This class provides a lively tour around the world and through the millennia, telling the compelling story of humanity’s quest for alcohol. Beginning about 10,000 years ago, humans in China and the Middle East became more sedentary and began to rely more on the food they grew than from hunting and gathering. The cereal grains these early societies relied upon, such as rice, wheat, and barley, soon formed the basis for the first alcoholic beverages. Relying on ethnographic, biological, linguistic, and archaeological data, the course will introduce students to what we now know about how humans created and currently use fermented beverages across cultures. The course introduces students to the basic concepts of anthropology by highlighting the variability of alcohol use through time and space. From the world’s first beer in Henan, China in 7000 B.C. to modern breweries in Pennsylvania the class will explore the historical and societal impacts of alcohol production. From the ceremonial use of distilled sugarcane in southern Mexico to ritualized tailgating in the United States, students will be presented with the highly varied ways in which alcohol is consumed. Anthropology of Alcohol provides students with an understanding of the origins of one of the world’s earliest and most utilized psychoactive drugs as well as an appreciation for some of the contemporary challenges of alcohol use on college campuses in the US.

ANTH 146: Indigenous North America
3 Credits

This course is a review of the indigenous cultures of North America, located north of Mexico. It will cover the cultures that developed just prior to, during, and immediately after contact with non-indigenous explorers and pioneers. The primary themes include (1) the astonishing diversity of ways of life that developed across the North American continent; (2) the exploration of this diversity from the perspective of cultural ecology; and (3) trends of cultural change and continuity that contribute to present-day Native American cultures. Students will also explore the stereotypes that plague a richer understanding of and respect for Native American communities. The course will introduce students to cultures that differ from their own. ANTH 146 meets both United States cultures and International Cultures objectives. Approximately 50% of the course focuses on the indigenous cultures of North America prior to European contact and the later founding of the United States. The course will introduce students to the diversity of cultures that have existed in North America prior to the founding of the United States and Canada. Students will develop an understanding of similarities and differences among these non-US cultures and between these indigenous cultures and the culture of the US. Approximately 50% of the course will examine the impact these indigenous cultures have had on the historic and present-day United States culture - such as plant domestication, technological achievements, linguistic influence, and stereotypes.

ANTH 152: Hunters and Gatherers
3 Credits

A comparative study of hunter/gatherer societies using both archaeological and ethnographic evidence.

ANTH 176: Sex and Gender: A biosocial and comparative perspective
3 Credits

This course approaches the topic of sex and gender using an interactionist perspective: biological sex is an evolutionary adaptation, and gender is an adaptive social construction, and the two interact and mutually constrain one another. The focus is primarily on gender, the expression of behavior, rather than sexual behavior per se. The content of this course stresses both the common expression of cross-cultural patterns in gender roles and the diversity of those patterns through time and across space, surveying some cultural, biosocial, and evolutionary explanations of such patterning. Topics covered include the evolution of sex and primate perspectives on sex and gender differences, and biosocial aspects of sex and gender in disease and mortality, reproductive physiology and decision-making, subsistence practices, initiation, homosexuality and warfare, and power and politics.
ANTH 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

ANTH 215: Skin: Evolution, Biology and Culture
3 Credits
This course will explore the evolution and roles of skin and human life, including health, communication, and social wellbeing. ANTH 215 Skin: Evolution, Biology and Culture (3) (GN) Skin mediates the most important of transactions of human lives because it is our interface with the physical and social environments. Skin is constantly changing and reflects our age, ancestry, and health, while serving as our personal "billboard." In "Skin," students will explore the evolutionary and social histories of human skin, including the changes in structure and function it has undergone in the course of human evolution. Three unique attributes of human skin will be explored at length: 1) functional nakedness and sweetness; 2) the range of skin's natural colors; and 3) skin as a surface for decoration. The course begins with an overview of the structure and function of human skin and proceeds to an exploration of the comparative biology and evolution of skin in vertebrates, especially nonhuman mammals. Special attention will be paid to the outermost layer of skin, the epidermis. This will lead to a discussion of human hairlessness and sweating, and the role of skin in temperature regulation. Detailed exploration of the evolution of human skin color follows. The key role played by melanin pigmentation in protecting skin from sunlight will be discussed as a prelude to review of the evolution of human pigmentation in human dispersals. Discussion of the role of skin color in human interactions through history follows, including an introduction to the development and manifestations of color-based racism. The importance of skin as the organ of touch and as a vehicle for communication will then be reviewed. This will introduce the subject of skin as a mirror of human emotions, as in anger and blushing. Because aging of skin is one of the most visible signs of aging and is one of the most significant of human preoccupations, this phenomenon will be discussed in detail, and some of the most common skin diseases and problems associated with "wear and tear" will be surveyed. Considerable time and discussion will be devoted to skin decoration, with particular attention paid to the use of cosmetics and paints in the establishment of identity and the advertisement of sexuality in individuals, and the importance of tattoos in expressing individuality and group identity. The course will conclude with a speculative investigation of the future of human skin, including the prospects for artificial skin and robotic skin, and the expanding frontiers of skin decoration and communication via remote touch.
Prerequisite: ANTH 021 or ANTH 045
General Education: Natural Sciences (GN)

ANTH 216N: Sex and Evolution
3 Credits
This course introduces students to evolutionary theory and explores its relevance to the anthropological study of human sexuality and sex differences. In doing so, the course draws from in integrates findings from a wide array of disciplines, including evolutionary biology, genetics, neuroscience, endocrinology, behavioral ecology, anthropology, and psychology. After honing their evolutionary skills by investigating reproduction in other species, students will apply evolutionary principles to understanding human mating. Why do we prefer certain characteristics in a mate? How do these preferences differ between and within the sexes, and why? How do mating behaviors vary across cultures, and why are some behaviors more culturally variable than others? Other topics covered include infidelity, sexual jealousy, concealed ovulation, sexual conflict and rape, orgasm, parental care and abuse, and menopause. In understanding the evolutionary basis for a trait, it is helpful to understand its development. Thus, this course also covers the basics of sexual differentiation and investigates how variation in these processes might lead to variation in sexual orientation and gender identity. Students should take away not only a better understanding of human sexuality but also a way of thinking that helps them understand all living things.

ANTH 218: Genes, Evolution and Behavior
4 Credits
This course explores how genes influence our traits and how our traits evolve, with special emphasis on behavior. ANTH 218 Genes, Evolution and Behavior (4) (GN) Genes, Evolution & Behavior is a science course designed to introduce students to modern genetics and explore the genetic and evolutionary bases for human and nonhuman primate traits, with special focus on behavior. In particular, students will investigate the main features of DNA, genomes, genes and how genetic variation can be associated with both rare Mendelian traits and common traits that vary continuously. That is, we will consider how some traits vary primarily due to genetic variants with relatively large effects, while other traits vary due to differences between individuals in many genes with small effects, along with environmental differences. Students will gain an understanding of human and nonhuman primate behavioral ecology and how the evolutionary forces of mutation, migration, genetic drift and selection shape behaviors and their underlying genes. The approach to the material will be both practical and personalized, as students will be invited to assay their own DNA for particular genetic variants and to measure some of the traits studied (e.g., facial features using 3d photos, voice pitch, skin color, and personality traits) on themselves. During the course of the semester, we will consider how various physical traits such as facial appearance, voice, bitter tasting ability, skin pigmentation, disease risks, and body odor, and behavioral/psychological traits such as diet, territoriality, cooperation, altruism, cognition, mating behaviors and parenting are influenced by genes and shaped by the forces of evolution. Numerous hands-on experiments will be used to help students to visualize the sometimes-abstract methods and concepts occurring on unfamiliar scales of time and size. Students should come away from the course with a basic understanding of modern genetics, how genes influence the characteristics of organisms, and how anatomy, physiology, behavior and their underlying genes evolve. This course has a lab component and thus fulfills lab requirements, as well as serving toward the major and minor in Anthropology.

General Education: Natural Sciences (GN)
ANTH 220: Anthropology and Art/ifacts

3 Credits

This course examines anthropological approaches to the study of art works, their production, and function in diverse human societies, both past and present. ANTH 220 Anthropology and Art/ifacts (3) (GA;GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course examines the ways in which the discipline of anthropology has used art and artistic production as an interpretive lens, as a means to understand past human action, cultural behaviors and ancient societies as a whole. To take up this topic, the course is divided into five distinct units allowing a thematic and comparative analysis of a variety of human societies. We will critique the conceptual divide between "art/artifact," and "artifact," focusing on long-standing assumptions about philosophies of aesthetics, derived primarily from early modern European (Renaissance) notions of "art," Geographically, the course content has a global reach, but primarily focuses on the artistic production of the Americas, Africa and Oceania, challenging the label of 'primitive' that has historically been applied by modern Western approaches. During the course of the term, we will conduct analyses aimed at elucidating how scholars have used the interpretation of art objects to better understand the complexity of human experience, specifically in regards to categories such as gender, kinship, social hierarchy and cosmology. Each class meeting will consist of a lecture and also a discussion component, primarily focusing on the assigned readings to ensure complete comprehension and relevancy. Students will be evaluated on essays and exams. This course will satisfy general education requirements and provide a base for other courses in anthropology, art history, museum studies and history.

ANTH 221: The Ancient Maya

3 Credits

The Maya and their neighbors: Origin and Evolution of Classic Maya civilization. ANTH 221 The Ancient Maya (3) (GS;IL) (BA) This course meets the Bachelor of Arts degree requirements. Great civilizations emerged independently in several parts of the world beginning about 5500 years ago. Most students have had some exposure to the great Old World civilizations (Mesopotamia, Egypt, China), but know comparatively little about their counterparts in the New World. Among these the Classic Maya (AD 250-900) are by far the most familiar, and are heavily featured in popular culture. Many students have (or will) visit Maya sites as tourists, and be impressed by the flamboyant archaeological remains of these ancient people. Despite their visibility, The Maya are widely misunderstood and heavily sensationalized. ANTH 221 will trace the development of Maya culture from about 9000 BC to its eventual conquest by the Spaniards in the 1540s. Most important will be the Classic Maya interval, when Maya civilization achieved unparalleled heights in architecture, art, astronomy, mathematics, and writing. The Maya were participants in a much wider tradition of complex civilization in the region archaeologists call Mesoamerica, and several lectures will place them in this more general context. Much content of this course will come from research done by members of the Anthropology Dept. We have had a very long tradition of Mesoamerican/Maya research since the early 1960s and our department has heavily influenced both the study of Mesoamerican studies and complex cultures in general. These have proved to be very durable themes and have been at the heart of our department's success for almost a half century. This course will fulfill basic BA and GenEd requirements (GS, IL). It may also be used to fulfill an ANTH, ARSCI, and BANTH additional ANTH course requirement.

Prerequisite: any anthropology course on 100 level or below
Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
General Education: Social and Behavioral Sciences (GS)

ANTH 223: European Prehistory

3 Credits

The prehistory of European societies from the Upper Palaeolithic to the Iron Age. ANTH 223 European Prehistory (3) (GS;IL) (BA) This course meets the Bachelor of Arts degree requirements. This class explores the archaeological record of human societies in Europe from the Upper Palaeolithic to the Iron Age, spanning a 40,000-year period. Many archaeological sites, such as Stonehenge, are widely known but often misunderstood or sensationalized. ANTH 223 will trace the history of humans in Europe and provide the cultural, chronological, and environmental contexts to understand these places on the landscape. The class explores the extinction of Neanderthals and Pleistocene animals, the origins of art, the transition to agriculture, the beginnings of metallurgy, and the rise of complex societies. Emphasis is placed on the evidence for subsistence and production, funerary rites, changes in settlement, production of art, symbolism, the role of technology, and emergence of social hierarchies. The course introduces students to archaeological and anthropological concepts by viewing cultural groups in ecological and social context, and highlighting the variability of human adaptations to shifting climates and natural and social environments. This course will fulfill basic BA and GenEd requirements (GS, IL). It may also be used to fulfill an ANTH, ARSCI, and BANTH additional ANTH course requirement.

Prerequisite: 3 credits in 100 level or below ANTH course
Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
General Education: Social and Behavioral Sciences (GS)

ANTH 240N: Livelihoods and Ecosystems: Anthropological Approaches to Human-Environment Interaction

3 Credits

This course provides an anthropological understanding of the relationship between human subsistence and environment. The impacts of environmental change on human societies, and the roles those societies play in ecological modification, have deep roots in human evolution. This class focuses on providing students with tools to understand the foundations and cross-cultural expressions of resource use, environmental transformation, and their ecological interactions. The class has three goals: 1) introduce students to ways of thinking about ecological and social factors that shape variability in how humans define, use, and consume resources, 2) provide students the opportunity to explore archaeological, ethnographic, and ecological evidence of the interaction between human livelihoods and habitats across the
entirety of the human experience, 3) utilize those concepts and evidence to investigate variability in contemporary livelihoods, socio-ecological systems, and the dilemmas we all face in natural resource use and sustainability. Regarding the first goal, students are introduced to the natural science of conservation biology and community ecology, along with influential concepts in the social science of decision-making and cultural institutions of resource management. We review key models of ecosystem dynamics and social interaction from evolutionary ecology, disturbance ecology, niche construction, common property theory, and political ecology to approach questions about consumption, complex socio-ecological systems, and the role of humans in food webs and trophic interactions. The course then investigates archaeological and paleo-ecological evidence concerning the evolution of human subsistence systems, global settlement, intensification, and their implications for understanding environmental change over the last two million years. We take the broadest possible anthropological approach: we explore the diversity of ways that humans have made a living in the past, and investigate a wide variety of contemporary systems of resource use. We begin with the emergence of subsistence regimes among the earliest members of our genus and variability in environmental conditions through the Pleistocene. We then discuss the spread of modern humans and arguments concerning the ecological impact of people in the New World, as humans first colonized Australia, the Americas, and islands of Pacific and Indian Oceans. Finally, students investigate contemporary Indigenous systems of resource use and food production, exploring interactions between people and culturally constructed environments, commensal relationships between humans and non-human plants and animals, processes of intensification, and ecosystem function. The course incorporates these concepts with studies of inequality into new ways of understanding global issues of conservation, economics, and policy impinging on environmental change.

GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

ANTH 260: Building the Human Animal
3 Credits

An exploration of how the same genetic and developmental properties that shape animal evolution produced the unique human form. ANTH 260 Building the Human Animal (3) (GN) Honors Building the Human Animal: How do animal bodies adapt to their environment? How is the shape of our bodies encoded in our genes, and how can the same genes be used to make animals as different as a fly and a human? How does evolution create such variety in animal forms? What are the evolutionary pressures that made us human? Can the origins of the human body be seen in less advanced animals? These are questions being asked and answered by the relatively new field of evolutionary and developmental biology (evo-devo). We will investigate these questions and learn how their answers help us better understand human evolutionary history. Readings will include excerpts from three classic and accessible popular science books in conjunction with articles from the primary literature. After a brief introduction into the broad field of Anthropology, we will learn how Darwin developed his theory of Natural Selection and show that evolution can actually be observed and tested in living organisms, such as the Galapagos finch. Next we will explore how genes are used to construct animals from single cells to the adult. We will find that similarities between humans and other animals run surprisingly deep. We will follow with a discussion of how these genetic, developmental, and selective pressures affected the evolution of our body from lowly fishes to the walking, large-brained primates that we are. Finally, we will discuss how these exciting advances can be communicated to the general public through popular writing and multimedia museum exhibits. This course will consist of lectures and discussions of the readings.

General Education: Natural Sciences (GN)
Honors

ANTH 271: Parasites and Human Evolution
3 Credits

Advance our understanding of human evolution by studying the ecologies and evolutionary histories of our parasites. ANTH 271 Parasites and Human Evolution (3) (GN) Honors The goal of this course is to advance our understanding of human evolution by studying the ecologies and evolutionary histories of our parasites. Many of these parasites flourish only under very specific human behaviors and habitats, are wholly dependent on us, and have evolved with us for thousands or millions of years. Therefore, by asking when and how we first acquired those parasites, under which environmental and cultural conditions we are the most susceptible, and how the parasites have evolved and adapted to us and in response to them, we can gain considerable insight into our own evolutionary history. As examples, the lifecycle of tapeworms is dependent on our consumption of meat, the speciation of body and head lice was likely coincident with the development of clothing, and the spread of endemic malaria was likely associated with agriculture. A series of human parasites will be studied in sufficient depth - from biology to genetics to population dynamics and so on - to facilitate a holistic consideration of the implications for human evolution, population history, and culture.

Prerequisite: one introductory course that covers some aspects of evolutionary biology or parasitology, for example: ANTH 021, BIOL 110, ENT 202, MICRB 106, or MICRB 201.
General Education: Natural Sciences (GN)
Honors

ANTH 294: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ANTH 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ANTH 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
ANTH 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ANTH 303: Race and Gender in the Americas: Latin American and Caribbean Cultures
3 Credits

Utilizing a theoretical framework of intersectionality, this course examines historical and cultural constructions of race and gender in Latin America and the Caribbean. AFAM 303 / ANTH 303 / WMNST 303 Race and Gender in the Americas: Latin American and Caribbean Cultures (3) (GS;IL) Utilizing a theoretical framework of intersectionality, this course examines how racial, gender, sexual, and class identities are constructed in Latin American/Caribbean societies. The course applies an anthropological perspective to a wide range of countries in the region to reflect on how historical events such as the conquest, colonization, slavery, and independence movements are relevant to understanding the region today, as well as how race, gender, and sexuality inform contemporary themes of empire, nation-building, imperialism, neo-colonialism, revolution, violence, militarization, social movements, religion, neoliberalism, U.S. involvement/relations, and popular culture. The course addresses issues of power, culture, racial formation, and citizenship by incorporating interdisciplinary material beyond ethnography such as newspapers, grassroots media, biographies, films, music, novels, personal testimonies, etc. Rooted in feminist anthropological scholarship, this course emphasizes how power (from above and below) and culture mediate relationships between individual/community agency and institutions/structures. As an effort to encourage students to think about Anthropology and culture beyond superficial or romanticizing celebrations of multiculturalism, food, and music, the course stresses the theoretical importance of situating power and privilege amidst difference. We conceptualize culture not only as socially transmitted patterns of behavior and ideas/meanings, but as a complex and dynamic process/medium grounded in unequal relations in which power is constituted and resisted. The ethnographic emphasis of the course centers on the complex lived realities and voices of people, encouraging students to learn, understand, and respect cultural difference. The course offers students a broad sense of how power is central in the production of knowledge (particularly within the disciplines of Anthropology and History). Students will critically engage an array of topical issues in Latin America beyond dichotomous thinking. Discussion of course material includes contemplating issues of ethics, subjectivity, bias, and privilege. Conversations regarding processes of “Othering” and traditional “us vs. them” debates that often occur when discussing developing countries will prompt students to situate their own power/privilege and challenge our assumptions and preconceived notions of Latin America. Moreover, this course teaches Latin American Cultures within a global context of racialization. As such it also stresses the historical and contemporary social, economic, cultural and political significance of the U.S. in Latin America, to demonstrate how we are connected and responsible to what happens “over there.” In order to promote service learning, a core tenant of feminist pedagogy, this course also offers students the opportunity to participate in an optional embedded program entitled “Cuba: Identity, Diversity and Popular Culture”. This two-week course in Havana, Cuba promotes interactive learning in and outside the classroom with international study. This course component successfully combines academic classes, hands-on activities, and service learning.

Cross-listed with: AFAM 303, WMNST 303

International Cultures (IL)

General Education: Social and Behavioral Scien (GS)

ANTH 321: Intellectual Background of Archaeology
3 Credits

Introduction to primary sources on the development of archaeology as a scientific discipline.

Prerequisite: ANTH 002, ANTH 045

Writing Across the Curriculum

ANTH 375Q: Anthropology of Food Honors
3 Credits

This course is an anthropological approach to understanding temporal and spatial variation in human food consumption and nutrition: why do we eat what we eat? To answer this question, we approach it from multiple perspectives: biological, evolutionary, ecological and social. In this course, students will investigate how food tastes, preferences, and diets of different individuals and societies both in the past and present are affected by genetic variation, by processes of individual and cultural learning, by evolutionary and ecological forces and histories of ecological and social interaction, by existing social contexts and structures, and by global political and economic forces. Topics include a broad survey of human and nonhuman primate diets and their physiological and behavioral correlates; theories of optimal diet breadth and prey choice; fossil and archaeological evidence for early human diets; genetic adaptations to diet; metabolic syndrome; food security; food taboos; the origins and cross cultural uses of spices; ecological impacts of hunting, gathering, and agropastoralism especially relative to food webs, biodiversity and sustainability; cultural diversity in the social uses and meanings of food and the sharing of food and how sociopolitical contexts have shaped the overexploitation of certain resources throughout history. Students will come away from this course with an understanding of the diversity of human foodways through time and space: how biology, culture, and ecology interact to shape the food we eat, and how the food we eat shapes us.

RECOMMENDED PREPARATIONS: ANTH 21; ANTH 45

General Education - Integrative: Interdomain Honors

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

ANTH 380: Anthropology Museum Studies
3 Credits

Introduction to the history, significance, and operation of anthropology museums. ANTH 380 Museum Studies (3) This course introduces students to the operation of anthropology museums and to the growing field of museum studies. The course explores the historical setting within which these institutions evolved and the role of museums in the development of anthropology. Students will learn about the primary
functions of museums through individual and group projects. Other topics to be covered include museum organization and administration, collection management, curation and conservation, research and education, public relations and financing, and ethical and legal issues. Students will gain hands-on experience with the planning and implementation of a display in the Matson Museum of Anthropology. In addition, students will learn about museum careers, museum developments in other countries, and contemporary controversies, such as repatriation and the shifting role of museums in contemporary society.

The course will provide the student with an introduction to the behind-the-scenes nuts-and-bolts of daily museum operations but also to the institutional role of museums as the preservers, interpreters, and communicators of humanity’s cultural heritage. Students are evaluated based on two papers, work on Matson Museum exhibits, and participation in class discussions. This course fulfills a 3-credit requirement for additional courses for the anthropology major. This course expands on the history of anthropology and professional employment in the field that is presented in introductory courses.

ANTH 395: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

ANTH 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

ANTH 401: Human Evolution: The Material Evidence
3 Credits

Human origins as seen in the fossil record and comparative biology of humans and their primate relatives.

Prerequisite: ANTH 021

ANTH 403: Evolution of Human Walking
3 Credits

An in depth analysis of the biology, biomechanics, evolutionary history of human walking and running.

Prerequisite: ANTH 021

ANTH 405: Primatology
3 Credits

Nonhuman primate origins, evolution, comparative physical and behavioral characteristics, ecological context, phylogeny and taxonomy; and their importance in anthropology.

Prerequisite: ANTH 021

ANTH 408: Anthropological Demography
3 Credits

Analysis of demographic studies in traditional and very small populations. ANTH 408 Anthropological Demography (3)(BA) This course meets the Bachelor of Arts degree requirements. This course examines population-related problems from an anthropological perspective. Special emphasis is placed on ecological and economic approaches to the study of population dynamics in small-scale, preindustrial societies. This is an advanced undergraduate course that builds upon introductory anthropology and leads the student into more difficult demographic problems that are linked with economics, politics, religion and other cultural factors that shape population and population change. While the course is designed to introduce any of the basic analytical methods of demography, attention is focused primarily on fundamental theoretical issues concerning population growth, resources, fertility, mortality, age structure, and household demography in traditional societies. Data is drawn from ethnographic studies of living populations, from historical demography, and from paleodemography (the reconstruction of population patterns from skeletal samples). There will be three take-home problem sets. These will be a mixture of short essay questions and simple numerical exercises that can be solved on a pocket calculator or a spreadsheet. This course fulfills a 3 credit 400-level requirement for the Anthropology major and minor.

Prerequisite: 3 credits in anthropology

ANTH 410: Osteology
4 Credits

Introduction to the systematic study of the human skeleton from an evolutionary developmental biological perspective. ANTH 410 Osteology (4) This course introduces students to the aspects of the human skeleton and dentition that are of anatomical, archaeological, forensic, and developmental significance. Topics include the identification of skeletal and dental structures; the distinction between normal and pathological bone; the estimation of age, sex, and stature from skeletons; bone metabolism; growth and development; and the functional aspects of musculoskeletal and dental systems. Up to one-half of the course is spent on bone identification and skeletal anatomy. Lectures are supplemented by labs that provide practical experience in the identification of individual bones and anatomical structures, age and sex estimation, and the differentiation of abnormal from normal bony structures. It is absolutely essential for students to attend labs to familiarize themselves with bone specimens and casts. At the close of this course, students are expected to be able to recognize human bones and be familiar with anatomical terms, the bony landmarks that define their shape, and the relation of those bones with various soft-tissue structures. Students will have a basic grasp of bone growth and development, as well as how to identify an individual’s general characteristics from the skeleton, such as age, sex, and prior life-history events including disease and trauma. The course fulfills a 400-level elective for the Anthropology (BA) major and minor, as well as the Archaeological Science and Biological Anthropology (BS) degree programs.

Prerequisite: 3 credits in anthropology, 3 credits in the biological sciences, or concurrent enrollment in ANTH 401 or ANTH 501

ANTH 411: Skeletal Forensic Anthropology
3 Credits

An introduction to anthropological forensic science with an emphasis on what can be learned from human skeletons and archaeological recovery methods. ANTH 411 Skeletal Forensic Anthropology (3) This course is a survey of forensic anthropology focusing on human skeletal
remains and archaeological recovery methods. Emphasis is placed on field methods used to collect human remains from surface and buried contexts; taphonomic processes; estimating age, sex, stature, and ancestry from human skeletons; recognizing signs of trauma and scavenger damage; and identifying individuals from skeletons. Lectures are accompanied by class discussions and complemented by practical lab sections closely tied to lecture materials. There will be two exams, a midterm and a final, and students are responsible for preparing a poster and presenting a semester-long research project. This course is related to existing ANTH 410, Human Osteology, and proposed course ANTH 413, Molecular Forensic Anthropology. It fulfills a 400-level requirement for the anthropology major or minor, as well as the university’s Forensic Science major.

Prerequisite: ANTH 021 or ANTH 410 or Forensic Science major

ANTH 412: Settlement Demography

3 Credits

Examination of the demography and ecology of human settlement systems in the preindustrial past. ANTH 412 Settlement Demography (3) This seminar will examine the population dynamics of human settlement systems in preindustrial societies, living, historic, and prehistoric. The focus will be on subsistence-level agrarian settlements, but some attention will also be paid to settlement patterns in hunter-gatherers, in market economics, and in complex societies. After reviewing basic assumptions and problems of working with spatial data, the course will examine processes determining settlement size, composition, and location on the micro-level (i.e. that of individual households, farmsteads, hamlets, and villages) and then pass on to regional patterns of transport, migration, and defense. The processes of site colonization, settlement expansion and contraction, site abandonment, and re-colonization will all be considered in detail. Since human settlements are always non-randomly distributed across spatially-heterogeneous landscapes, some basic landscape ecology will be presented in the course. Some fundamentals of geostatistical analysis will also be taught, although the course is not intended to be a survey of quantitative geography or spatial analysis. Rather, it is designed to be a more specialized follow-up to ANTH 408 (Anthropological Demography); the new course builds upon the basic explored in ANTH 408 by extending them into the spatial domain. During the last quarter of the semester, students will split into 2-3 teams, each of which will re-analyze settlement data from a region and time period of its choice for presentation to the rest of the class. The proposed course will provide 3 elective credits toward the undergraduate major and minor, and will be open to graduate students as well. The overall aim is to produce scholars who can think in creative ways about the dynamics of settlement systems in their own reading and research. The course should be of interest to archaeologists, anthropological demographers, ethnologists, and other students interested in human population science, especially as it relates to preindustrial society.

Prerequisite: ANTH 408

ANTH 413: Molecular Forensic Anthropology

3 Credits

An introduction to the field of the application of DNA methods to estimating forensically useful phenotypes. ANTH 413 Molecular Forensic Anthropology (3) This course is a survey of forensic anthropology focusing on human genetic methods. Emphasis is placed on laboratory methods for analyzing DNA variation, the genomic and geographical distributions of genetic variation, estimating genetic ancestry, sex, pigmentation, facial features, and other traits. Lectures are accompanied by class discussions and complemented by practical lab sections closely tied to lecture materials. There will be three exams and students are responsible for preparing a poster and presenting a semester-long research project. This course is related to existing ANTH 411, Skeletal Forensic Anthropology. It fulfills a 400-level requirement for the anthropology major or minor, as well as the university’s Forensic Science major.

Prerequisite: ANTH 021 or Forensic Science major

ANTH 416: The Evolution of Human Mating

3 Credits

The Evolution of Human Mating is a science course designed to familiarize students with the primary literature on the evolution and development of human mating behavior and sex differences.

Prerequisite: C in ANTH 216 or permission of program

ANTH 420: Archaeology of the Near East

3 Credits

Culture of the Near East and India from Paleolithic times through the Bronze Age.

Prerequisite: ANTH 008, ANTH 009, ANTH 011, or ANTH 012 Cross-listed with: JST 420

Bachelor of Arts: Other Cultures

Bachelor of Arts: Social and Behavioral Sciences

ANTH 421: Intro to Geospatial Science in Anthropology and Archaeology

3 Credits

This course is a practical, data driven, introduction to applications of Geospatial tools in anthropological and archaeological research. ANTH 421 Intro to Geospatial Science in Anthropology and Archaeology (3) As anthropologists, we are interested in humans, how humans interact with each other, and how that interaction is modulated by space and place. The purpose of this course is to introduce students to the basic concepts of spatial theory in anthropology, and the use of GIS (Geographic Information Systems) as a tool in anthropological and archaeological research designs. Students will gain familiarity with geospatial technologies, their use as a tool for data creation, storage and manipulation, and a broad array of data analyses. The course is relevant to anyone documenting or investigating spatial dimensions of human social behavior. Students will gain familiarity with GIS software, its use as a tool for data creation, and a broad array of data analyses. This class will be offered each Fall semester. It will introduce students to sources and uses of data in addressing anthropological or archaeological research questions. It will prepare the student for more advanced spatial analysis courses such as Advanced Geospatial Science for Anthropologists and Archaeologists. Students will be expected to develop a research project which uses GIS as a tool to address broader anthropological research questions. The class will culminate in the development of a research contract for a future fieldwork project. A list of sample topics is provided. Students will be expected to develop an original and functioning GIS which addresses their research question. The purpose of this exercise is to introduce the student to all stages in the development and operationalization of an anthropological research GIS in the development of an archaeological or anthropological project. There are two components to this class: classroom and labs. The
classroom component will consist of lectures and discussions. The student will receive hands-on experience with GIS applications during the laboratory component of the class. The laboratory component will enable students to gain experience applying the concepts discussed in class to archaeological data through use of GIS programs in a technology classroom setting. Data used in the laboratory exercises derive from actual anthropological and archaeological fieldwork. Students are expected to complete labs in one of the several computer labs across campus that have GIS software installed. Grades are based upon the completion of 12 lab exercises, a draft of a proposed contract, the final contract and a short presentation of the proposed contract to the class. This course will fulfill three credits of the requirement in both the Minor and Major in Anthropology. This is the first part of a two part course. The second part of this course is called Advanced Geospatial Science for Anthropologists and Archaeologists.

Prerequisite: ANTH 001 or ANTH 002

ANTH 422: Meso-American Archaeology and Ethnography

3 Credits

Survey of ethnohistorical and ethnographic patterns of Meso-American society; origin and development of ancient civilization in Mexico, Guatemala, and Honduras.

Prerequisite: ANTH 008, ANTH 009, ANTH 011, or ANTH 012
Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences

ANTH 423: The Evolution of American Indian Culture

3 Credits

Historic and archaeological sources used to trace American Indian lifestyles from the first immigrants to the period of Euro-American contact.

Prerequisite: 3 credits in anthropology
Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences

ANTH 424: Andean Ethnology and Archaeology

3 Credits

Cultures of the Andes from earliest settlements to Inka Empire; includes discussion of life in modern Andean communities. ANTH 424 Andean Ethnology and Archaeology (3)(BA) This course meets the Bachelor of Arts degree requirements. When the Spanish conquistadors arrived in the Andes in 1532, they were astonished by the complexity and grandeur of the Inca Empire, which stretched along western South America incorporating a multitude of different societies that occupied a seemingly inhospitable landscape with coastal deserts, rugged mountain chains, and dense jungles. This course traces out the history and development of Andean cultures from the earliest peopling of the continent to the rise and fall of the Inca Empire. Using archaeological, historical, and ethnographic sources, students will learn about the relationship between Andean societies and their environments and landscapes, as well as the economic, social, and political changes that transformed small egalitarian communities through time into large, stratified states. Through the course, students will not only gain a strong background in pre-Columbian Andean history but will also hone their skills in the use of different lines of evidence to reconstruct the past while learning to critically evaluate existing interpretations. All students are expected to participate actively in discussions. Lectures will be supplemented by illustrations (slides, handouts, videos), and students will learn how societal dynamics are expressed in material culture and in the organization of architecture and settlements. Grades will be based on the results of three exams, a short paper, and participation in discussions. The course complements existing courses at the same (400) level on the archaeology of Mesoamerica (ANTH 422) and North America (ANTH 423). It continues the discussion (at a higher level) of some of the themes covered in ANTH 008 (Incas, Aztecs, Mayas). It fulfills the archaeology credits requirement for the major and is one of the 400-level courses that can be used for the minor. For students outside the major, it may be used to meet the Other Cultures or the Social Sciences requirement in Bachelor of Arts programs.

Prerequisite: ANTH 002, ANTH 045
Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences

ANTH 425: Zooarchaeology

3 Credits

Introduction to the systematic study of animal skeletal remains from archaeological sites.

Prerequisite: ANTH 002 or ANTH 021

ANTH 426W: Archaeological Laboratory Analysis

3 Credits

Scientific laboratory methods used in the analysis of ceramic and lithic artifacts. ANTH 426W Archaeological Laboratory Analysis (3)
This course, Archaeological Laboratory Analysis, employs experiential learning to teach students how to ask and answer archaeological questions using real data. While students learn the fundamentals of interpretation in other courses using already processed computer (and internet) assembled data sets, this is not how archaeological data are analyzed. Archaeological data emerge from the ground covered with dirt and the analyst must learn how to identify and measure their important attributes, and interpret what they mean. This class will provide a hands-on learning experience where students learn how to examine and use physical remains to reconstruct and interpret human behavior. Students in the Anthropology program currently learn this critical step on an ad hoc basis by working with faculty on individual research projects. This approach, while effective, is neither systematic nor comprehensive. This is a course on analytical systematics. It provides students with an introduction to problem formulation, artifact processing, artifact cataloging, attribute identification, artifact classification, analysis, data illustration and photography. At the same time, students will be introduced to two separate and distinct approaches to interpretation: 1) morphological/diagnostic analysis, and 2) direct experimentation and replication. Students will be graded on the completion of nine laboratory exercises. These exercises will require that students identify the research question being addressed, the theoretical assumptions used in the analysis, the data sample, the analytical method(s) employed, and the conclusions reached. The exercises will also request that students identify personal insights and difficulties encountered during the analysis. This course fills a vital position in training undergraduate majors by providing them with practical training in research design and data analysis. It also provides the logical link between our general courses in prehistory, our courses on archaeological theory, and our method courses on field methods of data recovery. All of these courses intersect in the archaeological laboratory where data interpretations are made and new
information about the past takes shape. In addition to contributing to both the BA and BS undergraduate majors and minors, this course will also provide a framework for training graduate students who enter the program with minimal field and laboratory training in archaeology.

**Prerequisite:** ANTH 007 , ANTH 008 , ANTH 009 or ANTH 011

Writing Across the Curriculum

ANTH 427: Forensic Archaeology

3 Credits

Application of archaeological techniques to crime scene investigations, with practical experience in field and laboratory contexts.

**Prerequisite:** ANTH 002

Writing Across the Curriculum

ANTH 428: Archaeological Methods and Theory

3 Credits

Scientific methods as applied to archaeological data: evolution, ecology, diffusion, and cyclicism theory.

**Prerequisite:** ANTH 007 , ANTH 008 , ANTH 009 , ANTH 011 , or ANTH 012

ANTH 429: Paleoethnobotany

3 Credits

Introductory course in paleoethnobotany, the study of the interrelationships between people of the past, natural environment, and plant resources. ANTH 429 Paleoethnobotany (3)This course is a survey of the fast-developing field of paleoethnobotany-- also known as "archaeobotany" or "phytoarchaeology"-- that involves the extension of ethnobotany into the past, emphasizing archaeological plant remains and study of the historical dimensions, complex dynamics, and myriad interrelations between people and plant resources. The primary goals of the course are 1) to promote understanding of the vital interplay between the natural environment and human societies, with their diverse systems of belief and resource use, especially those of the past but with relevance to the present; and 2) to foster an appreciation for what modern paleoethnobotany involves as a subdiscipline or specialization in archaeology, related to both anthropology and the plant sciences. The course begins by considering the history and nature of the field, including parallel developments in plant biology. The first half of the semester entails weekly sessions that focus attention on the plant organism, sources of archaeobotanical data, taphonomic issues, and the major classes of archaeobotanical materials. Fundamental issues involved in fieldwork, and the variety of laboratory concerns and methodologies specific to paleoethnobotany as whole and with regard to individual subareas are addressed. Individual laboratory sessions highlight the different preservation states that affect ancient plant materials, as well as methods of identification and analysis. In the second half of the semester, attention is focused on theory and application, issues central to and/or addressed by paleoethnobotany as a subdiscipline of archaeological anthropology. The course follows a seminar style, with substantial participation by students, including individual presentations, laboratory study, and analysis. Learning is augmented and enhanced by use of various visual aids, along with modern comparative specimens and actual archaeological plant remains. ANTH 429 will fulfill 3 credits of the additional courses in the Anthropology minor and majors. ANTH 2 is a prerequisite.

**Prerequisite:** ANTH 002

ANTH 431: Advanced Geospatial Science for Anthropologists and Archaeologists

3 Credits

This course is an intensive, data driven, treatment of the use of geographic information systems in anthropological and archaeological research. ANTH 431 Advanced Geospatial Science for Anthropologists and Archaeologists (3)As anthropologists, we investigate how humans evolved, behave, define groups, and interact socially. Examining how these processes are shaped by space and place is central to the anthropological enterprise. The use of geospatial science in anthropological and archaeological research is now commonplace. Geospatial technologies are now intimately involved in anthropological and archaeological research designs. The course objective is to expose students to advanced concepts and techniques of conducting geospatial science research in anthropological and archaeological contexts. The course is a continuation and development of the introductory geospatial science course and it will fulfill three credits of the requirement in both the major and minor in Anthropology. Students will develop an in-depth understanding of anthropologically and archaeologically tailored geospatial project design and implementation. Students are expected to complete the work for the course in one of several computer labs across campus that has the appropriate software installed.

**Prerequisite:** ANTH 421

ANTH 432: Environmental Archaeology

3 Credits

Introductory course in Environmental Archaeology, with emphasis on method and theory in the subfields archaeobotany, pedoarchaeology, and zooarchaeology. ANTH 432 Environmental Archaeology (3)This class is a survey of the fast-developing field of environmental archaeology, or archaeobiology, which encompasses archaeology, the earth sciences, plant biology, and zoology. Environmental archaeologists apply techniques and insights obtained from these fields to questions concerning the relationships among humans, cultural systems, and the natural world, as reflected in the archaeological record. The general goal of the course is to promote understanding of the vital interplay between human societies, with their diverse systems of belief and cultural practices, and the natural environment, with emphasis on human interactions with biotic resources. Instruction is by lecture, supplemented by laboratory sessions emphasizing hands-on experience. Weekly topics are explored through selected readings and class discussions, augmented with laboratory assignments (practical exercises) variously focused on specific types or classes of archaeobiological materials. ANTH 432 will fulfill 3 credits of the additional courses in the Anthropology minor and major, as well as the Archaeological Science major. ANTH 002 is a prerequisite.

**Prerequisite:** ANTH 002

ANTH 433: Archaeological Ethics and Law

3 Credits

Introductory course that examines prominent ethical and legal issues in archaeology integral to modern applied research and practice. ANTH 433 Archaeological Ethics and Law (3)This course explores the ethical, legal, and practical dimensions of modern archaeology through a consideration of the following topics: archaeology as a profession; archaeological
ethics; the relationship between archaeology and others (the public, ethnic groups, avocationalists, collectors, etc.); international and national approaches to archaeological heritage management; the antiquities market; maritime law, underwater archaeology, and treasure hunting; cultural resource management in the United States; and archaeological outreach and education. Students are introduced to a variety of legal and ethical issues in archaeology that span local to international scales. Through lecture, discussion, and readings, students will consider the archeology and ethics of ownership and stewardship, including issues centered on intellectual property rights, representation, repatriation, and reburial of cultural properties. They will be able to identify the various stakeholders in contemporary archaeology, and assess their values and interests in issues such as the treatment, ownership, and disposition of human remains, heritage sites, submerged cultural resources, and antiquities. They will consider growing problems with illicit collecting and excavation, illegal trade, and global concerns centered on the international trafficking of antiquities, and will be variously exposed to relevant national and international legislation involving cultural patrimony and management of antiquities, including international treaties such as the 1970 UNESCO Convention on Cultural Property, and related pieces of US federal legislation. The 1990 Native American Graves Protection and Repatriation Act (NAGPRA) and the Archaeological and Historic Preservation Act (ARPA) of 1974 figure prominently in the course. In general, upon completion of the course students will come to have a stronger appreciation of archaeological ethics and "archaeopolitics" they will have a good understanding of the U.S. Secretary of the Interior’s standards (36CFR61) for professional archaeologists and will be able to assess and evaluate contemporary issues of archaeological ethics and law in the context of modern practice. ANTH 2 is a prerequisite of this course.

Prerequisite: ANTH 002

ANTH 435: Ancient Economy

3 Credits

The course examines the comparative organization and development of ancient economies in both the Old and New Worlds. ANTH 435 Ancient Economy (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the origin and development of ancient economy from its earliest beginnings to the advent of complex monetary economies that existed prior to the industrial revolution. It examines the common economic structures found in ancient foraging, pastoral, and agricultural societies and how those structures were modified and transformed as these societies were integrated into more complex monetary economies. The goal of the course is to develop a comprehensive understanding of ancient economies, the function and purpose of their economic structures, and how those structures of production and distribution were modified and retained within the modern economies that we live in today. While the economy is often approached as its own field of study, this course shows how and why the economy was embedded in social, political and religious institutions that were so prominent in the ancient past. The course will discuss the domestic and institutional economy, the origin and organization of ancient market systems, the development of urban centers and the economies that supported them, the role of merchants in ancient societies, and origins of many of our 21st century institutions including money, banking, insurance, and the organization of craft production before the industrial revolution. The class draws upon the rich literature in archaeology, history and ethnohistory that examines the structure of ancient societies. It employs a cross-cultural perspective to model ancient economies and to investigate how social forces influenced their development. A range of different historic and prehistoric societies are discussed each semester to illustrate the cross-cultural perspective. The societies discussed vary from semester to semester and include, but will not be limited to, the ancient Sumerian, Assyrian, Greek, Roman, Mongol, Aztec and Inka societies. Examples will be selected that include societies at different scales of complexity from simple hunting and gathering groups to pre-industrial states. The course fulfills the Social and Behavioral requirements in Liberal Arts. It also fulfills specific major and minor requirements for the BA in Anthropology. The BS in Archaeological Sciences, and the BS in Bioanthropology. The course is also relevant for students in CAMS, History, and Ancient History that are interested in a comparative study of New and Old World civilizations.

Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

ANTH 440: South American Tribal Societies

3 Credits

Ethnographic survey of tribal societies in South America. Special emphasis on non-Andean area.

Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences

ANTH 441: From Stone Ax to Uzi: Tradition and Change in the New Guinea Highlands

3 Credits

This course explores cultural change and innovation among tribal peoples of Highland New Guinea from stone tool technology to globalization. ANTH 441 From Stone Ax to Uzi: Tradition and Change in the New Guinea Highlands (3) (IL) The indigenous peoples of Highland Papua New Guinea were unknown to the outside world until the 1930s and began to be seriously influenced by European contact only after the First World War. At first contact with Europeans, the million or so people living in the Highlands used a stone tool technology, had no knowledge of the wheel, and lived in small, politically and economically independent local groups. They presented a major population engaged in a way of life typical of human society in a technologically simpler past, and have been crucial in anthropology’s discussion of the general characteristics of human culture and institutions. The study of these cultures also provides an opportunity to explore the processes through which these peoples have assimilated thousands of years of technological, political, and economic innovation in a very brief period, while simultaneously maintaining and recreating their cultural identity, despite the impact of colonial rule and global influences. Apart from the specific history of these populations, the course will also give students insight into the processes of globalization and internationalization that necessarily effect changes in traditional cultures, and will require that they consider the advantages and disadvantages that accrue from these processes. Among the topics this course will cover are traditional and current approaches to dispute settlement, economic changes that entail moving from subsistence agriculture as the basis of the economy to cash cropping for a global market, the ecological effects of extractive industries such as mining and how those effects are translated into social and cultural domains, the reorganization of gender roles, the incorporation of politically independent tribal units into a centralized, powerful state, and the demise of traditional religion with the conversion to Christianity. Students will be evaluated on contributions to class discussion, essay exams, a term paper and a brief oral presentation based on that paper.
The course will provide support and depth for more general courses dealing with warfare, gender, religion, politics and economics and specific understandings for programs devoted to exploring cultural variation and modernization.

**Prerequisite:** ANTH 045
International Cultures (IL)

ANTH 444: Primitive Warfare

3 Credits

Critical overview of the ethnography and theory of primitive warfare. ANTH 444 Primitive Warfare (3) Anthropology 444 is concerned with the phenomenon of lethal group violence in tribal societies so called "primitive war". Through lectures, readings, and research projects, this course reviews anthropological approaches to the study of primitive war, focusing both on ethnographic examples and on theoretical approaches. The course covers topics such as explanations, traditional and modern, for the existence of warfare; the primate background to human warfare; and the social causes and individual motives leading to warfare in tribal societies; as well as its consequences for those societies. Students become familiar with both general and particular manifestations of primitive warfare, and are exposed to individual ethnographic cases of primitive warfare as they motivate a variety of theoretical paradigms. All students are expected to attend all lectures and to complete all weekly readings. At the last class meeting of each week, a rotation of students are assigned to organize and direct the class discussion of the week's readings in the light of the lectures earlier in the week. Performance in this activity constitutes 40% of the student's grade. Another 40% is earned in the research term paper each student must prepare. The final 20% of the grade is based on overall student contribution to class discussion, particularly during those weeks when the student is not a discussion leader. There is no final examination. This course can be used to fulfill major and minor requirements in Anthropology. Because warfare was and often still is a major activity in most tribal societies, this course provides an important complement to area-focused ethnography and archaeology courses such as ANTH 241 (Peoples and Cultures of Highland New Guinea), ANTH 422 (Mesoamerica), ANTH 423 (North America), ANTH 425 (American Southwest), ANTH 440 (Lowland South America), and ANTH 447 (Africa). This course is also relevant to topically focused course such as ANTH 450 (Comparative Social Organization), ANTH 451 (Economic Anthropology), ANTH 454 (Political Anthropology), and ANTH 456 (Cultural Ecology). On the graduate level, this course addresses central topics covered in ANTH 522-523 (Ecological Theory in Anthropology), ANTH 556 (Social Organization of Traditional Societies), and ANTH 559 (Behavioral Anthropology).

**Prerequisite:** ANTH 045 ; and ANTH 002 or ANTH 021

ANTH 446: Ethnography of the United States

3 Credits

Ethnographic descriptions of various dimensions of life in the United States. ANTH 448 / AMST 448 Ethnography of the United States (3) Ethnographic descriptions of various dimensions of life in the United States. The course covers uses of ethnography in American Studies toward an understanding of social and cultural communication and performance. The application of ethnography and concepts of cultural anthropology to complex societies such as the United States is discussed. The course teaches students to use ethnographic methods for research of American society and culture. Attention is given to the ethics and issues of ethnographic fieldwork. The course satisfies the "area" requirement in "society" for American Studies majors.

**Prerequisite:** ANTH 045

ANTH 453: Anthropology of Religion

3 Credits

Traditional and modern religious and historical and contemporary religious movements from an anthropological perspective. ANTH 453 Anthropology of Religion (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the origin, evolution and social function of religion from a cultural materialist perspective. It will begin with a general discussion of an anthropological approach to the study of religion, using numerous examples from different cultures for purposes of illustration. Following a discussion of several topics...
relevant to the anthropological study of religion—including magic, rituals, witchcraft and mythology—the course will focus on the relationship between politics and religion: first discussing the role of religion as a mechanism of social and political control, and then examining the role of religion as a vehicle of sociopolitical change in the form of what anthropologists call revitalization movements. This course links to courses on the sociology, history, and philosophy of religion, to courses on intellectual history, and history of social sciences. Course evaluation will be based on 3 take-home essay examinations. Students will give the instructor 3 questions at indicated times; the instructor will return one question; the student will write an essay on the indicated question. Attendance is mandatory. This course will fulfill a 3 credit 400 level requirement for the Anthropology major and minor.

**Prerequisite:** ANTH 001 or ANTH 045
Bachelor of Arts: Other Cultures
Bachelor of Arts: Social and Behavioral Sciences

ANTH 455: Global Processes and Local Systems

3 Credits

Ethnographic, comparative, historic, evolutionary treatment of global economic, political, and cultural processes and their consequences for local systems. ANTH 455 Global Processes and Local Systems (3) (BA) This course meets the Bachelor of Arts degree requirements. Students will learn about global economic, political, and cultural processes and their consequences for local systems, how anthropologists do ethnography in the modern world of villages and factories; varieties of anthropological approaches and theories and how to assess them and how to critically assess ethnographic work. Students will write a series of book reviews in which they critically analyze the works they read in the course. Each review will present the main argument of the work; the theoretical assumptions the argument entails; the evidence the author used, the methods the author used to develop the evidence; the relationships among theoretical assumptions, arguments, evidence, and methods; and conclusions. Each review will assess the validity and reliability of the findings and the relationships of findings, arguments, and assumptions to the conclusions. These reviews will direct the student's attention to the salient points of scientific ethnography and anthropological theory with specific examples. Grades for the reviews will be assigned on the basis of how well each component of the review is completed, short in-class writing assignments to test reading comprehension and orient discussion, and a synthetic essay.

**Prerequisite:** ANTH 045
Bachelor of Arts: Social and Behavioral Sciences

ANTH 456: Cultural Ecology

3 Credits

Survey of the methods and concepts of cultural ecology, focusing on the interaction between cultural and geographical systems.

**Prerequisite:** 3 credits in anthropology
Bachelor of Arts: Social and Behavioral Sciences

ANTH 457: Jewish Communities: Identity, Survival, and Transformation in Unexpected Places

3 Credits

Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement.
methods, we will do only simple analyses that don’t require any statistical sophistication (e.g., descriptive statistics, chi square tests)

**Prerequisite:** ANTH 045
Bachelor of Arts: Social and Behavioral Sciences

ANTH 460: Human Genetics

3 Credits

This course will cover the nature and contents of the human genome and the basic principles of evolution. We will also explore the future implications of personal genomics and how this information is being used to reconstruct our evolutionary history and to advance human medicine. We will carefully consider the processes by which we can identify how information contained within our genomes may affect physical and behavioral phenotypes, and what other factors may be involved (e.g., the environment). The points will be illustrated by a variety of examples of human evolution and important biomedical issues

**Enforced Prerequisite at Enrollment:** ANTH 21 or BIOL 133 or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 322 or BMB 251 or BMB 251H
Cross-listed with: BIOL 460

ANTH 460H: Honors Human Genetics

4 Credits

This course will cover the nature and contents of the human genome and the basic principles of evolution. We will also explore the future implications of personal genomics and how this information is being used to reconstruct our evolutionary history and to advance human medicine. We will carefully consider the processes by which we can identify how information contained within our genomes may affect physical and behavioral phenotypes, and what other factors may be involved (e.g., the environment). The points will be illustrated by a variety of examples of human evolution and important biomedical issues.

**Enforced Prerequisite at Enrollment:** ANTH 21 or BIOL 133 or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 322 or BMB 251 or BMB 251H
Cross-listed with: BIOL 460H

Honors

ANTH 461: Molecular Anthropology

3 Credits

Provides framework to understand current issues in biology, genetics, and anthropology as they relate to the evolution of our species. ANTH 461 Molecular Anthropology (3) The aim of this course is to provide students with the framework to understand current issues in biology, genetics, and anthropology as they relate to the evolution of our species. Basic methods in molecular biology, structure of the genome, molecular evolution, and human population genetics will be covered in the first part of the course. Once these tools are in place we will examine both classical and contemporary research reports on a number of topics, including the place of humans among the apes; mitochondrial Eve, DNA in forensics; Neandertal DNA and other applications of ancient DNA; reconstructing recent human evolution the biological meaning of race; disease gene mapping; recent technological advances in genomics; skin, hair, and eye color genes; and the genetic future of our species. There will be three exams that will each count for 25% of the grade. Attendance and participation are mandatory and will count for 25% of the final grade. A portion of this participation grade is earned by presenting 10 min. summaries of particular readings. Each student will be expected to summarize a scientific paper four times during the semester. These summaries are not expected to be exhaustive reports on the material, but should reflect an effort on the part of the student to understand and discuss the material and may require some background work.

**Prerequisite:** 3 credits in biological anthropology or 3 credits in biology

ANTH 465: Fifteen Great Biology Papers

3 Credits

Reading and discussion of the most influential papers in the history of biology that illustrate exceptional insight and elegant reasoning. ANTH 465 Honors Fifteen Great Biology Papers (3) Thousands of papers are published annually in the life sciences, but only a few have lasting impact on their field. These are usually characterized by elegant and thoughtful insight, and creative scientific thinking. For each of the fourteen weeks of the semester we will read and discuss a landmark paper of this type. The 15th paper? That will be the student’s term project. The student will read one classic paper in the history of biological thought each week and discuss the paper in class. During the last half of each class in last third of the semester, the students will present the classics they have chosen for their term paper. The major topics covered in this course are: Weeks 1-4: Basic history of thought about origin and nature of variation in living organisms Weeks 5-8: Landmarks in the philosophy of science Weeks 9-12: History and development of ideas in evolutionary biology. Weeks 13-14: Foundations of 20th Century biology The objective of this course is to give students an experience with and appreciation for (1) the history and origins of science, biology in particular, (2) the nature of cogent critical thinking and expression, (3) the basis for fundamental ideas in biology today. (4) a sense of the nature of papers that had great influence on the future of the field, and (5) experience scouting, choosing, evaluating, and writing about papers of this nature. Evaluation will be based on class attendance and participation, critical thinking ability and effort as manifest in class, and a term paper (graded also to include quality of writing and research.) This course is generally related to all life science courses, and relevant to social and other sciences, philosophy, and history. This course can fulfill elective credits for Anthropology majors and minors.

**Prerequisite:** ANTH 021 or 3 credits in evolutionary biology or genetics, and 3 credits in statistics

Honors

ANTH 466: The Skull

3 Credits

Survey of the mammalian skull from many perspectives including evolution, development, anatomy, function, and variability of the skull. ANTH 466 The Skull (3) This course will provide a survey of what is known about the Mamalian skull from many perspectives including evolution, development, anatomy, function, and variability of the skull. The course will consist of lectures and a laboratory component. Students will learn about the basic skull architecture and be introduced to various specializations of extinct and extant species. The section on evolution will cover the evolution of the skull from the earliest jawless vertebrates through human evolution. During the section on development, we will discuss the nature of the formation of bone embryologically. Other topics include the ways in which bone changes shape and size during prenatal and postnatal growth, how changes in growth can result in evolutionary change in morphology. The section on the function of bone will focus on biomechanical interpretations of the morphology of the skull. The lectures will focus on human anatomy but provide contrasts with other
mammals (e.g., horse, dog, mouse). The last section on variability will survey the major groups of mammals highlighting similarities and differences in bony architecture and skull morphology. This portion of the course will be more laboratory-based with students examining specimens, taking measurements and leading discussions on hypotheses regarding why skull architecture is so different among mammals. The objective of this course is to provide the student with a broad survey of information relating to the mammalian skull. Through assigned readings and lectures the student will become familiar with salient anatomical and osteological features, obvious differences in skull architecture and the various biological processes responsible for these differences. During the final laboratory part of the course the students will bring their knowledge to an assigned problem and specimen in order to apply what they have learned to a scientific question. Students will be required to attend all lectures and laboratories. Periodic quizzes will be administered as well as an exam at midterm. A paper that focuses on the student’s laboratory experience will be required at the completion of the course.

**Prerequisite:** ANTH 021

ANTH 468: Evolution and Development of Human Origins

3 Credits

In depth analysis of the genetic and developmental basis for phenotypic variation and evolution of humans and primates. ANTH 468 Evolution and Development of Human Origins (3) Recently biology has undergone a revolution regarding our understanding of the mechanisms underlying the evolution and development of animal form. This knowledge has a profound impact on the way we conduct and interpret morphological analyses pertaining to human evolution. In this course we will explore basic principles underlying Darwinian natural selection and our understanding of the evolution of complex characters. Then we will delve into developmental genetics to explore how the gene regulation can alter spatial and temporal expression patterns during development. We will next conduct a survey the basic embryology of key morphological systems of interest to biological anthropologists including: the axial skeleton and somite formation, limb buds, musculoskeletal system, skull formation, and dental and skin appendage formation. We will also explore issues concerning skeletal plasticity, fossil analysis, and comparative genomics. Discussion particular case studies related to human and primate evolution and morphological variation will illustrate the principles discussed in this course.

**Prerequisite:** ANTH 021

ANTH 470: Our Place in Nature

3 Credits/Maximum of 3

An in-depth consideration of humanity's behavioral origins as biological beings through natural selection. ANTH 470 Honors Our Place in Nature (3) The title "Our Place in Nature" takes off from T.H. Huxley's famous book in 1863 that put humans in rather than outside of nature, and the idea of the course is to place humans in the context of organic evolution both specifically and as a kind of general "model" organism (for example, genomic, phylogenetic, and comparative perspectives will be included). We will take a theme (one or more related topics, depending on enrollment, timeliness, etc.), which students will be assigned to work on singly or in groups. We'll first read from the historical, comparative, and evolutionary literature to see how "Our Place in Nature" relative to that theme, was first argued. Then we will follow the literature in evolutionary, developmental and genetic biology to the present to see how our current understanding of the trait evolved. Current research, especially on developmental and genetic aspects of the trait, will be examined in depth. We'll pay special attention to research strategies, comparative and genomic approaches, and latent working assumptions that help or hinder our explanations. The sociocultural context will be considered throughout, including the implications for society of our changing scientific assessment of the trait. As an Honors course, we will have the time, and the students the dedication, to pursue the chosen topic(s) in much greater and more rigorous detail than is possible in the usual lecture or even seminar course formats. The students who enroll for this course will be given a description of the approach and the intended general topic, on a course web page or by email when I learn they have registered. Requisite background reading will be identified so students will know what will be expected of them. Some prior reading will be assigned, so that we can begin the semester with a common basis in background. The course will assume the level of knowledge such as can be obtained in one of several recent "Evolution" texts, an understanding of modern genetics and genetic methodology, basic statistics, and a general work on the history and philosophy of science and evolutionary thinking (initially, probably J.A. Moore's Science as a Way of Knowing). This substantial background requirement is based on this being an upper-level class; for good students to get what good students deserve at a good university, we need to be able to start at a high level. Evaluation will stress original synthetic thought and investigation rather than memorized factual recapitulation. Work groups will tackle particular problems, present them, and turn in written products. There will be a written take-home synthetic essay exam. There will be other written assignments summarizing assigned reading or topics to keep students on track. The class will generally be based on oral discussion and/or be run in Socratic Q&A format. Evaluation will include a major component related to attendance and to level and quality of in-class participation, acquired knowledge and quality of thought and communication. This course will build on, and incorporate, knowledge acquired in physical anthropology, evolutionary biology, statistics, and genetics courses and will count as 3 credits toward the additional courses in biological anthropology required for the Anthropology major.

**Prerequisite:** An introductory course in biological anthropology, biology or a social science.

Honors

ANTH 471: Biology, Evolution, and Society

3 Credits

Exploration of the genetic theory of evolution and development, its history and application within Biology and beyond. ANTH 471 Honors Biology, Evolution, and Society (3) This will be a reading, discussion, and exploration course that looks at the way theory about the nature of life and its origins and diversity have developed over time into today's evolutionary theory. The course will examine the Darwinian theory, and then new elements that recent biological research have revealed about the nature of biological traits themselves and how genes produce them. These points were not part of evolutionary theory itself, but are an important supplement that could not have been made before results from the last 20 years have been available. A theory can be called a cosmolgy when its assumptions go beyond hypotheses to be tested, to become assumptions that are no longer under test but are used to devise future research and that then set the directions of science. This includes, but isn't restricted to the kind of cosmology that deals with life space. We have to use theory to order our work and to anticipate what we have not yet found (for example, that newly discovered species will be related to other known species). But in the case of biology, a modern "biocosmology" has developed steadily since Darwin,
increasingly centered on molecular genetics and genes as the ultimate units of biological causation. Sometimes that theory has become so unquestioned as to impair research and even to be somewhat misleading. Elements of biological theory, such as natural selection, are powerful and general, and are being borrowed by physicists and astronomers (a reverse of the borrowing that occurred in the last century), to account for aspects of the physical universe in explicit evolutionary terms (including natural selection). For somewhat similar reasons, however, developing methods that have been used to develop that theory. A view of biological theory as a broader cosmology leads to the additional consideration of the nature of biological causation as a statistical rather than purely deterministic phenomenon, and the kinds of research approaches that are used to understand biological problems. The latter include the engineering of organisms, the health sciences, and the nature, evolution, and biological basis of behavior. The objective of this course is to give students a broad understanding of the evolutionary and genetic theory of life and a broader view of the way that theory extends to areas not yet understood, as well as to its origins and relevance to human society. Everyone is familiar with Darwin’s basic theory that life is historical and evolves via natural selection, and that genes are the basis of it all. But these ideas are often only superficially understood - sometimes even by biologists - and many clearly central aspects of life have been left out of the Darwinian theory. That theory explains how organisms evolve, but not what evolves or how genes make those traits possible. These are topics in gene function and developmental mechanisms. Along with some modifications to Darwin’s ideas, largely involving elements of chance and population structure and ecology, the genetic theory evolution can be augmented by a few simple organizing principles to explain the nature of traits and flesh out a more comprehensive understanding of life. These principles are in daily use in research but will be helpful for students to have them organized into a synthetic framework placed explicitly within evolutionary theory itself. This course will be generally related to all life science courses, and relevant to social and other sciences, philosophy, and history. But it is not tied to any particular other course, and as a kind of overview of the governing notions of life at the onset of the 21st century, complements the education of anyone in these related fields. This course will be of interest to students who have or will take courses in astrobiology, developmental biology, evolutionary biology and/or population genetics, or anthropological genetics and human evolution. The grade will be based on attendance and participation. Reading and/or research of some kind will be assigned most weeks, with students responsible for oral reporting or writing brief descriptions of what they have found. There will be a term paper or project, but no formal exams.

Honors

ANTH 471H: Biology, Evolution, and Society

3 Credits

Exploration of the genetic theory of evolution and development, its history and application within Biology and beyond.

Prerequisite: ANTH 021, BIOL 222, BIOL 230, BIOL 322, or BIOL 460; 3 credits in statistics

Honors

ANTH 472: The Ecology of Traditional Farming

3 Credits

This course will examine the ecology of traditional farming, focusing on the farming household, its farm, and its subsistence needs.

Prerequisite: ANTH 045 or equivalent

ANTH 476: Anthropology of Gender

3 Credits

Cross-cultural construction of gender and sex roles; theories of gender construction; case studies and practical effects. ANTH 476 / WMNST 476

Anthropology of Gender (3) Students will learn the current theoretical approaches in anthropology to the cultural construction of gender and sex roles. The first 2-3 weeks of the course will concentrate on exploring and understanding these theoretical approaches. The remaining weeks will focus on case studies of non-western gender systems, and on the practical effects of those systems, but students will also be encouraged to relate these systems to their own experience. Each meeting will be based on discussion of the readings assigned for that meeting and students will be expected to participate. During the period devoted to theoretical approaches, discussion will focus on the assumptions, advantages, and disadvantages of each approach. For the part of the course devoted to readings on individual societies, one reading each week will be the basis for a critical essay of approximately five pages. These essays will be expected to include: 1) an identification of the theoretical approach that informs the work, 2) a statement of the author’s arguments or questions, 3) a discussion of the methods used to provide data in support of the arguments or to answer questions, 4) a critique of the adequacy of data, and 5) a statement suggesting which additional elements might make for a better study. These essays will be graded for both content and form and students will have the option of rewriting essays (and improving their grade) after they receive comments. These essays will provide 60% of the course grade, while participation in discussions will provide another 15%. A short research paper will also be required. The paper must focus on a question or hypothesis concerning gender, and a preliminary proposal that includes the focus of the paper, its relevance to the course, and a beginning bibliography is required. A first draft of the paper will be required two weeks before the end of the semester. The research paper will provide 25% of the course grade. The course complements other courses in Anthropology that deal with sex differences, but will provide a perspective on gender that is not available elsewhere in the curriculum. The course can be used to fulfill a Behavioral Anthropology requirement in both the major and minor in Anthropology and a writing across the curriculum requirement. It will also provide students in other departments with the opportunity to study aspects of diverse, non-western cultures. The course is currently identified as one that may be taken to fulfill the requirements of the Women’s Studies minor.

Prerequisite: 3 credits in women’s studies or anthropology

Cross-listed with: WMNST 476

Writing Across the Curriculum

ANTH 478: Cannibalism

3 Credits

Explores the cultural institution of cannibalism, uses of the “cannibal” label, and cannibalism’s meaning among those who practiced it.

Prerequisite: ANTH 045
International Cultures (IL)

ANTH 492: Intermediate Field Methods
3-6 Credits/Maximum of 6
On-site experience in collecting archaeological, behavioral, or biological data.
Prerequisite: ANTH 002

ANTH 493: Field Techniques
3-6 Credits/Maximum of 6
Training in techniques involving analyses of archaeological, behavioral, or biological data.
Prerequisite: ANTH 002

ANTH 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
ANTH 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
Honors
ANTH 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Prerequisite: prior approval of proposed assignment by instructor

ANTH 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ANTH 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANTH 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

Applied Linguistics (APLNG)

APLNG 83: First-Year Seminar in Applied Linguistics
3 Credits
Introduction to the application of theories of language to cognition, culture, gender, society, and second language acquisition.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
First-Year Seminar
General Education: Social and Behavioral Scien (GS)

APLNG 200: Introduction to Language, Culture, and Social Interaction
3 Credits
Introduction to the interrelationships among language, culture, and social interaction and their fundamental links to social identities and discourse communities.

International Cultures (IL)
General Education: Humanities (GH)

APLNG 210: The Ecology of Global English
3 Credits
This course explores how English language enables globalization processes and how globalization changes the structure, norms, and usage of English.

International Cultures (IL)
General Education: Humanities (GH)

APLNG 220N: Multilingual Lives: Stories of Language and Culture Learning
3 Credits
In recent years Applied Linguistics has witnessed a narrative turn, with growing interest in complementing its logico-scientific core with analysis of stories about multilingual experiences. This course will explore how the intersection of knowledge domains from the social sciences and the humanities can enrich our understanding and appreciation of multilingualism, including its challenges and its intellectual benefits. The course will first read and analyze stories about growing up in bi- or multilingual families, immigration in childhood or adulthood, and voluntary learning of languages at home or abroad. Along the way, we will encounter questions about the relationship between language, culture and personal identity as well as questions about the ways in which gender, power, and social class influence our pathways in pursuit of a satisfying sense of self. The stories we read will be interspersed with formal inquiry in second language acquisition, bi- and multilingualism, and language education, such as: How can we understand the processes of language acquisition and attrition? How do individual differences such as age or motivation influence learning? What are the documented cognitive benefits of bilingualism? The class will then conduct a community outreach project, collecting and analyzing stories from multilinguals who may be members of their own families,
recent or longer-term immigrants, international students, scholars or retirees, foreign language learners, heritage learners, or parents of bilingual children. This project will encourage students to interrogate lived experiences as objects of study. Presentation of findings may take various forms, e.g., public poster sessions, digital narratives, or contributions to oral history archives (e.g., welisten@psu.edu)

APLNG 250: Peer Tutoring for Multilingual Writers
3 Credits/Maximum of 3

This class provides theoretical and practical training to prepare Writing Center Peer Tutors with specific expertise in tutoring international/multilingual students. This course provides a theoretically-grounded introduction to the principles and practices of tutoring with multilingual writers (writers for whom English is not a first language). It is designed specifically for undergraduate students who wish to be employed as Peer Tutors with Penn State Learning at the Writing Center. Like ENGL 250, the class provides a basic orientation to the techniques of being an effective writing tutor, but offers a deeper understanding of the issues faced by writers whose first language is not English. The class may be of particular interest to students who study languages or education, who plan to work in academia, or who have a strong interest in cross-cultural communication or international education. However, undergraduate students of any major and of any language background are welcome to enroll in this course. Drawing upon research in second language acquisition, instructional theory, and composition pedagogy, the class examines the central roles of identity, belief, and cultural perspective in the development of tutoring expertise. Exploring the student’s own development as a writer and learner, engaging in practical training activities, writing intensively, talking about writing, and engaging in reflective exercises comprise the first set of topics in the semester. In the second unit, through readings, interaction, observation and discussion, each tutor-in-training will explore the cultural and linguistic factors in the development and maintenance of second-language writing proficiency for international students in an American university context. There is a strong focus as well on tutoring pedagogy, and the class includes a 10-week structured practicum experience during which each student will tutor an ESL student from a first-year writing class (ESL 15). Students who want to work as Peer Tutors must have completed their own first-year writing requirement; it is recommended that they have completed ENGL 202 also.

Prerequisite: ENGL 015; ESL 015

APLNG 280N: Conducting International Comparative Research
3 Credits

APLNG 280N Conducting International Comparative Research. (3) (Gen Ed:IL; Integrative) (BA) This course meets the Bachelor of Arts degree requirements and may also serve as a methods course in the Global and International Studies (GLIS) major. The goal of this course is to equip students with effective methods for conducting international and cross-cultural research that addresses issues and problems occasioned by an increasingly globalized world. Students will acquire the background knowledge and skills necessary to analyze and evaluate existing international comparative literature and to design and propose new cross-national and cross-cultural research. The course focuses on projects in five key, contemporary domains of globalization: human rights, culture and identity, global conflict, wealth and inequality, and health and environment, and it draws on multidisciplinary methods from across the humanities and social sciences - including qualitative, quantitative, and mixed methods. Particular attention is paid to working with international datasets and the issue of translation and interpretation. As a result of the course, students will be able to: (1) locate and understand the structure and import of existing international databases, (2) design comparative, cross-national and cross-cultural research projects, (3) evaluate the validity, reliability, and significance of published international comparative research, (4) conduct basic comparative analyses of social, political, and cultural texts (documents) and oral interview data and other audio and visual data, (5) evaluate comparative quantitative data from cross-cultural surveys and other quantitative instruments, and (6) design reports and multimedia presentations of international comparative research.

APLNG 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

APLNG 310: Language Rights, Policy, and Planning
3 Credits

This is a course on language rights, policy, and planning from individual, group, inter-ethnic, and national perspectives. Linguistic minorities are a consequence of colonization by European powers in different regions of the globe. Other effects of colonization and political conflicts include mass movement, migration, and the emergence of nationalism. In such contexts, minorities have made demands for language rights and used language policy and planning as strategies to realize demands for social justice. This course will examine how linguistic minorities secure opportunities to use their own languages and have them accommodated in official legislation as mother tongue, second, or foreign languages. The course will adopt a global perspective and analyze language rights as well as language policy and planning in diverse regions of the globe, including but not restricted to, Africa, Asia, and South America. Analysis will primarily focus on how language policies can be carried out from different perspectives (e.g., literary, linguistic, and political) in different geographical regions. After examining how language policies operate in and influence society, the course will use sociopolitical ideologies to explore the nature of the relationship between language policies and language rights and the ways this relationship enables one to achieve an expanded understanding of the impact of language policies and language rights on local language practices.
APLNG 402: Language, Culture and Cognition in East Asian Context

3 Credits

This course is a linguistic introduction to the relationship between language, culture, and cognition with a focus on Chinese, Japanese, and Korean. In this course, we study the cognitive linguistic view that human cognition is fundamentally embodied and shaped by various figurative processes such as metaphor and metonymy grounded in our bodily and cultural experiences, and that human thought and language are fundamentally metaphorical in nature. We examine how we think and speak figuratively and conceptualize our experience metaphorically in everyday life, and compare the languages in terms of cognitive universals and cultural variations. The objectives of this course are threefold: (1) to lead language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (2) to provide them with a broad perspective on similarities and differences among Chinese, Japanese, and Korean as components that form a coherent category known as “East Asian”.

Class work will include some lecture but will emphasize guided discussions, literature review writings, student presentations, and research papers. This interactive approach is intended to encourage students' participation, involvement, and cooperation in learning, to help them understand the relationship between language, culture, and cognition, and to assist them in developing both analytic and expressive abilities. This course is designed to count as a BA “Other Cultures” and International Culture. Students can take this course as long as they have an interest in the relationship between language, culture and cognition, especially in the context of East Asia.

Prerequisite: ASIA 100; ASIA 101; ASIA 102; ASIA 103; ASIA 104; 5th Semester standing

Bachelor of Arts: Other Cultures
International Cultures (IL)

APLNG 410: Teaching American English Pronunciation

3 Credits

Study and application of principles of North American English phonetics and theories of teaching pronunciation. APLNG 410 Teaching American English Pronunciation (3)(BA) This course meets the Bachelor of Arts degree requirements. This course, for teachers who deal with speakers of other languages, integrates research and theory on the acquisition and development of pronunciation, as well as current pedagogy, to enable them to construct their own principled theory of teaching pronunciation. Students are introduced to the characteristics of the consonant and vowel systems of English. In addition, students are introduced to variations in the production of consonants and vowels by speakers of languages other than English. Students are expected to understand and to be able to describe the stress rhythm, and intonation of English as well as the adjustments that are made in connected speech. Students will learn how grammar and orthography influence the pronunciation of phonemes. Students will learn how to diagnose an individual's difficulties in the production of North American English and will learn how to develop appropriate curriculum. By focusing on instructional strategies from fields as diverse as theater arts, psychology, and instructional technology, students will be able to individualize their instruction by providing alternative ways to better respond to second language speakers' learning styles and preferences. Moreover, this course requires students to develop and implement appropriate curriculum for both hypothetical, real tutorial, and whole class instruction. The objectives of this course are for teachers 1) to develop a satisfactory understanding of the phonetics of North American English, including consonants, vowels, rhythm, stress, intonation and prominence, 2) to develop an understanding of the relationship between listening and pronunciation, as well as orthography and pronunciation, 3) to develop an ability to explain these phonetic concepts appropriate to students with varying learning styles using a variety of techniques such as kinesthetic and tactile reinforcement, 4) to develop an ability to diagnose speakers' particular pronunciation difficulties and to create instructional materials in response, 5) to develop a coherent philosophy of the teaching of pronunciation, and 6) to develop an ability to evaluate pronunciation textbooks and materials and supplement them when necessary.

Bachelor of Arts: Social and Behavioral Sciences

APLNG 412: Teaching Second Language Writing

3 Credits

This course provides opportunities for exploring various perspectives on theory, research, and pedagogical applications in second language writing. APLNG 412 Teaching Second Language Writing (3) This course has been designed to provide opportunities to explore various perspectives on theory, research, and pedagogical applications in second language writing. Through readings, writing, class discussion, and development of practical applications, students may develop an understanding of how research and theory can inform their practice, as well as an awareness of how personal and professional factors come together to inform their own theory of second language writing. By engaging in instructional activities, such as evaluating writing, responding to writing, and developing materials, students may begin to develop an understanding of how to implement theory in practice aligned with understanding. The overriding objectives are for students to help develop self-awareness as a writer and a teacher of writing, develop their own philosophy of teaching composition in an additional language context and to develop curriculum that embodies this philosophy. Students will be evaluated on reading journals, tutoring in the Writing Center, literature review, materials development project and developing of materials. APLNG 412 is an elective course in the M.A. TESL program and/or PhD option in Applied Linguistics.

APLNG 482: Introduction to Applied Linguistics

3 Credits

Application of theories of language to psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition and teaching. APLNG 482 Introduction to Applied Linguistics (3) (IL) This is a survey course concerned with the application of theories of language to issues in the areas of psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition, and second language teaching. Specifically, the course focuses on: a) how language influences the way people think and bring meaning to what they do, b) how language users match their utterances to specific functional purposes within specific social contexts, c) how the language practices of a particular culture are closely tied to the beliefs and conceptual principles by which people in the culture live, d) how language is used
by speakers of different races, genders, and ethnic backgrounds, and
e) how language is acquired, used, and perceived within bi/multilingual
societies. Through reading, writing, and discussing the major issues in
each of these areas students will come to understand how theories of
language have influenced the way we think and bring meaning to what we
do, the ways we communicate within different cultures and societies, and
the way languages are learned and used.

International Cultures (IL)
Writing Across the Curriculum

APLNG 484: Discourse-Functional Grammar

3 Credits

Develop a working knowledge of the structure of English and apply
such knowledge to research and/or classroom situations. APLNG 484
Linguistic Structures for English as a Second Language (3) This course
is designed to enable prospective and practicing ESL/EFL teachers to
understand the linguistic structures of the English language. Through the
use of transformation grammar, students will interpret and analyze the
basic grammatical structures of the English language. Students will apply
their developing skills of linguistic analysis to recognize, and analyze,
and remediate both oral and written grammatical errors in ESL/EFL
instructional contexts. Students will understand the current theoretical
issues related to pedagogical grammars and develop an appreciation for
the practical and theoretical relevance of linguistics analysis for second
language educators.

APLNG 491: Theory: Second Language Acquisition

3 Credits

An investigation into current issues in the theoretical bases of second
language acquisition. APLNG 491 Theory: Second Language Acquisition
(3) This course considers the relationship between second language
acquisition (SLA) theory and language teaching. An examination of
various aspects of first language (L1) and second language (L2) learning/
acquisition processes provides a framework for consideration of
basic questions in SLA research and interpretation of findings to date.
Of particular interest is the relationship of this research to teaching
materials and methods. The questions addressed include the following:
What is SLA? What are the methods and aims of SLA Research? How
are theories of SLA related to major theoretical models of human
language and human learning? What have been or could be important
interdisciplinary perspectives in SLA?

APLNG 493: Teaching English as a Second Language

3 Credits

Theory, research, and pedagogy that focus on the teaching of English to
speakers of other languages in varied contexts. APLNG 493 Teaching
English as a Second Language (3) (IL) This course focuses on the
teaching of English to speakers of other languages. Specifically, the
course explores the multidimensional nature of the teacher as a learner
of teaching, the context of schools and schooling within which teaching
occurs, and the activities and content of second language teaching and
learning. Throughout the semester, students will engage in a range of
theoretical, pedagogical, and reflective activities that will enable them
to: 1) understand their own beliefs and knowledge about language
learning and language teaching and become aware of the impact of
such knowledge and beliefs on their classroom practices, 2) recognize
the highly situated and interpretative processes involved in language
teaching and be able to reflect on, critically analyze, and evaluate
their own teaching practices, 3) become sensitive to the complex
social, cultural, political, and institutional factors that affect language
teaching and students' language learning, 4) come to recognize students'
strengths and development as learners and language learners, 5)
understand subject matter content from an instructional perspective and
learn to anticipate areas that may require additional instructional support,
6) use their knowledge of theory to inform their instructional practices,
7) participate in professional collaborations with other teachers as they
learn about language teachers, language teaching, and language learning.

International Cultures (IL)

APLNG 496: Independent Studies

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively
narrow subject that may be topical or of special interest.

Applied Youth, Family and
Community Education (AYFCE)

AYFCE 211N: Foundations: Civic and Community Engagement

3 Credits

Through readings, discussion, deliberation, listening, and individual as
well as collaborative action, this course gives students the opportunity
to learn about and practice theories and habits of civic and community
engagement and public scholarship with the goal of helping to build
democratic capacity and sustain participatory democracy. This course
emphasizes concepts and case studies that focus on the people’s
role in shared governance. The course also provides a foundation for
understanding how a wide range of other individual and collective
practices have an equally important role to play in building and sustaining
community. The course draws from studies in demography, political
science, sociology, psychology of racial identity formation and education
to help students communicate better about and in shared governance.
Among the core concepts are the role of students and other citizens
in sustaining and transforming their communities, the historical
and contemporary mission of Land Grant universities, the centrality
of rhetoric and communication to collaborative judgment, and the
relationship among media, cultures, and politics as they affect civic
and community engagement. Students also learn together about the
role in shared governance. The course also provides a foundation for
understanding how a wide range of other individual and collective
practices have an equally important role to play in building and sustaining
community. The course draws from studies in demography, political
science, sociology, psychology of racial identity formation and education
to help students communicate better about and in shared governance.
Among the core concepts are the role of students and other citizens
in sustaining and transforming their communities, the historical
and contemporary mission of Land Grant universities, the centrality
of rhetoric and communication to collaborative judgment, and the
relationship among media, cultures, and politics as they affect civic
and community engagement. Students also learn together about the
range of ways that citizens do, can, and might participate in democratic
decision-making and will observe and practice these forms in several
communication media and across a range of differences. Finally, learn
about models of and opportunities for engaging other citizens across and
beyond Penn State, including in global environments.

AYFCE 270: Consumer and Financial Skills
3 Credits
Introduces consumer and financial concepts and skills needed to function in society; increases financial security today and in the future. AYFCE 270 Consumer and Financial Skill (3) (GS) This course covers essential consumer and financial skills young adults need to successfully manage resources and personal finances. It is also designed to satisfy social and behavioral general education requirements. Major themes addressed include goals and decision-making, spending sensibly, borrowing wisely, maximizing earnings/income, protecting assets, making money work, and life events that have financial implications. Some of the information has immediate application, while the remainder will become applicable to all students after graduating and living independently. Regardless of students’ major or profession, the course content applies to them and can play a critical role in their professional and personal success. Course topics are related to current economic events from an individual perspective, consumers’ behavior in the market, and their impact on communities and society in general. Strategies are discussed which outlines how course topics can be extended to others. For instance, future formal educators (teachers) will learn strategies for incorporating consumer and financial skills into existing curricula regardless of the subject they teach. Students who plan to work in non-formal settings (e.g., human service agencies, community agencies, youth groups or organizations) will acquire useful tools and techniques that may be used to improve the life skills and financial security of their clients. Future parents will learn easy ways to incorporate desired financial skills and behaviors in their children using daily living. The course addresses critical consumer and financial topics from the individual or household level only and with emphasis on key decisions from a social and behavioral perspective.

Prerequisite: semester standing of 3rd or higher

AYFCE 295B: Leadership Jazz
3 Credits/Maximum of 3
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

AYFCE 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AYFCE 438: Living in an Increasingly Diverse Society
1-3 Credits/Maximum of 3
Students in this course will explore selected dimensions of diversity through lecture, discussion, speakers, active participation, and experiential learning.

AYFCE 455: Extension Youth Development Programs and Volunteer Management
3 Credits
A study of 4-H/Extension youth programs and the variety of roles played by volunteer leaders.

Prerequisite: 6 credits of social or behavioral sciences

AYFCE 495: Internship in Youth and Family Education Programs
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practicums, or internships.

Prerequisite: prior approval of proposed assignment by instructor

AYFCE 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AYFCE 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Arabic (ARAB)

AYFCE 295B: Leadership Jazz
3 Credits/Maximum of 3
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

AYFCE 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AYFCE 438: Living in an Increasingly Diverse Society
1-3 Credits/Maximum of 3
Students in this course will explore selected dimensions of diversity through lecture, discussion, speakers, active participation, and experiential learning.

AYFCE 455: Extension Youth Development Programs and Volunteer Management
3 Credits
A study of 4-H/Extension youth programs and the variety of roles played by volunteer leaders.

Prerequisite: 6 credits of social or behavioral sciences

AYFCE 495: Internship in Youth and Family Education Programs
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practicums, or internships.

Prerequisite: prior approval of proposed assignment by instructor

AYFCE 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AYFCE 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Arabic (ARAB)

AYFCE 295B: Leadership Jazz
3 Credits/Maximum of 3
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

AYFCE 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AYFCE 438: Living in an Increasingly Diverse Society
1-3 Credits/Maximum of 3
Students in this course will explore selected dimensions of diversity through lecture, discussion, speakers, active participation, and experiential learning.

AYFCE 455: Extension Youth Development Programs and Volunteer Management
3 Credits
A study of 4-H/Extension youth programs and the variety of roles played by volunteer leaders.

Prerequisite: 6 credits of social or behavioral sciences

AYFCE 495: Internship in Youth and Family Education Programs
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practicums, or internships.

Prerequisite: prior approval of proposed assignment by instructor

AYFCE 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AYFCE 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Arabic (ARAB)

AYFCE 295B: Leadership Jazz
3 Credits/Maximum of 3
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

AYFCE 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AYFCE 438: Living in an Increasingly Diverse Society
1-3 Credits/Maximum of 3
Students in this course will explore selected dimensions of diversity through lecture, discussion, speakers, active participation, and experiential learning.

AYFCE 455: Extension Youth Development Programs and Volunteer Management
3 Credits
A study of 4-H/Extension youth programs and the variety of roles played by volunteer leaders.

Prerequisite: 6 credits of social or behavioral sciences

AYFCE 495: Internship in Youth and Family Education Programs
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practicums, or internships.

Prerequisite: prior approval of proposed assignment by instructor

AYFCE 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AYFCE 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Arabic (ARAB)

AYFCE 295B: Leadership Jazz
3 Credits/Maximum of 3
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

AYFCE 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AYFCE 438: Living in an Increasingly Diverse Society
1-3 Credits/Maximum of 3
Students in this course will explore selected dimensions of diversity through lecture, discussion, speakers, active participation, and experiential learning.

AYFCE 455: Extension Youth Development Programs and Volunteer Management
3 Credits
A study of 4-H/Extension youth programs and the variety of roles played by volunteer leaders.

Prerequisite: 6 credits of social or behavioral sciences

AYFCE 495: Internship in Youth and Family Education Programs
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practicums, or internships.

Prerequisite: prior approval of proposed assignment by instructor

AYFCE 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AYFCE 497: Special Topics

ARAB 2: Elementary Modern Standard Arabic II

4 Credits

Continuation of ARAB 1 ; development of additional skills in conversation, reading, and writing; grammar and vocabulary building; cultural components. ARAB 2 Elementary Modern Standard Arabic II (4) (BA) This course meets the Bachelor of Arts degree requirements. This language and culture course, which counts towards the language requirement for B.A. (and some other) degrees, presents the second semester of the study of the Modern Standard Arabic language and an exploration of several aspects of Arab cultures. ARAB 2 is the continuation of ARAB 1, an elementary course designed to introduce learners of Arabic as a second/foreign language to the basic structures of Arabic and to its uses in common situations of everyday communication. ARAB 2 begins with a review of the basics learned in ARAB 1, and, as in some sections of ARAB 1, the course may follow the story of an Arab American family. ARAB 2 expands on vocabulary, goes into more complex grammar structures, and further introduces Arab culture. The "multiplicity" of the Arabic language and the coexistence of spoken (colloquial) and written standard forms of Arabic continue to be addressed in order to prepare the student for the complex reality of the language. This course underscores all four communication skills (reading, speaking, listening and writing) and uses audio and video material to take the learner to native speakers in their natural environment; introducing invaluable listening segments and various cultural aspects of the Arab world. The course may also have recourse to popular media such as films, comics, newspaper headlines, websites, music, and songs. Students are reminded through their oral presentations that Arabic is spoken as an official language in 22 countries with diverse and rich historical, political, economical, religious, artistic, and literary venues, and Arabic is also used in many additional parts of the world. Class activities and projects are designed to enable students to become active, creative participants, and transmitters of new knowledge to their peers. The course is designed for students who have completed Arabic 001 in Penn State's language sequence or have the equivalent level of language proficiency. In turn, this course serves as a prerequisite for ARAB 3. Placement within the Arabic language sequence follows the University's foreign language placement policy; for example, students whose native language is Arabic are not eligible to receive credit in this course.

Prerequisite: ARAB 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

ARAB 51: Elementary Intensive Arabic for Graduate Students I

3 Credits

Intensive introduction to Modern Standard or Colloquial Arabic: first half of graduate sequence in elementary reading, writing, listening, cultures. ARAB 51 Elementary Intensive Arabic for Graduate Students I (3) Students learn the Arabic alphabet. They learn to form the letters in all their different positions, they also learn to read them. Practice through dictation, listening and reading lists of words containing the different sounds and letters. Students learn how to greet one another. They also learn vocabulary words they can use in simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

ARAB 52: Elementary Intensive Arabic for Graduate Students II

3 Credits

Intensive introduction to Modern Standard or Colloquial Arabic: second half of graduate sequence in elementary reading, writing, speaking, listening, cultures. ARAB 52 Elementary Intensive Arabic for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Arabic. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Arabic vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: ARAB 051 and graduate standing

ARAB 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
ARAB 110: Arab Language, Cultures, and Current Topics

3 Credits

Fourth-semester Modern Standard Arabic: study of cultures through authentic discourse, texts, film; development of reading, writing, listening, speaking skills. ARAB 110 Arab Language, Cultures, and Current Topics (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This language and culture course, which fulfills the Humanities or the International Cultures requirement within General Education or the Other Cultures requirement within the Bachelor of Arts degree, will offer a continuation of the study of the Modern Standard Arabic language and an exploration of several aspects of Arabic cultures, such as the religious and cultural traditions of the month of Ramadan, the differences between American and Arab relationships, preparing for a trip to the Middle East, and an introduction and brief exposition of the Palestinian problem. The course is designed for students who have completed ARAB 003 in our language sequence or have the equivalent level of language proficiency. Students will develop listening, reading, writing, and speaking skills, and will be introduced to a range of Arabic cultures and encouraged to see both commonalities and differences among them. The material is always presented through culturally rich texts. The course offers opportunities for students to increase their knowledge and appreciation of not only the language, in its Modern Standard form, but also the varieties of cultural production in the Arabic-speaking world, in their many facets and diverse manifestations. Along with continuation of language learning, students are exposed to Web sites, film, music, comics, literature etc. Students’ assignments use a combination of reading, writing, listening, and researching skills. Students often work in groups, performing oral and written class activities. This course serves as a prerequisite for ARAB 401.

Prerequisite: ARAB 003 or permission of program
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)

ARAB 164: Muhammad and the Qur’an

3 Credits

History of the Qur’an and its interpretation by the early Muslim community; life of Muhammad and his role within Islam.

Cross-listed with: RLST 164
International Cultures (IL)
General Education: Humanities (GH)

ARAB 165: Islamic States, Societies and Cultures c. 600-1500

3 Credits

This course introduces students to the history and culture(s) of the Islamic world from c. 600-1500. The course develops a historical framework for understanding developments in religious and legal thought and practice, science, medicine, and technology, philosophy, and the arts. Students will learn about culture through lecture and discussion and through examination and analysis of a variety of texts and examples of material culture from different periods and regions.

Cross-listed with: HIST 165, RLST 165

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Key Literacies

ARAB 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARAB 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ARAB 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

ARAB 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARAB 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARAB 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
ARAB 401: Advanced Language & Cultures I

3 Credits

Fifth-semester Modern Standard Arabic: reading more complex texts, films, further development of conversation, composition skills, Arab cultures, current issues. ARAB 401 Advanced Language & Cultures I (3) (IL) (BA) This course meets the Bachelor of Arts degree requirement. This language and culture course, which fulfills International Cultures requirement or the Other Cultures requirement within the Bachelor of Arts degree, will offer a continuation of the study of the Modern Standard Arabic language and an exploration of several aspects of Arab cultures. Language skills (reading, writing, speaking, listening) are further developed through the exploration of several culturally important themes that illustrate a range of cultural situations and contexts. Among the themes that may be discussed are the following: new opportunities and also persistent problems facing Arab youth; social and economic conditions in which fundamentalist and other groups present their agendas; the condition of women and the pressures often exerted by society&rsquo;s norms and traditions to keep women out of the public scene; cultural, emotional, and literary reactions to the tragedy of displaced peoples; Islam and other religions among Arab cultures; love and the images and symbolism used to describe it; the writings of one or more well-known authors, including the evolution within the works of the author(s) and the influence of these writings on Arab thought; Arabic cultures in various parts of the world, including the U.S. All themes are presented in the target language and represent a wide range of Arabic culture and current issues. The course may also involve popular media such as comics, newspaper headlines, music and songs, and a visit to the library. Class activities and projects are designed to enable students to become active and creative participants and transmitters of new knowledge to their peers. Students will be asked to conduct research using authentic material, and to write a short paper in Arabic as a wrap up of their final presentation.

Prerequisite: ARAB 110 or approval of program
Bachelor of Arts: Arts
International Cultures (IL)

ARAB 402: Advanced Language & Cultures II

3 Credits

Sixth-semester Modern Standard Arabic: reading more complex texts, films, further development of conversation, composition skills, Arab cultures, current issues. ARAB 402 Advanced Language & Cultures II (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This language and culture course, which fulfills the Humanities or the International Cultures requirement within General Education or the Other Cultures requirement within the Bachelor of Arts degree, will build upon previous courses in the Arabic curriculum and offer a continuation of the study of the Modern Standard Arabic language, an exploration of several aspects of Arab culture in a range of contexts, and the exploration of current issues and topics of interest in Middle Eastern media. Among the themes that may be discussed are the following: the achievements of Arab Nobel Prize winners, holiday traditions, colloquial Arabic, love, social and economic conditions of the poor and the middle-class, practical and psychological problems arising from belonging to a certain social class, ways in which the state (in different countries) relates to the needs of the people, Arab cultures in various parts of the world including the U.S., and a variety of the most recent social and political newspaper and magazine articles. All themes are presented in the target language and represent a wide range of Arabic culture and current issues. The course may also involve popular media via the reading of comics, relevant headlines, music and songs, and computer practice for students to learn how to type in Arabic and benefit from available resources to equip students with this useful Arabic tool. Class activities and projects are designed to enable students to become active and creative participants and transmitters of new knowledge to their peers. Themes will often be examined comparatively and will draw on students&rsquo; personal experience to connect with the material presented. The course is designed for students who have completed Arabic 401 in our language sequence or have the equivalent level of language proficiency. At University Park the course will be offered every semester or every other semester, according to enrollment patterns and the availability of staff. At other locations, course-offering patterns will be determined by their needs.

Prerequisite: ARAB 401 or approval of program
Bachelor of Arts: Arts
International Cultures (IL)

Architectural Engineering (AE)

AE 124: Architectural Engineering Orientation

1 Credits

Introduction to architectural engineering; lectures and discussions with special reference to the relation of architectural engineering to the building industry. AE 124 Architectural Engineering Orientation (1) (FYS) This course is designed to help students decide whether they do
or do not want to major in Architectural Engineering. It has four major goals. The first is to introduce the role of the architectural engineer in the building industry. The second is to introduce the concepts of integrated building systems design and construction management. The third is to familiarize students with the Architectural Engineering curriculum, department facilities, and faculty. The fourth and final goal is to develop an awareness and interest in the periodicals and publications related to buildings. This course will provide students with access to the regular faculty of the program, a feature that continues throughout the students’ 5-year career in Architectural Engineering. Students and faculty will be connected through discussions of related topics to the building industry and the areas that future A E students will be studying. Since this program operates under enrollment control, this course will address entrance to the major, the requirements placed on the freshman year, and the selection process. Additionally, special features of the program will be discussed, including option selection, which takes place after 3 years, the study abroad program at the University of Leeds, and the integrated graduate/undergraduate program. Depending upon the semester in which the course is taken, students will be provided with either an opportunity to participate in the annual AE Career Fair or the 5th year thesis presentations. Students will take field trips to buildings and construction sites on campus to reinforce the material learned in class. As a result of this class, all students should be better prepared to make a decision as to whether or not the wish to apply for this major at the end of their first year.

First-Year Seminar

AE 202: Introduction to Architectural Engineering Concepts

3 Credits

Introduction to profession of architectural engineering, building envelope systems, sustainable design, fire protection systems, and engineering economics. AE 202 Introduction to Architectural Engineering Concepts (3) As the first course after students are admitted into the major, AE 202 is designed to expose students to two aspects the profession: the interdisciplinary nature of architectural engineering and the concept of professional practice. Technical areas of focus chosen for this course are building envelope and fire protection. These disciplines of architectural engineering require students to sufficiently understand the application of a number of disciplines in the creation of successful and integrated solutions. Students will learn to integrate architectural design and detailing, structural analysis and design, the influence of thermal science, construction processes and building codes in the proper execution of the design of specific building systems. Social and environmental responsibility will be introduced through the discussion of sustainable design. Understanding the Greed design concepts and the LEED certification system provides the practical basis for the students to put idealism to work. Early exposure to professional practice and engineering economics provides students with a framework of understanding to manage the relationships of the myriad of technical courses. This course is designed to provide students an appreciation that the practice of architectural engineering includes proper executions of business and management practices. Students will also learn to analyze design options based on economic factors. The course utilizes lectures, practicums, examinations, projects and presentations to deliver and reinforce the technical content. The course offers students opportunity to work in team settings and to present their work orally to their peers. The broad coverage of the technical and social issues and professional skills intentionally involves students early in their education to all the ABET educational outcomes. The projects present opportunities to engage students in discussion and application of social and ethical responsibilities. The course is open to architectural engineering students in the second year with an ENGAE standing. Students in other curricula may enroll in this course with prior approval of the program.

AE 210: Introduction to Architectural Structural Systems

3 Credits

Qualitative study of architectural structural systems; historical development of structures; insights of structural analysis and synthesis; comparative structural types. This course is intended for Architecture students. AE 210 Introduction to Architectural Structural Systems (3) is an introductory course in structural analysis and engineering mechanics (primarily statics) with an emphasis on buildings. This course was created specifically for Penn State architecture students. The course is designed to give students an understanding of the behavior of building structural and related architectural elements under a variety of loading conditions. AE 210 is designed to provide students with an understanding of the interpretation and application of structural aspects of building code requirements, particularly in the area of design loads. In addition, this course provides the necessary prerequisite knowledge for two additional structural design courses that are required for architecture students.

Prerequisite: algebra, trigonometry

AE 211: Introduction to Environmental Control Systems

3 Credits

Qualitative study of humans in macro- and micro-architectural environmental systems. This course is intended for Architecture students. AE 211 Introduction to Environmental Control Systems (3) introduces Architectural students to building thermal environmental and building mechanical issues. Thermal environmental issues include: thermal comfort, natural environmental impacts, heat transfer through the building envelop, heating and cooling design, noise and vibration of mechanical systems, and building energy consumption. Building mechanical system issues include: heating, ventilating and air-conditioning systems. Emphasis is placed on building design in response to the technical, environmental and societal challenges, with a focus on sustainable design principles and guidelines applied to mechanical systems. The course utilizes lectures, practicums, examinations, projects and presentations to deliver and reinforce the technical content. The course offers students opportunity to work in team settings and to present their work orally to their peers. The broad coverage of the technical and social issues and professional skills challenges the architecture students to incorporate technical issues as an integral part of the overall building design. The course is required for students enrolled in the undergraduate architecture program. The course is not available to architectural engineering students.

AE 221: Architectural Building Materials

3 Credits

The structural and architectural use of building materials; commercial standardization, classification, and description as encountered in the building trades. AE 221 Architectural Building Materials (3) The course objective is for students to understand building materials and methods. It is taught using a combination of these methods, 1) job site visits to current construction projects on campus, 2) guest speakers from manufacturers, engineering firms, building code organizations, construction managers and contractors, 3) video series of building
construction, and other various DVD's, 4) visits to local building suppliers and testing facilities, 5) bus trip to several manufacturing, fabrication, milling plants, 6) hands-on mock-ups of construction assemblies, and 7) actual material samples. This course prepares students for further study in the advanced architectural engineering courses. Student evaluation and individual grades are based on a combination of homework, projects, quizzes, attendance and a final cumulative exam. The major part of the final grade is from six (6) quizzes of which the lowest quiz grade is dropped. Special facilities consist of 1) the drafting room, where various drawings and specifications are utilized to understand materials, 2) the computer lab, where students have access to the internet, which provides them with information from manufacturers, suppliers and construction trade organizations, 3) the material samples room, where actual material samples and fasteners are examined and understood, 4) the hands-on mock-up room, where true size mock-ups are built by student groups and 5) the structures testing lab, where concrete beams, wood trusses, etc. built by the students are load tested to understand construction methods and failures.

Concurrent: A E 222

AE 222: Building Modeling and Documentation

3 Credits

Materials and methods of construction used in residences, and preparation of working drawings for a small building. The course objective is for students to understand construction documents, communicate construction information with sketches and to create drawings and specifications. The course is organized around a series of modules related to working drawings. These modules consist of: 1) reading and interpreting construction documents, 2) hand drawn sketches, from existing mock-ups, from existing drawings, from assigned details of existing campus buildings, from only given material and connection parameters, 3) CAD drawings of plans, elevations, wall sections, building sections, details, schedules. The final partial construction documents will be in accordance to CAD standards and various codes, including zoning, International Building Code, ADA, etc. This course prepares students for further study in the advanced architectural engineering courses. Student evaluation and individual grades are based on a combination of homework, projects, in class assignments, exams, quizzes and attendance. In class assignments are generally short and given to demonstrate a concept or as practice. Special facilities consist of: 1) the drafting room, where various drawings and specifications are utilized and where students prepare sketches, 2) the computer lab, where students have access to computer aided design software, presentation software and communication software, 3) the material samples room, where actual material samples and fasteners are examined and understood and 4) the hands-on mock-up room, where true size mock-ups that represent the students drawings are built by student groups.

Prerequisite: EDSGN130 or EDSGN100; Concurrent: A E 221

AE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

AE 308: Introduction to Structural Analysis

4 Credits

Algebraic and graphical methods of analysis of determinate members, deflections; introduction to indeterminate analysis methods. Course includes practicums. AE 308 Introduction to Structural Analysis (4) In this introductory course, students develop skills to perform analysis of structures, with emphasis on buildings and their structural elements. The objectives of this course are as follows: 1) to determine loads that the buildings/structural elements are likely to be subjected to during the lifetime of the building; 2) to discuss procedures used to determine reactions and internal forces in trusses, beams, and frames; 3) to introduce methods that can be used to calculate deflections. These objectives can be seen as three general steps that define structural analysis. Although the main emphasis in this course is the analysis of planar, statically determinate structures, an introduction to the analysis of indeterminate structures is also given. The course is required to be taken by all architectural engineering undergraduate students in the third year. A knowledge of statics and strength of materials is required and this course serves as prerequisite for steel and concrete design courses in the Architectural Engineering Program.

Prerequisite: E MCH211, E MCH213

AE 309: Architectural Acoustics

3 Credits

Acoustical design for good hearing conditions and noise control; construction details, materials, acoustical properties of room shapes; sound absorption, transmission. Course includes practicums. AE 309 Architectural Acoustics (3) Architectural acoustics encompasses four distinct areas of study: room acoustics, sound isolation, mechanical system noise and vibration and sound reinforcement. The course concentrates on the performance of the building components as they impact on the acoustical environment. The goal of good acoustical design is to provide an environment to afford occupants of a building a high quality listening environment and to minimize intrusion by offending noises. By manipulation of building materials, spatial relationships and geometry, the students learn to improve acoustical performance of a building. Through lectures, practicums, projects, tours to campus performance venues and examinations, the concepts of acoustical design are delivered and reinforced. The course offers students opportunity to work in team settings and to present their work orally to their peers. The course is required for all architectural engineering students, typically taken in the 3rd-year. PHYS 213 is a prerequisite for this course. This course is a prerequisite for Advance Architectural Acoustics and Noise Control. Students not in the architectural engineering curriculum are encouraged to consult with the instructor prior to enrolling in the course.

Prerequisite: A E 221, A E 222, PHYS 213

AE 310: Fundamentals of Heating, Ventilating, and Air Conditioning

3 Credits

Fundamental principles and engineering procedures for the design of heating, ventilating, and air-conditioning systems, including energy utilization and constraints. AE 310 Fundamentals of Heating, Ventilating, and Air Conditioning (3) AE 310 explores the fundamentals of the heating, ventilating and air-conditioning (HVAC) systems that control environmental conditions inside buildings. HVAC systems have
common basic components, although they may significantly differ in physical appearance and arrangement. The course considers a variety of HVAC systems and presents methods of analyzing air-conditioning processes. HVAC systems maintain not only an acceptable level of thermal comfort within conditioned spaces, but also a healthy environment. Hence, the conditions for a comfortable and healthy indoor environment, such as physiological considerations, environmental indices, and control of indoor air quality are defined. The design of a successful HVAC system requires an accurate estimate of the peak rate at which energy must be added to (heating load) or removed from (cooling load) a space. Therefore, the various types of heat transmission in buildings and methods for estimating them are discussed in order to prepare students to estimate buildings energy consumption and size HVAC systems properly. The target audience is Architectural Engineering students at a junior level who have taken AE 202 "Introduction to Environmental Systems in Buildings," and ME 23 "Introduction to Thermal Science.

Prerequisite: M E 201; Prerequisite or concurrent: A E 202

AE 311: Fundamentals of Electrical and Illumination Systems for Buildings
3 Credits

Fundamental principles, systems, and planning concepts for electrical and illumination systems in modern buildings.

Prerequisite: or concurrent: E E 211, PHYS 212

AE 372: Introduction to the Building Industry
3 Credits

Introduction to the building industry; owner, designer responsibilities; documents, bidding procedures; design-construct contracts; project management; insurance, labor relations.

Prerequisite: sixth-semester standing in Architectural Engineering

AE 401: Design of Steel and Wood Structures for Buildings
3 Credits

Application of principles of engineering mechanics to layout, analysis, design, and detailing of structural elements in steel and wood of simple buildings. AE 401 Design of Steel and Wood Structures for Buildings (3) AE 401 is a first course in structural steel and wood design taken by all undergraduate Architectural Engineering students in the 6th or 7th semester. It applies the principles of engineering mechanics to layout, analysis, design, and detailing of structural steel elements. The course covers the principles of structural design, structural safety, structural stability, steel as a material, methods of structural steel design, design of tension members, design of columns, design of beams (flexure, shear, deflection, bearing, web crippling, web yielding), combined stresses (beam columns), fasteners/connections. It also treats wood design, including material characteristics, beam design, column design, and fasteners. After completion of the course students will be able to design simple wood and steel structures.

Prerequisite: A E 221, A E 222, A E 308

AE 402: Design of Concrete Structures for Buildings
3 Credits

Application of principles of engineering mechanics to layout, analysis, design, and detailing of structural elements in concrete of simple buildings. AE 402 Design of Concrete Structures for Buildings (3) This course is designed to provide all Architectural Engineering students with an ability to analyze and design reinforced concrete and an understanding of the theoretical behavior of reinforced concrete members. The primary focus is on the analysis and design of one-way systems comprised of slabs, beams, and columns. Evaluation methods include, but are not limited to, exams and homework assignments. A prerequisite knowledge of structural analysis is necessary. It is a required course in the Architectural Engineering curriculum. Additionally, this course provides the necessary prerequisite knowledge for several upper level concrete courses in both Civil and Architectural Engineering.

Prerequisite: A E 221, A E 222, A E 308

AE 403: Advanced Steel Design for Buildings
3 Credits

Continuation of A.E. 401. Advanced analysis, design, and detail of the structural elements in wood and steel. AE 403 Advanced Steel Design for Buildings (3) AE 403 is designed for 4th year Architectural Engineering students in the structural option, to build on the design and analysis base developed in the first course in steel design. This course is intended to develop competency in analysis and design of multi-story steel buildings subjected to gravity, wind and earthquake loadings, including study of connections, framing systems, composite design and plastic design of steel members. The course prerequisites include determinate and indeterminate analysis and structural design of steel members. It will cover such topics as types of construction, the design process, loading and load cases, floor systems, floor vibration, moment rotation characteristics of connections, plastic analysis, multi-story frames, braced and unbraced frames, seismic design, leaning columns, drift, composite design and connections.

Prerequisite: A E 401, A E 430

AE 404: Building Structural Systems in Steel and Concrete
3 Credits

Basic analysis, design, and detailing of steel and concrete structural elements for buildings, emphasizing systems design and comparisons. AE 404 is not permitted for AE Structural Option students or for Architecture students. AE 404 Building Structural Systems in Steel and Concrete (3) The course is designed for architectural engineering students in the Construction, Mechanical Systems and Lighting/Electrical options to gain an ability to design simple building members in steel and concrete using current professional standards, specifications and guidelines. Students will learn to combine these members into simple structural systems and compare the performance and load carrying characteristics of these systems. The course will also address general performance parameters of these materials, construction issues and key systems-integration issues for beams, columns, flooring and roofing systems, and lateral bracing systems constructed in steel and concrete. This course is considered to be the terminal course for non-structural option AE students, and is designed to provide a general understanding of design, construction and integration issues that affect these structural
systems. This course may not be taken by AE Structural Option students or Architecture students.

Prerequisite: A E 221, A E 222, A E 308

AE 405: Geotechnical Engineering

4 Credits

Course prepares students for understanding, analysis, evaluation, and design of the most commonly used shallow foundation systems to support buildings. All structural loads on buildings, most notably gravity loads and wind/seismic lateral loads, are transferred to the soil supporting the building. In order for the building to safely deliver these loads to the soil and avoid settlement issues and soil failure, a proper foundation system must be designed. Design of foundation systems is a function of soil material properties, foundation material, and the selected foundation system. This course educates the student on the basics of soil mechanics for foundation design, and educates the student on how to select and design the most commonly used types of foundation systems. Course is intended to provide students with the knowledge, tools, and understanding of material properties, analysis and design principles, and methods necessary for successful construction of foundation systems within the framework of quality control, code compliance, economic consideration and safety, while minimizing failure risks. The course is required for Architectural Engineering students in the Structural and Construction Options, but other students may take the course with permission by the instructor.

Prerequisite: (AE 308; CE 340,) (AE 402; AE 404)

AE 421: Architectural Structural Systems I

3 Credits

Qualitative and quantitative analysis and design of architectural structures, force flow; structure configurations; measurement and experiments; design studio critique.

Prerequisite: A E 210, 3 credits in mathematics

AE 422: Architectural Structural Systems II

3 Credits

Continuation of A E 421, with emphasis on structural configuration and construction assemblies.

Prerequisite: A E 421

AE 424: Environmental Control Systems I

3 Credits

Fundamental principles and applications of environmental systems in buildings. This course is intended for Architecture students. AE 424 Environmental Control Systems I (3) This course is a complement to AE 211. Environmental control systems other than the thermal environmental systems are covered in this course. AE 424 introduces architecture students to building illumination, acoustical, fire protection, electrical and plumbing design issues. Emphasis is placed on building design as a response to the technical, environmental and societal challenges. The course utilizes lectures, practicums, examinations, projects, presentations and field trips to deliver and reinforce the technical content. The course offers students opportunity to work in team settings and to present their work orally to their peers. The broad coverage of the technical and social issues and professional skills intentionally involves students in discussion and application of social and ethical responsibilities. The course is required for students enrolled in the undergraduate architecture program. AE 211 is a prerequisite for this course. The course is not available to architectural engineering students.

Prerequisite: A E 211

AE 430: Indeterminate Structures

3 Credits

Classical methods of analysis for beams, frames, arches, and secondary stresses as applied to buildings; introduction to modern methods.

Prerequisite: A E 308

AE 431: Advanced Concrete Design for Buildings

3 Credits

Continuation of AE 402. Advanced analysis, design, and detail of concrete masonry, prestressed and reinforced concrete. AE 431 Advanced Concrete Design for Buildings (3) This is the last course in reinforced concrete design in the Architectural Engineering curriculum, and builds on previously learned skills in reinforced concrete design and analysis of statically determinate and statically indeterminate systems. Successful students will come away with sufficient understanding of the theoretical basis of concrete design to be able to learn any further aspect of concrete design on their own, and a set of specific critical skills needed by any structural designer involved with reinforced concrete structures. These skills include: Identification of the assumptions and weakness of the theory of reinforced concrete members. Detailed design of reinforced concrete beams and girders. Design of reinforced concrete slabs by the direct design method. Design of reinforced concrete slabs by the equivalent frame method. Analysis of reinforced concrete members subjected to torsion, to determine bending and torsional moments. Design of reinforced concrete members subjected to torsion. Design of reinforced concrete columns, slender and non-slender. Design of reinforced concrete columns in biaxial bending. This course is taught by a combination of lectures, solution of example problems, and design projects.

Prerequisite: A E 402, A E 430

AE 432: Design of Masonry Structures

3 Credits

Analysis and design of unreinforced and reinforced masonry: non-bearing walls, bearing walls, shear walls, masonry building systems. AE 432 Design of Masonry Structures (3) This course is intended to prepare students in Architectural Engineering and related disciplines such as Civil Engineering and Agricultural and Biological Engineering to design load-bearing and non-load-bearing masonry structures. Although the emphasis will be on reinforced masonry, the design of unreinforced masonry will also be covered. The course will begin with a discussion of the materials used in masonry construction: clay units, concrete units, mortars, grout, and reinforcement. Since masonry is designed by allowable stress methods, a discussion of allowable stress design, as compared to load and resistance factor design, is necessary from the outset. The first design applications to be discussed will be non-load-bearing walls, reinforced and unreinforced. This will be followed by a brief coverage of the topic of columns. The next topic will be load-bearing walls, reinforced and unreinforced. The discussions of load-bearing walls
building performance rating scales which use such data are discussed. Energy efficiency renovation impacts are detailed. Industry established empirical expected building energy use models, as well as document as ambient weather parameters and occupant density, to establish, using the data with associated significant independent variables, such operated equipment - are reviewed. Inverse modeling techniques of subsystems - lighting, heating ventilation and air conditioning, occupant associated with a building system, both on whole building and significant

In this course, the means of measuring and monitoring of the energy use for predicting and determining energy use of whole buildings and important subsystems. Building systems use more primary energy utilization and generate more emissions than either the U.S. transportation or industrial manufacturing sectors. Due to the significance of the building sector on national energy used and emissions profiles, the development of quantitatively predictive energy and performance simulation of buildings is a rapidly advancing technical field. The Architecture and Architectural Engineering communities are pursuing aggressive programs to establish a data-based, protocol methodologies and computer based modeling tools that enable accurate predictions of the expected energy utilization and indoor environment performance of alternative building designs. The developing modeling tools are to be integrated with on-site performance measurements and protocol based energy auditing of facilities. Expected performance characteristics predicted by the modeling tools are to be compared with the measured values. The building design community is evolving to design simulation methodologies used by the transportation and manufacturing sectors. In this course, the means of measuring and monitoring of the energy use associated with a building system, both on whole building and significant subsystems - lighting, heating ventilation and air conditioning, occupant operated equipment - are reviewed. Inverse modeling techniques of using the data with associated significant independent variables, such as ambient weather parameters and occupant density, to establish, empirical expected building energy use models, as well as document energy efficiency renovation impacts are detailed. Industry established building performance rating scales which use such data are discussed.

Prerequisite: A E 402 or C E 341

AE 444: Micro CADD Applications for Buildings
3 Credits

Application of microcomputer based CADD systems to architectural engineering problems including graphics, system customization, and AI programming techniques.

Prerequisite: A E 222; CMPSC201 or CMPSC202

AE 445: Building Retuning
3 Credits

AE 445 is an undergraduate course focused on the implementation of energy-efficient measures for commercial buildings and is intended for students with backgrounds in building design, construction, operations, and facilities management. This course builds upon prerequisite knowledge in building energy systems and is intended to support the career advancement in the energy services industry. Students will also gain experience in the interaction with building occupants and operators, and also working as a team that encourage action toward energy efficient system operation.

Prerequisites: AE 424; AE 476; AE 454

AE 453: Load and Energy Use Simulations for Buildings
3 Credits

Course examines measurement and mathematical modeling techniques for predicting and determining energy use of whole buildings and important subsystems. Building systems use more primary energy utilization and generate more emissions than either the U.S. transportation or industrial manufacturing sectors. Due to the significance of the building sector on national energy used and emissions profiles, the development of quantitatively predictive energy and performance simulation of buildings is a rapidly advancing technical field. The Architecture and Architectural Engineering communities are pursuing aggressive programs to establish a data-based, protocol methodologies and computer based modeling tools that enable accurate predictions of the expected energy utilization and indoor environment performance of alternative building designs. The developing modeling tools are to be integrated with on-site performance measurements and protocol based energy auditing of facilities. Expected performance characteristics predicted by the modeling tools are to be compared with the measured values. The building design community is evolving to design simulation methodologies used by the transportation and manufacturing sectors. In this course, the means of measuring and monitoring of the energy use associated with a building system, both on whole building and significant subsystems - lighting, heating ventilation and air conditioning, occupant operated equipment - are reviewed. Inverse modeling techniques of using the data with associated significant independent variables, such as ambient weather parameters and occupant density, to establish, empirical expected building energy use models, as well as document energy efficiency renovation impacts are detailed. Industry established building performance rating scales which use such data are discussed.

Fundamental heat transfer and thermal capacitance relationships as used by the engineering design community are discussed along with linearization approximations and Fourier series techniques used to simplify the resulting complex, coupled partial differential equations that result from energy balancing model equations. Analytical and numerical approaches to solving the equations to arrive at predicted thermal loads developed by a building system are reviewed. Readily available, building simulation software packages commonly used in the building design community to determined energy used by equipment configurations to meet predicted loads are discussed. Students are required to exercise one of the standard software tools to model a specific building facility.

Prerequisite: A E 310, A E 454

AE 454: Advanced Heating, Ventilating, and Air Conditioning
3 Credits

Engineering design and performance analysis procedures for complex commercial building systems, including energy conservation techniques; design project.

Prerequisite: A E 310

AE 455: Advanced Heating, Ventilating, and Air Conditioning System Design
3 Credits

Design of several different systems for a course project building; control strategy; economic comparisons using life-cycle cost techniques.

Prerequisite: A E 454

AE 456: Solar Energy Building System Design
3 Credits

Solar radiation, collectors, and thermal storage; design and analysis of a heating system using system-simulation computer program.

Prerequisite: seventh-semester standing in Engineering

AE 457: HVAC Control Systems
3 Credits

Theory of automatic control. HVAC control applications. Control system components, control loops, development and documentation of control logic, control commissioning. AE 457 HVAC Control Systems (3) The objective of the course is to develop the knowledge and skills necessary to understand, design, document, and diagnose problems in HVAC control systems. The course builds on knowledge of HVAC system function and design obtained in prior courses in the curriculum and prepares students for advanced design courses and the capstone project. The course begins with an introduction to concepts and terminology of automatic control, followed by detailed study of control system components: sensors, controlled devices, and controllers. Understanding of these fundamentals is then applied to the development and documentation of controls for common HVAC systems and the commissioning of control systems. Relevant standard and guideline documents are referenced as necessary.

Prerequisite: A E 454
AE 458: Advanced Architectural Acoustics and Noise Control
3 Credits
Advanced consideration of noise control in buildings; ventilating system noise and vibration; acoustic design variables.
Prerequisite: A E 309

AE 459: Measurement Science for High Performance Building Systems
3 Credits
The course Measurement Science for High Performance Building Systems is meant to provide students hands-on experience of measuring building energy performance, thermal comfort, and indoor air quality. Students will learn standardized test methods and instrumentation for field investigation of building system performance. Using the measurement data from real buildings (both commercial and residential), students will be able to critically evaluate performances of building HVAC system, building envelope, and environmental quality in occupied spaces. Students will also learn how to renovate building systems based on field monitoring data. This course provides a foundation for engineering students for design of net-zero energy and high performance buildings that address energy saving, occupant comfort, productivity, and health.
Prerequisites: AE 310 and AE 454

AE 461: Architectural Illumination Systems & Design
3 Credits
Lighting units & photometry; lighting equipment; design criteria, calculation methods; the design process; energy codes. AE 461 Architectural Illumination Systems & Design (3) This course will prepare students to design basic lighting systems by providing them with background information and experience to do the following: 1. Develop their knowledge of lamp, luminaire, and control types and evaluate their applicability to a particular design situation. 2. Establish fundamental design criteria for a variety of lighting applications. 3. Conduct appropriate and accurate analyses of lighting systems to assess system performance and evaluate its ability to meet design criteria. 4. Implement a completed design by specifying all of the components of the system and providing an appropriate system layout. This is the first full-semester lighting course that students receive in the Architectural Engineering Department’s Lighting/Electrical Option.
Prerequisite: A E 311

AE 463: Daylight Analysis of Roman Architecture
3 Credits
Solar geometry, building orientation and form, daylight design methods, characterization of interior and exterior lighting conditions. Offered in Rome. Analysis of Roman architecture from the perspective of daylight. Topics include solar geometry; building orientation and form; daylight design methods including top lighting and sidelifting strategies; illuminance meters; characterization of interior and exterior lighting conditions; site visits. Course includes development of a software tool to compute solar geometry and daylight availability for any location on the globe and for clear, overcast, and cloudy sky conditions. The software tool will also run in reverse, providing time of day and year when the sun is in a desired position for any latitude and longitude. Offered on location in Rome.

AE 464: Advanced Architectural Illumination Systems & Design
3 Credits
Flux transfer theory; advanced lighting and control systems; emergency lighting; daylighting; visual performance issues; psychological aspects of lighting. AE 464 Advanced Architectural Illumination Systems & Design (3) This is the final undergraduate architectural lighting course in the Lighting/Electrical Systems Option. The course focuses on advanced topics related to lighting design such as luminous flux transfer and its application to lighting analysis procedures, advanced issues in photometry, advanced control systems, and advanced topics in lighting design. The light design topics include the psychological aspects of lighting, and design for complex spaces such as museums, stores, and video conferencing. The course includes a weekly hands-on practicum experience, homework, exams and a design project.
Prerequisite: A E 461

AE 466: Computer Aided Lighting Design
3 Credits
Design and analysis for outdoor area; floodlighting; and interior applications, including design criteria; economic analysis; modeling algorithms; and visualization. AE 466 Computer Aided Lighting Design (3) The goal of this course is to cultivate an understanding of good lighting design practice through a series of design and analysis problems. Course topics include design criteria, design practice, and the application of lighting hardware and analysis procedures for outdoor area lighting, economic analysis of lighting systems, interior lighting design and lighting system visualization. Commercially available computer software is applied to approximately seven design projects, which students present in either PowerPoint or submit in a short report format. Students, faculty and outside professionals critique the project solutions. The critiques enhance the learning experience for all students through the evaluation of different lighting solutions applied to the same design problem.
Prerequisite: A E 444, A E 461

AE 467: Advanced Building Electrical System Design
3 Credits
Design of electrical systems for commercial and industrial facilities emphasizing design practice and integration with codes and standards.
Prerequisite: A E 311, E E 211

AE 468: Advanced Building Electrical and Communication Systems
3 Credits
Special Building Electrical and Communication Systems is an elective course within the architectural engineering program. It addresses specialized components and analysis of building electrical systems, cost and availability of electrical energy, and power quality. Students will also develop an a more in-depth understanding of alternative electrical sources, the National Electric Code, advanced design issues of electrical systems, as well as other electrical and building communication issues. In addition, part of the course will focus on the fundamentals of special systems typically included within the electrical discipline scope of work such as fire alarm, access control, surveillance, voice, video and data.
systems. Upon completion of this course, students will be able to explain the fundamentals of special electrical and communication systems within a building.

**Prerequisite:** AE 467

AE 469: Photovoltaic Systems Design and Construction

3 Credits

Criteria and analysis methods pertaining to the design and construction of photovoltaic (PV) systems and their integration with buildings. AE 469 Photovoltaic Systems Design and Construction (3) This course provides students with a working understanding of the design and construction of photovoltaic (PV) systems and their applications in buildings, and is intended for students in Engineering and Energy Engineering. The course provides an overview of PV systems and common applications in residential and commercial buildings including the determination of solar irradiance and insolation based on latitude and climate as well as site survey and assessment methods for the positioning of PV systems. Technical topics include solar module components, DC-AC power inversion, energy storage systems, and system sizing and design. The integration of PV systems with building electrical and mechanical systems, including discussions of the pertinent building codes, utility interconnection, and the economic analysis of PV systems, is also included in this course. Upon the completion of the course, students will be able to calculate and account for the factors affecting the performance of PV systems in various climates and conditions, distinguish the features and performance variables of solar modules and inverters in the design of PV systems, calculate string sizing and inverter matching variables in the design of PV systems, communicate the critical design features of safe and efficient PV system integration with buildings and utilities, evaluate and quantify the factors affecting the successful installation and performance of PV systems in variable settings, and will develop inquiry skills needed to assess new products entering the solar energy marketplace. In addition to understanding the key issues with system design, students will be able to utilize this understanding to choose components properly and to design a basic grid-tied system for a chosen building. Students will also be able to conduct an economic analysis of PV systems in the context of residential and commercial building construction.

**Prerequisite:** E E 210 or E E 211

AE 470: Residential Building Design and Construction

3 Credits

Managerial aspects; architectural and code considerations; cost estimating, design, and construction of structural, plumbing, HVAC, and electrical systems.

**Prerequisite:** A E 372 or C E 332; seventh-semester standing in Architectural Engineering or Civil Engineering

AE 471: CONSTRUCTION MANAGEMENT OF RESIDENTIAL BUILDING PROJECTS

3 Credits/Maximum of 3

Understanding residential project planning, management, contracts, budget, administration, and execution; discussion of the life cycle of a residential construction business. AE 471 Construction management of Residential Building Projects (3) The course Construction Management of Residential Building Projects is designed to introduce the students to a general understanding of the construction industry, basic principles of project planning and management, contracts, budget and project administration and execution as applied to residential building construction. The content of the course is intended to provide the student with the knowledge, tools, and understanding of processes and tasks necessary to manage residential building projects to completion successfully and within the framework of quality control, code compliance, and safety, while minimizing risks. The scope of the residential construction considered in this course is primarily focused on single-family dwellings and multi-family dwellings. Furthermore, most of the topics covered can be applicable to new construction, remodeling, as well as repair projects.

**Prerequisite:** 6th semester standing

AE 472: Building Construction Planning and Management

3 Credits

The objective of AE 472 is to introduce students in the construction management option of the Architectural Engineering program to the process in which building construction contractors acquire building projects, and the range of services typically provided on these projects. Upon completion of this course, students will have a working understanding of the preconstruction process and methods of acquiring negotiated work in building construction. They will be capable of assembling estimates, schedules, cash-flow curves, and site plans for building projects, and will have a working knowledge of competitive presentation strategies and develop professional presentation skills. The content of the course centers upon the process in which companies plan for and acquire projects as construction managers and general contractors. Specific topics include schematic estimating and scheduling, design coordination of structural, architectural, and mechanical systems, value engineering processes, and site planning. The financial aspects of construction work are also presented, including project financing, cash flow, and accounting. A significant portion of the course is also devoted to the development of strategic and competitive business presentation, including risk assessment, fee structure, team dynamics, and technical presentation skills. The class relies heavily upon the application of all content by students in the context of a team project. The project involves the distribution of a "Request for Proposal" for which students prepare a competitive proposal for an actual building construction project planned on the Penn State University Campus. Class activities include the presentation of key issues followed by in-class or independent exercises to reinforce themes and strategies to be applied in the project proposal. Students are assessed on their performance on discussion quizzes, independent exercises, class participation, a team presentation, and exams.

**Prerequisite:** AE 475

AE 473: Building Construction Management and Control

3 Credits

Building construction project planning; construction cost, schedule, quality and safety control systems; project cost accounting; change management; construction company management. AE 473 Building Construction Management and Control (3) The goals of this course are for students to learn how to perform detailed construction planning, identify potential problems during construction, and manage changes throughout a construction project. By completing this course, students will better understand the role of the general contractor/construction manager in analyzing the construction aspects of a building project.
and designing the construction engineering and management systems
to effectively execute the project. The main course objectives include
learning how to perform and implement detailed planning for a
construction project together with monitoring the project progress and
performance including detailed cost control. Other course objectives
emphasize gaining knowledge of the key decisions that construction
executives make when managing a construction company and identifying
potential projects to pursue. Students will also be introduced to the
management of changes which occur throughout a project and how
to negotiate changes. Finally, ethical standards for a professional
engineer and their impact on decisions within the construction industry
are important course learning objectives. The course is taught via a
combination of teaching methods that rely on problem based learning
through both in and out of class activities; lectures by faculty and
industry experts; project case studies; student presentations; and team
and individual assignments. Completion of AE 472 is a prerequisite for
this course.

**Prerequisite:** A E 472

AE 474: Building Construction Estimating

3 Credits

Construction estimating and cost engineering fundamentals; quantity
take off; pricing, bid preparation; estimating, cost accounting by
computer.

**Prerequisite:** A E 372

AE 475: Building Construction Engineering I

3 Credits

Project planning, supervision, inspection of architectural and structural
operations in major buildings; mobilization, coordination of trades; offsite
testing and fabrication.

**Prerequisite:** A E 372

AE 476: Building Construction Engineering II

3 Credits

Construction of mechanical and electrical systems in major buildings; fire
protection, sound control, elevating; trade coordination; manufacturers'
developments; computer application.

**Prerequisite:** A E 309, A E 475

AE 481: Comprehensive Architectural Engineering Senior Project I

4 Credits

Building project selection and preparation of overall plan; preliminary
investigation of building design and construction issues; creation of
individual Capstone Project Electronic Portfolio (CPEP) and project
proposal required. AE 481 Comprehensive Architectural Engineering
Senior Project I (4) The course sequence of AE 481 and AE 482
comprises the capstone engineering design program for Architectural
Engineering students. AE 481 is taken by all undergraduate architectural
engineering (A E) students and also serves as the writing intensive
course requirement in A E. Based on an actual building project model,
students will investigate the building, perform technical analysis, develop
project criteria and prepare a written proposal for more detailed work
to be accomplished in AE 482. Evaluation methods include but are
not limited to written reports, verbal and written presentations, faculty
consultations and development of a capstone project electronic portfolio
(CPEP).

**Prerequisite:** ARCH 441, fifth-year architectural engineering standing in
major area of emphasis

**Writing Across the Curriculum**

AE 482: Comprehensive Architectural Engineering Senior Project II

4 Credits

Continuation of AE 481 Engineering analysis of building systems;
emphasis on analysis and design of building structural, mechanical,
lighting/electrical, and construction related systems. Final written
report, web-based project portfolio and verbal presentation are required.
AE 482 Comprehensive Architectural Engineering Senior Project II (4)
AE 482 is the second half of the capstone engineering design project
for Architectural Engineering students. The course is taken by all
undergraduate architectural engineering and serves as a direct follow up
to AE 481. Students perform detailed option specific work in conjunction
with individual proposals written in AE 481. Students are also required
to demonstrate work in the breadth areas of architectural engineering.
Evaluation methods include but are not limited to written reports, verbal
and written assignments, faculty consultations, maintaining their
capstone project electronic portfolio, a final comprehensive written report
and a verbal presentation to a faculty jury.

**Prerequisite:** A E 481W

AE 486: Professional Engineering Practice

3 Credits

A study of the influences which affect the practice of architectural
engineering, particularly codes, ethics, legal considerations, and contract
documents.

**Prerequisite:** seventh-semester standing

AE 494M: Senior Honors Thesis

4 Credits

Comprehensive Architectural Engineering Senior Project development
and planning with an honors thesis focus. In this course, an honors
student in architectural engineering will work on a real-world building
project which the student has selected and for which the student has
obtained drawings and specifications, as well as the owner's permission
to use this project as their undergraduate thesis project. Students
enrolling in this course are required to complete the following: - Develop
and initiate a plan for their undergraduate senior project in Architectural
Engineering which will also serve as their Schreyer Honors College
thesis. Through this thesis, the student demonstrates a command of
relevant scholastic work and a personal contribution to that scholarship.
- Secure an honors thesis adviser and meet with that person to select
an in-depth and/or integration focus for their Honors Thesis work. The
student then develops a formal proposal describing the focus area for the
undergraduate senior project and honors thesis, outlining the analyses,
investigations, and design elements of this work and the tools that will
be employed. - Summarize the existing conditions present in this building
project as it relates to their AE option, systems integration, and the
honors thesis topic. - Conduct a thorough review of the relevant literature
that has been published in the area that is the focus of the honors thesis,
including details on the relevant building, construction, and energy codes
that govern this work. Commence work on the investigation, analysis, and design portion of the thesis, together with the general activities required of all AE students in their undergraduate capstone projects.

**Prerequisite:** ARCH 441, fifth-year architectural engineering standing in major area of emphasis

Honors

Writing Across the Curriculum

AE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AE 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

AE 498F: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

**Architectural Engineering Technology (AET)**

AET 101: Building Materials

3 Credits

Structural and architectural use of building materials and construction assemblies.

AET 102: Methods of Construction

3 Credits

Materials and methods of construction used in buildings, as expressed in drawings.

**Prerequisite:** AE T 101, EG T 101, EG T 102

AET 103: Plumbing and Fire Protection

3 Credits

Layout of plumbing and fire protection in buildings to meet code and usage requirements.

**Prerequisite:** or concurrent: AE T 102

AET 113: Site Planning

2 Credits

Energy conservation through optimum site utilization, contours, cut and fill calculations, storm drainage, spot grading, and finish grading.

AET 121: Introduction to Building Environmental Systems

2 Credits

Introduction to building environmental systems technology terminology, concepts, and the design process.

AET 204: Heating, Ventilating, and Air Conditioning Layout

3 Credits

Fundamental calculations and layout of systems in buildings.

**Prerequisite:** AE T 103. Prerequisite or concurrent: AE T 102

AET 206: Architectural Presentation

2 Credits

Visual communication through architectural presentation drawings. Line, value, color, and composition.

**Prerequisite:** EG 001 or EG 003

AET 207: Advanced Construction Methods

3 Credits

Integration of materials and systems in working drawings.

**Prerequisite:** fourth-semester standing

Writing Across the Curriculum

AET 210: Architectural Engineering Office Practice Using Writing Skills

3 Credits

Concepts, procedures, and writing-intensive activities to properly prepare site observation reports, cost estimates, contractual conditions, and outline and technical specification.

**Prerequisite:** fourth-semester standing

Writing Across the Curriculum

AET 212: Building Lighting and Electrical Layout

3 Credits

Layout of lighting and electrical distribution in buildings.

AET 214: Steel Construction

3 Credits

Strength of materials as applied to the design of simple steel structures.

**Prerequisite:** AE T 102, MCH T111
AET 215: Concrete Construction
3 Credits
Fundamentals of design and construction of reinforced concrete structures.
Prerequisite: AE T 102, MCH T 111

AET 227: Liquid Heating and Cooling Systems
3 Credits
Water, steam, and refrigerant systems and components; pumps and piping; heat exchangers; fluid and component selection; power and controls.
Prerequisite: AE T 121, MET 281

AET 228: Air Heating, Cooling, and Ventilating Systems
3 Credits
Air systems and distribution components; fans and ductwork; heat exchange coils; dampers and controls; residential fired equipment operation.
Concurrent: AE T 227

AET 229: Analysis of Building Environmental Systems
3 Credits
Comprehensive analysis and application of building environmental systems with focus on selected areas; calculation and layout; computer modeling of systems.
Prerequisite: fourth-semester standing

AET 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

AET 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Architecture (ARCH)

ARCH 100: Architecture and Ideas
3 Credits
General introduction to world architecture, emphasizing the relationship between concepts, philosophies, values and ideologies in shaping the built environment. ARCH 100 Architecture and Ideas (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces architecture and urbanism for a general audience. It presents key concepts that have shaped the built environment, and provides an ongoing framework for evaluations of what makes a good building or city. The material discussed is taken from prehistory to the present, and encompasses both major works of architecture and consideration of common building types and contexts. Although monuments and philosophies from the Western tradition predominate, it brings in issues and examples of global scope as well. The course is structured around a set of themes. These include: how architecture embodies spiritual beliefs; affects private and community life; evolving definitions of the architect; and how ideas about aesthetics, technology, tradition, and other cultural forces shape buildings and influence diverse, often conflicting notions of what constitutes “good” architecture. The topics discussed will demonstrate multiple ways of understanding buildings and cities. Lectures and assigned readings explore significant illustrative structures, design theories, and the cultural and intellectual contexts in which they emerge. Through the lectures and readings students will become familiar with an extensive set of architectural works, as well as a wide range of influential architectural concepts, authors, and texts. ARCH 100 will ultimately help students analyze and judge buildings and the arguments about them critically, and better understand buildings and cities as ideologically charged artifacts that influentially structure human experience.

General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

ARCH 121: Visual Communications I
2 Credits
Development of two and three-dimensional graphic communications skills and techniques required for the practice of architecture. ARCH 121 Visual Communications I (2) The course is designed to introduce two and three-dimensional graphic communication skills. Assignments will develop the student’s understanding and skills associated with the hand-drawing techniques used in the practice of architecture. Exercises provide exposure to the variety of representational techniques available to architects for the visual communication of design ideas and design documentation. Visual Communications I is organized as an interactive studio environment which combines lectures and demonstrations with individual instruction. The basic concepts and theories of documenting, representing, and presenting architecture will be introduced through a series of lectures, seminars, and examples. In studio, skills will be developed through project workshops. Instruction includes working sessions, individual desk reviews, technique demonstrations and group discussions. Students will learn the fundamentals of architectural drawing by hand, introductory-level descriptive geometry, orthographic projection, paraline and perspective drawings. These skills and principles are imparted primarily through studio-based assigned projects.

ARCH 122: Visual Communications II
2 Credits
Development of two-dimensional digital graphic communications skills and techniques required for the practice of architecture. ARCH 122 Visual Communications II (2) The course is designed to introduce students to two-dimensional digital tools used in the practice of architecture. Assignments will develop the student’s understanding and skills associated with digital techniques and software. Exercises provide exposure to the digital tools available to architects for the visual communication of design ideas and design documentation. Skills developed in ARCH 121 (drawing and modeling techniques) will provide the foundation for work performed in this course. ARCH 122
is organized as an interactive studio environment combining lectures and demonstrations with individual instruction. The basic concepts and theory of documenting, representing, and presenting architecture will be introduced through a series of lectures, seminars, and examples. In studio, skills will be developed through project workshops. Instruction includes working sessions, individual desk reviews, software and hardware demonstrations, and group discussions.

**Prerequisite:** Students must earn a C or better in ARCH 131S and ARCH 121; Concurrent: ARCH 132

ARCH 130A: Basic Design and Research I

3-6 Credits/Maximum of 6

Multidimensional design and perceptual development. Formulation of abstracted concepts and logical visual models.

**Prerequisite:** Architectural Engineering majors only

ARCH 131: Basic Design Studio I

4 Credits

An introduction to the basic concepts, methods, and skills of architectural design in a project-based, active learning, studio environment. ARCH 131 is a project-based, active learning where the development and evaluation of the work is driven by a critical dialogue with the instructor and one's classmates. This course is the first in a series of design studios that serve as the central thread throughout the curricula of the Architecture program. In ARCH 131, students gain knowledge about the discipline of design, develop skills of design and communication, and foster a capacity for judgment - the ability to make appropriate choices and decisions regarding design questions. As a laboratory, the design studio provides the opportunity to apply and explore the knowledge and experience gained in other courses. ARCH 131 is an intensive course that encourages creativity and industry on the part of the students. Its design projects are open-ended; there are no single "right answers." It demands energy, creativity, the willingness to take risks, and introspection. Each student is expected to be open to a diverse range of ideas, values and solutions. The student is invited to view the studio experience as an opportunity to explore, discover, and invent. The studio is divided into separate sections, each led by one studio instructor. Each section instructor will establish particular and unique assignments, and criteria for each project. This introduces students to the rich variety of possibilities in architectural communication and design. When assessing the student work, the instructors will consider the students performance in the following areas: 1. Conceptual Strength: The intentions and ideas that inspire the work. 2. Design Development: The energy, effort, and growth demonstrated throughout the course of the project. 3. Product: The tangible quality of the final product as a demonstration of the student's level of craftsmanship and mastery of the skills introduced in class. 4. Student Preparedness: At desk critiques, pin-ups, and review. 5. Student Participation: Students are expected to actively participate and be constructively engaged in class discussions, critiques, and reviews.

**Prerequisite:** or concurrent ARCH 121

ARCH 132: Basic Design Studio II

4 Credits

Continuation of ARCH 131 which further explores basic concepts, methods, and skills of architectural design with an emphasis on craftsmanship. ARCH 132 Basic Design Studio II (4)This course is a continuation of ARCH 131 and shares the same goals, methods, and means of evaluation. However, it builds upon the foundation of fundamental knowledge and skills delivered in the previous course and demands that the students expand their ability to tackle more difficult and complex problems of architectural design. The focus of this course is on "craftsmanship" and the methods and techniques of "making and building." Students are expected to thoroughly consider the implications of materials, construction, and detailing as they relate to their overall design intentions. ARCH 132 is an intensive course that encourages creativity and industry on the part of the students. Its design projects are open-ended; there are no single "right answers." It demands energy, creativity, the willingness to take risks, and introspection. Each student is expected to be open to a diverse range of ideas, values and solutions. The student is invited to view the studio experience as an opportunity to explore, discover, and invent. The studio is divided into separate sections, each led by one studio instructor. Each section instructor will establish particular and unique assignments, and criteria for each project. This introduces students to the rich variety of possibilities in architectural communication and design. When assessing the student work, the instructors will consider the students performance in the following areas: 1. Conceptual Strength: The intentions and ideas that inspire the work. 2. Design Development: The energy, effort, and growth demonstrated throughout the course of the project. 3. Product: The tangible quality of the final product as a demonstration of the student's level of craftsmanship and mastery of the skills introduced in class. 4. Student Preparedness: At desk critiques, pin-ups, and review. 5. Student Participation: Students are expected to actively participate and be constructively engaged in class discussions, critiques, and reviews.

**Prerequisite:** Students must earn a C or better in ARCH 131S and ARCH 121; Concurrent: ARCH 122

ARCH 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ARCH 198: Special Topics

1-15 Credits/Maximum of 15

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARCH 199: Foreign Studies--Architecture

1-15 Credits/Maximum of 15

Individual or group instruction conducted in a foreign country.

International Cultures (IL)
ARCH 203: Materials and Building Construction I

3 Credits

Instruction in the design and construction of buildings utilizing wood and steel. ARCH 203 Materials and Building Construction I (3) This course serves as an introduction to common architectural building materials and associated methods of construction. It is the first part of a two-semester sequence to be followed by ARCH 204 in the spring semester. Lectures, readings, and in-class discussions introduce students to the historical development and conventional use of architectural materials and construction technologies, while select hands-on projects offer students experience in materials application and use. The class covers a wide variety of building methodologies that includes developed and developing cultures, building systems that are technologically sophisticated, as well as traditions considered primitive/vernacular. The primary objective of the course is to make BARCH students familiar with the materials and methods employed in making architecture, so that the results of that familiarity begin to inform the student's studio work/production. In addition to materials and construction methods, the course will also touch on issues related to craft/craftsmanship, sustainable practices and ethical use of resources, and the significant role that evolving technologies play in the process and economy of building-making.

Prerequisite: Students must earn a C or better in: A E 210; Concurrent: ARCH 231, and A E 421

ARCH 204: Materials and Building Construction II

3 Credits

This course will continue the presentations of ARCH 203 , with a focus on concrete and masonry materials. ARCH 204 Materials and Building Construction II (3) The course is the second part of a two-semester sequence, following ARCH 203 . ARCH 204 is an introductory course in building materials and construction. It is intended for BARCH majors and is designed to prepare students for the professional practice of architecture. The learning objectives for the course can be divided into two categories: 1. developing a sense of materials and construction methods as the media for architecture, and then learning to use these media in creative and appropriate ways; 2. developing basic knowledge of the conventions of current building materials and construction techniques. Particular emphasis is placed on the use of drawings and models to accurately depict construction systems, assemblies and details. The course combines lectures and field trips with design projects, hands-on construction experiences, required readings, drawing and modeling.

Prerequisite: Students must earn a C or better in: ARCH 203; Concurrent: ARCH 232, and A E 422

ARCH 210: Introduction to Architecture and Planning Theories

3 Credits

The course introduces architectural and urban theory by presenting and exploring key concepts through major texts from the Western tradition. ARCH 210 Introduction to Architecture and Planning Theories (3) (BA) This course meets the Bachelor of Arts degree requirements. The course introduces architectural and urban theory by presenting and exploring key concepts through major texts from the Western tradition. ARCH 210 covers a period ranging from ancient Greece and Rome to the present, with greatest emphasis on writings from the nineteenth and twentieth centuries. Recurring themes will include the ways in which architectural theory has defined the architect and the relationships between architectural and urban ideas, aesthetics, and the cultural contexts in which these ideas develop. Major topics will include ancient architectural theory, the role of the "architect" throughout history, architecture aesthetic principles, Judeo-Christian architectural theory, Renaissance classicism, the Baroque city, Neoclassicism and typology, the Beaux-Arts, tectonics and Gothic rationalism, romanticism and functionalism, Le Corbusier's new architecture, the International Style, semiotics, and the neo-avant-garde. Learning Objectives: Students will acquire a basic familiarity with important ideas, authors, and texts that have shaped Western traditions in architecture and urbanism. These will introduce some of the ways in which theoretical writings have framed architecture's complex and changing relationship to human needs. Students are taught to approach these materials critically and will be required to conduct individual research on and analysis of one major theoretical work. * Through the course students learn to utilize critical theories of the built environment. Students are taught to transform their personal observations into an analytical tool for criticizing and interpreting buildings. * Students understand the key developments in architecture and urban theory and criticism from early Classicism to Post-Modernism. * Students are introduced to architecture as a manifestation of ideology and cultural values. * The students are introduced to ideas and encouraged to use key terms to discuss architecture and urbanism. * Students are encouraged to recognize the importance of architecture and architecture writing as a tool for aesthetic interpretation.* Theoretical concepts in architecture frequently are compared to similar ideas in other art disciplines, including design and the visual arts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ARCH 211: Contemporary Design and Planning Theories II

3 Credits

Continuation of ARCH 210, with an in-depth analysis and study of significant and current environmental constructs and issues.

Prerequisite: ARCH 210

Bachelor of Arts: Arts
General Education: Arts (GA)

ARCH 231: Architectural Design I

6 Credits

Design of limited environments within defined constraints. ARCH 231 Architectural Design I (6) The second-year design curriculum introduces the student to the complexity of the architectural whole. The curriculum bridges the abstract design principles taught in the first year and the ability to put together a large building, the focus in the third-year. The objectives are to create an understanding of architectural elements and develop a sensitivity and awareness required for valid interpretations as well as to develop a reflective and critical design process with emphasis on the individual ability to articulate ideas. The major means of accomplishing development is through the design of smaller buildings/environments. To introduce the pragmatic and expressive aspects of architectural design and integrate visual communication with the design process. The emphasis is on developing comprehensive architectural thought, on the foundations of skill and knowledge essential for designing more "complex" buildings in later years, and making the students aware of the multiplicity of factors involved in the design process and their civic responsibility in making informed choices Thus,
the pervasive issue of meaning in architecture is given a high priority and is interwoven in all stages of design exploration.

**Prerequisite:** Students must earn a C or better in: ARCH 132 and ARCH 122; Concurrent: ARCH 203, and A E 421

ARCH 232: Architectural Design II

6 Credits

Design of limited environments within defined constraints. ARCH 232 Architectural Design II (6) The second-year design curriculum emphasis is on introducing the student to the complexity of the architectural whole. The curriculum bridges the abstract design principles taught in the first year and the ability to put together a large building, the focus in the third-year. The objectives are to create an understanding of architectural elements and develop a sensitivity and awareness required for valid interpretations as well as to develop a reflective and critical design process with emphasis on the individual ability to articulate ideas. The major means of accomplishing the design process is through the design of smaller buildings/environments. To introduce the pragmatic and expressive aspects of architectural design and integrate visual communication with the design process. The emphasis is on developing comprehensive architectural thought, on the foundations of skill and knowledge essential for designing more “complex” buildings in later years, and on making the students aware of the multiplicity of factors involved in the design process and their civic responsibility in making informed choices. Thus, the pervasive issue of meaning in architecture is given a high priority and is interwoven in all stages of design exploration.

**Prerequisite:** Students must earn a C or better in: ARCH 231, and ARCH 203, and A E 421; Concurrent: ARCH 204, and A E 422

ARCH 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARCH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARCH 299: Foreign Studies--Architecture

1-15 Credits/Maximum of 15

Individual or group instruction conducted in a foreign country.

International Cultures (IL)

ARCH 311: Architectural and Planning Theories

3 Credits

Architectural theory course with a strong focus on the reading and writing of essays about architecture and related fields. ARCH 311 Architectural and Planning Theories (3) ARCH 311 is a required course in the BARCH curriculum. The central goal of this course is to foster critical-thinking skills, in conjunction with the ability to develop and articulate theoretical positions related to the design, practice, and historical evolution of architecture, both verbally and in writing. ARCH 311 is a writing intensive seminar course fulfilling the University’s Writing Across the Curriculum (WAC) requirement. Students will be introduced to various topics pertaining to advanced architectural theory. Students will critically read, then discuss significant works with the instructor. Lectures by the instructor will also be presented, discussed and analyzed. Writing assignments are utilized as instruments for learning the subject matter, methods of inquiry, and the types of writing typical of the discipline of architecture. The course format will also involve lectures by the instructor as well as presentations by the students related to past, present, and speculative architectural theories of importance to the field. In addition, students will complete writing assignments that demonstrate the development of a critical stance or idea, proficiency in critical analysis, and the use of established research techniques, citation of sources, and writing formats.

**Prerequisite:** ENGL 015 or ENGL 030; Students must also earn a C or better in: ARCH 210 and ART H201 and ART H202

Writing Across the Curriculum

ARCH 312: Critical Postcolonial and Contemporary Perspectives in South Asian Architecture

3 Credits

This course will examine critical postcolonial and contemporary architectural issues in South Asia in the context of cultural globalization today. ARCH 312 Critical Postcolonial and Contemporary Perspectives in South Asian Architecture (3) This course will examine the evolution of the cultures and architectures of South Asia through their encounters with colonialism and the postcolonial analysis of architectural development in the region. It will provide an introduction to precolonial architecture and urbanism in South Asia using methodologies of cultural studies via an examination of Buddhist, Hindu, Islamic (Mughal), and Western influences. The course will introduce students to the significant variety of South Asia’s architectural accomplishments and encourage them to discuss broader theoretical issues in the context of cultural globalization and its implications for contemporary architectural thought and practice. References to indigenous architecture and techniques will be an integral part of the course, as will be examples of colonial architecture, especially the works of Edwin Lutyens. In the context of globalization during the post-colonial period, three important planning and building design projects undertaken by Western architects in South Asia will become the means to segue into contemporary architectural issues and the impact of Modernist thinking on South Asian architecture: Le Corbusier’s master plan and building designs for Chandigarh - the Kahn’s design for the monumental second capital complex in Dhaka, Bangladesh, and the master plan for Islamabad, the capital of Pakistan, by Constantinos Doxiades. In addition, the works of such South Asian architects such as Charles Correa, Balkrishna Doshi, Raj Rewal, Geogrey Bawa, Maxharul Islam, and Nyyar Dada, will be included in the lectures and discussions. The overall methodology will not be strictly chronological; rather, broad themes will be addressed during the course of the semester. This approach will enable a clear and substantive illustration of relationships between theory and practice in South Asia. It will also help students recognize the inevitable partiality and incompleteness of such theoretical descriptions - compelling as they may be - with regard to actual historical phenomena.
ARCH 316: Analysis of Human Settlements: Cities
3 Credits
Analysis of the interrelated factors which determined and shaped the
various types of early cities through the nineteenth century.
Bachelor of Arts: Arts
General Education: Arts (GA)
ARCH 317: Theory of Modern Japanese Architecture
3 Credits
Introduction to the development of modern Japanese architecture from
the Meiji Restoration of 1868 to the present day. ARCH 317 Theory
of Modern Japanese Architecture (3) ARCH 317 outlines a lineage
of ideology in Japanese architectural discourse in order to examine
reciprocal interactions between Japan and the West in the development
of modern Japanese architecture from the Meiji Period (1868-1912),
through the Metabolism of the 60's, to the present day. The concept
of "tradition" is an invention of the Meiji (modern) era. Through this notion, the course will introduce students to crucial
moments in the development of Japanese architecture, while making
parallel references to the key developments in the West. Inversely,
examples of traditional Japanese architecture will be introduced as
counterpoint for the modern. Several topics such as the evolution
of Japanese symbolic and spatial traditions in art, architecture, and
landscape architecture (gardens) will be discussed. While discussing
the evolution of Japanese culture, aesthetics and religions, the influences of
China and Korea will be introduced, thus increasing students' familiarity
to the East. A brief examination of Western architects paralleling the
course content will also be presented. The key figures to be discussed
during the class include Kenzo Tange, Kisho Kurokawa, Arata Iozaki,
Fumihiko Maki, Tadao Ando, Shin Takamatsu, Toyo Ito, Kazuyo Sejima
and Shigeru Ban. Key Western architects, including Bruno Taut, Walter
Gropius, Frank Lloyd Wright, and Le Corbusier, will also be discussed.
In addition, several broad themes such as geography, climate culture,
and symbolic and spatial traditions in art will be introduced. Eastern
designs and ethics very incongruent from those of the West and
their impact on architecture will be presented and discussed. Specific
globalization, the resultant reciprocal and transformative cross-cultural
interactions in the development of modern Japanese architecture,
and the unique process of "Japanization," in which ideas from the West are adapted, refined, and absorbed into Japanese
architecture through specific buildings and architects. Students in this
course will be expected to become more familiar with Eastern culture;
comprehend basic principles behind Japanese architecture and gardens;
understand relevant terminology associated with Japanese culture, art,
gardens, and architecture; and become more aware of the reciprocal and
transformative cross-cultural interactions in architecture.
ARCH 331: Architectural Design III
6 Credits
Development of the design process through organizational
methodologies, based on physical, functional, and social-behavioral
determinants. ARCH 331 Architectural Design II (6) Development of the
design process through organizational methodologies, based on physical,
functional, and social-behavioral determinants. Emphasis is placed
on "The Building Thoroughly Considered." The third-year design studio
course is a continuation of the rigorous development of the architectural
process started in the second year studio. Students will strive to develop
an architectural totality, search for thoughtful decisions and sound
judgments. Students continue the process of integrating the abstraction
of the basics with the pragmatics of the built world. The student at the
completion of this year should understand what a building is and how it
responds to human needs in terms of cultural meaning, physical reality,
operational prerequisites and construction.
Prerequisite: Students must earn a C or better in: ARCH 232 and
ARCH 204 and A E 422; Concurrent: A E 211
ARCH 332: Architectural Design IV
6 Credits
Development of the design process through organizational
methodologies, based on physical, functional, and social-behavioral
determinants. ARCH 332 Architectural Design IV (6) Development of the
design process through organizational methodologies, based on physical,
functional, and social-behavioral determinants. Emphasis is placed on
"The Building Thoroughly Considered." The second semester of the third-
year design studio course is a continuation of the rigorous development
of the architectural process started in the third year, first semester studio.
ARCH 332 extends and deepens the understanding of the "thoroughly
considered" building begun in ARCH 331. Students will strive to develop
an architectural totality, search for thoughtful decisions and sound
judgments. Students continue the process of integrating the abstraction
of the basics with the pragmatics of the built world. The student at the
completion of this year should understand what a building is and how it
responds to human needs in terms of cultural meaning, physical reality,
operational prerequisites and construction.
Prerequisite: Students must earn a C or better in: ARCH 331 and A E 211;
Concurrent: A E 424
ARCH 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)
ARCH 410: Building Material Reclamation & Reuse
3 Credits
This course is a very hands-on, project-based seminar focusing on
the theory and practice of building material salvage and recycling.
Through active and applied learning, students will gain experience in
handling, preserving and adding value to salvaged building materials.
The course will consist of a variety of small-scale design-build projects,
where students will learn and practice the methods and techniques
of reclamation and explore the design possibilities of reused material.
In addition to being a practical hands-on seminar, this course is also
intended to explore and examine the broader historical and theoretical
context for the activity of building material reclamation and reuse.
Since the literal fall of the Roman Empire, reclaimed building materials
have been creatively used in the design and construction of new
buildings, yet we lack a thoughtful theoretical (and poetic) construct that
supports reclamation activity other than the simple and obvious ethics
of sustainability. Themes to be explored: ruins, spoglia, palimpsests,
weathering, memory and the mnemonic function of architecture.
Prerequisite: 5th Semester standing
ARCH 412: Integrative Energy and Environmental Design

3 Credits

Concepts and strategies for the environmentally conscious design of the built environment.

ARCH 417: The Language of Boundaries in Architecture and the Landscape

3 Credits

This course examines the development and significance of boundaries in the construction of human space and time. Students who have taken other courses from Architecture Visual Arts, Geography, or Philosophy that treat some aspect of spatial perception, conception, construction, or visualization, or who have completed equivalent study independently, may enroll with the permission of the program. ARCH 417 The Language of Boundaries in Architecture and the Landscape (3)This course is composed of eight chronologically arranged units of study that examine the major developments in the human use of boundaries in the creation of architecture and landscapes - those actually constructed as well as those created through literature, myth, art, and film. Human boundary behavior is complex. While we tend to describe space and time as 'transitive' (rational), our actual experience of them is intransitive. Because descriptive systems tend to disregard the role of time, they favor a constructed descriptive objectivity over subjective accuracy. Conflicts between representations and experiences reflect psychological and cultural conflicts expressed as symptoms and dysfunctions. Both the lectures and supplemental films are directed at helping students understand, reflect upon, and critically think about the trans-cultural and ubiquitous quality of boundary behavior. The thrust of the course is historical and critical rather than professional, and the intent of the course is to provide students with a comprehensive overview of the issues that surround the human use of boundaries. Because boundary issues are the result of humans' mental apprehension of the world, psychology, philosophy, critical studies, literature, and other humanities are intrinsically involved. But, because boundaries are a part of a way of conceiving the world mathematically, ideas from topology, number theory, and circuit logic are also key. Each unit of study will be accompanied by exemplary films that illustrate some aspect of boundary behavior. The course includes approximately 12 important films for required study.

Prerequisite: Students should have taken at least one of the following courses: ARCH 210, ARCH 130A, ARCH 131S, LARCH 060, LARCH 065, GEOG 020, or INART 003 or permission of program

ARCH 419: Design Research and Architectural Programming

3 Credits

ARCH 419 prepares undergraduate Architecture students with the skills and tools to conduct research contributing to the pursuit of an architectural idea in a rigorous, in-depth manner, and then subsequently utilize the acquired knowledge in the development of the idea through the completion and presentation of a thoroughly considered architectural design project (building, component or system). This course will help students prepare for their independent or directed design research studios through the exploration of foundational approaches and methodologies in the field. It will foster in-depth design inquiry and research; build upon and reiterate design awareness, skills, and methods introduced in previous years; and introduce, discover and develop new ones. This course will help prepare students to identify significant design project topics, select the proper methodology, and engage in independent or directed research.

Prerequisites: ARCH 332

ARCH 431: Architectural Design V

6 Credits

Continuation of ARCH 331 and ARCH 332, with design and research in program option areas. ARCH 431 Architectural Design V (6) The fourth-year architecture studio emphasizes the development of skills in research, documentation, analysis and presentation of project-related physical and cultural information. The studio will investigate the implications of a rigorous predesign process in the design of architecture. The studio curriculum seeks to investigate the role of the architect in urban design, especially the design relationship between individual buildings, groups of buildings, exterior spaces, streets and streetscapes. Students will explore the synthesis of individual landmark buildings, building groups, urban landscape and service systems. The studio explores the difference between the roles and responsibilities of public and private clients. In particular the implications of establishing levels of control within the built environments, such as design guidelines, circulation systems and utility networks. Emphasis will be placed on the development of the following design skills: • Cooperation and collaboration in research and design. • Understanding the implications of existing patterns on subsequent design. • Understanding attitudes toward contexts: cultural, physical, economic, personal, political, organizational (bureaucratic). * Integration of scale: Development of logics (orders) for the use of the site and continuity of logic across scales of building. * Developing culturally meaningful relationships between the ordering of land-use and space throughout related buildings. * Design of exterior space using architectural relationships between multiple buildings * Investigation of the implications of design controls on the single building.

Prerequisite: Students must earn a C or better in: ARCH 332 and A E 424

ARCH 432: Architectural Design VI

6 Credits

A continuation of ARCH 431, this course explores in greater depth urban planning and architectural design in an urban context. ARCH 432 Architectural Design VI (6) ARCH 432 is a continuation of ARCH 431 with a focus on architecture in urban environments and urban/community planning issues of greater complexity. The class will collaborate in the research and documentation of the existing conditions of an urban site and the forces that influence it. This will include the study of precedents. The class will prepare a pre-design presentation, individual architecture projects, base models, and a book of the semester’s work. Based on the pre-design information, small student groups will develop a master plan for a large program. This exercise will include the preparation of the plan, supported by concept diagrams and models, land use diagrams, open space diagrams, landscape plans, pedestrian and vehicular circulation/parking/servicing diagrams, written and graphic site and building design guidelines, and a utilities diagram. The architectural component of the master plan will be selected for development as the studio architectural design project. Each student will prepare an architectural project based on the general logic and concepts of the group plan. Major topics addressed in the course include working collaboratively in teams, understanding fundamental ordering principles of cities and towns, understanding urban contexts, urban plans, land-use controls, and
economic plans, the design of urban spaces, and the design of a single building or complex of buildings in an urban environment.

**Prerequisite:** Students must earn a C or better in: ARCH 431

ARCH 441: Architectural Design Analysis

3 Credits

Studies in principles and elements of design; planning for human use; the relationship of space to physical and social environment. Architectural Engineering majors only. ARCH 441 Architectural Design Analysis (3) Studies in principles and elements of design; planning for human use; the relationship of space to physical and social environment. The objective of this course is to explore various approaches to architectural design and to reinforce the concept that there is no "right" or "wrong" answer to a design problem. "Design" is decision-making in itself -- the key to a successful project lies not only in the final product, but in the process leading up to it as well. In order to be successful, design solutions must respond to both formal ideas as well as human, environmental and technical realities. Thus, the interaction between art and technology becomes imperative.

**Prerequisite:** ARCH 130A

ARCH 442: Architectural Design Analysis

3 Credits

Continuation of ARCH 441, with emphasis on functional relationship of space, form, structure, and building groups. Architectural Engineering majors only. ARCH 442 Architectural Design Analysis (3) Continuation of ARCH 441, with emphasis on functional relationship of space, form, structure, and building groups. The objective of this course is to explore various approaches to architectural design and to reinforce the concept that there is no "right" or "wrong" answer to a design problem. "Design" is decision-making in itself -- the key to a successful project lies not only in the final product, but in the process leading up to it as well. In order to be successful, design solutions must respond to both formal ideas as well as human, environmental and technical realities. Thus, the interaction between art and technology becomes imperative.

