperial authority. Marble is of course one of the most familiar of all art materials, used frequently for sculpture from the very beginnings of art production. The Greeks and Romans in particular took great pains to obtain different types of marbles with specific colors, veining patterns, etc., for use in both sculpture and architecture. Finally, alabaster is one of the easiest of all stones to work: it is so soft that one can make a mark simply with a fingernail! Its intricate banding and translucency made it a favorite material for thin-walled bowls and vases in the Ancient Near East, Ancient Egypt, and in the Classical world. Later, in Early Christian and Medieval Italy, it was used for windows instead of glass—sun shining through alabaster casts a golden glow into a church interior. By the Late Gothic period, alabaster was being exploited as an easily sculpted material throughout Europe, with major quarries and workshops in England (Nottingham), France, and Northern Spain.
physical evidence, for example the layers of mud on the bottom of a car suspected of involvement in criminal activity. We will discuss the many types of physical evidence, focusing in particular on those that involve earth materials (soils, sand, mineral dust) or that can be analyzed using techniques commonly applied to geologic problems (for example, analyzing shards of glass from a hit and run accident using a scanning electron microscope). Basic mineralogy, sedimentology, and petrology will be introduced in the context of trace evidence. Common techniques used by both geoscientists and crime scene investigators, including fluorescence, microscopy, ground-penetrating radar, magnetometry, and seismology will be covered, including hands-on demonstrations when possible. We will learn how isotope geochemistry is used to date natural materials, and how it can be used to determine the geographic origin of rocks, minerals, or sediments. Students will learn how and when it is possible to make a statistically meaningful comparison of naturally variable samples present only in trace amounts. The proper handling of earth materials as trace evidence will be explained. Students will be expected to use the knowledge they have acquired to come up with original solutions to both real and invented crime cases. Finally, students will use the material they have learned in class to write an original mystery story in which geological evidence plays a key role in solving a crime.

General Education: Natural Sciences (GN)

GEOSC 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 201: Earth Materials
4 Credits

Elements of crystallography and crystal chemistry; origin, occurrence, and identification of sedimentary, igneous, and metamorphic rocks and their minerals. This course has one or more required field trips for which a fee is charged to the student.

Prerequisite: CHEM 110, third-semester standing. Prerequisite or concurrent: GEOSC001 or GEOSC020

GEOSC 202: Chemical Processes in Geology
4 Credits

An in-depth examination of the application of chemical principles to geological processes.

Prerequisite: GEOSC001, MATH 140, third-semester standing. Prerequisite or concurrent: CHEM 113

GEOSC 203: Physical Processes in Geology
4 Credits

An in-depth examination of various physical processes that operate within and at the surface of the earth. GEOSC 203 Physical Processes in Geology applies basic principles from physics and mathematics to explore and understand the Earth and the processes that operate within the Earth and at the Earth's surface. The course includes the study of Earth's gravity and magnetic fields, focusing on how they reveal the internal structures and dynamics related to plate tectonics. The basic physics and mathematics of plate motions are also explored in some detail. We will also examine the elastic properties and behaviors of rocks, which form the basis for understanding seismic waves, rock fracture, and fault slip. The next major topic of the class is the flow of heat through the solid Earth system, involving the study of conduction, convection, and advection. The study of heat will provide the basis for understanding the application of simple differential equations with boundary conditions to geological processes; this will also introduce the mathematics of diffusion, which will permeate much of the course. This study of diffusion will enable us to move from steady state conditions to non-steady state conditions that typify most geological settings. We will examine the fluid dynamics relevant to the flow of the mantle and less viscous fluids at the surface such as lava flows and glaciers. The fluid dynamics will also lead us into an exploration of the basic physics of ocean circulation, stream flow, and erosion on land. Throughout the course, students will learn how to use calculus and very simple computer programming in MATLAB to provide a quantitative framework for understanding the physical processes that shape the Earth. The class involves a weekly lab that involves several field trips to make measurements using a variety of geophysical instruments to solve problems related to gravity, stream flow, and heat flow. Other lab activities involve studies of rock friction and fracture, ocean currents, glacial flow, seismology, and plate motions.

Prerequisite: GEOSC001 or permission of program. Prerequisite or concurrent: PHYS 211, MATH 140

GEOSC 204: Geobiology
4 Credits

An introduction to how biological processes and materials are used to solve geological problems. GEOSC 204

Prerequisite: BIOL 110; GEOSC001 or GEOSC020

GEOSC 212N: Earthquakes and Human History
3 Credits

A natural disaster is the result of a natural hazard impinging upon human society. In this course we examine seismicity as a geophysical phenomenon and as a natural hazard that interacts with the built environment and the social structures of human societies. Whenever possible, we approach this subject historically. Among other topics, we examine the history of how earthquakes have been understood as well as the impact of earthquakes and seismicity on the history and development of certain societies. Our specific perspectives include: Earthquakes as understood by modern and contemporary earth science. Major conceptions of earthquakes in the past. Impacts of seismic hazards on the built environment of past societies. Impacts of seismic hazards on politics, economic development and social policies of past societies. Seismic hazards, earthquake-related technology, and contemporary societies. By examining earthquakes in these ways, the study of earthquakes becomes a vehicle for enhancing skills in analytical reasoning. In particular, this course focuses on applications of modern scientific analysis and the approaches commonly employed in historical investigation. Specific skills addressed in this course include, processing and quantifying information, problem solving using evidence and sound reasoning, and expressing ideas with clarity. Immersion in the study of earthquakes affords an opportunity to think more broadly about how people have dealt with natural disasters in the past and to explore the roles that science, technology, and social policy play in defining and addressing natural hazards in contemporary societies and in the future. Class meetings include lectures, discussions, and in-class activities. We
analyze scientific observations that have led to increased understanding of earthquakes, earthquake hazards and risk. We also make extensive use of case studies as concrete examples of different types of earthquakes, the historical evolution of ideas about earthquakes, and the range of social impacts of earthquakes. Reading assignments provide essential background for class sessions.

**Recommended Preparation:** 3RD SEMESTER STANDING

Cross-listed with: HIST 212N

General Education: Humanities (GH)

GEOSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 297F: Special Topics - InterDomain

3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GS GenEd course.

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GEOSC 303: Introduction to Environmental Geology

3 Credits

Origin of earth and earth materials; natural resources, geologic barriers and hazards, and relationships to human use of the environment. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

GEOSC 310: Earth History

4 Credits

The principles of stratigraphy and paleontology and their use, in combination with plate tectonics, in reconstructing the earth's history.

This course has one or more required field trips for which a fee is charged to the student.

**Prerequisite:** GEOSC201

GEOSC 310H: Earth History

4 Credits

The principles of stratigraphy and paleontology and their use, in combination with plate tectonics, in reconstructing the earth's history.

Honors

GEOSC 320: Geology of Climate Change

3 Credits

Geologic evidence for climate change and mechanisms of change, especially from the Ice Age through the near future. GEOSC 320

GEOSC 340: Geomorphology

3 Credits

Physical and chemical processes operating at the earth's surface and their resulting landforms. This course has one or more required field trips for which a fee is charged to the student.

**Prerequisite:** GEOSC001 ; fifth-semester standing

GEOSC 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 402: Natural Disasters

3 Credits

Case studies of the causes and consequences of natural disasters; analysis of disaster impact in different economic, cultural, and social conditions. GEOSC 402 Natural Disasters (3) (IL)(WAC) Is anywhere safe from natural disasters? Can we hide, or should we learn to live with the hazards around us? This course will explore the causes, effects, and societal response to disasters. By learning from previous disasters, we can develop strategies to avert the disasters or at a minimum mitigate their affects. We will look at a variety of natural hazards and related disasters including flooding, volcanoes, landslides, earthquakes, hurricanes, and tsunami. By the sue of case studies of recent occurences of natural disasters, we will determine how damaging disasters can be, and what we can do to minmize their impact on society. This course will provide an in-depth, hands-on study of natural hazards, their geography, and their impact on societies worldwide. We will focus on both the physical processes (e.g. underlying geoglogy or geophysics) of selected natural hazards and the humn systems that have developed to minimize the impact of natural disasters. The course will place emphasis on active learning exercises to investigate processes and responses to natural hazards. We will meet for two periods each week which will include both lecture and group research activities (approximately 30% of time is in lectures, 70% time is in group research activities). Grading will be based on reports for each topic, a disaster diary, and a term report. The term report is an independent project which focuses on a selected city facing significant natural hazards. Cities will be selected from both the developed and developing world to allow comparisons
of the impacts of natural disasters under different socio-economic and cultural conditions. The course is offered once each year with a target enrollment of 25-30 students. Prerequisites for the course are at least 6 credits in science courses (including GN courses).

**Prerequisite:** fourth-semester standing
International Cultures (IL)
Writing Across the Curriculum

GEOSC 405: Hydropedology

3 Credits

Soil and water interactions across scales, integrated studies of landscape-soil-water relationships, fundamental processes of water flow and chemical transport. SOILS (GEOSC) 405 Hydropedology

(3) Hydropedology is the study of the fluxes, storages, pathways, residence times, and spatio-temporal organization of water in the root and deep vadose zones, and their relations to climate, ecosystem, land use, and contaminant fate. The aim is to characterize integrated physical, chemical, and biological processes of soil-water interactions across scales (including chemicals and energy transported by water flow). This course embraces interdisciplinary and multiscale studies of interactive pedological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of hydropedology (as a sister discipline of hydrogeology). This course emphasizes situ soils that have distinct characteristics of pedogenic features, structures, layers, and soil-landscape relationships in the real world. Students will gain an in-depth understanding of soil and water interactions across scales from point observations to watershed phenomena, and will gain skills in predicting flow pathways and water fluxes in the landscape. This course promotes active learning, critical thinking, and hands-on skills. Course format will consist of two lectures and one laboratory/field exercise each week. The course will utilize a network of local watersheds with different land uses for demonstrations and class projects. Grading will be based on weekly lab/field exercise (20%), class research project (40%), homework (10%), one midterm exam (15%), and one final exam (15%). Since hydropedology is linked to a wide array of environmental, ecological, geological, agricultural, and natural resource issues of societal importance, SOILS (GEOSC) 405 will support interdisciplinary training of students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Agricultural and Biological Engineering, Agronomy, and Forest Resources. Students in the College of Earth and Mineral Sciences, College of Engineering, Eberly College of Science, and the Intercollege Graduate Degree Program in Ecology also will find this course useful when undertaking research on the vadose zone, the hydrologic cycle, and the earth system.

**Prerequisite:** SOILS101
Cross-listed with: SOILS 405

GEOSC 409: Geomicrobiology

3 Credits

Investigation of modern and ancient microbial interactions with soils, sediments, the atmosphere, minerals, rocks, nutrients, and pollutants.

**Prerequisite:** CHEM 112; GEOSC001, GEOSC020, GEOSC040, EARTH002, BIOL 110 or MICRB201
Writing Across the Curriculum

GEOSC 410: Marine Biogeochemistry

3 Credits

Exploration of the ways in which life influences and is influenced by chemical, physical, and geological processes in the ocean. GEOSC 410

**Prerequisite:** CHEM 112; EARTH002 or GEOSC001, GEOSC020, GEOSC040

GEOSC 412: Water Resources Geochemistry

3 Credits

Aqueous geochemistry of silica, alumina, carbonate minerals, and selected metals; organic species in water; isotope geochemistry applied to water.

**Prerequisite:** CHEM 110, CHEM 112

GEOSC 413: Techniques in Environmental Geochemistry

3 Credits

This course teaches techniques needed for the collection, chemical analysis, and data analysis of environmental geochemical measurements. This course has one or more required field trips for which a fee is charged to the student.

**Prerequisite:** one of the following: C E 475, CHEM 402, GEOSC202, GEOSC412, SOILS419
Writing Across the Curriculum

GEOSC 415: Geochemistry

3 Credits

Element abundance and genesis, application of chemical principles to earth materials, element fractionation in geologic processes.

**Prerequisite:** CHEM 112, GEOSC201

GEOSC 416: Stable and Radioactive Isotopes in Geosciences: Introduction

3 Credits

Discussions on theories for natural isotopic and element variations and their applications to the solution of geologic and cosmoligic problems.

**Prerequisite:** CHEM 110, CHEM 112, CHEM 111, CHEM 113; GEOSC001 or GEOSC020

GEOSC 418: Soil Environmental Chemistry

3 Credits

Introduction to chemical constituents and processes occurring in soils. Topics include mineral weathering, soil solution chemistry and adsorption of solutes. GEOSC 418GEOSC 418 (SOILS 419) Soil Environmental Chemistry (3) Upon completion of the course, the students will be able to identify the soil components and properties responsible for the chemical reactivity of soils and will know the fundamental chemical processes that occur in soils. The students will also be able to link theoretical concepts to real life environmental problems. The students will be evaluated on examinations, homework, and class participation.
GEOSC 418 (SOILS 419) is offered every Spring semester. Class limit: 25 students.

**Prerequisite:** CHEM 112, SOILS 101
Cross-listed with: SOILS 419

GEOSC 419: The Organic Geochemistry of Natural Waters and Sediments
3 Credits
Composition, sources, and fates of particulate and dissolved organic matter in natural environments; biogeochemical processes; organic geochemistry of anthropogenic contaminants.

**Prerequisite:** CHEM 110, CHEM 112

GEOSC 420: Paleobotany
3 Credits
Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical techniques and specimens. GEOSC 420 BIOL (GEOSC) 420 Paleobotany (3) Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands. This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

**Prerequisite:** any 3 credit introductory course in historical geology or plant biology
Cross-listed with: BIOL 420

GEOSC 422: Vertebrate Paleontology
3 Credits
Course covers scientific thinking and skills in scientific writing, the history of vertebrates, and modern evolutionary theory applied to vertebrates.

**Prerequisite:** GEOS2001 and BIOL 110

GEOSC 424: Paleontology and Fossils
3 Credits
Concepts and procedures using fossils to solve problems in systematics, evolution, biostratigraphy, correlation, sedimentation, paleoecology, and global change.

**Prerequisite:** GEOS2001 or GEOS2020

GEOSC 434: Volcanology
3 Credits
Phenomena and products of volcanic eruptions; physical characteristics of lava and pyroclastic material.

**Prerequisite:** GEOSC 201

GEOSC 435: GEOSCHOLARSHIP
3 Credits
The goal of this class is to learn how to function as a geoscientist engaged in the relentless pursuit of knowledge. This course aims to benefit students in professional development, preparation for advanced courses, and senior thesis research and writing. The most important topic is peer-reviewed scientific literature, the currency of science. Recognizing, accessing, databasing, annotating, writing about, summarizing, critically discussing, and correctly citing peer-reviewed papers are the principal activities. There will be regular assigned activities involving much reading, writing, presenting, and discussion. Other topics will include professionalism, gathering data, how to handle specimens and data, publishing, talking to the media, what graduate programs are looking for and how to approach them, and participation in scientific meetings. There will be a major final paper due during exam week (and no exams). This will be a review article written in the style of a top review journal series such as Annual Reviews. For grading, simply, the strongest possible participation, enthusiasm, completeness, and quality of work is expected at all times, and the professor’s perception of this is what the grade will be based on, with a heavy weighting from the term paper. Students will receive comments and other feedback all the way through that will make it clear how they are progressing, and the term paper will receive a formal grade.

GEOSC 439: Principles of Stratigraphy
3 Credits
An introduction to the description and genesis of sedimentary rock bodies, the determination of their stratal geometries, and their correlation. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

**Prerequisite:** GEOSC 201

GEOSC 440: Marine Geology
3 Credits
Chemical and physical processes affecting the topography and sediments of the sea floor.

**Prerequisite:** fourth-semester standing

GEOSC 444: Matlab Applications for Geoscience
2 Credits
An introduction to Matlab: m-file development, descriptive statistics, bootstrapping, Fourier transforms, regression, interpolation, least-squares, differentiation, integration, differential equations, signal analysis, graphics. GEOSC 444 Matlab Application for Geoscience (2) The goal of this class is that students become familiar with Matlab so that they can conduct scientific research without needing to manipulate spreadsheets or other non-mathematically based software. The course is geared
towards, beginning graduate and advanced undergraduate students with little or no previous Matlab experience, and examples are focused on applications in the science and engineering with a focus on the geosciences, including problems from groundwater hydrology, tectonics, geochemistry, rock physics, and climate change. Some basic concepts about vectors and matrices will be helpful, but are not required.

**Prerequisite:** MATH 110 or MATH 140

**GEOSC 450: Risk Analysis in the Earth Sciences**

3 Credits

An introduction to concepts and methods of quantitative risk analysis with focus on water, climate, and energy related risks. GEOSC 450 Risk Analysis in the Earth Sciences is an introduction to concepts and methods of quantitative risk analysis in the Earth system. Key concepts include probability, impacts, risk, uncertainty, statistical estimation, and decision-making under uncertainty. Important methods to be covered are sensitivity studies, probabilistic prediction, and uncertainty analysis. Examples of risks to be analyzed include: drought, flooding, nuclear waste storage, and anthropogenic climate change. Students will also use simple risk analysis software (provided by the instructor and accessible without prior programming experience) to actively apply these concepts to example problems. The course is designed for advanced undergraduate students with a prior exposure to basic statistics and calculus.

**Prerequisite:** MATH 140 or MATH 110, Introductory Earth Science or Geoscience class, Introductory Statistics class (e.g. STATS 200, or STATS 301, or ENNEC 473), or permission of program

**GEOSC 451: Natural Resources: Origins, Economics and Environmental Impact**

3 Credits

Geologic, economic and environmental issues related to exploitation of non-renewable natural resources (metals, minerals, rocks, and fossil fuels). GEOSC 451 GEOSC 451 Natural Resources: Origins, Economics and Environmental Impact (3) All the materials needed for health and prosperity in our complex society come from the earth, such as water, iron and other metals to make steel, silica to make glass, limestone to make concrete, potash and phosphate to make fertilizers, and oil, natural gas, coal and uranium to generate heat and electricity. Most of these natural resources are non-renewable, and easily recoverable quantities are limited. The main purpose of this course is to increase understanding and appreciation of geological, economical and environmental aspects of exploitation of mineral and energy resources. Approximately two-thirds of the lectures/discussions will focus on geological, geochemical and biological processes that have governed the concentration and dispersion of economically important elements and natural materials on Earth, including water, heavy metals (aluminum, iron, copper, zinc, lead, etc.), precious metals (gold, silver, platinum, etc.), industrial minerals and rocks (clays, limestone, gypsum, salts, etc.), nuclear-energy sources (uranium and thorium) and fossil fuels (petroleum, natural gas and coal). The remaining one-third of the lectures/discussions will focus on: (i) exploration methods to discover new mineral (and fossil fuel) deposits; (ii) economic aspect of mineral commodities (usages, production statistics, economic of mining and concentration); and (iii) environmental issues related to mining, nuclear waste disposal, and constructions. There will be two half-day field trips to study the nature of sulfide mineralization and acid-water pollution.

**Prerequisite:** GEOSC001 or GEOSC020

**GEOSC 452: Hydrogeology**

3 Credits

Hydrologic cycle: occurrence, movement, quality, and quantity of groundwater; solute transport; quantitative hydrogeologic methods; role of water in geologic processes. This course has one or more required field trips for which a fee may be charged to the student. GEOSC 452 GEOSC 452 Hydrogeology (3) GEOSC 452 is the study of the relation between geological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of natural flow systems, emphasizing the occurrence, movement, quality, and quantity of groundwater and its relations to contaminate fate and transport. The primary objective is to provide students with the fundamental knowledge and tools that are necessary to understand the hydrologic cycle. Students will gain an in-depth understanding of fluid flow across scales from point observations to watershed phenomena, and will gain skills in using mathematics to describe water fluxes. The course format consists of two lectures each week, and includes two field trips. Grading is based on weekly homework assignments, exams, and participation on the field trips. Because hydrogeology is linked to a wide array of environmental, ecological, engineering, and natural resource issues of societal importance, GEOSC 452 will support interdisciplinary training of students in the natural sciences and engineering. Students will find this course useful when undertaking research about fluids in geologic processes.

**Prerequisite:** CHEM 112; GEOSC001, GEOSC020, or GEOSC071; MATH 140 or MATH 110

**GEOSC 454: Geology of Oil and Gas**

3 Credits

Properties, origin, migration, and occurrence of oil and gas. This course has one or more required field trips for which a fee is charged to the student.

**Prerequisite:** GEOSC001

**GEOSC 460: Principles of Igneous and Metamorphic Petrology**

3 Credits/Maximum of 3

Igneous and metamorphic processes drive planetary evolution. This course is designed to provide an understanding of the formative processes of igneous and metamorphic rocks through application of simple physical and chemical processes. Through a combination of petrographical observations and applied thermodynamics, students will learn how to treat rocks as chemical systems and, in doing so, equip themselves with a skillset that is of tremendous utility in industry and academia.

**Prerequisites:** GEOSC 201

**GEOSC 465: Structural Geology**

4 Credits

Effects and mechanics of deformation of the earth's crust; practicum includes field trips and studies of maps and structural problems. This
course has one or more field trips for which a fee is charged to the student.

**Prerequisite:** or concurrent: GEOSC203, GEOSC310

GEOSC 470: Introduction to Field Geology

3 Credits

Field interpretation of geologic features; principles and techniques of geologic mapping; interpretation of geologic maps and diagrams. This course has one or more required field trips for which a fee is charged to the student.

**Prerequisite:** GEOSC201; fifth-semester standing

Writing Across the Curriculum

GEOSC 472A: Field Geology I (Introduction to Field Methods)

3 Credits

Introduction to geologic field methods and the 3-D characterization of earth structure and the reconstruction of geologic histories. This course includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

**Prerequisite:** GEOSC310

GEOSC 472B: Field Geology II (Advanced Field Methods)

3 Credits

Advanced application of geologic field methods to the 3-D characterization of earth structure and the reconstruction of geologic histories. This course includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

**Prerequisite:** GEOSC310, GEOSC465. Prerequisite or concurrent: GEOSC472A

GEOSC 474: Astrobiology

3 Credits

Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student’s literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student’s previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

**Enforced Prerequisite at Enrollment:** BIOL 110 or BIOL 110H and CHEM 110 or CHEM 110H

Cross-listed with: BIOL 474

GEOSC 479: Advanced Stratigraphy

3 Credits

Modern topics of sequence stratigraphy are addressed, with a heavy emphasis on field and laboratory data analysis and interpretation.

**Prerequisite:** GEOSC472A

GEOSC 482: Satellite Remote-Sensing For Earth Observation

4 Credits

Comprehensive introduction to theory and methods in remote-sensing, covering optical, thermal and radar methods and their application in geosciences.

GEOSC 483: Environmental Geophysics

3 Credits

This course presents the principles and applications of the variety of techniques geophysicists use to address environmental problems.

**Prerequisite:** PHYS 211, PHYS 212

GEOSC 487: Analysis of Time Series

3 Credits

Nonstatistical approach to data analysis; spectral and correlation analysis; filter theory; signal-to-noise improvement applied to geoscience data.

**Prerequisite:** MATH 140 and MATH 141

GEOSC 488: An Introduction to Seismology

4 Credits

An overview of the observations, methods, and frameworks used in seismogram analysis for earthquake and earth-structure investigations (includes laboratory).

**Prerequisite:** MATH 140, MATH 141

GEOSC 488H: An Introduction to Seismology

4 Credits

An overview of the observations, methods, and frameworks used in seismogram analysis for earthquake and earth-structure investigations (includes laboratory).

Honors
GEOSC 489: Dynamics of the Earth
4 Credits
Constitution and dynamics of the solid earth; mechanics and consequences of Plate Tectonic processes.
Prerequisite: GEOSC203, GEOSC310, PHYS 211

GEOSC 494M: Thesis Research
1-6 Credits/Maximum of 6
Supervised student activities on research projects identified on an individual, or small group basis.
Prerequisite: seventh-semester standing
Honors
Writing Across the Curriculum

GEOSC 494W: Senior Thesis
1-4 Credits/Maximum of 4
Supervised student activities on research projects identified on an individual, or small group basis.
Prerequisite: seventh-semester standing
Honors

GEOSC 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GEOSC 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GEOSC 496H: Independent Studies
1-18 Credits
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Honors

GEOSC 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

German (GER)

GER 1: Elementary German I
4 Credits
Introduction to listening, speaking, reading, and writing with emphasis on the first two skills; cultural aspects through readings and videos. Students who have received high school credit for two or more years of German may not schedule this course for credit, without the permission of the department. GER 001 Elementary German I (4) German 001: Elementary German I is designed to help students develop skills in the interpretation, expression, and negotiation of spoken and written German. In addition to German language skills, students in the course will develop a greater understanding of German-speaking culture. The course requires active student involvement and participation. Attendance is mandatory. Students will be guided by the instructor in working with German-language materials available on the internet. Student evaluation is based on active participation in class, homework, quizzes, oral and mid-term examinations, oral and written final examinations and culture projects. Placement in German 001 is based on Penn State foreign language placement policy (link to: http://bulletins.psu.edu/bulletins/bluebook/general_information.cfm?section=Placement2). Students who have received high school credit for two or more years of German may not schedule this course for credit, without permission of the department. German 001 is offered every semester. Enrollment is capped at 24 students per section.

Bachelor of Arts: 2nd Foreign/World Language (All)

GER 2: Elementary German II
4 Credits
GER 2 is a continuation of GER 1; further introduction of basic structures, culture, and development of four basic skills stressing aural-oral aspects. Students who have received high school credit for four or more years of German may not schedule this course for credit, without the permission of the department. GER 2 Elementary German II is a continuation of German 1 and is designed to help students develop skills in the interpretation, expression, and negotiation of spoken and written German. In addition to German language skills, students in the course will develop a greater understanding of German-speaking culture. The course requires active student involvement and participation. Attendance is mandatory. Students will be guided by the instructor in working with German-language materials available on the internet. Student evaluation is based on class participation, homework, quizzes, oral and mid-term examinations, oral and written final examinations and culture projects. Students who have received high school credit for four or more years of German may not schedule this course for credit, without permission of the department. German 2 is offered every semester. Enrollment is capped at 24 students per section.
Prerequisite: GER 001

Bachelor of Arts: 2nd Foreign/World Language (All)

GER 3: Intermediate German
4 Credits
Continued four-skill development with increased emphasis on reading, writing, and grammatical accuracy; culturally-oriented reading selections
and videos. Students may receive credit for only one of the following: GER 003 or GER 008.

**Prerequisite:** GER 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

**GER 11: Intensive Basic German**

6 Credits

Listening, speaking, reading, writing, basic structures and vocabulary of German. Taught on an accelerated basis. Students may receive credit for only one of the following: GER 001, 011, or 015.

Bachelor of Arts: 2nd Foreign/World Language (All)

**GER 12: Intensive Intermediate German**

6 Credits

Continued skill development of structures and vocabulary; listening, speaking, reading, writing. Taught on an accelerated basis. Students may receive credit for only one of the following: GER 002, 003, 012, or 016.

**Prerequisite:** GER 011
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

**GER 51: Elementary Intensive German for Graduate Students I**

3 Credits

Intensive introduction to German: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. GER 051 Elementary Intensive German for Graduate Students (3) This is the first in a series of three courses designed to give students an intensive introduction to German. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the German vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

**Prerequisite:** graduate standing

**GER 52: Elementary Intensive German for Graduate Students II**

3 Credits

Intensive introduction to German: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. GER 052 Elementary Intensive German for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to German. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the German vocabulary. Lessons are taught in an authentic cultural context.

**Prerequisite:** GER 051 or equivalent, and graduate standing

**GER 53: Intermediate Intensive German for Graduate Students**

3 Credits

Continued intensive study of German at the intermediate level: reading, writing, speaking, listening, cultural contexts. GER 053 Intermediate Intensive German for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of German. Continued intensive study of German at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

**Prerequisite:** GER 052 or equivalent, and graduate standing

**GER 83: First-Year Seminar in German**

3 Credits

Germany's cultural past and present. GER 083S First-Year Seminar in German (3) (GH;FYS;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to give the student an introductory overview of certain important aspects of German culture and its development during the past 1500 years. The topics selected will give the student an introduction to major periods and representative thinkers that have helped shape the destiny of German-speaking countries and much of Europe as well. As Goethe noted, our views of the past are a mirror in which we dimly see our own reflection. Serious examination of the issues raised in this course also result in learning something about one's self and the world in which s/he live today. This course can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the Intercultural/International Competence requirement, and the first-year seminar requirement. A series of short papers will enable students to develop the skills of information gathering and written expression. The course grade will be based on oral participation and on the grade for the papers, which will be evaluated both for content and writing. This course will help to prepare students for a variety of additional courses in the fields of literature and German-speaking area studies. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests. The course will be offered once per year to an audience of 20 students.

**GER 100: German Culture and Civilization**

3 Credits

Culture and civilization of the German people from the Germanic migrations to the Nazi period. Conducted in English. GER 100 German Culture and Civilization (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. In German 100, students examine the ethical basis for decision-making of representative thinkers and periods in German history. The course begins by looking at the warrior ethos that pervades early Germanic literature, proceeds to examine successive
changes in ethics brought on by Christianization, the Reformation, and the Enlightenment. The course ends by looking at the ethics of power advocated by Nietzsche and the racialist ideology of Nazism. The course will also examine changes in aesthetic values, as represented by the art of Durer and the Expressionists, the literature of the Storm-and-Stress movement and Kafka, the music and theater of Wagnerian opera and the film of the Expressionists and Leni Riefenstahl. Finally, the nettlesome issue of German national identity will be addressed through the perspective of historical developments since the time of Charlemagne. German 100 is linked closely to German 200. German 100 concentrates on German culture and civilization up to the Nazi period. German 200 concentrates on German culture and civilization since the Nazi period. German-Russian 143 addresses aspects of Nazism in greater depth than does German 100. The course meets three times per week, including fifty-minute lectures on Monday and Friday and a discussion section on Wednesday. The total enrollment is limited to approximately 180 students and the discussion sections have no more than 27 students each. When taught in the summer, the total enrollment for the class is less than fifty. Assessment is based on three examinations with an essay component, one short paper, and participation in classroom discussions, and attendance. German 100 may not be applied toward the requirements of a German major or a German minor. It may be used for the General Education humanities requirement, for the General Education Intercultural/International competence requirement, or for a B.A. humanities requirement.

General Education: Humanities (GH)

GER 128: The Holocaust in Film and Literature

3 Credits

Thematic, formal, and historical analysis of filmic and literary representation of the Holocaust. GER (CMLIT/J ST/ENGL) 128 The Holocaust in Film and Literature (3) (GH;US;IL) This course provides an introduction to the film and literature of the Holocaust through a historical survey of these traditions &‘ key texts, figures, and themes. Both US and international texts and traditions will be covered, as will both fictional and nonfictional treatments of the Holocaust. The course will focus on the defining aspects of the literature and film and on what these traditions reveal about the Holocaust and about the community that created the Holocaust, the interpretive cultures through which we approach the Holocaust, and Jewish and other cultures. The course will also introduce students to the concept and theory of trauma, and to its place in theories and traditions of representation, as well as to the concept and history of genocide. Some time will be spent analyzing what has been called the Americanization of the Holocaust. Materials will consist predominantly of primary texts, including both fiction and nonfiction film, prose fiction and nonfiction, poetry, and drama. Course methodology will emphasize the close reading of texts and analysis not only of what is represented, but also of the representation, drawing students’ attention to genre distinctions and the different expectations we bring to fiction and non-fiction, to film and the written word.

GER 143: The Culture of Stalinism and Nazism

3 Credits

The culture of Stalinist Russia and Nazi Germany in comparative perspective. GER 143GER (RUS) 143 The Culture of Stalinism and Nazism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The regimes of Stalin and Hitler have decisively shaped the 20th-century historical experience not only in Russia and Germany, but in much of Europe and the world at large. At the same time, there is no consensus about how to classify these systems, whether the term "totalitarian" is appropriate to describe them, and whether Stalinist Russia and Nazi Germany are essentially similar or essentially different historical phenomena. Espousing a comparative perspective, this course will explore the culture produced by both Stalinist Russia and Nazi Germany. The main focus will be on works of literature, but it will also take into account the visual arts, architecture, music, film, and popular culture. The classics of Stalinist socialist realism and Nazi propaganda, such as Nikolai Ostrovski’s How the Steel Was Tempered or Leni Riefenstahl’s Triumph of the Will will be analyzed both as political statements and works of art. The course will also include a reading of authors who attempted to create artistic representations of life in Stalinist and Nazi societies, such as Yevgeny Zamyatin, Alexander Solzhenitsyn, Bertolt Brecht, or George Orwell. The course will be team-taught by faculty of the Department of Germanic and Slavic Languages and Literatures. Additional faculty from the Departments of Spanish and Italian and Comparative Literature (Japanese) may be invited to lecture about the totalitarian culture in their respective societies, and members from the Department of History may be invited to lecture about the historical context of Stalinism and Nazism. A knowledge of Russian or German is not required, as class lectures and discussions, as well as all reading assignments, will be in English. At the end of the course, students will have a summary knowledge of the cultural history of Stalinist Russia and Nazi Germany and of the aesthetic and philosophical issues raised by these cultures. Requirements for the course will include a research paper. The course grade will be based on the average score on the mid-term and final exam (using definitions and essay questions) and the grade for the paper, which will be evaluated both for content and style. This course will fulfill the General Education and International/Intercultural requirements. It complements courses on the politics and history of totalitarian regimes offered by the departments of Political Science and History, and it will provide a background for students wishing to study Holocaust literature or Soviet Literature. The course will be taught every two years.

GER 157: Pennsylvania Germans: The Culture of the Sectarians

3 Credits

Survey of the religious background, beliefs, social life, customs, education, and culture of the Pennsylvania German sectarians, especially the Amish. Conducted in English. GER 157 Pennsylvania Germans: The Culture of the Sectarians (3) (GH; US; BA) This course meets the Bachelor of Arts degree requirements. Through lectures, discussions, and films, students will be introduced to the culture, history, religion, language, education, occupations, folklore, music, and literature of the Pennsylvania Germans. Since 1683, people coming from the German-speaking territories of Central Europe settled Pennsylvania to a large degree. Many of these immigrants soon blended into American society but others who had been persecuted in Europe for their convictions and religious beliefs refused to be Americanized and retained their style of life in the New World. The best-known are the Amish who arrived in colonial times and still cling to their traditional language, beliefs and values, their economic basis, and even their clothing after living nearly three centuries in now industrialized America. They live in small, stable, and viable communities an austere life dictated by established beliefs and customs totally opposed to the American dream of progress and innovation, individual happiness and material success. By studying their history and culture and that of other groups, such as the Mennonites, Hutterites, and Moravians, students are offered a unique opportunity to learn more about other truly diverse cultures and are enabled to arrive at a better understanding of their own cultural concepts and values. In this course, students may either make a 30-minute presentation or write a 10-page paper on a topic pertaining to the curriculum of the course. The number of students, only a small number (approximately six) will have the opportunity to make a presentation. Teaching assistants help grade the papers. In addition, students take two one-hour examinations and a final examination. The course is related to GER 100 and GER 200 by examining the culture of German-speaking peoples. GER 157 differs from those courses, however, by focusing on a German-speaking minority culture found in Pennsylvania and elsewhere in North America. Germany may not be applied toward the requirements of a German major or a German minor. It may be used for the General Education humanity requirement, for the General Education Intercultural/International Competence requirement, or for a B.A. humanity requirement. The course is offered approximately once a year with an enrollment of 150-180 students.

General Education: Humanities (GH)

GER 189N: German Film

3 Credits

A survey of German film from its beginnings to the present, with emphasis on historical, political, and cultural contexts. GER 189 German Film (3) (GH; GA; IL) This course is an introduction to German cinema, broadly defined as any representation of moving images made in Germany, Switzerland, or Austria, or by filmmakers from these countries working in exile. The course will be both an historical survey of the developments in German film, as well as a general introduction to film analysis. Neither prior knowledge of German culture and language nor of film history and terminology is required. All materials will be supplied in English. Students will learn about the technology of film production as well as fundamental concepts for film analysis (shots, angles, sound, lighting, etc.). The course will be structured around different political and cultural contexts, providing students with a concrete historical perspective on Germany from the late nineteenth to the early twenty-first centuries. Screenings will cover several artistic modes, including comedy, melodrama, propaganda film, experimental film, period drama, crime drama, horror film, and documentary. Readings will complement screenings with seminal writings by filmmakers and theorists, as well as texts that provide historical perspective and close analysis. By examining German film with attention to changing cultural settings, students will investigate such topics as the relation of memory and history, the representation of war and genocide, the roles of propaganda and censorship, the formation (and deformation) of national identity, the impact of technological and economic changes on culture, and changing gender roles. In addition, students will learn to think critically about the visual medium of film, becoming more engaged and critical spectators in a world saturated with the moving image. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. The course is designed to be suitable for all students generally interested in German, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Germany. As an inter domain course, GER 189 also counts towards the integrative studies requirement.

3 Credits  
A study of both early and late romanticism, including such writers as Novalis, the Schlegels, E.T.A. Hoffmann, and Heine.  
**Prerequisite:** or concurrent: GER 431 or GER 432

Bachelor of Arts: Humanities  
International Cultures (IL)

GER 489: Introduction to German Film History and Theory in Context  
3 Credits  
Introduces films in German since the 1960s and addresses issues relevant to German and European cultures and politics. GER 489 Introduction to German Film History and Theory in Context (3) This course focuses on German cinema's development since the 1960s. The course situates the "Young" and then "New German Cinema" within contemporaneous European and U.S. film cultures. Thus the course will address the difference between the European cinematic culture of auteurs and the school of genres; in the U.S. The preceding traditions of Italian Neorealism and of the French nouvelle vague are also engaged alongside a few Hungarian, Czech and/or Polish films. The students will have the opportunity to consider how these other national cinematic productions impacted the German filmmakers who were involved in the creation of a national German cinema that would critically engage Hollywood on the one hand, and distance itself from the Nazi past on the other. The course will be structured around questions about the grounds for a national cinema and its cultural and critical relevance both at the time these films were produced and today. Yet, the national question will not be the only focus of this class, in the course of which students will be able to discuss the historical, political and ethical questions raised by the directors selected. In addition, students in this course will learn about the specificity of cinematic language and will be exposed to some film theory. In conclusion, the course provides upper level undergraduate students with a basic knowledge of the most important New German films, with a confrontation with issues specifically relevant to a study of German culture, and with some familiarity with film theory. The evaluation methods for this course will be based on 1) participation [attendance; reports/worksheets, after each film and in class discussion]; 30%; 2) presentation 20%; 3) take-home mid term essay 20%; and 4) final paper 30%. The course is part of the German Program, in particular of the German Studies curriculum. It teaches students of German culture about German and European contemporary cinema, while situating the cinema within broader historical-political debates concerning Europe. It functions as an excellent complementary course to our GER LIT classes at the 400 level and offers an additional choice to pursue cultural studies to those who are more reticent about reading texts. Enrollment: 25. The course will be offered every other year.  
**Prerequisite:** GER 310 or COMM 250

GER 494: Research Project  
1-12 Credits/Maximum of 12  
Supervised student activities on research projects identified on an individual or small-group basis.  
Bachelor of Arts: Humanities

GER 494H: Research Project  
1-12 Credits/Maximum of 12  
Supervised student activities on research projects identified on an individual or small-group basis.  
Bachelor of Arts: Humanities Honors

GER 495: Internship  
3-9 Credits/Maximum of 9  
Supervised off-campus, non-group instruction including individual field experiences, practicums, or internships. Written and oral critique of activity required.  
**Prerequisite:** prior approval of proposed assignment by instructor

Bachelor of Arts: Humanities

GER 496: Independent Studies  
1-18 Credits/Maximum of 18  
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Bachelor of Arts: Humanities

GER 497: Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.  
Bachelor of Arts: Humanities

GER 499: Foreign Study--German  
3-12 Credits/Maximum of 12  
Advanced studies in German language, literature, and culture.  
**Prerequisite:** any 300-level course in German

Bachelor of Arts: Humanities  
International Cultures (IL)
Global and International Studies (GLIS)

GLIS 101N: Globalization

3 Credits

This course provides a broad introduction to the topic of global studies. This course meets the Bachelor of Arts degree requirements. This interdisciplinary course explores how people and nations confront the phenomenon of globalization, presenting different perspectives for studying and making sense of the world. Students are exposed to a variety of analytical approaches from the arts, humanities and social sciences to allow them to see how different perspectives portray the world, interpret events, and often shape human actions. The course begins from a humanities perspective, exploring the concept of social identity, in particular understanding how people in different cultures develop a sense of their identity and how this is perpetuated over time through a society’s products, practices, and perspectives (e.g., artifacts, value systems, traditions). The focus then shifts to organizations in society, comparing how they operate with either national or global identities. This leads to an exploration of how information and communication technologies are tools to create both global connectivity, yet can also be a source of division. Globalization is then considered in terms of its impact on the natural environment, populations, and health. Challenges arising in each of these areas are the concern of all global citizens, and are explored in terms of how interdependencies are increasing their impact. The focus of the course progresses to gender, poverty, and human rights, exploring these in tandem with their literary representations, presented in both global and comparative contexts. Economic development models are also used to uncover trends in gender and poverty. The final focus is on global peace and conflict, highlighting how globalization, in bringing people and nations closer together, can also give rise to conflict and division. This course is one of two 100-level courses that are required for the GLIS major. While this course focuses on a general introduction to global studies as a field of study, GLIS 102N complements the topics raised here, exploring many from a range of different perspectives to prepare students for choosing their options through the major.

General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

GLIS 102N: Global Pathways

3 Credits

This course meets the Bachelor of Arts degree requirements. This course introduces students to five pathways to thinking about global issues today: Global Conflict, Health & Environment, Culture & Identity, Wealth & Inequality, and Human Rights. We will spend three weeks focusing on each problem. Students will complete the course with a stronger sense of many of the major global issues of our time, as well as a sense of how those issues can be approached and studied from a variety of humanistic and social scientific perspectives. Students will also learn how aspects of identity, like race, sexuality, or gender, affect and are affected by global forces. Combined with GLIS 101N, this course will help prepare students for lives and careers in which they will interact with these large-scale global issues on a daily basis; it will allow students to understand how various local or national issues are affected by global ones, and to see ways of intervening in the world to address global problems. 1. Global Conflict: Why do people fight? Is violence inherent to human society? How is it possible to dream of an end to war, as creative writers of many cultures have done? 2. Health & Environment: How does climate affect human history? How have societies and individuals interacted with their environments, and how have the relations between human beings and the natural world been represented in literature and the arts? How are health issues depicted in narratives and other media, and how do health crises challenge political or cultural norms? 3. Culture & Identity: How do we come to be who we are? How are we shaped by the circumstances we grow up in? What is culture, and how do we understand cultures other than our own? What happens when people move or change cultures, or when cultures move or change people? 4. Wealth & Inequality: Why are some nations, and some people, rich, and others poor? What structural factors help explain those differences? How does the distribution of wealth factor into what counts as a good society? 5. Human Rights: What are the most fundamental properties of being human? Does everyone in a society have the same rights?

GenEd Learning Objective: Integrative Thinking

GLIS 310: Language Rights, Policy, and Planning

3 Credits

This is a course on language rights, policy, and planning from individual, group, inter-ethnic, and national perspectives. Linguistic minorities are a consequence of colonization by European powers in different regions of the globe. Other effects of colonization and political conflicts include mass movement, migration, and the emergence of nationalism. In such contexts, minorities have made demands for language rights and used language policy and planning as strategies to realize demands for social justice. This course will examine how linguistic minorities secure opportunities to use their own languages and have them accommodated in official legislation as mother tongue, secondary, or foreign languages. The course will adopt a global perspective and analyze language rights as well as language policy and planning in diverse regions of the globe, including but not restricted to, Africa, Asia, and South America. Analysis will primarily focus on how language policies can be carried out from different perspectives (e.g., literary, linguistic, and political) in different geographical regions. After examining how language policies operate in and influence society, the course will use sociopolitical ideologies to explore the nature of the relationship between language policies and language rights and the ways this relationship enables one to achieve an expanded understanding of the impact of language policies and language rights on local language practices.
Cross-listed with: AFR 310, APLNG 310
International Cultures (IL)

GLIS 400: Seminar in Global and International Studies
3 Credits/Maximum of 3

A Capstone Seminar focusing on critical themes and the development of the senior thesis for Global Studies Majors. This interdisciplinary course will offer a seminar on some current event, issue, or phenomenon that involves a significant proportion of the globe. Topics will vary each year and depend on the faculty member leading the course, but it may include subjects such as the European Union, global economic change, international pop culture, or international response to human rights violations. Students will develop, write, and workshop a global studies research thesis. Both written and oral work will be assigned and graded. Students will discuss material from a variety of academic fields such as political science, economics, sociology, history, anthropology, and cultural studies.

Prerequisite: GLIS 101, GLIS 102
Bachelor of Arts: Other Cultures
International Cultures (IL)
Writing Across the Curriculum

GLIS 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

GLIS 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**Graphic Design (GD)**

GD 15: First-Year Seminar in Graphic Design
1 Credit

An orientation to the historical, social, and professional context of design and an exposure to a variety of ethical, philosophical, and topical ideas from the world of design.

Prerequisite: admission to the AADEx program
First-Year Seminar

GD 100: Introduction to Graphic Design
3 Credits

A beginning level graphic design course. Instruction touches on the practice, theories, history and processes of the graphic design industry. GD 100 Introduction to Graphic Design (3) (GA) GD 100 (GA) INTRODUCTION TO GRAPHIC DESIGN (3) is a beginning level graphic design course. Instruction touches on the practice, history, theories, and analysis of the design industry. This course places emphasis on problem solving and observing design, while developing intuition and creativity. Projects focus on the process of defining the parameters of a design problem, observing examples within the design industry, and critically evaluating examples of effective and ineffective design. The course will help students to: 1. Understand the graphic design industry and the responsibilities of the profession. 2. Develop an appreciation for the practice of design. 3. Begin to develop the ability to define and solve problems. 4. Increase their knowledge of the history of graphic design and typography. 5. Refine their conceptual skills. 6. Learn and understand the vernacular of the industry. Students will be quizzed on terminology and important facts provided in the readings. Grading: 1. Grades will be calculated by quizzes, which will be given throughout the semester. Quizzes will be based on topics and material provided online. 60% of the final course grade will be based on quizzes. 2. Participation in online discussion forums is required. Students will be expected to post comments and responses to an online forum. 20% of the final grade will be based on participation within these forums. 3. Students will be expected to research various examples of design in commercial and non-commercial applications, upload examples, comment on designs, and engage in discussions of effective and ineffective use. Emphasis will be placed on writing skills as part of the evaluation. 20% of the final grade will be based on project assignments in design evaluation.

General Education: Arts (GA)

GD 101: Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas in Graphic Design
3 Credits/Maximum of 3

An introduction to the theory and practice of defining problems, developing solutions, and generating ideas in design. GD 101 GD 101 Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas (2) This course is designed to help students learn to think creatively, define problems, and solve those problems by generating good ideas. The first part of the course, Learning to Think Creatively, will cover basic principles and concepts used in thinking creatively. In the second part of the course, Defining Problems, students will learn how to effectively define problems by establishing and refining goals and objectives based on research. The third part of the course, Solving Problems and Generating Ideas, will engage students in practical project-based learning by creating solutions to design problems through teamwork, brainstorming, and a design sequence that fosters new ideas and tests them through prototyping and analysis. Students will learn to approach problems in design by developing skills in creative thinking, applying those skills in defining problems, and working in creative teams to solve problems through the generation of new ideas that can be practically applied.

Concurrent: GD 001S

GD 102: Introductory Design Studio
3 Credits

A studio course in defining problems, solving problems, and generating ideas. GD 102 GD 102 Introductory Design Studio (3) This course is designed to build upon the experience of GD 101 Thinking Creatively: Defining Problems, Solving Problems, and Generating Ideas by engaging students in a studio environment where they must arrive at solutions to two design problems, each requiring approximately seven weeks work. Students will define problems and arrive at creative solutions to those problems by generating ideas based on an applied method involving teamwork, brainstorming, and a design sequence that fosters new ideas and tests them through prototyping and analysis. This course is designed for students in the AADEx pre-graphic design program, although it emphasizes concepts and methodologies applicable to all design fields.
Students will learn to approach problems in design by developing skills in creative thinking, applying those skills in defining problems, and working in creative teams to solve problems through the generation of new ideas that can be practically applied. Grading is based on participation (20%), studio project one (40%), and studio project two (40%). GD 102 is only available to students enrolled in AADES or by permission of instructor and carries the prerequisite of GD 001S and GD 101.

**Prerequisite:** GD 001S and GD 101

**GD 115N: Visualizing Information**

3 Credits

The world is awash with complex, dynamic information. With the development of powerful technologies capturing vast amounts of data, the art of visually representing information in ways that increase understanding of complex data and models will become a critical skill. Effective representations can communicate information in ways that maximize comprehension, analysis, exploration, and understanding of the underlying data. Knowing how to read and interpret visual data is essential to navigating this ocean of information. Those who know how to present data visually employ a powerful communication tool.

In this class, you will become an effective reader and creator of visual representations of data. Through critical assessment of examples, interactions with peers, and the generation of your own projects, you will generate visualizations of data and create works using a common visual language to help people analyze and understand the information at hand. Good visualizations not only present a visual interpretation of data, but also do so by improving comprehension, communication, and decision-making. Effectively functional visualizations can offer insights that reveal evidence and truths that may be difficult to observe otherwise. They can often empower readers to explore both the norms that give meaning to the data and the exceptions that convey its complexity or uncertainty. Visualized information can assist in revealing:

- **Distributions and frequency over time**
- **Changes and trends**
- **Spatial and mapping information**

Regardless of your major field of study, the ability to effectively visualize information represents a significant and essential skill for effective communication. Whether you are creating representation of your work for your company’s leadership board, a general public audience, or a meeting of your peers, the ability to craft a visual display that offers an accurate and insightful interpretation of data is a key capability in the workplace. No prior experience in design or statistics is required for success in this course.

**General Education: Arts (GA)**
**General Education: Humanities (GH)**
**General Education - Integrative: Interdomain**
**GenEd Learning Objective: Effective Communication**
**GenEd Learning Objective: Crit and Analytical Think**
**GenEd Learning Objective: Integrative Thinking**
**GenEd Learning Objective: Key Literacies**

**GD 200: Graphic Design Studio I**

3 Credits

A beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation. GD 200/GD 200 Graphic Design Studio I (3) This course is a beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation. Emphasis is on problem solving and technical training while, at the same time, nurturing intuition and creativity. The course will help students to:

- Develop skills and techniques applicable to graphic design.
- Become familiar with appropriate computer hardware and software.
- Develop the ability to define and solve problems.
- Develop an understanding of graphic design as a profession.
- Refine their conceptual skills.
- Develop the work habits and attitudes of design professionals.

Grading: 1. Work will be evaluated on the relevance and originality of the design idea, the suitability of the design approach in serving the client’s needs, the effectiveness of the design in reading its intended audience, and all pertinent functional parameters. 2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules. 3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade. 4. Neatness, craft and attention to detail will be considered in the final grade. 5. Visual, verbal and written communication skills will also be part of the evaluation. GD 200 carries the prerequisite of GD 102.

**Prerequisite:** GD 102

**GD 201: Typography**

3 Credits

A consideration of the word in relation to visual organization and its application to communication. GD 201

**Prerequisite:** GD 200

**Bachelor of Arts: Arts**

**GD 202: The History of Graphic Design**

3 Credits

A survey of graphic design, especially emphasizing influential movements, innovative designers and technological advances relevant to contemporary visual communication. GD 202 The History of Graphic Design (3) The History of Graphic Design course provides an overview of design as a vehicle of visual communication. The primary focus of the coursework is on images and styles of image-making as well as on language as a visual, typographic form. The application of images and typography is the basis of design, and its history ranges from Sumerian clay tablets to 21st century digital tablets. Special emphasis is given to periods of innovation and inspiration, including the late Roman period, the Renaissance, the Industrial Era, the rise of Modernism in Europe and America, and the digital revolution. Graphic design is a discipline which embraces its production and delivery technology; therefore, attention is also focused on the evolution of that technology—from the letterpress and metal typography, through the camera and photomechanical reproduction era, to current computer and digital production processes.

**Prerequisite:** GD 001S, GD 100, GD 101; Concurrent: GD 102

**Writing Across the Curriculum**

**GD 203: Advanced Typography**

3 Credits/Maximum of 3

Continues students’ knowledge of foundational typographic systems and investigates the communicative potential of emerging methodologies on language systems in visual culture. Advanced Typography satisfies institutional and professional demand for future design practitioners to...
be versed in a robust knowledge of typography, the skillful techniques of organizing visible language. Building upon foundational knowledge gained from Typography GD201, this course excels student syntactic and semantic proficiencies and applies them towards crafting distinctive visual communications for print and digital platforms. Primarily, students will organize complex message systems of text, icons and image matter in the design of artifacts that address contemporary communication paradigms. They will explore the changing notion of the published form and create innovative content delivery solutions, which anticipate unique reader interpretation. Through investigation and analysis students will also determine efficacy of emerging technologies in visual culture such as screens, devices, and open source programming. Coursework manifests in several forms. Typeface design converges social, culture, linguistic, and semiotic systems to form a useable alphanumeric character set. Voluminous publications require students to develop solutions for narrative structure with large quantities of text and image. Environmental applications such as way finding and experience-based installations use visible language to navigate, explain or entertain in public settings. Visual communication in their printed form is the arrangement of poetic and visual content addressing material and physical variables. In digital form this content may also address technology, virtual interactions and sequential time-based media. Students will continue to develop core professional competencies in their mastery of industry tools and techniques for actual and virtual domains. Students should also expect introduction to newly available tools.

**Prerequisite:** GD 201

GD 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GD 296: Independent Study

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GD 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GD 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction. International Cultures (IL)

GD 300: Design Photography

4 Credits

An investigation of graphic photography processes and how print technology affects the final appearance of a photograph. GD 300

**Prerequisite:** GD 201 and successful portfolio review

Bachelor of Arts: Arts

GD 301: Experience Design Process + Methods

4 Credits/Maximum of 4

Experience design process and methods for graphic design majors. GD 301 is an advanced graphic design studio class that provides graphic design students with an in-depth study of the intricate relationship between the professional graphic designer and digital technology. Students will advance their knowledge of design software applications and will be introduced to programing languages that will assist them throughout the design process. From research and ideation to the creation of comprehensive studies and final designs, students will be given the tools that are critical to the completion of a variety of graphic design projects. The course will help students to: 1. Gain proficiency in appropriate hardware, software and programing languages. 2. Apply the students’ existing digital knowledge to design methodology for interfaces, user behavior and experiences. 3. Develop an understanding of the graphic designer as a digital communicator. 4. Refine their digital craft. 5. Develop the work habits and attitudes of professional designers.

**Prerequisite:** GD 201

Bachelor of Arts: Arts

GD 302: Applied Communication

4 Credits

Definition and concentrated involvement in problem/audience analysis, with emphasis on understanding symbol and image in evoking audience response. GD 302

**Prerequisite:** GD 300, GD 301

Bachelor of Arts: Arts

GD 303: Applied Experience Design

4 Credits/Maximum of 4

Interaction design and user experience for graphic design. This class introduces the concepts, technologies, and languages used to design and build modern interactive experiences. GD303 will explore the visual aspects and structural flow of interface design. Through projects, lectures, and workshops students will explore design strategies for web and mobile devices. Students will design screen-based experiences through research and empathy to achieve their user’s end-goals and objectives. Core concepts might include content strategy, personas, sitemaps, user flows, wireframes, information architecture, and usability principles. The objectives for this course are to give graphic design students experience in the complexities of digital visual communication in emerging mediums and to provide students with the opportunity to work with software packages that facilitate digital communication. Students will receive instruction regarding the graphic designer’s role in complex, collaborative digital communications.

GD 304: Practical Communications

3 Credits

Practical design experience for students through design/publicity problems from the University and community non-profit organizations. GD 304

**Prerequisite:** Prerequisite or concurrent GD 300, GD 301

Bachelor of Arts: Arts
GD 310: Studio Apprenticeship
3-6 Credits/Maximum of 6

Direct involvement in the creative process of the artist-teacher in the studio environment. GD 310

Prerequisite: Junior or senior standing in Graphic Design. Prior approval of proposed assignment by instructor.
Bachelor of Arts: Arts

GD 395: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GD 397: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GD 400: Time and Sequence
4 Credits

Development of visual sequence as replies to graphic design problems.

GD 400

Prerequisite: GD 302
Bachelor of Arts: Arts

GD 401: Package Design
3 Credits

Orientation to packaging designs as it relates to the consumer, client, and to societal and environmental concerns. GD 401

Prerequisite: GD 302
Bachelor of Arts: Arts

GD 402: Senior Problems
4 Credits

Development of visual replies to graphic design problems. GD 402

Graduation and the beginning of his or her career by putting together their final portfolios, resumes, letters and job search strategies. The course will help students to: 1. Perform as editorial designers. 2. Prepare for the real working environment they will confront in the professional arena after graduation. 3. Thoroughly examine the design process and learn to clearly define the problem, in order to work logically towards an appropriate solution. 4. Develop the work habits and attitudes of professional designers. 5. Polish visual, verbal and written presentation skills. 6. Practice positive behavior, and conflict avoidance/resolution in the workplace. 7. Prepare designers for realistic working environment expectations. 8. Foster an appreciation of good typography.

Grading: 1. Work will be evaluated based on the relevance and originality of the idea and the appropriateness of the design approach to the idea, the intended audience, and all pertinent functional parameters. 2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules. 3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade. 4. Neatness, craft and attention to detail will be considered in the final grade. 5. There will be a review at the end of the semester, which will include all work from the class. Each piece will be evaluated for quality and presentation. 6. Visual, verbal and written communication skills will be a part of the evaluation.

GD 400 and 401 are prerequisites to GD 402. GD 402 will be offered spring semesters.

Prerequisite: GD 400, GD 401
Bachelor of Arts: Arts

GD 403: Graphic Design Seminar
3 Credits

A seminar on subjects which relate to the field of graphic design. GD 403

Graduation and the beginning of his or her career by putting together their final portfolios, resumes, letters and job search strategies. The course will help students to: 1. Perform as editorial designers. 2. Prepare for the real working environment they will confront in the professional arena after graduation. 3. Thoroughly examine the design process and learn to clearly define the problem, in order to work logically towards an appropriate solution. 4. Bachelor of Arts: Arts  
Writing Across the Curriculum

GD 404: Book Design  
3 Credits

Writing, designing, illustrating and production (printing) of a book. GD 404GD 404 Book Design (3)(BA) This course meets the Bachelor of Arts degree requirements. This is an advanced course that explores the relationship of the written and visual elements in the design of a book. Each student (or student team) will select a topic, create the text and give visual form to an original book, which will have a minimum length of 16 pages. The intrinsic qualities of the book medium such as typography, sequence, imagery, paper, dye-cuts, fold-outs, pop-ups, and binding will be investigated in relation to how each affects the overall communication of the book's meaning to a specific audience. The course is intended to: 1. Foster an appreciation for good typography. 2. Allow students to investigate the sequential relationships between the visual and verbal aspects of a book and their synergistic interaction in the communication of the books meaning to a particular audience. 3. Introduce the appropriate use of illustrations in book design. 4. Help students develop the work habits and attitudes of professional designers. 5. Help students to examine the design process to learn to define the problem and work logically towards an appropriate solution. 6. Develop the ability to work as a member of a team. 7. Gain a deeper understanding of graphic design aesthetically, critically, and technically. Grading: 1. Each of the two copies of the book that are submitted at the end of the semester should be identical, with flawless execution and craft. 2. The book will be evaluated on the originality of the idea and the appropriateness of the design approach to the idea, the intended audience and all pertinent functional parameters. 3. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules. 4. Visual, verbal and written communication skills will be evaluated. GD 404 will be offered fall or spring semesters.

**Prerequisite:** GD 302  
Bachelor of Arts: Arts  
GD 405: Minor Advanced Studio  
3 Credits/Maximum of 3

This class introduces the concepts, technologies, and languages used to design and build publications, objects, and complex collaborative digital communications. GD405 provides Graphic Design Minors with an advanced-level design studio, appropriate in rigor, and in keeping with the expectations of the Minor in Graphic Design degree. This will prepare the successful student for the self-guided thesis environment of the Minor in Graphic Design Capstone Course (GD406). Within this advanced studio course, students will continue to develop core professional competencies in their quest for mastery of industry tools and techniques for actual and virtual domains. It will apply the student’s existing knowledge of design methodology to the completion of project-based studio coursework. Through research, ideation, and the creation of final designs, students will be given continued experiences in printed mediums, be introduced to the design of physical artifacts, and exposed to the complexities of digital visual communication in emerging mediums. These may include complex long-format publications, commercial product packaging, websites, and digital interfaces. Students will develop an understanding of the graphic designer as a professional communicator, and develop the work habits and attitudes found within this design profession.

**Prerequisite:** GD 200, GD 201  
GD 406: Minor Capstone Studio  
3 Credits/Maximum of 3

A structured studio for Minors in Graphic Design culminating into a final self-authored project on a topic that engages each student’s declared major. The Minor Capstone Studio applies each student’s accumulated knowledge of graphic design towards the development of a self-authored project on a topic that engages his or her declared major. Each project will exercise the student’s capacity to synthesize visual form and written components through the application of design methodology, and culminate their findings into a completed, presented thesis. Coursework will also include an introduction to communication theory, contemporary communication paradigms, the changing notion of audience and context, and formal research methodology.

**Prerequisite:** GD 405  
GD 494: Research Project  
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

GD 494H: Research Project  
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.  
Honors

GD 495: Internship  
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GD 496: Independent Study  
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GD 497: Special Topics  
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Greek (GREEK)**

GREEK 1: Elementary Classical and New Testament Greek  
4 Credits

Pronunciation, forms, syntax, and translation.
Bachelor of Arts: 2nd Foreign/World Language (All)

GREEK 2: Elementary Classical and New Testament Greek
4 Credits

Further instruction in syntax and sentence structure.

Prerequisite: GREEK001
Bachelor of Arts: 2nd Foreign/World Language (All)

GREEK 99: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

GREEK 101: Introductory Ancient Greek
4 Credits

GREEK 101 is the first course in a two-semester introduction to ancient Greek, the language of Homer, Sophocles, Plato, and the New Testament. Students will begin to learn the grammar and vocabulary necessary for reading Greek literature of different periods. Unlike a modern language, ancient Greek is not a spoken language. Consequently, the class will be devoted to honing reading skills through drills and the translation of short sentences and passages. Students will also be encouraged to compose ancient Greek sentences and passages as they develop their fluency in the language. By the end of the semester, students will be prepared to continue to GREEK 102.