**Prerequisite:** ARCH 441

ARCH 443: Architectural Design Analysis Inspection Trip

1 Credits

Faculty guided trip to metropolitan areas to investigate noteworthy architecture and building construction and to visit professional offices.

**Prerequisite:** fourth-year architectural engineering majors first priority, others by faculty approval

ARCH 451: Architectural Professional Practice

3 Credits

A study of architectural practice in today's society: education, registration, office practice, codes, standards, construction industry, contracts, and legal documents. ARCH 451 Architectural Professional Practice (3) ARCH 451 is a required course in the BARCH curriculum. It is intended to prepare students for the professional practice of architecture. The course explores the historical influences and current trends that shape the relationship between the architect, client and builder in contemporary society. This course provides an overview of the changing roles of the architect through history as well as a detailed examination of the architectural profession in today's rapidly changing world. ARCH 451 reviews internship, architectural licensing procedures and requirements, professional development (life-long learning), architectural practice including office organizational structures, the architect's administrative role, construction cost control, professional organizations, the architect's professional, legal and ethical responsibilities (including life-safety and accessibility), leadership in the profession and the community as well as alternative architectural / design related careers.

**Concurrent:** ARCH 491

ARCH 480: Technical Systems Integration

3 Credits

Presentations of buildings' analyses from a multiplicity of viewpoints: architectural, spacial, environmental, mechanical, construction assembly. ARCH 480 Technical Systems Integration (3) This course is a synthesis of topics previously introduced in the AE sequence - such as structural, mechanical, electrical, and other systems related to a building's technical performance. Students will practice the purposeful integration of all technical aspects of a buildings design, providing them with a working knowledge of matters related to energy efficiency, sustainability, lighting, and acoustics. The focus of the course lies in questioning how technical requirements and design intentions should be integrated during the design process, so as to enhance the aesthetic and performance qualities of an architectural project. This course combines lectures, field trips, and technical assignments, along with analysis and implementation of energy, day lighting, electrical lighting, and acoustical concepts in the student's design efforts. In addition to the synthesis of building design and technical systems, this course will further develop the student's knowledge of active/passive techniques for sustainable architecture. A focus on the collaborative workings/environment of the architectural practice helps students to translate systems integration strategies into graphic/digital representation, and reinforces the interdisciplinary nature of designing and constructing successful works of architecture.

**Prerequisite:** ARCH 203, ARCH 204, ARCH 332, AE 422, and AE 424 with a grade of C or better in each; Concurrent: ARCH 431

ARCH 481: Digital Design Media

3 Credits

Advanced course in digital modeling, rendering, animation and non-linear video for architectural investigations.

**Prerequisite:** approval by instructor

ARCH 491: Architectural Design Studio

6-12 Credits/Maximum of 12

Problems in architectural planning and design; and/or programming, implementation methodologies and applications for various environmental design scales. ARCH 491 Architectural Design VII-Thesis (6) It is the goal of this program that, upon completion of the fifth year, each student will have the ability to pursue an architectural idea in a rigorous, in-depth manner and be able to express the knowledge of and implication of that idea through the completion and presentation of a "thoroughly considered building design project." It is the intent of the fifth-year component of the Bachelor of Architecture program to foster the spirit of in-depth design inquiry and research, and to build upon and reiterate design awareness, skills, and methods introduced in previous
years; and to introduce, discover and develop new ones. To these ends the primary educational vehicle is the use of a propositional thesis as a way of directing the study toward the linking of theory and building in a meaningful manner.

**Prerequisite:** Students must earn a C or better in: ARCH 431, ARCH 499A, and ARCH 311W; Concurrent: ARCH 451

ARCH 492: Architectural Design Studio
6 Credits
Continuation of select ARCH 491 sections with concentration and specialization options.

**Prerequisite:** Students must earn a C or better in: ARCH 491; Concurrent: ARCH 480

ARCH 492H: Architectural Design Studio
6 Credits
Continuation of select ARCH 491 sections with concentration and specialization options.

**Prerequisite:** Students must earn a C or better in: ARCH 491; Concurrent: ARCH 480

ARCH 495: Advanced Architectural and Related Design/Construction Work Experience II
1-3 Credits/Maximum of 6
Supervised off-campus, non-group instruction including field experiences, practica, or architectural and related design/construction work experience. ARCH 495 Advanced Architectural and Related Design/Construction Work Experience II (1-3 per semester/maximum of 6)
Supervised off-campus, non-group instruction including field experiences, practica, or architectural and related design/construction work experience. A final presentation of activities will be evaluated by a faculty member in the Department of Architecture. Number of credits will be determined based on the total number of hours of approved work experience under the direct supervision of a registered architect or other approved professional: 1 credit: 75-149 hours 2 credits: 150-239 hours 3 credits: 240+ hours

**Prerequisite:** Grade of C or higher in: ARCH 332; instructor approval of work experience proposal including employment agreement with an approved supervisor.

ARCH 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARCH 496H: Independent Study - Honors
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors
ARCH 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARCH 498: Special Topics
1-15 Credits/Maximum of 15
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARCH 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

**Prerequisite:** seventh-semester standing International Cultures (IL)

ARCH 499A: Rome Study-Architectural Design
6 Credits/Maximum of 12
Individual or group instruction conducted in Rome, Italy. ARCH 499A Foreign Study - Architectural Design VI (6) The semester abroad design work will focus on the difficult problem of creating new construction in the presence of an historic structure. This is an inevitable problem in the city of Rome where one can hardly avoid confronting historic or monumental buildings. However, as every place is preceded by a history, either natural, political or material, these issues are important outside of this context, the course aims to help students define critical strategies that will serve them beyond their semester abroad. Fifteen weeks is a short time to experience a place as complex and interesting as Rome, Italy. For many students, it may be a chance of a lifetime to live in and study a place as challenging and full of opportunity as this. Students are expected to approach the semester with even more seriousness then they would a semester at home. A semester in this program is not a mere travel experience but an academic exploration of a foreign and historic environment Every activity of this studio is designed to these ends. Therefore, we have selected a very direct and limited building program, a site in the historic center, and exercises that require students to spend time in the field as well as in the studio.

**Prerequisite:** Students must earn a C or better in: ARCH 332 and A E 424; Concurrent: ARCH 499Band ARCH 499C

ARCH 499B: Architectural Analysis
3 Credits/Maximum of 12
ARCH 499B Architectural Analysis (3) (IL)Architecture is amplified and embodied in cities. Since most architecture is set in cities and the city is itself an architecture, it becomes necessary for us to evaluate the relationships that affect the making of buildings for cities and the organization of buildings into a meaningful whole. This course will explore the two meanings of the term "the architecture of cities." It will propose questions leading to an analytical decomposition of the situation of cities in general and Rome in particular. The course is loosely divided into three sections. The first, Historical
Overview, presents the evolution of early settlements focusing on the significance of built form. The second, Revolutions and Modernity, demonstrates the qualitative shift in emphasis that settlements undergo from the Enlightenment, through the Industrial Revolution, to the Information Revolution. The third section, the Current Debate, will present some contemporary issues and techniques proposed for the resolution of apparent problems of city architecture. Since this course is given in a unique setting, it takes full advantage of Rome, its history and its problems, to highlight the universal design elements that are part of an analytical understanding, but also of a synthetic design understanding of cities. This course is theory based and, as such, will provoke thinking, a taking apart mentally, more than a making of architecture. The studio design problem, also set in this city, is the operative dimension of thoughts generated here. In this class, students are expected to articulate thought and some clear graphic analysis concerning architecture. These thoughts, if manipulated with discipline and commitment, will become a source of illumination for design activity. Learning Objectives: * To learn the meaning of cities in Western culture * To understand the significance of foundation and other rites concerning building the human environment. * To understand the meaning of urban architecture * To understand the reasons for the form of streets, buildings and open spaces in Western cities * To achieve the analytical skills necessary to take apart the component systems and material elements of architecture

**Prerequisite:** Students must earn a C or better in: ART H201 and ART H202; Concurrent: ARCH 431Aor ARCH 432A and ARCH 499C

ARCH 499C: Urban Studies

3 Credits/Maximum of 12

ARCH 499C Urban Special Topics (3) (IL)The course is a presentation of the history of Rome through the medium of its maps. The well documented cartographic history of the city is presented along with the morphological changes that are evident in the city today. The material of Rome’s physical development is presented in two distinct ways. The first involves slide presentations of Roman maps and engraving images organized by specific routes (via consolari and others) into and out of the city. The second is by on-site walks through the same routes with the instructor. The approximately twelve routes involve a lecture presentation usually given on Tuesdays, followed by an on-site walk usually given on Thursday. Students are then assigned their own route map of the same study area to generate over the weekend. These are graded and discussed in the following sessions. Framework: * Introduction: The definition of the Urbs through maps * 14th-15th century. Limbourg, Taddeo di Bartolo * 16th century: Bufalini, Duperac * Renaissance planning and the expanding city * 17th century: Maggi, Falda * 18th century: Nolli * 19th century. Catasto Piano * 20th century. Lanciani, Sanjust Themes: * 14th-15th century. Derivation of the iconic map from Mappaemundi and city images in art * 16th century. Images of pre-Sistine in-city and extension planning vs. Sixtus V’s city outside the city * 17th century. Illustrating the Baroque point developments: Urban theater * 18th century. The new orientation and precision measurement of the Age of Reason. Nolli and Piranesi: the contemporary vs. the archaeological city *19th century. Stasis and expansion: Nolli retreats and the master Plans for the new Capital city * 20th century. Recapitulation and expansion: Lanciani’s new Forma Urbis and images of the boundless city Learning Objectives: * To learn the history of the development of one of the most important cities in the world. * To learn the importance of mapping an way-finding in the understanding of architecture. * To learn the reading of traces of the past morphological development of a city.

**Prerequisite:** Students must earn a C or better in: ART H201 and ART H202; Concurrent: ARCH 431Aor ARCH 432A and ARCH 499B

ARCH 499F: Architectural Design Foreign Study

3-6 Credits/Maximum of 12

The abroad design studio serves students in their fifth year of the BARCH program, giving them the option of studying abroad for a semester additional to their required Rome semester. This studio will provide our students with a much needed global perspective into architecture and urbanity as practiced elsewhere in the world. The Architectural Design Studio will be embedded in an urban location abroad, introducing students to the socio-cultural and urban-architectural forces that shape our globe. It is increasingly important to recognize different models of architectural practice within different global contexts, and this studio will permit our students to engage in these issues first hand by being immersed within a particular culture and designing for it. A semester in an abroad studio is not merely a travel experience, but an academic exploration of a global environment. Students are expected to approach the work of the semester with even more rigor than they would a semester at home, while they follow a similar semester structure. The abroad studio will involve a site in the host city, programs and infrastructure appropriate for the exploration of the new context. The semester will include an initial urban/architectural analysis of the host city, leading to the identification of sites and design research topics. The studio will continue with the introduction of programs, and additional infrastructural requirements, and will culminate with a building proposal within the context of the host city. The abroad studio will have 150 contact hours, similar to architectural design studios at home.

**Prerequisite:** Students must earn a C or better in: ARCH 431 , ARCH 480 , ARCH 499A , andARCH 311

International Cultures (IL)

**Army (ARMY)**

**ARMY 101:** U.S. Army Organization and Functions

2 Credits

Introduction to U.S. Army and ROTC: their organization, missions and functions; customs and traditions; leadership laboratory.

**ARMY 102:** The Military Profession: Leadership and Management Theory

2 Credits

Introduction to leadership techniques and basic management skills; leadership laboratory.

**ARMY 203:** Army Operations: Tactics and the Principles of War

2 Credits

Organization and operation of Army units; fundamentals of unit tactics; leadership laboratory.
ART 1 Introduction to the Visual Arts

3 Credits

Introduction to the media, elements, function, making, and meaning of visual arts today and in diverse historical and cultural contexts. ART 1 Introduction to the Visual Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 1 is an introduction to the visual arts and is designed to meet the General Education Arts requirement. The course is offered every semester at University Park, for example, with an enrollment of 330. There are no prerequisites, and students are assumed to have little or no background in studying or making art. As a result of taking the course, students are able to look more closely and find ways to say what they see in the visual arts.

ART 2 Interactive Learning and Web-Design

3 Credits

Introduce students to research on-line, preparing verbal, visual and other elements for presentation of outcomes and posting them to the Internet. ART 2 Interactive Learning and Web-Design (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is constructed to introduce students to doing research on-line, preparing the verbal, visual and other elements for a presentation of their research and posting them to the Internet with special emphasis placed on the aesthetics of Web design and effective communication. Both individual and group projects are included. It is intended to provide the skills to work collaboratively using computers and the Internet effectively, efficiently and with an awareness of the aesthetic qualities of that work. This final emphasis is particularly important since the quality of presentation is not included in most classes where Web sites are developed and they are crucial to the effective use of this medium. Aesthetic judgments by the students of their peers work is central to making comprehensive and complete evaluations of it. A central message of the course is that content and presentation cannot be separated and a primary skill to be learned is how to discover, create and refine images for use on the Web in conjunction with clear, well-organized and legible text. The student's work will be evaluated on the basis of how well they grasped the problem,
worked with others to solve it, when required, and the effectiveness of the final result.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 3: Visual Images on the Web

3 Credits

Introduce students to using visual images for communication on the World Wide Web. ART 3 Visual Images on the Web (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is constructed to introduce students to doing art work on-line, preparing visual, verbal and other media for presentation on the Internet with special emphasis placed on the aesthetics of image making and good Web design. Working both individually and in groups is included. Each student is assigned to a working group, which makes collaboration and communication possible. All the projects emphasis art making of different kinds - still and animated, bit-map and vector - as well as different formats - HTML, Flash format and Portable Document format. The grasping of the different kinds of images each makes available, aesthetic qualities of each and they can be used in communication at the center of the course. The student's work will be evaluated on the basis of how well they grasped the problem, worked with others, when required, to solve it and the effectiveness of the final result. The students may do the work for the course on their personal computers or in the University labs on any of the available platforms - Windows, Mac or UNIX. The course will be offered in the spring and the fall and have an enrollment of 200 students.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 10: Introduction to Visual Studies

3 Credits

INTRODUCTION TO VISUAL STUDIES; PICTORIAL SPACE AND THE PRINCIPLES OF VISUAL ORGANIZATION. ART 10 Introduction to Visual Studies (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 10 is intended as a general survey course for non-majors consisting of images, ideas, and processes used in art making. As a studio offering, emphasis is placed on hands-on activities, which promote literacy and sensitivity to both two-dimensional and three-dimensional conventions in the visual arts. Students will experience the contextual influences of art, the visual languages and organizational systems of art, and the various studio processes of art. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the visual arts function. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Students enrolled in this course will be required to participate in the following active learning components: 1. Studio Assignments: a) Contextual influences of history and contemporary culture b) Visual languages and organizational systems related to the visual arts c) Studio processes with materials and techniques. 2. Creating a social and historical context for sculpture making through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to works by historical and contemporary artists in order to understand the ways in which visual arts convey meaning. b) Studio visits: Students will visit the personal studios of local artists to learn how professional artists develop best practices as related to the three kinds of studio-based assignments outlined above. Additionally, they will explore and discuss with these artists the concepts and meanings expressed in their creative works. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual works of art as compared with those that they experience as slide and printed representations. The role of museums and galleries in contemporary art practice will also be discussed. Grading and evaluation: Students’ art projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions-their ability to communicate concepts clearly; 3) the quality of their craftsmanship-an effective use of materials and procedures and commitment to the studio assignments-the effort expended on each project; 4) Their willingness to participate in critique sessions-a thoughtful and informed interpretation of visual ideas in art works produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques. Since the School of Visual Arts now requires a portfolio review for Visual Arts majors to enroll in studio courses, ART 10 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 11: First-Year Seminar- School of Visual Arts

1 Credits/Maximum of 1

Facilitate adjustment to high expectations, demanding workload, increased academic liberties, and other aspects of college life in the arts. The First-Year Seminar will help facilitate students’ adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life and introduce them to their responsibilities as members of both the School of Visual Arts (SoVA) and University community. In addition, the First-Year Seminar is designed to engage students, acquaint them with the learning tools and resources available at Penn State and orient them to the SoVA community from the outset of their undergraduate studies in a way that will bridge to later experiences in their chosen program of study. The first-year seminar will serve as a broad introduction to SoVA’s programs of study in Studio Art, Art Education, and Interdisciplinary Digital Studio (IDS) as well to Penn State’s academic policies and procedures. Topics to be covered: Introduction to SoVA’s areas of study (Studio Art, Art Education, and Interdisciplinary Digital Studio) University wide Web based academic resources, academic policies and procedures Introduction to Penn State’s Student Affairs Offices (e.g., Career Services, Center for Women Students, Multicultural Resource Center, and Student Activities)

First-Year Seminar

ART 17: Introduction to Metal Arts

3 Credits

Introduction for non-art majors to fundamental jewelry making and small-scale metalsmithing processes including fabrication, surface treatment, and finishing of metalwork. ART 17 Introduction to Metal Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 17 is intended as a general survey of metal arts for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and a sensitivity to the various metal arts
conventions. Students are given the opportunity to briefly explore many of the traditional materials and processes of metalsmithing including those that are used in cold joining, surface texture, and fabrication. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the metal arts function. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Since the School of Visual Arts now requires a portfolio review for visual arts majors to enroll in studio courses, ART 17 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 20: Introduction to Drawing

3 Credits

Introductory experience in making of art through drawing media; designed for non-majors seeking general overview of studio practice. ART 20 Introduction to Drawing (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 20 is intended as a general survey of the art of drawing for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and on the various conventions used in drawing. Students will be given the opportunity to briefly explore many of the traditional materials of drawing, including pencil, charcoal, conte, ink and ink wash, pastel, as well as experimental tools. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which drawing functions. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Since the School of Visual Arts now requires a portfolio review for Visual Arts majors to enroll in studio courses, ART 20 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 30: Introduction to Sculpture

3 Credits

Introduction to sculpture for non-art majors consisting of lectures/basic studio work coordinated to cover broad range of processes. ART 30 Introduction to Sculpture (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 30 is intended as a general survey of the art of sculpture for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various sculptural conventions. Students are given the opportunity to briefly explore many of the traditional materials of sculpture including those that are used in modeling and replication, subtractive processes, and fabrication. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of sculpture functions. Students enrolled in this course will be required to participate in the following active learning components:1. Studio Assignments: a) Modeling and Replication b) Subtractive Processes c) Fabrication Assignment2. Creating a social and historical context for sculpture making through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to the sculptural works of historical and contemporary artists in order to understand the ways in which the three dimensional aspects of sculpture convey meaning. b) Studio visits: Students will visit the personal studios of local artists to learn how professional artists develop best practices as related to the three basic approaches to rendering sculptural form outlined above. Additionally, they will explore and discuss with these artists the concepts expressed in their sculptural works. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual works of art as compared with those that they experience as slide and printed representations. The role of museums and galleries in contemporary art practice will also be discussed. Grading and evaluation: Students’ sculptural projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions—their ability to communicate concepts clearly; 3) the quality of their craftsmanship—an effective use of materials and procedures and commitment to the studio assignments—the effort expended on each project; 4) Their willingness to participate in critique sessions—a thoughtful and informed interpretation of visual ideas in sculptural works produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 40: Introduction to Printmaking

3 Credits

Instruction and practice in elementary printmaking and papermaking processes. ART 40 Introduction to Printmaking (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 40 is intended as a general survey of the art of printmaking for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various printmaking conventions. Students are given the opportunity to briefly explore the various approaches to printmaking, which may utilize some or all of the following: screenprinting, relief, intaglio, lithography, and others. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of printmaking functions. Students enrolled in this course will be required to participate in the following active learning components: 1. Studio Printmaking Assignments: a) Screenprinting b) Relief c) Intaglio d) Lithography e) Others (collagraph, monotype, electrostatic, artists books) 2. Creating a social and historical context for printmaking through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to prints of historical and contemporary artists in order to understand the ways in which the two-dimensional aspects and various processes of printmaking convey meaning. b) Studio visits: Students will visit the personal studios of local printmakers to learn how professional artists develop best practices as related to the basic approaches to printmaking outlined above. Additionally, they will explore and discuss with these artists the concepts expressed in their printed images. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual prints as compared with those that they experience as slide and book/journal reproductions. The role of museums and galleries in exhibiting prints will also be discussed. Grading and evaluation: Students’ printmaking projects will be evaluated according to the following criteria: 1) the
uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions-their ability to communicate concepts clearly; 3) the quality of their craftsmanship—an effective use of materials and procedures and commitment to the studio assignments-the effort expended on each project; 4) Their willingness to participate in critique sessions—a thoughtful and informed interpretation of visual ideas in prints produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 50: Introduction to Painting

3 Credits

Introductory experience in making of art through painting media; designed for non-majors seeking a general overview of studio practice. ART 50 Introduction to Painting (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 50 is intended as a general survey of the art of painting for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in the discipline of painting. Students are given the opportunity to briefly explore the various approaches to creating visual images by applying various painting materials, techniques, and concepts. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of painting functions. Students enrolled in this course will be required to participate in the following active learning components: 1) Studio Painting Assignments: a) Visual concept development: students will be introduced to the various ways that artists create meanings through painting. b) Materials development: through a process of exploration and experimentation, students will learn how to apply various painterly media and tools in creating visual images. c) Technique development: through a process of exploration, experimentation, and skill development students will learn how to render and model painterly images that range between abstract and realistic representations. 2) Creating a social and historical context for painting through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to paintings by historical and contemporary artists in order to understand the ways in which the two-dimensional aspects and various processes of painting convey meaning. b) Studio visits: Students will visit the personal studios of local painters to learn how professional artists develop best practices as related to the basic approaches to painting outlined above. Additionally, they will explore and discuss with these artists the concepts expressed in their painted images. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual paintings as compared with those that they experience as slide and book/journal reproductions. The role of museums and galleries in exhibiting paintings will also be discussed. Grading and evaluation: Students’ painting projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions—their ability to communicate concepts clearly; 3) the quality of their craftsmanship—an effective use of materials and procedures and commitment to the studio assignments—the effort expended on each project; 4) Their willingness to participate in critique sessions—a thoughtful and informed interpretation of visual ideas in paintings produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 51N: Meteorology and Visual Arts: To Know is to See

3 Credits

This course examines the inter-relationship between what we know and what we see, through an introductory exploration of art and science. Engaging students in the study of weather formation, mainly clouds, artistic depictions within the genre of landscape, and the expressed practice of painting; fosters the development of observational skills necessary for reading the landscape and interpreting collected data. What we know and what we see is an on-going evolution of development; syncing the old with the new. Therefore, observation and interpretation are essential to critical thinking, making the intersection between art and science a fertile ground for discovery and learning. The exciting part of the course is the large amount of overlap in the general ideas and thought processes used in meteorology and art, especially when using clouds as the connective tissue. Scientists and artists are both detail oriented and worry about the quality of their work. Both involve collecting data to find the best approaches to a problem, and reasoning through challenges that arise. Students will be challenged throughout the course to seek these connections and how perspectives from each discipline inform the other. Meteorology and art have long been aligned in a common quest to understand how the world works, each seeking interpretations and explanations using a range of complementary and contrasting practices and perspectives. Clouds come in a vast array of sizes and shapes, and are depicted in art using a variety of techniques, creating a shared focus for a deeper understanding of both areas of endeavor. Students will learn about the concept of mixing, which is important to cloud formation and to painting. Students will conduct experiments to learn about cloud processes, and will learn and practice artistic techniques to convey atmospheric conditions. Ideas from both perspectives will be integrated in analysis and discussion. Data from instruments and the individual artist will be collected, shared, and analyzed. Learning how clouds form will help with painting, and questions and perspectives that arise from painting will increase the understanding of cloud processes. The common threads in this approach are a curious mind, a strong detail-oriented focus, effective communication, and respect for the creative tension between ambiguity and assurance in the search for a better sense of causes, connections, and incessant changes.

ART 80: Introduction to Ceramics

3 Credits

Introduction to the concepts and techniques fundamental to the making of pottery and ceramic sculpture. ART 80 Introduction to Ceramics (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 80 is intended as a general survey of the art of ceramics for non-
majors. As a studio offering, emphasis is placed on hands-on activities, which promote visual literacy and sensitivity to the various conventions in ceramics. Students are given the opportunity to briefly explore many of the traditional approaches to ceramics including those that are used in hand building, wheel throwing, glazing, and kiln firing. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of ceramics functions. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Since the School of Visual Arts now requires a portfolio review for visual arts majors to enroll in studio courses, ART 80 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 97: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ART 98: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Arts

ART 100: Concepts and Creation in the Visual Arts

3 Credits

A study of the personal and cultural foundations of artistic creation and practice of creative production in the art studio. ART 100 Concepts and Creation in the Visual Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 100 is intended as an introduction to the concepts underpinning artistic creation. Through lectures and studio work, students will explore relationships between artistic processes and in daily life. The objective of the course is to develop in the student both an appreciation and understanding of contemporary art through an examination of art and contemporary social, cultural, and political issues surrounding artistic practice. Students will respond to the ideas presented in the lectures by completing a series of artworks intended to reflect the issues and concepts that have been presented. The intended, though not exclusive, audience for the course is non-art majors. While the focus of the course is a critical examination of both the artworks studied and the artworks created by the students, the critique will be derived from the various backgrounds and academic experiences of the students and not necessarily from their knowledge of art. In this manner, the course can become a relevant complement to all of their studies. In short, the goal of the course is to understand art as a means to critically engage and begin to understand our surroundings and not simply as an end product. Evaluation of student achievement will be done in both the classroom and studio portions of the course. Since it is not expected that students have a background in art, content knowledge assessment will primarily be based on the students' active participation in class discussions as well as objective tests in the form of written responses to the issues and concepts examined. In the studio, their work will be judged on how well students have responded to the concepts and issues explored as well as on their ability to articulate their own ideas in relation to those of other students and other aesthetic and cultural ideas to which they have been exposed. In the studio, this process will primarily be done in the form of individual conversation and group critique. Since the School of Visual Arts now requires a portfolio review for visual arts majors to enroll in studio courses, ART 50 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 101: Introduction to Web Design

3 Credits

A beginning level course in Web Design, with emphasis on designing with standards to assure accessibility and effective communication. ART 101 Introduction to Web Design (3) (GA) (BA) This course meets the Bachelor of Arts degree requirements. ART 101 is a beginning level web design course that is concerned with the designing and creating of web sites using XHTML and recommended government standards. This emphasis is central so that the work the students do will reach the broadest audience, including people with disabilities, through the use of a broad range of software and hardware. This course will teach students how to meet the present government standards for accessibility by the disabled and the technical and accessibility standards recommended by the World Wide Web Consortium (W3C). This course will also place an emphasis on the uses of art-images to present information along with the presentation of text and typography for communication and how these elements can make projects on the web more effective. The course will introduce topics such as: clarity of art and design, ease of use (navigability), in creating art and graphics for web delivery (optimization). There will also be discussion on the dynamics of networked communications, along with issues pertaining to the authoring and publishing of content and media on the internet.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 102: Beginning Computer Aided Design for Artists

3 Credits

ART 102 explores the computer as artistic media. Student creations are realized through 3D printing, vinyl cutting, and laser engraving. ART 102 Beginning Computer Aided Design for Artists (3) (GA) Students are introduced to the exciting realm of digital 3D design. The class explores the computer as an artistic media as students learn a CAD application. Projects will address the themes of form, function and the aesthetics of design while also gaining an introduction to contemporary sculpture and computer mediated design happening in the art world now. Students are guided through the creation of a variety of objects from chess pieces to cars. Objects created during the class, in a computer application, are then realized tangibly through various output systems including 3D printing, vinyl cutting, and laser engraving. While no prior CAD experience is required students should be aware that all of the art created in class is done on a computer. Students in all areas of study, especially those interested in any aspect of art or engineering, are encouraged to register.

General Education: Arts (GA)
ART 110: Ideas as Visual Images
3 Credits
Introduction to the ideational relationships among subject, form, and content in visual images.

ART 111: Ideas as Objects
3 Credits/Maximum of 3
An introduction to the relationship between ideas and the creation of three-dimensional objects. In this course, students will learn concepts, methods, and vocabulary relative to the production of three-dimensional objects. Through slide lectures, discussions, critiques, and assigned projects, participants will investigate how to make, analyze, and critique sculptural objects within the context of contemporary art and visual culture. Students are expected to be inquisitive about the discipline and willing to immerse themselves in it. Students are expected to ask questions, explore new ideas, and engage in the course material.

Bachelor of Arts: Arts

ART 122: Commentary on Art
3 Credits
An introduction to verbal commentary, both oral and written, about art. The development of critical and expressive skills given emphasis.

Bachelor of Arts: Arts
United States Cultures (US)
Writing Across the Curriculum

ART 144Z: Climate Change: Arts, Agency and Activism
3 Credits
This course introduces students to contemporary art activism and environmental and humanitarian issues through research presentations, discussions and the production of artwork. It encourages students to imagine the effects of climate change and investigate how art can bring new ways of thinking about and bring a greater awareness to global issues. Media will vary depending on student ideas, it may include drawing, painting, video, sculpture, photography or installation art. Coursework integrates written, oral and visual communication. As an introductory course, assessment will be based equally on class discussion, research presentations, the content of art works produced and students' ability to articulate the synthesis of their work within the theme of climate change. ART 144Z fulfills 3 credits of the GA Domain General Education requirements. ART 144Z may also be used in combination with either BIOL 144Z or PSYCH 144Z as linked courses to fulfill 6-credits of Integrative Studies.

General Education: Arts (GA)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking

ART 165: Artistic Concepts of Space
3 Credits
A studio course that utilizes lecture and varied media experiences to investigate space as artistic expression. ART 165 Artistic Concepts of Space is a hands-on studio course supplemented by lecture. It utilizes various media experiences to investigate notions of space in artistic expression. Explorations will include traditional ways of depicting and constructing space as well as contemporary approaches. Both 2-D and 3-D studio investigations will be employed. A lecture component will provide a historical and cultural backdrop upon which students may better understand the role of special depiction in artistic expression.

General Education: Arts (GA)

ART 168: The Digital Medium
3 Credits
A studio course where the computer is introduced as an artistic media. ART 168 The Digital Medium (3) This course will provide a much needed introductory technological/digital component wherein computing will be discussed as a media, rather than a tool. Students will be engaged in the creation of artistic manifestations of individual interpretations surrounding themes and concepts introduced in class. Each unit of the course will build upon the next resulting in a knowledge base of the possibilities of what the digital medium includes. Students will be asked to demonstrate their knowledge of the medium with a culminating final project that uses at least four of the techniques demonstrated in class. The final project will be determined by the student, manifestations may include a web site, short film, installation, projects, or performance.

General Education: Arts (GA)

ART 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ART 197B: Special Topics - InterDomain
3 Credits/Maximum of 9
Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GH GenEd course.

General Education: Arts (GA)
General Education: Humanities (GH)
General Education - Integrative: Interdomain

ART 198: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Arts

ART 199: Foreign Studies--Art
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Arts

International Cultures (IL)

ART 200: Scripting Fundamentals for Visual Artists and Designers
3 Credits/Maximum of 3

This course introduces object-oriented programming fundamentals for the production of expressive interactive experiences such as animations, interfaces and games. ART 200 SCRIPTING FUNDAMENTALS FOR VISUAL ARTISTS AND DESIGNERS introduces object-oriented programming fundamentals for the production of expressive interactive experiences such as animations, interfaces and games. This course focuses on creative work that is exploratory and experimental and engages students in research methods to advance their skills and critical competence in new media. Students apply computation concepts based on readings and discussions of key texts about interactive design, media art, and game design to the creation of original interactive projects. The course offers a series of scripting exercises in which students learn to develop applications using both a top-down and bottom-up design process. Students also develop a series of more ambitious computational projects using an iterative design process. They produce detailed design treatments and working prototypes before turning in final applications developed using an object-oriented programming language.

ART 201: Intro to Digital Arts: Computer Graphics
3 Credits

Art 201 is a course introducing digital art, design, and new media concepts using graphic applications on the computer. ART 201 Intro to Digital Arts: Computer Graphics (3) This is a course in which the students work with raster graphic, vector graphics and text layout programs. The purpose of the course is to give an introduction to how computer hardware and software can be used to produce works of art and design, which can be exhibited electronically, and also in print. It provides the first step for students interested in realizing their artwork using computers to develop and realize it.

Bachelor of Arts: Arts

ART 202: Computer 3-Dimensional Modeling and Rendering
3 Credits

ART 202 is a studio course introducing the student to 3-D computer modeling and rendering applications on the Macintosh computer.

Bachelor of Arts: Arts

ART 203: The Art of Web Design
3 Credits

This course will focus on utilizing graphic formats ideal for web-based work and designing with web standards. ART 203 The Art of Web Design (3) This course meets the Bachelor of Arts degree requirements. ART 203 is a 200-level course for the New Media area of concentration in the School of Visual Arts, and will focus on working with different graphic formats, both bitmap and vector based, which work on the web and on designing with web standards to assure accessibility and effective communication of information in a variety of forms. This course will teach how to meet the present government standards for accessibility by the disabled and the technical and accessibility standards recommended by the World Wide Web Consortium (W3C). The web as a global communication medium will be discussed, with special consideration given to the presentation of sites using languages other than English. The course will also emphasize the various uses of images to present information in different ways, in a variety of formats - gif, jpg, png, swf and svg - to learn which is the most effective for the particular information being presented. The use of text and typography for communication and how these can make artwork on the web more effective will also be examined. Clarity and flexibility of art and design, ease of use and creating web-optimized files that download quickly will be other subjects of concern. There will also be examples and discussion of artists and designers currently using the web, how communication on the web can work well, how it can work badly and how it can be abused.

Bachelor of Arts: Arts

ART 204: Animation Fundamentals
3 Credits

This course provides foundational knowledge for creating animated works that communicate ideas, enhance user interaction, and inspire critical reflection. ART 204: Animation Fundamentals focuses on creative work that is grounded in fundamentals and engages students in research methods to advance their skills and critical competence in time-based media. Students are introduced to core skills and knowledge necessary for producing animated works that communicate ideas, enhance user interface and interaction, and inspire critical reflection. Through a series of animation exercises students apply visual digital concepts in the creation of original animated projects that are further enhanced by critical responses to screenings and discussions of key texts about animation. Initial exercises cover animation principles and tools, creating assets, production planning, layout and composition, keyframes, transformation and deformation, and interpolation. Character animation design and development, rigging, asset preparation, camera are covered, along with various forms of interface prototypes such as interaction design, wireframes, interface elements. Students are also introduced to typography, sound design and Foley, motion design, color, masking, post effects, and color grading. Later in the course, students also develop a series of more ambitious animation projects using an iterative design process that further develops their digital competencies and creative and critical capabilities in time-based media.

ART 207N: LGBTQ+ Identity, Culture and The Arts
3 Credits

WMNST 207N: LGBTQ+ Identity, Culture and the Arts will blend theories and methods in the Social and Behavioral Sciences (GS) with those of
the Integrative Arts (GA). The course introduces key ideas, concepts and issues related to LGBTQ+ identity and culture, while highlighting aesthetic values of LGBTQ+ expression. The course broadly traces the historical, global, political and academic trajectories of LGBTQ+ studies and considers contemporary topics (for example, global-local influences, intersectionality, activism, and the media) as they relate to LGBTQ+ identity and the arts. The course is attentive to the ways that sexual identities intersect with other types of identities, such as age, gender, race/ethnicity, ability, religion. The course will also help students develop arts-related skills and teach students to recognize and value the arts as an integral part of LGBTQ+ cultural expression. Students will write critical papers, participate in discussions with artists and scholars, explore queer art and art spaces, as well as create a performance or installation art project. Incorporating seminar - and lecture-style instruction with constructivist-creative learning and experiential strategies, the course seeks to develop a learning community stimulated by discourse, collaboration, and creative/aesthetic exploration. This course is a General Education interdomain (N) course for General Education Social and Behavioral Sciences (GS) and General Education Arts (GA), with US Cultures (US), International Cultures (IL) designate. The course is cross listed in both Women's Studies and Arts.

Cross-listed with: WMNST 207N

ART 211: Introduction to Digital Art and Design Criticism
3 Credits/Maximum of 3

An introduction to the language, aesthetics and cultural impacts of digital art and design in contemporary society. ART 211 Introduction to Digital Art and Design Criticism (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ART 211 examines 1) the conventions, language, practices, and aesthetics used by digital artists and designers and 2) the social and cultural implications that they and their works have for society with regard for the contexts of politics, philosophy, economics, race, gender, and technological development. Critical and creative thinking and expression are given primary emphasis in class activities and assignments. The course meets twice weekly and topics are explored through lectures, discussions, readings, presentations by visiting speakers, and out-of-class trips. Course assignments are writing and project based and require students to respond to ideas and concepts presented in class and to develop critiques of digital works through a variety of formats. Assignments include informal in-class projects, media reviews, a course journal, and a final project. Students build writing skills through analyzing assigned readings and developing research- and reflection-based projects about digital art and design. Speaking and listening skills are developed through discussions and collaborative activities. Course topics explore the: - social contexts of digital art/design; - significance of the computer interface to digital art and design; - practices used by digital artists and designers and their impact on audiences; and - professional issues, concerns, and controversies affecting digital art/design, artists/designers, and their audiences. Students are required to have access to the Internet and to their University e-mail account. ART 211 will enroll 25 students and will be offered spring semester.

Bachelor of Arts: Arts
United States Cultures (US)

ART 211Y: Introduction to Digital Art and Design Criticism
3 Credits

An introduction to the language, aesthetics, and cultural impacts of digital art and design in contemporary society.

Bachelor of Arts: Arts
United States Cultures (US)

Writing Across the Curriculum

ART 220: Figure Drawing
3 Credits

Drawing from life. Emphasis on developing the ability to comprehend and record the human figure. ART 220 Figure Drawing (3) This course is intended to further investigate the art of figure drawing for art majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in figure drawing. Students will be given the opportunity to explore many of the traditional materials of drawing, including pencil, charcoal, cont', ink and ink wash, pastel, as well as experimental tools. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which figure drawing functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 110S , ART 111 , and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review
Bachelor of Arts: Arts

ART 223: Drawing: Techniques, Materials, and Tools
3 Credits

Drawing with an emphasis on organization and the development of drawing skills through a variety of techniques, materials, and tools.

ART 223 Drawing: Techniques, Materials, and Tools (3) This course is intended to further investigate the art of drawing for art majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in drawing. Students will be given the opportunity to explore many of the traditional materials of drawing, including pencil, charcoal, cont', ink and ink wash, pastel, as well as experimental tools. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which drawing functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 110S , ART 111 , and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review
Bachelor of Arts: Arts
ART 230: Beginning Sculpture

3 Credits

An introduction to sculpture consisting of lectures, demonstrations, and studio work to cover a broad range of processes. ART 230 Beginning Sculpture (3) This course is intended to investigate the art of sculpture for art majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in sculpture. Students will be given the opportunity to explore many of the traditional materials and processes of sculpture, including additive and subtractive processes, plaster-working, wood fabrication, metal fabrication, and mixed-media usage, as well as experimental tools and processes. Slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which sculpture functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 110S, ART 111, and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review Bachelor of Arts: Arts

ART 240: Beginning Printmaking

3 Credits

An introduction to printmaking consisting of lectures, demonstrations, and studio work to cover a broad range of processes. ART 240 Beginning Printmaking (3) This course will consist of lectures, demonstrations, and studio practice in a broad range of printmaking processes. Critiques will be directed toward technical, aesthetic, and historical issues in black and white and color print. Various print collections within the University will be employed to acquaint the students with the work of the professional in the field. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 110S, ART 111, and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review Bachelor of Arts: Arts

ART 260: Water Media

3 Credits/Maximum of 6

This course develops artistic expression in water-based painting media while developing skills with watercolor, ink, acrylic, and natural pigments. ART 260 Water Media introduces techniques and concepts relevant to the creation of artworks using water based painting media, materials and techniques, including watercolor, ink, acrylic, and natural pigments, as well as different grounds and surfaces. Basic techniques are introduced and skills are developed while experimentation and innovation are encouraged. Water based painting media such as watercolor, ink, acrylic, and natural pigments, are covered. Examples from historical and contemporary water media painting practice will be presented and discussed. Particular emphasis will be placed upon the development of individual expression and a critical awareness concerning processes, composition, and content. Students apply their emerging skills and expressive preferences in developing a concentrated body of work. A goal is that the work demonstrates technical competence and conceptual awareness through the pursuit and refinement of an evolving personal vision. Students are introduced to the process of critique, which is central to the critical learning skills that are core experiences to the studio experience. This course gives students the requisite technical and conceptual skills to take more advanced painting and drawing courses such as ART 320 ADVANCED DRAWING and ART 350 INTERMEDIATE PAINTING among others. ART 260 will be offered once a year in the Spring semester.

ART 265: Artistic Concepts of Color

3 Credits

A studio course that utilizes lecture and various media to investigate color as artistic expression. ART 265 Artistic Concepts of Color (3) ART 265 Artistic Concepts of Color is a hands-on studio course supplemented by lecture. It utilizes various media experiences to investigate notions of color in artistic expression. Explorations will include traditional ways of investigating and creating color as well as contemporary approaches. Both 2-D and 3-D studio investigations will be employed. A lecture component will provide a historical and cultural backdrop upon which students may better understand the role of special depiction in artistic expression.

Prerequisite: ART 165, ART 166
ART 266: Artistic Concepts of Light

3 Credits

A studio course that utilizes lecture and varied media experiences to investigate light as artistic expression. ART 266 Artistic Concepts of Light (3) ART 266 Artistic Concepts of Light provides students with necessary concepts about light. Both 2-D and 3-D studio investigations will be employed. A lecture component will provide a historical and cultural backdrop upon which students may better understand the role of special depiction in artistic expression.

Prerequisite: ART 165, ART 166

ART 269: Methods and Materials I

3 Credits/Maximum of 9

A studio course that focuses on specific media or techniques reflecting varied faculty expertise. ART 269 Methods and Materials I (3) This course provides students with the opportunity to experience particular areas of visual art in which

Prerequisite: ART 165, ART 166

ART 280: Beginning Ceramics

3 Credits

The fundamentals of ceramics, throwing, hand-building, and glazing; acquainting the student with ceramic materials, techniques, and philosophy. ART 280 Beginning Ceramics (3) This course is intended to further investigate the art of ceramics for art majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in ceramics. Students will be given the opportunity to explore many of the traditional materials of ceramics, including functional and nonfunctional applications, stoneware, and high fire glazes. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the field of ceramics functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 110S, ART 111, and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review Bachelor of Arts: Arts

ART 290: Beginning Photography

3 Credits

Fundamental techniques and approaches to the art of photography utilizing digital photographic technologies; digital camera required. ART 290. Beginning Photography (3)(BA) This course meets the Bachelor of Arts degree requirements. ART 290 is the first course for students who desire to pursue a concentration in photography. It will focus on the process of making photographs and the development of a critical understanding of photographic images and their evaluation. In ART 290 students will develop the habit of taking photographs on a regular basis. Each week, students will be expected to turn in 24 pictures on one of five assignments for review and critique by both instructors and members of the class. Each assignment will be covered over a three-week period. The topics of the five assignments will vary, but each will focus on important aspects of photography. They may include: portraits, self-portraits, nature photographs, travel photographs, documentary series, experimental images, action assignments, etc. The final assignment will be a self-defined topic that allows the student to explore and work in an area of personal interest. Each topic will be selected to acquaint the student with important aesthetic principals in photography and at the same time advance their technical skill in the process of making photographic images. As part of the five assignments in ART 290, students will also gain background on the history of photography and the critical evaluation of photographs. For each assignment there will be an accompanying gallery of work by other photographers (professionals, amateurs, and students) on the assigned topic area. Each photograph in the gallery will be accompanied by an “artist’s statement” - a written critical statement where the photographer describes his or her work and methods. Students will be required to complete each of the five assigned topics by submitting a final “gallery” of four photographs with a written “artist’s statement” that speaks to the intent, process, and result of their work. Final submissions will help students develop skills in not only making photographs but critically evaluating their own work and articulating their personal means, methods, and objectives as photographers. Grading will be based on (1) the completion of weekly submissions, (2) the quality of photographs in final submissions for each assignment, (3) attendance, and (4) participation in critiques. A digital camera is required. ART 290 will be offered fall and spring semesters.

Bachelor of Arts: Arts

ART 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

ART 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

ART 297C: Special Topics - InterDomain

3 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GS GenEd course General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

ART 299: Foreign Study–Art

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Arts
International Cultures (IL)
ART 302: Digital Portfolio Elements

3 Credits

The creation of more involved digital projects that may ultimately be included in the students’ digital portfolio. ART 302 Digital Portfolio Elements (3) ART 302 DIGITAL PORTFOLIO ELEMENTS (3) This course utilizes relevant digital tools for the completion of more involved projects that may ultimately be included in the students’ digital portfolio. Through completion of the course, students will gain increased ability and independence in the application of relevant digital tools. The structure of the assignments and overall course will prepare and guide the students towards increased professionalism.

Prerequisite: ART 201 or ART 203

ART 314: Computer 3-D: Modeling, Rendering, and Animation

4 Credits/Maximum of 12

A studio course introducing 3-D computer generated artwork and content creation using modeling, rendering, and animation applications on the computer. ART 314 Computer 3-D: Modeling, Rendering, and Animation (4 per semester/maximum of 12) This is a studio course introducing 3-D computer generated artwork and content creation using modeling, rendering, and animation applications on the computer. This course will provide students with an in-depth understanding of 3-D techniques and production strategies for the visual and new media artist through technical exercises and creative exploration of the medium. The course will seek to introduce students to a wide range of digitally generated 3-D based creative work and concentrate on producing and integrating 3-D modeled, rendered, and/or animated work into new media and studio art practice. This course will explore the nature and potential of digitally generated 3-D artworks through lectures, readings, demonstrations, studio practice, and critiques. Assignments will cover a range of applications used in 3-D studio production. This course will culminate in the creation of a series of original 3-D generated artworks.

Prerequisite: ART 201, ART 203

ART 315: New Media Art: New Media Studio

4 Credits/Maximum of 12

A studio course concentrating on digital art and new media authoring practices. ART 315 New Media Art: New Media Studio (4)(BA) This course meets the Bachelor of Arts degree requirements. This is a studio art class that focuses on creating, authoring, exhibiting, and critically evaluating digital video art making through lectures, readings, demonstrations, studio practice, and critiques. The course will engage students in research methods to advance their skills in time-based media and to help them develop an understanding of the critical evaluation and assessment of video and time-based artworks. This course will explore the nature and potential of digital video art through lectures, readings, demonstrations, studio practice, and critiques. Assignments will cover a range of digital video authoring applications central to video and time-based arts production. The course will culminate in a video art screening/exhibition of student work.

Prerequisite: ART 201 and enrollment in the ART BA, ART BFA, Art Education, Interdisciplinary Digital Studio (IDS) or Integrative Arts degree program

Bachelor of Arts: Arts

ART 316: Video Art and Time-Based Media

4 Credits/Maximum of 8

A studio course concentrating on video art, new media, and experimental time based work. ART 316 Video Art and Time-Based Media (4 per semester/maximum of 8)(BA) This course meets the Bachelor of Arts degree requirements. ART 316 is a studio art class that focuses on creating, authoring, exhibiting, and critically evaluating video and time-based arts. This new media course explores experimental uses of video by visual artists with an emphasis on integrating digital video into current studio practice (i.e., new media digital arts, mixed media, installation, and performance). The course will engage students in research methods to advance their skills in time-based media and to help them develop an understanding of the critical evaluation and assessment of video and time-based artworks. This course will explore the nature and potential of digital video art through lectures, readings, demonstrations, studio practice, and critiques. Assignments will cover a range of digital video authoring applications central to video and time-based arts production. The course will culminate in a video art screening/exhibition of student work.

Prerequisite: ART 314, ART 315

ART 318: New Media Art: Game Art

4 Credits/Maximum of 8

A studio course concentrating on game art and new media authoring practices. ART 318 New Media Art: Game Art (4 per semester/maximum of 8) This course will concentrate on creating, authoring, exhibiting, and critically evaluating interactive games as creative vehicle for self-expression. This course will focus on creative work that is exploratory and experimental and engage students in research methods to advance their skills and critical competence in new media. This course will explore the nature and potential of digital art through lectures, readings, demonstrations, studio practice, and critiques. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring. The course will culminate in a final interactive game authored project for presentation on the Web, CD-ROM, or DVD.

Prerequisite: ART 314, ART 315

ART 319: Physical Computing

4 Credits/Maximum of 8

A studio course concentrating on interactive physical systems using software/sensors that can sense and respond to the analog world. ART 319 Physical Computing (4 per semester/maximum of 8) This is a course that looks at alternative techniques for engaging an audience with computer-based art, aside from the familiar monitor-mouse dialog. The course introduces students to haptic systems, interactive environments, dynamic control systems, procedural video/audio and the creation of work that is exploratory and experimental. Through readings, discussions, design of individual and collaborative projects, students are expected to develop an articulate, theoretical basis for conceptualizing and discussing works presented in class as well as their own creative
projects. Assignments will cover both a technical introduction to basic electronics, analog circuit design, and microcontrollers as well as design concepts and philosophies for building interactive art objects.

**Prerequisite:** ART 201, and enrollment in the ART BA, ART BFA, Art Education, Interdisciplinary Digital Studio or Integrative Arts degree programs

**ART 320: Advanced Drawing**

4 Credits/Maximum of 8

Drawing for art majors; emphasis on sustained individual approaches based on figurative and nonfigurative sources. ART 320 Advanced Drawing (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work. Portfolios will be graded and midterm and at the end of the semester. In addition to the portfolio requirements, each student will give a presentation on a contemporary artist whose work has in some way influenced your own current body of work. Critiques will be regularly scheduled. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 220, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program

Bachelor of Arts: Arts

**ART 330: Intermediate Sculpture: Metal Fabrication and Mixed-media**

4 Credits/Maximum of 8

Development of technical and conceptual skills through metal fabrication, welding, and mixed-media processes. ART 330 Intermediate Sculpture: Metal Fabrication and Mixed-media (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various sculpture processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 230, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program

Bachelor of Arts: Arts

**ART 338: The Body: Issues and Objects**

4 Credits/Maximum of 8

Creating representations of the human body and related objects as a means of sculptural expression. ART 338 The Body: Issues and Objects (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work through the exploration of both historical and contemporary artmaking practice concerning the representation of the human body and objects related to the body. Students will learn both traditional and non-traditional ways of making sculptural objects that use the body as a primary means of artistic communication. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various sculpture processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 230, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program

Bachelor of Arts: Arts

**ART 340: Printmaking**

4 Credits/Maximum of 8

Development of technical and expressive skills through selected problems in one or more of the print processes. ART 340 Printmaking (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques
used in the various printmaking processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 240, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts

**ART 341: Intermediate Printmaking: Intaglio/Relief**

4 Credits

Instruction and practice in the fundamentals of intaglio and relief printmaking processes in their relation to the fine arts. ART 341 Intermediate Printmaking: Intaglio/Relief (4) This course is designed for the student who is interested in expanding her/his image making vocabulary through intaglio and relief printmaking processes. It will expose students to the history and practice of these processes, and will prepare students to competently produce original works. Readings, lectures, and demonstrations will introduce students to the materials and techniques used in the various intaglio and relief processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of complete artworks.

**Prerequisite:** ART 240, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts

**ART 342: Intermediate Printmaking: Lithography/Serigraphy**

4 Credits

Instruction and practice in the fundamentals of the lithographic and serigraphic processes and their relationship to the meaning of the print. ART 342 Intermediate Printmaking: Lithography/Serigraphy (4) This course is designed for the student who is interested in expanding her/his image making vocabulary through lithographic and serigraphic printmaking processes. It will expose students to the history and practice of these processes, and will prepare students to competently produce original works. Readings, lectures, and demonstrations will introduce students to the materials and techniques used in the various lithographic and serigraphic processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of complete artworks.

**Prerequisite:** ART 240, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts

**ART 343: New Media Printmaking**

4 Credits/Maximum of 8

A studio course concentrating on the integration of new media and traditional printmaking processes. ART 343 New Media Printmaking (4 per semester/maximum of 8) ART 343 is a studio art class that focuses on creating and critically evaluating printed media. Problem solving with new and traditional print technologies will allow the student to use both the computer and the printing press as a means to a creative end. Students will acquire the skills to critically participate in our technology driven culture, while at the same time they will develop an appreciation for the aesthetics of the handmade. This course will explore the nature and potential of printed media through lectures, readings, demonstrations, studio practice, and critiques. Various conceptually driven assignments will cover a range of graphic computer programs (Adobe Photoshop and Adobe Illustrator) and specific print outputs (digital, photo litho, photo etching and serigraphy) These assignments will engage students in research methods to advance their skills in printed media and help them to develop an understanding of the critical evaluation and assessment of Art.

**Prerequisite:** ART 201 or ART 240, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts

**ART 350: Intermediate Painting**

4 Credits/Maximum of 8

A variable offering in painting; course conditions defined on a rotating basis according to needs of individuals and groups. ART 350 Intermediate Painting (4 per semester/maximum of 8) This course is will further develop painting techniques, using the genres of landscape, still life, and painting from the model, collage, abstraction, and some digital applications. Examples from past and contemporary painting practice will be presented and discussed. Particular emphasis will be placed upon the development of a critical awareness concerning processes and content. Readings and discussions will focus on contemporary cultural and political issues. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experience through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their creative use and application is essential to the success of completed artworks.

**Prerequisite:** ART 250, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts

**ART 365: Themes and Issues I**

3 Credits

An advanced studio course that emphasizes individual approach to theme oriented problem solving through traditional and non-traditional multi-media explorations. ART 365 Themes and Issues I (3) ART 365 contains a common course theme wherein students will be asked to build a series of three completed works in diverse materials and techniques. Students will work to build clear concepts that are communicated through objects and images. Beginning with a thorough investigation of how artists of all fields (music, architecture, design, writing, theatre etc.) have interpreted the theme students will be guided through research, brainstorming, and concept development activities. During this they
will be asked to keep a journal which documents their process through written descriptions and comments but also image based resources, sketches, diagrams, and in progress photographs. Students will be urged to complete pieces that are conceptually linked so as to begin working in series. At the completion of each piece, students and faculty will conduct group critiques.

**Prerequisite:** ART 165, ART 166, ART 265, ART 266

**ART 366: Themes and Issues II**

3 Credits

An advanced studio course that emphasizes individual approach to theme oriented problem solving through traditional and non-traditional multi-media explorations. ART 366 Themes and Issues II (3) ART 366 contains a common course theme wherein students will be asked to build a series of three completed works in diverse materials and techniques. Students will work to build clear concepts that are communicated through objects and images. Beginning with a thorough investigation of how artists of all fields (music, architecture, design, writing, theatre etc.) have interpreted the theme students will be guided through research, brainstorming, and concept development activities. During this they will be asked to keep a journal which documents their process through written descriptions and comments but also image based resources, sketches, diagrams, and in progress photographs. Students will be urged to complete pieces that are conceptually linked so as to begin working in series. At the completion of each piece students and faculty will conduct group critiques and each student will mount a smale-scale individual exhibition at one of the many available areas for exhibition on campus.

**Prerequisite:** ART 165, ART 166, ART 265, ART 266, ART 365

**ART 380: Intermediate Throwing**

4 Credits/Maximum of 12

Intermediate ceramics course with focus on using wheel and throwing skills leading to personal expression in form, glazing, and firing. ART 380 Intermediate Throwing (4 per semester/maximum of 12) The purpose of this course is to explore the use of the wheel. Various types of forms will be addressed such as bowls, covered jars, and vases. Technical skills will be learned with the goal to use them to create a personal means of expression via the wheel. Both traditional and nontraditional vessels will be created. Forming, trimming and glazing techniques will be covered. There will be both group and individual critiques along with slide presentations and demonstrations. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 280, ART H111, ART H112, and enrollment in the ART BA, ART BFA, ART Education, or Integrative Arts degree program

**ART 390: Introduction to Photochemical Photography**

4 Credits

Introduction to the fundamentals of black and white photochemical photography. ART 390 Introduction to Photochemical Photography (4)(BA) This course meets the Bachelor of Arts degree requirements. ART 390 will explore the art and science of 35mm black and white photography. It will introduce students to chemically based photography as a process and continue to advance their skill and background as photographers. In the course, students will learn about film cameras and their operation, basic film types, film developing and processing, and basic photochemical printing practices. Students will also develop skills through experience in making, developing, printing, and presenting photographs created through photochemical processes. Each student will be required to turn in 20 contact sheets (36 exposures each) during the semester on required weekly assignments and develop a final project containing 25 mounted 8 x 10 black and white prints. 40% of the semester grade will be based on the final project, 40% on weekly assignments, and 20% on quizzes. A 35mm film camera with adjustable shutter speeds and aperture settings and a light meter (hand-held or built into the camera) is required. In addition, materials (film, photo paper, developing tanks, photo thermometer, etc.) will cost around $300 to $350. ART 390 will be offered fall and spring semesters.

**Prerequisite:** ART 110S, ART 111, ART 290, and successful portfolio review

**Bachelor of Arts: Arts**

**ART 397: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Bachelor of Arts: Arts**

**ART 399: Foreign Study--Art**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**Bachelor of Arts: Arts**

International Cultures (IL)
ART 402: Portfolio Design and Professional Practices

3 Credits

This course emphasizes the development of presentation skills for digital artists in audience/client interactions. ART 402 Portfolio Design and Professional Practices (3) ART 402 PORTFOLIO DESIGN AND PROFESSIONAL PRACTICES (3) is the concluding experience for all students enrolled in the Digital Arts Certificate (DAC) program. The course provides opportunities for students to learn about the practical application of professional practices and portfolio development tools specific to careers that require knowledge of digital art and design principles and culminates in the development of a professional-quality creative portfolio. The course prepares the DAC student with the skills, knowledge, and ability to 1) communicate a critical understanding of his/her work through the articulation of goals, critique, and self-assessment; 2) identify, assess, and evaluate tools and information necessary to maintaining current and effective techniques for written and visual self-presentation; and 3) prepare and present online a professional-quality creative portfolio of digital art/design works and appropriate supporting documentation. The course is taught fully online and comprises coursework supported by online presentations and guest talks, assigned readings, and other resources and reference materials relevant to the professional development of digital artists and designers. Course topics include: 1) the role of the portfolio, 2) selecting portfolio ingredients and how to adapt them for different audiences, 3) selecting/composing supporting documentation for the creative portfolio, 4) developing a professional-level online presentation of the digital portfolio, 5) locating and evaluating resources for the digital arts/design professional and 6) identifying professional practices relevant for individuals working in digital art and design. Students engage in both individual and team-based projects and interactions via activities such as asynchronous group discussions and guest talks delivered by streaming media. Assessment is based on the quality of the student’s work and participation in individual and team-based projects and activities that include online discussions, peer-reviews, collaborative research, and the development of an online presentation for the creative portfolio. Students receive regular individual and group feedback throughout the course in the form of instructor and peer reviews and critiques. Formal assessment occurs at regular intervals in a manner that evaluates both individual and group components of assigned tasks and activities. Students are expected to positively contribute to the course through active engagement in online discussions, team-based work and activities, and peer reviews. Course assignments include creative and written components and provide multiple ways for students to engage in various forms of professional development, self-evaluation, and critique. Students are required to have access to the Internet.

Prerequisite: ART 302

ART 404: Art and Life: Where They Intersect

4 Credits

This course addresses where art and life meet; how life influences what artists make, and how art influences our lives. “Art and Life: Where They Intersect” focuses on interdisciplinary areas that address notions of creativity, critical thinking, and studio practice as well as how these perspectives can influence what an artist creates. The essence of the course examines how life influences what an artist makes, and conversely how what we create influences how we live. Themes and ideas draw from interdisciplinary perspectives such as contextual approaches to creativity that are linked to themes in sociology, material theories of art as related to distributed views of cognition, expressive aesthetics that are connected to introspective perspectives of psychoanalytic theories, and other forms of creative agency found in the human sciences. The content of the course includes both studio practice and critical studies. This combination of experiential learning and critical theory is designed to give students a greater understanding and comprehension of the creative process from the point of view of individual interests and a variety of cultural contexts. The course includes students writing autobiographies in relation to their artwork. This reflective analysis is referenced to seminal essays that focus on different disciplinary perspectives on creativity. Creative studio projects will be undertaken to complement textual analysis and seminar discussion. By integrating studio practices with critical studies the creative process is more fully understood. The course curriculum relies on active student participation in class discussions and a willingness to share and take risks in the spirit of contributing to a collaborative learning experience. Art is by nature multidisciplinary and increasingly teaching art means teaching about life. The course is designed for students with a desire to acquire a deeper understanding of their creative research in the context of contemporary culture.

Prerequisite: fifth semester standing or higher

ART 409: Museum Studies

3 Credits

An introduction to the professional activities that occur in art museums. ART 409 / ARTH 409 Museum Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student’s chosen field. Offered every spring, this course will have a maximum enrollment of 20 students. Grades are based on class participation, four out-of-class projects, and a final project. Extra credit is offered for an off-campus visit to a museum, among other options.

Prerequisite: 6 credits of ART H, ART and/or A ED

Cross-listed with: ARTH 409

Bachelor of Arts: Arts

ART 411: Seminar in Contemporary Art

3 Credits/Maximum of 6

Trends in contemporary art investigated within the framework of studio visitations, museum tours, and through other related avenues of encounter. ART 411 Seminar in Contemporary Art (3) This seminar on contemporary art exposes students to artistic practices and to the advanced-level critical discourses accompanying them. It is relevant to all students interested in expanding their knowledge of contemporary
art and essential to BFA students who are encouraged to take the course more than once. The only prerequisite for this course is ART 122. The seminar's intimate format allows for discussions and a convivial examination of the pluralistic expressions of contemporary art while articulating it with theory and criticism. From an international perspective, this seminar focuses on art since the 1960s. Besides more traditional artistic expressions such as painting, sculpture, photography, installation, performance, and video, the course examines networked collaborations before and after the Internet, art and social activism, and a range of new media and new genre artistic practices. The conceptual issues these works raise include among others the dematerialization of the art object, issues of site-specificity and public art, and institutional critique. The course approaches these developments through artists' writings and essays in contemporary theory and criticism. Works of art are presented through videos, power points, films, performances, gallery visits, field trips, and discussions of related essays. Critical "reading" includes an extensive introduction to the work's historical contexts, readings from primary source materials, and the exploration of critical methods of analysis. From a cross-disciplinary perspective - including historical, esthetic and philosophical approaches - this course examines principles, assumptions, and tensions inherent in art's works as well as in our responses to them. Student evaluation is based on short written papers such as an exhibition review or an interview, participation in class discussions, and a creative project (ranging from a web site to an installation, artist's book, or a performance), which must reflect a general understanding of the issues addressed in the course. The course is offered at least once a year with the enrollment of 15 students.

Prerequisite: ART 122Y, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program.
Bachelor of Arts: Arts
United States Cultures (US)

ART 413: Performance Art

3 Credits

The development, production, and presentation of performance art works, and the study of performance art theory and history. ART 413 Performance Art (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will consist of lectures, readings, demonstrations, critiques, and studio practices in performance art. The course will begin with introductory exercises aimed toward the use and understanding of objects, images, materials, and actions of the body as performance elements. Performance assignments will range from autobiographical works to those which will address political issues effecting art and the body today such as sexuality, ethnicity, health, ecology, the art market, government intervention, and others. Reading and discussion assignments will cover the theory and history of performance art in the twentieth-century. Performance Art Paper: One week after the second performance project, students will be required to submit a paper that defines performance art. The paper should be typed/doubledouble, spaced, and three pages in length. In addition, it should contain a page for references that indicates at least five sources that have been used from the course reading list to support arguments.

Prerequisite: 4 credits of 300-level art, or graduate level status, or permission of instructor
Bachelor of Arts: Arts

ART 415: Integrating Media: Convergence in Practice

4 Credits/Maximum of 12

A studio course concentrating on the integration of new media technologies in contemporary art practice. ART 415 Integrating Media: Convergence in Practice (4)(BA) This course meets the Bachelor of Arts degree requirements. This course will concentrate on the integration of technologies into contemporary studio art practice. Emphasis will be placed on the convergence of digital, interactive, and time-based experiences within current studio practice. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring. The course will culminate in a final large-scale collaborative media project, group show, installation, video screening, and/or class web presentation. This course will be offered fall and spring semesters.

Prerequisite: ART 315
Bachelor of Arts: Arts

ART 416: Advanced Web and Net Art: Multimedia Publishing

4 Credits/Maximum of 12

A studio course concentrating on multimedia online “net art” practice and Web publishing. ART 416 Advanced Web and Net Art: Multimedia Publishing (4 per semester/maximum of 12)(BA) This course meets the Bachelor of Arts degree requirements. This is a studio art class that focuses on creating, authoring, exhibiting, and discussion online art practice. “Net Art” has become an important form of new media art creation and exhibition. The course explores experimental uses of new media in the visual arts with emphasis on integrating net art and design practice in cyberspace with current studio practices in two, three, and four (time based) dimensional art. In addition to the actual creation of new media artworks, the course will engage students in research methods to advance their skills in new media art and design and help them to develop an understanding of the critical evaluation and assessment of new media artworks created specifically for the web. The course will also explore various methods and strategies for exhibiting and publishing artworks on the web and creating online portfolios. The course will examine and explore the potentials of net-based art through lectures, readings, demonstrations, creative practice in studio, critiques, and actual web-published exhibitions. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring. The course will culminate in an online exhibition and personal portfolio sites published on the web.

Prerequisite: ART 203, ART 315, and 8 credits of 300-level new media
Bachelor of Arts: Arts

ART 419: Advanced New Media: Capstone

4 Credits/Maximum of 8

A new media and digital arts capstone course concentrating on the integration of art and technology in advanced thesis projects. ART 419 Advanced New Media: Capstone (4 per semester/maximum of 8) This is an advanced senior level capstone experience for new media. The course concentrates on advanced media theory and discourse, the integration of new media technologies into contemporary studio art and design practice, and on the creation and documenting of senior thesis projects. The course will focus on the final preparation of professional portfolios. The course will follow a studio/seminar model. Student thesis projects may cover a range of digital multimedia applications in sound, image,
motion, interactivity, interface design, 2D, 3D, 4D media authoring, etc. in relation to their focus in new media art and design practice.

**Prerequisite:** ART 315, ART 203 or ART 416, and 12 credits of 300/400-level new media, senior or graduate standing

ART 421: Drawing
4 Credits/Maximum of 12
Drawing for advanced students, with total emphasis on sustained individual approaches.

**Prerequisite:** ART 320
Bachelor of Arts: Arts

ART 422: Advanced Figure Drawing
4 Credits/Maximum of 12
Advanced work in sculpture, with an emphasis on individual development.

**Prerequisite:** ART 220, 8 credits of 300-level art courses
Bachelor of Arts: Arts

ART 430: Advanced Sculpture
4 Credits/Maximum of 8
Concentrated work in recording and understanding the human figure.

**Prerequisite:** ART 330, ART 331, 12 credits of 300-level sculpture
Bachelor of Arts: Arts

ART 431: Installation Art
4 Credits
Study and production of original visual statements through installation work as an art form.

**Prerequisite:** 4 credits of 300-level art, or graduate level status
Bachelor of Arts: Arts

ART 432: Flexible Molds: Parting Seams and Sculptural Concepts
4 Credits/Maximum of 8
ART 432 FLEXIBLE MOLDS: PARTING SEAMS & SCULPTURAL CONCEPTS introduces the relevancy of producing material specific multiples in a contemporary sculptural practice. It will offer students a broad understanding of the conceptual ramifications of molding an object and referencing a “mass-produced” look versus casting in an organic “fused form” way. Technical information on how to make one, two and three (+) part flexible molds in urethane compounds to be cast in concept relevant materials is emphasized. While the technical mold making and casting applications learned will be consistent for all members of the class, the results of the skills learned are expected to fold into each individual's artistic strengths differently. These technical skills are folded into three projects. The intent of these is to refine the students' craftpersonship in relation to constructing a mold and see construction precision as a portal to an expansive approach to casting. These multiple types of casting processes are expected to fold into projects that incorporate multiple genres. The course prerequisites, ART 230 or ART 280 allow for beginning level students to take the course while its 400 level welcomes both undergraduate and graduate students. If a student may repeat the class, the content of the class customizes to match the students increased technical skill. With repeating students, a more advanced approach to realizing individually proposed project ideas is expected.

**Prerequisite:** ART 230 or ART 280 or permission of instructor

ART 438: The Body: Issues and Objects
4 Credits/Maximum of 8
Creating representations of the human body and related objects as a means of sculptural expression. ART 338 The Body: Issues and Objects (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work through the exploration of both historical and contemporary artmaking practice concerning the representation of the human body and objects related to the body. Students will learn both traditional and non-traditional ways of making sculptural objects that use the body as a primary means of artistic communication. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various sculpture processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 230, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program.
Bachelor of Arts: Arts

ART 440: Advanced Printmaking
4 Credits/Maximum of 12
Individual projects in one or more of the printmaking processes. Emphasis is on developing a portfolio of prints.

**Prerequisite:** 4 credits of 300-level printmaking courses, 8 credits total of 300-level art courses
Bachelor of Arts: Arts

ART 446: Artists Books
4 Credits
Study and production of original visual statements through the book as an art form. ART 446 ARTISTS BOOKS (4) This course will consist of lectures, demonstrations, and studio practice in production of artists books. Lectures and demonstrations will include hand papermaking, signature binding, book design, new and alternative book forms, and container construction. Each student will produce six either unique or editioned books during the semester; each book will have a mock up, title, colophon page, and will be signed. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 110S, ART 111, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program.
Bachelor of Arts: Arts
ART 447: Photo Based Printmaking

4 Credits

Study and production of original visual statements through photographic based printmaking as an art form. ART 447 ART 447 Photo Based Printmaking (4)(BA) This course meets the Bachelor of Arts degree requirements. This course will consist of lectures, demonstrations, and studio practice in production of graphically based art prints. Each student will produce original prints in each of the printing techniques presented. Specific lectures, demonstrations, and projects will include photo based prints through: 1) Serigraphy, 2) Intaglio, 3) Gum Bichromate, 4) Cyanotype, 5) Van Dyke Brown, 6) Adobe Photoshop A particular emphasis will be placed upon the use of the computer as a tool in the production of images. The digital negatives produced during the computer instruction in this course will be employed in all of the other printing processes.

Prerequisite: ART 240, 4 credits of 300-level Art courses, or graduate level status
Bachelor of Arts: Arts

ART 450: Advanced Painting

4 Credits/Maximum of 12

Development of the artist through a series of commitments; each semester serves as a contractual agreement along professional lines.

Prerequisite: ART 350
Bachelor of Arts: Arts

ART 455: Advanced Painting Critique

4 Credits/Maximum of 8

The painter in relation to his peers and his profession.

Prerequisite: senior or graduate standing
Bachelor of Arts: Arts

ART 465: Individual Approaches I

3 Credits

An advanced studio where students are expected to explore personal themes and individual concepts in their art work. ART 465 ART 465 Individual Approaches I (3) ART 465 is an advanced studio course concentrating on creating art within a series. Students will be asked to complete 4-6 pieces that stem from an individual idea. Medium is open and can be traditional or non-traditional. Students will be required to document and maintain a journal outlining the steps needed to complete each piece. Weekly formal and/or informal critiques will allow students constant feedback of their progress.

Prerequisite: ART 165, ART 166, ART 265, ART 266, ART 365, ART 366

ART 466: Individual Approaches II

6 Credits

An advanced studio/lecture addressing the preparation for potential employment and/or entrance into graduate studies. ART 466W ART 466W Individual Approaches II (6)(BA) This course meets the Bachelor of Arts degree requirements. ART 466W is the Visual Art Studies capstone experience where students are given the opportunity to experience the professional aspects of a practicing artist. In addition to completing the last 2-4 pieces toward their exit portfolio students will address vital activities surrounding applying for employment and graduate school. Students will create "packets" including resumes, cover letters, post cards, slides, and portfolio CDs that can be used directly out of school for various calls and job listings. In addition topics that will be addressed in depth are photo-documentation, and inventory of work through database maintenance. All of these issues will culminate with small group exhibitions which will be curated, installed, and promoted by the students.

Prerequisite: ART 165, ART 166, ART 265, ART 266, ART 365, ART 366, ART 465

Bachelor of Arts: Arts
Writing Across the Curriculum

ART 467: Matter, Materiality and Mediums: An Interdisciplinary Approach to Artistic Stuff

3 Credits

Considers the physical challenges and long traditions of use of artistic media from both studio and historical points of view. ART (ART H) 467 Matter, Materiality and Mediums: An Interdisciplinary Approach to Artistic (3) Art and Art History are disciplines famously preoccupied with stuff: its malleability and its endurance, its sensuous properties and formal possibilities, its economic value and its mythic or even supernatural power. As an introduction to art through its materiality, this class will focus its attention upon a different material every week. With two class meetings per week, classes will alternate between &ldquo;practicum&rdquo; sections (demonstrations of selected materials with visits to metal foundries, studios and laboratories) and &ldquo;historical&rdquo; sections (lectures and discussions of those materials as they have worked in different historical and cultural contexts). The class will also introduce students to humanistic discussions of &ldquo;matter&rdquo; as well as attend to the cultural work involved in western art history&rsquo;s preoccupation with the differences between &ldquo;matter&rdquo; and artistic &ldquo;medium&rdquo;

Prerequisite: 3 credits in ART or 3 credits in ART H

ART 468: The Intermediate Digital Medium

3 Credits

An advanced studio course using the computer as an artistic medium. ART 468 ART 468 The Intermediate Digital Medium (3) This course will provide the much needed advanced technological/digital component wherein computing will be discussed as a media, rather than a tool. Students will be engaged in the creation of graphic/moving/three-dimensional imagery and sound that explores themes and concepts introduced in class. While most of the course will center around the use of industry standard computers there will be some forays into hardware associated with production, sound, and projection of images.

Prerequisite: ART 165, ART 166, ART 168

ART 469: Methods and Materials II

3 Credits/Maximum of 9

A studio course that focuses on specific media or techniques reflecting varied faculty expertise. ART 469 ART 469 Methods and Materials II (3)
This course provides students the opportunity to experience particular areas of visual art in which

Prerequisite: ART 165, ART 166, ART 265, ART 269

ART 475: Contemporary Women Artists

3 Credits

An interdisciplinary course that investigates women artists who were integral to the production of contemporary art primarily in the Americas, Europe, and Asia.

Prerequisite: fifth-semester standing, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program.

Cross-listed with: ARTH 475
Bachelor of Arts: Arts
United States Cultures (US)

ART 476: History and Theory of Digital Art

3 Credits

History and theories of contemporary digital art emphasizing humanistic approaches to technology. ART 476 / ARTH 476 History and Theory of Digital Art (3)(BA) This course meets the Bachelor of Arts degree requirements. Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware. Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such as Keith Obadike, whose on-line performances include an attempt to put his "blackness" up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on the internet) can critique commercial cooptation of global culture: etoy.com, for example, is an international and collaborative artist's group that satirizes global capital by camouflaging itself as a multinational corporation. This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

Prerequisite: ART H100 or ART H112 or ART H307 or ART H325 or ART H326 or ART 211
Cross-listed with: ARTH 476
Bachelor of Arts: Arts

ART 477: Curator's Workshop

3 Credits

In Curator's Workshop, students will gain valuable experience in curatorial practices, exhibition design, and arts administration. Focus topics include how to generate an effective exhibition concept; liaising with artists, institutions, and other curators; curatorial research in support of an exhibition concept; questions and concerns in spatial design; and the writing of didactic materials such as labels, wall texts, press releases, checklists, and others. Students will engage in a final project requiring them to generate a complete exhibition proposal, inclusive of a budget, written and visual support and documentation, and a clearly defined concept. Through field trips, readings, guest lectures, and research, students will gain a fuller understanding of the role of the curator in today's art world, relating their work back to their individual fields of study.

Prerequisites: Fifth semester standing or above

ART 480: Advanced Ceramic Arts

4 Credits/Maximum of 12

Individual exploration of ceramic materials and construction leading to graduate study or career development as a professional potter.

Prerequisite: ART 380
Bachelor of Arts: Arts

ART 490: View Camera Photography

4 Credits

Experience with diverse camera formats and applications; particular emphasis on view camera. ART 490 ART 490 View Camera Photography (4)(BA) This course meets the Bachelor of Arts degree requirements. ART 490 will provide students with experience in diverse camera formats and application with particular emphasis on view camera and its creative applications. The course will give students background in the history of large format photography and understanding of its application in specialized fields such as architectural photography, portraiture, and landscape photography. Students will gain experience in view camera operation and the creation of large format photographs in a variety of different applications. Grading will be based on a minimum of five projects that will account for 80% of the semester grade. The remaining 20% of the semester grade will be based on participation in class critiques. The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence. ART 490 will be offered in the fall semester each year.

Prerequisite: ART 390
Bachelor of Arts: Arts
ART 494: Research Projects Courses
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors
ART 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Prerequisite: prior approval of proposed assignment by instructor

Bachelor of Arts: Arts
ART 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts
ART 496H: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts
ART 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts
ART 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
AED 101S: Introduction to Art Education
3 Credits
This course introduces students to issues, concepts, and ideas in Art Education. A ED 101S Introduction to Art Education (3) The objective of the course is to introduce students to basic ideas, areas of inquiry, and experiences in art education. This will be a required course that serves as the first of a sequence of courses in the Art Education major and will provide a beginning point for the rest of the courses in the major. The Art Education Program has two emphases. The first leads to public school teacher certification and the second to an understanding of arts education in settings such as museums and community arts organizations. This introductory course will be broadly based and the content and will be applicable to students in both emphases. This course will be conducted in a seminar format. Evaluation methods for the course will include, for example, critical response papers to readings, observation reports of early field experiences, tests, and portfolio assessment.

First-Year Seminar
AED 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
AED 201W: History and Philosophy of Art Education in Schools and Cultural Institutions
3 Credits
Introduction to historical, philosophical, and sociological foundations of education in schools and cultural institutions, museums, and community organizations. A ED 201W A ED 201W History and Philosophy of Art Education in Schools and Cultural Institutions (3) Art education is not an isolated phenomenon; art teaching and learning has always occurred in the context of broader cultural changes and a range of social factors, including technological developments and population diversity. This course examines the historical, philosophical, and sociological foundations of art education in the United States. Art education can be found in a variety of formal and informal settings, including schools, community arts organizations and museums. Students will examine questions such as, what was the purpose of teaching art in the past? Was art study a means to improving social status, to attaining technical literacy, or to vocational training? Did education in art promote a democratic way of life? Or did it help reproduce existing divisions of race, gender, class, and ethnicity in American society? This course examines past and present developments in art education, paying special attention to the relation of art teaching and learning in contexts of art worlds, schooling, cultural institutions, and changing demographics. While the course will focus on art education in the United States, art education in a global context will be addressed as appropriate.

Writing Across the Curriculum
AED 211: Interpreting Art Experience: Social and Behavioral Perspectives
3 Credits
Examination of psychological, cultural, aesthetic, philosophical and educational perspectives on creation and response to art in children, adolescents and adults. A ED 211 Interpreting Art Experience: Social and
Behavioral Perspectives (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the shared human experience of making and responding to visual images and artifacts from the broadest possible range of perspectives, encouraging students to develop an understanding of the role of art experience in their own lives and in the lives of others. How art is learned within specific cultures and subcultures, how understanding and appreciation of particular images and objects evolves, and how experience and learning interacts with fundamental processes of perception, cognition, and interpretation are central themes. Students will draw upon their own personal and cultural histories and consult accounts written by others to explore the role of visual art in contemporary life. Classic and contemporary studies of artistic development and aesthetic response will be reviewed through well-illustrated lectures and amplified through students' active involvement in small scale, collaborative research studies based upon methods commonly used to study the art experience of children, adolescents, and adults without professional expertise in the visual arts; these activities will include close observation, interviews, and the design of preference and drawing studies. As a final course project, each student will construct a case study of a child, adolescent, or adult which describes in detail one perspective on that individual's experience of art in the home, school, museum, and/or other cultural institutions and settings.

Bachelor of Arts: Arts
General Education: Arts (GA)

AED 212: Interpreting Art Experience: Educational Implications
1 Credits

In-depth study of the educational implications of the information on art making and response introduced in A ED 211. A ED 212 Interpreting Art Experience: Educational Implications (1) A special discussion section attached to A ED 211 and required of students majoring in art education. A ED 212 focuses on the educational implications of the perspectives on art experience presented in A ED 211. This segment of the course will attend specifically to issues related to learners and learning in the visual arts, including characteristics of learners at various stages of development and the ways in which curriculum and instruction can and should be shaped by these considerations.

Prerequisite: A ED 101S, A ED 201W; Concurrent: A ED 211

AED 225: Diversity, Pedagogy, and Visual Culture
3 Credits

Issues of diversity in art, education, visual culture, and pedagogy. A ED 225 Diversity, Pedagogy, and Visual Culture (3) (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. This interdisciplinary course will serve to introduce students to critical understandings of issues of diversity, as they arise in contexts such as the art world, cultural institutions (such as museums and community arts organizations), schools, visual culture, and the culture, educational texts (such as curricula), and history, while developing a theoretical base from educational and cultural theory. By the end of the course, students will understand diversity as broadly defined in relation to visual culture and be able to critically explore the complex dynamics of race, gender, sex, and class, and the pedagogical issues posed by diversity.

Bachelor of Arts: Arts
United States Cultures (US)
or in groups. The purpose of this course is: 1. To assist students to insightfully interpret and create artworks through both writing and artistic media. 2. To provide students with the bases for understanding, interpreting, and critically analyzing contemporary visual culture, which can provide the content of curriculum outlines and unit and lesson plans that students develop in the course for use during internships, student teaching, and as art educators. 3. To provide students with opportunities to develop connections between artworks and their own lives, the lives of their prospective students, and the societies in which they will live. 4. To encourage students to consider race, class, sexual identity, age, and gender issues in art, art education, cultural production, exhibition venues, and career opportunities. TEXTS include popular arts, film, television, video/computer games, music, theatre, fashion, museums, contemporary art, and newsmedia.

Prerequisite: A ED majors only

AED 355Q: Show Me Where it Hurts: Healthcare and Creative Inquiry

3 Credits

Show Me Where It Hurts: Healthcare and Creative Inquiry is an interdisciplinary exploration of the dynamics of healthcare using both storytelling and artmaking as research methods. Stories of healthcare professionals, caregivers, and self-care will be explored to understand the actions and emotions that constitute empathy as the ability to relate to another person's experiences. By the end of the course, students' deeper understanding for how sharing experiences through the arts can increase empathy in human relationships will augment perspectives on care within healthcare systems either as professionals or patients. The course investigates methods for developing empathy that employ narrative and arts-based inquiry while also exploring a range of resources unique to Penn State to increase understanding such as the Graphic Medicine Series and the Art and Design Research Incubator (ADRI). Students will develop multiple modes of communication appropriate to the social sciences and the arts to develop effective communication in writing, presenting, and artmaking in thematic projects. The course pursues three themes throughout the semester. Theme 1: Seeing, Knowing, and Understanding * Engaging with forms of narrative, art and performance to understand how artists and social scientists use observation, data, and interpretation to inform their practices Theme 2: Developing Capacity for Empathy * Utilizing art studio explorations with materials and techniques combined with reflective writing practices, students engage in creative thinking skills to heighten empathic ways of knowing through the medium of art and narrative. Theme 3: Analyzing Perspectives in Art and Health * Analyze case studies focused on art and health to explore healthcare from three perspectives: healthcare professionals, caregivers, and self-care.

General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)
General Education - integrative: Interdomain
Honors

AED 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AED 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AED 401: Curricula, Pedagogy, and Assessment in Art Education

3 Credits

Preparation of curricula, pedagogical, and assessment strategies for elementary/secondary school and museum art education programs.

Prerequisite: A ED 101S , A ED 201W , A ED 211 , A ED 212 , A ED 225 , A ED 322 , A ED 323

AED 488: Cultural Institutions Practicum

1-3 Credits/Maximum of 3

Supervised field experience in a museum or other cultural institution, including planning, implementation, and evaluation of an educational project.

Prerequisite: ANTH 100 or 3 credits of art history courses from department list; A ED 401; Concurrent: A ED 490

AED 489: Advanced Practicum

3 Credits

Supervised observation, unit planning, and teaching in Saturday Morning Arts School: analysis of creative expressions and art programs for learners.

Prerequisite: A ED 401; Concurrent: A ED 490

AED 490: Capstone Course in Art Education

3 Credits/Maximum of 3

Synthesis of preservice art education coursework; introduction to professional practices and standards; completion of teaching and learning portfolio. AED 490 Capstone Course in Art Education (2) The capstone course has four major objectives for student learning. Each student will synthesize the experiences and understandings developed through prior courses in the undergraduate art education program. Students will become aware of emerging trends in art education and reflect on implications of those trends for their future teaching and learning. Each student will complete, and publicly present, a teaching and learning portfolio that includes evidence of professional preparation, biographical information, samples of artwork and writings on art/ visual culture, and reflective statements explaining the selection and significance of specific items. Students will gain understanding of the importance of professional standards and practices in art education. Student learning will be evaluated through assessment of the preprofessional teaching portfolio, and through a combination of written assignments, individual and small group oral presentations, and active
participation in class discussions. Students will collaborate on a final installation, performance or exhibition demonstrating their readiness for the final internship. Since this is the final course in the major prior to student teaching or the internship, attendance is very important and will count toward part of the final grade. Students need access to a computer lab. The capstone course in the art education major should be taken in the final semester before student teaching or a final internship. Since one goal of the course is helping students synthesize what they have learned in their prior courses, successful completion of all of the required courses in the major is prerequisite to enrollment in the capstone course. Students will have been introduced to the teaching and learning portfolio in their introductory art education course and should have developed pieces for their pre-professional teaching portfolios in most of their earlier art education courses. Much of the work of the capstone course will, therefore, focus on reflection, refinement, and synthesis.

**Prerequisite:** admission to Teacher Preparation Program and successful completion of all required courses in the major except Student Teaching or final internship. Prerequisite or concurrent: A ED 488 for majors in the Museums and Cultural Inst.

AED 494: Schools and Museums
3 Credits

Museum education: issues, theories of aesthetic education and practices in schools, museums, and community art centers.

**Prerequisite:** 12 credits in art education, art, art history, or education

AED 494H: Schools and Museums
3 Credits

Museum education: issues, theories of aesthetic education and practices in schools, museums, and community art centers.

**Prerequisite:** 12 credits in art education, art, art history, or education Honors

AED 495: Internship in Art Experiences
15 Credits

Comprehensive instruction in craft, health, cultural, museum, studio, gallery or social agency. Students supervised by University personnel and arts personnel.

**Prerequisite:** A ED 440; seventh- or eighth-semester standing

AED 495A: Art Education Student Teaching Practicum
7 Credits

AED 495A A ED 495A Art Education Student Teaching Practicum

(7) The Pittsburgh-based elementary or middle-level field experience fulfills the student teaching requirement for Pennsylvania certification to teach art in elementary and secondary schools. It is offered each semester, and student teachers are placed through the School District University Collaborative in Pittsburgh Public Schools. An on-site Art Education faculty Supervisor supervises students. Assignments, required seminars, and professional development activities meet the teaching prerequisites outlined by NCATE (National Council for Accreditation of Teacher Education) and the Standards for Pre-Service Teachers in Urban Education. Experiences and assignments provide evidence in each of the four domains for teacher preparation: Domain A - Planning and Preparing for Student Learning, Domain B - Teaching, Domain C - Analyzing Student Learning and Inquiring into Teaching, and Domain D - Fulfilling Professional Responsibilities. The work completed in this course (a digital and/or paper-based portfolio, and documented performance-based assessment of teaching as assessed by the university supervisor and mentor teachers/clinical instructors) will demonstrate fulfillment of the teaching/domain standards. The outcome of this work is to produce multiple experiences that support professional and personal development while preparing students for upcoming positions teaching art in multiple public and private contexts at both elementary and secondary levels. At the culmination of the student teaching semester, students will have both practical and theoretical understandings in addition to materials for application within the classroom.

**Prerequisite:** A ED 489; eighth- or ninth-semester standing; Concurrent: A ED 495B

AED 495E: Internship in Museums and Cultural Institutions

15 Credits

SE D 495E A ED 495E Internship in Museums and Cultural Institutions (15) The internship at a museum or other cultural institution completes the requirements for the Museums and Cultural Institutions option for the BS in Art Education. It is generally scheduled full-time for a period of 12 consecutive weeks during a double summer session, although it may also be taken during the fall or spring semester. The internship enables interns to meet their own educational objectives through participation in a supervised experience that moves them out of the classroom into the workplace. Prospective interns are encouraged to select internship sites that offer educational experiences relevant to their professional goals and desired careers. The internship incorporates guidelines consistent with the Standards and Guidelines for Museum Internships prepared by the New England Museum Association and published by the American Association of Museums (1993, 2000). A formal written internship agreement signed by the intern supervisor at the sponsoring museum or cultural institution, and by the prospective intern and university supervisor outlines the objectives of the internship, the intern’s duties and responsibilities, the responsibilities of the museum and university supervisors, and the means by which the intern’s work will be evaluated. Interns are integrated into the ongoing work and education programs of the museum and treated as staff members. They assume professional responsibilities and are expected to complete a project or some discrete portion of a major project that is being undertaken by the education department of the museum. Interns become acquainted with functions, programs and departments of the museum in addition to those to which they have been assigned in order to understand the relationship of their educational work to that of the museum, to the community, and to the museum field in general. Interns may participate in any workshops, lectures, professional courses, and staff training seminars that may occur at the museum during period of internship. They are also encouraged to seek professional employment after completion of the internship, and reasonable accommodation is made to allow them time to look for positions, prepare application materials, and attend interviews. Interns submit a weekly journal of activities and reflections to the university supervisor, as well as a summary report at the end. The museum supervisor submits an evaluation documenting the intern’s actual working/learning experiences and critically assessing these experiences. The final evaluation is based on this assessment, on the intern’s weekly journal and final report, and on the university supervisors’s onsite observations and interviews.

**Prerequisite:** A ED 440, seventh- or eighth-semester standing.

AED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AED 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
Art History (ARTH)

ARTH 1: First-Year Seminar

3 Credits

An introduction to the field of art history, through an examination of a selected issue in a seminar setting. ART H 001S First-Year Seminar (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This First-Year Seminar is open to all majors and to those who have yet to decide upon a major. It is also a 3-credit General Education in the Arts course (GA). The course will introduce entering university students to the field of art history through a case study on a selected topic. Each semester the topic will be different, potentially covering such diverse subjects as the purpose and function of Ancient Egyptian architecture to the role of sculpture in Renaissance Florence to the development of abstract painting in the early 20th century. Some semesters, the seminar may also focus upon a single exhibition at the Palmer Museum of Art. Such a focus upon a single topic will allow the class to look at a particular issue in the field from many different perspectives. The course will not be a broad survey of the history of art, but it will introduce students to the breadth of methods and approaches of art history. The seminar approach of the course will emphasize how to tackle an issue in art history, how to critically read selected texts, how to discuss in a small group the various dimensions of a problem, how to do art historical research in the library and on the internet, and how to present your own research and perspectives through public speaking and writing.

ARTH 100: Introduction to Art

3 Credits

An approach to the understanding of art through a critical analysis of selected works of architecture, painting, and sculpture. Students who have passed ARTH 110 may not schedule this course. ART H 100AART H 100 Introduction to Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 100 provides an introduction to the history of art from prehistory to the present, through selected topics, rather than a comprehensive survey. Areas covered usually include prehistoric art, art of the Near East and Egypt, ancient Greek and Roman art, medieval art culminating with the Gothic, Renaissance art both in Italy and northern Europe, Baroque and Rococo art, and modern developments often highlighting Romanticism, Impressionism, Cubism, Dada, Surrealism, Abstract Expressionism, Pop, Feminist, and contemporary art. The course also introduces selected artistic traditions in Africa, Asia and the Americas. The course is designed to meet two principal goals. The first is to increase students’ powers of visual analysis and to help them build a critical vocabulary for discussing an art object’s medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts, both historical and contemporary. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender and the incorporation of non-European art forms into the Western tradition. Requirements typically include examinations combining short answer and essay questions, and one paper based library research or intensive examination of an actual work of art. As a general education course in the arts, this course provides an introduction to selected themes in the broad history of art for students in any major. It has no prerequisite and presumes no prior exposure to fine art. This course is not a requirement of Art History major or minors, and is therefore directed essentially to students outside the field.

Bachelor of Arts: Arts
International Cultures (IL)
General Education: Arts (GA)

ARTH 105: Pictures and Power

3 Credits

An introduction to strategies for analyzing the political effects, uses and interpretation of popular imagery. ART H 105 Pictures and Power (3) (GA) In an era in which information is increasingly visual, and in an age in which our environment is ever more packed with imagery, students need powerful tools with which to interpret, compare, use and challenge images. Art History as a discipline, with its rigorous and ever more diverse arsenal of analytical strategies for interrogating images, provides students an excellent opportunity to think critically about the pictures that surround them every day. This class is therefore about the ways in which popular imagery pleases, informs, persuades, and otherwise exerts power. More important, this class will equip students with interpretive techniques by which they can examine and critique the power worked by pictures. The class will conduct analytical explorations of contemporary popular imagery and the influence they exert in daily life, from selfies to magic eye posters, fashion spreads to anatomical models, corporate logos to product labels. At the same time, the course will ground these explorations within historical contexts, examining the ways in which these visual cultures have come into being over time; students may learn how, for example, current political campaign imagery inherits codes of visual presentation first developed in ancient Roman portrait sculpture. The class will also acquaint students with works of art that have informed, attempted to draw upon or even contested the power of popular sculpture. Particular emphasis will be placed on the interrelatedness of imagery; just as religious paintings of the Renaissance often exerted their force their meaning by virtue of their companionship with architectural sites, music and ritual practices, contemporary popular imagery (from newspaper journalism to family albums) depends upon the larger constellation of events and artifacts in which they are nestled.

General Education: Arts (GA)

ARTH 107N: Rocks, Minerals, and the History of Art

3 Credits

This online course investigates select rocks and minerals used in the production of art between the Prehistoric Era and the Early Modern period. Topics covered include chemical and physical properties, occurrence in nature, the processes by which natural materials are acquired and worked, their symbolic and monetary value, and specific works of art in which they are found. Each material (ochre, garnet, lapis lazuli, rock crystal [quartz], igneous rocks [basalt, diorite and porphyry], alabaster and marble) is addressed in a 2-week unit. The seven units are split equally between scientific analysis of the materials and art historical case studies. A final project integrates Geosciences and Art History topics to investigate the use of a chosen natural material in
a specific work of art. Each material addressed in the course plays a crucial role in the history of art, and each one was particularly prized for its physical and material properties (color, hardness, etc.). Ochre was the first known pigment, and was in use by early humans for bodily adornment and for drawing and painting in caves and shelters as early as 100,000 years ago for bodily adornment and 40,000 years ago in cave art. Its availability worldwide and in multiple strong colors made it a desirable choice. Lapis lazuli, by contrast, was difficult to obtain, and difficult to refine as a pigment. It was first used to make small sculptures and cylinder seals in the Ancient world, and was prized for its brilliant blue color. The difficulty in grinding and purifying blue pigment from lapis lazuli made it one of the most expensive pigments in the Medieval and Renaissance world—it was worth its weight in silver! Pure blue lapis pigment, when found in a painting, is always a sign of great expense and importance. Rock crystal was valued for its clarity and purity, and its extreme brittleness meant that works made from it were valued for their intricacy and fragility. Nero reportedly destroyed two elaborate crystal goblets in a rage, and in so doing, deprived future generations of masterpieces of the sculptor’s art. In the Ancient Near East and Ancient Egypt, rock crystal was frequently used for amulets and other magical objects, while in the Medieval world, its purity was seen as a metaphor for the Virgin Mary. Garnet had a similar symbolic value in the Middle Ages: its red color was related to the blood of Christ, and it was thus used frequently in liturgical vessels. In the Ancient world, the rich red tone of garnets was prized in jewelry and in small-scale relief carvings. Igneous stones like porphyry, basalt and diorite were particularly prized for their extreme hardness and permanence, and thus the Law Code of Hammurabi was inscribed on basalt to ensure its permanence. Other Ancient Near Eastern rulers had images of themselves made from basalt and diorite in order to ensure that those works would survive for centuries. Imperial porphyry, an igneous stone with a rich red-purple color, came from a single remote quarry in the Egyptian mountains. Its use was reserved just for the Imperial family in Rome, and it was used for carved sarcophagi, for columns, for colored veneers on floors and walls, etc., as a sign of Imperial authority. Marble is of course one of the most familiar of all art materials, used frequently for sculpture from the very beginnings of art production. The Greeks and Romans in particular took great pains to obtain different types of marbles with specific colors, veining patterns, etc., for use in both sculpture and architecture. Finally, alabaster is one of the easiest of all stones to work: it is so soft that one can make a mark simply with a fingernail! Its intricate banding and translucency made it a favorite material for thin-walled bowls and vases in the Ancient Near East, Ancient Egypt, and in the Classical world. Later, in Early Christian and Medieval Italy, it was used for windows instead of glass—sun shining through alabaster casts a golden glow into a church interior. By the Late Gothic period, alabaster was being exploited as an easily sculpted material throughout Europe, with major quarries and workshops in England (Nottingham), France, and Northern Spain.

ARTH 112: Renaissance to Modern Art

3 Credits

Survey of Renaissance, Baroque, Rococo, Romantic, Modern, and Contemporary art, with an emphasis on painting, sculpture, and graphic arts. ART H 112 ART H 112 Renaissance to Modern Art (3) (GA;IL)(BA)

This course meets the Bachelor of Arts degree requirements. Art History 112 provides an introduction to the history of art in the European tradition from the early Renaissance (ca. 1300) to the present. Areas covered include Early and High Renaissance Italian art; Northern Renaissance art; Baroque art of Italy, Spain, France and the Netherlands; and subsequent artistic movements emphasizing the Rococo, Neo-Classicism, Realism, Impressionism and Modernist movements from Fauvism through Abstract Expressionism to Contemporary. The course is designed to meet two principal goals. The first is to increase students’ powers of visual analysis and to help them build a critical vocabulary for discussing an art object’s medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts, both historical and contemporary. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender and the incorporation of non-European art forms into the Western tradition. Requirements typically include examinations combining short answer and essay questions, and at least one writing assignment. As a general education course in the arts, this course provides an introduction to Renaissance through modern art for a student in any major. It has no prerequisite and presumes no prior exposure to art history. It will teach students majoring in Art History both the common vocabulary of the field and the outlines of the field that form the foundation for future study. Art History 112 serves a companion course to Art History 111, which examines Western art from Antiquity through the Middle Ages. Art History 112 also complements Art History 202, “Renaissance to Modern Architecture.”

ARTH 115N: Arts of Love

3 Credits

This course will familiarize students with expressions of love in Western arts and literature. Students will analyze the artistic, philosophical and literary representations of courtship, friendship, homoeroticism, sexuality, marriage, adultery, and familial bonds and explore how the preceding phenomena are inflected by gender roles, race and miscegenation, and class and religious differences. We will also trace the way particular narratives about love have been adapted by different artistic media. Love is a universal human experience and its study transcends disciplinary boundaries. It is a linchpin of human existence, uniting and enriching nearly any subject worthy of serious study.

ARTH 120: Asian Art and Architecture

3 Credits

A selective overview of the art and architecture of India, Southeast Asia, China, Korea, and Japan. ART H 120 ART H 120 Asian Art and Architecture (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 120 provides an introduction to the art and architecture of Asia, with an emphasis upon south, southeast, and east Asia. Selected monuments from these regions will be considered within their original cultural and historical context. Particular emphasis will be placed on the art associated with Hinduism and Buddhism. The course begins with India, from the early Indus Valley Civilization up through the Taj Mahal. Angkor Wat and other developments in southeast Asia are examined. Selected themes in Chinese art and architecture are explored from the early Bronze Age up through the Forbidden City in Beijing. The unique contribution of Korean art is included. The course concludes with a discussion of Japanese art and architecture, from early Shinto shrines to Japanese prints, gardens, and the tea ceremony. The course is designed to meet two principal goals. The first is to develop skills of visual analysis and a critical vocabulary for discussing the media, technologies, styles, and iconographies of various Asian artistic traditions. The second is to foster an understanding of art--and visual culture in general--according to social, economic, political, and religious contexts. Key topics include: patronage, issues of reception and aesthetics, the function of visual imagery in religious practices, the ritual use of objects, the organization and use of sacred space, depictions of gender, and relationships between the art of various regions and cultures. Requirements include essay exams and a paper. As a general education course, this class provides an introduction to Asian art for students of any major. The course has no prerequisites, and presumes no prior exposure to art history. Art History majors will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole.

ARTH 120Z: Asian Art and Architecture -LINKED

3 Credits

This course surveys Asian art and architecture from the earliest civilizations to the present day, focusing more on the arts and monuments from China, Japan and India but also introducing those
from Korea, Southeast and Central Asia. We will study how artistic traditions develop, transmit and become localized in those distinctive yet interconnected societies, and how those traditions interact with the political, religious, social and cultural contexts in which they grow. Issues investigated include (but are not limited to) the spread and metamorphosis of Buddhist, Hindu and Islamic art and architecture, the production and consumption of art as related to political power (including colonialism, decolonization and nationalism), social hierarchies and market mechanisms, and various forms of modernity in Asian art and culture. In addition to regular class meetings, requirements include slide identification exams, essay exams and short papers. We will also have field trips to museums with collections of Asian art that are suitable for this course, and you will curate an online exhibition of artworks of your choice. As a general education course, this class provides an introduction to Asian art for students of any major. Art History majors will broaden their vocabulary, methodology and knowledge of the discipline. ARTH 120Z is linked to ASIA 100Z.

ARTH 130: Art of Africa, Oceania, and the Americas
3 Credits

A selective overview of the indigenous art of Africa, Oceania and the Americas. ARTH 130 African, Oceanic, and Native American Art (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. ARTH 130 provides a selective introduction to major developments and issues in African and Oceanic art. The beginning of this course will concentrate upon the art and architecture of selected regions of Africa, during the pre-colonial, colonial, and post-colonial periods. This will be followed by a discussion of the traditional arts of Oceania in Polynesia, Micronesia, Melanesia, and Australia. The course will conclude with an introduction to the Pre-Columbian art and architecture of the Americas and art from the Eastern Woodlands, Great Plains, the Southwest and Pacific Northwest of North America. Art will be examined within its cultural and social contexts. Special attention will be given to the role that art serves in a culture’s religion, rituals, ceremonies, political structure, gender roles, and ethnic identity. The impact of the West upon the art of these regions, both in colonial and post-colonial contexts, will be a recurring issue in this course. The actual time devoted to each topic and the sequence of topics will vary from instructor to instructor. The objective of the course is to introduce students to diversity in art. In so doing, negative stereotypes associated with traditional notions of the “primitive” will be challenged. Also, the course emphasizes visual analysis and critical thinking. The course requirements will consist of exams and a paper. As a general education course, this class provides an introduction to African and Oceanic art for students of any major. The course has no prerequisites, and presumes no prior exposure to art history. On the other hand, students majoring in Art History will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole.

Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)
United States Cultures (US)
(BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to Western architecture before the Renaissance, roughly before A.D. 1400. Some of the topics covered in this course include prehistoric architecture in Europe and the Mediterranean, architecture of the ancient Near East, Egyptian architecture, Minoan and Mycenaean architecture, the classical architecture of ancient Greece, ancient Roman architecture throughout the empire, the Early Christian architecture of western Europe and Byzantium, early medieval architecture, Middle Byzantine architecture, Islamic architecture, and the Romanesque and Gothic architecture of Western Europe. Selected major individual buildings and architectural complexes will be emphasized and will include types of buildings/complexes such as the sanctuary, temple, tomb, forum, basilica, cathedral, monastery, and castle. Architecture will be analyzed with regard to materials’ construction, engineering and design, and in the contexts of culture, society, and urban or rural setting.

Political, economic, religious, ethnic and gender-related issues will be presented as they are part of the dynamics contributing to many of these structures. The students’ understanding and ability to articulate the conceptual themes of the course will be tested through essay examinations. There will also be a short paper. This course will provide an introduction to ancient to medieval architecture to students of any major. The course has no prerequisite. This course also serves as an introductory foundation course for students in the arts, particularly architecture and landscape architecture. The companion course to Art History 201 is Art History 202, "Renaissance to Modern Architecture," which examines Western architecture after A.D. 1400.

Art History 201 is a required course for the Major in Art History and the Interdisciplinary Minor in Architectural History.

ARTH 202: Renaissance to Modern Architecture

3 Credits

A survey of Renaissance, Baroque, Rococo, Romantic, Victorian, Modern, Post-Modern, and Contemporary architecture in Europe and America. ART H 202 Renaissance to Modern Architecture (3) (GA;US;IL)(BA)

This course meets the Bachelor of Arts degree requirements. This course is an introduction to Western architecture from approximately A.D. 1400 to the present. Some of the topics covered in this course include the Italian Renaissance, the rebuilding of St. Peter’s in Rome, Mannerism, the villas of Palladio, Italian Baroque churches, Spanish Colonial architecture in the Americas, royal French architecture from Francis I to Louis XVI, Late Baroque and Roccoco architecture from Bavaria to Russia, Elizabethan to Georgian architecture in England and America, the Industrial Revolution, Neoclassicism from Schinkel to Jefferson, Romanticism and the Gothic Revival, Ecole des Beaux-Arts, Second Empire Paris, Victorian architecture, the Arts & Crafts Movement, Richardsonian Romanesque, the Chicago School, Frank Lloyd Wright, the City Beautiful Movement, Art Nouveau to Futurism, Art Deco skyscrapers, the International Style, the Bauhaus, Le Corbusier, Louis 1. Kahn, PostModernism, Deconstructionism, and contemporary architecture. Selected major architects, theories, buildings, and urban developments will be emphasized. Architecture will be considered within the contexts of religion, politics, philosophy, culture, economics, race, gender, society, engineering, and landscape architecture. The students’ understanding of the basic factual information concerning selected buildings will be tested through quizzes. The students’ understanding and ability to articulate the conceptual themes of the course will be tested through essay examinations. There will also be a short paper. This course will provide an introduction to Renaissance to contemporary architecture to students of any major. The course has no prerequisite. This course also serves as an introductory foundation course for students in the arts, particularly architecture and landscape architecture. The companion course to Art History 202 is Art History 201, "Ancient to Medieval Architecture," which examines Western architecture before A.D. 1400. Art History 202 is a required course for the Major in Art History and the Interdisciplinary Minor in Architectural History.

ARTH 204: The Art of Marvel: Italy and Spain 1600 - 1750

3 Credits

This class is intended to provide a general introduction to the art and architecture of Italy and Spain from roughly 1590-1750. Discussion will concentrate on what constitutes the baroque and its interpretation in each geographic area as well as issues such as patronage, primary sources, iconography, and historical context. The goal is to increase your visual analysis skills and help build a critical vocabulary for discussing an art object’s medium, composition, style, and iconography. The second goal is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts.

ARTH 220Z: Chinese Art - Linked

3 Credits

A general survey of the great periods of Chinese art from the Shang dynasty until the modern period. ARTH 220Z Chinese Art - Linked (3) (GA;IL)(BA)

ARTH 220Z provides an introduction to the art of China from the Neolithic period through the twentieth century. Emphasis will be placed on the major dynastic periods (Shang, Zhou, Qin, Han, Tang, Song, Ming, Yuan, and Qing); however, regional developments throughout China are examined as well. Students are introduced to a variety of artistic traditions and media, including jades, bronzes, ceramics, sculpture, painting, and architecture. The course is designed to meet two principal goals. The first is to develop skills of visual analysis and a critical vocabulary for discussing the media, technologies, styles, compositions and iconographies of Chinese art. The second is to foster an understanding of art—and visual culture in general—according to social, economic, political, and religious contexts. Key topics include: the ritual use of objects, patronage, issues of reception and aesthetics, Buddhist art, the organization and use of sacred space, depictions of gender, and regional developments/interactions. Requirements include essay exams and at least one paper. As a general education course, this class provides an introduction to Chinese art for students of any major. This course has no prerequisites and presumes no prior exposure to art history or the history of China. Students majoring in Art History will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole. Because
ART H 222Q: Intersections between Art History and Psychology

Why is there a cultural association between mental illness and artistic creation? What is the history of this association? Is there a psychological foundation for it or is it a cultural stereotype with no basis in reality? To address these questions this course will explore the integrated histories of modern psychology and avant-garde art from the late 19th century to the present, comparing the different approaches to the topic in the disciplines of art history and psychology. We will discuss the possible benefits and drawbacks of each approach. By celebrating genius, art history has often been complicit in perpetuating the stereotype of the "mad" artist, even romanticizing it and discounting the reality of disease; whereas psychologists often view images as symptoms, misinterpreting the art historical context in which artists work. Interestingly, avant-garde art has often been associated with "insanity" with both negative and positive connotations. As a history of art and psychology course, the syllabus is organized as a chronological survey focusing on points of intersection between avant-garde art and psychology. Many of these points will be the lives and works of individual artists who either suffered mental illness, such as Vincent van Gogh, or engaged with psychology and mental illness as the subject of their art, as did Edvard Munch, the creator of the famous image, The Scream. In each case it is interesting to look at the reciprocity between the two disciplines: how the artists represented mental illness and transformed psychological theories into visual art and how psychologists and the medical establishment have responded to these artists, using them as diagnostic subjects. We will look specifically at bi-polar disorder and the psychological debates surrounding its relationship to artistic creativity. We will also look at larger avant-garde movements such as Expressionism and Surrealism, movements inspired by therapeutic practices, the art of mental patients, and psychoanalytic theory. We will look at the legacy of each of these movements in contemporary avant-garde art, including attitudes toward Outsider or Visionary artists and modern art therapy. Particular emphasis will be placed on psychoanalytic theory. Sigmund Freud's interest in art impacted his work and has rendered his writings conducive to artistic interpretation even today, although his theories have been rejected by many contemporary psychologists. We will look at artists who directly responded to Freud's writings such as Max Ernst and Salvador Dali, female surrealists such as Leonora Carrington, and issues surrounding "hysteria" as it was adopted by both male and female surrealists as a model for creative expression, and which continues to inform feminist art practices today. While contemporary avant-garde artists continue to respond to various psychological theories and practices, contemporary psychologists use formal analysis to understand the art of mental patients and employ artistic practices in the development of modern art therapy.
fostering more sophisticated understandings of how evolving socio-political ideas affect our sense of who we are and how we relate to texts and images. The course is relevant to students of American and English studies, art, art history, and women's, gender and sexuality studies.

ARTH 226: The Comic Book: A History of Sequential Art

3 Credits

An overview and examination of the history of sequential art with a focus on comic books and graphic novels. ART H 226 The Comic Book: A History of Sequential Art (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Art History 226 will lead students on a journey through one of the world’s most interesting and yet most misunderstood art forms. In this class, students will familiarize themselves with various styles, terminology, and major examples of sequential art beginning with the cave paintings of Lascaux and ending with the more popular and critically acclaimed comic books of recent years. Students will not only learn a bit and appreciate sequential art, but they will also understand how deeply and significantly these works have melded into various aspects of our culture and society.

Bachelor of Arts: Arts
General Education: Arts (GA)

ARTH 250: A Chronological Survey of Photography

3 Credits

A survey of photography’s place and influence in a social, cultural, and historical context. ART H 250 A Chronological Survey of Photography (3) This course explores the role played by photography over time in providing understanding and insight in a social, cultural, and historical context of the impact of the development of the photographic medium and its effect on social, political, cultural and technological events. Emphasis will be given to understanding the context that surrounds the scientific and aesthetic development of photography. This is a survey of the chronology of events in western culture that transpires from the inception of photography until the year 2000. It includes the influences and outcomes of photographers and those associated with the medium on our culture. Emphasis will be placed on the influence of photography on the world around it, and significant events and individuals in the development of the medium as a vital art form. The structure of the course will consist of research and discussion of events and individuals that characterized years selected for examination. Each week one or two decades of western culture will be highlighted. Although the thrust of research will relate to photographic subject matter, the events studied will span the culture. We will explore the development of art, literature, music, and photography, as well as, historic landmarks, and the events that have shaped present society. Each week a selection of visual material will be presented highlighting selected events, students will read literature from the period of discussion, significant pieces of music will be introduced, and accounts of periodic events will be surveyed. Each week, a group of students will be assigned to research at least one decade. Each student will gather information about a significant figure or event that occurred in the course of a given period. The student will be expected to prepare a short paper and give a five-minute oral presentation about his/her assigned year, historical figure or event. As each student presents, the chronology of events becomes clear and the multiple threads of history weaves a brilliant tapestry of our culture. For the final presentation the student will prepare a ten-page research paper about a historical figure or event. Students will be graded on the quality of the weekly oral presentations and the demonstrated level of commitment to research. Another significant part of their grade will be derived from the length of committed scholarship given to the ten-page term paper. Students must exhibit a level of originality, clarity, and insight. The student must demonstrate the capacity for the assimilation of facts and events relative to their subject and demonstrate how their subject relates to other events that occurred around the same time of their event. Toward this end students will be encouraged to work together to illustrate the interconnection of the chronology.

Cross-listed with: PHOTO 201

ARTH 292N: Witches and Witchcraft from the Middle Ages to the Present

3 Credits

This course will explore the social and cultural history of witches and witchcraft from the late Middle ages in Europe and the U.S. to the present. The very nature and broad scope of the topic lends itself to an interdisciplinary approach that combines history, folklore, religious studies, criminology, women's studies, art history, English literature and popular culture. Historically, real individuals were accused of witchcraft and suffered persecution and punishment accordingly. Others proclaimed themselves to be witches and the practice continues to attract adherents today such as in the modern Wiccan movement. However, modern consensus views witches as fictions: figures of magical power in folklore, literature, visual art and popular culture. From Shakespeare's Macbeth to the characters in the popular Harry Potter books and films, fictional witches have haunted European and American culture for centuries. This course will explore the complex interplay of fact and fiction in the history of witches and witchcraft. In other words, how do fictions become powerful enough to inform history? The course will also focus on the historical status of witches as a source of power outside of, and in opposition to, established political, religious and social structures. Since those accused of witchcraft were predominately women, how has witchcraft functioned as a means of empowerment for women as well as a tool for their persecution? And how has the representation of witches influenced attitudes towards women both historically and today? The course will begin with an historical inquiry into the belief in witchcraft during the late Middle Ages in Europe and the social and cultural role witches played in society. We will look at texts such as the Malleus Maleficarum (Hammer of Witches) published in 1486 as a guide for hunting and destroying witches, as well as studies on the more constructive role witchcraft may have offered women and communities. The course will be organized chronologically and move back and forth between history, such as the Salem witch trials, and the representations of that history in art, literature and film. Particular emphasis will be placed on the visual arts, from the engravings of German Renaissance artists such as Albrecht Durer and Hans Baldung Grien, the gothic paintings of Francisco Goya during the Romantic period, to contemporary artist Louise Bourgeois' monument to those executed as witches in Norway. The course will end with analysis of images of witches in popular
culture, movies and television, and with a discussion of the modern representations of the domesticated witch and the femme fatale.

3 Credits
Art of the Ancient Near East, including Egypt, Mesopotamia, and neighboring civilizations. ART H 301 ART H 301 Egyptian and Mesopotamian Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art history 301 provides an introduction to the arts of the Ancient Near East including those of Egypt and Mesopotamia. The class is dealt with chronologically. Works studied in class include papyri, seals, fabric, codices as well as sculpture, architecture, and painting. Additional readings of primary sources focused on mythology, and religion will form a key element in the structure of the class. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Ancient Near Eastern and Egyptian art to a student of any major. This course has no prerequisite, and presumes no prior exposure to fine art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 302: Art of the Early Middle Ages
3 Credits
A survey of the art of Western Europe from the Early Christian era through the Ottonian Empire, c.300-1050 A.D. ART H 302 ART H 302 Art of the Early Middle Ages (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 302 concentrates on the art of northern Europe between A.D. 600 and 1050, from the years which saw the art and culture of the migration period in Europe meet and merge with the Greco-Roman traditions of the Mediterranean, to the beginnings of Romanesque art. Works studied include architecture, manuscript painting, ivory carving and goldsmithwork, most of which were produced by or for members of the clergy, royalty or the lay aristocracy. The basic structure of the course is chronological. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to early Medieval art to a student of any major. This course has no prerequisite, and presumes no prior exposure to art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 303: Italian Renaissance Art
3 Credits
The major arts in Italy from the thirteenth century A.D. through the Renaissance; emphasis on sculpture and painting. ART H 303 ART H 303 Italian Renaissance Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 303 provides an introduction to the art of the early and "high" Renaissance in Italy, conceived in chronological terms as the period from c. 1300 to c. 1530, and embracing developments from the emergence of the Mendicant orders on the later 13th century to the rise of Mannerism in the 16th century. Monuments form all parts of the Italian peninsula will be considered, with emphasis on the major centers of Florence, Siena, Venice, Rome, Milan, and Naples, as well as Mantua, Ferrara and Urbino. The basic structure of the course is chronological, and is divided into three sections corresponding to the three centuries deigned by Giorgio Vasari in his Lives of the Artists. In each section, an attempt will be made to present the careers and major works of the most significant artists in relation to their historical and
ARTH 305: Romanticism and Revolution

3 Credits

A survey of painting and sculpture in Europe 1780-1860, from the origins of Neoclassicism through Romanticism and Realism. ART H 305ART H 305 European Art from 1780-1860 (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 305 provides an introduction to the painting, sculpture, and graphic arts of Europe between ca. 1780 and 1860, with an emphasis on selected developments in France, Spain, England, and Germany. The course begins with the origins of Neoclassicism and the revolutionary art of Jacques Louis David. Art is examined within the context of the tumultuous history of this period, such as the decline of the French monarchy, the French Revolution and the rise and fall of Napoleon. The course will examine the rise of Romanticism, as seen in such diverse expressions as Goya's horrific images of inhumanity, Fuseli's dreams, Turner's sublime landscapes, Friedrich's frozen visions of Gothic ruins, Delacroix's colorful battles of beasts. Realism emerges in the biting social commentaries of Daumier, the meticulous detailed paintings of the English Pre-Raphaelites, and the raw reality of Courbet's paintings. The course ends with the extraordinary art of Manet. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Italian Renaissance art to a student of any major. This course has no prerequisite, and presumes no prior exposure to art. ARHT 307: American Art

3 Credits

History of art in the English colonies and the United States from the seventeenth century to the present. AMST 307 / ARTH 307 American Art (3) (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. American art, from the colonial period to the present, is examined through paintings, sculpture, buildings, prints and photographs, as well as exhibitions and national/world fairs. The class places special emphasis upon the predication of national identity by examining the ways in which the very notion of the "American" has historically been highly contested. Special points of emphasis include: negotiations between indigenous, colonial and European artistic styles, representations of and by displaced populations (colonial subjects, Native Americans, African Americans), myths of the American landscape, the cult of domesticity and the gendering of American citizenry, later transatlantic experiences of expatriate artists, conflicts between urban and rural conceptualizations of the "typical" American experience, the role of the American avant-garde after World War II, and debates over federal funding for the arts. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to American art to a student of any major. This course has no prerequisite and presumes no prior exposure to fine art. ARTH 308: American Architecture

3 Credits

History of the architecture of the United States, as well as its Native American and colonial antecedents. AMST 308 / ARTH 308 American Architecture (3) (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. This Art History course (cross-listed with American Studies) will cover the history of American architecture and will examine such topics as the architecture of: Native Americans, Spanish Colonial missions, 17th-century Virginia, Puritan New England, Georgian America, Southern Plantations and Slave Cabins, Thomas Jefferson, the new federal city of Washington, D.C., the Greek Revival, the industrial revolution, utopian religious communities such as the Shakers, Gothic Revival cottages and villas, Victorian Philadelphia, Henry Hobson Richardson, Newport mansions, the birth of the skyscraper in New York and Chicago, the City Beautiful Movement, Frank Lloyd Wright, Arts & Crafts California, Henry Ford's Michigan, Art Deco New York, Mies van der Rohe, Levittown, Disneyland, Louis I. Kahn, Post-Modernism, Frank Gehry, and Green Buildings. Selected major buildings, architects, ideas, and urban developments will be emphasized. Architecture will be considered
within the contexts of religion, politics, philosophy, culture, economics, gender, race, society, technology, engineering, landscape architecture, urban planning and interior design. This introductory survey has no prerequisite and is intended for both students of architecture/art and students unfamiliar with the field.

ARTH 311: Greek and Roman Art

3 Credits

Greek and Roman art, with emphasis on painting and sculpture. ART H 311ART H 311 Greek and Roman Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 311 provides a survey of Greek and Roman art. Included are the Orientalizing, Archaic, Classical and Hellenistic periods of Greece and the Republican and Imperial Rome. Special attention is paid to politics, culture, and literature. The focus of this class is painting, sculpture and architecture; ceramics and other minor arts are also addressed. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. ARTH 313: Northern Renaissance Art

3 Credits

Art in northern Europe in the fifteenth and sixteenth centuries, emphasizing painters such as Van Eyck, Durer, and Bruegel. ART H 313ART H 313 Northern Renaissance Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 313 explores the relationship of the visual arts to power structures, political events, and social and religious issues in the Netherlands and Germany, c. 1380-1585. Topics include the forms and functions of religious art, the place of visual representation in the governing strategies of the cra's rulers, the rising status of the artist, the new technology of printing, the complex role of visual culture in bringing about the Protestant Reformation, and the wave of destruction and censorship known as the Great Iconoclasm of 1566. Particular attention is paid to the works and careers of Jan van Eyck, Hieronymus Bosch, Albrecht Dürer and Pieter Bruegel. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Northern Renaissance art to a student of any major. This course has no prerequisite, and presumes no prior exposure to fine art. ARTH 315: Architecture and Art of South and Southeast Asia

3 Credits
Survey of the architecture/art of South/Southeast Asia (emphasis on India) from the Bronze Age to a globalizing present. ARTH 315 / ASIA 315 Architecture and Art of South and Southeast Asia (3) (GA,IL)(BA) This course meets the Bachelor of Arts degree requirements. This course has a focus on the architecture and art of South Asia (India, Pakistan, and Bangladesh) and Southeast Asia (particularly Thailand, Cambodia, and Indonesia). Topics will span a time period that begins with Bronze age urbanization in South Asia and concludes with the emergence of globalized architecture in the context of modern nation states. The course will be an opportunity for students to engage with artistic traditions and patronage systems that have adapted to cross-cultural currents, including the more recent forces of colonialism and globalization. Early Buddhist and Hindu architecture and sculpture, the medieval Hindu temple, the advent and adoption of Islam and its artistic forms, the emergence of an early modern empire under the Mughals and their patronage of architecture and painting, British colonial architecture and contemporary interpretations of Modernist architecture and art, are some of the topics that will be covered. Besides paying attention to the formal aspects of buildings, cities and objects, lectures will incorporate information on the emergence of Art History as a discipline in South and Southeast Asia. Lectures, exams and reading assignments will aid in providing students with an intensive introduction to the region’s cultural and artistic diversity.

ARTH 320: Chinese Art

3 Credits
A general survey of the great periods of Chinese art from the Shang dynasty until the modern period. ART H 320ART H 320 Chinese Art (3) (GA,IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 320 provides an introduction to the art of China from the Neolithic period through the twentieth century. Emphasis will be placed on the major dynastic periods (Shang, Zhou, Qin, Han, Tang, Song, Ming, Yuan, and Qing); however, regional developments throughout China are examined as well. Students are introduced to a variety of artistic traditions and media, including jades, bronzes, ceramics, sculpture, painting, and architecture. The course is designed to meet two principal goals. The first is to develop skills of visual analysis and a critical vocabulary for discussing the media, technologies, styles, compositions and iconographies of Chinese art. The second is to foster an understanding of art–and visual culture in general–according to social, economic, political, and religious contexts. Key topics include: the ritual use of objects, patronage, issues of reception and aesthetics, Buddhist art, the organization and use of sacred space, depictions of gender, and regional developments/interactions. Requirements include essay exams and at least one paper. As a general education course, this class provides an introduction to Chinese art for students of any major. This course has no prerequisites and presumes no prior exposure to art history or the history of China. Students majoring in Art History will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole. Because China (currently the world’s most populous nation) has one of the longest recorded and continuous artistic traditions, the course also contributes to a broader understanding of important global issues.

ARTH 325: Impressionism to Surrealism

3 Credits
A survey of European painting and sculpture from ca. 1850 to ca. 1940. ART H 325ART H 325 Impressionism to Surrealism (3) (GA,IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 325 is a survey of European painting and sculpture from approximately 1860 to the Nazi occupation of Paris in 1940. This course will provide an introduction to Impressionism (Manet, Monet, Renoir, Morisot), Post-Impressionism (Seurat, Czanne, van Gogh, Gauguin), Symbolism, the Nabis, Edvard Munch, Rodin, Fauvism (Matisse), Cubism (Braque, Picasso), Italian Futurism (Boccioni), Expressionism (Kirchner, Kandinsky), Dada (Duchamp), De Stijl (Mondrian), Suprematism (Malevich), Russian Constructivism (Tatlin), the Bauhaus, Paul Klee, Marc Chagall, and Surrealism (Ernst, Miro, Dalí). The course will close with the Nazi’s “Degenerate Art” exhibition of 1937 and the Second World War. The course is designed to meet two principal goals. The first is to increase students’ powers of visual analysis and help them build a critical vocabulary for discussing an art object’s medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-
cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to European art to a student of any major. This course has no prerequisite, and presumes no prior exposure to fine art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 326: Art Since 1940
3 Credits

An international survey of painting, sculpture, photography and other media since 1940. ART H 326 Art Since 1940 (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course offers a survey of art objects and practices after 1940. The class is international in scope, exploring the ways in which artists of different countries have responded to each other's work, and to international cultural and political events. Though the class will develop chronologically, lectures will be thematic in their emphasis. Topics to be covered include Abstract Expressionism, Pop Art and other forms of art relying upon methods of appropriation, Minimalism, Conceptualism, Fluxus and Performance Art, Land Art and Site-Specificity, and Art in protest movements (such as the Civil Rights movement). The course will also address such larger issues as: 1) the means by which art works engage in critiques of racial, sexual and national identity; 2) the political uses to which contemporary art has been put (often by figures other than the artists); 3) the dominant critical paradigms through which art has been filtered; 4) the relationship of art works to commodity culture and late capitalism; 5) and the ways in which contemporary art works challenge notions of exhibition, patronage, and ownership of art. This course should be of interest to students of Art History as well as to students interested in post-war history, literature and intellectual culture. It should also be of use to those enrolled in studio art, architecture and other practicum areas.

ARTH 330: Islamic Architecture and Art
3 Credits

Survey of the art and architecture of Islamic lands from the late seventh century until the sixteenth century. ART H 330 ART H 330 Islamic Architecture and Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 340 provides an introduction to the arts of Islam from its birth and early formation in the seventh-eighth centuries to the eighteenth century through the examination of architecture, painting and calligraphy, and the decorative arts (metalworking, ceramics, glassware, ivory carving). The focus is on the traditional Islamic areas including Spain, North Africa, the Middle East, and South Asia, although the spread of Islam to other regions (e.g., Southeast Asia and especially Indonesia, the world's most populous Islamic country) may also be included. Each of the major traditions of Islamic art will be examined in a generally chronological sequence; these include the Abbasids, the Umayyads of Spain, the Fatimids of Egypt, the Seljuqs, the Ilkhanids (Mongols), the Timurids, the Mamluks of Egypt, the Safavids of Persia, the Ottoman Turks, and the Mughals of India. The course will conclude with a discussion of "Orientalism" and more recent developments in Islamic art and architecture. The course is designed to meet two principal goals. The first is to develop skills of visual analysis and a critical vocabulary for discussing the media, technologies, styles, and composition of Islamic art. The second is to foster an understanding of art-and visual culture in general--according to social, economic, political, and religious contexts. Key topics include: patronage, issues of reception and aesthetics, the important link between art and text in the Islamic tradition, the organization and use of sacred space, gender issues, relationships between the art of various regions and cultures, and the western interpretation of Islam as part of the discourse on "Orientalism." Requirements include essay exams and at least one paper. As a general education course, this class provides an introduction to Islamic art and architecture for students of any major. It has no prerequisites, and presumes no prior exposure to art history. Students majoring in Art History will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole.

ARTH 335: African Art
3 Credits

Introduction to the visual arts of Africa, including contemporary African art and the influence of African art outside Africa. ARTH 335 / AFR 335 African Art (3)(GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. The course will examine the arts of various African peoples in historical, religious, sociological and geographic contexts, providing an introduction to the many visual art forms of Africa including masquerade, costume, and indigenous architecture. While many of the arts in this field of study are from west and central Africa, the course will also include materials from southern and eastern Africa. Contemporary African art, African Diaspora arts, and the influence of African art on European art are important topics that may be included. In addition to the traditional format of a geographic organization of the material, students will explore thematic approaches. Each of the assignments requires completion of essays which draw upon the multiple course texts and readings. Exams include image identification and short essays.

ARTH 409: Museum Studies
3 Credits

An introduction to the professional activities that occur in art museums. ART 409 / ARTH 409 Museum Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student's chosen field. Offered every spring, this course will have a maximum enrollment of 20 students. Grades are based on class participation, four out-of-class projects, and a final project. Extra credit is offered for an off-campus visit to a museum, among other options.

Prerequisite: 6 credits of ART H, ART and/or A ED

Cross-listed with: ART 409

**Prerequisite:** 3 credits of Art History
International Cultures (IL)

ARTH 426: Iconoclasm: Powerful Images and their Destruction
3 Credits
Iconoclasm: exploring the political, religious, and social motivations behind the destruction of powerful imagery throughout history. ART H 426 Iconoclasm: Powerful Images and their Destruction (3) (US;IL) (BA)
This course meets the Bachelor of Arts degree requirements. Images have been granted extraordinary powers in many human societies, and their purposeful destruction has been a recurrent feature of political, religious and social strife around the world. This course explores how and why humans have granted such power to images, and the subsequent reactions that have resulted in periodic outbreaks of iconoclasm. Topics include the historical specificity of image destruction, the role of art and its detractors in precipitating the Protestant Reformation, and the manipulation of iconoclasm in modern mass media. Victimized images covered may include the bronze bust of Sargon (3rd millennium BCE) and early Renaissance altarpieces through the statues of Saddam Hussein and beyond. We will read primary and secondary materials ranging from Biblical texts to letters to the editor in the New York Times. Through careful consideration of iconoclasts’ historical contexts, we will explore art’s ability to function as a societal lightning rod. This course has two major objectives: to introduce students to a subject matter that holds great relevance for our time, and to train them in the methods and ethics of scholarly research. This course fulfills elective and 400-level requirements in Art History and General Education (US and IL), but it is intended also to complement concentrations in History, Visual Studies, Religion, and Communications. It would be offered every two to three years. Evaluative criteria include analytical reading and discussion, written components such as critical essays and a research projects, and analysis of relevant current events and their media coverage. Requires a classroom with digital audio-visual capability. Course may include museum visits or field trips where appropriate.

**Prerequisite:** 3 credits of Art History in any area
Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)

ARTH 427: Topics in Global Artistic Communication
3 Credits/Maximum of 6
Explores a specific time period in art history cross-culturally in Europe, Asia, Africa, and/or the Americas. ART H 427 Topics in Global Artistic Communication (3 per semester/maximum of 6) (IL) This course explores specific time periods and/or issues in global artistic exchange among several diverse cultures. The course may be taken up to two times, if the topics are different. One semester the topic might be "Ca. 1800: Arts and their Global Colonial Contexts." Another semester the topic might be "Global Modernisms ca. 1930" or "Ca. 1600: Global Artistic Exchange in an Era of Increased Contact." Each offering will include theoretical discussion of the goals and challenges of such intercultural study. It will then explore the artistic traditions and responses to foreign contact of diverse cultures. The course will consist of lectures, discussions, and, in many cases, visits to the Palmer Museum of Art for the study of objects in its collection. Through critical reading, listening and looking students will develop an appreciation for the range and diversity of cultural production, and the historical specificity of responses to contact with the unfamiliar. Themes touched upon may include ethnic or religious identity, gender, cultural resistance, rejection or embrace. Learning evaluation may depend upon a combination of class participation, analytical reading, essays or research papers, and examinations.
Selected topics in the painting, sculpture, and architecture of seventeenth-century Italy, France, Flanders, Holland, and Spain. ART H 429 Studies in Baroque Art (3) (IL) This course addresses aspects of European art of the seventeenth century, a rich and complex period in which illusionism and powerful visual effects in the arts reached maturity. Baroque painters went beyond the realism of their Renaissance predecessors to explore both the sensuous aspects of the medium of oil painting and their own increasingly subjective vision. In all the visual arts Baroque masters explored space, mass, and form with a heretofore unheard of freedom and drama. Lectures and discussion in the course may focus on painting, sculpture and/or architecture, in Italy, Flanders, France, Holland, and/or Spain. The course may include selected artists such as Bernini, Borromini, Caravaggio, A. Gentileschi, Poussin, Rembrandt, Rubens, Velazquez, and/or Vermeer. The style and meaning of Baroque art may be studied within its political and cultural setting. For example, new approaches in the visual arts in Italy, and particularly in Rome, may be explored in relation to the rise of the counter reformation. The Spanish war in the Netherlands, and the Dutch struggle for freedom, may be connected with the art of Flanders and Holland. Attendant developments in other fields such as natural philosophy (science) and literature may be related to the visual arts. For example, the use of the camera obscura may be discussed with the art of Jan Vermeer and the poetry of Giambattista Marino may be related to the art of Nicolas Poussin. Aesthetic, critical, interpretive, and theoretical ideas of major artists and writers of the seventeenth century as well as of today’s art and cultural historians may be considered. The emergence of new genres such as landscape and still-life may be examined, as well as the continuing themes of mythology, portraiture, and religion. Course objectives may include students’ understanding of the national and regional development of styles and schools within seventeenth-century art, the particular approaches to style and meaning by major artists of the period, the analysis of symbolism and meaning within art works of the period; the interrelationship between the art of the period and other disciplines such as natural philosophy and literature, and particular ways in which seventeenth-century art relates to the politics of particular countries, regions, and patrons. This course may serve as an elective for undergraduate students interested in the visual arts and art history, and for graduate students seeking a deeper exposure to art history. Evaluation may be accomplished through a combination of exams, quizzes, term papers, special projects, and participation in class discussion. Special facilities include a darkened room with dimmable spot lighting, computer, computer projector, and a large projection screen.

**Prerequisite:** ARTH 435: Studies in Modern Art (3) (IL)

International Cultures (IL)

**Prerequisite:** 6 credits in Art History

International Cultures (IL)

ARTH 440: Monuments of Asia

3-9 Credits/Maximum of 9

An exploration of major Asian sites and monuments through a focus on their historical and cultural significance. ART H (ASIA) 440 Monuments of Asia (IL) (BA) This course meets the Bachelor of Arts degree requirements. In this course, major Asian monuments are introduced in their physical, historical and cultural contexts. Students are also exposed to various theoretical approaches through which these monuments will be studied. Some of the themes around which the course is structured include patronage, religious practice, cultural meaning, political relevance and the shifting meanings of monuments over time. Students will learn to understand and discuss ways of defining monuments, their formal character and lineage, historical and cultural contexts and their representation across space and time. Each semester monumental sites will be organized around a common theme such as, &ldquo;Hindu and Buddhist Sites across Asia: Historical Significance and Contemporary Relevance,&rdquo; &ldquo;Patronage and Religion,&rdquo; &ldquo;Islam across Asia: Global Ideas and Local Contexts,&rdquo; &ldquo;Political and Symbolic Centers in Asia: Between Early Modernity and the Nation State,&rdquo; or &ldquo;Early Modern Asia: Empire and the Built Environment.&rdquo; Alternately, these topics will be incorporated within a multi-themed structure. The objective of the course is to expose students to the histories and cultures of Asia in a globalizing world. Another objective is to equip students with the methodological tools of art history as a discipline, even as they learn about specific monuments. The course will build on the foundation laid by survey courses in Art History, Architectural History and Asian Studies. Weekly readings will be assigned and discussed in class. The development of analytical and writing skills will be stressed, and grades will be based partly on essay exams and short response papers. In addition, students will write a research paper, to be completed by the end of the semester.

**Prerequisite:** ART H100 or ART H120 or ART H315 or ART H320 or ART H330

Cross-listed with: ASIA 440

Bachelor of Arts: Arts

Bachelor of Arts: Other Cultures

International Cultures (IL)

ARTH 442: Late Antiquity and Early Christian Art

3 Credits

Survey of the architecture, painting, and minor arts of Christian society from the beginning to the mid-sixth century.

**Prerequisite:** ART H100, ART H111, ART H201, or ART H302

Bachelor of Arts: Arts

International Cultures (IL)

ARTH 445: Oceanic Art

3 Credits

Survey of the arts of Oceania (Polynesia, Micronesia, Melanesia), including masks, sculpture, textiles, architecture and other art forms. ART H 445 Oceanic Art (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course is a one-semester survey of the sculpture, masks, textiles, architecture and other traditional art forms of the Pacific Ocean area known as Oceania, which is usually divided into the sub-areas of Polynesia, Micronesia and Melanesia. The material examined during the semester is organized according to ethnic groups.
and culture areas. Objects are discussed on the basis of style, style
relationships, iconography and the uses to which they were put in their
traditional religious, political or social contexts. The time period covered
is primarily from the period of European contact up to the present, with
occasional references to archaeological findings such as the Lapita
culture’s (3,000 – 4,000 years ago) tracing of the movement
of peoples into Polynesia. Lectures, films, reading assignments, quizzes,
writing requirements (term paper) and exams will aid in providing
students with an extensive introduction to the region’s cultural
and artistic diversity.

**Prerequisite:** 3 credits of Art History
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 446: Topics in African Art

3 Credits/Maximum of 9

Topics vary from “Arts of Eastern and Southern Africa” to “Art of West
Africa.”

**Prerequisite:** 3 credits of Art History
Cross-listed with: AFR 446
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 447: Topics in the Art of the African Diaspora

3 Credits/Maximum of 6

Selected topics in arts of the African Diaspora (South America, Caribbean,
USA) including masquerades, textiles, architecture and other art forms.

**Prerequisite:** 3 credits of Art History
Cross-listed with: AFR 447
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 450: The History of Photography

3 Credits

The history of photography from 1839, with particular emphasis on the
relationship with the plastic arts.

**Prerequisite:** ART H100 , ART H112 , ART H305 , ART H307 , or ART H325
Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)

ARTH 452: Byzantine Art

3 Credits

Monumental and minor arts of Byzantium and related areas from the
reign of Justinian to the Turkish conquest of Constantinople.

**Prerequisite:** ART H100 , ART H111 , ART H201 , or ART H302
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 456: Renaissance and Baroque Palaces

3 Credits

This course examines palace architecture and decoration in Italy, France,
England, and Germany from 1450-1700.

**Prerequisite:** ART H100 , or ART H112 , or ART H202 , or ART H303 , or
ART H304
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 458: The City 1600-1800

3 Credits

This course examines the architecture and urbanism of cities from
1600-1800. This course will examine what transformed the cities into
centers of power, culture, and learning. We will look at new building
types, the creation of civic institutions, and changes in the urban plan.
The course will therefore provide an overview of the architecture and
urbanism of the period and also explore the political and social contexts
that made them possible. Topics include capitals of great political
importance such as Paris, Beijing, and London as well as smaller centers
like Turin and Lisbon that underwent major urban and architectural
transformations. The social function of buildings that mark these
capitals, from poor houses to opera houses, will also be explored.
Primary and secondary reading, ranging from Pepy's Diary to Habermas' examination of the public sphere will offer period accounts as well as conceptual frameworks for understanding the capital. The objective is to challenge students to think deeply about our urban environment and its debts to this earlier era. This course fulfills elective and 400-
level requirements in Art History and General Education (IL), but it is also designed to complement concentrations in History, Music, and Architecture.

**Prerequisite:** ARTH 202; ARTH 304; ARTH 100; ARTH 112; ARTH 314;
ARTH 120; ARTH 140; ARTH 315
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 460: Art and Empire: Aztec, Inca and Spanish

3 Credits

This course is a comparative study of the artistic production used in
Aztec, Inca and Spanish empires. ART H 460 Art and Empire: Aztec, Inca
and Spanish (3) (IL)(BA) This course meets the Bachelor of Arts degree
requirements. This course compares the diverse visual culture of the pre-Columbian world’s two most powerful empires, the Aztec and Inca, to ascertain how art, architecture and public ritual functioned as tools of hegemony. In the aftermath of the Spanish physical and spiritual conquests of the sixteenth century, colonists continued to exploit the central role played by Aztec and Inca imagery as a means to assert and maintain colonial control, co-opting preexisting channels of training and also imposing foreign sign systems. This course queries, how did the visual arts effectively communicate competing imperial ideologies, how was art production appropriated as a site of indigenous resistance, and how do these artifacts continue to construct communal identities, both past and present?

**Prerequisite:** 3 credits of ART H
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 462: Studies in Latin American Art

3 Credits/Maximum of 6

Specific studies of the visual and material culture created in Latin America from the colonial through the modern era. ART H 462 Studies in Latin American Art (3 per semester/maximum of 6) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course analyzes the art and architecture created in Latin America from the first moments of European contact (1492) until the modern era. Each time it is taught, the class will refine its focus to study the artistic production of a specific time period (such as the early colonial period, the nineteenth century, or the modern period), a specific geographic expanse (such as the modern nation state of Mexico), or perhaps a distinct cultural group (indigenous artists). Core to this course is the study of the interaction of seemingly divergent social groups and the ways in which artistic production both reflects and reinforces the resulting cultural systems.

Prerequisite: 3 credits of Art History Bachelor of Arts: Arts Bachelor of Arts: Other Cultures International Cultures (IL)

ARTH 464: French Art and Architecture, 1589

3 Credits

This course examines painting, sculpture, and architecture in France from the Wars of Religion through the French Revolution. Over the course of a dynamic two centuries architects and patrons shaped, refined, and innovated upon distinctly French classical styles. Through an examination of some of the leading figures, such as François Mansart and Jules Hardouin-Mansart, Claude Perrault, Claude-Nicolas Ledoux, and Étienne-Louis Boullée, the course will introduce not only a wide range of key buildings, but also a distinct idea about the status of the architect in French society. Classes will also be devoted to specific themes, such as the role of academies in standardizing training, and the influence of public opinion on specific works. We will also examine the urban transformation of Paris into the capital of a centralized French state. This course examines painting, sculpture, and architecture in France from the Wars of Religion through the French Revolution, from the close of the sixteenth century through the end of the eighteenth. In the seventeenth century with the art of Poussin, French painting can be seen to have come into its own, as Poussin broke with his contemporaries in establishing a particularly French mode of classicism in Rome. We see the efflorescence of classicism in history and landscape painting in the work of Poussin and Claude Lorrain, monumental realism in the work of the Le Nain brothers, and the development of complex allegories of power in the work of Peter Paul Rubens in France. We examine the Rococo style in terms of its eroticism, itsartisanal ethic, and the new patterns of aristocratic patronage that emerge in the eighteenth century. We will also consider the rise of the public sphere and its impact on artists such as Jean-Baptiste Greuze, Jacques-Louis David, and David's pupils. With regard to sculpture, we will look at a range of styles from the baroque to the neoclassical.

Prerequisite: 3 credits in ART H Bachelor of Arts: Arts International Cultures (IL)

ARTH 470: Contemporary Art

3 Credits/Maximum of 9

A focused investigation of a special topic relating to art made after 1940.

Prerequisite: 3 credits of ART H Bachelor of Arts: Arts

ARTH 475: Contemporary Women Artists

3 Credits

An interdisciplinary course that investigates women artists who were integral to the production of contemporary art primarily in the Americas, Europe, and Asia.

Prerequisite: fifth-semester standing, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program.

Cross-listed with: ART 475 Bachelor of Arts: Arts United States Cultures (US)

ARTH 476: History and Theory of Digital Art

3 Credits

History and theories of contemporary digital art emphasizing humanistic approaches to technology. ART 476 / ARTH 476 History and Theory of Digital Art (3)(BA) This course meets the Bachelor of Arts degree requirements. Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware. Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such as Keith Obadike, whose on-line performances include an attempt to put his "blackness" up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on the internet) can critique commercial cooptation of global culture: etoy.com, for example, is an international and collaborative artist's group that satirizes global capital by camouflaging itself as a multinational corporation. This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them
understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

**Prerequisite:** ART H100 or ART H112 or ART H307 or ART H325 or ART H326 or ART 211

**Arts Administration (ARTSA)**

**ARTH 301: Introduction to Arts Administration**
3 Credits
This course provides students with a survey of the major concepts and practices of arts administration.

**ARTH 401: Arts Event Planning and Project Management**
3 Credits
Planning and managing an event for an arts organization.

**Prerequisite:** ARTSA301 , ARTSA495A , MKTG 301

**ARTH 402: Strategic Management and Planning for the Arts**
3 Credits
Study of strategic planning for commercial and non-profit arts organizations.

**Prerequisite:** 7th semester standing and ARTSA301 , ARTSA401 , MKTG 301 , ACCTG211

**Writing Across the Curriculum**

**ARTH 403: Fundraising and Grant Writing**
3 Credits
This course explores strategies to identify and secure financial support for arts organizations and not-for-profit institutions. ARTSA 403, Fundraising and Grant Writing, is an upper level requirement for the Bachelor of Arts degree in Arts Administration. This course will provide students with an understanding of common institutional and leadership structures in the world of not-for-profit organizations. The course will explore proven strategies to create and maintain fiscal stability by generating revenue from a variety of potential financial sources. These include individuals and businesses, federal, state, and community resources, and charitable foundations. Students will also examine practical methods for development, including special events, long and short term campaigns, and the writing of proposals and grants. Upon completion of this course, ARTSA majors will be equipped with the skills necessary to plan and develop organizational solvency.

**ARTH 404: Event Planning Practicum**
3 Credits
Students individually plan their own arts event in a workshop setting that guides them through organization and implementation. ARTSA 404, Event Planning Practicum, is an upper level requirement for the Bachelor of Arts degree in Arts Administration. The course will function as a workshop for the planning and execution of students’ capstone projects, in which they organize and implement an arts event either on or off campus. Projects may take the form of an exhibition of visual art or a theatrical or musical performance. Although students will be working independently on their own projects in consultation with a faculty advisor, the course is structured so that they will progress through the stages of event planning as a class, regularly presenting and critiquing work in progress. Topics to be covered include budget preparation, grant writing and fundraising, marketing, and program evaluation. Significant class time will also be devoted to discussing the implementation of each student’s project. On
completion of this course, students will be able to manage all aspects of the planning and execution of an arts event.

**Prerequisite:** ARTSA 301, ARTSA 401, ARTSA 403, ARTSA 402W

ARTSA 495: **SPECIAL TOPICS**

3 Credits

ARTSA 495A: Arts Administration Off Campus Internship **SPECIAL TOPICS**

3 Credits/Maximum of 3

Arts Administration Off Campus Internship (3) A professional internship experience with an established arts agency or organization outside of the university.

**Prerequisite:** ARTSA301

ARTSA 495B: On Campus Internship in Arts Administration

3 Credits/Maximum of 3

On Campus Internship in Arts Administration (3) An internship with an on-campus arts organization or program.

**Prerequisite:** ARTSA301, ARTSA401, ARTSA495A

ARTSA 496: Independent Study

3-9 Credits/Maximum of 9

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Arts and Architecture (AA)**

AA 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AA 100: Introduction to International Arts

3 Credits

An interdisciplinary, multicultural introduction to the arts of the world. A&A 100 Introduction to International Arts (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. The arts of the world can be simultaneously universal and unique. By conveying qualities of the human condition (mortality, love, lust, virtues, vices, etc.) the arts can be universal. However, the arts communicating these qualities can be as unique as the cultures that produced them. Consequently, the arts are representative of the commonality and diversity of the peoples of the world. A&A 100 will use the arts to consider similarities and differences among cultures. The primary objective of this course is to develop each student’s ability to appreciate the arts from a variety of cultures. By equipping students with the skills to analyze works of art from other countries, the course will make them more receptive to the unfamiliar. The scope of this course will be open to all arts from all countries but it cannot be comprehensive given how large a field of study this represents. The course will concentrate on but will not be limited to the visual arts, architecture, designed environments, theatre and music. It will not include all arts from all countries. Instead, case studies will be used to provide students with in depth examination of specific examples. Individual case studies will be selected based on qualities indicative of the culture of origin. Care will be given to selecting case studies representative of a wide variety of cultures. Effort will be made to include examples from Asia, Africa, Australia, South America and Europe. Case studies will be presented by guest lecturers and chosen from other resources on campus. Members of the College of Arts and Architecture faculty, international graduate students and visiting scholars will be invited to present examples from their expertise. Objects in the Palmer Museum Of Art, events at the Center for the Performing Arts and audio/visual/internet resources will also be used as sources for other case studies. Because the arts are central to this course, visual and audio experiences will be a major component. A&A 100 is the foundations course required by the International Arts Minor, but will also be available to other students not pursuing the minor as a General Education Arts (GA) and United States Cultures and International Cultures (US;IL) course.

AA 105: Interdisciplinary Digital Studio (IDS) Seminar I

3 Credits

This course will consist of 5 modules that will introduce students to emerging technologies that are applicable to interdisciplinar electronic design study. A&A 105 Interdisciplinary Digital Studio (IDS) Seminar I (3) This foundational course will consist of five three-week modules during which students will be introduced to digital design process and applications that are necessary for IDS design research and creative production. What students learn in this first of two preliminary courses during the first of year in the IDS major will have direct application in digital design problems that will be introduced in the beginning, intermediate, and advanced courses in the IDS Program. Accomplished digital artists and designers consisting of faculty in the School of Visual Arts, the School of Music, the Department of Architecture, and the Department of Landscape Architecture will teach the modules. Content of the five modules will include two and three-dimensional modeling, animation; sound, and game design concepts and processes.

**Prerequisite:** School of Visual Arts Admissions Portfolio

AA 106: Interdisciplinary Digital Studio (IDS) Seminar II

3 Credits

This course will consist of 5 modules that will introduce students to emerging technologies that are applicable to interdisciplinary electronic design study. A&A 106 Interdisciplinary Digital Studio (IDS) Seminar II (3) This second foundational course will consist of five three-week modules during which students will be introduced to further study in digital design process and applications that are necessary for IDS design research and creative production. What students learn in this first of two preliminary courses during the first of year in the IDS major will have direct application in digital design problems that will be introduced in the beginning, intermediate, and advanced courses in the IDS Program. Accomplished digital artists and designers consisting of faculty in the School of Visual Arts, the School of Music, the Department of Architecture, and the Department of Landscape Architecture will teach
the modules. Content of the five modules will include two and three-dimensional modeling, animation, sound, and game design concepts and processes.

**Prerequisite:** School of Visual Arts Admissions Portfolio and completion of A&A 105

**AA 110: Interdisciplinary Digital Media Studio I**

3 Credits

Provides arts and design students an interdisciplinary studio-based exploration of critical, theoretical, and historical understandings of digital media. A&A 110 Interdisciplinary Digital Media Studio I (3) This course is the first of a series of required courses for the Interdisciplinary Digital Studio (IDS) degree. Students in A&A 110 will gain an interdisciplinary and collaborative foundation through the studio-based exploration of digital media arts and design processes. This course will foster interdisciplinary awareness and diverse perspectives and provide students with a common language with which they can communicate and collaborate with other students in the arts and design disciplines. The course will integrate a variety of methodologies and approaches rather than discipline-specific subject matter and be especially significant to such areas as learning to think critically, learning to engage in critical dialogue, and development of research skills. It will provide an introduction to, and discussion of, the processes of historical thinking and methodology as these pertain to the work and experience of historical and living digital media artists and designers. Through the completion of studio-based projects encompassing a wide range of digital media, including image production and manipulation, basic interactivity/hypermedia, interface design, 3D modeling, animation, digital fabrication, audio, and video, students will create a portfolio of work that will enable them to make informed and guided choices as to the further focusing of their studies in the digital arts and design. Students will be introduced to various collaborative situations and approaches to be utilized as necessary based on the needs of the project. In the following year, students will build upon the explorations of this course through more focused and rigorous studio work in A&A 210 as well as other relevant courses to the degree.

**Prerequisite:** Prerequisite or concurrent: A&A 101, A&A 102S; Concurrent: or A&A 103, A&A 104

**AA 120N: Introduction to Art Therapy**

3 Credits

Introduction to Art Therapy is designed to introduce undergraduates to the philosophical, pragmatic and historical bases of the human service field of art therapy, with emphasis on current applications in the field of art therapy. This course provides a brief introduction to art therapy globally, with emphasis on art therapy within the United States, and other expressive therapies and their application to the overall mental health and human service professions. Art experiences, class discussions, case studies and study of artistic productions will be utilized to explore the relationship between art and healing. Students will relate material learned in class to their community by producing a community art project that will address their local community social or cultural needs. Art and psychology will be explicitly outlined and drawn upon within the course lessons. Weekly discussions include prompts to stimulate integrative thinking and additionally, reflective visual journaling will be required. Drawing upon the curricular materials of both INART 1 and PSYCH 100 (though not prerequisite courses), assignments for each lesson will include both reading and written discussion about art therapy. While students will acquire knowledge of part of the practice of art therapy, they will not study to the extent of a graduate program in the field. The narrowing of scope allows for a more basic introduction to the field of art therapy, as well as providing a solid foundation for those interested in practicing to pursue a graduate degree. And while students will acquire considerable knowledge of the major approaches in the field, as articulated in selected readings, they will not complete the work necessary to become a practicing art therapist. Instead, the selected readings will allow students to reflect on the relationships and connections between case studies and their own life experiences. The main objectives of the course are to explore the scope and practice of art therapy as a human services profession, art and art making act as a non-verbal benefit to communication, how to become an art therapist, credentials and prerequisites, multiple forms of expressive therapies, and community needs that can be addressed through art making.

GenEd Learning Objective: Soc Resp and Ethic Reason

**AA 121: Design Thinking and Creativity**

3 Credits

An introductory and multidisciplinary exploration of the theory, process, methods, and artifacts of design, achieved through an examination of ideas, examples, and applications. A&A 121 Design Thinking & Creativity (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introductory, general education level course based on the premise that design is a fundamental human activity that everyone engages in one way or another. Design encompasses both the ability to imagine that which does not yet exist and to make it appear in concrete form. Design is a form of deliberate, considered action that seeks solutions to problems and creates useful and powerful artifacts. Design is simultaneously used as a noun and a verb, and to describe a discipline and many fields of practice. Yet design remains essentially a black box to most people – its methods, processes, and components are mysterious, magical, and opaque. This course will turn the “black box” of design into a glass box. The course focuses on the relationship between ideas, tools, and artifacts in order to connect theory, practice, and outcomes. Using theory, practice, and artifacts from a range of design fields (including architecture, landscape architecture, product design, engineering, graphic design, environmental design, and design theory itself), the course will empower students to understand design from the perspective most useful to them and their work - ideas, application, and the things they encounter in the world. The course focuses on the kinds of problems, situations, and processes of thinking that are critical for designers, business professionals, engineers, humanists, social scientists and natural scientists. The course is divided into eight distinct units, allowing a thematic and comparative analysis of a breadth of design topics: What is Design?; Design Artifacts; Design Problems; Creativity; Design Thinking; Models of the Design Process; Design Action; and, Design Tools and Methods. By the end of the course, students will be equipped with the necessary knowledge and skills to understand and analyze the role of design in the world and to take action themselves, including: the breadth of design in the world; the power and responsibility of design; and a range of
design artifacts; how designers think and work; what creativity is and what it entails; understandings of design, design thinking, and creativity across a breadth of disciplines; the parts of design problems; how the design process can be described; strategies and methods applicable to the stages of the design process. There are no prerequisites for this course. The course will serve as an introduction to fundamental ideas of design and complement design-focused courses in other departments/programs across the university. The course satisfies general education requirements for Arts (GA) requirements.

Bachelor of Arts: Arts
General Education: Arts (GA)

AA 122: Introduction to Graphic Storytelling
3 Credits

Introduction to Graphic Storytelling is a studio exploring the visual language of comics and graphic novels. Assignments will include writing and drawing exercises, and short and long-form comics projects. Students will study the formal concerns of visual sequence and storytelling, layout and lettering, and traditional drawing materials. Subjects of study and discussion will include contemporary comics and graphic novels, comprehensive critical response, creative ideation and development, and the history and theory of sequential art. Through exercises, projects, readings, discussion, and communal feedback, students will become develop their own visual and narrative process for producing graphic narratives.

AA 193N: The Craft of Comics
3 Credits

This course combines the literary analysis of comics and graphic novels with the creative practice of making comics. Students will learn through an integrated and ongoing process of interpreting select comics texts and also making their own work in that same medium. Students will gain a technical vocabulary for discussing and assessing comics, which they will then apply to formal analysis of compositional and narrative elements in select assigned texts. This analysis will occur first in class discussion, facilitated by the instructors, and then through a sequence of individual written assignments. At the same time, students will receive formal instruction in making comics as they create their own work over the course of the semester; workshopping with peers and instructors as a way of gaining further insight into the creative and technical processes of the studied texts. Formal analysis and creative work will be coordinated and progressive across the course of the semester. The culmination of this collaborative learning would be an integrated understanding and appreciation of comics art.

General Education: Arts (GA)
General Education: Humanities (GH)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

AA 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AA 197C: Special Topics - InterDomain
3 Credits

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GS GenEd course.

General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

AA 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AA 210: Focused Realization Studio
3 Credits

Provides students the opportunity for the realization of more focused interdisciplinary studio explorations in the digital arts and design disciplines. A&A 210 Focused Realization Studio (3) Building upon the material introduced in A&A 110: Interdisciplinary Digital Media Studio I as well as other relevant courses, such as ART 211W, students in A&A 210 will create team-based and individual studio work that investigates, from a variety of disciplinary understandings, more advanced issues and problems in the digital arts and design disciplines. This rigorous and focused exploration will result in a portfolio of completed and fully realized studio-based projects. This final portfolio will be made available online by the student, both to reach as broad an audience as possible as well as encourage the growth of a critically focused community of similarly interested practitioners in the digital arts and design disciplines. The primary purpose of the course is to bring together students engaged in a wide range of studio explorations and create a synergistic group dynamic that will inform and advance the work of all participants; hence, personal initiative and strong self-learning skills are a given expectation. The studio format is the fundamental model for education within the arts and design disciplines in the University. Ways of learning about the arts and design through projects and assignments that incorporate various technologies will be included in the course. This course also will give students knowledge of the digital arts and design disciplines, develop skills of art, design and communication, and foster a capacity for judgment. There will be an emphasis on both product and process necessitating a high level of self-motivation and initiative. Each student will be encouraged to be open to a diverse range of ideas, values and solutions.

Prerequisite: A&A 110

AA 295: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internship. Written and oral critique of activity required.
AA 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

AA 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AA 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
AA 310: Creative Collaboration Studio
3 Credits
Provides students with an advanced studio exploration of interdisciplinary collaborative projects in the digital arts and design disciplines. A&A 310 Creative Collaboration Studio (3) This course is the third required studio course for students in the Interdisciplinary Digital Studio (IDS) degree program. Students in A&A 310 will create advanced studio work that investigates, from a variety of disciplinary understandings, increasingly complex issues and problems in the arts and design disciplines. The course will emphasize collaborative and team-based projects, exploring the creative potential within the group dynamic as well as in relation to a client. This rigorous and focused exploration will result in a portfolio of completed and fully realized studio-based projects. This final portfolio will be made available online by the student, both to reach as broad an audience as possible as well as encourage the growth of a critically focused community of similarly interested practitioners in the digital arts and design disciplines. The primary purpose of the course is to bring together students engaged in a wide range of studio explorations and create a synergistic group dynamic that will inform and advance the work of all participants; hence, personal initiative and strong self-learning skills are a given expectation. The studio format is the fundamental model for education within the arts and design disciplines in the University. Ways of learning about the arts and design through projects and assignments that incorporate various technologies will be included in the course. This course also will give students knowledge of the digital arts and design disciplines, develop skills of art, design and communication, and foster a capacity for judgment. There will be an emphasis on both product and process necessitating high level of self-motivation and initiative. Each student will be encouraged to be open to a diverse range of ideas, values and solutions.

Prerequisite: A&A 210, ART 211W

AA 322: Arts Marketing
3 Credits
Topics include: arts markets, consumption models, targeted development of aesthetic products, analysis of websites and other marketing materials that communicate artistic value. A&A 322 Arts Marketing (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will introduce and outline the role, purpose, and perception of “art” in various marketplaces and contexts for the emerging arts entrepreneur. Topics include: issues in marketing aesthetic products, consumer identification through art, models of consumer behavior, art and technology, targeted development of arts products/services, and the analysis of websites and other marketing materials that communicate artistic value to appropriate market(s).

Prerequisite: third-semester standing

Bachelor of Arts: Arts

AA 323: Arts Enterprise Development
3 Credits
Course outlines the cultural and economic environment of the arts in the United States. Topics include: feasibility study and start-up of for- and non-profit arts ventures, the role of geography, demand and infrastructure considerations in entrepreneurial decision-making. A&A 323 Arts Enterprise Development (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will introduce and outline the cultural and economic environment of the arts in the United States. Topics include: feasibility study and start-up of for- and non-profit arts ventures, economic and social impact of art and artists in communities, public and private arts support, non-profit culture and basic grantmanship, arts policy, creative economy efforts, the role of geography, demand and infrastructure considerations in entrepreneurial decision-making, and competition analysis.

Prerequisite: Third-semester standing

AA 324: Arts Entrepreneurship and the Law
1 Credits/Maximum of 1
Course surveys general legal considerations in the arts and pertinent issues for monetizing creative work. Course surveys general legal considerations in the arts and pertinent issues for monetizing creative work. Class meetings consist of arts and law faculty collaboratively leading discussions and/or workshops that identify and define areas of legal concern from the perspectives of artistic persons and art implicated organizations. Students will learn how to navigate the U.S. legal system and gain an understanding of intellectual property implications pertaining to the arts. Additionally, students will begin to think, speak, and act in an informed manner when dealing with legal matters, thus enabling them to better identify potential legal issues, recognize when to seek professional legal advice, and be successful artists operating within the domains of business and the law. Topics include: navigating the legal system, intellectual property, contracts, business organization and startup, taxation, etc.

Prerequisite: 4th semester standing

AA 325: Arts Entrepreneurship & Professional Photography
1 Credits
AA 325 Arts Entrepreneurship and Professional Photography is an entrepreneurially oriented course, which introduces students to basic ethical professional business practices in photography. Students will learn the foundational knowledge necessary to understand key issues and to remain current as they pursue a professional career in photography or related fields. The course closely follows the best industry practices defined by the principal respected professional photographic organizations such as the American Society of Media.
Photographers. Professional photographers commonly work as freelance artists and technicians. Such freelance work is by nature entrepreneurial, which presents substantial challenges for creatively motivated students after graduation. This course will augment the creative focus of their arts education with the business realities they will inevitably face in their working life. It links industry best practices with the ethical behaviors necessary to establish and preserve professional reputations.

AA 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AA 401: International Arts Minor Final Project
1-3 Credits

The final project required for the International Arts Minor. A&A 401 A&A 401 International Arts Minor Final Project (1-3) The requirements for the International Arts Minor specify that the course applied toward the minor reflect a coherent course of study constructed around a geographic, chronological, or thematic concentration. Also required for the minor is a culminating project that relates to the chosen concentration. The final project is intended to capitalize on the knowledge and experience gained from the prerequisite components of the minor. The topic of the project will be chosen by the student in consultation with the person in charge of the minor. Work toward completion of the project will be overseen by the person in charge of the minor with advice or assistance from other member(s) of the faculty as appropriate. For the purpose of the minor, the arts are very broadly defined to include topics such as the visual arts, architecture, design environments, theatre, music, and literature so most any creative endeavor may be considered for the subject of the final project. The project may result in formats such as a written paper, a work of art, an exhibition, a recital, or a musical composition as long as it conforms to the intent of the requirement for the minor. It is anticipated that the subject of most projects will be cross-cultural or multicultural in nature. For example, a research paper might be thematic such as an intercultural comparison of adaptations of a Greek myth. A studio project might be technical, such as the wood firing techniques employed by Japanese ceramicists. The requirements for the International Arts Minor specify a project of at least one (1) credit. A&A 401 International Arts Minor Final Project will be offered for one (1) to three (3) credits to accommodate students who may be more than one (1) credit to complete the minor and for those who may propose a project worth more than one (1) credit. A&A 401 may not be repeated.

Prerequisite: A&A 100 and completion of at least 12 credits toward the International Arts Minor

Bachelor of Arts: Arts

AA 410: Interdisciplinary Digital Studio Capstone I

4 Credits

Provides arts and design students an opportunity to conceptualize a digital arts and design undergraduate thesis. A&A 410 Interdisciplinary Digital Studio Capstone I (4) This course is the first part of a two-course undergraduate digital arts and design thesis. The course will integrate particular methodologies and approaches rather than discipline-specific subject matter. Each student will have the opportunity to identify the primary issue of theoretical concern based on his/her personal interest, and pursue research in a rigorous, in-depth manner. The preparation and initiation of the digital arts and design undergraduate thesis will occur within a collaborative team-based studio environment. Students in A&A 410 will begin to research and synthesize interdisciplinary understandings through the exploration of critical, theoretical, and historical perspectives of digital media. This understanding will foster the spirit of in-depth arts and design inquiry and research, and will build upon arts and design awareness, skills, and methods introduced in previous courses. These explorations are supported by the advanced theoretical topics and ideas being presented in ART H/ART 476: History and Theory of Digital Art, which students will have already completed or will be taking concurrently. The student will integrate studio and theory while creating a significant work of digital art or design. The student will work with a faculty adviser in addition to the instructor of record for the course. The adviser will participate in the public critiques of the student’s work.

Prerequisite: A&A 310, Prerequisite or concurrent: ART H476

AA 411: Interdisciplinary Digital Studio Capstone II

4 Credits

Provides arts and design students an opportunity to implement a digital art and design undergraduate thesis. A&A 411 Interdisciplinary Digital Studio Capstone II (4) This course is the second part of a two-course undergraduate digital arts and design thesis and the culmination of the digital studio sequence of A&A 110, 210, 310. The course will integrate particular methodologies and approaches rather than discipline-specific subject matter. Each student will have the opportunity to further explore the primary issue of theoretical concern based on his/her personal interest, and complete research in a rigorous, in-depth manner. The creation and implementation of the digital arts and design undergraduate thesis will occur within a collaborative team-based studio environment. Students in A&A 411 will build upon the preliminary research and studio investigations undertaken in A&A 410. The thesis will synthesize the student’s arts and design awareness, skills, and methods introduced in previous courses. The student will integrate studio and theory while creating a significant work of digital art or design, which demands a high degree of responsibility, self-motivation, and personal commitment. The student will work with a faculty adviser in addition to the instructor of record for the course. The adviser will participate in the public critiques of the student’s work.

Prerequisite: A&A 410

AA 424: Arts Entrepreneurship Capstone Research Project

3 Credits

Mentored research on an arts venture idea equips students for immediate, informed, individually specific action upon completion of the program. A&A 424 Arts Entrepreneurship Capstone Research Project (3) This course functions as the impetus for students to bring their specific venture idea(s) into being, by researching the geographic region where they want to operate, using the actual infrastructure necessary to their specific project. By incorporating the acquired knowledge gleaned from previous courses as applied knowledge towards their chosen venture, the students will be operating literally as the CEO, while being mentored and guided through the process. This course is a mechanism for integrating and implementing the feasibility and marketing strategies developed in the previous courses, thus equipping the students for immediate, informed, individually specific action upon completion of the program.

Prerequisite: A&A 322 and A&A 323
Asian American Studies (AAS)

AA 494: Research Project Courses
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

AA 494H: Research Project Courses
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors
AA 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

AA 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

AA 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AA 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Asian Studies (ASIA)

ASIA 3: Introduction to the Religions of the East
3 Credits
Religious experience, thought, patterns of worship, morals, and institutions in relation to culture in Eastern religions. RLST 3 / ASIA 3 Introduction to the Religions of the East (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the foundations, development, and diversity of religious traditions in Asia, focusing mostly on Hinduism, Buddhism, Confucianism, Daoism, and Shinto. It is organized according to two sections: Foundations and Developments. The Foundations section provides an introduction to the worldviews and practices of Eastern teachings. We will also discuss the structure of society, the social expectations on individuals based on gender and class, and rituals, which expose us to rich mythologies or intricate ceremonies. The second section, Developments, traces the evolution of religious doctrine and practice through history. Here, we learn to distinguish among large and small-scale movements and schools, and to familiarize ourselves with the geographical scope of each religion in South, Southeast, and East Asia. An abiding emphasis in this course will be on how to read and interpret the varied scriptures and primary texts of these religions.

An introduction to the history, literatures, politics, and cultures of Asia.

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)

ASIA 100Z: What is Asia? - LINKED
3 Credits
What are the factors that bind and define a region? What makes a geographical area, a set of cultures, or a certain group of people into a single entity? Who decides? Asian history provides a view of how a region is formed and reshaped over time. This course will address the question of what makes Asia a region by examining the shared experiences and interlocking histories and cultures of its people. This will entail study of art and architecture, literature, history, religion, philosophy, social structures, economics, and international relations, with particular attention to reading both visual and textual materials. The goals of this class are two-fold; we aim not only to learn something about times and places far removed from our own, but also to encourage thought about what we do when we study Asia. Students in this class will be expected to think critically about assigned texts and make their own interpretations of their meanings. ARTH 120Z is linked to ASIA 100Z

GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Global Learning

ASIA 101N: Sports in Asia
3 Credits
The history and contemporary practice of athletics in Asia shows that sports are much more than just games. Taking a multi-disciplinary approach to the study of sports in Asia, this course will examine what meanings have been attached to the participation in and planning of athletic events and institutions by Asian peoples and nations. The course will begin with a historical perspective, examining the place of traditional athletic practices, then tracing the introduction of Western-style athletics to various Asian countries in the 19th and 20th centuries and their incorporation into programs of national development. The second part of the course will focus on the international relations of sports mega-events like the Olympic Games and the FIFA World Cup. The third part will focus on the sociology of sports: what meanings do athletic activities and competitions hold in Asian societies, how does that shape people's behavior, and how does it compare to Western societies? Finally, the course will include an anthropological component that seeks to understand Asian societies in new ways by focusing on specific athletic activities, such as Japanese baseball and the Beijing Olympics, and by tracing the changing meanings of Asian sports like judo and karate as they spread to other parts of the world. The aim of this course is not only to build understanding of distant places and disparate peoples, but also to gain new perspectives on our own society through the shared activity of sports.

ASIA 102: Asian Popular Culture
3 Credits
An exploration of popular culture in Asia. ASIA 102 Asian Popular Culture (3) (GH;IL)(BA) Asian popular culture encompasses a broad array of cultural practices and forms that shed light on the politics and societies of Asia. This course examines "low" or non-elite cultures that allow us insight into the day-to-day lives of the people who created or enjoyed them. Along the way, we will consider how popular culture intersects with issues such as politics, economy, and society, whether on a local, national, regional, or even global scale. Through examining the contested meanings and presentations of popular culture symbols and forms, students will be introduced to the diverse media through which popular culture has been disseminated and consumed. Themes and topics will vary depending on the instructor, but may include cities and urban culture, commercial cultures, television and theater dramas, film, anime, digital video, mass literature, comics, game shows, video games, youth cultures, gender and its representations, martial arts, popular religion, food, and net cultures and social media.

ASIA 103: Introduction to Hinduism
3 Credits
Historical overview of the development of ideas that forms the basis of the south Asian religious culture. ASIA 103 / RLST 103 Introduction to Hinduism (3) (GH;IL)(BA). This course meets the Bachelor of Arts degree requirements. We begin with a discussion of the pre-Vedic Indus Valley civilization reflecting upon its influence on later south Asian cultures. The course then traces how the Vedic ritual tradition, and the Vedantic philosophy gave rise to the concepts of Karma (individual
action and its underlying motives), Samsara (the cyclical view of life), and the Atman (nature of the individual). Moreover, we pause here to explore the relationship between the emerging idea of civic responsibility (Dharma) and its relationship to the Vedic and Vedantic thought. Next we examine how the Vedantic philosophical tradition may have incorporated a diversity of philosophical views including both Brahmical as well as non-Brahmanical traditions of Buddhism, Jainism, Lokayata, etc. The class will read excerpts from the religious literature of the era.

The first part of the course concludes with selected readings from the Bhagavadgita, Mahabharata, as well as some Buddhist and Jaina texts. All of these readings will be in English. Class discussions focus on how the classical Hindu worldview may have emerged from the philosophical foundation of the Vedantas, and later built the groundwork for the Hindu Bhakti (devotion) movements. The second part of the course focuses on the various regional Bhakti traditions from the middle ages onwards, analyzing how the regional cultures may have related with the great classical Brahmanic tradition. The course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. We shall read excerpts from noteworthy thinkers and writers of nineteenth and twentieth century to understand the very interesting dynamics between religion and civil society of more recent times. This course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of historical south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. We shall read excerpts from noteworthy thinkers and writers of nineteenth and twentieth century to understand the very interesting dynamics between religion and civil society of more recent times.

ASIA 104: Introduction to Buddhism

3 Credits

A general survey of the basic doctrine, practice, and historical development of Hinayana and Mahayana Buddhism. RLST 104 / ASIA 104 Introduction to Buddhism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a general survey of the historical development, basic doctrines, and practices of Hinayana, Mahayana, and Vajrayana Buddhism. The course is structured around the "Three Jewels" of Buddhism: Buddha, Dharma, and Sangha. That is to say, we will learn about the Buddha as a historical figure and spirit; we will come to understand the basic elements of his doctrinal teachings; and we will examine the community of followers who have practiced his teachings. Special attention will be paid to the various "geographies" of Buddhism as expressed through different cultures in ancient India, Southeast Asia, and East Asia. At the conclusion of the course, we will encounter Buddhism as a relatively new cultural force in America. The course revolves around the discussion of key issues in the philosophy, ethics, and theology of various forms of Buddhism.

ASIA 105: War and Memory in Asia: Twentieth Century and beyond

3 Credits

The history and memory of the Hiroshima and Nagasaki, Nanking massacre, the Cambodian genocide and other forms of mass violence are often taught separately in different disciplines within Asian Studies and beyond. This course will examine them together through the various ways different Asian societies dealt with, experienced and understood them. Using the extensive literature on the history of genocide, this course further suggests the mutual impact of these entangled tragic events. Specific content will vary according to individual instructor, but topics may include victim cultures, ethnic cleansing, trauma, human rights, dark tourism, memorials, and architecture, as well as the general impact of these tragedies on Asian and global politics.

ASIA 106N: Asian Traditions of Health, Medicine, and the Body

3 Credits

This course provides an introduction to historical and contemporary traditions of health, medicine, and the body from various parts of Asia. Potentially including such diverse topics as Ayurveda, yoga, acupuncture, taiji, qigong, Tibetan medicine, and other systems of practice, the course emphasizes comparative and multi-disciplinary frameworks. The semester finishes with sections on the modernization and globalization of Asian traditions, including their practice in the US. Throughout, the class will approach all Asian ideas and practices on their own terms, encouraging comparison among the various traditions as well as with contemporary American ideas about health and wellness.

ASIA 120Y: South Asia: A Literary History

3 Credits

The course traces the cultural history of South Asia by studying its literary tradition from ancient to modern times. ASIA 120Y South Asia: A Literary History (3) (GH,IL)(BA) This course meets the Bachelor of Arts degree requirements. Asian 120Y provides undergraduate students a taste of the inherent pluralism of South Asian culture and the readings emphasize the broad idea of plurality. The readings and discussions may include, but not necessarily remain confined to a) architectural b) literacy c) musical etc. traditions, depending on the research interests of the individual faculty members teaching the course. Asian Studies undergraduates should be able to recognize both the richness of diversity, as well as the nature of the continuity of the cultural tradition in South Asia that has fascinated outsiders for centuries

ASIA 122: Gods to Godzilla: A Survey of Japanese Culture

3 Credits

This course will examine the formation of Japanese culture through the lens of exchange and adaptation. Seeking to examine our understanding of "Japan" and "culture," the course will explore the interplay between culture and identity, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. Focusing primarily on cultural studies and history, we will also consider not only how the world influenced Japan, as is the standard narrative, but also, how Japanese culture impacted other cultures, both near and far, as the country emerged from being an obscure Asian island to a cultural superpower at the beginning of the 21st century.

ASIA 171: South Asia since 1500

3 Credits

This course will offer students a general introduction to the cultures and societies of the South Asian subcontinent from the early modern to the contemporary through both the colonial and postcolonial periods. Beginning with an introduction to Mughal rule, the course traces the rise of British power, and the various responses to it from collaboration to mutiny before moving on to the development of competing nationalisms and anticolonialisms, including secular, socialist, Hindu and Muslim variations culminating with the creation of the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration; leading into the 21st century. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

ASIA 172: Introduction to Japanese Civilization

3 Credits

This course surveys the development of civilization in Japan from ancient times to the present. Among the key goals of this course is to discuss what is distinctive about "Japanese civilization." As a survey of Japan it includes topics such as external relations and cultural exchanges with Japan's neighbors and the world more broadly; the nature of indigenous beliefs, Shinto and Buddhism; the making of the Japanese bureaucratic state and gentry society; the rise of the commercialized economy; the growth of Japanese culture; Tokugawa Japan. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

ASIA 174: East Asia to 1800

3 Credits

This course provides students with an overview of the most important historical developments and external relations of China, Japan and Korea from ancient times to the end of the eighteenth century. As a comparative survey of China, Japan and Korea it includes topics such as external relations and cultural exchanges; early Chinese dynasties; Confucianism, Daoism, Shinto and Buddhism; the making of East Asian bureaucratic state and gentry society; the rise of Ming-Qing commercialized economy; the growth of Japanese culture; Tokugawa Japan, and the role of Korea in East Asia. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

ASIA 175: East Asia since 1800

3 Credits

This course is a comparative survey of the internal developments and external relations of China, Japan and Korea since the early 1800s. Topics include interaction with the West, internal rebellions and reforms, the importance of certain key figures, the changing roles of women, student protests, and current social problems. Considerable focus will be placed on the transition from imperial to constitutional governments, rise of nationalism, World War II in the East Asian context and the phenomenal role China, Japan and Korea have played in shaping the post-World War II world. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

ASIA 176: Survey of Indian History

3 Credits

Survey of cultural, institutional, and political history from ancient times to the present. HIST 176 Survey of Indian History (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the history and civilization of India or South Asia from the earliest times to the modern period. The goal of the course is to enable students to form a comprehensive conception of the various facets of Indian or, South Asian civilization in a historical context. This course is an excellent foundation for the history of modern India and also complements a variety of existing courses on the history of the non-western world. In addition to satisfying the GI requirement, HIST 175 satisfies the general credit requirements for the history major or minor, including the "non-western" component of the major. Non-majors may use this course to satisfy a general education humanities selection. Typically, students will be evaluated on in-class quizzes, written exams, participation in class discussions of assigned readings and critical reviews of books. This course is offered once every year and has an enrollment of 50 students.

ASIA 177: Rise of Modern Southeast Asia

3 Credits

This course looks at Southeast Asia from the rise of early empires to the present. Beginning with the great empires of Southeast Asia this course surveys the rise of Southeast Asian politics, culture and society before examining the colonial period when the region was dominated by European imperial powers, and concluding with the formation of the modern-day nations of Burma (Myanmar), Cambodia, Laos, Thailand, Indonesia, Malaysia, Singapore, Vietnam, and the Philippines. As part of this discussion, issues of Indianization, colonization, life under Japanese during World War II, and the way in which Cold War politics shaped the region. By the end of the course, students should have a firm understanding of changes in Southeast Asia and be able to assess these historical factors that shaped the current societies.

ASIA 181: Introduction to the Religions of China and Japan

3 Credits

A survey of the history, philosophy, and cultural impact of the major Far Eastern religions: Confucianism, Taoism, Buddhism, and Shinto. ASIA 181 / RLST 181 Introduction to the Religions of China and Japan (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This is an introductory survey of the historical, philosophical, and cultural dimensions of the major religious traditions in China and Japan. The course delineates and highlights the organic view of the universe and the hierarchical ordering of society in East Asia. It traces the evolution of the major traditions (Confucianism, Daoism, Buddhism in China, as well as Shinto, Buddhism and Confucianism in Japan) by examining their ideas of humanity and nature, morality and society, and metaphysics and ethics. It also reveals the interaction and interrelationship between ideology, politics and society, and their impact on the development of the major religious traditions in history. A major focus is the relation between the popular and folk practices and beliefs of esoteric Daoism, devotional Buddhism, and fertility-cult Shinto and the elite and literate doctrines and precepts of Confucianism, philosophical Daoism, and monastic Buddhism. The course also devotes some attention to the influence of religion on various facets of culture, such as medicine, science, literature, art and food. The objectives of the course are first to acquaint students with the religious beliefs, values, and practices of China and Japan by looking at their historical formations and contemporary manifestations, and second, to locate them in a global and comparative context.

ASIA 182: Asian Trade: Economy, Industrialization and Capitalism in Asia

3 Credits

An historical overview of economy, industrialization, globalization and capitalism in Asia from the 16th century to present. ASIA (HIST) 182 Asian Trade: Economy, Industrialization and Capitalism in Asia (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Asian economies have experienced spectacular growth in the second half of the 20th century. But this growth is part of a longer story of Asian commerce and trade and its relationship to and integration with (and, in some cases, isolation from) global patterns of exchange. Moreover, these exchanges are best understood alongside the politics, society, and culture--sometimes local, sometimes regional--that shaped trade and
business in entrepots, capitals, and hinterlands throughout Asia. This course begins with a historical exploration of the economic development and social change and ends by asking what lies in store for one of the world's fastest growing economic regions. By offering a historical frame for Asian economic experience, students will gain insight into the strengths and weaknesses of prevailing theories that tend to overstate centralized control, market mechanisms, and cultural determination. Asian economies and markets are quite diverse, consisting of emerging and mature markets, making it difficult to view them through a single lens. As a result this course seeks to introduce students to a variety of conceptual frameworks in these countries. Examinations of the major economic players China, India, and Japan form the backbone of the course, but the precise geographic emphasis will vary with instructor, and may also include discussions of Japan, Korea, Vietnam, Singapore, Indonesia, Taiwan, and other Asian states. Themes of the course will vary depending on instructor, but may include industrialization, sustainability and the environment, gender and labor, protest and political reform, and consumerism and advertising, among others. The course will also offer a general introduction to economic theories that underpin the concepts of globalization, capitalism, and socialism as they are understood in an Asian context. This course is intended as an introduction to Asia for those with particular interests in Business, Economics, Global Studies, Labor, and/or Government. Through weekly readings, films and class discussion students will be introduced to the development of Asian economies in the global context.

ASIA 183: Gender, Family, and Society in East Asia

3 Credits

This course tracks the changes in East Asian gender roles, relationships, and family life from 1800 to the present, placing private life at the center of the history of China, Japan, and Korea. Among the topics covered are the examination of gender and family life in early modern East Asia, considering topics such as marriage customs, the cult of female chastity, birthing practices, male-male sexuality as well as tracing the remarkable shifts in gender and private life in East Asia beginning in the nineteenth century and continuing to the present. The course will likely also cover issues such as women's liberation, changing expectations for courtship, marriage and sex, homosexuality, cross-dressing and androgyny, gender and revolution, and the state's role in regulating sex and procreation.

ASIA 184: Society and Culture in the Pacific War

3 Credits

This course examines will explore the origins, nature, and consequences of World War II in the Pacific. Moving beyond the common American focus on the war as a U.S.-Japanese conflict, it will explore the different nations, political movements, ideologies, and empires that clashed across Asia-Pacific from 1931 to 1945. Topics include the culture and society of modern Asia in the periods immediately before, during, and after the Pacific War. This course looks at social and historical roots of the war across Asia from the 1890s to the present to better understand the causes of the war and the affect it had on people throughout Asia.

ASIA 186: The Silk Roads

3 Credits/Maximum of 3

A survey of the Silk Roads and maritime routes connecting premodern Europe and Asia, and the cultures that flourished along them. What do medieval Buddhist pilgrims, Mongol warriors, Marco Polo, and nineteenth-century British secret agents all have in common? What were the "information highways" that connected people and cultures across the premodern world? Taking crosscultural communication and connectivity as its central themes, this course explores the central role that the Silk Roads and Indian Ocean maritime routes have played throughout Eurasian history. It provides a historical survey of the land and sea trade networks connecting Europe and Asia, and the cultures that have flourished along them. The course explores connections between China, Rome, Byzantium, Persia, the Mongol Empire, Southeast Asia, and Central Asia. It covers exchanges of art, religion, cultural, technological, and economic goods. It also includes discussion of ethnic conflict and cultural identity in Central Asia, the importance of global trade routes in shaping the modern world, and the representation of the Silk Roads in contemporary popular culture. The focus of the course is to provide students with an appreciation of the interconnectivity of the premodern world, as well as the vital role of the trade system in the development of the major civilizations of Eurasia.

International Cultures (IL)

ASIA 187: Global Taiwan

3 Credits/Maximum of 3

This course examines the historical, cultural, and ethnic dimensions of Taiwan over several centuries to the present day. Taiwan's rich history and important economic role in contemporary East Asia clashes with its exclusion from international organizations like the UN and WHO and resultant international isolation. This class will examine the history and culture of Taiwan to better understand how it got here and where it might go. Topics covered will include the Dutch incursions in "Formosa," Japanese colonization, years of military dictatorship and cross-strait tension, rebirth as one of the four "Asian Tiger" economies, and its current rowdy democracy and warming ties with the People's Republic of China. We will also explore the literature, film, and culture of this multi-ethnic, multi-lingual, and multi-cultural island.

International Cultures (IL)
ASIA 188: Tibet: People, Places and Spaces

3 Credits

Few places generate as much curiosity, interest, or controversy, in the Western mind than Tibet. This course examines Tibet from a variety of perspectives from Tibet’s political unification under a single ruler in the seventh century up to Tibet’s incorporation into the People’s Republic of China in the latter half of the twentieth century. Adopting a Tibetan-centered focus, this course examines three core dimensions of Tibet namely its people, its religion and its strong sense of place to allow for a more nuanced and comprehensive understanding of Tibet to emerge. No background or specialized knowledge about Tibet is expected though a willingness to read primary documents on a variety of religious, ethnic and political themes will be quite useful. In this course students can expect to gain an appreciation for how religion, history and politics contribute to contemporary portrayals of Tibet, Tibetans and their society.

ASIA 189: Illicit Asia: An Alternative Introduction to Asia

3 Credits

A historical introduction to unlawful, illegitimate and forbidden ideas, goods, people and places in modern Asia. ASIA (HIST) 189 Illicit Asia: An Alternative Introduction to Asia (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines patterns of illicit ideas, goods, peoples and places of modern Asia. Traditional introductions to Asia emphasize a history of the powerful, of the center, of the victors. This course seeks to invert the customary narrative by telling the tale of Asia’s early modern and modern past from the perspective of those working against the interest of the elite, popular and mainstream. At the same time, traditional introductions to Asia often risk perpetuating stereotypes of a mysterious, sinister Orient. In fact, dominant discourses both cross-culturally (such as Orientalism) and within a given society (such as elite nationalism) have tended to criminalize or pathologize all kinds of countercultures, alternate economies, non-normative sexual practices, and so forth. But attitudes to orthodoxy and legality may depend on one’s relationship to the dominant system, and the dominant narrative. This class seeks to reveal those phenomena in a different light, according to their own contextual logic. Often omitted or ignored, understanding why illegal activity occurs, how it occurs and who the relevant actors are can offer an extremely potent introduction to the roles traditional boundaries of political, cultural and societal activity played in the shaping of Modern Asia. Specific content and regional focus will vary according to individual instructor, but the course will be divided into four general sections that focus on forbidden ideas, goods, places and peoples. Topics may unpack heterodox beliefs like secret societies or anarchist movements; trace the production and distribution of illegal goods like opium or counterfeit items; map out notorious places like the Golden Triangle or the internal workings of human traffickers; or examine the practices and scope of criminal elements like pirates or brigands. The objectives of the course are not only to learn about the illicit activities across modern Asia, but are also organized to encourage us to rethink the way we understand standard interpretations of the past and the factors that go into those perceptions. Students will also consider the changing justifications for and definitions of what is legal, normal and orthodox.

ASIA 200: What Are Asian Languages?

3 Credits

Introduction to the interrelated notions of language, interaction, and culture centering on regions and languages covered in Asian Studies. The purpose of the course is to introduce the interrelated concepts of language, interaction, communication, and culture. The focus is on Asian languages (Korean, Japanese, Chinese, Persian, Hindi, Punjabi, and Urdu) spanning the regions addressed by the Department of Asian Studies. Students explore which concepts in language and culture are universal (e.g., basic reference, time, space) and which are language-culture specific. The course examines what constitutes human language and how human language differs from other forms of communication, e.g., animal communication, artificial languages, and computer-related languages. At issue is the concept of meaning, gradations of meaning, nuances of meaning, literal meaning, implied and inferred meaning, and so forth. The course provides an overview of the essential branches of linguistics (phonetics, phonology, morphology, semantics, syntax, and pragmatics) initially using English examples to illustrate these areas of linguistic focus. English is also used to illustrate the classical notions of parts of speech. The course provides an overview of the geographic regions in which each of the seven languages are spoken, as well as an overview of writing systems, the notions of standard languages, official languages, government oversight of language purity, and dialects. The course examines pragmatics, including basic theories of politeness. Students will gain an in-depth understanding of some of the sociopolitical underpinnings of the notions of “standard” language, deviant language, and dialects. Students will gain a basic understanding of the types of concepts in language and culture that are universal (e.g., basic reference, time, space) and those that are language-culture specific. Students will be expected to discern the multitudes of ways that meaning is created in language and interaction. This course is open to any students interested in learning about the language-culture interface as it applies to languages offered in Asian Studies (plus Persian). Students of any proficiency level of any of the target languages are welcome, from absolute beginners to heritage and/or native speakers.

ASIA 315: Architecture and Art of South and Southeast Asia
3 Credits
Survey of the architecture/art of South/Southeast Asia (emphasis on India) from the Bronze Age to a globalizing present. ARTH 315 / ASIA 315 Architecture and Art of South and Southeast Asia (3) (GA,IL) (BA) This course meets the Bachelor of Arts degree requirements. This course has a focus on the architecture and art of South Asia (India, Pakistan, and Bangladesh) and Southeast Asia (particularly Thailand, Cambodia, and Indonesia). Topics will span a time period that begins with Bronze age urbanization in South Asia and concludes with the emergence of globalized architecture in the context of modern nation states. The course will be an opportunity for students to engage with artistic traditions and patronage systems that have adapted to cross-cultural currents, including the more recent forces of colonialism and globalization. Early Buddhist and Hindu architecture and sculpture, the medieval Hindu temple, the advent and adoption of Islam and its artistic forms, the emergence of an early modern empire under the Mughals and their patronage of architecture and painting, British colonial architecture and contemporary interpretations of Modernist architecture and art, are some of the topics that will be covered. Besides paying attention to the formal aspects of buildings, cities and objects, lectures will incorporate information on the emergence of Art History as a discipline in South and Southeast Asia. Lectures, exams and reading assignments will aid in providing students with an intensive introduction to the region’s cultural and artistic diversity.

ASIA 400: International Culture in East Asia
3 Credits
Study of the role of culture in East Asian regional and East-West international relations. ASIA 400 (PL SC 486/HIST 489) International Culture in East Asia (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the place of culture in international history through a comparative look at the role of cultural circulation and exchange in relations among China, Korea, and Japan (and between East Asia and the West) from the propagation of Buddhism in the first century A.D. to present-day circulation of popular music, movies, and comics. We will explore the international politics of culture and the politics of international culture, considering questions of what constitutes culture, whether it is ever entirely separate from politics, and how that separation has evolved over time. These larger themes of the course will be tackled by following the historical movement of concrete objects and people throughout the region. This is a course in international history, but it also seeks to explore aspects of international relations. The goals of the class are not only to gain an understanding of the uses and impact of culture in international relations, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will think critically about assigned texts to develop their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the assigned readings, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities.

ASIA 401: Technology & Society in Modern Asia
3 Credits
Role of technology in modernization, national identity, and foreign relations of one or more Asian countries from 19th century to present day. ASIA 401 Technology & Society in Modern Asia (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The countries of Asia are often seen (or imagined) in the West today in terms of their technological capabilities. This course will examine the role of technology in the modernization, national identities, and foreign relations of one
or more countries of East, South, or Southeast Asia from the mid-19th century to the present day. Specific content will vary according to individual instructor, but topics may include the relationship between technological development and international relations, national power, leisure, domestic political and aesthetic movements, war, empire, and trade, as well as the impact of technology on interconnected images of self and other on the part of the peoples of Western and Asian countries. The objectives of the course are not only to learn about the role of technology in modern East Asia, but also to encourage us to rethink the way we view other countries and the factors that go into those perceptions (as well as developing a new way of understanding of what contributes to the views other peoples hold of their own countries). Students will also consider the changing role that technology has played (and continues to play) in all modern societies.

**ASIA 402:** Language, Culture and Cognition in East Asian Context

3 Credits

This course is a linguistic introduction to the relationship between language, culture, and cognition with a focus on Chinese, Japanese, and Korean. In this course, we study the cognitive linguistic view that human cognition is fundamentally embodied and shaped by various figurative processes such as metaphor and metonymy grounded in our bodily and cultural experiences, and that human thought and language are fundamentally metaphorical in nature. We examine how we think and speak figuratively and conceptualize our experience metaphorically in everyday life, and compare the languages in terms of cognitive universals and cultural variations. The objectives of this course are threefold: (1) to lead language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on similarities and differences among Chinese, Japanese, and Korean as components that form a coherent category known as “East Asian.”

Class work will include some lecture but will emphasize guided discussions, literature review writings, student presentations, and research papers. This interactive approach is intended to encourage student participation, involvement, and cooperation in learning, to help them understand the relationship between language, culture, and cognition, and to assist them in developing both analytic and expressive abilities. This course is designed to count as a BA “Other Cultures” and International Culture. Students can take this course as long as they have an interest in the relationship between language, culture and cognition, especially in the context of East Asia.

Writing Across the Curriculum

ASIA 414: Chinese Language, Culture and Society

3 Credits/Maximum of 3

The study of Chinese language and culture and a perspective on the way of life in contemporary Chinese society. Through this course, the students are introduced to a cognitive approach to the study of Chinese language and culture and a broad perspective on the Chinese way of life in contemporary Chinese society. In particular, we will study how the interaction between Chinese language and culture frames the worldview of Chinese speakers, how the usage of the Chinese language manifests the underlying conceptual structure, which in turn is shaped by the physical (including bodily) and cultural experience of its speakers, and how conventional usage of linguistic expressions of Chinese reflects, and possibly influences, the ways in which Chinese speakers see or conceptualize the world. We will focus on conventionalized expressions, which include compound words, idiomatic phrases, and proverbial sayings, in the Chinese language, and study the Chinese conventional ways of talking about reality, both external and internal, as windows into Chinese culture and cognition. More generally, we will try to understand the embodied nature of human cognition as we see how abstract thought is grounded in bodily experience in and with the physical and cultural world. We will also look at various domains of life in contemporary China in order to gain a better understanding of Chinese society. The objectives of this course are threefold: (1) to lead Chinese language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on contemporary Chinese society.

ASIA 415: China Beyond China

3 Credits

Study of modern and contemporary Chinese culture in its diversity and its intercultural contexts. CHNS 415 China Beyond China (3) (IL) In order to begin to understand Chinese culture, we cannot treat it as a monolithic, unified whole. This course will give an introduction to modern and contemporary Chinese culture (focusing on the 20th and 21st centuries) by paying special attention to China's inner diversity, as well as the continuous shaping of Chinese culture in contact, dialogue, and tension with other cultures. Through the study of literary texts, films, and other cultural material - as well as a small number of theoretical essays - this course will focus on: 1) Chinese culture in its variety by focusing on Chinese cultural spheres beyond the People's Republic (Taiwan, Hong Kong), the Chinese diaspora, as well as other ethnicities and cultures within Mainland China; and 2) the ways in which Chinese modernity was impacted by intercultural impulses, as well as the recent self-representation of China in the context of globalization. Course Objectives include: 1. Understand modern and contemporary China in its cultural diversity, as well as shaped by intercultural and global processes. 2. Critically analyze processes of cultural contact and the representations of cultural differences. 3. Think critically about globalization with its impact on such categories as the local and the national. 4. Question your assumptions about the world, re-examine your own points of view, and understand cultures and value systems that may different from (or be shared with) your own.

ASIA 416: Gender and Sexuality in China

3 Credits

Study of gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China. CHNS 416 Gender and Sexuality in China (3) (IL) This course explores gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China (from the end of the 19th century up to today), paying attention also to developments in Chinese cultural spheres beyond the People's Republic, such as Taiwan, Hong Kong, and the Chinese diaspora. This course will use the representation of gender, sex, and sexuality as a lens through which modern and contemporary Chinese culture can be understood in its historical, social, and aesthetic changes. The analysis of representations of gender and sexuality throughout the class will focus on literary and filmic texts, as well as art, rather than on theoretical work on gender and sexuality (in China or in general). Course Objectives include: 1. Critically assess the complex construction of gender roles and sexuality in modern and contemporary Chinese literature and film. 2. Reflect critically on different ways of understanding and representing gender difference. 3. Critically assess the connections between gender and sexuality and changing political, historical, and cultural contexts. 4. Question your assumptions about gender and sexualities in the context of cultural difference, understand cultures and value systems that may be different from (or be shared with) your own.

Prerequisite: ASIA 4; ASIA 100; ASIA 101; ASIA 102; ASIA 175; ASIA 183; CMLIT 4; HIST 175; CHNS 120; CHNS 121; HIST 183; 5th Semester standing

ASIA 417: The Warrior, the Courtesan and the Ghost in Classical Chinese Novels

3 Credits

This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. CHNS 423 417 The Warrior, the Courtesan and the Ghost in Classical Chinese Novels (3) (IL) A narrowly defined notion of modern literature is a relatively recent phenomenon that dates back only to the early twentieth century in the Chinese context. There is, however, a long tradition of the vernacular novel that remains influential till
today, in spite of its marginalization by the Western-influenced Chinese Enlightenment project. This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. The warrior is commonly found in historical romances, tales about errant knights and assassins, and martial arts fiction. Although the typical setting for the courtesan is in novels about prostitution (Xia Xie Xiaoshuo), this course will relate this figure to other female types in various domestic space, thereby tracing the genealogical connections between the domestic fiction and the courtesian fiction. The ghost can be found in Accounts of the Strange (Zhi Guai) and Tales of the Miraculous (Chuan Qi). This course will relate this figure in these narrative genres with other types of the supernatural being, such as Gods and Demons. Most readings will be drawn from the Mind-Qing period (14th -20th c) but modern and contemporary literature as well as visual or media culture that consciously continue or rewrite these narrative traditions will be considered as well. All readings and class discussions will be in English. Knowledge of Chinese or Chinese literature is not assumed or required. From year to year the content we cover might change, but this course will always explore: 1) Major classical Chinese narrative traditions that are radically different from the Western-influenced narrative modes of the twentieth century. 2) Pre-modern practices of reading and criticism and pre-modern notions of literacy, literature, and modes of circulation. Course Objectives include: 1. Critically analyze major texts and genres of the classical Chinese novel. 2. Understand pre-modern practices of story-telling, literary circulation, reading, and criticism. 3. Think critically about pre-modern societies and their connections with the contemporary world.

ASIA 418: Confucius and the Great Books of China

3 Credits

This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China. CHNS 418 / ASIA 418 / HIST 482 Confucius and the Great Books of China (3) This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period, providing an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as “(Confucian) ritualists,” “statesmen,” “military strategists,” “rebels,” “recluses,” and “spiritual leaders.” Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

ASIA 419: The Chinese Rhetorical Tradition

3 Credits/Maximum of 6

Study of the rhetorical works in ancient China as well as multiple facets of modern Chinese rhetoric. CHNS 419 The Chinese Rhetorical Tradition (3 per semester/maximum of 6) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the Chinese rhetorical tradition dating back two and a half millennia. Rhetoric is defined here as the study and practice of artful means of communication, including poetic, expository, and argumentative modes. The class will first delve into the works of competing intellectual schools in pre-imperial China (pre-221 BCE), which set a corner stone for thoughts and practice of communication in the imperial period (221 BCE - 1918). These schools, including the Daoist, the Confucian, and the Legalist, developed their rhetorical notions through engaging with the political, intellectual, and ethnic Other. From here the class will examine the multiple facets of modern Chinese rhetoric, which has undergone a continual contact and conflation with other rhetorical traditions in the global contact zone. The class will focus on topics such as feminist discourse, Chinese-American rhetoric, and the teaching of writing, which bear direct implications on our contemporary social life.

Prerequisites: ENGL 15; ASIA 3; ASIA 100; ASIA 104; ASIA 175; ASIA 181; HIST 175; CHNS 120; CHNS 121; RLST 3; RLST 181; 5th Semester standing

ASIA 424: Transnational Korean Literature

3 Credits

Exploration of seminal Korean texts, including poetry, fiction, autobiography, and criticism, from the early twentieth century to the contemporary era. This course provides a comprehensive overview of modern Korean literature within a transnational context. As we learn how to critically analyze seminal Korean texts, we will locate them in the social, political, economic, and cultural conditions under which they were produced and received. In grappling with some of the fundamental issues they raise; including colonialism, migration, national division, war, gender relations, developmentalism, urbanization, democratization, and contemporary consumer culture; we will also seek to situate these writings in the Korean vernacular within the larger context of global modernity. Rather than take Korean literature and global modernity as given or apart from each other, we will attend to their intersections by raising such questions as: How did modern experiences, constructed through the interface with unfamiliar Others, change preexisting ways of writing and reading? How did foreign occupations affect the formation of a national literature? In what ways do Korean writers’ representations of the inter/national events and phenomena on and beyond the Korean peninsula at once enrich and complicate empirical investigations into modern histories of Korea, East Asia, and the world? In an increasingly borderless world, can we draw a boundary around what is called “Korean” literature? In parallel with these questions, we will further discuss why and how to engage in literary practices in the current age of digital reproduction. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

Prerequisite: KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4; CMLIT 4; 5th Semester standing
ASIA 425: Global Korean Cinema

3 Credits

Exploration of Korean cinema from the early twentieth century to the present, with an emphasis on its global/local dynamics. This course offers an introductory overview of Korean cinema. As we trace its history from the colonial period to the current "Korean wave," we will also engage with film criticism, the trans/national contexts of film productions, the particular aesthetics of selected auteurs/genres, and local/global receptions of Korean cinema. Our discussion of formal elements and key issues featured in these films; modernity, colonialism, division, nation, class, gender, identity, tradition, ideology, desire, violence, and migration, among others; will be informed by readings of secondary sources and theoretical works, as well as literary materials produced during the same period. Throughout our analyses, we will seek to contextualize the cinematic texts within moments of major shifts not only in modern Korean history, but also in the transnational film industry and screen culture. In pursuing a broad and detailed perspective of Korean cinema, this course will ultimately enrich, and simultaneously complicate, our understanding of Korea, cinema, and the world. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

ASIA 430: Japan in the World

3 Credits

Study of Japan's foreign relations and position in the international community from the early 19th century to the present. ASIA (JAPNS) 430 Japan in the World (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine Japan's foreign relations and position in the international community, from the rethinking of relations with the Western world in the early nineteenth century to its emergence as a pop culture superpower in the present day. The course will explore the structures of international relations, such as imperialism and international organizations, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. We will also consider the development of alternative methods of diplomacy, including cultural exchange and economic and technical assistance.

Prerequisite: JAPNS 120; JAPNS 121; ASIA 100; ASIA 101; ASIA 102; ASIA 105; ASIA 172; ASIA 175; ASIA 185; HIST 172; HIST 175; HIST 185; 5th Semester standing

Bachelor of Arts: Other Cultures
International Cultures (IL)

ASIA 431: Courtly Japan

3 Credits

Focused study of aristocratic society and culture of Heian period Japan. JAPNS 431 (ASIA 431) Courtly Japan (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The Heian period of Japanese history saw the apex of a refined court culture. Through readings of primary and secondary sources, this seminar-style course will explore the activities, norms, and structures of courtly society in Japan, from the centralization of imperial power in the 8th century through the court's political marginalization in the late 12th century. We will pay particular attention to religion, the arts, politics and governances, gender, and the gradual rise of samurai power in the shadows of the court. This course is intended to provide an introduction to the political, social, economic, and cultural life of the Heian court of ancient Japan. The goals of the class are not only to gain an understanding of a time and place far removed from our own, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian or literary critic themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through reading, discussions, and writing, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing. The course is intended to deepen student's appreciation of the cultural production of ancient Japan, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. The course is designed to be suitable for all students generally interested in Japan or in various fields of humanistic study.

International Cultures (IL)

ASIA 432: War and the Warrior in Japan

3 Credits

Survey of the role of warfare and the warrior in Japan, with attention to changing cultural settings. Taught in English. JAPNS 432 (ASIA 432) War and the Warrior in Japan (3) (IL) This course is intended to provide an introduction to the social and historical roles of warfare, and the changing cultural figure of the warrior, in Japan. Some prior study of Japan (JAPNS 120 or JAPNS 121 or HIST 172) is required. All materials will be available in English. Students will learn about subjects like the causes of violence, culturally acceptable ways of resolving conflict, obligations of victor toward vanquished, expectations regarding the memory of the war dead, the ideal of the warrior as a cultural figure, and historical roles that Japanese warriors have played in ages of peace. Readings and screenings will cover several genres, such as film, historiography, history, documentary, classical epic, modern novel, and excerpts from Japanese history textbooks (in translation). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have generated attitudes toward war and the warrior in Japan. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical investigators of literature and related media. Readings and in-class discussion will focus on the image of the warrior as a cultural icon, exploring the many ways in which popular understandings of the warrior have changed over time, for instance, as popularized dramas began to idealize warriors as moral exemplars.
in the late medieval period, and then as historical realities made the
position of the warrior itself redundant in the early modern era. Class
work includes some lecture but emphasizes guided discussions,
group work, writing exercises, and some student presentations. This
participatory approach is intended to deepen students' appreciation
of the works, to help them understand value systems that may differ
from those predominant in western cultures, and to assist students
in developing both analytical and expressive abilities. Through critical
reading, group discussion and interpretive writing, students will hone
skills for evaluating modes of cultural production and consumption
in premodern and modern Japan. Evaluation will be through means
such as in-class presentations, short writing assignments, midterms or
quizzes, one analytic paper (3-7 pages), and in-class/on-line participation
discussion. The course is designed to be suitable for all students
generally interested in Japan, or interested in various fields of humanistic
study.

ASIA 433: Traveling Voices

3 Credits

**Transnational Writings of Japan: from Modern to Contemporary Eras.**

**JAPNS 433 (ASIA 433) Traveling Voices (3) (IL)(BA)** This course meets
the Bachelor of Arts degree requirements. Through literary and visual
texts from modern to contemporary eras, this seminar-style course will
explore a wide range of narrative voices of Japan, created by writers who
are physically or figuratively dispersed in many directions within, towards,
and away from Japan, and who therefore problematize “Japanese-
ness” by dealing with cultural situations (e.g. identities, marginality) in
their writings. Some Prior Study of Japan (JAPNS 120, JAPNS 121, or
HIST 172) is required. Students will explore the rich cultural diversity in
Japan and the Japan diaspora, and develop a further understanding of
historical border crossers between Japan/East Asia and Americas/the
West. They will become more aware of the reciprocal and transformative
cross-cultural interactions in languages, literature, religions, economics,
ideas, or political formations. They will learn how to think critically,
in speech and writing, and develop writing analytic skills appropriate to
their final paper project. Evaluation will depend on specific instructor
practice, but will certainly emphasize guided discussions, some student
presentations (alone or/and group), and writing exercises (especially
final research project). A sample guideline might look like this: Class
Participation/discussion, Response papers, Informal Presentation (pair or
group up to three), Mid-term exam, Final paper presentation, Final Project

ASIA 440: Monuments of Asia

3-9 Credits/Maximum of 9

An exploration of major Asian sites and monuments through a focus on
their historical and cultural significance. **ART H (ASIA) 440 Monuments of
Asia(IL)(BA)** This course meets the Bachelor of Arts degree requirements.
In this course, major Asian monuments are introduced in their physical,
historical and cultural contexts. Students are also exposed to various
theoretical approaches through which these monuments will be studied.
Some of the themes around which the course is structured include
patronage, religious practice, cultural meaning, political relevance
and the shifting meanings of monuments over time. Students will
learn to understand and discuss ways of defining monuments, their
formal character and lineage, historical and cultural contexts and their
representation across space and time. Each semester monumental sites
will be organized around a common theme such as, "Hindu and
Buddhist Sites across Asia: Historical Significance and Contemporary
Relevance," "Islam and the Built Environment," or, "Early Modern Asia: Empire and the Built
Environment." Alternately, these topics will be incorporated
within a multi-themed structure. The objective of the course is to expose
students to the histories and cultures of Asia in a globalizing world.
Another objective is to equip students with the methodological tools of
art history as a discipline, even as they learn about specific monuments.
The course will build on the foundation laid by survey courses in Art
History, Architectural History and Asian Studies. Weekly readings will
be assigned and discussed in class. The development of analytical and
writing skills will be stressed, and grades will be based partly on essay
exams and short response papers. In addition, students will write a research paper, to be completed by the end of semester.

**Prerequisite:** ART H100 or ART H120 or ART H315 or ART H320 or ART H330

ASIA 457: Hiroshima & the Holocaust in History and Memory

3 Credits

The history and memory of the Holocaust and Hiroshima and Nagasaki are often taught separately in different disciplines. This course will examine them together through the various ways different societies remembered, understood and commemorated these. Using the extensive literature on the history of memory, this course further suggests ways in which these memories and histories affected and were entangled by each other. Specific content will vary according to individual instructor, but topics may include victim cultures, cold war nuclear history, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on the fraught politics of memory in East Asia and the Middle East, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

ASIA 469: Government and Politics of South Asia

3 Credits

This course offers an overview of the politics of modern South Asia with specific focus on Afghanistan, India and Pakistan. ASIA (PL SC) 469 Government and Politics of South Asia (3) (IL) This course provides an overview of the politics of modern South Asia with particular attention to the experiences of Afghanistan, India and Pakistan. It examines theories of political and economic development and ethnic politics, the impact of the British colonial experience on South Asia, the rise of nationalism, and the emergence of independent nation states in the region. Three important themes are explored throughout the course: (1) the state of economic development in the three countries; (2) the relationship between identity politics and violence; and (3) the international relations of these countries, with particular attention to terrorism and nuclear policy. Course topics will be explored through readings from textbooks and assigned articles, articles from current news sources and, documentary films from the three countries. By the end of the course, students will have knowledge of the politics of Afghanistan, India and Pakistan and the political factors that have shaped their development over the past century. Students will acquire the tools necessary to evaluate critically the impact of war, the legacy of colonialism, and the challenge in building durable democratic institutions. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors.

**Prerequisite:** PL SC003, PL SC014, PL SC022 or ASIA 100
Cross-listed with: PLSC 469
International Cultures (IL)

ASIA 474: Early Modern Japan

3 Credits

Japanese history from 1580-1880. ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3) Japan's Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms. Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students' knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

**Prerequisite:** HIST 172 , HIST 174 , JAPNS120 or JAPNS121
Cross-listed with: HIST 474, JAPNS 426

ASIA 475Y: The Making and Emergence of Modern India

3 Credits

India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. ASIA (HIST) 475Y The Making and Emergence of Modern India (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course covers India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. It begins during the early modern period, when European travelers encountered the flourishing Mughal Empire, and moves into the dynamic moment following, when the East India Company was one of various competing forces, both locally and globally. It then examines the rise of British power, and the various responses to it from collaboration to mutiny; the multiple development of nationalisms and antiocolonialisms, including secular, socialist, Hindu and Muslim variations; the accompanying social reform visions, including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging

Writing Across the Curriculum

ASIA 480: Japan in the Age of Warriors

3 Credits

An overview of Japan from the 10th to 17th century, a period of political decentralization, cultural efflorescence, and social change. ASIA (HIST) 480 Japan in the Age of Warriors (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. By the eighth century, Japan had become a centralized state centered on the reign of a sovereign, commonly known in English as an emperor. At the end of the ninth century, the emperor’s court relocated to the city of Heian (Kyoto), and soon thereafter, an elegant court culture developed in the capital. The courtly culture was based on civilian values and civilian rule. In the countryside, however, Japan was gradually becoming militarized. Local warlords began rising to prominence and vying with each other for power. One of them, Taira-no-Masakado, rebelled against the central government during the years 939-940, declaring himself emperor; several provinces in eastern Japan centered on Hitachi. Although the central government in Kyoto enlisted other warrior groups to put down Taira-no-Masakado’s rebellion, the process of militarization was underway. Buddhist temples also participated in this process, using their wealth and influence to assemble monastic armies on occasion. This course examines Japanese history beginning approximately in the 10th century, at a time when civilian high culture in the capital was approaching the height of its development. At the same time, the process of militarization of the countryside was beginning to undermine that civilian court culture. The course ends in approximately the seventeenth century with the establishment of a military government under the Tokugawa shoguns. This development was ostensibly the peak of warrior influence, with the samurai (=warrior) class entrenched by law as the elite group within society. However, just as the warriors began their rise to power in the tenth century, by the end of the seventeenth century they were rapidly losing influence and prestige to wealthy merchants as the forces of the market economy spread throughout Japanese society. ASIA 480 is a course in medieval Japanese history, broadly defined. Different instructors will emphasize different aspects of Japanese history and culture during this era. Approaches to teaching will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government’s program of rapid modernization and Westernization, imperial expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945–1952), Japan’s resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skills of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historians themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

Prerequisite: HIST 172, HIST 174, or HIST 175

ASIA 484: History of Chinese Thought

3 Credits

A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present. ASIA (HIST) 484Y History of Chinese Thought (3) (IL)(BA) This course meets the Bachelor...
of Arts degree requirements. This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing China’s philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular “Orientalist” myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

ASIA 485: China’s Last Empire: The Qing Dynasty, 1644-1911
3 Credits

China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China’s internal diversity. ASIA (HIST) 485Y China’s Last Empire: The Qing Dynasty, 1644-1911 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as Chinese; but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of China starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynastic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of Western colonialism on China. Considerable time will also be focused on China’s internal diversity. The course uses excerpts from primary documents, fiction, and film to help students understand the modern Chinese historical experience.

Bachelor of Arts: Other Cultures
International Cultures (IL)

ASIA 494: Research Project
1-12 Credits/Maximum of 999
Supervised student activities on research projects identified on an individual or small-group basis.
Honors

ASIA 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ASIA 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ASIA 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Astronomy and Astrophysics (ASTRO)

ASTRO 1: Astronomical Universe
3 Credits

The development of modern understanding of the astronomical universe from planets and stars to galaxies and cosmology. Student who have passed ASTRO 005, ASTRO 006, or ASTRO 010 may not take this course for credit. ASTRO 001 Astronomical Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 001
is an introductory course for non-science majors. It provides a broad introduction to Astronomy including the historical development of the subject, basic physics of gravity, light, and atoms; telescopes; planets, moons, and other objects in our solar system; exosolar planets; the Sun and other stars; the evolution of stars; the Milky Way galaxy and other galaxies; distant quasars and other active galaxies; the expanding universe; cosmology based on the Big Bang theory; and life in the universe. The goal of this course is to cover most of the areas of modern astronomy at a level which requires only basic mathematics.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 1H: Astronomical Universe

3 Credits

The development of modern understanding of the astronomical universe from planets and stars to galaxies and cosmology. Students who have passed ASTRO 005, ASTRO 006, or ASTRO 010 may not take this course for credit. ASTRO 001H Astronomical Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 001H is an introductory course for non-science majors. It provides a broad introduction to Astronomy including the historical development of the subject, basic physics of gravity, light, and atoms; telescopes; planets, moons, and other objects in our solar system; exosolar planets; the Sun and other stars; the evolution of stars; the Milky Way galaxy and other galaxies; distant quasars and other active galaxies; the expanding universe; cosmology based on the Big Bang theory; and life in the universe. The goal of this course is to cover most of the areas of modern astronomy at a level which requires only basic mathematics.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 5: The Sky and Planets

3 Credits

The development of our modern understanding of the visible sky and planetary systems. Students who have passed ASTRO 001 or ASTRO 010 may not take this course for credit. ASTRO 005 The Sky and Planets (3) (GN)ASTRO 005 will introduce students to the wonders of the universe and help them to understand how the universe works through the laws of physics. During the semester, they will learn about the different observed motions of objects in our sky, how astronomical objects influence our concepts of time, the nature of light and spectra, how planetary systems are formed and comparative details about our solar system and other planetary systems. Many colorful images and movies of the solar system have been collected by unmanned satellite missions like Voyagers I & II, the Magellan mission to Venus, the Mars Rovers and Pathfinders, the Galileo mission to Jupiter, the Cassini and Huygens missions to Saturn, and the New Horizons mission which is now on its way to study Pluto. These images will be used to convey the excitement of discovery to our students.

Prerequisite: Students who have passed ASTRO 001 or ASTRO 010 may not take this course.
General Education: Natural Sciences (GN)

ASTRO 6: Stars, Galaxies, and the Universe

3 Credits

The development of our modern understanding of stars, galaxies, and the astronomical universe. Students who have passed ASTRO 001 or ASTRO 010 may not take this course for credit. ASTRO 006 Stars, Galaxies, and the Universe (3) (GN)ASTRO 006 will introduce students to the laws of nature as they apply to the study of stars, galaxies and the universe. During the semester, they will learn about gravitational forces, the nature of light and spectra, the different telescopes and instruments used to study the universe, new discoveries about our Sun and other stars, the births and deaths of stars, the structure of our own Milky Way galaxy, types of galaxies, how other nearby galaxies affect the Milky Way, the origin of our universe and the techniques that we have used to learn about our universe. These topics will be enhanced by numerous images and movies of our Sun and other astronomical objects that were collected with telescopes like the Hubble Space Telescope, the Swift gamma ray burst explorer, the Chandra X-ray telescope, the Solar and Heliospheric Observatory (SOHO), as well as other state-of-the-art instruments.

Prerequisite: Students who have passed ASTRO 001 and ASTRO 010 may not take this course.
General Education: Natural Sciences (GN)

ASTRO 7N: The Artistic Universe

3 Credits

ASTRO 7N (GA/GN) is both an introductory course in astronomy for non-science majors and a creative space for those with science backgrounds interested in visual arts; it provides students the opportunity to demonstrate understanding and develop a personal connection to the subject by designing four art projects. Students will learn the broad concepts of astronomy by playing an immersive video game, which allows them to 1) explore seasons, phases of the Moon, light, gravity, and telescopes from a virtual colony on Mars; 2) fly from planet to planet in the Solar System and learn about their properties and formation; 3) visit the Sun and other stars, learn how they produce energy, and about their life cycles; 4) fly through the cosmos and construct their own universe, particle by particle. Students will also learn about the relationships and exchanges between arts and sciences, and explore inspiration and perspective on these topics by designing themed art projects using traditional and digital media. These projects include assembling a photo-journal of astronomically-relevant subjects, constructing their own video-game-like scene, interpreting data to inform a plausible depiction of an alien world, and producing three- color images using methods like those employed by astronomers to compose and display Hubble Space Telescope images. Students who have passed ASTRO 1, ASTRO 5, ASTRO 6 or ASTRO 10 may not take this course for credit.

General Education: Arts (GA)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
ASTRO 10: Elementary Astronomy

2 Credits

Introductory survey of modern astronomy from planets and stars to galaxies and the universe. Students who have passed ASTRO 001, ASTRO 005, or ASTRO 006 may not take this course for credit. Students may not receive General Education credit for ASTRO 010 unless they also take ASTRO 011. ASTRO 010 Elementary Astronomy (2) (GN) (BA) This course meets the Bachelor of Arts degree requirements. ASTRO 010 provides the 2 credit lecture component of a one-semester overview of modern astronomy. The class covers a wide range of topics in planetary, stellar, galactic, and extragalactic astronomy and cosmology. The level is appropriate for students with no university-level science background. The instructor makes frequent use of dramatic images of astronomical objects, demonstrations, and computer simulations. Profound themes underlie the content of the course: how the physical structure and evolution of the universe appears to be ruled by deterministic mathematical laws; how our understanding of the universe progresses by the intricate interplay between theory and observations; how we, as living organisms on a well-placed planet, appear to be both an intimate part of yet an unusual occurrence within the universe. The student will gain perspective on his or her place in a vast and stunningly beautiful universe.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 11: Elementary Astronomy Laboratory

1 Credits

Selected experiments and explorations to illustrate major astronomical principles and techniques. Telescopes observations of planets, stars and nebulae. ASTRO 011 Elementary Astronomy Laboratory (1) (GN) (BA) This course meets the Bachelor of Arts degree requirements. ASTRO 011 is the 1 credit laboratory component of this overview of astronomy. It covers material similar to the lecture component, but the selected topics are covered in more depth and are focussed on active learning components. Weekly two-hour labs include discussion of the search for extraterrestrial intelligence, an activity to illustrate the phases of the moon, analysis of the colorful spectra of different chemical elements, and exploration of the deepest image of space ever obtained. In addition, students will complete a semester nighttime observing project that typically involves learning some constellations, tracing phases of the moon, and sketching images seen through our well-equipped rooftop student observatory. While most laboratory sections meet in the evening, daytime sections concentrate on classroom, computer-based and solar observing activities.

Enforced Prerequisite at Enrollment: or concurrent: ASTRO 1 or ASTRO 10
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 19N: Being in the Universe

3 Credits

Being in the Universe considers three fundamental questions of human existence from both humanistic and scientific perspectives: (1) What is the nature of our universe, and to what extent are creatures like ourselves a predictable consequence of it? (2) What is the nature of time, and what does it mean to be a conscious being living our lives through time? (3) What would it mean for humans to be alone in the Galaxy or the universe, or alternatively, not alone? "Being in the Universe" is an integrative GH+GN GenEd course. The course's three major units cover the following topics: (1) We discuss cosmology and religion as human enterprises, as well as the history of science; (2) We study the basic scientific theory of the Big Bang universe, and consider its implications for human life; (3) We address contemporary theories of the multiverse from scientific, philosophical, and literary perspectives; (4) We consider the thermodynamic and relativistic theories of time, and the basic philosophical approaches to time, and discuss the implications of these for our ordinary human experience of the past, present, and future; (5) We discuss the history of life in the universe, the possibility of life on other planets, and the social, religious, and imaginative reactions to those possibilities in literature and film.

GenEd Learning Objective: Key Literacies

ASTRO 20: First-Year Astronomy Seminar

2 Credits

Introduction to the study of modern astronomy through discussions, activities, and writing.

First-Year Seminar

ASTRO 21: Introduction to Research in Astronomy

2 Credits

The course is designed to provide first year undergraduate students in both the ASTRO and PASTR majors with necessary tools and techniques to perform research. Students will practice a variety of techniques on authentic astronomical data, which might include light curves from the Kepler mission, galaxy and stellar spectra from the Sloan Digital Sky Survey, or pulsar data from the Green Bank or Arecibo telescopes. An emphasis will be placed on using common tools for observational astronomy, such as viewing astronomical FITS images in SAOimage. Students will be introduced to the common programming languages and environments used by astronomers at the time the course is offered, which currently includes Python and IDL. Students will be given experience in calculating statistical information about a set of astronomical data using the R programming language and its built-in tools. Students will make plots to illustrate a pattern in their data using the tools in Python, IDL, or R, for example.

ASTRO 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
ASTRO 116: Introduction to Astronomy for Educators

3 Credits

This course is designed to engage students with the big ideas of astronomy in ways that will help them understand both the content of astronomy, as well as the practices of science as carried out by astronomers. The course is designed for prospective elementary and middle school teachers (PK-4 and 4-8 majors), although it is available to other non-science majors. Throughout the course, students engage in a series of investigations that lead towards the development of evidence-based explanations for patterns observed in the current Solar System. Investigations will include computer-based simulations, night-sky observations, and use of simple laboratory equipment. These investigations lead students towards an understanding of how observations of the current Solar System can be explained by the model of its formation. The course is designed to build from students’ own personal observations of the day and night sky towards developing increasingly sophisticated explanations for those phenomena and beyond. Conducting these astronomy investigations will help students understand fundamental aspects of physics, thus broadly preparing them for future science teaching in these domains. The course models evidence-based pedagogy, thus helping to prepare students for future teaching careers as they learn effective strategies for teaching science.

Cross-listed with: SCIED 116

ASTRO 120: The Big Bang Universe

3 Credits

Exploration of Cosmology, Birth, and Ultimate Fate of the Universe; Origin of Galaxies, Quasars, and Dark Matter. For non-science majors ASTRO 120 The Big Bang Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Astronomical observations made during the last 70 years, combined with mathematical physical theory (Einstein’s General Relativity), has led to a dramatic new view of the history of the Universe. Ten to twenty billion years ago, all the material that is now contained in stars, planets, and galaxies was then compressed into a region, smaller than a pinhead, and so hot that atoms could not survive. This fiery cauldron cooled and expanded, forming hydrogen and helium, and eventually all the materials and structures that we know today. This course will discuss the evidence, theories and controversies of this new scientific cosmology, commonly known as “the Big Bang”. This class is designed for the non-science students who, after learning the fundamentals of astronomy in ASTRO 1(GN), ASTRO 5 (GN) or ASTRO 10 (GN), want to pursue further the questions of cosmology. The great success of the Big Bang theory in explaining the expansion of the Universe, the synthesis of the chemical elements, and the relic radiation leftover from the first moments are reviewed. Some of the questions discussed are still debated in the scientific community. For example: Why do some galaxies have stunning spiral structures, while others are relatively featureless ellipticals? What is the “dark matter” that may have emerged from the Big Bang, and seems to make a larger contribution to the mass of the universe than all of the material we are familiar with? What can the most distant and oldest objects we know of, the quasars, tell us about how galaxies formed? In presenting the development of this subject, the empirical and conceptual methods of modern physical science are conveyed. Students are assigned problems that exercise the use of elementary mathematics and physics to address real issues, and will confront discussions of interpretation and meaning in essays. A final project allows them to explore individual interests.

Enforced Prerequisite at Enrollment: ASTRO 1 or ASTRO 6 or ASTRO 10
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 130: Black Holes in the Universe

3 Credits

The predicted properties of black holes and the astronomical evidence for their existence are investigated in the context of modern ideas about space, time, and gravity. ASTRO 130 Black Holes in the Universe (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. Black Holes in the Universe introduces students to the predicted properties of black holes and the astronomical evidence for their existence. Modern ideas about the nature of space, time, and gravity are also covered. The key topics discussed in the course include Newton’s and Einstein’s theories of gravity, predicted properties of black holes, stars and their fates, how to detect a black hole, gamma-ray bursts, supermassive black holes in galactic nuclei, active galaxies, black hole spin, gravitational waves, Hawking radiation, singularities, and black hole child universes. The course is intended to be an attractive choice for students who are interested in enriching and broadening their understanding of modern physical science. The course is intended for students who have completed and enjoyed the one-semester survey of modern astronomy, ASTRO 1 or ASTRO 10. It has an interdisciplinary flavor, combining basic physical concepts, astronomical observations, and philosophical ideas to present a complete picture of the current understanding of black holes. Students use mathematics at the level of high school algebra.

Enforced Prerequisite at Enrollment: ASTRO 1 or ASTRO 6 or ASTRO 10
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 140: Life in the Universe

3 Credits

The problem of the existence of life beyond Earth is investigated, drawing from recent research in astronomy and other fields. For non-science majors. ASTRO 140 Life in the Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The possibility of life beyond Earth is one of the great unsolved puzzles of human thought and has been debated for millennia. An answer would fundamentally change the relationship between the human race to the rest of the Universe. Advances in modern physics and astrophysics have dramatically changed and enriched the understanding of our cosmic surroundings, but have not yet produced an unambiguous evidence concerning the extraterrestrial life. Yet, significant progress has been made on certain aspects of the problem. Recent observations of protoplanetary disks around young stars, planets around solar-type stars and a rapidly spinning pulsar (a Penn State discovery), and pervasive organic molecules throughout the Galaxy give tantalizing albeit indirect, hints in favor of the existence of nonterrestrial life. “Life in the Universe” is envisioned to be an attractive choice for students who are interested in enriching and broadening their understanding of modern science. The course is highly interdisciplinary, combining evidence from several fields of science to describe our chances to encounter life beyond Earth and the Solar System. Selecting this course would be a logical choice for students who completed and enjoyed ASTRO 1 (GN), ASTRO 5 (GN), ASTRO 10 (GN). The students are expected to reach the following goals from this course: - learn to appreciate limitations of human experience and a role of the interdisciplinary approach in solving scientific problems.
- gain understanding of a relationship between the physical Earth, its biosphere, and the rest of the observable Universe • examine in some detail a contemporary problem of scientific investigation: the astrophysical evidence for planets around stars other than the Sun • assess the scientific significance of searches for extraterrestrial life including technological civilizations. The course material is conveyed, analyzed and discussed through lectures, invited talks, reading, essay writing, homework assignments and oral presentations. Lectures systematically cover the topics listed in the course outline at a level appropriate for non-science students, although Science and Engineering majors do take the course and perform at a higher technical level. While general understanding of astronomy from the prerequisite course is expected, the necessary physical and astrophysical concepts are reintroduced to assure a logical and coherent flow of information throughout the course. Videos are used to illustrate a number of topics, such as the search for extraterrestrial intelligence, physical conditions on planets of the Solar System, the detection of planets around a neutron star, and to evaluate the scientific content of science fiction movies. Invited talks by faculty from other departments enrich the course material with in-depth presentations of subjects such as habitable zones around stars, the basics and perspectives of space flight and the foundations of biological evolution. There has been some experimentation with activity and assessment strategies for the course. Some of the work involves quantitative analysis while other work requires qualitative synthesis of classroom experience with readings. Group presentations give students a chance to study selected, often controversial topics and present them to the class in a disciplined, scientific manner.

**Enforced Prerequisite at Enrollment:** ASTRO 1 or ASTRO 5 or ASTRO 10
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

**ASTRO 141N: Film and Extraterrestrial Life: Science Fact or Fiction?**
3 Credits
The search for life beyond planet Earth has been the subject of much interdisciplinary scientific search and has stimulated human imagination. Scientific discoveries of exoplanets (outside of our solar system), of extremophiles (life which can survive in extreme conditions) and the discoveries of conditions on other bodies in our solar system which might be able to support life, has provided progress in answering the question of the existence of extraterrestrial life. Not only have a plethora of fictional work appeared in the film media to depict scenarios of life beyond Earth, but there has also been an abundance of video media created to present the scientific ideas to the wider audience beyond the scientific community. This course intends a critical evaluation of both nonfiction and fictional media works in the educational dissemination of scientific ideas and the effective presentation of concepts. We will analyze techniques in photography, mise en scene, editing, sound, dramatization and writing as they are applied to topics in astrobiology.

**ASTRO 199: Foreign Studies**
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

**ASTRO 291: Astronomical Methods and the Solar System**
3 Credits
Physical processes and observational techniques in astronomical systems, characteristics of the sun, planets, and moons. ASTRO 291/292 is a two-semester overview of our current knowledge of astronomy. They are designed for students with a solid grounding in math and physics who wish to obtain a more quantitative understanding of the universe than that presented in ASTRO 001 or the 100-level ASTRO series. These courses are required for students majoring in astronomy, generally taken in the sophomore year. ASTRO 291 starts with the appearance of the sky to the naked eye and the historical development of European astronomy. It then turns to an introduction to physical processes relevant to the interpretation of astronomical findings: Newtonian gravity and its applications in celestial mechanics, electromagnetic radiation, and a simplified understanding of atoms. The principal tools of astronomy telescopes are then described. The course proceeds with the survey of astronomy with the constituents of the solar system: sun, planets, natural satellites, planetary rings, asteroids, and comets. Physical processes are integrated with empirical findings to provide a profound and quantitative understanding of the phenomena; e.g. the role of angular momentum and tidal forces in establishing the orbits and spins of solar system bodies. The class then tackles the challenging development of models of the formation and evolution of the solar system.

**Enforced Prerequisite at Enrollment:** PHYS 211
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

**ASTRO 292: Astronomy of the Distant Universe**
3 Credits
Observed properties and astrophysical understanding of stars, stellar evolution, galaxies, the large-scale universe, and cosmology. ASTRO 292 is a two-semester overview of our current knowledge of astronomy. They are designed for students with a solid grounding in math and physics who wish to obtain a more quantitative understanding of the universe than that presented in ASTRO 001 or the 100-level ASTRO series. These courses are required for students majoring in astronomy, generally taken in the sophomore year. ASTRO 292 continues the survey started in ASTRO 291. The first half of the course is devoted to stellar astronomy and astrophysics. The class follows the successful application of physics to astronomical data in the 19th -20th centuries to understand distances, masses and energy sources of stars. The formation, structure and evolution of stars is treated in the context of physical processes developed in ASTRO 291. The class studies the death of stars, including spectacular phenomena such as supernova explosions, pulsars and black holes, solutions to difficult problem of establishing distance...
scales (stellar, galactic, intergalactic) are presented. In the second half of the course, the students examine the Universe on progressive larger scales: our Milky Way galaxy, other galaxies, and massive black holes in galactic cores (e.g. quasars). Exotic phenomena such as gravitational lenses, gamma-ray bursts and cosmic rays are investigated. Finally, the class delves into the remarkable findings of modern cosmology. Hubble’s discovery of the expansion of the Universe, the discovery of the cosmic microwave background and consequent dominance of Big Bang cosmology in the context of Newtonian and Einsteinian theories of gravity. Cosmological evolution is studied; e.g. formation of light elements during the first few minutes, and the growth of large-scale structure that continues to the present. Unsolved problems faced by today’s scientists are emphasized.

**Enforced Prerequisite at Enrollment:** ASTRO 291

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

ASTRO 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ASTRO 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ASTRO 320: Observational Astronomy Laboratory

3 Credits

Basic observational astronomy techniques introduced through observational exercises, lab experiments, and lectures on relevant statistical techniques. ASTRO 320 Observational Astronomy Laboratory (3) (GN) ASTRO 320 will provide students with practical experience in basic observational and laboratory aspects of astronomical data collection and analysis, including an introduction to associated statistical concepts. Observational techniques will be introduced through an observing project using a telescope with a CCS imaging camera. Lectures will introduce fundamental principles including Poisson and Gaussian statistics, measurement precision, propagation of errors, and systematic uncertainties. These principles will be put into practice in the observing project and with laboratory experiments investigating the properties of light and cosmic rays. Experiments include: a cosmic ray telescope; a Michelson interferometer; a photodiode and monochromator; laser interference, diffraction and refraction; fluorescent gases; and a diffraction grating spectrometer.

**Enforced Prerequisite at Enrollment:** ASTRO 291

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

ASTRO 401: Fundamentals of Planetary Science and Astronomy

4 Credits

Overview of the techniques used and results from studies of the Solar System, stars, and galaxies. ASTRO 401 Fundamentals of Planetary Science and Astronomy (3) This course will focus in core content areas in planetary science and astronomy. Students will explore the fundamentals in robotic exploration of the Solar System, how astronomers map and navigate the night sky, our understanding of the nature and evolution of stars, and the nature and evolution of galaxies. Students will engage with real data from Solar System missions as well as ground-based and space-based telescopes. Through the use of many databases and data archives from missions and observatories, the students will become familiar with the census of astronomical objects in various categories. A particular emphasis will be placed on examples of qualitative and quantitative problem solving in these content areas. In addition, students will explore how scientists communicate their results to the public, and they will get hands-on experience, such as planning and executing a planetarium show.

**Enforced Prerequisite at Enrollment:** (ASTRO 1 or ASTRO 5 or ASTRO 6 or ASTRO 10) and MATH 140.

ASTRO 402: Astronomical Telescopes, Techniques, and Data Analysis

3 Credits

Properties and use of optical telescopes, imaging and spectroscopy, multi-wavelength techniques, data analysis and statistics, practical research methods. ASTRO 402 Astronomical Telescopes, Techniques, and Data Analysis (3) This course will provide practical experience and understanding of the telescopes and techniques by which astronomers obtain data and conduct research. The study of telescopes will include optical, infrared, radio, ultraviolet, X-ray, and gamma ray observations, and students will learn to set up and use optical telescopes. In-depth coverage of the instruments used for imaging and spectroscopic observations of a variety of astronomical objects will be provided. Applications will include topics in planets, stars, galaxies, and cosmology. Detailed examples of data analysis will be given, including the relevant statistical techniques. Finally, the process by which research in astronomy is conducted will be reviewed, from proposing observations, to obtaining them, to analyzing and interpreting them, to writing up the results. This course is a requirement for students in the Planetary Science and Astronomy major and minor. It may be taken by any students with the needed pre-requisites, but cannot be counted towards the required 400 level courses for the Astronomy and Astrophysics major or minor.

**Writing Across the Curriculum**

ASTRO 410: Computational Astrophysics

3 Credits

Applications of numerical methods and computer programming to astrophysics, including stellar physics and cosmology.

**Enforced Prerequisite at Enrollment:** (CMPSC 201 or CMPSC 121) and PHYS 212 and PHYS 213 and PHYS 214

ASTRO 414: Stellar Structure and Evolution

3 Credits

Theory of Stellar structure and evolution including energy generation and transport and an examination of stellar models. ASTRO 414 Stellar Structure and Evolution (3) ASTRO 414 covers the theory of stellar structure and evolution at an introductory level. It includes the basic physical processes that influence the structure of a star, such as energy generation in stellar cores, the transport of energy to the surface via photon diffusion and convection, equilibrium conditions, etc. It examines
realistic stellar models as they apply to stars of different masses, for example, polytropes and other approximations. The treatment of stellar evolution includes gravitational collapse, stable stellar configurations on the main sequence, and the fast-paced late stages of evolution, leading up to the formation of compact objects. Realistic stellar models will be employed to illustrate the structures of different types of stars and the influence of various physical processes on these models.

**Enforced Prerequisite at Enrollment:** ASTRO 292 and MATH 230 and PHYS 212 and PHYS 213 and PHYS 214 and PHYS 237

**ASTRO 420: Planets and Planetary System Formation**

3 Credits

Solar system properties, star formation, protoplanetary disks and planet formation, solar system model, extrasolar planets, and astrobiology.

**ASTRO 420W Planets and Planetary System Formation**

3 Credits

The course explores the wide variety of physical and chemical processes that govern the motions and properties of planets. Observations of the planets, moons, asteroids, comets and planetary rings in our Solar System are described. The properties of extrasolar planets are also emphasized. The process of planetary formation is discussed in the context of the solar system and in the context of extrasolar planets. The prospects of life and the effect of life on such planets will also be discussed. It will be taken by roughly half of the juniors and seniors majoring in Astronomy and Astrophysics (about 10 people). The course will include writing papers on current issues of debate in the areas of solar system and extrasolar planets and will satisfy the "Writing Across the Curriculum" requirement.

**Enforced Prerequisite at Enrollment:** ASTRO 292

**Writing Across the Curriculum**

**ASTRO 440: Introduction to Astrophysics**

3 Credits

Theoretical investigation of physical processes in astronomical objects and systems; modern physical interpretation of astronomical phenomena.

**Enforced Prerequisite at Enrollment:** MATH 230 and PHYS 237

**ASTRO 451: Astronomical Techniques**

3 Credits

Practical methods of modern observational astronomy, detectors, filters, instrumentation for both ground-based and space observations, and data analysis. ASTRO 451 Astronomical Techniques (3) ASTRO 451 will introduce students to the techniques and technologies for modern observational astronomy, emphasizing the development of practical skills as well as understanding through computer-based investigations integrated with traditional lecture content. Beginning with a summary of probability theory, the students will be introduced to standard techniques of statistical analysis including hypothesis testing and the characterization of uncertainties. Subsequent lectures and computer exercises will discuss the physics and design of astronomical detectors, the principles of telescope and spectroscope design, and the data analysis methods used in processing astronomical datasets. Significant emphasis will be placed on estimation of signal-to-noise ratios for various observing scenarios. The effects of the Earth's atmosphere, interstellar matter, and the expanding Universe on the propagation of astronomical signals will also be discussed.

**Enforced Prerequisite at Enrollment:** PHYS 212 and PHYS 213 and PHYS 214

**ASTRO 475: Stars and Galaxies**

3 Credits

Astronomical studies concerning the distribution and evolution of stars and gas in our and other galaxies.

**Enforced Prerequisite at Enrollment:** ASTRO 292

**Writing Across the Curriculum**

**ASTRO 480: Nebulae, Galaxies, and Cosmology**

3 Credits

Emission-line spectroscopy, structure and evolution of galaxies, physics of galactic nuclei and quasars, observational cosmology.

**Enforced Prerequisite at Enrollment:** ASTRO 292 and PHYS 212 and PHYS 213 and PHYS 214

**ASTRO 485: Introduction to High-Energy Astronomy**

3 Credits

The study of black holes, neutron stars, white dwarfs, supernova remnants, and extragalactic objects through x-ray and gamma ray observations.

**Enforced Prerequisite at Enrollment:** PHYS 237

**ASTRO 494H: Honors Thesis**

1-6 Credits/Maximum of 6

Investigation of an original research problem, including a literature search. Preparation of a formal thesis is optional

**ASTRO 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**ASTRO 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Athletic Training (ATHTR)**

**ATHTR 135: Introduction to Athletic Training**

3 Credits

Introduction to Athletic Training provides an overview of the field of athletic training exploring the breadth of athletic training terminology, issues, and injuries. After completing the course, the students will be able to describe the roles of the sports medicine team, understand the legal considerations for the athletic trainer as a health care provider, and
identify the basics of physical conditioning and nutrition in reference to injury prevention. Students will be able to describe an emergency action plan for injuries, and environmental conditions. Students will be able to identify basic use of therapeutic modalities and principles of therapeutic exercise programs. Students will gain an understanding of acute vs. chronic injury conditions and be able to describe the related anatomy, etiologies, pathologies, signs and symptoms, and general treatment and management for injuries of the foot, ankle, lower leg, knee, hip/groin, shoulder, elbow, wrist, hand, cervical spine, and head. Rationale and demonstrations for a variety of taping techniques are included to address upper and lower extremity injuries. Students are also provided an overview of general medical conditions that may occur in the athletic arena.

Cross-listed with: KINES 135

ATHTR 202: Functional Human Anatomy

3-4 Credits

This course is designed to provide students a didactic and laboratory experience in functional human anatomy. Upon course completion, students should be able to comprehend and apply standard anatomical nomenclature pertaining to human movement science; comprehend structure and function of the musculoskeletal, neurological, respiratory, cardiovascular, lymphatic, gastrointestinal and endocrine systems pertaining to human movement science; comprehend the classification, structure and function of human anatomical articulations (joints) pertaining to human movement science; and comprehend the classification, structure, and function of human biological tissues (epithelium, connective, muscle and nervous) pertaining to human movement science. In the laboratory portion of the course students will learn to identify bone and capsuloligamentous tissues as well as their respective landmarks pertaining to human movement science; identify origins, insertions, actions and innervations of skeletal muscles pertaining to human movement science; and identify biomechanical characteristics and neuromuscular activity of human anatomy during the execution of active, passive as well as resistive movements. The laboratory portion of this course will use three-dimensional bone models, joint models, ligament models and cadaveric models to apply concepts covered in lecture.

Cross-listed with: KINES 202

ATHTR 231: Foundations of Clinical Practice I

3 Credits

This course is designed to introduce students to basic skills required for the clinical practice of athletic training. The course will teach introductory content and skills related to injury and illness prevention and management. Specific topics include preventing environmental injuries and illnesses, taping and wrapping techniques, protective equipment, pre-participation physical examinations, preparing for emergencies in the athletic setting, and concepts of basic athletic injury management. The course requires both lecture and practical lab experiences each week. Demonstrations of practical skills specific to the clinical proficiency are required to sit for the Board of Certification exam.

Prerequisites: Completion of the Athletic Training Pre-Professional Phase Application and Accompanying Observational Experience

ATHTR 233: Acute Care and Emergency Response

3 Credits

This course prepares students pursuing the athletic training major in the Department of Kinesiology with the knowledge and skills to respond to medical emergencies. Basic skills including rescue breathing, cardiopulmonary resuscitation for health care providers, and first aid management of injury and illness emergencies are developed. These skills are supplemented with content related to blood borne pathogens and OSHA regulations needed for personal safety and effective management of athletic training services, the causes and prevention of sudden cardiac death in athletics, and training in the use of automated external defibrillators. The second part of the course focuses on the secondary survey and evaluation and management of central nervous system, musculoskeletal injuries, and shock. The final part of the course addresses conditions of the thorax, abdomen, and musculoskeletal system, environmental hazards encountered in athletics; and drug and alcohol overdoses and poisoning. The course will include the opportunity for professional certification in first aid and cardiopulmonary resuscitation. The course includes both lab and lecture components each week. CPR certification (written and practical), blood borne pathogens certification (practical), and demonstration of practical skills specific to the clinical proficiency required to sit for the Board of Certification exam are required in this course.

Prerequisites: Completion of Pre-Professional Phase Application and Accompanying Observational Experience

ATHTR 235: Foundations of Clinical Practice II

3 Credits

Athletic Training Clinical Practice II provides instruction in supervised practice of the basic skills required in the practice of athletic training. Topics include documentation of medical records, postural screening, assessment and improvement of flexibility, assessment, and improvement of strength, use of functional rehabilitation protocols, use of common therapeutic modalities, and description of the use of medications in sports medicine. Students are introduced to the foundational components of evidence-based practice and methods for translation into clinical practice. Students practice skills specific to the clinical proficiencies required to sit for the Board of Certification exam. This course provides the student with the opportunity to learn and practice clinical athletic training skills before beginning practicum experiences.

Prerequisites: ATHTR 231, ATHTR 233

ATHTR 334: Examination of Injuries to the Lower Extremity, and Spine

3 Credits

This course will focus on: 1) the etiology of athletic injuries to the lower extremity and lumbar sacral spine, and 2) evaluation techniques for assessing athletic injuries to the lower extremity and lumbar sacral spine. The objectives of this course include: understanding the mechanisms of athletic injuries to the lower body; demonstrating proficiency in the objective and subjective assessment procedures of lower body athletic injuries; recognizing orthopedic, neurovascular, and medical emergencies associated with lower body athletic injuries; recognizing the normal and abnormal mechanics of the lumbar sacral spine and lower extremity including the walking and running gait cycles; and integration of injury mechanisms into the treatment and rehabilitation plan of care for the
injured physically-active person. This course includes lectures as well as hands-on laboratory sessions.

Prerequisites: ATHTR 231, ATHTR 233

ATHTR 335: Examination of Injuries to the Head, Torso, and Upper Extremity

3 Credits

This course will focus on: 1) the etiology of athletic injuries to the upper extremity, head, cervical spine, thorax, and abdomen; 2) evaluation techniques for assessing athletic injuries to the upper extremity, head, cervical spine, thorax, and abdomen; and 3) the application of evidence-based practice principles to be able to answer focused clinical questions. The objectives of this course include: understanding the mechanisms of athletic injuries to the upper body; demonstrating proficiency in the objective and subjective assessment procedures of upper body athletic injuries; recognizing orthopedic, neurovascular, and medical emergencies associated with upper body athletic injuries; recognizing the normal and abnormal mechanics of the cervical spine and upper extremity including the overhead throwing motion; and integration of injury mechanisms into the treatment and rehabilitation plan of care for the injured physically-active person. This course includes lectures as well as hands-on laboratory sessions.

Prerequisites: ATHTR 235, ATHTR 334

ATHTR 336: General Medical Principles of Clinical Practice

3 Credits

This course is designed to instruct students in general medicine content and skills related to the clinical practice of athletic training. Specific topics include pathology; pharmacology; physical examination of head, ears, eyes, nose, throat, pulmonary, cardiovascular, gastrointestinal, renal, genitourinary, and dermatological conditions commonly seen in physically-active populations; exertional heat illness; diabetes and exercise; female athlete triad; injuries in populations with physical disabilities; and psychosocial aspects of patient-provider relationships. Several lectures will be made by physicians who specialize in sports medicine. Lab activities will include the instruction, practice, and assessment of psychomotor skills related to the course content. The course will include a balance of both lecture and laboratory activities. The course includes a balance of lecture-based and laboratory activities. Students practice skills specific to the clinical proficiencies required to sit for the Board of Certification exam.

Prerequisites: ATHTR 235, ATHTR 334

ATHTR 395A: Clinical Internship I

3 Credits/Maximum of 3

This course is designed to give students practical experiences in a variety of clinical settings in which certified athletic trainers are commonly employed. Students will participate in clinical education experiences under the supervision of certified athletic trainers in a variety of clinical settings. These settings include but are not limited to: intramural sports, club sports, outpatient sports medicine clinics, high schools, and intercollegiate athletic training facilities. In addition to clinical experiences there is also a didactic portion of this course which emphasizes students gaining proficiency in important clinical skills. The objectives of this course include demonstrating proficiency in: the evaluation of a unconscious person; the recognition of cerebral concussion and closed head injury; the recognition of acute injury to the cervical spine; the recognition of fractures and dislocations; the assessment of neurovascular function; the recognition, treatment, and prevention of lower extremity injuries, heat illnesses including heat cramps, heat exhaustion, and heat stroke; the use of splints, stretchers and spine boards in the management of injured persons; the application of taping and wrapping techniques commonly used in the prevention and management of common athletic injuries; and in obtaining a medical history.

Prerequisites: ATHTR 235, ATHTR 334

ATHTR 434: Rehabilitation of Injuries to the Lower Extremities, and Spine

3 Credits

Rehabilitation of Injuries to the Lower Extremities is a 3-credit course offered each fall semester with an enrollment limit of 40 students. The course provides students who have been accepted into the undergraduate athletic training option in the Department of Kinesiology with the theoretical foundation for application of manual therapy techniques and therapeutic exercises in the treatment of musculoskeletal injuries sustained by physically active individuals. Laboratory instruction and guided practice in performing manual therapy techniques and therapeutic exercises will also be provided. At the end of this course students: 1) can identify five components of a comprehensive plan of care for an injured physically-active person; 2) have a working knowledge of the effects of therapeutic exercise on tissue repair and return to activity; 3) have a working knowledge of the impact on pain on programs and therapeutic exercise; 4) are able to perform selected manual therapy techniques and integrate them into a comprehensive plan of care; 5) understand the psychological response to injury and therapeutic exercise; 6) can develop a plan of rehabilitation utilizing principles of tissue healing, therapeutic exercise and manual therapy; and 7) instruct patients in home programs of therapeutic exercise. This course will focus on the basic principles of therapeutic exercise and rehabilitation of injuries to the lower extremities.

Prerequisites: ATHTR 235, ATHTR 334

ATHTR 435: Rehabilitation of Injuries to the Trunk and Upper Extremities

3 Credits

Rehabilitation of Injuries to the Trunk and Upper Extremities is a 3-credit course offered each fall semester with an enrollment limit of 40 students. The course provides students who have been accepted into the undergraduate athletic training option in the Department of Kinesiology with the theoretical foundation for application of manual therapy techniques and therapeutic exercises in the treatment of musculoskeletal injuries sustained by physically active individuals. Laboratory instruction and guided practice in performing manual therapy techniques and therapeutic exercises will also be provided. At the end of this course students: 1) can identify five components of a comprehensive plan of care for an injured physically-active person; 2) have a working knowledge of the effects of therapeutic exercise on tissue repair and return to activity; 3) have a working knowledge of the impact of pain on programs and therapeutic exercise; 4) are able to perform selected manual therapy techniques and integrate them into a comprehensive plan of care; 5) understand the psychological response to injury and therapeutic exercise; 6) can develop a plan of rehabilitation utilizing principles of tissue healing, therapeutic exercise and manual therapy; and 7) instruct patients in home programs of therapeutic exercise. This course will focus on review of the basic
principles of therapeutic exercise and rehabilitation on injuries to the trunk and upper extremities.

**Prerequisites:** ATHTR 335, ATHTR 395A, ATHTR 434

ATHTR 436: Physical Agents in Rehabilitation

4 Credits

The course provides students with the theoretical foundation for the application of contemporary therapeutic modalities in the treatment of musculoskeletal injuries sustained by physically-active populations. At the end of this course students will: 1) have a working knowledge of the physiological response to thermal, acoustic, electrical, light and mechanical modalities; 2) understand the physiological response to thermal, acoustic, electrical, light and mechanical modalities; 3) be able to search for and appraise clinically relevant trials involving modality application and; 4) apply these understandings and thermal, acoustic, electrical, light and mechanical modalities in the safe and effective manner.

**Prerequisites:** ATHTR 335, ATHTR 395A, ATHTR 434

ATHTR 438W: Administrative and Professional Aspects of Sports Health Care

3 Credits

Theoretical and practical aspects for management of an Athletic Training professional practice and identifying contemporary issues related to the profession. ATHTR 438W Administration and Issues in Athletic Training (3) This course is designed to instruct students in the concepts and skills required for successful administration of an athletic training program and to understand and discuss contemporary professional issues attendant to the Athletic Training profession. General topics to be covered include theoretical basis of management, program management, human resource management, financial resource management, facility design and planning, information management, athletic injury insurance, legal aspects of sports medicine, ethical considerations in sports medicine, pre participation physical and drug-testing, professional preparation issues, professional practice issues, and clinical practice issues. Experts from the community are brought in to lecture on several of the topics. This is a writing intensive course. Writing will be used to facilitate critical thinking about course material. Written assignments are based on the technical writing requirements of an athletic training administrator.

**Prerequisites:** ATHTR 336, ATHTR 495A, ATHTR 435, ATHTR 436

Writing Across the Curriculum

ATHTR 495A: Clinical Internship II

3 Credits

This course is designed to provide students didactic and practical clinical experiences in a variety of practice settings in which certified athletic trainers are commonly employed. This is the second clinical assignment after a student is admitted to the Athletic Training option within the Kinesiology major. Students will complete clinical education experiences under the supervision of a certified athletic trainer in a variety of clinical settings. These settings include but are not limited to: intramural sports, club sports, outpatient sports medicine clinics, high schools, and intercollegiate athletic training facilities. The objectives of this course include demonstrating proficiency in: assisting lower level students in developing athletic training skills and mastering level-appropriate competencies; demonstrate proficiency in evaluation and documentation of common athletic injuries; assist in the development and documentation of a plan of care for common athletic injuries; demonstrate proficiency in the development and documentation of clinical progression through a plan of care; participate in the application of therapeutic modalities and therapeutic exercise under the supervision of a certified athletic trainer. In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date and as required by the program up to the current semester.

**Prerequisites:** ATHTR 335, ATHTR 395A, ATHTR 434

ATHTR 495B: Clinical Internship III

3 Credits/Maximum of 3

This course is designed to provide students didactic and practical clinical experiences in a variety of practice settings in which certified athletic trainers are commonly employed. This is the third clinical assignment after a student is admitted to the Athletic Training major. Students will complete clinical education experiences under the supervision of a certified athletic trainer in a variety of clinical settings. These settings include but are not limited to: intramural sports, club sports, outpatient sports medicine clinics, high schools, and intercollegiate athletic training facilities. The objectives of this course include demonstrating proficiency in: assisting lower level students in developing athletic training skills and mastering level-appropriate competencies; demonstrate proficiency in evaluation and documentation of common athletic injuries; assist in the development and documentation of a plan of care for common athletic injuries; demonstrate proficiency in the development and documentation of clinical progression through a plan of care; participate in the application of therapeutic modalities and therapeutic exercise under the supervision of a certified athletic trainer. In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date and as required by the program up to the current semester.

**Prerequisites:** ATHTR 336, ATHTR 495A, ATHTR 435, ATHTR 436

ATHTR 495C: Clinical Internship IV

3 Credits

This course is designed to provide students didactic and practical clinical experiences in a variety of practice settings in which certified athletic trainers are commonly employed. Students will complete clinical education experiences under the supervision of a certified athletic trainer. These settings include but are not limited to: outpatient sports medicine clinics, interscholastic athletic settings, and intercollegiate athletic settings. The main objectives of this course include demonstrating proficiency in: head, ears, eyes, nose and throat assessment; peak flow and urinalysis assessment; auscultation and palpation of the chest and abdomen. The objectives also include understanding the psychosocial competencies related to athletic training (substance abuse, eating disorders, response to injury, mental health issues, catastrophic injuries, psychosocial trends in adolescent sports). In addition, students will work closely with their peers by assisting lower-level students in developing athletic training skills and mastering level-appropriate competencies; demonstrate proficiency in evaluation and documentation of common athletic injuries; assist in the development and documentation of a plan of care for common athletic injuries; demonstrate proficiency in the development and documentation of clinical progression through a plan of care; participate in the application of therapeutic modalities and therapeutic exercise under the supervision of a certified athletic trainer. In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date and as required by the program up to the current semester.

**Prerequisites:** ATHTR 336, ATHTR 495A, ATHTR 435, ATHTR 436
therapeutic exercise under the supervision of a certified athletic trainer. In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date in preparation for the national Board of Certification exam. This course also offers a culminating experience for athletic training students in the form of a capstone project.

**Prerequisites:** ATHTR 235, ATHTR 334

### Behavioral Sciences - CA (BESC)

**BESC 370: Community Psychology**

3 Credits

Introduction to concepts and terminology of community psychology with discussion of historical development. Community mental health issues will be analyzed.

**BESC 376: Introduction to Human Service Organizations**

3 Credits

A course designed to acquaint the student with the role of various social agencies.

**BESC 395: Behavioral Science Internship**

3-12 Credits/Maximum of 12

Internship in human service organizations providing for application of academic knowledge, reading, and discussion.

**Prerequisite:** 90 credits with at least 16 credits in the major

**BESC 407: Small Groups Counseling**

3 Credits

Intensive survey of research and theory on behavior in small groups, with emphasis on interdependence, cooperation, and attitude change.

**Prerequisite:** general psychology, general sociology, or general behavioral science

**BESC 408: Group Facilitation and Leadership Skills**

3 Credits

Skill training in group facilitation and leadership based on analyses of roles and interpersonal dynamics plus differences among impact population.

**Prerequisite:** general psychology, general sociology, or general behavioral science

**BESC 459: Basic Counseling Skills**

3 Credits

Behavioral, cognitive, and expressive methods of assessing and enhancing life-coping skills.

**Prerequisite:** general psychology, general sociology, or general behavioral science

**BESC 464: Feminine/Masculine**

3 Credits

Study of sex role learning; investigating feminine/masculine labeling; implications for contemporary society. BESC 464 BE SC (WMNST) 464 Feminine and Masculine (3) (US) This course provides a critical examination of the concepts of masculinity and femininity through a consideration of how these have shifted and changed historically and cross-culturally. It considers a variety of theories of gender difference. It investigates how gender is socially constructed and practiced. Thus, it examines how gender is enacted in interpersonal relationships and defined, reinforced, and challenged through processes of socialization as well as through the various institutional spheres of social life. The course addresses the diversity of masculinities and femininities within a single society. Thus, attention is given to race and class-based differences as well as to trans-genderism and homosexuality.

**Prerequisite:** general psychology or general sociology

**Cross-listed with:** WMNST 464

**United States Cultures (US)**

**BESC 494: Senior Thesis**

3-9 Credits/Maximum of 9

Problem formulation, literature search, research design, data collection, analysis of results, and final write-up of a substantial research project.

**Prerequisite:** permission of program

**BESC 494H: Senior Thesis**

3-9 Credits/Maximum of 9

Problem formulation, literature search, research design, data collection, analysis of results, and final write-up of a substantial research project.

**Prerequisite:** permission of program

**Honors**

### Biobehavioral Health (BBH)

**BBH 19: Health and Disease**

1 Credits

Essentials of communicable and chronic disease control.

**First-Year Seminar**

**BBH 48: Values and Health Behavior**

1.5 Credits

Examination of issues that impact the social, emotional, and physical well-being of college students through a values and decision-making process. BBH 048 Values and Health Behavior (1) (GHA) This is a 1 credit course designed for non-BB H majors who want a greater understanding of concepts related to health and health promotion and who want to learn practical skills related to optimizing health and improving lifestyle behaviors. General health topics that are relevant to students as they adjust to the transition into--and through--college are introduced through a values and decision-making approach to learning. The course is designed to give students a broader understanding of both short-term and long-term wellness and how it is affected by behavior. Concepts
regarding personal health and development are introduced using individual and group activities. To impact behavior, a model for decision-making that includes facts, risks, and consequences is utilized within an experiential learning approach. Students will work individually to perform self-assessment of health-related activities (e.g., nutrition, alcohol and drug-related knowledge and risk behaviors) and in small groups to further assess and describe the effects of health behaviors on short-term and long-term wellness. The course will be evaluated through completion of several short reaction papers to reading assignments and internet research, a group project on health promotion, completion of a health-related journal, and completion of a personal behavior change plan.

General Education: Health and Wellness (GHW)

BBH 101: Introduction to Biobehavioral Health

3 Credits

Introduction to an interdisciplinary study of health, examining the interaction of biological processes and behavior on health.

General Education: Health and Wellness (GHW)

BBH 101H: Introduction to Biobehavioral Health

3 Credits

Introduction to interdisciplinary study of health, examining the interaction of biological processes and behavior on health.

General Education: Health and Wellness (GHW)

Honors

BBH 119: Behavior, Health, and Disease

3 Credits

Principles of health promotion, disease prevention, and treatment of acute and chronic illness. This course is designed for non-BB H majors. BB H 119 Behavior, Health, and Disease (3) (GHA) This course is designed for non-BB H majors who want a fundamental understanding of disease processes, disease states, and principles of disease prevention and health promotion. This course should help students in the biological and behavioral sciences better understand practical applications of theoretical approaches to health issues. The course will provide a broad understanding of the major human diseases underlying morbidity and mortality in America. The course will cover most major diseases using a variety of organizational schema including: (1) diseases according to organ systems, (2) diseases according to developmental and age-related processes, and (3) diseases according to causal factors including behavioral (lifestyle), environmental, and genetic factors. The course content is organized to encourage promotion of a healthy lifestyle, prevention of disease and understanding the causes and management of acute and chronic illness. The course includes information and assignments to allow the student to appropriately assess one's own health, estimate health trajectories, access and use the health care systems on campus and in their home communities, and develop a long-term health promotion plan. The student will also learn specific skills to find and evaluate traditional and non-traditional treatment processes when they or family members become sick with an acute illness or chronic disease, and to better engage with health care professionals and the health care system for management of illnesses that they or their family may have or develop. Students will also learn practical skills in being able to access a variety of sources to update knowledge about disease causality and treatment and to critically appraise these sources. Students intending to major in Biobehavioral Health should take BB H 101—Introduction to Biobehavioral Health.

General Education: Health and Wellness (GHW)

BBH 130: Strategies for Addressing the Obesity and Diabetes Epidemics

3 Credits

Strategies for understanding and modifying the factors underlying weight, health, and the current U.S. and worldwide obesity/diabetes epidemics.

General Education: Health and Wellness (GHW)

BBH 143: Drugs, Behavior, and Health

3 Credits

Health aspects of use and abuse of licit and illicit drugs; related social problems and prevention. Designed for non-BB H majors. BB H 143 Drugs, Behavior, and Health (3) (GHA) This course is designed for non-BB H majors who want a fundamental understanding of health and social issues relating to drug and alcohol use and abuse. This course should help students in the biological and behavioral sciences better understand practical applications of theoretical knowledge relating to drug physiology, drug-related health effects, health promotion and disease prevention, issues related to social and psychological effects of drug use and abuse, and drug control policies. The course will cover a broad array of drugs including licit drugs (e.g., therapeutic drugs, tobacco, caffeine, alcohol, etc.), and illicit drugs (amphetamine, marijuana, hallucinogens, etc.) with additional focus on drugs liable for addiction and the progression from occasional use to addiction. The course will cover the basics of drug pharmacology, including pharmacokinetics and pharmacodynamics. Special attention will be given to toxicology and addiction physiology. The course is broad in scope, covering subjects such as alcohol and drug use and misuse in specific populations (youth college students, etc.), toxicity and threats to children and adults posed by common therapeutic drugs (aspirin, prescription drugs, etc.), and prevention and treatment strategies for overdoses (e.g., emergency treatment, use of poison control centers, etc.). The course will involve student and faculty discussion of laws concerning the manufacture, distribution and use of drugs, including alcohol and tobacco, and drug development. Students will engage in activities to learn the most efficacious strategies for prevention, intervention and treatment for drug-misuse-related disorders, including community-based programs to pharmacological intervention, and detoxification. Students will engage in a number of activities that involve self-assessment of personal drug use and potential health trajectories. A significant portion of the course will involve accessing drug-related websites to complete specified exercises in data gathering, synthesis, and critical evaluation of issues relating to drug use and abuse and drug control. These exercises will involve both written reports and oral discussions and applications to contemporary society and community. Students will learn practical skills in being able to access a variety of sources to update knowledge about causality and treatment of addictions and to critically appraise these sources. Students intending to major in Biobehavioral Health should take BB H 451—Pharmacological Influences on Health.

General Education: Health and Wellness (GHW)
BBH 146: Introduction to Health and Human Sexuality
3 Credits
An examination of human sexuality as it relates to health.
General Education: Health and Wellness (GHW)
BBH 148: Coping with College: A First Year Transition Seminar
2 Credits
Exploration of effective learning strategies, university resources, academic requirements and planning, career development issues in discussion-centered environment.
First-Year Seminar
BBH 150N: Safe and Sound: The Intersection of Criminal Justice and Public Health
3 Credits
This course will consider the overlapping responsibilities and epistemologies of criminal justice and public health. Both fields concerned with the promotion of population welfare, the public health and criminal justice systems nevertheless confront the same social problems from different ethical perspectives, research methodologies, and knowledge bases. Each may further mobilize different institutional actors driven by divergent political agendas. While we will discuss the productive collaboration between public health and public safety agencies, we will also consider ongoing ownership struggles over certain issues, behaviors, and even populations. Given its practical relevance to many ongoing social issues and controversies of general importance, this course is motivated by a commitment to community-engaged scholarship and thus will include topics, readings, assignments, speakers, and field trips of local and state importance. At the same time, specific topics will be framed in terms of their national and international importance, and students will be encouraged to link micro-level problems to macro-level processes.
Cross-listed with: CRIMJ 150N
General Education: Health and Wellness (GHW)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies
BBH 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
BBH 197J: Special Topics - InterDomain
3 Credits/Maximum of 3
Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GS/GHW GenEd course.
General Education: Health and Wellness (GHW)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
BBH 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)
BBH 203: Neurological Bases of Human Behavior
3 Credits
An introduction to biopsychology, emphasizing the structure and function of the human brain. BB H (PSYCH 260) 203 Neurological Bases of Human Behavior (3) The nervous system provides the biological underpinning of behavior, and several scientific fields are concerned with the relationship between the nervous system and behavior. The goal of this course is to introduce the principle methods, findings, and theories of these scientific fields. Topics include (a) the anatomy and physiology of the nervous system, (b) how the nervous system gives rise to perception, action, language, memory, emotion and reproductive behavior, and (c) how drugs and mental illnesses affect the nervous system and alter normal perceptual, cognitive, and emotional behavior. The course prepares students for a number of more advanced courses in Psychology and Biobehavioral Health that address specialized topics in neuroscience, and may satisfy a requirement of these majors.
Cross-listed with: PSYCH 260
BBH 210: Biobehavioral Aspects of Genetics
3 Credits
An individual's DNA is a key biological process involved in behavior, health, and disease. The goal of this course is to introduce the foundational concepts of genetics in a Biobehavioral Health framework. This course will examine how genes are encoded by DNA, how DNA is transcribed into RNA, and how RNA is translated into protein. Additionally, this course will cover DNA at the global level of the chromosome. Finally, variation across levels will be explored. For example, variation at the level of an individual DNA base pair or through alterations in chromosome structure. Application of these concepts to human health and disease will be highlighted throughout the course. The course prepares students for a more advanced course in Biobehavioral Health that address specialized topics in health and developmental genetics.
Prerequisites: BIOL 110; BIOL 161
BBH 251: Straight Talks I: Advanced Sexual Orientation/Gender Identity Peer Education
3 Credits
Exploration of social justice issues, diversity leadership, and group facilitation skills related to lesbian, gay, bisexual, transgender, and ally issues. BB H 251 Straight Talks I: Advanced Sexual Orientation/Gender Identity Peer Education (3) (US) Straight Talks I provides students an opportunity to explore various lesbian, gay, bisexual, transgender and allies (LGBTQ+ issues) from an educational perspective. Students will be exposed to theories, terminology, and various speakers who will approach topics such as LGBTQ+ history and multicultural issues. The
course projects are designed to enhance both written and oral skills, and provide students an opportunity to work together. Finally, the course challenges students to think critically about the social, economic, and political cultures around them and how these cultures affect sexual and gender orientation issues.

Course Objectives:

1. To think critically about your spiritual, social, economic, political, and cultural existences and their relationship to your understanding of sexual and gender orientation issues.
2. To develop a critical consciousness that will bring awareness of the ways custom, ritual and tradition helped shape and continue to shape our daily lives.
3. To develop a fuller understanding of the way gender and sexual orientation are conceived of by other people and the ways in which these conceptions link with other elements of identity including ethnicity, class, gender, ability, etc.
4. To challenge you to consider the following questions: a) What does it mean to provide educational programming? b) What does it mean to be a peer educator? c) How do I influence others by my involvement in this program? d) How do I change the world so that it is a better place when I leave it? Praxis.
5. Develop facilitation and presentation skills.
6. Acquire information on sexual orientation, identity development, and queer history.
7. Define your ability to provide programming activities in the form of facilitation, discussion, skits, and exercises.
8. Develop a sense of community and rapport with other panelists through class discussions and projects.

United States Cultures (US)

BBH 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

BBH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BBH 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BBH 301: Values and Ethics in Biobehavioral Health Research and Practice

3 Credits/Maximum of 3

Examines bases for choices among values in personal and professional relations in human development processes and supporting services. This class will give students both background knowledge of and practice in the process of ethical decision making. Students will learn the historical, philosophical, and psychological concepts underlying the study of morality and ethics. Course content will include the history and rationale for regulations regarding the ethical practice of research, medicine, and public health.

Prerequisite: BB H 101

Writing Across the Curriculum

BBH 302: Diversity and Health

3 Credits

Exam the relationship of diverse personal and sociocultural factors to health, like socioeconomic class, race-ethnicity, gender, age, and sexual orientation. BBH 302 / AFAM 302 Diversity and Health (3) (US) is an introduction to an interdisciplinary study of the impact of diversity on health in America and across nations. The course is designed to provide an understanding of the complex interaction between concepts of diversity including but not limited to race, ethnicity, culture, gender, age, socioeconomic status, and sexual orientation. The course will also consider and critique the methods used in the study of these concepts and issues related to the measurement of health among diverse groups. The ultimate goal of this examination is to assist students in developing an appreciation of the current diversity and the impact diversity has on assessments and study of health, health status, and health promotion in America and other nations. The course is also designed to integrate different sources of information about diversity by utilizing critical thinking skills for the consumption of health information. The educational objectives will be to enable students to: 1) Consider the implications of race, ethnicity, gender, age, socioeconomic status and sexual orientation on health/social policies in light of research findings, 2) Understand the legacies and historical events that have impacted our view, the status, and treatment of diverse populations, 3) Appreciate the importance of understanding the origins of different health behaviors that impact biological processes, as well as the impact of biological processes in the context of social, environmental, and cultural influences when examining health issues. To achieve these objectives, the course will involve open class discussions, small breakout group discussions, written assignments, and a presentation (e.g., poster or other media presentation) requiring the acquisition and utilization of information/research from library and internet resources.

Prerequisite: PSYCH100 or SOC 001

Cross-listed with: AFAM 302

United States Cultures (US)

BBH 305: Introduction to Global Health Issues

3 Credits

Course will develop awareness of contemporary issues in global health. BB H 305 Introduction to Global Health Issues (3) This course is an introduction to health and related issues in the global context. It is intended to be an overview of fundamental perspectives about the historical, current, and future public health challenges facing developing and industrialized countries. The course will explore the interrelationships among social structure, culture, demography, health promotion/disease prevention, biology, ecology and health policy of various countries and international health organizations. This course will 1. present key issues related to the history, conceptual frameworks, economic conditions, and policy affecting public health in the global context, 2. examine reports and studies pertaining to major global health issues and comparative research, 3. discuss the role of social structure, culture, gender roles, government policies, and the increasing numbers of the elderly in preventive health behaviors and health promotion in the global context, and 4. critique theories and models used to inform health and development programs in non-Western nations.

Prerequisite: BB H 101

Cross-listed with: AFR 305
International Cultures (IL)
BBH 310: Research Strategies for Studying Biobehavioral Health
3 Credits
Surveys the various research methodologies used in biomedical research, including case, epidemiological, quasiexperimental and experimental approaches.
Prerequisite: BB H 101, STAT 200
BBH 311: Interdisciplinary Integration in Biobehavioral Health
3 Credits
A review of literature relevant to the concepts and findings of different scientific domains as they apply to biobehavioral health.
Prerequisite: BB H 101, BIOI 110, PSYCH100
BBH 315: Gender and Biobehavioral Health
3 Credits
Interdisciplinary study of gender, examining the interaction of biological, behavioral, and sociocultural factors on health differentials throughout the lifespan. BB H 315 Gender and Biobehavioral Health (3) (US) BB H 315 is an interdisciplinary study of the impact of gender differences (and similarities) in health in the United States and the world, examining the interaction of biological, behavioral, and sociocultural factors on health, morbidity, and mortality. The course will also consider and critique the methods used in the study of gender and concepts and issues related to the measurement of health in men and women. The ultimate goal of this course is to assist students in developing an appreciation of the diversity concept of gender, and the impact of this concept on assessments and study of health, health status, and health promotion in America and other nations. The course is also designed to integrate different sources of information about gender by utilizing critical thinking skills for the consumption of health information. The educational objectives will be to enable students to: 1) define the concepts of sex, gender, gender roles, and gender identity and how they contribute to differentials in morbidity and mortality at various life stages, based on epidemiological data and other research, in the United States and other countries; 2) describe biological (e.g., genetic and hormonal) factors that contribute to gender differences and similarities in health at different life stages; 3) describe behavioral factors, such as acquired risks, self-protective behavior, and stress, that contribute to gender differences and similarities in health at various life stages; 4) describe sociocultural factors, such as gender roles, class, race/ethnicity, and educational level that contribute to gender differences and similarities in health at various life stages; 5) describe and design gender-sensitive strategies for health research and health promotion; 6) examine gender differences in a specific illness, disease, or health issue experienced by women and/or men in this country and others, and the contributing factors (e.g., sociocultural) to the differences that may exist; and 7) critique gender research on particular health issues. To achieve these objectives, the course will involve open class discussions, small break-out group discussions with written assignments, short quizzes, a paper requiring the acquisition, utilization, and critical analysis of information/research from library and internet resources, and a group presentation that requires collaborative work.
Prerequisite: BB H 101

United States Cultures (US)
BBH 316: Foundations and Principles of Health Promotion
3 Credits
Basic exposure and skills development in theory and practice in health promotion. BB H 316 Foundations and Principles of Health Promotion (3) BB H 316, Foundations and Principles of Health Promotion, is a 3-credit course required of all BB H majors and available to other students interested in developing a basic knowledge in health promotion interventions. The course is designed to provide students with the conceptual foundation necessary to develop health promotion programs and interventions. It will involve information on both theory and practice. The educational objectives are that students will be able to: 1) define the concepts and levels of health, health promotion, and prevention; 2) describe the variety of settings in which health promotion and preventive services exist 3) identify levels of intervention in planning health education and health promotion programs; 4) describe a rationale for health promotion programs; 5) address the role of culture, environment, and policy in health behavior; 6) explain why different levels of health promotion interventions should be planned using theoretical frameworks. Students fulfill the educational requirement of the course by attending class, completing reading and class assignments and small group project, viewing video tapes, and participating in class discussions.
Prerequisite: BB H 101
BBH 324: HealthWorks Peer Education Training
3 Credits
Designed to train new HealthWorks peer educators, this course addresses behavior theories, promotion strategies, and college health issues. BB H 324 HealthWorks Peer Education Training (3) HealthWorks is a peer education/outreach group that aims to promote health among Penn State students. The mission of HealthWorks is to: increase awareness and knowledge of health issues, such as sexual health, nutrition and fitness, wellness, alcohol, tobacco and other drugs, and body image and eating disorders,-promote healthy lifestyle choices;- provide health education programs, information, and materials to students, and-advocate for a healthy Penn State community. BB H 324 is designed to train students who have been accepted into University Health Services’ HealthWorks program every fall semester. The course will address the topics of health behavior theories, health promotion strategies, and health issues relevant to college populations (i.e., alcohol, nutrition, physical activity, sexual health, sleep, stress, and tobacco). To ensure that new HealthWorks members are trained to effectively promote health, students will gain both knowledge and practical experience in this course. Students will learn about health behavior theories, health promotion strategies, and health topics relevant to college students through formal classroom lectures and examinations. Classroom technology will be utilized to examine campus and national health campaigns and messages, illustrating the theories and strategies discussed in class. To garner practical experience and application-based learning, students will assist with current HealthWorks programming. Members of this class will additionally apply and integrate their new understanding of class topics through a semester project. The small-group project will ask students to propose a future HealthWorks program focused on one or more health topics that is built upon at least one health behavior theory and utilizes evidence-based strategies. By the conclusion of this course, HealthWorks members will possess the knowledge and skills to effectively provide health-related outreach,
advocacy, community development, and education opportunities to students on the Penn State campus.

**BBH 325: Health Promotion Services Training**

3 Credits

This course will provide students with the knowledge and professional skills to deliver peer-based individual health promotion services for the college population. The course will cover a variety of health issues that are relevant to college students, including nutrition, physical activity, sexual health, sleep, and stress (including mindfulness and time management). Students will be taught about each of the health topics over the course of two class sessions. Students will be taught information about how each health topic specifically relates to the college population. Current data about each topic will be included. These issues will be discussed in the context of health promotion principles and applicable health promotion theories. The class will provide an overview of the ecological perspective, but the focus will be on intrapersonal and interpersonal level theories, such as the Stages of Change (Transtheoretical) and Health Belief Models, as well as Social Cognitive Theory. Students will be taught the constructs for each model/theory. Students will be taught about how the theories/models apply to delivering individual health promotion interventions. Students will receive extensive training in motivational interviewing, an evidence-based strategy for promoting health behavior change. The content is designed to help students develop an understanding of the core concepts of motivational interviewing. Students will practice motivational interviewing techniques during class time. The students will deliver individual interventions during class time. Additionally, students will be given course assignments that require them to practice delivering the interventions. Students will learn about professionalism and ethics within the context of delivering individual interventions to college students.

**Prerequisite:** PSYCH 100 or CAS 100

**BBH 368: Neuroanatomy, Behavior, and Health**

3 Credits

The neuroanatomical bases of behavior, health, and disease. BBH 368 Neuroanatomy, Behavior, and Health (3) BBH 368 will examine, in detail and in depth, the relationships between the multitudinous structures of the human nervous system and their roles in monitoring and controlling all functions of the body, in behavior and in health and disease. Because of the complexity of the anatomy of the nervous system, of necessity there will be an emphasis on each student developing a three-dimensional understanding of the brain's structures and their geographic relationships to each other. For students majoring in BBH, this course provides a foundation and preparation for BBH 469 & 470, the two semester Neurobiology/Integrative Neuroscience course sequence, which assumes that the student has a basic, but detailed knowledge of the nervous system. This course will count toward fulfilling the BBH major requirement, "Take 15 credits in Biobehavioral Health." It will also count toward fulfilling the requirement of 9 credits of additional courses in the Neuroscience Minor. Upon successful completion of the course, the student should be able to: a) identify on gross specimens and in slides of sections of the human nervous system the important nuclei, tracts and supporting structures. b) Describe the important pathways and circuits between the different components and nuclei of the human nervous system. c) Describe the role of each nucleus, tract, and circuit in controlling functions and behavior. d) Describe the expected deficits in function and behavior resulting from injury or disruption of each nucleus and tract.

**Prerequisite:** BB H 101; BI SC004, or BIOL 141, or PSYCH260

**BBH 390A: Preparation for Global Health Field Experience**

3 Credits

Designed to help students prepare for the required field experience in the Global Health minor. BBH 390A Preparation for Global Health Field Experience (3) This purpose of this course is to train students admitted to the Global Health (GLBHL) minor to plan and prepare for the required field experience in a global health setting. Students in the minor must take both this course, BB H 390A, and the subsequent field experience course, BB H 390B. This course includes an examination of both practical and academic issues related to successfully completing an appropriate field placement. Focus is given to encouraging students to become reflective global health practitioners who are able to adapt to and work through personally and professionally complex situations. Interactive class lectures, readings, case studies, discussions, assignments and projects/presentations will help students gain an awareness of the socio-cultural, economic, and political context of various kinds of global health professional settings, and to be sensitive to the constraints under which health professionals work in different parts of the world. To broaden their understanding of the realities of engaging in the field of global health, students will have opportunities to meet with individuals who have health work experience in a variety of low and middle-income settings.

**Prerequisite:** BB H 305, BB H 440 or HP A440, and admission to the Global Health minor

**BBH 390B: Global Health Field Experience**

6 Credits

Field experience in a global health setting. BBH 390B Global Health Field Experience (6) The purpose of this course is to provide a supervised field experience in a global health setting for the students who have been admitted to the Global Health Minor (GLBHL). Students in this minor must take BBH 390A "Preparation for Global Health Field Experience" before scheduling this course. Students will spend 6 weeks in the summer working in one of several pre-approved international or domestic health care or public health settings under professional supervision.

**Prerequisite:** BB H 390A and admission to the Global Health minor

**BBH 397: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**BBH 399: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
BBH 402: African Health & Development

3 Credits

Course will address African health and development strategies in the context of health promotion programs. BB H 402 African Health & Development (3) (IL) This course is designed to address African health and development strategies in the context of health promotion programs. Students will analyze the cultural, educational, social, economic, political and environmental impact of health and development in Africa. Emphasis will be on development of health promotion strategies that locate program implementation and evaluation within their cultural contexts. The objectives are to prepare students to: 1. discuss and debate the roles of culture, social contexts, gender, and political economic impact on health behaviors in Africa; 2. critique some of the theory and models used to inform public health programs in Africa; 3. examine the role of historical, spiritual, linguistic, and political impacts on health projects in different countries in Africa; and 4. analyze health priorities in Africa and their impacts on such global initiatives as the Millennium Development Goals; 5. discuss issues related to human rights, population identities in the world and examine their impact on health in Africa. Attendance is required. Students will be expected to participate actively by critically reviewing assigned readings, engaging in class discussions, and preparing and delivering in-class presentations. Grading is based on attendance, participation, presentations, exams and a final research paper.

Prerequisite: BB H 305
International Cultures (IL)

BBH 407: Global Health Equity

3 Credits

Health, social disparities, and equity in the global environment. BB H 407 Global Health Equity (3) (IL) This course focuses on issues related to health, social disparities, and equity in the global environment. It examines the theories of health disparities and equity from the vantage point of Western and non-Western countries. It explores epidemiologic data and the relationships between social structure, culture, demography, health promotion/disease prevention, and health policy of various countries and international health organizations. The course objectives are to: 1. discuss and critique the history, conceptual frameworks, and policy implications of global health disparities and equity; 2. examine epidemiologic data and studies pertaining to major global health issues and cross-national and comparative research; 3. discuss the role of social structure, culture, gender roles, and government policies in preventive health behaviors and health promotion in the global context; 4. critique theories and models used to inform health and development programs in non-Western nations.

Prerequisite: BB H 101 or 3 credits of SOC
International Cultures (IL)

BBH 410: Developmental and Health Genetics

3 Credits

Discussion of genetic influences on development and the interrelationships between genetics and health.

Prerequisite: BIOL 133 or BIOL 222; STAT 200, or STAT 250

BBH 411: Research and Applications in Biobehavioral Health

3 Credits

Research methods, multi-level analyses, and applications in biobehavioral health. BB H 411W Research and Applications in Biobehavioral Health (3) This is an upper-division course on research and applications in Biobehavioral Health and is the designated writing intensive (W) course for the major. The primary goals of this course are to provide the student the ability to effectively: 1) find, organize, integrate, and critique existing knowledge and research in biobehavioral health; 2) generate and analyze new data related to a specific domain though the conduct of original research; 3) interpret, evaluate, and communicate—to both scientific and lay audiences—the results of the original research; and 4) integrate these findings—with due concern for strengths and limitations of the research—back into the body of knowledge on the biobehavioral health topic. In this course the instructor will first introduce the student into a body of knowledge related to a domain involving health and health-related behaviors. Example domains may include areas such as, stress and health, drug/alcohol addictions and health, hormonal impacts on health, smoking cessation programs, obesity and health, sexual behaviors and health, etc. Students will go through the steps involved in original research (e.g., Introduction, Methods and Procedures, Results, Discussion, Summary, Abstract, Bibliography) and written assignments will be involved for each step. Depending on the instructor, the original research may involve laboratory work, collection of survey data, analyses of publically available data, or existing data sets based on faculty’s research program. Students will learn how to use available tools to descriptively summarize and analyze data using computer-assisted software. This is a required course in the Biobehavioral Health major. The course is designed to give skills to acquire, integrate, and critique health-related information and to communicate to professional and non-professional audiences. The course is appropriate for students intending to obtain positions in health promotion and disease prevention and to students seeking to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

Prerequisite: BB H 101, BB H 310, STAT 200

Writing Across the Curriculum

BBH 416: Health Promotion II: Planning, Implementation, and Evaluation

3 Credits

Planning, implementation, and evaluation of health promotion, prevention, and intervention programs; emphasizing evaluation.

Prerequisite: BB H 310, BB H 316

Cross-Listed

BBH 417: Advanced Applications in Health Promotion

3 Credits

Advanced learning experience in health promotion applications in which students will actively participate in planning, implementing, evaluating health programs.

Prerequisite: BB H 416
BBH 420: Developing Stress Management Programs
3 Credits
Planning, developing, and implementing strategies for stress management programs for health education professionals in school, community, and corporate settings.
Cross-Listed
BBH 432: Biobehavioral Aspects of Stress
3 Credits
Comprehensive discussion on the mechanisms of stress-induced diseases.
Prerequisite: BB H 101, BIOL 141
BBH 440: Principles of Epidemiology
3 Credits
Theory of epidemiology and significant case studies; potential applications to health care. BB H / HPA 440 Principles of Epidemiology (3) (US, IL) This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations. The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors; 3) be able to interpret and critique epidemiological research reports on the identification of risk factors and casual factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful interventions; and 7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world. This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers. Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.
Prerequisite: BB H 101 or BIOL 110 or H P A310; STAT 200 or STAT 250 Cross-listed with: HPA 440
International Cultures (IL)
United States Cultures (US)

BBH 446: Human Sexuality as a Health Concern
3 Credits
Examination of human sexuality as a integral part of basic health education and health care for persons of all ages.
Prerequisite: BB H 101
Cross-Listed
BBH 451: Pharmacological Influences on Health
3 Credits
Biological and behavioral aspects of therapeutic and recreational drug use and misuse, and their relationships to health. BB H 451 Pharmacological Influences on Health (3) The primary theme of this course is to review and integrate information relevant to the actions, uses, and biobehavioral influences of psychoactive drugs. Concepts relevant to pharmacology, biobehavioral health, and drug use and abuse will be learned. The primary objectives of this course are: 1. To provide an understanding of the concepts relevant to pharmacology, including: principles of drug action (pharmacokinetics, pharmacodynamics), drug safety, and drug effectiveness. 2. To provide a descriptive representation of the breadth of topics relating to behavioral and biological influences of psychoactive (i.e., therapeutic, recreational) drugs on human health and disease. 3. To provide exposure to and enhance critical thinking skills in current research related to the biobehavioral effects of psychoactive (i.e., therapeutic, recreational) drugs, including: psychoactive drug use and abuse, therapeutic drug use, and drug addiction treatments.
Prerequisite: BB H 101, BIOL 141, PSYCH100
BBH 452: Women's Health Issues
3 Credits
Recommended Preparations: BIOL 141; PSYCH 100; WMNST 100 N452 examines major health issues concerning women today. The topics covered include, but are not limited to: developing a healthy lifestyle—nutrition and exercise; family planning—birth control methods; violence against women—relationship rights and signs of a batterer; eating disorders—anorexia, bulimia, and binge eating; sexual wellness; substance abuse—alcohol, prescription drugs; menopause signs and symptoms, treatments; and medical conditions affecting women today such as cancer, arthritis, multiple sclerosis and heart disease. The course emphasizes that women’s lives are influenced by social, economic, political, and cultural conditions.
Recommended Preparation: BIOL 141 or PSYCH 100 or WMNST 100 Cross-listed with: NURS 452, WMNST 452
United States Cultures (US)

BBH 458: Critical Issues in Reproduction
3 Credits
Examination and analysis of the new reproductive technologies from the standpoint of medical ethics, feminism, and sociocultural influences.
Prerequisite: BIOL 141 or PSYCH100 or WMNST100 Cross-listed with: WMNST 458
General Education: Social and Behavioral Scien (GS)
BBH 468: Neuroanatomical Bases for Disorders of Behavior and Health

3 Credits

An examination of the anatomical/cellular/molecular bases for human central nervous system disorders and their impacts on victims/families/caregivers. BBH 468 Neuroanatomical Bases for Disorders of Behavior and Health (3) This course will examine in detail and in depth the neuroanatomical and cellular/molecular/genetic bases for selected disorders of the human central nervous system (e.g., Parkinson’s, Alzheimer’s, stroke, etc.) and their impacts on the victim, his/her daily life and his/her family and care givers. Damage to, or malfunctions of, any part of the central nervous system causes specific and characteristic disruptions of normal processes, which manifest as abnormal and/or absent behaviors. Current research on the anatomical, cellular, molecular, and genetic bases for the disorders and the current/future trends in prevention/treatment of the disorders will be studied. Upon successful completion of the course, the student should be able to: a) describe the physical signs, symptoms, causes, effects on the patient and his/her family & care givers, prognoses, treatments, and support systems available to these patients, of the neurological disorders covered in this course; b) describe the neuroanatomical, cellular, and molecular bases for these conditions; c) describe the current research on these disorders and the new prevention/treatment approaches being developed. The evaluation of students’ performances in the course will be typically based on multiple choice examinations and a library research paper. This course will count toward fulfilling the BB H major requirement, "Take 15 credits in Biobehavioral Health.";

Prerequisite: BB H 368, BB H 469 or PSYCH260

BBH 469: Neurobiology

3 Credits

Students will acquire an understanding of basic neurobiology, the terminology of neuronal structures and functions, as well as experimental approaches designed to integrate the principles of neural cell biology, neurophysiology, neurochemistry, neuroendocrinology, neuropharmacology, genetics and molecular biology. The LEARNING OBJECTIVES of this course are to establish a working knowledge and understanding of: (I) the cellular structures, organelles and passive and active membrane properties important for neural function, (II) the neurotransmitters, receptors, ion channels and 2nd messenger systems underlying synaptic transmission and other forms of neural signaling, (III) the development of the nervous system including neurogenesis, neural maturation, apoptosis, synaptogenesis in both the developing and adult CNS, and (IV) the molecular mechanisms underlying synaptic plasticity and learning and memory. Lastly, (V) the course will demonstrate applications of above knowledge to select complex diseases of the central nervous system.

Enforced Prerequisite at Enrollment: BIOL 230 W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M

Cross-listed with: BIOL 470

BBH 470: Functional and Integrative Neuroscience

3 Credits

Neurobiological function in motivated behaviors, motor and sensory function, learning and memory, development, sexual differentiation, and pathology.

Enforced Prerequisite at Enrollment: BIOL 469

BBH 490: Introduction to Internship Experience

3 Credits

Provide an integrative learning experience to develop professional skills encountered in an internship experience and future careers in biobehavioral health. BBH 490 Introduction to Internship Experience (3) This course is a prerequisite for BB H 495, Internship Experience in Biobehavioral Health. This course will provide students with the professional and academic skills necessary to develop an internship, be successful in an internship and equip students with the tools necessary to launch a career within the field of BBH or enable students to prepare more competitive applications for entry into post baccalaureate programs in medical fields or graduate school. The primary goal of the course is to provide integrative learning experiences preparing students to be successful in their internship endeavor, while learning practical skills necessary to flourish in future career choices. Course topics include: professional self-assessment and critical reflection, experiential learning, person/environment fit, resume creation and professional writing criteria, practical skills related to securing an internship consistent with professional goals, interviewing skills, professionalism and ethics within the BBH field, effective communication and internship agreement guidelines. Through this practical application, students will gain the necessary proficiencies and awareness of career settings, protocols and contexts under which BBH specialists work and/or prepare for future educational opportunities.

Prerequisite: at least 9 credits from 300-level BB H

BBH 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

BBH 494H: Senior Honors Thesis

1-6 Credits/Maximum of 6

Independent study related to a student's interests directed by a faculty supervisor and culminating in the production of a thesis.

Prerequisite: approval of honors thesis advisor Honors

BBH 495: Internship Experience in Biobehavioral Health

6-12 Credits

This course provides experiential learning in the field. Internship Supervision and support will be provided by site and university personnel.

Prerequisite: BB H 490

BBH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
BBH 496H: Independent Honors Study in BBH 1-3 Credits/Maximum of 6

For non-thesis independent study/research by Schreyer Honors College scholars.

Honors

BBH 497: Special Topics 1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BBH 499: Foreign Studies 1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Biochemistry and Molecular Biology (BMB)

BMB 1: Understanding the Bases of Human Disease

3 Credits

A broad survey of the molecular and cellular factors that contribute to an understanding of selected human diseases. B M B 001 Understanding the Bases of Human Disease (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. B M B 001, Understanding the Bases of Human Disease, is a survey of the most common diseases of humans. In addition to discussing various diseases, symptoms, outcomes, prevention and treatment options, we also study disease processes by describing events at the cellular or DNA level. We will come to appreciate that various cellular, metabolic or genetic problems can give rise to disorders that carry a common name - anemia, for example. One form, Sickle Cell anemia, also provides a good example of another theme of the course: how a small genetically-based problem in one function of one cell type can lead to a cascade of malfunctions with ramifications system wide. How medicines work and how they are metabolized by the body will be discussed. Treatment of the growing problem of drug/drug, drug/food, and drug&supplement' interactions will also be included. Any study of infectious disease must be prefaced by a discussion of the proper functioning of the immune system and how its various components work together to fight an infection. The proper function or malfunction of the immune system is also studied for relationships to noninfectious diseases such as cancer and certain genetic disorders. As with any system of the body, the immune system also has its own unique set of disorders: allergy, hypersensitivity, autoimmunity and immune deficiency - congenital and acquired. In our exploration of infectious diseases, we will look at various mechanisms of infection used by different types of organisms and at strategies the offending organisms might have to fool the immune system, hide from the immune system, or fight against it. A prime example is the ability of HIV to hide from the immune system. Knowing disease mechanisms and the life cycle of the infectious agent can suggest strategies for treatment of the disease. Another focus of this unit will include discussion of emerging and re-emerging diseases. Human genetic traits and susceptibilities are discussed throughout the course, but we will also address the major genetic disorders, patterns of inheritance, chromosomal disorders and new treatments available for a growing number of such disorders. Included under this topic is the problem of cancer in all of its various forms today. The course addresses issues of normal cell/cancer cell characteristics and the concept of cancer as a &quot;genetic disease&quot;. Using the information gleaned from units on cell function, genetics and the immune system, we will explore new treatment options evolving today. No course on treatment of disease is complete without the study of the two major &quot;lifestyle&quot; diseases: coronary vascular disease and diabetes. We will explore the environmental factors as well as the genetic and infection-related factors often associated with these diseases. The course is independent of all other B M B courses and does not serve as a prerequisite for any other course.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BMB 12: The Science of Sickness - Linked

3 Credits

During this course, students will learn about the scientific process and how science has contributed to the knowledge used in the medical field to diagnose, treat, and prevent disease. The course will include a broad survey of the molecular and cellular factors that contribute to an understanding of select human diseases. By the end of the course, students will appreciate how various cellular, metabolic or genetic problems can give rise to a variety of diseases and disorders. The knowledge gained about molecular processes will also be used in order for students to discuss the scientific basis of and ethical dilemmas related to controversial and cutting-edge diagnostic, treatment and prevention strategies such as drug development, clinical trials, genetic testing, genetic engineering, and stem cell therapy. Lastly, students will gain knowledge necessary to analyze statements made in the popular press about disease or disease treatments and determine if those statements are grounded in scientific research. The specific diseases covered each semester may vary based on student and instructor interest, but will include a discussion of diseases that have a well understood scientific basis as well as a lifestyle component such as certain types of cancer, as well as diabetes/metabolic syndrome. Students will analyze the influence of molecular, genetic and environmental factors as well as lifestyle choices in regards to disease prevalence and severity. Diseases that have fitness related treatment options will also be discussed in order to provide further opportunities for students to integrate material with the linked course, KINES 84Z. As a course that meets general education (GN) requirements, students will increase their scientific literacy, their critical and analytical thinking, and ethical reasoning skills. As a linked course, BMB 1Z can satisfy the Integrative Studies requirement in General Education as long as students successfully complete both BMB 1Z and KINES 84Z. Students will ultimately be able to use the knowledge gained in this course to better understand disease processes, and will be able to make better informed decisions regarding their health and well-being or that of a loved one.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason
Biochemistry focuses on the chemistry of living organisms. This course provides basic biochemistry laboratory skills and exposure to widely-used methodology to develop a fundamental understanding of biochemistry needed for advanced courses in the student’s major and compatible with the student’s career interests. Outside resources for the student include reserved books and a course web site: www.bmb.psu.edu/courses/daniel/BMB212/default.htm.

**Enforced Prerequisite at Enrollment:** or concurrent: BMB 211

**BMB 221: Applied Biochemistry**

2 Credits

Application and correlation of biochemical events to physiological-nutritional processes in specialized cells, fluids, and whole animals. Students may not receive credit for both B M B 221 and 401. B M B 221 B M B 221 Applied Biochemistry (2)In B M B 221, students will build on their knowledge from Elementary Biochemistry (B M B 211). Emphasis is on the application of biochemical principles to specific problems in medicine, agriculture, pharmaceuticals and biotechnology. Students review fundamental principles and learn how biochemical methods, techniques and theory are applied. Class presentations are computer based in some cases. The course may also include class discussions. Evaluation and grading varies with the instructor, but possible methods of evaluation include multiple choice examinations, essay-short answer
questions, and in-class contributions. Students will have completed at least three semesters of chemistry before B M B 221, because Elementary Biochemistry (B M B 211) is a prerequisite, and inorganic (CHEM 012) and organic chemistry (CHEM 034 or CHEM 038) are prerequisites for B M B 211. Knowledge of organic chemistry and basic biochemistry is essential so that the course can focus on applications rather than introductory material. B M B 221 is a requirement for those Biotechnology majors who choose not to take the 400-level series of introductory biochemistry courses. It is also required of students enrolled in the science option of the Dairy and Animal Science major. It serves as an elective for all other majors. It is not approved as a general education course.

**Enforced Prerequisite at Enrollment:** B M B 211

**BMB 251: Molecular and Cell Biology I**

3 Credits

BMB 251 Molecular and Cell Biology I (3) is an introduction to the fundamental principles of molecular and cellular biology, with a primary focus on eukaryotic cells. Topics covered will include elementary biochemistry; structure and function of biological macromolecules, the cell and its organelles; the role of biological membranes in bioenergetics and sub-cellular compartments. There will be a particular emphasis on the molecular mechanism of heredity; the organization and expression of genetic information; experimental methods used in the analysis of gene expression and the relationship between gene/protein structure and function.

**Enforced Prerequisite at Enrollment:** CHEM 112 or CHEM 112H

Recommended preparations MICRB 201 or MICRB 201H

Cross-listed with: MICRB 251

**BMB 251H: Molecular and Cell Biology I**

3 Credits

Biomolecules, genetic mechanisms, organization of cells and their organelles, DNA replication, protein synthesis, membranes, the cell nucleus, energy conversion. BMB 251H Molecular and Cell Biology I (3) This course is an introduction to the fundamental principles of molecular and cellular biology, with a primary focus on eukaryotic cells. Topics covered will include elementary biochemistry; structure and function of biological macromolecules, the cell and its organelles; the role of biological membranes in bioenergetics and sub-cellular compartments. There will be a particular emphasis on the molecular mechanism of heredity; the organization and expression of genetic information; experimental methods used in the analysis of gene expression and the relationship between gene/protein structure and function. A key feature of the Honors course is the use of review papers and peer-reviewed journal articles as integral components of the course. The objectives of this component of the Honors course are to: 1) introduce students to the scientific method (the formulation of hypotheses based on observation and the processes underpinning the rigorous test of such hypotheses); and 2) provide the intellectual framework for a critical evaluation of the literature. Students are expected to engage in classroom discussion and will be evaluated by a combination of classroom presentations, multiple choice and short essay exams.

**Enforced Prerequisite at Enrollment:** BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M

Recommended preparations BMB 251H or BIOL 230M

**BMB 252: Molecular and Cell Biology II**

3 Credits

Continuation of BMB 251 / MICRB 251; cytoskeleton, cell growth, division, adhesion, signaling, germ cells, differentiation, immune system, nervous system, plant cells. BMB 252H Molecular and Cell Biology II (3) This course is the second part of BMB 251H. This section focuses on the internal organization on eukaryotic cells and their organization in multi-cellular organisms. Topics covered include cell communication, the cytoskeleton, cell cycle, fertilization and development of multi-cellular organisms, genesis of tissues, and the molecular mechanisms of cancer and immunity. There will be a particular emphasis on how the basic principles and experimental approaches presented in BMB 251H are employed to address questions related to the topics that will be covered in BMB 252H. As in BMB 251H, a key feature of the Honors section will be the use of review papers and peer-reviewed journal articles as integral components of the course. The objectives of this component of the Honors section are to: 1) introduce students to the scientific method (the formulation of hypotheses based on observation and the processes underpinning the rigorous test of such hypotheses); and 2) provide the intellectual framework for a critical evaluation of the literature. Students are expected to engage in classroom discussion and will be evaluated by a combination of classroom presentations, multiple choice and short essay exams.

**Enforced Prerequisite at Enrollment:** BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M

Recommended preparations BMB 251H or BIOL 230M

**Honors**

**BMB 294: Research Projects**

1-6 Credits/Maximum of 8

Supervised student activities on research projects identified on an individual or small-group basis.

**BMB 398: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
BMB 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BMB 400: Molecular Biology of the Gene
2-3 Credits

Biochemistry of genetic phenomena, including the structure, replication and dynamics of genes and chromosomes, their expression and regulation. BMB 400 Molecular Biology of the Gene (2-3)Molecular Biology of the Gene examines the flow of information in living things at the molecular level. Topics such as the following are included: 1) DNA replication, repair and recombination, 2) RNA transcription and modification, and 3) protein translation, folding and modification. This class is designed as a one-semester course having the objectives of understanding concepts in molecular biology and gene regulation, and exploring research materials and methods used in the laboratory. Course materials are prepared not only from the textbook but also from the primary literature. Therefore, students who want to take this course should have some familiarity with reading research articles. BMB 400 is for advanced undergraduates who have already taken introductory molecular biology and biochemistry. Knowledge of molecular biology is essential background for pursuit of a career in the life sciences, including academia, medicine, industry, forensic science and science policy.

Enforced Prerequisite at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M ) and ( CHEM 212 or CHEM 212H )

BMB 400A: Molecular Biology of the Gene
3 Credits/Maximum of 3

Molecular Biology of the Gene examines the flow of information in living things at the molecular level. Topics such as the following are included: 1) DNA replication, mutation, repair and recombination, 2) RNA transcription and modification, 3) protein translation, folding and modification, and 4) gene regulation. This class is designed as a one-semester course having the objectives of understanding concepts in molecular biology and gene regulation, and exploring research materials and methods used in the laboratory. Subjects are related to forensic applications when applicable. Course materials are prepared not only from the textbook but also from the primary literature. Therefore, students who want to take this course should have some familiarity with reading research articles.

Enforced Prerequisites at Enrollment: ( BIOL 222 or BIOL 322 ) and ( BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M ) and ( CHEM 212 or CHEM 212H )

BMB 401: General Biochemistry
3 Credits

Principles of the structure and function of biological molecules, including carbohydrates, lipids, membranes, proteins, and enzymes. BMB 401 is the first course of the general biochemistry series, a sequence designed to prepare students for careers and graduate study in the life sciences. Overall, biochemistry describes, in chemical and molecular terms, the structures, mechanisms, and chemical processes at work in all living things, and abstracts organizing principles that underlie life in all its diverse forms. Building upon concepts introduced in molecular and cellular biology and in organic chemistry, students in BMB 401 synthesize and apply this knowledge toward understanding the structure and function of the major classes of cellular constituents: water, and the various macromolecules – amino acids and proteins, sugars, and polysaccharides, nucleotides and nucleic acids, fatty acids and lipids, and membranes and various membrane proteins. These molecules interact to comprise the next level of multi-and mixed molecular structures and organelles that enable a cell to carry out its many metabolic functions. Students also learn about the technologies used to study cellular components and processes, and current advances in biotechnology that have accelerated the pace of discovery in the field. Having gained familiarity with the molecules found in a cell, students are well-equipped to take on more advanced topics in the exciting, rapidly-evolving fields of the life sciences. An overriding theme in biochemistry is
that polymers of living systems, though structurally large and functionally complex, are highly ordered chemical entities, with specific sequences of monomeric subunits giving rise to discrete structures and functions. The course begins with an introduction to proteins, covering the structural basis of protein functions and then moves on to enzyme kinetics and mechanisms. Next, students explore simple and complex carbohydrates and topics in glycobiology that include energy storage, framework skeleton, and specific molecular recognition. Various classes of lipids, including phospholipids, complex lipids, membrane biology and transport systems, are covered next. Following is an analysis of the biochemical basis of signal transduction describing how specific signals regulate biomolecular activity within a cell, and between cells to keep an organism in homeostasis. Lastly, as a transition to intermediary metabolism in BMB 402H, an introduction to bioenergetic principles is included to provide a framework for understanding pathways of carbon and nitrogen metabolism, using glycolytic reactions as an example. Students may not receive credit for both CHEM 476 and BMB 401H.

**Enforced Prerequisites at Enrollment:** (CHEM 212 or CHEM 212H) and (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) Honors

**BMB 402: General Biochemistry**

3 Credits

BMB 402 General Biochemistry (3) is a comprehensive survey of the pathways and regulation of intermediary metabolism. Most, if not all, of the students taking BMB 402 intend to pursue a Ph.D., M.D. or M.D./Ph.D. degree after graduation. Since biochemistry is an important discipline for advanced studies in life and medical sciences, a major goal of BMB 402 is to prepare students well for their future challenges in graduate or medical school. The major topics covered include glycolysis, TCA cycle, metabolism of fatty acids, lipids (phospholipids, cholesterol and sphingolipids), amino acids and nucleotides, signal transduction, and human genetic diseases. Since biochemistry is a very rapidly progressing discipline, any new developments not covered by the textbook are introduced in the lectures or via discussion of current scientific papers at an appropriate level. In addition, students must be able to integrate information learned from different but related material.

**Enforced Prerequisites at Enrollment:** BMB 401 or BMB 401H or CHEM 476

**BMB 402H: General Biochemistry**

3 Credits

Comprehensive survey of the pathways and regulation of intermediary metabolism. BMB 402H General Biochemistry (3) provides a more intimate and interactive class environment than does BMB 402. Most, if not all, of the students taking BMB 402H intend to pursue a Ph.D., M.D. or M.D./Ph.D. degree after graduation. Since biochemistry is an important discipline for advanced studies in life and medical sciences, a major goal of BMB 402H is to prepare students well for their future challenges in graduate or medical school. The textbook used is more advanced than that used in BMB 402, and it is what is typically used in biochemistry courses taught at premier medical schools and graduate schools. The class is conducted at a challenging level to provide students with the opportunity to treat topics in greater depth and to explore current development more fully than is possible in BMB 402. The major topics covered include glycolysis, TCA cycle, metabolism of fatty acids, lipids (phospholipids, cholesterol and sphingolipids), amino acids and nucleotides, signal transduction, and human genetic diseases.
covers thermodynamics, solution chemistry and kinetics. The study of thermodynamics includes the three laws of thermodynamics, and the concepts of energy, entropy and enthalpy. Solution chemistry includes the study of colligative properties, ligand binding and energetics in biological systems. Kinetics covers the study of both chemical and enzyme kinetics, as well as enzyme inhibition.

**Enforced Prerequisites at Enrollment:** (MATH 141 or MATH 141B or MATH 141H) and (PHYS 212 or PHYS 212H or PHYS 251) and (CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H)

BMB 428H: Physical Chemistry with Biological Applications
3 Credits

Chemical thermodynamics and kinetics with applications to biological problems.

Honors

BMB 430: Developmental Biology
3 Credits

Developmental Biology introduces students to one of the most complex and exciting areas of modern biology. This course will cover basic concepts using a comparative embryology approach and focus on molecular and genetic analysis of mechanisms involved in cell differentiation and organ development. Students will learn how studies of development in different model organisms including invertebrate and vertebrate species have identified a network of evolutionarily conserved genes and signaling pathways that regulate embryonic development and morphogenesis.

**Enforced Prerequisites at Enrollment:** BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M Recommended preparations

BIOL 222 or BIOL 322

Cross-listed with: BIOL 430

BMB 432: Advanced Immunology: Signaling in the Immune System
3 Credits

The study of signaling pathways that regulate the immune response. BMB 432 / MICRB 432 / VBSC 432 Advanced Immunology: Signaling in the Immune System (3)This course will use the immune system as a model in which to study how cells communicate in order to coordinate an immune response. We will focus on signaling mechanisms that regulate such immune responses as T cell activation, Th1/Th2 differentiation, macrophage activation, and migration of immune cells to sites of inflammation. All lectures are based on recent reviews by key investigators in each field, as well as primary articles to present students with the most recent advances, techniques, and approaches used. The goal of the course will be to convey a basis understanding of intracellular signaling mechanisms that will pertain to all areas of biology, an appreciation for current questions and future directions in the field, and an in depth understanding of the signals that govern immune responses. The material presented will build on the basic concepts learned in BMB 400 and MICRB 410, and will lay the foundation for more advanced courses at the graduate level.

**Enforced Prerequisites at Enrollment:** (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (MICRB 410 or VBSC 410) Cross-listed with: MICRB 432, VBSC 432

BMB 433: Molecular and Cellular Toxicology
3 Credits

In-depth coverage of processes by which drugs/chemicals interact with biological systems and the experimental approaches used to study these processes.

**Enforced Prerequisite at Enrollment:** BMB 401 or BMB 401H or BMB 211 Cross-listed with: VBSC 433

BMB 435: Viral Pathogenesis
3 Credits

Viral Pathogenesis provides students with a general knowledge of medically relevant viruses, with a specific focus on important human viral pathogens. The course is meant to help students understand how viruses cause diseases in humans and animals. Lectures and in-class discussions will focus both on the fundamentals of viral infection and disease mechanisms, and on contemporary virology-related topics in the scientific literature. Topics discussed can be divided into two main areas: (1) general concepts related to viral pathogenesis and the control of viral infections; and (2) specific viruses that cause human disease including HIV-1, herpes viruses, papillomaviruses, influenza virus, West Nile virus, Ebola virus, and SARS virus. Although prior knowledge of virology is not required for taking this course, a working knowledge of molecular biology, cell biology, immunology, and some microbiology is helpful.

**Enforced Prerequisite at Enrollment:** (MICRB 201 or MICRB 201H) and (BMB 252 or MICRB 252 or BMB 252H) or (BIOL 230W or BIOL 230M) Cross-listed with: MICRB 435, VBSC 435

BMB 437: Physiological Biochemistry
2 Credits

Physiological aspects of biochemistry, with emphasis on mammalian metabolism, specialized tissue and fluid functions, detoxification mechanisms, energetics, and physiological interrelationships.

**Enforced PreRequisite at Enrollment:** BMB 402

BMB 442: Laboratory in Proteins, Nucleic Acids, and Molecular Cloning
3 Credits

Laboratory in enzyme purifications and assay techniques; nucleic acid isolation and characterization, including plasmid preparation. BMB 442 / MICRB 442 Laboratory in Proteins, Nucleic Acids, and Molecular Cloning (3)The DNA portion of B M B/MICRB 442 serves as an introduction to fundamental techniques of recombinant DNA technology and as a reinforcement of principles of Molecular Genetics from lecture courses. The central experiment entails all basic procedures necessary to clone a gene, i.e. to make a recombinant molecule comprised of DNA from two sources. Students use restriction enzymes to cut two distinct DNA molecules into smaller fragments. The fragments are mixed and treated with the enzyme Ligase, which randomly combines small fragments into large recombinant DNA molecules in new combinations different in composition from either original molecule. The recombinant molecules, which include genes that confer drug resistance, are transformed into E. coli cells that initially have no drug resistance. Cells that acquire recombinant DNA molecules are identified by selective plating on growth media containing drugs. From the transformed cells, recombinant DNA is isolated and analyzed by agarose gel electrophoresis, completing the array of basic gene cloning techniques. In addition to this central,
multi-session experiment, students also do PCR and an investigation of the lac operon, a classic molecular genetic model system. The proteins portion of BMB 442 / MICRB 442 is designed to introduce students to protein biochemistry topics and laboratory techniques typically encountered in academic and commercial settings. Students will learn about buffers, spectroscopy, enzyme purification and characterization methods. Specifically, the experiments include preparation of buffers and performing kinetic studies to determine $K_m$ and $V_{max}$ values. Separation of a mixture of phycobiliproteins using ion-exchange column chromatography is a major experiment that the students will perform to learn protein purification methods. In this experiment they will learn how to pour a column, apply sample, elute it with salt gradient and collect fractions using automated fraction collector. Ammonium sulfate precipitation and dialysis will be part of protein purification procedures. Characterization of the separated proteins will be performed by determining the absorption spectra with spectrophotometer and by determining the molecular weights of the subunits of the phycobiliproteins by SDS-polyacrylamide gel electrophoresis.

**Enforced Prerequisites at Enrollment:** (CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H ) and (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) or (MICRB 201 or MICRB 201H) Concurrent Courses: BMB 211 or BMB 401 or BMB 401H

**Cross-Listed**

**BMB 443W: Laboratory in Protein Purification and Enzymology**

3 Credits

This course is intended to provide advanced Biochemistry & Molecular Biology students with instruction on handling various laboratory methods to uses to explore the physical & chemical properties of proteins and other topics relevant to enzymes such as protein purification techniques and enzyme kinetic assays. In addition students will have hands-on laboratory experience conducting experiments related to 1) enzyme kinetics and product inhibition pattern to determine the order of product release, 2) purification of proteins such as rabbit muscle aldolase using a variety of protein purification methods including salt precipitation, dialysis, and ion-exchange/affinity chromatography using phosphocellulose resin, 3) determination of specific activity and purity of a student purified protein, 4) determination of molecular weight of native enzymes using gel-filtration-HPLC and subunit molecular weight by SDS-PAGE, 5) determination of isoelectric point and identification of C-terminal amino acid of a purified protein, and 6) determination of optimal conditions for protein crystal growth. Student performance is evaluated through a variety of assessments, including lab reports organized in accordance to the biochemistry journal articles and through written examinations that assess the understanding of principles and methodology.

**Enforced Prerequisites at Enrollment:** BMB 442 and (BMB 401 or BMB 401H)

**Writing Across the Curriculum**

**BMB 445W: Laboratory in Molecular Genetics I**

2 Credits

Laboratory in molecular techniques in gene analysis and microbial genetics, emphasizing in vitro methodologies. BMB 445W Laboratory in Molecular Genetics I (2) The objectives of BMB 445W are to provide advanced Biochemistry and Microbiology students with instruction in (1) techniques commonly used in modern research and clinical laboratories in this field, (2) evaluation of the quality of experimental data, including appropriate analysis, and (3) presentation of results of laboratory work in written form. Experiments are focused on key techniques and procedures such as DNA isolation, polymerase chain reaction, Southern hybridization analysis, cloning, and DNA sequencing. Students are evaluated via written lab reports and written examinations that assess the understanding of principles and methodology. BMB 445W is an extension of the nucleic acid section of BMB 442, which is a prerequisite for BMB 445W.

**Enforced Prerequisites at Enrollment:** BMB 442 and (MICRB 201 or MICRB 201H) Recommended Preparations (MICRB 202 or MICRB 203 ) and BMB 400

**Writing Across the Curriculum**

**BMB 448: Model Systems and Approaches in Cell Biology Inquiry**

2 Credits

Advanced laboratory that uses inquiry-based approaches to analyze organelles, genetic mechanisms, and metabolic processes in eukaryotic organisms.

**Enforced Prerequisites at Enrollment:** ( BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M ) and ( MICRB 202 or MICRB 203 )

**RECOMMENDED PREPARATIONS** BMB 442

**BMB 450: Microbial/Molecular Genetics**

2 Credits

This course will focus on understanding the mechanisms and applications of the tools of both classical and molecular genetics to the study of prokaryotic organisms. To that end, topics to be discussed will include: 1) structure and replication of bacterial genomes (chromosomes, plasmids, etc.); 2) the organization of genes on bacterial genomes (operons, regulons, etc.); 3) regulation of gene expression; 4) mutagenesis and DNA repair; 5) recombination; 6) extrachromosomal DNA elements (plasmids, transposable elements and bacteriophages); 7) gene transfer in bacteria; 8) mechanisms of "immunity" to foreign DNA uptake; and 9) classical and molecular genetic analyses (complementation, conditional mutations, screens and selections, recombinant DNA, HTP techniques, nucleic acid mobility shift assays, blots, gene fusions, etc). The course will utilize a variety of formats including formal lecture presentations, guest lectures by BMB faculty performing research in the area of prokaryotic genetics, as well as student presentations.

**Enforced Prerequisites at Enrollment:** ( BIOL 222 or BIOL 322 ) and ( MICRB 201 or MICRB 201H )

**Cross-listed with:** MICRB 450

**BMB 460: Cell Growth and Differentiation**

3 Credits

Mechanisms and regulation of protein trafficking, organelle biosynthesis, cell development, signaling and cell cycle control. Emphasizes experimental design and analysis. BMB 460 / MICRB 460 Cell Growth and Differentiation (3) is a unique course that uses the primary literature to teach significant content in advanced cell biology while simultaneously exposing students to the scientific craft of experimental design and analysis. In addition to exploring historical and current cell biology research articles, students will develop two vital scientific skills: critical thinking as applied to experimental data and creative thinking about solving unresolved questions in cell biology. In this course students will read from journals to explore questions about cell biology and how
BMB 474: Analytical Biochemistry

3 Credits

Physical/chemical theory and techniques that emphasize purification and characterization of biological macromolecules, including proteins, lipids and nucleic acids. B M B 474 Analytical Biochemistry (3) This three-credit course deals with acquiring knowledge of laboratory skills required for success in experimental biochemistry and molecular biology. It is particularly suited for students intending a career as a research scientist in the areas of biochemistry, biotechnology, bioengineering, microbiology, or molecular biology. Course content focuses on the detection, purification and identification of biological macromolecules such as practice of separation science with emphasis on diffusion, gel permeation chromatography, ion-exchange chromatography, affinity chromatography, sedimentation velocity ultracentrifugation, sedimentation equilibrium ultracentrifugation, density gradient ultracentrifugation, agarose gel electrophoresis, SDS gel electrophoresis, isoelectrofocusing, membrane filtration and dialysis (including Donnan equilibrium), ligand binding, high performance gas chromatography, high performance liquid chromatography, mass spectrometry, and immunological methods of macromolecules. The second unit includes the theory and practice of biological spectroscopy with emphasis on visible, infrared, circular dichroism, optical rotary dispersion, Raman, resonance Raman, nuclear magnetic resonance, electron paramagnetic resonance, Mossbauer, surface plasmon resonance, electron-nuclear double resonance, and electron spin echo spectroscopy of macromolecules. The lectures are designed to introduce a particular topic, to derive relevant equations, to supplement reading material with practical examples, and to clarify points in assigned problem sets. Two guest lectures by experts in the field will provide up-to-date information on mass spectroscopy and Mossbauer spectroscopy, and two site-visits, one to the mass spectrometry core facility and the other to the magnetic resonance core facility, will provide hands-on experience. Problem sets are not collected or graded; rather, answers are handed out in the following class period. This method provides the ability to collaborate with others on solving problems and to self-check work.

Enforced Prerequisite or concurrent at Enrollment: BMB 428 or CHEM 450

BMB 480: Cancer Development and Progression

3 Credits

BMB 480 / MICRB 480 Cancer Development and Progression (3) explores how cancer initiates and progresses with a focus on the interactions between tumor cells and normal tissues in the body. The goal of the course is to build fundamental knowledge of the mechanisms that drive cancer, and the current advances and challenges in cancer treatment. Genetic, biochemical, mechanical, and metabolic aspects of cancer will all be discussed along with relevant experimental techniques. RNA and DNA viruses that cause cancer will be highlighted as agents leading to the discovery of oncogene and tumor suppressor signaling pathways, and as ongoing contributors to cancer-related death. Significant attention will be given to the role of the immune system in cancer development, prevention, and treatment. By understanding mechanisms leading to the disruption of signaling pathways in cancer, students will develop a framework of how hallmark features of cancer arise and what corresponding therapeutic strategies have been developed to target them. Students are expected to participate in lectures and take part in discussion and analysis of scientific literature. This course applies core concepts from genetics, biochemistry, and cell biology to the study
Enforced Prerequisites at Enrollment: (BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M ) and ( BIOL 222 or BIOL 322 ) RECOMMENDED PREPARATIONS MICRB 410 and BMB 460 and MICRB 415
Cross-listed with: MICRB 480

BMB 482: Introduction to Computational Biology

3 Credits

Modern DNA sequencing technologies have transformed molecular biology into a data science. Sequencing machines can now read hundreds of millions of DNA sequence fragments in a few hours and at low cost. These technologies not only enable affordable sequencing of individual genomes (human or any other species); they also allow us to investigate numerous ways in which the genome performs its biological functions in different cell types and how mutations in genomes give rise to various phenotypes. However, given the volume of data and the noisy nature of biological measurements and signals, we require intelligent and efficient computational algorithms to make sense of genomic datasets. The discipline of bioinformatics and computational biology aims to meet this need. This course focuses on understanding and applying the computational methods and algorithms that are used to analyze genomic data, in particular the large datasets arising from high-throughput DNA sequencing technologies. During the course, we will focus on several application areas in genomics that require computational analyses. These topics will be organized around three main themes: - Genomes: comparing DNA and protein sequences; locating sequences on the genome; assembling genomes. - Evolution: reconstructing evolutionary relationships; personal genomics; detecting disease-associated genome variations. - Function: understanding biochemical activities using functional genomics; discovering functional elements in genome sequences; characterizing regulatory relationships between genes. For each of the genomics topics listed above, we will focus on understanding the computational algorithms that are used to analyze data. Such algorithms may include dynamic programming (sequence alignment), graph algorithms (assembly), clustering methods (phylogenetics & metagenomics), and machine-learning approaches such as Expectation Maximization, Gibbs sampling, and Hidden Markov Models (various applications in discovering functional genomic elements). Students will also develop practical bioinformatics analysis skills throughout the course. Each bioinformatics topic will be accompanied by practical exercises. Students will also work in teams to research and develop a project that applies computational methods to a genomics-related problem.

Enforced Prerequisites at Enrollment: (BMB 251 or BMB 251H or MICRB 251 or BIOL 230W or BIOL 230M ) or ( CMPSC 465 )

BMB 484: Functional Genomics

3 Credits

Biochemical, genetic and evolutionary approaches to comprehensive discovery of functional DNA segments in genomes, including genes and regulatory sequences. BMB 484 Functional Genomics (3) What in your genomic DNA makes you different from chimpanzees, mice or flies? What sequences in your DNA make it more or less likely that you will develop diabetes or cancer? These are questions of widespread interest, answers to which could play major roles in personalized medicine and in understanding our place in the biosphere. Modern genomic analysis uses powerful technologies and generates massive amounts of data, which are yielding exciting insights into answering these questions. One hallmark of genomic research is that data are released rapidly along with tools for browsing and analyzing it. Thus not only can you learn the major results by reading papers, but you can examine the underlying data and do your own analyses. Discovery is no longer the exclusive domain of the data producers - you can join in! This course will introduce students to ongoing research aimed at identifying functional regions in genomes and encourage them to use web-based bioinformatics tools for exploring the genomic and epigenetic data. Students will develop creative projects that address issues in functional genomics of high interest to them. The course has two phases, the first on the basics of genomics (sequencing, alignment, assembly, resources), and the second on the search for functional elements in genomes. The course will explore ways to find:- Protein-coding genes within genomes- Transcribed regions: How much of the genome is transcribed? Which transcribed regions do not code for proteins? What roles do they play in the cell (regulatory and enzymatic)?- Evolutionary signatures of function: How can you use genome comparisons between species to estimate the amount of functional sequence - and to identify it?- Non-genic functional sequences: How do you map epigenetic features associated with gene regulation, such as histone modifications, DNase hypersensitive sites, and transcription factor occupancy?- Function by phenotype: Given the ability of genetic association to find loci that contribute to complex traits, such as disease susceptibility, how does functional genomics aid in finding basis of these traits?