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

GREEK 102: Intermediate Ancient Greek
4 Credits

Intermediate study of classical Greek grammar, syntax, and vocabulary. GREEK 102 Intermediate Ancient Greek (4)(BA) This course meets the Bachelor of Arts degree requirements. GREEK 102 continues from GREEK 101, which is prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Greek vocabulary, morphology and syntax to enable them to read unadapted passages from ancient Greek authors (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from Greek authors themselves rather than either Greek composed by the textbook authors or adapted ancient Greek passages, so that when students enter more advanced classes, they will find the transition to reading Greek as smooth as possible. In tandem with the increasing emphasis on Greek written by ancient Greeks, the course will continue to focus on the cultural milieu of ancient Athens in particular as a background for the texts that the students read. Basics of Greek history, archaeology, and philosophy will be introduced as relevant to the texts that the students read. Students will be evaluated on a combination of written work, including frequent tests and quizzes; homework completion; and course attendance and participation. GREEK 102 will prepare students to continue with courses in Greek at the 400-level. Students may select to use GREEK 102 to fulfill either a 3-credit requirement for a course in Greek or Roman language, literature, civilization, or archaeology or the requirements for 9 credits in courses related to Classics and Ancient Mediterranean Studies within the Common Requirements for the Major. Students desiring to fulfill the B.A. requirements for 12th-credit level foreign language in Greek may do so by successfully completing a 400-level course in Greek. This course will be offered once a year with 24 seats per offering.

Prerequisite: GREEK101
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

GREEK 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

GREEK 203: Greek Reading and Composition
4 Credits

The course reviews ancient Greek grammar, syntax, and vocabulary and introduces students to Greek poetry and prose.

Prerequisite: GREEK102

GREEK 420: Greek Prose Authors
3-6 Credits/Maximum of 6

Readings in representative authors.

Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities

GREEK 425: Greek Historians
3-6 Credits

Translation and study of one or more of the ancient Greek historians. GREEK 425 Greek Historians (3-6)(BA) This course meets the Bachelor of Arts degree requirements. GREEK 425 is a reading course in ancient Greek focusing on one or more of the major ancient Greek historians (usually Herodotus, Thucydides, or Xenophon, or Polybius). The course is designed to advance the student’s fluency in reading Greek prose, while at the same time enriching their understanding of Greek civilization and history by a thematic choice of historical readings. The course may concentrate on one author or may address a thematic issue with readings from a variety of Greek historians. For example, readings may be selected from Herodotus’ accounts of ancient Egypt. Or readings may focus on a comparative study of Thucydides’ and Polybius’ reasons for writing history. The major portion of class time will be devoted to translating prepared passages. These passages will also be the basis for discussing grammatical forms, as well as stylistic issues in prose writing. The class will also include discussions of historical themes relevant to the readings. Students’ work in the course will be evaluated based on class participation, three in-class tests, a final examination, and a term research paper or oral presentation. GREEK 425 is one of a series of advanced Greek poetry and prose courses that allows students to gain skill and knowledge about a range of ancient Greek literature. This course requires a mastery of basic Greek grammar and vocabulary acquired in GREEK 003, 102, or their equivalent. GREEK 425 may be used to fulfill several requirements for the CAMS major including the requirement of courses in...
Greek and Roman language, literature, and archaeology, and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin.

**Prerequisite:** GREEK102  
Bachelor of Arts: 2nd Foreign/World Language (All)  
Bachelor of Arts: Humanities

**GREEK 430: Greek Poetry**  
3-6 Credits

Translation and analysis of selected readings in Greek poetry. GREEK 430 Greek Poetry (3-6)(BA) This course meets the Bachelor of Arts degree requirements. GREEK 430 is an advanced Greek literature course in which students will read 1200-1500 verses of a non-dramatic genre of ancient Greek poetry (in different years the course is offered, this might be epic, lyric, bucolic, or didactic poetry). Students also will read in English the entire output of the author they are studying. The overall goals of the course are as follows: (1) to increase the ease and fluency of advanced-level students with ancient Greek in general and poetic idiom in particular; and (2) to expose students to a limited amount of scholarly literature and give practice in understanding and evaluating a scholarly argument in relation to a primary text with which they are familiar. Students will be expected to enter the class with a comfortable level of reading skill (as acquired in GREEK 003, 102 or their equivalent); the course will not cover grammar, nor will all the assigned readings in Greek be translated in class. Emphasis is on reading a generous amount of poetry in the original Greek and on literary interpretation. The approach in the classroom will change as the term progresses. Initially, classes will be more lecture-driven in order to explain the background and characteristics of the poetry being read. Translation assignments early in the semester will be relatively short (30-50 verses per class). As students gain in ease and familiarity with the Greek they are reading, assignments will become longer (with a goal of approximately 75-80 verses per class by the end of the term) and students will assume an increasing proportion of the responsibility for conducting individual class sessions. Students will be evaluated through class participation, quizzes, tests, and a final examination. GREEK 440 is one of a series of advanced Greek poetry and prose courses that allow students to gain skill and knowledge about a range of ancient Greek literature. This course requires a mastery of basic Greek grammar and vocabulary acquired in GREEK 003, 102, or their equivalent. GREEK 440 may be used to fulfill several requirements for the Classics and Ancient Mediterranean Studies major including the requirement of courses in Greek or Roman language, literature, or archaeology and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin. GREEK 440 will be offered once every other year with 20 seats per offering.

**Prerequisite:** GREEK102  
Bachelor of Arts: Humanities

**GREEK 440: Greek Drama**  
3-6 Credits

Translation and study of a selected play. GREEK 440 Greek Drama (3-6)(BA) This course meets the Bachelor of Arts degree requirements. GREEK 440 is an advanced Greek drama course in which students will read 1200-1500 verses of an ancient Greek drama. Students also will read in English additional plays by the author they are studying. The overall goals of the course are as follows: (1) to increase the ease and fluency of advanced-level students with ancient Greek in general and dramatic idiom in particular; and (2) to expose students to a limited amount of scholarly literature and give practice in understanding and evaluating a scholarly argument in relation to a primary text with which they are familiar. Students will be expected to enter the class with a comfortable level of reading skill. The course will not cover grammar, nor will all the assigned readings in Greek be translated in class. Emphasis is on reading an entire play in the original Greek and on literary interpretation. The approach in the classroom will change as the term progresses. Initially, classes will be more lecture-driven in order to explain the background and characteristics of the poetry being read. Translation assignments early in the semester will be relatively short (30-50 verses per class). As students gain in ease and familiarity with the Greek they are reading, assignments will become longer (with a goal of approximately 75-80 verses per class by the end of the term) and students will assume an increasing proportion of the responsibility for conducting individual class sessions. Students will be evaluated through class participation, quizzes, tests, and a final examination. GREEK 440 is one of a series of advanced Greek poetry and prose courses that allow students to gain skill and knowledge about a range of ancient Greek literature. This course requires a mastery of basic Greek grammar and vocabulary acquired in GREEK 003, 102, or their equivalent. GREEK 440 may be used to fulfill several requirements for the Classics and Ancient Mediterranean Studies major including the requirement of courses in Greek or Roman language, literature, or archaeology and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin. GREEK 440 will be offered once every other year with 20 seats per offering.

**Prerequisite:** GREEK102  
Bachelor of Arts: Humanities

**GREEK 494: Research Project**  
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**Bachelor of Arts: Humanities**

**GREEK 494H: Research Project**  
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**Bachelor of Arts: Humanities Honors**

**GREEK 496: Independent Studies**  
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Bachelor of Arts: Humanities**
GREEK 496H: Independent Studies (Honors)

Health - CA (HLTH)
HLTH 306: Physical Education, Health, and Safety in Elementary Schools
2 Credits
A study of appropriate activities for elementary-age children. Student participation in physical activities is required. HLTH 306 Physical Education, Health and Safety in the Elementary Schools (3) This course is designed to prepare elementary classroom teachers to provide age appropriate instruction related to issues of health and safety encountered in the school, home, and community. Understanding and demonstrating a knowledge of foundations, lesson planning, instructional strategies, and assessment is a key component of the program. In addition, the pre-service teachers are prepared to organize and implement physical education activities that may be carried out in the classroom, playground and/or appropriate indoor facilities. The physical education aspects of the program are generally provided as ancillary activities to the program provided under the guidance and direction of a certified Health and Physical Education instructor.

Prerequisite: eighth-semester standing in Elementary Education Program

Health and Human Development (HHD)
HHD 100H: Honors Seminar on Longevity, Health, and Human Development
1 Credits
This course aims to provide students with an overview of the impact the growth in human longevity is having on society, viewed through the lens of current research in the fields of health and human development. Students will explore the recent research on growth in the human lifespan and how this is having impacts on individuals, families, employers, governments, and communities. Through readings and discussions with faculty working on research related to aging and longevity, students can see how these issues connect with physical activity, nutrition, communication, health behaviors, health policy, cognition and the effects longer life is having on restaurants, hotels, parks, tourism, health care facilities, schools, and other service industry employers.

Honors

HHD 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHD 200N: Addiction Science to Society
3 Credits
Addiction is commonly defined as set of compulsive behaviors that cannot be stopped despite negative consequences. The term itself is controversial and defined differently by various disciplines. This has resulted in skewed perceptions of addiction by society as a whole. This course aims to inform students on the biological, psychological, and sociological viewpoints of addiction and how they interact to form an integrated perspective (the biopsychosocial model). By understanding the current knowledge on the biological and psychological bases of addiction, students will be better prepared to make knowledgeable decisions on their own behaviors, understand the behavior of others, and generate informed opinions on the social aspects of addiction. We will begin by comparing and contrasting the different ways addiction has been defined in various fields and exploring the debate on which substances/behaviors are actually considered addictive. Throughout the course, students will broadly explore basic concepts in biology (cells, neural communication, brain anatomy, use of animal models, pharmacology, genetics, epigenetics, and comorbidity), psychology (memory, conditioning, reward, expectancy, bias, and mental health) and sociology (family systems theory, stress theory, developmental theory, feminist theory). These concepts will be practically applied to various questions concerning 1. The status of addiction as a disease. 2. How addiction is or should be treated. 3. The effects of addiction on family and society. 4. Policies concerning the criminalization of drugs and compulsive behaviors. In addition, methods and data from primary research in all three domains of the biopsychosocial model will be analyzed. Several assignments using various forms of communication will serve to illustrate the connections and assess integrated learning.

General Education: Natural Sciences (GN)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

HHD 294: Research in HHD
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis

HHD 295: Internship in Health and Human Development
1-18 Credits
Supervised internship, field experience, or practicum related to student career objectives.
HHD 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HHD 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHD 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHD 401: Women's Leadership Initiative: Leadership Concepts and Competencies I
2 Credits
HHD 401 is the first semester of the year-long program for students selected to participate in the Women's Leadership Initiative (WLI). The course designed to work in concert with WLI activities to support students in their development of the foundational values, knowledge, skills, and confidence to realize their potential as effective, life-long leaders. Through their participation in this course and the spring semester course, students will develop a deeper knowledge of themselves and others, be able to define and critically assess leadership concepts, develop leadership skills, and practice leadership skills in various settings. Students will accomplish these objectives through the completion of assessment tools, discussions with leaders from the campus and the community, mentoring by women leaders, and the delivery of course topics pertaining to leadership. Students will be evaluated through communication skills assignments, reflection assignments, class participation, and completion of assessment tools. Students must apply and be selected to participate in the Women's Leadership Initiative in order to take this course.

HHD 402: Women's Leadership Initiative: Leadership Concepts and Competencies II
2 Credits
HHD 402 is the second semester of the year-long program for students selected to participate in the Women's Leadership Initiative (WLI). The course designed to work in concert with WLI activities to support students in their development of the foundational values, knowledge, skills, and confidence to realize their potential as effective, life-long leaders. Through their participation in this course and the spring semester course, students will develop a deeper knowledge of themselves and others, be able to define and critically assess leadership concepts and incorporate these into a personal leadership philosophy, develop leadership skills, and practice leadership skills in various settings. Students will accomplish these objectives through the completion of assessment tools, discussions with leaders from the campus and the community, mentoring by women leaders, and the delivery of course topics pertaining to leadership. Students must apply and be selected to participate in the Women's Leadership Initiative in order to take this course.

Prerequisite: H&HD 401

HHD 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects on an individual or small-group basis.

HHD 495: Internship in Health and Human Development
1-18 Credits
Approved experiential learning related to student career objectives

HHD 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Health Policy and Administration (HPA)

HPA 57: Consumer Choices in Health Care
3 Credits
HPA 57 is designed to provide students with an understanding of the breadth of decisions related to health and health care in the United States. HPA 57 introduces students to the consumers' role in health related decisions, including assessing health risks, health benefits, service choices, and end-of-life care. The growth in available health care information resources, the expansion of for-profit medical care, and increasing cost pressure are transforming the role of the health care consumers from passive recipients to active participants in many health care decisions. The main goal of this course is to educate students to become knowledgeable health care consumers and providing them with opportunities to learn how to gather, analyze, and synthesize information about health and health care to make sound health care choices. Students will learn practical information, key terminology and
where/how to find reliable, up-to-date information on different sectors of the health care system (e.g. physicians, hospitals, commercial and public health insurance, mental health, long-term care).

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

HPA 101: Introduction to Health Services Organization
3 Credits
Examination of the social, political, historic, and scientific factors in the development and organization of health services.

HPA 210: Health Care Payment
3 Credits/Maximum of 3
This course covers basic concepts and issues related to health insurance and payment for health care providers. This course covers both public insurance programs and private health insurance products including managed care approaches to the financing and delivery of healthcare services. Within public and private insurance schemes, Students will explore reimbursement and payment methodologies. In doing so, the course will evaluate multiple dimensions of health care cost and payment, with an emphasis on how payment systems influence provider organization, behavior and performance. Participants will review sources and uses of health care dollars, and examine how these have changed in recent years as well as further changes that are likely as a result of the 2010 health care reform law and associated regulations. Students will examine forms, processes, practices and the roles of health information professionals. Students will discuss concepts in insurance, third-party and prospective payments, and managed care organizations. Finally this course will examine various stakeholder points of view on health care finance; and assess how health care finance can drive changes in health care delivery and can lead to different experiences and outcomes for both providers and patients.

Prerequisite: ECON 102; HPA 101

HPA 211: Financial Decisions in Health Care Organizations
3 Credits/Maximum of 3
An introduction to financial and economic information to make decisions in health care organizations. Healthcare Finance is at the core of issues surrounding quality healthcare delivery. It involves wisely balancing the need to manage/control costs while simultaneously investing in strategic opportunities. This course will present and allow students to examine forms, processes, practices, and the roles of health information professionals. Students will discuss concepts in insurance, third-party and prospective payments, and managed care organizations. Finally, this course will examine various stakeholder points of view on health care finance; and assess how health care finance can drive changes in health care delivery and can lead to different experiences and outcomes for both providers and patients.

Prerequisite: ECON 102, HPA 101, PLSC 001

Writing Across the Curriculum

HPA 301H: Health Services Policy Issues
3 Credits
Analysis of major issues in health services delivery in hospitals, medical practice, public health, mental health, and health professional education. This course provides students with a basic framework for health policy analysis and examines major strands of U.S. health policy. Detailed consideration and discussion are given to the relationship of national policy to the planning, implementation, and funding of health care services, with particular emphasis on low-income and minority populations. This course will cover topics such as the healthcare policy environment in the U.S., government-funded health care through Medicaid and Medicare, and contemporary health care reform initiatives. 

Prerequisite: ECON 102, HPA 101, PLSC 001

Field Experience

HPA 295: Field Experience
1-3 Credits/Maximum of 3

Field Experience

HPA 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HPA 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HPA 301: Health Services Policy Issues
3 Credits

Analysis of major issues in health services delivery in hospitals, medical practice, public health, mental health, and health professional education. This course provides students with a basic framework for health policy analysis and examines major strands of U.S. health policy. Detailed consideration and discussion are given to the relationship of national policy to the planning, implementation, and funding of health care services, with particular emphasis on low-income and minority populations. This course will cover topics such as the healthcare policy environment in the U.S., government-funded health care through Medicaid and Medicare, and contemporary health care reform initiatives. 

Prerequisite: ECON 102, HPA 101, PLSC 001

Writing Across the Curriculum

HPA 301H: Health Services Policy Issues
3 Credits

HPA 301H uses a case study method to examine health services policy issues and emphasizes the skills needed to analyze and communicate knowledge about health services policy. The chief goals of the course are to broaden student understanding of selected current policy issues in health care, to deepen student knowledge of the development of health policy issues, and to develop student skills in the areas of information literacy, communication, and teamwork. Students are evaluated on a combination of individual and team work.

Prerequisite: ECON 102, PLSC 001, HPA 101

HPA 310: Health Care and Medical Needs
3 Credits

HPA 310 introduces students to the use of medical terminology in the context of the structure of the human body, functions of its systems, and disease. Disease processes include development, progression, diagnosis, treatment, and prevention. We will also highlight technological
developments in the health care field that are used to assist in diagnosis, treatment, and prevention of diseases. In the process of learning the language of the medical profession and health care industry, students are expected to develop an appreciation for the complex interactions between individual, social, environmental and community factors in the development, growth, and progression of disease processes. Students are also expected to develop skills in accessing and disseminating reliable and relevant information concerning the disease process. On completion of this course students will have a more in depth understanding of 1. The language and terminology of medicine and the health care field; 2. Technologic developments in clinical, diagnostic and therapeutic areas; 3. Anatomy and physiology of organ systems, and how they relate to disease states; 4. Major chronic illnesses prevalent in the U.S.

**Prerequisite:** BB H 101, BI SC004, or BIOL 141

HPA 310H: Health Care and Medical Needs

3 Credits

Health care from an individual, family, and community standpoint illustrated with specific diseases and health problems.

Honors

HPA 311: Population Health and Healthcare

3 Credits/Maximum of 3

This course covers fundamental theories, concepts, issues, and strategies related to a population health approach to health and health services

**Prerequisite:** H P A 101

HPA 332: Health Systems Management

3 Credits

Health Systems Management provides you with an overview of how health care institutions are organized and governed, the role of the management staff, and the management systems designed for their efficient and effective operation. This course will build student competencies in management. By the end of the semester students will have an appreciation for the complexities in managing a health care organization. They will develop this awareness by both examining their own patterns of behavior and learning about many dynamics common within organizations, using both conceptual information from the text and by analyzing selected cases. Class activities will primarily focus on the application of concepts in a variety of different situations and settings. By the end of this class students will: 1) Understand management as a balance among competing goals in a variety of situations; 2) Display such critical managerial competencies as listening, providing feedback, managing time effectively and managing conflict; 3) Apply organizational behavior theories to situations in health care management; 4) Solve organizational challenges using quality improvement tools; 5) Synthesize financial and economic information to make decisions in health care organizations; and 6) Understand the process of making ethical decisions.

**Prerequisite:** H P A101

HPA 332H: Health Systems Management

3 Credits

Introduction to and analysis of managerial roles and practices in health service organizations.

Honors

HPA 390: Professional Development in Health Policy & Administration

3 Credits

Development of personal understanding and professional skills to prepare students for future employment or study in health policy and administration. H P A 390 Professional Development in Health Policy and Administration (3) The objectives of H P A 390 are to help students understand themselves and the opportunities available in the health care field and professional skills in preparation for their required internship and future profession. In H P A 390 students learn to assess their talents and abilities and how those talents can be best applied in one of the many career settings in health care. They research different types of organizations and opportunities in the health care field. They learn the basic professional skills that are required in the health care world. Students are evaluated on the basis of a personal self-study exercise, completion of a required planning for several professional development exercises, and a team project on a health care organization. Health Policy Administration students take H P A 390 after they have completed the initial overview of the health care system in H P A 101 and while they are taking their core courses in the major, H P A 301, H P A 310, and H P A 332. The course is a prerequisite for H P A 395, the student’s professional internship, providing the professional development background that students need to have a high-quality internship experience that furthers their education. H P A 390 is a required course in the curriculum. No students from other departments may take the course without H P A permission.

**Prerequisite:** H P A101

Writing Across the Curriculum

HPA 395: Field Experience in Health Policy and Administration

1-13 Credits/Maximum of 13

Professional field experience providing opportunities to apply skills and knowledge in health care setting.

**Prerequisite:** H P A301W, H P A310, H P A332, H P A390

HPA 401: Comparative Health Systems

3 Credits

Comparative analysis of health services in selected developed and developing countries. H P A 401 Comparative Health Systems (3) (IL) In HPA 401 students will examine health and health services delivery systems as complex and variable entities that reflect individual country’s values and beliefs. Health systems influence and are influenced by the various cultures, demographics, geographies, economies, technologies, and political infrastructures of the country. This class will provide students with a tool kit to begin the difficult task of understanding health care outside the U.S. The class will be focusing on the challenges of attempting comparisons before drawing comparative conclusions.

**Prerequisite:** H P A301W
International Cultures (IL)

HPA 401H: Comparative Health Systems

3 Credits

Comparative analysis of health services in selected developed and developing countries.

Honors

HPA 410: Principles of Public Health Administration

3 Credits

This course is an overview of issues pertaining to public health administration and the uses of data analytics in population health. Course content provides the foundational understanding for the organization and function of public health activities within the health care delivery system of the United States. Students are introduced to fundamental concepts, issues, and strategies related to the public health system in the United States. On successful completion of this course students should be able to discuss and analyze policies and population-based interventions related to public health and utilize scientific knowledge base and public policy skills to approach solutions to public health problems.

Prerequisite: H P A 301, H P A 311

HPA 420: Principles of Managed Care

3 Credits

Survey of managed health care, including history, typology, current issues, management challenges, and impacts on patients, providers, and special populations. H P A 420 Principles of Managed Care (3) H P A 420 is designed to introduce students to managed health care in the United States, including history, typology, current issues, management challenges, and impacts on patients, providers, and special populations. Participants must have a basic knowledge of the US healthcare system, including key stakeholders, national trends in health delivery, financing, and health policy. Most assignments encourage students to select a focus on the impact of managed care on either the private sector or public sector, allowing them to examine concepts in detail that is relevant to their career path. This course is designed as a seminar and employs team-based learning and other projects to achieve the learning objectives. Students will demonstrate mastery of skills through tests, written assignments, and oral presentations. All students are expected to actively participate in class discussions. Much of the work for this course will be conducted in project teams. All students are expected to participate as full and equal members of their team and are responsible for all research and content developed by the team.

Prerequisite: H P A 301W

HPA 430: Health Care Leadership

3 Credits

The objectives of HPA 430 are: (1) to help students learn about their own strengths and weaknesses as leaders; (2) to give students an opportunity to build their skills in small group leadership; and, (3) to explore the leadership challenges in health care. On successful completion of the course students should be able to do the following: 1) Describe, compare, and contrast several leadership competency models in current use in health care; 2) Understand the four cornerstones of health care leadership; self-awareness, vision, interpersonal relationships, and execution. Explain two to four significant leadership challenges in the current health care system; 3) Identify their leadership strengths and weaknesses and develop a plan for improving their leadership skills and/or explore ways to improve those skills; 4) Understand the leadership skills required for leading small group projects and discussions.

Prerequisite: H P A 332, H P A 301, H P A 311

HPA 433: Administration of Hospital and Health Service Systems

3 Credits

Analysis of administrative structures and interorganizational arrangements among hospitals and other health care organizations.

Prerequisite: H P A 332

HPA 435: Safety Net Health Care

3 Credits

This course is designed to provide students with knowledge about what safety net health care is, how it is delivered and financed, and current policy and practice initiatives related to safety net care. A safety net can generally be described as a program that transfers benefits to those who are impoverished. The course will describe how poverty is defined in the United States and other countries. Safety net benefits could be in the form of cash, vouchers, or services. Transferring benefits to the impoverished can help to limit or prevent future economic shock or vulnerability for them. In health care, safety net is a generic term that is often used to describe services that are available to impoverished individuals, some of whom are insured and some are not. The safety net can also be described as a group of clinics, hospitals, and providers that have decided to provide services to impoverished patients. This decision may be based on altruism, but oftentimes an organization or provider must carefully consider the financial implications of providing this care. Given the challenges that public and private organizations face in providing safety net health care, novel approaches have been developed and students will have an opportunity to examine recent innovative approaches. After learning about the components of the safety net, students will consider how these components work together within communities. In the last part of the course students will study marginalized groups that are often served in the safety net. Students will think about how they would manage these groups from a clinical, operational, and patient-centered perspective.

Prerequisite: H P A 301, H P A 311

HPA 440: Principles of Epidemiology

3 Credits

Theory of epidemiology and significant case studies; potential applications to health care. BBH / HPA 440 Principles of Epidemiology (3) (US, IL) This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations. The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors;
3) be able to interpret and critique epidemiological research reports on the identification of risk factors and casual factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful interventions; and 7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world. This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers. Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.

**Prerequisite:** BB H 101 or BIOL 110 or H P A310; STAT 200 or STAT 250
Cross-listed with: BBH 440
International Cultures (IL)
United States Cultures (US)

HPA 442: Long-Term Care Management

3 Credits

Management and policy issues for institutional, community, and home settings for chronic care services.

**Prerequisite:** H P A332

HPA 443: Nursing Home Administration

3 Credits

This course provides students who are interested in a career in long-term care to gain an operational knowledge of managing skilled nursing facilities. After mastering the concepts of skilled nursing management, the student can step into a position as an administrator, assistant administrator, or trainee administrator, and find a level of comfort in dealing with operational issues and problems encountered in day-to-day management situations in any type of long-term care organization. To accomplish this, the course incorporates numerous theories, models, illustrations, and examples to help the student grasp the complexities of managing a long-term care facility. Upon course completion students will be able to: Discuss the broad range of operational issues related to the field of nursing home administration; Describe the rules and regulations that impact nursing home operations; and Recognize the professional development needs of nursing home administrators.

**Prerequisites:** HPA 332

HPA 444: Aging Policy in the United States

3 Credits

The United States is an aging nation and in the coming decades the number of elders in the United States is expected to grow dramatically. Policymakers faced with growing concern about containing the cost and scope of government face tough questions: Given the current and changing political climate, what course should policy makers chart to meet the challenges of a societies where large numbers of people are moving into old age and living long lives? How will their decisions affect entitlements for older adults now and in the future? What social, economic, political, and cultural factors will influence policymaking? This course will address the impacts of national age-based and age-related policy and programs such as Social Security, Medicare, Medicaid, and the Older Americans Act. In addition, it will examine the implementation of these programs in state and local settings, where implications are tangible for vulnerable groups such as low-income and frail older people and their families. Policy challenges of issues such as Alzheimer’s, long term services and supports, housing, caregiving, transportation, nutrition, emergency management, and disease prevention will be considered.

**Prerequisites:** HPA 301

HPA 445: Health Economics

3 Credits

Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives.

**Prerequisite:** ECON 302 , ECON 315 , or ECON 323
Cross-listed with: ECON 445
Bachelor of Arts: Social and Behavioral Sciences

HPA 445W: Health Economics

3 Credits

Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives. ECON (HP A) 445W Health Economics (3)The healthcare sector comprises a set of markets that differ in some significant ways from the textbook model. In the US, this sector performs well in some respects and questionably in others. Notably, there has been sustained improvement over time in life expectancy and other indicators of the effectiveness of health care for most people, but the resources devoted to producing this improvement have been growing considerably faster than GDP. The goal of this course is to examine several broad questions raised by these facts. The course begins with an overview of evidence on wealth, health expenditure, and life expectancy across countries, and then examines increasing life expectancy and medical expenditures in the US and their causes. Issues in measuring the value of medical expenditures are addressed, and an overview of the industrial organization of health care is provided. A major component of the course covers the economics of health insurance, and the course also examines medical R&D and the pharmaceutical industry as well as issues in the financing of medical care for the elderly. The course seeks to introduce students to the economic analysis of health care. It is in the area of applied microeconomics, and deals with issues relating to labor markets and public finance, in particular. This writing-intensive course will be one of several 400-level W seminars that the Economics Department is seeking to establish, with the broad objective of exposing our advanced undergraduate students to economic analysis in a seminar setting requiring significant writing by the students. The course counts toward the major and the minor in economics, as a 400-level course. In addition, it also counts toward a &quot;module&quot; (area of concentration) in human resource and public economics. Student performance in the course will be evaluated based on three papers.

**Prerequisite:** ECON 302 , ECON 315 , or ECON 323
Cross-listed with: ECON 445W
Writing Across the Curriculum
HPA 447: Financing Health Care

3 Credits

This course is to prepare health care administrators for the responsibilities involved in maintaining a well-managed health care organization. The course covers concepts in managerial accounting and finance that are critical to decision-making. Topics covered include types of budgets; considerations for cash flow, payables and receivables; and considerations in working with various types of revenue streams. These topics include evaluation of capital investment decisions, sources of financing, managerial accounting concepts (including cost behavior, profit analysis, and incremental analysis), reimbursement under various third-party payer environments, cost allocation and government program reporting.

**Prerequisite:** HPA 332; HPA 211

HPA 450: Healthcare Policies and Politics

3 Credits

Survey of health care's political contexts: formulation, implementation, and modification stages of policy process; politics of private interests (associations) at national and state levels.

**Prerequisite:** HPA 101, PL SC001

HPA 454: Health Care Professional Communication

3 Credits

This course will focus upon the analysis and application of professional communication principles and practices for successful participation in health care organizational and occupational activities. The changing health care industry towards greater coordination and integration of health delivery and the increased emphasis on the active participation of service recipients require that individuals send clear verbal messages, choose effective nonverbal behaviors, listen for desired results, and apply valid critical-thinking and problem-solving processes. Students in this course will be expected to identify, analyze, develop, and evaluate communication skills needed for professional success in interpersonal situations, group interactions, and professional written documents and oral presentations.

**Prerequisites:** HPA 301, HPA 332, HPA 390

HPA 455: Strategic Planning and Marketing for Health Services

3 Credits

The history, principles, techniques, and methodologies of health services planning and marketing are studied and students learn how to plan for new or changed health services, programs, or facilities. Students will examine the various stakeholders and explore community and healthcare program specific needs assessments, planning and marketing design. They will apply concepts learned and analyze real-life situations found in the market today. This course will build students' competencies in management, with a focus on application of these concepts to healthcare organizations. By the end of the semester students will have a deepened appreciation for the complex balancing of priorities and responsibilities necessary to effectively manage the strategic priorities within healthcare organizations. They will develop this awareness by both examining their own patterns of behavior and learning about common behavioral and structural dynamics within organizations. By the end of the course students will be able to: 1) identify critical features on an organization's environment and examine the implications of each feature on organizational goals and objectives; 2) Recognize and analyze regulatory, demographic, and policy trends to inform planning and assess potential impact on long-range goals; 3) Differentiate service/product specific markets and identify competitors within each market; 4) Propose comprehensive approaches for distribution network development and marketing/communication plan implementation; 5) Design metrics for evaluating goal attainment; 6) Formulate and defend strategic plans, marketing plans, goals and action steps; 7) Demonstrate the conceptual mastery of team dynamics through effective service as team members.

**Prerequisite:** HPA 395

HPA 460: Human Resource Management in Health Care Organizations

3 Credits

Foundations of human resource management applied to health care organizations, including hospitals, long-term care facilities, and community health organizations.