Enforced Prerequisites at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (BIOL 222 or BIOL 322)

BMB 485: Human Genomics and Biomedical Informatics

3 Credits

The purpose of this course is to introduce students to the field of Human Genomics and Biomedical Informatics, in particular in the context of genetic architecture of complex human diseases and traits. The field of Human Genomics has experienced a massive explosion in data generation technologies, new discoveries, and increasing popularity in many scientific fields. This course will cover the molecular, statistical, population, and analytical aspects of modern human genomics and translational aspects of this field in biomedical informatics. Current methods to uncover the complex underpinnings of disease including methods to explore gene-gene and gene-environment interactions and data integration will also be covered.

Enforced Prerequisite at Enrollment: BIOL 322 and (STAT 200 or STAT 250 or STAT 301 or STAT 401)
Cross-listed with: VBSC 485

BMB 488: Communities of Practice in Biochemistry and Molecular Biology

2 Credits/Maximum of 16

The course combines laboratory research in a community of practice and a seminar on topics in science, ethics, and society.

Enforced Prerequisites at Enrollment: MICRB 202 RECOMMENDED PREPARATIONS MICRB 202 or MICRB 203
Bioethics (BIOET)

BIOET 110N: Health, Illness, and the Human Condition
3 Credits

This course surveys the human experience of health and illness from a combined social/behavioral science and humanities perspective. Topics may include the following: the body in art, science, and history; models of normality and disease; family, patient, and practitioner stories; adaptation to illness; health care relationships; principles and psychology of health care ethics; cultural aspects of end-of-life; identity, meaning, and mental health in health care professionals. Reading, writing, and discussion will give students in all majors a set of skills and knowledge for understanding individuals and groups in the context of health and illness. Texts include fiction; poetry; graphic memoir; film; essays; and social science research and theory. Students will experiment with various writing genres to understand and challenge disciplinary boundaries, and creative projects will provide experience with diverse methods and types of knowledge. The arena of health and illness presents a valuable opportunity for integrating social/behavioral science and humanities in analyzing and solving real world problems. Despite technological advances, health care is essentially a human-to-human endeavor; so the humanities and social sciences are necessary to complement biomedical perspectives. This course provides transferable skills and a framework for addressing similar challenges and opportunities in a range of fields that students may encounter in the future. This is an Inter-Domain course containing two general education domains (GH/GS). Successful completion of the course fulfills 3 credits of Integrative Studies in General Education. Prerequisite: ENGL 15

Prerequisite: ENGL 015.
General Education: Humanities (GH)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

BIOET 401Q: Science, Ethics, Policy, and Law
3 Credits

This course explores the ethical, policy, and legal implications of science, and the implications of science for ethics, policy, and law. The course provides an introduction to scientific norms and practice; an introduction to the theories and methods employed in ethical analysis; an overview of ethics for scientists (including, but not limited to, falsification, fabrication, and plagiarism, and the protection of human and non-human animal participants); and an introduction to law and policy. In addition, the course will explore the use of science in the courts; the role of scientists in policy debates (whether they should be advocates or "honest brokers"); science education policy; science communication and scientific hype; the roles and responsibilities of professional scientists and citizen scientists; science in regulatory and policy processes; the assessment and management of risk; policymaking in the face of scientific uncertainty; and what ethics, policy, and law might learn from recent developments in social and behavioral science. In its examination of law and policy, the course will explore international and comparative perspectives. The course will also explore a variety of special topics (that may vary according to the expertise of the instructor and the interests of the students). These topics may be drawn from a variety of spheres: medicine and public health, food and nutrition science, neuroscience, agricultural science, climate science, and the social sciences. Special topics may include the ethical and policy implications of "big data"; the ethics of science in war and as a instrument of harm; climate science, climate change denial, and ethical decision-making in the face of scientific uncertainty; the promises and perils of forensic science; the role of food science in nutrition policy; the regulation of environmental toxins; the use of behavioral science and "nudging" in public health policy; gun violence and gun control policy; contemporary challenges related to transparency, reproducibility and replication in science; the commercialization of science, and an ethical and policy assessment of the so-called "Triple Helix" of government-academy-industry relations; and the neuroscience of moral and criminal responsibility.

Prerequisites: 5th Semester standing
General Education: Humanities (GH)
General Education: Social and Behavioral Scien (GS)
General Education: Integrative: Interdomain
Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

BIOET 496: Bioethics Independent Studies
1-9 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BIOET 497: Special Topics in Bioethics
1-9 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Biological Engineering (BE)

BE 1: Growing Your Future–First-Year Seminar
1 Credits

First-year seminar to introduce students to the breadth of the agricultural and biological engineering profession, including bioprocessing, machinery, and natural resources. B E 001S Growing Your Future–First-Year Seminar (1) This first-year seminar introduces students to the university in general and to the breadth of the agricultural and biological engineering profession. Students participate in hands-on lab activities in the focus areas of the profession, including machinery systems, food and biological processing, and natural resource engineering. Through these lab activities and a group project, students learn how the profession is critical to providing a growing world population with food, fiber, fuel, and water under increasing environmental constraints. In addition to being introduced to Penn State as an academic community, students also become familiar with the resources, tools, and opportunities available to them. Through the lab activities and in-class discussions on research, internship, and international opportunities, students meet and establish relationships with faculty, graduate students, and undergraduate students affiliated with the Biological Engineering and BioRenewable Systems programs.

First-Year Seminar

BE 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BE 301: Mathematical Modeling of Biological and Physical Systems
3 Credits

The ability to quantify relationships into mathematical models, and implement the models into the computer to find solutions, is essential for engineering analysis and design. This course provides the student with tools for modeling biological and physical systems. Upon completion of this course, the student will be able to: identify a process/system and component responses. Due to the time-dependent and non-linear systems of equations, and applications of these methods to biological and agricultural systems.

Prerequisite: MATH 251

BE 302: Heat and Mass Transfer in Biological Systems
4 Credits

Engineering applications of the fundamentals of heat and mass transfer to natural and engineered biological systems. B E 302 Heat and Mass Transfer in Biological Systems (4) This course applies the principles of heat and mass transfer to the engineering of biological systems, ranging from soil/water ecosystems to animal, plant, and microbial production systems. Heat transfer mechanisms (conduction, convection, and radiation) are covered, as well as analysis techniques for steady state and transient cases. Mass transfer mechanisms (diffusion, dispersion, and convection) are also covered followed by simultaneous heat and mass transfer, including psychrometrics, ventilation, and drying. Applications of heat and mass transfer to agricultural and biological engineering are interwoven throughout the course. These applications may include heat exchangers for hydraulic systems, flow through porous media, soil freezing and thawing, bioreactor design, post-harvest product storage, animal housing, and greenhouses.

Prerequisite: MATH 231, MATH 251, B E 301, M E 300. Prerequisite or concurrent: C E 360 or M E 320; Concurrent: C E 360 or M E 320

BE 303: Structural Systems in Agriculture
3 Credits

Engineering analysis and design of structural systems in agriculture; topics: loads, connectors, analysis and design of structural members and systems. B E 303 Structural Systems in Agriculture (3) The objective of this course is to provide the student with the essential skills necessary to engage in practical agricultural structure analysis and design. Topics include a review of shear, moment and deflection concepts; loading in agricultural structures including earth loads, grain loads and livestock loads; methods for the analysis of determinate and indeterminate beams, trusses and frames; the material properties of wood including impact of species, grain orientation, degree of hydration, etc., on member adequacy. The nano and molecular structure of wood is also discussed and how it impacts material properties. A lecture is also presented including ethics in the workplace including issues related to new materials technologies. Lectures are focused on the practical application of basic engineering principles with examples. The lab period contains a substantial design analysis project where a student team analyzes an industrially designed structure (typically a post-frame building containing a truss roof system), which has been designed for a specific area. The team then redesigns the structure for a different location with different snow and wind loadings as well as intended usage, and optimizes the structure for efficient design of the structural members. The design and analysis uses a common industrial software package. There are also field trips near the end of the class to tie everything together. The course will serve as a prerequisite for senior-level structural design courses.

Prerequisite: E MCH210 or E MCH213

BE 304: Engineering Properties of Food and Biological Materials
3 Credits

Engineering properties play a crucial role during the analysis, design, and synthesis phases of problem solving. The accurate knowledge of properties is essential to the precise determination of the overall system and component responses. Due to the time-dependent and environmentally-sensitive nature of properties of the agricultural, food, and biological materials, the theory and measurement systems are different from those used for conventional engineering materials and their systems. Therefore, the focus of this course is to provide the students with sound bases of the theory and measurement methods that are used to quantify physical, mechanical, thermal, biological, and chemical properties of products and their systems. In addition, the significance and importance of the inherent variation in the property values of agricultural, food, and biological materials is emphasized.

Prerequisite: (EMCH 210; EMCH 213), MATH 251 CONCURRENT: BE 301, (CE 360; ME 320)
BE 305: Agricultural Measurements and Control Systems

3 Credits

Principles of measurements, instruments, controls, and data acquisition systems, with emphasis on agricultural applications. B E 305 Agricultural Measurements and Control Systems (3) Engineers and scientists are routinely required to measure or control parameters of physical systems. Frequently, these parameters are quantified electronically. This course prepares the student to solve fundamental engineering instrumentation and control problems with emphasis on agricultural and biological systems. Upon completion of this course, the student will be able to: select and apply electronic devices to solve basic engineering measurement and control problems; apply interference (noise) reduction techniques using sound engineering principles; demonstrate correct use of common electronic measurement tools including multimeters, oscilloscopes and others; demonstrate electrical construction techniques including cable preparation, soldering, crimping, circuit board fabrication, and others; explain simple measurement and control circuits represented by schematics or ladder diagrams; demonstrate the application of dataloggers, microcontrollers, programmable logic controllers, and computer software to collect data and/or control basic processes; explain the function of common circuit components such as resistors, capacitors, inductors, diodes, transistors, op-amps, and transformers in simple circuits. Students are evaluated on homework and lab worksheets, quizzes, an oral presentation, and a final project.

Prerequisite: PHYS 212

BE 306: Machines for Agricultural and Biological Processing

3 Credits

Application of machine systems to agricultural production and biological processing machinery. Functional design and analysis of equipment. B E 306 Machines for Agricultural and Biological Processing (3) This course is designed to provide a broad foundation for understanding machine system design for biological engineering students. In addition, this course serves as a foundation for those wishing to develop a more focused understanding of agricultural and general machine systems, and is a prerequisite for B E 400 level courses. Machine systems are an integral part of many agricultural operations from field production to post-harvest processing, storage, transportation, and bio-based processing. Biomass feedstock logistics and bioenergy production systems are heavily relying on machine systems. Biological engineers will likely encounter a wide range of powered and automated equipment in their careers. This course consists of lectures, labs, and open-ended design projects. The lab activities will focus on testing and evaluating of machine performance using prototype machines and instruments. Lab activities and design projects will be completed in the format of small groups. This course equips the students to: (1) describe operating characteristics of engines and motors and properly select models for different applications; (2) design machine elements and mechanical power transmission systems to accomplish a machine task; (3) apply basic physics and engineering principles in a variety of machine-product interaction situations; and (4) practice technical report writing and oral presentation.

Prerequisite: E MCH212; E MCH210 or E MCH213

BE 307: Principles of Soil and Water Engineering

3 Credits

Utilization and engineering of soil-water resources; including rainfall-runoff, soil-water movement, erosion/sediment transport and flow processes. B E 307 Principles of Soil and Water Engineering (3) The two 50-minute class periods will focus on exploration of the underlying principles, equations, and importance of each of the topics to be covered. The two-period lab sessions will be used to explore each topic in a practical and experiential mode, with class participants sharing in discussions, lab activities, and explanations/presentations of project items. Weekly quizzes and periodic exams (somewhat evenly distributed during the semester) will be given during the lab period at appropriate stages of the course (likely after each major topic). The lab activities will focus on using representative soil profiles, cropping-management systems, and watershed-scale settings common to the immediate Centre County region as the basis for the experiential learning. Lab activities will sequentially build from one lab period to the next, showing how each stage of soil and water engineering is used to develop a more complete watershed-type project. Labs will involve in-class activities and field trips including map use, problem formulation, team problem solving, discussions, and reports/presentations by class participants. Participants will be expected to gather information and conduct some analyses outside of the class meeting times so as to complete the required lab projects. As appropriate, field trips will be scheduled so as to show course participants the practical settings in which basic soil and water engineering principles can be applied. The course will serve as a course preceding the senior-level soil and water engineering design courses in the Natural Resources Engineering Option of the Biological Engineering (B E) major.

Prerequisite: C E 360 or M E 320; Concurrent: C E 360 or M E 320

BE 308: Engineering Elements of Biochemistry and Microbiology

3 Credits

Introduction to basic biochemistry and microbiology as well as industrial and environmental applications. B E 308 Engineering Elements of Biochemistry and Microbiology (3) B E 308 provides an introduction to microbiology, biochemistry, and major organic compounds found in living systems such as carbohydrates, lipids, proteins, and vitamins, as a package to engineering students. Energy calculations in microbial bioenergetics will be covered. Examples of industrial and environmental applications that build on the basic principles will be presented.

Prerequisite: CHEM 110

BE 391: Contextual Integration of Communication Skills for the Technical Workplace

2 Credits

To develop corporate communication skills in technically focused students in a contextual manner. A S M (A B E) 391 Contextual Integration of Communication Skills for the Technical Workplace (2) A B E/A S M 391 is the first half of a two-semester capstone experience in corporate focused leadership and communication skills training. The sequence is formatted into two 2-credit courses (second semester Junior for A B E/A S M 391 and first semester senior for the companion A B E/A S M 392 course). A key facet of this training is the contextual approach taken. All course modules are focused around the needs of industry and corresponding technical course content &mdash; a complete contextual
approach. To meet the needs of the student, the course will reflect clear understanding of leadership and communication but also appreciate critical aspects of the technical content of student’s work and of the industries within which the students will ultimately work. The primary focus for 391 is communication skills (oral and written) with a secondary focus on leadership and career skills. The course provides the student with interaction with individuals from industry (company visitors, industry trips, and recruiting opportunities). Students will be evaluated through writing and speaking projects, professional presentations, written worksheets in class and out, creation of portfolios and reports, in-class group and individual exercises, computer graphics presentation assignments, library assignments, interaction with industry executives (reports), and leadership journals.

**Prerequisite:** Junior level standing in B E or BRS 391
Cross-listed with: BRS 391
General Education: Writing/Speaking (GWS)

**BE 392: Contextual Integration of Leadership Skills for the Technical Workplace**

2 Credits

B E/BR S 392 is the second half of a two-semester experience in corporate-focused leadership and communication skills training. The sequence is formatted into two 2-credit courses (second semester junior for B E/BR S 391 and first semester senior for the B E/BR S 392 course). A key facet of this training is the contextual approach taken. All course modules focus on leadership and communication needs of industry within its corresponding technical content - thereby representing a complete contextual approach. To meet the needs of the student, the course will reflect clear understanding of leadership and communication but also appreciate critical aspects of the technical content of student’s work and of the industries within which the students will ultimately work. The primary focus of BE/BRS 392 is on leadership, with communication, ethics, sustainability and career issues the secondary focus. The course provides students with interactions with individuals from industry (company visitors, industry trips, and recruiting opportunities). Topics developed for B E/BR S 392 include personal development, ethical decision-making, corporate social responsibility, strategic group management, facilitation, and diversity. Students may be evaluated through writing and speaking projects, professional presentations, written worksheets in class and out, creation of portfolios and reports, in-class group and individual exercises, interaction with industry executives (reports), and leadership journals.

**Prerequisite:** BRS 391, junior level standing in B E or BRS
Cross-listed with: BRS 392
General Education: Writing/Speaking (GWS)

**BE 460: Biological Engineering Design I**

2 Credits

BE 460 is part one of a two course sequence that provides a culminating design experience for students in the Biological Engineering major. Students will develop skills and techniques for managing and executing engineering design projects in the following fields: agricultural engineering, food and biological processing engineering, and/or natural resource engineering. Projects are sponsored by faculty, industry, or community initiatives and are structured to span two semesters. In the Fall semester, the emphasis is on classroom lectures, preliminary analyses, and project proposal development. In the Spring semester, the emphasis is on hands-on laboratory activities, project execution, and report preparation. Project teams perform all facets of the design process. This includes project identification, planning of the project, formulation of design specifications, development and evaluation of alternative conceptual designs, development of detailed designs, consideration of safety and design optimization, design implementation, design testing, and analysis and documentation of results. Students improve their writing skills through preparation and refinement of various documents including a design notebook, proposal, statement of work, design specification report, status reports, and a final report. Students also present their results in other formats, including poster and oral presentations for both technical and non-technical audiences.

**Prerequisite:** B E 301 ; B E 391 ; 7th semester standing
Writing Across the Curriculum

**BE 461: Design of Fluid Power Systems**

3 Credits

Hydraulic systems, hydrostatic transmissions, electro-hydraulic systems in application to agricultural production and processing systems. B E 461 Design of Fluid Power Systems (9) This course is designed to provide a solid foundation for understanding hydraulic and pneumatic systems for power transmission and motion control. Applications include mobile and stationary equipment. Biological Systems Engineers (and other engineers as well) will likely encounter a wide range of powered and automated equipment in their careers. This course equips the students to: (1) understand the key operating characteristics of most fluid power system components including compressors, pumps, valves, cylinders, and motors, (2) design fluid power circuits, (3) mathematically model the steady state operation of fluid power systems, and (4) have sufficient knowledge to obtain the Hydraulic Specialist Certification offered by the Fluid Power Society. The course includes a hands-on laboratory offering the chance for students to construct circuits, see component cutaways, experience component and system performance demonstrations, and work with electronic control of hydraulic systems. Prerequisite knowledge includes fluid mechanics and familiarity with mechanical power transmission systems. The course grade is based on homework assignments, laboratory reports, a design project, and exams.

**Prerequisite:** B E 306 or M E 360 ; C E 360 or M E 320

**BE 462: Design of Wood Structures**

3 Credits

Structural properties of wood; design of wood structural elements; design of wood structural systems; design of post-frame buildings. B E 462 Design of Wood Structures (3) This course begins by defining the structural loads applicable to wood framed building systems. The course then introduces students to the unique physical and structural characteristics of solid lumber and other wood products, such as plywood and other panel products and structural composite lumber, including laminated veneer lumber, parallel strand lumber and composite wood I-joints. The engineering principles and specifications for designing wood structural members, including tension members, beams, columns, and beam-columns are presented in detail using the National Design Specification for Wood Design. Design specifications for designing wood structural connections using dowels, such as nails, bolts and lag-screws, are presented. Design procedures for designing selected wood-frame systems, such as floors, trusses, structural diaphragms and shear walls, are also presented. Students are introduced to a computer program which is an invaluable aid for analyzing and designing wood framed
structural systems. At the conclusion of the course students will be able to specify structural loads for wood framing systems and analyze and design wood beams, columns, beam-columns, typical wood diaphragms and shear walls, simple wood structural systems, and a range of wood structural connections. The course builds on engineering students’ prior knowledge from strength of materials and elementary structural analysis. Students are evaluated based on homework assignments, exams and a semester project.

**Prerequisite:** B E 303, A E 308, or C E 340

BE 464: Bioenergy Systems Engineering

3 Credits

Fundamental theories and applied technologies for production and conversion of biomass into energy and co-products. Students may take only one course from B E 464 and A B E 884 for credit. B E 464 Bioenergy Systems Engineering (3) In the coming decades biomass will play an increasing role in satisfying society’s energy and material needs, providing a renewable alternative to fossil fuels. This course will cover the fundamental theories and applied technologies used in production and conversion of biomass into transportation fuels, heat, power, electricity, chemicals and other value-added products. Production strategies focus on sustainable cropping systems, harvest, storage, and pretreatment for diverse biomass feedstocks. Conversion technologies covered include ethanol fermentation, biodiesel catalysis, combustion, pyrolysis, gasification, anaerobic digestion, and emerging processes. System analysis will address worker safety and health, environmental impacts, policy, and economics. The course is recommended for students in engineering and science majors with a background in thermodynamics, chemistry, and biochemistry or microbiology. Evaluation will be based on class participation, homework, quizzes, exams, and a team design project.

**Prerequisite:** EME 301 or M E 201 or M E 300 or CH E 220; Prerequisite or concurrent: B E 308 or CH E 340 or C E 479

BE 465: Food and Biological Process Engineering

3 Credits

Reactor design, kinetics, fluid flow, thermal processes, and other topics applied to the design of systems for the food and biological process industry. B E 465 Food and Biological Process Engineering (3) Learning objectives. At the end of this course students will be able to: 1. Use and convert units and dimensions applicable to food processing 2. Apply laws of conservation of mass and energy 3. Evaluate time and temperature profiles for food pasteurization and sterilization 4. Design an aseptic processing system 5. Describe operation of mechanical refrigeration systems 6. Calculate freezing times 7. Compute the energy requirements in single and multiple effect evaporators 8. Use the psychrometric chart in relation to drying processes Engineering principles of reactors, fluid flow, thermal processes and other topics will be applied to the design of systems for the food and biological process industry. The examples used will be applicable to bioreactor production, food processing, pharmaceutical manufacture, etc.

**Prerequisite:** B E 302

BE 466: Biological Engineering Design II

2 Credits

BE 466 is part two of a two course sequence that provides a culminating design experience for students in the Biological Engineering major. Students will develop skills and techniques for managing and executing engineering design projects in the following fields: agricultural engineering, food and biological processing engineering, and/or natural resource engineering. Projects are sponsored by faculty, industry, or community initiatives and are structured to span two semesters. In the Fall semester, the emphasis is on classroom lectures, preliminary analyses, and project proposal development. In the Spring semester, the emphasis is on hands-on laboratory activities, project execution, and report preparation. Project teams perform all facets of the design process. This includes problem identification, planning of the project, formulation of design specifications, development and evaluation of alternative conceptual designs, development of detailed designs, consideration of safety and design optimization, design implementation, design testing, and analysis and documentation of results. Students improve their writing skills through preparation and refinement of various documents including a design notebook, proposal, statement of work, design specification report, status reports, and a final report. Students also present their results in other formats, including poster and oral presentations for both technical and non-technical audiences.

**Prerequisite:** BE 460

BE 467: Design of Stormwater and Erosion Control Facilities

3 Credits

Design of best management practices for stormwater management, erosion and sediment control as applied to the agriculture-urban interface. BE 467 Design of Stormwater and Erosion Control Facilities (3) This course equips seniors agricultural and biological engineers with the ability to design sediment and stormwater impoundments and erosion control structures used in agriculture and the development of the agricultural-urban interface. Predictive hydrology is presented along with an introduction to several hydrology-based models used in the land-development industry. Basins are presented as fundamental structures used to attenuate stormwater peaks as well as holding ponds to facilitate gravitational sediment removal from stormwater runoff. Various sediment traps are also included. Flood routing is developed so students understand and can design for flood peak attenuation. Low Impact Development (LID) practices such as green roofs, bioretention areas and vegetated filter strips are presented as infiltration-based alternatives to traditional stormwater management. Open channel design procedures including maximum permissible velocity and tractive force are reviewed. The Revised Universal Soil Loss Equation (RUSLE) is introduced and the latest version of the RUSLE software package is available for student use. Stream corridor restoration procedures, especially many of the structural practices, are introduced. The course includes a major design project executed in groups of 3 to 5 students. Students are assigned a land parcel and the proposed development. Students are expected to develop a Stormwater Management Plan, including several LiDs, and an Erosion and Sedimentation Control Plan, including a sediment basin. Students must present their final designs in oral and written format to their peers and a lay audience. This project makes up about 30% of their course grade. The remainder of the grade is from two take-home exams and daily homework. The majority of those taking this course are A B E seniors or
graduate students. Civil and Environmental Engineers often elect this course.

**Prerequisite:** B E 307 or C E 461

BE 468: Microbiological Engineering

3 Credits

Application of basic engineering principles and designs in biochemical and biological processes. BE 468 Microbiological Engineering (3) Microbial engineering is a combination of biochemistry and microbiology applied to engineering. The purpose of this course is to provide an understanding of conversions of raw agricultural materials into value-added products via microbial fermentation. This course presents all steps in this type of bioprocessing such as mutagenesis, genetic modification for microbial manipulation, enzyme and microbial kinetics, aeration, agitation for bioreactor design, and scale-up strategies, as well as various recovery methods for downstream processing.

**Prerequisite:** B E 308 or both MICRB201 and B M B211; Concurrent: B E 302

BE 477: Land-Based Waste Disposal

3 Credits

Analysis, design, and management of land-based systems for recycling and disposal of municipal, industrial, and agricultural wastes. BE 477 Land-Based Waste Disposal (3) The course focuses on exploration of the fundamental principles and processes that determine the fate of nutrients and pollutants in liquid and semi-solid wastes that are applied to the soil for recycling and disposal. These principles then serve as the basis for design of systems for application of livestock manures, biosolids, septage, wastewater effluents, and other residual materials. Relevant state and federal regulations will be covered to illustrate the impact of regulations and policies on engineering practice. The course culminates in a project for which students design a system to dispose of municipal, agricultural, or industrial byproduct or wastewater. Principles will be reinforced with several homework sets. Field trips will expose students to land-based waste disposal processes and systems. The course will serve as a senior-level engineering science/design course in Agricultural and Biological Engineering (A B E).

**Prerequisite:** B E 307 or C E 370 or A S M327

BE 487: Watershed Modeling for Water Quality Design

3 Credits

Application of common watershed models used to investigate design alternatives for flow and quality effects. BE 487 Watershed Modeling for Water Quality Design (3) This course will explore the use of several commonly-available watershed simulation models for investigating water quality (WQ) and water quantity issues. The models will serve as a base from which students can investigate the effects of different management design scenarios on watershed system responses. Spring Creek Watershed in Centre County, and subwatersheds within Spring Creek, will serve as case study watersheds to be investigated for all modeling applications. The ArcView Generalized Watershed Loading Function (AVGWLF) model will be used as an initial exploration of modeling for the entire watershed and to show the hydrologic and WQ responses for various subwatersheds (agriculturally dominated vs. urban dominated). The StormWater Management Model (SWMM) model will be used to explore more in-depth modeling for an urban watershed, with the Fox Hollow Watershed serving as the primary case study. Extensive flow and WQ monitoring data are available and will serve to assist in parameterizing and calibrating the model. The Soil Water Assessment Tool (SWAT) model will be used to explore flow and constituent response from a more agriculturally-dominated Cedar Run watershed, also located within Spring Creek. The potential impact of urban low impact design (LID) practices and agricultural best management practices (BMPs) will be investigated for urban and rural watersheds, respectively.

**Prerequisite:** B E 307 or C E 461

BE 494: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

BE 494H: Senior Honors Thesis

1-6 Credits/Maximum of 999

Senior honors thesis.

**Prerequisite:** junior or senior status in the University Scholar’s program Honors

BE 495: Agricultural Engineering Internship

1-6 Credits/Maximum of 6

Independent study and supervised cooperative education experience related to the student’s career objective.

BE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Biological Science (BISC)**

BISC 1: Structure and Function of Organisms

3 Credits

An exploration of how cellular structures and processes contribute to life and how life displays unity even in its diversity. Students who have passed BIOL 027, 110, or 141 may not schedule this course.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)
BISC 2: Genetics, Ecology, and Evolution

3 Credits

The study of how living organisms inherit their traits, how plants and animals evolved, and how they now interact. Students who have passed BIOL 033, 133, 110, 220W, or 222 may not schedule this course.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BISC 3: Environmental Science

3 Credits

Kinds of environments; past and present uses and abuses of natural resources; disposal of human wastes; prospects for the future. Students who have passed BIOL 220 or any other upper-level ecology course in biology may not schedule this course. BISC 3 Environmental Science (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. BISC 3 will help the student to prepare for living in current and future society's mixture of technology and mythology by presenting ideas and concepts about living systems and their environments. Policy makers and citizens are urgently needed who can act with an understanding of ecological principles when exercising community responsibilities to handle the environmental problems of our times, such as water use, solid waste management, global warming, energy use, conservation of irreplaceable natural resources, overpopulation, and the preservation of biodiversity. An understanding of biological and ecological principles and their application towards environmental challenges should give the student the confidence to be a trustworthy and active citizen, a conscientious steward of nature, and an agent of change for making a healthy, sustainable community and society. Regardless of the students' field of study, as a citizen of both local and global communities some environmental issues will impact their lives. The course objectives are to enable students to: * Develop a basic understanding of how ecosystems and biological systems work, learn how economic systems depend on natural capital, biological/chemical processes, and the function of ecosystems * Develop a fundamental understanding of sustainability * Understand the scientific basis of specific environmental problems * Understand the significance of environmental legislation and the impact of increased citizen awareness on improving the quality of life we enjoy today * Further develop the ability to evaluate their contributions to shared environmental problems, identify ways to minimize their impact on the environment, and contribute to the development and maintenance of a sustainable future.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BISC 4: Human Body: Form and Function

3 Credits

A general survey of structure and function—from conception, through growth and reproduction, to death. Students who have passed BIOL 129 and 141 may not schedule this course. BI SC 004 Human Body: Form and Function (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to biological principles fundamental to understanding human life. Cell structure, biochemistry and metabolism, the structure and function of major organ systems, and human genetics are explored in the course. Special emphasis on the relationship of the functioning of the human body to human disease is also stressed. Students will be able to describe the basic biochemical, structural and functional characteristics of cells. They will learn the roles of carbohydrates, lipids, proteins and nucleic acids in cells and in the body as a whole. They will understand how these molecules are used in building cell and body structures, in energy-releasing metabolism and in the copying and use of genetic information. Students will also be able to explain how different organ systems enable the body to meet the need for support structures, oxygen, nutrients, waste elimination, internal communication, defense against infectious disease and cancer, coordination of internal activity, and reproduction. This will be accomplished through the study of the skeletal and muscular systems, the circulatory, respiratory, digestive and nervous systems as well as the endocrine and reproductive systems. The course provides support for majors such as Nursing, Psychology, Nutrition and others that touch on various aspects of human biology. However, students from any major will benefit from this course for the obvious reason that everyone should understand how their lives depend on a properly developed and functioning body.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

Biology (BIOL)

BIOL 1: Preparation Skills for Success in Biology and Life Sciences

1 Credits

A foundation course that emphasizes study skills and reviews basic biological, chemical and mathematical principles. BIOL 1 Biology of Success (1) This course is designed to facilitate success in the required science courses for allied health majors. Many students are challenged by their lack of basic skills and knowledge in one or more of the following areas: biology, chemistry, mathematics, and study skills. Thus, this course addresses these issues and positions the student for success. During the semester equal time is given to the following topics: study skills, which includes learning styles, goals, test taking strategies and organizational skills; terminology, which includes practice with prefixes, roots, and suffixes; basic math skills, which includes the metric system and practice with work problems; chemistry, which covers atoms, ions, and basic anabolic and catabolic reactions; cell structure and functioning; and body basics, which is an overview of the anatomy and functioning of body systems. Students are given a diversity of assignments and projects relevant to the various topics that will allow them to review and develop a basic level of competency in these areas in preparation for required science courses.

BIOL 3: Peer Learning in Biology

1 Credits

Group and learning skills to facilitate the understanding of complex biological processes. BIOL 3 Peer Learning in Biology (1) The study of Biology is complicated by the myriad pathways and processes that must be mastered in a way that interrelationship become apparent. A major stumbling block in a student's progress is learning how best to organize one's study so that both the details of these processes can be learned, along with how these processes fit together (i.e. integration). The second hurdle is learning how to use this information in a way that can solve real life problems and to communicate this process to others. This course is designed for students who would like to improve their ability to organize their learning strategies in order to maximize their understanding of
the complexities of life's process. The course will be organized using peer learning groups which are posited on the assertion that every student can improve their performance with the proper environment and direction. Group leaders (enrolled in BIOL 251) will play an integral role in the program in that they are the connection between participant and course instructors. The group leaders will learn how to pass their skills on to other students in such a way as to encourage ownership of their education. Through regular meetings, the students enrolled in BIOL 003 will learn about time management and study skills, test taking strategies, exam writing, working with others that have divergent learning styles, and how to be multiculturally competent such that they are able to work with a diverse population.

BIOL 11: Introductory Biology I

3 Credits
An introduction to fundamental biological topics (including cells, energy transduction, genetics, evolution, organismal structure/function, ecology) for non-majors biology-related fields. BIOL 011 Introductory Biology I (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The twelve primary topic areas within Biology 11 are: An introduction to major themes within the course, defining life, and how natural selection operates through differential reproduction. All organisms are composed of matter and must obey the laws of chemistry - a review of basic chemical principles, the study of water and carbon-based macromolecules, the building blocks of organisms. The cell is the fundamental unit of life - a detailed study of the structure and function of eukaryotic cells. Organisms require energy to maintain organization - an exploration of the processes of photosynthesis, the conversion of light energy into chemical bond energy, and cellular respiration, the production of ATP. All cells arise from previously existing cells - a discussion of mitosis and meiosis. Genes carry information between generations - an examination of the principles of Mendelian genetics and their application to human disorders. The structure of DNA, how it codes for information in proteins, and the effect of mutations are explored. This history of life on earth, a discussion of the role of natural selection in populations and speciation. Plants are the only multicellular eukaryotes that photosynthesize - an inquiry into their evolution, function, structure, reproduction and response to the environment. Animals are multicellular eukaryotes that must acquire their energy/nutrients from other organisms - an exploration of the basics of the animal body plan and two human organ systems. Organisms must interact with their environment - a discussion of energy flows and nutrient cycling in ecosystems, as well as ecosystem distributions. Interactions among communities of species can be complex and these relationships will be investigated. Humans have an increasing impact on the environment, affecting all aspects of the world in which we live - an examination of human activities and solutions to environmental damage we have caused. The target audience is students who are majoring in biology-related fields, such as some of Agriculture (not biology majors). This serves as a foundation course for students who require a solid grounding in the fundamentals of biology before taking more advanced courses in their major. The course will serve as breadth course in biology for non-science majors, fulfilling a three-credit GN requirement. Evaluation of course performance is done through five in-class tests, in-class ALE activities (10 required during the semester), and an ecological footprint.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BIOL 12: Introductory Biology II

1 Credits
Laboratory exercises demonstrating principles of biology.

Enforced Prerequisite at Enrollment: or concurrent: BIOL 11
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BIOL 60N: Art in the Natural World

3 Credits
This course will foster appreciation of art and the natural world through exploration of the flora, fauna, geology, and water systems. Students will use scientific and artistic observation skills to understand, relate, and respond to connections in nature. Students will learn how to identify species in the field and gain a base knowledge of natural history. Students will develop observational skills and a deeper awareness of their natural surroundings through scientific observation, visual expressions, and writing responses. Using a common visual language, utilizing the elements and principles of design, students will begin to develop an aesthetic awareness through observational collecting. Nature presents an installation ready to analyze, deepening the students’ natural curiosity and ability to make connections. Most course work will be in the field and will include use of tools such as binoculars, microscopes, cameras, and sketchbooks. Goals for this course will include enhancing effective communication and critical and creative thinking. Students will use visual, oral, and written communication to express their observations of the natural world. Critical and creative thinking will be used to analyze and synthesize observations to develop independent research projects and presentations.

General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

BIOL 110: Biology: Basic Concepts and Biodiversity

4 Credits
A STUDY OF THE EVOLUTION OF THE MAJOR GROUPS OF ORGANISMS INCLUDING THE FUNDAMENTAL CONCEPTS OF BIOLOGY. BIOL 110 Biology: Basic Concepts and Biodiversity (GN)(BA) This course meets the Bachelor of Arts degree requirements. This is the first biology course taken by students who intend to major in biology. It provides a foundation for the basic concepts that govern life. In addition, these concepts are used to explain the processes of evolution which contribute to the biodiversity that we observe today. The course objectives have remained unchanged and seek to provide students with a fundamental understanding of: 1) features of life; 2) how basic genetic processes provide continuity between generations; 3) how genetic variation arises and contributes to evolutionary processes; 4) how structure relates to function; 5) how the diversity life is studied and explained by evolution.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
BIOL 110H: Honors Biology: Basic Concepts and Biodiversity

4 Credits

Honors study of the evolution of the major groups of organisms including the fundamental concepts of biology. BIOL 110H BIOL 110H Honors Biology: Basic Concepts and Biodiversity (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. This is the first biology course taken by students who intend to major in biology. It provides a foundation for the basic concepts that govern life. In addition, these concepts are used to explain the processes of evolution that contribute to the biodiversity that we observe today. The course objectives have remained unchanged and seek to provide students with a fundamental understanding of: 1) features of life; 2) how basic genetic processes provide continuity between generations; 3) how genetic variation arises and contributes to evolutionary processes; 4) how structure relates to function; 5) how the diversity life is studied and explained by evolution.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Honors

BIOL 110S: Biology: Basic Concepts and Biodiversity

4 Credits

A study of the evolution of the major groups of organisms including the fundamental concepts of biology. This course also fulfills the First-Year Seminar requirements. BIOL 110S Biology: Basic Concepts and Biodiversity (3) (GN:FYS)(BA) This course meets the Bachelor of Arts degree requirements. This is the first biology course taken by students who intend to major in biology. It provides a foundation for the basic concepts that govern life. In addition, these concepts are used to explain the processes of evolution which contribute to the biodiversity that we observe today. The course objectives have remained unchanged and seek to provide students with a fundamental understanding of: 1) features of life; 2) how basic genetic processes provide continuity between generations; 3) how genetic variation arises and contributes to evolutionary processes; 4) how structure relates to function; 5) how the diversity life is studied and explained by evolution.

Bachelor of Arts: Natural Sciences
First-Year Seminar
General Education: Natural Sciences (GN)

BIOL 120N: Plants, Places, and People

3 Credits

Students learn about plants from the perspective of sustainability, agriculture, food, genetics, textiles, and medicine, across history and around the globe, after spending a few weeks learning about basic plant biology. Students engage with a group project in collaboration with other students to deepen their understanding and appreciation of plant biological and historical connections with human civilization. Students share these projects with the class in a peer-teaching and learning exercise in the final weeks of class.

Bachelor of Arts: Humanities
Bachelor of Arts: Natural Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Humanities (GH)
utilizes lecture descriptions and discussions, along with laboratory specimen dissection, identification and nomenclature to give a thorough overview of anatomy. Small group collaboration is emphasized in laboratory.

Course Objectives: The principle objective of the course is for every student to obtain a working knowledge and understanding of basic mammalian anatomy, emphasizing a body system approach, and where possible, relate this to the human anatomical body plan. The lecture portion of the course will stress the construction, function, and relationships between anatomical systems. The laboratory portion of the course will emphasize structure identification and nomenclature of anatomical systems and will utilize human skeletal samples, cat specimen dissections, and anatomical models. Where possible, anatomical relationships that are important in clinical situations and common medical conditions will be emphasized. The end point of both objectives is to obtain a practical understanding of anatomy that demonstrates the relationships between anatomical form and function. Students will leave the course being able to relate this knowledge and nomenclature to future clinical or personal health situations.

Relationship to Courses and Programs of Study: This majority of students enrolled in this course are from the College of Health and Human Development in Nursing, Biobehavioral Health, Kinesiology, and Nutrition majors, although some students are from other colleges including the Eberly College of Science, Liberal Arts, and Agriculture. Because the majority of these students will utilize course information in future clinical settings, anatomy and its nomenclature as it relates to humans is emphasized and important clinical considerations are discussed.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BIOL 133: Genetics and Evolution of the Human Species

3 Credits

Human heredity and evolution, individual and social implications. The course is for non-majors; students who have passed BIOL 222, 230W, 2916 or any upper-division biology course may not schedule this course. BIOL 133 BIOL 133 Genetics and Evolution of the Human Species (3) (GN) BIOL 133 is a 3 credit non-majors course designed as an overview of our current knowledge of human genetics and genetic issues, with special attention to issues that are relevant to non-scientists. We discuss background information that is necessary for understanding these issues, including the structure and function of DNA and chromosomes, Mendelian inheritance, gene expression, gene mutations and chromosomal aberrations, population genetics, evolution, cancer, and genetic and reproductive technologies. This course includes multimedia presentations, textbook readings, classroom activities and problem solving. The goal for this course is to provide students with sufficient scientific knowledge to make informed decisions about genetic issues and the ability to discuss these issues intelligently.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BIOL 141: Introductory Physiology

3 Credits

Explanation of the normal structure and function of the animal body, with special emphasis on human body systems. Students who have passed BIOL 472 may not schedule this course. BIOL 141 Introductory Physiology (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. General Description: Biology 141 is a 3 credit lecture course specifically designed to cover the fundamentals of human physiology for students in a variety of life science related majors including Nursing, Kinesiology, Athletic Training, and Science. Successful completion of this course will give the student working knowledge of human physiology with the intent on applying this information to future clinical situations they may encounter in nursing, physical therapy, athletic training, dentistry, and medical settings. The course utilizes both descriptive and problem solving techniques and as a result, may require some review of basic science and math principles developed in previous high school and college biology, chemistry, and math courses.

Course Objectives: The course has two primary objectives. The first is for every student to obtain a working knowledge and understanding of basic human physiology. The second is to apply these physiological principles to problem solving situations as observed in medical situations, including cardiac problems, hypertension, renal failure, acid-base balance disturbances, and endocrine imbalances. The end point of both objectives is to obtain a practical understanding of physiology which students can build upon and use in future clinical settings. Relationship to Courses and Programs of Study: This majority of students enrolled in this course are from the College of Health and Human Development in Nursing, Biobehavioral Health, Kinesiology, and Nutrition majors, although some students are from other colleges including the Eberly College of Science, Liberal Arts, and Agriculture. Because the majority of these students will utilize course information in future clinical settings, human physiology as it relates to clinical problems is emphasized.

Many students will take Biology 141 along with our partnered 1 credit laboratory course, Biology 142, Physiology Laboratory. Additionally, many students enrolled in Biology 141 will also take our related course in anatomy, Biology 129, as a result of course program prerequisites within their major.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BIOL 142: Physiology Laboratory

1 Credits

Experiments demonstrating basic physiological principles, with special reference to man.

Enforced Prerequisite at Enrollment: or concurrent: BIOL 141

BIOL 144: Climate Change: Biological Impacts

3 Credits

A study of the interactions of organisms with their environment through exploration of the biological impacts of climate change on individuals, populations, ecological communities, and ecosystems. Students will develop skills to make informed judgments about the implications of climate change using scientific information and expand their understanding of how and why science works to generate knowledge to address biological issues relative to climate change. Students will construct evidence-based explanations of the impacts of climate change on biological processes such as disease transmission, population dynamics, and ecosystem functioning. Because of duplication of subject matter a student may receive credit for only one of the following courses: BIOL 144, BIOL 144Z, BIOL 220W

General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
BIOL 144Z: Climate Change: Biological Impacts - Linked

3 Credits

A study of the interactions of organisms with their environment through exploration of the biological impacts of climate change on individuals, populations, ecological communities, and ecosystems. Students will develop skills to make informed judgments about the implications of climate change using scientific information and expand their understanding of how and why science works to generate knowledge to address biological issues relative to climate change. Students will construct evidence-based explanations of the impacts of climate change on biological processes such as disease transmission, population dynamics, and ecosystem functioning. In addition, students will develop skills to integrate biological knowledge with the psychological factors that influence peoples' views of climate change and the use of artistic expression to increase awareness of environmental issues. BIOL 144Z fulfills 3 credits of the GN Domain General Education requirements. BIOL 144Z may also be used in combination with either ART 144Z or PSYCH 144Z as linked courses to fulfill 6-credits of Integrative Studies. Because of duplication of subject matter a student may receive credit for only one of the following courses: BIOL 144, BIOL 144Z, BIOL 220W.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Integrative Thinking

BIOL 145N: The Visual Body

3 Credits

This course uses the field of anatomical illustration to explore the history of medicine and our understanding of the human body. Charting the influence of visual art and imaging systems as essential aspects of medicine, this survey of art and historical imagery connects the study of human anatomy with principles of visual literacy and design. In addition to researching historical publications through writing and discussions, students will produce a research portfolio based on illustrations examined in the course. Lab activities with human cadavers will help students learn the basics of human anatomy within a historical context. No fine arts skills are required to take this course: only an enthusiasm for the study of human anatomy and its visual history. Scientific research is often concerned with a constant progress toward future discoveries - but it is vital to understand the research and discoveries that came before our time. For medicine, this history is uniquely linked to the evolution of art, printing technology, and education. Any scientist would be well served by some knowledge of art and design. Experiments rarely change the world on their own, and much can be gained and lost in the communication of their results. But anatomy is especially reliant on images and illustrations (even after the invention of photography). In order to explore the unique relationship between medical discovery and art history, we have designed this course to be a space for interdisciplinary research. Co-taught by an artist and an anatomist, we will take advantage of an on-site cadaver lab and digital media resources to reimagine the history course as a site of discovery, design, and discussion.

General Education: Arts (GA)

General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BIOL 162: Human Anatomy and Physiology I - Laboratory
1 Credits
This is the first laboratory course of a two-semester sequence introducing human anatomy and physiology. The A&P I laboratory complements the A&P I lecture by providing students with hands-on experiences such as examination of preserved specimens and anatomical models, and performing physiological experiments. Topics covered in the Human Anatomy & Physiology I Laboratory include: anatomical orientation and terminology; the anatomy and physiology of the nervous system; special senses; skeletal system and muscular system.

Enforced Concurrent Course at Enrollment: BIOL 161
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BIOL 163: Human Anatomy and Physiology II - Lecture
3 Credits
This is the second lecture course of a two semester sequence introducing human anatomy and physiology, which is the branch of biology that focuses on the structure and function of the human body. Lectures will take a "systemic" approach to anatomy and physiology, focusing on one body system at a time. Topics covered in the Human Anatomy & Physiology II Lecture include: the cardiovascular system, lymphatic and immune systems, respiratory system, digestive system, metabolism, urinary system, and reproductive system. Each unit will build on previous knowledge to establish a cohesive picture of the human body. Throughout the course, students will build a strong foundation in the form and function of the human body from the cellular to the gross anatomical level. This knowledge will be contextualized by incorporating information about clinical cases, personal health and lifestyle choices, and human development.

Enforced Prerequisites at Enrollment: BIOL 161
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BIOL 164: Human Anatomy and Physiology II - Laboratory
1 Credits
This is the second laboratory course of a two-semester sequence introducing human anatomy and physiology. The A&P II laboratory complements the A&P II lecture by providing students with hands-on experiences such as examination of preserved specimens and anatomical models, and performing physiological experiments. Topics covered in the Human Anatomy & Physiology II Laboratory include: the anatomy and physiology of the cardiovascular system, respiratory system, digestive system, urinary system, and reproductive system.

Enforced Concurrent Courses at Enrollment: BIOL 163

BIOL 165: Human Anatomy and Physiology III - Lecture
3 Credits
This course presents a thorough background on the basic structure and function of the human reproductive system. This course will investigate the distinctiveness of Homo sapiens, using fossil and non-human animal comparisons to highlight how modern humans are both similar to and different from other species. Basic elements from the fields of biology, genetics, anatomy, physiology, ecology, cognition, neuroscience, social psychology, and anthropology will be integrated for a complete and robust picture of humans and their place in the animal world. Furthermore, students will expand upon this integration of fields to make inferences about how an individual's or society's perspective on human uniqueness, or the lack thereof, impacts decisions and behaviors relevant to research ethics, environmental policy, educational policy, religion, and/or social issues.

Cross-listed with: PSYCH 169N

General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

BIOL 177: Biology of Sex
3 Credits
Basic structure and function of the human reproductive system. Physiology of gametogenesis, fertilization, contraception, gestation, parturition, lactation, and sexual behavior. BIOL 177 Biology of Sex (3)
(GN)(BA) This course meets the Bachelor of Arts degree requirements. This course presents a thorough background on the basic structure and function of the human reproductive system, to provide the student with sufficient scientific knowledge to understand and discuss sex-related topics and make informed personal decisions. Through lecture format presentations, multimedia presentations, small group activities, and guest presentation, students will be exposed to information that will clarify their understanding of the ways that their own body functions in sexual behavior and reproduction. In-class demonstrations and activities will be used to illustrate practical aspects of anatomical, health and contraception issues. Large class discussions, facilitated small group activities, and written assignments will encourage students to think critically and practically about the application of biological information to personal decision-making and to reducing their own risk of disease. Importantly, students will examine the roles of reproductive physiology and sexuality in a historical, cultural and social context, with particular emphasis on cultural and gender differences in anatomical forms, sexual expression, and disease susceptibility. Guest presentations from community groups will present current information about local reproductive and sex-related concerns and services. The course will present ongoing research on human sex and reproduction, and explore the biology behind current issues in human sexuality and medicine. Student evaluation is based on participation in activities, written assignments, and performance on four examinations. The course is divided into four units: Reproductive Anatomy and Physiology provides students with a thorough background in human reproductive anatomy and function. This unit sets the tone for the course, providing students
BIOL 183Q: From Beast Books to Resurrecting Dinosaurs

3 Credits

In this honors course, we'll explore changing perspectives on life and approaches to studying life. More specifically, we'll examine, through an historical lens, humankind's quest to describe and explain and, ultimately, to expand the diversity of the living world. We begin with early attempts to classify living things, for example, Aristotle and Pliny. We then see how medieval bestiaries appropriated classical ideas about nature while adding to them in the context of Christian historia. In the Enlightenment, Linnaeus's taxonomic work provided a new way of naming and systematizing organisms. On the other hand, the nascent scientific methods of Sir Francis Bacon anticipate the shift from the descriptive to the theoretical and mechanistic that accompanied Darwin's first sketch of a phylogenetic tree and the theory of evolution. We consider new theories, methods, and language in our examination of Watson and Crick and the double helix, molecular biology, and genomics. The course concludes with a glimpse at future possibilities enabled by what was studied previously in the course: genetic engineering, synthetic biology, and de-extinction. The course original structure offers the experiential engagement of the sciences through laboratory experiments and fieldwork along with the workshop and directed discussions characteristic of the humanities seminar. The content and type of "readings" also reflect both areas and include primary and secondary sources in a variety of media. A visit to a natural history museum and/or zoo provides important physical contexts where students learn about type specimens, live specimens, and how scientists today use collections. They will assemble and curate their own zoological collection, juxtaposing various approaches to describing and classifying animals. The integration of the humanities and the sciences into a single course, along with the incorporation of significant experiential work, helps students gain a broad and deep understanding of and appreciation for each of these intellectual disciplines and for life itself.

International Cultures (IL)

BIOL 200: Introduction to Pharmacological Concepts

3 Credits

Presents basic concepts of pharmacology; includes major drug classifications, pharmaceutical preparations, and biological implications relevant to these therapeutic agents.

BIOL 220M: Honors Biology: Populations and Communities

4 Credits

Honors study of the major physical, chemical, and biological factors constituting environment and their dynamic interaction with organisms forming ecosystems. A study of the structures and functions of organismic interactions from simple populations to complex ecosystems. (BIOL 220W, BIOL 230W, and BIOL 240W each carry only 1 credit of "writing"; all three courses must be taken to meet the writing requirement.) BIOL 220M is an introductory course in ecology. It introduces students to the fundamental ecological principles, concepts, patterns, and processes regarding populations, communities, and ecosystems. This course provides students with a foundation of ecological science, as well demonstrating linkages between ecology, population genetics, and evolution. The course objectives are the same as those described in the original course proposal and are to provide students with a fundamental understanding of: 1) genetic processes within populations of living things, 2) evolutionary processes involved in speciation, 3) dynamic interactions of organisms within and among populations, especially pertaining to energy cycles, various biogeochemical cycles, predator-prey interactions, and the like, and 4) distribution patterns of living organisms and the need to conserve the resources of the earth.

**Enforced Prerequisite at Enrollment:** BIOL 110 or BIOL 110H
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Writing Across the Curriculum

BIOL 222: Genetics
3 Credits

Variation and heredity in bacteria, plants, and animals; relationships of genetic knowledge to evolution and breeding practices. This course is for students in life sciences majors that are not Biology, Genetics and Development and Biochemistry and Molecular Biology. Students should have at least 3 credits of biological sciences before scheduling this course. In this course, we will discuss chromosome structure; mitosis and meiosis, in particular their application of the transmission of DNA; principles of Mendelian inheritance; structure and function of DNA, RNA, and proteins; gene expression; DNA mutations and chromosome changes; genomics; population genetics and the intersection of genetics and society. The course will include multimedia presentations, textbook readings, problem-solving and homework, in-class activities and discussions of science and society.

**Enforced Prerequisite at Enrollment:** BIOL 110 or BIOL 110H or MICRB 201 or MICRB 201H or BIOL 141 or BIOL 133 or BMB 251 or BMB 251H

BIOL 223: Laboratory in Genetics
1 Credit

Principles of genetics illustrated with Drosophila breeding experiments and with demonstrations of plant and animal materials.

**Enforced Prerequisite at Enrollment:** BIOL 133 or BIOL 222

BIOL 230M: Honors Biology: Molecules and Cells
4 Credits

This four credit course with lecture and laboratory components provides an understanding of the major unifying principles of life as they apply to the study of the molecular mechanisms underpinning the function of living organisms. Through the lab, students are expected to become proficient in the interpretation and presentation of experimental results through written and oral reports. Taken together with the other honors core courses in the biology curriculum (BIOL 110H, BIOL 220M, BIOL 240M), BIOL 230M will help students to integrate concepts ranging from molecular and cellular events through principles governing entire populations and ecosystems. Further, BIOL 230M provides the foundation on which students further their study of molecular genetics - a discipline integral to a number of the biological sciences.

**Enforced Prerequisite at Enrollment:** BIOL 110H or BIOL 110H

BIOL 230W: Biology: Molecules and Cells
4 Credits

BIOL 230W is a four credit course with lecture and laboratory components. (BIOL 220W, BIOL 230W, and BIOL 240W each carry only 1 credit of "writing"; all three courses must be taken to meet the writing requirement.) The goal of this course is to provide an understanding of the major unifying principles of life as they apply to the study of the molecular mechanisms underpinning the function of living organisms. Through the lab, students are expected to become proficient in the interpretation and presentation of experimental results through written and oral reports. Taken together with the other core courses in the biology curriculum (BIOL 110, BIOL 220W, BIOL 240W), BIOL 230W will help students to integrate concepts ranging from molecular and cellular events through principles governing entire populations and ecosystems. Further, BIOL 230W provides the foundation on which students further their study of molecular genetics - a discipline integral to a number of the biological sciences.

**Enforced Prerequisite at Enrollment:** BIOL 110 or BIOL 110H
Recommended preparations: CHEM 110
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Writing Across the Curriculum

BIOL 230M: Honors Biology: Function and Development of Organisms
4 Credits

Honors study of development and physiological processes at the organismic level. (BIOL 220W, BIOL 230W, and BIOL 240W each carry only 1 credit of "writing"; all three courses must be taken to meet the writing requirement.) This course provides an understanding of the major unifying principles as they apply to the study of the development and physiological mechanisms utilized by organisms from both animals and plants. In lecture a comparative approach will be taken in the examination of reproduction, development, and physiology primarily at the organismal level. In laboratory, experimental investigations of both animal and plant systems will reinforce the concepts covered in lecture. Through the lab, students are expected to become proficient in the interpretation and presentation of experimental results through written and oral reports. Taken together with the other core courses in the biology curriculum (BIOL 110, BIOL 220, BIOL 230W), BIOL 240M will...
help students to integrate concepts ranging from molecular and cellular events through principles governing entire populations and ecosystems. Further, BIOL 240M provides the foundation on which students further their study of animal physiology and development - two of the largest options in the biology majors curriculum. Through this class, and the other core course, students will develop skills integral to the General Education mission. Evaluation methods in the lecture part of the course include two to three "mid-term" exams and a comprehensive final exam. Evaluation methods in the lab portion of the course include in-class quizzes, one or more formal lab reports on experiments or data analysis conducted in lab sessions, and short write-ups of existing data sets or relevant ecological issues. The Honor's version of the course will differ in a number of ways from the parent BIOL 240W course. First, there are more opportunities to discuss current applications of the information. In addition, a unique project (either in lab and/or in lecture) will allow students to explore a specific area of the course in more detail (e.g., students choose a topic in the current literature and present a paper along with its significance to the class). Where appropriate, students will be exposed to current research in specific areas. The evaluation for the course will be modified from that of the parent course in accordance with the changes in assignments.

Enforced Prerequisite at Enrollment: BIOL 110H and CHEM 110 or CHEM 110H
General Education: Natural Sciences (GN)

BIOL 251: Peer Leadership in Biology

1 Credits

Leadership training in guiding others to learn, communicate, and apply biological principles. BIOL 251 Peer Leadership in Biology (1) The study of Biology is complicated by the myriad pathways and processes that must be mastered in a way that interrelationship become apparent. A major stumbling block in a student’s progress is learning how best to organize one’s study so that both the details of these processes can be learned, along with how these processes fit together (i.e. integration). The second hurdle is learning how to use this information in a way that can solve real life problems and to communicate this process to others. This course is designed for students who have already mastered basic concepts in biology and who want to learn how to communicate their understanding to others who are learning these first principles. This course is unusual in that it has divergent goals. The students enrolled in this course will be trained to be more effective communicators. In the 21st century, it is critical that we train our students to be better at relating to the general population by using effective communication skills. In addition, the course will train the students to act as effective group leaders in peer learning programs so they become competent, comfortable, and confident in working with students of diverse background, learning styles and skill levels. The philosophy behind peer learning programs is that every student can improve their performance and with the help of a group leader, this goal can be realized. The group leaders play an integral role in the program that in that they are the connection between participant and course instructors. The group leaders will learn how to pass their skills on to other students in such a way as to encourage ownership of their education. Through workshops and biweekly meetings, the group leaders will learn about time management and study skills, test taking strategies, exam writing, working with students with divergent learning styles, and how to be multiculturally competent such that they are able to work with a diverse student population. They will facilitate learning through group activities and practice their leadership skills in a small group setting. Group leaders will be monitored through review of their weekly journals as well as observation of their groups by supervising faculty. The student developed exercises will be implemented and reviewed for effectiveness.

BIOL 261: Reading Seminar in the Health Professions

1 Credits/Maximum of 2

Students will read and discuss 3 to 4 books of creative nonfiction that address issues in the health professions. These may include collections of reflective essays from health professionals, historical narratives of diseases or conditions, biographies, collections of case studies, exposé, memoirs, or other formats. Topics may include disease transmission, ethics, patience care, health care, diseases, historical events, or other relevant topics. In addition, students will read and discuss primary scientific literature and news articles on topics related to their book readings. Students must attend and participate in weekly discussion and complete online writing assignments.

BIOL 294: Research Project

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small-group basis.

BIOL 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
BIOL 296G: Special Topics
1 Credits

BIOL 296H: Independent Studies
1 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors
BIOL 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BIOL 322: Genetic Analysis
3 Credits

Recommended Preparations: At least one life science course. A discussion of the mechanisms of heredity in prokaryotes and eukaryotes with emphasis on analysis and modes of inference.

BIOL 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BIOL 400: Teaching in Biology
1-6 Credits/Maximum of 6

This course will train biology teaching assistants to teach in the laboratory/recitation setting with emphasis on critical thinking skills.

BIOL 400 BIOL 400 Teaching in Biology (1-3) This course provides teaching assistants with the fundamentals they will need to be effective in the laboratory and/or recitation classroom. Students will learn the fundamental skills needed to; design lesson plans; facilitate class discussions; write effective quizzes; communicate learning expectations; grade fairly; and in the case of the laboratory setting, maintain a safe learning environment. Students enrolled in this course will also be serving as teaching assistants and consequently faculty who serve as course instructors and/or lab coordinators in the relevant course will provide the instruction. Through regular meetings the course instructors will help teaching assistants adjust to their duties and solve common problems that arise in the laboratory/recitation environment. Emphasis will be placed on how teaching assistants can facilitate active learning and help their students develop sound study skills. Students enrolled in this course will be evaluated on regular attendance, organization in and preparation for their teaching, and clarity in how they communicate with their students.

Enforced Prerequisite at Enrollment: 5th semester standing

BIOL 402W: Biological Experimental Design
3 Credits

Discussion of experimental design, analysis and presentation, with a practicum providing for student design, analysis and presentation of biological experiments. Students may not take this course if they have taken BIOBD 350W. BIOL 402W Biological Experimental Design (3) This course emphasizes written and oral communication of scientific ideas. Students discuss papers from the literature, preparing written critiques of two. Critiques are reviewed in writing by the instructor and peers and may be revised twice. Peer reviews are graded in writing and may be revised once. Written proposals for biological research are required. Students must build arguments for methodological rationales, justify statistical approaches, and place their proposed research into a larger societal context. Proposals are reviewed by the instructor and three peer reviewers. Peer reviewers must prepare written critiques and present proposals to the class during an "NSF"-style panel review. Prior to the presentation, the instructor provides written and oral feedback to the author and the peer reviewer in a meeting at which strategies for presenting the proposal are discussed. Subsequent to the presentation, peer reviewers write summaries of the discussion and provide explicit guidance to authors. Proposals may be revised twice. Peer reviews and summaries are graded in writing and may be revised once. Thus, each student writes 2 critiques, 1 proposal, 2 peer reviews of critiques, 1 peer review of a proposal, and 1 summary of the panel discussion. Each assignment is graded in writing and is subject to revision. Students also are graded on their proposal presentations and on participation in panel discussions. These activities constitute 75% of the final grade. Students must demonstrate competence in the use of SAS, a statistics package. Students must choose and apply appropriate statistical techniques to biological data. In addition to the program and its output, students write interpretations of the results. This activity constitutes 25% of the final grade. Lectures are used to review statistics and "how tos" (e.g., proposal preparation). Case histories are used to address ethics, statistical decision-making, and design. Students are expected to challenge what they learn, and the notion that scientists must acknowledge and guard against bias in their work is emphasized. Intellectual honesty and the ability to give and receive constructive criticism are demanded. This course is required in two of the six options in biology (ecology and general), and it can be taken by students in the other options. The course is required of students who have not fulfilled the WAC requirement at the 200-level (transfer students).

Enforced Prerequisite at Enrollment: STAT 250 and at least two of the following three courses: BIOL 220W and BIOL 230W and BIOL 240W Writing Across the Curriculum

BIOL 403: Biological Writing and Communication for Research
3 Credits

Each student will pose and address their own research question with support from the scientific research literature. Each student will share their own research findings in written and oral formats, both for scientific and general public audiences. Data to address each student's research question can come from their own undergraduate research or from queries with publicly-available data sets. Students should expect to give and receive regular peer feedback on writing assignments relating to their research project and incorporate that feedback from peers and from their teacher in synthesis projects. Synthesis projects, where students are expected to integrate and make revisions to writing from the semester, include a short research manuscript, a research poster and oral presentation, and a blog post geared toward the general public. Weekly workshops paired with readings on scientific theory about writing and communication will help students practice technical science writing in general.
Enforced Prerequisite at Enrollment: (BIOL 110 or BIOL 110H or MiCRB 201 or MiCRB 201H or BMB 251 or BMB 251H or STAT 200 or STAT 250) and (ENGL 15 or ENGL 137H or CAS 137H or ENGL 30)

General Education: Writing/Speaking (GWS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BIOL 404: Cellular Mechanisms in Vertebrate Physiology

3 Credits

This course is focused on cellular and molecular mechanisms governing physiological aspects of vertebrate cell signaling, and will consider how these mechanisms are adapted to particular organismal functions. To illustrate general principles, specific examples from different organ systems are discussed. For each example, some background on the relevant organismal physiology is provided and thus no physiology course is required as a pre-requisite. The main course objective is to help students better understand the scientific basis of Biology through consideration of experimental findings and student-led discussions of primary research in the field.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H

BIOL 405: Molecular Evolution

3 Credits

This course is designed to introduce the concepts of evolution from a molecular point of view and the basic techniques of analysis of molecular sequence data. The class will include a mixture of lecture-based and student activity-based instruction that addresses various topics in molecular evolution, as well as in-class and extracurricular work on the computer to learn how to use online bioinformatics tools for sequence analysis. As a result of this course, students will be able to analyze DNA and protein data with a purpose of addressing specific scientific questions of interest. The course embraces applications of computing and statistics to the life sciences.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M and (BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 222 or BIOL 322) Recommended Preparations: Completion of a course in Statistics is strongly recommended

BIOL 406: Symbiosis

3 Credits

Mutualisms (interactions between two species that benefit both of them) occur in every habitat on Earth, and nearly every species on the planet is involved directly or indirectly in one or more of these interactions. The influence of mutualisms transcends levels of biological organization from cells to populations, communities and ecosystems. Mutualistic associations, such as our microbiome and agricultural symbioses, are critical for human health and welfare. Mutualistic symbioses played a fundamental role on the origin of the eukaryotic cells and the evolution of multicellularity. In addition to the key role played by mutualism in the evolution of complex lifeforms on earth, mutualistic association are instrumental to understand how some important ecosystems such coral reefs and hydrothermal vents function. Mutualistic symbioses are critical for nutrient cycling in the environment and the reproduction and dispersal of numerous plant and animal species. This course will focus on unifying concepts that cut across different forms of mutualism. We will explain and tests these concepts analyzing classic examples of mutualisms. We will define and categorize the diverse array of symbiosis occurring in nature. We will explore the evolutionary origins and implications of mutualistic symbiosis, investigate the population, community and ecosystem ecology of mutualisms and we will assess current anthropogenic threats to mutualisms, their potential for resilience and the role of mutualisms in conservation. Finally, we will explore in detail the metabolic linkages using selected nutritional symbiotic mutualisms examples. The course combines in-class and online teaching, as well as a weekly discussion session, in which the students are responsible for selecting one primary scientific article, prepare a brief presentation and lead a critical discussion session in front of the class. The course takes advantage of the technology-rich Bluebox experimental classroom. This learning space has been designed to support active, collaborative learning experiences increasing student engagement.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or BMB 251 or BMB 251H

BIOL 407: Plant Developmental Anatomy

3 Credits

The course will provide students with an understanding of the developmental anatomy of plant organs, tissues and cells throughout the plant life cycle. When appropriate, the course will discuss genes involved in the formation and function of these organs and how organ development is affected by environmental inputs. In laboratory sections, observational skills will be trained and knowledge gained in lectures will be applied to the analysis of plant anatomical structures. Plant developmental adjustments to environmental stresses will be studied using light microscopy and digital image acquisition. Primary scientific literature related to the lecture topics will be assigned as reading material to be discussed in class. Students will learn how to formulate research hypotheses and, in a written assignment, research a global challenge to food security and discuss strategies to improve agricultural productivity by manipulating the biology of plants.

Enforced Prerequisite at Enrollment: BIOL 240W or BIOL 240M or BIOL 127

BIOL 409: Biology of Aging

3 Credits

This course focuses on the molecular, cellular and physiological changes that are associated with the aging process. Diseases that are associated with aging will also be addressed. Continual emphasis will be placed on interventions that may prolong the “health span” of an organism. Original research articles will be the primary sources of information in this course. By the end of the semester, students will have a firm understanding of the theories of aging and the age-related changes that take place on several levels of inquiry. Additionally, students will develop their abilities to critically evaluate scientific literature.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 240W or BIOL 141 or BMB 251

BIOL 411: Medical Embryology

3 Credits

This course offers an overview of Human Embryology, including reproductive physiology, infertility, the events and timeframes
characterizing human embryological development, the structure and function of developing human body systems, and relevant clinical correlations associated with disease and congenital malformations. This course features discussions and explanations of topics in developmental biology that some students might view as controversial including comparative anatomy and evolution, contraception, assisted reproductive techniques, cloning, potential medical applications of stem cells, abortion with respect to developmental time frames, and gender development. The goal of such discussions will be to educate and give perspectives on these issues, but not to indoctrinate a particular viewpoint or philosophy.

**Enforced Prerequisite at Enrollment:** BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or BIOL 141 or BMB 251 or BMB 251H

**BIOL 412: Ecology of Infectious Diseases**

3 Credits

This course will take an ecological approach to the study and control of infectious diseases. The course examines the dynamics of disease, how parasites (worms, bacteria and viruses) spread through a host population, the consequences for the hosts and the consequences for the parasite from both an ecological and evolutionary viewpoint. Ecological insights will be used to discuss and identify effective means of controlling the parasites. Students will learn how to develop basic mathematical models to describe the dynamics of a parasitic infection and discuss how these models can be applied to make predictions and optimize control-strategies for infections. This will be illustrated with numerous work examples of human, veterinary and wildlife diseases. Students will also examine the role of parasites in the ecosystem and how environmental changes affect parasite transmission. At the finer level the course will investigate how host-parasite interactions and multi-parasite species infections are modulated by host features (e.g. age, sex, immunity) and what may cause rapid changes in infectiousness and transmission. The course will touch on a range of current issues that include pandemic outbreaks, emerging infectious diseases and the role of parasites in ecosystem functioning. The ecological approach involves applying the principles of population biology to understand infectious diseases and develop new perspectives on epidemiology, thus the title "Ecology of Infectious Diseases". This course is designed for ecology, biology and animal science majors to obtain insights into the ecology of parasitism, and for pre-meds to provide biological foundation to the study of epidemiology.

**Enforced Prerequisite at Enrollment:** BIOL 220W or BIOL 220M or HPA 440

**BIOL 413: Cell Signaling and Regulation**

3 Credits

Introduction to the molecular mechanisms by which cells send, receive, regulate, and respond to signals. Through review of primary literature, students will explore the variety of mechanism by which endocrine, paracrine, and juxtacrine signal molecules exert their effects on target cells. Subject matter will include ligand/receptor families, second messenger systems, G-proteins, kinase cascades, and effector proteins that regulate cytoskeleton dynamics, metabolism, and gene expression.

**Enforced Prerequisite at Enrollment:** BIOL 230W or BIOL 230M or BMB 251 or BMB 251H

**BIOL 414: Taxonomy of Seed Plants**

3 Credits

This course provides an introduction to modern plant systematics as exemplified by the wide diversity of living plants growing in central PA. By the end of the course, students will be able to: 1) use the technical vocabulary that describes plant structures necessary for their identification, 2) characterize the major groups and families of flowering plants and gymnosperms, 3) recognize on sight 60 of the most important plant families in our region and be able to describe and contrast their major features, 4) use and write identification keys to identify and study living plants as represented in the local flora, and 5) discuss current concepts of plant systematics and phylogenetics and their applications to plant classification and the study of the evolution of and relationships among families of flowering plants.

**Enforced Prerequisite at Enrollment:** BIOL 240W or BIOL 240M or BIOL 127

**BIOL 415: Ecotoxicology**

3 Credits

Ecotoxicology is an interdisciplinary field that involves the study of chemicals and radiation on organisms and their environment. The goal of this course is to introduce the science of ecotoxicology, including a survey of classes of contaminants as well as the impacts of various toxins. The emphasis will be on organism and ecosystem effects of toxins, as well as some toxicity testing methods and pertinent government regulations. Additionally, we will undertake a research project as well as critical readings of current literature. One of the biggest challenges students face in this course is dealing with potentially conflicting data and applying scientific thinking in the process of making decisions about these controversies. These challenges will underscore the political, economic, and scientific constraints that U.S. regulatory agencies work under to protect public health. The goals of this course are to: 1) introduce the science and history of ecotoxicology, 2) look at classes of contaminants and their modes of action, 3) understand the impacts of various toxins on organisms and ecosystems, 4) introduce some of the various U.S. agencies that evaluate and regulate contaminants in the environment, 5) critically review scientific papers, data, and arguments, and 6) learn to communicate like a scientist with an emphasis on communicating complex topics to a lay audience and demonstrate understanding of the scientific method and apply that understanding to the development of a research project.

**Enforced Prerequisite at Enrollment:** BIOL 220W or BIOL 220M or FOR 308 or WFS 209

**BIOL 416: Biology of Cancer**

3 Credits

Biology of Cancer introduces basic biological aspects of cancer development with an emphasis on molecular and cellular mechanisms of tumorigenesis. It discusses how molecular genetic approaches can be used to reveal fundamental processes of carcinogenesis. Through this course, students will learn genetic, cellular and biochemical basis of cancer development and understand how such information can be instrumental in devising strategies for prevention, detection, and treatment of cancer. As a 400 level class, students are expected to have a background in molecular biology and genetics.
Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 222

BIOL 417: Invertebrate Zoology

4 Credits

Function and form of major invertebrate phyla.

Enforced Prerequisite at Enrollment: BIOL 110

BIOL 419: Ecological and Environmental Problem Solving

3 Credits

The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems. After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited, unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating in individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology throughout the semester. No modeling experience is necessary as the course will start from basic principles.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M or MATH 140 or MATH 140B or MATH 140H

BIOL 419H: Ecological and Environmental Problem Solving

3 Credits

Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and environmental problems. BIOL 419 Ecological and Environmental Problem Solving (3) The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems. After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. Many of the class meetings will be held in computer laboratories where they will be actively engaged in working on applying these models. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited, unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating in individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology. This course will be one of several ecology courses that are available to students in the ecology and general option in the biology program along with the biology minor.

Honors

BIOL 420: Paleobotany

3 Credits

Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical techniques and specimens. GEOSC 420 BIOL (GEOSC) 420 Paleobotany (3) Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant- animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands. This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

Prerequisite: any 3 credit introductory course in historical geology or plant biology

Cross-listed with: GEOSC 420

BIOL 421: Comparative Anatomy of Vertebrates

4 Credits

BIOL 421 / VBSC 421 Comparative Anatomy of Vertebrates Students will study vertebrate anatomy from an evolutionary and developmental perspective. They will become familiar with important structures, terminology and function; a basic requirement of the biomedical sciences. Comparisons between representative vertebrate groups (including fish, amphibians, reptiles, birds and mammals) will be used to illustrate structural adaptations of each organ system from an evolutionary perspective. Specific examples comparing ancestral and descendant species will demonstrate the relationships between the lifestyle of an organism and the morphology of homologous structures. A study of early embryonic development, differentiation of primary germ layers and organ formation will provide a basis for understanding organ structure and function. Laboratory activities will involve work with preserved specimens and will focus heavily on anatomic structure identification and function. Topics include anatomic directional terminology, vertebrate classification systems, early embryonic development and a detailed examination of the various organ systems. Specimens are selected to illustrate the anatomy of ancestral vertebrate species, the evolutionary changes observed in descendant species and the association of morphology with lifestyle. Although students will invest the majority of their time becoming familiar with the anatomy of a representative mammal (the cat), multiple species will be
examined, and students will be expected to recognize selected anatomic structures in each species studied.

**Enforced Prerequisite at Enrollment:** BIOL 129 or BIOL 141 or BIOL 220W or BIOL 220M or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or BMB 251 or BMB 251H

Cross-listed with: VBSC 421

**BIOL 422: Advanced Genetics**

3 Credits

Now is an exciting time for evolutionary, quantitative, and disease genetics. Increasingly sophisticated technologies are making it possible to obtain dense genomic data from large numbers of individuals from a variety of taxa. Such data permits the evaluation of processes that have generated genetic variation, providing a rich resource to make inferences about natural selection and population history that have affected the current distribution of genetic diversity. In addition, when correlated with phenotypic traits, such data enables researchers to identify genomic regions underlying trait variation, which is of particular importance for identifying genes involved in disease. By the end of the course, students will be able to understand how the genome is organized, learn how to find and assay genetic variation across the genome, and will know how such variation is inherited. They will learn how pedigree analysis, linkage mapping, and autozygosity mapping can be used to identify loci underlying Mendelian traits, and will be exposed to a number of examples from human disease. The students will also learn about the neutral and adaptive processes that shape genetic diversity within and across species, and will understand the basics of sequence alignment, phylogenetic reconstruction, and testing for natural selection from within and between species data. Moreover, students will acquire the fundamentals of quantitative genetics, will understand the essentials of polygenic adaptation, and will learn how to use genome-wide association studies to identify loci underlying complex traits. Finally, students will become familiar with recent advances in individual identification from genetic data, and its relationship to privacy.

**Enforced Prerequisite at Enrollment:** BIOL 222 or BIOL 322 or BIOL 230W or BIOL 230M or BMB 251 or BMB 251H

**BIOL 424: Seeds of Change: The Uses of Plants**

3 Credits

It is not possible to conceive of civilization, or life on earth for that matter, without plants. Through photosynthesis and oxygen production, plants are the major producers of biomass and constitute the base of the food pyramid. Plants also have evolved astounding diversity of forms, sizes, shapes, colors, smells and chemical compounds. This structural, nutritional and chemical flexibility has been put to innumerable uses by people, from hunter gatherers to the scientists in search of a cure for AIDS. Plants are at the core of the everyday necessities (food, clothing, shelter, medicines, beverages), simple pleasures (flower, fragrances) and pervasive problems (energy supply, drug addiction, famine). Plants have changed civilization in dramatic ways in the past. Witness, for example, the spectacular alterations in diet and the increased population growth catalyzed by the Columbian Exchange. In the future we expect that plants will continue to affect people through an increasingly complex interplay between new technologies such as genetic engineering, the pressure on natural resources, and the search for new crops, medicines and biomaterials.
This course will study the theory of evolution and the different levels at which biological evolution can be examined ranging from macroevolution and the fossil record to microevolutionary processes at the population level. It will look at how genomes evolve from bacteria to multicellular organisms as well as the evolution of body plans in plants and animals and the molecular underpinnings of these developmental transitions. These concepts will be used to understand human evolution and learn how the genome revolution has shed light on evolutionary medicine.

**Enforced Prerequisite at Enrollment:** (BIOL 220W or BIOL 220M and BIOL 230W or BIOL 230M or BMB 251 or BMB 251H) or (BIOL 220W or BIOL 220M and ENVST 200)

Cross-Listed

BIOL 428: Population Genetics

3 Credits

This is an exciting time for population genetics research. Increasingly sophisticated technologies are making it possible to obtain dense genomic data from large numbers of individuals. Further, advances in population genetics theory are improving our ability to make inferences about the evolutionary forces acting on populations. However, to effectively apply these new techniques to data being generated across populations, it is important to understand how evolutionary processes shape patterns of genetic variation. In this course, students will learn about the mathematical models employed in population genetics, and how these models can be used to make inferences from data. Specifically, this course emphasizes modern population genetic theory through the coalescent process, which provides a direct application to the analysis and understanding of empirical data.

**Enforced Prerequisite at Enrollment:** BIOL 220W and (STAT 200 or STAT 240 or STAT 250) and (MATH 111 or MATH 141 or MATH 141B or MATH 141H)

BIOL 429: Animal Behavior

3 Credits

Physiological mechanisms, ecological relevance, and adaptive significance of animal behavior.

**Enforced Prerequisite at Enrollment:** (BIOL 110 or BIOL 110H) and BIOL 430: Developmental Biology

3 Credits

Developmental Biology introduces students to one of the most complex and exciting areas of modern biology. This course will cover basic concepts using a comparative embryology approach and focus on molecular and genetic analysis of mechanisms involved in cell differentiation and organ development. Students will learn how studies of development in different model organisms including invertebrate and vertebrate species have identified a network of evolutionarily conserved genes and signaling pathways that regulate embryonic development and morphogenesis.

**Enforced Prerequisites at Enrollment:** BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M Recommended preparations BIOL 222 or BIOL 322

Cross-listed with: BMB 430

BIOL 431: Reproductive Biology

3 Credits

Reproductive Biology is an upper-level undergraduate course. The course will discuss topics in reproductive development and physiology, which can include development of gonads and the germline, sex determination, meiosis, development of gametes, plant reproductive development, effects of environmental factors on reproductive development, cloning and asexual reproduction, infertility and birth defects. In addition to morphological and cellular description of reproductive organs and tissues, there will also be discussion of genetic basis of diseases and molecular analysis of gene functions crucial for reproductive development in human and model organisms. Students will be asked to read original research articles on various aspects of reproductive biology, and work in two-person teams on a powerpoint presentation, which they use to report their understanding of a selected article in class to other students. The lectures and exams focus upon concepts integral to reproductive biology. Exams will be a combination of multiple choice, filling blanks, and true/false questions.

**Enforced Prerequisite at Enrollment:** BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or BMB 251 or BMB 251H or MICRB 251

BIOL 432: Developmental Genetics

3 Credits

An advanced course in developmental biology, focusing on the use of genetics techniques to study fundamental questions of animal development. Topics taught in this course include an introduction of popular model organisms, various mutagenesis approaches, complex signaling mechanisms and cellular reprogramming. The goals for this course are 1. To acquire knowledge in advanced genetic tools commonly used to study animal development. 2. To acquire skills in reading and understanding scientific literature in the field of developmental genetics. 3. To acquire skills in applying knowledge and tools to solve basic problems in developmental genetics. 4. To gain an appreciation for the relevance of developmental genetics research to human health and other global issues.

**Enforced Prerequisite at Enrollment:** BIOL 230W or BIOL 230M or BMB 251 or BMB 251H

BIOL 433: Evolution of Vertebrates

3 Credits

This course focuses on the evolution of vertebrate animals, beginning with an overview of vertebrate classification and a consideration of early vertebrate evolution. Each group of vertebrates (fishes, amphibians, reptiles, birds and mammals) will be explored, with an emphasis on the history of each group, adaptations (physiological, morphological, behavioral) seen within the group, and relationships among members of the group, including insights from molecular data. Consideration of extant (living) vertebrates will be emphasized, specifically convergent adaptations across taxa (including flight, swimming, and specialization for similar environments, such as arctic or desert). The student will develop a perspective on vertebrate evolution, representative groups, vertebrate classification systems, and different vertebrate body plans and special adaptations. Additionally, a course project will reinforce broader skills of scholarly paper writing, oral presentation techniques, and collaboration. There is a single short field trip associated with this
course. Over one weekend, the students will be driven to one of several sites, typically a zoo and a natural history museum. This experience provides students with an opportunity think deeply about how the principles presented in the class shape the diversity of past and current vertebrates. The biology major strives to develop an overall perspective on evolution for our undergraduates, and this course uses an important group, the vertebrates, to fully exemplify and develop that goal. Students in other majors outside our college, including Geology/Paleontology and Wildlife Science may also find interest in this course offering, and could graduate students.

**Enforced Prerequisite at Enrollment:** BIOL 220W or BIOL 220M and BIOL 240W or BIOL 240M

**BIOL 434: Pathobiology of Emerging Infectious Disease**

3 Credits

This course examines the biology of emerging and reemerging infectious diseases. The course includes viral, bacterial, and eukaryotic pathogens causing serious mortality and morbidity. Major course topics include a historical perspective on diseases; microbiology and immunology of each class of pathogen; processes of evolutionary change in pathogens; public health efforts to detect, monitor, respond to, and/or eliminate diseases from local to international scales; zoonotic disease and host jumps; and the One Health integration of human, animal and environmental health. Students will complete quizzes, discussions, and research project based in primary literature reporting on a current or classical infectious disease. Case studies will include, but are not limited to, influenza, HIV/AIDS, smallpox, West Nile virus, polio, dengue, tuberculosis, and malaria. Depending on class size, students may complete additional research projects or scenarios. Students with interests in disease and health from majors in many colleges may wish to take this course.

**Enforced Prerequisite at Enrollment:** BIOL 110 or BIOL 110H or BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or MICRB 251 or MICRB 201 or MICRB 201H

**BIOL 435: Ecology of Lakes and Streams**

3-4 Credits

Physical, chemical, and biological characteristics of freshwater environments, with special emphasis on factors regulating productivity in freshwater ecosystems.

**Enforced Prerequisite at Enrollment:** BIOL 220W

**BIOL 436: Population Ecology and Global Climate Change**

3 Credits

Ecological responses of individuals, populations, and communities to environmental variation, with emphasis on climate change. BIOL 436 BIOL 436 Population Ecology and Global Climate Change (3) In this course, students will be presented with a close look at the factors shaping the characteristics of populations and their dynamics in time and space, with emphasis on the responses of populations to climatic fluctuation and global climate change. The course begins with an introduction to the basic concepts necessary for understanding the responses of individuals, populations, and communities to climate change in the recent past (the past 2 centuries), present, and future. These concepts include: the science of climate change, how temperature trends are estimated, the data used in assessment reports by the Intergovernmental Panel on Climate Change, large-scale climate systems such as the North Atlantic Oscillation and the El Niño Southern Oscillation, the basic characteristics of populations, how population densities are estimated, and the types of population data used in studies of population responses to climate change. In this first section of the course, students are also introduced to natural selection and the concepts of adaptation and vulnerability, which sets the stage for distinguishing between adaptive ecological responses to climate change vs. susceptibilities to climate change. After presenting these basic concepts, the course then moves on to examine single-species population dynamics. This section of the course teaches students about the different types of population growth, including unlimited growth, density-dependent population dynamics, and density-independent population dynamics. Here, we take a close look at case studies documenting population responses to large-scale climatic fluctuation, and case studies that demonstrate interactions between the opposing influences of density dependence and climate on population dynamics. This section of the course also introduces students to some of the analytical difficulties inherent in quantifying the contribution of climatic fluctuation to local population dynamics. This section finishes with lectures on the phenomenon of spatial synchrony in population dynamics and the implications of global climate change for widespread population decline and extinction risk. The final section of the course focuses on multi-species dynamics. Lectures in this section introduce students to inter-specific competition through examination of case studies involving desert rodents and ants; then move on to predation, with case studies of wolf predation illustrating the different types of functional and numerical responses, predator-prey cycles, and cascading effects of predators on population dynamics at lower trophic levels including herbivores and plants; and parasite-host dynamics, including discussion of the role of parasites as specialized predators in host population dynamics. This section also includes disc: BIOL 436 Population Ecology and Global Climate Change (3)

**Enforced Prerequisite at Enrollment:** BIOL 220W

**BIOL 437: Histology**

4 Credits

This course develops a visual, conceptual, and functional understanding of histology, the microanatomy of body cells, tissues, and organs. The lecture portion of this course will use diagrams, digital images, and didactic explanations to build a conceptual understanding of histology, stressing form, function, and clinical applications. The laboratory portion of the course emphasizes form, identification, and naming of cells, tissues, and organs at a microscopic level. As such, the lab will use microscopes and digital images to investigate actual histology slides of body tissue, with the goal of visual identification, classification, and naming of body tissues.

**Enforced Prerequisite at Enrollment:** BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M or BIOL 141

**BIOL 438: Theoretical Population Ecology**

3 Credits

This course a highly quantitative second ecology course. It emphasizes mathematical and theoretical approaches to ecological questions. The course builds on concepts from introductory ecology and requires students to use tools acquired in biostatistics and calculus to solve ecological problems. It can act as an introduction to or as an extension of experimental design. Although it is not a writing-intensive course, students are required to use standard technical writing and public
speaking skills throughout the course. The course covers topics that are relevant to, but not addressed in, evolution and evolutionary genetics. In addition, it offers an opportunity for mathematics students interested in application of mathematics to biological problems to apply models covered in mathematical modelling to real situations. Throughout the semester analytical and theoretical thinking will be emphasized, starting with simple descriptions of population phenomena and ending with development of mathematical models and the critical experiments needed to test those models. The emphasis lies on empirical tests of ecological theory and applications of ecological theory to real-world problems. Students will be evaluated by means of essay exams covering theory, mathematical models, and the design of hypothetical experiments, in-class presentations of the primary ecological literature and applications of ecological theory to current environmental problems.

**Enforced Prerequisite at Enrollment:** BIOL 220W or BIOL 220M and MATH 140 or MATH 140B or MATH 140H and (STAT 200 or STAT 240 or STAT 250)

BIOL 439: Practical Bioinformatics

3 Credits

Practical aspects of retrieving and analyzing biological information residing in common databases. BIOL 439 Practical Bioinformatics

(3) This course focuses on practical aspects of biological databases and analyses of molecular data. Students will learn about vast resources available, how to access them, and retrieve only the desired information. Sequence comparison and alignment methods will be presented. We will discuss practical aspects of such algorithms as dot matrix plots, dynamic programming, BLAST, and FASTA. Different strategies of multiple alignments will be discussed as well. We will cover computational genomics and computational analysis of gene expression. Students will learn how to assemble short sequences into long contigs and how to infer biological information from raw sequence data. They will learn how to analyze protein sequences including secondary structure prediction, protein function prediction (based on motifs and functional domains), and structural modeling. The whole course will be well balanced between theoretical description of computational biology methods and practical aspects of bioinformatics (some sessions will meet in computer classrooms). Upon completion of this course, students will have sufficient knowledge to retrieve a desired information from biological databases based on both text and sequence data. They will learn what public resources are available in term of databases and a software. They will know how to interpret results in biological context and how to adjust different parameters in the software to get exact desired results. This course will be one of several courses that are available to students in the genetics and developmental biology and general options in the biology program along with the biology minor.

**Enforced Prerequisite at Enrollment:** BIOL 230W or BMB 251

BIOL 441: Plant Physiology

3 Credits

Classical and current concepts in plant constituents, mineral nutrition, water relations, respiration, photosynthesis, photoperiodism, plant growth regulators, growth and development, and responses to the environment. Using these concepts, students will be able to explain how specific processes in a plant integrate with other relevant processes to determine the overall response of the plant to a particular set of conditions; describe how multiple plant biochemical pathways intersect and influence each other; describe how energy affects processes at all levels of biological organization from the molecule and cell to organisms and ecosystems; and be able to explain how plants perceive and respond to their environment, including signal transduction, intercellular communication, and information processing. As part of their work in this course, students will demonstrate an ability to read and discuss the scientific literature on plants and critically analyze current issues in plant physiology including impacts on human health, agricultural biotechnology, and bioenergy.

**Enforced Prerequisite at Enrollment:** (BIOL 230W or BIOL 230M or BMB 251 or BMB 251H) and (BIOL 240W or BIOL 240M)

BIOL 443: Evo-devo: Evolution of Developmental Mechanisms

3 Credits

Evolutionary Developmental Biology (Evo-Devo) is an interdisciplinary field that combines developmental biology, comparative genetics, and evolution to understand how organisms have attained their diversity in form. While the field of developmental biology aims to understand how a given organism develops, Evo-Devo focuses on how form evolves through alteration of these developmental mechanisms. Course instruction involves lectures, discussion, and student presentations/projects and features case studies from the scientific literature across the diversity of life, towards developing a predictive framework for the evolution of form.

**Enforced Prerequisite at Enrollment:** BIOL 240W or BIOL 240M

BIOL 444: Field Ecology

3 Credits/Maximum of 3

This field course will explore the flora and fauna of the mid-Atlantic area. BIOL 444 Field Ecology of the Central Appalachian Highlands

(3) This course is designed to take advantage of the teaching opportunities presented by the West Virginia highlands. The main advantage of using this area as an outdoor classroom derives from the fact that there are large changes in elevation and soils, and a tremendous variety of community types located in a small geographic area. In this area, students can observe ecological communities ranging from river, bottom forests at 1500 to 2000 feet in elevation to dry ridge slope forests at 3000 feet to the unique acid soil heath barrens community of the Dolly Sods Wilderness at 4000 feet. Since almost all of this area was extensively logged in the past, students will have the opportunity to observe the results of succession, and how the process of succession is affected by variation in topography, soil type and local climate. There are also several types of aquatic communities available for study, including large rivers, small high elevation streams and acidic wetlands. The course will use an integrated natural history approach to study the various ecological communities. This will include discussion of the effects of human activity and the topography and geology of the area in addition to study of terrestrial and aquatic flora and fauna. At terrestrial site, we will, in part, follow the example of the US Forest Service’s Forests of the Central Appalachians Projects (http://www.sipes.com/~gus/forests/) which uses forest walk inventories to document biodiversity. Therefore, the course would have a significant plant identification and taxonomy component. Each community can be studied as a separate unit and then compared to the adjacent communities at different elevations. By the end of the course, students should understand the relationship of geology, topography and soil type to the distribution of plant communities. They should also understand the relationship of plant communities and water chemistry to the distribution of aquatic insect and vertebrate and be able to use aquatic insects as water quality indicators. This course will be one
of several field courses that are available to students in the ecology and general option in the biology program along with the biology minor.

**Enforced Prerequisite at Enrollment:** BIOL 220W

BIOL 446: Physiological Ecology

3 Credits

This course introduces students to the study of interactions between physiological capabilities of organisms, their ecology and, more broadly, their environment. This course looks at how organisms work and what it is about their environment that has led them to work that way. Both abiotic and biotic components of the environment are considered as sources of important variation to which organisms must adapt. Plants and microbes are covered to some extent, but the primary focus will be on animals (both vertebrates and invertebrates). The primary goal is to gain an appreciation for the flexibility of physiological systems and the powers of evolutionary processes to shape the physiology of an organism in response to its environment.

**Enforced Prerequisite at Enrollment:** BIOL 220W or BIOL 220M and (BIOL 222 or BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M)

BIOL 448: Ecology of Plant Reproduction

3 Credits

Analysis of the ecology, evolution, and natural history of plant reproduction. We focus on angiosperms (flowering plants) but also touch on the broader reproductive diversity in plants. Our topics include pollination, fruit-set, dispersal, and relevant plant-animal interactions. This course is highly integrative and draws on basic concepts in ecology, evolutionary biology, and genetics. We also pay especial attention to the implications of global environmental change on plant reproduction and plant diversity.

**Enforced Prerequisite at Enrollment:** BIOL 240W or BIOL 240M

BIOL 450W: Experimental Field Biology

3-5 Credits

This is a practical introduction to modern design of field studies and experiments in terrestrial and freshwater habitats. This is an outdoor course almost as much as a classroom one. Be prepared to go outside, develop the power of observation, and discover. Emphasis is given to learning scientific skills via active-learning methods. Students will learn to formulate research questions, and develop adequate hypotheses and study designs and experiments to test hypothesis using statistics. Students will be guided step-by-step to perform basic and advanced data analyses: from data tables and frames, to parametric, non-parametric, and multivariate statistical methods used in everyday biology and ecology research driven hypothesis-testing approaches. Each week the class meets in the classroom (Tuesdays) for discussion-format lectures, and on lab day (Thursdays) the class goes out into the field to collect data and perform experiments. Primary scientific literature will be read and discussed in the context of the lectures and field exercises. Specific Learning activities include the ecology of natural communities including terrestrial and aquatic, seed dispersal and seed ecology, predation, foraging ecology, pollination, fruit-eating mutualisms, and population census methods. Student evaluations are based on participation, engagement, oral presentations, and written reports (no exams given in this class). At least one field trip involves staying overnight in a natural area. Specific topics covered in this class are: asking questions in science, designs of studies and experiments, ecological data collection techniques, data storing methods, statistical analyses (univariate to multivariate), graphical representation of results, oral presentation skills, research ethics, and writing and publication skills and techniques.

**Enforced Prerequisite at Enrollment:** (BIOL 220W or BIOL 220M and BIOL 240W or BIOL 240M) or (BIOL 220W or BIOL 220M and ENVS 200)

Writing Across the Curriculum

BIOL 451: Biology of RNA

3 Credits

Ribonucleic acid (RNA) plays a central role in all organisms on earth, and was very likely the central molecule during the origin of terrestrial life. This course will explore the biological functions that RNA plays in diverse organisms, including transcription, translation, virology, and RNA-interference, and CRISPR-based genome editing. There will be a strong emphasis on the evolution of RNA functions and upon the relevance of RNA-based biological mechanisms to health, disease, and society. The course laboratory focuses on computational skills required for modern analysis of RNA, and emphasized genome-wide studies. This course requires knowledge on the basic mechanisms of molecular biology and genetics, and is designed for upper-level undergraduates and graduate students in the Biology or Biochemistry and Molecular Biology (BMB) departments. Reading materials will involve selections from textbooks, as well as from the scientific literature. Students will be evaluated on the basis of written examinations, homeworks, and a final laboratory project.

**Enforced Prerequisite at Enrollment:** BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or MICRB 251

BIOL 459: Plant Tissue Culture and Biotechnology

3 Credits

The overall goal of this course is to provide a strong overview of the techniques used in plant biotechnology and the applications made possible by those techniques. The lecture topics will be used to introduce the principles of tissue culture and molecular biology, including how they are used to produce transgenic plants. Furthermore, the course will give students a broader and deeper knowledge in the field of Plant Biotechnology and provide a foundation for understanding the field as it changes in the future. Topics include the safety, legal and ethical issues surrounding GMOs and the study of the anti-GMO arguments surrounding each issue. In the laboratory component of the course, students will be introduced to the underlying principles of molecular biology techniques and aseptic culture of plant cells as well as the tissues and organs used to produce transgenic plants. In summary, through this course students will be introduced to many of the most important tools of the biotechnologist.

**Enforced Prerequisite at Enrollment:** BMB 252 or BMB 252H or MICRB 252 or BIOL 230W or BIOL 230M

Cross-listed with: BIOTC 459, HORT 459

BIOL 460: Human Genetics

3 Credits

This course will cover the nature and contents of the human genome and the basic principles of evolution. We will also explore the future implications of personal genomics and how this information is being used to reconstruct our evolutionary history and to advance human
Enforced Prerequisite at Enrollment: ANTH 21 or BIOL 133 or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 322 or BMB 251 or BMB 251H
Cross-listed with: ANTH 460

BIOL 460H: Honors Human Genetics

4 Credits

This course will cover the nature and contents of the human genome and the basic principles of evolution. We will also explore the future implications of personal genomics and how this information is being used to reconstruct our evolutionary history and to advance human medicine. We will carefully consider the processes by which we can identify how information contained within our genomes may affect physical and behavioral phenotypes, and what other factors may be involved (e.g., the environment). The points will be illustrated by a variety of examples of human evolution and important biomedical issues.

Enforced Prerequisite at Enrollment: ANTH 21 or BIOL 133 or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 322 or BMB 251 or BMB 251H
Cross-listed with: ANTH 460H

BIOL 461: Contemporary Issues in Science and Medicine

3 Credits/Maximum of 3

Current/classical issues relating to health, research, agriculture, environment, and biotechnology. Active exploration of the impact of science on society. BIOL 461 Contemporary Issues in Science and Medicine (3) The aim of this course is to provide students of the biological and biomedical sciences with a framework to recognize, examine, and resolve conflicts which may affect their professional conduct. Current and classical issues relating to human health, scientific and medical research, agriculture, the environment, and biotechnology will be explored. The history, controversies, and current issues related to each topic will be presented by the instructor through lecture, guest presentations, and multimedia presentations. Each topic will be explored by students through a variety of activities, including role playing, case studies (real and hypothetical), mock trials, small- and large-group discussions, writing exercises, and student research projects presented in oral and poster format. Some activities and discussions will involve the entire class simultaneously, while other activities will be structured for very small groups (2-3 students), small groups (5-6 students), or large groups (10-15 students). This course is especially relevant to any student majoring in Biology, as it allows and encourages them to relate information they have learned in other Biology courses to their own professional conduct. Although the course was specifically designed to cover issues that are relevant to students majoring in each of the Biology concentration areas (Genetics and Developmental Biology, Ecology, Plant Biology, and Vertebrate Physiology), it is also relevant to students in colleges other than Science, who may be enrolled in majors with some biological content or applications. This course is designed to be rigorous and very interactive.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M Recommended preparations: Successful completion of at least one 400-level Biology course

BIOL 463: General Ecology

3 Credits

Illustrates science of ecology, from individual, population, and community-level perspectives, discusses applications of this science to issues of conservation of biodiversity.

Enforced Prerequisite at Enrollment: BIOL 220W

BIOL 464: Sociobiology

3 Credits

Life is social. From quorum sensing bacteria blocking up urinary catheters to the seemingly poetic integration of millions of bodies during an army ant raid. And of course there are humans; that singularly unique species once described as the ‘paragon of animals’. Whether the group is bacteria, worms, ants or humans selection has resulted in precise rules that govern interactions and maintain stability. Understanding these rules is the field of sociobiology and we can even see such rules at play among the inorganic realm as researchers select for social robots. In this course we explore sociobiology through stories of adaptation that will challenge you to pinpoint where and how selection is acting. We will deal with the well known topics of natural, sexual and artificial selection as well as less precisely understand topics of kin and group selection. Many of the stories in this course bring us to the exciting front line of research where social behavior is the end result. From agriculture to cities. We will ask how our adaptations parallel those of other organisms and how they diverge. Finally, we will tie this back to Penn State’s mission as a Land Grant School and how social behavior is important in practical and applied science delivered to the masses.

Enforced Prerequisite at Enrollment: ANTH 21 or BIOL 220W or BIOL 220M

BIOL 464H: Animal Behavior--Sociobiology

Cross-Listed

3 Credits

Biological basis of social behavior. Comparative evaluation and adaptive value of social structures, mating systems, ecological correlates of social behavior.

Honors

BIOL 465: Network analysis of biological systems

3 Credits/Maximum of 3

The survival of a cell, organism or population in a variable environment depends on mounting specific responses to external stimuli. Each of these responses is governed by the coordinated action of multiple
BIOL 230 W or BIOL 230M or BMB 251 or BME 201. Recommended Preparation: MATH 140B or MATH 141B or MATH 297.

BIOL 467: Molecular Basis of Neurological Diseases

3 Credits

This course provides up-to-date knowledge of and insight into the molecular/cellular/genetic basis of the neurological diseases. The focus will be on neurodegenerative and cognitive disorders with a relative high prevalence as listed below: Neurodegenerative disorders: Alzheimer's disease, Parkinson's disease, Huntington's disease, Ataxia, ALS Cognitive and emotional disorder: Autism spectrum disorders, Mental Retardation, Depression, Bipolar disorder, Schizophrenia, Addiction, Posttraumatic disorder

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or MICRB 251

BIOL 469: Neurobiology

3 Credits

Students will acquire an understanding of basic neurobiology, the terminology of neuronal structures and functions, as well as experimental approaches designed to integrate the principles of neural cell biology, neurophysiology, neurochemistry, neuroendocrinology, neuropharmacology, genetics and molecular biology. The LEARNING OBJECTIVES of this course are to establish a working knowledge and understanding of: (I) the cellular structures, organelles and passive and active membrane properties important for neural function, (II) the neurotransmitters, receptors, ion channels and 2nd messenger systems underlying synaptic transmission and other forms of neural signaling, (III) the development of the nervous system including neurogenesis, neural maturation, apoptosis, synaptogenesis in both the developing and adult CNS, and (IV) the molecular mechanisms underlying synaptic plasticity and learning and memory. Lastly, (V) the course will demonstrate applications of above knowledge to select complex diseases of the central nervous system

Enforced Prerequisite at Enrollment: BIOL 230 W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M Cross-listed with: BBH 469

BIOL 470: Functional and Integrative Neuroscience

3 Credits

Neurobiological function in motivated behaviors, motor and sensory function, learning and memory, development, sexual differentiation, and pathology.

Enforced Prerequisite at Enrollment: BIOL 469
Cross-listed with: BBH 470

BIOL 472: Mammalian Physiology

3 Credits

Physiology is the science explaining body function at system, organ, cellular, and biochemical levels. This course explores the fundamentals of mammalian physiology with an emphasis on human physiology and its clinical applications. The target audience is advanced undergraduate and graduate students studying in the life sciences, many of whom plan to study clinical medicine disciplines in the future. Physiology is an integrative science discipline and thus will apply principles developed in previous biology, chemistry, mathematics, and physics courses to problem solving situations. Core elements of this course include integrating science knowledge and applying science principles to develop a broad understanding of physiology systems and solve physiology problems.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M or ( BIOL 141 and BIOL 142 )

BIOL 473: Laboratory in Mammalian Physiology

2 Credits

Laboratory experiments demonstrating fundamentals in physiology.

Enforced Prerequisite or concurrent at Enrollment: BIOL 472

BIOL 474: Astrobiology

3 Credits

Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student's literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student's previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short
oral presentation; and (S) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

**Enforced Prerequisite at Enrollment:** BIOL 110 or BIOL 110H and CHEM 110 or CHEM 110H
Cross-listed with: GEOSC 474

**BIOL 475N: Anatomy in Italy: Cadavers, Culture, and Science**

3 Credits

Anatomy is more than learning to name structures. Students will practice critical thinking and analytical skills, and develop key literacies while studying human cadavers and learning to predict a structure’s function by observing its shape, texture, and tissues. Students will practice critical and integrative thinking while discussing the historical circumstances that gave rise to, supported, and sometimes hindered the development of anatomy as a science by synthesizing original arguments (written and oral) that explore the evolution of anatomic science within the context of Italian history, politics, and culture. Students will also study the ethics of acquiring cadavers within contemporary and renaissance contexts, identify individual graphics and historical sculptures that demonstrate anatomical understanding, and discuss their origins and implications for renaissance-era society. Students will also develop their communication skills: presenting original posters, leading class discussions, writing term papers, and creating webcasts as part of a service project. During spring break, students will travel with the instructors to Italy and study anatomic wax specimens born through collaborations between anatomists and artists; Michelangelo’s hidden anatomy in the Sistine Chapel; and the history of medicine. As preparation for their study abroad experience, students must concurrently enroll in IT 197: Italian Language and Culture for Study Abroad

**Enforced Prerequisite at Enrollment:** BIOL 129 or BIOL 141 or BIOL 240W or BIOL 472 or KINES 202 and Consent of Instructors.
General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

**BIOL 476: Advanced Human Anatomy - cadaver based**

3 Credits

Advanced Human Anatomy is an in-depth human anatomy course with both a lecture and lab component. Lecture meets twice per week for 50 minutes, and lab meets once per week for 2 hours in the cadaver lab. In lecture, there is a focus on understanding anatomy in the context of development, histology, evolution, and clinical scenarios. Lectures also include clinical correlations, where students will apply their anatomical knowledge to understand general and specific clinical cases. Learning how to identify structures in various imaging modalities (including X-ray, CT, and MRI) is an important component of this aspect of the course. A typical lecture session often includes group-work on clinical application worksheets, completed with the help of the instructor and lecture assistants. Lab activities are conducted in the cadaver lab, and mostly focus on learning to identify structures on the cadavers. Students will also learn to identify anatomy on isolated skeletal elements, plastinated cross-sections and models, and occasionally on animal organs. In both lecture and lab, there will be an emphasis on understanding the 3-dimensional relationships between structures in the body. Examination of cadavers and real human cross-sections will greatly aid in this goal. Each week’s lab activities are linked with that week’s lecture topic. The course is organized regionally, meaning that each region of the body is studied in turn. This promotes a focus on understanding the interrelationships between body structures and systems. The course is divided into three blocks, each capped by an exam. The first block is Thorax, Abdomen, and Pelvis, the second block is Back and Limbs, and the third block is Head and Neck. Exams consist of written lecture exams and lab-practical examinations.

**Enforced Prerequisite at Enrollment:** BIOL 129 or BIOL 141 or (BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164) or (BIOL 240M or BIOL 240W) or BIOL 472 or KINES 202

**BIOL 478: COMPARATIVE NEUROANATOMY**

3 Credits

This course provides instruction on the functional and structural organization of the vertebrate nervous system. In addition to lectures, students attend laboratory sessions devoted to human brain dissections, histologic sections of various vertebrate brains, neuroanatomical methods for analyzing brain and spinal cord organization, and non-invasive magnetic resonance imaging. The structural organization of the brain is described at both the gross and microscopic levels. A major aim of the course is to instill students with an understanding of the three-dimensional structure of the brain. To achieve this goal, students are taught how to recognize specific structures in different planes of sections along the major axes of the brain. Structural-functional relationships in the nervous system are explained, and particular emphasis is placed on understanding the functional impact of brain trauma and a variety of neurological diseases. While the course emphasizes the mammalian nervous system, many aspects of brain organization in non-mammalian vertebrates are also presented. As part of this, a major section of the course is devoted to understanding neurocladistics and the biological principles that have guided brain evolution across different phylogenetic lineages.

**BIOL 479: General Endocrinology**

3 Credits

Endocrine mechanisms regulating the morphogenesis, homeostasis, and functional integration of animals.

**Enforced Prerequisite at Enrollment:** BIOL 141 or BIOL 472

Cross-listed with: ANSC 479

**BIOL 482: Coastal Biology**

3-4 Credits

BIOL 482 is a combination lecture and intensive field course designed to introduce participants to the Caribbean coral reef biome and other near-shore environments such as rocky shores, mangroves and seagrass beds. Students will learn through theoretical and practical exercises how environmental and biological factors interact to sustain near-shore ecosystems. We will discover and describe the amazing diversity of coral reef systems, explore the physiological and behavioral adaptations that enable organisms to live in this environment and deduct the basic ecological principles that underlie the function of near-shore ecosystems. We will be reading primary literature throughout the course. Students may choose to focus on current issues in marine conservation science as part of their class projects/proposal. Topics may include but are not limited to connectivity among marine populations, metapopulations-dynamics,
adaptation to climate change, and conservation genetics. A (optional) field trip during the maymester will take us to the beautiful island of Curacao, part of the Netherland Antilles in the southern Caribbean. Healthy coral reefs, mangroves and seagrass beds are easily accessible from shore and we will study them by snorkeling. The colonial past and economic realities in Curacao provide an instructive backdrop to understand the complexity of marine conservation issues today. This course requires strong participation and thus is most suited for highly motivated students. All participants must pass a swimming test before leaving for Curacao. Participants will be charged a fee to cover the trip costs to Curacao and have to bring their own snorkel gear. Field trip limited to 10 students. Variable credit hours (3 for lecture, 1 for field trip). BIOL 482 counts towards the Marine Science Minor

Enforced Prerequisites at Enrollment: BIOL 110 or BIOL 110H
BIOL 492: Senior Seminar in Biology
1 Credits
Discussion of selected topics from recent biological literature; reports on current research or internship experiences.

Enforced Prerequisites at Enrollment: 7th Semester standing
BIOL 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

BIOL 495: Internship in Biology
1-12 Credits/Maximum of 12
Practical off-campus experience in Biology under the supervision of a professional and a faculty member.

Enforced Prerequisites at Enrollment: BIOL 494, BIOL 495
Full-Time Equivalent Course
BIOL 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BIOL 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BIOL 498: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BIOL 498A: ***SPECIAL TOPICS***
0.5-5 Credits

BIOL 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BIOL 499A: Tropical Field Ecology
3 Credits/Maximum of 999
A research-intensive, active learning course taught entirely in Costa Rica during the winter break. Students depart from wherever they are and rendezvous in Costa Rica, with detailed plans and contingencies in the event of problems with flights. We work at rustic but comfortable (beds, meals, indoor plumbing) field stations where we have immediate access to pristine habitats where we perform faculty and student-designed research projects. These research projects involve collaborative design, data collection of data to test specific hypotheses, data analyses, oral presentation, and writing formal journal-style reports. Faculty present evening lectures comprising background and examples that connect finished work to these nascent projects. Main field sites comprise a pre-montane moist forest on the Atlantic slope and a lowland rainforest on the Pacific coast of the Osa Peninsula. Course objectives are diverse, including i) provide an opportunity for students to gain confidence traveling to a non-english speaking country, independently of family but supported by faculty, peers, and our in-country partners; ii) learn how to perform research in a setting where learning methodology is deemphasized while intellectual engagement and ownership are maximized, iii) experience and learn about a broad sweep of natural history and ecology of the neotropics.

Recommended Preparation BIOL 220W or BIOL 220M

International Cultures (IL)

Biomedical Engineering (BME)

BME 100: Biomedical Engineering Seminar
1 Credits
First-year seminar to introduce the students to the field of biomedical engineering, and related opportunities in research, and industry. BME 100S Biomedical Engineering Seminar (1) A first-year seminar designed for students interested in pursuing a career in Biomedical Engineering. Through a series of lectures, demonstrations and problem solving sessions, the multifaceted world of biomedical engineering will be explored. Students will be: 1) introduced to Penn State as an academic community, including fields of study and research with an emphasis on Biomedical Engineering 2) acquainted with the learning tools and resources available at Penn State 3) given an opportunity to develop relationships with full-time faculty and other students interested in Biomedical Engineering 4) taught about their responsibilities as part of the University community 5) engaged in discussion about Biomedical Engineering and possible career paths that are available to Biomedical Engineering graduates.

First-Year Seminar
BME 201: Fundamentals of Cells and Molecules
3 Credits

Cell and molecular biology taught from an engineering perspective. Includes biochemistry, recombinant DNA, and cell structure/function.

BME 201 Cell and Molecular Bioengineering (3) This course provides students foundational knowledge in cell and molecular biology. The first quarter of the course covers fundamentals of biochemistry including ligand-receptor interactions, protein structure, enzyme kinetics, and biochemical thermodynamics. The second quarter of the course covers molecular biology including DNA replication, transcription, translation, recombinant DNA tools, and applications to biotechnology and molecular medicine. The second half of the course covers selected topics in cell biology including cell adhesion, cell signaling, the cytoskeleton, cancer, and tissue engineering. Material is taught from a quantitative and engineering perspective and students are expected to have strong foundations in chemistry, physics and math. Recurring concepts in the class include chemical kinetics, consideration of the free energy of chemical reactions and the role of mechanics at the molecular and cellular level. Tools and applications discussed include recombinant protein expression, molecular mechanisms of pharmaceuticals, genetic testing, and the use of analytical and computational modeling to understand cellular function in health and disease.

Prerequisite: BIOL 141 or BIOL 240W, CHEM 112, MATH 141 Prerequisite or concurrent: PHYS 212 and CMPSC200

BME 301: Analysis of Physiological Systems
4 Credits

Analysis of physiological signals and modeling of physiological systems by electrical and mechanical analogs in the context of continuous linear systems. BME 301 Analysis of Physiological Systems (3) Analysis of physiological signals and modeling of physiological systems in terms of electrical and mechanical analogs in the context of continuous linear systems. The course will cover an introduction to analysis of physiological systems using Matlab to perform numerical analysis and representation of biological signals with the techniques of Fourier frequency domain and linear time domain analyses. These topics will be followed by applications to describe control and function of physiological systems in the context of traditional systems analysis of continuous linear systems. Topics will focus on electrical and mechanical analogs of physiological systems and control of physiological parameters such as blood pressure, oxygen delivery to tissue, and blood glucose levels. The lab/recitation session may be used to review homework problems and implementation of solutions to computer programming assignments.

Prerequisite: BIOL 141 or BIOL 240W, PHYS 212, MATH 250 or MATH 251, CMPSC200

BME 303: Bio-continuum Mechanics
3 Credits

Mechanical properties of fluids and solids with applications to tissue mechanics and vascular system. BME 303 Bio-continuum Mechanics (3) The course serves as an introduction to continuum mechanics for students of biomedical engineering providing a foundation for studies in fluid and solid mechanics, material sciences, and other applications of science and engineering to the biomedical field. It will provide an introduction to concepts of solid and fluid mechanics, analysis in the context of mechanical properties of biological tissues, physiological models and measurement systems. For success in the course, students will draw from their prerequisite background in calculus, physics, statics, strength of materials, vector analysis, and elementary differential equations.

Prerequisite: BIOL 141 or BIOL 240W, E MCH210 or E MCH211 and E MCH213, MATH 230 or MATH 231 and MATH 232, MATH 251

BME 313: Thermodynamics for Biomedical Engineering
3 Credits

Chemical processes, including material and energy balances and heat transfer with emphasis on biological and biomedical applications.

BME 313 Thermodynamics for Biomedical Engineering (3) The course provides an introduction to thermodynamics, including the fundamentals of material and energy balances with specific emphasis placed on physiological and biomedical engineering applications. This course will cover equations of state, the first and second laws of thermodynamics in both open and closed systems, and Maxwell Relations. Examples of biological applications that can be considered are the application of thermodynamic analyses to understanding thermoregulation, the cardiac cycle, respiratory gas exchange, cell potentials and to osmosis. This course also covers heat transfer including Fourier’s law of conduction, convective and radiative heat transfer. Specific biological examples that may be discussed include applications to bioinstrumentation, thermoregulation and tissue heating by radiation for cancer therapy. A general knowledge of physiology and chemistry are prerequisites; the analytical approach of the course will also require an ability to work with basic differential and multivariable calculus.

Prerequisite: BIOL 141 or BIOL 240W, CHEM 112, MATH 230 or MATH 231 and MATH 232, MATH 251

BME 399: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

BME 401: Numerical Simulations in Biomedical Engineering
3 Credits

Integration of design theory and finite element analyses for the development of solutions to problems in biomedical engineering.

BME 401 Numerical Simulations in Biomedical Engineering (3) Biomedical engineers develop novel devices and models to facilitate patient-specific diagnosis and care. The main goal of this course, therefore, is to help students learn how to use computational modeling software as a means to apply theoretical engineering and biological principles to solve problems in medicine and biology. The course will also focus on integration of ethics and design by continually identifying where ethical decision making and health needs of global populations influence design decisions.

Prerequisite: BME 301, BME 303, BME 313 Prerequisite or concurrent: BME 201

BME 402: Biomedical Instrumentation and Measurements
3 Credits

Biomedical measurements, including consideration of techniques, equipment, and safety. BME 402 Biomedical Instrumentation and
Measurements (3) This course is designed to introduce students to the principles, applications, and design of instruments used in biomedical research and applications. The emphasis is on engineering design and analysis with supplemental discussion of relevant physiological principles. Topics covered include: sensors, biopotential signal origin, amplifiers, filtering, electrodes and signal processing; pressure and flow measurement in the cardiovascular and respiratory systems, chemical biosensors, therapeutic devices, and medical imaging modalities. Students will learn to analyze and design instrumentation and measurement systems through a variety of techniques including in-class examples, homework problems, and active participation.

**Prerequisite:** MATH 250 or MATH 251; BME 301 or E E 210 or E E 212 or PHYS 402

**BME 403: Biomedical Instrumentation Laboratory**

1 Credits

Building basic biomedical signal processing circuits and biomedical measurement systems, experiments in medical imaging techniques, and measurement of bio-potentials. BME 403 Biomedical Instrumentation Laboratory (1) Laboratory course to accompany BME 402, Medical Instrumentation. Biomedical measurements laboratory where students will build basic biomedical signal processing circuits, run experiments in medical imaging techniques, use transducers to build biomedical measurement systems, and measure bio-potentials. The class is comprised of studies in medical circuits and transducers for static and dynamic biological inputs, and includes measurement of actual biomedical signals. For preparation for industry or research, proper laboratory documentation techniques are taught along with basic skills for presenting experimental data.

**Prerequisite:** Prerequisite or concurrent: BME 402

**BME 406: Medical Imaging**

3 Credits

Physical principles and clinical applications of medical imaging methods. BME 406 Medical Imaging (3) This course covers all four major diagnostic medical imaging modalities including x-ray, ultrasound, radioisotope imaging, and magnetic resonance imaging. Physical principles, instrumentation, and biomedical applications of these modalities, as well as the basics of imaging signals and image processing will be discussed. Success in this course will require background in physics and electrical circuits, and some experience with Matlab.

**Prerequisite:** PHYS 212 and CMPSC200 or CMPSC201

**BME 408: Solid Mechanics of Biological Materials**

3 Credits

This course presents advanced topics in solid mechanics that are important for understanding the behavior and function of biological materials, including cardiovascular tissues (e.g., blood vessels, myocardium, epicardium), musculoskeletal tissues (e.g., tendon, bone, articular cartilage), synthetic biomaterials (e.g., hydrogels, composites), and cells. The course will begin with a review of basic concepts in mechanics and mathematics, followed by a detailed discussion of the principles of stress and strain for infinitesimal deformations. Since most biological materials undergo large deformation, the limits of our definitions for stress and strain will be discussed along with alternative methods if these limits are violated. Constitutive equations for linear elastic homogenous isotropic, orthotropic, and transversely isotropic materials will be presented. These concepts will then be applied to various mechanics problems that are relevant to biology, physiology, and medicine. The second half of the course will cover fiber-reinforced composite materials, which are relevant for both engineering prostheses as well as understanding the behavior of numerous native biological materials (e.g., tendon, epicardium, intervertebral disc). The course will conclude with a brief introduction to poroelasticity and its role in the function of articular cartilage and hydrogels.

**Prerequisites:** MATH 230 MATH 251, CMPSC 200, EMCH 210

**BME 409: Biofluid Mechanics**

3 Credits

The fundamental relations in fluid mechanics and their application to biofluids including steady/unsteady flows, diseased states, devices and bioengineering. BME 409 Biofluid Mechanics (3) This course is a first course in fluid mechanics, with application to biomedical problems. This course incorporates understanding of fluid properties of biological materials and applies the fundamental laws (mass, momentum, and energy) that govern fluid mechanics to solve biofluid applications such as those in the cardiovascular system, including diseased states. The course will enable students to use approximation methods and constraints in fluid mechanics to model and solve biofluid examples. Bioengineering and cardiovascular prosthetics is the context of fluid mechanics will be discussed. The students will be able to understand and apply problem solving techniques to steady and unsteady biologicalflows and be exposed to wave propagation theory and oscillatory flow. Students will be exposed to biofluid devices and flow measurement techniques used to assess these devices.

**Prerequisite:** MATH 230, MATH 251, BIOL 141 or BIOL 240W

**BME 410: Biomedical Applications of Microfluidics**

3 Credits

Study of fluid mechanics at small length scales including fabrication of microfluidic devices and microfluidic components, lab-on-chip concept and applications. BME 410 Biomedical Applications of Microfluidics (3) Microfluidics is the study of flow phenomena at small length scales with characteristic channel dimensions typically less than the diameter of human hair. Small length scale effects become important as surface forces such as viscous drag and surface tension govern flow behavior rather than body forces (inertia) as seen in macroscale fluid mechanics. Miniaturization of fluid handling systems also allows the development of micro Total Analysis Systems (microTAS) or so called "lab on a chip" which combines biological sample preparation, separation and analysis in a single device. Topics explored in this class include: silicon based microfabrication and non-conventional micro/nano fabrication techniques; flow phenomena at small length scales, including laminar flow and flow resistance, inertial flow, diffusion, capillary effect, electrokinetic flow like electroosmosis, electrophoresis, and dielectrophoresis (DEP); microfluidic components including valves, pumps, mixers, sensors, actuators; lab-on-chip system concept and applications; hands-on lab to make and test microfluidic device; finite element simulation lab to gain better understanding of microfluidic devices.
metabolic engineering, catalysis, bioreactors, and drug discoveries.

to understand the clinical need, and what FDA regulations must be
pharmacokinetic modeling are introduced and utilized for the analysis of
drug transport and distribution within tissues.

Prerequisite: BME 313 or M E 300 or M E 302 or CH E 220 or PHYS 213

BME 413: Mass Transport in Biological Systems

An integrated study of the fundamentals of mass transport processes
with emphasis on the analysis of physiological systems. BME 413 Mass
Transport in Biological Systems (3) This course provides an introduction
to mass transport phenomena in biological systems. The course builds
upon thermodynamic concepts of phase and chemical equilibrium to
analyze ion transport and cell membrane potentials including Nernst
potentials, Gibbs-Donnan equilibrium and osmotic pressure. In particular,
the principles of oxygen transport in tissues are specifically described
and analyzed using the Krogh Cylinder Modes and hemoglobin-oxygen
binding relationships. The transport of substances across biological
membranes is discussed and analyzed for various biological transport
mechanisms including: passive diffusion, active transport and facilitated
transport. Convective transport through porous media is introduced using
Darcy's Law and the Brinkman Equation. Finally, fundamental concepts of
pharmacokinetic modeling are introduced and utilized for the analysis of
drug transport and distribution within tissues.

Prerequisite: BME 313 or M E 300 or M E 302 or CH E 220 or PHYS 213

BME 419: Artificial Organs and Prosthetic Devices

Analysis of function and consideration of design concerns for biomedical
implants, including prosthetic joints, electrical stimulators, and
vascular pumps. BME 419 Artificial Organs and Prosthetic Devices
(3) This course provides an overview of artificial organs and medical
devices (ranging from blood pumps, hemodialysis, BioMEMS, tissue
engineered technology, orthopaedic devices, cardiovascular implants,
pacemakers, etc.) and how engineers use a design methodology, need
to understand the clinical need, and what FDA regulations must be
considered to develop these technology. Guest speakers and experts
provide lectures on the various technology and students are exposed to
industry and academic device development. The basics of biomaterials
and biocompatibility are discussed within the context of the technology.

Prerequisite: BIOL 141 or BIOL 240W or BIOL 472 and CMPSC200 or

CMPS201 or CMPSC121

BME 423: Reaction Kinetics of Biological Systems

Chemical kinetics and reaction equilibria with applications to the analysis
of physiological function and the design of synthetic organs. BME 423
Reaction Kinetics of Biological Systems (3) Chemical reactions are the
underlying mechanism for numerous biological processes such as energy
metabolism, biosynthesis pathways, mass transport, and detoxification.
This course will introduce the basic concepts in chemical equilibrium
and reaction kinetics. The course will then apply these chemical kinetics
and analytical approaches to understand the underlying mechanisms
of selected biological and physiological processes, which will include
metabolic engineering, catalysis, bioreactors, and drug discoveries.

Prerequisite: BIOL 141 or BIOL 240W, CHEM 112, MATH 250 or

MATH 251, BME 313 or CH E 210 or M E 300 Concurrent or prerequisite:
BME 413 or CH E 410 or B E 302

BME 429: Biomedical Mechanics and Techniques Laboratory

Experimental laboratory that includes hands-on measurement,
computational simulations, and statistical analysis of biofluids, biosolids,
and biomaterial phenomena. BME 429 Biomedical Mechanics and
Techniques Laboratory (2) This course focuses on three five-week
modules whereby students will conduct experiments on biomaterial
interfaces, biofluid mechanics, and biosolid mechanics. These
experiments will be complimented with computational simulations to
enable discussion between the experimental and computational results
and appropriate advanced statistics. Students will apply theoretical
knowledge from previous core bioengineering/biomedical engineering
courses. Examples of some experiments include blood separation,
quantifying the flow through a stenosis, and measuring the material
properties of bone.

Prerequisite: BME 201, BME 303, BME 401

BME 429H: Biomedical Mechanics and Techniques Laboratory

Honors

BME 430: Advanced Biofabrication Processes

This course covers advanced biofabrication processes used in tissue
engineering, regenerative medicine and drug testing, and provides
fundamental statistical concepts and tools that are required to analyze
biofabrication process data. Topics include: Introduction, Review of
Basic Statistics, Statistics for Analysis of Experimental Data, Hypothesis
Testing with Two Sample, Introduction to Biofabrication, Traditional
Manufacturing Processes for Tissue Engineering, Micro-patternning
and Molding, Microfluidics in Tissue Engineering, Scaffold-free Tissue
Fabrication, Modular Assembly and 3D Printing in Tissue Engineering.
The course also includes utilization of software packages, hands-on
laboratory homework assignments.

Prerequisite: At least 7th semester classification so that students have a
technical background before taking the course.

BME 433: Drug Delivery

Engineering and biological principles as applied to pharmaceutical
transport and designing drug carriers. BME 433 Drug Delivery (3) The
success of drug delivery depends on not only the understanding of
chemical synthesis, polymer sciences, and cell biology, but also the
fundamental understanding of drug transport that is affected by both
drug's properties and physiological barriers, which are very critical
but often overlooked in the design of drug delivery systems. Therefore,
this course covers two main issues: 1) physiological barriers and drug
transport; 2) design and characterization of drug delivery systems. The
first section of this course introduces transport mechanisms of drug delivery at the levels of cell, tissue and whole body from the engineering viewpoint. The second section describes the rational design of various drug delivery systems and emphasizes nanomedicines. Case studies of cancer therapy/tissue engineering are described to compare, contrast and analyze current drug delivery systems.

**Prerequisite:** CHEM 112, and BME 201, BIOL 230W or B M B 251, and BME 413 or B E 302 or CH E 410

**BME 440: Biomedical Engineering Professional Seminar**

1 Credits

Seminar giving students exposure to professionals who apply engineering and related fields to biology and medicine. BME 440 Biomedical Engineering Professional Seminar (1) A senior seminar introducing students to professionals in the field of biomedical engineering and disciplines that are critical to the field (e.g. ethics, regulatory affairs, entrepreneurship). This course is designed to prepare students for the subsequent capstone design course and allow them to consider areas where innovation and design in biomedical engineering are needed. Discussion with presenters will allow students to explore the promises and limitations of the clinical applications of biomedical engineering and to explore possible career paths. Guest speakers may include representatives and alumni from the medical device industry, biomedical entrepreneurs, medical clinicians, professionals from relevant regulatory agencies, and professionals in bioethics.

**Prerequisite:** 7th semester standing in BME program

**BME 443: Biomedical Materials**

3 Credits

Describe properties of materials and composites and their in vivo interactions. BME 443 (MATSE 403) Biomedical Materials (3) Metals, polymers, and ceramics, and their composites, which are capable of emulating the functions of hard and soft tissues, are the subjects of this course. The subject matter shall be confined to implanted materials; external appliances, such as casts, braces, etc are not considered. The topical content of this course will be grouped into four areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis) and the development of caries. The perspective placed on these topics will be that of materials science. The selection of ceramics for hard tissue prosthesis will be discussed. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses and pyrolytic carbons. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glassionomer cements will also be considered as ceramics. Hydroxyapatite, Hap-based composites and Hap-metal interactions will be discussed in particular Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and vitallium, used in prosthetic applications, will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particular debris in the vicinity of an implant will be discussed in particular Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications it is desirable that a polymeric material biodegrade while in others property retention is desirable.

**Prerequisite:** MATSE201 or CHEM 112 and MATH 230 or MATH 231

Cross-listed with: MATSE 403

**BME 444: Surfaces and the Biological Response to Materials**

3 Credits

Focus is on special properties of surface as an important causative and mediating agent in the biological response to materials.

**Prerequisite:** CHEM 112 or MATSE112

Cross-listed with: MATSE 404 International Cultures (IL)

**BME 445: Tissue Engineering: Concepts, Calculations and Applications**

3 Credits

Introduction to interdisciplinary tissue engineering concepts, associated biochemical and biomechanical engineering calculations, and cardiovascular, musculoskeletal, and other tissue application examples. BME 445 Tissue Engineering: Concepts, Calculations and Applications (3) Tissue engineering is a field of research dedicated to the design and construction of living tissues for use in repairing or regenerating tissue structures and functions compromised by disease or trauma. This course provides an introduction to interdisciplinary tissue engineering concepts, associated biochemical and biomechanical engineering calculations, and cardiovascular, musculoskeletal, and other tissue application examples. Topics covered in this course will span the entire process of creating an engineered tissue, including, among other topics: biomaterials for tissue engineering, cell-material interaction, wound healing response; techniques for cell isolation, recovery, and expansion; biodegradable polymer synthesis and degradation; scaffold design, fabrication, and cell seeding; bioreactors; special topics such as tissue engineering of neural, bone, cardiovascular, cartilage, and other tissue.

**Prerequisite:** CHEM 112 and BME 201 or BIOL 230W or B M B 251 and PHYS 211

**BME 446: Polymers in Biomedical Engineering**

3 Credits

Foundation in polymer chemistry and physics, polymer design, characterization, and processing with a focus on biomedical applications.

**Prerequisite:** CHEM 112, CHEM 113, CHEM 202 or CHEM 210, E MCH210 or E MCH211 and E MCH213
BME 446H: Polymers in Biomedical Engineering

3 Credits

Foundations in polymer chemistry and physics, polymer design, characterization, and processing with a focus on biomedical applications.

BME 450: Biomedical Senior Design

3 Credits

Team based capstone design course with open ended project for industry or clinical applications related to Biomedical Engineering.

BME 450W Biomedical Senior Design (3) This course is a culminating design experience where students will be presented with open-ended industry and clinically sponsored design projects related to biomedical engineering. Students will work in multi-disciplinary teams to effectively design and prototype a solution for the sponsor. Students will be required to do needs assessment, project planning, budget planning, formulation of design specifications, analysis of the design, and documentation of results. Several design review reports and assessments will be used to monitor progress throughout the semester. Students will develop teamwork and communication skills and learn how to consider the ethical implications of their design, both in construction and use. Students meet with the instructor and sponsor on a regular basis for progress assessment. Notebooks are carefully maintained and critiqued. At the end of the semester, students will demonstrate their final design in a variety of formats that may include formal presentations, posters, websites, and written reports.

BME 494H: Honors Thesis

1-3 Credits/Maximum of 6

Independent study research and design, leading towards honors thesis. Honors

BME 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BME 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Biomedical Engineering Technology (BE_T)

BE_T 101: Introduction to Medical Equipment Maintenance

1 Credits

Introduction to the field of clinical engineering and the management of medical equipment and systems. BE_T 101 Introduction to Medical Equipment Maintenance (1) BE_T 101 is an introductory course in medical equipment management. It is an entry level course intended to give students the big picture of the field of biomedical and clinical engineering. The course covers the background and history of the field, exploring how medical equipment technology has changed as well as the management of the service of the equipment. The focus of this class will be from the perspective of the biomedical equipment technician, what skills are necessary, education requirements, training opportunities, certification, job duties and descriptions, and career paths. The types of employers, their organization structures, required regulations, recommended standards and information about the work place will be presented. Business ethics of working with medical equipment, patients, clinical care givers and other health care providers will be discussed. Topics covered include: * Background and history of medical equipment management * Changes in medical equipment technology * Certification for biomedical equipment technicians * BET job duties, descriptions and requirements * BET continuing education needs * Ethical decisions in medical equipment management * Functions & Organization of clinical engineering departments * Employer types * Department organization charts * Reporting structures * Services provided by clinical engineering departments * Regulatory and standards requirements * Documentation systems

BE_T 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BE_T 201: Medical Equipment & Systems I

5 Credits

Introduction to the field of biomedical engineering technology, electrical wiring devices, theories of measurement, cardiovascular systems and ECG monitor operation. BE_T 201 Medical Equipment & Systems I (5) This course introduces the student to electrical safety standards and related wiring devices, methods and systems. Grounding and leakage current is studied so the student understands the causes of leakage current, safety limits, measurement and safe control of medical devices. Electrical wiring devices, over current protective devices, power quality devices and simplified hospital electrical distribution systems are discussed in relation to the electrical power delivery and quality required for medical devices. The electro-physiological theories of measurement, sensors, electrodes and measurement errors are discussed to provide an understanding of how signals are detected on the human body. A variety of transducers will be studied that are used with medical devices, such as: pressure, temperature, audio, relays, solenoids, lighting, video displays, motors, printers and batteries. The blood, heart, and cardiovascular system is studied in detail, as well as the electro-physiological signals of the heart. The normal and many abnormal electrocardiograph signals are studied pursuant to a thorough understanding of the function and operation of the heart. The electrocardiograph (ECG) machine is studied from an electrical/electronic design perspective so the student has an understanding of the electronic circuits required to measure and display the human ECG signal. The controls, operation, electrical safety testing, performance testing and general design of an ECG monitor is studied so the student has a full understanding of its operation, usage and preventative maintenance testing. Topics covered include: &bull; electrical safety &ndash; grounding, leakage current and protective systems &bull; electrical wiring devices, over current protective devices, and isolated power &bull; power quality, disturbances and corrective methods &bull; simplified hospital electrical distribution system &bull; theory of measurement: terms, factors, and errors &bull; electrodes, sensors, and transducers devices and circuits
cardiovascular anatomy and physiology; bio-potentials: electro-conduction system of the heart; common ECG waveforms: normal and abnormal; ECG monitor application and connections to patient.

Prerequisite: EET 105

BE_T 203: Biomedical Equipment Laboratory (Internship)

4 Credits

Practical experience, within or related to the hospital environment, on a variety of biomedical instruments. BE T 203 Biomedical Equipment Laboratory (4) The final semester internship is a curriculum requirement for the Biomedical Engineering Technology (BET) Program. It allows eligible students to develop entry-level skills in the biomedical field while gaining valuable work experience before graduation. The program consists of 400 hours of hands-on experience in an actual work environment on patient care and life support equipment. The student is expected to understand and perform basic fundamentals of the operation, minor corrective repairs and perform basic preventive maintenance and electrical safety tests to a wide variety of medical devices. During the internship, the student will be expected to participate in a wide variety of clinical procedures to learn the environment, application, problems, and the routine and abnormal situations that may occur in regards to the medical devices. Students will also be exposed to the organization and management of a clinical engineering department by attending various committees, investigating education and training for biomedical equipment technicians, investigating the risk based preventative maintenance system, investigating the clinical engineering department performance indicators, and investigating the required policy and procedures of a clinical engineering department. Students will be expected to use good communication and customer skills when working with co-workers, clinical personnel, patients, visitors and all others while conducting the internship. Students will be expected to document their activities as required by the course requirements as well as the requirements of the internship location. Students will be assigned an internship supervisor that they will take direction from on a daily basis. The student will be expected to work and follow the requirements of the internship site and follow all required policies and procedures. A biomedical engineering technology student manual will be provided to the student detailing all of the requirements for the internship.

Prerequisite: BE_T 201, BE_T 205

BE_T 205: Medical Electronics

4 Credits

Solid state devices, diodes, power supplies, operational amplifiers, transistors, timing circuits, high power devices, circuits as applied to medical devices. BE T 205 Medical Electronics (4) BET 205 introduces solid state devices and circuits as they apply to medical devices. This course begins with the fundamentals of solid state devices, diode models and applications, then application of these fundamentals in linear power supply design. Students design a theoretical linear power supply as a term project, applying the fundamentals of diodes, transformers, filters and regulators. Operational amplifiers, transistor devices and circuits is presented along with the applications of amplifiers, switches, filters and other related circuits. Special solid state and high power devices will be discussed and their applications to medical device circuits. This course provides students with a broad exposure to a wide variety of solid state devices and their application to medical devices. Topics covered include: &bull; fundamentals of solid state principles;&bull; P-N junction, forward and reverse biasing;&bull; diode models: ideal, practical and complete;&bull; specialty diodes: zener and LED;&bull; diode specifications and testing;&bull; transformers: step up, step down & isolation;&bull; rectifier circuits: half and full wave;&bull; linear power supply; rectification, filters & regulation designs;&bull; Switching Mode Power Supply (SMPS) fundamentals;&bull; linear power supply design project;&bull; operational amplifiers: amplifiers, comparators, filters and others;&bull; transistors: BJT, JFET, MOSFET;&bull; special power devices: photo detectors, optoisolators, TRIAC, DIAC and others;&bull; timing circuits;&bull; tuned amplifiers & band width Topics are supported by laboratory exercises were students learn about solid state devices and power supplies. Students are required to complete a theoretical design of a linear power supply with given specifications. Students are also required to prepare written laboratory reports outlining the laboratory activity and power supply design project. Reports are graded on technical quality, grammar, and professionalism. Students in BET 205 are required to use computers in to simulate electrical circuits and systems and also produce high quality laboratory reports.
Troubleshooting methods
- Troubleshooting components
- Requirements
- Test equipment, simulators, analyzers and tools

Topics covered include:
- Safety procedures
- Skill set and co-workers
- Cleaning, handling and general safety methods
- Control and the steps that must be followed to protect them, the patients and medical equipment

Individuals need to have an awareness of infection or "people" skills are investigated. How to communicate outcomes, tools, test equipment, simulators and analyzers. In addition including: equipment operation, application, normal and abnormal

Logical methods for troubleshooting medical devices

Many different methods can be used to identify and solve problems that include using many different skill sets. This course introduced logical methods for troubleshooting medical devices including: equipment operation, application, normal and abnormal outcomes, tools, test equipment, simulators and analyzers. In addition to the technical skills of troubleshooting, the "soft" skills or "people" skills are investigated. How to communicate with others and the customer skills will be introduced. While working with medical equipment, individuals need to have an awareness of infection control and the steps that must be followed to protect them, the patients and co-workers.

Cleaning, handling and general safety methods will be discussed. Topics covered include:
- Safety procedures
- Skill set requirements
- Test equipment, simulators, analyzers and tools
- Troubleshooting methods
- Troubleshooting components

**Prerequisite:** EET 105

**BE_T 206:** Medical Computers and Networks

**4 Credits**

Introduction to computer hardware, software and networks for medical equipment; PC and medical equipment hardware; networking fundamentals. BE T 206 Medical Computers and Networks (4) This course provides an introduction to computer hardware, software and networks used by medical equipment with an in-depth background of PC and medical equipment hardware and networking fundamentals. The topics covered include: Microsoft Office review and advanced applications; personal computer (PC) hardware fundamentals; formatting and sectoring hard drives; installing various Windows operating systems and other required software/drivers; networking hardware component fundamentals; administrator networking software settings and configurations; fundamentals of health level 7 (HL7) standards; fundamentals of digital imaging and communication in medicine (DICOM) standards; operation of DICOM viewer software for medical images; fundamentals of picture archive and communications systems (PACS) configurations for medical applications; fundamentals of The Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy and Security rules in regards to medical equipment maintenance; creation of a simple PC network with several PCs and basic networking hardware components; creation of a simple physiological computer based network with several physiological devices and basic networking components; creation and testing of network cables using applicable tools and test equipment; troubleshooting correct technical problems of a basic PC and medical equipment networks using appropriate software, tools and equipment; and analyzing and generating a written reports. Lectures will be supported by laboratory exercises in which the student learns about PC hardware, PC software, network hardware, network configuration and troubleshooting these systems. Students will be required to prepare written laboratory reports outlining the laboratory activity. Reports will be graded based both on their technical quality and their grammatical and professionalism. Students in BET 206 will be required to use computers in both class and laboratory exercises to use software, create and configure networks for PCs and physiological monitors.

**Prerequisite:** BE T 201, IST 220

**BE_T 210:** Troubleshooting Medical Equipment

**3 Credits**

Methods and strategies for troubleshooting medical equipment, systems and electronics components. BE T 210 Troubleshooting Medical Equipment (3) BE T 210 will provide students with methods and strategies for servicing medical equipment, systems and electronics components. Many different methods can be used to identify and solve problems that include using many different skill sets. This course introduced logical methods for troubleshooting medical devices including: equipment operation, application, normal and abnormal outcomes, tools, test equipment, simulators and analyzers. In addition to the technical skills of troubleshooting, the "soft" skills or "people" skills are investigated. How to communicate with others and the customer skills will be introduced. While working with medical equipment, individuals need to have an awareness of infection control and the steps that must be followed to protect them, the patients and co-workers. Cleaning, handling and general safety methods will be discussed. Topics covered include:
- Safety procedures
- Skill set requirements
- Test equipment, simulators, analyzers and tools
- Troubleshooting methods
- Troubleshooting components

**Prerequisite:** BE T 201

**BE_T 296:** Independent Studies

**1-18 Credits/Maximum of 18**

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**BE_T 297:** Special Topics

**1-9 Credits/Maximum of 9**

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

## Biorenewable Systems (BRS)

**BRS 221:** Engineering Principles of Biorenewable Systems

**3 Credits**

Application of engineering principles critical to agricultural and biorenewable systems. BRS 221 Engineering Principles of Biorenewable Systems (3) This course provides an overview of engineering principles to students in non-engineering majors, but who are likely to encounter challenges that require quantitative solutions. Problem solving skills are extremely important to technology. At the end of the course, students will be able to: solve problems related to biorenewable systems using a structured, logical method combining concepts from physics and math; recognize and apply unit factoring and dimensional analysis to problem solving; quantify physical relationships and apply engineering principles to evaluate basic engineering technology problems involving electrical systems, structural members, fluid mechanics, heat transfer, and psychrometrics. Hands-on examples are used throughout the course to tie the course material to applications in agricultural and biorenewable industries. Examples include residential wiring; sizing structural members made of wood, steel, and other materials; non-moving and flowing fluids in bioproduct and agricultural processing; heat transfer through wall, windows, and other materials likely to be found in construction and processing facilities; psychrometrics in environmental growth and drying facilities. This course provides the groundwork for topics explored in more detail later in the BioRenewable Systems curriculum.

**Prerequisite:** MATH 110 or MATH 140; PHYS 250 or PHYS 211

**BRS 300:** Introduction to Biorenewable Products

**3 Credits**

Overview of bioproducts and their related industry sectors, including forest products, biocomposites, biofuels, bioenergy, bio-based adhesives, biochemicals, and bioplastics. BRS 300 Introduction to Biorenewable Products (3) This course provides an overview of the nature and utilization of bioproducts, which are defined as products created from biologically derived, renewable industrial feedstocks. These materials are renewable and can be sustainably produced; as such, they will be increasingly utilized as society recognizes the opportunity cost of mining and using other non-renewable industrial feedstocks. The class focuses on overviewing the relevant industry sectors.

**Prerequisite:** MATH 110 or MATH 140; PHYS 250 or PHYS 211
Prerequisite: CHEM 110, Concurrent: CHEM 110

BRS 391: Contextual Integration of Communication Skills for the Technical Workplace
2 Credits

To develop corporate communication skills in technically focused students in a contextual manner. A S M (A B E) 391 Contextual Integration of Communication Skills for the Technical Workplace (2) A B E/A S M 391 is the first half of a two-semester capstone experience in corporate focused leadership and communication skills training. The sequence is formatted into two 2-credit courses (second semester Junior for A B E/A S M 391 and first semester senior for the companion A B E/A S M 392 course). A key facet of this training is the contextual approach taken. All course modules are focused around the needs of industry and corresponding technical course content &mdash; a complete contextual approach. To meet the needs of the student, the course will reflect clear understanding of leadership and communication but also appreciate critical aspects of the technical content of student work and of the industries within which the students will ultimately work. The primary focus for 391 is communication skills (oral and written) with a secondary focus on leadership and career skills. The course provides the student with interaction with individuals from industry (company visitors, industry trips, and recruiting opportunities). Students will be evaluated through writing and speaking projects, professional presentations, written worksheets in class and out, creation of portfolios and reports, in class group and individual exercises, interaction with industry executives (reports), and leadership journals.

Prerequisite: Junior level standing in B E or BRS
Cross-listed with: BE 391
General Education: Writing/Speaking (GWS)

BRS 392: Contextual Integration of Leadership Skills for the Technical Workplace
2 Credits

B E/BRS 392 is the second half of a two-semester experience in corporate-focused leadership and communication skills training. The sequence is formatted into two 2-credit courses (second semester junior for B E/BRS 391 and first semester senior for the B E/BRS 392 course). A key facet of this training is the contextual approach taken. All course modules focus on leadership and communication needs of industry within its corresponding technical content - thereby representing a complete contextual approach. To meet the needs of the student, the course will reflect clear understanding of leadership and communication but also appreciate critical aspects of the technical content of student work and of the industries within which the students will ultimately work. The primary focus for B E/BRS 392 is on leadership, with communication, ethics, sustainability and career issues the secondary focus. The course provides students with interactions with individuals from industry (company visitors, industry trips, and recruiting opportunities). Topics developed for B E/BRS 392 include personal development, ethical decision-making, corporate social responsibility, strategic group management, facilitation, and diversity. Students may be evaluated through writing and speaking projects, professional presentations, written worksheets in class and out, creation of portfolios and reports, in-class group and individual exercises, interaction with industry executives (reports), and leadership journals.

Prerequisite: BRS 391, junior level standing in B E or BRS
Cross-listed with: BE 392
General Education: Writing/Speaking (GWS)

BRS 393: Industry Tour
1-2 Credits/Maximum of 2

A week-long tour of bioproducts and agricultural systems industries. BRS 393 Bioresources Industry Tour (1) This is a week long course, in which students will travel to tour relevant manufacturing facilities. Roughly half of the time (2.5 days) will be dedicated to the bioproducts industry, and the remaining time will be focused on agricultural systems. Bioproducts and agricultural systems are the two key components of the BioRenewable Systems major.

Prerequisite: Junior standing in BRS or B E

BRS 402: Foundations of Sustainable Business
3 Credits

Emphasis on understanding business strategies for enhancing sustainable operations, including issues related to the natural environment and corporate social responsibility. ERM 402 / BRS 402 Foundations of Sustainable Business (3) This course will provide students with an understanding of how environmental and sustainability issues are impacting business strategies and ultimately profits. We will also examine the external stakeholders, such as environmental groups, policy-makers, and "green" consumers, that impact business management. Business students will benefit by a better understanding of environmental/sustainability issues that impact their operations and strategies. Non-business students will benefit by understanding how business decisions can impact the natural environment. An emphasis will be on a thorough understanding of making a business case for sustainability. We will also discuss the triple bottom line and its use. Some Specific Issues to Cover: 1. How are organizations shifting business models to work with sustainability trends? 2. How can we make a business case (justification) for being "green"? 3. Can firms differentiate themselves by being responsible/sustainable? Do consumers and other stakeholders care? 4. Thorough understanding of stakeholders and how they impact operations. 5. How can the "business" side of the world work with the "environmental" side? 6. Use of packaging as an example of where parts of the supply chain are working together to be more sustainable. 7. How "waste" in its many forms can be seen as a surrogate for unsustainable practices. 8. Pros and cons of metrics used to measure sustainability. 9. Impacts of business operations on the environment.

Prerequisite: AG BM 101 or ECON 102 or ECON 104 and 7th semester standing

BRS 411: Biobased Fiber Science
4 Credits

Theoretical and practical aspects of structure-property relationships for biobased industrial fibers, including fiber biological and chemical constitution and fiber-water relationships. BRS 411 Biobased Fiber Science (4) This course investigates fundamental aspects of biobased industrial fibers (also known as biofibers), and ties their underlying biological and chemical structure to macroscale properties. Bioproducts
are defined as products created from biologically derived, renewable industrial feedstocks (wood, cotton, grasses, and bast fibers including jute, hemp, kenaf, etc.). The course begins with a look at the worldwide production of biofibers, and considers implications relating to sustainability. Elements of underlying biological and chemical structure are then investigated, including an introduction to relevant aspects of polymer science. The interaction of biofibers with water is a practical issue that bears great significance; this is the focus of the last third of the course. Students will learn principles of psychrometrics (water-temperature-environment relationships) including measurement of relative humidity and fiber moisture content. Final course subjects include industrial techniques for drying fibers, energy implications of these processes, and troubleshooting of biofiber industry issues relating to moisture.

**Prerequisite:** CHEM 110, BRS 300

**BRS 417: Processing and Manufacturing Systems for Bioproducts**

4 Credits

Description of systems and processes used in the manufacture of bioproducts. This course reviews major bioproducts and details how they are manufactured industrially. The focus of the course is wood processing, since wood is by far the leading source of industrially manufactured bioproducts at this time. Beginning at log grading, wood processing is covered in detail with respect to major industrial and commercial practices. Primary wood processing is covered, which details how logs are converted to cants, boards etc., including time dedicated to the function of required manufacturing machinery. The grading of lumber is considered. The manufacturing of common solid wood products is described, as well as how the raw materials of wood are produced and subsequently converted into valued-added bioproducts including those made from veneer, chips, strands, other refined particles and lignocellulosic fibers. Adhesive formulations as binder systems and composites are covered, including those made from other bioproducts.

**Prerequisites:** BRS 221 and BRS 300

**BRS 422: Energy Analysis in Biorenewable Systems**

3 Credits

Energy management, energy conversions, renewable energy alternatives, engineering economic analyses, national and international perspectives on energy resources. BRS 422 Energy Analysis in Biorenewable Systems (3) This course focuses upon first understanding the various forms of energy in common use today and then analyzing the energy equivalents of various forms of energy. Forms of energy to be studied most extensively include electricity, fossil fuels, and renewable energy sources. Principles and applications of engineering economic analyses will be emphasized because these principles are needed to evaluate the feasibility of converting from one energy form to another. Specific application areas of emphasis include buildings, motors, and lights. For each application area, there will be discussion of the alternatives available for using energy in a more efficient and economical manner. The infrastructure systems needed for providing electricity and natural gas to a specific location will be described as well as typical rate structures for the energy provided. Alternatives to the conventional energy systems will be identified and the course will conclude with discussion of energy strategies throughout the 21st century. Local, national, and international perspectives on energy resources will be infused throughout this course.

**Prerequisite:** BRS 221

**BRS 423: Deterioration and Protection of Bioproducts**

3 Credits

Timber, wood, and bioproduct deterioration from fungi, insects, fire; treatment of bioproducts for in-service protection.

**Prerequisite:** BRS 300; Concurrent: BRS 411

**BRS 426: Safety and Health in Agriculture and Biorenewable Industries**

3 Credits

Managing occupational safety and health in production agriculture, bioproducts and related operations. BRS 426 Safety and Health in Agricultural and Biorenewable Industries (3) BRS 426 explores management aspects of occupational safety and health specifically as it pertains to both the agricultural and biorenewable systems industry sectors. Employers are increasingly demanding students have training in safety and health. Topics to be covered include principles of safety and health, hazard analysis, hazard prevention and control, human behavior and safety, training and education, safety and health regulations, agricultural emergencies and developing a written safety program.

**Prerequisite:** 5th semester standing

**BRS 428: Electric Power and Instrumentation**

3 Credits

Principles and application of electric circuits for power distribution, motors, automatic controls, and instrumentation used in agricultural and biorenewable industries. BRS 428 Electric Power and Instrumentation (3) Nearly every facet of our modern society relies on electricity and electronics. Whether engaged in product development, manufacturing, production, testing, or management, graduates of technical programs benefit from a fundamental understanding of electrical/electronic systems. This course prepares students to analyze electrical/electronic systems applicable to agricultural and biorenewable industries. Upon completion of this course, the student will be able to: demonstrate correct use of common electronic measurement tools including multimeters, oscilloscopes and others; demonstrate sound electrical construction techniques including cable preparation, soldering, circuit board construction, and others; demonstrate sound troubleshooting skills for electrical and electronic systems; understand common elements of power distribution systems; understand simple measurement and control circuits represented by schematics or ladder diagrams; understand and apply various sensors to measure temperature, pressure, strain, force, proximity, speed etc.; understand the application of dataloggers, programmable logic controllers, and computer software to collect data and/or control simple processes; understand the function of common circuit components such as resistors, capacitors, inductors, diodes, op-amps, transistors, and transformers in simple circuits; understand basic maintenance and safety requirements for facility electrical systems.

**Prerequisite:** BRS 221

**BRS 429W: Biorenewable Systems Analysis and Management**

3 Credits

BRS 429W is a capstone course for the BioRenewable Systems major. The course covers systems analysis and optimization techniques including an introduction to systems theory, qualitative and quantitative
analysis, linear programming, waiting line models, PERT/CPM, minimal spanning tree, calculus methods, simulation modeling for decision making, inventory, and energy audits. All topics are presented in the form of case studies that require the students to solve problems in realistic production and processing scenarios. The course also provides a writing-intensive structure. The course targets BRS students in their last semester because it integrates knowledge and experiences acquired in prior BRS, business, and agricultural science courses.

**Prerequisite:** BRS 422

**Writing Across the Curriculum**

BRS 437: Bioproduct Marketing and Sales

**4 Credits**

Business-to-business bioproduct sales and marketing fundamentals and market overview of key forest industry sectors including biorefinery value chain outputs. BRS 437 Bioproduct Marketing and Sales (4) This course covers business-to-business (B2B) bioproduct marketing fundamentals and a market overview of key forest industry sectors (solid wood, composite panels, and engineered wood products) including biorefinery value chain outputs (environmental services, energy, fuels, and co-products) and personal selling of bioproducts. Students will apply B2B market principles and concepts toward an understanding of bioproducts industries and markets. Personal selling techniques will be developed and applied to enhance understanding of the industrial sales function within bioproduct firms. Marketing research for decision-makers will be examined.

**Prerequisite:** BRS 300, AG BM101 or ECON 102

BRS 490: BioRenewable Systems Colloquium

**1-2 Credits/Maximum of 2**

Presentations and discussions of solutions to problems within the biorenewable systems industries.

**Prerequisite:** BRS 300, Prerequisite or concurrent A S M 391

BRS 494: Undergraduate Research

**1-12 Credits/Maximum of 12**

Supervised student activities on research projects identified on an individual or small group basis.

BRS 494H: Honors Thesis

**1-6 Credits/Maximum of 6**

Independent study directed by a faculty supervisor that culminates in the production of a BioRenewable Systems honors thesis.

**Prerequisite:** junior or senior standing in the Schreyer Honors College and permission of a BioRenewable Systems honors advisor Honors

BRS 495: Internship

**1-18 Credits/Maximum of 18**

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

BRS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BRS 497: Special Topics

**1-9 Credits/Maximum of 9**

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BRS 499: Foreign Studies

**1-12 Credits/Maximum of 12**

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**Biotechnology (BIOTC)**

BIOTC 416: Microbial Biotechnology

**2 Credits**

The overall goal of BIOTC 416 / MICRB 416 is to introduce students to fundamentals of applied biotechnology and the use of microorganisms in the synthesis of biologically important and industrially useful products. The course will focus on the application of the tools of Microbiology, Molecular Biology, Biochemistry, Forensics, Environmental Biology and Bioinformatics to exploit microbes as vessels to create an array of products to benefit humans, animals and the environment. Specifically, discussions will address the use of microbes in the cleanup of polluted environments (bioremediation) as well as their role in producing drugs (vaccines, antibiotics, etc.), industrially important enzymes (rennet, meat tenderizers, indigo production etc.), and biodegradable plastics to name a few. Furthermore, ethics and regulations surrounding the production, marketing and distribution of these biologics will be discussed. Students will also gain a deeper understanding of the application of recombinant DNA technology, genomics and bioinformatics.

**Enforced Prerequisite at Enrollment:** BMB 442 and (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203)

Cross-listed with: MICRB 416

BIOTC 459: Plant Tissue Culture and Biotechnology

**3 Credits**

The overall goal of this course is to provide a strong overview of the techniques used in plant biotechnology and the applications made possible by those techniques. The lecture topics will be used to introduce the principles of tissue culture and molecular biology, including how they are used to produce transgenic plants. Furthermore, the course will give students a broader and deeper knowledge in the field of Plant Biotechnology and provide a foundation for understanding the field as it changes in the future. Topics include the safety, legal and ethical issues surrounding GMOs and the study of the anti-GMO arguments surrounding each issue. In the laboratory component of the course, students will be introduced to the underlying principles of molecular biology techniques and aseptic culture of plant cells as well as the tissues and organs used to produce transgenic plants. In summary, through this course
students will be introduced to many of the most important tools of the biotechnologist.

**Enforced Prerequisite at Enrollment:** BMB 252 or BMB 252H or MICRB 252 or BIOL 230W or BIOL 230M
Cross-listed with: BIOL 459, HORT 459

BIOTC 460: Advances and Applications of Plant Biotechnology

3 Credits

This course provides a comprehensive overview and current status of plant biotech research. The course provides knowledge of plant systems that fall in the category of GMOs. BIOTC 460 / AGRO 460 Advances and Applications of Plant Biotechnology (3)This course will provide a comprehensive overview and status of current plant biotech research. The focus is on providing knowledge of the biology of plant systems. Consequences of development of a transgenic plant either for food (crops) or as a tool to understand molecular, genetic, and inheritance mechanisms of a trait will be discussed in detail. The course will deliver the current literature and understanding of mechanisms involved in herbicide resistance in transgenic plants. Specific topics that will be of interest to students from various disciplines include disease and insect resistance, quality traits, and secondary metabolites. Molecular biology of different pollination systems will be examined so that students will understand the concept of gene flow from transgenic to non-transgenic crops. Examples from recent developments on the beneficial use of transgenic plants as producers of modified compounds, starches, antibodies and their use in phytotherapy of toxic and organic pollutants will be discussed from the perspective of genetic and molecular plant systems. Gene expression of transgenic plant traits and the stability of an engineered crop will be discussed. Specific emphasis will be on different modes of inheritance that a transgenic plant can follow after its development and release into the environment. The course also prepares students for understanding the regulatory processes that are required for testing, moving, and environment release of transgenic crops. The laboratory component of the course will introduce students to the common techniques of molecular biology that are used to detect expression in transgenic plants. Transgenic maize plants will be grown in a greenhouse and analyzed for expression of introduced genes.

**Enforced Prerequisite at Enrollment:** BMB 251 or MICRB 251 or BIOL 230W or BIOL 251H or BIOL 230M
Cross-listed with: AGRO 460

BIOTC 479: Methods in Biofermentations

3 Credits

The overall goal of this course is to enable students to plan and execute fermentation processes approaching industrial scales. Students will get hands-on experience setting up and monitoring fermenters, as well as conducting practical experiments that include: 1) the effects of medium components on cell density, mixing, aeration and oxygen mass transfer in fermentation systems 2) analysis and control of key parameters for product optimization and 3) computer control of fermentation processes. In addition, the student will learn to prepare and complete documentation to support project goals that will meet GLP (good laboratory practice) standards, take proper laboratory notes on all procedures which are carried out in the laboratory, and present results to a group orally. The laboratory work will be supported by presentations and discussions on the fundamentals of microbial culture, aseptic techniques, kinetics of fermentation, recombinant microorganisms, scale-up strategies, downstream processing, economic considerations, regulatory aspects and cGMP (current good manufacturing practices).

**Enforced Prerequisites at Enrollment:** BMB 442 and ( MICRB 201 or MICRB 201H ) and ( MICRB 202 or MICRB 203 ) and ( BMB 252 or BMB 252H or MICRB 252 or BIOL 230W or BIOL 230M )

BIOTC 489: Animal Cell Culture Methods

3 Credits

The overall goal of this course is to introduce students to basic principles and techniques in animal cell culture. More specifically, the course outlines the importance of animal cell culture to the field of biotechnology as it applies to the pharmaceutical industry. Lecture discussions will be used to provide the necessary theoretical background in working with animal and insect cells, such as history of cell culture, media components, growth kinetics, principles of regulating biological products, cell line propagation, characterization, quality control and the complex issues of scale-up of cell culture from the research bench to larger reactors. Students will become familiar with the practical aspects of culturing and sub-culturing established cell lines and learn basic techniques such as creating a primary cell line, chromosome spreading and mycoplasma detection as well as maintaining insect cells. In addition to hands-on experiments, different methods and equipment employed in the scale-up of animal cell culture will be demonstrated and discussed in the laboratory.

**Enforced Prerequisites at Enrollment:** ( MICRB 201 or MICRB 201H ) and ( MICRB 202 or MICRB 203 ) and ( BMB 251 or BMB 251H or MICRB 251 or BIOL 230W or BIOL 230M )

Cross-Listed

**Business Administration (BA)**

BA 100: Introduction to Business

3 Credits

A comprehensive view of the contemporary environment of business. This course provides a broad overview of the study of business and its environment, organization, operation, and interrelationships with government and society. Topic areas include: economic systems, forms of business ownership, information, accounting, finance, management, marketing and supply chain principles, legal and regulatory environments, business ethics and international business. A student majoring in business will develop a broad basis for further study in a specific area in business, while other majors will become familiar with the American enterprise system and the functions and issues facing business today.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BA 100S: Introduction to Business

3 Credits

BA 100S is a broad overview of American business practices and policies. The course introduces the functions of business and how each interacts and shapes the legal, political, social, cultural and economic environments. Students who successfully complete this course will understand how a) the American free enterprise system operates...
b) businesses operate in our modern political, social, and economic environment c) how to analyze the methods and procedures used by people in business to arrive at effective decisions d) ethics and corporate social responsibility affect business decisions e) globalization has transformed American businesses.

First-Year Seminar
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
BA 195: Cooperative Practicum with Business Offices
3-6 Credits/Maximum of 6
Cooperative practical work with business offices under the supervision of the instructor.

BA 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BA 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
BA 241: Legal Environment of Business
2 Credits
Examines the legal system's role and impact regarding business transactions, liability issues, and ownership of intellectual property. Students earning credit for B A 241 may not earn credit toward Smeal College baccalaureate degree for B Law 243 and/or B A 243. B A 241B A 241 Legal Environment of Business (2)As an integral part of planning and management responsibilities, a business decision-maker must be able to identify risks and opportunities from many sources. The legal environment represents a significant segment of the decision-maker's landscape. This survey course is designed to develop the student's awareness and recognition skills with respect to the major inputs in the increasingly complex commercial legal environment. Students in this course will examine the design and function of the U.S. legal system in its roles as protector of property interests and facilitator of business transactions. Alternatives to judicial resolution and enforcement will also be examined. In addition, students will learn about the legal issues affecting the formation and enforcement of business agreements. This will include studying the impact of our economy's continued shift to digital technology for communication and documentation. Finally, tort liability and intellectual property issues from a business perspective will be examined with a special emphasis upon issues created by the Internet's rapid growth. Students earning credit for B A 241 may not earn credit toward a Smeal College baccalaureate degree for B LAW 243 and/or B A 243.

BA 242: Social and Ethical Environment of Business
2 Credits
Explores the social and ethical environment of business and ethical decision making in a business context. B A 242 Social and Ethical Environment of Business (2) Modern businesses operate in an increasingly interdependent environment. The actions of businesses have major impacts on society. Conversely, society influences a wide range of corporate actions through laws and regulations as well as via public opinion and the media. With changes in information technology, corporate decisions that were once considered private are now subject to public scrutiny. Therefore, more than ever, these decisions must take into account the larger social environment. In this course, students will learn about a broad range of stakeholders and societal issues that affect corporate decision-making and they will consider the corporation's responsibility to society. They will also learn to apply ethical decision-making frameworks to a variety of ethical decisions faced by corporate managers. This course is taught in the sophomore year and therefore lays a broad foundation for other core business courses. For example, other courses tend to focus on a single stakeholder group such as customers (marketing), employees (management), or stockholders (finance). This course teaches students to think broadly about how a business fits into a more complex web of relationships within society.

BA 243: Social, Legal, and Ethical Environment of Business
4 Credits
Explores the ethical, political, social, legal and regulatory, technological, and demographic diversity environment of business. A student may not receive credit toward graduation for both B LAW 243 and B A 243.

BA 250: Small Business Management
3 Credits
Analysis of problems of the small firm, particularly for the student who wishes to venture into business.

Prerequisite: 3 credits in economics

BA 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BA 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BA 299: Foreign Studies
1-12 Credits
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
BA 302: Supply Chains

3 Credits

BA 302 provides non-business students with an introduction to the issues and decisions routinely faced by supply chain managers and the impact of effective supply chains on today's business environment. Using the Supply Chain Operations Reference model as a framework, this course considers how successful firms plan, integrate and execute sourcing, manufacturing, customer fulfillment, reverse logistics and sustainment processes across a complex marketplace to provide value to the customer. The course looks at the interplay and coordination of product, financial and information flows through a supply chain resulting in value creation for the customer and competitive advantage for the firm. Students will consider the roles of drivers such as cost, quality, time, flexibility, innovation and information sharing in designing supply chain strategies in support of overarching business strategies. Through detailed exploration of models, case studies and real world events, coupled with the application of operations management tools and techniques, the course provides the opportunity to identify and dissect issues, and develop solutions to supply chain challenges not only faced by today's business managers, but also impact the customer. The course examines supply chain organization, implementation and management planning, the evaluation and control of manufacturing processes, and the execution of supplier and customer management activities. Students will use basic information technologies and programs to leverage tools like business process mapping, value indexing, and total cost analysis to aid in the identification and mitigation of supply chain issues in a global business environment. Students will also be exposed to current supply chain issues such as sustainability and the impact of boundary-spanning information technologies as relevant keys to competitive advantage. The course provides the basic supply chain knowledge and skills necessary for the non-business major to be an effective member of a cross functional team in a professional business environment while providing a level of understanding to benefit the student in navigating the complex customer fulfillment issues present as a consumer of goods and services in today's globally connected marketplace. A student may not receive credit towards graduation for both BA 302 and and SCM 301.

Prerequisites: ( ECON 102 or ECON 104 ) and ACCTG 211 and ( SCM 200 or STAT 200 or ECON 306 )

BA 303: Marketing

3 Credits

BA 303 provides broad-based exposure and understanding of marketing and its processes. The course is a stand-alone marketing course for those interested in the role of marketing within the business context. It covers a range of topics from the basic (what is marketing), to the processes (market segmentation, marketing strategy, development of product, price, place and promotion), to the broader societal questions (why marketing exists, ethics, the future of marketing). There is also the opportunity to examine marketing from the perspective of various industries for non-business students. Assessment will test factual knowledge of marketing and the marketing process. Written assignments will ask students to work both individually and in teams to apply course concepts. These can include assignments developing one's skill set in consumer psychology, target market selection, writing a positioning statement, developing a marketing plan, new product development concepts, promotional campaign ideas, and ethical questions to discuss and debate. Students may also be asked to form small groups for discussion and/or make presentations to the class based on set marketing topics specific to one's area of interest. Students will also be expected to participate in class discussions. A student may not receive credit towards graduation for both B A 303 and MKTG 221 or MKTG 221W. Furthermore, a student may not receive credit towards graduation for both B A 303 and MKTG 301 or MKTG 301W.

Prerequisites: ECON 102 or ECON 104

BA 303H: Honors Core Marketing

2 Credits

Junior Core Marketing - Honors Section. B A 303H Honors Core Marketing (2)This course is an exploration of fundamental concepts and issues in marketing. In this course, we will discuss what marketing is and learn to analyze the marketing environment and our potential customers. Based on these insights, we will then discuss strategy alternatives and the key functions of marketing. A project is a major component of the course.

Honors
BA 304: Management and Organization

3 Credits

BA 304 is an overview of a body of knowledge that exists concerning the management of modern organizations. Management is critical to business success no matter the industry, the field or the arena. Eight key functions for any manager will be covered - organizational structure, operations, staffing, recruitment, leadership, culture and ethics, planning, and innovative and responsible practices. A key take away for BA 304 is the difference between leadership and management and what do these terms mean. In recent years the focus has been on leadership as the preferred ability to strive for with management skills losing favor. In general, it has been said that leaders focus on "doing the right things" and managers focus on "doing things right". This will be a theme for review and discussion throughout the course as each subject area is covered. A student may not receive credit towards graduation for both BA 304 and MGMT 100 or MGMT 100W. Furthermore, a student may not receive credit towards graduation for both BA 304 and MGMT 301 or MGMT 301W.

**Prerequisites:** ECON 102 or ECON 104

BA 304H: Honors Core Management

2 Credits

Junior Core Business Management - Honors Section. BA 304H is an overview of a body of knowledge that exists concerning the management of modern organizations. Management is critical to business success no matter the industry, the field or the arena. Eight key functions for any manager will be covered - organizational structure, operations, staffing, recruitment, leadership, culture and ethics, planning, and innovative and responsible practices. A key take away for BA 304H is the difference between leadership and management and what do these terms mean. In recent years the focus has been on leadership as the preferred ability to strive for with management skills losing favor. In general, it has been said that leaders focus on "doing the right things" and managers focus on "doing things right". This will be a theme for review and discussion throughout the course as each subject area is covered. A student may not receive credit towards graduation for both BA 304H and MGMT 100 or MGMT 100W. Furthermore, a student may not receive credit towards graduation for both BA 304H and MGMT 301 or MGMT 301W.

**Prerequisites:** ECON 102 or ECON 104

BA 321: Contemporary Skills for Business Professionals

3 Credits

Emphasizes the development of individual, group, critical thinking, and presentation skills, through the application of modern method and business technology. BA 321 is an overview of a body of knowledge that exists concerning the management of modern organizations. Management is critical to business success no matter the industry, the field or the arena. Eight key functions for any manager will be covered - organizational structure, operations, staffing, recruitment, leadership, culture and ethics, planning, and innovative and responsible practices. A key take away for BA 304H is the difference between leadership and management and what do these terms mean. In recent years the focus has been on leadership as the preferred ability to strive for with management skills losing favor. In general, it has been said that leaders focus on "doing the right things" and managers focus on "doing things right". This will be a theme for review and discussion throughout the course as each subject area is covered. A student may not receive credit towards graduation for both BA 304H and MGMT 100 or MGMT 100W. Furthermore, a student may not receive credit towards graduation for both BA 304H and MGMT 301 or MGMT 301W.
situation. Students will develop the negotiation skills needed to meet the challenges facing today’s executives. Students will develop the sophistication to analyze bargaining and conflict relationships, and an awareness of their individual bargaining style. Students will apply various techniques in order to: understand the basic elements of negotiation; make informed decisions about continuing a negotiation or walking away; participate or lead in team-based negotiations; and effectively manage international negotiations. A primary component of this course is application of negotiation theories through exercises in which the student assumes various roles within a negotiation scenario. Through practice and role playing, students will develop effective personal and professional negotiation skills.

**Prerequisite:** ACCTG211 ; ECON 102 or ECON 104 ; ENGL 015; Concurrent: SCM 200or STAT 200 ; MIS 204

BA 342: Socially Responsible, Sustainable and Ethical Business Practice

3 Credits

Course examines actions taken by corporations that impact global citizenship, environmental sustainability, and the economic stability of international societies. It further looks at relationships, rights, and responsibilities between businesses, business decision-makers and their stakeholders. B A 342 Socially Responsible, Sustainable and Ethical Business Practice (3) Businesses and other large organizations have come to influence nearly all aspects of life in contemporary industrialized societies. The actions taken by businesspeople have major impacts on individuals and on society as a whole. Conversely, the expectations of citizens and their representative bodies (e.g., governments, communities, unions, interest groups) influence a wide range of corporate actions. Students of B A 342 will examine these relationships, rights, and responsibilities between businesses, business decision-makers and their stakeholders. As students enter their field of study, this course will introduced them to current ethical, social responsibility and sustainability issues that face business practitioners within their field and across related disciplines. Each business function &ndash; accounting, finance, marketing, risk, supply chain, human resource policies, etc. &ndash; has relationships and responsibilities within the larger social environment. This course considers commonalities across the business functions and teaches students to think broadly about how a business fits into a more complex web of relationships within society. The course begins with an overview of the corporation’s place and role in society as well as key concepts in understanding why knowledge related to corporate governance, ethics, sustainability and social responsibility issues is critical to professional managers&mdash;responsibility and long-term career success. The stakeholder model is reviewed along with the study and application of ethical decision-making frameworks to current ethical dilemmas. Sustainability and global responsibility are introduced within the context of government regulation versus responsible stewardship. The closing section of the course provides thought and discussion on issues facing business practitioners across key business functions.

**Prerequisite:** MGMT 301 , MGMT 301W , or B A 304 ; Prerequisite or concurrent: FIN 301 or B A 301 ; MKTG 301 or B A 303 ; SCM 301 or B A 302

BA 364: International Business and Society

3 Credits

Business organizations and the sociocultural environment; current issues; corporate responsibility; international and multinational business environments. B A 364YIB A 364Y International Business and Society (3) (US;IL) This writing-intensive course will provide an overview of the relationship between business organizations and the sociocultural environment. Current issues in the media and the scholarly literature will be used to discuss and analyze this relationship. Special attention will be given to the topics of business and government relationships, corporate responsibility, environmental issues, and topics related to international and multinational business environments.

**Prerequisite:** ENGL 202D , MGMT 301 International Cultures (IL)
United States Cultures (US)
Writing Across the Curriculum

BA 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

BA 395A: Practicum in Business Administration

1 Credits/Maximum of 1

Professional and guided work experience in business administration with private or public organizations. May be taken only as an elective.

**Prerequisite:** fifth-semester standing

Full-Time Equivalent Course

BA 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BA 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BA 411: Analyzing Business and Industry

3 Credits

Prepares students to obtain an enterprise-wide view of business and industry by integrating operational and financial decisions in a team and learning environment. B A 411B A 411 Analyzing Business and Industry (3) The course provides the students with a methodology for analyzing the business, introduces the students to sources of financial information available from private and public sources and trains the student to prepare and professionally present business analysis reports. The course, which adopts a user perspective, extends the students’ basic knowledge of financial reporting and provides them with a broader context for understanding business that includes economic and social forces, the regulatory environment of businesses and their financial reporting, capital market operations and corporate governance. It applies concepts and decision tools that are studied throughout the curriculum such as present value, financial ratio analysis, break-even point analysis and statistical analysis.
Prerequisite: ACCTG211; B A 301 or FIN 301; B A 302 or SCM 301; B A 303 or MKTG 301; B A 304 or MGMT 301

BA 412: Honors Integration and Research

2-3 Credits

The integration of the business core into a detailed financial, strategy and market analysis of actual companies selected by student teams. BA 412H Honors Integration and Research (2-3 credits) The purpose of this course is to assist students in developing their Schreyer Honors Thesis. It proceeds by exposing students to research conducted within the various business majors; the research conducted by prior honors students; and having student teams conduct research or contemporary businesses and industries. Typical readings include materials related to evaluating an actual company, prior Schreyer Honors theses, contemporary business articles, prior course projects and supporting academic literature. Written company analyses and oral presentations are made by the teams.

Prerequisite: ACCTG211; FIN 301 or B A 301; SCM 301 or B A 302; MKTG 301 or B A 303; MGMT 301 or B A 304 Honors

BA 420: Preparation for Career Management

1 Credits

This course emphasizes effective career planning by closely examining oneself, the business world, communication styles and strategies. B A 420 Preparation for Career Management (1) BA 420 develops students’ career preparation and management skills through the close examination of self, the world of work and communication styles and strategies. This course is one of a series in the program which collectively develop the skills and competencies necessary for the business administration student. The course is designed on the belief that (1) career decision-making is greatly enhanced by considering personal traits such as one’s interests, values, goals, and approach to making decisions; and (2) through the exploration of self and world through out-of-classroom learning experiences. The student becomes empowered to apply prior classroom learning outside of the academic environment. These skills are utilized throughout a person’s career. Students who successfully complete the course will be able to: Prepare resumes targeted to a range of industries and positions. Write effectively to prospective employers. Identify personal traits and qualities in the context of career management. Demonstrate effective interview techniques.

Prerequisite: B A 321 or B A 322

BA 421: Project Management

3 Credits

Introduction to Project Management covering all phases of a project including proposal development, planning, execution, and closing. BA 421 Project Management (3) BA 421 is designed to provide the fundamental skills necessary for success in the business environment. BA 421 is one of a series of courses that collectively develop the the skills and competencies necessary for business administration students. BA 421 is designed to provide students with the fundamental understanding of the Project Management Book of Knowledge that defines the standards of the Project Management Institute (PMI) which is the professional credentialing body of the discipline. This introductory course in project management covers all phases of a project, including: proposal development, planning, execution and closing. The course will also explore the application of the Theory of Constraints to project management, and will use project management software to demonstrate and reinforce class concepts. The software will also be instrumental in the execution of a business project. By the end of the proposed new course, students should be able to: Identify the role of the project manager within organizations and projects. Understand the Processes and Procedures needed to Plan and Control a Project. Recognize the options available as well as the inherent strengths and weaknesses of different approaches. Define the project scope and priorities. Create Work Breakdown Structure (WBS) and integrate it with the organization. Estimate and interpret project times and costs. Construct project networks and find critical paths. Understand and Implement Activity Precedence Logic. Identify, assess and respond to project risks. Schedule project resources and evaluate resource constrained projects. Differentiate between the options to accelerate project completion. Use Microsoft Project Management Software as a skilled tool for Project Management.

Prerequisite: B A 321 or B A 322

BA 422W: Strategic Business Planning

3 Credits

Study of strategic planning and implementation in multi-industry, multi-cultural, and multi-national settings with emphasis on sustaining competitive advantages. BA 422W Strategic Business Planning is the capstone of the series of business administration courses in the BSB degree. These courses collectively develop the the skills and competencies necessary for the business administration student. BA 422W is designed for students to examine the discipline of strategic management and to develop an appreciation of the criticality of strategic management in guiding a business entity through a changing and challenging environment. The course requires students to build upon their knowledge of business structure, internal and external environments, and functional design as each relates to strategy development and implementation. Students explore methods and techniques to identify strategies best suited to accomplish an entity’s mission and its business objectives. As a writing intensive (W) course, there is a strong emphasis on development and reinforcement of effective writing skills. Students prepare well reasoned, organized, and constructed bodies of work. Upon successful completion of the course, students will be able to: 1. Identify environmental threats and opportunities impacting a firm. 2. Identify strengths, weaknesses and competencies of a firm. 3. Effectively apply critical thinking skills to design strategic alternatives and then the best Alternative. 4. Critique and evaluate strategic actions taken by firms. 5. Explain the profound effects that a strategic move (either at the corporate level or at the business level) can have on the entire organization. 6. Demonstrate exceptional skills in presenting complex business information and issues. 7. Efficiently research a firm or industry using a variety of sources. 8. Demonstrate proficiency in analyzing business cases and formulating well reasoned recommendations when no "right" answer exists. 9. Demonstrate effective leadership skills in a group environment.

Prerequisite: B A 321; B A 322; B A 421; FIN 301; MGMT 301; MKTG 301; SCM 301

Writing Across the Curriculum
BA 441: Strategies for Enterprise Sustainability

3 Credits

An understanding and analysis of how environmental and sustainability issues are impacting business strategies and ultimately profits. BA 441 Strategies for Enterprise Sustainability (3) Enterprise globalization warrants a greater level of awareness and responsibility in seeing that products and services maintain a high level of integrity, quality, and reliability; products need to be produced and moved throughout the supply chain in a manner that does not cause unacceptable environmental or social burdens, but that also allows for acceptable profits. We will examine both external and internal forces, such as environmental groups, policy-makers, and consumers that impact business strategies. This will be put into the context of the "triple bottom line"—with an understanding of its challenges and opportunities. Business students will benefit by a better understanding of environmental/sustainability issues that impact operations and strategies. Students will learn via analyses of cases studies and by working in teams to solve real-world problems faced by chosen organizations. Focus will include all key aspects of an enterprise, from procurement to product development, and from human resources to supply chain solutions.

Prerequisite: B A 342

BA 442: Sustainable Behavior of Consumers, Firms, and Societies

3 Credits

Strategies to influence sustainable behavior considering consumer response and marketing communications. BA 442 Sustainability Behavior of Consumers, Firms, and Societies (3) Sustainability is a broad domain concerning the extent to which environmental, economic, and social practices are viable for current and future generations. Consumer awareness of sustainability issues has evolved from an emerging social movement to mainstream values, but increasing sustainable behavior remains a challenge. This course is designed to provide students with the knowledge to enhance sustainable behaviors in firms, among consumers, and in society at large. In doing so, this course will include frameworks for understanding how to influence sustainable practices, consumer response to sustainability, and marketing communication issues as well as real-world examples of sustainable practices and issues, offering both a theoretical and applied approach. The course may also include a project which will entail student teams working on a real-world sustainable behavior problem in collaboration with a business or segment of the university campus when available or other course project addressing a relevant sustainability issue. Students should leave the course with an understanding of sustainability issues in the current marketplace and the knowledge and ability to influence sustainable behaviors. Students will enter their career with the knowledge and skills to be a sustainable business decision-maker and foster sustainable behavior.

BA 462: Business Strategy

3 Credits

Interpretation of business concept in the analysis of problems related to the successful management of a company, institution, or organization. Business Strategy is the study of managerial decisionmaking in a firm’s competitive space. As such, the course focuses on the formulation and implementation of corporate strategy sets as if the student was on the top management team (TMT) inside a forprofit organization. The course covers topics such as decisionmaking under uncertainty, environmental scanning and sequential updating, industry structure, the firm’s regulatory constraints, relative bargaining power, Porters Five Forces, industry barriers to entry, industry value chain analysis, firmlevel resources and capabilities, competitive advantage, corporatelevel strategy, businesslevel strategy, and collaborative strategies such as franchising, licensing and joint ventures. The overarching goal of the strategic manager is to ensure that the firm survives and thrives and, with these goals in mind, Business Strategy addresses the actions and outcomes to corporate decisionmaking. The course has a number of objectives in addition to learning and retaining information on the aforementioned topics. These include (i) obtaining critical thinking skills necessary to function as a strategic manager or to perform the tasks comprising the strategic management process, (ii) integrate and apply the knowledge accumulated in various functional areas, such as marketing, human resource management, operations, accounting and finance, (iii) prepare you for management careers by providing inclin options for you to enhance your ability to communicate orally and in written formats, (iv) to lead and to work with others in realistic work settings, (v) expose you to the ethical and societal issues raised in operating an enterprise, and (vi) to provide you with experience in dealing with real strategic decision issues facing managers in all types of organizations. This is accomplished through a number of pedagogical mechanisms that include news articles, case studies, academic articles, documentaries, simulations and written assignments.

Prerequisite: FIN 301, MGMT 301, MKTG 301, B A 364Y, seventh-semester standing or higher

BA 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

BA 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

BA 495: **SPECIAL TOPICS**

3-9 Credits/Maximum of 9

BA 495A: Business Internship

3-6 Credits/Maximum of 6

B A 495A Business Internship (3-6 per semester/maximum of 6) B A 495A facilitates the application of students’ prior classroom learning in a field setting. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student. The course is designed to provide students with a firsthand opportunity to experience the challenges and rewards of the business professional. Essentially, an internship bridges the gap between the academic environment and the professional environment. Internships provide an opportunity for students to link theory with practice in a nonacademic setting. Internships provide practical, real-world experiences which cannot be simulated in the classroom. Upon successful completion of an internship, students will: Have a better understanding of
employer expectations related to career advancement. Have an enhanced strategic view of the industry/business segment in which they worked. Have experience integrating and using their knowledge and skills from the classroom. Have increased awareness of professional and technical areas of strengths and weakness.

**Prerequisite:** B A 321, B A 322, B A 420, and completion of 6 credits at the 300- or 400-level in the student's option

BA 495B: Undergraduate Research in Business

3-6 Credits/Maximum of 6

B A 495B Undergraduate Research in Business (3-6 per semester/maximum of 6) BA 495B provides students an opportunity to apply prior coursework to address a business problem or research question in far greater depth than a traditional research paper. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student. The course provides the students with an opportunity to work intensively on a research project of extended duration and depth of analysis with a supervising faculty member. This course introduces the students to conducting business research on a more advanced level. Students will have the opportunity to develop the research question(s), read extensively in the academic literature, gather and analyze data, and thereby extend learning from prior coursework in a research setting.

**Prerequisite:** B A 321, B A 322, B A 420, and completion of 6 credits at the 300- and 400-level in the student's option

BA 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BA 499: Foreign Study--Business Administration

1-18 Credits/Maximum of 18

Study in selected countries of business institutions, functions, and current business problems.

**Prerequisite:** ACCTG211, ECON 102, ECON 104, SCM 200

International Cultures (IL)

**Business Law (BLAW)**

BLAW 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BLAW 243: Legal Environment of Business

3 Credits

Social control through law: courts, basic policies underlying individual and contractual rights in everyday society. May not be used to satisfy Smeal College baccalaureate degree requirements. Not available to students who have taken B A 243.

**Prerequisite:** third-semester standing

BLAW 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BLAW 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

3 Credits

An introduction to the business environment emphasizing business contracts, liability issues arising from business relations, including those in the internet realm and intellectual property issues. Alternative dispute resolution and global perspectives will be integrated throughout. B LAW 341 Business Law I: Introduction to Contracts, Liability Issues, and Intellectual Property (3) Business decisions have legal consequences. Such decisions can represent both legal risks and opportunities. It is important for one entering business to have a fundamental understanding of the governing legal principles. This course will provide an introduction to the U.S. legal system, coverage of the major components of contract law, and an examination of business liability issues under tort law. In addition, the intellectual property issues of trade secrets, trademarks, patents, and copyrights will be covered. The impact of digital technology and business globalization will be integrated into each topic discussed. The course will be taught in a lecture-discussion format to encourage interaction and exploration of difficult issues. The course text and materials will include key business legal cases.

**Prerequisite:** MGMT 301, MGMT 301W, or B A 304; Prerequisite or concurrent: FIN 301 or B A 301, MKTG 301, MKTG 301W, or B A 303; SCM 301 or B A 302

BLAW 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BLAW 424: Real Estate Law

3 Credits

Analyze contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real
property. B LAW 424 B LAW (R M) 424 Real Estate Law (3) Analysis of contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. The objectives for this course are: (1) to provide students with an understanding of essential U.S. real estate property law, including the rights private property owners may obtain, how ownership and transfer are handled in view of present and future interests, constitutional issues that impact real estate ownership, and the legal aspects of modern real estate contractual transactions; (2) to teach students the ability to spot the legal issues arising from the above as future business leaders and (3) to introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. Student progress and mastery of the material will be evaluated through periodic examinations.

**Prerequisite:** B LAW341 or B LAW243
Cross-listed with: RM 424

BLAW 425: Business and Environmental Regulation
3 Credits
Examines the interplay between environmental regulation and commercial activities, including property interests. B LAW (R M) 425 Business and Environmental Regulation (3) R M/B LAW 425 is an advanced business law course based on foundation knowledge in legal regulation, property rights, and enterprise. The course explores the interplay between environmental laws and property rights and includes topics such as: common law regulation of the environment, government power and private rights, zoning, protecting endangered species, regulating the transportation and storage of hazardous materials, and Federal regulation of water quality. Students will develop their comprehension and analysis of the legal reasoning processes along with the ability to identify legal issues from the perspectives of the government, property owners, and environmental interest groups. The instructional methods will include class discussions of readings and video presentations. To facilitate thorough analysis of the competing interests affecting environmental law, this course will employ the Socratic teaching method and place a special emphasis upon class discussion and interaction.

**Prerequisite:** B LAW341 or B LAW243
Cross-listed with: RM 425

BLAW 441: Business Law II: Agency, Employment and Business Structure
3 Credits
An examination of the laws governing agency relationships, employment, and the various structures of commercial enterprises.

**Prerequisite:** B LAW341 ; FIN 301 or B A 301

BLAW 444: Advanced UCC and Commercial Transactions
3 Credits
All articles of the Uniform Commercial Code, banking relationships, debtor-creditor law, and bankruptcy law. B LAW 444B LAW 444 Advanced UCC and Commercial Transactions (3) This course is designed to: (1) provide the student with a systematic study of the laws governing sales transactions, the instruments for financing those transactions and rights and liabilities of debtors and creditors (the Uniform Commercial Code governs these issues); (2) to explore current trends in the law affecting commercial transactions; (3) to develop further the student’s legal reasoning processes; (4) to enhance the student’s ability to identify legal issues from the business decision maker’s and financial auditor’s perspectives. Instructional methods will include lectures, readings, multimedia content, and class discussions. Student progress and mastery of the material will be evaluated through periodic examinations. Some state C.P.A. Boards require completion of this course as a prerequisite to obtaining certification as a public accountant. Completion of the course will be credited toward fulfillment of the requirements for the Legal Environment of Business Minor.

**Prerequisite:** B LAW341 , B A 241 or B A 243 ; ACCTG211 ; and FIN 301 or B A 301

BLAW 445: Advanced Intellectual Property and Competition Law
3 Credits
Copyrights, trademarks, patents, and trade secrets followed by related topics in the regulation of competition. B LAW 445 Intellectual Property & Competition Law (3) The objectives for this course are to (1) provide students with an understanding of U.S. and international law that supports the creation of beneficial information via intellectual property rights, allows government to regulate information property through antitrust and privacy statutes, and promotes business development by encouraging competitive uses of information; (2) teach students the ability to spot the legal issues arising from the above as future business leaders and (3) introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. The course builds on the introductory business law curriculum by providing an advanced and detailed study of specific areas of law that are highly valuable to modern, technology-driven businesses.

**Prerequisite:** B LAW441

BLAW 446: Employment Law
3 Credits
Examines the legal and regulatory environment of employment relationships. Topics include anti-discrimination; worker health and safety; and labor relations laws. B LAW 446 Employment Law (3) The course is designed for business students seeking a solid understanding of labor relations and employment law. It is not a general overview or introduction to law course for those seeking to enter law school. Labor and employment law has developed and changed over the past seven decades, and continues to evolve as the economic model and means of productions changes globally. With the passing of the National Labor Relations Act and subsequent amendments thereto, including development in the ability of public employees to engage in concerted activity, the understanding of the modifications in the employer-employee relationships is necessary for successful business executives and frontline managers. While a thorough understanding of the underpinnings of these laws is necessary, this is only a portion of the issues at hand. The ability to apply these laws in current working environments along with interpreting and critiquing these laws will assist in the preparation of future corporate managers. The course goes into detailed discussion regarding the employment at will doctrine, wrongful discharge, workplace torts, and employee privacy and monitoring. With this foundation, the course then covers civil rights and discrimination based on race, color, religion, gender, sexual orientation, family obligation, disability, and
national origin are covered using Supreme Court cases that have tested the validity and soundness of our federal legislation. The closing part of the course focuses on organized labor through the process of unionizing and union membership, negotiations and economic pressure used to obtain concessions in collective agreements. Additionally, fair labor laws and occupational health and safety requirements to diminish workplace accidents and improve productivity is discussed. For each of the topics presented, detailed analysis of prominent cases will be discussed with the expectation that students can apply these case decisions to current employer/employee situations. Exposure to differing opinions, reversed rulings, and detailed legal processes will provide students with a broad understanding of the complex nature of legal proceedings and how these processes impact labor and employment relations in the United States. Content synthesis and critical analysis are the learning goals of the course.

Prerequisite: BLAW 441
BLAW 447: Entertainment Law
3 Credits
This course covers legal issues that arise in various entertainment industries through discussion of contemporary issues along with personality rights and intellectual property rights associated with entertainment assets. Issues will be covered within the context of business models, pervasive pop-culture influences affecting entrepreneurial activities, business transactions and contractual provisions unique to creative industries, commercialization of celebrity image, rights of privacy of public figures, defamation, related advanced copyright and trademark issues, ethics and fiduciary responsibilities, and other emerging topics. Students will be introduced to the legal reasoning process necessary to analyze these issues in context and compose creative solutions that both address and avoid the legal problems presented. Instructional methods for the course will include lecture and classroom discussion focused on readings and other materials. The course builds on the introductory business law curriculum by providing an advanced study of legal principles highly relevant to businesses that employ, promote, or monetize creative talent. Upon completion of the course, students should understand the legal concepts impacting the entertainment industry and the impact this has on talent, intellectual ownership, copyrights and trademarks.

Prerequisites: BLAW 341
BLAW 494: Research Project
1-12 Credits/Maximum of 999
Supervised student activities on research projects identified on an individual or small-group basis.

BLAW 494H: Research Project
1-12 Credits/Maximum of 999
Supervised student activities on research projects identified on an individual or small-group basis.

Honors

BLAW 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BLAW 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BLAW 498: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BLAW 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Chemical Engineering (CHE)

CHE 97: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CHE 100: Exploring Chemical Engineering First-Year Seminar
1 Credits
The exploration of Chemical Engineering and available career opportunities.

First-Year Seminar

CHE 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHE 210: Introduction to Material Balances
3 Credits
An integrated approach to the study of material balances and industrial chemical processes important in chemical engineering. CHE 210 Introduction to Material Balances (3) The objective of this course is to present an introduction to chemical engineering calculations, establish mathematical methodologies for the computation of material balances and to present an overview of industrial chemical processes. It is the introductory course in the chemical engineering curriculum and is normally taken in the sophomore year. It is prerequisite for several junior-level courses in the curriculum, including courses in process fluid dynamics, heat transfer and phase equilibrium. The course
reviews the fundamentals of chemistry and physics as they pertain to chemical problems and applies mathematics to the development of time-dependent equations to describe materials flow through a process. Examples of the processes studied include stoichiometry in combustion and other reactions, materials flow with recycle streams, humidification and drying process, and the analysis of non-steady systems. In addition, the course presents an introduction to Industrial Chemistry with an overview of steam reforming, ammonia synthesis and similar examples.

**Prerequisite:** MATH 251

**CHE 210H: Introduction to Material Balances (Honors)**

3 Credits

An integrated approach to honor-level study of material balances and industrial chemical processes important in chemical engineering. CHE 210H CHE 210H Introduction to Materials Balances (Honors) (3) The objective of this course is to present an introduction to chemical engineering calculations, establish mathematical methodologies for the computation of material balances and to present an overview of industrial chemical processes. The course reviews the fundamentals of chemistry and physics as they pertain to chemical problems and applies mathematics to the development of time-dependent equations to describe materials flow through a process. Examples of the processes studied include stoichiometry in combustion and other reactions, material flow with recycle streams, humidification and drying process, and the analysis of non-steady systems. The Honors version of the course places emphasis on the use of computational methods in the solution of chemical engineering problems through the use of advanced mathematical packages.

**Prerequisite:** MATH 251

**Honors**

**CHE 220: Introduction to Chemical Engineering Thermodynamics**

3 Credits

Chemical process applications of energy balances, equations of state, thermodynamic properties of real fluids, second law of thermodynamics, cycles. CHE 220H CHE 220H Introduction to Chemical Engineering Thermodynamics (Honors) (3) CHE 220H is the introductory course in chemical engineering thermodynamics. The emphasis of this course is in the development of the theory of thermodynamics and its application to pure substances. The theory is applied on the thermodynamics analysis of small- and large-scale processes in closed and open systems. Students learn how to formulate the energy balance for a process with multiple streams and energy exchanges, how to compute heat and work loads, from small units, such as pumps, compressors, turbines, and heat exchangers, examples grow to larger systems such as power plants and refrigeration cycles, that may involve many interconnecting units and recycle streams. The Honors version of the course places special emphasis on (a) the connection between thermodynamics and molecular properties and (b) on the use of computational methods for the calculation of thermodynamic properties under non-ideal conditions.

**Prerequisite:** MATH 231

**Honors**

**CHE 220H: Introduction to Chemical Engineering Thermodynamics (Honors)**

3 Credits

Chemical process applications of energy balances, equations of state, thermodynamic properties of real fluids, second law of thermodynamics, cycles. CHE 220H CHE 220H Introduction to Chemical Engineering Thermodynamics (Honors) (3) CHE 220H is the introductory course in chemical engineering thermodynamics. The emphasis of this course is in the development of the theory of thermodynamics and its application to pure substances. The theory is applied on the thermodynamics analysis of small- and large-scale processes in closed and open systems. Students learn how to formulate the energy balance for a process with multiple streams and energy exchanges, how to compute heat and work loads, from small units, such as pumps, compressors, turbines, and heat exchangers, examples grow to larger systems such as power plants and refrigeration cycles, that may involve many interconnecting units and recycle streams. The Honors version of the course places special emphasis on (a) the connection between thermodynamics and molecular properties and (b) on the use of computational methods for the calculation of thermodynamic properties under non-ideal conditions.

**Prerequisite:** MATH 231

**CHE 230: Computational Tools for Chemical Engineering**

1 Credits

This 1-credit course will cover the key computational tools needed by Chemical Engineering students. CHE 230 Computational Tools for Chemical Engineering (1) This 1-credit course will cover the key computational tools needed by Chemical Engineering students. Specific topics of interest include: constructing high quality graphs, statistics and linear regression, solving coupled algebraic equations, solving ordinary and partial differential equations, and matrices.

**Prerequisite:** MATH 231

**CHE 294: Research Project**

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**CHE 296: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**CHE 296H: Individual Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses. **Honors**
CHE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CHE 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHE 300: Professional Development Seminar

1 Credits

Lectures and discussion by visiting engineers and faculty on chemical engineering, job selection, patents, licensing, ethics, and other professional problems. CH E 300 Professional Development Seminar (1)

The course objective is to offer an orientation to the chemical engineering profession and to promote professional attributes such as professional ethics, lifelong learning, and awareness of environmental and societal factors and to highlight their importance in the career lives of chemical engineers. The course consists of a one-hour lecture each week by visiting speakers and Penn State faculty. For some lectures, reading material is distributed a week before the lecture and in some cases, the students must turn in the questionnaire in which they have to answer various questions related to the topic of that week. The topics vary from year to year, but several key topics are included each time the course is taught: ethics, environmental issues, process safety, patent law and intellectual property, graduate school, and job opportunities in various industries.

Prerequisite: fifth-semester standing

CHE 320: Phase and Chemical Equilibria

3 Credits

Pure component phase properties, solution properties, equilibria among phases, equilibrium stage separations, chemical reaction equilibria. CH E 320 Phase and Chemical Equilibria (3) The course covers the fundamentals of phase and chemical equilibrium with emphasis on vapor/liquid systems and their applications to separation processes. It is the second course in chemical engineering thermodynamics and leads to the study of separations and reacting systems. Computational methodologies are presented for the calculation of the properties of mixtures and the construction of phase diagrams (P-x-y, T-x-y) using activity coefficients or equations of state. The theory is applied to the analysis of equilibrium stage separation such as distillation and extraction including the construction of McCabe-Thiele diagrams. In the last portion of the course the principles of equilibrium are further applied to chemically reacting systems.

Prerequisite: CH E 210 with minimum grade of C, CH E 220 with minimum grade of C

CHE 330: Process Fluid Mechanics

3 Credits

An integrated study of the fundamentals and the quantitative design techniques involving flow of fluids in chemical processes. CH E 330 Process Fluid Mechanics (3) This course introduces the principles of fluid mechanics that are of fundamental importance to chemical engineers. The list of topics discussed in this course include the mechanical principles governing fluid flow, stress in a fluid, conservation of mass and momentum, using differential and integral balances, elementary constitutive equations, hydrostatics, exact solutions of the Navier-Stokes equations, approximate solutions using control volume analysis, mechanical energy balances and Bernoulli’s equation, dimensional analysis and dynamic similarity, and introduction to boundary-layer theory and turbulence.

Prerequisite: CH E 210 with a minimum grade of C

CHE 330H: Process Fluid Mechanics (Honors)

3 Credits

An integrated study of the fundamentals and the quantitative design techniques involving flow of fluids in chemical processes. CH E 330H Process Fluid Mechanics (3) This course introduces the principles of fluid mechanics that are of fundamental importance to chemical engineers. The list of topics discussed in this course include the mechanical principles governing fluid flow, stress in a fluid, conservation of mass and momentum, using differential and integral balances, elementary constitutive equations, hydrostatics, exact solutions of the Navier-Stokes equations, approximate solutions using control volume analysis, mechanical energy balances and Bernoulli’s equation, dimensional analysis and dynamic similarity, and introduction to boundary-layer theory and turbulence.

Prerequisite: CH E 210 with minimum grade of C

Honors

CHE 340: Introduction to Biomolecular Engineering

3 Credits

Introduction to concepts and principles of biomolecular engineering, with emphasis on biotechnology and pharmaceutical industries. CH E 340 Introduction to Biomolecular Engineering (3) This course introduces students to the concepts and principles needed to apply chemical engineering principles to the analysis of biological systems, with particular emphasis on the biotechnology and pharmaceutical industries. Students will learn to use appropriate search engines to identify and characterize specific genes and proteins, discuss similarities and differences between biological and chemical processes, perform statistical analyses of biological data, and estimate rates of enzymatic reactions and bioreactor mass transfer. This course is required for the B.S. degree in Chemical Engineering.

Prerequisite: CH E 210 with C or better, B M B251, CHEM 212

CHE 350: Process Heat Transfer

3 Credits

An integrated study of the fundamentals and the quantitative design techniques involving heat transfer in chemical processes. CH E 350 Process Heat Transfer (3) The objective of the course is to introduce to students heat transfer mechanisms in solids and fluids and their chemical process applications. At the conclusion of the course, the student should possess the ability to model steady and unsteady heat transfer in simple systems, and design heat exchangers and simple heat exchanger networks. The development of the material of this course requires use of thermodynamics and fluid mechanics, scheduled earlier
In the curriculum, and sets the basis for the design of reactors and separation processes, which are covered in subsequent courses.

**Prerequisite:** CH E 210 with minimum grade of C

CHE 360: Mathematical Modeling in Chemical Engineering

3 Credits

Mathematical modeling formulation for chemical and physical processes, including applications of ordinary differential equations and numerical methods. CH E 360 Mathematical Modeling in Chemical Engineering (3) This course covers the applied mathematical techniques necessary for the simulation of physical and chemical processes such as mass transfer and reacting systems, and the analysis of process dynamics. In the former area, the formulation of ordinary differential equations for a variety of situations of interest to chemical engineers is considered. Numerical methods and mathematical packages that form the basis for computer simulations are emphasized. In the latter, the notions of steady-state, stability and controllability are introduced. The tools discussed in this course are used in subsequent courses on the analysis and design of chemical reactors and mass transfer processes.

**Prerequisite:** CH E 210 with minimum grade of C, MATH 230, MATH 251

CHE 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHE 410: Mass Transfer Operations

3 Credits

Introduction to principles and applications of mass transfer, with a focus on the design of equilibrium stage and continuous contacting separation processes. CH E 410 Mass Transfer Operations (3) The objective of this course is to present the principles of mass transfer and their application to separation and purification processes. The course integrates fluid dynamics and thermodynamics and proceeds to develop rate expressions for mass transfer in multiphase, multicomponent systems. Starting with Fick’s law and macroscopic balances the course moves to the design of large scale separation processes such as equilibrium stage separations (distillation, extraction) and continuous separation (absorption towers, scrubbers) for the separation and purification of chemical compounds. The course also introduces the use of modern software tools such as HySys, used in the actual design of such processes and also in the capstone design course.

**Prerequisite:** CH E 320 and either CH E 330 or CH E 350

CHE 412: CHE and the Environment

3 Credits

In this course students will apply chemical engineering principles to important environmental problems. These chemical engineering principles include: Material balances, Thermodynamics, phase and chemical equilibrium, transport and chemical kinetics. These principles are critical to solve current environmental challenges such as access to safe drinking water, remediation of contaminated sites and sustainability of chemical processes in the field. In addition to the application of these principles, students will learn the history of the environmental field such as the first use of chlorine as a disinfection, the advent of an activated sludge tank and the development of the first environmental laws. Combining these will allow students to design solutions for current challenges such as emissions of carbon dioxide and excess waste.

**Prerequisites:** CHE 210 CHE 220 CHE 320 CHE 330

CHE 423: Chemical Energy Technology

3 Credits

This course provides an overview of current and prospective chemical energy storage and conversion technologies. CHE 423 Chemical Energy Technology (3) This course provides an overview of chemical energy storage and conversion technologies. Current fossil fuel based conversion processes in power plants and transportation applications will be surveyed. The course will emphasize critical evaluation of alternative conversion technologies, with the goal of providing the skills for quantitative assessment of the potential of various storage and conversion technologies. Current conversion technologies surveyed will include coal power plants, petroleum refineries, and internal combustion engines. Alternative technologies will consider unconventional fossil fuel processing, electrochemical energy conversion, solar energy conversion, and agricultural/biological fuel conversion. A semester long student project will involve generation of a future energy scenario 25-50 years in the future. The class structure is interactive, with readings motivating class period discussions.

**Prerequisite:** CH E 210 with a minimum grade of C, prerequisite or concurrent: CH E 320

CHE 430: Chemical Reaction Engineering

3 Credits

Chemical reaction rates and equilibria, reactors, reactor design; emphasis on industrial chemical processes. CH E 430 Chemical Reaction Engineering (3) This course teaches the principles of reaction engineering and reactor design. It is one of the core subjects in the chemical engineering curriculum and it is normally scheduled in the senior year. Students learn how to apply stoichiometry in combination with a rate law to design a chemical reactor that produces the desired conversion of reactants. The design of various types of chemical reactors is discussed at length, including continuous stirred-tank (CSTR), plug-flow (PFR), continuous-operation and batch-operation reactors. Additional topics include heterogeneous reactors, catalytic systems and fluidized beds, the design and optimization of reactor networks, and safety. The course integrates fluid mechanics and heat transfer to the design and analysis of isothermal and non-isothermal reactors. It leads to the capstone design course in which chemical reactors are integrated into a chemical plant.

**Prerequisite:** CH E 320

CHE 432: Petroleum Processing

3 Credits

A study of physical and chemical processes to convert crude oil into desired products with an outlook from present to future.

**Prerequisite:** CHEM 210

Cross-listed with: FSC 432
CHE 438: Bioprocess Engineering
3 Credits

Introduction to the biotechnology field including consideration of upstream and downstream processing of biochemicals.

Prerequisite: CHEM 212

CHE 442: Polymer Processing Technology
3 Credits

Basic principles of polymer melt processing are reviewed and subsequently applied to the most important industrial processing operations. MATSE 448 (CH E 442) Polymer Processing Technology (3) MATSE 448 involves both lectures and laboratory experiments illustrating the interrelations between structure, processing conditions, and physical properties of industrial polymer products. Students apply engineering fundamentals and principles of polymer melt rheology to analyze industrial processing operations. Unlike typical polymer processing courses offered at most U.S. universities, MATSE 448 covers detailed analyses of individual processing operations, rather than dwelling on underlying polymer science fundamentals that are covered elsewhere in our curriculum. Students learn to optimize processing variables, given a particular set of materials and conditions, establishing how processing conditions impact the physical properties of finished polymer products. We explore the physics governing processing operations including extrusion, mixing, calendering, blow molding, thermoforming fiber spinning compression molding, injection molding, and nanolithography.

Prerequisite: MATSE447 or CH E 302A
Cross-listed with: MATSE 448

CHE 443: Introduction to Polymer Science
3 Credits

Introduction to synthesis, structure, characterization and processing of polymers. Single molecule properties, polymer properties, solution, glasses, crystals and blends. CH E 443 Introduction to Polymer Science (3) The objective of this course is to introduce students to the synthesis, structure, characterization and processing of polymers. Emphasis is placed on the molecular origins of polymer properties. The course will provide an overview of single molecule properties and polymeric solutions, glasses, crystals and mixtures from a Chemical Engineering perspective. The course builds on CH E 320, Chemical and Phase Equilibria, to develop a more in-depth description of the thermodynamics of polymers. This course will also build on CHEM 210, Organic Chemistry, to analyze more in-depth strategies for the synthesis of polymers. At the end of the course, the students will be able to evaluate the viability of synthetic pathways for various polymers, estimate the size of polymer chains in solution and in the melt, calculate thermodynamics phase diagrams of polymer blends and solutions, and compare and contrast different approaches to describe the physical properties of polymers.

Prerequisite: CH E 320 and CHEM 210

CHE 445: Bioremediation/Green Chemistry
3 Credits

Man has polluted his environment but biotechnology holds great promise for cleansing it and for synthesizing the chemicals that we all need in a modern society in a manner that limits generating new pollution. The course focuses on the application of biological and engineering principles toward the remediation of hazardous wastes and for the synthesis of chemicals in a sustainable manner; i.e., in a manner that limits the production of unwanted compounds. The tools that will be explained for accomplishing this are metabolic engineering, systems biology, and protein engineering. Students will also gain knowledge related to the design of biological contacting devices for waste remediation and green chemistry. Emphasis will also be placed on the evolution of bacterial pathways for accomplishing engineering goals. Discussion will also ensue on societal issues such as the wisdom of the release of genetically-engineered microorganisms and the limitations of biotechnological approaches.

Prerequisite: CHE 340

CHE 446: Transport Phenomena
3 Credits

Fundamental treatment of mass, heat, and momentum transfer; emphasis on transport properties and mathematical models of chemical engineering transport processes. CH E 446 Transport Phenomena (3) This is an intermediate course in transport phenomena intended to expand on the materials introduced in the required undergraduate courses on momentum, heat and mass transfer. It introduces the student to the rigorous formulation of transport problems using the conservation principles and flux expressions, and identifies the similarities and differences among the transport processes for momentum, heat, and mass. The main focus of the course is on microscopic treatment of transport problems, with particular emphasis on proper use of dimensional analysis and scaling arguments. Transport phenomena is a rather mathematical subject and the student is assumed to be familiar with ordinary and partial differential equations, elementary vector analysis, and elementary numerical techniques. This course is intended to prepare the student for a graduate-level course in transport phenomena.

Prerequisite: CH E 330, CH E 350, CH E 360; prerequisite or concurrent: CH E 410

CHE 449: Bioseparations
3 Credits

Analysis and design of separation processes for the purification of biological molecules. CH E 449 Bioseparations (3) This course introduces students to the principles and applications of separation processes used for the purification of biological molecules, including fine chemicals, pharmaceuticals, and therapeutic proteins. By the end of the course students will be able to perform preliminary design calculations and scale-up of specific separation systems including centrifugation, filtration, chromatography, and membrane processes. Students will also be able to develop outlines of overall separation schemes appropriate for the purification of different biological products. This course is required for the Bioprocessing and Biomolecular Engineering Option in Chemical Engineering.

Prerequisite: CH E 410

CHE 450: Process Dynamics and Control
3 Credits

Analysis of time-dependent variables in chemical process plants; reactor design and control; computer applications. CHE 450 Process Dynamics and Control (3) The course is an introduction to chemical process
develop critical design logic to evaluate a process, starting with block tools, with special emphasis on process simulators. The student will design and economic evaluation utilizing various industry computer engineering capstone design course introduces the principles of process report required. CH E 470 Design of Chemical Plants (3) The chemical

---

### CHE 470: Design of Chemical Plants

**Prerequisite:** CHE 210 with minimum grade of C and MATH 251

**CHE 452: Chemical Process Safety**

**3 Credits**

This course provides an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant accidents. CHE 452 Chemical Process Safety (3) The course will provide an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant accidents, their causes, and steps to eliminate them, with emphasis on inherently safe designs. Chemical Plant accidents deal most often with Flammability and Toxicity issues and these are dealt with in great detail. The role of Human Error in accidents is also examined Actual case studies (including Bhopal, BP Texas City, Piper Alpha) will be examined to show the relevance in today’s workplace. The course requires active student participation via discussions of system designs, their weakness and improvements. Guest lecturers will also be invited to supplement the material. This is offered as a senior elective in Chemical Engineering.

**Prerequisite:** CHE 320 CONCURRENT: CHE 330, CHE 350

**CHE 455: Drug Delivery, Pharmacokinetics, and Artificial Organs**

**3 Credits**

CHE 455 is an elective course that examines the application of chemical engineering principles (thermodynamics, transport, and kinetics) to the analysis of a number of medically related phenomena and devices. Specific topics include drug delivery systems, pharmacokinetics, artificial organs, biological transport phenomena, and temperature regulation.

One of the important goals of the course is to understand how chemical engineers go about developing appropriate physical models for complex biological systems. Emphasis will be placed on identifying the key physical / biological phenomena governing the system behavior. Where appropriate, the course will also examine some of the social, political, and economic implications of medical technology in our society, e.g., the artificial kidney program. Students do not need a background in biology or physiology – the key biological phenomena will be covered at appropriate places throughout the semester.

**Prerequisite:** CHE 350, BME 409, BME 413, or BE 302 RECOMMENDED

**PREPARATION:** CHE 410

**CHE 470: Design of Chemical Plants**

**3 Credits**

Lectures and practicum on methods and calculations, including economic evaluations for the design of chemical plants; formal technical report required. CH E 470 Design of Chemical Plants (3) The chemical engineering capstone design course introduces the principles of process design and economic evaluation utilizing various industry computer tools, with special emphasis on process simulators. The student will develop critical design logic to evaluate a process, starting with block flow diagrams and simple material balances utilizing practical heuristics and then build the process flowsheet through computer simulation, flowsheet optimization, and detailed equipment design.

**Prerequisite:** CHE 410, CHE 430

**CHE 480M: Chemical Engineering Laboratory (Honors)**

**3 Credits**

Data interpretation and analysis from student-operated experiments on pilot-plant equipment. Individual written and oral technical reports. CHE 480M CHE 480M Chemical Engineering Laboratory (Honors) (3) CHE 480M is the laboratory course in chemical engineering. The objectives of CHE 480M is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior-senior-level classes. This course does not introduce new material but focuses instead on planning, execution and interpretation of experiments. The special aspect of the honors section is that students will be given an open-ended experimental research project.

**Prerequisites:** CHE 230, CHE 320, CHE 330, CHE 350 Concurrent Courses: CHE 410 Honors Writing Across the Curriculum

**CHE 480W: Chemical Engineering Laboratory**

**3 Credits**

Data interpretation and correlation from student-operated experiments on pilot-plant equipment. Individual written and oral technical reports. CHE 480W Chemical Engineering Laboratory (3) This is the laboratory course in Chemical Engineering. Its objective is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior- and senior-level classes. CHE 480W does not introduce new material but focuses instead on planning, execution and interpretation of experiments. The course is team-based and includes laboratory sessions as well as lectures. Evaluation is based on the written and oral reports given based on experiments performed. These reports undergo several drafts, in which at different times students or faculty evaluate the report, suggesting corrections. Course evaluation may also include a “pre-exam” to assure that the students understand technical material coming into the course. Peers assess each others’ performance (contributing to the grade), as does the faculty.

**Prerequisites:** CHE 230, CHE 320, CHE 330, CHE 350 Concurrent Courses: CHE 410

Writing Across the Curriculum

**CHE 494: Research Projects in Chemical Engineering**

**1-6 Credits/Maximum of 6**

An original problem, including a search of the literature, experimental investigation, and preparation in formal thesis form.

**Prerequisite:** Permission of program
CHEM 001: Molecular Science (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. CHEM 001 is designed for students who want to gain a better appreciation for how chemistry impacts everyday life. You are expected to have an interest in understanding the nature of science, but not necessarily to have any formal training in the sciences. During the course, you will explore important societal issues that can be better understood knowing some concepts in chemistry. The course is largely descriptive, though occasionally a few simple calculations will be done to illuminate specific information. The course does rely on your ability to think systematically, and to relate things to each other. From year to year and instructor to instructor, the course may cover any number of a large variety of topics related to current events, including, but not limited to: air and water pollution, ozone depletion, global warming, acid rain, new and old methods of energy generation and energy use in modern society, examples of production and use of modern polymers, examples of production and use of modern drugs, examples of the chemistry of nutrition, examples of advances in biochemistry and how they affect us.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 003: Molecular Science With Laboratory
3 Credits

Selected concepts and topics designed to give non-science majors an appreciation for how chemistry impacts everyday life. Students who have received credit for CHEM 001, 101, or 110 may not schedule this course. CHEM 003 is a course that includes both lecture and laboratory. It is designed for students who want to gain a better appreciation of chemistry and how it applies to everyone's everyday life. You are expected to have an interest in understanding the nature of science, but not necessarily to have any formal training in the sciences. During the course, you will explore important societal issues that can be better understood knowing some concepts in chemistry. The course is largely descriptive, though occasionally a few simple calculations will be done to illuminate specific information. The course does rely on your ability to think systematically, and to relate things to each other. From year to year and instructor to instructor, the course may cover any number of a large variety of topics related to current events, including, but not limited to: air and water pollution, ozone depletion, global warming, acid rain, new and old methods of energy generation and energy use in modern society, examples of production and use of modern polymers, examples of production and use of modern drugs, examples of the chemistry of nutrition, examples of advances in biochemistry and how they affect us. In the laboratory component, students will conduct experiments that are related to the lecture material being covered.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 005: Kitchen Chemistry
3 Credits

An elementary discussion of the chemistry associated with foods and cooking. CHEM 005 is designed for students who want to gain a better appreciation of chemistry and how it applies to everyone's everyday life. You are expected to have an interest in understanding the nature of science, but not necessarily to have any formal training in the sciences. During the course, you will explore important societal issues that can be better understood knowing some concepts in chemistry. The course is largely descriptive, though occasionally a few simple calculations will be done to illuminate specific information. The course does rely on your ability to think systematically, and to relate things to each other. From year to year and instructor to instructor, the course may cover any number of a large variety of topics related to current events, including, but not limited to: air and water pollution, ozone depletion, global warming, acid rain, new and old methods of energy generation and energy use in modern society, examples of production and use of modern polymers, examples of production and use of modern drugs, examples of the chemistry of nutrition, examples of advances in biochemistry and how they affect us. In the laboratory component, students will conduct experiments that are related to the lecture material being covered.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
CHEM 20: Environmental Chemistry

3 Credits

Applications of chemistry to environmental problems, including air, water, thermal pollution; pesticides; drugs and birth control agents; food additives; etc. For non-chemistry majors; chemistry majors will not receive credit. CHEM 020 Environmental Chemistry (3) Topics include the study of air, air quality, and the effects of various substances that create air pollution. Significant detail is given to ozone and its interactions in various layers of the atmosphere. The study of fossil fuels and hydrocarbon chemistry leads to an extensive discussion of global warming. Water contamination due to acid rain and acid mine drainage is studied in conjunction with acid-base chemistry. The concept of pH is discussed in detail. Newer sources of energy including fuel cells, photovoltaic cells, biomass fuels, and nuclear energy are investigated with much consideration given to the economics of fuels. These energy topics require a study of electrochemistry, nuclear chemistry, radioactivity and organic chemistry. Biological topics of drug design, toxic substances, pesticides, genetic engineering and food safety complete the course by covering numerous aspects of organic chemistry and biochemistry. Most topics also deal with the associated analytical chemistry of the substances discussed and the challenge of sample procurement, sample preparation, chemical analysis, and result interpretation considering analytical error. Methods of chemistry data presentation to the general public are investigated and criticized.

CHEM 21: Environmental Chemistry Laboratory

1 Credits

Introduction of basic laboratory techniques and data analysis used in environmental chemistry. CHEM 021 CHEM 021 Environmental Chemistry Laboratory (1) This course will provide an introduction of basic laboratory techniques and data analysis used in environmental chemistry. The suggested laboratory experiments will consist of a broad range of scientific inquiry that will enhance the lecture material covered in CHEM 020. The course will provide laboratory experience in the chemistry of air, water, and solids. Experiments have been chosen that have a strong biology component such as Stream Ecology, Toxicity, Testing, and Dissolved Oxygen experiments. These experiments should relate to the BIOL 110 and 220 courses. The Chi-Square and Probability experiments will relate to STAT 250 course. The course will be an integral part of the Environmental Studies major providing an experimental chemistry background and experience.

Enforced Concurrent at Enrollment: CHEM 20

CHEM 101: Introductory Chemistry

2-3 Credits

Selected principles and applications of chemistry. Prior study of chemistry is not assumed. Students may take only one course for General Education credit from CHEM 101 or CHEM 110. CHEM 101 CHEM 101 Introductory Chemistry (2-3) CHEM 101 is an introductory chemistry course designed to prepare students for college level chemistry courses, such as CHEM 110 or CHEM 202. Prior study of chemistry is not assumed, so the course introduces the vocabulary along with some basic principles of chemical problem solving. The course covers the following topics: matter and measurement, molecules and molecular compounds, ions and ionic compounds, chemical reaction types, stoichiometry, atomic and molecular weights, the mole, simple quantitative calculations with chemical reactions, the periodic table, nomenclature, electronic structure of atoms, simple periodic properties of the elements, chemical bonding, molecular geometry, and properties of various states of matter, acids and bases, and the basics of chemical equilibrium. There are 2 and 3 credit versions of this course offered at different locations. The 3-credit version usually involves a laboratory component.

Enforced Prerequisite at Enrollment: Completion or placement beyond MATH 21.
General Education: Natural Sciences (GN)

CHEM 106: Introductory and General Chemistry

5 Credits

Introductory chemistry and chemical principles for students who are required to take additional chemistry, e.g., CHEM 112, but are unprepared for CHEM 110. CHEM 106 Introductory and General Chemistry (5) (GN) (BA) This course meets the Bachelor of Arts degree requirements. CHEM 106 is an extended version of the first-semester comprehensive general chemistry course. It includes more class time for preparing students so that they learn introductory chemistry and general college level chemistry in one semester. As in CHEM 110, CHEM 106 introduces students to the basic principles of chemistry with an emphasis on the relationships between the microscopic structure and macroscopic properties of matter. Principles are illustrated with a wide variety of examples from the sciences, from engineering and technology, and from everyday life. The course covers the following topics: matter and measurement, molecules and molecular compounds, ions and ionic compounds, chemical reaction types, atomic and molecular weights, the mole, quantitative calculations with chemical reactions, the periodic table, nomenclature, aqueous reactions and solution stoichiometry, thermochemistry, electronic structure of atoms, periodic properties of the elements, chemical bonding, molecular geometry, the gaseous, liquid, and solid states of matter, properties of solutions, some basic aspects of chemical equilibrium, and applications to the real world including environmental chemistry. GN credit for CHEM 106 requires that CHEM 111 also be completed.

Enforced Prerequisite at Enrollment: Completion or placement of MATH 22 or higher
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 108: Problem Solving in Chemistry

1 Credits

Techniques, strategies, and skills for solving problems in general chemistry for students potentially at risk in CHEM 110. CHEM 108 CHEM 108 Problem Solving in Chemistry (1) The purpose of CHEM 108 is to facilitate success in the first semester general chemistry course (CHEM 110). Students who need extra help in CHEM 110 are strongly encouraged to take CHEM 108 with CHEM 110. The course covers the same topics in the same sequence as the concurrent CHEM 110 course. It provides an opportunity for students to develop stronger problem solving skills through active and collaborative learning activities and skill building. CHEM 108 does not satisfy the General Education requirement and will not count toward graduation in some majors.

Enforced Corequisite at Enrollment: CHEM 110
CHEM 110: Chemical Principles I

3 Credits

CHEM 110 is the first semester of a two-semester, comprehensive general chemistry course which introduces students to the basic principles of chemistry with an emphasis on the relationships between the microscopic structure and macroscopic properties of matter. Principles are illustrated with examples from the sciences, engineering and technology, and from everyday life. Topics covered are atomic structure and periodic properties, molecular compounds and chemical bonding, molecular structure, intermolecular forces, the properties of gases, liquids, and solutions, chemical reactions, stoichiometry and thermochemistry. Students may only receive credit for one of CHEM 110 or CHEM 106 (4 credits) or CHEM 130.

Enforced Prerequisite: Completion of or placement beyond MATH 22.
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

CHEM 110H: Chemical Principles I - Honors

3 Credits

CHEM 110H is the first in a two-semester comprehensive course in general chemistry for majors in science, engineering, and related disciplines. Chemistry impacts virtually every area of our lives, from how our bodies work, to the environment, to new materials, to how we live and work. The goals of this course are to teach students to recognize that what happens at the molecular level directly shapes the macroscopic world. Students will gain an understanding of (1) how atoms combine to form molecules; (2) how molecules interact and react with each other; and (3) how molecular-level structure and interactions affects a material’s macroscopic properties. Students will also learn the problem-solving skills necessary to apply and interpret simple mathematical models and graphical representations of chemical and physical phenomena. The honors version of CHEM 110 covers the same topics as the regular offering but at a level appropriate for students with advanced backgrounds and talents.

Enforced Prerequisite: Completion of or placement beyond MATH 22.
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Honors
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

CHEM 111: Experimental Chemistry I

1 Credits

Introduction to quantitative experimentation in chemistry. CHEM 111 Experimental Chemistry I (1) (GN) (BA) This course meets the Bachelor of Arts degree requirements.CHEM 111 is a one-credit introductory general chemistry laboratory. It is designed to complement the lecture course CHEM 110. The students are introduced to laboratory safety and good experimental technique, how to keep a proper laboratory notebook, interpret data, and write a formal report. The course introduces laboratory experimentation in the context of a variety of specific topics, such as reactions in solutions, spectroscopy, chemistry of natural waters, acids and bases, and the synthesis and analysis of chemical compounds. GN credit for CHEM 111 requires that CHEM 106 or CHEM 110 or CHEM 110H also be completed.

Enforced Prerequisite or Concurrent: CHEM 110 or CHEM 110H or CHEM 106
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 112: Chemical Principles II

3 Credits

CHEM 112 builds upon the subject matter of CHEM 110, covering the following topics: reaction rates and chemical kinetics, nuclear applications, catalysis, gas phase and aqueous equilibrium, chemical thermodynamics, entropy, free energy, acid-base equilibria, the pH scale, the common-ion effect, buffers, acid-base titrations, factors that affect aqueous solubility, electrochemistry, oxidation-reduction reactions, oxidation states, voltaic cells, batteries, corrosion, electrolysis, transition metals, crystal field theory, molecular orbital theory, bonding in solids, and properties of modern materials.

Enforced Prerequisite at Enrollment: CHEM 110 or CHEM 110H or CHEM 106
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

CHEM 112H: Chemical Principles II - Honors

3 Credits

Continuation of CHEM 110, including an introduction to the chemistry of the elements. GN credit for certain chemistry courses requires both lecture and laboratory courses be taken. These courses are: (CHEM 106 or CHEM 110 or CHEM 110H) and (CHEM 111; CHEM 112 or CHEM 112H) and (CHEM 113 or CHEM 113B).

Enforced Prerequisite at Enrollment: CHEM 110 or CHEM 110H or CHEM 106
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Honors

CHEM 113: Experimental Chemistry II

1 Credits

Continuation of CHEM 111, with emphasis on topics related to CHEM 112. CHEM 113 Experimental Chemistry II (1) (GN)(BA) This course meets the Bachelor of Arts degree requirements. CHEM 113 is a second-semester, one-credit introductory general chemistry laboratory course meant to complement the lecture course. CHEM 112. The course builds on material learned in CHEM 111 with emphasis on quantitative
analytical procedures. Essential material covered includes proper use of a laboratory notebook, writing of a formal laboratory report, use of the chemical literature, experimental design, interpretation of data using statistics, laboratory safety procedures, and an appreciation for what instruments can and cannot do. The course introduces laboratory experimentation in the context of a variety of specific topics, for example: halogens, their compounds and their reactions chemical kinetics of a simple chemical reaction; acid-base equilibria and titrations; oxidation-reduction reactions and electrochemistry; separations of compounds using paper and liquid chromatography; separations using gas chromatography. GN credit for CHEM 113 requires that CHEM 112 or CHEM 112H also be completed.

**Enforced Prerequisite:** CHEM 111. Prerequisite or Concurrent: CHEM 112 or CHEM 112H

**Bachelor of Arts: Natural Sciences**

**General Education:** Natural Sciences (GN)

**CHEM 113B: Experimental Chemistry II—Bioscience**

1 Credits

A continuation of CHEM 111 with emphasis on topics related to CHEM 112 in the context of bioscience. CHEM 113B Experimental Chemistry II - Bioscience (1) CHEM 113B is a one-credit introductory general chemistry laboratory course meant to complement the lecture course CHEM 112. This course builds on material learned in CHEM 111. It has the same goals, and covers similar topics to CHEM 113, and for this reason should count as CHEM 113, regardless of major. The main difference is that CHEM 113B covers chemical topics in the context of experiments with biological relevance. The emphasis is on quantitative analytical procedures. Essential material covered includes proper use of a laboratory notebook, writing of a formal laboratory report, use of the chemistry literature, experimental design, interpretation of data using statistics, laboratory safety procedures, and an appreciation for what instruments can and cannot do. The course introduces laboratory experimentation in the context of a variety of specific topics, for example: alcohols; enzyme kinetics; acid-base equilibria and titrations; separations of compounds using paper and liquid chromatography, separations using gas chromatography. GN credit for CHEM 113B requires that CHEM 112 or CHEM 112H also be completed.

**Enforced Prerequisite:** CHEM 111. Prerequisite or Concurrent: CHEM 112 or CHEM 112H

**General Education:** Natural Sciences (GN)

**CHEM 130: Introduction to General, Organic, and Biochemistry**

3 Credits

This course is a one-semester, rigorous college level introductory Chemistry course covering the fundamental principles of general, organic, and biochemistry. One year of high school chemistry is strongly recommended, and students should have math placement beyond the level of Math 021. 3 Credits, fulfills the General Education requirements. Course topics include dimensional analysis, atomic structure and periodicity, chemical bonding, molecular structure, states of matter and intermolecular forces, basic gas laws, solutions and solubility, acids, bases and equilibria, reaction stoichiometry and thermodynamics. In addition, fundamentals of organic nomenclature, properties of main organic functional groups, structure and function of biological macromolecules, as well as metabolism will be discussed. The course will emphasize chemistry in environmental and health-related contexts. This course is primarily designed for students in a program that does not require the more theoretical and mathematically oriented general chemistry courses (CHEM 110/112), such as some majors in the colleges of Nursing, Agriculture Sciences, and Health & Human Development. It is a suitable prerequisite for the organic chemistry course sequence CHEM 202/203. This course is not appropriate for medical school preparation and will not serve as a prerequisite for the organic chemistry CHEM 210/212 course sequence. Students majoring in chemistry, other natural sciences, or engineering will normally register in the CHEM 110/112 sequence. Consult your advisor and the instructor if you have questions about CHEM 130 vs. CHEM 110/112.

**Enforced Prerequisite at Enrollment:** Completion or placement beyond MATH 21.

**General Education:** Natural Sciences (GN)

**GenEd Learning Objective:** Key Literacies

**GenEd Learning Objective:** Critical & Analytical Thinking

**CHEM 199: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**International Cultures (IL)**

**CHEM 202: Fundamentals of Organic Chemistry I**

3 Credits

Introduction to organic chemistry, with emphasis on the properties of organic compounds of biochemical importance. Because of duplication of subject matter, students may not receive credit for both CHEM 202 and CHEM 210. CHEM 202 CHEM 202 Fundamentals of Organic Chemistry I (3) CHEM 202 is a one-semester, comprehensive course that introduces the students to the fundamental principles of organic chemistry including relationships between the molecular structure of organic compounds and their macroscopic properties. Some of the principles are illustrated with a variety of examples from nature and everyday life. The course covers the following topics: alkanes; alkenes, including polymers; alkynes; benzene and aromaticity; alcohols and phenols; ethers; aldehydes; ketones; carboxylic acids and their acyl derivatives; amines; alky halides; nomenclature; stereochemistry, including conformational analysis and chirality. Chemical reactions of the functional groups will be discussed along with the mechanistic details, including stereospecificity, of some of these processes. Biological molecules such as carbohydrates, lipids, steroids, peptides/proteins and nucleic acids, along with their importance in living systems, will be surveyed.

**Enforced Prerequisite at Enrollment:** CHEM 101 or CHEM 110 CHEM 110H or CHEM 106

**CHEM 203: Fundamentals of Organic Chemistry II**

3 Credits

Introduction to organic chemistry, with emphasis on the identification of organic compounds by characteristic chemical reactions and by spectroscopy. The course involves both lecture and laboratory. Because of duplication of subject matter, students may not receive credit for both CHEM 203 and CHEM 213. CHEM 203 CHEM 203 Fundamentals of Organic Chemistry II (3) CHEM 203 is a one-semester organic chemistry course that has both lecture and laboratory components. The lecture
introduces students to the basic theory and application (structure determination) of different types of spectroscopy (nuclear magnetic resonance spectroscopy, infrared spectroscopy, and ultraviolet-visible spectroscopy) and mass spectrometry. Certain chemical reactions learned in CHEM 202 will be reviewed along with the mechanistic details of some of these processes. Special topics such as drug discovery, natural product isolation, and synthesis will be surveyed. The laboratory teaches students the fundamental techniques used by organic chemists such as recrystallization, melting point determination, distillation, extraction, thin-layer chromatography, and column chromatography. Mastery of these basic techniques lays the foundation for carrying out organic syntheses and/or natural product isolations. Students are given hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Students are responsible for writing laboratory reports for all experiments.

**Enforced Prerequisite at Enrollment:** CHEM 202

**CHEM 210: Organic Chemistry I**

3 Credits

Bonding theories for organic molecules; stereochemistry and conformational analysis; reactions (and mechanisms) of alkyl halides, alkenes, alkynes, aromatics, and alcohols. CHEM 210 Organic Chemistry I (3) Organic chemistry is an essential subject for many scientific disciplines, particularly those in the life, materials, and chemical sciences, as well as chemical engineering. The fundamentals of organic chemistry, as developed in CHEM 210, the first part of a two-semester organic chemistry sequence, are required for scientists to understand the electronic structure and reactivity of simple and complex molecules. Concepts taught in CHEM 210 include hierarchical bonding models (Lewis dot, valence bond, molecular orbital), Lewis acids and bases, conformational analysis and stereochemistry, functional groups and their reactivity (alkenes, alkynes, alkyl halides, dienes, aromatics, alcohols, and ethers), organic reaction mechanisms focusing on electrophiles and nucleophiles, and aromaticity. Successful students will understand and be able to apply various structural and reactivity models to solving problems in organic chemistry.

**Enforced Prerequisite at Enrollment:** CHEM 112 or CHEM 112H

**CHEM 210H: Organic Chemistry I - Honors**

4 Credits

Principles and theories; nomenclature; chemistry of the functional groups; applications of spectroscopy. Because of duplication of material, students may not receive credit for both CHEM 210 and 202. CHEM 210H Organic Chemistry I - Honors (4) Chemistry 210H is the first semester of an in-depth two semester survey of organic chemistry. It should be followed by Chemistry 212H. The concentrated and fast-moving pace of this course is facilitated by four class periods/week, seven (biweekly) hour exams and an evening recitation dedicated to the informal discussion of the subject material covered in previous or pending hour exams. This course will emphasize the mechanistic underpinning of organic chemistry. That is, students will not only learn what happens in organic chemistry but also, and more importantly, why and how. It is hoped that students will develop an intuition for the structure, function and reactivity properties of organic compounds which is of fundamental importance for subsequent studies in the life, material and chemical sciences. The course begins with an introduction to the structural aspects of organic compounds and an appreciation of the three-dimensionality of the subject based upon the important concepts of molecular orbital theory, valence bond theory, hybridization and conformational analysis. Reaction mechanisms and organic synthesis, two important topics that are emphasized throughout the course, are introduced early in the context of addition reactions of alkenes and alkynes. Perhaps the most abstract/vexing topic in organic chemistry is next encountered, namely, stereochemistry. These fundamentals are then used to explore the reactivity properties of various classes of compounds including substitutions and eliminations of alkyl halides, free radical reactions of alkenes, isomerization and cycloadditions of conjugated pi systems, and electrophilic substitution reactions of aromatic compounds.

**Enforced Prerequisite at Enrollment:** CHEM 112 or CHEM 112H Honors

**CHEM 212: Organic Chemistry II**

3 Credits

Continuation of CHEM 210. Emphasis is placed on the role of organic reactions in biological chemistry. CHEM 212 CHEM 212 Organic Chemistry II (3) This course will continue to build upon the important concepts learned in the prerequisite course, CHEM 210, with an emphasis on reactions mechanisms and organic synthesis. The course will begin with conceptually new material that will be applied in the laboratory course, namely, the elucidation of the structures of organic compounds using mass spectrometry, infrared spectroscopy and nuclear magnetic resonance spectroscopy. The majority of the new material is concerned with the chemistry of carbonyl compounds and includes: 1) the nucleophilic addition reactions of ketones and aldehydes; 2) nucleophilic acyl substitution reactions of acid chlorides, anhydrides, esters and amides; 3) carbonyl alpha-substitution reactions and 4) carbonyl condensation reactions. The latter part of the course will be concerned with biologically relevant compounds such as amines, amino acids/peptides/proteins and carbohydrates.

**Enforced Prerequisite at Enrollment:** CHEM 210 or CHEM 210H

**CHEM 212H: Organic Chemistry II - Honors**

3 Credits

Continuation of CHEM 210(H). Emphasis is on the chemistry of carbonyl compounds, spectroscopic analysis and pericyclic reactions. CHEM 212H Organic Chemistry II - Honors (3) CHEM 212H is the second semester of a comprehensive year-long treatment of introductory organic chemistry at an advanced level. CHEM 210H is recommended but not required. This honors course focuses more on depth than breadth, and will delve into some of the more modern approaches/theories to key topics. Most of the material derives from the chemistry of carbonyl compounds. The classic topics -- carbonyls as as electrophiles and as nucleophile (enolate) precursors -- will be covered. In addition, discussions of stereochemical selectivity issues will provide the framework to introduce contemporary concepts of stereoelectronic and steric effects into these topics. For example, Cram, Felkin-Ahn and chelation-based models for stereoselective addition of nucleophiles to aldehydes/ketones will be developed, as will chiral auxiliary chemistry for stereoselective enolate addition reactions. In addition to carbonyl chemistry, an introduction to spectroscopic techniques for compound characterization will be included. These techniques include mass spectrometry, infrared spectroscopy, and nuclear magnetic resonance spectroscopy. Finally, a survey of pericyclic reactions, along with the molecular orbital (stereoelectronic) underpinnings of chemical selectivity observed in
these processes, will be pursued. Class grades will be based on 5 exams, 5 (out of 6) homework assignments, and a final exam.

**Enforced Prerequisite at Enrollment:** CHEM 210 or CHEM 210H

**Honors**

**CHEM 213: Laboratory in Organic Chemistry**

2 Credits/Maximum of 2

Basic laboratory operations; synthesis and chemical or instrumental analysis. Because of duplication of subject matter, students may not receive credit for both CHEM 203 and CHEM 213. CHEM 213 offers a Laboratory Organic Chemistry (1-2) A strong foundation in organic laboratory skills is provided by this laboratory course. Laboratory work includes learning the basic techniques and recrystallization/melting point determination, distillation, liquid/liquid extraction, thin layer chromatography and column chromatography. Mastery of these basic techniques lays the foundation for carrying out a number of organic syntheses or natural product isolations. Students are often provided with hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Chemistry 210 is a prerequisite and CHEM 212 may be a co-requisite for this course, because they provide the theoretical background for the reaction chemistry as well as the spectroscopic characterization of organic molecules.*Note: The number of credits and meeting times vary from location to location. Some locations offer CHEM 213 as two one-credit courses to be taken in sequential semesters, whereas other locations offer CHEM 213 as a single-semester two-credit course. Normally, the latter format involves two 3-hour labs per week in addition to extensive written work outside of the laboratory. The prerequisite / concurrent requirement for CHEM 212 does not apply when CHEM 213 is taken as a 1 credit course.

**Enforced Prerequisite at Enrollment:** CHEM 210 or CHEM 210H and Prerequisite or Concurrent: CHEM 212 or CHEM 212H

**CHEM 213H: Laboratory in Organic Chemistry - Honors**

2 Credits

Basic laboratory techniques learned in context via theme-based modules, spectral analysis, multi-step synthesis, and professional scientific writing. Because of similarity of subject matter, students may not receive credit for both CHEM 203 and CHEM 213. CHEM 213H Laboratory in Organic Chemistry - Honors (2) A strong foundation in organic laboratory skills is provided by this laboratory course. Laboratory work includes learning the basic techniques and recrystallization/melting point determination, distillation, liquid/liquid extraction, thin layer, chromatography and column chromatography. Mastery of these basic techniques lays the foundation for the reaction chemistry as well as the spectroscopic characterization of organic molecules. *Note: The number of credits and meeting times vary from location to location. Some locations offer CHEM 213 as two one-credit courses to be taken in sequential semesters, whereas other locations offer CHEM 213 as a single-semester two-credit course. Normally, the latter format involves two 3-hour labs per week in addition to extensive written work outside of the laboratory. The prerequisite / concurrent requirement for CHEM 212 does not apply when CHEM 213 is taken as a 1 credit course.

**Enforced Prerequisite at Enrollment:** CHEM 210 or CHEM 210H and Prerequisite or Concurrent: CHEM 212 or CHEM 212H Honors

**CHEM 213M: Laboratory in Organic Chemistry - Honors, Writing Intensive**

2 Credits

Basic laboratory techniques learned in context via theme-based modules, spectral analysis, multi-step synthesis, and professional scientific writing. Because of similarity of subject matter, students may not receive credit for both CHEM 203 and CHEM 213.

**Enforced Prerequisite at Enrollment:** CHEM 210 or CHEM 210H and Prerequisite or Concurrent: CHEM 212 or CHEM 212H Honors

**Writing Across the Curriculum**

**CHEM 213W: Laboratory in Organic Chemistry - Writing Intensive**

2 Credits

Basic laboratory techniques learned in context via theme-based modules, spectral analysis, multi-step synthesis, and professional scientific writing. Because of similarity of subject matter, students may not receive credit for both CHEM 203 and CHEM 213.

**Enforced Prerequisite at Enrollment:** CHEM 210 or CHEM 210H and Prerequisite or Concurrent: CHEM 212 or CHEM 212H Honors

**Writing Across the Curriculum**

**CHEM 227: Analytical Chemistry**

4 Credits

The purpose of this course is to provide students with a rigorous and comprehensive exposure to the techniques and methods used in biotech, environmental, forensic, and pharmaceutical industrial and research laboratories. The principles, methodology and practical aspects of both traditional and modern chemical analysis will be discussed. Laboratory and lecture are fully integrated, emphasizing the importance of the laboratory component to achieving mastery of overall course content. Concepts will include acid-base, precipitation, chelation, electrochemistry, UV/Vis spectroscopy, and introductory chromatography, as well as some more advanced topics at the instructor's discretion. Students will be expected to develop both their chemical problem solving and laboratory skills, and will be evaluated on their ability to speak and write clearly, solve context-based chemical problems, maintain a research style laboratory notebook, and carry out reliable chemical analysis individually as well as part of a team. This course is relevant to any student majoring or minoring in Chemistry or Forensic Science.

**Enforced Prerequisite at Enrollment:** C or better in CHEM 112 or CHEM 112H and C or better in CHEM 113 and C or better in MATH 140

**CHEM 233N: Chemistry and Literature**

3 Credits

This pedagogically innovative course will be team taught by an instructor from the English department and one from the Chemistry department. Both instructors will be present in the classroom throughout the semester, providing joint presentations and leading discussions. The integration of humanities and natural sciences domain content will encourage students from humanities and natural science backgrounds,
as well as other interested students, to take the course and learn how to integrate these two domains of knowledge in their education and their lives after leaving Penn State. This course teaches both basic concepts of chemistry and their cultural elaboration in literature, and it models a critical assessment of the implications of chemistry and literature emerging from a shared cultural field, rather than autonomously from two separate cultures. The course seeks to provide students with a nuanced understanding of how literature and science inform each other and negotiate cultural, religious, and political tensions. Understanding the origin and development of these ideas, perspectives, and discoveries is an essential component of science and scientific achievement, but too often our methods of teaching science focus almost exclusively on teaching facts and theories at the expense of the historical discovery, creation, and development of those facts and theories. This course teaches both the scientific facts and theories and the contexts of their production in order to sharpen students’ abilities at critical evaluation of facts. The literary and scientific focus will vary from class to class, but may include writings by literary authors such as Mary Shelley, Edward Bulwer-Lytton, Bram Stoker, H. G. Wells, Garrett Serviss, Aldous Huxley, Roald Hoffmann, Carl Djerassi, Don DeLillo, William Butler Yeats, Arthur Machen, D.H. Lawrence, A. E. Waite, Aleister Crowley, Arthur Conan Doyle, Camille Flammarion, and Rachel Carson, and scientific texts by scientists such as T.H. Huxley, William Crookes, William Ramsay, Frederick Soddy, Ernest Rutherford, Wilhelm Conrad Roentgen, Henri Bequerel, J.J. Thomson, Niels Bohr, and Marie Curie. Key concepts of environmental chemistry. The specific focus of this class will vary from class to class, but all sections will spend approximately 40% of the class on units specifically devoted to key concepts in basic chemistry, 40% of the class on literary interpretations of and influences upon concepts in chemistry in specific historical periods, and 20% of the class on significant methods of theorizing the boundaries between and interrelationships of science and culture, and on the concept of the “culture of science.” However, these subjects will be interwoven throughout the semester. Indeed, the pedagogy of the course depends upon the literature and the science not being neatly separated from each other. Instead, students will learn up-to-date science while exploring the origins, development, and cultural dimensions of that science, and will learn to integrate their understanding of the domains of science and the humanities through the course. The course will be offered once every year with approximately 20-35 seats per offering.

Cross-listed with: ENGL 233N
Bachelor of Arts: Humanities
General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

CHEM 294: Special Problems and Research
1-4 Credits/Maximum of 12

Designed for freshman or sophomore students who are prepared to undertake special problems and research by arrangement with a faculty member.

CHEM 294H: Special Problems and Research - Honors
1-4 Credits/Maximum of 12

Designed for freshman or sophomore students who are prepared to undertake special problems and research by arrangement with a faculty member.

Prerequisite: permission of instructor
Honors

CHEM 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CHEM 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CHEM 297E: Special Topics - InterDomain
3 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GN/GH GenEd course.

General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain

CHEM 301: Environmental Chemistry and Analysis

3 Credits

Chemical principles, interpretation, and methods of analysis for groundwater, water supply, wastewater treatment, stream pollution. CHEM 301 CHEM 301 Environmental Chemistry and Analysis (3) The objective of the course is to introduce students to water quality chemistry and the associated laboratory analytical techniques commonly used in groundwater, water supply, wastewater treatment, steam pollution control. This course will be instructed with classroom lectures, laboratory exercises, and a project. These laboratory exercises include pH, solids, turbidity, alkalinity, acidity, dissolved oxygen, biochemical oxygen demand, chemical oxygen demand, total organic carbon, chlorine residual, chlorine demand, nitrogen, phosphorus, nitrate, sulfate, chloride, hardness, and metals. This course involves two lecture periods and one laboratory period each week. The students will be evaluated with quizzes, midterm examination, final examination, laboratory reports, and a project report. The course has a prerequisites of a two-semester General Chemistry course and the associated laboratory courses. This course is a prerequisite for Water Supply and Pollution Control which is one of core courses for Environmental Engineering Program.

Enforced Prerequisite at Enrollment: (CHEM 112 or CHEM 112H) and CHEM 113
CHEM 310: Introductory Inorganic Chemistry

3 Credits

Conceptual and descriptive aspects of inorganic chemistry, focusing on structures, bonding, and properties. CHEM 310 Introductory Inorganic Chemistry (3)CHEM 310 covers the structure, bonding, and properties of inorganic molecules and solids. Theories and models of chemical bonding, including valence bond theory, crystal field theory, and molecular orbital theory are applied to inorganic molecules, coordination compounds, and solids. Aspects of structural inorganic chemistry are presented, including molecular geometry and structures of metallic, ionic, and covalent solids. Transition metal chemistry is discussed, including key aspects of bonding, properties, and reactions. The course also covers acids and bases, oxidation and reduction, and coordination chemistry. Special topics such as solid-state inorganic materials, inorganic nanoscience, and bioinorganic chemistry may also be included.

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H

CHEM 316: The Professional Chemist

1 Credits

Industrial employment opportunities and challenges; graduate and professional school opportunities; tailoring the chemistry curriculum to career goals. CHEM 316 CHEM 316 The Professional Chemist (1) This junior-level seminar course is designed to help prepare chemistry majors to take advantage of opportunities provided by the Department and community of professional chemists in choosing, attaining, and furthering their career goals. A number of guest lectures cover a variety of career-related topics. Careers in the pharmaceutical, chemical production, biotechnology, and analytical sectors and other specialty companies will be discussed. Also, various academic careers paths are presented and compared. Preparing for chemistry graduate school and other post graduate training will be an important element of this seminar. Most of the meetings of the course will be primarily informational. A graded short presentation on a chemistry related topic is also required.

Enforced Prerequisite at Enrollment: 4th semester standing or higher in Chemistry

CHEM 358: Literature, Conduct and Safety in the Chemical Sciences

3 Credits

CHEM 358 is designed to prepare a student majoring in chemistry to interact with the scientific community as a professional. The course will be divided into three major units. The first unit will focus on communicating scientific information and research results. This will include searching, reading and interpreting peer-reviewed scientific literature, preparation of formal reports suitable for publication, and presenting research orally. Students may be asked to attend public events related to science outside the normal meeting hours for the course. The second unit will focus on developing career skills needed to become a successful professional in the field. This will include examining various career paths related to chemistry, professional networking, resume and job seeking skills, and instruction on effective interview strategies. Outside speakers will be invited to help reinforce particular topics. Additionally, scientific integrity will be discussed. The third unit will focus on an introduction to chemical integrity in order to promote advanced safety practices above what students have learned in previous laboratory courses. This will include complying with safety regulations, understanding when and how to use proper personal protective equipment, understanding the categories of hazards associated with chemicals and how to read chemical labels, and interpreting Safety Data Sheets (SDS).

Enforced Prerequisite at Enrollment: CHEM 213

CHEM 395: Chemistry Teacher Assistant Training

1-2 Credits/Maximum of 2

Instruction and practice in the role of the teaching assistant in the undergraduate chemistry laboratory.

CHEM 400: Chemical Literature

1 Credits

Instruction in use of the library and of the literature of chemistry. CHEM 400 Chemical Literature (1) CHEM 400 covers an orientation to use the library; sources of organic and inorganic synthesis information; use of relevant indexing and abstracting services; spectral data sources; patent literature; sources related to general chemical information, and properties data. Additional topics may be included as time permits.

Enforced Prerequisite at Enrollment: (CHEM 210 or CHEM 210H) and Prerequisite or Concurrent: (CHEM 212 or CHEM 212H)

CHEM 402: Chemistry in the Environment

3 Credits

Chemistry of the atmosphere, natural waters, and the land surface with particular focus on human influence on processes occurring therein. CHEM 402 CHEM 402 Chemistry in the Environment (3) Fundamental and descriptive aspects of the sources, reactions, transport, and effects of chemical species, both natural and synthetic, in water, air, soil, and living systems, and the influence of human activities on these processes. The goal of the course is to gain an understanding of the theory and application of the fundamental processes that determine the distribution and transport of inorganic and organic substances in the environment; the techniques for determining important physicochemical properties that influence environmental fate; and the major sources of important classes of environmental chemicals. Rapid increases in technological sophistication have led to startling innovations in our everyday lives almost unthinkable a century ago. However, at the same time, advances in science and engineering have complicated how we live and react to the new technologies and, at times, force consideration of complex issues before our need for reflection. Approaching problems from different directions and perspectives is fundamental to our understanding of Earth processes. New and continued emphasis in global warming, loss of biodiversity, ozone layer depletion, acid mine drainage, sustainable development and energy use are only a few of the major environmental threats which require an intelligent and informed response. As such, the course provides a balanced discussion of the hard science and social sciences aspects of environmental issues.

Enforced Prerequisite at Enrollment: (CHEM 212 or CHEM 212H) and Prerequisite or Concurrent: CHEM 450 or CHE 320

CHEM 406: Nuclear and Radiochemistry

3 Credits

Theory of radioactive decay processes, nuclear properties and structure, nuclear reactions, interactions of radiation with matter, biological effects of radiation. CHEM 406 Nuclear and Radiochemistry (3)
CHEM 406 provides a basic introduction to many of the important physical phenomena in nuclear and radiochemistry and the theories that describe them. The exposition of both experimental phenomena and theory complements the content of other upper-level courses in physical chemistry such as CHEM 450 and 452. Specifically, the types of radioactive decay are described, and, using this information, the equations that relate the growth and decay, i.e., the kinetics, of radioactive nuclei are derived. In parallel, a variety of types of nuclear reactions, such as neutron capture are introduced and used to develop the equations that governing the kinetics of nuclear reactions, including the concept of cross section. To describe the nature of nuclear matter, the relationships between energy, binding energy, and mass, are developed and augmented with the introduction of related quantities including the nuclear magnetic-dipole moment, total angular momentum of the nucleus, and Fermi-Dirac and Bose-Einstein statistics. A basic introduction to quantum mechanics, including several problems of increasing complexity, namely, the one-dimensional particle-in-a-box, the three-dimensional particle-in-a-cubic-box, and the particle-in-a-spherical box is then provided. The latter problem forms the basis for developing the single-particle shell-model of the nucleus, which is compared to the single-particle shell-model of the atom, namely, the hydrogen-atom problem. The barrier-penetration theory of alpha-decay, Fermi's phase-space theory of beta-decay, and the selection rules for gamma-ray decay are then presented. Final topics include the interactions of radiation with matter and the biological effects of radiation.

Enforced Prerequisite at Enrollment: CHEM 452 or PHYS 237 or NUCE 301
Cross-listed with: NUCE 405

CHEM 408: Computational Chemistry
3 Credits

Introduction to numerical and nonnumerical computer uses in physical science. CHEM 408 CHEM 408 Computational Chemistry (3) CHEM 408 introduces some of the many ways in which computers are used in modern chemical research. The main emphasis is on molecular modeling, including such topics as electronic structure calculation, molecular mechanics, molecular dynamics and Monte Carlo simulation methods. In lesser detail, chemical informatics will also be considered, time permitting. Discussion of the theoretical underpinnings of these various methods and their range of applicability will be combined with exercises illustrating the use of several current chemical software packages and with assignments based on critical reading of illustrative literature papers.

Enforced Prerequisite or Concurrent at Enrollment: CHEM 452
Cross-Listed

CHEM 410: Inorganic Chemistry
3 Credits

Conceptual and descriptive aspects of nontransition elements, covering structural, thermodynamic, and kinetic features. CHEM 410 Inorganic Chemistry (3) CHEM 410 covers structure and bonding in inorganic chemistry, including the chemistry of main group elements and selected topics in transition metal chemistry. Theories and models of chemical bonding (valence bond theory, crystal field theory, and molecular orbital theory) are applied to inorganic molecules, coordination compounds, and solids. The course also covers the following topics: periodic trends in the chemistry of the d- and p-block elements, structural solid state chemistry, magnetism of transition metal complexes and inorganic solids, ionic and covalent bonding in solids, electronic properties of metals, alloys, superconductors, and semiconductors, synthesis of inorganic materials, and properties of nanoscale inorganic solids.

Enforced Prerequisite at Enrollment: (CHEM 112 or CHEM 112H) and (CHEM 202 or CHEM 210 or CHEM 210H) and Prerequisite or Concurrent: CHEM 450 or CHEM 452

CHEM 412: Transition Metal Chemistry
3 Credits

Structure and bonding of compounds containing transition metals. CHEM 412 Transition Metal Chemistry (3) CHEM 412 covers the chemistry of the transition metals, in particular the d-block elements. Major areas of emphasis include coordination chemistry, organometallics, and the role(s) of transition metals in biology. The course covers the following topics: molecular symmetry with applications to bonding and vibrational spectroscopy, coordination chemistry, structural and optical isomers, crystal and ligand field theories, electronic structure and electronic transitions, spectroscopic methods for probing transition metal complexes, kinetics and thermodynamics of ligand substitution reactions, oxidation-reduction reactions, organometallic complexes and their basic reaction types, homogeneous and heterogeneous organometallic catalysts and their reaction cycles, the interactions of metal ions with biological molecules, the function of transition metal ions in metalloproteins, and medically-important transition metal complexes.

Enforced Prerequisite at Enrollment: (CHEM 202 or CHEM 210 or CHEM 210H) and CHEM 310 and Prerequisite or Concurrent: CHEM 450 or CHEM 452

CHEM 413: Chemistry of the Elements
4 Credits

Theoretical and descriptive chemistry of the elements; laboratory synthesis and measurements in inorganic, coordination, and transition metal chemistry.

Enforced Prerequisite at Enrollment: CHEM 213 or CHEM 213W or CHEM 213M

CHEM 423W: Chemical Spectroscopy
4 Credits

Modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis. CHEM 423W Chemical Spectroscopy (4) This course reviews modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis. Topics include electronics, optics, and atomic and molecular spectroscopy (UV-VIS, Fluorescence, FTIR, Raman, liquid- and solid-state NMR). The course thoroughly integrates lecture and laboratory activities. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write research papers during the semester. The reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature. The course is designed to be rigorous and comprehensive in scope. The writing component for this course includes: maintaining a proper laboratory notebook; reports; and
CHEM 425W: Chromatography and Electrochemistry
4 Credits

Gas, liquid, and other forms of chromatography; important techniques of electrochemistry.

Enforced Prerequisite at Enrollment: (CHEM 227 or CHEM 221) and CHEM 450
Writing Across the Curriculum

CHEM 427W: Forensic Chemistry
4 Credits

Analytical and instrumental methods used in the forensic sciences with special emphasis on the analysis and characterization of trace evidence. Forensic chemistry is a classroom and laboratory based course designed to introduce the student to the forensic analysis of trace evidence according to established forensic procedures. The trace evidence can include paint, fire debris, glass, controlled drug substances, blood alcohol analysis, fibers, smokeless powders, inks/dyes, gunpowder, and low explosives. The focus of the course will be on identifying and understanding the nature of the samples, common sample preparation methods, chemical and analytical instrumental methods, and proper collection and storage of evidence. The course will simulate the methods in a standard forensic chemistry laboratory. The analytical methods will include microscopical, spectroscopic, trace elemental, and chromatographic analytical tools that are commonly used in these laboratories. The course will rely heavily on the students' knowledge and skills that have been learned or acquired during their studies in the pre-requisite course work. The pre-requisite knowledge include, but are not limited to: algebra, calculus, general chemistry, organic chemistry, analytical chemistry, basic statistics, polarizing light microscopy, spectroscopy theory, chromatography theory, proper evidence handling practice, and good writing skills. All of these knowledge areas are represented in the required pre-requisite courses which are CHEM 213 AND CHEM 227 AND (FRNSC 411 OR CHEM 431W).

Enforced Prerequisite at Enrollment: CHEM 213 and CHEM 227 and (FRNSC 411 or CHEM 431W)
Cross-listed with: FRNSC 427W
Writing Across the Curriculum

CHEM 430: Structural Analysis of Organic Compounds
3 Credits

Spectroscopic methods as tools in gross and detailed structural analysis and interpretation within the framework of modern theory. CHEM 430 CHEM 430 Structural Analysis of Organic Compounds (3) This course is designed to introduce students to the spectroscopic techniques that are used to elucidate the structures of organic molecules of various molecular weights. Some theoretical background will be provided and is necessary, but the emphasis is on solving problems. The course starts with fundamental concepts and techniques learned in sophomore organic chemistry and builds toward state-of-the-art methods used by modern organic and bioorganic chemists. Topics to be covered include: UV spectroscopy, 1D- 1H and 13C NMR, spin-spin (scalar) coupling and chemical shifts, IR spectroscopy, simple and advanced mass spectroscopic techniques, stereochemistry, advanced NMR topics including advanced 1D and 2D NMR and correlation spectroscopies. Some consideration will also be given to the challenges associated with structure determination in biomolecules.

Enforced Prerequisite at Enrollment: (CHEM 210 or CHEM 210H) and Prerequisite or Concurrent: (CHEM 213 or CHEM 213W or CHEM 213M)

CHEM 431W: Organic and Inorganic Preparations
4 Credits

Preparation, purification, and characterization of both organic and inorganic compounds by modern methods. CHEM 431W CHEM 431W Organic and Inorganic Preparations (3) CHEM 431W is a one-semester, writing-intensive advanced laboratory course that focuses on the preparation, isolation, purification, and characterization of organic, organometallic, and inorganic compounds. Students are expected to use the techniques learned in the introductory organic chemistry laboratory and will learn more advanced techniques such as the use of air-free and anhydrous reaction conditions, glove bags, vacuum manifolds, vacuum distillations, flash chromatography, solvent stills, and gas-tight syringes. Molecular modeling techniques are also introduced. Students are given hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Students are expected to search the chemical literature using databases and online journals and to write formal lab reports in ACS style. The lab assignments include syntheses, separating an unknown mixture, and a team project, which includes a written proposal, synthetic work, a final report, and a poster presentation.

Enforced Prerequisite at Enrollment: CHEM 213 or CHEM 213W or CHEM 213M
Writing Across the Curriculum

CHEM 432: Organic Reaction Mechanisms
3 Credits

The study, evaluation, and discussion of the mechanisms of selected organic reactions.

Enforced Prerequisite at Enrollment: CHEM 212 or CHEM 212H
CHEM 440: Instrumental Analysis
3 Credits

This course presents analytical methods used in chemistry in a way that extends and complements the treatment in CHEM 227. Preliminary discussions will entail sample preparation for organic and inorganic samples, quantitative and qualitative measurements, sensitivity and limit of detection. Techniques addressed will cover the areas of separation, optical spectroscopy, mass spectrometry, electroanalytical techniques and surface analysis. Students are expected to learn how instruments produce signals and how to choose the appropriate technique for a particular analysis.

Enforced Prerequisite at Enrollment: CHEM 227
CHEM 441: Instrumental Analysis Laboratory

1 Credits

This laboratory course presents analytical methods used in the chemistry field in a way that extends and compliments the treatment in CHEM 440. Techniques addressed will cover the areas of separation, optical spectroscopy, mass spectrometry, electroanalytical techniques and surface analysis. Students are expected to learn how instruments produce signals and how to choose the appropriate technique for a particular analysis.

**Enforced Prerequisite at Enrollment:** CHEM 227. **Enforced Prerequisite or Concurrent at Enrollment:** CHEM 440

CHEM 443: Electrochemistry and Chromatography Laboratory

1 Credits

An introduction to the use of modern instruments for problems in chemical structure and analysis. CHEM 443 CHEM 443 Electrochemistry and Chromatography Laboratory (1) CHEM 443 is one of three laboratory courses (CHEM 441, CHEM 443, and CHEM 445) which accompany the lecture course in instrumental analysis, CHEM 440. The topics for CHEM 443 are: 1) ion sensitive electrodes and cyclic voltammetry, 2) gas and high performance chromatography, and 3) gas chromatography-mass spectrometry. Every student will have ample opportunity to become proficient in the operation of the instruments being studied. They will spend about half of the time learning the fundamentals of each instrument and will then carry out a specific determination for each one.

**Enforced Prerequisite or Concurrent at Enrollment:** CHEM 440

CHEM 445: Atomic and Molecular Spectroscopy Laboratory

1 Credits

An introduction to the use of modern instruments for problems in chemical structure and analysis. CHEM 445 CHEM 445 Atomic and Molecular Spectroscopy Laboratory (1) CHEM 445 is one of three laboratory courses (CHEM 441, CHEM 443, and CHEM 445) which accompany the lecture course in instrumental analysis, CHEM 440. The topics for CHEM 445 are: 1) flame atomic absorption spectrometry and fluorimetry, 2) infrared and ultraviolet-visible spectroscopy, and 3) nuclear magnetic resonance spectrometry. Every student will have ample opportunity to become proficient in the operation of the instruments being studied. They will spend about half of the time learning the fundamentals of each instrument and will then carry out a specific determination for each one.

**Enforced Prerequisite or Concurrent at Enrollment:** CHEM 440

CHEM 446: X-Ray Crystallography

3 Credits

Theoretical and practical aspects of structure determination using x-ray diffraction, from crystal growth to structure solution. CHEM 446 CHEM 446 X-Ray Crystallography (3) CHEM 446 introduces the student to the basic principles of molecular structure determination through the diffraction of X-rays by single crystals. The emphasis is on small organic, coordination and organometallic compounds. However the principles can provide the basis for extensions into disciplines ranging across geology, materials, molecular biology, and nanoscience. The course is organized in the same way that an actual crystal structure determination might proceed, with theoretical considerations introduced as needed. Techniques of crystal growth and selection are summarized. X-ray sources and instrumentation are described briefly. Unit cells, Miller planes, unit cell geometry and Bragg’s law give rationale to the diffraction experiment. Space group symmetry is connected with data collection and the contents of the unit cell. Practical considerations of data collection and instrumentation are covered next. The theoretical description of structure factors and Fourier synthesis leads to consideration of solutions to the phase problem. The remainder of the course illustrates the process of structure solution using real data and software readily available to the students. All the details of publication of a crystal structure, the CIF, ORTEP figures and the format of the experimental section of most journals is described using actual student selected publications. Related structural techniques such as protein crystallography and molecular modeling may be reviewed time permitting.

**Enforced Prerequisite at Enrollment:** CHEM 210 or CHEM 210H

CHEM 448: Surface Chemistry

3 Credits

Surface chemistry, emphasizing the physical and chemical aspects of surfaces important for applications in colloids, catalysis, microelectronics and biocompatibility. CHEM 448 CHEM 448 Surface Chemistry (3) CHEM 448 introduces the student to the basic principles of the chemical behavior of surfaces with an emphasis on the fundamental aspects, including surface structure, bonding, thermochemistry and dynamical behavior. The course is intended to provide the basis for extensions into disciplines ranging across geology, materials, environmental engineering, biology, agriculture, physics and nanoscience. Fundamental concepts and relationships of the chemical behavior of organic and inorganic substances that the student has already learned in previous courses will be assembled, correlated and directed towards understanding the behavior of the special case of the surfaces and interfaces of liquids and solids. Starting from the basic principles the student will be guided to evolve a fundamental understanding and predictive ability for important man made and natural applications and phenomena of practical interest, including colloids, surface coatings, lubrication, heterogeneous catalysis, weather, geology, chemical sensing, microelectronics and biocompatibility.

**Enforced Prerequisite at Enrollment:** CHEM 450 and CHEM 452

CHEM 450: Physical Chemistry - Thermodynamics

3 Credits

Introduction to physical chemistry with primary emphasis on chemical thermodynamics and its molecular interpretation.(Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.) CHEM 450 Physical Chemistry - Thermodynamics is a physical chemistry course that introduces students to chemical properties of matter and the fundamentals of chemical thermodynamics. The theoretical foundations of thermodynamic principles are covered and illustrated with a wide variety of examples from the sciences, engineering and technology fields. The course covers the following topics: gas laws, equations of state, the First Law of Thermodynamics, work and heat, internal energy, enthalpy changes, heat capacity, the Second Law of Thermodynamics, entropy and entropy changes, the Third Law of Thermodynamics, Helmholtz and Gibbs energies, phase stability and phase boundaries, phase diagrams, phase equilbrium, surface tension, capillary action, partial molar quantities, thermodynamics of mixing, chemical potential, solvent and solute
activities, colligative properties, the phase rule, thermodynamics of two-component systems, chemical equilibrium, spontaneity of chemical reactions, the response of equilibria to experimental conditions, and equilibrium electrochemistry. Note: Students cannot receive credit for both CHEM 450 and CHE 320.

**Enforced Prerequisite at Enrollment:** CHEM 112 or CHEM 112H and MATH 141 and (PHYS 211 or PHYS 212). Students cannot receive credit for both CHEM 450 and CHE 320.

**CHEM 451: Experimental Physical Chemistry I**

1 Credits

CHEM 451 is a laboratory course designed to illustrate several of the principles of chemical thermodynamics presented in CHEM 450 and to demonstrate proper treatment and presentation of quantitative data. The experimental topics for this course include heat capacity ratio of gases, diffusion of gases, Joule-Thomson coefficients for gases, enthalpies of combustion, freezing point depression, and vapor pressures of liquids. Students will learn how to write quantitative laboratory reports complete with analysis of the uncertainties of the measurements they make. They will also learn how these uncertainties are propagated through each calculation that make use of the initial measurements. Students will become more aware of the importance of experimental design, proper use of instrumentation, and careful data collection.

**Enforced Prerequisite or Concurrent at Enrollment:** CHEM 452

**CHEM 452: Physical Chemistry - Quantum Chemistry**

3 Credits

Introduction to physical chemistry with primary emphasis on molecular structure, spectroscopy, and chemical kinetics. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.) CHEM 452 Physical Chemistry - Quantum Chemistry (3) is an introductory physical chemistry course that covers quantum chemistry and atomic and molecular spectroscopy. If time permits other topics may include chemical kinetics, statistical thermodynamics, nuclear magnetic resonance, and electron spin resonance spectroscopy. Quantum chemistry topic covered are Schrodinger’s equation, the particle in a box, in a ring, on a spherical surface, the free particle, barrier penetration, the harmonic oscillator, the hydrogen atom, electron spin and multi-electron atoms, molecular structure and symmetry will be covered. Spectroscopy topics are atomic spectra, and the microwave, infrared, and visible spectra of molecules. Chemical kinetics may include rate laws, mechanisms, chain reactions, polymerization reactions, catalysis, molecular reaction dynamics (collision theory and activated complex theory), and nature of potential energy surfaces for reactions.

**Enforced Prerequisite at Enrollment:** CHEM 112 or CHEM 112H and (PHYS 211 or PHYS 212) and MATH 141. Recommended Preparation: MATH 231 or MATH 230

**CHEM 453: Experimental Physical Chemistry II**

1 Credits

CHEM 453 is a laboratory course designed to illustrate several of the principles of chemical kinetics and quantum mechanics presented in CHEM 452, and to demonstrate proper treatment and presentation of quantitative data. The experimental topics for this course include kinetics of decomposition and hydrolysis reactions, and different spectroscopic techniques such as ultra violet-visible, infrared, emission and nuclear magnetic resonance spectroscopies. Students will learn how to write quantitative laboratory reports complete with analysis of the uncertainties of the measurements they make. They will also learn how these uncertainties are propagated through each calculation that make use of the initial measurements. Students will become more aware of the importance of experimental design, proper use of instrumentation, and careful data collection.

**Enforced Prerequisite or Concurrent at Enrollment:** CHEM 452

**CHEM 457: Experimental Physical Chemistry**

1-2 Credits/Maximum of 2

Laboratory experiments designed to illustrate the principles of physical chemistry and teach techniques of error analysis and the presentation of quantitative data. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.) CHEM 457CHEM 457 Experimental Physical Chemistry (2) CHEM 457 is a laboratory course designed to illustrate some of the principles of physical chemistry presented in CHEM 450 and 452 and to teach proper treatment and presentation of quantitative data. In this course, students will learn how to write quantitative laboratory reports complete with analysis of the uncertainties of the measurements they make. They will also learn how these uncertainties are propagated through each calculation that make use of the initial measurements. In doing so, students should become more aware of the importance of experimental design, proper use of instrumentation, and careful data collection.

**Enforced Prerequisite or Concurrent at Enrollment:** CHEM 450 or CHE 320

**CHEM 459W: Advanced Experimental Physical Chemistry**

4 Credits

Laboratory experiments and projects for students interested in advanced study in physical chemistry. CHEM 459W Advanced Experimental Physical Chemistry (4) CHEM 459W Advanced Experimental Physical Chemistry is a project-based course designed as a follow-up to CHEM 457. CHEM 459W provides students with further experience in laboratory techniques used for quantitative experimentation and with the processing and interpretation of quantitative data. Experiments and short research projects are designed to complement the theoretical knowledge acquired in lecture courses so as to enhance students’ problem solving in a research environment. Particular attention will be devoted to written communication of experimental results in an effective and concise manner according to American Chemical Society journal standards.

**Enforced Prerequisite at Enrollment:** CHEM 450 an CHEM 457 and Prerequisite or Concurrent: CHEM 452

**Writing Across the Curriculum**

**CHEM 464: Chemical Kinetics and Dynamics**

3 Credits

Introduction to chemical kinetics and molecular dynamics. CHEM 464 CHEM 464 Chemical Kinetics and Dynamics (3) CHEM 464 is a one-semester course that introduces students to chemical kinetics and molecular dynamics, the branch of chemistry concerned with the rates of chemical reactions and the microscopic details of how reactions occur. The course covers old and new experimental, theoretical, and computational methods for kinetics and dynamics. Example systems
are chosen from a variety of application including gas-phase reactions, reactions in solution, atmospheric chemistry, and reactions in biological systems. Topics covered are: basic concepts, phenomenological treatments, mechanisms, chain reactions, potential energy surfaces, collision theory, transition state theory, analysis, reactions of surfaces, photochemistry, molecular beams, Monte Carlo methods, molecular dynamics, energy requirements for reaction, and energy disposition.

**Enforced Prerequisite at Enrollment:** (CHEM 450 or CHE 220) and CHEM 452

**CHEM 466: Molecular Thermodynamics**

3 Credits

Introduction to physical chemistry with a primary emphasis on the statistical and molecular interpretation of thermodynamics. CHEM 466CHEM 466 Molecular Thermodynamics (3) CHEM 466 is a physical chemistry course that emphasizes the statistical and molecular interpretation of thermodynamics. This focus enables the student to consider macroscopic properties based on the constituent molecular properties. After a very brief introduction to classical thermodynamics, the statistics of large systems is introduced, used to develop the Boltzmann distribution of energies and then combined with the quantum mechanical structure of energy levels to form a basis to predict and understand atomic and molecular properties such as heat capacity and chemical reaction equilibrium. Solution thermodynamics, interfacial phenomena and colligative properties are discussed in terms of lattice models. The course then turns to a molecular view of transport and chemical reaction rates. Molecular transport is described in terms of random molecular motion and intermolecular forces that tie together to give macroscopic behavior such as ionic conductivity and mass diffusion. Reaction rates are formulated in terms of the distributions of energies and statistical probabilities of the combined reactants in a transition state. Cooperativity in phase transitions is discussed, followed by adsorption and catalysis. Examples with proteins and other biomolecules, as well as polymers and various solutions, appear throughout the course.

**Enforced Prerequisite at Enrollment:** CHEM 450 or CHE 220

**CHEM 472: General Biochemistry I**

3 Credits

Basic structure and function of cellular components; principles of enzyme kinetics and regulation. CHEM 472 General Biochemistry I (3) CHEM 472 will serve as an introductory course in biochemistry. The course will begin with a review a number of chemical concepts applicable to biochemistry including molecular interactions, acid-base reactions, buffers, titrations and basic thermodynamic and kinetic concepts. The focus will then shift to a discussion of the structures of the biomolecules that make up living matter including carbohydrates, lipids, membranes, proteins, and enzymes, emphasizing the relationship between chemical structure and biological function.

**Enforced Prerequisite at Enrollment:** CHEM 212 or CHEM 212H

**CHEM 474: Organic Synthesis**

3 Credits

Theory and methodology of organic synthesis applied to complex organic molecules. UCHEM 474 CHEM 474 Organic Synthesis (3) CHEM 474 will present the theory and methodology of organic synthesis. The course will initially focus on the methodology necessary to synthesize complex organic molecules. This will include an in-depth look at functional group transformations, carbon-carbon bond forming reactions, ring-forming reactions, aromatic chemistry and heterocyclic chemistry. We will then discuss the use of retrosynthetic analysis and the "disconnection approach" to logically guide total synthesis. Finally, a number of literature syntheses will be used to examine the strategies involved in formulating a total synthesis emphasizing the compatibility of functional groups, sequence of reactions, use of protecting groups and the impact of stereochemistry.

**Enforced Prerequisite at Enrollment:** CHEM 212 or CHEM 212H

**CHEM 476: Biological Chemistry**

3 Credits

Fundamentals of Biochemistry for Chemists. Students cannot receive credit for both CHEM 476 and BMB 401. CHEM 476 Biological Chemistry (3) This course is designed to be an introduction to biological chemistry from a chemistry student's perspective. The course will cover the basics of protein, nucleic acid, lipid and carbohydrate structure. The three-dimensional structural aspects of these biological macromolecules will be emphasized, showing their structure-function relationships. The course will also cover some of the chemical logic in enzymatic reactions, drawing from advanced organic and inorganic chemistry concepts, and include a focus on physical processes such as reaction kinetics and binding equilibria. More advanced topics of interest to chemistry students will also be covered, including the biochemical aspects of drug design and discovery. Throughout, the approach will be to introduce the analytical tools that have led to major advances in biochemistry as well as the physical and chemical principles underlying each topic. The course will follow a textbook designed for chemistry students. It will also include reading assignments of several types, including historical papers and current scientific literature dealing with recent advances in the field. The course also includes assignments that require students to familiarize themselves with modern biochemical databases such as those from the National Center for Biotechnology Information.

**Enforced Prerequisite at Enrollment:** CHEM 212 or CHEM 212H

**CHEM 494: Chemical Research**

1-10 Credits/Maximum of 20

Experimental investigation of an original research problem. Preparation of a formal thesis is optional. (Credit not allowed for graduate students in Biochemistry, Chemistry or Chemical Engineering.)

**CHEM 494H: Chemical Research**

1-10 Credits/Maximum of 20

Experimental investigation of an original research problem. Preparation of a formal thesis is optional. (Credit not allowed for graduate students in Biochemistry, Chemistry or Chemical Engineering.)

Honors
Child Maltreatment and Advocacy Studies (CMAS)

CMAS 258: Introduction to Child Maltreatment and Advocacy Studies

3 Credits

Introduction to the multidisciplinary field of child maltreatment. CMAS (HD FS) 258 Introduction to Child Maltreatment and Advocacy Studies (3) This course will focus on the identification, investigation, service, advocacy, prosecution, and prevention of child maltreatment as well as the treatment of adverse health outcomes for children who have been maltreated. Specific topics include the causes, correlates, and consequences of child maltreatment, best practices for reporting and investigating an allegation of child maltreatment, evidence-based prevention and intervention programs, the Child Welfare System, and relevant legal issues (e.g., termination of parental rights, children’s testimony in court, etc.). By definition, this course will detail issues related to the abuse and neglect of children. This material can be difficult to hear, view, and discuss. This course is a required course, and a prerequisite for all advanced courses, for a Minor in Child Maltreatment and Advocacy Studies.

Cross-listed with: HDFS 258, SOC 258

CMAS 465: Child Maltreatment: Prevention and Treatment

3 Credits

Advanced examination in approaches for preventing child maltreatment and treating its consequences. HD FS (CMAS) 465 Child Maltreatment: Prevention and Treatment (3) Child maltreatment, including physical abuse, sexual abuse, emotional abuse, and neglect, is a highly prevalent condition affecting nearly one million children each year in the United States alone. This course will delineate the long-term health consequences affecting those who have experienced child maltreatment with an emphasis on those outcomes exerting the greatest impact on overall public health throughout the lifespan. Importantly, a focus on the etiology of such health consequences in the child maltreatment population will be made in order to understand the causal pathways leading to these health consequences. This focus on etiology will serve as a segue into the remaining sections of this course, specifically the prevention and treatment of child maltreatment and its consequences. Universal and targeted prevention programs, where the focus is to prevent an initial instance of child maltreatment from occurring, will be detailed, as will tertiary prevention programs, where the focus is on preventing a re-occurrence of child maltreatment. Similarly, prevention of adverse health outcomes for those affected by child maltreatment will also be covered. Finally, evidenced-based interventions applied with children who have been maltreated and are currently experiencing clinical levels of impairment (e.g. post-traumatic stress disorder) will be detailed. Identification and rehearsal of treatment components commonly used in prevention and clinical intervention programs will be emphasized. Students successfully completing this course will have direct knowledge of the consequences of child maltreatment and the established methods used in prevention and intervention programs applied with this population.

Prerequisite: CMAS 258 or HD FS258

Cross-listed with: HDFS 465

CMAS 466: Systems and Community Responses

3 Credits

An exploration of the multidisciplinary response to child maltreatment. CMAS 466 / NURS 466 Systems and Community Responses (3) An exploration of the multidisciplinary response to child maltreatment. The roles, responsibilities, and interconnected relationships between the systems that interact when responding to child maltreatment issues will be analyzed. The forensic medical response, challenges, and multidisciplinary team best practices to child maltreatment case are examined. Students will explore responses and best practices within the health care, judicial, child protection, social service, educational, mental health, human service, and community systems. This course provides students with the opportunity to work with a variety of majors and understand more clearly the interdisciplinary nature of child maltreatment prevention, advocacy, and response.

Prerequisite: CMAS 258

Cross-listed with: NURS 466

CMAS 493: Child Maltreatment and Advocacy Studies: Capstone Experience

1-3 Credits/Maximum of 3

This course serves as the capstone experience for students enrolled in the Child Maltreatment and Advocacy Studies minor.

Prerequisite: CMAS 258 or HD FS258; Concurrent: CMAS 465 or HD FS465, CMAS 466 or NURS 466

Cross-listed with: EDPSY 493
CHNS 1: Level One Chinese A

4 Credits
Introductory study of Chinese language, with audio-lingual practice of Mandarin Chinese and attention to structure and the writing system.

Prerequisite: CHNS 001
Bachelor of Arts: 2nd Foreign/World Language (All)

CHNS 2: Level One Chinese B

4 Credits
Continued audio-lingual practice of Mandarin Chinese, further study of structure, practice in reading and writing Chinese.

Prerequisite: CHNS 002
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Foreign/World Lang (12th Unit)

CHNS 3: Level Two Chinese A

4 Credits
Continued audio-lingual practice of Mandarin Chinese, more extensive practice in reading and writing; study of Chinese culture.

Prerequisite: CHNS 003
Bachelor of Arts: 2nd Foreign/World Language (All)

CHNS 99: Foreign Studies

1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHNS 110: Level Two Chinese B

4 Credits
Readings in selected modern Chinese literature (short stories, plays, essays, poems) and other texts; practice in conversation and simple composition. CHNS 110 Conversation, Reading, and Composition (4) (IL) (BA) This course meets the Bachelor of Arts degree requirements. As the fourth course in the Chinese language series, CHNS 110 continues to focus on the four skills of listening, speaking, reading, and writing. It intends to introduce students to frequently-used grammatical constructions in the Chinese language and to give students an active vocabulary of about 800 words. Building on the skills students acquired in Chinese 001 to 003 (the prerequisites to Chinese 110), this course expands their knowledge of the language and cultures of the Chinese-speaking peoples in China, Hong Kong, Taiwan, and around the world. To that end, there are both language-learning objectives and socio-cultural ones in this course. About 85% of the class time will be spent in language learning and about 15% in cultural issues. Research indicates that the more knowledge students have about the context in which the target language is used, the higher their overall linguistic proficiency level will be. To facilitate students’ learning of Chinese culture, CHNS 110 also incorporate into the curriculum a variety of culture-related activities, including interviewing native speakers, film screening, calligraphy workshops, etc. Class activities include group discussion, mini-presentations, and in-class conversation practice. Evaluation will be through means such as vocabulary and sentence pattern quizzes, weekly journals and reaction papers, chapter exams, in-class oral presentations, writing assignments, and a final oral interview with instructor. Chinese 110 counts towards the Chinese minor and may also fulfill other requirements, such as providing credits towards the major in Comparative Literature or the major in Asian Studies; check with advisors in those majors.

Prerequisite: CHNS 003
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)

CHNS 120: Introduction to Chinese Literature and Culture

3 Credits
Chinese cultural productions, classical through contemporary; literature and film; changing cultural settings in multiple Chinese-speaking locations. Taught in English. CHNS 120 Introduction to Chinese Literature and Culture (3) (GH; IL) (BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to Chinese cultural production from ancient times to the postmodern era, with an emphasis on literature. In its more recent segments, the course will include film as well as considerations of Chinese cultures in the Chinese diaspora (such as the United States) and throughout the Chinese-speaking world. Students will learn about major eras of Chinese literature and the diversity of Chinese cultures in such locations as mainland China, Taiwan, Hong Kong, and the worldwide Chinese diaspora. Readings will represent several genres, such as poetry, folktale, short story, novel, prose fiction, drama, and historical annals. Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired literary works. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and post modern consumer culture, among others. Students will read literature and related materials from different periods, with examples from other media such as films where appropriate. Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students’ presentations. This participatory approach is intended to deepen students’ appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. CHNS 120 is designed to be suitable for all students generally interested in China and the Chinese-speaking world, or interested in literature and other fields of humanistic study, whether or not they have previously studied Chinese culture. All materials will be available in English. The course is designed to count as General Education, as international cultures, and as a B.A. &quot;Other Cultures&quot; course. This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. As a general education course, all versions will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)
CHNS 120W: Introduction to Chinese Literature and Culture

3 Credits

An introduction to Chinese histories and societies through literature and visual culture. Readings drawn from both classical and modern traditions, covering the period from the 11th century B.C. to the contemporary era.

General Education: Humanities (GH)
Writing Across the Curriculum

CHNS 120Z: Introduction to Chinese Literature and Culture - Linked

3 Credits

CHNS 120Z This course provides an introduction to Chinese cultural production from ancient times to the postmodern era, with an emphasis on literature. In its more recent segments, the course will include film as well as considerations of Chinese cultures in the Chinese diaspora (such as the United States) and throughout the Chinese-speaking world. Students will learn about major eras of Chinese literature and the diversity of Chinese cultures in such locations as mainland China, Taiwan, Hong Kong, and the worldwide Chinese diaspora. Readings will represent several genres, such as poetry, folklore, short story, novel, prose fiction, drama, and historical annals. Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired literary works. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and post modern consumer culture, among others. Students will read literature and related materials from different periods, with examples from other media such as films where appropriate. Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. CHNS 120Z is designed to be suitable for all students generally interested in China and the Chinese-speaking world, or interested in literature and other fields of humanistic study, whether or not they have previously studied Chinese culture. All materials will be available in English. The course is designed to count as General Education, as international cultures, and as a B.A. "Other Cultures" course. It is linked with ARTH 220Z. Taught in English.

CHNS 121N: Chinese Film and New Media

3 Credits

Survey of Chinese film and new media in the twentieth century and beyond, with attention to changing cultural settings. Taught in English. CHNS 121N Chinese Film and New Media (3) (GH;GA;IL) (BA) This course meets the Bachelor of Arts degree requirements. This is intended to provide an introduction to modern and cutting-edge forms of cultural production in the Chinese-speaking world from the twentieth century to the present day. Prior study of China is not required and materials will be available in English. Students will learn about major technologies and forms of media, including film, TV, and various forms of new media (cell-phone novels, blogs, MMOGs, IM, and Web 2.0 for instance). Readings and screenings will cover several artistic modes including formalism, historiography, documentary, period drama, and experimental works. The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have inspired the creative works under study. By examining Chinese-language film and new media with attention to changing cultural settings, students will investigate such topics as the relation between social institutions and the individual, the formation and expression of identity, changing gender roles and family structures, the impact of technological and economic trends on social structure, and changing climates of censorship and freedom of expression. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical spectators of film and related media. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in the Chinese-speaking world. The course is designed to be suitable for all students generally interested in China, or interested in various fields of humanistic study, whether or not they have previously studied Chinese culture. It is designed to count as General Education and as a B.A. "Other Cultures" course. This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. As a general education course, all versions will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

CHNS 401: Level Three Chinese A
4 Credits
Emphasis on oral proficiency through discussions of aspects of contemporary Chinese culture. CHNS 401 Advanced Conversation (4) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course aims to enhance students’ abilities in speaking, listening, reading, and writing. The objectives in this course are: 1) to review, reinforce, and expand the basic grammar, 2) to expand knowledge of characters, vocabulary and idioms, 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions, 4) to be able to read and understand simple essays and stories, 5) to be able to write short compositions.

**Prerequisite:** CHNS 110
Bachelor of Arts: 2nd Foreign/World Language (All) International Cultures (IL)

CHNS 402: Level Three Chinese B
4 Credits
Readings in representative works of traditional and modern literature; practice in composition; study of aspects of Chinese culture.

**Prerequisite:** CHNS 401 or EQUIVALENT
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures

International Cultures (IL)

CHNS 403: Level Four Chinese A
4 Credits
Continuation of CHNS 402. Aims to improve students’ proficiency in all four language skills, with a special emphasis on writing. CHNS 403W Level Four Chinese A (4) This is a four credit course designed for those who have completed Level Three Chinese B or the equivalent. The course aims to further develop students’ proficiency in all four language skills, with a special emphasis on writing. Students will study several topics on current social issues in modern Chinese society, such as education and housing issue, woman’s status, through a selected textbook, news reading, and by interviewing native speaker of Chinese from different regions. Via all the debatable topics, students will be guided to explore and practice various writing styles, such as description, narration, argumentation, and expository writing throughout the semester. Comparison of rhetorical strategies between Chinese and English writing will also be introduced to help students think and write more like a native when using the target language. The majority of reading and writing assignments will be done outside of class, with some guidance from the instructor. Class time will be used mainly for discussions of content, feedback on writing. All class activities will be conducted in Chinese. Writing exercises include short response papers on topics, summaries of the readings, and short essays. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. This will help students be prepared for a longer thesis in the next course in the sequence. This course will help students further advance their writing skills by continuously building their vocabulary, understanding the target culture, and its social issues through various sources of structured and authentic materials. Students will also write a resume and formal letter that help them start building their career in Chinese.

**Prerequisite:** CHNS 402
Writing Across the Curriculum

CHNS 403M: Level Four Chinese A
4 Credits
Continuation of CHNS 402. Aims to improve students’ proficiency in all four language skills, with a special emphasis on writing. Students will also write a resume and formal letter that help them start building their career in Chinese.

Honors
Writing Across the Curriculum

CHNS 404: Level Four Chinese B

4 Credits
Continuation of CHNS 403W. Aims to improve students’ proficiency in all four language skills through content-based language learning. CHNS 404 Level Four Chinese B (4) This is a four credit course designed for those who have completed Level Four Chinese A or the equivalent. The course aims to further develop students’ proficiency in all four language skills. Students will study several topics on current social issues in contemporary Chinese society. For example, economic spurt in China, environmental protection, values conflict between traditional Chinese culture and Western culture, etc. Students will learn those topics via a textbook, interviewing native speakers of Chinese from different regions, and variety of media, such as newspaper, TV news, and movie. The majority of reading and writing assignments will be done outside of class, with some guidance from the instructor. Students will be guided to use appropriate resources such as dictionaries, reference books, online dictionaries and other online resource to facilitate their learning. Class time will be used mainly for discussion of content, feedback on writing, and presentations by students. All class activities will be conducted in Chinese. Students will be mainly evaluated by writing exercises and presentations. Writing exercises include short response papers on topics, summarizes of the readings, short essays and a final thesis. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. Presentations include debates, individual and group presentation, which will help students advance their communication and presentational skills. E-portfolio will sample the work students have done in the course.

Prerequisite: CHNS 403W

CHNS 410: Chinese Through Film

3 Credits
This course is designed for students who finish Level Two Chinese or higher and aims to help them develop Chinese proficiency through movies. CHNS 410 Chinese Through Film (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course aims to provoke students’ critical thinking on China-related issues and improve their Chinese language proficiency by encouraging them to reenact and remake selected scenes from the movies, investigate and discuss the social issues as shown from the movies. This is a three credit course designed to go beyond the day-to-day topics to further develop students’ understanding of the social issues in contemporary China and thus enhance their Chinese language proficiency. Through watching movies in Chinese, students will listen to authentic Chinese and expose to broader aspects of Chinese people’s lives and Chinese society. In addition, they will have opportunities to conduct culture comparisons between China and the U.S., East and West, which will enable them to make in-depth analysis when examining a complex social, political or economic issue in China. The follow-up class activities include both speaking and writing assignments. Depending on the topics, speaking assignments may include: reenactment or recreation of a selected scene from the movies, class or group discussions, debates and presentations. Writing assignments may include: writing a new story or different ending for the movies, and reflection essays.

Prerequisite: CHNS 110 or equivalent
Bachelor of Arts: Humanities
International Cultures (IL)

CHNS 411: Chinese Written Characters

3 Credits
This course aims to establish a solid foundation of students’ Chinese orthography and prepare students for continuing study in subsequent Chinese courses. CHNS 411 Chinese Written Characters (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course aims to equip students’ knowledge and skills of Chinese orthography through both cognitive and meta-cognitive approach of learning, where it is expected to lay a solid foundation for students’ continuing study of subsequent Chinese language courses. Students will learn and apply radical and component-building approach to synthesize their already-acquired characters, and further learn approximately 500 additional characters. Characters selected for study in this course are based upon the references of HSK (Hanyu Shuiping Kaoshi) Level V and TOP-Huayu (Test of Proficiency-Huayu) Intermediate level. Building upon these characters, students will further expand their vocabulary volume through character association strategy and extensive reading. Cooperative learning approach will be largely incorporated to promote in-class active learning, such as developing and sharing character learning strategies through keeping learning journal, group reading, discussing cultural connotations of selected amount of characters, etc. Students will also learn the origin, history and evolution of Chinese characters through textbook reading and multimedia materials learning, such as DVD and You Tube video clips that help visualize the evolution process of selected characters for demonstration. Instructional Objectives (what the student is expected to learn; what skills s/he will develop): 1. Understand the origin, history and evolution of Chinese characters 2. Develop and apply strategies on learning Chinese characters 3. Familiarize with available resources that assist Chinese characters learning and memorizing 4. Strengthen and synthesize students’ existing knowledge of Chinese orthography 5. Learn approximately 500 new characters 6. Expand vocabulary volume derived from the acquired characters 7. Expand reading experience by reading semi-authentic and authentic articles that are constituted of the acquired characters 8. Strengthen listening and speaking skills of the target language through intensive in-class discussions and lectures.

Prerequisite: CHNS 110 or the equivalent
International Cultures (IL)

CHNS 412: Business Chinese

3 Credits
This is a three-credit course designed for those who have completed Level Two Chinese or the equivalent. Business knowledge is presented as a means to facilitate language learning, while the content-based
materials enhance cultural awareness. Emphasis will be given to helping students gain the linguistic skills that characterize advanced level second language learners, especially linguistic conventions essential to functioning in business environments. Real cases involving successful multinational Chinese and foreign companies and issues such as marketing, branding, mergers and acquisitions, OEM, and international expansion will be used as texts. The selected textbook is in Chinese with English explanations, but students will be guided through in-class discussions in Chinese. Approximately 80% of the instructional language will be conducted in Chinese. This course is designed to give students exposure to China’s vibrant business scene and to enhance both their Chinese skills in the business context and their understanding of the social and cultural aspects of “doing business” in China and the impact of Chinese economy in the globalization era. Students will discuss real business cases from multinational companies that have successfully entered the Chinese market and from large Chinese corporations that have been successful in the global market, especially in the United States. By reading, discussing, and performing communicative tasks related to those cases, students will learn how to use Chinese as a carrier of culture, thus acquiring a better understanding of China in economic and cultural terms. In addition to the business case analysis, supplementary reading, writing and listening exercises as well as media materials, such as clips of Chinese talk shows and television interviews, will also be provided. Highlights of these exercises are: listening comprehension of business news reports on current issues; analysis of the Chinese financial market; discussion of Chinese business laws, translation of business terms and documents, and commercial language and word processing. Students are supported and guided through the course as they develop the skills they need to continue learning on their own. Students are encouraged to explore and keep up to date with new developments in China’s economy through their own efforts, thus developing an independent learning style and connecting classroom learning to the real world.

Prerequisite: CHNS 110

CHNS 414: Chinese Language, Culture and Society

3 Credits/Maximum of 3

The study of Chinese language and culture and a perspective on the way of life in contemporary Chinese society. Through this course, the students are introduced to a cognitive approach to the study of Chinese language and culture and a broad perspective on the Chinese way of life in contemporary Chinese society. In particular, we will study how the interaction between Chinese language and culture frames the worldview of Chinese speakers, how the usage of the Chinese language manifests the underlying conceptual structure, which in turn is shaped by the physical (including bodily) and cultural experience of its speakers, and how conventional usage of linguistic expressions of Chinese reflects, and possibly influences, the ways in which Chinese speakers see or conceptualize the world. We will focus on conventionalized expressions, which include compound words, idiomatic phrases, and proverbial sayings, in the Chinese language, and study the Chinese conventional ways of talking about reality, both external and internal, as windows into Chinese culture and cognition. More generally, we will try to understand the embodied nature of human cognition as we see how abstract thought is grounded in bodily experience in and with the physical and cultural world. We will also look at various domains of life in contemporary China in order to gain a better understanding of Chinese society. The objectives of this course are threefold: (1) to lead Chinese language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on contemporary Chinese society.

CHNS 415: China Beyond China

3 Credits

Study of modern and contemporary Chinese culture in its diversity and its intercultural contexts. CHNS 415 China Beyond China (3) (IL) In order to begin to understand Chinese culture, we cannot treat it as a monolithic, unified whole. This course will give an introduction to modern and contemporary Chinese culture (focusing on the 20th and 21st centuries) by paying special attention to China’s inner diversity, as well as the continuous shaping of Chinese culture in contact, dialogue, and tension with other cultures. Through the study of literary texts, films, and other cultural material - as well as a small number of theoretical essays - this course will focus on: 1) Chinese culture in its variety by focusing on Chinese cultural spheres beyond the People’s Republic (Taiwan, Hong Kong), the Chinese diaspora, as well as other ethnicities and cultures within Mainland China; and 2) the ways in which Chinese modernity was impacted by intercultural impulses, as well as the recent self-representation of China in the context of globalization. Course Objectives include: 1. Understand modern and contemporary China in its cultural diversity, as well as shaped by intercultural and global processes. 2. Critically analyze processes of cultural contact and the representations of cultural differences. 3. Think critically about globalization with its impact on such categories as the local and the national. 4. Question your assumptions about the world, re-examine your own points of view, and understand cultures and value systems that may different from (or be shared with) your own.

Prerequisites: ASIA 4; ASIA 100; ASIA 101; ASIA 102; ASIA 175; CMLIT 4; HIST 175; CHNS 120; CHNS 121; 5th Semester standing

Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 416: Gender and Sexuality in China

3 Credits

Study of gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China. CHNS 416 Gender and Sexuality in China (3) (IL) This course explores gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China (from the end of the 19th century up to today), paying attention also to developments in Chinese cultural spheres beyond the People’s Republic, such as Taiwan, Hong Kong, and the Chinese diaspora. This course will use the representation of gender, sex, and sexuality as a lens through which modern and contemporary Chinese culture can be understood in its historical, social, and aesthetic changes. The analysis of representations of gender and sexuality throughout the class will focus on literary and filmic texts, as well as art, rather than on theoretical work on gender and sexuality (in China or in general). Course Objectives include: 1. Critically assess the complex construction of gender roles and sexuality in modern and contemporary Chinese literature and film.
Reflect critically on different ways of understanding and representing gender difference. Critically assess the connections between gender and sexuality and changing political, historical, and cultural contexts. Question your assumptions about gender and sexualities in the context of cultural difference, understand cultures and value systems that may be different from (or be shared with) your own.

**Prerequisite:** ASIA 4; ASIA 100; ASIA 101; ASIA 102; ASIA 175; ASIA 183; CMLIT 4; HIST 175; CHNS 120; CHNS 121; HIST 183; 5th Semester standing

Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 418: Confucius and the Great Books of China

3 Credits

This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period, providing an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as "(Confucian) ritualists," "statesmen," "military strategists," "rebels," "recluses," and "spiritual leaders." Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

**Prerequisite:** ASIA 3; ASIA 100; ASIA 104; ASIA 175; ASIA 181; HIST 175; CHNS 120; CHNS 121; ENGL 15; RLST 3; RLST 181; 5th Semester standing

Cross-listed with: ASIA 418, HIST 482

CHNS 419: The Chinese Rhetorical Tradition

3 Credits/Maximum of 6

Study of the rhetorical works in ancient China as well as multiple facets of modern Chinese rhetoric. CHNS 419 The Chinese Rhetorical Tradition (3 per semester/maximum of 6) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the Chinese rhetorical tradition dating back two and a half millennia. Rhetoric is defined here as the study and practice of artful means of communication, including poetic, expository, and argumentative modes. The class will first delve into the works of competing intellectual schools in pre-imperial China (pre-221 BCE), which set a corner stone for thoughts and practice of communication in the imperial period (221 BCE - 1918). These schools, including the Daoist, the Confucian, and the Legalist, developed their rhetorical notions through engaging with the political, intellectual, and ethnic Other. From here the class will examine the multiple facets of modern Chinese rhetoric, which has undergone a continual contact and conflation with other rhetorical traditions in the global contact zone. The class will focus on topics such as feminist discourse, Chinese-American rhetoric, and the teaching of writing, which bear direct implications on our contemporary social life.

**Prerequisites:** ENGL 15; ASIA 3; ASIA 100; ASIA 104; ASIA 175; ASIA 181; HIST 175; CHNS 120; CHNS 121; RLST 3; RLST 181; 5th Semester standing Concurrent Courses: ENGL 471

Cross-listed with: ASIA 419

Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 452: Contemporary China: Culture and Trends

3 Credits/Maximum of 6

Survey of aspects of the contemporary Chinese-speaking world. Includes readings from Chinese newspapers, magazines, and fiction. Topics may vary each semester. CHNS 452 Contemporary China: Culture and Trends (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. This course surveys Chinese cultural production in the contemporary
period, with an emphasis on literature. Taught in Chinese; readings and assignments in Chinese. The course will examine the diverse forms of cultural expression (literature, film, new media, theater, television) throughout the Chinese-speaking world. Students will learn about major cultural trends in such locations as mainland China, Taiwan, Hong Kong, and the worldwide Chinese diaspora. Readings will represent several genres, such as poetry, folklore, short story, novel, prose fiction, and drama. Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired literary works in the contemporary period. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others. Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students’ presentations. This participatory approach is intended to deepen students’ appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. Chinese 452 is designed to be suitable for students (Chinese majors) who have completed Chinese 401. The course is designed to count as international cultures, and as a B.A. &quot;Other Cultures&quot; course. This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. The course will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

Prerequisite: CHNS 401
Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 453: Chinese Film
3 Credits/Maximum of 6

Selected films and directors representing various aspects of Chinese culture and cinema. Topics may vary each semester. Taught in Chinese. CHNS 453 Chinese Film (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. This course surveys Chinese film from the early twentieth century to the present time, with an emphasis on film and national history. Taught in Chinese; readings and assignments in Chinese. The course will examine the diverse forms of film language in the works of filmmakers from mainland China, Taiwan, and Hong Kong. Readings will include interviews, reviews, film criticism, and other relevant texts (such as a short story that inspired a film). Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired Chinese-language films. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others. Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students’ presentations. This participatory approach is intended to deepen students’ appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. Chinese 453 is designed to be suitable for students (Chinese majors) who have completed Chinese 401. This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. The course will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

Prerequisite: CHNS 401
Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 454: Introduction to Classical Chinese
3 Credits/Maximum of 6

Basic patterns and structures of Classical Chinese to the first millennium B.C. to the 19th century. CHNS 454 Introduction to Classical Chinese (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. This course introduces students to the basic patterns and structures of Classical Chinese. Classical Chinese is a language shaped in the latter half of the first millennium B.C. that still persists as a living medium of expression today. Knowledge of Classical Chinese is important to help students read and understand sophisticated modern Chinese texts, which make frequent use of Classical allusions and constructs. In this course, students will learn basic grammar, syntax, and commonly-used vocabulary. The cultural and literary implications of classical Chinese will be discussed throughout the course in order to provide the students not only with the linguistic knowledge of classical Chinese, but the rich historical backgrounds implied in this particular style of Chinese. The main goal of the course is for students to acquire skills in reading Classical Chinese and expand their knowledge and understanding of ancient Chinese culture, society and history in relation to modern and contemporary Chinese culture, such as Confucianism and family values. With this knowledge and training, not only will students be more comfortable reading the Chinese Classics, they will also thereby increase their proficiency in modern Chinese and their knowledge of Chinese culture. This course will fulfill the Intercultural Cultures and B.A. &quot;Other Cultures&quot; and foreign language requirements.

Prerequisite: CHNS 401 or equivalent (such as study abroad credit)
Bachelor of Arts: Foreign/World Lang (12th Unit)
Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 455: Masterpieces of Traditional Chinese Literature
3 Credits

Survey of traditional Chinese literature, including poetry, historical narratives, philosophical texts, and drama and novel. CHNS 455 Masterpieces of Traditional Chinese Literature (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. CHNS 455 Masterpieces of Traditional Chinese Literature presents an overview of China’s literary tradition, focusing, in particular, on literary techniques used in a variety of text types such as poetry, essays, fiction and drama. This course aims to develop students’ advanced knowledge of the features of traditional Chinese literature and its intellectual, cultural, and social background. Through close reading of selected major works, students will become familiar with the features of various genres. For example, students will study prose writings, the major poetic forms and some of the important poets from the Tang period, and aspects of literati culture through close reading of texts from the late imperial period. At the end of this course, a student will have read and discussed sample writings from philosophical and poetic traditions and well as sample writings on the cultural and scholastic activities of the literati. Students should also
be able to deal with classical texts on a reasonable level, to identify problematic passages and to be able to clarify them with the help of secondary reference material. Students should also be able to appreciate some of the civilizing aspects of Chinese culture as well as literary and poetic devices such as tonal patterns, rhyme schemes, structure and writing techniques, and discussion of the poets and their work, and have an understanding of the main genres in classical Chinese literature and philosophy.

Prerequisite: CHNS 401 or equivalent
Bachelor of Arts: Foreign/World Lang (12th Unit)
Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

CHNS 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors

CHNS 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CHNS 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CHNS 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Civic and Community Engagement (CIVCM)

CIVCM 211N: Foundations: Civic and Community Engagement
3 Credits
Through readings, discussion, deliberation, listening, and individual as well as collaborative action, this course gives students the opportunity to learn about and practice theories and habits of civic and community engagement and public scholarship with the goal of helping to build democratic capacity and sustain participatory democracy. This course emphasizes concepts and case studies that focus on the people's role in shared governance. The course also provides a foundation for understanding how a wide range of other individual and collective practices have an equally important role to play in building and sustaining community. The course draws from studies in demography, political science, sociology, psychology of racial identity formation and education to help students communicate better about and in shared governance. Among the core concepts are the role of students and other citizens in sustaining and transforming their communities, the historical and contemporary mission of Land Grant universities, the centrality of rhetoric and communication to collaborative judgment, and the relationship among media, cultures, and politics as they affect civic and community engagement. Students also learn together about the range of ways that citizens do, can, and might participate in democratic decision-making and will observe and practice these forms in several communication media and across a range of differences. Finally, learn about models of and opportunities for engaging other citizens across and beyond Penn State, including in global environments.

Civil Engineering (CE)

CE 100S: Topics and Contemporary Issues in Civil and Environmental Engineering: First-Year Seminar
1 Credits
First-Year Seminar exploring a specific topic or contemporary issue in civil and environmental engineering. CE 100S Topics and Contemporary Issues in Civil and Environmental Engineering: First-Year Seminar (1)
(FYS)The first-year seminar in civil engineering will provide an opportunity for students to explore a specific topic or contemporary issue, which may fall within one of the Department of Civil and Environmental Engineering's technical emphasis areas, or include many of the facets of civil engineering. Civil engineers plan, design, construct, operate, and maintain the physical works and facilities essential to modern life: highways, streets, bridges, dams and levees, water distribution and wastewater collection, and treatment systems. Civil engineers work with architects and other engineers in the design and construction of buildings and industrial structures and facilities. They also have a major responsibility for identifying and remediating environmental hazards. The specific course topic, chosen by the course instructor, will vary by section and semester and will be indicated by the section subtitle. Examples of the topics that may form the core of a seminar section include droughts and floods, lessons from structural failures, engineers as environmental change agents, beneficial reuse of treated wastewater, highway accident reconstruction and engineering, and landmark civil engineering projects. Within the context of the specific seminar topic, each section will provide students with an introduction to the civil engineering field, exposure to some of the professional skills and competencies associated with academic study and the practice of engineering, and access to relevant student and professional societies. Each seminar section will include an active learning element that may include laboratory experiments, group projects, class discussions, and possible trips, providing close interaction with the faculty member teaching the course. This seminar course will help incoming students become acclimated
to University life and become aware of available resources and support services.

First-Year Seminar

CE 209: Fundamentals of Surveying
2 Credits
Fundamental surveying measurements, traverse computations, coordinate geometry, mapping, CAD applications. Intended for architectural engineering students. (The lecture will be taught concurrently with CE 211.)

Prerequisite: EG 130, MATH 141

CE 254: Personal & Occupational Safety
3 Credits
Students will learn about principles of safety in work and personal settings. CE 254 Personal & Occupational Safety (3) (GHA; US) This is a 3 credit course designed for students who want an understanding of safety, practices related to the individual's wellness and developing knowledge, attitudes, habits and skills needed for a safe healthful lifestyle. General safety topics that are relevant to students as they adjust to the transition into and through college are introduced through a values and decision making approach to learning. The students will understand direct and indirect cost related to an accident; identifying the major occupational and general injuries and deaths and the role of workers compensation, and safe procedures. OSHA will be discussed including its structure & organization, citations & fines, inspections, various standard areas, and developing an effective safety program. The course content will also be related to principles of personal and general safety including, preventive and protective systems, highway/road safety, general child safety, emergency response, and how safety is integrated with their lifestyle and our society. The course is designed to give students a broader understanding of both short-term and long-term wellness and how it is affected by safety behavior.

United States Cultures (US)
General Education: Health and Wellness (GHW)

CE 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 310: Surveying
3 Credits
Fundamental surveying measurements, traverse computations, coordinate geometry. Global positioning and graphic information systems are studied.

Prerequisite: EDSGN100, MATH 141

CE 321: Highway Engineering
3 Credits
Highway engineering principles, vehicle and driver characteristics; geometric and pavement design; highway drainage; traffic engineering, capacity analysis, and signal timing. CE 321 Highway Engineering (3) This course provides an introduction to highway engineering and is designed for civil engineering students. It includes topics such as vehicle motion, highway cross-sections, horizontal and vertical alignment, and sight distance. Other topics are pavement design, drainage analysis, traffic engineering and highway capacity. The students will also have a CAD lab where they design a highway using computer software. The semester project provides hands-on highway design experience. This course serves as a prerequisite for advanced highway engineering study.

Prerequisite: CE 310

CE 332: Professionalism, Economics & Construction Project Delivery
3 Credits
Introduction to engineering management process; economic analysis; pricing; contract documents; estimating; ethics; professional practice and engineering economy. CE 332 CE 332 Project Development (3) The first five weeks of the course introduces concepts relating to engineering ethics, professionalism including the importance of licensure, and engineering economy. The remainder of the semester concentrates on project development and the design and construction of the delivery process. Topics include: scope of design services; conceptual cost estimates; the bidding process, estimating; and risk management.

CE 333: Construction Management I
3 Credits
Components of a construction organization, managerial terminology and documents, labor laws and relations, insurance and safety. CE 333W CE 333W Construction Management I (3) The object of this course is to have a broad understanding of the business process in the construction industry. The construction industry offers a variety of organizations with each having specialized needs and processes in operating an effective business. The professional constructor deals with a complex process of decisions and auctions that start from the time of projects conception until the project is completed. The course addresses issues involving legal and code requirements, necessary documents in selecting projects, developing estimates, determining delivery systems, planning and scheduling, and managing a construction project. Also covered are the liability issues that will be required, insurances or bond requirements, and the ethical role of the constructor. The managerial and safety role of the professional constructor is also introduced.

Writing Across the Curriculum

CE 335: Engineering Mechanics of Soils
3 Credits
Soil compositions, classification, subsurface exploration, ground water flow, stress analysis, compaction, soil behavior, bearing capacity, lateral earth pressure, slope stability. CE 335 CE 335 Engineering Mechanics
of Soils (3) This course explores the engineering properties of soils, fundamental soil mechanics, and their applications of foundation design and analysis. Specific topics covered in this course include soil compositions, soil classification, subsurface exploration, ground water flow and seepage analysis, stress analysis, compaction, consolidation, strength behavior, bearing capacity, lateral earth pressure, and slope stability analysis.

Prerequisite: E MCH213 ; Prerequisite or concurrent: GEOSC001

CE 336: Materials Science for Civil Engineers

3 Credits

Introduction to civil engineering materials; their structure and behavior; relationship between structure and behavior. C E 336 C E 336 Materials Science for Civil Engineers (3) This course introduces engineering students to the structure, properties and behavior of construction materials, providing the bridge between engineering mechanics and engineering design. The course is an engineering science course focused at providing the students with a working knowledge of the nature and engineering properties of construction materials to understand prediction models and statistical variations for quality control. The course provides an introduction to aggregates, concrete, asphalt, timber, steel, structural alloys, and polymers used in the civil infrastructure and in building construction.

Prerequisite: E MCH213 ; Prerequisite or concurrent: STAT 401

CE 337: Civil Engineering Materials Laboratory

1 Credits

Laboratory investigating the physical and mechanical properties of civil engineering materials; soils, aggregates, concrete, steel, wood, and polymers. C E 337 C E 337 Civil Engineering Materials Laboratory (1) The understanding of the structure, physical and mechanical properties and behavior of engineering materials is at the very core of engineering design. A command of this knowledge is essential for all civil engineers. This 1-credit laboratory provides a hands-on experience with the testing and evaluation of civil engineering materials, including soils, aggregates, concrete, steel, wood and polymers. In addition, this lab builds on the topics of professional communication and engineering in groups that are present throughout the Civil Engineering curriculum. This course is required for all Civil Engineering majors and is a required laboratory component for ABET review. The course also may serve selected Architectural Engineering students that currently enroll in Material Science for Engineers. The laboratory will be taught every semester with an offering of 4-6 sections per semester. The Civil Engineering Materials Laboratory is directly tied to Engineering Mechanics of Soils and Material Science for Civil Engineers. It replaces the laboratory component of both of the existing courses to create a comprehensive materials laboratory experience. By creating a stand-alone course, students may schedule the laboratory separate from the lecture time, eliminating multiple course conflicts. The course meets 3 hours each week throughout the semester with an introductory lecture and training session on lab safety. Concurrent or previous enrollment in Engineering Mechanics of Soils or Material Science for Engineers ensures that the students have completed the Strength of Materials course and have a clear point of reference to the relevance of the material in the course. The Civil Engineering Materials Laboratory will incorporate the use of a variety of equipment, including universal testing machines, Charpy fracture toughness device, Rockwell Hardness device, soil compaction devices, sieves, plasticity index devices, concrete mixing equipment, electronic strain devices, direct/biaxial/triaxial shear devices and other similar equipment.

Prerequisite: C E 335 or C E 336 or concurrent

CE 340: Structural Analysis

3 Credits

Analysis of statically determinate and indeterminate structures, beams, and frames; reactions, axial forces, shears, moments, deflections. Introduction to influence lines. The course includes an introduction to structural systems and basic analysis methods for beams, frames, and trusses. Topics covered include the analysis of statically determinate and indeterminate structures, deflection calculations, influence lines, and an introduction to the stiffness method and a software package for structural analysis.

Prerequisite: EMCH 213

CE 341: Design of Concrete Structures

3 Credits

Design of reinforced concrete beams, slabs, and columns, with emphasis on ultimate-strength methods; prestressed concrete; building and bridge applications. C E 341 Design of Concrete Structures (3) This course provides students with an understanding of the structural design process, the mechanics of reinforced concrete, and the ability to design and proportion structural concrete members including slabs, beams, and columns for strength, serviceability, and economy. Design procedures are based on the Building Code Requirements for Structural Concrete published by the American Concrete Institute. The mechanics underlying the code design equations are explained as well as their application to practical design problems. In addition to regular homework assignments the students complete a design project in which the design of specific components is integrated into the design of the structure as a whole.

Prerequisite: C E 340 . Prerequisite or concurrent: C E 336

CE 342: Design of Steel Structures

3 Credits

Design of steel tension members, beams, columns, and connections; elastic and plastic methods; design applications. C E 342 Design of Steel Structures (3) This is a first course in design of steel structures intended to develop a fundamental ability to evaluate and design steel tension members, beams, columns, beam-columns, composite beams, and connections. Discussion of design requirements focuses on failure mechanisms and behavior, evaluation of existing components, and the process to develop economical steel member designs. All discussions are based on the current American Institute of Steel Construction steel design specifications with an overview of historical requirements as appropriate. Students complete a design project of a multi-story, steel commercial building that is intended to synthesize the course material and create a realistic context for the course. Weekly assignments are typically derived from the course project. Computer applications are an important component of these assignments.

Prerequisite: C E 336 , C E 340
CE 360: Fluid Mechanics

3 Credits

Mechanics of fluids; flow in conduits and around bodies, friction and energy loss, fluid measurements. C E 360 Fluid Mechanics (3) The course objective is to provide students with the fundamental physical and analytical principles of fluid mechanics through the understanding of: conservation of mass, conservation of energy, and the conservation of momentum equations. The student will demonstrate the understanding of these fundamentals by solving problems dealing with: fluid properties, fluid statics, pressure on plane and curved surfaces, buoyancy and flotation, kinematics, systems, control volumes, conservation principles, ideal incompressible flow, impulse-momentum, and flow of a real fluid. Fluid mechanics is a prerequisite to all courses in hydrosystems and environmental engineering. It is typically offered fall and spring semesters and during summer session. A series of homework problems are assigned after each lecture and there are typically 3 examinations given during the semester and final examination during the final examination period.

Prerequisite: E MCH212

CE 370: Introduction to Environmental Engineering

3 Credits

Nature and scope of environmental issues; air, water, land impacts; fundamentals and processes of pollution control. CE 370 Introduction to Environmental Engineering (3) The objectives of this course are to introduce science and engineering principles for dealing with natural and engineered environmental systems; to provide quantitative tools to solve environmental engineering problems dealing with water and wastewater treatment, air pollution control, and management of solid and hazardous wastes; and to identify alternative ways to deal with pollution and to minimize pollution.

Prerequisite: CHEM 110 ; MATH 111 or MATH 141

CE 371: Water and Wastewater Treatment

3 Credits

Water treatment; water storage; design of water distribution and wastewater systems; pumping stations. CE 371 Water and Wastewater Treatment (3) This course includes engineering design of water and wastewater treatment facilities, and it emphasizes quantitative problem solving. Numerous examples pertain to contemporary water and wastewater treatment facility designs. This course will nurture the ability to use the techniques, skills and state-of-the-art engineering tools so as to prepare students for water and wastewater treatment engineering practice. Water treatment-related topics include: water quality criteria for potable water, reactor characteristics, reaction rates in water and wastewater treatment, mixing and flocculation sedimentation, rapid sand filtration, chlorination and alternative disinfection. Wastewater pretreatment, biological principles for treatment of wastewaters, suspended growth bio-systems, attached film bio-systems, nutrient removal processes, and de-watering and treatment processes for sludges is also included.

Prerequisite: C E 360 , C E 370

CE 396: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CE 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CE 410: Sustainable Residential Land Development

3 Credits

C E 410 provides students with a working knowledge of the residential land development design process including conservation and green design approaches; site assessment; grading and earthwork; utility design and layout; and stormwater management. The course covers the subdivision and land development regulatory process, zoning issues, and the elements of civil infrastructure design required in the residential land development process. Conservation design and sustainable development techniques are emphasized throughout the course. The course focuses on practice-oriented design problems and a real piece of land (either University owned or privately held) will be used throughout the semester for demonstration of design approaches for homework assignments and in-class examples. The course is an elective for students in the Civil Engineering major and an elective in the Residential Construction Minor.

Prerequisites: CE 332 Corequisites: AE 372 Concurrents: 7th Semester standing in AE or CE major.

Writing Across the Curriculum

CE 411: Residential Construction Design Project

1 Credits

Interdisciplinary teams will develop a complete design and investment package for a real life new residential or real estate development.

Prerequisite: 5th semester standing or higher

CE 421: Transportation Design

3 Credits

Design of streets and highway facilities; emphasis on geometric elements, intersections and interchanges, roadway drainage, and pavement design. C E 421 W C E 421W Transportation Design (3) This course provides advanced study in highway engineering and is designed for civil engineering students who are interested in Transportation Engineering careers. It includes topics such as functional classification, highway cross-sections, horizontal and vertical alignment and sight distance. Other topics are pavement design, drainage intersection and interchange design and highway signs. The students will also have a CAD lab where they design a complete highway system. The semester project
Prerequisite: Writing Across the Curriculum

CE 422: Transportation Planning
3 Credits

Transportation systems planning, programming, and management; modeling and simulation, data collection, analysis, and forecasting. C E 422 C E 422 Transportation Planning (3)In this course, students acquire basic knowledge on the history and recent developments in transportation planning problems and quantitative methods. They will develop an understanding of transportation planning, transportation modeling, transportation system simulation, data collection techniques, and gain laboratory experience with each. Students will use mathematical/statistical models and GIS software to analyze, simulate, and forecast the demand for transport services. They will gain familiarity with the software used in transportation planning practice.

Prerequisite: 3 credits in probability or statistics

CE 423: Traffic Operations
3 Credits

The highway capacity manual, concepts and analyses, freeway operations, signalized and unsignalized intersections, signal coordination, traffic impact studies.

Prerequisite: C E 321

CE 424: Project Info. Modeling
3 Credits/Maximum of 3

Project Information Modeling is the process of constructing a 3D digital model of a project with attached information. Project Information Modeling (PIM) is an integrated process built on coordinated, reliable information about a project from design through construction and into operations. It is a new approach to project delivery in which a digital representation of the project process is used to facilitate the exchange and interoperability of information. Implementation of PIM generates significant benefits, including improved design quality, reduction in design errors, improved field productivity, reduction in conflicts and changes, and final reduction in construction cost and time. In this course, students will learn applications of PIM used in the industry by different disciplines (e.g., architectural, engineering and construction), design model-based development and coordination (e.g., 3D, 4D, 5D, and XD), value engineering concepts, system clash prevention, and understand the benefits of various parametric modeling applications that can be used. Upon completion of this course, students will have full understanding of PIM concepts throughout the lifecycle of a building or an infrastructure project, from planning, design, pre-construction, construction and operations.

Prerequisite: EDSGN100 ; C E 332 or C E 333W

CE 432: Construction Project Management
3 Credits

Fundamentals of project management, construction scheduling using the CPM technique, construction project preplanning, and control of quality, safety, and costs. C E 432 C E 432 Construction Project Management (3) This course introduces students to the basic practical aspects of the construction process and the quantitative methods used to manage projects within budget, deadline, and prescribed quality. Students will understand the construction market and the inter-relationships among the various players involved. Focus in this course is on integrating the various facets of construction cost estimating, planning, scheduling, control, and overall project management.

Prerequisite: C E 332

CE 434: Geotechnical Engineering Design
3 Credits

This is an advanced design course in geotechnical engineering, offered to undergraduate senior and graduate students in civil engineering. This course covers fundamental engineering geology, subsurface exploration including geophysical techniques, principles of shallow and deep foundation designs, slope stability, geosynthetics design, groundwater and drainage, and geotechnical earthquake engineering. The course is typically delivered in lecture format and concentrates on practice-oriented design problems in geotechnical engineering.

Prerequisite: CE 335

CE 435: Foundation Engineering
3 Credits

C E 435 provides students with a working knowledge of the state-of-practice of foundation engineering, covering bearing capacity, settlement, and structural design of shallow foundations; lateral earth pressure; design of retaining and sheet-pile walls; and an introduction to deep foundations. The course is an elective for students in the civil engineering major and serves as an essential prerequisite for continued study in the areas of construction and structural engineering. The course concentrates on practice-oriented design problems in foundation engineering.

Prerequisite: CE 335

CE 436: Construction Engineering Materials
3 Credits

Design, production, application, specification, and quality control of construction materials unique to civil engineering. C E 436 Construction Engineering Materials (3) C E 436 provides students with a working knowledge of the safe design, production and application of quality construction materials unique to civil engineering. The course builds upon the understanding of civil engineering materials gained in the introductory course. C E 436 focuses on the materials design and quality control of aggregates, steel, portland cement concrete, and asphalt concrete.

Prerequisite: C E 336 , STAT 401
CE 437: Engineering Materials for Sustainability
3 Credits
Environmental impact of materials; life-cycle assessment; material selection to optimize performance; design, evaluation, and production of green construction materials.

Prerequisite: C E 336 or equivalent

CE 438: Construction Engineering Capstone Design
3 Credits
Construction project integrating geotechnical reports; materials specifications; quality control; equipment; estimation; scheduling; design details: excavations, foundations, retaining walls, formwork, pavements.

CE 438W C E 438W Construction Engineering Capstone Design (3) This course is intended to establish the foundation for organizational and procedural understanding in construction engineering. The student will gain the knowledge necessary to apply engineering principles in analyzing economical approaches to construction problems. This course will cover construction methods, equipment, and cost estimation of the construction materials, excavation, foundation, and other phases of civil engineering construction projects.

Prerequisite: C E 432 and C E 435 or C E 436
Writing Across the Curriculum

CE 439: Geotechnical and Materials Engineering Design Capstone
3 Credits
Subsurface site evaluation; integrated design of retaining walls, foundations, pavements, and materials for airports, highways, dams, or other facilities.