**Prerequisite:** HPA 332

HPA 470: Health Care Information Management

3 Credits

This course introduces information systems terminology, data structures, software applications, and their management functions in health services organizations. HPA 470 Health Care Information Management (3) This course introduces the student to information systems terminology, structures, specific applications, and their relationships to management functions in health services organizations. Health providers and health systems are continuing to make multi-million dollar investments in information systems in order to meet new market and regulatory requirements. All health services managers will play a role in the analysis, design, acquisition, installation, operation and ultimate success of information systems necessary to meet organizational goals and objectives. This course exposes students to the IS/IT applications used to support management functions. Further, applications and management issues unique to industry segments (e.g., long-term care, home care, hospital administration, physician practice management) will also be explored. The goal of the course is to ensure that students are schooled in the terminology, conceptual models, applications and opportunities and limitations of information systems in health services to the point that they can ask appropriate questions, recognize and state significant issues, and participate in the discussion and analysis of information systems development and application. The course is one of several elective courses in the Health Policy Administration major that students can complete and is also a required part of the Information Sciences and Technology/Health Policy Administration Minor providing students with an understanding of the basic structures of information systems in health administration; the relationship of these systems to managerial functions such as communications, coordination, control strategic and process planning and decision making, and the important policy and ethical issues associated with privacy, confidentiality, and security in information systems. Since the course represents the capstone of the Information Sciences and Technology/Health Policy Administration minor, it is important for students to have the pre-requisites for the course (HPA 332, IST 210, and IST 220), including an understanding of major issues in the health care system, health care management and information systems. Student's attainment of educational objectives will be assessed through a variety of evaluation methods. Understanding and appropriate application of
terminology, management issues, and ethical/privacy concerns will be assessed through examination. Concept integration will be assessed through case-study analysis and project papers. Data presentation and training communication issues will be assessed through individual application projects and presentations. A technology classroom with access to the World Wide Web and Penn State servers is required for effective instruction. We will use these facilities to demonstrate software applications, provide technical support for guest speaker presentations, and facilitate student presentations. The course will be offered once per academic year with an expected enrollment of 20-40 students.

**Prerequisite:** HPA 332, IST 210, IST 220

HPA 475: Health Care Quality

3 Credits

This course covers the basic principles and techniques of quality management in healthcare, including the definition, measurement, and uses of data for improving the quality of health and health services. The course also covers the organizational responsibilities related to quality assurance. Students will examine methods and tools for managing quality in health facilities, physician practices, and integrated health systems; including developments in quality assurance and improvement, utilization review, risk management, and patient satisfaction. From this examination students will be able to understand how to benchmark quality indicators using accreditation standards. On the successful completion of the course students will be able to: 1) Define the common terminology related to quality and process improvement; 2) Apply the quality management concepts to the modern health care operating environment; 3) Evaluate the effectiveness of a quality/process improvement program; 3) Define accreditation standards and how they drive quality; 4) Be able to use quality tools to improve quality; 5) Discuss the current issues and future trends associated with quality in the health care environment.

**Prerequisite:** HPA 332

HPA 490: Physician Practice Management

3 Credits

Development of skills needed to effectively manage physician practices. Practice management may be defined as the body of knowledge and skills necessary to manage the multiple elements of a specific practice of a physician. These elements include organization, administration, communication, marketing, and patient care. This course provides students an opportunity to develop the knowledge and skills necessary to be successful in the growing field of physician practice management. Topics include management of tasks and responsibilities, supervision and training, practice marketing, service scheduling, accounting processes, benchmarking and receivables, reimbursement and billing related to the physician practice. Upon successful completion of the course, the student will have: 1) A historical knowledge of the origins and evolution of physician practices; 2) An awareness of the legal entities which make up physician practices; 3) A working knowledge of the governance, performance domains, hiring processes, revenue cycles, medical record keeping, and common quality measures used in physician practices.

**Prerequisite:** HPA 211 and HPA 332

HPA 494: Senior Honors Thesis

1-6 Credits/Maximum of 6

Independent study related to student’s interests directed by a faculty supervisor and culminating in the production of a thesis.

**Prerequisite:** approval of honors thesis advisor

Honors

HPA 495: Field Experience

1-12 Credits/Maximum of 12

Field Experience

HPA 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Prerequisite:** Department approval

Honors

HPA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HPA 499: Foreign Study

1-3 Credits/Maximum of 3

Study of health care systems and practices in selected foreign countries.

**Prerequisite:** Department approval

**Hebrew (HEBR)**

HEBR 1: Basic Modern Hebrew I

4 Credits

An introduction to modern Hebrew in its written and spoken forms; oral and aural work stressed.

Bachelor of Arts: 2nd Foreign/World Language (All)

HEBR 2: Basic Modern Hebrew II

4 Credits

Continued study of grammar; emphasis on improving oral-aural facility, with increased attention to reading and writing.

**Prerequisite:** HEBR 001

Bachelor of Arts: 2nd Foreign/World Language (All)
HEBR 3: Intermediate Modern Hebrew

4 Credits

Grammar, reading, composition, and oral and aural exercises.

Prerequisite: HEBR 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

HEBR 10: Jewish Civilization

3 Credits

Life of the Jewish people from Biblical times, emphasizing cultural, religious, and institutional developments. HEBR (J ST) 010 Jewish Civilization (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Jewish civilization goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events – ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. – we will explore developments in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are evaluated on the basis of essay exams, essay assignments, quizzes, in-class discussion and commentaries, group projects, journals, a final comprehensive exam/essay, web-based activities, and on-line discussion. such means as quizzes, essay examinations, and group projects.

HEBR 151: Introductory Biblical Hebrew

3 Credits

Fundamentals of Biblical Hebrew grammar, syntax, and vocabulary. J ST (CAMS/HEBR) 151 Introductory Biblical Hebrew (3) The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student’s homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses. The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together from such an important piece of literature.

Cross-listed with: CAMS 151, JST 151

HEBR 152: Intermediate Biblical Hebrew

3 Credits

Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary. CAMS (JST/HEBR) 152 Intermediate Biblical Hebrew (3)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/JST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible. In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

Cross-listed with: CAMS 152, JST 152
Bachelor of Arts: Humanities

HEBR 199: Foreign Study–Basic Hebrew

1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

HEBR 295: Internship

1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practicums, or internships.
**Prerequisite:** prior approval of proposed assignment by instructor

**HEBR 296:** Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

**HEBR 297:** Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be taught in one year or semester.

Bachelor of Arts: Humanities

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

**HEBR 401:** Advanced Hebrew--Conversation Emphasis
3-6 Credits/Maximum of 6

Development of oral proficiency through discussions focusing on issues in contemporary Jewish culture.

Bachelor of Arts: Humanities 2nd Foreign/World Language (All)

**HEBR 402:** Advanced Hebrew--Reading Emphasis
3-6 Credits/Maximum of 6

Readings in representative works of traditional and modern literature; practice in composition; study of aspects of Jewish culture.

Bachelor of Arts: Humanities 2nd Foreign/World Language (All)

**HEBR 451:** Advanced Biblical Hebrew
3 Credits

Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

**Prerequisite:** HEBR 152 or equivalent

**HEBR 452:** Readings in Biblical Hebrew
3 Credits

Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details. HEBR 452 is a Biblical Hebrew literature course which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of which advanced students are able to read all types of Biblical texts. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 451 or its equivalent, the course will continue to emphasize grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read any Biblical Hebrew text comfortably and be able to analyze grammatical structures. Students’ work in the course will be evaluated on class participation (20%), short in class quizzes (20%), and a mid-term (30%) and final exam (30%).

HEBR 452 is part of a series of advanced Hebrew classes that will allow students to gain skill and knowledge about a range of Biblical Hebrew texts. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

**Prerequisite:** HEBR 451 or equivalent

**HEBR 494:** Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

**HEBR 494H:** Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Higher Education (HIED)

HIED 302: The Role of the Resident Assistant: Theory and Practice
3 Credits

An analysis of the various roles of the resident assistant, including interpersonal facilitator, disciplinarian, program developer, and activities facilitator.

HIED 303: Leadership Development through Orientation
3 Credits

Assisting new students and their parents and family members at New Student Orientation goes far beyond campus tours and providing directions. Today's mentors are charged with teaching new students about issues related to the classroom transition from high school to college, mental health, alcohol and drug use and abuse, sexual assault prevention, diversity and inclusion, and more. Beyond the subject matter knowledge required to facilitate these conversations, mentors must have confidence in their ability to speak publicly, think critically, and manage a group of students their age. The foundation of student development and transition theory provided in this course set the stage for both knowledge and skill acquisition in these areas. Once the foundation exists, students will hone their public speaking, critical thinking and multicultural competency skills. Through classroom discussions, personal reflection, and engaging faculty, staff, and advisers throughout the University, this course is designed to assist students in their journey to being a peer mentor. Students will explore their personal strengths, navigate personal bias in regards to the issues mentioned previously, and understand the role all of these play in a successful academic, social and personal transition to Penn State.

HIED 396: Individual Studies
1-9 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HIED 397: Special Topics
1-9 Credits/Maximum of 12

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HIED 490: Exploration of Careers in Higher Education
3 Credits

Foundation of graduate study in the field of higher education. HI ED 490 Master's Professional Seminar (3) This course is an introduction to higher education as a field, and as an orientation to graduate study. Early sessions will provide a brief review of the history of higher education, an introduction to the Carnegie Classification scheme of colleges and universities, and an overview of the structure of public and private higher education. Students will participate in an orientation to the services of the library including internet sources and tools needed to develop research skills. Technical writing skills will be developed through direct instruction, practice writing assignments, and peer review workshops in service of completing a literature review on a topic of the student's choosing. Students will explore a variety of career options through guest lectures and individual projects in areas of potential interest. A final career exploration portfolio will demonstrate what the student has learned regarding career areas. Professional, interpersonal, and ethical skills will be developed through role playing and interviews with actual higher education practitioners. Written work will include an annotated bibliography, a literature review, and integrative analysis essays. In addition, students will explore various options appropriate for a capstone project for their master's degree: internships, academic papers, portfolios, etc. Readings will reflect current topics and issues.

HIED 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Hindi (HINDI)

HINDI 1: Level One Hindi A
4 Credits

This is an introductory course in Hindi that presents the Devanagari script, elementary grammar and sentence structure.

Bachelor of Arts: Foreign/World Lang (12th Unit)

HINDI 2: Level One Hindi B
4 Credits

This intermediate level course seeks to impart functional literacy in oral and written expression in Hindi to students.

Prerequisite: HINDI001 or equivalent competency
Bachelor of Arts: Foreign/World Lang (12th Unit)

HINDI 3: Level Two Hindi A
4 Credits

This is an intermediate level course in Hindi that seeks to improve student's skills in oral and written expression.

Prerequisite: HINDI002 or equivalent competency
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)
HINDI 110: Intermediate Hindi

4 Credits/Maximum of 4

Hindi 110 teaches basic intermediate to advanced functional proficiency (ACTFL Standards) in reading, writing, and speaking Hindi.

Prerequisite: HINDI003 or equivalent competency

History (HIST)

HIST 1: Western Civilization I

3 Credits

HIST 1 examines the development of western civilization, beginning with the ancient world of the Mediterranean, Europe, and Mesopotamia, and continuing through Early Modern Europe, which involves the Reformation, the Counter-Reformation, and the early period of the Age of Exploration. The course is intended to introduce aspects of Ancient, Medieval and Early Modern history that has helped to shape the developments of Western Civilization. The examination of written and visual primary sources, as well as secondary sources, allows this course to examine the political, religious, economic, and cultural development of the western world. The variety of sources used in the course aids the students in learning how to understand and interpret history, and encourages the students to develop a critical method by which to evaluate primary and secondary historical sources.

HIST 2: The Western Heritage II

3 Credits

A survey of the Western heritage from the dawn of modern Europe in the seventeenth century to the present. HIST 002 The Western Heritage II (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. History 002 is an introduction to the history of Europe from the reformation to the present. The course focuses on four broad shifts in European history: the emergence of the powerful states of the ancient regime from the century of religious violence following the reformation; the critique of and attack on major assumptions of ancient regimes before, during, and after the French revolution; the social and economic transformation of Europe in the eighteenth and nineteenth centuries; and the formation of mass societies during the nineteenth and twentieth centuries. Although individual versions of the course may vary in emphasis, these changes are recognized as vital to Europe's significance in the modern world. A major teaching goal of the course is the use of historical evidence, in the form of documents, to build interpretations of the past. A book of documents and an additional course packet supply this evidence and serve as the focus of the weekly discussion classes. There are weekly reading quizzes to ensure preparation and to provide questions for the start of discussion. A textbook and lectures supply the overviews and broad themes of the course. The course requirements typically consist of exams, quizzes, and class attendance. (Note that these are the typical, general requirements. Individual instructors may make adjustments that will maintain the intellectual integrity and pedagogic intent of the course.) The course is a basic introduction to modern European history. It is therefore, related to all upper division courses on this subject. It also introduces students to basic cultural and social movements essential to courses in art history and music and to courses in the social sciences. History002 is required for history majors and for others fulfills a humanities requirement in the university's general education/bachelor of arts requirements. HIST 002 is offered twice a year with 50 to 250 seats per offering.

HIST 3: The American Nation: Historical Perspectives

3 Credits

American history from discovery to the present, focusing on both racial, ethnic, and religious differences and shared traditions and ideals. HIST 003 The American Nation: Historical Perspectives (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. This course covers American history from discovery to the present, focusing on racial, ethnic, and religious differences as well as shared traditions and ideals. Major economic, religious, political, and social issues and events from first contact to the present day are addressed, although individual versions of the course may vary in emphasis. Topics, which vary with instructor, view the American past through such lenses as democracy, the world of work, and daily life. A major teaching goal of the course is the use of historical evidence, in the form of documents, images, and other materials, to formulate interpretations of the past. Lectures and readings from textbooks, books, chapters, and academic articles provide the essential material of the course and are supplemented by electronic media. The course requirements typically consist of exams, quizzes, and class attendance and participation; they may include short papers as well. (Note that these are the typical, general requirements. Individual
Instructors may make adjustments that will maintain the intellectual integrity and pedagogical intent of the course.) The course provides an overview of American history and is therefore related to all upper division courses on this subject. It also introduces students to basic cultural and social movements essential to courses in American studies, art history and music and to courses in the social sciences.

HIST 5: Ancient Mediterranean Civilizations
3 Credits

Survey of the history and cultures of ancient Mediterranean civilizations in Mesopotamia, Egypt, Syro-Levant, Anatolia, Greece, and Rome. CAMS (HIST) 005 Ancient Mediterranean Civilizations (3) (GH;IL) This course provides an introduction to the history and cultural traditions of the ancient civilizations of the Mediterranean. From the origins of cities and the invention of writing, it surveys the intellectual, artistic, and political traditions that laid the foundations for the later civilizations of Europe and western Asia. Students will acquire a basic historical framework for the ancient Mediterranean from the third millennium BCE through the end of antiquity in the first millennium CE. Within this framework cross-cultural relationships of time and ideas will be established among religious texts, epic literatures, and political and legal traditions. In the part of the world where the division between Asia and the East and Europe and the West was born, the course will examine the development of regional and ethnic identities along with the historical development of concepts of the universal nature of humanity. This course is designed to serve as the foundation course for all majors in the department of Classics and Ancient Mediterranean Studies (CAMS).

HIST 6N: History and Weather: How Weather Played an Instrumental Role in Great World Events
3 Credits

In HIST 6N / METEO 6N, we'll survey how weather and history are integrated throughout time. Moving from past to present, the course will use case studies to navigate historical moments where weather shaped the outcome. Each case study will have a historical, cultural, and meteorological analysis of the event so students gain a deeper understanding of the national or international event and the integration of science and history. Weather has shaped the outcome of major world events. For example, a weather forecast led to the delay of the Allied invasion of Normandy (DDay), record cold weather in Florida led to the Challenger Space Shuttle explosion, General George Washington used fog to conceal the withdrawal of his troops at the Battle of Long Island, and the list goes on. The case studies range from the Revolutionary War through present day, and this period of history has been selected because there are firsthand accounts of the weather and/or recorded weather data for each event. The meteorological study examines the event's atmospheric conditions. How or why did they occur? How did they affect the event? Therefore, students will learn basic meteorology and climatology. They will also analyze weather maps and scientific data. The historical study provides context for the event. What lead to the event? What happened during the event? What are the event's lasting impacts? To better understand the decisions that leaders faced, students will be asked to assess risk and make decisions based on the same weather data or information leaders at the time had. Students will also explain the context, cause, and effects of major historical moments in everyday language to an audience of their peers through discussions and/or projects. The cultural study examines each event from a psychological and sociological point of view. What were the mindsets of the people and cultures involved in the event? How does the event connect to or parallel things in today's society? How would a present day culture react? This study will give students a better understanding of cultural differences in the world and how those cultural differences can alter the course of history. Time in the course is equally split between United States and international topics, and there will be frequent discussion of current events.

HIST 10: World History to 1500
3 Credits

World Civilizations to 1500 is an introductory survey of the world’s major civilizations from the rise of the earliest human communities to the age of global expansion in the sixteenth century. The emphasis will be on the distinctive histories and cultural values that shaped major regions and cross-cultural contacts between those regions. Students will learn how ancient to early modern societies adapted their environments, organized their political economies, expressed themselves in art and philosophy. The course provides a historical overview of global changes over time.

Writing Across the Curriculum

HIST 21Y: American Civilization Since 1877

3 Credits

An historical survey of the American experience from the emergence of urban-industrial society in the late nineteenth century to the present. This course meets the Bachelor of Arts degree requirements. HIST 21 seeks to introduce students to salient events, developments, and themes of United States history since 1877, including westward expansion and the decline of the Native American, the industrial revolution, urbanization, immigration, Gilded Age culture and politics, the labor movement, imperialist, Progressivism, segregation and African-American response, the women's movement, World War I, the Great Depression and New Deal, World War II, post-war prosperity, the Cold War, the Civil Rights movement, the Vietnam War, the disillusionment of the 'Seventies', the Reagan revolution, and America in the post-Cold War era. The social and ideological diversity of the American experience is a prominent theme of HIST 21. Students learn how to "think historically", developing their capacity to identify and analyze key themes and issues from the past, critically assess primary sources, and sharpen their skills in marshaling data and concepts, and expressing them cogently in discussions and in writing.

Bachelor of Arts: Humanities

HIST 20: American Civilization to 1877

3 Credits

An historical survey of the political, social, and economic development of America from colonial settlement through the Civil War and Reconstruction. This course meets the Bachelor of Arts degree requirements. HIST 20 provides a historical overview of change over time in North America before 1877 with a focus on the diverse experiences of different groups of Americans. Students will receive an overview of the most important historical developments in America History from the colonial period through Reconstruction, including the history of American slavery, the evolution of American political systems, gender roles, and regional differences, changes in immigration, economic development, and the American Civil War and Reconstruction. While "knowing the facts" is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or "order" to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations / arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the diverse histories of the peoples of the United States prior to 1877; (2) Students will gain an understanding and knowledge of the domestic, transnational and global political and economic processes that have shaped the lives, labor, institutions and cultures of the United States before 1877; (3) Students will learn how to "think historically" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of American history prior to 1877. Demonstrate an understanding of the diverse experiences of different groups of Americans prior to 1877. Demonstrate an understanding of the economic, social, and political structures that emerged before 1877 and continue to shape the modern United States.

HIST 66: Survey of British History

3 Credits

The British Isles and their peoples since the ancient period, emphasizing political, cultural, and intellectual developments and imperial rise and fall. HIST 066 Survey of British History (3) (GH;IL) The Survey of British History is composed of five units of study that chronicle the creation and development of Great Britain. The course's chronological design should help students trace the trajectory of Britain's improbable
rise to and fall from dominant imperial power. This design is also adopted so as to lead students to identify recurring trends and notable anomalies in how Britain developed. Prioritizing students’ ability to identify and evaluate the impact of historical events, this course examines the interconnections between Britain’s economic, political, cultural, and religious histories, showing how changes in the economy, for example, allowed for the rise of new art forms or how changes in religious ideals influenced the population’s vision of their leaders. Britain’s impact on other nations is a corollary emphasis of this course, one justified by the knowledge that recognizing the past’s ongoing legacy makes the study of history vital. Each unit of study will be accompanied by the analysis of multiple objects of British history, such as the Domesday Book, the Magna Carta, and the Rosetta Stone. Leading students in discussions of the creation and reception of these objects will supplement class lectures. Such discussions should press students to apply their readings and understandings of class lectures, leading them to ask, for instance, how the Roman Baths showcased the Roman nation’s economic and military strength as well as reflected their plans for British lands and peoples. Grades in History 066 will be determined four quizzes and three writing assignments. The quizzes will consist of identification and short questions based on the readings and lectures, thus testing students’ understanding of the material presented. The first two writing assignments will ask students to outline two assigned books concerning British history; books that have been used in the past include one concerning the development of London and another exploring the impact of Darwin’s ideas on the British nation. These assignments will introduce students to two different types of historical monographs as well as develop their skills in identifying main points and prioritizing evidence. The final writing assignment will ask students to research another object; of British history and explain how it reflects significant events in British history and/or British ideals. Giving students the opportunity to deal with a type of primary document, this paper assignment is designed to introduce students to a type of historical research, to test students’ ability to synthesize information, and to develop their ability to construct an argument about the significance of an object based on their knowledge and understanding of major developments within British history.

HIST 83: First-Year Seminar in History

3 Credits

Critical approaches to the dimensions and directions in History. HIST 083S First-Year Seminar in History (3) (GH;FYS)(BA) This course meets the Bachelor of Arts degree requirements. Through readings, discussions, lectures, and research projects, students are expected to master the subject material of the course as well as to acquire basic skills useful to the study of the liberal arts. Students will learn to read books and original documents, discuss them, formulate effective arguments, and write essays and papers. Historical analysis of this type will provide students with techniques for appreciating and judging arguments and presentations in many fields of learning, from scholarly to popular. The topics chosen for these seminars will acquaint students with major figures and developments in important historical areas. By reading and understanding historical documents, students will learn to consider the cultural assumptions of different groups and societies and to appreciate their own values and assumptions by contrast with these. Although the course will focus on a specific topic, the instructor will help the student to see the wider implications of the issues and controversies discussed. Whenever possible, the international and intercultural aspects of the topic will be considered. The course will challenge students to express themselves and to gather information through discussion and writing of papers. It will always challenge students to think about social behavior, the nature of the community, and the value of scholarly endeavor as these relate to the particular topic of the seminar. The course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanity requirement. The course will be offered twice a year in sections of 20 students.

HIST 100: Ancient Greece

3 Credits

Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization. CAMS (HIST) 100 Ancient Greece (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenaen, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian Justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E.

HIST 101: The Roman Republic and Empire

3 Credits

History of the Roman Republic and Empire from the origins of Rome to the disintegration of the Empire. CAMS (HIST) 101 The Roman Republic and Empire (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course fulfills 3 credits of the General Education-Humanities (GH) requirement and is an introduction to the ancient Roman empire: how that empire came into being, how it evolved, how it came to govern much of the Mediterranean and European world, and how that empire declined. Particular stress is placed, through readings and discussion, on the sources of our knowledge of the past and on the social and legal structures employed by a past society to govern an ethnically- and religiously-diverse population. This course complements other courses on the ancient Mediterranean world (such as HIST/CAMS 100) and is a prerequisite to more advanced (400-level) courses in ancient Mediterranean history. An example of evaluation includes: three brief quizzes, a take-home mid-term permitting library and Internet use, and a final examination; all examinations require student synthesis and expression of what has been learned through written essays of varying
length. Emphases in the course is on student engagement through class discussion of the topics presented in the texts and lectures.

HIST 102: Canaan and Israel in Antiquity  
3 Credits  
This course is an overview of the ancient history and cultures of Canaan (the Mediterranean Levant of Syria-Palestine) and the emergence of Israel. It involves a critical view of biblical texts (especially the Hebrew Bible, aka Old Testament) in light of other ancient texts, archaeology, and historical methods, in order to explain the nature and the evolution of society, religion, and thought in the prebiblical and biblical era. We will be especially interested in the period from the end of the Late Bronze Age (c. 1200 BCE) to the Persian period (539-332 BCE), and will examine ongoing debates about the Bible and history, as well as the development of Israelite religion from polytheism toward monotheism and a distinctive worldview.

HIST 103: The History of Madness, Mental Illness, and Psychiatry  
3 Credits  
More than perhaps any other set of human afflictions, the phenomena that have gone under the names of "madness," "insanity," "lunacy," and "mental illness" have historically provoked a wide variety of often contradictory reactions. Those who have been in the throes of "madness" have described experiences ranging from an ecstatic sense of holiness to being beset by undeniable impulses to feelings of unending despair. Observers have sought explanations for the behavior of "touched" and "crazy" individuals by invoking such things as sin, destiny, heredity, moral degeneracy, upbringing, trauma, fatigue, and body chemistry. Those afflicted have been admired, pitied, mocked, hidden from public view, canonized, imprisoned, restrained, operated on, sterilized, hospitalized, killed, counseled, analyzed, and medicated. Why? This course will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness. This course will be an introduction to the modern history of "madness" in the Western world. In particular, we will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness; the changing experiences of those afflicted; the development of those professions designed to look after those deemed mad, insane, and mentally ill; and the social and cultural assumptions behind treatments, policies, and public opinions.

HIST 106H: The Byzantine Empire  
3 Credits  
Rise and development of the civilization of medieval Europe from the decline of Rome to 1500. HIST 107HIST (MEDVL) 107 Medieval Europe (3)  
(H;IL)(BA) This course meets the Bachelor of Arts degree requirements. HIST/MEDVL 107 is an introductory course on the history of Europe from the late classical period to the beginning of the sixteenth century. There are three main areas of concentration in this course. First, the development of political, judicial and diplomatic institutions, from the collapse of central Roman authority through the rise of local chiefdoms to the centralized kingdom as ancestor of the modern state. The second theme is the role of Christianity in all its forms—orthodox, heretical, and popular—and its contribution to a distinctly medieval society. The third main theme is the development of society following changes in economic activity, cultural interest and the extended family. Several forms of learning are used in this course. A textbook gives the student a broad overview of the period and gives a chronological structure to the material. This material provides a background to the instructor’s lectures, which not only give factual information, but integrate the various trends, individuals and events. The assigned readings illustrate specific events or individuals; the discussion groups allow the student to explore these texts in a collaborative environment with the instructor and their fellow students. The research paper gives the student the opportunity to investigate a specific topic of interest, while training them in scholarly writing and analysis. Finally, the tests, all essay questions, let students demonstrate their comprehension of the material through problem solving. The essay exams and discussion groups allow the student actively to address specific problems from the material; the research paper enables the student to gather information from traditional
that American history has a natural context; (2) that relationships to human beings. Major themes of the course include: (1) recognizing those ecological changes then reciprocally influence human life. A series of various questions about such relationships, including exploring how scholarship that examines changing relationships between human beings and the natural world in American history. HIST 109 Introduction to U.S. Environmental History (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. Taking the United States as its focus, this course provides an introduction to environmental history as a field of study. It will be accepted but not required for the History Major and Minor. It will be offered once each year with 90 seats per offering.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

HIST 109: Introduction to U.S. Environmental History

3 Credits

An introduction to the changing relationships between human beings and the natural world in American history. HIST 109 Introduction to U.S. Environmental History (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. Taking the United States as its focus, this course provides an introduction to environmental history as a field of scholarship that examines changing relationships between human beings and the natural world. Environmental history centers on the examination of various questions about such relationships, including exploring how natural forces shape history, how humankind affects nature, and how those ecological changes then reciprocally influence human life. A core message of the course will be that environmental factors do not deterministically shape history, but rather structure the possibilities open to human beings. Major themes of the course include: (1) recognizing that American history has a natural context; (2) that relationships between nature and culture change over time; and (3) that knowledge about nature is socially constructed and historically contingent. The course will examine the increasing speed and geographic spread of human-driven changes to the environment and provide students with the historical context necessary to appreciate contemporary environmental dilemmas. This course is intended as an introduction, with no prerequisites, though general familiarity with American history will be helpful. Course meetings and assignments are designed to encourage comparing and contrasting points of view on questions such as: How has the non-human world shaped the course of American history? What were the environmental impacts of historic changes in the ways Americans produced and consumed resources? What ideas shaped the ways different groups of people defined and used specific resources? What role have science and technology played in changing popular attitudes about the human place in the world? How did America’s environment shape the political, social, and economic development of the United States? How have changes in American relationships with nature interacted with other global change processes and recognitions of the need to develop more sustainable societies?

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)

HIST 110: Introduction to Global Environmental History

3 Credits

This course provides a broad introduction to the history of human relationships with nature throughout the world. The human relationship with the natural environment, the world of plants, animals, and microbes, of air, water, and land, is an important historical subject. History 110 provides a broad, thematic description and analysis of major global trends and shifts, with an emphasis on contemporary issues and problem solving. The most important goal of the course is to provide students with the historical context necessary to construct a thoughtful appreciation of the environmental dilemmas of our time. Ecology has contributed a great deal to historical understanding in terms of specific examples or case studies; however, it has also begun to reconstruct the overall structure of the history that we teach. History 110 seeks to leverage this new paradigm by encouraging students to break down the barriers that often divide the humanities and the sciences. This course utilizes environmental science to demonstrate and explain specific human tendencies. Finally, this course is structured to help students better situate the history of the United States in a more global centered view of both the past and contemporary environmental concerns. Particularly in relation to contemporary environmental issues, History 110 will make clear that many environmental problems are local in neither their construction nor impact. The course will focus on several critical points, including: How has the non-human world shaped the course of human history? What were the environmental impacts of historic changes in the ways humans produced and consumed resources? What ideas shaped the ways different groups of people defined and used specific resources? What role have science and technology played in changing popular attitudes about the human place in the world?

HIST 111: Introduction to U.S. Food History

3 Credits

This course is a historical analysis of agriculture and food production in the United States. It includes examination of the history of food production and consumption patterns, the food industry, food marketing, and the politics and regulation of the American food system. This course explores the food system as a nexus that brings together history, technology, and culture in ways that have significant impacts on human livelihoods and wellbeing. A core theme of the course will be consideration of questions about food ethics and the challenge of improving the sustainability of food systems including the need to maintain or increase improvements in productivity while also addressing social effects and reducing environmental impacts of food production.

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

HIST 112: Introduction to Public History

3 Credits

Introduction to Public History lays a broad foundation for history-based careers in museums, historic site management, foundations, and government services. Practicing as a historian outside of a classroom opens worlds of very diverse professional opportunities. This course is designed to introduce students to that wide world and equip them to experiment with it. It teaches theories of public history practice, along with basic approaches and perspectives on audience development, collection management, interpretation, and organizational management and finance that all public historians need to know to succeed. The course will consider the past and future of the field. Students should encounter public history practice; there are various ways to make that happen, including meeting practicing public historians through field trips and/or in class, preparing a grant application, and presenting a modest Public History project in class. Public history offers opportunities to students in communication, media, management, finance/accounting, and education, as well as history. This course is the first stage of a public history emphasis or minor (when available) but also stands alone as an introduction to a growing and promising field of work for students drawn to history but seeking professional opportunities beyond graduate work and teaching.