Prerequisite: C E 435 , and either C E 436 or C E 437
Writing Across the Curriculum

CE 441: Structural Design of Foundations
3 Credits
Design of concentrically and eccentrically loaded square, rectangular, and combined footings; analysis and design of mat foundations; retaining walls; piles caps; flexible retaining design, and caissons. C E 441 Structural Design of Foundations (3) This course prepares the structural engineering student to analyze, proportion, size reinforcing, and select steel sections for structural foundations designs based on the state of practice presented in ACI 318, AISC, and available industry literature. Structural foundation analysis techniques for many foundation types are presented with extensive use of EXCEL in the design process. Analysis and design of foundation systems are developed for concrete shear walls, concentrically loaded square and rectangular footings, eccentrically loaded square and rectangular footings, and combined footings. Use of approximate and finite element analysis methods for analyzing mat foundations and grid foundations are presented. Working knowledge of retaining wall, pile cap, and flexible earth retaining structure design methods are also developed. This course is an elective for students in the civil engineering major and serves as an essential prerequisite for continued study in structural engineering and advancement to the structures capstone course. This course is delivered in lecture format and concentrates on practice-oriented structural foundation analysis and design problems.

Prerequisite: C E 341; Concurrent: C E 342

CE 445: Advanced Structural Analysis
3 Credits
Analysis of trusses and frame stiffness matrix method of analysis. Analysis of indeterminate beams, trusses, and frames using classical methods. C E 445 C E 445 Advanced Structural Analysis (3) The course is an advanced analysis which includes an analysis of structures using classical and matrix methods. Topics covered include the analysis of statically determinate and indeterminate beams; trusses and frames. An introduction to the stiffness method and a software package for structural analysis will also be covered.

Prerequisite: C E 340

CE 447: Structural Analysis by Matrix Methods
3 Credits
Analysis of truss and frame structures using flexibility and stiffness methods of matrix analysis. Computer applications.

Prerequisite: C E 340

CE 448: Advanced Structural Design
3 Credits
Wind, snow, seismic, bridge loads; building design using steel, concrete, and prestressed concrete; advanced steel connections; capstone project; computer applications. C E 448W C E 448W Advanced Structural Design (3) The objectives of the course are to develop an understanding of advanced structural engineering design issues in a capstone context that will merge knowledge gained in prerequisite structural design and analysis courses. Building on concepts introduced in introductory steel building, concrete building, and foundation design, students will gain proficiency in structural conceptualization, environmental and induced load determination, modeling and analysis, detailed design of steel and concrete structures, and graphical communication.

Prerequisite: C E 342, C E 441; Prerequisite or concurrent: ENGL 202C
Writing Across the Curriculum

CE 449: Advanced Structural Design
3 Credits
Special systems, frames and bracing in steel, wood and reinforced or precast concrete. Introduction to composite construction. C E 449 C E 449 Advanced Structural Design (3) This course provides students with an understanding of advanced structural design processes, the mechanics of special systems (such as prestressed concrete) as well as the ability to design and proportion structural connections and bracing members including reinforced concrete and steel. The course will also introduce the LRDF approach and composite construction in which the design of specific components is integrated into the design of the structure as a whole.

Prerequisite: C E 340, C E 341, C E 342
CE 454: Safety

3 Credits

This course will focus on safety issues as they relate to OSHA.

**Prerequisite:** permission of program

CE 456: Planning and Scheduling

3 Credits

Theory and practice used in planning and scheduling projects; defining task and resources, creating logic diagrams, and monitoring the projects. C E 456 C E 456 Planning & Scheduling (3) "Planning and Scheduling" encompasses construction tenets and fundamentals including organizing, staffing, directing, and controlling representing concepts and principles integral to career applications in project and design management. Students who successfully complete this course will be able to: 1) understand and use planning, scheduling, and control techniques for managing construction projects 2) understand scheduling techniques and computer applications in critical path methods, PERT, and resource scheduling 3) understand construction financing and schedule / cost relations 4) understand the principles of project tracking, progress measurements, trend analysis, and forecasting

**Prerequisite:** C E 332 or C E 333W

CE 458: Construction Management II

3 Credits

Procedures in construction organization including procurement, ethics, field supervision, legal and managerial problems, personnel, cost accounting, and construction business practices. C E 458 C E 458 Construction Management II (3) This course presents policies, procedures, and applications in construction management and organization including procurement, ethics, field supervision, legal and managerial problems, personnel, cost accounting, and construction business practices. The course encompasses construction tenets and fundamentals including planning, organizing, staffing, directing, and controlling. Students who successfully complete this course will be able to: 1) understand organizational issues concerning development of a project delivery system 2) comprehend the roles and responsibility of the Resident Project Representative and members of the construction team and the respective utility of the resident inspection office responsibilities 3) know the various documentation construction records/reports normally 4) recognize the salient features of specifications and drawings and the fundamentals for using them in contract administration 5) become familiar with the prevailing construction laws, policies, and procedures dealing with labor and safety 6) understand the utility of meetings during construction and the principles and techniques of negotiation 7) apply risk management through contractual allocation of rush and liability 8) become well versed in planning/orchestrating during reconstruction operations 9) apply management principles of directing and controlling construction operations and resources including CPM scheduling, inspections, tests, and contractor submittals 10) understand the concept of value engineering in construction operations 11) understand the critical control issues involved with measurement and payments, controlling construction materials and workmanship, and changes and extra work

**Prerequisite:** C E 333W, C E 456

CE 461: Water-resource Engineering

3 Credits

Qualitative and quantitative description of the hydrologic cycle, flood and drought frequency analysis, climate and land use change impacts, risk analysis and uncertainty, water resource management at regional, national and global scale.

**Prerequisite:** C E 360

CE 462: Open Channel Hydraulics

3 Credits

Free surface flow in rivers, canals, steep chutes, stilling basins, and transitions. C E 462 Open Channel Hydraulics (3) This is an advanced senior level course dealing with steady gradually varied flow. The laws of conservation of mass, energy and momentum are applied to gradually varied steady flow problems in rectangular and non-rectangular channels. Basic definitions and equations governing flow are developed for uniform and nonuniform flow conditions. The students will use their knowledge of fluid mechanics, calculus, numerical analysis and computer science to solve practical open channel flow problems.

**Prerequisite:** C E 360

CE 465: Water Resources Capstone Course

3 Credits

Hydraulic design of river structures and open channels including supercritical and spatially varied flow; hydrologic/hydraulic computer modeling; design project. C E 465W C E 465W Water Resources Capstone Course (3) This course is designed to provide seniors in the water resources area with a major design project. In addition, the course has a writing component, which satisfies the University's writing across the curriculum requirement. Projects cover hydrologic and hydraulic design. Hydrologic analysis is performed to size the hydraulic structure systems that convey the design flows. The students utilize Geographic Information Systems data bases, utilize several state of the art computer models, and are required to write several computer programs.

**Prerequisite:** C E 461. Prerequisite or concurrent: C E 462

Writing Across the Curriculum

CE 472: Environmental Engineering Capstone Design

3 Credits

Principles and design of unit operations for water; domestic and industrial wastewater treatment; equipment selection and application. C E 471 C E 472W Environmental Engineering Capstone Design (3) This course will integrate engineering science and design skills through application to an open-ended environmental problem dealing with one or more of the following: industrial sustainability and pollution prevention; water transmission and treatment; wastewater collection and treatment; solid waste collection, treatment, and disposal; remedial investigation and feasibility studies for a hazardous waste site.

**Prerequisite:** C E 370, C E 371

Writing Across the Curriculum
CE 475: Water Quality Chemistry

4 Credits

Chemistry applicable to the understanding and analysis of water quality, pollution, and treatment. C E 475 C E 475 Water Quality Chemistry (4) C E 475 Water Quality Chemistry is a senior/graduate-level course focused on both theoretical aspects of water chemistry and applied aspects of engineering practice. The course will cover a wide range of fundamental chemical principles that will be investigated further in the laboratory exercises and through an independent research project. The course covers reaction stoichiometry and reaction type with specific examples of processes typically encountered in water, wastewater and hazardous waste treatment situations. The course distinguishes between kinetic and equilibrium reactions and presents mathematical formulations for both types of reactions. The course reviews thermodynamics and electrochemistry and relates them to equilibrium constants and the spontaneity of reactions. The course covers redox reactions especially with respect to the corrosion of civil infrastructure, the generation of acid rock drainage, and biological wastewater treatment processes. The course covers acid/base reactions especially with respect to disinfection of drinking water and pH adjustments commonly used to enhance air stripping of pollutants. The course introduces the use of computer models for determining chemical speciation of acid/base constituents. The course covers alkalinity and the carbonate system especially with respect to the issues of acid rain, acidification of the Earth’s oceans, and limestone buffering of surface waters in Pennsylvania. Computer models are used to calculate chemical speciation in carbonate-containing systems. The course covers pH-dependent solubility of common minerals such as primarily carbonates, hydroxides and aluminosilicates. The course covers engineering applications related to metal solubility including water softening, coagulation for turbidity removal in water treatment plants, heavy metal generation from acid rock drainage, and heavy metal removal in hazardous waste treatment. The course covers complexation reactions especially with respect to effects on metal solubility and toxicity. Computer models are used to calculate chemical speciation in multi-complexant systems. The course covers analytical chemistry especially with respect to the most common parameters measured in water and wastewater treatment systems, and with respect to the principles of measurement (i.e. gravimetric, spectrometric, volumetric, potentiometric analyses). The course involves a research project on a local water quality problem of concern. In the past, this project has focused on the proposed Beneficial Reuse; of wastewater in Centre County, and on the impact of acid rock drainage from the construction of I-99 on Buffalo Run in Centre County.

Prerequisite: C E 370, CHEM 110, CHEM 111

Cross-Listed

CE 476: Solid and Hazardous Wastes

3 Credits

Characteristics and treatment of solid wastes and hazardous wastes. C E 476 C E 476 Solid and Hazardous Wastes (3) Solid waste management continues to be a major area of concern for the Environmental Engineering profession. Based on the principle of the conservation of mass, we know that all of our wastes must be deposited in either the air, water or land environments. With improvements in air and water pollution control technologies, resulting in solid residuals, an increasing waste load is being placed on the land. Environmental impacts are being addressed as a future need.

Prerequisite: C E 370, C E 371

CE 479: Environmental Microbiology for Engineers

3 Credits

Intro microbiology for engineers; microbe structure, function, and diversity; environmental ecosystems; diagnostic labs. C E 479 Environmental Microbiology for Engineers (3) C E 479 Environmental Microbiology for Engineers is a senior/graduate-level course comprised of three main sections: (1) the fundamentals of microbial structure, function, nutrition, and growth for students with no prior formal instruction in microbiology; (2) microbial diversity and ecology; and (3) the application of these fundamental microbial principles to environmental systems. In the fundamentals section, the course covers microbial nomenclature, macromolecules, cell biology, energetics, growth, and genetic regulation. This is illustrated with calculations of thermodynamic constraints in microbially catalyzed reactions, the calculation of efficiencies based on energy conservation from common pathways, and the connection of these efficiencies to microbial growth in a chemostat. Building on these fundamental concepts of metabolic potential and conserving energy and acquiring reducing equivalents from redox reactions, the second section covers the reactions and energetics of the primary microbial functional diversity such as phototrophy, lithotrophy, autotrophy, anaerobic respirations, and fermentations. It also introduces modern molecular biology techniques for studying microbial systems, and pulls the concepts of functional diversity together by illustration with the major nutrient cycles, including discussions of environments in which each reaction might be encountered. Finally, the last section applies these ecological principles to several specific engineered environments of interest. Homework assignments throughout the semester involve questions about the methods, findings, or applications of recent articles that highlight the recently covered material, giving the students experience in the critical evaluation of primary literature and demonstrating the relevance of the material to environmental microbiology research and application. Complementing the progression of the lectures are eight instructional laboratories that provide hands-on application of diagnostic microbiological techniques to the characterization of environmental enrichment cultures and pure cultures. For example, a microscopy lab immediately follows the lecture material on cell biology, an enrichment experiment follows the material on nutrition, an enumeration experiment follows the section on microbial growth, etc. The final seven weeks of the laboratory period are devoted to group projects, in which students apply the techniques the have learned as appropriate to answer specific short-term research hypotheses. The final period is devoted to group presentations of their projects.

Prerequisite: CHEM 111, C E 370

CE 488C: Capstone Project - Construction

4 Credits/Maximum of 4

This course consists of a project either selected by the students with approval or assigned by the instructor. C E 488C Capstone Project - Construction (4) This course integrates the structural design and construction skills through an application to a project focusing in the construction management area. The course is serves as the capstone of the senior student course education courses. The course C E 488C identifies the student selection of a construction capstone project. The student works on a team during the course project process. The team will evaluate on different assignments during the project as well the final product. The team will submit a final written report as well make an oral presentation. The SDCET advisory board is invited to participate in the
oral participations. The 4 credit hour course is separated into two parts which are taken in two consecutive semesters. The first course offering is for 1 credit to provide the students an overview of the course and an introduction to the project. The course is then repeated for 3 credits the following semester for the project. This is to allow the necessary time for students to complete the project.

**Prerequisite:** eighth-semester Structural Design and Construction Engineering Technology student. Previous or concurrent: CET 430, CET 431, CET 432, CET 435, C E 456

CE 488D: Capstone Project - Structural Design

4 Credits/Maximum of 4

This course consists of a structural design project either selected by the students with approval or assigned by the instructor. C E 488D Capstone Project - Structural Design (4) This course integrates the structural design and construction skills through an application to a project focusing in the construction management area. The course is serves as the capstone of the senior student’s education courses. The course C E 488D identifies the student selection of a structural design capstone project. The student works on a team during the course project process. The team will evaluated on different assignments during the project as well the final product. The team will submit a final written report as well make an oral presentation. The SDCET advisory board is invited to participate in the oral participations. The 4 credit hour course is separated into two parts which are taken in two consecutive semesters. The first course offering is for 1 credit to provide the students an overview of the course and an introduction to the project. The course is then repeated for 3 credits the following semester for the project. This is to allow the necessary time for students to complete the project.

**Prerequisite:** eighth-semester Structural Design and Construction Engineering Technology student. Previous or concurrent: CET 430, CET 431, CET 432 and CET 435

CE 494: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

CE 494H: Honors Senior Thesis

1-6 Credits

Investigation of an original project in the area of Civil Engineering. C E 494H C E 494H Honors Senior Thesis (1-6) Investigation of an original project in the area of Civil Engineering. The thesis topic must be approved by the honors advisor and thesis advisor and submitted as a thesis proposal to the Schreyer Honors College prior to scheduling the course. Students may register for a total of 6.0 credits over their last two semesters.

Honors

CE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CE 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**Civil Engineering Technology (CET)**

CET 308: Construction Methods and Materials

3 Credits

The study of the methods and materials used in the construction industry.

**Prerequisite:** MATH 022, MATH 026, ED&G 100 or EG T 101 and EG T 102

CET 342: Civil Engineering Materials - Concrete and Bituminous

3 Credits

Properties and tests for aggregates, portland cement, fresh and hardened concrete, concrete mix designs. Bituminous Materials: properties, mixtures and tests.

**Prerequisite:** MATH 022, MATH 026

CET 343: Soils Mechanics

3 Credits

This course presents the fundamentals of engineering soil mechanics related to civil engineering. CET 343 Soil Mechanics (3) This course presents the fundamentals of engineering soil mechanics related to civil engineering. The course provides the initial exposure to soil mechanics, presenting the fundamentals essential to further study in foundation engineering and other advanced courses. The course begins with coverage of how soil properties influence the different types of structures or facilities built by structural and construction engineers. Students study the formation of natural soil deposits by the geological and biological events in the earth’s history. The soil sampling procedures are briefly explained, and then various index properties of soils are determined, and utilized in engineering classifications of soils. Options available for compacting soils in the lab and field are studied. The laboratory tests for finding soil permeability are studied, followed by coverage of empirical equations for estimating the permeability. Simple cases of seepage are analyzed using graphical flow net method. Elastic half-space theories and approximate methods are used for estimating the stress distribution in soils. The concepts of pore water pressure and effective stress are introduced. The covered strength theories include the unconsolidated undrained shear strength parameters. Elastic compression and consolidation compression are covered in this course. The course ends with simple field soil investigation procedures.

**Prerequisite:** MATH 140, Statics; Concurrent: ET 322 or E MCH213 or MCH T213
CET 361: Fluid Flow
3 Credits
Fluid flow theory; hydrostatics; dimensional analysis and similitude; pipe flow; flow measurement; open channels; flow forces; fluid machinery.
Prerequisite: MATH 140, Statics, Dynamics

CET 430: Structural Analysis
3 Credits
Analysis of determinate structures; use of influence lines; deflection of structures; classical methods of analysis of statically indeterminate structures.
Prerequisite: Statics, Strength of Materials, MATH 140

CET 431: Structural Design-Steel
3 Credits
Design of steel beams, columns, truss members, decks, bar joists and selected connections.
Prerequisite: Statics, Strength of Materials, MATH 140; Concurrent: CET 430

CET 432: Structural Design-Reinforced Concrete
3 Credits
Design of reinforced concrete beams, columns, slabs, and selected framing systems for bending and shear. Introduction to formwork design.
Prerequisite: Statics, Strength of Materials, MATH 140; Concurrent: CET 430

CET 434: Foundations
3 Credits
Analysis and design of footings, piling, retaining walls; consideration of construction problems involving soils and foundations of structures.
Prerequisite: CET 343, CET 430, CET 432

CET 435: Construction Estimating
3 Credits
Methods and techniques used in estimating construction cost; practice in takeoffs, costing and final bid preparation; microcomputer applications; class projects.
Prerequisite: ED&G 100, ET 200, C E 333W

Classics and Ancient Mediterranean Studies (CAMS)

CAMS 1: Greek and Roman Literature
3 Credits
CAMS 1 Greek and Roman Literature (3) (GH) (BA) This course surveys the traditions of classical literature exemplified by the masterworks of Greek and Roman authors. The choice of readings (in English translation) may vary from semester to semester, but the curriculum typically covers mythological epic (Homer, Virgil, and Ovid); tragedy (Aeschylus, Sophocles, Euripides, and Seneca); and comedy (Aristophanes and Plautus). The course may also examine minor poetic genres such as lyric, elegy, and satire; or the development of prose genres such as historiography, philosophical dialogue, rhetoric and oratory, and biography. The principal objective of CAMS 1 is to acquire knowledge of the story world of Greek and Roman literature, whose characters include the gods, goddesses, heroes, and heroines of classical mythology. A second objective is to understand the rules that govern the genres of Greek and Roman literature. Third, students learn how to interpret classical literature within its social and historical context as well as through the application of both ancient and modern literary theory. CAMS 1 is an introductory course that may be credited toward every Classics and Ancient Mediterranean Studies major, option, and minor. CAMS 1 meets the Bachelor of Arts degree requirements and is a General Education course in the Humanities (GH).

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

CAMS 4: Jewish and Christian Foundations
3 Credits
Introduction to the perspectives, patterns of worship, morality, historical roots, and institutions of the Judaeo-Christian traditions; their relationships to culture. CAMS 4 / JST 4 / RLST 4 Jewish and Christian Foundations (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Jewish and Christian Foundations seeks to help students better understand the Bible as the scriptural background for both Judaism and Christianity. Some people believe the Bible is "scripture," self communicated by God to humanity. To others, this text is a compendious collection of poetry, historical writing, law, myth, and mystical writings, which stems from the religious, political, and cultural milieu of the ancient Near East. Some people believe this is a book designed to bring people to belief in the power and reality of the god discussed in these writings. For others, the book is a source of both unity and division among people in the world, and must be treated as ambiguous in nature. Still others see the biblical text as the single most important collection of literature to have shaped the religious, political, and imaginative contours of western civilization. This course focuses on selected portions of the biblical text, representing diverse strands of historical remembrances, interpreted and re-interpreted in light of critical historical events, and serving, first as an oral, and later as a written account of the life, beliefs, and hopes of Jewish and Christian peoples. Readings from both the Hebrew Bible (the Christian "Old Testament") and the Christian scriptures (the "New Testament") will be used. CAMS 4 / JST 4 / RLST 4 provides a broad discussion of the origin of both Judaism and Christianity within a historical and geographical framework. The principle teachers, writers, and "founders" are discussed, including Moses, Isaiah, David, Ezra, Jesus, Peter, and Paul. Students are challenged to read and understand these important writings which have interpreted the human condition and which have oriented generations of people towards a transcendent referent associated with love and loyalty. Evaluation methods may include two hour examinations, a final examination, and two short writing assignments. The examinations are not cumulative. Class participation will also be a factor in overall
This course will introduce students to the history of the civilization and the culture of Ancient Mesopotamia (Modern Iraq), which contributed to shape both the Western world and the modern Middle East. Ancient Mesopotamia was a land of contrasts between city and countryside, between sedentary and nomadic populations, between official cult and popular religion, between royal ideology and political skepticism. This course will encompass the variegated nature of this civilization and all the cultures that determine the nature of the historical records (written texts and material culture), through which one can reconstruct the history of Mesopotamia, and, in general, the whole Syro-Mesopotamian region. Furthermore, the connections between this region and other areas of the Ancient near East (Iran, Anatolia, Syro-Palestine, and Egypt) will be explored.

International Cultures (IL)
General Education: Humanities (GH)
Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Key Literacies

CAMS 12: Lands of the Bible
3 Credits

Textual and archaeological evidence for the lands, cities, and peoples associated with the Hebrew Bible and Christian scriptures. CAMS (J ST/RL ST) 012 Lands of the Bible (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/J ST/RL ST 012 introduces students to the lands, cities, and peoples associated with the Hebrew and Christian scriptures. Using methodologies from historical geography, archaeology, ancient history, epigraphy, and anthropology, students study the Fertile Crescent, from the Nile Valley, through the Levant and its Jordan River valley, to Mesopotamia—the river valleys of the Tigris and Euphrates. Students will study the cities and states of the cultures along these rivers in the Bronze and Iron Ages, including Memphis/ Saqqarah, Thebes, Ugarit, Jerusalem, Lachish, Megiddo, Shechem, Samaria, Hazor, Ebla, Babylony, Ur, Petra, Jericho, 'Akko, and others. These are the lands of the Hebrew and Christian scriptures, but also cities that have been revealed through modern study. For example, the texts excavated at Ugarit (Syria) in the 1920's shed light on the relations between ancient Israelites and their Canaanite neighbors in the period of the "Conquest" and the monarchies of the Iron I and Iron II periods. Students will learn that the culture of the ancient Near East is inexorably linked to an understanding of the religious traditions that grew up in the region, including Judaism, Christianity, and Islam. Classes will be a combination of lecture, discussion, and problem-solving, with frequent use of slides and occasional use of artifacts to illustrate the topics at hand. Students are evaluated on three of the following five means: a midterm test, a final essay examination, a five to seven page term paper, a team research oral presentation, a team research poster presentation. Participation in class discussion will also be evaluated. This course fulfills three credits of the General Education or the B.A. humanities requirement. For majors in CAMS, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology. The course fulfills the three credit requirement for courses in RL ST 001-099 for the Religious Studies major, and the Jewish Studies major’s requirements. The course also would fulfill three credits of the six credit requirement for courses in any field that may be below the 400-level for the Religious Studies Minor, three credits of the nine credits required in course work for the Jewish Studies Minor, and three of the 18 credits required for the CAMS minor.

International Cultures (IL)
General Education: Humanities (GH)
CAMS 15: Wonders of the Ancient World

3 Credits

Overview of ancient world by focusing on the famed "Seven Wonders" and similar achievements from 3000 B.C.E.-1st Century C.E.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

CAMS 20: Egyptian Civilization

3 Credits

The culture, history, literature, and archaeology of ancient Egypt from the dawn of history to the Greco-Roman period. CAMS 020CAM S 020 Egyptian Civilization (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 020 is a thematic introduction to the major features of ancient Egyptian civilization. If you have heard of hieroglyphics, Tutankhamen, or the Rosetta Stone and wanted to learn more, CAMS 020 will provide the background and significance of these and many other aspects of ancient Egypt. The course begins with a grief historical overview, and then presents topics such as language and writing, the Pyramid Age, kingship, Egyptian imperialism, Egyptian literature, everyday life, Egyptian religion, death and afterlife, women in Ancient Egypt, and science and medicine. The course concludes with a consideration of Egyptomania, the modern fascination with ancient Egyptian culture. CAMS 020 is taught in lecture and discussion format and will be offered once a year. In some semesters the enrollment is limited to 50 students. In other semesters where enrollment is limited to 120 there are two lectures per week and a discussion section taught by a graduate assistant. Students will make small-group oral presentations in class or in these sections based on library and web-based research. Evaluation will be based on these presentations, on two in-class essay and short answer tests, and a final essay examination. In some sections a term paper may replace the final essay examination. CAMS 020 fulfills a humanities general education or B.A. requirement, and also the requirement for a course in Near Eastern language, literature, history, civilization, or archaeology of the CAMS major. CAMS 020 may be used to fulfill the requirements for 12 credits of course work at any level towards a CAMS minor.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CAMS 25: Greek Civilization

3 Credits

This course explores the cultural, political, and historical identity of the ancient Greeks—who they were, what they achieved, how they organized their society, and what they believed. This is not a history of ancient Greece, but an examination into the different facets of ancient Greek civilization, including the Trojan War myth, the ancient Olympics, the rise of democracy, slavery, the cultural and political contexts of artistic performance, and the sex-gender system. Students will pursue these topics and others using an interdisciplinary approach, consulting evidence from Greek literature, art, history, and philosophy. Ultimately, this course will provide students with a broad background in ancient Greek civilization and prepare them for more advanced work in the ancient Mediterranean world. As such, it fulfills both the GH and IL requirements.

CAMS 33: Roman Civilization

3 Credits

Origin of the Romans; sociopolitical development; food, homes, education, marriage, family life, amusements, private and public worship. CAMS 033 CAMS 033 Roman Civilization (3) (GH)(IL) (BA) This course meets the Bachelor of Arts degree requirements. Roman Civilization (CAMS 033) provides a comprehensive survey of one of the major and most interesting societies from which contemporary western culture developed. For over 1200 years, the Romans expanded and ruled over the largest empire in recorded history. An understanding of their successes and failures can inform our own understanding of modern politics and international relationships. Many ideas in such diverse areas as government, law, military organization and strategy, the calendar, social practices, urban life, literature, art, and architecture clearly derive from Roman practices. Knowledge of the Romans, and the similarities and important differences between their lives and ours provides an opportunity to reflect on human values and contemporary culture. The course includes discussion of the origins of the Romans, how they saw it themselves, and the rather different picture painted by modern archaeology. How the Romans expanded and maintained their power with long periods of peace from what is now Great Britain to the borders of India, and how their power waned in the later Roman period is one of the great illustrations of political institutional design. Roman society included various social groups, from slaves to the wealthy members of the traditional nobility. The opportunity for movement from slave to freedman
or freedwoman to landowner helps explain why for generations Roman rule was widely accepted. Roman urban life, with its great public meeting halls, baths, arenas, race courses, and luxurious houses and comfortable apartment blocks was eagerly accepted across Europe, North Africa, and the Near East. Many of these areas were more intensively and successfully populated under the Romans than at any time since. The greatest achievements of Rome’s poets, Virgil’s “Aeneid” and Ovid’s “Metamorphoses” remain rich sources for current writers, composers, and choreographers. Major Roman historians and thinkers also continue to inform and inspire. Religious beliefs and the causes for the growth of Christianity are also important features of the Roman Empire. Almost two thousand years separate us from the summit of Roman power and yet we still benefit from a study of their society to understand our own. The class meetings include twice weekly lectures for all students enrolled and once a week discussion sections of thirty students or less. Small enrollment classes meeting three times each week may also be scheduled. Assignments include individual and group papers, tests, and a final examination. Students are expected to participate actively in class discussions. In addition to twice weekly lectures for the 200 students in this course, smaller discussion sections of 30 students or less are scheduled once per week. All students will be expected to participate actively in the class discussions. In addition, students will write one individual paper and a longer paper based on collaborative work. In preparation of the written papers, students will gather information from both computer/electronic resources and use of the library. WEB resources for the study of classical antiquities and ancient texts are extremely rich. By integrating these various sources, students will be expected to synthesize various sources and to analyze the relationships between ancient and modern culture. A major assignment in this course requires collaborative learning and the preparation of a written paper in groups of 4 students. Study of the Romans includes learning in detail about the geography, resources, and cultures of a very large area of the world from northern Scotland to North Africa, and from Gibraltar to the borders of India. Many basic features of these areas remain relatively unchanged, and the realities of the resources and climate continue to regulate modern societies who inhabit the same spaces, often less successfully.

General Education: Humanities (GH)

CAMS 44: Ancient Near Eastern and Egyptian Mythology

3 Credits

Survey of major ancient Mediterranean myths, gods, and goddesses in their cultural contexts; influence on later cultures. CAMS 044 CAMS (RLST) 044 Ancient Near Eastern and Egyptian Mythology (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to a selection of major ancient Mediterranean and Egyptian myths, gods, and goddesses. Ancient Canaan, Mesopotamia, and Egypt (geographically approximating the contemporary Middle East) were primary locations for the development-beginning already in the fourth millennium B.C.E.-of highly complex urban civilizations, many of which persisted until the turn of the Era. These ancient societies were responsible for notable technological achievements, such as writing, sophisticated irrigation systems, and the wheel, and for notable cultural achievements, such as impressive legal codes, highly developed astronomical research, and complex religious systems. This course will acquaint students with some major religious writings stemming from these fascinating old world cultures. The class discusses in some detail a limited range of stories about the divine realm, creation, the flood, kingship, life and death, and sexuality. The course pursues such comparisons by studying myths against the background of the different cultures that produce them. Because a number of these religious myths are historically related, the course will also critically compare the similarities and the differences between them. To underscore how important historical and geographic settings are to understanding these stories, the course uses different techniques of instruction such as small group discussions, slides, lectures, and films. Three of the world’s major religions—Judaism, Christianity, and Islam—trace their roots to the religions of the ancient Near East and Egypt. Hence, some attention will be paid to the similarities and differences between the views expressed in these myths and the views developed in classical Judaism, Christianity, and Islam. By grappling with issues such as divine character, self-identity, and female/male relationships in the ancient Mediterranean world, students will be better acquainted with how classical Judaism, Christianity, and Islam innovate beyond the religious heritage to which they are indebted.

CAMS 45: Classical Mythology

3 Credits

CAMS 45 Classical Mythology (3) (GH;IL)(BA) CAMS 45 introduces the myths of ancient Greece and Rome as they are represented in the canonical works of Greek and Latin literature and art. Students become conversant in classical mythology by studying the stories of gods and goddesses and heroes and heroines. The course discusses the meaning and function of myths in their historical, religious, and literary contexts. It may also approach the interpretation of myth from different disciplinary perspectives (comparative mythology, critical theory, cultural anthropology, gender theory, history, philosophy, psychology, religion, or rhetoric). In addition, CAMS 45 gives students the opportunity to apply their knowledge and understanding of myth to the flourishing legacy of classical mythology in the literature, art, and culture of subsequent ages. CAMS 45 meets the Bachelor of Arts degree requirements. It also fulfills the General Education humanities requirement and the International Cultures requirement.

CAMS 83: First-Year Seminar in Classics and Ancient Mediterranean
Studies
3 Credits

Critical approach to the study of ancient Mediterranean languages,
literatures, and/or material cultures. CAMS 083S First-Year
Seminar in Classics and Ancient Mediterranean Studies (3) (GH;FYS;IL)
(BA) This course meets the Bachelor of Arts degree requirements. The
first-year seminar in Classics and Ancient Mediterranean Studies (CAMS)
is concerned with interesting and challenging features of one or more
of the cultures that surrounded the Mediterranean Sea in antiquity,
from around 3,500 B.C. to 500 A.D. While the topic of CAMS first-year
seminars varies, in all, you will be introduced to the civilizations that
surrounded the Mediterranean Sea in ancient times and why their great
accomplishments, their struggles, and their failures remain important
to us even today, thousands of years later. You will learn about ancient
literature and physical remains that provide information about these
cultures. In this class, you will learn to assess theories about ancient
societies, the types of evidence that exist for antiquity, and how to gain
access to academic resources in the library and in electronic form. The
topics of the seminars vary. Some current seminars include a critical
study of widely believed "Ancient Mysteries" such as: the continent of
Atlantis and Pyramid Power; a seminar on the relationships among
Christians, Jews, and Pagans in the later Roman period; and Word
Power, a course that gives you linguistic tools to understand the sources
and nature of much of our modern English vocabulary. You will read
selections of ancient literature in English translation and examine the
remains of the societies that produced them to ponder basic questions
about the meaning and value of human life. Some knowledge of ancient
Mediterranean cultures has always been indispensable to intelligent
participation in western society. Their social, political, economic, and
legal systems, their religious experience, their language and art all are
of interest, and their contribution to our own present world view can
hardly be overemphasized. Today, the oldest of humanistic disciplines
is more vital, more wide-ranging, and more current than ever before. By
reading ancient literature, studying the structure of ancient languages,
and learning about the religious, political, and social ideas formulated in
antiquity, you may gain important insights into our own culture and come
to understand the common humanity all people share.

CAMS 90: Jerusalem: Past, Present, and Future
3 Credits

Social, cultural, religious, political, and archaeological history of
Jerusalem from earliest times (c. 3000 BCE) to present. CAMS 90 /
JST 90 / RLST 90 Jerusalem: Past, Present, and Future (3) (GH;IL)(BA)
This course meets the Bachelor of Arts degree requirements. Jerusalem,
a holy city for Judaism, Christianity and Islam, is symbolically depicted
in art and literature as the physical and spiritual center of the world.
Throughout its history, this "city of peace" was a focal point attracting
numerous cultures and peoples, the latter sometimes as prophets and
more often as conquerors. The reasons for Jerusalem's centrality and
significance during the past five millennia as a heavenly and earthly
capital are explored in this course. The course curriculum will survey
the religious, political, architectural, and historical record of ancient
Jerusalem, beginning with its earliest settlement during the fourth and
third millennia BC. Jerusalem's urbanization in the second millennium
BC, its role as the capital of biblical Israel and Judah during the First
and Second Temple periods, and its transformation as a center of
Christianity and later Islam are studied utilizing the testimony of artifacts,
architecture, and iconography in relation to the written word. Throughout
the ages and continuing into the 21st century, Jerusalem remains a
contested city for the three monotheistic faiths. The holy city's impact
on the politics of the modern Middle East will be critically examined in
light of Jerusalem's history and recent archaeological discoveries and
their modern-day interpretation. Objectives include the critical evaluation
of archaeological, historical and literary evidence and its relationship to modern-day political and religious perceptions of Jerusalem. The course will encourage research skills (including library training sessions) and writing and oral communication skills based on an analytical approach to the texts and material culture relevant to Jerusalem. This course will fulfill three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in CAMS, the course will fulfill the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the CAMS ancient Mediterranean archaeology option it will fulfill the three credits of archaeology course work requirement. The course will fulfill three credits of course work concerned with the ancient period or with the land of Israel.

CAMS 100: Ancient Greece  
3 Credits  
Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization. CAMS (HIST) 100 Ancient Greece (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenae, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian Justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E.

CAMS 101: The Roman Republic and Empire  
3 Credits  
History of the Roman Republic and Empire from the origins of Rome to the disintegration of the Empire. CAMS (HIST) 101 The Roman Republic and Empire (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course fulfills 3 credits of the General Education-Humanities (GH) requirement and is an introduction to the ancient Roman empire: how that empire came into being, how it evolved, how it came to govern much of the Mediterranean and European world, and how that empire declined. Particular stress is placed, through readings and discussion, on the sources of our knowledge of the past and on the social and legal structures employed by a past society to govern an ethnically- and religiously-diverse population. This course complements other courses on the ancient Mediterranean world (such as HIST/CAMS 100) and is a prerequisite to more advanced (400-level) courses in ancient Mediterranean history. An example of evaluation includes: three brief quizzes, a take-home mid-term permitting library and Internet use, and a final examination; all examinations require student synthesis and expression of what has been learned through written essays of varying length. Emphases in the course is on student engagement through class discussion of the topics presented in the texts and lectures.

CAMS 102: Canaan and Israel in Antiquity  
3 Credits  
This course is an overview of the ancient history and cultures of Canaan (the Mediterranean Levant of Syria-Palestine) and the emergence of Israel. It involves a critical view of biblical texts (especially the Hebrew Bible, aka Old Testament) in light of other ancient texts, archaeology, and historical methods, in order to explain the nature and the evolution of society, religion, and thought in the prebiblical and biblical era. We will be especially interested in the period from the end of the Late Bronze Age (c. 1200 BCE) to the Persian period (539-332 BCE), and will examine ongoing debates about the Bible and history, as well as the development of Israelite religion from polytheism toward monotheism and a distinctive worldview.

3 Credits  
History of the Ancient Near East from the end of the Neolithic to the Hellenistic period. CAMS 105 CAMS 105 History of the Ancient Near East (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The objective of this course is to introduce the student
to the history of Ancient Near Eastern societies. The geographic areas to be covered include Mesopotamia, Iran, Anatolia, Syro-Palestine, and Egypt. This course will stress the variegated nature of civilizations in those geographic areas and focus on the written texts and material culture through which we can reconstruct the history of the Ancient Near East. This course complements similar introductory courses in ancient Mediterranean history and civilizations. This course satisfies major and minor requirements for programs of study in the Dept. of Classics and Ancient Mediterranean Studies. This course will be offered once a year, enrolling cap 50. The methods of evaluation include a mid-term and final examinations, two brief quizzes, a term paper and active class participation. A special emphasis will be placed on those aspects that permit us to relate to the seemingly arcane mechanisms lying behind the social, religious, and political interactions which characterize the history of these civilizations, especially ideology, economy, and propaganda. Major figures and events will be presented as being as symptomatic of cultural or political trends.

CAMS 110: Hebrew Bible: Old Testament

3 Credits

Introduction to the history, literature, and religion of ancient Israel.
RLST 110 / CAMS 110 / JST 110 Hebrew Bible: Old Testament (3) (GH;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. The Hebrew Bible is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel's neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babylonians, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. Hebrew Bible introduces students to the literature of ancient Israel, its rituals, the stories which established a people's identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the text and from a textbook which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment, and to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism. Students will be evaluated using an hour examination, a 6-8 pp. "hermeneutical essay," a final examination, class attendance and discussion. As an introduction to the scriptures of the Hebrew Bible / Old Testament, RLST 110 / CAMS 110 / JST 110 utilizes the methodologies used in the academic study of religion. The course is related or linked to many courses in religious studies which use these same methods or which are related to the history and development of Judaism, Christianity, or Islam. RLST 110 / CAMS 110 / JST 110 may be used to fulfill requirements for the Religious Studies major. RLST 110 / CAMS 110 / JST 110 may also be used to fulfill the GI or GH requirements in the major or minor in Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies.

CAMS 111: Early Judaism

3 Credits

Religious thought, practices, and parties in the Second Temple period; the emergence of rabbinic Judaism. CAMS 111CAMS (J ST/RL ST) 111 Early Judaism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). In this period, ancient Hebrew religion was transformed into a new world religion-Judaism. Students will read selections from the Bible, and from other religious literature, including the Dead Sea Scrolls, the Apocrypha, the Christian Scriptures, the Mishnah, and the Talmudim. By tracing the development of various Jewish "parties," students will appreciate how Classical Judaism evolved, and how the early Church emerged from Jewish roots in the first centuries CE. Early Judaism grew from its roots in the period of Achaemenid domination. Jews
were dispersed throughout the eastern Mediterranean, so influences from Persian, Hellenistic, and Roman thought naturally influenced the faith's development. Students in Early Judaism will develop a new appreciation for the basic beliefs and practices of Judaism as well as for the beginnings of the Jesus movement and the development of the early Christian Church. Theological and historical questions concerning the origins of evil, the primacy of prayer, the beginnings of Jewish religious architecture, and the rise of anti-Semitism will be explored. Religion is always linked inextricably to culture. Judaism's transformation in contact with diverse cultures will become evident throughout RL ST/CAMS/J ST 111. The methodologies used in this course will enable students to read and evaluate primary and secondary sources used in the academic study of Judaism. Many other courses in Religious Studies (001, 004, 110, 120, 124), Jewish Studies (010 and 102), and Classics and Ancient Mediterranean Studies, as well as History and Art History are closely related or linked to this course. RL ST 111 may be used to fulfill 3 credits in the Humanities, or to fulfill the GI requirement in the major or minor. The course will be offered once each year, with an enrollment of 65. This course will satisfy 3 credits toward the minor in Jewish Studies or the major in Religious Studies, plus being cross-listed with CAMS, fulfilling part of the requirement for courses in supporting or related areas of all Classical and Ancient Mediterranean Studies majors. The course also provides an excellent addition to other courses, such as CAMS 010, "Mesopotamian Civilization;" CAMS 044, "Ancient Near Eastern Mythology;" CAMS 045 "Classical Mythology;" CAMS 033, "Roman Civilization; and CAMS/ANTH/J ST 012, "Archaeology of the Lands of the Bible."

CAMS 113: Myths and Legends of the Jews
3 Credits

Comparative study of diverse interpretations of stories from the Bible in Judaism and Christianity. CMLIT (J ST/CAMS/RL ST) 113 Myths and Legends of the Jews (3) (GH;IL) The impact of the Bible on Western Culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and re-tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthly-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences are often too subtle to discern apart from careful comparison. This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Our procedure will be to compare these traditions closely with the biblical text, asking: What is different? What concerns motivated the changes? Is it possible to discern patterns of change, or of the author? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods.

CAMS 115: Literature of the Ancient Near East
3 Credits/Maximum of 3

Reading and study of literary works from the Ancient Near East, especially from Mesopotamia and Ancient Egypt. This course is designed to provide the student with both a basic knowledge of Ancient Near Eastern literature and the tools to appreciate it. It will present a wide sample of literary compositions from Ancient Mesopotamia and Ancient Egypt, along with some parallels from Ancient Anatolian and Syro-Palestinian traditions. Although mythology is not the main focus of the course, some mythological compositions will be read because of their literary fabric and epic structure. The course will be divided into two main sections: Mesopotamian and Egyptian literatures. Students will read some of the most famous literary compositions from the Ancient Near East (such as Gilgamesh and the Babylonian story of creation), as well as a representative sample of works from a wide variety of genres (love poetry, mythological narratives, laments, religious hymns, tales, wisdom literature). These compositions will be approached from a literary and aesthetic point of view, without neglecting the inherently problematic relation with their historical context (as in the case of compositions that mention actual historical characters, such as the legends of the Sargonic kings in Mesopotamia). Moreover, the works related to both official cult and popular religion (hymns, prayers, incantations, prophecies) will be read in their political, social, and religious context. In the limits between sacred and profane, our approach to love poetry will address some issues of ritual, gender, and sexuality. More strictly mundane genres (wisdom literature and humor) will show that some basic human concerns have remained unchanged. The course will provide students with a detailed overview of the main literary traditions and genres from the Ancient Near East, which played an essential role in the origins and shaping of the Bible as well as in some aspects of the Greek literary tradition (N.B., the foundations of the Western understanding of literature and religious discourse.

CAMS 120: New Testament
3 Credits

CAMS 120 / JST 120 / RLST 120 New Testament (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. This course
provides an introduction to the collection of early Christian writings that make up the New Testament. It begins with an examination of the first-century context in which these writings took shape—one overshadowed by the Roman empire, influenced by Hellenistic culture, and based, above all, on varieties of Judaism. From there, the course takes up a few guiding questions. How, in this ancient context, did the first Christians understand and portray the figure at the center of their communities, Jesus of Nazareth? What do the New Testament writings reveal about the beliefs and aspirations of these communities as they advanced a movement that would, in time, become among the most consequential in world history? By the end of the course, students will have gained knowledge of the historical context of New Testament writings and an understanding of why the New Testament has been such an important and influential collection of writings.

CAMS 121: Jesus the Jew

3 Credits

Although Jesus of Nazareth is the object of Christian devotion, he was not a Christian himself, but a pious Jew. What can be known about the historical figure of Jesus the Palestinian Jew? How would his teachings and actions have fit in the context of Judaism of his day, in the Greco-Roman world? What did he mean when he proclaimed the coming kingdom of God? Because almost all of our source material espouses Jesus as the Christ of Christian faith, the first step is to understand the aims and perspectives of these Christian sources, including the canonical Gospels as well as non-canonical Gospels. Through careful examination of these sources in light of critical scholarship and the social and historical context of Judaism in the Greco-Roman world, we will consider how much the historian is able to reconstruct of Jesus using historical method, what the limits of this investigation are, and how relevant the task is. We will consider and evaluate a few of the different scholarly reconstructions of the historical Jesus. Major emphases will include the historical, social, religious, political, and cultural contexts of Jesus, including important precursors; the political, institutional, and cultural history of the teachings and actions of Jesus in their Jewish setting, and how these are reinterpreted by his followers after his death. Attention will be paid to the development of variant Christian traditions about Jesus including Jesus as Messiah, his death as a saving event, the resurrection as exaltation of Jesus as Lord, the memorialization of Jesus in Christian ritual practice, and the cultural and religious impact of Jesus throughout history. In addition to the early Christian sources on Jesus (especially the canonical Gospels, but also other New Testament texts and non-canonical writings), on each topic students will read selections from early Jewish writings in order to illuminate the cultural context. These include the Dead Sea Scrolls, Philo, Josephus, Jewish texts among the so-called Apocrypha and Pseudepigrapha, early rabbinic texts, and epigraphical writings. Relevant archeological evidence and Greco-Roman sources will also be considered. Broader issues of historical, cultural, linguistic, political and geographical context will be covered in lectures and secondary readings.

CAMS 122: Apocalypse and Beyond

3 Credits

¿Apocalypse and Beyond¿ is a topic (and title) meant to suggest that apocalyptic imagination about the end of the world, first begun in the Ancient Near East with certain Jewish and Christian writings, is constantly re-envisioned for each new age. Apocalyptic literature and world views are frequently produced by marginalized groups who perceive themselves to be persecuted, and who envision a violent (often divine) intervention, which alone will bring justice. In Part One of the course, we will examine the ancient literary genre of apocalypse, which was popular in the Ancient Near East from around 200 BCE to 200 CE, especially in Jewish and Christian writings both in the Bible (e.g., Daniel and Revelation) and outside of it (e.g., First Enoch, the Apocalypse of Peter, and the Apocalypse of Paul). The authors of these apocalypses expected the evil age in which they were living to dramatically end in their lifetimes; although that did not happen, apocalyptic thinking became foundational to the three world religions stemming from the Near East ¿ Judaism, Christianity, and Islam ¿ to varying degrees. In Part Two, we will examine the ideology, sociological underpinnings and some historical examples of apocalyptic groups and movements in medieval to modern times, and look at the impact that apocalyptic world views have had on the secular world, including philosophy, political movements, and popular culture, such as movies.

CAMS 123: Ancient Monotheisms: Judaism, Christianity, Islam

3 Credits

Examines the origins and early development of the three major monotheisms of ancient Near East: Judaism, Christianity, and Islam. CAMS (J ST/RL ST) 123 Ancient Monotheisms: Judaism, Christianity, Islam (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the origins and early development of the three major monotheistic religions: Judaism, Christianity, and Islam. These three related religious traditions originate in the Near East and all center around a belief in the existence of one single god (monotheism). The aim of the course is to describe and compare core events, major beliefs, practices, and significant historical trends in each monotheistic tradition from their respective beginnings to around 750 C.E. The course begins with the origins of Judaism, the first religion in the Near East to be monotheistic. It then examines how Christianity branched out of Judaism in ancient Palestine, as well as how Islam emerged in Arabia
in the 7th century C.E. within a historical context rich in Jewish and Christian influences. All three religions share basic beliefs about the nature of deity, the role of the written word in revelation, and prophets as messengers. Equal emphasis will be placed on these commonalities and on the major tenets and practices that differentiate these three religions.

CAMS 124: Early and Medieval Christianity
3 Credits

Analysis in cultural context of selected thinkers, ideas, and movements in Christianity from the second through the fifteenth century. CAMS (JST/RL ST) 124 Early and Medieval Christianity (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course traces the development of one of the world’s major religions: religious foundations from the death of its founder (about the year 30 CE) down to the middle ages. It focuses on significant trends, controversies, personalities, and turning points. These are not just diverse in terms of chronological breadth, but are also spread geographically from the eastern end of the Roman Empire (the border with Persia) to northern Europe. Attention is given to the various manifestations of Christianity (Judaic, Hellenistic, Latin), and the linkage between local patterns (culture, history and predispositions) and how these shaped the sort of Christianity that took root in particular areas. Students typically will be evaluated on four assignments, quizzes, a midterm and a final exam. The course can be used towards a major or minor in Religious Studies, Classical and Ancient Mediterranean Studies, and Jewish Studies and used to fulfill 3 credits in the Humanities for non-majors.

CAMS 140: Classical Archaeology–Ancient Greece
3 Credits

Literary sources and material evidence for society; culture of the inhabitants of Greece in ancient times. CAMS 140 Classical Archaeology–Ancient Greece (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Greek Archaeology (CAMS 140 GH;SI) presents the literary and physical evidence for ancient Greek culture, especially in the Late Bronze Age from about 1550-1100 B.C. and in the Classical Period of the fifth and fourth centuries B.C., when the city of Athens was at its height of political and cultural influence. The course emphasizes the archaeological sites that illustrate these stages, on the island of Crete, at Troy, and on the Greek mainland at places such as Delphi, Olympia, and Athens. The connections among political and economic changes and the artifacts, both impressive buildings and humble fragments of broken pottery, are emphasized. The course begins with some fundamental principles of archaeology, with particular emphasis on survey methodologies; the various scientific and comparative methods used to establish dating; problems with existing ethical guidelines concerning the destructive marketing of antiquities; and the connections among geography, environment, and human settlement patterns. The great sites of the Bronze Age Aegean, including Knossos, Troy, Mycenae, and Pylos are described with discussion of the connections to Egypt and the Ancient Near East. The use of pottery and other artifacts to trace political structure on Crete is demonstrated. The decipherment of the Early Greek Linear B language provides evidence for relating economic and political organization to the results of surveys and excavation at various sites. The course briefly touches on the ceramic evidence for the collapse of this Bronze Age society and the Iron Age transition to Classical culture, including the reintroduction of writing, cultural interchange through Mediterranean trade, and colonization. The course culminates with a detailed consideration of the city of Athens, with emphasis on the economic and political center in the Agora; housing, coinage, funerary practices and monuments. Lectures illustrate some ways that archaeologists have used information provided by ancient authors such as Herodotus, Pausanias, and Thucydides to understand the excavated areas of the Athenian Agora and nearby sites. This course has two in-class essay examinations and a comprehensive final examination. Collectively these count for 75 percent of the course grade. In addition, students are graded on five assignments, each of which comprises 5 percent of the course grade. Four are essays based on textbook assignments. The fifth consists of a team-led classroom review of the previous six to eight classes. Assignments require use of Perseus II, a major and reliable Web resource for the study of ancient Greek civilization. CAMS 140 is a counterpart to CAMS 133 and 150, an appropriate prerequisite for CAMS 440W, and an appropriate parallel to CAMS/HIST 100 or a successor to CAMS 025. CAMS 140 is one of three courses accepted as a prerequisite for students enrolling in the Penn State Education Abroad Program in Athens. CAMS 140 fulfills common requirements in the major under two categories: (1) for a 3 credit course concerned with Greek or Roman language, literature, civilization, or archaeology, and (2) 6 credits of study in the general field of Classics and Ancient Mediterranean Studies at any level. CAMS 140 may be used to fulfill the requirements for 12 credits of course work at any level toward a CAMS Minor. CAMS 140 is an approved General Education Humanities course that may fulfill three credits of the six-credit requirement. It may also be used to fulfill the three credit B.A. humanities requirement.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CAMS 150: Classical Archaeology–Ancient Rome
3 Credits

Literary sources for the development of Roman civilization in relation to the relevant archaeological discoveries. CAMS 150 Classical Archaeology-Ancient Rome (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements Roman Archaeology (CAMS 150 GH) presents the literary and physical evidence for ancient Roman culture, from its formation in the Republican Period through Late Antiquity, over 1200 years later. The course emphasizes three archaeological sites that illustrate stages of Roman culture, Costa, Pompeii, and Ostia. The connections between political and economic changes and artifacts, both impressive buildings and humble fragments of broken pottery, are emphasized. The course begins with some fundamental principles of archaeology, with particular emphasis on survey methodologies; the various scientific and comparative methods used to establish dating; problems with existing ethical guidelines concerning the destructive marketing of antiquities; and the connections among geography, environment, and human settlement patterns. The
CAMS 150: Introductory Biblical Hebrew

3 Credits

Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary. CAMS (JST/HEBR) 152 Intermediate Biblical Hebrew (3) This course meets the Bachelor of Arts degree requirements. CAMS/JST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible. In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

Cross-listed with: HEBR 152, JST 152

Bachelor of Arts: Humanities
CAMS 153: Dead Sea Scrolls

Examines the discovery, contents, and interpretations of the Dead Sea Scrolls, Jewish texts from approximately 225 B.C.E. to 68 C.E. CAMS (J ST/RL ST) 153 Dead Sea Scrolls (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore early Judaism through what is known about it from the Dead Sea Scrolls, Jewish documents dating from approximately 225 B.C.E. to 68 C.E. that were discovered in 1947-1956 along the Dead Sea in Jordan (now the West Bank of Palestine). The course will be divided into three parts: 1) a short introduction to Judaism, especially the history of early Judaism, from the writing of the Hebrew Bible (Old Testament) to the Talmud; 2) a discussion of the caves above the Dead Sea and their relationship to the archaeological site called Khirbet Qumran; and 3) a survey of the contents of the 900+ Dead Sea Scrolls and select readings of some of them. These scrolls are primarily of three kinds: &ldquo;biblical&rdquo; books (books that came to comprise what is now known as the Hebrew Bible/Old Testament) and their commentaries or translations; &ldquo;apocryphal&rdquo; or &ldquo;pseudepigraphical&rdquo; books (previously known Jewish writings that never made it into the Hebrew Bible, such as Tobit, Enoch, etc.); and &ldquo;sectarian&rdquo; Jewish writings (previously unknown writings that seem to come from a minority Jewish group).

CAMS 160: Sacrifice in Ancient Religions

3 Credits

Examines theories of sacrifice and its manifestations in especially the religions of the ancient Mediterranean world and the Near East. RL ST (CAMS/J ST) 160 Sacrifice in Ancient Religions (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Sacrifice (from Latin sacer &ldquo;holy&rdquo; + facere &ldquo;to make&rdquo;) is one of the most prominent and troubling aspects of religion, in that it involves making an offering or slaughtering an animal to a deity. Its destruction and violence is often at odds with other rituals and core understandings within a religion, so why is it done and what good does it bring? This course will first examine some competing definitions and theories of sacrifice, and then turn to its manifestations in the ancient societies and religions of Greece, Rome, Egypt, Mesopotamia, Israel/Palestine (along with its neighbors Hatti and Phoenicia), as well as some examples from outside the Mediterranean world and the Near East, such as Mesoamerica or Vedic religion.

CAMS 180: Ancient Warfare

3 Credits

Historical survey of the evolution of warfare in the ancient Mediterranean region from prehistoric times to the Later Roman Empire. CAMS 180 CAMS (HIST) 180 Ancient Warfare (3) (GH;IL) Warfare has occupied a central place in the civilizations of the Mediterranean from the earliest times. The prehistoric origins of warfare is a hotly debated topic and constitutes the starting point for this course. Most scholars are agreed that military culture grew in step with sociopolitical development over the course of the third millennium BCE. In the following centuries, the Egyptians, and later the Assyrians and Persians, took great strides in developing sophisticated tactical systems, using infantry, chariots, and cavalry. These matters occupy a little over the first third of the course. Across the Aegean Sea, Bronze Age (Mycenaean) Greece was ruled by elites occupying massively walled citadels, their leaders buried surrounded by their weapons. But how did these warriors fight? Do the epic poems of Homer memorialize Bronze Age combat? In the Archaic Period (700-500 BCE) infantry warfare in Greece was transformed by the appearance of the heavily-armed infantryman (the hoplite), deployed in a tight formation (the phalanx). The processes involved in the appearance of this kind of warfare, its nature, and its effects on Greek society and culture will be the focus of our attention for the second third of the course. On the periphery of the Mediterranean basin stood a variety of warrior cultures (the Scythians, Celts, or Germans). Numerous warrior-dominated polities vied with each other in Archaic Italy, but one of them, sitting on a ford on the river Tiber, ultimately rose to be the greatest military power produced by the ancient Mediterranean world – Rome. The Roman legions first won and then ensured the security of a Mediterranean-wide empire that stood for 700 years and evolved ultimately into world’s first standing army of professional volunteers. The Roman military system holds our attention for the final third of the course. The course defines &ldquo;warfare&rdquo; broadly to include both tactical and strategic, as well as cultural and ideological, matters. Even this canvas is too vast to be surveyed in all its richness, so the major themes explored are: (i) what is war, where does it come from, and how did it change as civilization spread?; (ii) in what ways did warfare develop in the periods under study, in terms of strategy, tactics, and weapons technology?; (iii) how do different warfare practices reflect essential facets of the various cultures under consideration?

Bachelor of Arts: Humanities
forms, replacing barter as the primary means of exchange in economies. Numismatics is the scholarly study of coins. Coinage has been used in the study of Classical history and archaeology. CAMS (J ST) 210 Numismatics--the scholarly study of coins and medals--is a major tool in the study of Classical history and archaeology. CAMS (J ST) 210 Numismatics and the Historian (3) (GH;IL) WHY STUDY NUMISMATICS? Numismatics is the scholarly study of coins. Coinage has been used in the ancient world since the 7th century BCE. Eventually, minted money--i.e., coinage--came to supplant money in other forms, replacing barter as the primary means of exchange in economies.

CAMS 200: Ancient Philosophy

3 Credits

This course examines key themes, texts, and persons in ancient Greek philosophy, with the works of Plato and Aristotle at the core. We ask: What did Socrates mean when he said "the unexamined life is not livable by humans"? Or when Thales said "All begins in water"? Or when Epicurus said "Only pleasure is valuable"? Or when Parmenides said "You cannot speak of what is not"? To answer these questions, we examine the cultural background of philosophical thinking (Homer and Hesiod; Near Eastern traditions; trade and empire), and we survey views about, for example, the universe's structure and origin, the nature of reality and change, the status of knowledge and opinion, the best way of life for individuals and for societies, and the value of reason, persuasion, argument, and logic. We also give close attention to the formation, meaning, and purpose of philosophy, wisdom, and sophistry. This includes analysis of the "myth reason" hypothesis, Milesian inquiry into basic principles (archai), physical vs. ethical inquiry, and the development of doctrine, discipline, and disagreement. In addition to the figures mentioned above, figures studied may come from the periods of the Presocratics (e.g., Pythagoras, Heraclitus, Xenophanes), Hellenism (Stoic, Epicurean, Cynic, and Skeptic), the Romans (e.g., Cicero, Seneca), and the Neoplatonists (e.g., Plotinus).

CAMS 400: Comparative Study of the Ancient Mediterranean World
3 Credits

Comparative study of ancient Mediterranean civilizations. CAMS 400W Comparative Study of the Ancient Mediterranean World (3)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 400W provides students in the Classics and Ancient Mediterranean Studies (CAMS) Major, and other undergraduate and graduate students in allied fields, a capstone overview of research methodologies as they are applied to contemporary issues in ancient Mediterranean studies. The course is interdisciplinary in nature, and stresses the interactions among the ancient cultures of the Mediterranean region. The specific course content varies depending on the current research interests of the department faculty and the work undertaken by participating students. The course is organized as a seminar with participation by department faculty, and, when appropriate, visiting speakers. The topics concern issues of chronological, geographic, and cultural breadth. Students are expected to give an oral presentation of their research on a relevant topic during the last three weeks of the semester. This course requires a sequence of written assignments that constitute drafts in the process of writing an extended research paper. These consist of a statement of the problem, an annotated bibliography, a preliminary draft, and a final paper revised in light of the instructor's comments on the assignments. This paper and an oral presentation in class based upon it will constitute about half of the final grade. A quiz and essay final examination will constitute the remainder of the grade.

Prerequisite: 3 credits in Classics and Ancient Mediterranean Studies
Bachelor of Arts: Humanities
Writing Across the Curriculum

CAMS 405: Law & Economy in the Ancient Near East
3 Credits

This course is an overview of the legal and economic texts and institutions in the Ancient Near East. CAMS 405 Law & Economy in the Ancient Near East (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will introduce the students to the legal and economic institutions of the Ancient Near East, as well as to the many theoretical issues raised by their study, such as: the matter of land tenure; the role played by the temple and the palace in the economic structure; the nature of law within political theology and kingship; and the legal and economic status of specific social groups (women, the elderly, slaves, children). Since most of the topics to be examined are widely debated, the course will provide the students with a broad overview of scholarly theories and intellectual schools. In order to accomplish such an objective, the readings for the class will include both introductory works (taken, for instance, from Sasson, Civilizations of the Ancient Near East) and more advanced and specific articles and works (e.g., R. Westbrook, A History of Ancient Near Eastern Law). Students will be asked to prepare these readings, which will be available in the library or in electronic format, so they will be ready to take part in class discussions. The source book for the basic legal texts will be M.T. Roth's edition of law collections. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accomplished by some handouts. Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the several history and culture courses in CAMS that provide detailed overviews of major civilizations of the Mediterranean and Near Eastern regions.

Prerequisite: 6 credits in any undergraduate CAMS courses.
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CAMS 410: Classical Epic
3 Credits
Homer, Hellenistic Epic, and Vergil; influences on later epic.
Bachelor of Arts: Humanities

CAMS 411: Classical Drama
3 Credits
Masterpieces of Greek tragedy (Aeschylus, Sophocles, Euripides) and comedy (Aristophanes, Menander); their influence on Roman writers. CAMS 411W CAMS 411W Classical Drama (3)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to read, interpret, discuss, and write about the best known and most influential examples of classical drama (in English translation). Students will become conversant with the formal and thematic aspects of Greek tragedy and comedy. (The course could also include a module devoted to Roman adaptations of Greek drama.) The Greek playwrights to be read are Aeschylus, Sophocles, Euripides, and Menander. (Roman playwrights would include Plautus, Terence and Seneca.) The objectives of this course include learning how to read, analyze, and interpret tragedy and comedy within a literary, cultural, and historical framework that is fundamentally different from our own. At the same time as students come to grip with the cultural differences of Greek drama, they will be invited to ponder why these texts are still relevant to modern readers and audiences. The second objective of this course is to give students a forum in which they may reenact the critical debates and dramatic
conflicts that characterize the ancient Greek theater. Class time will be devoted to structured discussion on set topics. Toward the end of the semester students will give 15-minute presentations on different aspects of classical drama that illuminate the texts read in class: for example, the design of Greek theaters and ancient theatrical production, the religious and civic functions of tragedy, gender roles, tragic and comic heroism, myth, rhetoric, philosophy, and the legacy of Greek tragedy and comedy in the modern world. The third objective of the course is to focus on developing critical writing skills and communicating clearly with readers. Students will write six papers of varying length (three papers in two drafts) and two essay exams (mid-term and final). The process of writing will provide a vehicle for close-reading and critical interpretation of classical drama. Students will also learn in classroom discussion and in feedback from the instructor and other students that critical writing entails drafting ideas and revising them. Finally, participants will learn how to write properly documented and well-argued research papers.

Bachelor of Arts: Humanities
Writing Across the Curriculum

CAMS 420: Introductory Targumic Aramaic

3 Credits

Fundamentals of Aramaic grammar, syntax, and vocabulary. CAMS 420 Introductory Targumic Aramaic (3) The aim of CAMS 420 is to introduce students to the fundamentals of Targumic Aramaic as quickly and thoroughly as possible. Targumic Aramaic, is the dialect used by Jews in the last few centuries BCE in their translations of the Bible into Aramaic. Targumic Aramaic texts remain vital within Judaism and Biblical study. This course focuses primarily on the morphology and syntax of Aramaic. Drills on each point of grammar, as well as translation of sentences from Aramaic to English and English to Aramaic, and brief passages taken from the native texts are the basis of the student’s homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of actual Aramaic. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS will prepare students to work with Aramaic in related courses in CAMS, in particular those dealing with other Aramaic dialects, the Bible, and other related ancient languages. The course goals, in addition to providing the students a basic understanding of the history of the Aramaic literary tradition. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to real Targumic Aramaic texts, which are of great importance to understanding the history of Biblical textual transmission.

CAMS 425: Books of the Bible: Readings and Interpretation

3 Credits/Maximum of 12

Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship. CAMS (JST/RL ST) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12) The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

Prerequisite: 3 credits in CAMS or JST or RL ST, recommended CAMS/JST/RL ST 110 or 120; or ENGL 104.
Cross-listed with: JST 425, RLST 425
Writing Across the Curriculum

CAMS 440: Studies in Classical and Ancient Mediterranean Archaeology

3-6 Credits/Maximum of 6

Selected topics in the literary sources and material evidence for classical and ancient Mediterranean society. CAMS 440W/CAMS 440W Studies in Classical Archaeology (3-6)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 440W is a writing-across-the-curriculum upper level archaeology course on various topics in the broad field of ancient Mediterranean archaeology. The course will vary depending on the specific topic, which could be a study of authors such as Herodotus and/or Pausanias in relation to the archaeological record; epigraphy; numismatics; food production and consumption (e.g., diet, subsistence requirements, public dining, symposia, Roman dining, furnishings) from the literary and archaeological record; various classes of ancient Mediterranean ceramics; or the archaeological study of a specific urban site, such as Troy, Babylon, Egyptian Thebes, the Athenian Agora, or Pompeii with an emphasis upon economic and social organization. In most semesters the topic will emphasize interdisciplinary themes, such as comparative state formation, or Egyptian-Greek-Persian relations, or the cultural development of a particular society, such as the Etruscan, that was strongly influenced by interaction with other Mediterranean cultures. Students will learn of major publications in the field of study, and how to conduct searches of the previous archaeological literature and the related literary record. As one requirement, students will complete a research paper on a topic related to the particular theme of the course that semester. The sequence of writing assignments is designed to allow students to develop a project, to search for related publications, to develop a proposal, and to revise drafts of the final paper. The course is also intended to provide students with a practical background in Classical and ancient Mediterranean archaeology that will help prepare them for fieldwork at ancient Mediterranean sites, for the interpretation of archaeological publications, and, as relevant, for utilizing the literary and/or epigraphic record for interpreting archaeological evidence. Those considering enrolling in this course may obtain information about the specific topic by asking the faculty member listed as teaching the course or the Undergraduate Officer in the Department of Classics and Ancient Mediterranean Studies.

Prerequisite: 3 credits from: ANTH 002, ART H311, CAMS 010, CAMS 020, CAMS 025, CAMS 033, CAMS 140, CAMS 150, HIST 100, HIST 101 Bachelor of Arts: Humanities
Writing Across the Curriculum

CAMS 442: Sport in Ancient Greece and Rome

3 Credits

An examination of the continuity of sport in Greek and Roman societies. CAMS 442 / KINES 442 Sport in Ancient Greece and Rome (3) (IL) This
course examines the continuity of sport in ancient Greek and Roman societies. It investigates the role of athletic festivals in both cultures as well as the value placed on physical activity as part of the educational process. The objectives of the course are to enable students to gain an appreciation for the continuous involvement of the ancient Greeks in the areas of competitive athletics and gymnastics [Kinesiology] as an important part of their value system. Moreover, the course will provide a comparison of Greek and Roman attitudes of athletics and gymnastics. Typical topics include athletics during the Minoan/Mycenaean Bronze Age, Athenian and Spartan philosophies regarding education, the importance of spectator sports in Roman society and their link to politics.

Prerequisite: CAMS 025, CAMS 033, CAMS 140, CAMS 150, CAMS 100, CAMS 101 or KINES 141
Cross-listed with: KINES 442
Bachelor of Arts: Humanities
International Cultures (IL)

CAMS 450: Gender and Sexuality in Ancient Greece and Rome
3 Credits/Maximum of 3

An examination of gender, sexuality, and sexual desire in ancient Greece and Rome. This course examines issues of gender and sexuality in Greece and Rome. Through close analysis of ancient texts and artifacts, we will explore representations of gender in literature and art, medical theories of the male and female body, sexual norms and codes, and views on marriage, rape, adultery, and prostitution. In addition, we will consider how eroticism and gender both support and subvert political and social ideologies. The objective of this course is to enable students to analyze gender identities and conventions surrounding sexuality in the context of the Greek and Roman worlds. This course will also invite students to consider the influence of ancient conceptions of gender and sexuality on modern discussions and debates. Authors and texts may include Homer, Hesiod, Sappho, Sophocles, Aristophanes, Plato, Aristotle, the Hippocratic corpus, Catullus, Virgil, Ovid, and Augustine. These ancient readings will be supplemented with selections from modern feminist theorists and gender studies.

Prerequisite: 3 credits in CAMS
Cross-listed with: WMNST 450
International Cultures (IL)
Writing Across the Curriculum

CAMS 470: Languages and Cultures of the Ancient Near East
3 Credits

This course is an overview of the languages and cultures that populated the Ancient Near East. CAMS 470 Languages and Cultures of the Ancient Near East (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course aims to provide students with a wide overview of the languages spoken in the Ancient Near East. The goal is to go beyond the merely linguistic sketches of the main grammatical features of these languages. In fact, the focus will be placed on historical, literary, social, anthropological, and ethnic matters: language contact settings; relations between language and ethnicity; sociolinguistic aspects of language evolution, language variation, bilingualism, and diglossia; relations between historical and social patterns and the literary, bureaucratic, and popular uses of language; etc. In order to address this ample variety of issues, the students will be introduced first to the essential set of facts needed to comprehend the sociolinguistic history of each region, i.e., basic overviews of the languages in question, their linguistic affiliation, the main periods of their history as evolving linguistic realities, and their different writing systems. These overviews will immediately open the door to the discussion of a tapestry of topics concerning the realities behind these languages, especially their speakers and their ethnic, historical, and political identity. This inquiry into the facets of language as an inherently human reality will lead to a miscellaneous constellation of problems, such as, for instance, the construction of a national identity through the use, revival, or vindication of a concrete language or dialect. Students will be required to do a number of readings before each class. These readings will include basic historical sketches of the languages and linguistic traditions with which the course will deal. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of a lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accompanied by some handouts. Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the several history and culture courses in CAMS that provide overviews of major civilizations of the Mediterranean and Near Eastern regions.

Prerequisite: 6 credits in any undergraduate CAMS courses.
International Cultures (IL)

CAMS 471: Sumerian
3 Credits

Introduction to the Sumerian language and the cuneiform writing system. CAMS 471 Sumerian (3)(BA) This course meets the Bachelor of Arts degree requirements. Sumerian was the language originally spoken in the south of ancient Mesopotamia (modern Iraq) during the third millennium B.C.E. After it died out as a spoken language, Sumerian became the essential cultural vehicle for a wide variety of literary, scholarly, and religious genres, and it was preserved in writing until the practical disappearance of the Mesopotamian civilization by the second century of our era. This course aims to familiarize students with the basics of Sumerian grammar and enable them to read royal inscriptions from the Early Dynastic and Ur III periods (third millennium B.C.E.) as well as provide them with a preliminary introduction to some literary and non-literary texts. Students will be introduced to a variety of genres: royal inscriptions, administrative documents, letters, incantations, and literary texts. Because of the specific nature of the writing system and the fact that most Sumerian texts are available only in copies, students will also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs. Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put on class participation: every student will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a mid-term and a final examination. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to as essential language of the Mediterranean and Near Eastern regions.

Prerequisite: 6 credits in any undergraduate CAMS course.
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
CAMS 472: Akkadian

3 Credits

Introduction to the Akkadian language (Babylonian & Assyrian) and the cuneiform writing system. CAMS 472 Akkadian (3)(BA) This course meets the Bachelor of Arts degree requirements. Akkadian is the cover term for the East Semitic dialects spoken and written in Mesopotamia (modern Iraq) from the mid-third millennium b.c.e. to about the first century c.e. These dialects (Babylonian and Assyria) are all quite similar. As is customary, the course will focus on Old Babylonian, as this is the &quot;classical&quot; variety of the language, and served as the basis for the dialect of the vast majority of later Akkadian texts (Standard Babylonian). This course aims to familiarize students with the basics of Akkadian grammar and enable them to read a wide variety of genres: legal texts, letters, omens, royal inscriptions, and literary compositions. Because of the specific nature of the writing system and the fact that many texts are available only in copies, students will also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs. Every meeting will follow a similar structure: the first part will be devoted to the exercises corresponding to the lesson in the textbook that was explained the previous day; and the second part will be an explanation of the next lesson, the exercises of which will have to be prepared for the next meeting. Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put on class participation: every student will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a mid-term and a final examination. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies. Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to an essential language of the Mediterranean and Near Eastern regions.

Prerequisite: 6 credits of any CAMS course
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures

CAMS 480: Greeks and Persians

3 Credits

Development and achievements of the Achaemenid kingdom; relationships between Persians and Greeks.

Prerequisite: CAMS 010, CAMS 025, or CAMS 100
Cross-listed with: JST 480
Bachelor of Arts: Humanities

CAMS 481: Introduction to Middle Egyptian & Hieroglyphics

3 Credits

An introduction to the language and script of Ancient Egypt, familiarizing the student with grammar, syntax and lexicon. CAMS 481 Introduction to Middle Egyptian & Hieroglyphics (3) This course is offered as a basic introduction to that stage in the evolution of the Egyptian language known as Middle Egyptian and, as a vernacular c. 2300-1700BC, and as a literary dialect c. 2200-1350BC. First encountered in caption texts and snippets of conversation of the workers and peasants in late Old Kingdom mastaba depictions, Middle Egyptian originally was the vernacular of &quot;street&quot; during the outgoing Old Kingdom. In the upheaval that swept away the monarchy and elite of the Old Kingdom the language which characterized the Pharaonic court (Old Egyptian) was swept away as well. In the subsequent First Intermediate Period, the language that everyone speaks is a lower class register. Middle Egyptian was given a fillip shortly after the turn of the millennium when the new regime of the 12th Dynasty (c. 1991-1786 BC) established a writing school and adopted this dialect as the accepted literary medium. The scribes of this institution produced a number of literary pieces, hymns and poetry which although created in writing, were intended for oral dissemination parlando. They rapidly became classics and were copied and learned by heart for centuries into the future. Middle Egyptian was used in every walk of life from monumental inscriptions, religious, and mortuary texts to letters, business documents and accounts, and the output from Dyn. 12 through 18 was prodigious. Even beyond the 14th Century BC learned scribes would continue to make the attempt at composing in Middle Egyptian, even though the language was no longer spoken, and as a quasi-ecclesiastical speech it continued down to Greco-Roman times. By that time its restriction to temple texts gave the false impression that both language and script had always had the purpose of conveying religious concepts, hence the Greek misnomer &apos;hieroglyphs&apos;, i.e. holy script.

Prerequisite: 6 credits of any CAMS course
Bachelor of Arts: Other Cultures
International Cultures (IL)

CAMS 490: Ancient Mediterranean Languages

3-6 Credits/Maximum of 6

Variable topic study of an ancient language of the Mediterranean basin and related areas, other than Greek, Latin, or Hebrew. CAMS 490CAM 490 Ancient Mediterranean Languages (3-6)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 490 is a variable topic course in ancient languages, other than Greek, Latin, and Hebrew, that are offered by the Department of Classics and Ancient Mediterranean Studies. The course expands the range of ancient languages of areas in the Mediterranean region which students may study at Penn State. The course permits students of Latin, Greek, or Hebrew to learn the basics of other ancient Mediterranean languages, thereby extending their understanding of the structural similarities and differences of the region&apos;s writing systems. The languages taught at present include Egyptian and Sanskrit. Other languages, such as Akkadian, Hittite, Ugaritic, or Aramaic may be offered in future years. The course consists of three major components: The course begins with an overview of the language of study with respect to the language systems of the ancient Mediterranean world in a historical context. Next students learn the essential features of the language of study including its forms, grammar, and lexicon. In the second part of the semester, students read selected texts of various genres as appropriate, including literary and historical texts and inscriptions. The known features of the oral language will also be discussed. The course complements advanced courses such as LATIN 450W, The History of the Latin Language, and other advanced language offerings in Greek, Latin, and Hebrew. It also complements offerings in historical-comparative and Indo-European linguistics such as LING 102(GH).

Prerequisite: LATIN003
Bachelor of Arts: Humanities

CAMS 492: Intermediate Field Methods

3-6 Credits/Maximum of 6

On-site experience in archaeological fieldwork in the ancient Mediterranean region. CAMS 492CAM 492 Intermediate Field Methods
This course meets the Bachelor of Arts degree requirements. Students will have the opportunity to participate in a practicum in archaeological fieldwork at Mediterranean sites under the direction of an experienced research archaeologist. Activities will include surveying recognition and recording of stratigraphy and standing remains, recovery of artifacts and ecofacts, and on site conservation. Students will keep a journal and be graded on it as well as on their development of skills in excavation and interpretation. This course may be used to fulfill a requirement for the Classics and Ancient Mediterranean Studies option of the CAMS major and as a 400-level course for the CAMS Minor. The course will be available when CAMS faculty conduct archaeological fieldwork or students participate in projects approved by CAMS archaeology faculty. Estimated enrollment will vary depending on project, funding, etc.

**Prerequisite:** approval by field school director
Bachelor of Arts: Humanities

CAMS 493: Intermediate Field Analysis
3-6 Credits/Maximum of 6

On-site experience in archaeological analysis in the ancient Mediterranean region. CAMS 493 Intermediate Field Analysis (3-6)(BA)
This course meets the Bachelor of Arts degree requirements. Students will have the opportunity to participate in archaeological fieldwork at Mediterranean sites under the direction of an experienced research archaeologist. Activities will include analysis of materials recovered in archaeological projects including maintaining an objects database, artifact sorting and reparation, recognition of pottery types, recording finds, proper handling and storing of finds, and understanding the role of artifacts in archaeological interpretation. Students will keep a journal and be graded on it as well as on their development of skills in recording and interpreting archaeological data. This course may be used to fulfill a requirement for the Classics and Ancient Mediterranean Studies option of the CAMS major and as a 400-level course for the CAMS Minor. The course will be available when CAMS faculty conduct archaeological fieldwork or students participate in projects approved by CAMS archaeology faculty.

**Prerequisite:** approval by field school director
Bachelor of Arts: Humanities

CAMS 494: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

CAMS 494H: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities Honors

CAMS 495: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Bachelor of Arts: Humanities

CAMS 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Bachelor of Arts: Humanities

CAMS 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Humanities

CAMS 499: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities

International Cultures (IL)

**College Student Affairs (CSA)**

CSA 397: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CWC 294: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.
CWC 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small group basis.

Honors

**Communication Arts and Sciences (CAS)**

**CAS 83: First-Year Seminar in Speech Communication**
3 Credits
Introduction to major theoretical, critical, research and pedagogical issues in human communication.

Bachelor of Arts: Social and Behavioral Sciences
First-Year Seminar
General Education: Social and Behavioral Scien (GS)

**CAS 84: First-Year Seminar in Communication Arts and Sciences**
3 Credits
Introduction to significant issues surrounding effective human communication; humanities emphasis.

Bachelor of Arts: Humanities
First-Year Seminar
General Education: Humanities (GH)

**CAS 100: Effective Speech**
3 Credits
Introduction to speech communication: formal speaking, group discussion, analysis and evaluation of messages.

General Education: Writing/Speaking (GWS)

**CAS 100A: Effective Speech**
3 Credits
Principles of communication, implemented through presentation of speeches, with some attention to group discussion and message evaluation. CAS 100A Effective Speech (3) (GWS) This general education course studies the purposeful use of oral communication as a means of addressing practical problems, both professional and civic. It is designed to introduce students to principles of effective public speaking, implemented through the design and presentation of individual speeches and through practice in message analysis and evaluation. Class size is limited and class meetings involve considerable attention to developing public speaking skills through in-class activities, collaborative learning, peer critiques, and analysis of public speeches and other messages. At least three individual, graded speeches are required in this course. Additional presentations (graded or non-graded) may be required by some instructors. Course work may also include instruction and practice in group decision making. Assessment includes evaluation by examination (one or two; no final exam is given in the course) and by occasional quizzes and other activities, all of which emphasize the mastery and application of the conceptual content of the course. Public presentations are evaluated for content, organization, and presentation.

General Education: Writing/Speaking (GWS)

**CAS 100B: Effective Speech**
3 Credits
Principles of communication, implemented through group problem solving, with some attention to formal speaking and message evaluation. CAS 100BCAS 100B Effective Speech (3) (GWS) This is a general education course designed to introduce students to principles of effective communication with a specific focus on group problem solving. The goal of CAS 100B differs from the goal of the other sections of CAS 100, with the goal of CAS 100B directed toward skill development in effective group communication, with less emphasis on formal public speaking and message evaluation. Toward the end, class size is limited and class meetings involve considerable attention to group dynamics, teamwork, and effective communication within groups. Through in-class activities, peer critiques, and analysis of both process and product, this course is designed to allow students to actively work in groups and engage in self-analysis of their own group processes. Structurally, this course begins with discussion of the principles of effective communication and public presentation and then covers significant course content addressing group communication and group process. This course enables students to work more effectively in groups, develop teams, and make effective group and individual presentations. At least one individual speech, several group communication activities, and one message evaluation are required in this course. Evaluation methods include evaluation beyond formal exams. Public presentations are evaluated for content, organization, and presentation: group work is evaluated for process effectiveness and outcomes; critical evaluation of messages is assessed in individual assignments; and all course content is covered on exams. There is one midterm exam and one final exam, with the possibility of quizzes on lecture and reading materials throughout the semester.

General Education: Writing/Speaking (GWS)

**CAS 100C: Effective Speech**
3 Credits
Principles of communication, implemented through analysis and evaluation of messages, with some attention to formal speaking and group discussion. CAS 100CCAS 100C Effective Speech (3) (GWS) This is a general education course designed to introduce students to principles of effective communication with a specific focus on the analysis and evaluation of messages. Toward the end, class size is limited and class meetings will involve considerable attention to individual and group work in message analysis and critique. Through in-class activities, lecture, and discussion, this course focuses on the critical analysis of persuasive messages. This course will enable student to be better prepared to analyze both written and oral messages, work in groups, and develop effective presentations. Students will deliver a minimum of two public speeches and work on at least one group assignment. Public presentations will be evaluated for content, organization, and presentation. Exams will test students ability to synthesize and apply course concepts from the textbook and lectures.
General Education: Writing/Speaking (GWS)

CAS 100S: Effective Speech

3 Credits

Principles of communication, implemented through presentation of speeches, with some attention to group discussion and message evaluation.

First-Year Seminar
General Education: Writing/Speaking (GWS)

CAS 101N: Introduction to Human Communication

3 Credits

CAS 101 introduces students to the field of communication studies and to the most important concepts, questions, and ideas that surround the study of communication today. This class is essential for any student who wishes to consider a major or minor in Communication Arts and Sciences. The course is also an important elective for students who want to understand processes of communication in a variety of social forms or settings, including: interpersonal, small group, organizational, intercultural, public, and technological. The main objectives of the course are: 1) to expose students to the concepts and best practices that cut across every aspect of modern communication, 2) to prepare students to excel in advanced classes within the Department of Communication Arts and Sciences, and 3) to help non-CAS majors incorporate essential communication principles into their own fields of study and future professions. Students from every major or college are welcome. Student grades may be determined by a variety of assignments, including quizzes, exams, in-class discussions, and major individual or group projects. This course invites students not only to learn about major concepts or ideas in the study of communication, but to explore their practical implications.

Bachelor of Arts: Social and Behavioral Sciences

General Education: Humanities (GH)
General Education: Social and Behavioral Sciences (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

CAS 126: Developmental Listening

3 Credits

Introduction to effective strategies of listening, with an emphasis on studying, note taking, test taking, and research paper writing. CAS 126CAS 126 Developmental Listening (3) This course designed to assist first year students in developing a comprehensive understanding of their role as students, the nature of the learning process and the role of communication in successful learning. A critical objective of the course is for students to understand the integral relationship of communication to academic success. Therefore, considerable attention is given to learning processes and the significant impact of communication on these processes and subsequent learning outcomes. Within this larger context students will be provided opportunities to engage in activities designed to enhance their skills in the following areas: listening, speaking and writing; self awareness and self monitoring; classroom management; time management; study management and learning strategies; exam management; resource management; and researching and developing a thesis in a research paper. Student achievement is evaluated through class participation, including working in groups; a research paper and oral presentation based on developing an effective argument; an academic planning project; reflection papers; quizzes; and two exams. CAS 126 is available only to students participating in the Comprehensive Studies Program, Penn State's Act 101 Program.

CAS 137H: Rhetoric and Civic Life I

3 Credits

Rhetoric and Civic Life (RCL) is a year-long honors course offering comprehensive training in oral, written, visual, and digital communication. It unites these various modes under the flexible art of rhetoric and uses rhetoric both to strengthen communication skills and to sharpen awareness of the challenges and advantages presented by oral, written, visual, and digital modes. This portion of the course, CAS/ENGL 137 focuses particularly on two critical academic capacities: analyzing and contextualizing. In this semester, students learn to rigorously examine the rhetoric surrounding them, compellingly present their findings in various modes, and thoughtfully contextualize their research. In this course, students will: -Develop a rich understanding of rhetorical concepts - Practice application of concepts and terms in expressing understanding of effectiveness of rhetoric through analysis and contextualization of existing texts -Enhance communication skills by practicing and applying in a variety of communication modes (written, oral, digital)

Cross-listed with: ENGL 137H

GenEd Learning Objective: Integrative Thinking

CAS 138T: Rhetoric and Civic Life II

3 Credits

This course builds rhetorical skills in oral, written, visual, and digital contexts and introduces deliberation and advocacy in civic and disciplinary spheres. CAS (ENGL) 138T Rhetoric and Civic Life II (3) (GWS)ENGL/CAS 138T, Rhetoric and Civic Life II, expands knowledge and aptitudes built in ENGL/CAS 137H by asking students to use rhetorical skills and principles to develop strategies for persuasion and advocacy in the context of civic issues. The course continues the multimodal emphasis—the focus on oral, written, visual, and digital communication—used in 137H and adds new components as well. Students will develop a repertoire of communication skills through hands-on practice at composing and delivering speeches and essays, and they will work with digital media to create multimedia texts, podcasts, and websites. Students will reflect on these different modes as themselves rhetorical choices. The course’s civic and ethical components take center stage as students learn how to deliberate important public issues thoughtfully and with civility and respect. They will learn the difference between persuasion and advocacy and develop strategies for both in the context of pertinent local, national, and global issues. They will participate in a public deliberation forum on topics they generate and vote on. The forum will be organized to allow small deliberative action groups as well as large forum-style meetings. The course focuses on ethics in many contexts, e.g., community action and public deliberation; ethics of persuasion; ethical controversies in the disciplines. Students will be encouraged to explore percolating disciplinary interests and to share knowledge in online disciplinary communities. Students will work throughout the
 semester to design and build a final electronic portfolio that represents their academic work with an eye to their imagined professional futures. The portfolio assignment is designed to permit assessment of learning outcomes and encourage students to move toward qualifying for the College of the Liberal Arts Excellence in Communication Certificate (http://laus.la.psu.edu/current-students/paterno-fellows-program/excellence-in-communication-certificate), a mechanism which helps students hone their communication abilities throughout their Penn State careers by creating and perfecting an online portfolio.

CAS 162N: Communicating Care

3 Credits/Maximum of 3

Communicating Care ENGL 162N / SOC 162N / CAS 162N What do we talk about when we talk about health? Our states of well-being and illness are topics that, like the weather, drive our daily conversations, but we rarely have time to study and practice these vital exchanges. Spoken in emergency rooms or on long-distance calls, by medical professionals, family members, or strangers making small talk, the languages we use to share pain and recovery require our knowledge of long-established scripts and our willingness to improvise. By exploring how these encounters draw from and work as textual and dramatic performances, this course will guide students to achieve a new level of literacy in the most essential communicative art of caring. Students will analyze health conversations in literary texts, such as short stories, poems, memoirs, and graphic novels. They will explore real-life scenarios drawn from their own experiences, fieldwork, social science theories, and published case studies. Developing skills in the humanities (GH), they will see how subjective, often individual experience, historical perspectives, and creative expression help people to communicate about health and care. Developing their abilities in the social and behavioral sciences (GS), they will see how theory provides insights to predict and understand health and practices of care, investigate objective perspectives and recognize the contributions of fieldwork and data-driven studies to analyzing and improving communication when health is a main concern. They will integrate these methodologies especially to pursue these fields’ common goals of making beneficial connections between individuals and groups, and managing private and public life.

CAS 170N: What is Information?

3 Credits

What is Information? considers the material and social nature of information in historical and contemporary contexts. How has information been managed and valued? How have information infrastructures served as sites of social and political connection or antagonism? How have ideas about information changed over time and how have they remained the same? The course integrates perspectives from the social sciences and the humanities, and prepares students to think about (and act in) a world in which information (and its linked concepts, like data) play an increasingly important social and political role. The course addresses the history of information as both a concept and as a matter of social practice, and then focuses on three major topics: how information is presented, how information is organized, and how information is put to social and political use. Moving from the earliest periods of human history and their "information ages" (including the birth of writing and the dawn of printing and mass literacy), the course leads students into our contemporary "information society" and the ways in which both the use and manipulation of information shape our lives.

CAS 175: Persuasion and Propaganda

3 Credits

Propaganda, in common usage, is a deliberate, systematic attempt to manipulate beliefs and emotions, usually through methods considered deceitful and unethical. Persuasion, on the other hand, is an everyday activity in our personal, social, and civic lives. Persuasion is considered acceptable, even necessary in a free society. This course will explore the distinction, historically and theoretically, between propaganda and persuasion, with an emphasis on developing the critical skills necessary to distinguish between the two. There are many different definitions of propaganda and the term often is used to label and discredit political opponents. This course allows students to develop a more precise understanding of propaganda and the techniques of the propagandist. In more practical terms, students will learn to recognize, describe, and evaluate propaganda in all of its various forms and contexts. Toward this end, it includes important cases from the history of propaganda as well as contemporary cases of public advocacy that raise questions about the distinction between persuasion and propaganda.

CAS 195: Careers in Communication
1 Credits
An introduction to a variety of careers in the field of communication arts and sciences.

CAS 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CAS 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CAS 200: Language, Culture, and Communication
3 Credits
Introduction to language, language development, cultural literacy, culture, and intercultural communication. CAS 200CAS 200 Language, Culture, and Communication (3) (US;IL) This course defines culture broadly, including how people conceptualize and enact reason, rationality, race/ethnicity, sex/gender, power, and age. Course content is organized into three large units: (1) how culture shapes language use; (2) how language use shapes culture; and (3) how culture and language (both verbal and nonverbal) operate together and influence each other, including how language is used to create, and negotiate understandings of culture. In the first unit, the class examines the effects of preconceived cultural beliefs on behavior; that is, how beliefs that a culture takes for granted as being true filter persons' perceptions of reality. This unit also covers the concepts of self-fulfilling prophecies, cultural stereotypes about age, the possibility of cross-cultural universals (e.g., politeness), and African-American culture. In the second unit, the class examines how the structure of different culture's languages (e.g., their vocabulary and grammar) shapes how persons experience the world and thus shapes their "reality." In the third unit, the class takes the position that various aspects of culture (e.g., race/ethnicity, sex/gender, power, and age) are constantly being constructed and re-constructed through language. This unit examines how persons accomplish being "a woman," "African American," "old," "polite," "powerful," etc. This class is interdisciplinary and incorporates materials from anthropology, applied linguistics, linguistic anthropology, communication studies, and sociology. Grades are based on three in-class exams (two midterms and a final), which are closed-book and involve short-answer and essay-type questions. Attendance is mandatory. This is one of the three core/required courses for the major. This course ties into another core course, Communication Theory, by discussing several key Communication Theories in different ways, such as the Sapir/Whorf hypothesis, Politeness Theory, and various theories of language. This course ties into those dealing with race and gender.

International Cultures (IL)
United States Cultures (US)

CAS 203: Interpersonal Communication
3 Credits
The phenomenon called interpersonal communication encompasses the complexities of interaction between people in any of a variety of situations. The expectations people form prior to a conversation, the messages that they produce using language and nonverbal cues, the ways in which they attach meaning to the behaviors of others, and the systemic qualities of the dyad are all part of interpersonal communication. And interpersonal communication occurs in contexts as varied as strangers sharing a seat on a bus, neighbors passing each other in the street, college roommates or married couples coordinating their lives, and co-workers negotiating office politics. In the home, at school, at work, and in public, interpersonal communication is an intricate process that weaves the fabric of our lives as social beings. This class is designed as an opportunity to explore the complexities of interpersonal communication and to develop a repertoire of interpersonal communication skills.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 204: Communication Research Methods
3 Credits
Overview of the skills necessary to evaluate commonly reported communication research.

CAS 206: Mediation and Communication
3 Credits
Presentation of the history, theory, and practice of mediation as a means of resolving conflict through communication. CAS 206 CAS 206 Mediation and Communication (3) There are two overall objectives to this course. First, the course will acquaint students with conflict as a normal part of the human condition, and with the efforts of humans for thousands of years to resolve conflict in a peaceful way. The specific method of conflict resolution addressed by the course is mediation, which involves the intervention of a third party who is neutral in the conflict. Modern uses of mediation to resolve conflict extend from the playground to essential functions in society, for example, labor relations, legal systems, government operations, including international relations, and family disputes. While Western methods will be emphasized, mediation also plays an important role in non-Western cultures. For example, Hawaiian, Palestinian, Native American, and Chinese cultures rely on mediation to resolve conflict and rebuild relationships. In fact, mediation is the most popular means of conflict resolution in China, Taiwan, and Japan. Second, the course will acquaint students with the essential means by which mediation is accomplished, communication. The success of the mediation depends on the ability of the mediator to communicate well in specific ways when addressing the assembled parties, and when interacting with them individually. The course will also acquaint students with communication issues in mediation under study by both professional mediators and communication scholars. This course relates to lower-division Communication Arts and Sciences courses in rhetoric and interpersonal communication, in that it demonstrates how the different theories and practices they discuss can be integrated to produce important positive outcomes not
only to individuals in conflict, but also to cultures. This course relates to upper-division Communication Arts and Sciences courses in rhetorical theory, interpersonal communication theory and research, conflict resolution and family communication theory and research, by providing an introduction to communication issues arising from an important context of communication, mediation, issues that can stimulate both further theory and research. This course relates to upper division courses in Labor Studies and Industrial Relations dealing with workplace dispute resolution and collective decision-making, and in Human Development and Family Studies dealing with interventions and resolving problems, to the extent that these courses discuss mediation. This course introduces the communication bedrock on which mediation rests.

General Education: Humanities (GH)

CAS 208N: Introduction to Managing Conflict and Bargaining

3 Credits

CAS 208N introduces students to the nature of interpersonal conflict and emphasizes how this knowledge, in turn, helps students become more effective negotiators. Students apply both objectivist and interpretive theories to different communication contexts and across various communication channels (face-to-face and mediated). Students learn affective communication skills (e.g., how to be an empathetic listener) and instrumental communication skills (e.g., how to manage interpersonal conflict). Much of the class focuses on relational power dynamics in interpersonal contexts. Thus, students learn the importance of empathetic listening, especially when another person disregards students’ core concerns (ego, affiliation, appreciation, status, and role). Students will also learn distributive and integrative bargaining strategies, including how best to negotiate across cultures. The class integrates an array of theories where intellectual traditions from both the Humanities (GH) and the Social and Behavioral Sciences (GS) are covered equally.

CAS 209: Democratic Leadership

1 Credits

Penn State has a special opportunity to create new leaders who learn deliberative approaches to politics and public life. This one-credit course provides a background for this approach to democratic leadership, and it also prepares students for the Nevins Fellows paid internship program. Those who complete this course will have first priority when awarding these internships each year. The centerpiece of this course are day-long workshops that introduce students to effective civic leaders in government or the non-profit sector. Bracketing these workshops are a handful of seminars, which introduce ideas, discuss reading assignments, and reflect on the workshops. In addition to short reaction papers, students will produce a narrative essay at the end of the course that describes how they could see themselves advancing democracy in the United States (or elsewhere) and what kind of internship experience will help them prepare for such a career. For those who opt to seek an internship, this essay will supplement their formal application. Credit for the course requires attendance at every class meeting and workshop, or equivalent makeup assignments, if permitted.

Cross-listed with: PLSC 209 Honors

CAS 210: Landmark Speeches on Democracy and Dissent

3 Credits

Landmark Speeches on Democracy and Dissent offers a survey of key speeches, debates, and controversies making up the rich tradition of U.S. civic life. The course is designed to introduce students to the basic historical contexts within which these key events arise; engage them in close readings of speeches, tracts, and polemical writing; and develop skills in critical thinking and writing. Students will attend to a broad spectrum of voices, including those of historically under-represented peoples as well as canonical figures. Landmark Speeches on Democracy and Dissent thereby encourages students to develop a broad rhetorical literary in the diverse democratic voices that have long contributed to essential U.S. arguments about nationhood, protest, war, race, gender, religion, and more. The course presupposes that students will be able to apply this rhetorical literary to both participation within and critical thinking about contemporary forms of democracy and dissent.

GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 212: Professional Public Speaking

3 Credits

Organizing, adapting and presenting ideas in public informative, persuasive, technical and ceremonial speeches.

Prerequisite: CAS 100

CAS 213: Persuasive Speaking

3 Credits

Planning, organizing, and adapting techniques of persuasion to achieve personal and public goals; engaging in critical assessment of persuasive messages.

Prerequisite: CAS 100

CAS 214: Speech Writing

3 Credits

Writing speeches for delivery in political, professional, and ceremonial settings; emphasis on composition and language for oral presentation.

Prerequisite: CAS 100

CAS 215: Argumentation

3 Credits

This course provides an in-depth examination of argumentation in both public and private contexts. The course requires students to investigate the process of researching sound evidence, constructing legitimate
argumentative claims, and participating in live debates. Fundamental to this endeavor is a strong attention to research, ethics, and strategy. Major topics may include essential components of effective arguments, in-depth examination of different types of evidence, introduction to forms of reasoning, negative and affirmative cases, and debate rules or strategies. Students may be evaluated with a range of assignments, from oral debates or presentations to written assignments, quizzes, and exams. This course thereby offers students opportunities to enhance their skills in effective inquiry and advocacy, useful for academic as well as professional success. Understanding the theoretical foundation of argumentation will enable students to accomplish four objectives: 1) to understand the significant role argumentation plays in public and private discourse, 2) to research, gather and organize supporting material into argumentative discourse so as to become a skilled advocate, 3) to be familiar with the physical and virtual PSU libraries, and 4) to become an effective critic of argumentative discourse.

GenEd Learning Objective: Crit and Analytical Think

CAS 216: Practical Parliamentary Procedure
3 Credits

Practice in presiding over and participating in meetings conducted under rules of order.

Cross-listed with: AEE 216

CAS 220: Persuasion
3 Credits

The course aims to impart knowledge of scientific theories of persuasion by engaging students in the design and execution of a persuasion campaign. The applied component of the course involves (a) selecting a consequential issue, (b) evaluating the extent to which that issue might be amenable to solution via persuasion, (c) learning how members of the target audience view the issue via formative research, (d) designing theoretically-informed messages adapted to the target audience, (e) implementing a campaign that utilizes multiple messages in multiple modalities, and (f) evaluating the impact of the campaign. Classic and contemporary concepts of persuasion science are brought to bear on each stage of this sequence.

CAS 222N: Foundations: Civic and Community Engagement
3 Credits

Through readings, discussion, deliberation, listening, and individual as well as collaborative action, this course gives students the opportunity to learn about and practice theories and habits of civic and community engagement and public scholarship with the goal of helping to build democratic capacity and sustain participatory democracy. This course emphasizes concepts and case studies that focus on the people’s role in shared governance. The course also provides a foundation for understanding how a wide range of other individual and collective practices have an equally important role to play in building and sustaining community. The course draws from studies in demography, political science, sociology, psychology of racial identity formation and education to help students communicate better about and in shared governance. Among the core concepts are the role of students and other citizens in sustaining and transforming their communities, the historical and contemporary mission of Land Grant universities, the centrality of rhetoric and communication to collaborative judgment, and the relationship among media, cultures, and politics as they affect civic and community engagement. Students also learn together about the range of ways that citizens do, can, and might participate in democratic decision-making and will observe and practice these forms in several communication media and across a range of differences. Finally, learn about models of and opportunities for engaging other citizens across and beyond Penn State, including in global environments.

CAS 232N: Identity, Citizenship, and the Rhetoric of American Horror Film
3 Credits

Concentrated on American horror film from the 1930s to the present, the course will address the role of horror in the creation of stories told about the United States, its history, and its people. The course examines horror films rhetorically and social scientifically. Specifically, the course incorporates a rhetorical lens by exploring horror films as acts of constitutive rhetoric, that dramatize and interrogate the ways people use language and images to tell stories and foster identification within and between citizens and to constitute an “American identity.” The course also incorporates a social scientific lens by examining horror films’ association with identity/US identities using media effects theories, which include perspectives associated with audience use and reception. Both perspectives (rhetoric and media effects) are used to consider the roles of U.S. social, political, and economic contexts in the production/construction of horror films for the stories they tell and the characters they construct. For example, the course will examine the ways that American horror films respond to fear and anxiety in response to specific cultural contexts such as the emergence of science, xenophobia/marginalized populations, various social movements, economics, and war.

Skill development in the areas of group discussion, leadership, and teamwork. CAS 250 Small Group Communication (3) This course serves to develop students' skills in decision-making, problem-solving, and leadership. To provide opportunities for students to develop competence as communicators and leaders, this course will address both theory and practices. Learning from case studies and analyzing real-world problems are at the center of exploring group communication in this course. CAS 250 fulfills the skills requirements for our majors and minors and is the skills course associated with an organizational communication pathway emphasis in the major. Additionally, involvement in groups is essential to learn about group processes; therefore students will participate in a variety of group-based assignments and presentations. Evaluations will be determined at the individual level (e.g., exams, papers, attendance, peer evaluation) and at the group level (e.g., group presentation, group process, group paper). There will be two exams, a problem analysis report, and at least two small papers required in addition to the final group project and presentation.

CAS 252: Business and Professional Communication

3 Credits

Interviewing, briefing, conferring, and decision making; analyzing and evaluating formal and informal patterns of communication in organizations.

CAS 253: Health Communication

3 Credits

To introduce students to principles of health message design and the general theories and models used to guide these efforts. CAS 253 Health Communication (3) This course is designed to provide students with theoretical principles for practice in planning and evaluating health messages for dissemination by health organizations, policy makers, and other interested publics. CAS 253 emphasizes the potential positive and negative outcomes associated with specific messages designed to impact individuals' knowledge and behavior with health consequences. It emphasizes the importance of audience segmentation on goal selection in guiding health message design, as well as the effects and effectiveness of source and channel selection for reaching particular audiences. The CAS 253 Health Communication course is one of a series of electives for Communication Arts and Sciences majors or minors interested in pursuing careers in organizational communication, health communication, sales, and training and development in small groups. The course is possibly linked to those with interests in biobehavioral health.

CAS 271N: Intercultural Communication

3 Credits

Focus on topics such as language, identity, prejudice, and intergroup relations on a domestic/ international level. This course fulfills an intercultural and international competence (US/IL) requirement. CAS 271N is designed to give undergraduate students an introduction to the various issues, trends, and historical perspectives pertaining to communication within U.S. domestic and international cultures. It integrates social and behavioral sciences and humanities disciplines so that students can compare and contrast what different disciplines bring to a topic. CAS 271N is an introductory survey course that is highly recommended to students as a course preceding several other 300 and 400-level courses on interpersonal, group and intercultural communication, relationships, and processes.

CAS 272N: Political Communication and Technology

3 Credits

This course examines how interactive communication technologies reshape political rhetoric, discursive civic culture, deliberation in the online public sphere, and participatory democracy. It traces the evolution of the public sphere and explores theoretical and empirical issues related to online political discourse (blogs, political discussion fora, viral politics of social networking sites), cyberactivism, smart mobs, networked publics, and peer-to-peer production (You Tube, Wikis). CAS 272N concentrates on online rhetorical and discursive strategies of candidates for public office, and individuals and organizations campaigning on specific issues and causes. It emphasizes civic engagement and includes topical areas such as mechanisms of online public spheres, citizen generated discourse and content, viral politics, connections between social networking sites and political discourse, and behaviors such as networked activism. It examines how various interactive communication options have affected political discourse, campaign communications and public deliberation. It provides students with hands-on experiences in analyzing the rhetorical and persuasive strategies involved in creating video content, writing blogs, creating wikis and twitter messages. It teaches students how they could use these communication options in working for political campaigns, civic action groups and non-profit institutions. The goal of the course is to help students understand the opportunities and constraints involved in using interactive communication technologies for civic and political actions, and facilitate their development as informed citizens. Class activities focus on identification and critique of rhetorical strategies employed when using interactive communication technologies, and learning to create content such as weblogs, wikis, and mashups. Students will be graded on exams, participation in discussion groups, analyzing and connecting course concepts to real world examples, creating content such as mashups, and analysis of rhetorical strategies of political candidates and activist groups. CAS 272N is highly recommended to students interested in examining the potential of interactive communication technologies for civic and political action.

CAS 302: Social Influence
3 Credits
Explores how humans influence others through communication.

CAS 303: Communication Theory
3 Credits
This course is intended as a foundational course in communication theory for Communication Arts and Sciences majors and others interested in social science theory in general. It is designed to show how communication theory can be applied to understand and improve communication in your professional (and personal) life. The theories examined will span the range of communication contexts, including interpersonal, group, organizational, mediated, and cross-cultural interactions. At the conclusion of this semester, students should be able to demonstrate: - Knowledge of major ideas from a substantial number of communication theories - Ability to apply theories of human interaction to explaining and improving communication behavior, especially in professional contexts In addition, students should have: - Improved skills at both creative and analytic writing that includes practice in giving helpful feedback on others - writing, and facilitating discussion

Bachelor of Arts: Social and Behavioral Sciences

CAS 303H: Introduction to Communication Theory- Honors
3 Credits
This honors course provides an overview of conceptual perspectives and theories of human communication. Students will apply theories to analyze and solve problems in different applied contexts (e.g., interpersonal, political, and health, etc.). Students will learn to recognize and present clear descriptions of communication theories in both general instances and specific contexts. Students will learn to understand communication theories apply them to the analysis real-world problems. Students will learn to defend their analyses, justify their arguments, and prepare counter-arguments with articulate logic and appropriate empirical evidence. Additionally, students will learn to synthesize scholars’ logically related, testable statements devised to explain the same group of facts or the same phenomena: their definitions, claims, assumptions, and rationale from published, empirical research. CAS 303H is designed to provide the opportunity to pursue this course more in depth and rigorous level.

CAS 304: Quantitative Methods for Communication Research
3 Credits

The purpose of this course is to instruct students on concepts and issues of quantitative research methods in Communication. Students will learn how Communication researchers conduct and evaluate research from using a variety of qualitative methodologies. By the end of the course, students will possess the knowledge necessary to understand and evaluate arguments utilizing research to persuade, as well as, to conduct sound research on their own. A primary goal of the course is to enable students to become critical consumers and producers of information that defines the world around them. The course will educate on the proper terminology/concepts used in research methods. The end result of the course should be a fundamental understanding of how to critique and conduct research in the field of Communication.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 304H: Communication Research Methods (Honors)
3 Credits

The purpose of this course is to acquaint students with the basic concepts and issues of research methods in Communication. Students will learn how Communication researchers conduct and evaluate research from a variety of traditions (e.g., quantitative, qualitative, rhetorical). By the end of the course, students will possess the knowledge necessary to understand and evaluate arguments utilizing research to persuade, as well as, to conduct simple, yet, sound research on their own. A primary goal of the course is to enable students to become critical consumers and producers of information that defines the world around them. The course will educate students on the proper terminology/concepts used in research methods. The end result of the course should be a fundamental understanding of how to critique and conduct research in the field of Communication. This course sets itself apart as an honors course because of the depth of the investigation of course theory/concepts and through the conducting and writing of a significant research project. Further, the significance of cultural contexts is made central to the consideration of research, theoretical application, and communication of research findings, highlighting the importance of a global thinking relative to communication problem-solving.

GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 311: Methods of Rhetorical Criticism
3 Credits

Rhetorical Criticism introduces students to the most common methods of rhetorical criticism within the field of communication. These methods are designed to help students analyze and evaluate commonplace forms of rhetoric. Examples include historical or contemporary speeches, debates, political campaigns, social movements, or mass mediated messages intended to influence the public at large. The course not only provides a survey of essential methods of rhetorical criticism, but also requires students to produce works of rhetorical criticism themselves based on substantive research and written evaluation of a rhetorical artifact. Methods of rhetorical criticism are distinct from analytic methods used by other academic disciplines. Scholars of communication began to establish methods of rhetorical criticism in the early twentieth century in an effort to distinguish the aims of their scholarly pursuits from those of literary criticism or historical research. Rhetorical criticism evaluates the rhetoric of public communication (speeches, debates, or mediated messages intended to shape public understanding of real-world social, political, or moral issues). Such methods enable rhetorical critics to do so, moreover, not only by examining who said what at a given moment in history, but by closely analyzing how and why strategic uses of language or symbolic communication influenced public beliefs or behaviors. Rhetorical Criticism thus provides students with a variety of adaptable analytic tools that they may use to better understand and evaluate the nature as well as impact of rhetorical messages throughout history and in everyday life.

General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 315: Debate and Civic Life
3 Credits/Maximum of 3

This course provides historical background on debate in politics and in civic life, examining both public and competitive debate practices. Debate has been a vital part of democratic engagement in the United States since the founding of the country. This course explores the role debate has played in the United States, focusing primarily on debate practices in the 20th and 21st century. This course provides historical background on debate in politics and in civic life, examining both public and competitive debate practices. Course material will expose students to theories and practices of debate including the history of important debate moments in the United States, analysis of contemporary political debates, and practical debate techniques inside the classroom and in a public setting.

CAS 321: Rhetoric and Law
3 Credits

A survey of the literature on the role of rhetoric in law, including trial advocacy, appellate argument, and judicial reasoning. CAS 321CAS 321 Rhetoric and Law (3) A survey of the literature on the role of rhetoric in law, including trial advocacy, appellate argument, and judicial reasoning. Rhetoric and Law explains how knowledge of rhetorical principles enhances the understanding of legal documents, reasoning, and performance. This course surveys classical to contemporary rhetorical literature demonstrating its utility to the study of law. Students will examine the role rhetoric plays in injury deliberation, trial advocacy, appellate argument and judicial reasoning. Students will demonstrate their understanding of rhetorical theory by participating in a mock trial. In this exercise, students will deliver opening statements, closing arguments as well as conduct direct and cross-examination of witnesses. Finally, the class will examine United States Supreme Court majority and dissenting opinions as rhetorical documents.
CAS 340: Communication and Civility
3 Credits
Communication behaviors contributing to civil and uncivil discourse; their implications in business, public life, across cultures and in interpersonal relationships.

CAS 352: Organizational Communication
3 Credits
This course combines theory, research, and practical application to explore the role of communication in today's organizations. Students will learn communication skills applicable to modern work-related issues. Topics include organizational culture, problem solving in teams, organizational conflict, communication technology, social media, and ethical leadership.

General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

CAS 360: Communication for Teachers
3 Credits
Analysis of dynamics of instructor-student communication implemented through structured exercises in instructor listening, verbal and nonverbal message-making.

Prerequisite: CAS 100

CAS 373: The Rhetorics of War and Peace
3 Credits
This course explores how war and peace are advocated. CAS 373 The Rhetorics of War and Peace (3) In The Wealth of Nations (1776), the first classic of capitalism, Adam Smith speaks of "the art of war," deploying a phrase from Sun-Tzu's The Art of War that would later appear in Baron von Clausewitz's On War and also in contemporary U.S. military handbooks. This course argues that war is indeed an art, and a thoroughly rhetorical one in which the political economy of persuasion is as important as high-tech weaponry and whiz-bang battle plans. By considering some of war's most thoughtful theorists, by discussing wars past and present, and by reading powerful defenses and trenchant critiques of war, this course will help students understand how wars are managed rhetorically. This course satisfies a grave need: for living in the post-9/11 world requires the critical rhetorical skills necessary to understand not just how war is waged or how it structures our lives but how war is advocated and defended. The trajectory of this course will thus make the full arc from war to peace. Perhaps most importantly in this time of grave post-modern warfare, this semester's readings and discussions will make us all better rhetorical scholars capable of imagining alternative futures. From the realities of war comes the possibility of peace.

CAS 375: Rhetoric and Public Controversy
3 Credits
Survey of important events in the history of public address, including speeches, debates, and persuasive campaigns and movements.

CAS 383: Culture and Technology
3 Credits
This course will examine the area of cybertechnology as it relates to communication studies.

CAS 390: Qualitative Research Methods
3 Credits
An overview of Qualitative Research Methods, including how to conceive, design and execute a research study. CAS 390 Qualitative Research Methods (3) (GS) This course provides students with an understanding of both qualitative research methods and the theoretical frameworks that inform qualitative inquiry. Additionally, this course focuses on tools for data collection such as individual and focus-group interviewing and observing and recording interaction. This course provides practical experience for students in collecting and analyzing qualitative data with and without the use of technology and examines particular difficulties in the interpretation and reporting of qualitative findings. Qualitative Research Methods is course that bridges disciplinary boundaries and is useful to any student who will be investigating human interaction.

General Education: Social and Behavioral Scien (GS)

CAS 395: Forensics Practicum
1-2 Credits/Maximum of 16
Provides students in forensics the opportunity for supervised participation in the activity in class and in intercollegiate competition.

CAS 398: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CAS 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

CAS 402: Speech and Human Behavior
3 Credits
General semantics, thought, and human behavior; not offered at University Park campus.

CAS 403: Interpersonal Communication Theory and Research
3 Credits
Examining behavior within interpersonal encounters, with emphasis on both theoretical/applied explanations for how and why people act during such interactions.

Prerequisite: CAS 203
CAS 404: Conflict Resolution and Negotiation

3 Credits

Conflict and its management are critical issues that pervade the fabric of our society. This class is designed as an opportunity to explore the complexities of conflict, to understand the forces that make conflict challenging, and to develop a repertoire of skills for thinking about and managing conflict more effectively. In this pursuit, we first examine the features that define and set the stage for conflicts. We then turn to the communication behaviors that people use to manage conflicts. Finally, we consider some of the dynamics that make constructive conflict management a challenge. The objective of this course is to expose students to the scholarly study of interpersonal communication in a way that both captures the vitality of the discipline and enhances interpersonal communication skills. As a General Education course contributing to the social and behavioral science requirement, this class is also expected to (a) survey existing knowledge in the subject domain, (b) promote an understanding of social scientific methods, (c) clarify the multiple nature of causality in social settings, (d) demonstrate the relationships between the study of interpersonal communication and other disciplines, and (e) encourage students to integrate empirical knowledge and theoretical views of the social world. The course content, assignments, and exams were developed to attend to these concerns.

Recommended Preparation CAS 100

Prerequisites: 5th Semester standing
General Education: Social and Behavioral Sci (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 405: Family Communication Theory and Research

3 Credits

Explores the nature and functions of communication in family life; emphasis on meaning, patterns, and styles of family communication.

Prerequisite: CAS 101, CAS 202

CAS 406: Honors Course in Communication Arts and Sciences

3 Credits

Individual study and seminar in selected areas or issues of speech communication.

Prerequisite: an all-University average of B; approval of the departmental Honors Committee
Honors

CAS 409: Democratic Deliberation

3 Credits

Explores the theory and practice of democratic deliberation in elections, town meetings, juries, legislatures, and other public institutions. CAS (PL SC) 409 Democratic Deliberation (3) Many modern democracies have made strides to become more deliberative in how they make decisions. This course looks closely at the most promising innovations in self-government while also reviewing the persistent anti-deliberative and undemocratic features of modern societies and governments. Topics covered in the course include deliberative democratic theory, political conversation, common forms of public meetings, mediated deliberation, campaigns and elections, the jury system, and deliberative democracy on larger social scales.

Prerequisite: CAS 137, CAS 175, CAS 201, CAS 202, CAS 216, CAS 250, CAS 272 or PL SC001, PL SC017, PL SC112, PL SC130
Cross-listed with: PLSC 409

CAS 411: Rhetorical Criticism

3 Credits

Principles of rhetorical criticism examined through analysis of selected texts and critics.

Prerequisite: CAS 201 or CAS 100
Bachelor of Arts: Humanities

CAS 415: Rhetoric of Film and Television

3 Credits

Rhetorical analysis of the artistic forms and cultural structures of film and television; intensive study of selected examples.

Prerequisite: CAS 100 or COMM 150
Bachelor of Arts: Humanities

CAS 420: Rhetorical Theory

3 Credits

Ancient, medieval, Renaissance, Enlightenment, and contemporary theories of rhetoric.

Prerequisite: CAS 201
Bachelor of Arts: Humanities

CAS 421: Communication and Aging

3 Credits

Concentrates on the pivotal role that communication plays in the social process of aging. CAS 421 CAS 421 Communication and Aging (3) Communication and Aging is a course that concentrates on the pivotal role that communication plays in the social process of aging. An understanding of the communicative behavior of older adults can result in significant improvements in our ability not only to describe the essential components of a quality life, but to actively intervene in the various factors that help each of us adapt to the many physiological, psychological, social and economic challenges of the aging process. Topics covered in this course include: the theories of social aging; attitudes and ageism; mass media use and portrayals; work, leisure, and retirement; family relationships such as siblings, grandparent-grandchild, parent-child; friendships; health and aging; death and dying; and successful aging. This course places communication and our interactive behavior at the heart of the aging process and helps us combine the growing bodies of literature in physical, psychological and social aging as we attempt to grasp the process of life long development.

Prerequisite: Three credits of CAS

CAS 422: Contemporary African American Communication

3 Credits

A focused study on the continuities between African and African American culture and communication. CAS 422 / AFAM 422
Contemporary African American Communication (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. At least once a year, this multidisciplinary course is designed to serve both Speech Communication and African and African American Studies. It is concerned with the relationship between a people’s culture and world view and their systems of rhetoric/communication. It also provides a focus on the continuities between African and African American culture and communication. Specifically, it offers an approach to ascertaining the salient features of African and African American communication for community development. Special emphasis is given to the development and rhetoric of the Civil Rights Movement. The course utilizes videos, guest lectures, tapes of speeches, etc. to clarify objectives and stimulate classroom discussion. Students will be evaluated on two exams, one oral report, a final paper and class participation. Even though students need 400-level courses for their major and minor, this course is not required for Speech Communication majors. However, it does meet the Intercultural and International Competency requirement because it focuses on the communication of African Americans and how that communication has affected all Americans. The course will accommodate ten students in Speech Communication and ten students in African and African American Studies to ensure active discussion of issues.

Prerequisite: CAS 100
Cross-listed with: AFAM 422
Bachelor of Arts: Humanities
United States Cultures (US)

CAS 426W: Communication Ethics
3 Credits
Ethical issues in public and private communication; role of communication in expressing and realizing individual and social values.

Prerequisite: CAS 100
Bachelor of Arts: Humanities
Writing Across the Curriculum

CAS 438: Rhetoric of Documentary
3 Credits
Rhetorical analysis of the documentary in film, television, and other media; historical and critical analysis of functions and form.

Prerequisite: CAS 201

CAS 450W: Group Communication Theory and Research
3 Credits
Selected theories of problem solving through group discussion emphasizing participation and leadership. CAS 450W Group Communication Theory and Research (3)(BA) This course meets the Bachelor of Arts degree requirements. CAS 450W: Group Communication Theory and Research is a writing-intensive course in which students study a broad range of theories and perspectives concerning the role of communication in decision-making and problem-solving groups through a variety of writings by leading scholars in the area of Group Communication. The objectives of CAS 450W are: (1) to expose students to various facets of group life and theories that account for their performance; (2) to provide a summary knowledge of representative findings from research on group interaction; (3) to develop critical skill in the assessment of theoretical arguments and the adequacy of the evidence on which they are based; and (4) to enhance students’ capacities for addressing, both orally and in writing, substantive issues posed by the subject matter. Theoretical material is examined with a view toward determining how to improve the performance of decision-making and problem-solving groups. Hence, the course has a strong concern with the identification of communication practices on which students can draw in making choices concerning how to participate in such groups. The course incorporates a discussion, rather than lecture, format. Attendance is required. Students will receive a set of questions in advance of each reading assignment that will provide a basis for discussion in the class sessions. The questions for the first five reading assignments will also serve as topics for a series of five short position papers that fulfill the writing intensive component of the course. In addition to the position papers, students are required to complete a midterm and final examination, both of the open-book, essay variety, and a course paper exploring a significant communication issue raised in the course. Among the topics covered in the course are the impact of member characteristics on interaction, the social dynamics of groups, the management of conflict, argument and decisional outcomes, leadership, and principles of meeting management. Students completing the course will have not only a better understanding of why decision-making and problem-solving groups both succeed and fail, but also a much improved basis for contributing effectively to them. CAS 450W satisfies requirements in the Communication Arts and Sciences Major and Minor, the Liberal Arts Business Minor, and the Dispute Management and Resolution Minor. It may also be used as an elective and is complementary to courses dealing with groups and group process in Psychology, Sociology, and Management.

Prerequisite: CAS 100 or CAS 250
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

CAS 452: Organizational Communication Theory and Research
3 Credits
Explores the nature and functions of communication in organizations; emphasis on concepts, tools, and skills for effective management of communication.

Prerequisite: CAS 202 or CAS 252

CAS 452W: Organizational Communication Theory and Research
3 Credits
Explores the nature and functions of communication in organizations; emphasis on writing and exploring concepts, tools, and skills for effective management of communication. CAS 452W CAS 452W Organization Communication Theory and Research (3)This course is designed to further introduce you to the field of Organizational Communication. Emphasis is placed on macro-organizational variables that can systematically affect micro-communication behaviors: in other words, how could something like the hierarchy of the organization influence who you talk with as an organizational employee. The purpose of the course is to provide you with a basic understanding of communication-relevant behaviors and activities in organizations. This includes things like leadership, teamwork, conflict management, and diversity. Additionally, we will examine various theories of and approaches to studying communication within organizations. My hope is that when you’ve successfully completed the course you’ve mastered these objectives: - Develop a vocabulary and understanding of organizational communication concepts. - Become familiar with the historical, current, and future issues and problems facing organizations. - Apply theoretical
perspectives and concepts to organizational situations and settings. Identify and understand the relationships between macro (e.g., structure and hierarchy) and micro (e.g., social support and stress) organizational communication variables. Experience locating, reading, synthesizing, and evaluating scholarly research appropriate for organizational communication phenomena.

**Prerequisite:** CAS 202 or CAS 252

**CAS 453: Health Communication Theory and Research**

*3 Credits*

Principles of communication about health across the lifespan and within health-care contexts. CAS 453 Health Communication Theory and Research (3) This is an upper division course designed to provide students with a comprehensive introduction to multiple discourses about health and health care. CAS 453 emphasizes the communication about health and health care that reaches us everyday through many and varied professional, personal, and mediated forms. Interactions with health care providers were once limited primarily to physicians and nurses. Today, careers in health care are among the most rapidly expanding job areas, and a bewildering array of technicians and technical and professional titles greets the client of formal health care. Awareness and understanding of how to assess these various roles increases the ability of students to interact competently with care providers. Family, friends, and the cultural groups that nurture our youth and sustain our adulthood interact with us about health on a regular basis as well. Awareness and understanding of the impact that interactions with these primary social network members has on interactions with health care providers increases the likelihood that both provider and client will be better understood and better served. Every message about health and health care carries an ethical dimension in its content. The course will increase a students’ critical thinking and informed decision-making skills associated with others efforts to influence them regarding their own health practices. It also frames discussion about the ethics of and ethical decision-making associated with health communication. Students will examine communication about health in many situations and contexts to illustrate how it reflects efforts to assign labels to illness and disease, and sometimes the environmental and political contributors to the situation. Students will assess whether communication about health and health care places the responsibility on individuals, institutions, society, or some combination for the particular health condition or situation. Finally, students will evaluate how communication is used to invoke personal, professional, and societal norms of conduct associated with standards of conduct that should promote health and well-being. The course is linked to the courses in interpersonal communication, organizational communication, health communication, and small group communication, as discourse about health crosses societal, cultural, and personal contexts. CAS 453 is one of the upper division courses that may be used to fulfill Major or Minor students’ requirements for upper division credits.

**Prerequisite:** CAS 100

**CAS 455: Gender Roles in Communication**

*3 Credits*

Explores the literature on gender research in the discipline of human communication. CAS (WMNST) 455 Gender Roles in Communication (3) (US) This 400-level course is a theory and application course which also satisfies an intercultural requirement. CAS/WMNST 455 strives to ensure that students understand female and male differences and similarities in communication patterns, perceptions of the opposite sex, and expectations and stereotypes regarding the opposite sex. Many researchers find that gender communication is “cross cultural,” i.e., that women and men come from two different cultures, and therefore misunderstanding of each others’ intent and expectations may frequently occur. This course examines how distinctions in meaning and interpersonal dynamics may create these two differing cultures, and promotes understanding and possibilities for adaptation. It also investigates when and if changing communication styles is desirable, and in which settings. A goal of the course is to help students to solve puzzles toward understanding those we work with and relate to, as well as to apply their knowledge to their own lives and contexts. The course content and format reflects these goals. CAS/WMNST 455 begins with theoretical information, later applying it to situations of interest to other – relationships, language use differences (verbal and nonverbal), media messages, and workplace issues. Lecture incorporates considerable discussion and exploration of gender issues, and most topics are followed by activities, which illustrate how theories work in real life. This course is useful for any students seeking an intercultural course. It is recommended to Communications Arts and Sciences and Women’s Studies majors and minors due to emphasis on communication theory and gender issues. Business, counseling, psychology, sociology, education and any social science majors may fulfill a US requirement through 455.

**Prerequisite:** CAS 202

Cross-listed with: WMNST 455
United States Cultures (US)

**CAS 460: Introduction to Honors Thesis**

*3 Credits*

This course will guide students through steps that result in Honors Thesis Proposal.

**Prerequisite:** Student must be in good standing in Schreyer Honors College. CAS 201 or CAS 202 ; CAS 204 Honors

**CAS 470: Nonverbal Communication**

*3 Credits*

Examining ways nonverbal messages, such as gestures, posture, vocal intonation, and facial expressions, affect us on a daily basis.

**Prerequisite:** 6 credits in Communication Arts and Sciences

**CAS 471: Intercultural Communication Theory and Research**

*3 Credits*

Intercultural and cross-cultural communication research theory and practice as applied within and across national boundaries. CAS 471 Intercultural Communication Theory and Research (3) (US;IL) This course is designed to introduce theoretical approaches to cross-cultural communication from a variety of disciplines, e.g., speech communication, anthropology, linguistics, sociology, sociolinguistics, psychology, and has a double aim of combining theory with practical application and empirical observation. We will be utilizing a number of readings, films, and such mass media elements as films, magazines, newspapers, and television programs and commercials, as well as actual interviews with people from other cultures. Classes will be conducted through lecture sessions,
class discussions, and small group activities. Specific: To examine characteristics of communication, language, and culture; to consider which aspects of language, communication, and culture may be universal, culture-specific or individual characteristics of speakers; to examine cultural values and their relationships to communication involving members of the same cultural group and members of groups outside of that culture; to raise awareness of both similarities and differences within and between cultural groups; to analyze how effective communication is achieved and to identify potential sources of miscommunication and/or misunderstanding; to raise awareness of our own cultural norms, preferences, and expectations; to increase acceptance, understanding, and appreciation of similarities and dissimilarities among people. Students will be evaluated on two midterm exams (undergrads) or two extended analytic journals (grads) 25%, observation journals (6 total) 15%, thought journals (4 total) 15%, article presentation and critique 15%, final paper and oral report 25%, and participation 5%. The content and focus of this course is related to any field which has the potential of dealing with persons of other cultures, including but not limited to biobehavioral health, business and marketing, and education. This course is inherently related to Speech Communication Majors and Minors, but is also valuable from a cross-disciplinary perspective since we deal squarely with issues of humanity, tolerance, values, and communication.

**Prerequisite:** CAS 271
International Cultures (IL)
United States Cultures (US)

CAS 475: Studies in Public Address
3 Credits

History and criticism of public discourse; intensive analysis of selected public addresses and social movements.

**Prerequisite:** CAS 100
Bachelor of Arts: Humanities
Bachelor of Arts: Social and Behavioral Sciences

CAS 478: Contemporary American Political Rhetoric
3 Credits

Analysis of selected speeches, debates, and persuasive campaigns and movements in recent American political history.

**Prerequisite:** CAS 100

CAS 483: Communication and Information Technology II
3 Credits

Theory and application of interactive internet-based communication and information management; for students who want a Liberal Arts approach.

**Prerequisite:** CAS 283

CAS 490: Peer Tutoring for Public Speaking
3 Credits

This course will prepare students to become peer tutors in public speaking. CAS 490 Peer Tutoring for Public Speaking (3) This course will prepare undergraduates for work as peer tutors in the area of public speaking. Students will begin by considering peer tutoring as an opportunity for civic engagement, and public speaking as integral to the democratic process. Students will review and practice elements of the speaking process both to become excellent speakers themselves and also highly competent tutors for their peers across the university’s curriculum. In addition to instruction on elements of public speaking, students will study and practice the art of critique. This course will include in-class instruction, discussion, and activities, as well as a practicum in which students will participate in reviews of peers’ work at all stages of the speaking process.

**Prerequisite:** CAS 100A or CAS 137H or ENGL 137H or CAS 138T or ENGL 138T or approved higher level speaking course

CAS 493: Undergraduate Teaching Assistantship
1-3 Credits/Maximum of 6

As a Teaching Assistant, you’ll activate your learning in a way that will reinforce and enrich your understanding of course material. In addition to this intellectual benefit, working as a Teaching Assistant is great professional experience that enhances other skill sets including: organization, time management, planning and executing effective meetings, and, of course, effective communication. Finally, teaching assistantships are great ways to cultivate strong relationships with faculty and graduate students who may become mentors and personal and professional resources. Specific duties of undergraduate teaching assistants might include leading discussions, holding office hours, doing research or creating materials for the instructor, and performing tasks related to the course (e.g., taking attendance or keeping records). Grading of exams and assignments is not an appropriate task for undergraduate TAs.

CAS 494: Research Topics
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisite:** prior approval of proposed assignment by instructor

CAS 494H: Research Topics
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisite:** prior approval of proposed assignment by instructor Honors

CAS 495: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

CAS 496: Independent Studies
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisite:** prior approval of proposed assignment by instructor Honors

CAS 497: Honors Practicum
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor Honors

CAS 498: Honors Capstone
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisite:** prior approval of proposed assignment by instructor Honors

CAS 499: Honors Thesis
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

**Prerequisite:** prior approval of proposed assignment by instructor Honors

CAS 499H: Honors Thesis Honors
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor Honors
preventing voice disorders and promoting activities that contribute to healthy vocal habits across the life span. The course is designed to integrate theoretical knowledge, practice-based, and measurement-focused activities to assist learners in understanding, achieving, maintaining, and promoting a lifetime of healthy vocal activities. Learning activities include use of specialized computer instrumentation for analyzing voice qualities. The educational objectives of the course are to: 1) develop a basic understanding of the normal and disordered vocal mechanism; 2) understand the need for maintaining and promoting lifetime wellness in your vocal activities and habits for any occupational choice; 3) learn about the prevention of vocal disorders across the life span from vocal nodules to laryngeal cancer; 4) understand the subjective and objective measures of vocal qualities to assist in changing and altering vocal abuses and misuses while improving and enhancing good vocal habits, and 5) developing an understanding of how vocal behaviors influence social behaviors, employment, and quality of life. The course includes an overview of the anatomy and physiology of the respiratory and vocal mechanisms, physics of voice production, development of vocal abuses and resulting pathologies, disorders including vocal growths, paralysis, voice disorders associated with cleft lip and cleft palate, syndromes, neurodegenerative disorders, aging and head and neck cancer.

United States Cultures (US)
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

CSD 101: Preventing Hearing Loss
1.5 Credits
Assessment, intervention, and prevention of hearing loss caused by loud music and recreational and industrial noise.

United States Cultures (US)
General Education: Health and Wellness (GHW)

CSD 146: Introduction to Communication Sciences and Disorders
3 Credits
Classification of speech, language, and hearing disorders, diagnostic and treatment procedures; skills and responsibilities of the speech-language pathologist and audiologist. CSD 146 is a required course, requiring a grade of "C" or better, and should be taken during the first or second year (semester standing 1-4) since CSD 146 is a prerequisite for CSD 230, 245, 395W, 442, 444, 451, and 459W. The educational objectives of the course are to introduce students to speech, language, and hearing disorders and the professions of speech/language pathology and audiology. This is done by providing an overview of the normal aspects of speech, language, and hearing disorders with emphasis on assessment and intervention strategies. The course includes an overview of the anatomy and physiology of the speech and hearing mechanisms, physics of sound, and linguistic and psycholinguistic development. Students are required to complete several observations of speech, language, or hearing therapy or assessment in the Penn State Speech and Hearing Clinic and readings from a required text and Internet sites. Students are evaluated by three to four tests and their clinical observation reports.

International Cultures (IL)
United States Cultures (US)

CSD 218: American Sign Language I
3 Credits
Introduction to sign language; provides basic receptive and expressive skills; includes out-of-class practice. CSD 218 is a 3-credit course that can be taken by any student interested in learning sign language. Several sections of the course are offered every semester. For Communications Sciences and Disorders majors, the course is highly recommended as an elective. The intent of the course is to provide
students with a basic understanding of receptive and expressive sign language skills. The educational objectives are that students will (a) acquire a basic knowledge of expressive and receptive skills in American Sign Language (ASL), content variety signing, and finger spelling, (b) acquire a knowledge of the role of ASL in the lives of deaf people and to other cultural aspects of deafness, (c) develop and demonstrate a 600 word sign language vocabulary, and (d) demonstrate basic sign language communication skills. Students meet the educational objectives by attending class, completing reading assignments, observing video tapes, and practicing sign language inside and outside of class. Students will be evaluated using five tests. One test concerns aspects of the deaf culture as it pertains to the use of ASL and the grammatical structure of ASL. Four tests assess knowledge of vocabulary and communication skills by having the instructor sign vocabulary and questions and having students write down or sign back the answer. CSD 218 is a prerequisite for CSD 318, Sign Language II.

CSD 230: Introduction to Audiology
3 Credits

Basic measurement procedures, evaluation, and screening of hearing loss using pure-tone and speech audiometry, immittance, and physiological measurements. CSD 230, Introduction to Audiology (INTRO TO AUDIOLOGY), is a 3-credit course typically offered during Fall semester. The course is prerequisite by Communications Sciences and Disorders 146, required for Communications Sciences and Disorders majors, and should be taken during the second or third year. The course can also be taken by students exploring CSD as a major. The intent of this course is to provide students with a basic understanding of hearing measurement procedures, screening for hearing loss, and the educational, social, and vocational problems of hearing impaired individuals across the age span. The educational objectives are that students will acquire an understanding of: 1) acoustics as related to hearing testing, 2) anatomy and physiology of the auditory system, 3) common disorders of the auditory system, 4) the basic principles of measuring hearing sensitivity, speech understanding ability, and middle ear function, 5) screening for hearing loss, and 6) the educational, social, and vocational problems caused by a hearing loss across the life span. Students meet the educational objectives by attending and participating in class discussions, completing assigned readings, participating in workshops, observing hearing testing, and completing several examinations.

CSD 269: Deaf Culture
3 Credits

Explores the economic, social, psychological, and political aspects of the deaf culture and its interaction with the majority hearing culture. CSD 269, Deafness and Society (3) (GS;US;IL) explore this community as being a distinct culture having its own rules of social interaction, values, group norms, and identity. The educational objectives are that the student will acquire an understanding of: 1) the development of the American Deaf Community, 2) factors affecting an individual’s choice to affiliate with the Deaf Community, 3) history and current trends in deaf education, 4) American Sign Language (ASL) and other forms of communication used by Deaf Americans, 5) social, emotional, and psychological aspects of deafness, 6) diversity with the Deaf Community, and 7) deafness in the literature, media, and the arts.

International Cultures (IL)
United States Cultures (US)

CSD 311: Clinical Phonetics
3 Credits

Introduction to phonetic transcription of speech emphasizing articulatory phonetics of American English, its dialects, and disordered speech; extensive transcription experiences. CSD 311 Clinical Phonetics (3) For Communications Sciences and Disorders majors, CSD 311 is a required course, requiring a grade of “C” or better, and should be taken during the second or third year (semester standing 3-6). The educational objectives of this course are to introduce students to the phonetic transcription of speech sounds using the International Phonetic Alphabet, provide an overview of articulatory phonetics, describe representative sounds from languages of the world with primary emphasis on American English and its dialects, and the transcription of disordered speech production. Students will be expected to read and transcribe broad and narrow phonetic symbols, become familiar with sociolinguistic factors and non-organic and organic
speech disorders that affect pronunciation. In addition, students will be expected to describe the phonetic capabilities of humans including the articulatory basis of speech sounds, aspects of speech production, and speech sounds produced by the world's languages and disordered speakers. Recitation and extensive practice in transcription of live speech are integral parts of the course.

Prerequisite: CSD 146

CSD 318: American Sign Language II

3 Credits

Review of basic signing, plus continued development of signing skills. CSD 318 American Sign Language II (AM SIGN LANG II), is a 3-credit course that can be taken by any student interested in learning sign language provided they have taken CSD 218, Sign Language I. The course is offered every semester. For Communications Sciences and Disorders major’s, the course is highly recommended as an elective. The intent of the course is to provide students with an intermediate and some advanced understanding of receptive and expressive sign language skills. The educational objectives are that students will: 1) acquire intermediate and some advanced knowledge of expressive and receptive skills in American Sign Language (ASL) and content variety signing, 2) acquire conversational skills for interaction with members of the Deaf community, and 3) continue to develop signed vocabulary, ASL grammar, fluency in the use of signs and finger spelling, and knowledge of the Deaf culture. Speech is not permitted in the classroom. Students meet the educational objectives by attending class, completing reading assignments, observing video tapes, practicing sign language inside and outside of class, and spending at least 10 hours outside of class conversing in ASL with others who sign.

Prerequisite: CSD 218

CSD 331: Anatomy and Physiology for Speech and Hearing

3 Credits

Structure and function of the physical systems involved in speech and hearing, including respiration, phonation, articulation, perception, and neurology. CSD 331 Anatomy and Physiology for Speech and Hearing (3) For Communications Sciences and Disorders majors, CSD 331 is a required course, requiring a grade of "C" or better, and should be taken during the second or third year (semester standing 3-6). The overarching goal of this course is to provide a comprehensive foundation for understanding normal anatomy and physiology of the speech and hearing mechanisms (respiration, phonation, articulation, neurology, and perception), which is essential for evaluating and treating individuals with speech, language, or hearing disorders. Through lectures and active learning experiences, students will be expected to (a) distinguish between principles of anatomy and physiology, (b) demonstrate knowledge of terminology, concepts, and theories related to anatomy and physiology of the speech and hearing mechanism, and (c) understand how normal anatomy and physiology of the speech and hearing mechanism relates to understanding communication disorders.

Prerequisite: CSD 146, Course in human biology

CSD 341: Acoustic Principles in Communication Sciences and Disorders

3 Credits

Explores the fundamental concepts of acoustics as applied to individuals with communicative disabilities; special emphasis is placed on the acoustic analysis of speech. CSD 301CSD 301 Acoustic Principles in Communication Sciences and Disorders (3) For Communications Sciences and Disorders majors, CSD 301 is a required course, requiring a grade of "C" or better, and should be taken during the second or third year (semester standing 3-6). The educational objectives of the course are to introduce students to fundamental concepts of acoustics and to apply those concepts to individuals with communicative disabilities and to the acoustic analysis of speech. The course includes a detailed overview of the physics of sound, sound propagation, sound measurement, the generation, acoustic principles, measurement of speech sounds, and the acoustical analysis of speech for normal and disordered speakers. Students are required to have a scientific calculator capable of exponentiation, logarithms, and trigonometric functions.

Prerequisite: CSD 311, CSD 331

CSD 397: Special Topics

1-3 Credits/Maximum of 3

Formal Courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CSD 431: Neuroanatomical and Neuropsychological Foundations of Communication Disabilities

3 Credits

This course discusses various modes of communication, including speech perception, speech production, reading, writing, and sign language. All levels of language processing are discussed, from the morpheme level (smallest unit of meaning) to the discourse level, including prosody. The major psycholinguistic and neurolinguistic models of and the basic neuroanatomy responsible for the major aspects of linguistic communication are investigated. For all modes and levels of communication, examples from both normal and disordered language processing perspectives are included. Patterns of disordered language that result from neurological insult or neurodegeneration are discussed. To facilitate understanding, neuroanatomy, brain mapping methods, and the aphasias are the first topics of discussion.

Prerequisites: CSD 331

CSD 433: Aural Rehabilitation

3 Credits

Methods for improving receptive skills of persons with hearing impairments; clinical observation and practice. CSD 433 Aural Rehabilitation (3) Students will gain a basic understanding of the principles of aural rehabilitation for hearing impaired (HI) and deaf infants, children, and adults. Specifically, students will gain an understanding of: 1) hearing loss and hearing handicap in relation to speech understanding and communication, 2) the principles of amplification systems and assistive listening and alerting devices, 3) assessment of communication and communication strategies, 4) auditory training, 5) speech reading, 6) aural rehabilitation for adults, and 7) aural rehabilitation for infants/children. In addition, students will also acquire knowledge concerning the roles and work-sites of professionals working with HI and deaf individuals, and the impact of hearing loss and deafness on the individual, family, and society.

Prerequisite: CSD 146, CSD 230
CSD 433H: Aural Rehabilitation

3 Credits

Methods for improving receptive skills of persons with hearing impairments; clinical observation and practice.

Honors

CSD 442: Introduction to Disorders of Articulation and Phonology

3 Credits

This course is required for Communications Sciences and Disorders majors and should be taken during the third or fourth year. The intent of this course is to provide students with a basic understanding of the etiology, diagnosis, and treatment of children having articulatory and phonological disorders. The course is designed to facilitate critical thinking through problem solving. The educational objectives are that students will acquire an understanding of: 1) the theoretical and practical bases of language and dialectal variations, 2) normal and abnormal articulatory and phonological acquisition, 3) factors related to phonological disorders, 4) assessment procedures and analysis and interpretation of assessment results, and 5) remediation concepts, principles, and methodologies.

Prerequisite: CSD 311, CSD 331

CSD 444: Introduction to Organic Disorders of Speech and Language

3 Credits

Etiology, diagnosis, and principles of treatment of stuttering, and of speech-language disorders having organic bases. CSD 444CSD 444 Introduction to Organic Disorders of Speech and Language (3) The course is required for Communications Sciences and Disorders majors, and should be taken during the third or fourth year. The intent of this course is to provide students with a basic understanding of stuttering, related fluency disorders, and other organic disorders. The course is designed to facilitate critical thinking through problem solving with emphasis on the etiology and treatment of organic speech disorders. The educational objectives are that students will acquire an understanding of: 1) stuttering and related fluency disorders with emphasis on causation theories and assessment techniques, and 2) other organic disorders causing speech disorders with emphasis on stroke and closed-head trauma.

Prerequisite: CSD 300, CSD 331

CSD 451: An Introduction to Augmentative and Alternative Communication

3 Credits

Examination of assessment and intervention issues in augmentative and alternative communication techniques with persons with severe communication disorders. The course is required for Communications Sciences and Disorders majors, and should be taken during the third or fourth year. The intent of this course is to examine assessment and intervention issues in augmentative and alternative communication (AAC) techniques for persons having severe communication disorders. Students will be expected to spend outside of class time becoming familiar with common AAC devices located in the department's AAC laboratory. The educational objectives are that students will acquire an understanding of: 1) persons with severe communication disorders who may require AAC, 2) terminology and principles of AAC applications, 3) types and evaluation of existing AAC systems and emerging technology, 4) assessment issues for children and adults concerning the use of AAC devices, 5) intervention, learning, and therapy issues for children and adults who use AAC, 6) research in AAC, and 7) theoretical issues. Although the course will focus on non-electronic AAC applications, students will be expected to spend time in or outside of class becoming familiar with common electronic AAC devices located in the department's AAC laboratory.

Prerequisite: CSD 300

CSD 459: Principles of Clinical Management in Communication Disorders

3 Credits

CSD 459W, Principles of Clinical Management in Communication Disorders (PRIN CLIN MGMT), is a 3-credit writing-intensive course required for Communications Sciences and Disorders majors, and should be taken during the final year of their undergraduate curriculum. The intent of this course is to closely review the principles and practices for assessing and treating people across the life span who have a communication disorder as well as reviewing, interviewing, counseling, and report writing skills. Overall, this "how-to" course is designed to provide students with practical solutions and methods when serving persons with communication disorders. The educational objectives are that students will acquire an understanding of: 1) report writing with emphasis on different styles and the need for clear documentation and explanations, 2) assessment with emphasis on interviewing skills, preparation and test administration, interpretation of the results, and oral and written presentation, 3) therapy practices with emphasis on task analysis, behavioral objectives, and implementation, 4) documentation with emphasis on lesson plans, mid and final reports, documentation specific to school versus medical settings, and billing, and 5) client and family counseling and group sessions.

Prerequisite: CSD 300, CSD 230 plus 3 additional credits in CSD at the 300-level

Writing Across the Curriculum

CSD 462: Clinical Bases of Language Disorders

3 Credits/Maximum of 3

Description of pathological language and cognitive development, and principles of assessment and remediation among individuals with communication disorders. The course is required for Communications Sciences and Disorders majors, and should be taken during the third or fourth year. The course is designed to be an overview of language disorders with emphasis given to child language disorders. Specifically, the course provides information with a wide range of language disorders that affect individuals having different disabilities such as autism, hearing impairment, mental retardation, cerebral palsy, specific language impairment, learning disabilities, and traumatic brain injury. Through lecture, active learning experiences, and out-of-class assignments, students will learn to differentiate communication characteristics and associated problems for specific populations and become familiar with basic assessment and intervention principles. In addition, students will gain information of associated educational and medical problems common to individuals with language disorders.

Prerequisite: CSD 300

International Cultures (IL)

United States Cultures (US)
CSD 494: Senior Honors Thesis
1-6 Credits/Maximum of 6

Independent study related to a student’s interests directed by a faculty supervisor and culminating in the production of a thesis.

Honors

CSD 495A: Speech Therapy Practicum
1-6 Credits/Maximum of 6

CSD 495A, Speech Therapy Practicum (SPCH THPY PRACT), is a variable credit (1-6 credit) course offered every semester. The course is not required for Communications Sciences and Disorders majors. Fourth year Communications Sciences and Disorders students having a GPA of 3.0 can apply to take this course by contacting the Penn State Speech and Hearing Clinic, Coordinator of Clinical Services; however, Communications Sciences and Disorders graduate students are given priority. Typically, undergraduate students enroll in this course for 1-2 credits. Students enrolled in this course are student clinicians and provide assessment and treatment to clients of the Penn State Speech and Hearing Clinic. Students are highly supervised by Communications Sciences and Disorders clinical faculty and may be paired with Communications Sciences and Disorders graduate students. Students must adhere to all of the policies and procedures stated in the Penn State Speech and Hearing Clinical Policy Manual. Students are evaluated using outcome-based competency measures that includes oral and written reports skills.

Prerequisite: CSD 442

CSD 495B: Audiology Practicum
1-5 Credits/Maximum of 5

CSD 495B, Audiology Practicum (AUDIOLOGY PRACT), is a variable credit (1-5 credit) course offered every semester. The course is not required for Communications Sciences and Disorders majors. Fourth year Communications Sciences and Disorders students having a GPA of 3.0 and an interest in Audiology can apply to take this course by contacting the Penn State Speech and Hearing Clinic, Coordinator of Audiological Services; however, Communications Sciences and Disorders graduate students are given priority. Typically, undergraduate students enroll in this course for 1-2 credits. Students enrolled in this course are student clinicians and provide hearing assessment and treatment to clients of the Penn State Speech and Hearing Clinic. Students are highly supervised by Communications Sciences and Disorders clinical faculty and may be paired with Communications Sciences and Disorders graduate students. Students must adhere to all of the policies and procedures stated in the Penn State Audiology Clinic Policy Manual. Students are evaluated using outcome-based competency measures that includes oral and written reports skills.

Prerequisite: CSD 433

CSD 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSD 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CSD 497A: Neuro Foundation
3 Credits

This course will introduce students to the underlying neuroanatomy and neurophysiology of communication and social disabilities focus will be on the role of the nervous system plays in communication (e.g., speaking, listening, writing). This course will prepare CSD majors for higher level course, dealing with assessment and treatment of individuals who suffer from, neurological insult, injury, lesions, as well as congenital and degenerative disorders.

Communications (COMM)

COMM 1: Newspaper Practicum
1-3 Credits/Maximum of 8

A newspaper/print media practicum. Credits do not fulfill Communication major credits in all programs.

COMM 2: Newspaper Editorial Staff
1-3 Credits/Maximum of 8

A newspaper/print media practicum. Credits do not fulfill Communication major credits in all programs.

Enforced Prerequisite at Enrollment: COMM 1

COMM 3: Radio Practicum
1-3 Credits/Maximum of 8

A broadcast media practicum. Credits do not fulfill Communication major credits in all programs.

COMM 4: Television Practicum
1-3 Credits/Maximum of 8

A broadcast media practicum designed to provide students experience with TV and video production in a variety of contexts.

COMM 20N: Critical Media Literacy
3 Credits

We live in a world in which we are surrounded with media messages that influence how we think and act. Since we are so immersed in media culture, it is important that we know how to analyze media content, production and reception, so that media can become tools for liberation and creativity, not control. In this course, we will learn to critically analyze work produced in different forms of mass communication. The course focuses on power, ideology and social inequality, analyzing relationships between media producers and audiences, and between information, the politics of representation, and power, including a focus on the crucial areas of gender, sexuality, class, and race. The course takes a dialectical perspective that focuses on both theory and practice, providing students
with the opportunity and knowledge necessary to produce their own short film using the resources of Penn State's media commons.

COMM 97: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

COMM 99: Foreign Studies
1-6 Credits/Maximum of 6

Courses offered in foreign countries by individual or group instruction. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

COMM 100: The Mass Media and Society
3 Credits

AMST 106 / COMM 100 The Mass Media and Society (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. The Mass Media and Society is an overview of the interaction between mass media and society. By drawing from selected topics, the course pays particular attention to the social influences (e.g., economics, politics, technology, law and culture) that shape media messages. Among others, the course examines the nature of media controllers as well as the character of "users" and "consumers" of media products. By so doing, students are informed about the overall structure and scope of the mass media and led to understand the power and influences associated with media messages and practices. By the end of the semester, each student should have a better understanding of the dynamic nature of the mass media in an information society.

Cross-listed with: AMST 106
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

COMM 101N: Understanding and Enhancing Creativity
3 Credits

Creative work challenges the existing ways of seeing and understanding the world and is at the heart of many disciplines. This course will be an integrated general education course (GA-GS) that encourages students to approach Creativity through the concepts, principles, and the methods of scientific inquiry. This course will begin with an overview of the various approaches and theoretical views of Creativity. This will be followed by a module applying these to analyze the role of creativity in several global and cross-cultural works in the fields of art (paintings, sculptures), writing (prose, poetry, comics), mass media (movies, recorded music, magazines), strategic communications (advertisements, public relations, digital/internet marketing) science, and organizations. Students will develop an understanding and appreciation of the comprehensive role of creativity in the creative works, literature, and history of arts. In the third module, students will be introduced to techniques and strategies for creativity enhancement. During this module, students will learn of empirical investigations of how creativity enhancement has been studied and apply those techniques to their own work. The course will conclude with students producing their own creative work. Over the journey of this course, students will be sensitized and introduced to the science of creativity. Students will develop a better understanding of what is creative and what is not. Students will learn to think in an integrative way across disciplines, improve their critical thinking and analytical skills, while creating their own creative work.

General Education: Arts (GA)

COMM 110: Media and Democracy
3 Credits

COMM 110 Media and Democracy (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. COMM 110 seeks to introduce students to the important role of the mass media in developing conceptions of democracy and democratic participation in contemporary societies. Utilizing current events, popular culture and the students’ own relationship to media as the template, this course is designed to stimulate student thinking about the interrelationship between the dynamics of US culture, news, politics, and civil society in order to develop a greater understanding and appreciation of what civic engagement and global awareness can do towards nurturing democracy’s principles and practices.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

COMM 118: Introduction to Media Effects
3 Credits

COMM 118 Introduction to Media Effects (3) (GS) Aside from working and sleeping, individuals in the United States spend more time consuming media than any other single activity. By the time the average person reaches the age of 65, he or she will have spent over six full years of life watching television - not to mention the additional time spent reading newspapers and magazines, listening to the radio, using the Internet, and playing videogames. Given the centrality of media in the lives of most people, it is imperative that we understand and critically explore the variety of ways in which we perceived and are influenced by media messages. The purpose of this course is to introduce students to the study of the effects of media on individuals and on society. This course will overview a broad range of media theories that have examined media as a social force, that have explored factors that affect individuals’ selection of and perceptions of media messages, and that have studied how media affect viewers’ attitudes, beliefs, and behaviors. These theories will be used to examine a variety of different types of content, including media violence, portrayals of race and gender, politics, advertising, and entertainment, among others. Students will be assessed by exams on these theories and topics, by group-based writing assignments, and by an assignment requiring students to locate, identify,
and critically evaluate media content that illustrates the theories and issues covered in class.

General Education: Social and Behavioral Scien (GS)

COMM 120: Advertising and Society

3 Credits

History and structure of advertising in American society; the role of advertising in the economic and communications systems; regulation. May not be used to fulfill requirements of any major in the Bellisario College of Communications.

COMM 150H: The Art of the Cinema

3 Credits

COMM 150H The Art of the Cinema (3) (GA) This course takes a critical and historical approach to cinema, exploring relationships between classical and contemporary films and society and culture. It stresses critical thinking, analytical viewing, and essay writing (rather than memorization of facts or aesthetic evaluation of movies). COMM 150H assumes that the cinema reveals, both directly and indirectly, something about collective experience, identity, and culture, and that movies can be analyzed—even psychoanalyzed—to reveal something about the cultural conditions that produced them and attracted audiences to them. The course seeks both to familiarize students with works they probably haven't seen and to "defamiliarize," through critical and historical analysis, works they very well may have seen. Students will examine movies as formal constructs, market commodities, and cultural artifacts—as reflections, however distorted, of society in the twentieth and twenty-first century.

Bachelor of Arts: Arts
General Education: Arts (GA)
Honors

COMM 150N: The Art of the Cinema

3 Credits

COMM 150 (The Art of Cinema): COMM 150 is an introduction to cinema studies which aims to provide students with media literacy for a world in which communication is increasingly visual and cinematic in its form. The course assumes that films tell stories and make arguments as communicative forms by drawing on a visual language that can be learned. As such, films can be interpreted and analyzed to reveal something about the cultural conditions that produced them. The course seeks to familiarize students with examples of films that speak to both the forms that they follow and the cultural context in which they were produced. Movies, from early silent films to contemporary blockbusters, are examined as formal constructs, market commodities, and cultural artifacts that aim to represent a world for the viewer. Topics include the emergence of the cinema as a communications technology, business industry and cultural institution; the global dominance of classical Hollywood cinema; American film industry organization (production, distribution, exhibition, vertical integration, the studio system, the star system); analysis of film styles (national cinemas, historical movements); analysis of film genres (e.g., silent film melodrama, film noir, comedy, the war film, the western); consideration of film audiences (reception, spectatorship, criticism); introduction to film aesthetics (film art and appreciation); and alternative cinemas (independent, documentary and experimental cinemas). COMM 150 emphasizes media literacy and seeks to help students develop critical thinking, reading and viewing skills while providing them with a historical context for the media that they consume on a regular basis. All sections integrate lectures and readings with viewing feature films during the weekly practicum period. Many sections also incorporate slides and film or video clips during the lecture periods to allow students to exercise their critical viewing skills regarding certain teaching points. Students prepare for film screenings by reading, listening to lectures, and analyzing examples of relevant works. Introductory lectures seek to provide a critical and historical context for each week's screening; follow-up lectures offer critical analysis and examinations reward close viewing. The core purpose of the course, therefore, is to make film viewing a conscious, critical and analytic activity.

COMM 151N: Film and Extraterrestrial Life: Science Fact or Fiction?

3 Credits

The search for life beyond planet Earth has been the subject of much interdisciplinary scientific search and has stimulated human imagination. Scientific discoveries of exoplanets (outside of our solar system), of extremophiles (life which can survive in extreme conditions) and the discoveries of conditions on other bodies in our solar system which might be able to support life, has provided progress in answering the question of the existence of extraterrestrial life. Not only have a plethora of fictional work appeared in the film media to depict scenarios of life beyond Earth, but there has also been an abundance of video media created to present the scientific ideas to the wider audience beyond the scientific community. This course intends a critical evaluation of both nonfiction and fictional media works in the educational dissemination of scientific ideas and the effective presentation of concepts. We will analyze techniques in photography, mise en scene, editing, sound, dramatization and writing as they are applied to topics in astrobiology.

COMM 160: Basic News Writing Skills

1 Credits

COMM 160 Basic News Writing Skills (1) COMM 160 is a one-credit course that will provide instruction in the basic writing skills required of all journalists. The course will cover three main topics: (1) spelling and word usage, (2) grammar, and (3) punctuation. Students will be assessed by exams on each of the three course parts and a comprehensive final exam. Writing is the lynchpin of the journalism curriculum and it is essential that students possess the basic writing skills necessary to be
successful in journalism classes. For that reason, COMM 160 will be a prerequisite to all writing courses in the journalism curriculum. Students will be advised to take the course in their freshman year.

COMM 165: Build Your Media Brand

1 Credits

This course will explore and apply the concepts, tools, resources and techniques involved in building a strong digital brand as students start preparing for a career in the communications professions. Students conduct guided reflection on their strengths and goals; craft mission statements meant to inspire and focus their curricular and co-curricular activities and internships; learn how to interact professionally with members of the profession; create and use digital tools to network and display their best work; practice an "elevator pitch" to connect their experience and aspirations, learn about internship opportunities and best practices in media-related professions; and hone their interviewing skills.

COMM 168: American Journalism: Values, Traditions, and Practices

3 Credits

COMM 168 American Journalism: Values, Traditions, and Practices (3)

This course is aimed at consumers of news. This course will appeal to students with varying backgrounds who have an interest in how and why the news is gathered, presented, and marketed the way it is. This course explores where the American news business has come from, where it is now, and where it is going. The principles, practices and traditions of American journalism are studied. Students will gain an understanding of how a confluence of financial and competitive pressures is changing — and in some cases, distorting — journalism’s institutions and values. This will be a team taught course involving faculty from the Bellisario College of Communications as well as guest presenters from the news industry. The first few weeks of the course will focus on the historic development of the American press from the Colonial period to the present. The legal and constitutional framework under which the news media operate in the United States are also examined. The second segment will look at a news organization's obligations to its community, and a journalist's duty to uphold core values: seek the truth, act independently and be accountable. The role American journalism played in crucial times of the country’s history, such as the abolition movement, the great reforms, the Civil Rights era and in cleaning up political corruption are also examined. Students will also gain an understanding of how these principles have begun to fray under financial and corporate pressures in the hothouse environment of the Internet age. Considerable effort will be devoted to making sure students understand the differences in news standards among, for example, major national newspapers and unedited web sites or politically-oriented cable networks. The course will discuss the economic realities of the news as a business. How newspapers and broadcast outlets traditionally made their money and why that is eroding. Finally, students will get some "hands on" experience through exercises that will require them to distinguish between acceptable and unacceptable journalism, and spot flaws in journalistic practice. Students will be required to do independent research in historical archives and assess how the news media covered major events. Each student will be part of a group to make a presentation to the class on one of several major topics. Students will also be required to write a book review and a film review. There will also be an oral exam. Depending on the size of the class, discussion and debate will be encouraged.

General Education: Humanities (GH)

COMM 170: Introduction to the Sports Industry

3 Credits

COMM 170 Introduction to the Sports Industry (3) Since 1987 the sports industry has grown from $50 billion to more than $200 billion. It has become one of the ten leading industries in the United States. It is also an industry that is unlike any other in its structure and operating principles. In traditional business, the participants compete vigorously with one another for revenue and profits. By contrast, in almost every sports venture, the competitors, while competing on the field of play, must cooperate off the field in order for the venture to be profitable. Students in this course will study the unique aspects of the sports industry. They will begin to understand the workings through learning the history. Students will study the effect of the sports industry on the mass media and vice versa. The interrelationships of sports with the print, broadcast and electronic media will be considered. Students will learn how the basic principles of law, marketing, labor relations, profitability, finance and economics apply to the sports industry. The effect of legislation and regulation on the sports industry will be covered. The subject of ethics in sports will also be examined. The course will explore the formation and structure of leagues and governing agents in the sports industry. Professional, amateur, collegiate, international and Olympic sports will be included. An emphasis will be placed on current events in the sports industry. Students will be required to read and discuss the contents of weekly editions of Sports Business Journal. They will apply the principles learned in class and through the readings to the business problems of the day as reported in the Journal. Career opportunities in the sports industry and related fields will be explored. Students will be able to begin to evaluate their interest and ability to pursue careers in this area. The course will explore the formation and structure of leagues and governing agents in the sports industry. Professional, amateur, collegiate, international and Olympic sports will be included. An emphasis will be placed on current events in the sports industry. Students will be required to read and discuss the contents of weekly editions of Sports Business Journal. They will apply the principles learned in class and through the readings to the business problems of the day as reported in the Journal. Career opportunities in the sports industry and related fields will be explored. Students will be able to begin to evaluate their interest and ability to pursue careers in this area.

COMM 175N: Mental Illness and the Movies

3 Credits

This course serves as an introduction to the integration of psychology and film analysis, with a focus upon mental health. PSYCH 175N / COMM 175N seeks to help students understand the extent to which cinema can influence our perceptions of mental illness, and how the experience of mental illness can influence cinema. Students will be guided to critically analyze and discover how cinema can build or break the stigma and stereotypes regarding various types of mental illnesses and their treatments. The course is designed to familiarize students with various mental disorders (e.g., autism, schizophrenia, bipolar disorder, dissociative identity disorder, anxiety disorders, substance abuse, and dementia), aspects of their treatment (e.g., psychotherapy, medication, and ECT), and the creative ways in which filmmakers can choose to portray mental illness and its treatment (e.g., camera angles, lighting, music, costuming, casting, editing, method acting, and marketing) across cinema formats (e.g., in feature, independent, and documentary films). Students will be guided to consider how the cinema has shaped their own perceptions of mental illness, and how they could guide a filmmaker...
to generate a creative, compelling, and accurate portrayal of various types of mental illness and their treatments. PSYCH 175N / COMM 175N emphasizes integrative thinking, and seeks to help students develop critical reading, viewing, and thinking skills. The course incorporates lectures and assigned readings with the viewing of feature films during a weekly practicum period. Most lectures incorporate case examples and video clips to help students exercise their critical thinking skills. Introductory lectures provide a critical social and historical context for each week’s film screening. Follow-up lectures and discussions offer critical and integrative analysis. Course assessment includes both objective measures and essay exams. PSYCH 175N / COMM 175N is an Interdomain General Education course that incorporates student learning criteria from both the arts (GA) and the social sciences (GS). It assumes prior exposure to psychology or to film studies. As such, the course is designed to have broad accessibility, primarily for introductory level students.

Comm 180: Survey of Electronic Media and Telecommunications

3 Credits

COMM 180 Survey of Electronic Media and Telecommunications (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to electronic communications (telecommunications) and their consequences for society and the economy. Until a few years ago, this primarily meant over-the-air television, radio and cable TV, and a dial-up telephone. Increasingly, however, the field has expanded to include a wide variety of broadcast, wire-based and wireless forms of video, data and voice communications. The rapid convergence of previously disparate industries and services, especially the melding of television, telephone and Internet systems, will be a dominant theme in the course. At the same time, a global system of electronic communications has been steadily evolving. This class is also about the dynamics of that changing system; it is about the origins of the telecommunications system, and its future. To better understand these developments, we will examine powerful interacting forces that are shaping the world of information by drawing on history, economics, technology studies, politics, and culture. While the course is intended primarily for Telecommunications majors planning careers in these fields, all students will benefit from the course by learning to critically analyze media structures and programming and to better appreciate the importance of ICTs (Information, Communication and Technology) in their lives. This course serves both as an introductory core course for students in the Telecommunications major and as a broad social science course for students in other departments across the university. For students within the Telecommunications major, the course introduces the key terminology, concepts and issues in the field as well as the range of career options within the telecommunications industries. For students outside the major, this course provides a grounding in the current shift from an industrial society to an information society in which electronic media play a pervasive role in our personal, social, economic, and political lives.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

Comm 190: Gaming and Interactive Media

3 Credits

COMM 190 (GAME 140) Gaming and Interactive Media (3) The course is an introduction to the digital interactive media industries for students who may consider seeking employment in that sector, which includes video games and simulations, products for education, training, medicine, business, government/military, and virtual environments for a range of applications. Students will learn about industry structures, basic economics, business models, work flow, types of enterprises, job descriptions, and opportunities. It examines both the national and global markets. It provides students with a factually and theoretically informed appreciation of these industries. The course will build on the students’ personal and social experiences of these media, but it is not a course about playing or designing games or mastering individual applications. No special knowledge or experience in playing video games, using "serious games," or experiencing virtual worlds is required. It will provide students with the foundation to make a well-informed choice about careers in this sector and respond to their natural curiosity about this pervasive part of their lives. The course is divided into five segments. The first provides general context: history, scale and scope of the field, information on industry structure, business models and operations, and types of skills required. The second focuses on the video game industry, including social, regulatory and ethical issues. Video games are now a major media industry, having surpassed in U.S. revenue both the movie and recorded music industries. The third section looks at "serious games." A "serious game" is a game designed for a primary purpose other than pure entertainment, such as education, scientific exploration, health care, emergency management, city planning, military, engineering, religion, etc. The fourth segment looks at simulations and virtual worlds and their multiple models and uses (entertainment, learning, business, research, etc.), and the development of related online communities. The final section will examine the interrelationship of these industries with the other entertainment industries in terms of planning, marketing, finance, production, etc. It will conclude with a look ahead at new technologies, markets, business models, advancements in artificial intelligence and the convergence of virtual and material worlds. The course will employ presentations, class discussions, outside readings, demonstrations, videos, class exercises, online explorations, guest experts (in person and via technology), and experiences in virtual worlds.

COMM 205: Gender, Diversity and the Media

3 Credits

COMM (WMNST) 205 Women, Minorities, and the Media (3) (GS;US)(BA)
This course meets the Bachelor of Arts degree requirements. This course is aimed at consumers of media in any form. It explores the relationship between the media and society through critical analysis of media and its role in education about and creation of social reality. Students research literature on human diversity issues in media representation. Students explore economic, political and social implications of media practice. Course content is designed to help build deeper understanding of gender, race, ethnicity, ability, sexual orientation and class diversity in media. Students explore the role of media and media literacy within the pluralistic democratic US society in the context of a diverse global society. Communication theory helps explain how media representations impact human construction of meaning in social relationships.

COMM 208N: Visual Representations of the Middle East in the US and Middle East

3 Credits

This course is an introduction to the visual culture, the visual experience and sociological/historical context of images of the Middle East in the US mass media. The focus of the course will be on reading and interpreting visual images (painting, photography, film, illustration, digital media) and analyzing the larger social and cultural forces that shape the production, distribution and consumption of these media forms. We will explore these issues by focusing on a series of images/case studies located in a specific historical context, allowing us to introduce some of the major movements in visual culture, explore the social contexts of these images, and the ways in which the visual experience shapes our social lives and personal identities. Course evaluations will include exams, writing assignments, a class blog, and a final art project. The course examines visual representations of cultures over time, providing students with the artistic, historical, political and sociological context of their production. This integrative framework will enable students to understand how the creation of visual media and its interpretations both influence and are influenced by social context. It will introduce students to integrative thinking by providing them with interpretive techniques of the social sciences and the arts to increase their powers of visual analysis so that they can discuss an image¿s medium, composition, style and iconography. The course will examine the ways that the arts can be an expression of cultural values, helping students to comprehend the hegemonic aspects of image composition, production, exhibition and distribution. The course will explore the social milieus in which media is created, often depicting stereotypical images that poorly represent the complexity of the myriad cultural groups in the Middle East.

Enforced Prerequisite at enrollment: ENGL 15.
General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

COMM 215: Basic Photography for Communications

3 Credits/Maximum of 3

An introduction to digital photography, emphasizing camera skills, aesthetics and storytelling. COMM 215 Basic Photography (3) An introduction to photography as a means of visual communication in the digital age. Students will learn basic picture-taking principles, camera techniques, photographic aesthetics, and the use of digital imaging software. Students will be encouraged to explore photography as an aesthetic, expressive, and socially significant medium. This will be achieved through individual and group critique of each student's photographs, as well as through analysis of examples of the work of prominent photographers. Students will complete a series of assignments that help them learn to produce visual content for a digitally savvy audience. At the end of the semester, students will be able to produce story-telling images as well as write captions for their photographs. They will have a knowledge of the aesthetics of photography, will understand the importance of both form and content, and will have the ability to critically evaluate photographs.

COMM 222N: Social Justice and the Image

3 Credits/Maximum of 3

How do we perceive injustice? What are the roles of images in our perceptions of justice? If justice lies in the eyes of the observer, as the saying goes, what are the eyes seeing? Creating an image does not only mean creating the strictly visual, but also words that capture the imagination. Where do those words lead us? Social Justice and the Image (GA/GH) prompts students to reflect upon image-making and the reception of images in a variety of social justice contexts, to study the public claims made upon these images, and to explore interdisciplinary texts on social justice that assist us in interpreting those claims. Students will be introduced to a variety of critical approaches to social justice, and reflect upon how these images are connected to social movements, visual rhetoric, poetic protest, and rights-building. Readings will generally be determined by the instructor, and may include the work of authors such as Confucius, Plato, Aristotle, Asho Zarathushtra, Mary Wollenstonecraft, Louis Althusser, Gordon Avery, Gloria Anzaldúa, John Rawls, Roland Barthes, Warren J. Blumenfeld, Judith Butler, Virginia Held,
Patricia Hill Collins, Donna Haraway, bell hooks, and Seyla Benhabib, and Ximena Zúñiga. The subjects of study will be images, justice, and the categories ascribed to them, but also the possibility of challenging those categories. Rather than focus on how justice and images are treated by various disciplines separately, students will be asked to explain how various disciplines speak to (or perhaps ignore) one another, and what is missing from the analyses. "Interdisciplinary work," Roland Barthes wrote, "is not about confronting already constituted disciplines (none of which, in fact, is willing to let itself go) . . . Interdisciplinarity consists in creating a new object that belongs to no one." Social Justice and the Image invites students to "let go" with scholarly intensity, to explore what happens when disciplinary insights converge. ENGL 15 is recommended prior to COMM 222N

COMM 228: Introduction to Science Writing and Communication

3 Credits

Introduction to Science Writing and Science Communication (3)
COMM 228 introduces students to the basics of science writing and communication. Through a combination of lecture, discussion, and writing assignments, students learn how to write science stories that are accurate, clear, and compelling. After completing COMM 228 are students will be able to: demonstrate an understanding of the importance of science communication; write interesting, clear science stories that grab the reader's attention and explain the science in terms that people with a non-scientific background can understand; gather information through the use of interviews, research documents, scientific conference papers, and events.; generate story ideas that reflect an understanding of important science stories; produce copy free of misspellings, grammatical errors, AP style errors, and factual errors; understand the legal, ethical, and historical principles underlying science communication, including the role of science in society; and communicate the latest scientific, technological, and medical findings to create an informed populace.

COMM 230: Writing for Media

3 Credits

COMM 230 Writing for the Media (3)This course is an introduction to writing for various kinds of mass communication media. Students will practice writing public relations news releases, public information announcements, print, television and radio advertisements, as well as news stories and editorials. Students will be given weekly writing assignments, some of which will be re-writes of earlier submissions. In-class exercises will include various writing exercises designed to get students more comfortable with writing for media. Prerequisite: ENGL 015 and ENGL 202.

Enforced Prerequisite at Enrollment: ENGL 15 and ENGL 202.

Writing Across the Curriculum

COMM 234: Digital Cultures

3 Credits

Introduction to the rapidly changing world of digital cultures, and the communicative, and social impacts on individuals and institutions.

Cross-listed with: IST 234
General Education: Social and Behavioral Scien (GS)

COMM 241: Graphic Design for Communications

3 Credits

Introduction to basic design principles, critical analysis of visual material, and solving graphics problems utilizing traditional and digital production tools.

COMM 242: Basic Video/Filmmaking

3 Credits

COMM 242 Basic Video/Filmmaking (3) COMM 242 is an introductory course that emphasizes the development of creative expression and technical skills in digital film production. Students will explore modes of moving image representation through screenings, lectures, discussions, and especially through hands-on filmmaking. Students are required to construct projects that have both clear intentions and technically competent execution. The work of the course will facilitate the development of basic skills in image design, editing, and writing as they apply to single camera techniques for documentary, narrative, and experimental film modes. The course will also provide a basic cultural and historical context for the various production modes, and students will be encouraged to consider their own projects in relation to the work of other video and film artists. Creative collaboration and group critique are essential elements of the course. Students will be required to produce some collaborative projects, and to respond critically to the work of the other students in the course. Students will make projects using digital film cameras, microphones, portable lighting, and nonlinear editing stations.

Enforced Prerequisite at enrollment: COMM 150.

COMM 250: Film History and Theory

3 Credits

Exploration of film theory and criticism in the context of aesthetic, technological, and economic evolution of film history.

Enforced Prerequisite at enrollment: COMM 150.
Bachelor of Arts: Arts
General Education: Arts (GA)

COMM 251: The Nature of Media

3 Credits

A theoretical, cultural, and philosophical study of print and non-print media, including their histories, possibilities, limitations, and interrelationships. COMM 251 The Nature of Media (3) An examination of the theory, history, practice, and meaning of media. Within the framework of various media theories, students examine how print media, broadcast media, film, telephones, the Internet, and other technological forms communicate. Executives and practitioners from various media outlets
COMM 260W: News Writing and Reporting

3 Credits

COMM 260W News Writing and Reporting (3) COMM 260W introduces students to the basics of news reporting and writing. Through a combination of lecture, discussion, and writing assignments, students learn how to write news stories that are accurate, fair, clear, and concise. The goals of COMM 260W are to produce students who can: * Demonstrate an understanding of the importance of accurate, thorough, and fair news writing * Write concise, well-organized stories with effective leads that get the reader’s attention and tell the most important news * Gather information through the use of interviews, documents, and basic reference materials * Generate story ideas that reflect an understanding of the elements of newsworthiness (timeliness, prominence, proximity, conflict, novelty, and impact) * Produce copy free of misspellings, grammatical errors, AP style errors, and factual errors * Understand the legal, ethical, and historical principles underlying journalism, including the role of journalists in society * Appreciate the joy and importance of being well informed

**Enforced Prerequisite at Enrollment:** COMM 160 and (ENGL 15 or ENGL 30)

**Writing Across the Curriculum**

COMM 261: The Literature of Journalism

3 Credits

Representative nonfiction by writers such as Susan Sheehan, George Orwell, Joan Didion, Alice Walker, Truman Capote, C. D. B. Bryan, Russell Baker. COMM 261 The Literature of Journalism (3) (GH) The Literature of Journalism introduces students to 20th century nonfiction by people who were/are considered journalists. Most of the work originally appeared in magazines or newspapers and in some cases was expanded on before being published as a book. This is not a course in literary journalism, although some of the books assigned might qualify as such. Instead, the course is designed to give students a greater appreciation for the journalistic enterprise and different styles of writing. Students will also see how different writers influenced other writers. Students will read works by Hunter Thompson, Alex Haley, Joan Didion, Truman Capote, George Orwell, and James McBride, among others.

General Education: Humanities (GH)

COMM 269: Photojournalism

3 Credits

COMM 269 Photojournalism (3) Photography as a medium for communication; creating visual content for newspapers, magazines, and online publications; digital camera and editing techniques. Students complete a series of assignments that help them learn to produce visual content for newspapers, magazines, and online publications. Major topics of the course include fundamentals of digital photography for multimedia and print, ethics, composition, caption writing, photo editing, and the use of electronic imaging software. Through individual and class projects, students critically evaluate their own work and the work of others. Students use class assignments to create a portfolio

**Enforced prerequisite at enrollment:** COMM 260W.

COMM 270: Introduction to Multimedia Production

3 Credits

Introduction to multimedia project activities to explore image editing, layout, the integration of texts and images and web architecture.

COMM 271: Principles of Journalism

3 Credits

The course introduces how journalists work with the tools of multimedia and how multimedia is changing journalism. COMM 271 Principles of Journalism (3) Journalists have never had better tools to cover the news than they do today. Every news organization can now tell stories with text, video, sound and images. Reporters can interact with their audience while covering stories in real time. Audiences have unprecedented choice in when and where they can access information. These innovations are allowing the news industry to reinvent itself. But there are major challenges. What do social media have in this mix? How much do reporters need to know about these tools? What role do social media have in this mix? Are ethical standards and being lost in the scramble to gain audience and grow revenue? This course will introduce multimedia news and be a foundation for skills courses. It will examine the latest platforms and tools of the trade, adding value with multimedia, the roots and development of multimedia, working in a cross-platform environment, multimedia reporting and editing, data visualization, intellectual property rights, ethical issues, citizen journalism, social media and the news, business models for multimedia journalism, finding a job, and other subjects.

COMM 280: Introduction to Telecommunications Technologies

3 Credits

Students will evaluate content creation and distribution methods and demonstrate proficiency across emerging digital products and services. COMM 280 Introduction to Telecommunications Technologies (3) The media, communication and information industries of the 21st century are built upon the digitization of information. Professionals and consumers alike rely on digital technology for the creation and distribution of content. The technologies used for production, distribution and consumption of this content continue to evolve at a rapid pace. The proliferation of smartphone, tablet, and wearable devices has dramatically altered the way in which consumers interact with media. This course will introduce students to the basic technologies used in the creation of various types of digital content and examine the technologies used to distribute that content across wireless and wired networks. By the end of this course, students will understand the prevalent technologies utilized within the telecommunications industry. Through extensive project work, students will also develop an appreciation for the myriad of compatibility challenges that exist in a world with rapid technology advancements and multi-industry convergence. This course is especially appropriate for students in the Telecommunications major as it will familiarize them with the technologies they will encounter during their course of study and future careers.
COMM 282: Television Field Production

3 Credits

COMM 282 Television Field Production (3) COMM 282 provides an introduction to the pre-production, production and post-production techniques when creating video content. The course will explore the grammar and syntax of constructing and criticizing video messages in single camera productions. Students will apply shooting and editing concepts while doing a variety of projects typical of single camera shoots. Students will learn the particularities of single camera production from the textbook, the lectures, discussions and classmates' experiences. While learning the technical aspects of video production, the students will learn the managerial aspects of production. Students will practice and apply the processes of budgeting, topic and location research, script writing, production treatments, dealing with unions, releases, etc.

COMM 283: Television Studio Production

3 Credits

Students will learn the technical aspects of multi-camera studio television production. COMM 283 Television Studio Production (3) Communications 283W is an advanced video course. The course builds on the principles learned in Communications 282. The purpose of this course is two-fold. The first goal is to learn the technical aspects of multi-camera (studio) television production. Students will learn how to brainstorm ideas, write program proposals, treatments and scripts for various formats of television studio production. Incorporated in the technical aspects of the class, the students will learn how to produce and direct a studio production. They will also learn all the crew positions in a television studio production including audio, teleprompter, technical director, assistant director, videotape, floor manager, character generator operator and camera crew. The second goal of this course is to apply the grammar and syntax of constructing and criticizing video messages to multi-camera television productions. Students will apply shooting, producing and directing concepts while doing a variety of projects typical of multiple-camera shoots. They will learn the particularities of multi-camera television production from lectures, discussions and their own experiences.

Enforced Prerequisite at Enrollment: COMM 282 or COMM 242.

Writing Across the Curriculum

COMM 290N: Cinema and Globalization

3 Credits/Maximum of 3

This course explores how films reflect (and in some cases attempt to explain, promote and memorialize) the emergence and transformation of global social phenomena. Through course readings, students will become familiar with key texts on globalization produced by social scientists and cultural theorists, and will link those key texts to a diverse array of cinematic representations of various global actors, issues, institutions and processes, as well as historical and theoretical interpretations and debates on globalization. The course introduces students to the work of internationally recognized film directors (for example, Euzhan Palcy, Jia Zhangke, Stephen Frears, Rainer Werner Fassbinder, or Majid Majidi) and studies of globalization (by scholars such as Arjun Appadurai, Guy Standing, Saskia Sassen, John Tomlinson, Robbie Robertson), and asks students to link scholarly perspectives with the visual rhetoric of cinema artists.

Enforced Prerequisite at Enrollment: ENGL 15 and COMM 150

Recommended Preparations: ENGL 202A; ENGL 202B; ENGL 202C; ENGL 202D.

Cross-listed with: SOC 290N

International Cultures (IL)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

COMM 292: Introduction to Media & Politics

3 Credits

This course explores the intersection of media and politics, introducing students to the critical analysis of mediated political discourse. COMM 292 Introduction to Media & Politics (3) COMM 292 examines how mass media and political institutions interact to shape public thinking and debates around social goals, priorities, and policies. The course explores how media structures, routines, and practices shape political decision making; how political forces influence mass media institutions; and how public opinion and media audiences are formed. Students will gain an understanding of these issues through in-depth case studies, class discussions, and written assignments, helping students to develop their own informed views and to learn to express them constructively. The course is designed for both Communications majors and other students with an interest in media and politics.

General Education: Humanities (GH)

COMM 294: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

COMM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

COMM 296A: SPECIAL TOPICS

1-6 Credits

COMM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

COMM 297C: Special Topics - InterDomain

3 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GA/GS GenEd course
General Education: Arts (GA)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain

COMM 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

COMM 301: Entertainment Media Industries
3 Credits
This course examines the creation of content in film and television from the genesis of an idea to the deals on the back end. It will explore the new business models that enable content creators to keep pace with newer and more mobile technologies, encompassing the various ways viewers consume media content today. The class will include discussions with industry professionals, including from the creative side (actors, writers, directors, showrunners) and the business side (network and studio executives, agents and producers).

COMM 302: Art of Comedy
3 Credits
Comedy is an art. Each and every day, we are touched by comedy, from a movie we love to a sitcom we binge-watch. With the advent of new media, we watch more comedy now than ever before. The artists of comedy are numerous and have dominated television and film from the inception of these media. Their craft is not happenstance, although great comedians may make it look that way. Comedy is crafted through writing and performance and delivered in a variety of forms: from stand-up to musical theater, from television and film to online video. The genesis of this course is the why and how of comedy. It is only by a thorough look back at the evolution of comedy can we understand comedy today. In this course, we will study some of the great comedic films and television programs to get an understanding of comedic timing, rhythm and material. We will also explore comedy writing and take a look at how television and movies are created. Lastly, we will take a look at the creation of a sitcom or film. What can sustain a show over many seasons or a film to be economically successful. Students will learn how to develop an idea into a comedy show, as well as how to pitch that idea to industry executives.

COMM 303: Entertainment Law
3 Credits
Entertainment law is an overarching term that describes the interplay between several areas of law, including contracts, intellectual property, agency, constitutional law, federal and state administrative law, labor law and negotiation. This course explores the key components that comprise entertainment law, including defamation, privacy, the right of publicity, parody and satire, violent and sexual content in media, stalking and paparazzi laws, regulation of talent and literary agents, the role of managers, copyright and trademarks, contractual obligations (step deals and production overall deals, options, permissions, clearances and releases), employment law (unions and guilds, child actors, equal opportunity) and FCC broadcast content regulations.

COMM 304: Mass Communication Research
3 Credits
COMM 304 Mass Communication Research (3) This course provides an introduction to the logic and methods of social science research as it is employed to study topics in media. Students will be introduced to key principles of social scientific reasoning, including aspects of concept explication and effective measurement, evaluation and demonstration of causality, and reliance on empirical data. Core standards of evidence are presented for both quantitative and qualitative data, but a focus is placed on statistical evidence and reasoning. Topics include effective question wording, ethical treatment of research participants, experimental research designs, sampling and survey research, content analysis, and sound interviewing techniques. In addition, students address key ideas in statistical analysis, including principles of inference, common descriptive statistics, and widely used tests of both bivariate and multivariate relationships. Presentation of this material includes training in effective use of appropriate statistical software. Based on this training, students should be able to contribute to sound research on media-related topics in both the academic and professional environments. In addition, significant attention is paid to evaluating research done by others. Students read and assess original research and consider the merits of such research as well as its applicability to novel studies. Based on this training, students should be prepared to better understand the results presented in social scientific research, particularly within the field of media studies, and apply this knowledge to future coursework. Beyond this, students learn how to critically evaluate quantitative research when presented in media content, such as public opinion polling, and when making professional judgments about sound organizational strategies as a response to research conducted by others. At the end of this course, students should be better prepared to engage with the increasingly complex array of statistical information available to modern companies and citizens.

Enforced Prerequisite at Enrollment: (STAT 200 or SCM 200 or PSYCH200) and(COMM 100 or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 260W or COMM 320 or COMM 370)

COMM 305: Introduction to Critical Studies of Media
3 Credits
The course will acquaint students with the key terms, concepts and research areas of critical media studies (e.g. key terms/concepts and topic areas) and prepare them more effectively for advanced material in media studies. The course will also integrate practical insights into professional opportunities for the media studies major concentrations as well as future careers in media industries and media research (including jobs for the public sector, private industry, and academia). In addition, by presenting a critical perspective on the cultural forces represented by media in a global context, students develop media literacy skills to better evaluate their own use of media and the political and social consequences of the modern media industry. The course provides an overview of a diverse set of domains in the study of media throughout the world as well as the underlying principles that drive research in these areas and the skills necessary to both understand and evaluate such research. Perspectives summarized include critical theory, cultural studies, and political economy approaches.

Enforced Prerequisite at Enrollment: COMM 100 or COM 110 or COMM 118 or COMM 180 or COMM 250.
COMM 310: Digital Media Metrics

3 Credits

Analysis of audience data for traditional and new media to create metrics for advertising, content marketing and audience analysis. COMM (IST) 310 Digital Media Metrics (3) The emergence of a converged marketplace where all media are now digital, including broadcasting, websites and social media, has created enormous new opportunities for advertising, promotions and content distribution. The proliferation of media has made the marketplace much more competitive, but simultaneously the availability of data too has increased significantly making possible the much more precise and segmented distribution of messages and content. For media practitioners in this new environment, a familiarity with audience data, metrics and dimensions is essential. This course is an introduction to the methods for collecting, analyzing and utilizing audience data for traditional and new media. The class will cover the fundamentals of traditional media audience analysis, web metrics, and social media metrics, specifically as they relate to audience measurement, advertising campaign evaluation and content distribution. Students will learn the methods of data collection, analysis and use for traditional broadcast media, and the transformation of these practices in the newly digitized and converged multiplatform, multiscreen environment. The course will also cover the basics of data capture for new media (at an appropriate technical level), and the use of this data for the design of metrics appropriate for various purposes such as monitoring traffic, conversions and revenue generation. The use of metrics in pricing models for advertising, sales generation and content distribution will also be covered. Students will be introduced to data sources for digital media audience analysis, with a special focus on Google Analytics. Students passing this class would be able to pass the Google Analytics Individual Qualification test.

Cross-listed with: IST 310

COMM 315: Applications for Media Writing

3 Credits

Tutorial and practice in various kinds or journalistic and commercial writing, emphasizing basic skills.

Enforced Prerequisite at Enrollment: COMM 160 and (ENGL 202A or ENGL 202B or ENGL 202C or ENGL 202D)

COMM 320: Introduction to Advertising

3 Credits

Advertising management in business, including communication theory; common industry practices; basics of copy, media, and budget decision; and environmental influences. A student may not receive credit for both COMM 320 and MKTG 322. COMM 320 Introduction to Advertising (3) COMM 320 introduces students to the advertising industry and provides a foundation for understanding what advertising is and how it developed to its current state, what it tries to accomplish, how it works, and how it can affect society. The class includes numerous examples of advertising, from the 1880s to the 2010s, to illustrate the topics covered. The goal is to have students think more clearly and critically about the commercial actors behind advertising, their strategic objectives, how advertising messages help achieve specific marketing goals, and the possible social impacts. This course provides the basis for all further courses students take in the advertising sequence. During the course students: learn the basic concepts and vocabulary essential to the fields of advertising and brand promotion; understand the process and effects of advertising and brand communications; are introduced to the strategic and conceptual decisions advertisers face when deciding the best way to both say and deliver a message within the public marketplace; learn the landscape of the advertising industry, including understanding how the industry works and how it is organized; understand current trends in the advertising and marketing industries, and examine their implications for both industry and society; are exposed to the history and role of professionals and institutions in shaping communications; gain an understanding of the diversity of groups in a global society in relationship to communications. Specific topics covered in the course include definitions of marketing, advertising, and integrated marketing communication (IMC). Students learn what it means to be a brand, as well as how brand equity is developed by marketes. The fundamentals of brand positioning are also explored, in the context of brand promotion and evolution. The psychological processes that underlie persuasive commercial messages are explored. The differences between subliminal and non-conscious routes to persuasion are presented and discussed. The course also includes a review of promotional activities outside of traditional advertising, including public relations, direct marketing, personal selling and sales promotions. The role of social media and other online communications in the promotional mix are explored. The legal and ethical dimensions of commercial communication are outlined. Students are asked to think critically about the implications of marketing harmful products, selling to susceptible target audiences, using controversial appeals and the perpetuation of negative stereotypes.

Enforced Prerequisite at Enrollment: Third Semester Standing.

COMM 320H: Introduction to Advertising

3 Credits

Advertising management in business, including communication theory; common industry practices; basics of copy, media, and budget decision; and environmental influences. COMM 320H Introduction to Advertising (3) COMM 320 introduces students to the advertising industry and provides a foundation for understanding what advertising is and how it developed to its current state, what it tries to accomplish, how it works, and how it can affect society. The class includes numerous examples of advertising, from the 1880s to the 2010s, to illustrate the topics covered. The goal is to have students think more clearly and critically about the commercial actors behind advertising, their strategic objectives, how advertising messages help achieve specific marketing goals, and the possible social impacts. This course provides the basis for all further courses students take in the advertising sequence. During the course students: learn the basic concepts and vocabulary essential to the fields of advertising and brand promotion; understand the process and effects of advertising and brand communications; are introduced to the strategic and conceptual decisions advertisers face when deciding the best way to both say and deliver a message within the public marketplace; learn the landscape of the advertising industry, including understanding how the industry works and how it is organized; understand current trends in the advertising and marketing industries, and examine their implications for both industry and society; are exposed to the history and role of professionals and institutions in shaping communications; gain an understanding of the diversity of groups in a global society in relationship to communications. Specific topics covered in the course include definitions of marketing, advertising, and integrated marketing communication (IMC). Students learn what it means to be a brand, as well as how brand equity is developed by marketes. The fundamentals of brand positioning are also explored, in the context of brand promotion and evolution. The psychological processes that underlie persuasive
commercial messages are explored. The differences between subliminal and non-conscious routes to persuasion are presented and discussed. The course also includes a review of promotional activities outside of traditional advertising, including public relations, direct marketing, personal selling and sales promotions. The role of social media and other online communications in the promotional mix are explored. The legal and ethical dimensions of commercial communication are outlined. Students are asked to think critically about the implications of marketing harmful products, selling to susceptible target audiences, using controversial appeals and the perpetuation of negative stereotypes.

**Enforced Prerequisite at Enrollment:** Fourth-semester standing; A student may not receive credit for both COMM 320H and MKTG 322.

**Honors**

**COMM 325: Effects of digital games**

**3 Credits**

The course explores the influences of digital games on players and society. It helps students make sense of the complex and conflicting evidence from social science research about both positive and negative outcomes from playing games. Topics include violent and stereotypical content, enjoyment and immersion, addiction, learning, and persuasive applications such as games for health. In particular, the class considers prominent debates about the effects of games and how to understand the actual evidence and methodological controversies behind these debates. A significant focus is on the logic of media effects research and the strengths and weaknesses of this approach. Students emerge with greater familiarity with media effects scholarship as a process as well as the specific ways it can help them media literate players of games as well as thinking about how games might be used to promote positive outcomes.

**Enforced Prerequisite at Enrollment:** COMM 100 or COMM 118 or COMM 190.

**COMM 326: Effects of social media**

**3 Credits**

The course explores the effects of social media on individuals, organizations and society. It introduces students to social science research about both positive and negative outcomes of using social media. Topics include identity formation, self-esteem, social capital, relational maintenance, addiction, cyberbullying, enterprise social media, crisis management, political mobilization, online activism, philanthropy, online terrorist networks, effects of social media use for news, entertainment, advertising, public relations and other mass communications. Theoretical mechanisms governing the causes and consequences of social media will be explored, with a substantial discussion component. Applications to media practices and implications for design of future media will also be covered.

**Enforced Prerequisite at Enrollment:** COMM 100 or COMM 118

**COMM 327: Effects of entertainment media**

**3 Credits**

This course examines the central role that entertainment plays in the lives of most people in contemporary media landscapes. Today we are almost constantly tied to media entertainment through a variety of mobile devices, second screens, and streaming content. We see and listen to the world through entertainment media, and we construct, share, and post our lives on entertaining platforms. This course will examine the variety of ways that we use, experience, and are affected by entertainment, including its benefits and its harms. Topics include specific types of media content such as music, sports, and humor, as well as outcomes on our self-images, our stereotypes of others, and our feelings of connection with friends, family, and with society at large.

**Enforced Prerequisite at Enrollment:** COMM 100 or COMM 118

**COMM 328: Effects of Science, Environmental and Health Media**

**3 Credits**

This course provides students with a conceptual and applied overview of the effects of media representations of science, the environment, and health topics on different audiences. This course is appropriate for students interested in media effects as well as for students interested in science-related topics who want to gain a deeper understanding as to how messages about science (broadly defined) impact individuals and society. Class readings and discussions will encourage students to draw connections between theory, research, and message effects related to science, the environment, and health. In addition to learning and applying theories of media effects to the context of messages about science, students will also learn about the history of science, environmental, and health communication efforts and develop skills to critically interpret media messages related to these topics. This is one of multiple 300-level courses in the Media Effects sequences of the Media Studies major that focus on the effects of various types or genres of media on audiences.

**Enforced Prerequisite at Enrollment:** COMM 118 or CAS 101N or PSYCH 100.

**COMM 332: Reporting**

**3 Credits**

Practice in researching and gathering material for and preparation of news stories for print media. COMM 332 Reporting (3) The course is an introduction to the various tools and techniques of researching and gathering information, using a combination of traditional research methods and new computer-based technologies. It develops performance and critical skills focusing on concepts of news, fact checking, finding and developing sources, interviewing, writing styles, and structures of different story types. It also provides solid grounding in historical, ethical, and legal dimensions of U.S. newspaper journalism within a comparative media system context. For the duration of the course, there shall also be continuous discussion on the role of the journalist in society, where students shall examine the legal provisions and ethical considerations that govern the practice of journalism, the unwritten "social contract" between journalists and their audiences, and the nature of the relationship between journalists and those who wield political and economic power in the community.

**Enforced Prerequisite at Enrollment:** COMM 260W.

**COMM 333: Film History for Filmmakers I: The Development of the Cinema to 1960**

**3 Credits**

Film History I describes the prehistory and history of the medium of cinema to 1960. The course explores the artistic, technical, economic development of the cinema, and the cultural contexts in which this development occurred. The course covers narrative, experimental, and documentary cinema and trains students in the techniques of close
formal analysis of the cinema. The course stresses formal, thematic, and cultural analysis of the cinema throughout the first decades of its history. This course is integral to the curriculum in Film-Video. It provides Film-Video students with a detailed description of trends in their art form. It provides students with intensive study in the history of an influential medium in the development of the concept of mass media and communications.

**Enforced Prerequisite at Enrollment:** COMM 150 and COMM 242.

COMM 337: Intermediate Documentary Production

3 Credits

Exploration of documentary video techniques and aesthetics through the completion of short exercises and projects. COMM 337 Intermediate Documentary Production (3) This course focuses on intermediate technical and aesthetic aspects of single-camera documentary production with an emphasis on storytelling. In producing a series of short visual exercises students will explore the conventions of the documentary form, formal concepts of the visual image – both still and motion, the principals of controlling light and sound recording, the conventions of editing, and idea development. Written work and group critique will also inform the study of non-fiction modes of visual media. Technically this course builds on the skills and knowledge obtained in the beginning production course. Students work independently and collaboratively on the production of short media projects using video and digital technologies that provide project-driven experience in the disciplines of writing, producing, directing, camera work, sound, and editing. This course introduces new technologies and production techniques in relation to non-fiction modes. Students will develop ideas for one or more documentary projects and will have the opportunity to work in a variety of production roles. The course will require a significant amount of work outside of class. Students are encouraged to participate in class discussions and contribute critical feedback on their classmates’ projects.

COMM 338: Intermediate Narrative Production

3 Credits

Exploration of narrative film or video techniques and aesthetics through the completion of short exercises and projects. COMM 338 Intermediate Narrative Production (3) This course is an intermediate aesthetic and technical production course in short-form narrative production. Through screenings, discussions, readings and creative production projects, students will explore the collaborative process of narrative filmmaking and the conventions of the fiction form. This course builds on the skills and knowledge obtained in the beginning production course. Students work independently and collaboratively on the production of short media projects using video and digital technologies that provide project-driven experience in the disciplines of writing, producing, directing, camera work, sound, and editing. The success of any narrative film depends on a focused collaborative effort by a number of individuals to tell a story. In this course, students will explore the process of producing a short narrative video using traditional production techniques. An emphasis is placed on learning the responsibilities and established practices of key production roles such as producer, director, cinematographer, sound designer and editor. Working in small groups, students will develop a short project where they will apply the processes associated with pre-production, production and post-production. Students will be building on their technical and aesthetic knowledge of digital video formats through lectures, demonstrations, outside readings and class exercises; videos will be viewed throughout the semester to demonstrate these concepts.

Students will participate in class discussions and contribute critical feedback on their classmates’ projects. The emphasis will be on the exploration of visual and aural expression and a fundamental mastery of the digital medium as it applies to traditional narrative production.

**Enforced Prerequisite at Enrollment:** COMM 242 and Film-Video major.

COMM 339: Intermediate Alternative Production

3 Credits

Exploration of alternative film or video production techniques and aesthetics through the completion of short exercises and projects. COMM 339 Intermediate Alternative Production (3) COMM 339 is an intermediate level course in alternative film and video aesthetic theory and technique. The class is designed to expose students to a broad range of alternative and avant-garde filmmaking concepts, including classical and contemporary experimental practices, animation and new forms of cross disciplinary media production. The course is designed to encourage students to think about film and video production as the beginning point in an expanding journey of creative exploration. It exposes students to a diverse range of historical and contemporary alternative or experimental filmmaking practices and forms and enables them to: Explore their creative horizons beyond preconceived and popular forms of film culture. Develop their abilities to discover their own personal filmmaking focus and language. Learn the skills necessary to create unique bodies of work in film and video media. Critically assess the success of their own and their fellow students’ efforts.

**Enforced Prerequisite at Enrollment:** COMM 242 and Film-Video major or program permission.

COMM 340: Intermediate Cinematography and Editing Techniques

3 Credits

Exploration of film and video production techniques through the use of camera, lighting, audio and digital post-production equipment.

**Enforced Prerequisite at Enrollment:** COMM 242 and Film-Video major.

COMM 342: Idea Development and Media Writing

3 Credits

Introduction to various modalities of idea development and written expression for media production. COMM 342 Idea Development and Media Writing (3) This writing-intensive course is designed to introduce students to various modalities of idea development and expression for audio-visual projects. Writing as an ideational, descriptive or reflexive tool is an integral element of each modality. Learning objectives encompass the development of skills in the following areas: Conceptualization, Visualization, Decision-making, Intellectual articulation and Manifestation. Emphasis will be placed on using written work as an integral part of the creative process. As a designated W course, students will gain experience in the writing of media criticism and analysis as well as learning the writing styles specific to the profession. Writing assignments will include informal writing such as exercises in intuitive and timed writing, one minute response papers and collective story telling. Formal writing assignments will include observational essays, descriptive essays or stylistic “treatments”, formal narrative proposals, analytic and editorial story reports, and self-reflexive critique papers. Students will progress through a series of creative exercises that support the development of the above skills consisting of short (200-500 word) written and oral exercises, exercises in visual thinking,
visual storytelling and image composition and longer (750-1500 word) written assignments in various forms (descriptive, persuasive, analytical, editorial and critical) tailored to the professional requirements of the film-video major; these include descriptive essays or stylistic "treatments" formal narrative proposals, analytic and editorial story reports, and self-reflexive critique papers. Written feedback from the instructor will be provided on a regular basis, as well as in class peer critique and story workshops. Students will be required to redraw and rewrite assignments as needed.

**Enforced Prerequisite at Enrollment:** COMM 242 or COMM 282.

**Writing Across the Curriculum**

COMM 346: Writing for the Screen I

3 Credits

A beginning course in narrative Screenwriting emphasizing analysis, creativity, and critiquing skills necessary for the development of storytelling. COMM 346 Writing for the Screen I (3) The course is about the creative process of conceiving and fashioning films that wish to order experience into a meaningful and expressive narrative structure. It is designed for students who wish to delve more deeply into screenwriting and those wishing to develop a script for senior-level production. It continues to develop screenwriting and storytelling skills introduced in Introductory Film and Video Production and Media Writing, and seeks to further hone their creative skills as writer-filmmakers. A large part of classroom sessions will be conducted in a traditional writers workshop structure, focusing on the presentation, discussion, and critiquing of written work; other sessions will concentrate on the analysis and critiquing of professional screenplays, with particular emphasis on close-reading of individual scenes, and study of screenwriters writing about the process. Scripts produced will be limited to short-form work, target length being no more than 15 pages maximum. Such a length combines both the virtues of disciplined, sharply-focused perceptions with a length sufficient for developed narrative arcs and tonal and thematic complexity. Scripts produced in this class will be appropriate for all of the advanced single semester advanced production courses and submission as part of a student's application and practice; (d.) illustrate the ability to thoughtfully and re-writing skills needed for successful screenwriting through their application and practice; (d.) illustrate the ability to thoughtfully and constructively critique their own work as well as that of their fellow writers in the class. During the semester students will be expected to learn to write original and creative constructed pitches, treatments, and scripts.

**Enforced prerequisite at enrollment:** COMM 342

COMM 360: Radio Reporting

3 Credits

Reporting, writing, producing, and presenting radio news programs, focusing on the development of news judgment and writing skills. COMM 360 Radio Reporting (3) COMM 360 provides an introduction to broadcast news writing and radio production. Students take this course after they have completed an introductory print reporting course but before they take advanced courses that focus on television news production. This course is designed to introduce students to the general principles of broadcast writing used in both the radio and television mediums. As a prerequisite for 400-level courses, COMM 360 is offered on a regular basis to allow students to complete curricular requirements in a timely manner. Students learn the techniques needed to report, write and produce radio news. During the semester, students report on news and learn to produce, anchor and engineer a newscast. Learning objectives for COMM 360 are that students: * demonstrate an understanding of professional ethical principles in news reporting and apply those principles in newsgathering; * demonstrate basic proficiency in the tools used to report and produce broadcast-quality radio news; * demonstrate the ability to write news for a broadcast format; * demonstrate the ability to produce quality work on deadline; * apply an understanding of news values in the creation of a newscast; and * demonstrate the ability to supervise other students in a working newsroom. Students work together in a broadcast facility to produce a radio newscast. They are evaluated throughout the semester on their ability to integrate skills and concepts they learn into their broadcast stories. Upon successful completion of the course, students will have learned the theories and skills at the core of their broadcasting profession.

**Enforced prerequisite at enrollment:** COMM 260W.

COMM 361: Entrepreneurial Journalism

3 Credits

This course provides an overview of entrepreneurship and innovation in journalism and teaches students how to recognize and act on opportunities to innovate and launch journalism-related enterprises. Active learning pedagogies are emphasized to support student learning and skill development. First students learn trends, concepts, theories and/or current best practices and then apply them in assignments and major projects. Topics may include innovation in the news business, entrepreneurship, intrapreneurship and self-employment/freelancing in media, disruption caused by technology, globalization, competition and changes in customer/user news habits, opportunity recognition and idea assessment, customer discovery, value proposition design, lean methods, rapid prototyping, due diligence, analyzing/researching markets and competition, negotiation skills, pitching ideas to investors, financing and marketing for start-ups, and digital branding. Students apply what they learned in projects that could include developing and assessing their own news enterprise idea with a completed business plan or lean canvas, conducting primary market research, designing and implementing a digital brand, practicing negotiation techniques and pitching their idea to potential investors and/or customers.

**Enforced prerequisite at enrollment:** MGMT 215 or ENGR 310 or COMM 271

COMM 362: Podcasting

3 Credits

In this introduction to podcasting, students will explore one of the 21st century's fastest-growing digital journalism platforms. They will learn the skill of audio storytelling by creating, editing and publishing audio projects that include scripted stories and unscripted interview and discussion programs. Students will also examine podcasting's revenue-
generating models as well as the ethical challenges of advertising, sponsorship and branding. By the end of the course, students should be able to launch audio podcasts for organizations, such as news sites, or for their own personal use. Beyond getting a broad understanding of podcasting, students will learn important entry-level journalism skills to do podcasts -- using microphones, audio recorders and non-linear audio editing software.

**Enforced Prerequisite at Enrollment:** COMM 260W

COMM 363: Desktop Publishing

3 Credits

Practical and theoretical approach to visual communication production in newspaper journalism, advertising, public relations, and other communication industries. COMM 363 Desktop Publishing (3) An introduction to publication design and production for the print media, with an emphasis on newspaper, newsletter, advertising, and magazine design. Students critically analyze existing publication designs in order to develop their visual literacy and visual analysis vocabularies. For assignments, students make layouts and designs using desktop publishing and visual editing software, learning to combine visual and textual elements in publications to make them elegant, consistent, and visually appealing as well as readable and accessible. Assignments are critiqued in class discussion sessions designed to further develop critical visual vocabularies. Unique design issues associated with online and interactive media design are also discussed.

**Enforced Prerequisite at Enrollment:** COMM 215 or COMM 241.

COMM 364: Data Visualization for Journalists

3 Credits

In this course, students will learn to recognize and appreciate data-driven stories. They will produce stories from data by demonstrating proficiency in sorting, filtering and using simple functions of Excel. Students will use the U.S. Census website to find and download demographic data, file a federal Freedom on Information Act or state right-to-know request and use tools such as Structured Query Language, Chartbuilder, Tableau and Carto to query databases as well as build charts and maps. Students will also learn how data and visualizations, including graphics and maps, have become integral parts of story-telling in all journalism platforms – print/digital, broadcast and multimedia.

**Enforced Prerequisite at Enrollment:** COMM 260W

COMM 370: Public Relations

3 Credits

Public understanding of organizations and institutions; identification and analysis of public; media relations; public relations practice. COMM 370 Public Relations (3) This is the introductory course in public relations. It is a survey course that will provide students with a foundation for understanding the role and function of public relations and public opinion in American society, business and industry. The course defines the role of public relations, its societal value, and the workplace settings where public relations is practiced. Students are introduced to the interrelationships between the disciplines of public opinion and public relations and the many definitions of public relations and how they vary from organization to organization. Students learn how individuals, interest groups, organizations, corporations and politicians monitor and analyze public attitudes, opinions and issues that impact individual citizens, groups, organizations, institutions, and society. Students examine public relations from a historical perspective and study important social campaigns that have laid the groundwork for public relations in the modern era. Students are introduced to a myriad of communications theories and how they apply to different scenarios ranging from persuasion to crisis communications. The course helps students develop an understanding of the history, structure, and functions of public relations, the four-step public relations process (research, objectives, programming, and evaluation), the tools used to carry out public relations, ethics in public relations, and legal framework adhered to by public relations practitioners. Additionally, students are taught to appreciate the value of public relations in solving problems and making policy, i.e., the importance of being involved in the decision-making body of a corporation or public relations firm. Students are also shown why individual as well as institutional credibility is critical to public relations practice.

**Enforced Prerequisite at Enrollment:** Fourth Semester Standing.

COMM 372H: Public Relations

3 Credits

Public understanding of organizations and institutions; identification and analysis of public; media relations; public relations practice. COMM 370H Public Relations (3) This is the introductory course in public relations. It is a survey course that will provide students with a foundation for understanding the role and function of public relations and public opinion in American society, business and industry. The course defines the role of public relations, its societal value, and the workplace settings where public relations is practiced. Students are introduced to the interrelationships between the disciplines of public opinion and public relations and the many definitions of public relations and how they vary from organization to organization. Students learn how individuals, interest groups, organizations, corporations and politicians monitor and analyze public attitudes, opinions and issues that impact individual citizens, groups, organizations, institutions, and society. Students examine public relations from a historical perspective and study important social campaigns that have laid the groundwork for public relations in the modern era. Students are introduced to a myriad of communications theories and how they apply to different scenarios ranging from persuasion to crisis communications. The course helps students develop an understanding of the history, structure, and functions of public relations, the four-step public relations process (research, objectives, programming, and evaluation), the tools used to carry out public relations, ethics in public relations, and legal framework adhered to by public relations practitioners. Additionally, students are taught to appreciate the value of public relations in solving problems and making policy, i.e., the importance of being involved in the decision-making body of a corporation or public relations firm. Students also show why individual as well as institutional credibility is critical to public relations practice.

**Enforced Prerequisite at Enrollment:** Honors

COMM 372: Digital Public Relations

3 Credits

This course discusses digital strategies and techniques for public relations. COMM 372 Digital Public Relations (3) This course provides students with a conceptual and applied overview of how digital media are used in the field of public relations. Digital media combines traditional
public relations content creation with social media, search and mobile, thus transforming static news into conversations and connecting directly with target audiences online. This hands-on experience will be supported by theoretical, strategic and professional best practices. A specific focus will be on current digital tools while preparing students for future growth and changes by covering trends, strategy, and analytics.

COMM 373: Crisis Communications in Public Relations

3 Credits

The course is designed to introduce students to organizational risk assessment and protecting an organization’s reputation in times of crisis. COMM 373 Crisis Communications in Public Relations (3) All organizations, large or small, face the prospect of a crisis. At best, a crisis is a challenge; at worst, it has the potential to destroy the organization’s ability to conduct business. Nearly half of Fortune 500 companies operate without a crisis communications plan in place, yet there are scores of examples of crises that should serve as a warning to businesses to prepare for the worst. This course is designed to introduce students to organizational risk assessment and how to protect the company’s reputation while minimizing the. Students learn to deliver positive media interviews in order to deliver key messages to target publics. In times of crisis, public perception is reality. It is the practitioner’s job to be prepared and to act quickly and efficiently in times of crisis and be able to work with the media, not against them. It is also important that practitioners address their audiences with the right messages at the right time. Students will learn how to assemble a crisis communication team, hold a news conference to address a crisis, manage key information, and maintain effective media relations during a time of high anxiety. Students will learn the basic anatomy of a crisis in order to be able to respond with clarity and vision in the heat of a crisis. From product-tampering to oil spills, students will be able to recognize the warning signs of a crisis and identify the five stages of a crisis. In a world connected by the Internet and social media, it’s likely the news media will be at the organization’s doorstep before the public relations director gets there, and it places enormous pressure on corporate leadership and government leaders to make decisions quicker and respond to media queries as quickly as possible. Successful crisis management begins before a crisis occurs. It is the responsibility of crisis management specialists to see the crisis coming and move to minimize the impact or even relegate the impending crisis to a problem. It is far better to be proactive than reactive. Having a crisis management plan is important, but avoiding a crisis by identifying its weaknesses; identifying the resources the company can use before, during and after a crisis; identifying any perceived threats that can turn into a crisis, and identifying the things that company does well in a crisis can go a long way toward negating long-term negative effects of a crisis.

Enforced Prerequisite at Enrollment: COMM 260W and (COMM 370 or COMM 320)

COMM 374: Audio Production

3 Credits

Theory and practice in studio recording and broadcasting techniques, including continuity/news writing, control room operation and audio production. COMM 374 Audio Communication (3) Studio techniques for the production of audio essays, musical portraits, news, and on-air editorials and radio drama are explored through various writing and control room exercises. Students learn how to make interesting, marketable audio material suitable for both broadcast and non-broadcast markets. This course also covers the aesthetic limitations of each format and the marketing potential in the current broadcast and narrowcast markets. The cultural genesis and brief history of each medium and format provides the context for the producer, as well as readings covering the ethical and legal constraints particular to each production medium.

Enforced Prerequisite at Enrollment: COMM 180 or COMM 251 or COMM 100 or permission of program.

COMM 375: Public Relations Strategy

3 Credits

Through a combination of case studies and lectures, this class will prepare students to build upon their knowledge of the planning process and to learn how to make strategic public relations decisions based on diverse scenarios. Specifically, they will explore problem-solving and decision-making processes in strategic communication through the analysis of case studies and the development of strategic planning documents. A significant amount of work in this class is team-based. After this class, the student will be ready to develop a public relations campaign in COMM 473, the capstone course of the public relations major.

Enforced Prerequisite at Enrollment: COMM 370

COMM 380: Telecommunications Management

3 Credits

Introduction to basic principles of management as they apply in electronic media industries. COMM 380 Telecommunications Management (3) This course aims to introduce students to the operation and management of the broadcast, cable and telecommunications industries. It is one of three required courses for the telecommunications major of the Bellisario College of Communications, and is the entry-point into the major’s management sequence. The learning objectives for the course is to provide an understanding of the management function in the media and telecommunications industries; to familiarize students with sources of information about firm and markets; to provide basic training in critically evaluating and using financial information; and to improve writing skills. An associated objective is to prepare students for successful careers in the media and telecommunications industries, by building awareness about industry events and trends, and communicating information about job designations and career paths. The class provides a broad survey of management topics and includes modules devoted to topics such as financial management, marketing and sales, and human resources. These topics are customized to accommodate the management issues specific to the media and telecommunications industries, such as program management, ratings analysis and the Federal Communications Commission’s Equal Employment Opportunity (EEO) guidelines. A special module devoted to management ethics is included in the course. Topical coverage for the course includes not only the radio and television industries that have been the traditional mainstay of telecommunications careers, but also industries such as cable, wireline and mobile telephony, and the dot-com sector in which increasing numbers of telecommunications majors are finding job opportunities.

COMM 381: Telecommunications Regulation

3 Credits

Overview of the regulation of electronic media.
COMM 383: Advanced Video Production

1-3 Credits

Advanced video production techniques and production management issues. COMM 383 Advanced Video Production (1-3) This course uses rotating topics to teach advanced video and television production techniques. Building on the concepts and skills taught in the introductory production course, students will learn advanced techniques in production budgeting, preproduction planning, location scouting, logistics, advanced lighting and audio techniques, post-production techniques, video formats and distribution issues. Each semester the instructor will choose an appropriate project that will serve as the focus of the course. Projects that occur outside the studio will include logistical issues such as power supply and safety and environmental considerations. Examples of projects include coverage of live sporting events, development of scripted and non-scripted programs, and exploration of alternative distribution platforms via the Internet and alternative telecommunications networks.

Enforced Prerequisite at Enrollment: COMM 283

COMM 383A: Webcast Production

3 Credits

Explore all aspects of producing a live television show. Includes streaming a live webcast online. COMM 383A Webcast Production (3) The purpose of this course is to learn all aspects of producing a live video webcast. The first goal is to learn the technical aspects of video production. The class will learn how to plan a live remote broadcast including site selection and evaluation, audio and video techniques, lighting and contingencies for outdoor productions, converting a video signal into an IP stream, and streaming the signal live over the Internet. The second goal of this course is to apply the acquired skills to the production of a live webcast.

Enforced Prerequisite at Enrollment: COMM 283 or permission of program

COMM 384: Telecommunications Promotion and Sales

3 Credits

Principles of marketing services applied to telecommunications and information products/services; models of customer-focused selling and their applications to media time sales. COMM 384 Telecommunications Promotion and Sales (3) The two-fold objective of this course is learning the foundations of service marketing and achieving technical proficiency in applying models of customer-focused selling. The context is the ever-changing marketplace for voice, video, and data services in computing, telephone, broadband (cable) and broadcasting. Topics covered include principles of services marketing and of customer-focused selling, electronic marketing, distribution and sales, selling media advertising products, (television, radio, Web), niche position marketing for voice, video and data services, marketing and advertising trends in Ecommerce. Classroom time is devoted to lecture, discussion, team activities and presentations. Other course work may involve online discussion groups and other forms of electronic distributed learning, creating and presenting sales presentations to actual clients and study by case method.

Enforced Prerequisite at Enrollment: COMM 180 or COMM 320

COMM 385: Media Programming Strategies

3 Credits

Framework, principles, and strategies for media programming from perspective of content distributors and media outlets. COMM 385 Media Programming Strategies (3) This course will expose the students to the framework, principles, and strategies for content distribution via wired and wireless networks. Students will learn programming strategies for cable and broadcast networks, local television stations, cable systems, Internet sites, and other distribution outlets. The class will explore programming from the perspective of the network or outlet that acquires programming content as well as the perspective of the content producer trying to obtain distribution. The course explores how new technologies, laws, and social trends influence programming strategies. Students will learn audience analysis including Nielsen ratings and Internet measurement techniques. The class typically includes multiple group projects, presentations and written reports that evaluate programming strategies in addition to quizzes and exams. By the end of the course students should have a fundamental understanding of programming strategies, trends, and terminology. Broader course objectives include the understanding and application of ethics, diversity, the role of professionals in the industry, critical thinking, written and oral presentations including the use of visual information, appropriate use of mathematical concepts, professional writing, clear communication, and conducting and evaluating research.

Enforced Prerequisite at Enrollment: COMM 180

COMM 386: Telecommunications History

3 Credits

Historical development of telecommunications systems in the United States, including telegraph, telephone, radio, television, and the internet. COMM 386 Telecommunications History (3) Telecommunications History examines the development of electric and electronic communication systems in the United States within their economic, political, social and cultural contexts. Students will look at the origins and growth of communications systems and how those systems arise from and are constrained by existing social conditions. The evolution and impact of the telegraph, telephone, radio, television and Internet systems and industries will be among major topics addressed. In the process of examining the evolution of specific industries, students will be exposed to broader theories of technology and social chance. As a 300-level course, students will be expected to acquire modest skills in historical research, including library, Internet and some original research such as oral histories.

COMM 388: Production Management

3 Credits

Videos are an important means by which organizations communicate, whether online, through social media, during presentations, or delivered through traditional media platforms. In the professional arena, more and more organizations use videos to raise money, communicate, or market and promote their business. This course teaches students how to manage a video production agency and produce videos for clients. COMM 388, through a combination of lecture, readings, and practical exercises, will teach students how to communicate with clients, assign production team roles, create accurate and effective production timelines and budgets, as well as understand the legal issues that can arise when creating videos for clients that meet their specific needs. Student will bring an actual client’s story from the idea phase to final delivery, as well
as learn and utilize proper client etiquette, including email, phone, and in person conversations. Student will have the opportunity to learn about the responsibilities of each member on a production team, how to create and manage a production budget, the purpose and use of contracts and release forms, all while working together as a team to create a video for their client. The course will follow a standard production timeline starting with pre-production topics such as the basics of pitching, story development, and budgeting. The second portion of the class will focus on production issues particularly as they apply to client based production. This will include scheduling, interview outlining, location scouting, conducting on camera interviews, and filming footage. Finally, post-production and formatting topics will be addressed including discussions of different delivery platforms, including online, presentation, and social media. Throughout the semester students will complete practical exercises that will help build their skills at translating a client's idea into a realized project with a minimum budget and maximum production value.

**Enforced Prerequisite at Enrollment:** C or better in COMM 242 or C or better in COMM 282

COMM 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

COMM 400: In the Game: TV Sports Magazine

3 Credits

Students will produce, report, anchor and direct half-hour sports magazine show. COMM 400 In the Game: TV Sports Magazine (3) Magazine shows have expanded beyond traditional news subjects to cover various aspects of American culture. None is more prominent and prevalent than the coverage of sports. In the Game: TV Sports Magazine is a sports story-telling course in which students examine sports-related topics in their context within society. Students will use writing, photography, editing and technical skills gained from their journalism skills courses. The goal will be to produce sports enterprise stories.

**Enforced Prerequisite at Enrollment:** COMM 465 or COMM 283

COMM 401: Mass Media in History

3 Credits

Relationship of news media to social, economic, and political developments in the Western world.

Bachelor of Arts: Social and Behavioral Sciences

COMM 402: International Reporting

3 Credits

International Reporting is an advanced level course in the Bellisario College of Communications designed to give student journalists experience in reporting the news in a foreign country. COMM 402 International Reporting (3) International Reporting is an advanced level course in the College of Communications designed to give student journalists experience in reporting the news in a foreign country. The course is offered in the spring semester only. The key component is a 10-day reporting trip over the spring break to a foreign country. In its first three semesters, the class has gone to Mexico City and Shanghai, and Cape Town, South Africa. The course has been approved as an embedded program by the Office of Global Programs. Admission to the course is highly selective and open only to junior and senior journalism majors. Students must apply for admission and present examples of their work as well as recommendations by a member of the journalism faculty. The aim of this course is to help young journalists acquire the skills they will need to compete in an industry where increasingly the threads of even the most local stories either come from, or lead, overseas. This is not a course aimed at training students to become foreign correspondents. Rather, we hope to prepare students to function in a foreign environment, and to recognize, overcome and ultimately benefit from the linguistic, cultural, economic and legal challenges that working in another country will entail. The course has three segments. In the first half of the semester we study the history, culture, politics and economics of the country to which we are traveling. We also develop and refine our ideas for the stories we will report when we get there. We will also learn about foreign reporting and how it differs from the reporting we have been used to doing here. The second part of the course consists of supervised travel to our target country. Here, we report the stories we have selected, file blogs and video posts to ComMedia, and also meet with local journalists, officials and students of the host country. Depending on the country in which we are working, students also have the opportunity to collaborate, when appropriate, with students from local universities. The final half of the semester is devoted to supervised individual work aimed at turning our reporting into stories suitable for publication or broadcast. Although students are required to acquire a general working knowledge of the country to which we are traveling, and will be tested on it, in the end they will be evaluated almost entirely on their work product. This results-oriented approach has been chosen because it most closely replicates the environment of a professional newsroom.

**Enforced prerequisite at enrollment:** COMM 260W.

COMM 403: Law of Mass Communications

3 Credits

Nature and theories of law; the Supreme Court and press freedom; legal problems of the mass media. COMM 403 Law of Mass Communications (3) This discussion-intensive seminar provides an in-depth analysis of contemporary First Amendment issues ranging from the protection of violent media content and sexually explicit speech to defamation and invasion of privacy. Students explore the legal standards, public policies and theories that protect - and restrict - the Constitutional rights of free speech and free press. The primary area of study in this course is the law of mass communications and, in particular, legal issues facing the entertainment and news media. Using a law school casebook, written by a Harvard Law School professor, we will cover legal issues related to topics such as sex and violence in the media, defamation, privacy, and copyright.

Bachelor of Arts: Social and Behavioral Sciences

COMM 403H: Law of Mass Communications

3 Credits

Nature and theories of law; the Supreme Court and press freedom; legal problems of the mass media. COMM 403H Law of Mass Communications (3) This discussion-intensive seminar provides an in-depth analysis of contemporary First Amendment issues ranging from the protection of violent media content and sexually explicit speech to defamation and invasion of privacy. Students explore the legal standards, public policies
and theories that protect - and restrict - the Constitutional rights of free speech and free press. The primary area of study in this course is the law of mass communications and, in particular, legal issues facing the entertainment and news media. Using a law school casebook, written by a Harvard Law School professor, we will cover legal issues related to topics such as sex and violence in the media, defamation, privacy, and copyright.

Honors

COMM 404: Telecommunications Law

3 Credits

Overview of the regulation of electronic media. COMM 404 Telecommunications Law (3) Telecommunications Regulation offers students an introduction to a wide range of regulatory and policy issues affecting the telecommunications industries. These industries include traditional radio and television broadcasting, cable, satellite, telephone (wired and wireless), broadband, and the internet. This class is especially useful for students interested in careers in telecommunications, electronic commerce, public policy, information science, business management, law, information policy, and other related fields. Students taking this course will learn how regulations can affect business opportunities and how public policy shapes the development of the world's communications infrastructure. New developments in technology, business practices and regulatory philosophy are leading to dramatic changes in the regulatory climate in telecommunications. The goal of this course is to help you understand the implications of these changes for business strategy and for society as a whole. Some of the questions we will consider include: Why do we regulate telecommunications? What are the legal parameters of regulation? How does the regulatory process work? Why do "experts" disagree on the proper way to regulate? How do regulations influence business strategy and industry development? How do regulations affect the way individuals communicate and acquire information? How can we choose the best policies for the future to balance reliance on marketplace forces versus the need for Government intervention? This course emphasizes an economic and legal approach to regulation. Readings will include primary documents such as FCC regulations, court cases, and statutes as well as historical and economic analyses of telecommunications regulation.

COMM 405: Political Economy of Communications

3 Credits

COMM 405 takes a critical look at the structure and practices of the U.S. mass media within the U.S. and global political economy. The normative purpose of the course is to consider whether a media system operates in a manner which supports and promotes the development of a democratic society. As such, the course is both a theoretical and practical exploration of the study of political economy and the development of capitalism as it relates to the mass media. Topics include: the structure of contemporary capitalism (its nature and logic); the ownership and control of mass communications; commercialism, advertising and their impact on U.S. society; the mass media and journalism: the economic structure and organization of the cultural industries and precarious labor; the political economy of digital media; media policy; the tenets of democratic communication.

Enforced Prerequisite at Enrollment: ECON 102

Bachelor of Arts: Social and Behavioral Sciences

COMM 406: Electronic News Gathering and Editing

3 Credits

Intermediate level skills in creating and editing television news packages. COMM 406 Electronic News Gathering and Editing (3) This course is designed to provide a substantial background in video production techniques coupled with electronic newsgathering and the use of video equipment. Although students enrolled in this course would be expected to have a basic understanding of video production from previous courses, more advanced editing techniques, along with sustained practice in interviewing, taping, organizing and writing various types of news and feature packages, should provide an excellent preparation for subsequent internships or employment. This is a "hands-on" course and will provide extensive opportunities for practical application of material covered in class. Students will be evaluated on the quality of their productions. This course serves as a supporting course in the Communication and Media Studies major.

Prerequisite: COMM 315 or COMM 283W

COMM 407A: Media and Government

3 Credits

This course examines the relationship between politics, governance, and news media, and provides a foundation for understanding media's role in public policy. COMM 407A Media and Government (3) The course is designed to broaden, inform, and empower thinking about media influence on the ways people think about issues and how that influences public policy choices. The course will also analyze the various ways in which elected officials seek to craft messages and manipulate media to encourage support for policy agendas and initiatives. Through the process of examining the relationship between these powerful forces, students will gain critical thinking skills that will better prepare them to consume and create media and to function as citizens in American democracy. This course will examine the symbiotic relationship between politics, governance, and media, particularly news media, and will provide a foundation of classic media theory combined with new thinking on media's role in public policy formation and its impact on the larger society. The course will emphasize the importance of political narratives, how they are constructed and communicated and also how they influence elections and public policy choices. Primary sources will provide diverse perspectives on the many questions that will emerge from readings and discussions. This course is only offered as part of the Washington, D.C. Program.

COMM 407B: Perspectives on American Journalism

3 Credits

The course examines a number of current issues and topics surrounding journalism including: ethics, state of the industry, and news vs. entertainment. COMM 407B Perspectives on American Journalism (3) Journalism is a unique occupation. News editors, reporters, producers, anchors, and other media professionals have a special responsibility to the public - the responsibility to provide their readers and audience members with the information they need in order to make choices about how to vote, what issues to get involved with, how to live their daily lives. While journalists - unlike members of other professions - have very few laws that exist specifically to govern their work, their duty to the public carries with it a number of important ethical burdens and responsibilities to the public and to society as a whole. The course examines a number of current issues and topics surrounding journalism. While there will be
new themes and topics for each week's class, nearly all of the topics are interrelated, and each class will build on what has gone before. Among the topics that will be covered are the current state of the news industry, the ethical guidelines that journalists are supposed to follow, the blurring of lines between news and entertainment, and the news media's role in making people famous or infamous. The issues that we examine in this course will be most directly related to the practice of journalism, although we may touch on other aspects of communications (e.g. advertising or public relations) from time to time. Our goal will be to examine news coverage with a critical eye - to think about the reasoning and decision-making that shape the final products that we read or view. The class meetings themselves will center on discussion of the readings and presentation of real-world examples drawing from current news stories and issues involving the news industry.

COMM 407C: Media and World Politics
3 Credits
COMM 407C helps to make sense of the impact of media, public opinion and non-state actors shaping foreign policy.

COMM 408: Cultural Foundations of Communications
3 Credits
Examination of oral, scribal, print, industrial, and electronic cultures; analysis of impact of technology on communications and social structure. COMM 408 / STS 408 Cultural Foundations of Communications (3)(BA) This course meets the Bachelor of Arts degree requirements. COMM 408 / STS 408 traces the development of communications technologies and their impact on culture over the last 500 years. Students will examine how different tools for communicating changed the way people organized and made sense of their worlds. The course begins by looking at oral cultures and moves on to the scribal, print, industrial, electronic and post-industrial or postmodern cultures, studying the media developments that marked each of these eras. With each period and its corresponding technology students will examine how and why the new media altered not only the form of communication (the type of speech, form of writing and/or speed of information transfer), but also how such changes altered the content of knowledge (how people made sense of their lives and communities). Readings are drawn from a range of disciplinary perspectives on the issues, from history, sociology and anthropology, to philosophy, communication studies and cultural theory. The historical and theoretical knowledge provided by the course will give students a solid foundation for coming to terms with media trends in present-day society and for thinking through their possible epistemological, political and cultural impacts. The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

Enforced Prerequisite at Enrollment: Select 3 credits from the following:
COMM 100 or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 251 or COMM 320 or COMM 370
Cross-listed with: STS 408
Bachelor of Arts: Social and Behavioral Sciences

COMM 409: News Media Ethics
3 Credits
Ethical problems in the practice of journalism; principal public criticisms of news media; case study approach. COMM 409 News Media Ethics (3) Ethics is about doing the right thing - which, in the news business, is rarely as easy as it sounds. Is it ever OK for reporters and photographers to intrude on grieving families? Is it ever OK to lie to get information? Are the sex lives of politicians and celebrities our business? COMM 409 will give students a fuller understanding of how journalists do their jobs and how they should make ethically sound decisions. This class is more about learning to ask the right questions than learning the right answers. We'll rely on recent news coverage to get us in the habit of working through the moral dilemmas that reporters routinely confront.

Bachelor of Arts: Social and Behavioral Sciences

COMM 409H: News Media Ethics
3 Credits
Ethical problems in the practice of journalism; principal public criticisms of news media; case study approach. COMM 409H News Media Ethics (3) Ethics is about doing the right thing - which, in the news business, is rarely as easy as it sounds. Is it ever OK for reporters and photographers to intrude on grieving families? Is it ever OK to lie to get information? Are the sex lives of politicians and celebrities our business? COMM 409H will give students a fuller understanding of how journalists do their jobs and how they should make ethically sound decisions. This class is more about learning to ask the right questions than learning the right answers. We'll rely on recent news coverage to get us in the habit of working through the moral dilemmas that reporters routinely confront.

Honors

COMM 410: International Mass Communications
3 Credits
The role of international media in communication among and between nations and peoples. COMM 410 International Mass Communications (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the role of international mass media in communications and debates about global questions and/or crises between and among nations and peoples. These roles will be examined using such theories as imperialism, hegemony, information society, modernization, globalization, capitalism, cultural industries, propaganda, and others. Among other issues the course will examine the way in which media report, portray, represent, misrepresent, and construct knowledge about global questions and crises that may border on social injustices, health, the politics of armament, disarmament, and recognition of statuses of states. The course may also explore other issues of international importance not limited to those involving economic questions such as balance of trade, global debt, and financial crises.In addition, this course provides avenue for the appraisal of mediated debates between nations at such platforms as the United Nations (UN), the World Health Organization (WHO), and the World Trade Organization (WTO) among other international and bilateral organizations that serve as platforms for consideration of issues of global importance. Students are led to understand ways in which states relate and communicate with each other in the environment of supranational governance. Students are exposed to these issues through readings in pertinent theories, ICT-enhanced conversations, and critical examinations of applicable concepts, exposure to contemporary issues via media messages; including those presented via newspapers, news magazines, broadcast documentaries, films, and other media products that will aid students' ability to better appreciate issues of historical and contemporary relevance to the global community.
Critical Media Studies (1) This course provides an introduction to the critical study of media. It is designed to help students critically view the role of sport media in American culture. The influence of relationships between sport media and issues such as race, gender, sexuality (homophobia), nationalism, capitalism/consumerism, violence and civic life will be examined. Issues in relation to journalism ethics and the production of sport media also will be examined.

COMM 413: The Mass Media and the Public
3 Credits
Nature of mass communications, relationships between mass media and public, media influences on opinion; social pressures on the media.

Enforced Prerequisite at Enrollment: COMM 100 or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 251 or COMM 260W or COMM 320 or COMM 370
Bachelor of Arts: Social and Behavioral Sciences

COMM 413H: The Mass Media and the Public
3 Credits
Social-level and political theories of the relationships between media and public; media influences on public opinion; social pressure on the media; political communications. COMM 413W The Mass Media and the Public (3) This course is designed to explore the complex and dynamic relationships among the media, public, and government. These relationships are examined through the lenses of sociological and political theories regarding the nature and process of mass communication. The central questions answered in the course are: "How do the media influence the public, its opinions, and social and political behavior?" and "How does the public - through social pressures, and political constraints - influence media performance and content?" Special attention is paid to modes of inquiry in communication research, social functions and control of the media, social construction of reality, political communication, and public opinion. The goals of the course are to introduce students majoring in professional areas of communications to theoretical frameworks that help explain media practices, advance the understanding of the communications research literature for Media Studies majors, and develop skills of all students to be informed and critical consumers of the media. The course is required of Media Studies majors and is a communications elective for the Journalism and Telecommunications majors, the Corporate Communications and Journalism options in Communications, and the Media Studies minor.

Enforced Prerequisite at Enrollment: (COMM 100 or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 251 or COMM 260W or COMM 320 or COMM 370) and (COMM 304 or COMM 420)
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum
COMM 414: Media Management
3 Credits
Theoretical bases and practical approaches for management and administration of communications projects, organizations, and resources. COMM 414 Media Management (3) Students examine various management styles and how they are applied in various media industries. Special issues in media management such as intellectual rights and work-for-hire contracts are covered. General business management topics are also covered, such as human resource management, sales, motivation, working with unions, managing talent and other assets, and maximizing profits within the framework of very basic business principles. In addition, this course includes topics useful for small media
business startups and freelance media content producers. Usually this course utilizes a case/book study approach relying heavily on in-class discussion.

**Enforced Prerequisite at Enrollment:** COMM 100 or COMM 251

COMM 415: Advanced Photography for Communications

3 Credits

Advanced applications in documentary photography emphasizing the narrative qualities of imagery, and utilizing digital technologies. COMM 415 Advanced Photography (3) An advanced undergraduate examination of documentary photography with the goal for each student to produce a portfolio of pictures suitable for exhibition or to show prospective employers. Each week students complete photographic assignments designed to simulate commercial photography work and to give experience with a variety of photographic techniques and subjects. Assignments include topics such as portraiture, documentary photo story production, studio lighting, fill-flash lighting, and sports photography. Classroom exercises include demonstrations of various techniques as well as critique sessions to discuss student assignments and other photography work.

**Enforced Prerequisite at Enrollment:** COMM 215 or COMM 269

COMM 416: News Practicum

3 Credits

News Practicum is a professionally oriented course for students who have mastered basic news writing and interviewing skills to produce stories for professional news outlets. COMM 416 News Practicum (3) This is a course in which students employ skills they developed in previous classes including: reporting, writing and working in collaboration with editors to develop a variety of short and long stories that are designed to be used in professional publications. In the course of reporting stories, students will work independently, using sources ranging from first responders to local government officials and experts, to gather information that they will use writing their stories. Students will turn in multiple drafts to the instructor, who will work with them to edit the stories in preparation for publication. Part of the course will include post-publication review of the stories to discuss techniques and how to improve upon them.

**Enforced prerequisite at enrollment:** COMM 260W.

Cross-Listed

COMM 417: Ethics and Regulation in Advertising and Public Relations

3 Credits

Ethical issues in practice of advertising and public relations; legal and regulatory issues; case studies. COMM 417 Ethics and Regulation in Advertising and Public Relations (3) The purpose of this course is to help students gain an understanding of the complex legal and ethical issues they may face in advertising and public relations practice. Through an examination of historic and contemporary issues and cases, students will develop a professional framework for evaluating ethical dilemmas. Perspectives of advertisers, public relations practitioners, agencies, government, media, clients and advocacy groups will be examined, with a focus on social responsibility in professional practice.

**Enforced Prerequisite at Enrollment:** COMM 320 or COMM 370.

Bachelor of Arts: Social and Behavioral Sciences

COMM 418: Media Effects: Theory and Research

3 Credits

Investigation of social and psychological effects of media messages and technologies via theories and empirical evidence pertaining to processes of effects. COMM 418 Media Effects (3) This is an upper-level undergraduate course on the social and psychological effects of media messages and technologies, which moves beyond a simple introduction of media theories. Drawing on social and behavioral research in communication, psychology and related disciplines, it will attempt an advanced understanding of media effects via theories and empirical evidence pertaining to the processes of effects. Emphasis will be placed on rigorous examination of theory testing and theory development. The class will assume a general familiarity of basic communication theories pertaining to the relationship between media and public (COMM 118) and a working knowledge of quantitative research methods (COMM 304).

**Enforced Prerequisite at Enrollment:** COMM 118 and COMM 304.

COMM 419: World Media Systems

3 Credits

Comparative study of modern mass systems and the evolution and structure of specific countries’ systems. COMM 419 World Media Systems (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a comparative study of modern mass media systems with focus on the ways in which two or more countries’ media have evolved and are structured by the political, economic, social, and cultural environments within which they exist. Students will be exposed to the theories and practices of media systems - as explained in such normative expositions as the four theories of the press and other contemporary iterations. One objective of the course is for students to gain a better appreciation of the structure and location of the media system in the United States vis-à-vis greater awareness of media systems in other political contexts where media cultures may vary from the U.S. matrix. Across the board of sampled countries’ media systems, students will be exposed to the ways in which each country’s media have developed, are shaped, and are continually shaped by factors that include history, political cultures, evolving legal regimes, media regulations, finances, media economics, new technologies, institutional arrangements, citizens’ access to information, or lack thereof. Another objective of this course is to equip students with a toolbox and framework with which they can replicate comparative media systems analyses in other countries and regions of interest as they contemplate study abroad and/or long-term career (employment, graduate studies) engagements. To achieve foregoing objectives students will be exposed to readings in theories of media systems and to academic articles using comparative methodologies to examine structural evolution of media in tandem with countries transformations over time. Students will analyze historical or contemporary media systems’ developments through careful comparisons and applying critical thinking skills. In the process, students develop analytical skills useful in contending with academic and professional environments.

**Enforced Prerequisite at Enrollment:** COMM 410

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

United States Cultures (US)
As part of developing understanding of this decision-making process, students will learn how to relate research tools and outcomes to the advertising and public relations problems they encounter. This course will examine the role of research in solving in advertising and public relations. In addition to helping students understand how to conduct research, this course is also designed to help them become critical consumers of the research conducted by others. Students will learn to apply research findings to communication problems and evaluate the organization, regulation and economics of those systems. Finally, students will analyze the national development of media systems and the impact of the mass media in the modernization of peasants.

**Enforced Prerequisite at Enrollment:** COMM 410
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
Honors

**COMM 420: Research Methods in Advertising and Public Relations**
3 Credits
Primary and secondary research methods used in the development of solutions to advertising and public relations problems. COMM 420 Research Methods in Advertising and Public Relations (3) This course is designed to provide an introduction to the logic and methods of social science research and its applications in the professional practice of advertising and public relations. Students will be introduced to methods of primary research used in the advertising and public relations fields such as survey, focus group, content analysis, and experimental design. Students will also become more familiar with basic and advanced statistical techniques and statistical software used in the field. Understanding how research is conducted and the strengths and limitations of research findings is a critical first step in developing the ability to apply research findings to communication problems in advertising and public relations. In addition to helping students understand how to conduct research, this course is also designed to help them become critical consumers of the research conducted by others. Advertising and public relations problems often require the identification, understanding, synthesis, and application of data collected by others in developing problem solutions. Understanding secondary sources of data commonly used in the field, such as Simmons, Nielsen, Arbitron and SRDS, is an essential component of professional expertise. Problem-solving in advertising and public relations requires decision-making in a turbulent and dynamic marketing environment. To help students learn how to relate research tools and outcomes to the advertising and public relations problems at hand, this course will examine the role of research in decision-making at the critical steps in the problem-solution process. As part of developing understanding of this decision-making process, students will also become more aware of the ethical issues associated with research in advertising and public relations.

**Enforced Prerequisite at Enrollment:** (COMM 320 or COMM 370) and (STAT 200 or SCM 200 or PSYCH 200)
COMM 424: Advertising Campaigns

3 Credits

Advertising campaign problems from the viewpoint of the national advertiser and advertising agency; production of a complete advertising campaign. COMM 424 Advertising Campaigns (3) This comprehensive capstone course is designed to provide an opportunity to showcase your creativity and knowledge about advertising communications. Strategic integrated marketing communications concepts are emphasized. The campaign proposal developed in this course will showcase the full weight of your knowledge and skill in the area of advertising communications. Students will need a background in creative design and practices, media planning principles and practices, and research methods used to delineate appropriate target groups and evaluate campaign effectiveness. A strong focus will be on understanding the audience and developing message strategies that have a high potential to influence attention and marketing behaviors. During the course you will create a complete advertising/marketing communications campaign proposal that reflects a set of communication goals derived from a set of measurable objectives all designed to meet the needs of your client. A situation analysis will be developed to provide a detailed assessment of the product or service environment. This includes analysis of the product class, life cycle, generic and brand level competition, and target group identification. The goal is to gain relevant information that can be used to make justifiable strategic decisions related to the advertising campaign. Strategic goals and objectives will be developed that allow the direction and efficacy of the campaign to be measured. Tactics must reflect the strategies developed in the campaign. Campaigns include diagnostic and performance benchmarks used to evaluate the progress of a set of predetermined measurable objectives. The goal is to provide timely feedback that allows the agency and client to evaluate the effectiveness of the campaign. This is especially important as client-agency relations continue to adapt a series of formal measures of campaign effectiveness. The class is designed to develop critical thinking skills. For example, each strategic decision presented in a campaign must have a fully explicated rationale that is based on quantitative and qualitative criteria. Research tools will be presented in class that allow and support the development of measurable objectives. The campaign proposal must include a series of benchmarks designed to evaluate the progress of the campaign at key time points. The campaign will have a complete media plan that includes selected media, cost efficiencies, and media schedule. Students will be expected to be familiar with media principles and media planning software.

Enforced Prerequisite at Enrollment: COMM 420 and COMM 421W and COMM 422

COMM 425: Advanced Advertising Campaigns

3 Credits

An academic option for student AAF members who will develop an integrated advertising campaign to be presented in District competition. COMM 425 Advanced Advertising Campaigns (3) The class is structured along the lines of a real-world advertising agency and the manner in which they might pitch a new account. Students work through the research and situational analysis to develop an integrated communication plan, campaign budget, and message strategies for a client. The client is provided by the National Student Advertising Competition. This group provides undergraduate advertising students with a realistic problem that is solved through team effort, knowledge and creativity. Students might have the opportunity to pitch their plan to the NSAC client.

Enforced Prerequisite at Enrollment: COMM 424 or COMM 473.

COMM 426: International and Intercultural Strategic Communication

3 Credits

Advertising and public relations in the international and intercultural arenas; multicultural strategic communications strategies. COMM 426 International and Intercultural Strategic Communication (3) COMM 426 will provide students with a framework for applying their existing public relations and advertising tools in the global arena. Working internationally and/or interculturally challenges the advertising, public relations or marketing executive to think outside his or her own "cultural box." Some of the challenges include finding research about consumers, competitors and the marketplace outside of North America and Western Europe, understanding local cultures and customs, understanding the importance of ethnicity, and building an integrated core of professional communications that work with a common purpose, even if they come from different backgrounds - or are on different continents. The emphasis will be on developing a methodology for researching international and intercultural strategic communications problems, and then discussing possible communications-based solutions. To that end, case studies from both the international advertising and international public relations disciplines will play an important role in the course. Additionally, students will be exposed to a number of frameworks for analyzing culture, coming from the areas of anthropology (Schwartz’ 10 Value Domains), social psychology) Bond's essay on impression management in multicultural organizations and international business (Hofstede's Dimensions of National Culture).

Enforced Prerequisite at Enrollment: COMM 320 or COMM 370.

COMM 427: Client/Agency Relations

3 Credits

Building and maintaining client/agency relationships in advertising, public relations and direct response agency business functions. COMM 427 Client/Agency Relations (3) Client/Agency relations provides students with an understanding of advertising, public relations and direct response agency business functions, and the important role of building and maintaining client/agency relationships. It covers the phases of pre-relationship (identifying, prospecting, pitching and winning accounts), developing relationships with clients and maintaining and enhancing these relationships over time. Client/agency relationships are built on the development of viable partnerships with clients, establishing strategies to support and maintain the vitality of client business success, and the on-going delivery of fresh creative ideas from all agency disciplines. Today's agency has become a resource for all integrated marketing communication (MARCOM) needs. This includes, but is not limited to, advertising, promotion, public relations, direct response marketing, event marketing, customer-relationship marketing, interactive internet communication and branding ideas. This course covers the integration of these disciplines on behalf of an agency's clients.

Enforced Prerequisite at Enrollment: (COMM 421W and COMM 422) or COMM 471
COMM 428A: Principles of Strategic Communications

3 Credits

Principles of Strategic Communications provides an overview of the various media and communications methods that comprise modern integrated marketing campaigns. COMM 428A Principles of Strategic Communications (3) Principles of Strategic Communications will introduce students to strategic communications in the context of integrated marketing communication (IMC). It will overview the industry by providing a foundation for understanding what IMC is and how it developed to its current state, what it tries to accomplish, how it works, and how it can affect society. It lays the groundwork for other courses in the strategic communications sequence. The fundamentals of consumer psychology will be introduced, along with theories of persuasion. In addition to traditional advertising, the course will review other critical functional areas of IMC such as public relations, sales promotion and direct marketing. The role of the internet and emerging new media technologies will also be covered. The advantages and disadvantages for different media will be summarized, and the basics of media planning will be introduced. Course content is present in the context of strategy and planning, with the goal of illustrating how various elements in the promotional mix work together to achieve campaign objectives. The importance of effective measurement and accountability at each point of campaign development and execution will be explained. Finally, the ethical and regulatory environment for IMC will be explored.

COMM 428B: Strategic Communications Law

3 Credits

Analysis of laws and regulations affecting online advertising and strategic communications. COMM 428B Strategic Communications Law (3) Strategic communications law focuses on the key legal issues affecting strategic communications, advertising and marketing in an online environment. Major topics include First Amendment protection for commercial speech; advertising regulation including spam and the use of trademarks and copyrights; privacy regulation including the collection of user data and use of endorsements, and procedural issues such as jurisdiction and analysis of various regulatory authorities. Additional topics will include domain names, marketing to minors and current developments in advertising and Internet law.

Enforced Prerequisite at Enrollment: COMM 428A.

COMM 428C: Strategic Communications in a Global Environment

3 Credits

Strategic Communications in a Global Environment will provide students with a framework for applying public relations and advertising tools across media platforms and across cultures. COMM 428C Strategic Communications in a Global Environment (3) Strategic Communications in a Global Environment will provide students with a framework for applying public relations and advertising tools across media platforms and across cultures. While cross-cultural communication has always been a challenge for strategic communicators, introducing online elements to campaigns exposes strategic communications professionals to a host of new challenges, including a wide range of ethical and legal dilemmas emanating from new to abilities to collect sensitive data from audiences, often without their knowledge. Students will be exposed to a number of frameworks for segmenting publics in this new environment, both geographically and psychographically, and will learn the skills to work with colleagues across borders and cultures to create effective, ethical strategic communications campaigns.

Enforced Prerequisite at Enrollment: COMM 428A and COMM 428D.

COMM 428D: Research & Analytics

3 Credits

This course covers online research methods for strategic communication, including web analytics, online surveys, online interviews, and content analysis. COMM 428D Research and Analytics (3) Increasingly, organizations are using the web as a vehicle for communicating with key audiences such as customers, shareholders, volunteers, donors, community members, and government entities. In this class students will be exposed to theories and practices in the areas of online research and analytics with a focus on understanding how customers perceive the organization, assessing the engagement with target audiences online, measuring the value of relationships that organizations initiate and build online, and tracking how web site visitors experience an organization’s site. The course will expose students to tools for tracking and measuring online communication, and it will help students understand how to prioritize audiences and communication to maximize the effectiveness of measurement. Research methods taught in this class include web analytics, online surveys, online interviews, content analysis, and online focus groups. Gauging the impact of online communication helps organizations engage in more efficient and effective communication practices. Practitioners in strategic communication need to understand how to measure and evaluate the effectiveness of their communication in this medium. This course will prepare students to conduct online research in practice.

Enforced Prerequisite at Enrollment: COMM 428A and STAT 200.

COMM 428E: Social Media Strategies

3 Credits

This course covers social media theory, tools and best practices to prepare students for current and future use of social media. COMM 428E Social Media Strategies (3) Social media - including social networking, podcasting, bookmarking, blogging, microblogging, location-based, wikis, and other collaborative content creation platforms - are changing the field of public relations. While many public relations professionals claim to be social media “experts,” those who can demonstrate true expertise are rare and much sought after. This course narrows the focus from the broad field of social media to cover the specific tools and best practices needed to conquer current and future use of social media in public relations.

Enforced Prerequisite at Enrollment: COMM 428A and COMM 428D.

COMM 430: Mass Media and Politics

3 Credits

Study of mass media as institutions and the effects of the mass media on politics, public policy, and citizens. COMM 430 Mass Media and Politics (3) In Mass Media and Politics, we address issues and relations of the political realm, the media institutions, and the public sphere. Particular attention is dedicated to the influence of and coverage by both the domestic and international news media. In addition, we also examine topics such as bias in the media, women and politics, political campaigns, and advertising, ideology and hegemony, and cultural representations in the media. Of importance are notions of how and why mass media influences the national political debate, as well as what
mass media exports in terms of culture and what this means to the political reality of other nations. The discussion of these issues is often couched in terms of technologies, especially emerging and traditional mass media technology systems such as convergence technologies, the World Wide Web, television, radio, and newspapers. Prerequisite: COMM 251.

**Enforced Prerequisite at Enrollment:** COMM 100 or COMM 251.

COMM 431: Topics in Television Culture and Communication

3 Credits

Study television technologies, techniques, audiences, genres and trends in relation to a specific decades or cultural periods.

**Enforced Prerequisite at Enrollment:** COMM 100 and COMM 180 or permission of program.

Bachelor of Arts: Arts

COMM 433: Film History for Filmmakers II: The Development of the Cinema from 1960 to the Present

3 Credits

History of the art, industry, economics, culture, and technology of cinema from 1960 to the present. COMM 433 Film History for Filmmakers II: The Development of the Cinema from 1960 to the Present (3) Film History for Filmmakers II presents the history of the medium of cinema from 1960 to the present. The course explores the artistic, technical, economic development of the cinema, and the cultural contexts in which this development occurred. The course covers narrative, experimental, and documentary cinema and trains students in the techniques of close formal analysis of the cinema. The course builds upon formal, thematic, and cultural analysis of the cinema introduced in Film History I. This course is integral to the existing curriculum. It provides Film-Video students with a detailed description of trends in their art form. It provides students with a more intensive study in the history of an influential medium in the development of the concept of mass media and communications. The course will be taught each Spring semester.

**Enforced Prerequisite at Enrollment:** COMM 333

COMM 434: Movies, Media, and the Jewish American Experience

3 Credits

Study of Jewish American Film and Popular Culture. COMM (J ST) 434 Movies, Media, and the Jewish American Experience (3) The course examines film and other popular media, including theater, radio, and television, as important sources for understanding the Jewish experience and its impact on and relationship with American culture more generally since the late 19th century. Topics to be considered include US film and popular media as representations of Jewish history, culture, and experience; the role of Jews as prominent directors, producers, actors, and writers in their social-historical context; and the history and function of the representational modes and techniques used in these texts. A major emphasis of the course will be on analyzing film and other media texts as lenses to reflect, refract, and focus on Jewish American identity. By way of analyzing the interrelationships between filmic and other media texts and Jewish American experience, the course will attend to a number of key themes in Jewish cultural history, including Jewish life in late 19th-early 20th century Europe; immigrant life in turn of the century America and questions such as assimilation, preservation of tradition, family life, social mobility, and male/female relations; Jews in show business, organized crime, and sports; American Jews and the Holocaust; American Jews and Israel; Jews in the modern age; generational and denominational differences among Jews; and Jews and anti-Semitism.

**Prerequisite:** A previous course in Jewish Studies, Film Studies, Media Studies, Art, Music, English, or Comparative Literature.

Cross-listed with: JST 434

COMM 436: Advanced Audio Production

3 Credits

Advanced concepts and techniques of audio production in analog and digital formats with hands-on experience in recording, mixing and editing. COMM 436 Advanced Audio Production (3) This course builds on the concepts and techniques of audio production in both analog and digital formats introduced in COMM 374 and includes in-depth examination of sound theory and hands-on practice in advanced projects involving recording, mixing and editing in analog and digital formats. This course provides an understanding of technical and aesthetic aspects of advanced audio production, and provides students the opportunity to demonstrate advanced skills in recording, editing and mixing. Students gain an understanding of professional studio and field practices and develop advanced studio and field projects suitable for a portfolio.

**Enforced Prerequisite at Enrollment:** COMM 374

COMM 437: Advanced Documentary Production

3 Credits/Maximum of 6

Advanced exploration of documentary production techniques and aesthetics through the completion of a short video project. COMM 437 Advanced Documentary Production (3 per semester/maximum of 6) This course is designed to enable students to produce portfolio-quality work while bringing together ideas, processes, practices, and theories in the service of documentary production. Students will explore the history, conventions and theory of the documentary film form, while developing and producing a film or video work for screening at the end of the semester. Working in small crews with others from the class and using sophisticated production equipment, students will write and produce short digital video projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as on providing the support, guidance, and critique necessary for a successful production. Particular emphasis is given to the traditions of social criticism, the creative treatment of actuality, the individual and collective points of view. The history of documentary form is illustrated by comparing the work of the American Direct Cinema style embodied in the work of Drew Associates to the French Cinema Verite style developed by Jean Rouch. The evolution of these styles into what we now just refer to as Verite filmmaking is put into practice through a series of exercises that incorporate a variety of points of view. Analysis of the above works, as well as examples from Barbara Kopple, Errol Morris, and Frederick Wiseman, provide students with a springboard to develop their own style, vision, and personal creative voice. An examination of Bill Nichols taxonomy of non-fiction film classification further contextualizes aesthetic and theoretical issues for students. A series of lectures, discussions, readings, and screenings move students through the personal and collaborative process of documentary production.
Enforced Prerequisite at Enrollment: COMM 338 and COMM 340 and COMM 342

COMM 437A: Advanced Documentary Production Abroad

3 Credits

Advanced exploration of documentary production techniques and aesthetics through the completion of a short video project abroad. COMM 437A Advanced Documentary Production Abroad (3) This course is designed to enable students to produce portfolio-quality work while bringing together ideas, processes, practices, and theories in the service of documentary production. Working in small crews with others from the class and using sophisticated production equipment, students will write and produce short digital video projects. While exploring the history, conventions and theory of the documentary film form, students will develop and produce a 3-9 minute video work to be filmed abroad. Upon return from their time abroad, students will edit and screen their final projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as on providing the support, guidance, and critique necessary for a successful production. Particular emphasis is given to the traditions of social criticism. The history of documentary form is illustrated by comparing the work of the American "Direct Cinema" style embodied in the work of Drew Associates to the French "Cinema Verite" style developed by Jean Rouch. The evolution of these styles into what we now just refer to as "Verite" filmmaking is put into practice through a series of exercises that incorporate a variety of points of view. Analysis of the above works, as well as examples from Barbara Kopple, Errol Morris, and Frederick Wiseman, provide students with a springboard to develop their own style, vision, and personal creative voice. An examination of Bill Nichols taxonomy of non-fiction film classification further contextualizes aesthetic and theoretical issues for students. A series of lectures, discussions, readings, and screenings move students through the personal and collaborative process of documentary production.

Enforced Prerequisite at Enrollment: COMM 338 and COMM 340 and COMM 342

COMM 438: Advanced Narrative Production

3 Credits/Maximum of 6

Advanced exploration of narrative production techniques and aesthetics through the completion of a short film or video project. COMM 438 Advanced Narrative Production (3 per semester/maximum of 6) This course is designed to enable students to produce portfolio-quality short projects that bring together ideas, processes, practices, and theories in the service of narrative production. Over the course of the semester, students will pursue an entire project from conception to completion through intensive pre-production, production, and post-production stages. Working in small crews composed of fellow classmates and using sophisticated production equipment, students will write and produce short digital video projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions, as well as providing the support, guidance, and critiques necessary for a successful production. There will be an emphasis on the thorough execution and evaluation of the steps taken toward completion of their project. As a workshop, specific topics pertaining to the three stages of production will be reviewed as necessary. Students will be expected to hand in a pre-production packet (budget, schedule, script breakdown and lined script) before proceeding to the production phase.

Enforced Prerequisite at Enrollment: COMM 338 and COMM 340 and COMM 342

COMM 439: Advanced Alternative Production

3 Credits/Maximum of 6

COMM 439 Advanced Alternative Production (3) is a senior level course focusing on the development and expression of the individual filmmaker. The emphasis of the course is on exploring the history, conventions and modes that surround the experimental and animation film forms and using this knowledge in creating work that challenges conventions of mainstream media. The course involves viewing works of classic and contemporary alternative media, discussing its contribution or value in communications, and using these examples as models for exploration. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions, as well as on providing the support, guidance, and critique necessary for a successful production. There will be an emphasis on the thorough execution and evaluation of the steps taken toward completion of their project. This course assumes a working knowledge of intermediate film and video production and post-production techniques. Additional production and post-production techniques may be introduced based on the students' interest.

Enforced Prerequisite at Enrollment: COMM 339 and COMM 340 and COMM 342

COMM 440: Advanced Cinematography and Lighting Techniques

3 Credits

Advanced exploration in camera, lighting, audio, and color-grading techniques, emphasizing technical skills as well as aesthetics. COMM 440 Advanced Cinematography and Lighting Techniques (3) This course is a comprehensive approach to techniques, equipment and procedures of film and video production with an emphasis on both practical skills and aesthetics. The course is divided into four sections that will employ a combination of lectures and workshops in camera, lighting, audio and color grading. The course will focus on understanding the theory and procedures underlying dynamic composition, visual and psychological perspective, practical and emotive lighting and sound, color, and the conveyance of meaning through color and continuity. In addition, students will learn accepted procedures in care and use of film and video cameras, sound recording equipment, lighting and grip gear, as well as proper organization, media storage and maintenance techniques specific to post-production. Students will work individually and collaboratively to produce projects for critique and evaluation. The emphasis of the course is on the artistic and technical aspects that allow an idea to be cinematically realized on celluloid and/or a suitable digital format. The course involves viewing the work of outstanding, established cinematographers and videographers in great detail, and assessing their contributions to film aesthetics and history through the detailed, direct analysis of film excerpts and sequences from landmark films and video work, and the discussion of assigned reading materials on both film and video technique. Students then work in specific film and video production positions to reproduce precisely scenes from the films analyzed. By doing so, students will develop an understanding of the technology and artistic vision used in film and video production so that they may be better prepared to successfully create challenging and thought-provoking projects. In addition, this course also allows for an exploration...
and comparison of the ever-changing technology used in film and video production. Through this direct use of multiple visual and audio formats, students will discover the creative advantages and disadvantages of various media used to fulfill their artistic vision. COMM 440 is a support course for the senior level production courses. Student cinematographers in COMM 448 (Adv. Production for Groups) are strongly encouraged to take this course concurrently. It can also be taken as an elective technique course in conjunction with any of the one-semester mode specific advanced production courses (COMM 437, COMM 438, or COMM 439).

**Enforced Prerequisite at Enrollment:** COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

COMM 441: Advanced Graphic Design for Communications

3 Credits

Theory and practice designing graphic visual communication in commercial, non-commercial, and fine art formats for print and online media. COMM 441 Advanced Graphic Design (3) An advanced examination of graphic design. Students develop proficiencies in the art, craft, formats, and vocabulary of commercial graphic design by creating original work in a series of hands-on projects. During the semester, students learn to research, organize, and interpret verbal and visual information and to solve increasingly complex communication problems. They will further refine their creative problem solving and collaborative production skills. By semester end, students will have begun to develop their own styles and are able to verbally articulate it to others. Assignments generally include topics such as interactive media design, animation, advertising design, and infographic design.

**Prerequisite:** COMM 241 or COMM 371

COMM 443: Producing Workshop

3 Credits

This course will immerse students in the language and practice of producing film and video projects. COMM 443 Producing Workshop (3) Through a combination of lecture, readings, screenings, and practical exercises, students will learn the fundamental producing skills needed to begin to understand creative producing in an increasingly complex global marketplace. Producing students will learn how to bring stories all the way from development through post-production and beyond. Students will be afforded an opportunity to develop their creative voices, all the while developing their communication and problem-solving skills. The course will follow a standard production timeline starting with pre-production topics such as the basics of pitching, script development, and financing. The second portion of the class will focus on production issues particularly as they apply to independent film production. This will include line producing and production management, including scheduling/budgeting, script breakdowns, assembling talent and crew, location scouting, and running a set. Finally post-production and distribution topics will be addressed including discussions of trends from major trade publications that impact the industry. Throughout the semester students will complete practical exercises that will help build their skills at translating a script into a realized project with a minimum budget and maximum production value. COMM 443 is a support course for the senior level capstone production courses. Student producers in COMM 448 (Adv. Production for Groups) are strongly encouraged to take this course concurrently. It can also be taken as an elective technique course in conjunction with any of the one-semester mode specific advanced production courses (COMM 437, COMM 438, or COMM 439).

The prerequisites are in place to ensure students have the necessary production background taught in the intermediate-level courses.

**Enforced Prerequisite at Enrollment:** COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

COMM 444: Advanced Post-Production Techniques

3 Credits

This course offers intensive practical experience in editing, motion graphics and sound mixing techniques, emphasizing both technical skills and aesthetics. COMM 444 Advanced Post-Production Techniques (3) Through a combination of lectures, readings, screenings, and practical exercises, students will learn advanced post-production techniques needed to produce high quality finished film and video pieces. The course includes modules on the theory and aesthetics of editing, motion graphics, visual effects, 2D animation, audio signal processing and audio mixing. The course will enable students to develop creative skills for translating ideas into short films and to serve as post-production support for senior level productions. Specific design strategies and approaches will be discussed. Students will also be required to demonstrate competence in a variety of digital graphics programs. Throughout the semester students will work individually and collaboratively on practical exercises for critique and evaluation, developing technical, analytical and critical skills. The course is divided into three sections. In the first section students will focus on the procedures for successful post-production supervision and workflow management, including an exploration of accepted professional practices of editing departments. Students will explore advanced methods of picture editing in all modes and will edit and critique a professionally produced scene. In the second section of the course, students will work on graphics, animation and special effects procedures generally accepted as part of film-video post-production processes. The focus will be on techniques that translate to a variety of software and work environments; including manipulation of picture and text, light and color effects, compositing of multiple images and manipulation thereof. The third section of the course will focus on the practice of preparing elements for a professional audio mix and use of advanced digital audio workstations. This section will feature a discussion of the theory and practice of how tracks are organized, advanced psychoacoustics and signal processing, preparing a multi-track project for mix, and completion of a mixed sound design project.

**Enforced Prerequisite at Enrollment:** COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

COMM 445: Directing Workshop

3 Credits

An advanced aesthetic and skill production course in directing for the screen. COMM 445 Directing Workshop (3) This course is an advanced aesthetic and skill production course in directing for the screen. The class is designed to introduce more advanced directing concepts and techniques as well as to more deeply explore the collaborative processes of working with a creative team on effectively integrating the aesthetics of cinematography, production design and acting performance in film narrative. The first section of the course will focus on understanding the actor’s preparation and process with the goal of developing the appropriate and effective communications skills to coach performance. Students will thoroughly explore scenes for interpretation of subtext and motive, and will learn accepted practices of script preparation. Casting and audition styles will be investigated and demonstrated, as will various types of rehearsal techniques. At the end of this section students
will workshop a scene in a small group, blocking it and executing it to illustrate concepts of character relationships, stage and camera craft to produce a short scene for discussion and critique. The second section of the course will be an advanced aesthetic exploration of the visual vocabulary, including cinematic, psychological and fine art concepts that contribute to the planning and design of screen direction. Students will then analyze the technical means to execute this aesthetic vision through production design, lighting and composition. In practice the students will then translate this analysis into a working scene plan and will produce a short scene for discussion and critique. Students will also be introduced to professional practices such as location and studio set protocols and on-set safety procedures. The third section of the course will explore narrative conventions and their relationship to screen genres in the interest of understanding the film language shared between filmmaker and audience. At the end of the section students will produce a short classic scene with an alternative interpretation for discussion and critique.

**Enforced Prerequisite at Enrollment:** COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

**COMM 446: Writing for the Screen II**

3 Credits

An advanced course in screenwriting that further develops elements of storytelling technique.

**Enforced Prerequisite at Enrollment:** COMM 346

**COMM 448: Advanced Group Production I**

3 Credits

**COMM 448 Advanced Group Production I (3)** is designed to enable students to produce portfolio-quality work in any production mode (alternative, documentary, narrative) and to bring together ideas, processes, practices, and theories in the service of this production. Over the course of the semester, students will engage in intensive pre-production and production of an approved film or video project. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by collaborative productions as well as providing the support, guidance, and critique necessary for a successful production. There will be an emphasis on the thorough execution of every step of pre-production, principal photography, and preparation for post-production in spring semester. Students will fill a single production role (such as producer, director, cinematographer, sound designer, editor) throughout the two semesters and are strongly encouraged to take concurrently the supporting technique course for that production role. Students will be assigned individual exercises specific to their production role in addition to the collaborative work of the project's production. Production groups will be formed the first week of class. The first part of the semester is devoted to the development of the projects and pre-production. Roughly half way through the semester, the projects will begin production, with shooting and editing to be completed the following semester.

**Enforced Prerequisite at Enrollment:** COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

**COMM 449: Advanced Group Production II**

3 Credits

Continuation of advanced production course emphasizing intensive collaborative film-video production from script through post-production. **COMM 449 Advanced Film and Video Projects (3)** This course is the second half of a two-semester production course designed to enable students to produce portfolio-quality work in any production mode and to bring together ideas, processes, practices, and theories in the service of this production. Students from the fall semester will complete production and engage in intensive post-production in order to have a high-quality finished project to submit to film festivals by the end of the semester. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as providing the support, guidance, and critique necessary for a successfully completed project. Students will continue in the same production role (producer, director, cinematographer, sound designer, editor) from the fall semester, learning new skills for their role in the post-production phase. Students will be assigned individual exercises specific to their production role in addition to the collaborative work of the project's production. It is expected that all production group members will continue into the spring as well.

**Enforced Prerequisite at Enrollment:** COMM 448

**COMM 450A: Search Engine Marketing**

3 Credits/Maximum of 3

This project-oriented course provides students with the knowledge and skills necessary to conduct a sponsored research and keyword advertising-based marketing campaign. This course offers the students an opportunity to gain knowledge and hands-on experience on sponsored search and keyword advertising. In this course, students will gain knowledge and skills to advertise products and services using keyword advertising. Strategies for developing successful advertising campaigns will be discussed, including targeting potential customers based on the geo-location, applying A/B testing to identify the feasible advertising set-up, and organizing keywords with various products and services for effective management. In addition, various tools will be introduced to students for facilitating efficient and effective performance. By participating in a firm-based project, the students will acquire the experience of business consulting for advertising using current web-based techniques.

**Enforced Prerequisite at Enrollment:** COMM 310 or IST 310

**Cross-listed with:** IST 450A

**COMM 450B: Digital Advertising**

3 Credits

This course will explore the digital advertising "ecosystem," identify key players and trends, and review programmatic media buying. **COMM (IST) 450B Digital Advertising (3)** Beyond keyword advertising, digital has transformed many industry activities related to buying and delivering advertising. Information technology and big data have revolutionized the way media and content providers interact and negotiate with advertisers, agencies and third parties. This course will explore the digital advertising and media "ecosystem," identify key players and trends, lay out the basics of digital advertising campaign management, and review performance analysis and evaluation. Students passing this class will be able to take the Interactive Advertising Bureau Digital Media Sales certification
As advanced scholars in the disciplines, projects may include creative work, and multimedia texts which enact particular instances of adaptation and influence between media. These individual conclusions in summary projects which apply theory to translation, dramaturgy, and genre scholarship. Students express their course, students will meet ancillary concerns in adaptation, such as explored. Students will experience classical and non-classical forms conditioned these intermediations. The economics of literary and media students may encounter in addition to literary fiction and the media students may encounter in addition to literary fiction and the media students may encounter in addition to literary fiction and the media may include creative work, and multimedia texts which enact as well as analyze adaptation. As advanced scholars in the disciplines of literary and cinematic studies, students are expected to synthesize previous learning in these fields in their summary projects.

**Enforced Prerequisite at Enrollment:** COMM 310 or IST 310

Cross-listed with: IST 450B

**COMM 451: Topics in American Film**

3 Credits/Maximum of 6

Critical and historical studies of American films. Analysis of directing, cinematography, editing, screenwriting, and acting.

**Enforced Prerequisite at Enrollment:** COMM 250

Cross-listed with: AMST 451

**COMM 452: Topics in International Cinema**

3 Credits/Maximum of 6

Critical and historical studies of topics in non-American film. Analysis of theory, direction, cinematography, editing, and screenwriting.

**Enforced Prerequisite at Enrollment:** COMM 250

**COMM 453: Narrative Theory: Film and Literature**

3 Credits

This course explores the relationships between language and the medium of film through analysis of adaptations between other mediums and the cinema, and by analysis of the influences between the discourses of literature(s) and the cinema. The course has broad applicability not only to students of literature and students of the cinema, but to all students who need to understand ways to compare relationships between disparate communications and artistic media. Students begin by understanding techniques and theories of both cinematic and literary analysis. Then, they explore theories of adaptation between media, including general theories of artistic and cultural influence. Among the media students may encounter in addition to literary fiction and narrative cinema are the graphic novel, creative nonfiction, drama, poetry, journalism, video games, the documentary cinema, and the experimental cinema. Students work through case studies of adaptation in literal terms, such as the transformation of graphic novels into narrative cinema. Students also work through case studies in influence, in which distinct art and media discourses affect one another, as in the relationship between videogames and the cinema. Students study transmedia storytelling, in which core narratives are expressed in different media. Students also study transcultural and transnational storytelling, in which adaptation and influence are conducted across borders. Students study questions of representation, particularly of difference (race, class, sexuality/gender) and cultural specificity. Students learn the historical and institutional settings which have conditioned these intermediations. The economics of literary and media production and the circumstances of reception of distinct media are explored. Students will experience classical and non-classical forms of storytelling, as well as fictional and non-fictional discourses. In this course, students will meet ancillary concerns in adaptation, such as translation, dramaturgy, and genre scholarship. Students express their individual conclusions in summary projects which apply theory to particular instances of adaptation and influence between media. These projects may include creative work, and multimedia texts which enact as well as analyze adaptation. As advanced scholars in the disciplines

**Enforced Prerequisite at Enrollment:** COMM 250 or COMM 333
COMM 456: Media Criticism and Theory

3 Credits

Critical and theoretical approaches to the analysis of media and communication. COMM 456 Media Criticism and Theory (3) To what extent does media (television, movies, print, radio, Internet, etc.) shape our awareness of not only the world around us but also ourselves as thinking human beings? Is it all a matter of perception and relative exposure to these media? How do we approach everyday interfaces with the immense number of media messages in both public and private spaces? Where do our opinions of the validity of both the informational and the aesthetic standards of media messages come from? In this class we attempt to come to terms with the rise and apparent predominance of media as a dominant cultural institution.

Prerequisite: COMM 371

COMM 457: Media Audiences and Contexts

3 Credits

Survey of the ways media attempt to influence audience reception and how audiences hold sway over media content. COMM 457 Media Audiences and Contexts (3) The course begins with an examination of how the mass audience is conceived as a statistical entity by analyzing quantitative methods such as the Nielsen ratings. Much of the course is then spent interrogating how this statistical information is used and by whom. If the audience is created as a commodity and is sold to advertisers, what ethical guidelines are in place? How do audience profiles influence the programs we see and consume? As media become more and more fragmented, how does the problem of audience as a commodity get resolved? Students utilize a case-study approach to explore a variety of audience problems and present their findings in papers, demonstrations, and exhibitions.

Enforced Prerequisite at Enrollment: COMM 100 or COMM 251.

COMM 458: Media Law and Ethics

3 Credits

The study and practice of key issues in media law and ethics, including libel law, conflict of interest, truth in advertising. COMM 458 Media Law and Ethics (3) An examination of the role of the mass media in American society in regard to the rights, responsibilities, and duties of practicing media professionals. The semester is almost evenly divided between law and ethics topics. Students examine current laws in mass media with the goal of preparing them to be lawful and responsible members of the profession. Law topics include defamation, privacy, intellectual property and protection of anonymous sources. Students also get an introduction to ethical theories and their practical applications in media industries. Topics include journalistic responsibilities, objectivity, conflicts of interest, invasion of privacy, and the ethics of persuasion and entertainment.

Enforced Prerequisite at Enrollment: COMM 100 or COMM 251.

COMM 459: Cultural Effects of Interactive and Online Media

3 Credits

Study of the global social impact and rhetorical limitations of converging media, emphasizing cross-cultural media influences. COMM 459 Cultural Effects of Interactive and Online Media (3) An examination of the various effects of digital media on society and culture. The nature of digital media affects content and production, the way people use media, and social interaction. Topics include convergence, the information society, the global village, and the various changes in the ways media producers do their work. Various aspects of changes including philosophical, economical, and political are examined with the goal of helping students understand how to prepare for future changes in media industries.

Enforced Prerequisite at Enrollment: COMM 251

COMM 460: Reporting Methods

3 Credits

Techniques in reporting news and trends at the local, regional, and county levels. Emphasis on both deadline and interpretive reporting.

Enforced prerequisite at enrollment: COMM 260W.

Writing Across the Curriculum

COMM 461: Magazine Writing

3 Credits/Maximum of 6

Students will learn about idea conception, writing, and editing of magazine stories. COMM 461 Magazine Writing (3 per semester/maximum of 6) Students will learn about idea conception, writing, and editing of magazine stories. They will walk through the idea process, including how to pitch their ideas to editors. They will learn about research and reporting for stories, and then begin the process of organizing and writing their material. They will write stories and then work with editors to rewrite and improve the story for publication.

Enforced prerequisite at enrollment: COMM 260W.

COMM 461A: Digital Magazine Production

3 Credits/Maximum of 6

Students will be expected to develop a coherent editorial voice that will engage and educate their identified target audience. This voice will be embodied in a regularly updated web site which will be monitored and improved by a student team. Students will also be expected to manage a coordinated professional social media campaign to expand the reach of the publication well beyond the classroom. The structures in place can easily accommodate students from various campuses. This will allow for a diversity of content within a common enterprise.

Prerequisites: COMM 100; COMM 271; LA 101

COMM 462: Feature Writing

3 Credits

Reporting and writing the human interest article for newspapers and magazines. COMM 462 Feature Writing (3) COMM 462 teaches the fundamentals of reporting and writing feature stories for newspapers and magazines. Students learn reporting and writing techniques for various types of feature stories. The course emphasizes the development of sound journalistic judgment and proper ethical standards. Students write various types of features stories.

Enforced prerequisite at enrollment: COMM 260W.
**COMM 463: Newspaper Design**

3 Credits

This course will cover newspaper design. Students will learn to solve design problems, edit photos, and work with industry software. COMM 463 Newspaper Design (3) This upper-division course will cover contemporary design theory, grid systems, typography, color and photography as they pertain to newspapers. Students will develop skills necessary to solve design problems associated with the editing process. Students will also learn to use photo editing and page layout software.

**Enforced prerequisite at enrollment:** COMM 260W.

**COMM 464W: Editorial, Opinion and Commentary Writing**

3 Credits

Introduces techniques of editorial, opinion and commentary writing. COMM 464W Editorial, Opinion and Commentary Writing teaches the fundamentals of writing editorial, opinion and commentary articles. Students learn the techniques of gathering information and writing various types of opinion articles. The course emphasizes the development of sound journalistic judgment and proper ethical standards. Students write various types of opinion articles.

**Enforced prerequisite at enrollment:** COMM 260W.

**Writing Across the Curriculum**

**COMM 465: Television Reporting**

3 Credits

Television news reporting and production. COMM 465 Television Reporting (3) COMM 465 provides an introduction to television news reporting and production. Students learn the techniques of reporting and writing news for television. They also learn the audio and video techniques required to produce television news stories. The course emphasizes the development of sound news judgment and proper ethical standards. Students complete actual news assignments.

**Enforced Prerequisite at Enrollment:** COMM 360

**COMM 466: Public Affairs Broadcasting**

3 Credits

Students research, write, produce and direct public affairs shows and in-depth reports. COMM 466 Public Affairs Broadcasting (3) This is an advanced field production and reporting course focusing on the exploration of timely public affairs issues on the local, state and national level. Students learn to research a topic, conduct effective television interviews in the field, and produce in-depth reports with emphasis on solid broadcast writing, visual storytelling, editing, fairness, balance and accuracy.

**Enforced Prerequisite at Enrollment:** COMM 465

**COMM 467: News Editing and Evaluation**

3 Credits

Concepts and procedures involved in processing news for various news media, but with emphasis on print media editing. COMM 467 News Editing and Evaluation (3) The goal of the course is to qualify the student to be a proficient newspaper copy editor. These skills can be easily transferred to editing assignments on a Web site, in magazines and other publications, in broadcasting, and in public relations. Even if the student does not intend to become a copy editor, the course should help him or her do a better job of writing. The course emphasizes editing for accuracy, clarity, precision in language, and fairness of content. Students will learn about evaluating the relative importance of news and writing headlines, captions and other display elements. The course familiarizes the student with editing photographs and graphics and designing a newspaper page. Skill in editing is particularly important to the student majoring in print journalism. It is useful to anyone who regularly works with words. The student is evaluated through written work (editing copy, writing headlines and captions) and through quizzes, examinations, or other methods the instructor chooses to assess a familiarity with the theory and principles of the course. Because students need an opportunity to practice their skills under supervision, the course must be taught in a laboratory setting in which each student has access to a computer connected to the Internet. COMM 260 is a prerequisite. COMM 467 builds on the student’s understanding of reporting and news writing techniques by teaching rigor in the use of language.

**Enforced prerequisite at enrollment:** COMM 260W.

**COMM 468: Graphic Applications in Print Communications**

3 Credits

Issues, concepts, and practice identified with contemporary design strategies for print journalism, advertising, and public relations.

**Enforced Prerequisite at Enrollment:** COMM 260W or COMM 320

**COMM 469: Photography for the Mass Media**

3 Credits

Development of an informed and critical approach to photocommunication; individual and team projects, seminars, and critiques.

**Enforced Prerequisite at Enrollment:** COMM 269

**COMM 470A: Convergent Media News Service: Newspaper Production**

3 Credits

Practicum emphasizing newsgathering and reporting for newspaper and for additional media formats.

**Enforced prerequisite at enrollment:** COMM 260W.

**COMM 470B: Convergent Media News Service: TV**

3 Credits

Practicum emphasizing television news package production for periodic campus news program and for additional media formats. The digital revolution and cross media ownership has challenged all areas of communications, especially the electronic and print news media. Post media outlets now have an online presence along with their traditional operations. Increasingly news outlets are producing news packages for more than one media outlet, which can include online production of breaking news reports presented with text, images, movies and/or sound bites. Currently students preparing for news careers must have traditional news skills across media along with multimedia computer-based skills to develop versatility in reporting and production. This practicum in streaming radio and online news provides opportunities to produce pieces for streaming radio and online publications and also to reformat
these pieces for other media outlets such as the newspaper or television. It will also give students the opportunity to produce news pieces suitable for a crossmedia portfolio.

**Enforced Prerequisite at Enrollment:** (COMM 260W and COMM 242) or COMM 282 or permission of the program.

**COMM 470C: Convergent Media News Service: Radio and Online Publications**

3 Credits

Practicum emphasizing streaming radio news package production or production of news pieces for online publications and for additional media formats. The digital revolution and cross media ownership has challenged all areas of communications, especially the electronic and print news media. Most media outlets now have an online presence along with their traditional operations. Increasingly news outlets are producing news packages for more than one media outlet, which can include online production of breaking news reports presented with text, images, movies and/or sound bites. Currently students preparing for news careers must have traditional news skills across media along with multimedia computerbased skills to develop versatility in reporting and production. This practicum in streaming radio and online news provides opportunities to produce pieces for streaming radio and online publications and also to reformat these pieces for other media outlets such as the newspaper or television. It will also give students the opportunity to produce news pieces suitable for a crossmedia portfolio.

**Enforced Prerequisite at Enrollment:** (COMM 260W and COMM 270) or COMM 374 or permission of program.

**COMM 471: Public Relations Media and Methods**

3 Credits

Analyzing media and audiences for public relations purposes; planning, designing, and writing public relations communications; press relations and publicity methods. COMM 471 Public Relations Media and Methods (3) COMM 471 introduces students to the methods used in public relations to generate news media coverage for organizations and individuals. The public relations practitioner must understand the goals of the client organization and its publics to establish effective and ethical communication between them. This course focuses on writing and is designed to assist students in developing and improving professional writing skills for public relations practice, in many forms and for a wide variety of media. Students will learn the importance of different writing approaches required for specific publics and news media organizations. In this course students learn to: (1) locate, read, and evaluate research materials; (2) develop clear, concise program objectives based on the organizations’ or clients’ goals and the results of their research; (3) determine materials that need to be developed and written to achieve the program objectives; (4) develop newsworthy story ideas; (5) write clear, concise copy that is accurate and logically organized; (6) write in a variety of formats commonly used in public relations practice, including: pitch letters, news releases, position papers, backgronders, public service announcements; and (7) design media kits.

**Enforced Prerequisite at Enrollment:** COMM 260W and COMM 370

**COMM 472: Public Relations Event Planning**

3 Credits

Effective planning, organization, implementation and evaluation of events planning. COMM 472 Public Relations Events Planning (3) This course links the public relations theories and practices with skills and techniques required for effective events planning. Students will build on their understanding of public relations introduced in COMM 370 by working on projects that are designed to help them to develop skills in conceptualizing public relations events, designing events, selecting audiences, analyzing audiences, budgeting, and promoting/marketing. Students will gain experience in event conceptualization and implementation through in-class exercises and discussions, and public events projects. These assignments will provide students the opportunity to develop portfolio materials.

**Enforced Prerequisite at Enrollment:** COMM 370

**COMM 473: Public Relations Campaigns**

3 Credits

Case studies and problems in publicity and public relations in industry, government, and institutions. COMM 473 Public Relations Problems (3) This capstone course in the public relations major is designed to provide the student with the opportunity to develop a comprehensive public relations/marketing communications campaign plan based on the four-step process of public relations programming. Those steps include formative research, objectives, programming, and evaluative research. Initially, students will critically analyze award-winning public relations problems, cases, and programs that will provide a foundation for understanding the public relations planning process. Students will be introduced to public relations and communications theories that provide the foundation for excellence in program development. The public relations campaign plan will be developed from the analysis of primary and secondary research sources. The campaign plan will begin with a situation analysis that includes the client’s historical, financial, and competitive position in the marketplace. Previous public relations, advertising, and marketing communications programs will be reviewed and evaluated. Additional secondary research will include a content analysis of the client’s news media coverage as well as an analysis of the psychographic and demographic profiles of previously targeted publics. Account teams will design and conduct surveys and focus groups as part of the formative research required in setting the program objectives, strategies, and tactics. The public relations plan will require the development of a media plan, media objectives, production timetable, and budget for implementing the program objectives, strategies, and tactics. Students will apply their critical thinking skills and creative abilities to design and produce communication executions that will communicate the program message to the targeted publics. Those creative abilities include a working knowledge of writing, desktop publishing, photography, and graphic communication. The final phase of the public relations/marketing communications plan will include the design of evaluative research to measure the effectiveness of the program objectives. Those research methods will include content analysis, survey research, and focus groups. Students will work in account teams where each team will be responsible for developing a public relations counseling firm, where team members will produce a firm manual outlining the firm’s mission statement, organizational policies, organizational chart, records of all meetings with clients, records of all firm meetings, time sheets for each firm member, a weekly summary of firm activities, project budget reports, bi-weekly evaluations of firm members, and a client presentation plan.
The final public relations plan will be presented to the client for evaluation and critique. The final goal of the course is to provide students with the technical and managerial knowledge and experience required for effective public relations program design and implementation.

Enforced Prerequisite at Enrollment: COMM 370 and COMM 420 and COMM 471

COMM 474: Depth Reporting
3 Credits

Exploration of strategies for developing in-depth newspaper or magazine articles, with an emphasis on gathering information and long-form writing. COMM 474 Depth Reporting (3) is an upper-level undergraduate course designed to prepare students for writing in-depth newspaper or magazine articles, which extends beyond the basics of writing and reporting techniques emphasized in courses such as News Writing and Reporting, Reporting Methods, and the Feature Article. Depth stories are comprehensive accounts that go well beyond a basic news story or feature. An emphasis on longer, more comprehensive stories that require extensive research and interviews gives students an opportunity to be more than technicians following a rigid set of journalistic guidelines or principles. Depth stories require journalists to spend days, weeks or months exploring and investigating a topic and writing a lengthy story that must be cemented with effective transitions.

Enforced prerequisite at enrollment: COMM 260W.

COMM 475: Issues for Newsroom Managers
3 Credits

Newspaper and television management, the state of the industry and topics that prospective employees should know about. COMM 475 Issues for Newsroom Managers (3) is an upper level course for students with an interest in newspaper or/and television management. Issues that managers deal with and management approaches will be covered, emphasizing practical experiences. The basic text may be a packet based on professional experiences of instructor. There will be two papers of roughly 1,500 words. There will be one oral presentation, accompanied by a short summary outlining the main points. The class will consider major issues affecting the industry - the economy, the effort to attract younger audiences and how the look of a product forms the basis of what the audience thinks about the brand and whether it appeals to them. The class will consider how the Internet can be an asset to TV stations and newspapers, if used effectively. Students will evaluate some TV and newspaper Internet sites. The role of advertising and community relations for newspapers and television stations will be discussed. Newspaper opinion pages and public (or interactive journalism) will be covered. The importance of a good local report, and evaluating how effective local coverage is, will focus on state newspapers and television stations. The role of The Associated Press and other news agencies and their approach to coverage and how they relate to local media will be covered. Leadership, management and decision-making will be part of the course. The traits of effective leaders and managers will be discussed. There will be some in-class exercises on managing and ethics. Strategy focusing on the start-up of USA TODAY will illustrate how local newspaper can make strategic gains by following the same checklist. There will be occasional video on the topics covered.

Enforced prerequisite at enrollment: COMM 260W.

COMM 476: Sports Writing
3 Credits

Techniques in sports reporting and writing for media. COMM 476 Sports Writing (3) is an upper-level course designed to prepare students to write sports stories for news outlets. These specialized stories - including contest coverage, analysis, columns, enterprisers, profiles, and sidebars - require skills that go beyond those taught in classes such as News Writing. As the popularity of high-school, college, and professional sports grows, the sports section has become one of the most widely read sections of newspapers. Many magazines as well cover a variety of sports. Modern sports writing requires sportswriters to not only attend games and interview coaches, but also to use statistics, profile sports figures, and explore trends in sports industry. Through a variety of story assignments, the course provides students with the skills that will prepare them for the demands of being modern sportswriters. The course grounds them in the ethical principles that all journalists must follow.

Enforced prerequisite at enrollment: COMM 260W.

COMM 477: Sports Broadcasting
3 Credits

Techniques of sports broadcasting for radio and television. COMM 477 Sports Broadcasting (3) is an upper-level course designed to prepare students to broadcast sports events and news. These specialized broadcasts - including play-by-play, studio sportscasts, field reporting, and features - require myriad skills that go beyond those taught in classes such as Broadcast Journalism I (Radio News Reporting) and Broadcast Journalism II (Television News Reporting). As the popularity of high-school, college, and professional sports has exploded, sports shows have become some of the most popular on radio and television. Myriad networks and shows are devoted to sports coverage exclusively. But increasingly knowledgeable sports viewers demand more from sports broadcasters then game coverage and opinion pieces. Modern sports broadcasting requires journalists to not only attend games and interview coaches, but also to use statistics, profile sports figures, and explore trends in sports. Through a variety of story assignments, the course will give students the experience that will prepare them for the demands of being modern sports broadcasters. And it will ground them in the ethical principles that all journalists must follow.

Enforced Prerequisite at Enrollment: COMM 260W and COMM 360

COMM 478: Sports Information
3 Credits

Techniques of effective media relations used in a sports information office. COMM 478 Sports Information (3) is an upper-level course designed to prepare students for a specialized form of modern media relations, sports information. Sports information professionals combine skills of both journalists and public relations specialists, so the advanced techniques go beyond those taught in introductory classes such as News Writing and Public Relations Methods. As the popularity of high-school, college, and professionals sports has exploded, sports information professionals have increasing demands put on them. More and more journalists, working for a variety of publications and broadcasts, cover sports today. Moreover, the growing complexities of modern sports - from the impact of drugs to the enormous salaries of many athletes - means that sports information professionals have to provide more than simple information on athletes, coaches and sporting contest. Through a variety
of assignments, the course will provide students with the experience that will prepare them for the demands of being sports information professionals. And it will ground them in the ethical principles that all media relations specialists must follow.

**Enforced prerequisite at enrollment:** COMM 260W.

**COMM 479: Telecommunication Economics**

3 Credits

Economic, regulatory/business issues in the design/operation of large-scale telecommunication networks such as telephone, cable, wireless, and computer networks. COMM 479 Telecommunications Economics (3)

The objective of the course is to help students understand the economic, regulatory, and business aspects of the physical infrastructures underlying modern telecommunications. We will discuss the large-scale technological systems such as telephone, cable, wireless and computer networks over which media and telecommunications services are delivered today. We will not be discussing the content offered over telecommunications networks as much as the infrastructures themselves: the conduits over which information is delivered to the home and the workplace. With technological convergence and regulatory changes, telephone, cable and wireless networks have acquired the capability to provide services earlier reserved exclusively for one or the other network. For example, we can now access telephone services over wireless networks or over the Internet. Similarly, Web content is available with the traditional telephone modem, as well as over cable, wireless, and even satellite networks. In the not too distant future, it may become more meaningful to talk in terms of consumer network to a broadband conduit for all types of content, rather than to particular services such as cable television or long-distance telephony.

It thus becomes necessary for those who wish to participate in the telecommunications industry of the future to have a clear understanding of the way large-scale telecommunications infrastructures are put together and operated. Existing courses in the telecommunications curriculum provide instruction in the technology and content aspects of the media and telecommunications industries. The proposed course will complement these existing courses by focusing on the economic, regulatory and business aspects of large-scale networks, in a historical and policy context. What are the mechanisms by which large-scale telecommunications systems such as telephone, cable, wireless and computer networks are deployed over time? What are the costs involved in the initial deployment and expansion, and how do they influence policy? How do planners evaluate and choose between alternative technologies of delivering services? What are the economic justifications for and against government regulation of networked technologies? How do companies charge for services provided over networked systems? What problems do we face as more and more services—such as real-time gaming and interactive television—are added to telecommunications networks, and what are some of the current proposals to solve these problems? These are some of the questions that will be discussed in class.

**Enforced Prerequisite at Enrollment:** COMM 180 and COMM 380 or permission of the program.

**COMM 480: Television News**

6 Credits

Produce a weekly television newscast. COMM 480 Television News (6)

COMM 480 - Television News will help prepare students for a career in television newscast content, presentation and production with a strong multimedia component. Students will gain experience in all aspects of producing a newscast. The class will meet Mondays and Fridays, but they will be expected to produce content on a daily basis, whenever and wherever stories in Centre County happen. After a few weeks of training, we will produce the Centre County Report each week with elements BOTH ONAIR and ONLINE. This is NOT a newscast focusing only on Penn State activities. Students must be prepared to produce a newscast that informs the larger audience of Central Pennsylvania. COMM 480 needs the best students to produce the Centre County Report. Students will primarily serve as the news-editorial side of the newscast (anchors, reporters, sports, producers and some in-field photojournalists and studio camera operation) or as the technical team (director, technical director, audio, graphics, studio camera operator AND field production/photojournalists).

By the end of this course, students will have the skill set to: 1. Pursue a career in television news. 2. Write solid television news scripts. 3. Enhance your storytelling ability. 4. Enhance your ability to produce and technically support a newscast. 5. Understand the importance of multimedia. 6. Produce an effective resume tape.

**Enforced Prerequisite at Enrollment:** COMM 465

**COMM 481: Advanced Multimedia Production**

3 Credits

Advanced work in multimedia production using web authoring, video editing, audio editing, image editing and animation software. COMM 481 Advanced Multimedia Production (3)

This course builds on the foundations of multimedia production developed in COMM 270 giving students the opportunities to create multimedia website projects. Students will apply advanced multimedia concepts and techniques to website production and demonstrate versatility in multimedia software. Working individually and in teams, students will develop projects for clients using multimedia software, including web authoring, video editing, audio editing, image editing and animation software. These projects will be uploaded to the World Wide Web, and will serve as portfolio materials for the students. This course emphasizes skills development in multimedia and visual media in support of program objective to help students develop cross-media skills and versatility in media.

**Enforced Prerequisite at Enrollment:** COMM 465 or COMM 269

**COMM 483: Wireless Communications Industry**

3 Credits

A broad examination of the wireless phone industry including its development, current structure and future. COMM 483 Wireless Communications Industry (3)

Since the 1990s, the wireless industry has transformed “how” people communicate. The ability to offer mobile communication services to customers allowed the telecommunications industry to rapidly expand and create new products and services. Throughout this period of rapid growth, new players emerged from relative obscurity while incumbent telecommunication providers weighed the benefits & drawbacks of deploying this new technology. Although wireless devices have become pervasive throughout the United States, few people appreciate the technology and partnerships that are required to offer wireless services for millions of customers. This course will address a variety of wireless topics to allow students to develop a greater understanding and appreciation of the wireless industry. In terms of course design, there are three distinct elements: (1) The early days of the wireless and the key figures and events that shaped an industry, (2) A current state view of the tier 1 carriers, device manufacturers and product offerings, (3) The emerging trends in the wireless industry and the potential impact on consumer products and services. By the end of this
course, the objective is for students to view the wireless industry quite differently. Students will understand the relationship between wireless spectrum, carrier, device manufacturer and products. The industry landscape will be clearer to students and they will be well positioned to pursue a career in wireless.

**Enforced Prerequisite at Enrollment:** COMM 180 and COMM 380 or permission of the program.

**COMM 484: Emerging Telecommunications Technologies**

3 Credits

Overview of technology of electronic media and related societal issues. COMM 484 Emerging Telecommunications Technologies (3) COMM 484 introduces advanced topics related to the technologies in telecommunications and information processing. The course investigates old, new and prospective technologies primarily through analysis of incumbent or emerging companies bringing products and services to market. Students will examine materials not customarily used by undergraduates including stock prospectuses, company annual reports, and Internet searches. The class will consider recent strategic alliances, mergers and acquisitions (whether consummated or not) in the context of whether and how technologies drove the deal.

**Enforced Prerequisite at Enrollment:** COMM 180 and COMM 280 or permission of the program.

**COMM 484A: Wireless Devices and Global Markets**

3 Credits

Examination of the global market for smartphones, tablets, and other wireless devices. COMM 484A Wireless Devices and Global Markets (3) Wireless devices and applications have become pervasive throughout the world. Global wireless carriers continue to evolve their networks to provide increased access and data speeds for their subscribers. To leverage the increased network capabilities, device manufacturers have responded by introducing smartphone wireless devices that are feature-rich, complex and dramatically influence the way in which subscribers access and download wireless applications. This course will specifically focus on the major wireless device manufacturers in the world. In addition, students will understand the competitive wireless landscape along with the challenges of sustaining long-term success in the global marketplace. Students will also develop an appreciation for the intense competition that exists in the wireless device market as well as how swiftly market conditions can impact the long-term viability of a device manufacturer. By the end of this course, the objective is for students to appreciate the complexity of the global wireless device industry. Students will understand the importance of device operating systems, carrier relationships and global markets. The wireless device industry will be clearer to students and they will be well positioned to pursue a career in wireless.

**Enforced Prerequisite at Enrollment:** COMM 180 and COMM 280

**COMM 484H: Emerging Telecommunications Technologies**

3 Credits

Overview of technology of electronic media and related societal issues. COMM 484H Emerging Telecommunications Technologies (3) COMM 484H introduces advanced topics related to the technologies in telecommunications and information processing. The course investigates old, new and prospective technologies primarily through analysis of incumbent or emerging companies bringing products and services to market. Students will examine materials not customarily used by undergraduates including stock prospectuses, company annual reports, and Internet searches. The class will consider recent strategic alliances, mergers and acquisitions (whether consummated or not) in the context of whether and how technologies drove the deal.

**Enforced Prerequisite at Enrollment:** COMM 180 and COMM 280 or permission of the program.

**COMM 485: Analysis of Broadcast-Cable Policy**

3 Credits

Analysis of current policy issues in Broadcast/Cable. Standards and methods for evaluating telecomm policy processes and outcomes.

**Enforced Prerequisite at Enrollment:** COMM 404 or COMM 483

**COMM 486: Telecommunications Ethics**

3 Credits

Drawing on normative theory and political philosophy, this course explores problems in ethics and social responsibility in telecommunications. COMM 486 Telecommunications Ethics (3) In this course the instructor and students work together to consider and analyze ethical issues in contemporary telecommunications practice. Using the tools of ethical and political philosophy, students will discuss current cases in often long-standing problem areas such as truth, privacy and content control. The intention is that all involved will develop a greater sensitivity to the ethical dilemmas confronting telecommunication professionals and a greater ability to evaluate media performance. The course also strives to help students gain a deeper insight into their own ethical principles and become more keenly aware of the foundations and professional implications of those principles. In the first few weeks of the semester, students will review the major ethical theories and theorists. They will discuss the nature and types of normative analysis, including the major systems of ethical thought, the process of ethical reasoning and the meta-ethical problems of definition and justification. They will also explore the foundations of political philosophy as they relate to the role of telecommunications industries in democratic society. Related topics will include the nature and history of professional norms and values, the development of ethical codes within specific industries and existing organizational processes for the applications of those standards (the clearance process). In the remainder of the semester, students will discuss case studies involving various ethical dilemmas in professional practice across all segments of the relevant industries including, broadcasting, cable, telephony and the Internet. Special attention will be given to contemporary problems in areas such as social networking and Internet search companies. Topics will include: content control in entertainment and advertising, including issues involving race, gender and age; freedom of expression; privacy; intellectual property; international and cross-cultural issues; truth and anonymity; system access and power; questions of civic engagement; image ethics in a digital age; and broader philosophical questions about the inherent social nature of telecommunications technology. There are, of course, no ‘correct’ answers in these cases; stress is placed on the process of analysis. Students will be evaluated on their ability to articulate their assumptions and formulate coherent ethical rationales based on those assumptions. Comm 180 is a prerequisite for his course.
Enforced Prerequisite at Enrollment: COMM 180 and COMM 280 and COMM 380 or permission of the program.

Writing Across the Curriculum

COMM 487: Advanced Telecommunications Management and Leadership

3 Credits

Strategic management, leadership and ethics issues including marketing, financing, entrepreneurship, and innovation. COMM 487 Advanced Telecommunications Management and Leadership (3) This senior-level capstone course discusses a range of strategic management, leadership and ethics issues in telecommunications and media firms. Learning objectives include creative problem-solving, critical thinking and writing, basic financial literacy and management considerations in ethics, globalization, diversity and free speech. Specific areas of emphasis include marketing, programming, customer service, technology adoption, finance and strategic planning. Broadly, the aim is the honing of critical and creative problem solving skills and the enhancement of collaboration and communication skills. The course also stresses the fiduciary and social responsibilities that adhere to the telecommunication manager's role.

Enforced Prerequisite at Enrollment: COMM 180 and COMM 280 and COMM 380 or permission of the program.

Writing Across the Curriculum

COMM 488: Writer's Seminar

3 Credits/Maximum of 99

Workshop designed for advanced students interested in professional writing, involving extensive mutual and self-criticism. COMM 488 COMM 488 Writer's Seminar (3) This course is designed for advanced students interested in professional writing in the theatre, screen, and media arts. The class work involves submission and extensive revision of a variety of written projects. Revisions are based upon direct feedback from the instructor, as well as mutual critiques from classmates. Students will also learn the technique of self-criticism of their writing and in doing so develop a sense of their own writing style and subject matter preferences.

Enforced Prerequisite at Enrollment: COMM 230 or COMM 260W

COMM 489: Advanced Telecommunications Topics

3 Credits

Exploration of advanced topics related to the telecommunications industries. COMM 489 Advanced Telecommunications Topics (3) This capstone course provides students with an in-depth exploration of current issues facing the telecommunications industries. Students will have the opportunity to synthesize and apply the concepts and skills they have acquired in their previous telecommunications courses. Topics vary by instructor and semester and may include: intellectual property, privacy and surveillance, technology applications, children and media, social impact of telecommunications, impact of telecommunications on democracy, environmental impact of telecommunications, and the relationship of telecommunications to economic development. Students must have senior standing and completed all required core courses in the major before taking this course.

Enforced Prerequisite at Enrollment: COMM 180 and COMM 280 and COMM 380 or permission of the program.
perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. Internet mediation has the potential to change how we communicate, educate, inform, entertain, and transact business. Technological and marketplace convergence means that Internet mediation will have a profound impact on many legal, regulatory and economic constructs, i.e., the preexisting templates we use to describe and understand the communications process and impact on individuals and society. The course also will examine the growing body of cases that have addressed aspects of Internet-mediation in each of the following general categories: *Speech-commercial and political speech, obscenity, forums analysis *Legal and Regulatory Consequences of Convergence-the juxtaposition of telecommunication and information processing technologies, markets and regulatory regimes *Governance and regulation of the Internet-whether the need exists for government intervention on such matters as numbering and domain registration *Intellectual Property Rights-the impact of Internet-mediation on copyright, trademark and patent laws *Electronic Commerce-the law and policy of Internet-mediated transactions, privacy and encryption concerns *Equity, Competition Policy and Consumer Protection Concerns-what, if anything, should governments do to remedy market failures

**Enforced Prerequisite at Enrollment:** COMM 180

**COMM 493: Entrepreneurship in the Information Age**

3 Credits

Provides students with knowledge/tools to take their innovation/technology idea through the business planning, capital, and operations budgeting processes. COMM 493 Entrepreneurship in the Information Age (3) COMM 493 provides students with knowledge and tools to take their own idea for a media or communications product or service. Students bring their own ideas for a communications product or service. They work through the market feasibility, business planning, capital and operations budgeting processes to finally researching and seeking start up capital. This course is designed for both students plan to pursue careers as entrepreneurs and those who wish to learn more about small business management in the information age. Topics include entrepreneurship, business planning and budgeting, starting and managing a small media or communication technology firm, economic history of media, telecommunications and information innovation, trends and opportunities in media and information sectors, high tech start up legal and employment issues, financing options, overview of venture capital, COMM 493 and market capitalization, market feasibility analysis. Cases of recent successes and failures in the information and media sectors are used to illustrate principles of business planning, market and financing trends and entrepreneurship.

**Enforced Prerequisite at Enrollment:** COMM 180 and COMM 380 or permission of program.

**COMM 494: Research Project Courses**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**COMM 494H: Research Project Courses**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**Honors**

**COMM 495: Internship**

1-3 Credits/Maximum of 6

Supervised practicum with a variety of communications-specific entities including but not limited to digital media outlets, newspapers, broadcast/cable stations and networks, public relations agencies, advertising agencies, full-service marketing firms and film/video production companies.

**Full-Time Equivalent Course**

**COMM 495A: Internship**

1-6 Credits/Maximum of 6

Supervised practicum with a variety of communications-specific entities including but not limited to digital media outlets, newspapers, broadcast/cable stations and networks, public relations agencies, advertising agencies, full-service marketing firms and film/video production companies.

**COMM 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**COMM 496H: Independent Studies**

1-6 Credits/Maximum of 6

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses. These are generally used as thesis credits for undergraduate students in the Schreyer Honors College with the area of honors in one of the majors in the College of Communications. The honors thesis may take the form of a scholarly project involving the examination of some aspect of the field of communications, or the thesis may involve the production of a professional project.

**Honors**

**COMM 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**COMM 498: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
COMM 199: Foreign Study--Mass Communications
1-12 Credits/Maximum of 12
Study of mass communication systems and practices in selected foreign countries, by individual or group instruction.

International Cultures (IL)

Community Environment and Development (CED)

CED 152: Community Development Concepts and Practice
3 Credits

Concepts and practice of community development. CED 152 Community Development Concepts and Practice (3) Community development is broadly recognized as a process by which places (communities, small towns, neighborhoods) and the people in them, improve their economic and/or social well-being. Health of the environment and sustainable use of natural resources ensure the long-term well-being of human populations and so are central to sustainable community development. The practice of community development requires the ability to identify and understand the interrelationships of economy, society and environment locally, nationally and globally. Community development hinges on the capacity of local communities and residents to influence and determine their own futures. Students will gain an introduction to the concepts and models of community development and will become familiar with the roles of community development practitioners in developed and developing country settings. They will be able to identify the consequences of development strategies for social, economic and environmental well-being, focusing on the interrelationships of these aspects of development. Students will be introduced to strategies to identify capacity and resources available in communities and those that need to be enhanced. Models of decision-making will be introduced and students will work in teams in class with a focus on successful team functioning, identifying commonalities and shared interests to foster decision-making, and being able to extend that experience to working with groups in a community. Students will gain knowledge and understanding of the relevant concepts, processes and practice through readings and in-class lecture and discussion. Case studies of specific community development issues will give students the opportunity to apply the concepts and skills they learn in class, and to work in teams where students take on perspectives of different stakeholders and attempt to reach a resolution. Examples will be used throughout the course to portray important concepts. This knowledge and associated skills can be used to form the basis for further training and a career in community development or to provide a basic understanding for those interested in volunteering in their own community.

CED 155: Science, Technology and Public Policy
3 Credits

This course will survey the main issues that relate science and technology to public policy.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

CED 160: Introduction into Ethics and Issues in Agriculture
3 Credits

This course covers ethics and the social contract to include substantive ethical theories focusing on rights-based ethical theories (libertarianism and egalitarian theories) and consequentialist theories (utilitarianism and axiology). These theories assist in conceptually defining levels of participation and consent in democracy. This course explores the circumstances in which rational persons and political groups historically agree to be bound in collective decision making. The primary focus by examining four separate ethical themes illustrating why and how individuals accept a variety of terms. The course highlights philosophical/ethical decisions related to agriculture issues during the history of the United States. Issues range from non-interference rights to opportunity rights dealing with food, fiber, natural resource and environmental issues. Procedural theory emphasizes the formation of legitimate and defensible rules rather than ethics. Policy choices are assumed to be legitimate and defensible as long as individuals follow the rules/procedures for decision making. The content of this course meshes the procedural and the substance theories found throughout historical debates in agriculture communities. The course identifies traditional agrarian problem identification, policy formation, policy adoption and funding, program implementation and program evaluation. How ethics figures historically in agriculture policy processes is applied in a variety of case studies and debates as well as selected readings. The course includes an examination of the ethics of when, how and where the policy process historically influenced agriculture public policies. The course emphasizes the need to critically think about various points of view expressed by various conflicting authors.

GenEd Learning Objective: Soc Resp and Ethic Reason

CED 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CED 201: Introductory Environmental and Resource Economics
3 Credits

Apply principles of economics to analyze environmental protection policies and natural resource use decision. Examine contemporary policy issues. E RRE (AG EC) 201 Introductory Environmental and Resource Economics (3) An introduction to the concepts, theories, and applied methods used in the economic analysis of environment and natural resource issues. The course covers topics such as the principles of market efficiency, why the market often fails where environmental and natural resource issues are concerned, and environmental policy prescriptions and tools designed to correct this market failure. These principles and tools are explored with respect to air and water pollution, management and use of renewable natural resources such as forests and fisheries, and the unique problems of managing nonrenewable resources such as minerals and oil. The course aims to give students an understanding of how traditional economic principles can be used
to suggest and evaluate possible responses to the environmental and resource problems facing society.

**Prerequisite:** AG BM101 or ECON 102

CED 230: Development Issues in the Global Context

3 Credits

Exploration of issues related to economic development in national and international contexts, where key interrelationships between and among developed and developing regions are made explicit. CED 230 Development Issues in the Global Context (3) Local communities - in both developed and developing countries – are influenced by strong global forces that affect the well-being of their residents. Community economic development is one approach to enhance improve economic outcomes. This course will use an issue-oriented approach to help students understand economic development patterns and resultant issues in the U.S. as compared to what is observed and what is of critical concern in other places. Topics will include the concept of globalization, economic restructuring trends, investment in human capital and the ability to retain this often mobile form of capital, migration and change in patterns of migration, and environmental effects of development in different contexts. Each year that the course is taught, there will be a focus on patterns of economic development by region in the U.S. but with comparisons to three other selected countries – one in Latin America, one in Asia and one in Africa. Students will be encouraged to compare and contrast economic and related social issues that arise in these contexts, with particular emphasis given to recent economic trends and events and to the rate of change compared to the past.

**Prerequisite:** ECON 102, ECON 104, R SOC 011 or SOC 001

CED 275: Community, Environment and Development Professional Seminar

1 Credits

The CED Professional Seminar helps students learn how to be successful in the CED major and in their future professional careers. The emphasis is on career opportunities, important skills to learn and hone, and tailoring the major to fit their future professional interests. The course operates similar to a lab, with most work done in the classroom. It includes frequent interaction with CED professionals from a variety of organizations and topical areas, and hands-on skill training in facilitation and community-process techniques.

**Concurrent Courses:** CED 152

CED 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CED 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CED 309: Land Use Dynamics

3 Credits

Theory of land use and land use decision-making. CED 309 Land Use Dynamics (3) Land is a key natural resource for society. Decisions related to land use are understood through alternative theories that serve to explain why prevailing land use patterns occur and change. This course examines the theoretical foundations of land use and policy practices to better understand how land use may change in the future in response to changes in land prices, population growth, human preferences and especially preferences for natural amenities, and the quality of the natural environment, among other factors. Given current issues including the twin problems of urban sprawl and land abandonment, the course will also examine the role of land use policy and specific programs to guide and provide greater public control over land use decisions. Students will gain an appreciation of the importance of land as a resource, and the potential for irreversibility in many land use decisions. Knowledge will be gained of the relevant theories, trends and policies through readings and in-class lecture and discussion.

**Prerequisite:** ECON 102 or equivalent; GEOG 160

CED 329H: Intermediate Environmental & Resource Economics (Honors)

3 Credits

This Honors course focuses on intermediate principles of environmental and natural resource economics, with strong emphasis on policy analysis and applications. The central focus in any economics course is how best to allocate scarce resources and this holds true for this course as well. However, in this course the goods and services we will talk about differ from those in other economics courses in that there is typically no market in which to trade them - e.g., air and water quality or a scenic view. Thus, it may be the case that government policies are needed to maintain and enhance their quantity and/or quality. The course is structured around a number of broad thematic areas with individual book chapters, papers, class discussions, and assignments used to learn the material. The first two parts provide a review of micro and environmental economic theory, and an overview of how economists think about environmental issues. The third section focuses on benefit-cost analysis and valuation issues, and the fourth section looks at government intervention and policy. The final section(s) focus on specific topics in environmental and natural resource economics and related policy issues with the general goal being to provide students a better understanding of current issues related to the environment.

**Prerequisites:** (MATH 110 or MATH 140) and CED 201 and ECON 302 Honors

CED 375: Community, Local Knowledge, and Democracy

3 Credits

Understanding community decision-making, citizen-expert interactions and methods for resolving seemingly intractable conflicts associated with public issues. CED 375H Community, Local Knowledge, and Democracy (3) Decisions made in our communities have far reaching effects on individuals, families, neighborhoods, the local economy, the environment, the health and welfare of all citizens, and the community as a whole. These decisions or choices are the result of the collective action of community leaders and citizens, either through governmental, non-governmental, or community organizations. This course will familiarize students with principles, concepts and skills essential to understanding
processes of community decision making and community development. These processes involve countless human interactions, which ultimately lead to choices that affect the future economic, environmental, political, and social viability of citizens, their families, and the sustainability of their communities. These interactions are central to community decision making and community development, and to the functioning of local democracy. The nature of these interactions and the way in which they take place determine if desired community outcomes occur or not. This course seeks to reveal important, sometimes neglected or underdeveloped, factors in community decision making, specifically issue framing, tensions between local and expert knowledge, methods for resolving seemingly intractable conflicts associated with public issues, and the nature and role of participatory processes in debate, deliberation, and doing public work. This course will enable students to use these factors for analyzing community decision making situations and as community development tools in professional practice. In addition, students will be challenged to examine ethical issues in community decision making and community development professional practice.

**Prerequisite:** Prerequisite or concurrent: CED 152 Honors

CED 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CED 400: Exploring Indigenous Ways of Knowing in Great Lakes Region:

Lecture

2.5 Credits

Explore concepts and values distinctive to indigenous ways of knowing in the Great Lakes Region through readings, reflections, and library research. CED 400 Exploring Indigenous Ways of Knowing in the Great Lakes Region: Lecture (2.5) (US) Exploring Indigenous Ways of Knowing in the Great Lakes Region (400A) explores concepts and values distinctive to indigenous ways of knowing (IK) in the Great Lakes Region through readings, video segments, and lectures. Five structural concepts or key themes—local knowledge, relational knowledge, empirical knowledge, spiritual knowledge, and traditional knowledge—provide a conceptual framework for understanding indigenous cultures and knowledge production and their unique contributions to western society in the 21st century. Students will be introduced to the Algonquian cultures of the Great Lakes Region and to the Ojibwe (Anishinaabeg), Odawa, and Potawatomi (Three Fires) cultures in particular. This course will introduce students to the distinctive ways indigenous people experience, understand, and know the world through their relationship with the land or region to which they belong. Too often, colonizers around the world have ignored indigenous knowledge systems even though these ways of knowing have sustained peoples, cultures, and environments for thousands of generations. Because these ways of knowing are generally preserved and transmitted through stories, music, ceremony, and embodied traditions, they are seldom understood and frequently dismissed by those who control the production of knowledge in the modern world. The knowledge of the indigenous peoples of the Great Lakes region will, in this course, be presented as an empirically grounded scientific body of knowledge and theory comparable and complementary to the European tradition and, in specific ways, enhancing the sustainability of western scientific knowledge and practice. This course is a prerequisite for the Maymester field experience—Exploring Indigenous Ways of Knowing Among the Ojibwe (400B)—which offers students an opportunity to experience indigenous ways of knowing by engaging with Ojibwe educators, traditional knowledge holders, elders, and families among the Anishinaabeg of Red Lake, Leech Lake, and White Earth Nations, the three largest Ojibwe reservations in the US.

**Prerequisite:** R SOC011, SOC 001 or equivalent United States Cultures (US)

CED 401: Exploring Indigenous Ways of Knowing Among the Ojibwe

0.5 Credits

Through an intensive cultural engagement students will learn skills important to the pursuit of ethnographic research in cross-cultural contexts. CED 401 Exploring Indigenous Ways of Knowing Among the Ojibwe (0.5) (US) Exploring Indigenous Ways of Knowing among the Ojibwe&mdash;CED 400B, a 2-3 week field experience, transports students from the classroom to the Red Lake, Leech Lake, and White Earth Nations in northern Minnesota. During travel, students will follow part of the 800 year Great Migration route of the Ojibwe from their ancestral home around the St. Lawrence River estuary to western Lake Superior and the headwaters of the Mississippi River. This field experience will immerse students in the Anishinaabeg community, the largest of the &ldquo;three fires&rdquo; (Ojibwe, Odawa, Potawatomi) of the Great Lakes region. While most Americans learn history facing west, history will be presented through the experiences and memories of people facing east. Early Ojibwe history will be outlined while the period of contact, colonization, and restoration (late 1700 to the present) will be covered in greater detail. Ojibwe cultural codes and spiritual values will be explored through &ldquo;the teachings&rdquo; and participation in important ceremonies (sweat lodge, pipe, big drum, wiping the tears, shake tent, intertribal traditional powwow). The political and social injustices of colonialism will be examined, including removal, allotment, religious oppression, and the boarding school era. To experience family and social life, students will live for two days with Ojibwe host families on the Red Lake Nation (one of 2 closed reservations in the US). Students will be introduced to indigenous science and environmental justice (climate change, water quality, biodiversity and endangered species, traditional and sustainable agriculture, fish and game, wild edible and medicinal plants, forest management, etc.). Finally, a canoe trip through the headwaters of the Mississippi River will focus on nature and environmental health. The five key IK themes explored in the classroom&mdash;local knowledge, relational knowledge, empirical knowledge, spiritual knowledge, and traditional knowledge&mdash;will provide a framework for engaging with and understanding Ojibwe culture and knowledge production and their unique contributions to western science and American culture. Students will meet and learn from more than 25 prominent Ojibwe elders, educators, scientists, political leaders, medicine men/women, environmentalists, ethnobotanists, storytellers, and host family members. Students will also learn listening, observing, attending, respecting, critical thinking, and recording skills, all important to the study of cultures and the pursuit of ethnological research in cross cultural contexts. Exploring Indigenous Ways of Knowing Among the Ojibwe&mdash;CED 400A, offered during spring semester, is a prerequisite for this field experience.

**Prerequisite:** CED 400A or comparable course United States Cultures (US)
CED 404: Community, Environment and Development Research Methods

3 Credits

Students will learn empirical research methodology in the areas of community, environment and development. CED 404 Survey Research Methods (3) CED 404 teaches students practical approaches to empirical research in the areas of community, environment, and development (CED). The course covers research tools commonly used by CED professionals at the local level, including secondary data analysis, surveys, focus groups, and participatory research. As importantly, students learn and practice the basic mindset required for developing and exploring research questions. Students discuss and practice appropriate methods for presenting research results, including writing for different genres.

Prerequisite: STAT 200
Cross-Listed

CED 409: Land Use Planning and Procedure

3 Credits

General land use planning laws and procedures. CED 409 Land Use Planning and Procedure (3) This course provides students with an understanding of the legal and procedural aspects of land use planning as found in the United States. The emphasis of the course is to explain the sources of land use planning authority, the processes by which it is applied and the potential conflicts that arise in the application of this authority. As a result of taking this course, students will be expected to learn and explain a) the objectives of land use planning systems and a comparative analysis of these systems; b) the bases on which land use planning law and procedure is applied across the U.S.; c) policies, strategies and principles that can be applied to land use planning decisions; d) several land use planning models currently applied in American jurisdictions, including the structure of each land use planning system; e) the procedural steps used to engage the land use planning system by property owners and government officials; f) typical conflicts that arise in creating, changing or enforcing land use planning measures; g) how land use planning conflict is resolved in various systems. Student performance will be measured in two midterm exams and a final exam. The instructor reserves the right to give additional exams to aid in measuring student knowledge and understanding of course material. Each test will primarily be short essays questions that ask for an explanation, discussion, comparison or application of specific concepts and principles. Case studies also will be used to present students with situations to hone their analytical, organizational and problem solving skills on specific problem situations. This will ask students to analyze a given set of facts, assess the issues raised by the facts from the perspectives of individuals who are described in the situation and form and present a response that addresses a specific question posed to the student.

Prerequisite: 6 credits of B LAW, CED, ECON, E R M, E RRE, PL SC, R EST, SOC, S T S (any combination)

CED 410: The Global Seminar

3 Credits

Exploration of critical global issues relevant to sustainable development and the environment. Collaborative with other universities worldwide. CED 410 The Global Seminar (3) The Global Seminar course will help students gain an understanding of the implications of global change in a world of limited natural resources. The course will help students to understand the difficulties that society faces in balancing the environment with human needs; appreciate the challenge of balancing competing needs at different levels (individuals, communities, organizations, governments); understand trade-offs and the role of policy; and explore and critically assess avenues for effectively dealing with global issues. Students participating in the Global Seminar have the opportunity of direct interaction with students from other universities and academic institutions who may have different perspectives on these issues. To allow this interaction, the Global Seminar is offered jointly with other universities from across the world, with students engaging in global videoconferences, virtual classroom discussions and group work with student peers at other universities. Case studies are used, with critical assessment of important global issues related to development and environment, with a particular focus on food production and natural resources. Specific cases vary by course offering but may include cases related to: population dynamics, biodiversity, water quality, waste management, GMOs, BSE, organic food production, novel protein foods, among others. Issues of long-term sustainability are explored to gain a better understanding of the implications of alternative choices. The course is offered in collaboration with Cornell University, with students using Cornell's Blackboard system. The course is intended to strengthen linkages for students with other universities for study and research.

CED 417: Power, Conflict, and Community Decision Making

3 Credits

Impact of institutions on human interdependence and behavior, the structure of power, and community decision making and public policy. CED 417 Power, Conflict, and Community Decision Making (3) Community decision making and public choice is the result of collective action among individuals. The purpose of this course is to develop frameworks for analyzing conflict, power, and public choice. This course enables students to understand how culture and institutions affect the nature of human interdependence and behavior, shape patterns of influence and power, and impact community decision making and policy.

Prerequisite: R SOC011 or SOC 001
Cross-Listed

CED 420: Women in Developing Countries

3 Credits

Analysis of women's work, experiences, and development policies and practices in Africa, Asia, and Latin America. CED (WMNST) 420 Women in Developing Countries (3) (US;IL)The purpose of this course is to increase understanding of women's lives in third world countries at the time when women's movements, grassroots activism, and feminism are on the rise in the third world. The course examines third world women's challenges to Western definitions of feminism and traces the theoretical shifts and practical changes related to women's issues in African, Asia, and Latin America. Students participate in studying specific community and agricultural development projects. Topics include feminist critiques of development and post-colonialism, ecofeminism and environment, sexuality and reproduction, global restructuring, and grassroots community activism. This course will add diversity to both the rural sociology, community and economic development, and women's studies curricula. International, gender, ethnic, and racial issues are core components of the course. The course will be an elective for Women's Studies majors and minors and will serve graduate students in rural sociology, women's studies, and other fields.
Prerequisite: 5th semester standing or above  
Cross-listed with: WMNST 420  
International Cultures (IL)  
United States Cultures (US)

CED 425: International Community and Economic Development  
3 Credits

International community and economic development. CED 425  
International Community and Economic Development (3) Eight of  
ten people on the planet live in developing countries where problems  
such as hunger, malnutrition, infant mortality, inadequate housing,  
derunderemployment, over-urbanization, and environmental degradation  
often are severe. This class will focus on community and economic  
development in developing countries. Through lectures, readings, a series  
of topical videos, and in-depth class discussions, students will obtain a  
firm grounding in the ways development has been defined, the social and  
economic problems facing developing countries today, the basic ways  
in which economic development has been approached theoretically and  
empirically, the implications for developing countries of being embedded  
in a globalizing economy, the influence of multinational corporations,  
the policies that developing countries have followed to foster economic  
growth, the nature of foreign aid, the causes and consequences of Third  
World debt, the promise of micro-enterprise and the informal economy,  
rural development and land reform, and other topics.

Prerequisite: CED 152 and CED 230

CED 427: Society and Natural Resource  
3 Credits

Analysis of the relationships between societal development and  
and enhancement and natural resources. CED 427W Society and Natural  
Resource (3) There is a common tendency to portray environmental and  
natural resource problems as biophysical in nature. The implication of  
this tendency is that such problems are best addressed by scientists  
and engineers who discover evidence of and devise new technologies  
to fix them. Another common tendency is to assume that people resist  
solutions to environmental and natural resource problems because of  
individually held anti-environmental attitudes. In contrast to these two  
visions, sociologists point out that environmental and natural resource  
problems often lie at the intersection of biophysical processes  
and social, political, economic, belief, value, and knowledge systems. The  
goals of this writing-intensive course are to introduce students to the  
complexity of environmental and natural resource problems and to teach  
them to think sociologically. After taking this course, students should  
be better prepared to engage in debates with academics, politicians,  
and other citizens regarding the causes and potential solutions to  
environmental and natural resource problems.