CONCURRENT: HIST 20; HIST 21; HIST 1; HIST 2
United States Cultures (US)

HIST 113: Baseball in Comparative History

3 Credits

Comparative survey of baseball history from its beginnings to the present. HIST 113 Baseball in Comparative History (3) (IL) This course, which fulfills the International Cultures (IL) requirement, provides an introduction to comparative social history. It uses the broad cultural and geographic diffusion of baseball over time to examine the diverse and changing social, economic, and political meanings of this activity in different cultural settings, emphasizing the ways in which a common activity may acquire unique meanings in different cultures. Although North America, Cuba, and Japan demand attention as the most striking examples of baseball's pervasive impact, the course will consider baseball as a global phenomenon, exploring the minimal impact or failure of baseball promotions in many European and African societies, for example. As an introduction, the course will confine itself to English language texts, but it will use a wide range of primary sources, including newspapers and journals, memoirs, correspondence, promotional materials, and photographs to introduce students to basic concepts of historical method and problems of evidence. Students will be encouraged to consider baseball's impact in particular historical contexts as a cultural process, from the manner of its introduction through its adoption to the emergence of distinctive proprietary, even nationalist attitudes and styles of play. Among the many topics required of a survey, the course will return periodically to the question of American influence and US imperial aspirations. But the evidence of baseball games in other countries as sites of resistance or hostility to US power and as expressions of a potent nationalist politics raises questions about baseball's value for many conventional historical models of "empire" as a form of political or economic subordination. Students' assignments will require a combination of reading, writing, and research skills, and the course will introduce through lecture and discussion the variety of materials available at Penn State for the study of this subject.

HIST 114N: Historical Perspectives on Health Care Innovations

3 Credits

This course will explore how historical context influenced major innovators in health care. It will pursue the general education objectives of 1) integrative thinking, and 2) social responsibility and ethical reasoning. GH learning criteria will include: 1) knowledge of major cultural current issues and developments through time, 2) competence in critical thinking about topics in the humanities, and 3) familiarity with groups, individuals, ideas, or events that have influenced the experiences and values of different communities. GS learning criteria will include the abilities to: 1) describe the ways in which many different factors may interact to influence behaviors and/or institutions, 2) explain how social science researchers work to better understand and address world problems, and 3) recognize social, cultural, political and/or ethical implications of work in the social and behavioral sciences.

HIST 115: The American Jewish Experience

3 Credits

Chronological and topical survey of the story of Jewish life in America. We will trace the social, religious, cultural, and political developments in the Jewish community from the Colonial Period to the present. Topics to be covered include immigration, acculturation, ethnicity, gender, politics, and communal and religious innovation. While "knowing the facts" is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or "order" to the material; independent analysis and effective articulation (both in writing and
in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the relationship between the experiences of members of the American Jewish community and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the American Jewish experience. (3) Students will learn how to “think historically” by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronological history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped the American Jewish experience and continue to shape the modern United States.

HIST 117: Women in Modern History
3 Credits

Modernization and women: changing images and roles since mid-eighteenth century in the family, workshop, politics, society; cross-cultural comparisons. HIST 117HIST (WMNST) 117 Women in Modern History (3) (GH,US,IL,BA) This course meets the Bachelor of Arts degree requirements. History/Women's Studies 117 is an introductory survey of women in the United States and possibly elsewhere, from the seventeenth to the late twentieth century. The course examines women's history from several different perspectives. First, it introduces students to the methods, sources, and questions of the past thirty years of women's history-writing, and asks students how studying women transforms our understanding of history more generally. Second, it offers a survey of the narrative of modern women's history, stressing women's interactions with the larger processes of economic and political change, their relationship to changing ideologies of gender and feminism, and their complex identities not only as women but as members of a particular race, class, ethnic, and religious group. Throughout, students will ask when gender, and when some other aspect of women's lives and identities, is most salient in identifying the restrictions and opportunities they faced. Third, students will assume the perspective of historians themselves, as they examine primary sources and attempt to make analytic and historical judgments about what they say and why they matter to the larger narrative. Through significant essay-writing assignments, students will develop analytical and writing skills in learning to think historically about women. Questions about race, class, ethnicity, and sexual orientation, as well as gender, are intrinsic to this course. Students will be evaluated based on their class participation, papers, and final exam. This course is cross-listed in History and Women's Studies and fulfills requirements for both programs' majors and minors. History/Women's Studies 117 will be accepted, but not required, for the History Major, the Women's Studies Major, and the Women's Studies Minor. This course will be offered once a year with up to 70 seats per offering.

HIST 121: History of the Holocaust 1933-1945
3 Credits

Historical analysis of holocaust themes. HIST (J ST) 121 History of the Holocaust 1933-1945 (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The course will analyze the Holocaust using historical, literary, and philosophical approaches. Various species of evidence will be used and evaluated, including film and literary materials. Emphasis will be placed on discussion, student research projects, problems of ethnicity, race and religion in analyzing the origins of a persecuting mentality and the scapegoating and brutalization of victims, primarily Jews, but also including Gypsies and other groups. The Holocaust is also discussed in the context of global genocidal phenomena. The peculiar structures and dynamics of Jewish ethnic life in Eastern Europe are also treated prominently. Comparative analysis of the relationships between dominant and non-dominant cultures is a major concern of the course. An example of evaluation may include requiring students to complete one major paper on a specific theme covered in the course with a draft of four pages due at the end of six weeks. Students will be required to complete one major paper on a specific theme covered in the course. The course will contribute both to studies in 20th century European and German history, as well as to Jewish Studies. It will form a prominent feature linked to Modern Jewish History HIST/J ST 118 and the History of Anti-Semitism (HIST 302W). The course may be used to count for 3 credits toward the 18 credits required for the History minor and 22 credits required for the Jewish Studies minor. The course will be offered once per year with an enrollment of 20 for HIST and 20 for J ST.

HIST 122: History of Science I
3 Credits

The main goal of this course is to think through and understand major developments, ideas and issues in natural philosophy. "Natural philosophy" is the premodern term for science. The term "science" began to acquire its modern meanings around 1840. The geographic focus of this course is the Mediterranean region and Europe, but we will also investigate early science in China, the Indian subcontinent, and the Islamic world. The temporal coverage of this course is vast: from about 10,000 years ago to the 19th century. As is common in history courses, it will be essential for us temporarily to set aside modern and contemporary biases and ways of thinking. Our goal is to understand the world as ancient and premodern people did. Issues of religion will constantly make appearances in this course. If you have studied world religions already, that is great, but if not, the books and lectures will provide the essential points as we go along. You should also use Wikipedia or similar reference tools to look up any key term or concept that does not make sense to you, whether with respect to lectures or the books. It is your job to make an active effort to master the material. This course is ideal for anyone pursuing a scientific or technical major, but anyone should benefit from it. We will be exploring some of the most important issues that have shaped our world, key developments in the human capacity for creating knowledge and useful technologies, and, in some cases, innovative solutions to vexing problems. We will also examine some of the ways that social institutions, belief systems, and paradigms (models) have helped both to organize and to constrain human knowledge. If all goes reasonably well, this course will enhance your knowledge and open your mind to hitherto unfamiliar ways of thinking and approaches to problems.

GenEd Learning Objective: Key Literacies

HIST 123: History of Science II
3 Credits

A history of science and culture from the scientific revolution to the present. HIST 123 examines the intellectual, social, and cultural history of science from the Scientific Revolution to the present. The course covers a range of theoretical and applied disciplines, including engineering and medicine. In addition to major discoveries and new ideas, methods, and tools, the course examines the effect of social conditions on science as well as the impact science has had on society. Scientific developments in the Western world, broadly defined, constitute the organizing framework of the course, but the course also examines science in non-Western cultures.

GenEd Learning Objective: Key Literacies

HIST 124: History of Western Medicine
3 Credits

This course explores the history of health, illness, and medicine in western society. HIST (S T S) 124 History of Western Medicine (3) (GH;US;IL)Relying on both primary and secondary sources, the course examines developments in medical thinking and practice, the changing status of medical practitioners, and the experience of patients in order to understand the links between medicine and its social, cultural, intellectual, and political contexts. This course will also augment offerings in bioethics and medical humanities by providing the historical context of ethical issues and social policies concerning medicine. It will be attractive to students pursuing a health professional career and will provide a historical context to the issues raised in courses such as HD FS 301 "Values and Ethics in Health and Human Development" and BIOL 461 "Contemporary Issues in Science and Medicine" and PHIL/S T S 432 "Medical and Health Care Ethics" and ANTH 470H "Our Place in Nature". The course will be one of the Humanities Electives for the Bioethics/Medical Humanities Minor as well as the proposed Disability Studies minor. Within the Department of History, the course is part of the undergraduate
offerings in the history of science and, thus, is directly linked to HIST/S T S 122, HIST/S T S 123, and HIST 103. The course would also support the Science, Technology, and Society Program's undergraduate minor, augmenting courses in science and health and medicine, such as S T S 101, S T S 105, S T S 200, and S T S 432.

HIST 125N: History of Infectious Disease and Epidemiology
3 Credits

Infectious diseases once thought to be nearly eradicated have seen a resurgence in recent years. The majority of the cases arose from people who deliberately chose not to vaccinate their children against these disease. Even in the twenty-first century the nature of disease and how to prevent it is not merely a matter of science, but an issue laden with cultural, political, and religious concerns. This course charts the history of disease both as a subject of scientific inquiry and a cultural and religious phenomenon. We will begin with early Greek and Egyptian attempts to understand disease as a foreign entity attacking the body and end in the twenty-first century with current ideas surrounding the use of antibiotics, vaccines, and emerging threats throughout the world. Along the way we will discuss the impact of significant epidemics - for example, Bubonic Plague, Syphilis, and Influenza - as well as changing scientific thinking of both how to deal with disease and how to understand the natural world. In tandem with the historical background key scientific ideas necessary for studying disease - including current understanding of the microbial world, microscopy techniques, and modern gene theory - will be presented to the students through classroom instruction and virtual laboratories.

HIST 128N: Cultural Perspectives on Mathematics
3 Credits

This course will investigate the development of mathematical thought in multiple Afro-Eurasian cultures from the Bronze Age through the early medieval period, including Mesopotamia, Egypt, Greece, India, China, and the Islamic world. Math will be examined as a cultural product, with specific developments contextualized in the generating civilization's history, socio-political structures, economic systems, artistic and literary movements, and prevailing religious and philosophical ideas. Students will investigate the ways in which specific aspects of a culture influenced the development of specific ideas about, approaches to, and techniques regarding number and mathematical processes. Key themes in this respect will be what social forces encourage the development of practical or theoretical mathematics; how a society determines what is truth; the conception of abstract ideas such as zero and negative, infinite, and irrational numbers; the social status of mathematicians and their relationship with political and social authorities; and what social forces hinder the development of practical and/or theoretical mathematics. Students will also consider how the availability of certain mathematical knowledge enabled the development of particular social systems, architectural achievements, and more. Key themes in this respect will be the mathematical needs of specific political systems (such as the accounting involved in imperial administration), legal systems (such as fair division of goods), and religious systems (such as the calculation of accurate systems of time). At the same time, students will draw connections across time periods and cultures by examining the interactions between civilizations and how these interactions influenced the development of mathematics as a human endeavor. Key themes in this respect will be understanding what political, economic, and other forces cause cultures to come into contact or seek out contact; and how the exchange of knowledge shapes both the receiving culture and the study of mathematics as a whole. As part of this course, students will study both specific mathematical ideas (e.g., number systems, deductive reasoning, geometric algebra, and the motivating problems that spurred development) and the specific ancient and medieval cultures named above.

HIST 129N: Chocolate Worlds
3 Credits

This course will examine the "world" of chocolate throughout human history. First cultivated by the ancient peoples of the Americas and then manufactured by Europeans and Pennsylvanians alike, chocolate has played a privileged role as a luxury good. An interdomain course, "Chocolate Worlds" is interdisciplinary, taught by faculty in the departments of Plant Science, Anthropology, and History. As a team we investigate the how diverse societies have differentially interacted with this crop. Rather than be organized chronologically, this course
will be divided into course \textit{units} such as the history of cocoa uses and cultivation, cocoa plant science and farming issues, chocolate making and markets, and the state of the global chocolate industry. The course's lectures and assigned readings work in concert equally directed by scientific inquiry and the queries of the social sciences and humanities. \textit{Assignments} will address real world questions relating to contemporary cocoa cultivation and production, and its role in international development and social justice. As a class we will take field trips to sites such as local chocolate manufacturing facilities and cocoa research sites and laboratories. The learning objectives of this course include students' broad knowledge of cacao production, its history, and ethical issues surrounding its cultivation in today's global economy. Additionally, students will gain an historical appreciation for the role this crop has played in diverse human societies and a scientific understanding of its genetic structure.

HIST 130: Introduction to the Civil War Era, 1848 through 1877

3 Credits

Survey of the causes and consequences of America's deadliest conflict, the Civil War, from the end of the U.S.-Mexican War in 1848 through the end of Reconstruction in 1877. This course meets the Bachelor of Arts degree requirements. HIST 130 is a general survey of the American Civil War Era that satisfies the Gen Ed GH requirement. Course content features the causes of the war, the conflict itself, the consequences for the meaning of freedom in the United States, and the continuing relevance of this conflict today. Students will become familiar with American slavery; Northern and Southern social, cultural, political, and economic composition; the military progress of the war; problems on the home front; the struggle for emancipation; and the creation of a new nation based on free labor. The honors course will also take time to go further in depth in discussion and analysis of significant trends and topics in the history of the Civil War Era through intensive focus on primary sources in discussion and written assignments.

HIST 134: Introduction to the British Isles, 1400-1800

3 Credits

Survey of the history and cultures of the British Isles from 1400 to 1800. HIST 134 Introduction to the British Isles, 1400-1800 (3) (GH;IL) This history course, which fulfills the Humanities requirement in General Education (GH) or the International Cultures (IL) requirement, provides an introduction to the history of the British Isles from the fifteenth to the early nineteenth centuries, focusing on the diversity of English, Welsh, Scots, and Irish cultures and customs, their influence on early forms of nationalism in the British Isles, and their importance in the formation of the modern British nation-state. Using a wide range of primary sources, including the work of prominent British writers, the course introduces basic concepts of historical method, while exploring the process whereby an English empire came to govern these four major &
dquo;peoples&rdquo; of the British Isles. Students will be encouraged to consider the dynamism of this process, involving complex interrelationships rather than the simple supremacy of one ethnic group over another. The relationships between English and Scots protestants, the importance of translating the Book of Common Prayer from English to Welsh, the influence of Irish-born families of English descent on the governance of early modern Ireland, were all key elements in the emergence of an empire under the authority of an English dynastic state whose practical control over the territories it claimed to govern often remained quite limited.

International Cultures (IL)
General Education: Humanities (GH)

HIST 140: The Israel-Palestine Conflict

3 Credits/Maximum of 3

Roots of the Israel-Palestine conflict; relations between Arabs and Jews in the Middle East from 19th century to present. HIST (J ST) 140 Jews and Arabs in the Modern Middle East (3) (GH;IL)(BA) This course analyzes the Israel-Palestine conflict in the larger context of Jewish-Arab relations in the modern Middle East. Examination of the seeds of the conflict to the present day. Roots of the conflict between Jews, Palestinians, and Arabs reach back into the late Ottoman period but the First World War constituted a major turning point, when the project of a Jewish state in Palestine took shape as the Ottoman Empire collapsed. The 1917 Balfour Declaration provided an enormous boost to the relatively small Zionist movement. About 300,000 Jews moved to Palestine during the interwar period, with most Jewish migrants driven initially by economic rather than ideological motives. Some Jewish settlers established good relations with local Palestinians. But tensions erupted in the cities, not least over landownership. Clashes continued during the early 1930s. The
aftermath of World War II constituted the second major turning point. After 1945 Britain withdrew from the Middle East while large numbers of Jewish refugees from Eastern Europe migrated to Palestine. After the Israeli declaration of independence in 1948, the new Arab states declared war on the newly founded state. Israeli troops expelled large numbers of Palestinians permanently from their homes. At the same time almost all Jews were expelled from most Arab states and settled overwhelmingly in Israel. The course follows the main clashes between Israel and its neighbors without ignoring the internal relations, especially between Jews and Israeli Arabs, and Jews and Palestinians in the occupied territories. The main clashes that will be discussed are the Suez crisis of 1956; the 1967 Six-Day War; the 1973 Yom Kippur War; the bold 1977 peace initiative of Egyptian leader Anwar El-Sadat which led to the 1979 peace accord between Israel and Egypt (and eventually to a détente with Jordan); the 1982 Lebanon War and the first Intifada (protest wave by Palestinians in the occupied territories); the Oslo Peace Process during the 1990s; the Second Intifada and recent developments, especially the implications of Israel's settlement building in the West Bank. The course concludes with a discussion of potential scenarios for the relationship between Jews and Arabs in the Middle East during the 21st century.

Cross-listed with: JST 140
General Education: Humanities (GH)

HIST 141: Medieval and Modern Russia
3 Credits

This course is an introductory survey, including political, social, economic, and cultural development of Kievan, Muscovite, and Imperial Russia. Tracing the history of Russia from the ninth to early twentieth century, this course examines the central role of the people, politics and culture at the crossroads of Europe and Asia. Particular topics include the rise of the Kievan State, the Mongol rule, the rise of Muscovy, Ivan the Terrible, Peter the Great, relations with Western Europe up until the end of imperial Russia under the last tsar of Russia, Nicholas II. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

HIST 142: History of Communism
3 Credits

Marxism; Leninism and evolution of the Soviet Union; formation and development of the Communist bloc; impact of Chinese Communism. HIST 142 History of Communism (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Communism is one of the most powerful ideologies to have ascended in the modern period of history. Fashioned from Marxist philosophy, communism was embraced in the twentieth century to over one billion people from the former USSR, to China, to South Asia, to Africa, to Latin America, and by some here in the U.S. Unquestionably, the institutionalization of communist regimes has left an indelible mark on world history. This course will explore the writings of Marx and his advocates, notably Engels and Lenin, and strive to understand why the first communist regime emerged in the unlikeliest of places: Russia. Using the Soviet Union as a case study, we will examine how Marxist principles were either applied or transformed in the construction of the first communist society. By examining the history of the Soviet Union, including its spectacular and rapid demise, we will come to a greater understanding of communist principles and of the dynamics of capitalism as well. As a counter-example, we will also focus on the Chinese experience of Communism and contrast the divergent paths to reform that have been implemented there. The goal of the class is twofold: to become familiar with the principles of communism by examining their application primarily in the USSR, Eastern Europe and China, and to come to a greater understanding of the dynamics of a capitalist system. The course grade will be determined by the student’s performance on in-class essay exams, a research paper, the comprehensive final exam (essays and short answer), participation in class discussions, and regular attendance. This course serves as a prerequisite to History 430 and History of the Soviet Union, and provides valuable background for such related courses as PL SC 413 and 452 and RUS 100. HIST 142 satisfies three credits of any history for History majors. It is also a prerequisite for several upper level history courses dealing with twentieth century Eastern European or Eurasian history. For all other students, this course fulfills a Social and Behavioral requirement in general education. HIST 142 will be offered once each year with 75 seats per offering.

Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
General Education: Social and Behavioral Scien (GS)

HIST 143: History of Fascism and Nazism
3 Credits

The study of right-wing totalitarianism in the twentieth century, with special emphasis on Fascist Italy and Nazi Germany. HIST 143 History of Fascism and Nazism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. History 143 is an introductory survey of fascism and Nazism. The course concerns itself with understanding the social context of fascism, its governing assumptions, ideals, and values, how it worked in practice, and its consequences and historical implications. The course centers on the analysis of secondary and primary sources, and textual, video, and audio materials are all used. Lectures tie the various materials together, while weekly discussion sessions provide an opportunity for students to engage the materials directly. Students are evaluated on the basis of exams (which include an essay component), papers, and class attendance and participation. The course contributes not only to the study of the history of authoritarianism, antisemitism, and the history of the holocaust, but also contemporary and modern European history and, of course, German, Italian, and Spanish history. History 143 will be accepted, but not required, for the History Major as well as the History Minor. It may function as a service course for the Departments of Political Science and Sociology. It is recommended that it also serve as a general education course in the Humanities. This course is offered once a year with enrollment of up to 150 per offering with small discussion sections once a week.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)
HIST 144: The World at War: 1939-1945
3 Credits

In-depth study of the origins and conduct of World War II. Political and economic aspects as well as military. This course meets the Bachelor of Arts degree requirements. This course offers a wide-ranging description and analysis of the second world war, combining military history with political, social and cultural approaches. One major goal is to describe how large-scale war serves as a revolutionary social and cultural force in its own right, massively accelerating social change. In the case of the second world war, the course will describe how the conflict did much to create what we think of as the modern world, not only in political terms (the roots of the cold war, the collapse of European imperialism) but also in radically changing attitudes towards such basic matters as gender relations and generational conflict. Also viral were the new scientific advances of the war years, in nuclear energy, radar, aviation, and perhaps most critical of all, the computer. Particularly important to the educational justification for the course is the stress on the construction of historical memory, a theme with implications far beyond the specific instance of World War II. The course will assess and challenge many of the myths surrounding the war, and to show how subsequent accounts of the conflict were shaped by political and cultural needs. For example, the course will stress the critical importance of the Eastern Front throughout the phenomenon understated in the West because of the patriotic Anglo-American emphasis on D-Day. It will also explore the "Resistance Myth", and suggest the moral compromises necessary to survive in occupied societies of Europe and Asia. Throughout, the course will stress the impacts of war on the home front and civilian society. The course will be offered once every two years, with fifty seats on each occasion. Typically, students will be evaluated on essay exams, written book reviews, and research papers, and are expected to participate fully in class discussions of assigned readings. History 144 is an important complement to several existing courses within the History department, including 120, Europe Since 1848; 121, The History of the Holocaust; 142, History of Communism; 143, Fascism and Nazism; and 160, American Naval History. It also provides an excellent foundation for 400-level courses including 420, Recent European History; 447, Recent American History, and 454, American Military History. History 144 satisfies general credit requirements for the history major or minor. Majors and non-majors would both be able to use the course to satisfy their general education humanities selection.

Honors

HIST 145N: The Holocaust and Human Rights
3 Credits

This inter-domain course integrates historical (GH) study of the Holocaust with sociological (GS) perspectives on the Holocaust and human rights. Topical content begins with historical antisemitism ("the longest hatred") and elaborates the history of the Holocaust in Germany and in Europe. A second half of the course explores subsequent definitions of genocide and human rights, globally established by the United Nations through international law. Post-war campaigns to reduce prejudice and to raise 'Holocaust consciousness' are presented along with sociological insights into problems of persecution through eugenics, xenophobia, and racialized inequalities. Survivor testimonies underscore the value of resilience and the ethics of standing up against injustice, including discrimination or persecution based on cultural or another group identification.

HIST 147: East European Jewish History
3 Credits

The study of East European Jewish history, fascinating in its own right, is also key to understanding the lived experience of modernity in a complicated and compelling part of the world. This course will thus seek to examine East European Jewry from the inside and from the outside. We will see how a minority community weathered the storms of modernity, while at the same time noting how their experiences reflect on the broader culture and forces around them. We will look to examine the entire East European Jewish landscape, but with particular attention to Russia and Poland. In addition to the textbooks, we will read articles on economics, culture, politics, gender, religion and literature, as well as reading primary documents. Students who complete the readings and written assignments and participate in class should expect to expand their knowledge of the East European Jewish past as well as enhancing their skills as historians.

HIST 148: History of Pennsylvania State University
3 Credits

This course examines the complex history of Penn State. The time period covered extends from mid-19th century origins as the Farmers' High
School to the highly complex, multi-faceted, modern "research university" of the early 21st century. The course will study closely: the conduct, leadership, perspectives, and educational visions of notable presidents, administrators, and faculty (such as George Atherton, Edwin Sparks, Ralph Hetzel, Milton Eisenhower, Eric Walker, Jesse Arnelle, Howard Davidson, Della Durant, Seth Williams among many others); various dimensions of student life (including student protest and the demise of loci parentis); race and gender relations; athletics; and the challenges of university life, research, admissions, co-education and achieving diversity in the post-World War II era. The Penn State experience will be examined in the context of larger historical developments in American higher education, student life and attitudes, and the broad political / economic / social and legal environment. Comparisons will be made to other colleges and universities. Using primary and secondary historical sources, this course pursues a distinctly historical angle; particular emphasis will be placed on chronicling and evaluating change over time and thoughtful consideration of a diversity of voices and perspectives.

HIST 150: America in the 1960s: An Introduction
3 Credits

An introduction to the history of the United States in the 1960s. HIST 150 America in the 1960s: An Introduction (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. An introduction to the history of the United States during the 1960s. Assuming no previous knowledge of the era, we welcome students with a variety of backgrounds. Topics covered will include the leadership of John Kennedy, Lyndon Johnson, and Richard Nixon; the struggle for civil rights for people of color; the emergence of student movements across the country; the steady escalation of US involvement in Vietnam; shifting relations across gender lines, and particularly the rise of the modern feminist movement; and, finally, the growing influence of popular culture, such as music, literature, and film.

HIST 153: Native American History
3 Credits

HIST 153 provides students with an overview of the most important historical developments in the history of America's Native people, including first contact with Europeans, diplomacy and war, assimilation and cultural traditions, military service and the rise of Native casinos. While "knowing the facts" is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or "order" to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the diverse experiences of different groups of Native people. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped Native American history. (3) Students will learn how to "think historically" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of Native America history. Demonstrate an understanding of the diverse experiences of different groups of Native peoples. Demonstrate an understanding of the social, political, and ideological structures that shaped the history of Native peoples and continue to shape the modern United States.

HIST 155: American Business History
3 Credits
Major developments in the history of business and industry from the colonial period to the present. HIST 155 American Business History (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. History 155 surveys the development of business and industry within the United States, from the colonial period to the present. It treats the conduct of business as an integral element of American society and culture. Topics to be discussed will include the colonial commitment to commerce and early debates over what kind of commercialism the new national government should encourage; the effects of new technologies like the cotton gin, canals, and railroads in the 1800s and electrical products, cars, and computers in the 1900s; the emergence of modern large-scale industrial production and changes it brought about in business management, in society, and in politics; the changing fortunes and corporate citizenship; changing ideas about what kind of relationships should exist among governments, citizens, and businesses; the importance of world events for American businesses; and the emergence and importance of mass-market consumer products since the First World War. Materials we will use to cover this comparatively complex set of interrelationships will include textbook, supplementary studies of individuals or particular businesses, and current media coverage of the business world. The course is fast-paced and relies on students self-discipline and analytical skills. Student performance will be evaluated on two essay exams, a class presentation, group discussions, and in-class quizzes, and evaluation will be based on the instructors assessment of the students performance in reading and writing critically and knowledgeably on particular subjects, marshaling evidence in support of coherent arguments, and participating in class discussions and presentations. History 155 may complement, but does not compete with, courses offered by other departments or programs. It will be useful for students intending to major in business programs, in Labor and Industrial Relations, and/or to participate in the business world, by deepening their historical knowledge of that world, and will complement the Business/Liberal Arts minor. It will complement History 020 and 021 as well as more advance courses in American history. History 155 will be accepted, but is not required, for the history major and minor. It may be used to fulfill either General Education or Bachelor of Arts requirements in the Humanities for those not majoring in History. HIST 155 will be offered once a year with 45 seats per offering.

United States Cultures (US)

HIST 159: History of the FBI
3 Credits
Chronological survey of the History of the FBI since its founding in 1908, focused on the evolution of Federal law enforcement, bureaucracy, the increasing power of the Executive branch, the targeting of various minority groups, civil rights and civil liberties issues, and the growth of a national security role for the federal government over time. In its long history the FBI has intersected with a wide variety of groups and issues, and this reality will further expose students to the histories of African Americans, gays and lesbians, women's groups, Latinos, Native Americans, war protesters, students, various political dissenters, immigrants, targeting of morality, obscenity, and labor organizing. Because the FBI is responsive to both the political and policy interests of presidents and the influences of American society, students will come to appreciate the influences that politics has on bureaucracy and law enforcement, as well as the different social, political, economic, and cultural influences that each historical time period have exerted on the FBI to help shape its priorities and structure.

HIST 164: The History of Brazil
3 Credits
This course will study the history of Brazil, the only Portuguese-speaking nation in Latin America, from the colonial to the present period. We will examine Brazil’s transformation from Portuguese colony to the seat of a nineteenth century transcontinental empire ruled by the only European monarch to rule from the Americas, and discuss developments such as plantation slavery and industrialization that transformed Brazil into an international powerhouse. We will examine political, economic, cultural and racial movements and institutions that defined Brazilian history during the empire, the first republic, the Vargas era, and the military dictatorship. We will conclude with a look at Brazil’s struggles with democracy from the 1980s to the present as well as the rise of contemporary populist leaders, Brazil’s struggles surrounding policing, political corruption, affirmative action, and its hosting international sporting events in the twenty-first century. This course is designed to introduce students to the making of the modern Brazilian state focusing on the period from the rise of the Brazilian Empire in 1808 through the modern day. We will survey major historical trends in Brazilian society, from its roots as a Portuguese colony and its role at the center of slavery and the slave trade in the Americas to its distinctive patterns of independence and nationhood. Brazil’s experience as an independent nation during the nineteenth century (it became the only long-term monarchy in the Americas) offers an interesting point of comparison to the history of republican nationhood elsewhere in North and South America. We will also examine the challenges of state and nation building during the nineteenth and early twentieth century as well as the challenges associated with late industrialization and state-sponsored development.

HIST 166: History of Sexuality
3 Credits
Discusses the ideas, practices, and identities surrounding sexuality over several centuries in a variety of contexts, focusing primarily on the US. HIST (WMNST) 166 History of Sexuality (3) (GH;US)This is a 100-level course on the history of sexuality, spanning several centuries and a wide range of contexts. The study of sexuality offers a particularly good lens for developing students’ analytical ability to think historically about something that is often considered both natural and modern; and exclusively private and public. Topics will include the role of religion, medicine, law, and politics in controlling and shaping sexuality; change and controversy over birth control, abortion, and gender roles; the connections between prescriptive literature and lived experience; the origins and meanings and racial violence in the context of ideas about sexuality; the role of marriage in defining sex, race, and respectability; and the experiences and conflicts that have shaped the emergence of modern lesbian and gay identities. By closely and critically examining one aspect of human thought and experience, the course will teach students to evaluate large questions about sources, methods, and analysis that historians face, including: How do we recover stories of private life, from societies and eras different from our own? How does our own understanding of what sexuality complicate our historical exploration? What are the connections between gender identity and sexual practices? What can we learn about gender and sexuality, repression and resistance, deviance and acceptance, identity and community from studying the lesbian and gay past? How has racism been employed to justify particular reproductive and sexual practices, as well as to limit claims to sexual respectability? To what extent is the study of sexuality inherently a study of gender, sex roles, and feminism? While focused primarily on the United States, the course will offer students opportunities to examine these questions in other contexts, including India, the Middle East, and Latin America. It will be especially attentive throughout to the varieties of sexual practices and identities across different races, classes, ethnicities, and religious groups.

HIST 170: South Asia to 1500
3 Credits

This course will introduce students to major themes in the history of ancient and medieval South Asia, a region that is now made up of the nation-states of Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan and Sri Lanka. Students will gain a firm understanding of the key political, economic and socio-cultural traditions and practices that shaped the formation of diverse social groups, sectarian and religious communities and political institutions in the region. While developing a chronological perspective on the history of pre-modern South Asia, this course will encourage students to look beyond the modern nation-state boundaries in order to gain a firm understanding of the region's shared political and cultural past in the period up to 1500. Students will learn to critically read primary sources and secondary literature, to identify historical arguments and take a position in a scholarly conversation in written assignments.

HIST 178: Latin-American History to 1820
3 Credits
Conquest of the New World, development of colonial institutions, impact on native cultures, and origins of independence movements. HIST 178 Latin-American History to 1820 (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The &quot;Colonial Latin America&quot; class is a survey of three centuries, from the initial encounter on New World soil of Iberian, African, and native cultures and races, to the birth of independent culturally- and racially-mixed nations. Our emphasis is on the patterns of conquest and cultural encounter, the processes of colonial rule, the nature of interaction between social groups, and on the cultural impact of the colonial experience upon all colonial Latin America's peoples. We study the institutions, cultures, attitudes, and fortunes of Spaniards and Portuguese; African slaves and free blacks; Nahuas and Aztecs, Mayas, and Incas. We discover the roles played in colonial society by a wide variety of peoples, from an African slave on a Brazilian sugar plantation to a Spanish high society woman in Lima to the black and native workers in an Ecuadorian tannery to an Aztec nobleman in Mexico City. The people who lived in colonial Latin America are given a chance to speak for themselves as much as possible; most of the assigned books feature contemporary documents translated from Spanish, Portuguese, and various native languages. Students are evaluated on two sets of essay exams and write a paper, as well as participation in classroom discussion. History 178 is offered most years with 90 seats per offering and is a prequel (but not a prerequisite) to History 179, the &quot;Modern Latin America&quot; class often taught the semester following; both classes are required for the Latin American Studies major, as well as meeting various History major requirements.

HIST 179: Latin-American History Since 1820

3 Credits

This course examines the history of modern Latin America from the period of independence in the early nineteenth century until the present day. Students will learn about the geographic and political development of the region, the development of various economic models, and the widespread extraction of labor focusing on African slavery and Indigenous exploitation. The course examines significant events and historical trends in local, national, regional and global contexts. The goal of this class is for students to think critically and analytically about important issues and themes in Latin America, and to understand how historical events have shaped this region. We will look at important historical themes such as social, economic, gender, and racial conditions, as well as politics, focusing on events throughout select Latin American nations and regions. The course will focus on the following periods: the Independence and post-Independence period of the Spanish Americas (1810-1850); the period of Brazilian Empire (1808-1889); the integration of Latin America into the modern world economy (1850-1914); the rise of oligarchic and military governments (1914-86); Latin America and the US in the Cold War (1945-1989); and concludes with the recent rise of the Populist New Left and the Conservative Right backlash and violence that has recently threatened many nations of Latin America. This course fulfills the requirements for Bachelor of Arts: Humanities (BA), International Cultures (IL), General Education: Humanities (GH) and fulfills the requirement for Latin American Studies Major and Minor as well as the general credit requirement for the History Major.

HIST 180: Ancient Warfare

3 Credits

Historical survey of the evolution of warfare in the ancient Mediterranean region from prehistoric times to the Later Roman Empire. CAMS 180 CAMS (HIST) 180 Ancient Warfare (3) (GH;IL) Warfare has occupied a central place in the civilizations of the Mediterranean from the earliest times. The prehistoric origins of warfare is a hotly debated topic and constitutes the starting point for this course. Most scholars are agreed that military culture grew in step with sociopolitical development over the course of the third millennium BCE. In the following centuries, the Egyptians, and later the Assyrians and Persians, took great strides in developing sophisticated tactical systems, using infantry, chariotry, and cavalry. These matters occupy a little over the first third of the course. The Roman military system of tactics and weapons technology?; (iii) how do different warfare practices reflect essential facets of the various cultures under consideration?

HIST 181: Introduction to the Middle East

3 Credits

Origins of Islamic civilization; expansion of Islam; the Ottoman Empire; the Middle East since 1918. HIST 181 / JST 181 Introduction to the Middle East (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course presents a survey of the history of the Middle East from the rise of Islam to the current day. The objectives are to help students develop the vocabulary and historical background to discuss and evaluate contemporary events and debates, stimulate interest in the varied historical experiences and diverse societies and cultures of the region, and provide a foundation for deeper investigation. Students may elect to take one or more of the 400-level sequence on Middle Eastern history, or other specialized courses, upon completion of the course. The first half of the course focuses on the foundations of Islamic government and civilization, the first Islamic empires, and the Ottoman empire. The second half of the course traces the modern history of the Middle East and examines how it has been profoundly shaped by European imperialism and American political, economic, and strategic interests. Students will be evaluated on regular quizzes and essay exams and participate in class discussions of assigned readings and current events. HIST 181 / JST 181 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. The course may also be used to fulfill requirements for the Middle East Studies minor. Non-majors may use this course to satisfy a general education humanities selection. HIST 181 / JST 181 will be offered once a year with 50-60 seats per offering.

HIST 182: Asian Trade: Economy, Industrialization and Capitalism in Asia

3 Credits

An historical overview of economy, industrialization, globalization and capitalism in Asia from the 16th century to present. ASIA (HIST) 182 Asian Trade: Economy, Industrialization and Capitalism in Asia (3) (GH;IL)

(BA) This course meets the Bachelor of Arts degree requirements. Asian economies have experienced spectacular growth in the second half of the 20th century. But this growth is part of a longer story of Asian commerce and trade and its relationship to and integration with (and, in some cases, isolation from) global patterns of exchange. Moreover, these exchanges are best understood alongside the politics, society, and culture—sometimes local, sometimes regional—that shaped trade and business in entrepots, capitals, and hinterlands throughout Asia. This course begins with a historical exploration of the economic development and social change and ends by asking what lies in store for one of the world’s fastest growing economic regions. By offering a historical frame for Asian economic experience, students will gain insight into the strengths and weaknesses of prevailing theories that tend to overstate the centrality of globalization, capitalism, and socialism as their central themes, this course explores the central conceptual frameworks in these countries. Examinations of the major economic players China, India, and Japan form the backbone of the course, but the precise geographic emphasis will vary with instructor, and may also include discussions of Japan, Korea, Vietnam, Singapore, Indonesia, Taiwan, and other Asian states. Themes of the course will vary depending on instructor, but may include industrialization, sustainability and the environment, gender and labor, protest and political reform, and consumerism and advertising, among others. The course will also offer a general introduction to economic theories that underpin the concepts of globalization, capitalism, and socialism as they are understood in an Asian context. This course is intended as an introduction to Asia for those with particular interests in Business, Economics, Global Studies, Labor, and/or Government. Through weekly readings, films and class discussion students will be introduced to the development of Asian economies in the global context.

HIST 183: Gender, Family, and Society in East Asia

3 Credits

This course tracks the changes in East Asian gender roles, relationships, and family life from 1800 to the present, placing private life at the center of the history of China, Japan, and Korea. Among the topics covered are the examination of gender and family life in early modern East Asia, considering topics such as marriage customs, the cult of female chastity, birthing practices, male-male sexuality as well as tracing the remarkable shifts in gender and private life in East Asia beginning in the nineteenth century and continuing to the present. The course will likely also cover issues such as women’s liberation, changing expectations for courtship, marriage and sex, homosexuality, cross-dressing and androgyny, gender and revolution, and the state’s role in regulating sex and procreation.

HIST 184: Society and Culture in the Pacific War

3 Credits

This course examines will explore the origins, nature, and consequences of World War II in the Pacific. Moving beyond the common American focus on the war as a U.S.-Japanese conflict, it will explore the different nations, political movements, ideologies, and empires that clashed across Asia-Pacific from 1931 to 1945. Topics include the culture and society of modern Asia in the periods immediately before, during, and after the Pacific War. This course looks at social and historical roots of the war across Asia from the 1890s to the present to better understand the causes of the war and the affect it had on people throughout Asia.

HIST 186: The Silk Roads

3 Credits/Maximum of 3

A survey of the Silk Roads and maritime routes connecting premodern Europe and Asia, and the cultures that flourished along them. What do medieval Buddhist pilgrims, Mongol warriors, Marco Polo, and nineteenth-century British secret agents all have in common? What were the “information highways” that connected people and cultures across the premodern world? Taking crosscultural communication and connectivity as its central themes, this course explores the central role that the Silk Roads and Indian Ocean maritime routes have played throughout Eurasian history. It provides a historical survey of the land and sea trade networks connecting Europe and Asia, and the cultures that have flourished along them. The course explores connections between China, Rome, Byzantium, Persia, the Mongol Empire, Southeast Asia, and Central Asia. It covers exchanges of art, religion, cultural, technological,
and economic goods. It also includes discussion of ethnic conflict and cultural identity in Central Asia, the importance of global trade routes in shaping the modern world, and the representation of the Silk Roads in contemporary popular culture. The focus of the course is to provide students with an appreciation of the interconnectivity of the premodern world, as well as the vital role of the trade system in the development of the major civilizations of Eurasia.

International Cultures (IL)

HIST 187: Global Taiwan

3 Credits/Maximum of 3

This course examines the historical, cultural, and ethnic dimensions of Taiwan over several centuries to the present day. Taiwan's rich history and important economic role in contemporary East Asia clashes with its exclusion from international organizations like the UN and WHO and resultant international isolation. This class will examine the history and culture of Taiwan to better understand how it got here and where it might go. Topics covered will include the Dutch incursions in "Formosa," Japanese colonization, years of military dictatorship and cross-strait tension, rebirth as one of the four "Asian Tiger" economies, and its current rowdy democracy and warming ties with the People's Republic of China. We will also explore the literature, film, and culture of this multi-ethnic, multi-lingual, and multi-cultural island.

International Cultures (IL)

HIST 188: Tibet: People, Places and Spaces

3 Credits

Few places generate as much curiosity, interest, or controversy, in the Western mind than Tibet. This course examines Tibet from a variety of perspectives from Tibet's political unification under a single ruler in the seventh century up to Tibet's incorporation into the People's Republic of China in the latter half of the twentieth century. Adapting a Tibet-centered focus, this course examines three core dimensions of Tibet namely its people, its religion and its strong sense of place to allow for a more nuanced and comprehensive understanding of Tibet to emerge. No background or specialized knowledge about Tibet is expected though a willingness to read primary documents on a variety of religious, ethnic and political themes will be quite useful. In this course students can expect to gain an appreciation for how religion, history and politics contribute to contemporary portrayals of Tibet, Tibetans and their society.

HIST 191: Early African History

3 Credits

Explores important economic and cultural transformations in the making of early African empires from 1 MBC to 1750. HIST 191 / AFR 191 Early African History (3) (GH, IL)(BA) This course meets the Bachelor of Arts degree requirements. The course is an introduction to the history of Africa south of the Sahara from the origins of humankind to roughly 1750. Since it is not possible to undertake a systematic survey of the period – the continent is too vast and our data too sparse – we will focus on a number of common themes in the cultural and historical development of African societies. We will start with an introduction to African cultures and the problems in studying them, move on to examine the evidence for the early origins of humans on the African continent, the agricultural revolution, and ancient African kingdoms, empires and civilizations (including Egypt). We will then explore three interrelated themes in the history of Africa from the 16th-18th centuries: trade, state formation, and the spread of Islam. Finally, we will turn to an examination of the slave trade and its impact on Africa and the Americas. This is also a course in historical reconstruction and analysis. There are few documentary sources for this period and much of the data we have is fragmentary. The resulting history consists largely of long-term social changes rather than detailed narrative. We must thus learn to reconstruct history from what evidence is available, using general principles of African social, economic, and political organization that we will develop in class. Typically, students will be evaluated on the basis
of a map quiz, short papers, exams that have both an identification and essay component, and participation in class discussions and debates. HIST 191 / AFR 191 provides an excellent foundation for both AFR 192 / HIST 192 (Modern African History) and HIST 479 (Imperialism and Nationalism in Africa). In addition to satisfying the GI requirement, AFR 192 / HIST 192 satisfies general credit requirements for the history major or minor, including the "non-western" component of the major. Non-majors may use this course to satisfy a general education humanities selection. The course also may be used to fulfill requirements for the African and African-American Studies major and the African Studies minor.

HIST 192H: Modern African History

3 Credits

This Honors course offers an overview of the history of Africa from 1750 to the present. The course introduces students to the diversity of Africa's geography, demography, and history and investigates the experience of modern history through specific, regionally distinct, examples. Students will learn about structures of power, society, and economy in the colonial and post-colonial era in comparative terms, and about a variety of cultural forms and expressions. The honors course takes time to go into greater depth in a few selected topics, with attention to primary sources, historical method, and historiographic trends.

HIST 193: Modern Iran

3 Credits

Ever since the beginning of the twentieth century, Iran has been in a constant state of revolution. Social, political, and economic factors generated numerous movements that strove to find a better mechanism by which to run the country. The Constitutional Revolution laid the foundations for a new political discourse of rights and duties, of representation, and sovereignty. Later, the abolishment of the Qajar dynasty and the establishment of the Pahlavi state endeavored to create a new society that would fly the flag of modernity through an imagined linkage to ancient Persian traditions. Policies and reforms of that era helped create a middle class, and served as a pretext to many of philosophical, ideological, and political debates about the nature of Iranian nationalism and the Iranian people, and the nation's destiny in the world. And finally, the 1979 Revolution that aimed to create yet another "new" society but encountered difficulties to do so. The closure of this century was with the appearance of the reform movement that tried to revolutionize the country from within the apparatus of the Islamic Republic. This course will trace the social, political, and economic trends of Iranian history, through an examination of different schools of historiography, critical reading of scholarship and sources, and film analysis.

HIST 195: Genocide in Global perspectives: Twentieth Century and beyond

3 Credits

The history and memory of the Holocaust, the Armenian, Cambodian and other forms of genocide are often taught separately in different disciplines. This course will examine them together through the various ways different societies dealt with, experienced and understood these. Using the extensive literature on the history of genocide this course further suggests ways in which these tragic events affected and were entangled by each other's. Specific content will vary according to individual instructor, but topics may include victim cultures, ethnic cleansing, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on global politics, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

HIST 205: American Antisemitism

3 Credits

The Phenomenon of antisemitism in American history from Peter Stuyvesant to the present. HIST (J ST/RL ST) 205 American Antisemitism (3) (GH;US) This course explores the phenomenon of antisemitism in American history from the time of Peter Stuyvesant to the present. The significance and role of American antisemitic movements and authors, as well as its role in American society and culture, are examined and compared to those in European history over the same periods. At the same time, the impact of antisemitism on the lives and mentalities of American Jews is discussed. The course focuses on readings taken from original sources and recent historical treatments. The readings include material on colonial texts, Grant's notorious Order, nativists and anti-immigration texts, Gilded Age antisemitism, the Immigration Acts of the 1920's, Henry Ford's antisemitic campaign, Southern antisemitism and the Leo Frank case, the quota system at American universities, employment discrimination, the &quot;Gentlemen's Agreement&quot; system, Black antisemitism, and the New Antisemitism.

skills that Africans brought to the emerging staple crop economies, the knowledge of plants, foods, crops, and healing practices. We look at both the evolution of American slave societies in the North and the South, as well as the rise of Free Black communities. We use documents and readings to understand the multiple contributions of African Americans to science, literature, and music. Of major importance is the formation of slave communities, kinship networks, the rise of an African American religion, and various forms of resistance to slavery that included running away, daily forms of resistance, and actual slave revolts. We also discuss the rise of a special form of "slave politics" that shapes evolving notions of freedom. In addition to discussions of southern and northern slave society, we also look at the role of free blacks in the antebellum reform movements, especially the abolitionist movement. The course concludes with the coming of the Civil War and a discussion of the multiple ways that African Americans played a role in accelerating the road to war and in facilitating their own emancipation.

**HIST 212N: Earthquakes and Human History**

3 Credits

A natural disaster is the result of a natural hazard impinging upon human society. In this course we examine seismicity as a geophysical phenomenon and as a natural hazard that interacts with the built environment and the social structures of human societies. Whenever possible, we approach this subject historically. Among other topics, we examine the history of how earthquakes have been understood as well as the impact of earthquakes and seismicity on the history and development of certain societies. Our specific perspectives include: Earthquakes as understood by modern and contemporary earth science Major conceptions of earthquakes in the past Impacts of seismic hazards on the built environment of past societies Impacts of seismic hazards on politics, economic development and social policies of past societies Seismic hazards, earthquake-related technology, and contemporary societies By examining earthquakes in these ways, the study of earthquakes becomes a vehicle for enhancing skills in analytical reasoning. In particular, this course focusses on applications of modern scientific analysis and the approaches commonly employed in historical investigation. Specific skills addressed in this course include, processing and quantifying information, problem solving using evidence and sound reasoning, and expressing ideas with clarity. Immersion in the study of earthquakes affords an opportunity to think more broadly about how people have dealt with natural disasters in the past and to explore the roles that science, technology, and social policy play in defining and addressing natural hazards in contemporary societies and in the future. Class meetings include lectures, discussions, and in-class activities. We analyze scientific observations that have led to increased understanding of earthquakes, earthquake hazards and risk. We also make extensive use of case studies as concrete examples of different types of earthquakes, the historical evolution of ideas about earthquakes, and the range of social impacts of earthquakes. Reading assignments provide essential background for class sessions.

**HIST 220: Global Diaspora and Exile**

3 Credits

Introduction to and survey of the Jewish and other Diasporas around the world. HIST (J ST) 220 The Jewish and Other Diasporas (3) (GH,IL)
The long dominant view that the Jewish experience since antiquity defines Diaspora as a concept has been challenged in recent years. The meaning of the term Diaspora and related terms, especially (ethnic and/or national) identity and (ethnic and/or national) community, is a matter of much debate across disciplines. The longevity and diversity of distinct Jewish communities around the globe make the Jewish case a particularly interesting subject for study. In a wide geographical, chronological and disciplinary comparative sweep, the course will explore the diverse nature of ethno-national and ethno-religious diasporas (and sub-diasporas), their position vis-à-vis their place of origin (&ldquo;homeland&rdquo;) and their new surrounding culture and society. More specifically, the course will analyze how Diaspora communities in Europe, Asia, and the Atlantic world reconstituted their identities as they expanded into new environments and encountered other cultures, from antiquity to the present. Emphasis will be placed on exploration of the intersection of politics and culture in respect to race, nationality, ethnicity, gender and class. A key question guiding the discussions will relate to the usefulness and limitations of the Diaspora concept, especially in regard to the discourse about globalization where the term is often used. The course will begin with an extensive discussion of theoretical texts about the Diaspora phenomenon. This is followed by case studies of several larger Diasporas, ranging from the Jewish, the Greek to the Chinese Diaspora. Several case studies, notably the Muslim Diaspora, the concept of a victim Diaspora, or alternative Diasporas highlight the limitations of the Diaspora concept. The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists. The course includes a one-day field trip to the Lower Eastside in New York (visit of the Museum of Chinese in America, walking tour of the Lower Eastside to explore the history of a key American immigrant neighborhood).

HIST 235: The Church and the Jews

3 Credits

Examination of the relationship between Western church and the Jews from the First Century to Enlightenment. HIST 235/HIST 235 The Church and the Jews (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews. The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts. Students will be evaluated on the basis of three quizzes and a final exam. The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity). The course will count for 3 credits toward a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

HIST 240Q: Artistic Patronage in Europe

3 Credits

This course surveys the institutions and social networks in which European fine arts were created, consumed and critiqued. Beginning with the medieval period and ranging to the early 20th century, the course will examine the variety of communities where public and private often intersected and which sponsored innovations in the arts. Often indexing social movements and political change, such communities include convents and cathedrals, royal academies and courts, coffee houses, salons, and theaters. Artists, performers, patrons, politicians, journalists, and others collaborated and competed in these spaces. Such communities could embody political and economic power, or foster resistance to it. This approach to the history of the arts in western culture puts the focus less on the individual creative genius of great composers, writers, painters, and sculptors, and more on the social exchanges and institutions that sponsored and received their work. Such an approach brings to light particularly the ways in which women played significant roles in the production and reception of culture: as salon hostesses, patronesses, and divas, women often enabled and enacted cultural production. Some examples of particular units of study might include: the German convent of Hildegard of Bingen (1098-1179), where monophonic chant and allegorical morality plays developed; the Mantuan (Italy) court of Isabella d’Este, the first lady of the world (1474-1539) where the roots of the madrigal began and where notable painters found support and sponsorship; the French salons of Mme. Geoffrin (1699-1777) and Mme. de Staël (1766-1817); and the student residences in Madrid where avant-garde writers and artists interacted. Each unit will also consider the relationships between the aesthetic norms and values of a period and the economic and political realities of sponsorship. The course will require that students attend at least one musical performance or concert held on campus during the semester and complete a brief writing project based on that experience. This requirement will encourage students to think about their own university as a contemporary space of cultural sponsorship.

HIST 250: Introduction to the Modern Caribbean

3 Credits

A survey course which explores the historical evolution and emergence of the modern Caribbean. AFAM 250 / HIST 250 Introduction to the Modern Caribbean (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the evolution of the Caribbean region from the eve of the arrival of Columbus to the 20th century. It will explore the emergence, migration, and evolution of Amerindian societies in the Caribbean islands prior to the arrival of Columbus. It will then explore the European-Amerindian interactions that lead to the disappearance of these indigenous peoples from the region and the consolidation of European colonial empires. The course will then explore the various forms of coercive labor systems that emerged in the region including indentureship, enslavement, transportation of European prisoners and other social outcasts, African slavery, and the establishment of the plantation system that defined the region until the 20th century using both free and unfree labor to maintain its dominance in these island societies until the late 20th century. The course will also cover the issue of slave resistance, the Haitian revolution, the formation of maroon communities, and the role of abolitionist politics as a factor in bringing an end to slavery. It will also look at the re-emergence of indentureship of Asians as a response to the crisis of labor and the growth of peasant agriculture in the 19th century Caribbean. The course will also explore the emergence of nationalist sentiment in the region, especially the way in which the decay of Spanish colonial authority and the rise of American imperial ambitions helped to set the stage for the nationalist awakening that defined the course of the 20th century in the region. This is the course that will complement and expand upon issues raised in AFAM 211 / HIST 211 - The Emergence and Evolution of the Black Diaspora in the Atlantic World. It will also serve as an introduction to the 400-level course on the Caribbean in the 20th century that will be proposed simultaneously. The course will be required for students interested in pursuing the African Diaspora minor. It may be used to fulfill general education and diversity requirements. It can also be used as a course to meet non-Western history requirements in the History major.
HIST 261: Ghetto: From Venice to Detroit

3 Credits

This course explores why certain groups have been segregated in cities around the world in the last 500 years. HIST (J ST) 261Y Ghetto: From Venice to Detroit (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the history of segregated and demarcated districts for certain groups of people within cities (and metropolitan regions) in the last five hundred years in different parts of the world. The course identifies factors that led to the establishment of segregated (and often demarcated) districts and their eventual dissolution (or transformation). The course traces the social and political impact of exclusion within the segregated district, the possibilities of making contacts beyond the district, the function of innovation and cultural production emanating from these urban areas, and the conceptual trajectory of the Ghetto concept from Renaissance Venice to post-industrial Detroit. Cities and states have allowed certain groups to settle within their confines for economic benefit but have imposed severe restrictions to safeguard the respective city's cultural, political, and racial integrity. The course will present several representative case studies of segregated and demarcated districts in European, North American, Asian and African cities, highlighting strikingly different trajectories and purposes behind the spatial segregation of people categorized as different and threatening but also as useful. Comparing the case studies will lead to a discussion about the transformation of the Ghetto concept between 1517 and the present. Following a discussion of the Ghetto concept and an overview of urban history since 1500 we will study Jewish Ghettos in early and late Renaissance Italy and Central Europe. For comparison we will discuss the history of Dutch and Portuguese trade colonies in Japan around 1600. The second part of the course will focus on Jewish and other immigrant neighborhoods in late 19th century New York and Chicago. Before moving to the origins of the 20th century Black Ghetto (Chicago, Detroit) four related cases will be discussed: Chinatowns in the United States; residential segregation in colonial cities in South and East Asia, Nazi Ghettos in Poland and the Soviet Union; and townships in South Africa during the Apartheid period. The course introduces students to interdisciplinary approaches, placing some emphasis on the use of theoretical texts written by historians, sociologists, political scientists, and anthropologists.

HIST 292N: Witches and Witchcraft from the Middle Ages to the Present

3 Credits

This course will explore the social and cultural history of witches and witchcraft from the late Middle ages in Europe and the U.S. to the present. The very nature and broad scope of the topic lends itself to an interdisciplinary approach that combines history, folklore, religious studies, criminology, women's studies, art history, English literature and popular culture. Historically, real individuals were accused of witchcraft and suffered persecution and punishment accordingly. Others proclaimed themselves to be witches and the practice continues to attract adherents today such as in the modern Wiccan movement. However, modern consensus views witches as fictions: figures of magical power in folklore, literature, visual art and popular culture. From Shakespeare's Macbeth to the characters in the popular Harry Potter books and films, fictional witches have haunted European and American culture for centuries. This course will explore the complex interplay of fact and fiction in the history of witches and witchcraft. In other words, how do fictions become powerful enough to inform history? The course will also focus on the historical status of witches as a source of power outside of, and in opposition to, established political, religious and social structures. Since those accused of witchcraft were predominately women, how has witchcraft functioned as a means of empowerment for women as well as a tool for their persecution? And how has the representation of witches influenced attitudes towards women both historically and today? The course will begin with an historical inquiry into the belief in witchcraft during the late Middle Ages in Europe and the social and cultural role witches played in society. We will look at texts such as the Malleus Maleficarum (Hammer of Witches) published in 1486 as a guide for hunting and destroying witches, as well as studies on the more constructive role witchcraft may have offered women and communities.

HIST 402N: Russian Economic History
3 Credits
Russia is the largest country on earth. It has had a major influence on world events, especially during the Soviet period. The Soviet period represents the greatest economic experiment ever undertaken. Russia has had a vast imperial experience, and its economy has proven capable of producing nuclear weapons and space exploration. Yet, its economy remains dependent on natural resources. Russia is a literary, nuclear and geopolitical superpower but not an economic superpower. This juxtaposition is unique. The aim of the course is to provide a review of Russian economic history together with main concepts explaining the peculiarities of economic and institutional development of the country. The course combines historical narrative with formal economic analyses. We will utilize both an economics and a history perspective. We will explore the development of the Russian economy in the Tsarist period, the abolition of serfdom and Russian industrialization before the Russian Revolution, and we will explore the economic history of the Soviet period. We will also explore the interaction of economic history with social history. The course will conclude by examining the myriad economic and social difficulties encountered in transitioning from a socialist to capitalist economy.

HIST 403: Alexander the Great and the Hellenistic World
3 Credits
The career of Alexander, his impact on his own time, and the Hellenistic legacy.

Prerequisite: HIST 100
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 404: Advanced Public History
3 Credits
Public historians build essential bridges between ordinary citizens and the knowledge and understanding of the past required by any self-governing society. Knowing how time has acted upon a society, how things came to be the way they are, helps individuals and groups move toward where they want that society to go, what they want it to become. This class will lay the groundwork for what is expected of public historians in the many professional settings available to them, which include museums, art galleries, national parks, historical societies, non-profit organizations, park and recreation commissions, historic homes, battlefields, foundations, corporations, government departments, preservation organizations, archives, libraries, living history organizations, tourism councils, convention and visitors’ bureaus, and universities. This course allows students to experience of some of these roles and places, and more importantly, to develop a lived sense of how they all can fit together in an individual career. The course does this partly in the classroom and partly through direct engagement with doing public history, well-supported by faculty and classmates. The course invites students to meet public historians and to participate in the public history process - mobilizing accurate history to stimulate emotions that then produce citizen engagement. The heart of public history practice involves sharing authority with audiences and confronting the line between entertainment and education. The first several weeks of the course introduce students to specific elements of practice and examples of public history, followed by an extended public history work project that can be actual and/or virtual. After the completion of the project, students gather to reflect on their practice and develop a deeper theoretical understanding of what they have come to know. Together, the three sections of the course create the capacity, and the motivation, to become active public historians either as professionals or as participants in the communities students will encounter in their own lives.

Prerequisite: HIST 020 or HIST 021 or HIST 001 or HIST 002
United States Cultures (US)

HIST 405: The Roman Empire
3 Credits
The political and social history of the Roman empire; economic institutions and religious groups which influenced Roman administration.

Prerequisite: HIST 001, HIST 101, or 3 credits in classical studies
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum

HIST 406: Research in Medieval Sources

3 Credits

Guided research in the literature of medieval Europe.

**Prerequisite:** HIST 001

Writing Across the Curriculum

HIST 407: Early Medieval Society

3 Credits

Rise of European nations and evolution of their social and political institutions from the time of Constantine to the Crusades.

**Prerequisite:** HIST 107

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 408: Church and State in the High Middle Ages

3 Credits

European political, institutional, and social history in light of church-state tensions from the Crusades to the Renaissance.

**Prerequisite:** HIST 107

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 409: Antisemitisms

3 Credits

Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present. HIST (J ST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case—is there a single universal, eternal antisemitism? Or are there rather "anti-Semitism" each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates? We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire’s essays, German philosophical texts from Kant to Marx, Wagner’s racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher. The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

Cross-listed with: JST 409, RLST 407, RLST 409

Bachelor of Arts: Humanities

International Cultures (IL)

Writing Across the Curriculum

HIST 410: Jews in the Medieval World

3 Credits

Trends in medieval Jewish society under Islam and Western Christendom. HIST 410HIST 410 Jews in the Medieval World (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the thirteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students’ skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression. Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam. The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258). The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

Bachelor of Arts: Humanities

International Cultures (IL)

United States Cultures (US)

HIST 411: Medieval Britain

3 Credits

Political, cultural, and economic history of Britain from circa 400 to 1485 with an emphasis on the kingdom of England.

**Prerequisite:** 6 credits in European history or medieval studies

Cross-listed with: MEDVL 411

Bachelor of Arts: Humanities

International Cultures (IL)
HIST 412: Intellectual History of the Middle Ages
3 Credits
Intensive study of selected topics, such as philosophy, mysticism, heresy, the church, literary and artistic expression, and science.

Prerequisite: HIST 107
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 413: Medieval Celtic Studies
3 Credits
Celtic civilization from antiquity to the end of the middle ages.

Prerequisite: 3 credits in medieval studies, or in language, literature, or European history of the medieval period
Cross-listed with: MEDVL 413
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 414: Renaissance and Reformation
3 Credits
The transformation of consciousness from medieval to modern times, with special emphasis on Renaissance Italy and Reformation Germany.

Prerequisite: HIST 001
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 416: Zionism
3 Credits
History of Zionist thought and politics to the foundation of Israel 1948.

Cross-listed with: JST 416
Bachelor of Arts: Humanities

HIST 417: The Age of Absolutism
3 Credits
Seventeenth- and eighteenth-century royal absolutism in France, Prussia, and Austria; concurrent economic, social, and scientific developments; the Enlightenment.

Prerequisite: HIST 001
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 418: The French Revolution and the Napoleonic Era
3 Credits
Development of revolutionary France and the First French Empire and their impact on Europe from 1789 to the Vienna settlement.

Prerequisite: HIST 002
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 420: Recent European History
3 Credits
Impact of two World Wars in twentieth century; social conflict and economic catastrophe; political radicalism; post-1945 recovery and cooperation.

Prerequisite: 3 credits in European history
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 421: The History of European Women
3 Credits
European women's lives from the Middle Ages to the present.

Bachelor of Arts: Humanities
International Cultures (IL)

HIST 422: Religion and American Culture
3 Credits/Maximum of 6
Selected topics, problems, or historical movements in American religion. Relation between religion and American culture.

Prerequisite: 3 credits in either history or religious studies
Cross-Listed
Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

HIST 423: Orthodox Christianity: History and Interpretations
3 Credits
Examines Orthodox Christianity from origins to present using critical historical analysis of primary and secondary sources. RLST 423 / HIST 423 Orthodox Christianity: History and Interpretations (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course examines Orthodox Christianity from its origins to the present by focusing on a series of four major problems using critical historical analysis of primary and secondary sources: 1) The course provides students with the means to examine Orthodox self-understanding: Orthodox doctrine of God, its anthropology. 2) The issue of a world religion and the relationship of Orthodoxy to other world religions and secular authorities and other forms of Christianity, especially "western" Christians. 3) The challenge of alternate world religions--Judiasm, Islam, western Christianities. 4) The challenge of modern Orthodoxy in the context of twentieth and twenty-first century developments and issues.

Prerequisite: HIST 105
Cross-listed with: RLST 423
Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)
HIST 424: Monotheism and the Birth of the West
3 Credits

The birth of monotheism and its relation to social organization, the idea of individuality, and science. HIST (J ST/RL ST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)(BA) This course meets the Bachelor of Arts degree requirements. Learn about the formation of Western culture while learning to analyze the texts and other evidence about its formation from a critical rather than naive viewpoint. The idea of monotheism probably arose very early, and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why then did it take another seven centuries to become widespread--appearing in ancient Judah, Babylon and Ionia almost simultaneously? To answer this question, the course focuses on several developments through the medium of primary texts and archaeology: the shift from a state hinterland based on extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuality and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to re-invent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in ANTH/CAMS 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the student experience in CAMS 400, CAMS 440, CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, and Religious Studies and toward the minor in Jewish Studies and Religious Studies.

Prerequisite: CAMS 004, CAMS 110, CAMS 120, or HIST 102
Cross-Listed
Bachelor of Arts: Humanities
Honors

HIST 426: Holocaust
3 Credits

This course is an in-depth study of the history of the Holocaust in Europe that puts special emphasis on primary sources. HIST 426 / JST 426 Holocaust (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The Holocaust stands out as one of the most terrible and challenging phenomena of the 20th century. Societies and the scholarship struggled for decades to fully grasp how much the Holocaust has questioned widely shared assumptions about modernity and progress. This course pursues the overarching question how the Holocaust could have taken place. Who were the perpetrators, victims and bystanders? How much agency did they have? How was the Holocaust organized? The course will encourage students to critically engage with the Holocaust, and will consider a variety of different kinds of sources and means of representation, including oral testimony, film and fiction, as well as more conventional documentation. After discussing some of the most important studies about the Holocaust and identifying the main historiographical debates, students will look at the origins and the evolution of the "Final Solution." The course will also deal with Jewish responses to the Holocaust, notably with efforts to alert the public to the systematic killing after 1940; and the support especially of American Jews for Jewish survivors and DPs. Apart from discussing the historiography, students will work mostly with primary sources. Students are expected to do extensive reading for this class and prepare oral presentations on their respective paper topic. The research paper for this course will be based largely on primary sources. Apart from discussing the historiography, the sessions will concentrate on the interpretation of primary sources: - documents created by the perpetrators, bystanders, and victims; - files relating to postwar trials of perpetrators; - photographs; - representations of objects relating to the Holocaust; - memoirs by survivors; - interviews with survivors and bystanders.

International Cultures (IL)

HIST 429: Europe in the Age of Nationalism, 1789-1914
3 Credits

Emphasizing the role of nationalism in European cultural, diplomatic and imperial developments; concurrent economic and social changes.

Prerequisite: HIST 002
HIST 430: Eastern Europe in Modern Times

3 Credits

Influence of geography, economic conditions, and nationalism upon the Eastern European and Balkan peoples; Pan-Slavism, conflicting interests of the great powers.

Prerequisite: HIST 001 or HIST 002
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 431: Black Liberation and American Foreign Policy

3 Credits

This course deals with American foreign policy and Black liberation in Africa since 1945. AFAM 431 / HIST 431 Black Liberation and American Foreign Policy (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Black Liberation and American Foreign Policy in Africa since 1945 presents an interdisciplinary approach to the study of American foreign policy in Africa. Course readings will consist of both secondary and primary sources to explore the evolution of American policy toward the continent over the last half-century, and the meaning of the American engagement with Africa for American politics and society. The course will also examine the reasons that Africa has served as a focus of concern among African Americans both prior to, and, over the period 1945 to the present. Of particular concern will be the ways in which American policy has reflected pressures from African Americans as a constituency in foreign policy. The focus of the course will be student-centered written research and discussion. Students will be required to select topics from the course outline for presentation in class with the instructor serving as the moderator of discussion and guide to relevant research materials. Students will be encouraged to use both primary and secondary sources for their research. Students will be expected to prepare two individual written presentations which will serve as the basis for class discussion (30% of the grade), a book review (10% of the grade), and a research paper of 15 pages (40% of the grade) on a topic drawn from the areas identified in the course outline. The final 20% of the grade will be awarded for participation in class discussion.

Prerequisite: 3 credits in African history; 3 credits in African political science; or 3 credits in American political science
Cross-listed with: AFAM 431
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 432: Between Nation and Empire: The Caribbean in the 20th Century

3 Credits

An exploration of the political evolution of the Caribbean Region over the course of the 20th Century. HIST 432 / AFAM 432 Between Nation and Empire: The Caribbean in the 20th Century (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the political evolution of the Caribbean Region over the course of the 20th century. Its focus will be the ways in which imperial rule and the search for national identity have been the parameters that have shaped Caribbean political history over that period. Students will explore, in written assignments and class presentations, the ways in which the region which has historically been a theatre of confrontation among the major powers in the international system continued to serve that role over the course of the 20th century. The costs that have been borne by the people of the region from these conflicts have been enormous and crippling for several societies, especially Haiti, Cuba, Jamaica, and the Dominican Republic. Among those costs have also been the continued dependence of these societies upon human migration, limited economic strategies of transformation, increasing levels of poverty, and the emergence of a wide variety of political systems that reflect different historical experiences, demographic diversity, varying levels of political autonomy, and a remarkable level of cultural similarities. Evaluation will be based upon two class presentations; one research paper and class participation. The course will be required for students pursuing the African Diaspora minor and for those seeking to broaden their diversity requirements. It can be used to meet non-Western history requirements in the History major.

Prerequisite: HIST 250
Cross-listed with: AFAM 432
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 433: Imperial Russia, 1700-1917

3 Credits

Enlightened absolutism, mercantilism, westernization; economic progress, liberal reforms, and revolutionary movement; major intellectual and cultural trends; Russia as great power.

Prerequisite: HIST 141
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 434: History of the Soviet Union

3 Credits

Revolution; social, political, economic, and cultural continuity and change in the U.S.S.R. since 1917.

Prerequisite: HIST 141 or HIST 142
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 435: Topics in European History

3 Credits/Maximum of 9

Study of a particular period or country in European history, its significance and relation to other areas and the present. (May be repeated for credit.)

Prerequisite: HIST 001 or HIST 002

HIST 436: Great Britain Under the Tudors and Stuarts, 1485-1688

3 Credits

Religious, political, and constitutional developments in the British Isles.

Prerequisite: HIST 001 or HIST 002
Bachelor of Arts: Humanities
International Cultures (IL)
HIST 437: Great Britain 1688-1867

3 Credits

Social, economic, and political history of Great Britain from late Stuart times until the mid-Victorian era.

Bachelor of Arts: Humanities
International Cultures (IL)

HIST 438: Great Britain 1867-Present

3 Credits

Social, economic, and political history of Great Britain from the mid-Victorian era to the present.

**Prerequisite:** HIST 001 or HIST 002
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 439: Women and the Holocaust

3 Credits

Analysis of women’s experience in the Holocaust and exploration of the role of gender in Holocaust Studies. J ST (HIST/WMNST) 439 Women and the Holocaust (3) Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust. The first question motivating this class is thus what we can learn from examining women’s experiences. Is it possible that the ghetto, the camp, and the forest look different from women’s perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events? Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

**Prerequisite:** J ST 010 or J ST 121 or consent of program
Cross-listed with: JST 439, WMNST 439

HIST 440: Colonial America to 1753

3 Credits

Background, establishment, and growth of the American colonies, including economic, political, social, religious, and intellectual developments.

Bachelor of Arts: Humanities
United States Cultures (US)

HIST 443: Jewish Histories of the Middle East

3 Credits/Maximum of 6

Jews have been part of Middle Eastern societies for thousands of years. They flourished at times and endured hardships at others, but they have been part of every significant social and cultural transformation of the Middle East. In this class, students will discuss the significant contribution of the Jewish community to the development of various Middle Eastern societies throughout the centuries. Students will critically read and analyze primary sources and secondary literature. We will delve into national historiographies of places such as Morocco, Egypt, and Iran-to name a few—and seek to discover a nuanced narrative of Jewish histories of the region. We will also analyze popular culture products, such as documentaries, television, and literature. The course will follow a chronological and thematic order, and will examine Jewish history in conjunction with global and interregional processes in the Middle East and beyond, such as colonialism, imperialism, nationalism, relations with the West, the formation of the modern nation states of the Middle East, and the Israeli-Arab conflict.

Cross-listed with: JST 443

HIST 444: The United States in Civil War and Reconstruction—1850-1877

3 Credits

Causes of the Civil War; conduct of the war, North and South; impact of the war; problems of Reconstruction.

**Prerequisite:** HIST 130
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 444W: The United States in Civil War and Reconstruction—1850-1877

3 Credits

Causes of the Civil War; conduct of the war, North and South; impact of the war; problems of reconstruction.

**Prerequisite:** HIST 130 or HIST 020
Bachelor of Arts: Humanities
United States Cultures (US)
HIST 445: The Emergence of Modern America
3 Credits
Economic, social, political history of the United States, 1877-1919, emphasizing growth of industrialism and development as a modern nation.
Prerequisite: HIST 021, 3 additional credits in history, economics, or political science
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 446: America Between the Wars
3 Credits
The Roaring Twenties, the Great Crash, Depression, and New Deal; war debts, reparations, isolationism, and World War II.

HIST 447: Recent American History
3 Credits/Maximum of 3
Recent American History (3)This course covers the history of the United States and its role as a world power since 1945. AMST 447 / HIST 447
Economic, social, political history of the United States, 1877-1919, emphasizing growth of industrialism and development as a modern nation.
Prerequisite: HIST 021, 3 additional credits in history, economics, or political science
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 448: America in the 1960s
3 Credits
Social, political, and cultural themes in the United States in the 1960s.
Prerequisite: HIST 021
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 449: Constitutional History of the United States to 1877
3 Credits
Colonial background; framing and adoption of the constitution; development of the court under Marshall and Taney; sectionalism, Civil War, Reconstruction.
Prerequisite: HIST 020 or HIST 021, 3 additional credits in history or political science
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 450: Constitutional History of the United States Since 1877
3 Credits
Constitutional developments from laissez-faire to the welfare state; imperialism, war, internationalism; the contemporary court, civil liberties, and civil rights.
Prerequisite: HIST 020 or HIST 021, 3 additional credits in history or political science
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 451: The Consumer Revolution
3 Credits
The origins and impact of American consumer society since 1870. HIST 451/HIST 451 The Consumer Revolution (3) (US) (BA) This course meets the Bachelor of Arts degree requirements. This lecture course shows how the United States became a nation of consumers from 1870 to the present. It is designed both for the business and communications student as well as the liberal arts major. The origins of department stores, name-brand goods, fast-food chains, modern advertising, and mass entertainment show us how American business and culture was transformed by the consumer revolution. We will explore how the automobile became the leading consumer good of the 20th century and analyze its impact on how Americans shopped. The rise of advertising and its linkage to home-based mass entertainment through the radio and TV will interest us. We will also consider how events like the Great Depression, World War II, the counter-cultural movement of the 1960s, the energy crisis of the 1970s, and the economic deregulation of the 1980s and 90s shaped consumer attitudes and advertising. "The Consumer Revolution" also briefly explains how American consumer culture has been globalized (with companies like Coca Cola, Disney, and Ford). The course also explores how new consumer goods shaped the experience of childhood, youth, family and home life, and retirement. In particular, we will consider how youth-oriented goods in fashion, foods, and entertainment created a unique youth consumer culture. Also important are the intellectual debates about the meaning and value of consumer society. Is mass consumption the real meaning of American democracy or is it a perversion of it? Are consumer needs unlimited and where does the desire for goods come from? Because consumer society seemed to threaten so many traditional values, we will also analyze movements for restricting consumption. We will consider the origins and impact of Prohibition, dieting and health food crazes, and movements to restrict advertising and sale of goods like cigarettes. In addition to lectures and visual presentations in class, students will read chapters from major studies of the above topics, some of which will be discussed in class. Grades will be based on performance in discussion and essay exams.
Prerequisite: three credits in history, marketing, or advertising
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 452: History of U.S. Foreign Relations
3 Credits
History of U.S. foreign relations since 1789; emphasis on twentieth century.
Prerequisite: HIST 020 or HIST 021
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)

HIST 453: American Environmental History
3 Credits
The history of the ways Americans have used and thought about the environment since 1500.
Prerequisite: GEOG 030; and HIST 020, HIST 021; or 6 credits in the humanities or social sciences
Bachelor of Arts: Humanities
Bachelor of Arts: Social and Behavioral Sciences

HIST 454: American Military History
3 Credits
Development of U.S. military policy, 1776 to the present, emphasizing the conduct of our wars, interrelationship of civil and military authority.
Prerequisite: HIST 020 or HIST 021
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 457: Hiroshima & the Holocaust in History and Memory
3 Credits
The history and memory of the Holocaust and Hiroshima and Nagasaki are often taught separately in different disciplines. This course will examine them together through the various ways different societies remembered, understood, and commemorated these. Using the extensive literature on the history of memory, this course further suggests ways in which these memories and histories affected and were entangled by each other. Specific content will vary according to individual instructor, but topics may include victim cultures, cold war nuclear history, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on the fraught politics of memory in East Asia and the Middle East, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.
Prerequisite: HIST 457, JST 474
Cross-listed with: ASIA 457, JST 474
International Cultures (IL)

HIST 458Y: History of Work in America
3 Credits
A study of selected problems in the history of work in the United States, especially since 1877.
Prerequisite: HIST 021, HIST 156, or LER 100
Cross-listed with: LER 458Y
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

Writing Across the Curriculum

HIST 459: Social and Cultural History of the United States Since 1783
3 Credits
Role of immigration, social reform movements, religion, education, science, literature, and the arts in American history.

HIST 461: The Emergence of the American City: 1100-1880
3 Credits
The growth of American cities from their urban origins in Europe and the Native-American Southwest to 1880.
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)

HIST 462: The Twentieth Century City
3 Credits
Political, economic, social, and cultural transformations in American cities from 1880 to 2000.
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)

HIST 465: The Post-World War II Civil Rights Movement
3 Credits
The civil rights struggle and its impact upon American politics.
AFAM 465 / HIST 465 The Post-World War II Civil Rights Movement (3) (US) This course focuses on the post-World War II Civil Rights Movement. It begins with a discussion of the "Long Civil Rights Movement," briefly looking at the roots of the movement in the labor movement and social struggles of the Great Depression and World War II. We then turn to the impact of World War II on African Americans, the growing militancy during the war, the struggles over segregation in the military, the growing role of blacks in the labor movement, and the growing link between African Americans and the rising anti-imperial movements that accelerated after the war. We discuss the role of African Americans in the Cold War and the struggles over the role of Communism and Socialism in the emerging Civil Rights Movement. The course is broken down into key topics of the movement years: the rise of localized grassroots movements all over the United States that were led by local people who sought to challenge school segregation, political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement and segregation existed solely in the southern states, the entire country practiced both and black people suffered the consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian Leadership Conference;
and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker, Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the 1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers; the 1965 Selma to Montgomery March, and the final passage of the 1964 Civil Rights Act and the 1965 Voting Rights Act. The emphasis on the southern struggle is on the local, ordinary people who achieved extraordinary things.

**HIST 466:** Lesbian and Gay History

3 Credits

Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities. WMNST (HIST) 466 Lesbian and Gay History (3) (US;IL) This course will explore the relationships in different cultures and historical periods between the dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the "homosexual" helped establish not simply difference but "normalcy" in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States. An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper.

**HIST 469:** Drugs and Drug Policy in the United States

3 Credits

Examines the history and dimensions of drug use and analyzes the impact of drug policy. CRIMJ 469 / HIST 469 Drugs and Drug Policy in the United States (3) For nearly a century, the United States has been waging its version of a hundred years’ war on drugs, spending billions of dollars and incarcerating thousands of offenders while failing to significantly reduce the use of illicit drugs. This course examines drug use in a historical context while addressing the changing nature and dimension of drug use, including the pharmacology of drugs, patterns of drug use, and sentencing policies. Because drug control is inextricably linked to social, political, and public policy, the course will provide the student with a foundation for critical thinking and rational decision making relative to the efficacy of the various drug control initiatives. Since drugs seemingly permeate every level of American society and directly or tangentially touch most Americans’ lives, issues such as drug testing in the workplace, the use of drug courier profiles, legalized medical marijuana, and needle exchange programs are evaluated. Students will be expected to learn the pharmacology of various drugs, the history of drug use in the United States since the colonial era, the evolution of federal drug agencies, and acquire knowledge about contemporary drug issues. They also will be expected to develop and strengthen their critical thinking skills as they assess the consequences of implementing particular anti-drug policies and their impact on reducing the use of illicit drug use. An example of the evaluation methods would be: students will be evaluated on the basis of three exams and four “think pieces” (requiring students’ critical responses to an assigned topic) scheduled throughout the semester. Class attendance also will influence the grade. Faculty Member Proposing Course: John C. McWilliams

HIST 474Y: The Making and Emergence of Modern India

3 Credits
India's transition to social, economic, and political modernity through
the experience of British colonial rule and the nationalist struggle.

ASIA (HIST) 475Y The Making and Emergence of Modern India (3) (IL)
(BA) This course meets the Bachelor of Arts degree requirements.

This course covers India's transition to social, economic, and political
modernity through the experience of British colonial rule and the
nationalist struggle. It begins during the early modern period, when
European travelers encountered the flourishing Mughal Empire, and
moves into the dynamic moment following, when the East India Company
was one of various competing forces, both locally and globally. It then
examines the rise of British power, and the various responses to it from
collaboration to mutiny; the multiple development of nationalisms and
anticolonialisms, including secular, socialist, Hindu and Muslim
variations; the accompanying social reform visions, including caste
abolition and feminism; the turbulent paths toward partition and
independence, resulting in the postcolonial states of India, Pakistan,
Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the
continuing trajectories of these countries after independence, from
the Nehruvian years to the neoliberal shift, with attention to emerging
social movements and issues including caste and gender relations;
religious and separatist politics; struggles around land and development;
urbanization, and labor migration. This course raises important
questions about the nature of modernity and its relationship to global
interconnectedness, the rise of capitalism and colonialism, industry
and technology; while emphasizing South Asian social and cultural
contributions and responses to these global shifts. By filling in the
context of this part of the world to that global story, the course enables
students to grapple with some of the major economic and geopolitical
trends of the early 21st century.

HIST 480: Japan in the Age of Warriors

3 Credits

An overview of Japan from the 10th to 17th century, a period of political decentralization, cultural efflorescence, and social change. ASIA (HIST) 480 Japan in the Age of Warriors (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. By the eighth century, Japan had become a centralized state centered on the reign of a sovereign, commonly known in English as an emperor. At the end of the ninth century, the emperor&rsquo;s court relocated to the city of Heian (Kyoto), and soon thereafter, an elegant court culture developed in the capital. The courtly culture was based on civilian values and civilian rule. In the countryside, however, Japan was gradually becoming militarized. Local warlords began rising to prominence and vying with each other for power. One of them, Taira-no-Masakado, rebelled against the central government during the years 939-940, declaring himself &ldquo;emperor&rdquo; of several provinces in eastern Japan centered on Hitachi. Although the central government in Kyoto enlisted other warrior groups to put down Taira-no-Masakado&rsquo;s rebellion, the process of militarization was underway. Buddhist temples also participated in this process, using their wealth and influence to assemble monastic armies on occasion. This course examines Japanese history beginning approximately in the 10th century, at time when civilian high culture in the capital was approaching the height of its development. At the same time, the process of militarization of the countryside was beginning to undermine that civilian court culture. The course ends in approximately the seventeenth century with the establishment of a military government under the Tokugawa shoguns. This development was ostensively the peak of warrior influence, with the samurai (=warrior) class entrenched by law as the elite group within society. However, just as the warriors began their rise to power in the tenth century, by the end of the seventeenth century they were rapidly losing influence and prestige to wealthy merchants as the forces of the market economy spread throughout Japanese society. HIST 480 is a course in medieval Japanese history, broadly defined. Different instructors will emphasize different aspects of Japanese history and culture during this era. Approaches to teaching will also vary depending on the instructor. Class sessions can take the form of lectures or discussions. Assessment methods and learning activities may include debates, discussions, exams, research papers, book review papers, and other similar academic activities.

HIST 481: Modern Japan Since 1800

3 Credits

The transformation of Japan from a relatively isolated, agricultural nation into a highly industrialized world power. ASIA (HIST) 481 Modern Japan Since 1800 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In the late 19th century, Japan emerged from relative seclusion and grew, within the period of a few decades, into one of the world&rsquo;s major powers. Japan&rsquo;s remarkable transformation into an imperialist power ended suddenly with defeat by the Allied powers in August 1945. But the history of prewar and wartime Japanese nation-building and economic growth set the stage for postwar rebuilding. This course examines Japan&rsquo;s development as a powerful modern state, imperialist aggressor, defeated nation, economic power-house, and pop culture super-power. Specific content will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government&rsquo;s program of rapid modernization and Westernization, imperialist expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945&ndash;1952), Japan&rsquo;s resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

International Cultures (IL)

HIST 482: Confucius and the Great Books of China

3 Credits

This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China. CHNS 418 / ASIA 418 / HIST 482 Confucius and the Great Books of China (3) This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period, providing an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as "(Confucian) ritualists," "statesmen," "military strategists," "rebels," "recluses," and "spiritual leaders." Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

HIST 484: History of Chinese Thought
3 Credits
A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present. ASIA (HIST) 484Y History of Chinese Thought (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing China's philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular Orientalist myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

HIST 485: China's Last Empire: The Qing Dynasty, 1644-1911
3 Credits
China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China's internal diversity. ASIA (HIST) 485Y China's Last Empire: The Qing Dynasty, 1644-1911 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as "Chinese" but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of China starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynastic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of Western colonialism on China. Considerable time will also be focused on China's ethnic, religious and cultural differences in order to allow a deeper understanding of major issues and themes in late imperial Chinese history. Finally, the theme of China's international relations in Asia and the world and China's shifting place in the world will be a prominent thread of the course. Through a blend of primary and secondary sources, students in this class will need to think critically, read broadly and express their ideas clearly regarding the evolving challenges facing China's last empire.

Horticulture (HORT)

HORT 101: Horticultural Science
3 Credits

Introduction to horticulture with emphasis on plant domestication, morphology, classification, world food crops, commodities, gardens, propagation, and agrochemicals. HORT 101 Horticultural Science (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. The course content of Horticulture 101, as indicated in the complete course outline, deals with the fundamental concepts and specialty areas, which contribute not only to the science and technology involved in horticulture but also to the art. It provides an overview of the role of various specialties of the natural sciences (e.g. plant morphology, physiology, taxonomy, genetics and nutrition, pest management, management and production of crops, landscaping and technology) relevant to a range of plant uses from medicinals and food production to the aesthetic benefits derived from plants. The course begins with the origin and domestication of plants followed by: A. An Overview of horticulture which includes an explanation of the horticulture industry, how to achieve success in horticulture and the relationship between horticulture and the environment; B. Science in horticulture which includes the classification of plants, plant propagation, plant nutrition, environmental factors affecting plant growth and development, plant growth regulators, post harvest physiology and pest management; C. Management and production of horticultural crops which include nursery, floral, turfgrass, vegetable, fruit and nuts; D. Landscaping including designing landscapes, xeroscapes and sitescapes, establishing and maintaining landscapes; and E. Concluding with Technology in horticulture. The course content additionally includes major areas of knowledge based on the fundamentals, universal concepts and achievements in the cluster of scientific disciplines comprising horticulture and provides students with the opportunity to appreciate that the origins, domestication and production of cultivated plants are the essence of human existence.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

HORT 120: Computer Applications for Landscape Contracting
2 Credits

Emphasis is placed on the use of commercial software used for landscape planning and estimating. Limited to Landscape Contracting majors only.
HORT 131: Herbaceous Perennial and Annual Identification
3 Credits
Herbaceous and annual plant identification; landscape use of herbaceous perennials and greenhouse and garden annuals.
Prerequisite: BIOL 127, BIOL 110, or HORT 101

HORT 137: Ornamental Plant Materials
3 Credits
Identification and description under fall conditions; discussion of cultural and aesthetic aspects of trees of value in ornamental planting.

HORT 138: Ornamental Plant Materials
3 Credits
Identification and description under spring conditions; discussion of cultural and aesthetic aspects of shrubs of value in ornamental plantings.

HORT 150N: Plants in the Human Context
3 Credits
Plants have played a dynamic role in shaping our life. In reality, human existence on Earth is made possible by the breath of plants through photosynthesis. Likewise, our botanical connections and interactions are many; we need plants for food, beverages, medicines, materials, healthy lifestyles, and aesthetics. Plants have also played an important role in where our ancestors settled and where we live today. Some of the important topics discussed in this class will include the role of tea in transforming world cultures, the importance of sugar in the Civil War and the establishment of the Caribbean nations, the effect of the Irish potato famine on Europe and the US, and the use of plants in solving crimes.

GenEd Learning Objective: Integrative Thinking

HORT 201: Applied Arboriculture
2 Credits
Overview of methods used to diagnose problems and provide for the long term care of large trees. HORT 201 Applied Arboriculture (2) The objective of this course is to provide students with the opportunity to develop an appreciation of the skills required to properly care for large trees. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major. The course will provide an overview of the methods used to diagnose problems and provide for the long term care of large trees. Areas of emphasis will include accessing the upper parts of large trees; safety when working in and around large trees; and the proper selection, use, and maintenance of the equipment used in the arboriculture profession. The course will be taught each Fall semester and will have an enrollment limit of 18. Students will be evaluated by quizzes, exams, and laboratory assignments.
Prerequisite: Students must be physically capable of safely handling a running chainsaw, and pulling their weight up a rope.

HORT 202: Plant Propagation
3 Credits
Principles and practices of asexual and sexual plant propagation.
Prerequisite: BIOL 027, BIOL 110, or HORT 101

HORT 220: CAD Applications in Landscape Contracting
3 Credits
Application of computer-aided design software including AutoCAD and LANDCADD to landscape contracting.
Prerequisite: HORT 120

HORT 232: Horticultural Systematics
3 Credits
Fundamentals of horticultural crop plant classification and systematics. Examples chosen from fruits and vegetables, exclusive of subtropical and tropical fruit.
Prerequisite: HORT 101

HORT 233: The Science of Winemaking
3 Credits/Maximum of 3
Introduction to the principles of wine production emphasizing basic wine grape biology, fermentation science, wine chemistry, and wine perception. FDSC 233 / HORT 233 provides an interdisciplinary treatment of the science of grape growing, vinification, and wine consumption. Students will learn how viticultural practices translate to wine chemistry, and how key variables associated with that conversion affect consumer perception. The course will cover topics such as basic grapevine physiology, vineyard management practices, vinification, domestic and international wine styles, and consumer interactions with wine (e.g., sensory evaluation, health aspects of wine). Although the course is considered to be introductory, students must have a basic grounding in university-level chemistry and biology. Course material will be primarily transmitted through lectures, reading assignments to be completed outside of class, and brief practical exercises in the Sensory Evaluation Center (Department of Food Science).
Prerequisite: CHEM 110 or BIOL 110
Cross-listed with: FDSC 233

HORT 238: Turf and Ornamental Weed Control
3 Credits
Students will be introduced to the development of integrated weed management strategies utilizing a variety of cultural and chemical methods.
Cross-listed with: TURF 238

HORT 250: Landscape Contracting Design/Build Principles
3 Credits
Introduction to the processes and principles of residential landscape site development, from initial client contact to implementation.
HORT 269: Residential Landscape Planning
3 Credits
Principles and techniques in landscape design; preparation of plans of small properties.
Prerequisite: Landscape Contracting majors, in the Design/Build Option

HORT 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HORT 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
HORT 301: Principles of Arboriculture
3 Credits
Overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings. HORT (FOR) 301 Principles of Arboriculture (3) The objective of the course is to introduce students to the theories and practices related to the care of trees in developed areas. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major, and the Urban Forestry option of the Forestry major. This course will provide an overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings. Emphasis will be placed on maintaining the long-term health of large trees. Major topic areas will include methods for characterization of tree health, diagnosing problems in trees, the influence of environmental factors on tree health, and the assessment of hazard trees. Proper pruning techniques and factors to consider when making decisions regarding long-term tree care in urban areas will be discussed. The course will be taught each spring semester. Students will be evaluated by quizzes, exams, and laboratory assignments.
Prerequisite: BIOL 110 and SOILS101
Cross-Listed

HORT 315: Environmental Effects on Horticultural Crops
3 Credits
Horticultural plants respond to the environmental factors of light, temperature, water, and fertilizer both in controlled and field environments.
Prerequisite: HORT 101 , HORT 202

HORT 352: Flower Arranging
2 Credits
Floral design beginning with elements and principles of design. Flower arranging techniques as well as different styles of flower arrangements.

HORT 368: Landscape Planting Design
4 Credits
Basic planting design employing the use of indigenous and ornamental plants as design elements in the man-made environment. Intended for Landscape Contracting majors only.
Prerequisite: HORT 269

HORT 390: Junior Seminar
1 Credits
Current issues in horticulture and agriculture.
Prerequisite: FIFTH-SEMESTER STANDING

HORT 402: Plant Nutrition
3 Credits
Mineral nutrition of higher plants, including nutrient acquisition, transport, metabolism, and practical implications. HORT 402W Plant Nutrition (3) The course considers the mineral nutrition of higher plants from physiological, ecological, and agricultural perspectives. The first part of the course considers factors influencing the acquisition of mineral nutrients and their transport in the plant, including nutrient mobility in the soil, root biology, rhizosphere interactions, membrane transport, xylem, and phloem transport. Root symbioses and metabolic assimilation of N and S will also be discussed. The second part of the course gives an overview of mineral metabolism. The final third of the course illustrates the practical dimensions of plant nutrition. The diagnosis of nutritional disorders, nutrition, and yield, foliar fertilization, genetic aspects of plant nutrition, and nutrient cycling will be covered by lecture and laboratory exercises. Laboratory exercises demonstrate lecture topics and permit a "hands-on" involvement with the subject. Emphasis is placed on concepts and integrating principles rather than memorization of technical details.
Prerequisite: HORT 315 or BIOL 441 , SOILS101
Writing Across the Curriculum

HORT 407: Plant Breeding
3 Credits
The scientific principles and techniques of utilizing genetic variability in improving the heredity of plants for specific purposes. HORT 407 Plant Breeding (3) Horticulture 407 is a 3-credit course that is taught every spring semester and is required of horticulture undergraduate students at Penn State. This course also attracts upper-division and graduate students from other departments such as Agronomy, Biology, Forest Resources, Plant Pathology, Biochemistry, and Molecular Biology. The objectives of the course are to 1) develop an understanding of the role of genetics in plant breeding, 2) elucidate the diversity of plant characteristics which are subject to improvement, 3) review conventional and contemporary techniques for the development of new cultivars, and 4) present the opportunity for the student to effectively communicate scientific information in writing and through speaking. Horticulture 407 emphasizes basic principles of plant genetics and breeding and the utilization of molecular biology techniques for crop improvement. It includes two-hours of lecture and a two-hour laboratory-discussion session each week. Major topics of discussion during lecture periods include plant reproduction, genetic variation in plants, review of mitosis and meiosis, Mendelian genetics, linkage, and recombination,
qualitative and quantitative traits, population genetics, cytogenetics, theory of selection and response to selection, heritability, review of statistical tools useful in plant genetics and breeding, systems of pollination controls in plants including self-incompatibility and male sterility, breeding methods for self- and cross-fertilized plants, and application of modern technologies, including molecular markers, marker-assisted selection, and genetic transformation, to crop improvement. The laboratory sessions are designed to complement the lectures and provide opportunities for hands-on experience. For example, students practice staining and counting plant chromosomes on microscope slides, self- and cross-pollination of different plant species, linkage mapping and analysis of plants for Mendelian segregation, inoculating plants with fungal pathogens and observing and evaluating plants for disease development, extracting DNA from plant tissue and separating DNA segments on agarose medium using gel electrophoresis, and practicing computer programs for gene mapping and analysis of Quantitative Trait Loci (QTLs). Furthermore, students are mentored to prepare a term paper on a plant breeding/plant genetics subject and to orally present their findings to the class using visual aids. Student evaluation is based on two mid-term exams (each 100 points), one comprehensive final exam (200 points), 10 weekly homework or laboratory reports (for a total of 100 points), and a term paper (50 points for writing and 50 points for presentation). For the presentation, each student is required to turn in a 3-5 page write-up about a topic of interest.

HORT 408: Landscape Plant Establishment and Maintenance
4 Credits
The principles and practices involved in the establishment of plants in the landscape, and their subsequent maintenance.
Prerequisite: HORT 137 or HORT 138; SOILS 110

HORT 410: Issues in Landscape Contracting
3 Credits
This will be a survey of business management, regulatory, and environmental issues facing the landscape contracting profession. Laboratory.
Prerequisite: HORT 408
Writing Across the Curriculum

HORT 412: Post-Harvest Physiology
3 Credits
Harvesting, handling, storage, and transportation of horticultural crops; primary emphasis on physiological response to pre- and post-harvest environmental factors.
Prerequisite: 6 credits in horticulture or other plant sciences
Writing Across the Curriculum

HORT 420: Plant Growth Regulators
3 Credits
Plant growth regulators, their chemical and physical properties; general principles, practices, and applications in regulating plant growth and development.
Prerequisite: BIOL 110 or HORT 101

HORT 431: Small Fruit Culture
3 Credits
Cultural requirements and production practices of the principal small fruit crops: strawberries, grapes, blueberries, brambles, and cranberries.
Prerequisite: HORT 101, HORT 315

HORT 432: Deciduous Tree Fruits
3 Credits
Science, art, and techniques of regulated cropping; orchard designs and management systems.
Prerequisite: HORT 101

HORT 433: Vegetable Crops
3 Credits
Cultural requirements of important vegetable crops in conjunction with physiological processes and problems related to commercial production. This course will provide students with information, techniques and ideas to produce vegetable crops on a commercial scale. Students learn production fundamentals applying to all vegetable crops including fertility management, transplant production, season extension, and pest management during the first part of the semester. This is followed by detailed and specific information for important vegetables on the science of producing high quality crops. Using a participatory approach students learn important techniques to successful production including experimenting on a small scale, designing a drip irrigation system, scouting for pests and developing a pest management strategy. Field trips to successful operations and outlets and the research farm are important elements of the class.
Prerequisite: HORT 101

HORT 445: Plant Ecology
3 Credits
Advanced lectures on plant ecology which stress integration of physiological, population-level and community-level phenomena, and ecology in agriculture.
Prerequisite: BIOL 220W, FOR 308, or HORT 315

HORT 450: Greenhouse Management
3 Credits
Maintenance and manipulation of the greenhouse production systems including structures, covers, light, temperature, carbon dioxide, water, growing media, fertilizer and greenhouse cost accounting.
Prerequisite: HORT 101, HORT 315

HORT 451: Hydroponics and Aquaponics
3 Credits
The course provides information that is especially useful to those with knowledge of horticultural plants; however a background in plant production is not needed. Major topics discussed include basic concepts in plant and fish biology; nutrient and water use, cycling, and management; pest and pathogen management; and environmental
factors as they relate to the design and operation of hydroponics and aquaponics systems. This course includes a weekly laboratory session where students gain practical skills in growing crops in a variety of hydroponics systems and growing crops and fish in an aquaponics system.

**Prerequisites:** HORT 101; AGRO 28; AGECO 121; Recommended Preparation: Students without one of the formal prerequisite courses should have 3 credits of plant science, biology, or a Junior level standing in a science or engineering major.

HORT 453: Flower Crop Production and Management

3 Credits

Production of greenhouse flower and foliage plants; development of management skills for a greenhouse business.

**Prerequisite:** HORT 101, HORT 315

HORT 455: Retail Horticulture Business Management

3 Credits

The nature, operation, and management of retail garden centers, winery tasting rooms, and independent food retailers. Overview of retail marketing principles and practices as they pertaining to horticultural retail businesses. Lectures, discussions, and projects focus on: selecting and pricing goods and services; how independent retailers effectively use traditional promotion avenues and social media networks to connect with customers; and how to develop a relevant brand, cause marketing effort, and loyalty program. Students will also learn: about retail layout and display strategies; that each consumer segment has different wants, interests, and abilities to obtain goods and services, and about effective employee management.

**Prerequisite:** HORT 101; AG BM 101

Cross-listed with: AGBM 455

HORT 459: Plant Tissue Culture and Biotechnology

3 Credits

The overall goal of this course is to provide a strong overview of the techniques used in plant biotechnology and the applications made possible by those techniques. The lecture topics will be used to introduce the principles of tissue culture and molecular biology, including how they are used to produce transgenic plants. Furthermore, the course will give students a broader and deeper knowledge in the field of Plant Biotechnology and provide a foundation for understanding the field as it changes in the future. Topics include the safety, legal and ethical issues surrounding GMOs and the study of the anti-GMO arguments surrounding each issue. In the laboratory component of the course, students will be introduced to the underlying principles of molecular biology techniques and aseptic culture of plant cells as well as the tissues and organs used to produce transgenic plants. In summary, through this course students will be introduced to many of the most important tools of the biotechnologist.

**Enforced Prerequisite at Enrollment:** BMB 252 or BMB 252H or MICRB 252 or BIOL 230W or BIOL 230M

Cross-listed with: BIOL 459, BIOTC 459

HORT 464: Landscape Construction I

4 Credits

Standards, processes, and computations for site grading, drainage, earthwork, vehicular circulation, parking; detailing, and finishing of landscape construction materials.

**Prerequisite:** HORT 269

HORT 466: Landscape Construction II

5 Credits

Project scheduling methods, plant installation techniques, and field layout principles and practices. Implications of site preparation.

**Prerequisite:** HORT 464

HORT 468: Landscape Estimating and Bidding

2 Credits

Reading and interpreting contract drawings and specifications, quantity take-offs, cost estimating, and bid document preparation.

**Prerequisite:** HORT 466

HORT 469: Senior Seminar

1 Credits

Exploration of the interrelationships of horticulture, science, and society; evaluation of attributes and abilities related to various career opportunities.

**Prerequisite:** HORT 390, seventh-semester standing

HORT 490: Internship

1-13 Credits/Maximum of 13

Supervised off campus experience in a public or commercial horticultural enterprise. Written and oral critique of activity required.

**Prerequisite:** approval of proposed assignment required prior to registration

Full-Time Equivalent Course

HORT 495: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Prerequisite:** approval of proposed assignment required prior to registration

HORT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HORT 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.
Hospitality Management (HM)

HM 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual of group instruction.

International Cultures (IL)

HM 201: Introduction to Management in the Hospitality Industry

3 Credits

Introduction to the hospitality industry and hospitality management. HM 201 Introduction to Management in the Hospitality Industry (3) The objectives of this course are to provide an introduction to the hospitality industry, to management practices within the industry, and to the hospitality major. Students have an opportunity to learn about the functions of management; the major components of the hospitality, travel, and tourism industries; trade associations and publications; growth areas and trends; and the need for creative leadership. Main topics typically include: functions of management and functional areas of business segments of the hospitality industry, international business as related to hospitality, services business, the planning process and strategic planning, organization design in hospitality, directing and leading in hospitality, the control process in hospitality, travel and tourism industries hospitality, hotels and lodging, the restaurant business, managed services, leisure and recreation/other hospitality opportunities, beverage management, and management ethics and social responsibility.

Concurrent: HM 202

HM 202: Colloquium in Hospitality Management

1 Credits/Maximum of 4

Major industry and professional speakers lecture on current issues followed by discussion with students and faculty. HM 202 Colloquium in Hospitality Management (1) This course has two primary objectives. First, students have an opportunity to hear from industry leaders. Second, students can determine their career directions, learn about the requirements for success in the industry, and identify career opportunities. The topics for the course vary from semester to semester depending upon the expertise of the distinguished speakers who address the class. However, a common theme is to explore trends in the industry regarding hotels, restaurants, and institutional foodservice. Students may learn about related career opportunities, such as careers with cruise lines, travel agencies, and other sectors in the hospitality and tourism industry.

HM 203: Hospitality Professional Development Seminar

1 Credits

The purpose of this course is to provide students with professional development preparation early in the curriculum. This course will help students obtain quality work experience during their college career to best prepare them for post-graduate employment. In particular, this course is designed to prepare students for meeting the major's work experience requirement. Meaningful work experience serves as a complement to classroom learning and provides the foundation for securing employment upon graduation. This course will help students understand the connection between college work experience and full-time careers and will impart strategies for conducting a successful job search and making the most out of these work opportunities. The class will include lectures, discussions, experiential exercises, guest lectures, and professional development assignments.

Prerequisite: Prerequisite or concurrent: HM 201

HM 208: Social, Cultural, and Health Influences of Alcohol

1.5 Credits

This course is designed to provide a historical approach to educating students on the development of alcohol and its influence on society. Alcohol is both culturally and economically significant as its usage has been a source of global trade, economic status, and political conflict. Science has proven positive and negative impacts of alcohol, which have shaped marketing, regulation, and consumption patterns. A better understanding of alcohol and its place in our society is not only educational from a historical perspective, but provides students with impactful nutritional and health knowledge regarding alcohol. By the end of this course, each student will feel more comfortable with the topic of alcohol in our society. This course will focus on how we can promote a more responsible educational process involving alcohol consumption, sale, and service. Education on alcohol can provide fundamental information that cannot only significantly improve one’s well-being and quality of life, but also others.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

HM 228: Hospitality Food Safety

1 Credits

Application of HACCP, U.S. Food Code, biosecurity and other federal regulations to hospitality foodservice operations. Students attain certification in foodservice sanitation by taking the examination administered by the National Restaurant Association. HM 228 Hospitality Food Safety (1) This course will examine the science associated with preparing and serving food that is safe for consumption with regards to biological, chemical, and physical contamination. Emphasis is on federal regulations associated with HACCP; the U.S. Food Code, and other issues associated with safety of the food supply in the U.S. Case studies help students apply food safety principles to hospitality operations. Students will attain certification in foodservice sanitation by taking the examination administered by the National Restaurant Association.

HM 250: Principles of Quantity Food Production

3 Credits

Principles and methods of quantity food production including preparation techniques, quality control and evaluation, and cost control.

HM 270: Hospitality Administration Seminar

4 Credits

Components of food service systems are identified and studied as separate problems and as a total system. This course will not meet the prescribed requirements for the HM major in any option. HM 270 Hospitality Administration Seminar (4) The organization of a restaurant facility, from concept to operation, allows a student the opportunity to apply all previously learned course material in the Hospitality Sciences.
Management program. The focus of the course urges the student to apply the principles of marketing, menu planning, food cost control, human resource management, financial accounting, layout and design, and purchasing. This course is presented in a seminar format and includes a restaurant design project. Students who have completed this course gain the perspective of designing a restaurant facility with customers’ needs and owners’ profits in mind. Main topics include: creating a marketing plan and business plan, financing and leasing, leasing and tax matters, menu writing, menu analysis, function analysis, kitchen design and layout design conventions, recruiting and staffing including training and development, food purchasing, bar and beverage purchasing, beverage and alcohol service, and budgeting and controlling costs. The content of this course is considered fundamental for anyone in hospitality management and, therefore is required of all Hospitality Management majors.

Prerequisite: HM 250, HM 260; or HM 250, MGMT 341

HM 271: Introduction to Hospitality Technology
3 Credits

Introduction to technologies used in the hospitality industry including networks, security, e-commerce, social media, spreadsheets, databases and property management systems. HM 271 Introduction to Hospitality Technology (3) This course is designed to introduce students to the technology used in the hospitality industry and to the concepts of information technology. The objectives are to describe how managers in the hospitality industry use various information technologies to solve problems and make decisions, describe the role of hospitality managers in information system development and management, describe the functions of network and security systems within in hospitality technology systems, explain the role of hospitality information systems, e-commerce, distribution technologies, and social media in strengthening an operation or company’s competitive position, and demonstrate competency in the use of spreadsheet, database and property management system software with skills applicable to the hospitality industry.

Prerequisite: Prerequisite or concurrent: HM 201

HM 290: Hospitality Managerial Communication
3 Credits/Maximum of 3

Provides the foundational skills for professional written and oral communication for managers in the hospitality industry.

Prerequisite: a ’C’ of better in HM 201, and ENGL 015, ENGL 030, or ESL 015

Writing Across the Curriculum

HM 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HM 304: Institutional Food Service Management
3 Credits

Institutional food service management systems in the hospitality field. HM 304 Institutional Food Service Management (3) Institutional and contract food service management is in the growth stage of the hospitality industry life cycle. The objective of this course is to provide an overview of the various segments of institutional food service, including health care, life care, education, business, transportation (i.e., airlines, cruise ships), correctional and recreational services. Main topics typically include: historical overview of institutional/non-commercial food service management, exploring key markets where institutional food service management exists, key systems used in the fundamental areas of quantity food production, current and future trends effecting institutional food service management, career opportunities in the institutional food service management sector, and managed services and multi-department management. This course is an elective in the Hospitality Management program.

Prerequisite: a grade of C or better required for HM 201

HM 305: Restaurant Management
3 Credits

Restaurant food service management systems in the hospitality field; analysis including cost control and quality control techniques. HM 305 Restaurant Management (3) Providing quality service and products and ultimately making a profit in a restaurant require the foodservice professional to control and analyze costs. The objective of this course is to provide an overview of the food, labor, budget, and finance information required in restaurant management. Main topics typically include: framework and function of control in foodservice operations, steps and processes of using management information systems in controlling food cost and preparation of food; forecasting and menu pricing techniques in controlling food cost in the preparation and service of food; problems associated with labor costs and analyzing various techniques and tools used to control labor cost effectively through proper staffing and scheduling; methods of controlling food and beverage cost through effective purchasing, receiving, storage, issuing, preparation, inventory, and portion control; techniques of preparation and implementation of effective budgets as control tools; ratio-analysis for analyzing cost in foodservice operations; financial statements used to monitor the financial health of a foodservice operation; and capital budgeting and how it is used. This course is required in the Hospitality Management program. The introductory course in Hospitality Management must have been completed or must be taken concurrently.

Prerequisite: or concurrent: HM 201

HM 306: Hospitality in Senior Living
3 Credits

Introduction to senior living and continuing care retirement communities and related hospitality management career opportunities. HM 306 Hospitality in Senior Living (3) This course introduces students to continuing care retirement communities (CCRCs) and senior living facilities. The course is taught from a hospitality perspective and focuses on how the application of hospitality management can enhance senior communities and their residents. The multidisciplinary content includes a variety of perspectives on designing and delivering services for seniors, including long-term care administration, geriatric nursing, adulthood and aging, therapeutic recreation, and nutrition and foodservice.

Prerequisite: HM 201
HM 311: Wine Appreciation
2 Credits
A study of identification of varieties of wine, methods and techniques of viniculture, development of wine lists and wine marketing.

Prerequisite: Students must be 21 years of age or older to register for this course.

HM 318: Club Management and Operations
2 Credits
Principles and practices of club organizations and management. HM 318 Club Management and Operations (2) This course focuses on the unique management skills that are necessary in the private club industry. A key objective is to demonstrate to students the concept of "exceptional service" that is demanded in this field. The course leads students on a tour of the responsibilities and operations of all departments that would be found in a city or country club. Main topics typically include: club management industry and career opportunities; types of clubs that exist in the industry, including structure, organization, and philosophy; the various departments of a successful club including but not limited to: food and beverage, accounting and cost control, human resources, marketing and promotion, catering and banquet, golf operations, tennis operations, aquatics, and fitness facilities; and management skills required of a club manager: leadership, board relations, general management, service excellence, communications. The course is required in the Professional Golf Management option in the Recreation, Park, and Tourism Management program and is a professional elective for Hospitality Management majors.

Prerequisite: a grade of C or better required for HM 201

HM 319: Hospitality Facilities Management
3 Credits
Fundamental principles of facilities planning, facilities management, and maintenance for all segments of the hospitality industry. HM 319 Hospitality Facilities Management (3) This course has been designed to provide students with information related to hospitality facility design and maintenance. While managers may not have to fix equipment or install heaters, they should understand the complexity of these tasks and respect the position of the architect and hospitality engineer. Main topics typically include: principles of facility engineering and maintenance, costs associated with the life cycle of a hospitality facility; role of the manager in the planning and maintenance process; function of the building in service and marketing, impact of building design on guest service and operation; evaluation of building and grounds for compliance with the Americans with Disabilities Act of 1990; role of management in development, planning, and remodeling of food service operations; and flow of resources as exhibited in blueprints. The course is a required course for all Hospitality Management majors. Students must first complete the introductory hospitality course and the hospitality colloquium.

Prerequisite: a grade of C or better required for HM 201

HM 329: Introduction to Food Production and Service
3 Credits
Why do so many new restaurants fail? What factors drive the costs of foodservice operations and how do you go about controlling those costs? How do you make a foodservice operation profitable and why do many consider it one of the most difficult businesses to manage? How do you "WOW" the customer and build loyalty? This course will provide students with tools foodservice managers use on a daily basis to make sure they end each year "in the black." Students develop knowledge and skills needed to be successful in future courses that follow HM 329. This course provides students with information on the basic principles of effective food production and service management. The primary focus is on controlling costs, both food and labor. Course content stresses the integration of menu planning, recipe writing (including HACCP), and development and maintenance of quality standards, with other management tools used throughout the foodservice manufacturing cycle, such as operating ratios, procurement, recipe costing, menu analysis, and budgeting to successfully control costs and manage customer service. Course content is critical to laboratory assignments in HM 330 & HM 430, and advanced topics in NUTR 386.

Prerequisites: NUTR 119 or NUTR 320 Concurrent Courses: NUTR 119 or NUTR 320

HM 330: Food Production and Service Management
3 Credits
This course is designed to apply management principles to foodservice production and service in a lab environment. HM 330 stresses the integration of management principles acquired in prior classes, including planning, organizing, controlling, staffing, and leading. Students will rotate in management and staff positions for the quantity production of quality food. The course draws from the students' theoretical background in accounting, management, nutrition, food production and sanitation. HM 330 integrates this content into the daily operation of a campus foodservice facility as a living laboratory.

Prerequisites: NUTR 119 or NUTR 320 ; and a grade of C or better in HM 329

HM 335: Hospitality Financial Accounting
3 Credits
This course provides students with a basic knowledge of financial accounting principles and techniques. The course emphasizes what accounting information is, why it is important, and how it is used in the hospitality industry. Accounting is the information system that measures business activities, processes that information into reports, and communicates the results to decision makers. The students are exposed to all the important elements described above: the measurement system, processing of the information and the communication. The emphasis in this course is on the use of financial information from the user's perspective. Unless the user is aware of the process that generates the results of the accounting process, the user cannot make informed decisions. The students first learn the structure of the double-entry system of accounting and then they learn how to use the information to make informed financial decisions.

Prerequisite: A grade of C or better required for ACCTG 211. Prerequisite or concurrent: HM 201

HM 336: Hospitality Managerial Accounting
3 Credits
Collection, processing, and interpretation of accounting data for managerial planning, control, and evaluation in hospitality organizations.
HM 336 Hospitality Managerial Accounting (3) Managerial decision-making using accounting data is an integral part of the function of managers in the hospitality industry. The accounting function of the lodging business generates financial data, and managers need to be able to interpret the data, analyze it and make decisions based on their interpretation and analysis of the data. This course provides the student with the core knowledge needed to understand the kinds of data generated by the financial systems of hospitality operations, prepare budgets, perform variance analysis, and provide control over the financial aspects of the hospitality business. Main topics typically include: teaching managerial decision-making in the hospitality industry. Cost behavior analysis in the hospitality industry. Cost, volume and profit analysis in the hospitality industry. Pricing decisions in the hospitality industry. Preparation of operational budgets in the hospitality industry. Calculation and interpretation of cost and revenue variances in the hospitality industry. Preparation of cash budgets and control over cash in hospitality operations. Preparation of the statement of cash flows in the hospitality industry. Preparation of pro forma financial statements in the hospitality industry. The content of this course is considered fundamental for anyone in hospitality management and, therefore, is required of all Hospitality Management majors. Prior to this course, students are required to have taken Financial Accounting in the Hospitality Industry. HM 336 is a pre-requisite to Financial Management in Hospitality Operations.

**Prerequisite:** a grade of C or better in HM 335 or ACCT 211, and a grade of C or better in HM 271

HM 344: Social Media Marketing for Hospitality

3 Credits

This class in social media marketing explores the growing popularity of using digital technologies to reach guests. The emphasis of the class is on expanding student's working knowledge on the four zones of social media (community, publishing, entertainment and commerce) within the context of hospitality. Students explore how social media can be employed to build hospitality brands, conduct business, handle guest complaints, drive sales, forge and maintain guest relationships. Although strategies for executing successful social media campaigns is taught, an over emphasis on anyone specific social network is not.

**Prerequisite:** HM 201

HM 345: Hotel Management

3 Credits

Introduction to rooms management including front office, housekeeping, security, and engineering. Emphasizes operations, coordination, and communication within and between departments. HM 380 Hotel Management (3) HM 380 includes an active-learning component that requires students to be in the on-campus hotels for 48 hours during the semester. This experience will allow the students the opportunity to observe the basic functions of the Rooms Division departments of a hotel. In the Front Office department, students will observe the front desk and reservation clerks. In the Housekeeping department, students
will observe the room attendants, public area attendants and laundry workers. In Maintenance, students will observe maintenance employees and be introduced to Safety and Security concepts. The course will include a 2-hour per week lecture that focuses on Rooms Division departments but also briefly discuss other operating departments within a hotel. Students will also complete other assignments that encourage them to consider them how hotel departments operate and work together. Students will keep a daily journal of their work rotation experiences and observations, and will also be asked to answer several questions about how the departmental operations, interdepartmental communication, and other topics.

**Prerequisite:** A grade of C or better in HM 201, HM 271

**HM 384: Introduction to Meeting and Event Planning**

3 Credits

This course provides an overview of the meeting, event, and conference sector of the hospitality industry. HM 384 Introduction to Meeting and Event Planning (3) This course focuses on the meeting and event sector of the hospitality industry. This course provides an overview of the major processes involved in planning and implementing meetings, special events, and conferences. Students will learn and apply the logistics of building a meeting plan to gain an overall understanding of contract negotiation, menu planning, budgeting, site selection, and on-site management. When applicable, invited speakers will provide an applied perspective about the meeting and event profession.

**Prerequisite:** Prerequisite or concurrent: HM 201

**HM 386: Introduction to the Gaming and Casino Industry**

3 Credits

Students will learn about those traits of the casino industry which distinguish it from other segments of the hospitality industry.

**Prerequisite:** Prerequisite or concurrent: HM 201

**HM 387: Casino Controls**

3 Credits

This course is an overview of controls used in casinos including an exploration of complimentary goods (comps) and services and credit.

**Prerequisite:** C or better in HM 201, HM 335, and HM 386; Concurrent: HM 388

**HM 388: Gaming Operations Management**

3 Credits

Students will learn casino mathematics, game protection, floor layout methods, departmental organizational structure, and performance analysis.

**Prerequisite:** C or better in STAT 200, HM 201, and HM 386; Concurrent: HM 387

**HM 390: Corporate Social Responsibility in Hospitality**

3 Credits

This course introduces students to issues of corporate social responsibility (CSR). The course is taught from hospitality perspective with following foci. Specifically, this course addresses the general historical development of CSR in details along with hospitality cases, fundamental concepts of CSR, different arguments for CSR, major frameworks of CSR, sustainability (environmental) issues, and hospitality cases and applications. The course will provide an opportunity to students to analyze CSR programs of major hospitality companies by applying the concepts and practices of CSR discussed in the course. Throughout the course, students will learn the significance of CSR initiatives, not only for the society, but also for the business. The course will discuss how a hospitality company’s CSR initiatives can be strategic so that they will improve brand image, reputation, and relationships with customers, employees and governments, which will result in improved performance for the company.

**Prerequisite:** HM 201

**HM 397: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**HM 407: The Sustainable Fork: Food Systems Decisions for Away-From-Home Eating**

3 Credits

The course will incorporate economic and managerial dimensions to the discussion of food decisions in foodservice away-from-home eating contexts, particularly emphasizing the behavioral aspect of decisions - how individuals (consumers, providers, managers) make choices in the food system, and what might be the consequences of these choices. The course will use evidence from multiple farm-to-fork perspectives to allow students to analyze food systems problems and solutions. It will also require students to engage directly with the local food service system through course projects and tours. The major topics of discussion will be organized under each of the value chain components of the farm-to-fork continuum: production, distribution, purchasing, preparation, and consumption. Specific topics under each of these value chain components will include: nutrition, food safety, food waste, sustainable practices, social justice, consumer utility, economic profits, ethics, government policy, and decision-making. In particular, the course will be motivated by economic theories such as: agency relationship, information asymmetry, transaction cost economics, and behavioral economics topics such as self-rationing, and time discounting.

**Prerequisites:** AGBM 170

**HM 411: Beverage Management and Wine Selection**

3 Credits

Management issues in beverage service and products. Students taste wines, brews, and distilled spirits.

**Prerequisite:** students must be at least 21 years old

**HM 413: New Product Development for Commercial Foodservice**

3 Credits

This course introduces students to a new product development process that requires coordination, communication, and integration throughout the organization.

**Prerequisites:** AGBM 170
Prerequisite: a grade of C or better in HM 329

HM 430: Advanced Food Production and Service Management
3 Credits

Simulation and application of technical, conceptual, interpersonal skills. Emphasis on group dynamics; improvement in managerial skills; management team functions. HM 430 Advanced Food Production and Service Management (3) This course is designed to give students an opportunity to gain experience in the wide range of skills and techniques that are normally associated with the duties of a hospitality manager. The skills and techniques that will be emphasized include, but are not limited to, duties involved in the planning, execution and evaluation of full-service, theme oriented a la carte dining. Students are expected to form a marketable theme and then develop, produce and evaluate an authentic dining experience. A successful dining experience is contingent upon both guest satisfaction and the achievement of financial goals. Main topics typically include: * Research, describe and produce an authentic restaurant environment from a selected theme * Demonstration of technical responsibilities involved in the development, production and evaluation of a wide range of food service systems including: sales, menu planning, recipe development and evaluation, pricing, purchasing, facilities management, personnel management and financial management * Operational needs and potential problems in a food and beverage operation during production and service * Timely and effective managerial problem identification and decision-making abilities * Interpersonal and teamwork skills both within a management team and with classmates as employees * Interaction with guests and evaluation of guests' dining experiences The course is a capstone management class in the foods sequence and is required of all Hospitality Management majors. Students must first complete the introductory food production course.

Prerequisite: A grade of C or better required for HM 330

HM 432: Contemporary Issues in Restaurant Management
3 Credits

A focus on special topics and current events in the restaurant industry. HM 432 Contemporary Issues in Restaurant Management (3) The purpose of this course is to focus on contemporary issues and current events in the restaurant and food service management. The course will attempt to keep the students as updated as possible regarding the industry by covering these topics and including a discussion of current events from headline news services and other electronic references. Students gain knowledge that is applicable specifically to the restaurant and foodservice industry. This course explores the global food and drink market in today’s challenging climate with analysis of trends and developments. Consequently, it becomes evident that increases in sales will be reliant on the competitive advantages that professionals achieve in marketing strategies, sales management, and especially in marketing communications (MARCOM) tactics and execution. This course exposes students to a wide range of hospitality marketing communications issues. Students gather information from electronic media, trade and travel media, and consumer media. Students explore hospitality MARCOM issues through semester-long individual projects. Main topics typically include: * Marketing versus selling strategies * Industry trends that affect advertising and sales especially Internet activities * Types of advertising media * Print advertising principles * Broadcast advertising principles * Foundations of direct marketing * Elements of public relations * Travel agency relations * Personal sales This is an elective course. Students must first take the hospitality marketing course in Hospitality Management.

Prerequisite: a grade of C or better for HM 442

HM 442: Hospitality Marketing
3 Credits

Marketing management in the hospitality industry, including analyzing the market through market research and developing a marketing plan. HM 442 Hospitality Marketing (3) The hospitality industry is entering an era in which operational and product parity between organizations and their properties is increasingly likely. This is so because of their shared access to technology, design and training devices. Consequently, it becomes evident that increases in sales will be reliant on the competitive advantages that professionals achieve in marketing strategies, sales management, and especially in marketing communications (MARCOM) tactics and execution. This course exposes students to a wide range of hospitality marketing communications issues. Students gather information from electronic media, trade and travel media, and consumer media. Students explore hospitality MARCOM issues through semester-long individual projects. Main topics typically include: * Marketing versus selling strategies * Industry trends that affect advertising and sales especially Internet activities * Types of advertising media * Print advertising principles * Broadcast advertising principles * Foundations of direct marketing * Elements of public relations * Travel agency relations * Personal sales This is an elective course. Students must first take the hospitality marketing course in Hospitality Management.

Prerequisite: a grade of C or better in HM 201, MKTG 221

HM 443: Sales Planning and Advertising for Hospitality Operations
3 Credits

Elements of sales management, advertising, promotion, and public relations as applied to hospitality organizations. HM 443 Sales Planning and Advertising for Hospitality Operations (3) The hospitality industry is entering an era in which operational and product parity between organizations and their properties is increasingly likely. This is so because of their shared access to technology, design and training devices. Consequently, it becomes evident that increases in sales will be reliant on the competitive advantages that professionals achieve in marketing strategies, sales management, and especially in marketing communications (MARCOM) tactics and execution. This course exposes students to a wide range of hospitality marketing communications issues. Students gather information from electronic media, trade and travel media, and consumer media.