Prerequisite: R SOC001 or SOC 001 and ENGL 202  
Writing Across the Curriculum

CED 429: Natural Resource Economics  
3 Credits

Optimal management of resources; roles of markets and other  
institutions; resources and economic development; public policy.

Prerequisite: ECON 302 and MATH 110 or MATH 140

CED 430: Principles of Community Economic Development  
3 Credits

Concepts, strategies and techniques of local economic analysis, planning  
and development; case studies and decision-making exercises. CED 430  
Principles of Community Economic Development (3) This course is  
designed to introduce the issues giving rise to concern for rural and  
regional economies, and the theories, concepts and tools of rural and  
regional economic development. The goal is to integrate theory and  
practice and apply them to economic development problems. Tools  
are presented in a "how to" manner. Topics include current issues in  
rural economies, the economic view of rural development; business  
retention, expansion and location; entrepreneurship and its role in the  
economy; understanding the local economic structure and the forces of  
chance; introduction to economic growth theories; export base theory  
and economic base analysis; the role of labor and capital in development;  
techniques of market area, central place, shift-share and input-output  
analysis; policies of local economic development and growth.

Prerequisite: introductory course in economics

CED 431: Economic Analysis of Environmental and Resource Policies  
3 Credits

Economic analysis of environmental and natural resource policies,  
benefit-cost analysis, non-market valuation techniques; resource damage  
analysis.

Prerequisite: ECON 302

CED 442: Changing Food Systems: Comparative Perspectives  
3 Credits

The course begins with an overview of the scope of food systems and  
an orientation to interdisciplinary and community-based approaches  
for understanding and addressing social and ecological problems  
and potential changes in food systems. Two weeks are dedicated to  
reviewing selected challenges facing the food and agricultural system  
to underscore the complexity of these issues and illustrate how they  
have been approached and analyzed by different disciplinary fields. The  
next two weeks of the course are devoted to critical exploration of theoretical  
and policy models for understanding how food systems function and  
change. These conceptual and analytical tools are then applied in  
three subsequent course modules, focused on 1) Changing Agricultural  
Production Systems; 2) Changing Food and Farm Work; and 3) Changing  
Food Consumers and Eaters. Each of these three-week modules will  
focus on 3 - 4 cases of change efforts either led from "above" through  
government policies or business initiatives or from "below" by grassroots  
groups or social movements. Cases will be selected to compare and  
contrast U.S. contexts with other international contexts and to highlight  
the diverse experiences and perspectives across racial - ethnic, class,  
cultural and gender differences within the food and agricultural system.  
The course will conclude by synthesizing ideas and insights about the  
limitations and potentials of different approaches to food systems  
change. In the last week of class, students will also give "lightning talks"  
distilling their learning about food systems change through an individual  
semester long field-project with a local or regional community group,  
business, agency or farm.

Prerequisite: AG BM 170  
Cross-listed with: FDSYS 442
CED 445: International Development Practice

3 Credits

The goal of this 400-level course is to facilitate students' development of the hands-on skills and practical knowledge needed to engage successfully in international development work in the public, private, and non-governmental sectors. The course emphasizes competencies needed to effectively secure employment and work in occupations and sub-fields of international development that are most related to the CED major. It is organized into a series of modules that correspond to the major phases of international development projects - design, implementation, and evaluation. Students will integrate these phases by working through a "case study" of a specific development project for each semester. The course includes guest lecturers and budget requests accordingly who are currently working in the international development sector.

Prerequisites: CED 230, CED 404

CED 450: International Development, Renewable Resources, and the Environment

3 Credits

Theories of agricultural and economic development, with particular attention to interactions between development, renewable resources, and the environment. CED 450 International Development, Renewable Resources, and the Environment (3) (IL) This course introduces the key economic concepts and theories used to analyze agricultural and economic development in developing countries, with particular attention to interactions between development, natural resources, and the environment. The course examines how economic development can affect natural resources and the environment, and how resource and environmental conditions affect development. The course integrates theory with empirical evidence from developing countries, so that students gain an understanding of how different development strategies have actually fared in practice.

Prerequisite: 6 credits in Environmental Economics, Resource Economics or Economics International Cultures (IL)

CED 452: Rural Organization

3 Credits

Social organization and change in rural communities; use of sociological principles in analysis of rural problems and rural development. CED 452 Rural Organization (3) This course combines an introduction to the social theories of communities with real-life examples of applications to understanding community problems and concerns. The focus is on the special circumstances facing small towns and rural communities, but the concepts are applicable in all communities, from urban neighborhoods to suburbs. Topics covered include local community in a global economy, power and decision-making, the role of governments and other social institutions, development of community and the importance of building social infrastructure as well as economic and physical infrastructure, multi community collaboration and building, and sustainable communities. Those taking the class will gain experience in conducting a case study of a small Pennsylvania community, build skills in working in a team, and gain understanding of the complexity of factors that influence community (and your own) well-being. If your future career involves operating within a community setting, this course can increase your knowledge of that setting and how to function within it. And, even if you don't plan on working with communities in your job, you will be living in a community. This course can help you to understand the ways that you can contribute to improving your own quality of life by becoming involved in your community.

Prerequisite: 6 credits in rural sociology, sociology, or psychology

CED 470: Participatory Research Methods

3 Credits

People generally describe sustainability as an ideal that encompasses three spheres: environmental, economic, and social. Often, however, the social component receives the least amount of attention. Many projects lauded for their sustainability benefit only a privileged few. Alternately, the framework of just sustainability places issues of equity and social justice at the center of the discussion. It requires that we ask, first and foremost, who wins, who loses, and who decides. As community development (CD) scholars and practitioners, we are in a position to integrate these questions and a vision of just sustainability into our work. Central to this task is working in partnership with community members to identify problems, to ask questions, and to develop solutions. All community change efforts need good information, and good information comes from research. This course introduces students to participatory research methods, placing special emphasis on research ethics, the positionality of the researcher, and embedding research within CD practice. We will focus on research design within the context of a community project, data collection, data analysis, and the dissemination of results. We will cover various approaches to measuring community phenomena, including basic interview techniques, focus groups, observation, surveys, participatory mapping, and other qualitative analytical methods.

Prerequisites: CED 230 and CED 404

CED 475: CED Integrated Capstone Experience

3 Credits

An experiential-learning course that provides a capstone learning experience for seniors graduating from the Community, Environment and Development major. CED 475 CED Integrated Capstone Experience (3) A well-designed capstone experience provides students with a valuable reflective and integrative experience as they complete their baccalaureate degree programs. This course is designed to encourage students to reflect, integrate and apply the knowledge that they have learned in previous coursework for the CED major. The course is built on discussion and exercises that require integration. Like the CED program more generally, this course relies on case studies to help students apply the skills that they have learned to actual cases that challenge communities and regions in developed and developing areas of the world. The CED program is also designed to include experiential-learning exercises throughout the program; this course engages students in a significant in-depth experience or project that will vary year-by-year. The experience could be in the United States or in another country. The project will be hands-on and action-oriented. Evaluation is based on assessment of active participation in class discussions, papers that provide critical assessments of the case studies assigned to the class, and a final project conducted in the field, either in the U.S. or internationally.

Prerequisite: senior status only
CED 494: Undergraduate Research
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small group basis.

CED 494H: CED Honors Research Project
1-12 Credits
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors
CED 495A: Internship in Community, Environment, and Development
1-15 Credits/Maximum of 15
Supervised field experience in an environmental setting.

Prerequisite: prior approval of program
Full-Time Equivalent Course

CED 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CED 497: Special Topics
1-18 Credits/Maximum of 18
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CED 499: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Comparative Literature (CMLIT)

CMLIT 1: Introduction to Western Literatures Through the Renaissance
3 Credits
Introductory comparative survey of European and American literatures of Ancient through Renaissance periods, considering genre, themes, cultural and literary values.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 2: Introduction to Western Literatures Since the Renaissance
3 Credits
Introductory comparative survey of European and American literatures, post-Renaissance through Modern, considering genre, themes, cultural, and literary values.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 3: Introduction to African Literatures
3 Credits
Comparative analysis of drama, essay, novel, poetry, and stories from traditional oral forms to contemporary expressions of African literary styles. CMLIT 003 Introduction to African Literatures (3) (GH;IL)(BA)
This course meets the Bachelor of Arts degree requirements. CMLIT 003, Introduction to African Literatures, provides an introduction to the wonderful variety of African literary production, from early oral epic traditions, through the colonial/post-colonial period, to recent Nobel Prize winning authors. We will read texts written in English or translated into English from French or African languages, including several recorded from the oral tradition, as well as some texts from the African Diaspora. These literatures come from different geographic and cultural areas of Africa, and are composed in a variety of forms (novel, drama, epic, poetry), and range in date from 2,000 BCE to the colonial period to the modern national era. The focus of the course, however, is on the 20th century. We will also consider the ways in which history, culture and geography impact literary production. African literary and cultural influences on Western traditions may also be explored. Students will be evaluated on some or all of the following: short answer/essay exams, in-class discussion and group work, written assignments, collaborative presentations, and a final comprehensive exam/essay. Writing and speaking will always be included. This course fulfills a requirement for the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement and the Bachelor of Arts Humanities and Other Cultures requirement. It also satisfies the United States and International Competence requirement.

CMLIT 5: Introduction to Literatures of the Americas

3 Credits

Comparative interpretation of the oral and written literary traditions of North, Central, and South America. CMLIT 5 Introduction to Literatures of the Americas (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 5, Introduction to Literatures of the Americas, allows you to explore the great variety of literatures of the Americas, including translations of texts written in Spanish, French, Portuguese, and Amerindian languages, as well as texts originally written in English. Readings include many genres and artistic forms dealing with histories and accounts of "American" issues, such as conquest, nationalism, slavery, diaspora, and immigration. You will also consider the various influences among these traditions in terms of time period and genre. This course investigates the literary and cultural notion of "America," and what it means to be "American," in terms of the entire hemisphere. We will deal with issues of race, ethnicity, class, religion, as well as other vital concerns of identity and "Americanness" as reflected in both oral and written literary traditions through the history of the Americas. At the conclusion of this course, you should be able to understand and make comparisons among the many "American" literary traditions. This course fulfills requirements for the Comparative Literature major, the World Literature minor, General Education Humanities, Bachelor of Arts Humanities, and General Education United States and International Competency.

CMLIT 6: Philosophy and Literature in Western Culture

3 Credits

Explores fundamental issues of human existence through the traditions of western literature and philosophy. CMLIT 006CMLIT (PHIL) 006 Philosophy and Literature in Western Culture (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to introduce students to the various interpretive approaches to literature and philosophy. The class will explore key philosophic themes as these are exhibited in imaginative literature, and in doing so will practice both philosophical interpretation of literature and literary treatment of philosophy. The central themes of this course could include, for example, self-knowledge and self-deception; self-isolation, alienation and community; conflict of moral responsibilities; the use and abuse of language; the meaning of art; the ideal of a "simple life;" normalcy and madness. The class will ask such questions as what counts as literature, what purpose it serves, what is the relationship between literature and ideology, and whether a text can be considered independently from what the author wanted to say in it. Students may be graded by a variety of methods, including exams, papers, and individual and group projects. One example might be a collaborative annotated bibliography project, a collaborative position paper, individual evaluations of position papers, and a comprehensive final exam. This course is a non-major General Education Humanities course. It may be used to fulfill minor requirements in philosophy. This course may be used to fulfill an additional-course requirement in either the minor or the major in Comparative Literature, although it is geared primarily towards non-majors. This course will be offered once a year with an enrollment of 25-200 students depending on location. This course deals with literature and philosophy in the western tradition, and thus helps to complete the range of our other courses on western literature, such as Comparative Literature 001 and 002 (survey courses of Western Literature to the Renaissance, and Western Literature since the Renaissance), and Comparative Literature 401W and 402W (upper level chronological courses on Western Literature). This course differs from those however, by its strong emphasis on philosophical texts.

CMLIT 10: World Literatures

3 Credits

The development of literature around the world—from epic, legend, lyric, etc. in the oral tradition to modern written forms. CMLIT 010 The Forms of World Literature: A Global Perspective (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. As a one-semester introduction to the range and diversity of world literature from the ancient past to the present, CMLIT 010 is intended to help you read (or listen to) a work of literature from any time or place and to appreciate it more fully—whether it belongs to the more familiar types of literature you may have read in the Western tradition or is a fable, folktale, hero story, play, or narrative from another cultural tradition. You will practice expressing your ideas through written exams and in-class and on-line discussions/activities. Discussion sessions allow interaction with the instructor and with other students in the class. This course presents a global sampling of masterpieces of world literature. Through active class participation, you will become familiar with various literary genres and become proficient in the analysis of the similarities and differences between texts from many different time periods and cultures. CMLIT 010 is one of the choices of survey courses which can count toward the Comparative Literature major and the World Literature minor. This course also fulfills the General Education humanities requirement, the Bachelor of Arts humanities requirement, and the United States and International requirement.

CMLIT 11: The Hero in World Literature

3 Credits

The figure of the hero/heroine examined in world literature as a vehicle for expressing social and cultural values. CMLIT 011 The Hero in World Literature (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the concept of heroism and of heroes throughout the world in different time periods and different literary genres. We will examine different types of heroes and theories of heroism, as well as gender relations involved in concepts of heroes/heroines, and the roles of anti-heroes, villainous heroes, and the enemies of heroes. Heroes represent the most ideal values of a particular society. By examining heroes revered by a variety of societies, a greater awareness of values both specific to individual cultures and universal across cultures can be reached. Through comparisons of a variety of heroes, literary and social roles in the formulation and manipulation of heroic types can be assessed. The objectives of this course include...
expanding your awareness of the values of different cultures, examining the consequences of value systems as explored in literature, and increasing your skills of critical analysis on a body of literature designed to encourage you to accept, reject, or question specific ideas of good and evil, proper behavior, and appropriate action within cultural contexts. CMLIT 011 is one of the many choices of survey courses which count towards the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, or the United States and International requirement.

CMLIT 12: Introduction to World Drama and Performance

3 Credits

The power, ethics, and excitement of drama and related forms of performance literature, presented in a global and comparative context. CMLIT 012 Introduction to World Drama and Performance (3) (GH;IL) (BA)

This course meets the Bachelor of Arts degree requirements. Introduction to World Drama will enable students to discover the power and excitement of drama in a global context. Students will encounter a variety of cultural contexts as they observe how playwrights portray local histories and lifestyles, in settings from many parts of the world. The course will offer (1) an introductory overview of concepts and terms associated with understanding drama. It will present (2) traditional dramatic forms such as tragedy, comedy, history play, allegory, Noh, etc., as seen in plays prior to the twentieth century; and (3) recent dramatic forms such as testimonial, other politically engaged plays, drama online or on film, etc., as seen in plays from the twentieth and twenty-first centuries. Attention will be given to (4) the dramatic contributions of multiple cultural groups in the U.S., with African American, Asian American, Latino, and other U.S. plays seen not in isolation, but in relation to world drama. Finally, (5) the course will consider ways in which drama, as a form of world literature, can have an international and intercultural impact, both in earlier periods (for example, the ancient Sanskrit play &ldquo;Shakuntala&rdquo; from India, influenced the German writer Goethe &rsquo;s play &ldquo;Faust&rdquo; in the nineteenth century) and recently, when global circulation and international collaboration are increasingly frequent. Class work will include lectures or presentations by the instructor, presentations by students, web based activities, and focused discussions. Where feasible, attendance at one or more live theatrical performances will be encouraged.

International Cultures (IL)
General Education: Humanities (GH)

CMLIT 13: Virtual Worlds: Antiquity to the Present

3 Credits

Virtual worlds from ancien or postmodern, in a comparative and global context that includes literature, film, and online multiplayer games. CMLIT 013 Virtual Worlds: Antiquity to the Present (3) (GH;IL) (BA)

This course meets the Bachelor of Arts degree requirements. What are virtual worlds? And why do they speak so intensely to us about the present? This course puts immensely popular online virtual worlds like World of Warcraft into a historical perspective. Beginning with Homer, students will work through

some of the major imaginative worlds of literary history, including those of the Bible, Dante, Shakespeare, Goethe, Lu Xun, Basho, Balzac, and others. We will conclude with two weeks of reading and discussion about the meaning and value of contemporary online virtual worlds. We will analyze the ways in which virtual worlds represent/reflect on the cultures from which they emerge; their ethical stances and structures; and the alternative imagesthey embody. Students will be expected to spend at least 10 hours in such worlds as part of the course.

General Education: Humanities (GH)

CMLIT 19N: Being in the Universe

3 Credits

Being in the Universe considers three fundamental questions of human existence from both humanistic and scientific perspectives: (1) What is the nature of our universe, and to what extent are creatures like ourselves a predictable consequence of it? (2) What is the nature of time, and what does it mean to be a conscious being living our lives through time? (3) What would it mean for humans to be alone in the Galaxy or the universe, or alternatively, not alone? "Being in the Universe" is an integrative GH+GN GenEd course. The course's three major units cover the following topics: (1) We discuss cosmology and religion as human enterprises, as well as the history of science; (2) We study the basic scientific theory of the Big Bang universe, and consider its implications for human life; (3) We address contemporary theories of the multiverse from scientific, philosophical, and literary perspectives; (4) We consider the thermodynamic and relativistic theories of time, and the basic philosophical approaches to time, and discuss the implications of these for our ordinary human experience of the past, present, and future; (5) We discuss the history of life in the universe, the possibility of life on other planets, and the social, religious, and imaginative reactions to those possibilities in literature and film.

CMLIT 83: First-Year Seminar in Comparative Literature

3 Credits

International topics in literature and culture; each seminar will have a specific topic as announced (see the Comparative Literature Web site). CMLIT 083S First-Year Seminar in Comparative Literature (3) (GH;FYS;IL) (BA) This course meets the Bachelor of Arts degree requirements. One of the most important trends of our time is the increasing emphasis on internationalism and globalization. This course offers an international, intercultural approach to the study of literature, crossing the boundaries of time, place, nationalities, languages, and cultures. The range of literature taught in Comparative Literature as a discipline draws from every continent of the globe and from the ideas, experiences, and inspiration of women and men across thousands of years. With an entire
world of literature to choose from, the content of the course varies with the expertise and interests of the faculty member. Sample topics include "Literature and Illness," "Literary Reflections of Biblical Themes," "The Power of Literature to Change Our Lives," and "America Seen Through Foreign Eyes." Each seminar focuses on a specific topic that highlights the nature of literary study and research, presents debates in the discipline, and opens the way to further investigations. Topics for each semester are posted on the department's website. At the end of the seminar, students will be acquainted with representative texts from multiple literatures, with the methods of comparative literature study, and with selected important literary genres, themes, periods, and styles. This seminar can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the Intercultural/International Competence requirement, and the first-year seminar requirement. Students will have gained experience in writing, speaking, information synthesis, and international approaches. The seminar will help prepare students for a variety of additional courses in literature and the humanities generally. In addition to the academic topic of this course, students should gain a general introduction to the University as an academic community, including exploring their responsibilities as members of that community. They should also develop an understanding of the academic tools and resources available to them, including the opportunity to work with faculty and other students who share their academic interests.

CMLIT 100: Reading Across Cultures

3 Credits

Comparative approaches (studying international literary periods, themes, genres, etc.) and principles of literary interpretation introduced through readings representing various cultures. CMLIT 100 Introduction to Comparative Literature (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 100 is an introductory course to the discipline of Comparative Literature. The course is built around a central theme (or series of themes) and the reading assignments are chosen to complement this central concept of the course. Past themes have included "Literatures of the Body," "Mortality and Immortality," "Close Encounters Africa and the West," "Knowledge and Power," among others. Through various traditional (books) and non-traditional (film, multimedia, hypermedia) texts from around the world, students will develop the ability to analyze literature in different ways. Students will examine the works both within their individual and diverse cultural contexts, and in their relationship to broad or universal themes that transcend the boundaries of time and place. As an introductory course, CMLIT 100 is intended to lay a solid foundation for further study in any college-level courses on cultures or literature. Through an examination of a wide range of world literature, we will explore the practical aspects of what it means to deal with literary works in a comparative global context. The course is intended to help you develop your analytical and comparative skills and to simultaneously introduce you to a wide variety of interesting world literatures. Students are evaluated on essay exams, in-class discussion, group projects, and a final comprehensive exam/essay. Evaluation may also include web-based activities, on-line discussion and written student journals/reaction papers. Note CMLIT 100 is a required course for students intending to major in Comparative Literature and is recommended for students in other humanities fields. General Education students are also encouraged to enroll. The course fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the General Education United States and International Cultures requirement.

Bachelor of Arts: Humanities International Cultures (IL)
General Education: Humanities (GH)

CMLIT 101: Race, Gender, and Identity in World Literature

3 Credits

Identity and race, gender and heritage, centrality and marginality, self and other, as expressed in literary works from around the world. CMLIT 101 The Theme of Identity in World Literatures; Race, Gender, and Other Issues of Diversity (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines issues of race, gender, religions, and ethnicity as expressed in literary, social, and cultural contexts. We will address these questions in works from a variety of traditions and time periods. Literary works from around the world show a wide range of response to the "other," including the idealization of difference as exotic, fear of difference as threat, the desire to suppress difference or force it into conformity, the recognition of difference within ourselves, etc. The scope includes authors who are themselves members of racial, sexual or ethnic groups with which you may be less familiar. You will also consider the question of who and what constitutes identity as perceived by oneself and by others. CMLIT 101 is one of the many choices of survey courses, which count towards the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement. In general, this course will be taught in the active-learning mode, featuring in-class discussion, writing projects and web-based activities. Specifically, Writing, speaking, self-expression: Students will write essays and/or papers, which require the analysis
and comparison of various literary works from the standpoint of identity issues. Engagement in collaborative learning and teamwork: Small discussion groups both in-class and online will facilitate learning as a group activity. Activities may include group in-class presentations. Application of intercultural/international competence: Students will deal with a wide range of texts from around the world and compare/contrast the texts focusing on issues of diversity. This course, by definition, deals directly with issues of inter- and intra-cultural identity. Dialogue pertaining to social behavior, community, and scholarly conduct: The discussion of diversity issues is related to students' perception of their own identity and reaction to the notion of the "other." Implicit in this discussion is the issue of "community" creation of the "other;" and individual response to the community.

CMLIT 106: The Arthurian Legend
3 Credits

The growth and development of the legend of King Arthur, from medieval Europe to modern Japan. This course meets the Bachelor of Arts degree requirements. This course is designed to familiarize students with the legends about and surrounding King Arthur and the Round Table fellowship. Through a series of readings, students will survey the development of the legends of Arthur from their beginnings in early medieval Europe to their modern adaptations in many cultures around the world. The Arthurian legend is an ideal vehicle for showing the ways in which literary works capture and express changing value systems in different cultural and historical situations, and thus the course is a good example of comparative (international) approaches to literary study. Classes will discuss the changing cultural ideals represented, the different characterizations of the central figures, and the literary, techniques employed. Lectures and discussions will be supplemented by overheads, slides, music, and films or film clips dealing with Arthurian themes. Throughout, the course will ask why and how the stories of Arthur and the Round Table fellowship have captured the imagination of artists, political and religious leaders, and readers throughout the ages and around the world. Finally, it will ask how the practical concerns of daily life are developed in this literature-for example, how does this highly imaginative literature address practical concerns such as striking a balance between one's short-term goals and personal gratifications, and one's long-range obligations to other people? Means of evaluation will be selected from the following (always including writing): essay exam questions, short answer and objective questions, reading journals, quizzes, in-class discussion, group projects (including web sites), research and critical papers, and final comprehensive written exam. CMLIT 106 is not required for the Comparative Literature major but may be selected to fulfill one of the course requirements for the major or the World Literature Minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 107: Exploration, Travel, Migration, and Exile
3 Credits

An international selection of journey narratives, from the real to the imaginary; travel narratives as critiques of self and society. This course fulfills requirements for the Comparative Literature major, the World Literature minor, General Education Humanities, Bachelor of Arts Humanities, and General Education International/Intercultural Competency. Student performance in this course will be measured in a variety of ways, including some or all of the following (always including writing and discussion): -in-class and/or take-home essays/exams -literary diaries or reaction papers -in-class and/or online discussion/participation-individual and/or group in-class presentations/projects -research or topic papers

CMLIT 108: Myths and Mythologies

3 Credits

World mythology: myths primarily of non-Western cultures, based on selected areas and traditions around the world. CMLIT 108 Myths and Mythologies (3) (GH; IL)(BA) This course meets the Bachelor of Arts degree requirements. This course offers a survey of several different cultural traditions as expressed in myth, as well as discussion of myth in its literary, social, geographical, political, and religious contexts. Various theories of the evolution and analysis of myth will be examined. Mythological traditions from around the globe will be compared in order to determine qualities which they share and examine ways in which they are unique. This course will help you see the world in new and exciting ways, based on the wide variety of global myths. At the same time, you will consider the permanent human issues which connect all of these traditions to each other, to the modern world, and to you. CMLIT 108 is one of the choices of survey courses, which count toward the Comparative Literature major and the World Literature minor. This course also fulfills the General Education humanities requirement, the Bachelor of Arts humanities requirement, the United States and International Cultures requirement, or the B.A. other cultures requirement.

CMLIT 109: Native American Myths, Legends, and Literatures

3 Credits

Myths, legends, and literatures of Native American cultures. CMLIT 109CMLIT 109 Native American Myths, Legends, and Literatures (3) (GH; GI)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 109, Native American Myths, Legends, and Literatures, will allow you to read many traditional tales and selected works of modern literature representing a variety of American indigenous peoples. We will be examining the ways in which the myths, legends, and literary works reflect the cultural values and religious beliefs of the tribal nations from which they derive. You will learn how to read critically, analyzing symbols, archetypes, and motifs through the comparison of selected tales to others from the same and from different cultures, allowing you to recognize the rich diversity and unique oral traditions of Native American culture. You will also examine various geographical, historical, political, and social conditions which contribute to myth-making. Through the application of various theories of myth analysis, you will also synthesize the information learned about various Native American traditions with a view toward understanding the distinctive identities of Native American cultures, including where applicable their position as minority cultures, and also seeing their participation in universal human beliefs and concerns. Typically, students will be evaluated on any combination of papers, tests, class participation and/or projects, and legend-collection assignment. CMLIT 109 may follow upon CMLIT 108. However, each can be taken separately. CMLIT 109 can serve as a foundation for other courses dealing with the literatures of the Americas or for other courses dealing with minority literatures and cultures. Some students would take CMLIT 109, Native American Myths, Legends, and Literature, to fulfill the three-credit cultural diversity requirement; others would use it for the general education humanities slot. Liberal Arts majors could select it as their “Other cultures” course. CMLIT 109 is not required for the CMLIT major but may be selected to fulfill one of the course requirements for the major or form part of a student’s choices for the World Literature minor.

CMLIT 110: Jewish Literature: An International Perspective

3 Credits

Literature of the Jewish tradition in various cultures and contexts, such as Europe, Israel, Islamic countries, and the Americas. J ST 131 (CMLIT 110) Jewish Literature: An International Perspective (3) (GH; US; IL) (BA) This course meets the Bachelor of Arts degree requirements. CMLIT 110 (J ST 131) will provide an introduction to the multiple worlds of Jewish experience and the different literatures they continue to inspire. Jewish literary creativity has varied widely with the personal and communal experience of writers in many parts of the world, and in many different time periods. Readings usually range from the first Jewish literary text, the Hebrew Bible, to twentieth-century works, including writings about the Holocaust. The course typically includes units such as Jewish writing and culture in Eastern Europe, in the Americas, in Spain during the Middle Ages, and in Israel and the Middle East today. The material may be organized chronologically, thematically, or by regions or languages. Texts that critique or apparently suppress Jewish identity, as well as texts with representations of Jews by writers of other heritages, may be included for comparative purposes. We will include writings by Jewish authors who have written in languages usually associated with Jewish tradition (such as Hebrew and Yiddish) and in other languages (such as Spanish, Arabic, German, English, etc.). Topics discussed in the literature may focus on questions of Jewish identity and continuity, the situation of Jews as a minority people, the immigrant and diasporic experience, representations of the Holocaust, and the establishment of Israeli culture as a mixture of several traditions. We will question generalizations about the meaning of “Jewish” by showing the wide range of characteristics associated with Jewish literary productions, and the great diversity of depictions of Jews and Jewish lifestyles, in different times and places. In addition to our primary focus on literary texts, we may include examples of other cultural productions (film, music, the visual arts, philosophy, etc.). All offerings of the course include writing assignment and discussion in the evaluation methods. The syllabus often includes 2 or 3 midterms (with essay questions); a final exam, paper, or project; oral presentations; participation in online discussions. CMLIT 110 (J ST 131) counts towards the Comparative Literature major and the World Literature minor. No prior knowledge
Introduction to Global Drama, Theatre, and Performance will enable students to discover the power and excitement of drama in a global context. Students will encounter a variety of cultural contexts as they observe how playwrights portray local histories and lifestyles, in settings from many parts of the world. The course will offer (1) an introductory overview of concepts and terms associated with understanding drama and the technical aspects of theater. It will present (2) traditional dramatic forms such as tragedy, comedy, history play, allegory, Noh, etc., as seen in plays prior to the twentieth century; and (3) the dramatic contributions of multiple cultural groups in the U.S., with African American, Asian American, Latino, and other U.S. plays seen not in isolation, but in relation to world drama. (4) the course will consider ways in which drama, as a form of world literature, can have an international and intercultural impact, both in earlier periods and recently, when global circulation and international collaboration are increasingly frequent. Finally, (5) this course will look at world drama and theater from a design and performance perspective. Class work may include lectures or presentations by the instructor, presentations by students, web based activities, and focused discussions.

CMLIT 120: The Literature of the Occult

3 Credits

Important literary works dealing with witchcraft, demonology, vampirism, ghosts, and related concepts, from biblical times to present. CMLIT 120 The Literature of the Occult (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 120 is the study of literatures of the occult. Through readings of creative and critical works, you will develop an enhanced awareness of the variations among cultures and historical periods in accepting, fostering, tolerating or sometimes suppressing unorthodox traditions. Our range of readings from world literature will show that what is rejected or scorned in one cultural context may be tolerated or even honored in another. You will also explore the social, political, ethical and religious implications of “occult.” The course will be designed to compare various manifestations of the occult in literatures from around the globe and throughout history. You will explore issues of difference, and will develop an awareness of the tendency to demonize the ‘strange’ and ‘inaccessible.’ Through various texts from around the world, you will develop the ability to analyze literature in different ways. Readings will be examined both within their cultural context, and in relation to widely found or perhaps universal themes of the occult which transcend the boundaries of time and place. CMLIT 120 is one of the many choices of survey courses which count towards the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, or the United States and International Cultures requirement.

CMLIT 130: Banned Books: International and Comparative Perspectives

3 Credits

The world of banned books, their history, and their politics, studied comparatively and internationally. CMLIT 130 Banned Books: International and Comparative Perspectives (3) (GH;IL) This course examines one of the most documented events in the history of book reception—the banning of books. Bannings provide a useful window onto the myriad functions of culture in social identity formation. In order to understand how and why offense is given and taken, students will learn to place texts in a specific context of their historical production and reception and also to extrapolate connections between disparate moments when taboos were named. Incorporating examples from a range of global systems of censorship, the course examines differences in the modes and effects of repression and the sometimes surprising connections between church and monarchy, fascism and democracy. This course raises the following questions: What has censorship been justified? When, if ever, is censorship justifiable? What are the grounds on which censorship can be judged successful or incomplete? Who censors? Who is censored? What are the local categories of censorship? Though books are banned for reasons of blasphemy, sedition, and obscenity in various guises in several cultures, are these global categories? How do writers write against a ban? How do they write within it? What are the roles of importation, technologies of circulation, and geography in the censorship of texts? How do border-crossings and forms of miscegenation offend? Is there a unifying aesthetics to books that offend? Class work emphasizes discussions, group work, writing exercises, and student presentations. This participatory approach is intended to deepen students’ appreciation of the works and the historical, literary, and ethical problems they present. The course will help students understand value systems and historical contexts in which they were produced and in which they caused offense. It will also ask students to draw connections between seemingly unrelated moments of offense in order to assist students in developing both analytical and expressive abilities. The course is designed to be suitable for all students, whether or not they have previously studied literature or comparative literature. International Cultures (IL) General Education: Humanities (GH)

CMLIT 131: Crime and Detection in World Literature

3 Credits

Issues of ethics, truth, justice, and social order as embodied in crime and detective literature, presented in comparative contexts. CMLIT 131 Crime and Detection in World Literature (3) (GH;IL) This course studies the origins and development of crime and detective literature from an international and interdisciplinary perspective. Beginning with early Greek tragedies, the course traces literature’s investment in issues of crime, violence, detection, forensics, and social justice through a variety of historical and cultural contexts; this may include the classical era, the early modern period, the Enlightenment, the industrial era, and the modern/contemporary world. Some of the questions addressed may include reigning myths about law and order; the rise of urban societies and mass culture; the construction of the detective figure, the witness, the criminal, and the victim as models of subjectivity; issues of gender and sexual violence; and the nature of justice. Students will learn about the history of the idea of crime and its relationship with literary form. They will develop ideas about the contribution of literary thinking to ideas of social justice, as well as a theory of genre and its development over time; they will recognize regional, cultural, and historical differences and forms of change that affect the intellectual development of literature and detection alike. They will practice and master these skills through class discussion, short papers, and/or quizzes and exams. International Cultures (IL) General Education: Humanities (GH)

CMLIT 132: Nobel Prize Literature

3 Credits

Introduction to Nobel Prize winning literature and the culture of the prize in international and historical context. CMLIT 132 Nobel Prize Literature (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will provide an introduction to Nobel prize-winning literature. Students will learn about the authors and their works in cultural and historical context. Readings will cover several genres (such as poetry, drama, short story, and novel) and will include authors from an array of linguistic and cultural traditions (such as African, Latin American, Middle Eastern, European, North American, and Asian). In addition to reading primary literature, students will enrich their understanding of literary history by exploring secondary material such as essays, short biographies, reviews of author’s works, and the authors’ Nobel Prize acceptance lectures. The course will begin by introducing Alfred Nobel, founder of the Nobel Prize, and by surveying the parameters guiding how the prizing has been awarded since its inauguration in 1901. Further readings may be organized temporarily or thematically, but will be structured so that students develop a global perspective, allowing them to understand the variety of cultural contexts that have inspired the creative works under study. By examining the primary literature in connection with developing trends in prize culture, students will investigate such topics as pacifism and optimism in international prize culture, narrative and rhetorical techniques, the formation and expression of identity, changing gender roles and social expectations, the development of global Englishes, the emerging notion of world literature, and the changing climates of censorship and freedom of expression. Class work includes some lecture but emphasizes guided discussions, group work, short writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the works, to assist students in developing analytical and expressive abilities, and to encourage students to pursue individual areas of interest by researching cultural norms and historical situations in a range of times and places. Through critical reading, group discussion, short writing exercises, and group presentations, students will hone skills for evaluating modes of cultural production and valuation. Evaluation will be through means such as in-class presentations, short writing assignments or quizzes, and a final exam or final paper. The course is designed to be suitable for all students generally interested in literature and the globalization of culture. Prior study of literature is not required and all materials will be available in English. Bachelor of Arts: Humanities International Cultures (IL) General Education: Humanities (GH)
CMLIT 140: Literature and the Other Arts: International and Comparative Perspectives

3 Credits

A comparative, international examination of the relationship between literature and non-literary art forms. CMLIT 140 Literature and the Other Arts: International and Comparative Perspectives (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. All around the world, literature and other forms of creative expression are related in many fascinating ways. Writers and artists often find inspiration from each other, and some artists work across a wide spectrum of genres and embody several identities at once. In different times and places, how have writers and artists reacted to critical events or lifecycle experiences? What techniques have writers, artists, composers, and choreographers shared? In examining a broadly international range of materials, in this course we will consider (1) how artists and writers depict common themes such as nature, death, aging, love, and more; (2) ways in which art and literature relate to each other; and (3) how literature and other arts are influenced by, and in turn exert influences upon, their cultural and social contexts. Using a global perspective, we will examine relationships between literature and a variety of artistic forms, such as painting, photography, comics, film, theatre, opera, music, sculpture, and more. Students will practice enabling skills for reading across genres, media, and cultures, and for expanding their skills in analyzing and synthesizing information, their awareness of a wide variety of value systems and cultural traditions in different times and places, and their horizons of literature in global contexts. Evaluation methods will typically include class participation, short essays or papers or projects, and exams. This course can be used as a course for the major in Comparative Literature or the minor in World Literature.

International Cultures (IL)
United States Cultures (US)
General Education: Humanities (GH)

CMLIT 142: The Psychology of World Literature

3 Credits

A comparative, psychological approach to world literature from the perspectives of writer, narrative, character, and reader. CMLIT 142 The Psychology of World Literature (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course explores various psychological approaches to the discussion of literature from the perspectives of writer, narrative, character and reader. Can authors, narrators, and fictitious characters be psychoanalyzed? To what extent do cultural variants affect a psychological approach to literature? Are there psychological universals that transcend time and culture? How does an awareness of psychology affect the reader? All of these issues will be discussed and compared with an eye to speculating the ways in which the human mind creates literature and literature impacts the human mind.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 141: Religion and Literature

3 Credits

Major religious themes as expressed in literary masterpieces; sacred texts from various cultures read as literature. CMLIT 141 Religion and Literature (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 141 is an introduction to literature, to religious writing, and to the many ways in which literature draws upon or interacts with religion. Among the many possible relationships between religion and literature are: straightforward dramatization of sacred texts; allegory; expression of mystical experience; exploration, dramatization, and individualization of theological issues; the creation of literature to promote or to meet the needs of piety; and utilization of religious imagery and symbolism as a poetic resource. Readings will include sacred texts, and also literature that draws upon or responds to sacred texts and religious traditions. It may also include avowedly secular literature that shows some relationship to religious tradition, and even literature questioning or critical of specific religious traditions or their adherents. Students will read works from a range of historical periods and world societies, both Western and non-Western. Students will be evaluated on essay exam questions, short answer and objective exam questions, reading journals, quizzes, in-class discussion, group projects, research and critical papers, and final comprehensive written exam. CMLIT 141 is not required for the CMLIT major but may be selected to fulfill one of the course requirements for the major or for the World Literature Minor.
a balance of context and close reading, where stories are studied both for what they say and how they say it.

CMLIT 153: International Cultures: Film and Literature

3 Credits

Comparison of narrative techniques employed by literature and film in portraying different cultures, topics may vary each semester. CMLIT 153 CMLIT 153 International Cultures Through Literature and Film (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will compare narrative and artistic techniques employed by literature and film in portraying different social and cultural environments, which will range widely around the globe and may include Africa and the Middle East, East Asia, and South America, as well as European and North American examples. Students will view approximately twelve to fourteen films and read five to six novels or other texts such as short stories, plays, and poems. The purpose of this course is to have students examine how the selected artists have developed their intentions and their subject matter in their respective medium, literature or film, and to allow students to study modes of narration across different cultures and media. Through a combination of lectures and comparative discussions, students will examine how narrative components, including plot, genre, environment, character, and point of view are developed in films and fiction from diverse cultures. The comparative nature of the course allows students to understand, evaluate, and appreciate both the universal and unique qualities of the human condition. The study of narrative technique will help students develop analytical skills in discussing and writing about the literary and cinematic expression of cultural values. Student performance will be evaluated through means such as midterm and final short answer and essay examinations, a short initial paper (1-2 pages), and a final comparative paper (4-5 pages). The individual instructor may choose to replace or supplement some of these assignments with oral presentations. The examinations and papers will allow the student to demonstrate competency in evaluating and comparing cultures, artists and mediums, and in expressing their ideas.

CMLIT 183Q: From Beast Books to Resurrecting Dinosaurs

3 Credits

In this honors course, we'll explore changing perspectives on life and approaches to studying life. More specifically, we'll examine, through an historical lens, humankind's quest to describe and explain and, ultimately, to expand the diversity of the living world. We begin with early attempts to classify living things, for example, Aristotle and Pliny. We then see how medieval bestiaries appropriated classical ideas about nature while adding to them in the context of Christian history. In the Enlightenment, Linnaeus's taxonomic work provided a new way of naming and systematizing organisms. On the other hand, the nascent scientific methods of Sir Francis Bacon anticipate the shift from the descriptive to the theoretical and mechanistic that accompanied Darwin's first sketch of a phylogenetic tree and the theory of evolution. We consider new theories, methods, and language in our examination of Watson and Crick and the double helix, molecular biology, and genomics. The course concludes with a glimpse at future possibilities enabled by what was studied previously in the course: genetic engineering, synthetic biology, and de-extinction. The course's original structure offers the experiential engagement of the sciences through laboratory experiments and fieldwork along with the workshop and directed discussions characteristic of the humanities seminar. The content and type of "readings" also reflect both areas and include primary and secondary sources in a variety of media. A visit to a natural history museum and/or zoo provides important physical contexts where students learn about type specimens, live specimens, and how scientists today use collections. They will assemble and curate their own zoological collection, juxtaposing various approaches to describing and classifying animals. The integration of the humanities and the sciences into a single course, along with the incorporation of significant experiential work, helps students gain a broad and deep understanding of and appreciation for each of these intellectual disciplines and for life itself.

CMLIT 185: World Novel

3 Credits

Development of the modern novel in the last century (outside the British Isles and the United States); lectures, discussions, readings in translation. CMLIT 185 CMLIT(ENGL) 185 The Modern Novel in World Literature (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. In this course, which is cross-listed with English, students will read examples of the modern novel from around the world. Focusing on novels written outside of America and England, this class will explore the development of the modern novel as a genre across a number of world cultures. As an example, moving from the beginnings of literary modernism (the late nineteenth century) through the early and mid twentieth century, the course will consider works by writers such as the following: Chinua Achebe, Italo Calvino, Albert Camus, Simone deBeauvoir, Fyodor Dostoevsky, Isak Dinesen, Marguerite Duras, Natalia Ginzburg, Herman Hesse, James Joyce, Thomas Mann, Gabriel Garcia Marquez, Kenzaburo Oe, and Marcel Proust. This course will address the ways in which the world novels under consideration constitute examples of various literary forms and styles. The class will examine the
differences and distances between literary movements such as social realism and magical realism, modernism and postmodernism. The goals of this course will be to hone students' critical reading and writing skills while granting them the ability to think about the modern novel as a distinct genre in a comparative global context. Students will be asked to read a minimum of five to six novels, spending an average of two weeks studying each work. They will be asked to complete at least three writing assignments including at least two kinds of writing such as the essay, essay exam, or semester-long reading journal. This course will prepare students for additional college-level literature courses by helping them to develop the analytical skills necessary to analyze complex written texts. This course fulfills a General Education Humanities requirement.

CMLIT 189: Modern Drama

3 Credits

Playwrights who set the world's stage for twentieth-century drama; issues that continue to shape the contemporary theatrical world. CMLIT (ENGL) 189 The Founders of Modern Drama (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT/ENGL 189 will constitute a wide-ranging study of plays by authors often credited with the making of modernist drama. The class will approach these plays from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Ibsen, Strindberg, Chekhov, Shaw, Wilde, Galsworthy, O'Neill, Beckett, and Yeats. Topics under consideration will vary from class to class but may include a chronological introduction to the development of modern drama, a consideration of a principal theme or themes in modern drama through a number of plays, or a consideration of plays in the context of historical events or formal or aesthetic elements. Time allotted for the study of the works under consideration will vary. This class will prepare students for advanced courses in dramatic literature as well as other academic courses that engage in the verbal and written analysis of complex written texts. The course may be used as an English or Comparative Literature major credit or as credit toward the English or Comparative Literature minor.

CMLIT 191N: Introduction to Video Game Culture

3 Credits

This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will survey major debates over the meaning and value of video games, and study some of the major theoretical terms and perspectives developed to elaborate the cultural and sociological value of video games. The course extends students' skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production. Because the course is historically focused, it will spend significant time looking at the differential development of video games in three major regions: the United States, Europe, and East Asia (especially Japan).

CMLIT 240Q: Artistic Patronage in Europe

3 Credits

This course surveys the institutions and social networks in which European fine arts were created, consumed and critiqued. Beginning with the medieval period and ranging to the early 20th century, the course will examine the variety of communities where public and private often intersected and which sponsored innovations in the arts. Often indexing social movements and political change, such communities include convents and cathedrals, royal academies and courts, coffee houses, salons, and theaters. Artists, performers, patrons, politicians, journalists, and others collaborated and competed in these spaces. Such communities could embody political and economic power, or foster resistance to it. This approach to the history of the arts in western culture puts the focus less on the individual creative genius of great composers, writers, painters, and sculptors, and more on the social exchanges and institutions that sponsored and received their work. Such an approach brings to light particularly the ways in which women played significant roles in the production and reception of culture: as salon hostesses,
Comparative Literature (CMLIT)

patronesses, and divas, women often enabled and enacted cultural production. Some examples of particular units of study might include: the German convent of Hildegard of Bingen (1098-1179), where monophonic chant and allegorical morality plays developed; the Mantuan (Italy) court of Isabella d'Este, the first lady of the world (1474-1539) where the roots of the madrigal began and where notable painters found support and sponsorship; the French salons of Mme. Geoffrin (1699-1777) and Mme. de Staël (1766-1817); and the student residences in Madrid where avant-garde writers and artists interacted. Each unit will also consider the relationships between the aesthetic norms and values of a period and the economic and political realities of sponsorship. The course will require that students attend at least one musical performance or concert held on campus during the semester and complete a brief writing project based on that experience. This requirement will encourage students to think about their own university as a contemporary space of cultural sponsorship.

CMLIT 403: Latina/o Literature and Culture
3 Credits
Literary and other forms of cultural expression (film, music, art, and theater) are compared across different Latina/o communities. LTNST (CMLIT) 403 Varieties of Latina/o Cultural Expression (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This course provides students with a multi-faceted comparative view of Latina/o literature in relation to other forms of cultural expression. First, the course presents a variety of cultural expressions to students in an effort to teach them the different ways that form affects content. Each text will be studied in its historical context as well, thereby providing students with a sense of Latina/o cultural history. Second, this course compares works from within the same genre, allowing students to recognize the ways that Latina/o culture has worked to build identity, to deconstruct identity, and to challenge cultural stereotypes. Such comparison further facilitates comparison of the ways that different cultural forms have been used by diverse Latina/o communities. Third, this course compares cultural forms, allowing students to see how Latina/o poetry affects
Prerequisite: 3 credits in the humanities or in any LTNST course, or 4th-semester proficiency in Spanish

International Cultures (IL)

CMLIT 410: Literary Translation: Theory and Practice
3 Credits

Emphasizing literary translation, a study of the theoretical and practical problems encountered in the processes of translation, transmission, and interpretation. CMLIT 410 Literary Translation: Theory and Practice (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the history and practice of literary translation, ranging across space and time to provide a comparative, international perspective. It addresses such issues as the difficulties of literary language; theories of translation and translatability; theories of semantic equivalence; alternative modes of translation including sound- and graph-translation; and the history of important moments of translation in shaping the literary imagination. No second language is required, but students interested in learning how to translate literature may be given assignments allowing them to practice important skills connected to that task.

Prerequisite: 18 credits in a foreign language
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 415: World Graphic Novels
3 Credits

Critical analyses of form, genre, medium, and discourse of the graphic novel and its historical precedents in an international and comparative context. CMLIT 415 World Graphics Novels (3) (GH; US;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course considers the graphic novel (also known as graphic fiction, comics,
or sequential narrative) as an emergent literary medium and global phenomenon. The course focuses on texts that engage issues of contemporary identity, ethnicity, sexuality, technology, and/or history (personal, family, and national). These graphic novels engage these issues through the medium of text joined with image. This course explores the aesthetic of sequential narrative, its methods of production and consumption, and its place in a contemporary culture of reading.

Assigned texts include titles from the United States, France, Japan, Italy, Canada and Norway. All texts will be read in English translation.

**Prerequisite:** 3 credits in literature

Bachelor of Arts: Other Cultures
International Cultures (IL)

CMLIT 424: Transnational Korean Literature

3 Credits

Exploration of seminal Korean texts, including poetry, fiction, autobiography, and criticism, from the early twentieth century to the contemporary era. This course provides a comprehensive overview of modern Korean literature within a transnational context. As we learn how to critically analyze seminal Korean texts, we will locate them in the social, political, economic, and cultural conditions under which they were produced and received. In grappling with some of the fundamental issues they raise, including colonialism, migration, national division, war, gender relations, developmentalism, urbanization, democratization, and contemporary consumer culture, we will also seek to situate these writings in the Korean vernacular within the larger context of global modernity. Rather than take Korean literature and global modernity as given or apart from each other, we will attend to their intersections by raising such questions as: How did modern experiences, constructed through the interface with unfamiliar Others, change preexisting ways of writing and reading? How did foreign occupations affect the formation of a national literature? In what ways do Korean writers' representations of the inter/national events and phenomena on and beyond the Korean peninsula at once enrich and complicate empirical investigations into modern histories of Korea, East Asia, and the world? In an increasingly borderless world, can we draw a boundary around what is called "Korean" literature? In parallel with these questions, we will further discuss why and how to engage in literary practices in the current age of digital reproduction. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

**Prerequisite:** KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4; CMLIT 4; 5th Semester standing
Cross-listed with: ASIA 424, KOR 424
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CMLIT 425: Global Korean Cinema

3 Credits

Exploration of Korean cinema from the early twentieth century to the present, with an emphasis on its global/local dynamics. This course offers an introductory overview of Korean cinema. As we trace its history from the colonial period to the current "Korean wave," we will also engage with film criticism, the trans/national contexts of film productions, the particular aesthetics of selected auteurs/genres, and local/global receptions of Korean cinema. Our discussion of formal elements and key issues featured in these films; modernity, colonialism, division, nation, class, gender, identity, tradition, ideology, desire, violence, and migration, among others, will be informed by readings of secondary sources and theoretical works, as well as literary materials produced during the same period. Throughout our analyses, we will seek to contextualize the cinematic texts within moments of major shifts not only in modern Korean history but also in the transnational film industry and screen culture. In pursuing a broad and detailed perspective of Korean cinema, this course will ultimately enrich, and simultaneously complicate, our understanding of Korea, cinema, and the world. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

**Prerequisite:** KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4; CMLIT 4; 5th Semester standing
Cross-listed with: ASIA 425, KOR 425
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CMLIT 429: New Media and Literature

3 Credits

New media literary genres; critical discussion of creative works in digital media.

Cross-listed with: ENGL 429
Bachelor of Arts: Humanities

CMLIT 430: Global Modernisms

3 Credits

A comparative investigation of global Modernisms, with an emphasis on the relations between modernism, modernity, and modernization.

CMLIT 430 Global Modernisms (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course explores and reassesses, comparatively, the ironies, conundrums, paradoxes, and the self-defying and self-engendering strategies of Modernism's relentless activity as aesthetic movement and as complement to modernity. Readings from theoretical texts and literary works across cultural
contexts, international traditions, and linguistic frontiers. Students will learn how to do critical analyses of written texts, and how to analyze and write about the history of aesthetic and particularly literary modernism and the concepts of modernism, modernity, and modernization. Students will leave the course as better critics of literary work and with an increase ability to perform literary and cultural analysis that relies on a solid grasp of relevant historical and theoretical contexts. Grading will involve a combination of class discussion, writing assignments, and exams, depending on class size and instructor preference.

Prerequisite: 3 credits in literature
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 435: Cultures of Globalization
3 Credits/Maximum of 3

Cultural and literary effects of the process of globalization, with an emphasis on world literatures and transnationalism. CMLIT 435 Cultures of Globalization (3 per semester/maximum of 6) (IL)This course focuses on the cultural and literary effects of the process of globalization, with an emphasis on world literatures and transnationalism. It invites students to think about the ways in which the globalization of culture, politics, and/or the economy affects literary production, and the ways in which such literary features as genre, form, medium, style, and theme in turn reflect and attempt to shape our understanding of the global and its becoming. The course will have a significant focus on primary material (literature, film, other media) and secondary material (philosophy, journalism, criticism, and so on). It will introduce students to the main theoretical concepts that govern thinking about globalization and global culture, as well as to important literary and cultural texts that articulate those values. It will prepare them for further research in comparative literary studies and in the critical history of globalization.

Prerequisite: 3 credits of literature
International Cultures (IL)

CMLIT 438: Fantastic Worlds: International and Comparative Perspectives
3 Credits

A comparative, international study of fantastic worlds in literature and visual culture. CMLIT 438 Fantastic Worlds: International and Comparative Perspectives (3) (IL)This course will explore a wide range of genres, periods, and nations, through literary and visual texts from the 19th century to contemporary eras, and from Asia to Americas. Students will examine various types of literary techniques and concepts, such as magic realism, grotesque realism, the absurdity, the fantastic, etc., and learn how texts best capture/grasp the nature of realities; in their creation of worlds. Students will develop more profound understanding of literatures through global lenses, develop and refine critical thinking, in speech and writing, and comparative methods of literary analysis, and develop communications skills in essays, response papers, class discussions, and research papers. Instructional objectives: 1) Students will develop more profound understanding of literatures through global lenses; 2) Students will develop and refine critical thinking, in speech and writing, and comparative methods of literary analysis; 3) Students will develop communications skills in essays, response papers, class discussions, presentation, and research papers

Prerequisite: 3 credits in literature
International Cultures (IL)

CMLIT 440: War Stories: The Literature of War
3 Credits

War Stories: The Literature of War (US/IL): an exploration of representations of war in culture. This course considers how war is represented in a variety of cultural artifacts including literature, film, television, video games, music, art, etc. What stylizations, omissions, and blindnesses are necessary in order to represent the reality or the surreal reality of war? Readings are from the Classical period (the Iliad) to the current wars. Issues of memory, of traumatic reconstruction after the fact, and of the glorification of war as a necessary aftermath will complement some specific readings and films about (and often against) war. Texts and focus may vary but can include novels, film, video games, television, comics, social media, music, art, and more. Some of the major objectives of this course are to identify formal and aesthetic aspects of literary texts dealing with the topic of war and its aftermath, including genre, period, style, theme, language, and narrative structure as well as analyze those texts and other artistic media within a comparative or global context. We will also compare written and visual texts from different cultures, regions, languages, time periods, and genres that deal with the concept of war.

International Cultures (IL)
United States Cultures (US)

CMLIT 446: Postcolonial Literature and Culture
3 Credits/Maximum of 3

Postcolonial literature and theory in a comparative and international context. CMLIT 446 Postcolonial Literature and Culture (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. Taking a comparative and transnational approach, this course will provide an advanced introduction to the field of postcolonial literature and theory. Readings will include the foundational anti-colonial writings of the early twentieth century, the postwar literature of decolonization, and the most recent literature on cultures of globalization. Themes to be discussed may include nationalism, subalternity, neocolonial formations, migration, and cultural translation. In general, this course will be taught in the active learning mode, featuring in-class discussion, writing projects, and group presentations. CMLIT 446 is one of the many courses, which count towards the Comparative Literature major and the World Literature minor.

Prerequisite: 3 credits in the study of literature
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CMLIT 448: Literary Cultures of Buddhism
3 Credits

Comparative exploration of various Buddhist literary cultures, from the classical Indian subcontinent to modern movements like the Beats and dalit writing. CMLIT 448 Literary Cultures of Buddhism (3) (IL) This course will provide an in-depth exploration of various cultures of Buddhist literary production. Readings will cover a broad temporal and geographical range. Prior study of Buddhism or literature is not required and materials will be in English. Students will learn about major genres of Buddhist literature, such as sutras (scripture), j?taka (stories of the Buddha and his previous incarnations), hagiography, miracle tales, religiously inspired poetry,
and k?an meditational riddles. The course will also examine the various forms into which contemporary authors have adapted these materials (such as manga, novels, memoirs, and film). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the literary cultures that gave rise to the works under study. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. The course is designed to be suitable for all students generally interested in religious cultures of writing, in Buddhism, or in literature, whether or not they have previously studied in any of these areas. The Comparative Literature major requires a certain number of electives at the 400-level, of which this could be one, depending on its content. Further, the course is designed to count as General Education and as an IL (International) course. It will be taught, as feasible, every 2-3 years with an enrollment of 20-30 students. With the addition of supplementary reading and research assignments, the course may also be suitable for certain graduate students. This course would benefit from access to a laptop and digital projector.

**Prerequisite:** 3 credits in literature
International Cultures (IL)

CMLIT 449: Literary Cultures of Islam
3 Credits/Maximum of 3

Comparative discussion of the literary cultures of Islam from the seventh century to the present. CMLIT 449 Literary Cultures of Islam (3-6) (IL) (BA)
This course meets the Bachelor of Arts degree requirements. This course is an advanced introduction to the literary cultures of the Islamic world, from the seventh century to the present. No prior knowledge is required. Works will be read in translation. Students will study the foundational text of Islam, the Quran, as a literary text, and learn about major genres of Islamic literatures (ghazal, masnavi, and maqamah, among others). They will also examine how these genres have been adapted in modern literature and media (novels, memoirs, and film). Supplementary historical readings will be provided to contextualize the primary texts. CMLIT 449 is one of the many courses which count toward the Comparative Literature major and the World Literature minor.

**Prerequisite:** 3 credits in the study of literature
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CMLIT 453: Narrative Theory: Film and Literature
3 Credits

This course explores the relationships between language and the medium of film through analysis of adaptations between other mediums and the cinema, and by analysis of the influences between the discourses of literature(s) and the cinema. The course has broad applicability not only to students of literature and students of the cinema, but to all students who need to understand ways to compare relationships between disparate communications and artistic media. Students begin by understanding techniques and theories of both cinematic and literary analysis. Then, they explore theories of adaptation between media, including general theories of artistic and cultural influence. Among the media students may encounter in addition to literary fiction and narrative cinema are the graphic novel, creative nonfiction, drama, poetry, journalism, video games, the documentary cinema, and the experimental cinema. Students work through case studies of adaptation in literal terms, such as the transformation of graphic novels into narrative cinema. Students also work through case studies in influence, in which distinct art and media discourses affect one another, as in the relationship between videogames and the cinema. Students study transmedia storytelling, in which core narratives are expressed in different media. Students also study transcultural and transnational storytelling, in which adaptation and influence are conducted across borders. Students study questions of representation, particularly of difference (race, class, sexuality/gender) and cultural specificity. Students learn the historical and institutional settings which have conditioned these intermediations. The economics of literary and media production and the circumstances of reception of distinct media are explored. Students will experience classical and non-classical forms of storytelling, as well as fictional and non-fictional discourses. In this course, students will meet ancillary concerns in adaptation, such as translation, dramaturgy, and genre scholarship. Students express their individual conclusions in summary projects which apply theory to particular instances of adaptation and influence between media. These projects may include creative work, and multimedia texts which enact as well as analyze adaptation. As advanced scholars in the disciplines of literary and cinematic studies, students are expected to synthesize previous learning in these fields in their summary projects.

**Enforced Prerequisite at Enrollment:** COMM 150 or ENGL 15 or ENGL 30 or ENGL 137H or CAS 137H
Cross-listed with: COMM 453
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 455: Ethics, Justice, and Rights in World Literature
3 Credits

Concepts of ethics, justice, and rights, appearing in world literature and/or film. CMLIT 455 Ethics, Justice, and Rights in World Literature (3) (IL) The course will consider how literature and culture address common concerns, including morality, justice, equality, and agency from different perspectives, aesthetic styles, and formal constraints. Students will consider how cultural texts, like legal and philosophical texts, have the power to influence politics and society. Literature is important for understanding ethics, justice, and rights because it teaches ways of thinking and of relating to others that are central to social values. How do we develop the commitment to social equity? How do stories develop ideas of altruism, of prejudice, of pathos, and more in their audience? What role does culture play in developing the moral imagination required to think through social crises? Each class will explore one or more interrelated topics through a variety of cultural and philosophical works. Readings might include works by Melville, Shakespeare, Kafka, Glaspell, Morrison, Capote, Garcia Marquez, and others. Topics might include: formalism; the paradoxes of equity; narrative, storytelling, and framing; custom, law and the political order; law, society, and power; interpretation, authority, and legitimacy; punishment, retribution, and redemption; and others. This course will provide an opportunity to think about the law and ethics in a new way, to read engaging works of fiction and non-fiction, and to examine the humanistic and philosophical perspectives that are at the core of the ethical imagination.

**Prerequisite:** 3 credits in the study of literature
International Cultures (IL)
CMLIT 470: The Modern Novel
3 Credits
Major novels of Joyce, Proust, Kafka, Thomas Mann, Nabokov, and others; their contributions to the art of the novel. CMLIT 470 The Modern Novel (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the modern novel in a comparative and transnational perspective. It explores the basic connections between the modern period and the novel as a form, noting the rise to prominence of the novel in the modern period, and focuses on several important examples of the genre. Some versions of this course may adopt specific organizing themes, such as the novel and the city, the novel and war, the novel and love, and so on. Other versions may focus on the historical development of the novel over time or on crucial interpretive or narratological issues, including the problems of character, time, or point of view; still others may concentrate on major sub-genres of the modern novel, including realism, magic realism, modernism, and postmodernism.

Prerequisite: 3 credits in literature
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 471: Poetry and Poetics
3 Credits
Theoretical and practical concepts in the comparative, global history of poetry and/or poetics. CMLIT 471 Poetry and Poetics (3) (IL) This course explores theoretical and practical concepts in the history of poetry and/or poetics. Like all comparative literature courses, it pursues this task through discussions of poetry from a wide variety of national or linguistic origins and ranges widely across historical period, medium, and social form, where appropriate. Students will develop a broad array of interpretive skills appropriate to poetry and poetics; they will acquire a knowledge of a wide variety of poetic forms; they will undertake comparative analyses of poems and poetic structures; they will learn how to think about poetry outside poetry.

Prerequisite: 3 credits in literature
International Cultures (IL)

CMLIT 478: Comedy
3 Credits
Development of comic drama and its relationship to social background and philosophical theory.
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 486: Tragedy
3 Credits
Development of tragic drama and its relationship to social background and philosophical theory.
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 487: Comedy
3 Credits
Development of comic drama and its relationship to social background and philosophical theory.
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 488: Modern Continental Drama
3 Credits
From Ibsen to the drama of today: Strindberg, Chekhov, Hauptmann, Pirandello, Ionesco, Beckett, Genet, and others.
Prerequisite: ENGL 015 or ENGL 030
Cross-listed with: ENGL 488
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 489: Contemporary World Fiction
3 Credits
A survey of developments in contemporary world fiction in translation. CMLIT 489 Contemporary World Fiction (3) (IL) The purpose of this course is to expose students to the developments in world fiction in the last 50 years and to expose them to a range of authors from a number of countries. This course, then, also involves getting to know the novel-writing histories of those countries and in many cases, the recent histories of those countries (for example, in novels like Rushdie's Midnight's Children or Garcia Marquez's Hundred Years of Solitude). The class will approach these fictions from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Pamuk, Grass, Murakami, and Marquez. Time allotted for the study of the works under consideration will vary.

Prerequisite: 3 credits in literature
International Cultures (IL)

CMLIT 490: Video Game Lit Studies
3 Credits
A comparative look at the nature and history of video games as cultural artifacts, from Pong to online role-playing. CMLIT 490 Video Game Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. The video game industry is larger than the film industry, and yet the academic study of video games has only just begun. This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will learn basic narrative theory, and study its impact on game studies and game production. They will survey major debates over the meaning and value of video games, and review its history from Pong to contemporary games, including online world-based games. The course extends students' skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical
role video games have played and will continue to play in global cultural production.

**Prerequisite:** GAME 160, GAME 140, or 3 credits in literature; Concurrent: GAME 160 or GAME 140 if desired

Cross-listed with: GAME 460

Bachelor of Arts: Humanities

CMLIT 491: Literary Adaptation: International and Comparative Perspectives

3 Credits/Maximum of 3

A comparative, international study of adaptations between literature and other media (film, theater, photography, music). CMLIT 491 Literary Adaptations: International and Comparative Perspectives (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. From the very first expressions of literary impulses in prehistoric times, and continuing through the present, literary material has been re-used and creatively recycled through processes of adaptation and appropriation, often involving translations not only between languages, but also between media. This course uses a global perspective to explore the processes and aesthetics of adaptations of literary works, including adaptations into other genres or media, such as the visual arts, a film, opera, stage play (or vice versa &mdash; adaptations from other media into literature). Drawing upon a broadly international selection of materials, we will explore multiple discourses surrounding adaptation; address the importance of translation and the dynamics between languages, audiences, and texts; study how adaptations address common themes such as race, class, gender, and sexual orientation; discuss international taxonomies of literary genres; and critically assess different cultural notions of authorship, intellectual property, and communal vs. individual ownership. From year to year the works and authors studied in this course may change. Course objectives include (1) to encourage students to think critically about adaptations within and between cultures and media, in different parts of the world (2) to critically evaluate several of the often conflicting analytical paradigms which characterize the study of literary adaptations; (3) to assess varied approaches to genre in adapted works in different cultural settings; (4) to understand different perspectives on the concept of the author, such as the literary author and the "&quotes;author&quo; in theatre studies; (5) to question assumptions about the world, re-examine personal points of view, and understand an expanded international range of ethical and value systems as expressed in literature. For methods of student evaluation, see the syllabus for each section; options include class presentations, response papers, research projects, and exams. This course may form part of the Comparative Literature major, the World Literature minor, and other majors.

**Prerequisite:** 3 credits in literature or other fields relevant to this course

Bachelor of Arts: Humanities

International Cultures (IL)

CMLIT 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

Honors

CMLIT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

CMLIT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

CMLIT 499: Foreign Study--Comparative Literature

3-6 Credits/Maximum of 6

Advanced courses offered on comparative literary topics as part of a foreign-study program.

**Prerequisite:** 18 credits or equivalent in the appropriate foreign language; 6 credits in literature or related field appropriate to this course

Bachelor of Arts: Humanities

International Cultures (IL)

**Computer Engineering (CMPEH)**

CMPEH 472: Microprocessors

4 Credits

This course is designed to provide students with strong foundation in microprocessor programming and hardware interfacing both in the classroom and laboratory settings. This course is a required course in the Electrical Engineering BS curriculum and is intended to be taken by students who have completed their digital systems and first electronics course requirements. As such, the course integrates materials from the above undergraduate electrical courses in addition to related math, engineering, and science courses.

**Prerequisite:** ( CMPSC 101; CMPSC 121; CMPSC 131; CMPSC 201; CMPSC 202 ) ( CMPEN 271, CMPEN 275; CMPEN 270 )

**Computer Engineering (CMPEN)**

CMPEN 111: Computers and Computer Hardware

1 Credits

A brief orientation to University life and resources and an introduction to computers and computer hardware. CMPEN 111S Computers and Computer Hardware (IL) This course contains two components:
functions are introduced including sum-of-products and product-of-sum theorems and postulates are introduced. Boolean algebra is then used and binary arithmetic. Boolean algebra is presented and several basic course introduces students to logic design and digital systems. The or 271. CMPEN 271 CMPEN 271 Introduction to Digital Systems (3)This includes major components of a computer system (the data path, the control path,
the memory system, the I/O system), how they function together in executing a program, and how they are designed. The relationships between instruction set design, addressing modes, fetch and execute operations, and their impact on the underlying architecture are presented. Students will develop skills both in assembly language programming and in designing architecture components in a hardware description language (VHDL or verilog). CMPEN 331 is a required course for both computer engineering and computer science majors. CMPEN 331 requires access to PCs/workstations with commercial hardware description language tools (e.g., Synopsys VSS compiler and simulator) and a modern assembler/compiler (e.g., SPIM MIPS assembler, simulator, and debugger).

**Prerequisite:** CMPEN271 or CMPEN270; CMPSC121 or CMPSC201

CMPEN 351: Microprocessors

3 Credits

Microprocessor architecture; memory system design; assembly language programming; interrupts; the stacks and subroutines; memory and I/O interfacing; serial I/O and data communications; microprocessors applications.

**Prerequisite:** CMPEN271; CMPEN275

CMPEN 352: Embedded Systems Design

3 Credits

Design/development of embedded systems for data acquisition, process control, and special-purpose computing systems; peripheral interfacing, serial/parallel communications and bus systems. CMPEN 352W Microprocessor-based System Design (3) In this course students learn how to design application specific embedded systems. Embedded systems are increasingly important as they are used in industrial applications, personal computing, and consumer products. Embedded systems are based on microprocessors and microcomputers, but are not intended to be general-purpose computers. In the laboratory students will design, implement, and validate application specific embedded systems. Being a writing-across-curriculum course, students will learn effective techniques of reporting their technical designs.

**Prerequisite:** CMPEN351 or CMPEN472; E E 210

Writing Across the Curriculum

CMPEN 362: Communication Networks

3 Credits

Data transmission, encoding, link control techniques; communication network architecture, design; computer communication system architecture, protocols. CMPEN 362CMPEN (E E) 362 Communication Networks (3) CMPEN (E E) 362 is an elective course in both the electrical and computer engineering curricula which provides an overview of the broad field of data and computer communications. First, a general model of the communication task is presented, including the layered concept by which each layer provides services for the layer above. First, the lowest (physical) layer is studied. This involves signal design, Fourier analysis representations, bandwidth concepts, transmission impairments and communication media properties. Then the next higher (link) layer is considered which involves organizing bits into frames, data link and error control methods (including frame sequence numbering and error detection principles). Multiplexing to share a link is studied, including frequency division multiplexing, dedicated time division multiplexing, and statistical time multiplexing. At the network layer level, there are two categories: broadcast (usually local area) and switching networks. Broadcast and local area network studies include bus, tree and star topologies, Ethernet, optical fiber bus networks, ring networks, and medium access control protocols. Switching and routing concepts for networks are explained, including both circuit and packet switching, datagrams and virtual circuits. Properties of frame relay and asynchronous transfer mode (ATM) networks are described. Internetworking frame structures, routing and protocols are studied. Also, bridge routing for local networks is described. At the still higher transport (network end-to-end control) layer, transport protocols, including TCP/EP, are described.

**Prerequisite:** CMPEN270 or CMPEN271; Concurrent: STAT 301 or STAT 318 or STAT 401 or STAT 414 or STAT 418

Cross-listed with: EE 362

CMPEN 371: Advanced Digital Design

3 Credits

Theory, design, and implementation of digital circuits based on combinational and sequential circuits; implementation of designs using hardware description language. CMPEN 371 Advanced Digital Design (3) Students will learn advanced concepts in digital design for complex combinational and sequential logic, and learn how to effectively use minimization and synthesis techniques. Contemporary CAD tools and target digital technologies including Field Programmable Gate Arrays (FPGAs) are utilized. The use of a hardware-description language for digital design is introduced. In the laboratory portion, students will implement, simulate, and test designs.

**Prerequisite:** CMPEN271; CMPEN275; CMPSC121 or CMPSC201; E E 210 or E E 211

CMPEN 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

CMPEN 396: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CMPEN 396A: Current Technologies in Computer Engineering

1-6 Credits

Investigation of a current technology relevant to computer engineering.

CMPEN 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
E E 310, a basic circuits course required for both electrical engineering students. It is intended for students who wish to specialize in the field of digital circuits. This course introduces the basic concepts involved in the design of digital circuits, which find practical application as logic and memory circuits in computers and other digital processing systems. The course emphasizes integrated circuit process-compatible circuit design techniques in recognition of the amazing synergy that has characterized the relationship between computer circuits and integrated circuit processing technology. This course includes three lectures and a two-hour laboratory each week. The only prerequisite is a basic circuits course required for both electrical engineering and computer engineering students. CMPEN 416 begins with a review of the bipolar junction transistor (BJT) device and proceeds into the more advanced Ebers-Moll device model. This is followed by an examination of a series of BJT-based saturating and non-saturating digital circuits of ever increasing complexity illustrating the evolution of the modern bipolar logic circuit families. The next phase of the course reviews the metal oxide semiconductor field effect transistor (MOSFET) and proceeds along the same path taken for the bipolar transistor circuits. Various MOSFET logic circuit families are introduced and analyzed. Computer semiconductor memory circuits are considered next. Both BJT and MOSFET versions of both static and dynamic read-write and read-only memories are considered. The cell array, memory addressing circuits, and sense amplifier designs are all examined in detail. This is followed by the related subject of programmable logic arrays, the final topic. The emphasis of the laboratory component of the course is to compare the performance of representatives of each class of circuits to computer simulations of the same circuits. Parameters such as input-output voltage transfer characteristics, noise margins, and propagation delays are evaluated by building and measuring laboratory models. Most of the laboratory exercises require the student to evaluate a specified circuit, but the final exercise requires the student to design a circuit to meet a predefined set of specifications, then to prove that the design meets the requirements by measuring the circuit performance. Students are required to write a formal engineering report detailing the results of each laboratory exercise.

**Prerequisite:** E E 310

Cross-listed with: EE 416

CMPEN 417: Digital Design Using Field Programmable Devices

3 Credits

Field programmable device architectures and technologies; rapid prototyping using top down design techniques; quick response systems. CMPEN 417 CMPEN (E E) 417 Digital Design Using Field Programmable Devices (3) Field Programmable Devices, such as Field Programmable Gate Arrays (FPGAs) and Complex Programmable Logic Devices (CPLDs) are widely used for rapid prototyping and quick response-time designs. The objective of this course is to introduce the student to digital design using Field Programmable ICs, and to provide an understanding of the underlying technologies and architectures of these Integrated Circuits. The course begins by introducing design alternatives for modern electronic systems identifying and classifying alternative system solutions, and evaluating when particular design solutions are optimal. These alternatives include microprocessors, microcontrollers, off-the-shelf digital ICs, Programmable logic ICs (FPGAs and CPLDs), and various forms of Application Specific Integrated Circuit (ASIC) designs. A homework assignment requires the student to quantitatively evaluate the cost, complexity, packaging, and time-to-market issues for a complex system design specification. Next, the underlying Field Programmable Logic IC architectures and technologies are studied in detail. Following a broad survey of available programmable IC vendors and on-chip programming technologies (and their cost/performance trade-offs), several specific case studies are presented in the class. The first is the Xilinx XC4000xI line, because of the target boards used in the CAD laboratory component for this class. The initial lab portions of the class help the students to specify their design using various forms of design entry tools and also allows them to see how their design map onto the underlying FPGA architecture. The students also learn the underlying algorithms used by the design software they use in their Labs. Next, the systematic top-down method for specifying complex designs using VHDL is introduced. Students are given a supporting homework assignment to develop high-level behavioral models for a simple digital system to reinforce this segment of the course. VHDL behavioral synthesis is now introduced as a preferred path to go from high-level system behavior to actual implementation on the FPGA. The strengths and weaknesses of synthesis are discussed, as are the emerging CAD tool trends. Additional VHDL-based homework assignments reinforce behavioral design and synthesis using commercial CAD tools. The final segment of the class covers special topics that identify current trends in digital system architecture and programmable logic design. These include such topics as partially reconfigurable architectures and dynamic reconfiguration techniques, system design for testability, and field programmable analog arrays. Applications of FPGAs in special purpose computing environments such as signal processing, Java acceleration and image processing are also introduced. In the laboratory, student design project assignments explore larger and more complete system specifications of such things as controllers, CPU and memory design, and signal processing blocks. These assignments reinforce the lecture content as the students model, synthesize and implement their digital designs on the target Xilinx FPGA boards.

**Prerequisite:** CMPEN 331

Cross-listed with: EE 417

CMPEN 431: Introduction to Computer Architecture

3 Credits

Introduction to computer architecture. Memory hierarchy and design, CPU design, pipelining, multiprocessor architecture. CMPEN 431
Introduction to Computer Architecture (3) This course will introduce students to the architecture-level design issues of a computer system. They will apply their knowledge of digital logic design to explore the high-level interaction of the individual computer system hardware components. Concepts of sequential and parallel architecture including the interaction of different memory components, their layout and placement, communication among multiple processors, effects of pipelining, and performance issues, will be covered. Students will apply these concepts by studying and evaluating the merits and demerits of selected computer system architectures.

Prerequisite: CMPEN331 or CMPEN371

CMPEN 431H: Honors Introduction to Computer Architecture

3 Credits

Honors course in principles of computer architecture: memory hierarchies and design, I/O organization and design, CPU design and advanced processors. CMPEN 431H Introduction to Computer Architecture (3) This course will introduce students to the architecture-level design issues of a computer system. They will apply their knowledge of digital logic design to explore the high-level interaction of the individual computer system hardware components. Concepts of sequential and parallel architecture including the interaction of different memory components, their layout and placement, communication among multiple processors, effects of pipelining, and performance issues, will be covered. Students will apply these concepts by studying and evaluating the merits and demerits of selected computer system architectures.

Prerequisite: CMPEN331

CMPEN 441: Operating Systems

3 Credits

Resource management in computer systems. Process scheduling, memory management, file system design, I/O management, Unix operating system.

Prerequisite: CMPSC360

CMPEN 454: Fundamentals of Computer Vision

3 Credits

Introduction to topics such as image formation, segmentation, feature extraction, matching, shape recovery, object recognition, and dynamic scene analysis. CMPEN 454CMPEN 454 Fundamentals of Computer Vision (3)CMPEN 454 is an introduction to computer vision. The goal of computer vision is to make computers understand and interpret visual information. Computer vision systems bring together imaging devices, computers, and sophisticated algorithms for solving problems in areas such as industrial inspection, medicine, document analysis, autonomous navigation, and remote sensing. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of computer vision and introduces low level image analysis techniques for binary images. Binary vision systems are useful when the silhouette of imaged objects convey enough information to recognize them. Examples can be found in optical character recognition, chromosome analysis and recognition of industrial parts. Moreover, many techniques developed for binary systems can be applied to gray level or color images. Next, the course covers image segmentation and contours. These topics are the foundation of most computer vision techniques. For an image to be correctly interpreted, it must be partitioned into regions that correspond to distinct objects or parts of objects. First, region based techniques such as thresholding, split and merge, region growing and texture analysis are introduced. Next, edge based techniques using gradient and Laplacian operators are discussed. Finally, contour representations and curve approximations linking edges into region boundaries are studied. Next, depth from vision, with emphasis in stereo vision, is considered. Calculating distances to and among various points in the scene is important in many computer vision tasks such as inspection, robot manipulation, and autonomous navigation. In this part of the course the geometry of stereo systems and how to obtain depth maps from stereo image pairs is studied. Also, alternative 3D imaging sensors such as laser based range finders and radars are discussed. Following stereo, the topic of computer vision is broadened to understand sequences of images over time. In this section techniques using information on spatial and temporal changes are used to design computer vision systems capable of coping with moving and changing objects, changing illumination and changing viewpoints. Visual motion is important primarily for two reasons. First, motion is a very important cue to understand the scene structure. Second, biological systems do use motion to infer properties of the surrounding world with very little a priori knowledge. Finally, the topic of 3D object recognition is discussed. Object recognition entails two main issues: object identification and object localization. Identification determines the objects being imaged while localization determines their position in the world and with respect to the sensors. This topic builds upon all the different techniques discussed until this point.

Prerequisite: MATH 230 or MATH 231; CMPSC121 or CMPSC201

Cross-listed with: EE 454

CMPEN 455: An Introduction to Digital Image Processing

3 Credits

Overview of digital image processing techniques and their applications; image sampling, enhancement, restoration, and analysis; computer projects. E E (CMPEN) 455 An Introduction to Digital Image Processing (3) E E/CMPEN 455, a technical elective available to both electrical and computer engineering seniors and graduate students, discusses many current techniques for processing and manipulating digital images. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of digital image processing systems and digital image fundamentals. During this unit, important elements of human visual perception are reviewed; these ideas help motivate many of the computer-based techniques described in subsequent units. Also, the standard model for a digital image, in addition to the concepts of sampling and quantization, are described. Finally, basic topological concepts between digital image pixel are discussed. The next unit considers image transform analysis, with a primary focus on Fourier-based techniques. The one-dimensional Fourier transform is reviewed, and then two-dimensional Fourier transform analysis is discussed. To bridge the gap from the continuous world to the digital world, the sampling theorem is introduced. Next, the Discrete Fourier Transform and its properties are described. Fourier-based filtering techniques, such as the ideal low-pass and Butterworth filters are then introduced. The Fast Fourier Transform is also discussed. Finally, the Discrete Cosine Transform, used later in JPEG and MPEG, is introduced. The next unit discusses techniques for image enhancement and segmentation. These techniques include point-based techniques based on histogram analysis. They also involve linear and nonlinear mask-based methods for noise reduction and region sharpening. Further, techniques of mathematical morphology, which involve an application of
set-theoretic concepts to image processing, are described. Finally, image segmentation methods, based on edge detection and thresholding, are described. The final unit considers the concept of image compression. Techniques for image encoding and decoding are discussed. A brief model of the encoding-decoding process is described. Next, compression techniques, such as run-length encoding and Huffman coding, are described. Finally, the multimedia image-compression methodologies, JPEG and MPEG, are discussed.

Prerequisite: E E 350 or E E 353; CMPSC201 or CMPSC121
Cross-listed with: EE 455

CMPEN 461: Communication Networks
3 Credits

Data transmission, encoding, link control techniques, network architecture, design, protocols, and multiple access. CMPEN 461 Communication Networks (3) This course introduces students to fundamental concepts and principles underlying data communication networks, with an emphasis on the Internet and its five-layer architecture: the application, transport, network, link, and physical layers. The fundamental issues to be covered include, but not limited to, reliable communication over an unreliable network layer, connection establishment/teardown and handshaking, congestion and flow control, path determination, multiple access control. The student learning these principles will gain knowledge that lasts long after today’s network standards and protocols have become obsolete.

Prerequisite: CMPEN271; CMPSC121 or CMPSC201

CMPEN 462: Wireless Communications Systems and Security
3 Credits

This course explores the fundamental concepts and engineering processes of wireless communication systems, sensors, and security algorithms through the design, implementation, and evaluation of next generation wireless network architectures, and network and cryptographic protocols. This course is intended as a senior level course for computational majors such as computer science and computer engineering since it covers hardware and software design concepts associated with wireless access, data transmission, and computational security, security models, and privacy in a broad range of settings. The first part of the course studies programmatic, computational, and engineering issues associated with wireless systems and sensors at the physical protocol layer. Hardware, software, and engineering design considerations associated with MIMO, low latency, high reliability, and high data rate constraints will be analyzed. The next part of this course will introduce virtual machines, function virtualization, and network-slicing for constraint matching, resource scheduling, and mobility management at the data link and network protocol layers. The final component of the course focuses on the security and privacy for wireless systems and sensors including models and algorithms. The design and implementation of cryptographic algorithms for cellular, Wi-Fi, Bluetooth, Zigbee, and next generation systems including Device to Device (D2D), Vehicle to Vehicle (V2V), and Machine Type Communications (MTC) are studied and analyzed. Upon completion of the course students will be able to critically analyze the design, implementation, and protocols associated with wireless systems and sensors and assess the computational security and privacy vulnerabilities associated with these systems.

Prerequisites: CMPEN 362 or EE 362

CMPEN 471: Logical Design of Digital Systems
3 Credits

Basic switching theory and design of digital circuits, including combinational, synchronous sequential, and asynchronous sequential circuits.

Prerequisite: CMPEN331

CMPEN 472: Microprocessors and Embedded Systems
3 Credits

Microprocessors: architecture, design, assembly language, programming, interfacing, bus structure, and interface circuits and their use in embedded systems. CMPEN 472 Microprocessors and Embedded Systems (3) In this course students should learn about the operation and design of microprocessor-based systems, including both hardware and software aspects with an emphasis on real time control environments and embedded systems. After completing the course, students should be able to develop, write and debug programs in a microprocessor’s assembly language and use standard assembly language program development tools. They should also be able to interpret and analyze basic microprocessor system hardware. This course is a senior level elective for students in computer engineering and computer science. The course requires the use of general department computing facilities consisting of UNIX workstations running the appropriate program development tools.

Prerequisite: CMPEN331

CMPEN 472H: Honors Microprocessors and Embedded Systems
3 Credits

Honors course in microprocessors: architecture, design, assembly language, programming, interfacing, bus structure, and interface circuits and their use in embedded systems.

Prerequisite: CMPEN331

Honors

CMPEN 473: Microcomputer Laboratory
3 Credits

Design of digital systems using microprocessors. CMPEN 473 Microcomputer Laboratory (3) This laboratory course provides senior students with both theory and practice in designing, implementing, and debugging microprocessor-based systems. Students are guided through a series of projects in which they design, develop, and implement all of the components in a microprocessor based single-board system. After completing the course students will be able to design microprocessor based systems, including both software and hardware design. Students will also be able to use standard system design tools including standard laboratory equipment. This course is a senior level elective for computer engineering majors. CMPEN 472 is a prerequisite for this course. The course requires the use of a design laboratory including standard test equipment such as an oscilloscope, logic analyzer and signal generator as well as a PC with appropriate design software and a microprocessor or EPROM emulation system.
Prerequisite: CMPEN472

CMPEN 475: Functional Verification

3 Credits

Introduce concepts, methods, and technology for effective functional verification of modern electronic systems. CMPEN 475 Functional Verification (3) Verifying design correctness of increasingly complex system-on-chip designs poses a major challenge to the semiconductor industry. Functional or logic errors in a chip design that are not identified early in the design phase can dramatically increase a project's overall cost and schedule. Further, design verification is consuming an ever-increasing portion of IC development time and cost. As much as 70% of effort in a complex IC design project is now attributed to verification. This course will cover five key aspects of verification: an introduction to verification; a detailed description of simulation-based dynamic verification; formal verification; verification methodologies and advanced techniques; and case studies. First, the course will place verification in the context of the chip design process and introduce the verification cycle. Then, it will cover essential methodology principles and introduce the first hands-on example. It will also delve into various topics in dynamic verification, including the basic constructs of stimuli, monitors, checkers, observations, categories, assertions, and test benches. Various case studies on actual industry and research designs will be provided. The course will be supplemented by lab-assignments that provide hands-on experience with methodologies taught in lectures.

Prerequisite: CMPEN331

CMPEN 480: Computer Engineering Design

3 Credits

Engineering design and modeling, engineering economy, project planning, capstone project selections, and technical communication skills. CMPEN 480 Computer Engineering Design (3) This course prepares senior computer engineering students for industrial engineering design and project management. It covers the engineering design process, project planning and evaluation, engineering ethics, and engineering economy. In addition, students select, specify, and start their capstone design project, which is completed, in the follow-up course, CMPEN 481. Students are expected to carry out a group design project that is on par with industrial expectations. Upon completion of this course a student should have a solid understanding of the engineering design process, a clear capstone project description, should have completed some preliminary design work, and be adequately prepared to complete the project in CMPEN 481.

Prerequisite: CMPEN352W ; CMPEN431

CMPEN 481: Computer Engineering Project

3 Credits

Group or individual design projects in the area of computer engineering.

Prerequisite: CMPEN480

CMPEN 482: Computer Engineering Project Design

3 Credits

Computer engineering design project, project management, documentation, reporting, and group and individual communication skills. CMPEN 482W Computer Engineering Project Design (3) The two principle goals of CMPEN 482W are (1) to introduce the fundamentals of systems engineering and systems engineering management, and (2) to develop written and oral communication skills. The course explores the process of translating a problem statement into an effective and economical computer system that meets the needs of the customer. Topics include a comparison of popular process models, analysis and derivation of requirements, requirements allocation and flow down, the work breakdown structure, object-oriented analysis and modeling, the design and development of the user interface, reliability engineering, scheduling, costing, and ethics. Communication skills are developed through oral presentations and a sequence of writing assignments, beginning with a description of requirements and leading to a final design document. CMPEN 482W is not a prerequisite for any other course. CMPEN 482W requires access to PCs or Unix workstations having a C++ compiler. Other specialty hardware or software may be required on a semester-by-semester basis.

Prerequisite: E E 310,E E 353;CMPSC 473;ENGL 202C

Writing Across the Curriculum

CMPEN 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CMPEN 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

CMPEN 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

CMPEN 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CMPEN 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CMPEN 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
Students also investigate the operation of flip-flops, adder circuits, binary counters, shift registers, encoders and decoders, and memory units. Often, students are required to complete a digital design project as part of the CMPET 120 course. Many faculty also require selected labs to be submitted as formal reports. Digital simulation software is also commonly used in this course.

**Concurrent:** EET 105, CMPET117

**CMPET 211: Embedded Processors and DSP**

3 Credits

Introduction to micro-controllers and embedded controllers with applications, including concepts of digital signal processing. CMPET 211 Embedded Processors and DSP (3)CMPET 211 provides students with a basic understanding of microprocessors and microcontrollers with an emphasis on integrated embedded control of real world applications. The course provides a background in micro-processor/controller architecture, presents the operation and application of microcontroller peripherals, and introduces assembly language and higher level structured programming language. This can be a structured language such as C++ or PIC Basic. The intent is to introduce the students to a more powerful programming language capable of developing algorithms for embedded control of real world processes. Students will learn the analog to digital (ADC) and digital to analog (DAC) process and understand the resolution and aliasing consequences of these conversions. With the ADC and DAC material mastered, the course will then introduce students to basic applications of Digital Signal Processing (DSP), such as digital filtering and noise reduction. Simple discrete Fourier transforms can be covered along with sampling theory and digital aliasing. Although some of the mathematical theory underlying DSP techniques, such as Fourier and Hilbert Transforms, digital filter design and signal compression, can be fairly complex, the numerical operations required to actually implement these techniques are relatively simple and will be shown. DSP chips and applications will be covered to illustrate how to carry out such operations incredibly fast and efficiently. Topics covered include:- Microprocessor, microcontroller, and embedded system architecture- Microcontroller peripherals- Assembly Language Syntax and Programming- Structured Programming and Algorithms- Input and Output interfacing- ADC and DAC conversions- Sampling and DSP The course will emphasize the concepts, principles, procedures, and programming models used by engineers and technologists to design, develop and implement digital control for real world instrumentation. Particular emphasis will be given to embedded controllers for process control. Lectures will be supported by laboratory exercises in which the student will develop, assemble, download, and run programs on the target processor. Programming activities will focus on the development of algorithms for control of real world processes. Students will be required to prepare written laboratory reports outlining the program documentation. Reports will be graded based both on their technical quality and their grammatical and professionalism. Students in CMPET 211 will be required to use computers in both class and laboratory exercises to develop and test their programs.

**Prerequisite:** CMPET117 , CMPET120

**CMPET 301: Algorithmic Processes for Electrical Systems**

3 Credits

Algorithms, languages, notations and applications of object- and procedure-oriented languages to electrical and electronic problem solving. CMPET 301 Algorithmic Processes for Electrical Systems (3) Algorithmic Processes for Electrical Systems is a required course
for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. It is essential for Electrical Engineering Technology students to acquire a working knowledge of a computer language commonly used in practice. This course will prepare the student to analyze a problem and implement a structured procedural design and also an object-oriented design. This course is a follow-up course to CMPET 5 and CMPET 211, and prepares the student for several more advanced courses in the program related to computer analysis of circuits and systems. This course covers properties of algorithms and languages, software development process, notations for describing algorithms, applications of object- and procedure-oriented languages to electrical and electronic problem solving, high-level language programming, integrated development environment, and structured programming. Laboratory exercises parallel lecture material.

**Prerequisite:** CMPET211; Concurrent: MATH 141 or MATH 210

**CMPET 333: Computer Networking**

3 Credits

Introduction to Local Area Networks (LANs) and Wide Area Networks (WANs), including transmission mediums, protocols, topologies, software, and hardware. CMPET 333 Computer Networking (3) The purpose of the course is to understand the principles of networking as applied to local area networks (LANs) and wide area networks (WANs). The students learn internet working models such as the OSI seven-layer, Ethernet, and Cisco three-layer models. Network topologies and various connectivity devices are investigated to form networks. Cisco IOS is introduced and console port and web interfaces are used for configuring Cisco devices. Subnetting is discussed and Cisco switches and routers are used for the implementation of LANs and WANs. Various protocols such as ARP, ICMP, IP, and TCP are presented and a software protocol analyzer is utilized. Applications such as file-sharing and remote data collection are investigated. Laboratory exercises reinforce concepts developed in lecture.

**Prerequisite:** EET 212W, CMPET301

**CMPET 355: Intermediate Microprocessors and Microcomputers**

3 Credits

Microprocessor architecture and assembly language programming. Hardware and software of basic microprocessors. Input/output structure in microcomputers. CMPET 355 CMPET 355 Intermediate Microprocessors and Microcomputers (3) Intermediate Microprocessors and Microcomputers is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. This course builds upon prerequisite digital logic, microprocessors, and electronics courses. It includes microprocessor architecture and assembly language programming, hardware and software of basic microprocessors, and input/output structure in microcomputers. The course covers a review of number systems, digital logic, computer architecture, software development process; the microcontroller, specifications, block diagrams; assembly language programming; jump, loop, and call instructions; I/O port programming, addressing modes, arithmetic instructions and programs, logic instructions and programs, single-bit instructions and programs, counter/timer programming, serial communication, interrupts programming, real world interfacing, and bus interfacing to external memory. Laboratory exercises parallel lecture material.

**Prerequisite:** CMPEN271 or CMPET117; CMPEN275 or CMPET120

**CMPET 401: Data Communication and Networking**

3 Credits

Signal representations, communication techniques, interfacing, serial and parallel communication, modems, error detection, LAN and WAN protocols. CMPET 401 CMPET 401 Data Communication and Networking (3) This course is designed to provide the students with a foundation in signal presentation, communication techniques, serial and parallel communication, modems, and other interfacing methods. The networking technologies for local and wide area networks are also studied in detail. The range of topics covered depends on students’ background. Topics: Part 1. (2 weeks) Overview: Introduction Protocols and Architecture; Part 2. (9 weeks) Data Communications: Data Transmission Media Data encoding Communication techniques Data Link Control Multiplexing; Part 3. (4 weeks) Local and Wide Area Networks: LAN and WAN protocols Switching techniques Bridges and routers High speed networks Internetworking Internet resources. This course is a required course in the Computer Engineering Technology Option of the Electrical Engineering Technology BS curriculum.

**Prerequisite:** CMPEN271 or CMPET117

**CMPET 402: Data Communication and Networking Laboratory**

1 Credits

Network operating systems, LAN and WAN protocols, serial and parallel communications, modems, FAX, and other interfacing methods.

**Prerequisite:** or concurrent: CMPET401

**CMPET 403: Switching Circuit Design**

4 Credits

Analysis and design of advanced combinational and sequential circuits using IC logic devices and PLD’s while promoting the use of software development tools. CMPET 403 Switching Circuit Design (4) This course is designed to enhance students’ abilities to analyze and design complex digital systems. The course will include the following topics: 1. Review of combinational circuits’ analysis and design using, karnaugh maps with up to six variables and Quine-McCluskey method 2. Advanced combinational logic analysis and design with MSI logic circuits 3. Hazard in digital systems 4. Review of analysis and design of synchronous finite state machines (Moore and Mealy methodologies) 5. Synchronous sequential logic design using One-hot finite state machines 6. State reduction for completely and incompletely specified circuits/systems 7. Analysis and design of asynchronous sequential circuits/systems 8. Logic circuit testing and testable design 9. Introduction to Hardware Description Language This course is a technical elective in the Electrical Engineering Technology BS curriculum and is intended to be taken by students who have completed their first digital systems course requirements. As such, the course integrates materials from the above undergraduate electrical course in addition to related math, engineering, and science courses. No special facilities are required for this course other than laboratories available to the Electrical Engineering Technology Program.

**Prerequisite:** CMPEN271 or CMPET117; CMPEN275 or CMPET120
Design, architecture, programming, and interfacing of microprocessors, enhanced by lab experiments. CMPET 412 Microcomputers (4) E E T 412 is an intermediate course in microprocessor architecture, programming, and interfacing. It details the inner workings of a contemporary microprocessor, including its registers, busses, external connections, instruction set, and its available support devices for memory management, data transfer, clocking and interfacing. It includes a laboratory in which students program in machine language, assembly language, and high level language. Labs also teach students to interface a microprocessor to the user keyboard, the user display, floppy and hard disk drives, and external serial and parallel devices. E E T 412 is intended as an intermediate course, offered to students who have already had some exposure to microprocessor systems, microcomputer architecture, and low-level computer programming.

Prerequisite: CMPEN271 or CMPET117; CMPEN275 or CMPET120

CMPET 456: Advanced Microprocessors, High Level Interfacing

3 Credits

Operating systems; systems programming; high-level application programming; high-level hardware and software protocols; serial and parallel digital communications. CMPET 456 CMPET 456 Advanced Microprocessors, High Level Interfacing (3) Advanced Microprocessors, High Level Interfacing is a required course for senior-level students pursuing the computer engineering technology (CET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. Topics of this course include operating systems, systems programming, high-level application programming, high-level hardware and software protocols, serial and parallel digital communications. The purpose of this course is to extend and augment the topics covered in the earlier computer oriented courses, and build upon the foundations established there. It covers large scale embedded systems along with the related hardware and software design considerations. It is organized around a few intensive projects that cover the breadth of the material. The need for operating systems is discussed, as well as their important features including system services, command processing, device drivers, interrupt handling, memory and device management, system libraries, dynamic linking, virtual memory, multitasking, and inter-task communication. Unique considerations of real time operating systems are reviewed, such as throughput, task blocking, semaphores and special services. The gray area between operating systems and application programming known as systems programming is addressed, including standardization, generalization, choice of language, and make-buy decision issues. A large part of the course is spent on high-level application programming. Topics include structured programming, user-written functions, data structuring and packetizing, and use of commercial libraries and other intellectual property. Protocols based on current technology such as EPP, RS232, RS485, IIC, DeviceNet, USB, IEEE488, IEEE1394, are covered. Binary and character-based data transfer is discussed, along with communication layers and error detection, correction, and recovery issues. Serial and parallel communication topics include analysis and evaluation of the pros and cons of each protocol, debugging, monitoring, timing, and throughput.

Prerequisite: CMPET355

CMPET 457: Software Engineering

3 Credits

Application of modern techniques in software development, including program design based on new methods and tools. CMPET 457 CMPET 457 Software Engineering (3) Software engineering is a required course for senior-level students pursuing the computer engineering technology (CET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. Topics of the course include application of modern techniques in software development including program design based on current methods and tools. The purpose of this course is to stress a rigorous and systematic approach to embedded software development that represents current best practices and is widely accepted by business, industry and regulatory agencies governing embedded software. This includes proper planning and implementation. Knowledge of generally accepted core standards and guidelines is stressed, including safety planning, hazards analysis, software management planning, requirements specification, design documents, coding, test plans, test specifications, test logs, test reports, design reviews, structured code walk-throughs, verification and validation, and reporting. The Unified Modeling Language (UML) is introduced and followed, including the components of UML, class diagrams, object diagrams, use-case diagrams, state diagrams, sequence diagrams, activity diagrams, collaboration diagrams, component diagrams, and deployment diagrams. Object oriented concepts include classes, abstraction, inheritance, polymorphism, encapsulation, message sending, associations, and aggregation.

Prerequisite: CMPET355

Computer Science (CMPSC)

CMPSC 100: Computer Fundamentals and Applications

3 Credits

Introduction to computer fundamentals and applications to data processing environments.

Prerequisite: 2 entrance units in mathematics

CMPSC 101: Introduction to C++ Programming

3 Credits

Properties of algorithms, languages, and notations for describing algorithms, applications of a procedure-oriented language to problem solving. A student may receive credit for only one of the following courses: CMPSC 101, 200, 201, 202, 121.

Prerequisite: 2 entrance units in mathematics

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

CMPSC 102: Introduction to Visual Programming

3 Credits

Problem solving for non-majors; high-level language programming; control structures, functions, parameters, recursion, arrays, records/structures; verification; debugging; documentation.

Prerequisite: 2 entrance units in mathematics
CMPSC 109: Introduction to Data Processing with COBOL
3 Credits
Study of the COBOL programming language and its applications in industry. CMPSC 109 Introduction to Data Processing with COBOL (3) CMPSC 109 is an introductory COBOL course, designed particularly for students in the Management Information Systems major at Behrend, but also appropriate for students in other Business majors and students from any major with an interest in programming in a data processing environment. The course assumes no prior study in programming.

Prerequisite: 3 credits of programming

CMPSC 111: Logic for Computer Science
1 Credits
An introduction to logic and its application to problem solving and computer science. CMPSC 111S Logic for Computer Science (1)Computer Science provides the fundamental tools for analyzing problems and designing solutions to these problems which can be implemented on a computer. Logic plays an important role in this process, from a general-purpose tool for reasoning about knowledge to a special-purpose language for specifying the behavior of programs and designing hardware. This course examines the role of logic in problem solving and its application to computer science and computer engineering. Example problems will be drawn from a variety of sources, including brain teasers, puzzles, and mathematics. We will show how these problems and their solutions apply to real problems involving computers. We will also explore a number of the important areas of computer science and computer engineering including Boolean and Digital Logic, Designing Arithmetic Hardware, Cryptography and Security Programming Languages, Networking and Wireless Communication, Artificial Intelligence, and Computer Ethics.

First-Year Seminar

CMPSC 121: Introduction to Programming Techniques
3 Credits
Design and implementation of algorithms. Structured programming. Problem solving techniques. Introduction to a high-level language, including arrays, procedures, and recursion.

Prerequisite: MATH 110 or prerequisite or concurrent MATH 140

Bachelor of Arts: Quantification
General Education: Quantification (GQ)

CMPSC 122: Intermediate Programming
3 Credits
Object-oriented programming, recursion, fundamental data structures (including stacks, queues, linked lists, hash tables, trees, and graphs), the basics of algorithmic analysis, and an introduction to the principles of language translation.

Prerequisite: CMPSC 121

CMPSC 122H: Intermediate Programming
3 Credits
Object-oriented programming, recursion, fundamental data structures (including stacks, queues, linked lists, hash tables, trees, and graphs), the basics of algorithmic analysis, and an introduction to the principles of language translation.

Honors

CMPSC 131: Programming and Computation I: Fundamentals
3 Credits
This course introduces the fundamental concepts and processes of solving computational problems through the design, implementation, testing and evaluation of efficient and robust computer programs. The concepts include basic computational constructs found in imperative, object-oriented and functional programming languages such as iteration, conditionals, functions, recursion, and datatypes. These provide the basic building blocks found in virtually all programming languages. The processes include the stepwise refinement of a problem description into individual components that can be implemented, tested, and integrated into an effective solution. A central theme to the course is computational thinking which includes a wide range of approaches to solving problems and designing systems that draw upon concepts fundamental to computer science. Computational thinking includes thinking recursively, considering parallel processing, thinking about types and type checking, judging a program not just for correctness and efficiency but also for its esthetics, and judging a system design for its simplicity and elegance. Computational thinking is applying principles of abstraction at multiple levels to focus on important details; it is applying problem decomposition to identify small problems that can be individually solved then combined to form a solution to the original problem. Computational thinking uses program invariants to describe a system's behavior succinctly and declaratively. Computational thinking considers multiple models of computation when designing an effective solution to a problem.

CONCURRENT COURSES: MATH 110; MATH 140

CMPSC 132: Programming and Computation II: Data Structures
3 Credits
This course builds upon the foundations of programming and computation by introducing and studying the data structures and programming language features that support the design and construction of large-scale software systems. It introduces the foundations of object-oriented programming, the design and analysis of efficient algorithms using important data structures, and programming techniques that support reusable and modular program components, including data abstraction, polymorphism, and higher-order functions. Topics from object-oriented programming include classes, objects, inheritance, methods, message passing, static and dynamic type checking. These topics form the core of most object-oriented languages and provide a foundation for learning more advanced language topics. Data structures capture the common organization of many kinds of data arising in the design of efficient solutions to computational problems. Specific data structures covered include stacks, queues, trees, graphs and linked lists. The design and analysis of efficient algorithms using these data structures provide a foundation for the study of computing, where understanding the complexity of a problem and the availability of efficient solutions are essential skills. Finally, topics including higher-order
functional programming, data abstraction and parametric polymorphism, as well as principles from object-oriented programming, come together to support the design and implementation of modular, reusable and robust code.

**Prerequisite:** CMPSC 121; CMPSC 131

CMPSC 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPSC 200: Programming for Engineers with MATLAB

3 Credits

Development and implementation of algorithms in a procedure-oriented language, with emphasis on numerical methods for engineering problems. A student may receive credit for only one of the following courses: CMPSC 101, 102, 200, 201, or 202. CMPSC 200 CMPSC 200 Programming for Engineers with MATLAB (3) CMPSC 200 is a service course offered to engineering and science majors. The course teaches basic programming concepts including: algorithm development, data types, number representation, control structures, functions, plotting and basic numerical analysis techniques. The course enables students to develop computer programs in MATLAB to solve simple engineering problems. The basic numerical analysis techniques covered in the course include matrix operations, systems of equations, solving equations, roots, curve fitting, interpolation, numerical integration and ordinary differential equations. Students analyze physics-based and engineering problems; develop algorithms to solve the problems; implement the algorithms in the MATLAB programming environment; and produce informative output in both numerical and graphical form. The general programming concepts learned in the course are commonly found in most programming language environments. The problem-solving skills learned in the course can be utilized in upper-level engineering and science courses. The lecture portion of the course gives students the conceptual and syntactical background needed for the successful completion of practical programming assignments during the laboratory portion of the course. The laboratory instruction involves hands-on programming by individual students or student teams assisted by a teaching assistant and/or instructor. Evaluation methods may include examinations, in-class labs, and programming projects. The course is generally held in a STEC room where each student has access to a computer. The course will be offered during the Spring semester.

**Prerequisite:** MATH 140; Concurrent: MATH 141

General Education: Quantification (GQ)

CMPSC 201: Programming for Engineers with C++

3 Credits

Development and implementation of algorithms in a procedure-oriented language, with emphasis on numerical methods for engineering problems. A student may receive credit for only one of the following courses: CMPSC 101, CMPSC 102, CMPSC 200, CMPSC 201, or CMPSC 202.

**Prerequisite:** MATH 140; Concurrent: MATH 141

Bachelor of Arts: Quantification

---

General Education: Quantification (GQ)

CMPSC 203: Introduction to Spreadsheets and Databases

4 Credits

Design, use, and programming of spreadsheets and data bases with applications from a range of disciplines.

**Prerequisite:** 2 entrance units in mathematics

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

CMPSC 208: Technical Game Development

3 Credits

Introduction to the tools and techniques required to implement games in a virtual environment. GAME 250 (CMPSC 208) Technical Game Development (3) First, students learn about game and player elements by creating characters and objects and the means of user interactivity. Both orthographic and perspective views are introduced to assist in character design. Objects and characters are created using fundamental geometric primitives like scale, rotation, translation and extrusion. The set operations, union, intersection, and subtraction, are applied to create compound objects. Bezier and NURB curves are introduced to create objects with irregular contours. Students also learn to design graphical user interfaces (GUIs) and handle mouse and keyboard events to support user interactions. Second, students are introduced to methods of storytelling and guide them to build narratives for games. Methods of proximity and collision detection in the environment are studied for both static and dynamic objects. Dynamic objects are programmed to move and behave in a deterministically, random, or probabilistically under a variety of lighting methods including ambient, directional, point and diffuse lights are introduced. A number of particle systems are developed with different considerations of randomness, vector direction and velocity. The concept of linear interpolation is illustrated and applied to texture mapping to improve the look and feel of objects. Third, students are introduced to functions, propositional logic, loops, and randomness to model game behavior. Students will learn to combine a series of primitive actions into a function for control and reuse. Propositional logic will guide students to define conditions and develop game rules. Loops are introduced to simplify the implementation of repeated game behavior. Randomness enables the simulation of many life-like object movements. Students will learn and practice how to write concurrent, event drive and sequential processing algorithms for game objects. Fourth, students are introduced to the game development process of pre-production, production and post-condition phases and have them apply it to their own project. The topic of maintenance will be introduced with an emphasis on refactoring techniques, critical to improving the quality of game and providing flexibility for future updates. This course has a significant applied element. Game engine tools are used to develop prototypes of games and playtest them. Lab assignments are given throughout the semester and a final project requires students to demonstrate mastery of all aspects of the course.

**Prerequisite:** MATH 021

Cross-listed with: GAME 250

General Education: Quantification (GQ)
CMPSC 221: Object Oriented Programming with Web-Based Applications

3 Credits

The course covers advanced object-oriented principles and their application to web-based, net-centric computing. Major topics include virtual machines, intermediate code generation (Java-specific), graphical user interfaces (GUI) design, event handling, server-side programming with database queries, and security, permissions and file management concepts for client/server systems. Extensive programming assignments provide an understanding of the entire process of client/server development including interface prototyping, program design, implementation of both client and server programs, unit testing, and documentation. This course prepares students to meet immediate demands in solving complex computational problems.

**Prerequisite:** CMPSC 122 or CMPSC 132

CMPSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMPSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CMPSC 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPSC 302: Intermediate Visual Programming

3 Credits

OO programming, visual programming, classes, objects, ADTs, inheritance, recursion, regular expressions, user-defined controls, documentation, testing, verification, productivity tools. CMPSC 302 Intermediate Visual Programming (3) This course forms the second of a two course sequence of courses for non-major students. It is designed to build upon concepts and skills presented in the first course, CMPSC 102, with the intent of enabling the student to develop larger scale programs and interface with databases and Web servers using a visual programming language. Some of the topics covered in this course will be object-oriented programming, inheritance, string manipulation, regular expressions, creating custom controls, creating controls dynamically, interfacing with databases and using an appropriate platform, such as ASPX.net to create web pages. This course forms the second of a two course sequence of courses for non-major students. It covers advanced features of the target language, building larger scale programs and interfaces to databases and web servers. It builds on the skills covered in CMPSC-102 and introduces creating new controls, dynamically placing controls at run time, arrays and lists of controls, the use of regular expressions, more in-depth treatment of classes and objects, including inheritance and polymorphism, multi-dimensional arrays, lists, unit testing and project deployment.

**Prerequisite:** CMPSC121 or equivalent

CMPSC 310: or CMPSC121

CMPSC 311: Introduction to Systems Programming

3 Credits

Unix system programming in C; organization of programs and data; program analysis and support tools; software standards; common system functions. CMPSC 311 CMPSC 311 Introduction to Systems Programming (3) System Programming concerns the development of software components and methods for their combination, independent of any particular application. This course will provide information and experience required to understand, design and implement components of large software systems. In general, students should be able to evaluate design alternatives according to standard practice, specifications, performance analysis, robustness, etc. To concentrate attention, we investigate one system and one programming language in detail, through demonstration programs, short- and long-term programming assignments. The specific system is Unix, a family of operating systems forming a complete standardized programming environment based on the idea of software tools. The specific language is C, which is widely used for operating system implementations, and which forms the basis for the C++ and Java languages studied in the prerequisite courses. This will help students understand operating system services available to application programmers, and provide a firm ground for study of operating systems in general. There are several themes of the course: (1) Understand computer systems, especially low-level influences on high-level goals. This includes the machine-level representation of programs and data structures; the memory hierarchy and its impact on performance; access to stored information via file systems, and access to other computer systems via networks. (2) Understand existing system software and software standards, especially the UNIX toolset. This includes preparing a program (editors, static analysis, development environments); running a program (compilers and interpreters, assembler, linker, loader, debugger, profiler, tracer); controlling parts of a program (memory management, threads); communication between programs (within one system using signals, between systems using sockets and communication protocols); and combinations of software tools with scripting languages. (3) Understand “real code”, such as selections from the Linux operating system kernel and GNU utilities and libraries, and through comparative selections from Solaris, Linux, and Mac OS X. (4) Understand system performance, including experiments on program performance and optimization techniques.

**Prerequisite:** CMPSC221

CMPSC 312: Computer Organization and Architecture

3 Credits

Data representation, digital logic, instruction set/control logic, machine/assembly languages, advanced architectures, memory hierarchy, I/O devices, overall system design.

**Prerequisite:** CMPSC121 or equivalent

CMPSC 313: Assembly Language Programming

3 Credits

Program design, addressing modes, subroutines, parameter passing, stacks, bit manipulation, text processing, DOS functions, macros, I/O, high level language interfaces. CMPSC 313 CMPSC 313 Assembly Language Programming (3) This is a course in assembly language programming for IBM PCs and compatibles. Students will gain experience writing...
efficient, well-documented programs that are easily maintained. The course investigates the architecture and instruction set of a typical microcomputer based on the Intel 80x86 microprocessors. Topics include the basic structure of computers, the internal behavior of computers, program design, testing, debugging, machine architecture, addressing, BCD and binary arithmetic, subroutines and parameter passing, stacks, text processing, bit manipulation, DOS functions, macros, I/O routines, high level language interfaces and the assembly process. This course is important because assembly language is often used in programs where small size or fast execution is critical. Knowledge of assembly language is also useful in debugging programs written in high level languages. It also helps bridge the gap between hardware and high level languages. After successfully completing CMPSC 313, the student should be able to: explain the 80x86 architecture, including registers and segment:offset addressing; describe different ways data are represented in a computer and work with binary and hexadecimal numbers; describe the functions of an assembler; implement program designs in 80x86 assembly language, including: writing, documenting, testing and debugging a program in PC assembly language; manipulating strings; coding basic algorithms such as searching and sorting in assembly language; calling and passing parameters to subroutines; utilizing DOS functions; and interfacing with a high level language; explain how the underlying hardware affects software design and performance; appreciate the factors that contribute to program efficiency. Students will be evaluated on homework (35% of grade), semester exams (35%), and a final comprehensive exam (30%). The major only requires that a student have experience with assembly language programming.

This course is intended for students who have not had any experience with assembly language programming before entering the program. It will also serve as an elective. The material learned in this course is beneficial in understanding concepts in the required courses CMPSC 422, CMPSC 472, and CMPSC 460, as well as in the elective courses CMPSC 428 and CMPSC 470. No special facilities are required for this course. The software necessary is available in the computer labs or for students to use at home. This course will be offered once per year, with an expected enrollment of 55.

**Prerequisite:** CMPSC 312

CMPSC 335: Fundamentals of Communication Networks

3 Credits

Introduction to the composition of communication networks, including transmission mediums and protocols, transfer methods, topologies and software, and communications hardware.

**Prerequisite:** 3 credits of programming

CMPSC 360: Discrete Mathematics for Computer Science

3 Credits

Discrete mathematics and foundations for modern computer science. Topics include sets, relations, logic, algorithms, graphs, finite state machines and regular expressions.

**Concurrent:** CMPSC 122
of these algorithms will enable the students to develop data analytic models for massive datasets.

Enforced Prerequisite at Enrollment: CMPSC 122 and DS 220. Recommended Preparation: DS 310 or CMPSC 448. Cross-listed with: DS 410

CMPSC 412: Data Structures Lab
1.5 Credits

Programming with common data structures; recursion; stacks, queues, dictionaries, priority queues; string searching and manipulation; sorting; trees; combinatorics.

Concurrent: CMPSC462 or CMPSC465

CMPSC 413: Algorithms Lab
1.5 Credits

Programming with common algorithm design techniques; divide and conquer, greedy method, dynamic programming, and tree and graphy traversals.

Concurrent: CMPSC463

CMPSC 414: Contest Programming
1 Credits/Maximum of 4

Programming Contest Questions; Common Data Structures; Strings; Sorting; Searching; Combinatorics; Number Theory; Graph Algorithms; Dynamic Programming. This course provides hands-on practice with a wide range of computer science topics that are used to solve programming contest questions. These topics include common data structures; strings; sorting; combinatorics; number theory; graph traversal and other algorithms; dynamic programming. In the course, students will solve a range of programming contest questions, both using an online judge in practice sessions and during actual programming contests. In addition to solving programming problems, the course time will also be used to explore topics mentioned above and the relationship to specific problems, solution techniques, and the analysis of proposed solutions to specific problems. This course is envisioned to be a hands-on lab, with instructor supported, self-guided study. The course topics will be chosen from topics that commonly appear in current programming contests, including but not limited to: Contest Programming; Common Data Structures; Strings; Sorting; Combinatorics; Number Theory; Graph Algorithms; Dynamic Programming. This course will provide an introduction to the design and implementation of computer programs with a focus on efficient algorithm design and analysis.

CONCURRENT: CMPSC 221

CMPSC 421: Net-centric Computing
3 Credits

This course introduces JavaScript and AJAX for creating Rich Internet Applications, and XML for client-server communication and Web Services. CMPSC 421 Net-centric Computing (3) This course will build on the client-server computing concepts and techniques that students learned about in prerequisite courses. The goal of the course is to introduce students to the most significant and fundamental of those technologies that are used in the computing paradigm known by a number of terms including "Net-centric," "Web 2," and "cloud" computing. On the client: We will use Dynamic XHTML, Cascading Style Sheets, JavaScript and AJAX to develop the client side of Rich Internet (or Web) Applications. For client-server-communication: We will learn how to create and validate XML documents and use these as the primary language for transmission of data from the server to the client. We will also consider how JavaScript Object Notation (JSON) can sometimes be used as a viable alternative to XML for server to client data transmission. On the server: We will learn about a variety of server-side technologies for consuming, storing, transforming, and generating content. We will use the three main types of XML parsers to consume, transform, and generate XML; we will use XSL and XPath to style and transform XML; we will use XML binding tools to convert XML to and from classes (in some high-level language); we will use Data Access Objects and object-relational mapping tools for data persistence. We will learn how servers use Web services and RSS feeds to provide XML structured content, and we will consume existing Web services and RSS feeds and produce simple Web services.

Prerequisite: CMPSC221 or SWENG311

CMPSC 426: Object-oriented Design
3 Credits

Object-oriented analysis and design; design patterns such as creational, structural, and behavioral patterns; UML; and unified process. CMPSC 426 Object-Oriented Design (3) The primary goal of this course is to study the object-oriented design paradigm, including modeling languages, classes and objects, the inheritance relationship, polymorphism, and software engineering topics relating to object-oriented design. Study of this topic should provide a solid understanding of object-orientation for students to use in studying diverse topics such as operating systems, software engineering, and database design. This course is an elective for students in the BS COMP program. The course builds on topics learned in earlier object-oriented programming courses.

Prerequisite: CMPSC221, CMPSC462

CMPSC 430: Database Design
3 Credits

The main goal of this course is to explore the relational database model, with special emphasis on the design and querying of relational databases. Secondary goals include exploration of the mathematical basis for relational databases and exploration of the relationship of database to the rest of computer science. Study of these topics should improve student skills in programming, modeling the structure of data and using and administering databases. After completing CMPSC 430 the student should be able to: (1) Demonstrate comprehension of general database concepts (2) Identify key issues in developing database systems and applications (3) Explain the general organization of a relational database and explain the functions of the basic relational operators (4) Use query languages, in particular, Structured Query Language (SQL), to define, maintain, and query relational databases (5) Model a relational database through entity-relationship (ER) modeling and construct ER diagrams (6) Explain the methodologies used to conceptualize and design database systems (7) Apply decomposition and analyze/construct functional dependencies (8) Demonstrate an understanding of the concepts of relation normalization and the supporting fundamental knowledge of efficient database implementation

Concurrent Courses: CMPSC 462
CMPSC 431W: Database Management Systems

3 Credits

Topics include: conceptual data modeling, relational data model, relational query languages, schema normalization, database/Internet applications, and database system issues.

Prerequisite: CMPSC 221, ENGL 202C

Writing Across the Curriculum

CMPSC 436: Communications and Networking

3 Credits

Data transmission, basic signaling, data encoding, error control, communication protocols, security, network topologies, routing, switching, internetworking, emerging high speed networks. CMPSC 436 Communications and Networking (3) This course introduces the elements and architecture of computer and data communication networks, demonstrates the fundamental principles of computer networking, and provides experience in the practical use of current networking technology. Topics in this course include: data communications (basic signaling, data transmission, data encoding, errors and error control), communications architecture and protocols (communication protocols, internetworking, transport protocols, layered network architecture, network security) and computer networks (WANs, LANs, network topologies, internetworking, routing and switching strategies and emerging high speed networks). After taking CMPSC 436, students should be able to: 1) understand the fundamentals of networking concepts and terminology 2) define and contrast the classifications local area network (LAN), metropolitan area network (MAN), and wide area network (WAN) 3) name and describe basic networking elements 4) define the roles of clients, servers, and peers as they relate to computer networks 5) define the term "protocol" and explain how it relates to computer networks 6) identify specific network management areas and describe the organizational issues relating to each of them. Students will be evaluated on homework (35% of grade), semester exams (35%), and a final comprehensive exam (30%). This course is an elective in the computer science (COMP) BS curriculum. This course is intended to be taken by second semester juniors or seniors. No special facilities are required for this course. This course will be offered once per year, with an expected enrollment of 60.

Prerequisite: CMPSC 312

CMPSC 438: Computer Network Architecture and Programming

3 Credits

Network architectures, communication protocols, internetworking, network security, client-server computing, web application development, programming with APIs. CMPSC 448 Machine Learning and Algorithmic AI (3) Machine learning and artificial intelligence are closely-related branches of computer science that deal with the development of software that can "learn" how to perform useful tasks from prior data. Machine learning is mostly concerned with inferring trends from data in order to use them for future predictions. Artificial intelligence is mostly concerned about how to use knowledge gained from previous data to achieve specific goals. This course provides an introduction to important concepts in machine learning and artificial intelligence, as well as probabilistic and mathematical tools needed for applications of technology from both fields. Students will learn about important models and algorithmic frameworks used in machine learning such as linear models, neural networks, decision trees, support vector machines, k-nearest neighbor, adaboost, k-means clustering, and agglomerative clustering as well as methods for evaluating and tuning these models. Students will also learn about key artificial intelligence concepts such as A* search and reinforcement learning which are used by software agents (such as game AI's) to navigate and explore their environment.

Prerequisite: CMPSC 221, CMPSC 312

CMPSC 440: Data-driven Security Analytics

3 Credits

Today's security event monitoring and correlation tools are being taxed more than ever before. The constant deluge of data being output by the many devices in our security infrastructures and input into log managers, SIEM (Security information and event management) and other security management interfaces creates quite a load on our analytics systems. In the noise of all this security and event-related data, it is difficult to sort through and obtain real, actionable events that need attention. The market is in need of a new generation of security tools - ones that process much larger datasets, are capable of deep-dive analytics and rely more on intelligence than attack signatures. The proposed course will cover the fundamental data science techniques that are applied to enhance security intelligence. This course will complement the existing computer science and software engineering curriculum. It also prepares students for both a career as a data scientist and as a cybersecurity analyst.

Prerequisites: CMPSC 335, CMPEN 461

CMPSC 441: Artificial Intelligence

3 Credits

Problem solving, search techniques including local search and genetic algorithms, knowledge representation, planning, learning, and neural networks. CMPSC 441 Artificial Intelligence (3) The primary goals of this course are (1) to provide the students with an introduction to Artificial Intelligence concentrating on some fundamental areas of AI, and (2) to provide the students with a working knowledge of LISP so that they can investigate some basic problems in AI using LISP as a vehicle language.

Prerequisite: CMPSC 122, CMPSC 360

CMPSC 442: Artificial Intelligence

3 Credits

This course provides an overview of the theory, research paradigms, implementation techniques, and philosophy of artificial intelligence. A wide range of topics are covered that include search, problem solving, and game-playing, as well as knowledge, reasoning and belief networks. The material includes a brief introduction to machine learning and classification problems. Through programming assignments that sample these topics, students acquire an understanding of what it means to build rational agents of different sorts, especially the contrast between agents that operate in certain versus uncertain environments. Applications to specific areas of AI such as language and vision are presented.

Prerequisite: CMPSC 221 CONCURRENT: CMPSC 465
CMPS 443: Introduction to Computer and Network Security
3 Credits
Introduction to theory and practice of computer security with an emphasis on Internet and operating system applications.
Prerequisite: CMPS473, CMPEN362

CMPS 444: Secure Programming
3 Credits
Secure software design principles/practices, common threats, applied cryptography, trust management, input validation, OS-/programming language-specific issues, software validation. CMPS 444 Secure Programming (3) This course presents an overview of the principles and practices of secure software design. The course begins with a presentation of overarching principles of secure software development that enable the design, implementation, and testing of secure systems that can withstand attacks. These principles and strategies for realizing them will be illustrated through an analysis of common security issues and pitfalls in the software development process. The course will cover a variety of programming languages including C/C++, Java, and scripting languages; different classes of systems including standalone applications, client/server systems, and peer-to-peer applications; and development issues specific to different operating systems. Students will develop and analyze programs that demonstrate security principles, strategies, coding techniques, and the use of tools that can help make code more resistant to attacks.
Prerequisites: CMPS 221

CMPS 445: Applied Machine Learning in Data Science
3 Credits
Applied machine learning techniques are used in many different areas, such as the classification, visualization and analysis of data, clustering, and understanding of natural languages for human-computer interactions. These applications are crossing the boundaries of computer science and data science. Big technology firms have all started offering their own cloud machine learning platforms. This course will start with an overview of supervised and unsupervised learning, and introduce the associated libraries. It covers basic machine learning concepts, tasks, and workflow using an example classification problem based on K-nearest neighbors, Naïve Bayes, Support Vector Machine (SVM), K-means, and implementation using Python libraries. Natural language processing (NLP) techniques including n-gram models, grammar, parse trees, and part-of-speech tagging will be discussed. The issue of dimensionality of data will be discussed, and the task of clustering data, as well as supervised approaches for creating predictive models will be described, and learners will be able to apply Python predictive modeling methods while understanding process issues related to data generalizability (e.g. cross validation, overfitting). The course will also look at more advanced techniques, such as neural network, feed-forward network, back-propagation and deep learning with cloud AI services. Technological differences between using cloud services at a higher level of abstraction and coding locally will be discussed. Students will be able to identify the difference between a supervised (classification) and unsupervised (clustering) technique, identify which technique they need to apply for a particular dataset, manage and understand data, and engineer features to meet that need. Students will work in teams to develop web applications that use industry standard cloud services provided by one of the AI cloud service providers.
Prerequisites: STAT 318, MATH 220, (CMPS 122; CMPS 132)

CMPS 447: Software Security
3 Credits
This course explores the fundamental concepts and engineering processes of software development and testing to produce software that is designed for security. This course is intended as a senior-level course for computational majors such as computer science and computer engineering since it covers the exploitation of programs based on computer architecture, systems, and software concepts. First, software engineering considerations associated with a variety of software vulnerabilities will be analyzed, along with defensive programming techniques to avoid such vulnerabilities. The next part of this course will introduce systematic software engineering principles for building secure software to defend its attack surface, such as reference monitors, privilege separation, information flow, and program verification. The third part will focus on methods for security testing of software including fuzz testing, symbolic execution, grey-box testing, and forensics. The final week of the course will examine adding security into the software engineering life cycle. The design and implementation of techniques to develop reference monitors, information-flow secure programs, testing mechanisms and enhancements, as well as defensive programming against prominent software vulnerabilities will be studied and analyzed. Upon completion of the course students will be able to critically analyze the design and implementation of software for security flaws and build security mechanisms to prevent exploitation of such flaws. Recommended preparation for this course CMPS 360
Prerequisites: CMPS 443

CMPS 448: Machine Learning and Algorithmic AI
3 Credits
Evaluation and use of machine learning models; algorithmic elements of artificial intelligence.
Prerequisite: STAT 319 or STAT 415 and CMPS122 or prior programming experience

CMPS 450: Concurrent Scientific Programming
3 Credits
Problems of synchronization, concurrent execution, and their solution techniques. Design and implementation of concurrent software in a distributed system.
Prerequisite: CMPS121, CMPS201 or CMPS202; MATH 220; MATH 230 or MATH 231

CMPS 451: Numerical Computations
3 Credits
ALGORITHMS FOR INTERPOLATION, APPROXIMATION, INTEGRATION, NONLINEAR EQUATIONS, LINEAR SYSTEMS, FAST FOURIER TRANSFORM, AND DIFFERENTIAL EQUATIONS EMPLASIZING COMPUTATIONAL PROPERTIES AND IMPLEMENTATION. STUDENTS MAY TAKE ONLY ONE COURSE FOR CREDIT FROM MATH 451 AND 455.
Prerequisite: 3 credits of programming; MATH 230 or MATH 231
Cross-listed with: MATH 451
Bachelor of Arts: Quantification

CMPSC 452: Numerical Analysis

3 Credits
Algorithm efficiency and accuracy, function interpolation and polynomial approximation, numerical differentiation and integration, initial-value problems, and approximation of eigenvalues. CMPSC 452 Numerical Analysis I (3) General principles for evaluating the accuracy and efficiency of floating point algorithms; methods for solving single equations and systems of linear equations, function interpolation and polynomial approximation, numerical differentiation and integration, initial-value problems, approximation of eigenvalues.

Prerequisite: MATH 220

CMPSC 455: Introduction to Numerical Analysis I

3 Credits
Floating point computation, numerical rootfinding, interpolation, numerical quadrature, direct methods for linear systems. Students may take only one course for credit from MATH 451 and MATH 455.

Enforced Prerequisite at Enrollment: (CMPSC 201 or CMPSC 202 or CMPSC 121 or CMPSC 131) and MATH 220 and (MATH 230 or MATH 231)
Cross-listed with: MATH 455
Bachelor of Arts: Quantification

CMPSC 456: Introduction to Numerical Analysis II

3 Credits
Polynomial and piecewise polynomial approximation, matrix least squares problems, numerical solution of eigenvalue problems, numerical solution of ordinary differential equations.

Enforced Prerequisite at Enrollment: MATH 455
Cross-listed with: MATH 456
Bachelor of Arts: Quantification

CMPSC 457: Computer Graphics Algorithms

3 Credits

Prerequisite: CMPSC212; MATH 220

CMPSC 458: Fundamentals of Computer Graphics

3 Credits
Fundamentals of computer graphics: input/output devices, transformation, projection, clipping, hidden line/surface elimination.

Prerequisite: CMPSC311; MATH 220; MATH 230 or MATH 231

CMPSC 459: Scientific Visualization

3 Credits
Visualization techniques for data analysis and presentation. Applying visualization and perceptual theory. Using extending platform independent visualization software. CMPSC 459 CMPSC 459 Scientific Visualization (3) Visualization of scientific data and processes has always been important for gaining insights into scientific phenomena. Historically, such visualization has taken place in the scientist's imagination and was then rendered in drawings, graphs and diagrams. The rapid advance of computer technology, and in particular, computer graphics, has made new tools available to the scientist to aid in the interpretation and communication of scientific information. In this course students will study a variety of computer graphics, scientific visualization, and virtual reality techniques and apply them to scientific visualization projects. The projects will be drawn from all of the sciences and the resulting projects will then be available to faculty and students to use as tools in their disciplines. The prerequisites for this course are CMPSC 122. Students will apply the writing skills gained in ENGL 202C and refine them in the context of scientific writing. They will also have the opportunity to apply the knowledge and skills gained in CMPBD 360 and its predecessors, CSE 103 and CSE 120 within the context of a significant natural science or mathematical visualization problem. Software and languages used in this course will change as the discipline of scientific visualization evolves. Currently, programming will be done in C++ and Java; VRML and other virtual reality languages, and scientific specialty languages such as IDL, muPad, xpp, Mathematica, Maple, etc. Projects initiated in this course can form the basis for further development as a 494 research project. The course will take advantage of a variety of computing platforms available at Behrend including Windows NT and Unix.

Prerequisite: CMPSC122

CMPSC 460: Principles of Programming Languages

3 Credits
Design and implementation of high level programming languages and survey of language paradigms including imperative, functional, and object-oriented programming. CMPSC 460 Principles of Programming Languages (3) The primary topics of this course include run-time systems for imperative programming languages and aspects of the object-oriented, functional and declarative paradigms that have applications in industrial software development. Study of these topics should improve student skills in programming, debugging and problem solving.

Prerequisite: CMPSC312; CMPSC462; Concurrent: CMPSC469

CMPSC 461: Programming Language Concepts

3 Credits
Fundamental concepts of programming language design, specifications, and implementation; programming language paradigms and features; program verification.

Prerequisite: CMPSC221; CMPSC360
CMPS 462: Data Structures
3 Credits
In-depth theoretical study of data structures such as balanced trees, hash tables, priority queues, B-trees, binomial heaps, and Fibonacci heaps. CMPS 462 Data Structures (3) The primary goals of this course are (1) to provide the students with a set of basic data structures useful in the design of efficient algorithms, and (2) to provide the students with the ability to design and analyze new data structures as needed to solve problems. The secondary goal of this course is to introduce basic algorithm analysis techniques to prepare the students for the follow up course CMPS 463, Design and Analysis of Algorithms. This is a required course in the BS COMP program. It is also a prerequisite for a number of other courses in the COMP program such CMPS 463, 460, 430, etc.

Prerequisite: CMPS360

CMPS 463: Design and Analysis of Algorithms
3 Credits
Recurrences, algorithms design techniques, searching, sorting, selection, graph algorithms, NP-completeness, approximation algorithms, local optimization algorithms. CMPS 463 Design and Analysis of Algorithms (3) The primary goals of this course are (1) to provide the students with fundamental techniques for designing and analyzing algorithms, and (2) to introduce some techniques for dealing with inherently intractable problems. This is a required course in the BS COMP program.

Prerequisite: CMPS462; Concurrent: MATH 318, STAT 301 or STAT 318

CMPS 464: Introduction to the Theory of Computation
3 Credits
Computability/Complexity: finite automata, regular & context-free languages, Turing machines, Church-Turing Thesis, undecidability, reducibility, completeness, time/space complexity, P versus NP. CMPS 464 Introduction to the Theory and Computation (3) CMPS 464 introduces students to an essential part of theoretical computer science: how to define abstract mathematical models of computational devices (automata), how to characterize their computational power by studying the family of languages that they can recognize (formal languages), and what the limitations of even the most powerful computational devices are (computability). The course studies regular languages by means of deterministic and nondeterministic finite-state automata and regular expressions; it studies context-free languages through the use of context-free grammars and pushdown automata; and it studies computability by means of Turing machines and recursive and recursively-enumerable languages. The unsolvability of the halting problem for Turing machines is proved by a diagonalization argument, and this result is then used to show that various problems about languages are unsolvable, such as the problem of determining whether two context-free grammars generate the same language. Finally, the concept of computational complexity is introduced, and the classes P and NP are defined. (Informally, the former class consists of problems that can be solved computationally in a manageable amount of time, and the latter consists of problems for which a proposed solution can be verified in a manageable amount of time.) The concept of an NP-complete problem is defined, and some specific problems are proved to be values to the variable of a Boolean formula that will make the formula true.

Prerequisite: CMPS465

CMPS 465: Data Structures and Algorithms
3 Credits
Fundamental concepts of computer science: data structures, analysis of algorithms, recursion, trees, sets, graphs, sorting.

Prerequisite: CMPS122, CMPS360 or MATH 311W

CMPS 467: Factorization and Primality Testing
3 Credits
Prime sieves, factoring, computer numeration systems, congruences, multiplicative functions, primitive roots, cryptography, quadratic residues. Students who have passed MATH 465 may not schedule this course.

Enforced Prerequisite at Enrollment: MATH 311W
Cross-listed with: MATH 467
Bachelor of Arts: Quantification

CMPS 469: Formal Languages with Applications
3 Credits
Regular, context free, recursive, and recursively enumerable languages; associated machine models; applications. CMPS 469 Formal Languages with Applications (3) The primary goal of this course is to explore formal language theory, including regular, context free and recursively enumerable languages. Notations for specifying these languages (regular expressions, finite automata, context free grammars and turing machines) are emphasized. Applications of these languages, including pattern recognition, scanning, parsing, specification of programming language syntax and Unix shell programming, are also discussed. Study of these topics should provide a solid theoretical basis for students to draw on in studying diverse areas such as algorithm analysis, complexity theory and compiler construction.

Prerequisite: CMPS360

CMPS 470: Compiler Construction
3 Credits
Compiler design and implementation; scanning, parsing, semantic analysis, optimization (including static analysis), code generation, garbage collection, and error detection. CMPS 470 Compiler Construction (3) The primary topics of this course are areas of compiler construction that are applicable both in building compilers and in many other areas of computer science. Both the concepts and the implementation of these techniques will be emphasized. Study of these topics should improve student skills in programming, debugging and software engineering. This course is an elective for students in both the BS COMP and MS COMP programs. The course builds on concepts learned in earlier programming, data structure and computer organization courses.

Prerequisite: CMPS221, CMPS312, CMPS462, CMPS469

CMPS 471: Introduction to Compiler Construction
3 Credits
Design and implementation of compilers; lexical analysis, parsing, semantic actions, optimization, and code generation.
CMPSC 472: Operating System Concepts

3 Credits

Theoretical and practical issues of operating systems design and implementation, process management, concurrent programming, memory management, scheduling, I/O, and security. CMPSC 472

Operating Systems Concepts

CMPSC 472 is an essential part of a computer science education. This course is intended as an introduction to study the concepts, structure and mechanisms that underlie operating systems. A tremendous range and variety of computer systems exist for which operating systems are designed. Rather than focus on individual operating systems, this course discusses the key mechanisms of modern operating systems, the types of design trade-offs and decisions involved in operating system design and the context within which the operating system functions. After completing CMPSC 472, the student should be able to: (1) describe and understand the four major components of an operating system: process management (including synchronization, scheduling, mutual exclusion, deadlocks and concurrency), input/output (including disk scheduling and disk I/O), memory management (including virtual memory, paging, segmentation and addressing) and management of the file systems, (2) describe and understand how a centralized operating system functions, (3) describe and understand the various components of an operating system, (4) describe the various goals of protection and the security problem in general, (5) compare centralized operating systems with distributed operating systems. Students will be evaluated on homework (35% of grade), semester exams (35%), and a final comprehensive exam (30%). This course is required in the computer science (COMP) BS curriculum. It is intended for seniors to take this course in their fall semester. This course is also an admission requirement for the (COMP) MS program. No special facilities are required for this course. The software necessary is available in the computer labs or for students to use at home. This course will be offered once per year, with an expected enrollment of 80.

Prerequisite: CMPSC461

CMPSC 473: Operating Systems Design & Construction

3 Credits

Design and implementation of computer operating systems; management of various system resources: processes, memory, processors, files, input/output devices.

Prerequisite: CMPSC312; CMPSC462

CMPSC 474: Operating System & Systems Programming

3 Credits

Operating Systems overview and principles; processes and signals; concurrency and synchronization; memory and file management; client-server computing; scripts; systems-programming.

Prerequisite: CMPSC122; CMPSC312

CMPSC 475: Applications Programming

3 Credits

Development of software for devices including smart phones, tablets, handheld units, and other general purpose computing platforms.

Prerequisite: CMPSC221; CMPSC311 or CMPSC312; CMPSC462 or CMPSC465

CMPSC 483: Software Design Methods

3 Credits

Applications of scientific knowledge and methods in the design and construction of computer software using engineering concepts.

Prerequisite: CMPSC 221; CMPSC 465; ENGL 202C

Writing Across the Curriculum

CMPSC 484: Computer Science Senior Project I

2 Credits

Computer science capstone project with documentation emphasis. CMPSC 484 CMPSC 484 Computer Science Senior Project I (2) This course is phase one preparation for completing a design for a project to serve as the capstone to the computer science degree program. The course provides instruction and specification of a simulated real-world work environment and associated activities to employ and integrate computer science concepts. Technical instruction and delivered products will be required. Students enrolled in the program will: 1) produce a design for a significant senior project using a cooperative, team approach, 2) present concepts, progress, and products to and interact with peer and faculty review boards. The course will: 1) provide the student with an opportunity to work in a team environment designed around sound development practice, 2) present to students current team organization and management techniques, 3) describe various forms of written communication targeted to different audiences, and 4) reinforce the technical knowledge attained through the computer science curriculum.

Prerequisite: ENGL 202C; CMPSC 221; CMPSC 465

CMPSC 485: Computer Science Senior Project II

3 Credits

Computer science capstone project with documentation emphasis.

Prerequisite: CMPSC484

Writing Across the Curriculum

CMPSC 487: Software Engineering and Design

3 Credits

Software development process, life cycle: requirements analysis, specification, design, prototyping, testing, project management, and documentation. CMPSC 487W Software Engineering and Design (3) The primary goal of this course is to familiarize students with the wide variety of techniques and methodologies used in software engineering to assist in the development of large software systems. Issues discussed include the human factors involved in developing software, models of the software development process, the use of formal methods in software engineering, software validation and verification, and software maintenance. A second goal is to help students understand the importance of written communication in software engineering,
and to provide opportunities for students to improve the quality of their writing - specifically in describing software systems. The primary means of accomplishing this goal is a semester long project in which students write requirements for a large software system. In writing these requirements, students describe the system for non-technical readers (clients and users) and specify it for technical readers (other system developers). A final goal is to emphasize the role of teams in software development. Modern software systems are simply too large to reasonably be produced by one person, so the ability to work as part of a team is vital. To support achieving this goal, techniques and tools for working in groups are discussed in the course, and students work on the semester project in teams. This course is a required course in the computer science (COMP) BS curriculum, and is intended to be taken by seniors as the capstone course for the major. As such, the course integrates material from many (potentially all) of the undergraduate computer science courses. This course is also available as an elective for students in the MS COMP program.

**Prerequisite:** ENGL 202C, CMPSC221, CMPSC462

**Writing Across the Curriculum**

**CMPSC 488: Computer Science Project**

3 Credits

Project design and implementation with an emphasis on team work, documentation, and the employment and integration of computer science concepts. CMPSC 488 Computer Science Project (3) This class provides a hands-on experience designing and developing a real-world software system. The course will emphasize collaboration and teamwork to employ and integrate computer science concepts. Students will work on a project that will serve as the capstone to the computer science degree program. Technical instruction, research, software implementation and delivered products will be required.

**Prerequisite:** CMPSC487W

**CMPSC 494: Senior Honors Thesis**

1-6 Credits/Maximum of 6

Supervised Honors thesis research in computer science and engineering.

Honors

**CMPSC 495: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experience, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

**Full-Time Equivalent Course**

**CMPSC 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Prerequisite:** CC 200 or CC 330. Fifth semester standing
CC 402: External Communication
3 Credits
Explores the various ways organizations communicate with external stakeholders. CC 402 focuses on the process of communication with external stakeholders. An integral part of Corporate Communication, external communication is an integrated function that includes building relationships and writing for the traditional media, creating materials such as advertisements and brochures, writing for the web, and creating credible spokespeople. As such, this course focuses on identifying and defining methods of external communication, as well as, how to write effectively for each communication channel. Students will gain experience in core Corporate Communication competencies, including writing media releases, integrating content and design, and evaluating communication effectiveness.

Prerequisite: CC 200 or CC 300. Fifth semester standing

CC 404: Risk and Crisis in Corporate Communication
3 Credits
Explores crisis communication theory and practice as related to internal and external processes. Every organization will encounter crisis. Understanding how to communicate before, during, and after a crisis can dramatically alter the trajectory of an organization. This course approaches the topic of crisis holistically, as part of the organizational lifecycle, with a focus on internal and external organizing, and ultimately positions crisis as an organizational learning opportunity. The course is broken into four sections: key concepts, and pre-, during, and post-crisis organizing and communicating. The first section will cover foundation concepts such as crisis, risk, and uncertainty, as well as provide an overview of crisis types and stages. The second section of the course will explore pre-crisis issues such as risk assessment, crisis management teams and plans, and contingencies for crisis eventualities. The third section will focus on the acute stage of crisis, including activating the crisis management plan and exogenous variables that affect crisis communication. The final section of the course will focus on the post-crisis stage, including organizational learning, evaluation, and preparing for future crises.

Prerequisite: CC 200 and Fifth semester standing

CC 405: Strategic Speaking
3 Credits
This course addresses the design and delivery of strategic spoken word communications with stakeholders inside and outside organizations. CC 405 concentrates on strategic spoken word communications used to advance overall Corporate Communication goals inside and/or outside the organization. The course specifically addresses group-based speaking and/or speaking potentially shared with a large number of individuals through electronic means. For each of various contemporary modes of strategic spoken expression, students will learn standard elements, examine industry examples, create an original design, and deliver an original performance. CC 405 will be an additional elective course in the Corporate Communication major. It is designed to integrate with the internal-external conceptual model used throughout the Corporate Communication major. As an advanced course in the major, CC 405 provides considerable depth in terms of concepts, theories, and practices. Students will mainly need to apply, analyze, evaluate, and synthesize/create in this course. Students will primarily explore strategic speaking in terms of present day practices and future trends.

Prerequisite: CC 200 and Fifth semester standing

CC 406: Social Media in Corporate Communication
3 Credits
Explores the internal and external functions of social media in organizations, with a focus on organizational-stakeholder relationships. Social media allows organizations to connect and build dialogic relationships with stakeholders, and is therefore an integral part of the Corporate Communication field. This course discusses the role of social media in Corporate Communication, the communicative and social functions that social media technology enables, issues of appropriate and effective use, social media use from both the organizational and stakeholder point of view, and the ethical considerations of using social media. Emphasis will be placed on theoretical understanding and practical application in the context of organizations seeking to advance internal and external communication goals. This course integrates the internal/external communication focus that shapes the Corporate Communication major by focusing on the different types of messages, platforms, and issues that are unique to each audience, while also emphasizing how to create synergistic organizational messages that resonate with both internal and external audiences.

Prerequisite: CC 200 and Fifth semester standing

CC 490: Seminar in Corporate Communication
3 Credits
Explores and applies concepts and theories to various cases, emphasizing written development of strategies relevant to the internal and external organization. This course explores Corporate Communication as it encompasses both the internal and external organization. It takes a comprehensive approach to exploring theory and application in the context of specific cases. Course content builds on and unifies other required courses in the major. Coursework will primarily involve students developing major strategies and related tactics for existing or newly emerging organizations. Coursework may also involve students applying Corporate Communication concepts and theories to the development of their own career plans. This course emphasizes student synthesis and creativity in applying theory and research from Corporate Communication and allied fields to the total organization. The course will typically include analysis and evaluation of practitioner and scholarly readings, students’ work, and case studies.

Prerequisite: CC 200 or CC 300. Fifth semester standing

Writing Across the Curriculum

CC 495: **SPECIAL TOPICS**
3 Credits

CC 495A Internship in Corporate Communication (3) Communications experience in businesses or agencies that may include activities in writing, media production, planning, public relations, advertising, employee relations, or training.
Counselor Education (CNED)

CC 495A: Internship in Corporate Communication
3 Credits/Maximum of 3

CC 495A Internship in Corporate Communication (3) Communications experience in businesses or agencies that may include activities in writing, media production, planning, public relations, advertising, employee relations, or training.

Prerequisite: MKTG 310 and sixth-semester standing

Counselor Education (CNED)

CNED 97: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 100: Effective Career Decision-Making
3 Credits

Examination of internal and external factors that contribute to career development to assist students undecided about major or career. CN ED 100 CN ED 100 Effective Career Decision-Making (3) CN ED 100 teaches students career decision-making skills by closely examining internal factors, the world of work, and decision-making styles and strategies. The premise of this course is that career decisions are greatly enhanced by: (1) considering personal traits such as interests, values, abilities, decision-making styles and other factors; (2) gathering information about the world of work and education; and (3) integrating knowledge about the self and the world through an on-going process. Learning the career decision-making process is empowering and skills learned in the course can be valuable throughout life as individuals encounter crossroads that may prompt career changes. CN ED 100 is intended for students who are undecided about their major and career selection. The course format consists of lectures, discussions, and experiential learning activities designed to help students analyze their personal traits and to relate their traits to career theories, occupational fields and work settings. Self-assessment activities include reflective writing, use of established career assessment inventories, and completion of various activities. Diverse information is shared on majors and occupations as well as information gathering strategies. Students more closely discuss their career development and progress in formal small group sessions, facilitated by career counseling professionals. Five classes of the semester are devoted to these meetings.

CNED 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 198: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 200: Peer Mentoring
1 Credits

This course will prepare students for the roles and responsibilities of being a Peer Mentor. CN ED 200 Peer Mentoring (1) "Peer Mentoring" is designed to present to the student the basic principles, characteristics, and benefits of a peer mentoring relationship. Peer Mentoring is a beneficial relationship to both the mentee and mentor and ultimately can aid in college retention rates. Once this knowledge is gained, students in the course will learn how to deal with the various situations that could occur during the transition process. This course offers the student the opportunity to develop intellectual relationships with faculty, current campus peer mentors, and fellow classmates who share similar academic interests in leadership, mentorship, and role modeling. In this course, students will be introduced and learn to apply active listening skills, the hidden rules of college, how to conduct mentee interactions both virtually and in person, intrinsic and extrinsic motivation, along with cultural and self-awareness. Once introduced to the multi-layer elements of the course, students will demonstrate their knowledge of these skills through their in class involvement. The course is delivered as an interactive learning environment where in class exercises and hands-on demonstrations help the student understand the principles and implications of peer mentoring. Additionally, students will work on a campus resource project outside of the classroom that will be presented to the entire campus community at the conclusion of the semester. The course is open to all students, however, students interested in taking the course must get course entry approval by the faculty member in charge to determine the student's true interest in peer mentoring.

CNED 280: Job/Internship Search and Professional Skills
1 Credits

This course will teach students how to implement a career strategy to effectively secure a job/internship.

CNED 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNED 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 298: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 301: Student Organization Management
2 Credits

Exploration and development of leadership and group process skills necessary for effectively managing student organizations in higher education settings.
CNED 303: Career Search Strategies for Educators
1 Credits
An aid in preparing students with information helpful for entry into education and alternative job markets.

CNED 304: Education of the Peer Assistant
3 Credits
Student development theories: skill development in listening, informing, and referring culturally diverse peers in individual and group situations.

**Prerequisite:** limited to students selected as peer assistants or similar positions

CNED 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 401: Foundations of Chemical Dependency Counseling
3 Credits
An overview of diagnosis and assessment, models for chemical dependency prevention, counseling, and recovery; contexts of chemical dependency treatment.

**Prerequisite:** 3 credits in general psychology

CNED 404: Group Procedures in Guidance and Counseling
3 Credits
The nature and functioning of groups in educational and agency settings. Provides prospective counselors with experience in the group process.

**Prerequisite:** 6 credits in counselor education; 6 credits in psychology, sociology, or individual and family studies

CNED 416: Interpersonal Relationships and Alcohol and Other Drugs (AOD) Dependency
3 Credits
This course examines families with chemically dependent members, dynamics, appropriate interventions, and treatment.

**Prerequisite:** CN ED401 or RHS 301

CNED 420: Chemical Dependency: Youth at Risk
3 Credits
Study of youth who are at-risk of developing chemical dependency including the characteristics and factors related to chemical dependency.

**Prerequisite:** CN ED401

CNED 421: Counseling Strategies for Preventing Chemical Dependency
3 Credits
Examines helping professional's role in primary and secondary prevention of substance abuse, and related problems like delinquency, suicide, and pregnancy.

**Prerequisite:** CN ED401

CNED 422: Foundations of Addictions Counseling
3 Credits
Study of the fundamental principles of counseling individuals with a wide variety of addictions. CN ED 422 Foundations of Addictions Counseling (3) Students explore the fundamental principles of addictions counseling from a wide range of perspectives. These include the psychopharmacological aspects of alcohol and abusable drugs, along with theories and assessments of addictive disorders. Many treatment models are considered, and are examined in the context of individual, group, and family therapy perspectives. The course also addresses the research literature on codependence, COA's AA and other 12-step programs, dual diagnosis, relapse, prevention, and multicultural and gender issues.

**Prerequisite:** a minimum of 12 hours of coursework in sociology, psychology, education, or family studies.

CNED 423: Student Assistance Programs
3 Credits
Exploration of early stages of adolescent "at-risk" behavior and skills for student assessment and intervention within schools and communities.

**Prerequisite:** CN ED401

CNED 424: Facilitating Career Development
3 Credits
This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. CN ED (WF ED) 424 Facilitating Career Development (3) This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. This course addresses the following 12 Career Development Facilitator (CDF) competencies: 1) helping skills, 2) labor market information and resources, 3) assessment, 4) diverse populations, 5) ethical and legal issues, 6) career development models, 7) employability skills, 8) training clients and peers, 9) program management/implementation, 10) promotion and public relations, 11) technology, and 12) consultation. These 12 competencies are identified by the National Career Development Association (NCDA) for those who will deliver career development programs and services in a variety of settings. Potential job titles of CDFs include career group facilitator, job search trainer, career resource center coordinator, career coach, career development case manager, intake interviewer, occupational and labor market information resource person, human resource career development coordinator, employment/placement specialist, and workforce development staff. With certain years of work experience in career development, students who complete this course are eligible to apply for the Global Career Development Facilitator (GCDF) certification through the Center for Credentialing & Education (CCE), which is affiliated with the National Board for Certified Counselors (NBCC). A GCDF is a person who works in any career development setting or who incorporates
Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories explaining criminal behavior including differential association, anomie, control theory and labeling theory. A key focus of the class is examining the most recent scientific research testing the basic theories. The students learn the various research techniques that have been used to study criminal behavior including crime statistics such as the Uniform Crime Report that serves as a monitor on crime trends. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. The course concludes by using the knowledge base generated in the course to study the link of our understanding of criminal behavior and the emerging crime control policies of the past few decades. Finally, the course reviews the impact and effectiveness of some of these policies. Throughout the course, the lectures as well as the readings emphasize the complexity of explaining human behavior and criminal behavior in particular. One aspect of
the course is the use of a term paper on the objective and subjective availability of crime to the student. This paper emphasizes the complexity of the student's social life and the role that these factors may have on whether they have engaged in criminal behavior and their analysis of the causes of their criminal behavior. This project personalizes the various theories and helps the student understand the importance of their social environment in whether they have or will engage in crime. Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail. Writing assignments, along with in-class examinations, are required in all sections. This course meets a General Education requirement in the Social and Behavioral Sciences for non majors, is required for the CLJBA and CLJBS majors, and may be used in the SOC majors and minors.

Cross-listed with: CRIM 12, SOC 12
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

CRIMJ 12H: Honors Criminology
3 Credits

Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. This honors version of Introduction to Criminology is especially designed to be appropriately challenging for Schreyer Honors College students. A key focus of the course is examining the most recent scientific research testing the basic theories in criminology. Students learn the various research methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in criminology.

General Education: Social and Behavioral Scien (GS)
Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

CRIMJ 13: Juvenile Delinquency
3 Credits

Juvenile conduct, causes of delinquency, current methods of treatment; organization and function of agencies concerned with delinquency.

Cross-listed with: SOC 13
General Education: Social and Behavioral Scien (GS)

CRIMJ 83S: First-Year Seminar in Criminal Justice
3 Credits

Critical approaches to issues in criminal justice and criminology. CRIMJ 083S CRIMJ (CRIM) 083S First-Year Seminar in Criminal Justice (3) (GS;FYS)(BA) This course meets the Bachelor of Arts degree requirements. Each section of this course will be limited to 20 students who will be instructed by an experienced faculty member. Each section will focus on a well-defined body of scholarship that addresses a relatively specific topic while at the same time providing an opportunity to broadly survey existing knowledge in the discipline. For example, some sections may address very broad questions that encompass the entire field, such as criminal justice policy, issues related to social justice, or explanations of crime. Other sections may focus on justice system responses to certain types of crime, such as violent crime, white collar crime, organized crime, or transnational crime. Finally, some sections may take a comparative and international approach, and consider how justice systems are administered or how patterns of crime vary in a range of countries and jurisdictions. Each section will emphasize the development of discussion writing, and analytical skills and will give students the opportunity to work individually and in small groups. Students can expect to gain a general introduction to the University as an academic community and to explore their responsibilities as members of that community. They will also become familiar with the learning tools and resources available to them, and they will be able to establish relationships with faculty and other students who share their academic interests. This course fulfills a general education or Bachelor of Arts requirement in the social/behavioral sciences. A section of the course will be offered once a year. Students will write essays in class or out of class, engage in classroom discussion and group exercises, and make presentations. Faculty Member Proposing Course: Thomas S. Bernard

Bachelor of Arts: Social and Behavioral Sciences
First-Year Seminar
General Education: Social and Behavioral Scien (GS)

CRIMJ 100: Introduction to Criminal Justice
3 Credits

Overview of the criminal justice system, including legal foundations, processing and correction of offenders, extent and types of crime, victims. CRIMJ 100 CRIMJ (CRIM) 100 Introduction to Criminal Justice (3)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an overview of the criminal justice system in the United States. Topics to be covered include: the extent of crime in the United States; competing and complementary goals of the criminal justice system; sources of criminal law; the history and development of the system; the functions of police, attorneys, courts and correctional agencies; the interactions between different parts of the system; and the impact of crime on the victim. Students are evaluated on two exams (20% each), two written assignments (30%), and a final exam (30%). This course is a prescribed course in the CLJBA, CLJBS, ADM J BS and ADM J BA majors, and it is also a prerequisite for most 400-level courses in Crime, Law, and Justice.

Cross-listed with: CRIM 100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

CRIMJ 113: Introduction to Law
3 Credits

Introduction to law in society with a focus on criminal law, judicial code, laws of sentencing and corrections, criminal procedure. CRIM (CRIM) 113 Introduction to Law (3) Introduction to the law is designed to provide CLJ majors with an introductory level of knowledge of the criminal law, and other legal codes such as the Judicial Code, laws of corrections, probation and parole, and the rules of criminal and appellate procedure. The course will serve as a gateway course to taking more advanced courses.
CRIMJ 159: History of the FBI

3 Credits

Chronological survey of the History of the FBI since its founding in 1908, focused on the evolution of Federal law enforcement, bureaucracy, the increasing power of the Executive branch, the targeting of various minority groups, civil rights and civil liberties issues, and the growth of a national security role for the federal government over time. In its long history the FBI has intersected with a wide variety of groups and issues, and this reality will further expose students to the histories of African Americans, gays and lesbians, women’s groups, Latinos, Native Americans, war protesters, students, various political dissenters, immigrants, targeting of morality, obscenity, and labor organizing. Because the FBI is responsive to both the political and policy interests of presidents and the influences of American society, students will come to appreciate the influences that politics has on bureaucracy and law enforcement, as well as the different social, political, economic, and cultural influences that each historical time period have exerted on the FBI to help shape its priorities and structure.

CRIMJ 210: Policing in America
3 Credits
Police organization and operations in America.
Prerequisite: or concurrent: CRIMJ100

CRIMJ 220: Courts and the Prosecution Process
3 Credits
Purpose and function of criminal courts in society, organization, jurisdiction and staffing; prosecution, adjudication, and sentencing of offenders.
Prerequisite: CRIMJ100

CRIMJ 221: Issues in the American Criminal Justice System
3 Credits
Examination of the models of the criminal process, functions of the justice system, and approaches to crime and punishment.
Prerequisite: CRIMJ100

CRIMJ 230: Corrections in America
3 Credits
Punishment and treatment of sentenced offenders, correctional institution organization, staffing, inmates, and subcultures.

CRIMJ 234: Fundamental Techniques of Scientific Criminal Investigation
3 Credits
Traditional and innovative technical approaches utilized by law enforcement scientists; capabilities and limitations of technical techniques highlighted. CRIMJ 234 CRIMJ 234 Fundamental Techniques of Scientific Criminal Investigation (3) This course is designed to introduce students to the fundamental methods by which scientific-criminal investigations are pursued. Course objectives focus upon a familiarity with various strategies and techniques of scientific criminal investigation within the law enforcement context so that students may understand both the potentials and limitations of such methods. The course maintains a focus upon traditional methods of scientific criminal investigation as well as examination of scientific developments that have altered investigation in recent years. While this course cannot produce expertise in the more sophisticated technologies of criminal investigation, it serves as a basic introduction to the field. As such, it is designed to give an overview of various possibilities, so that students completing the course will have a general grasp of the various strategies and techniques that are available for criminal investigation and will be in a position to call upon the necessary and appropriate expertise when the occasion arises. The course design alerts students to many of the limitations of the various strategies and techniques of scientific criminal investigation, equipping, them to judge the validity of various findings and to assess the qualifications, and methods employed by different experts. The course gives special attention to strategies and tactics of interrogation and to means of corroborating interrogation data with scientific data obtained from other investigative techniques. The course provides an introduction to various techniques of fingerprinting, including ink pads and dusting techniques, as well as several techniques for bringing out latent fingerprints, with an emphasis on the careful collection and preservation of this evidence. It will introduce methods of drug testing, including techniques for insuring the validity of specimens and basic chemical analysis kits currently available for drug testing, with an emphasis on the careful collection and preservation of this evidence. It demonstrates and provides practical experience in breathalyzer utilization, as well as other investigative techniques for assessing driver impairment resulting from excess alcohol intake. It provides a basic introduction to DNA technology to the point of equipping students with a fundamental understanding of DNA evidence, including probabilities associated with various findings. Throughout the course, there is special stress on the concept of crime scene investigation, including strategies for cordoning off crime scenes and restricting contamination of evidence, basic crime scene mapping, and analysis of evidence such as blood splattering, foreign objects, unusual markings, hair and fiber samples, and other aspects of evidence. Finally, the course stresses preparation of investigative reports, with an emphasis upon clarity of presentation, attention to relevant details, preparation for presentation of evidence in court, and careful and concise writing. Faculty Member Proposing Course : Richard A. Ball

CRIMJ 240: Field Research in the Criminal Justice
4 Credits
Field research and observational strategies appropriate to the identification, investigation, and analysis of research questions in criminal justice. CRIMJ 240W CRIMJ 240W Field Research in Criminal Justice (4) Administration of Justice majors who are interested in completing an internship must first complete CRIMJ 240W. As augmented, this course attempts to introduce students to research strategies appropriate to the identification, investigation, and analysis of research questions in the administration of justice, while also providing intensive training in the use of various investigative strategies and intensive training in analysis of findings derived from such research, as well as preparation for an internship and extensive writing experience. As augmented, it will involve additional writing assignments by which students will demonstrate their ability to identify researchable questions, lay out their investigative strategies in written form and produce in writing analyses of their findings and conclusions, with recommendations for policy if appropriate. Considerable time is devoted to strategies for identification of research questions. Students will be required to perform an analysis of a setting in administration of justice, locate and specify aspects of the setting that require systematic research in order to explicate the setting or provide information on problems that might be solved by various administrative approaches or promising programs, projects or policies that might be adopted by other agencies. The course will provide an overview of field research methods appropriate to investigation of administration of justice issues such as those identified earlier. The course will include introduction to the theory and rationale of field research in the social sciences and considerable training and experience in field research methods across several different areas of methodology. The overview of field research methods introduces students to the variety of field methods that are available to researchers in administration of justice. Students will then proceed to an understanding of the issues associated with the theoretical perspectives and epistemological assumptions underlying the various
field methods examined in the preceding overview. Here attention will be given to the assumptions upon which each research method is built and the strengths and weaknesses of each method. As augmented, this course is designed to require students to take special account of the weaknesses of the various methods and learn how to counter these weaknesses by augmenting the research strategy by complementary methods where appropriate. As augmented, the course is designed to teach students the reasons for use of various methods as well as the methods themselves. Because this course places such emphasis on data collection, and because research is best learned by doing it, the course is further augmented with additional research exercises. Students are required to spend additional time in the field research exercises beyond that required for a 3-credit course, completing as much as 20 hours of participant observation for sharpening their observational skills, as 10 hours of focus group work, with much of this effort aimed at sharpening their ability to interpret communications from several different sources with respect to the same events, and as 20 hours of interviewing, using several different interviewing techniques. These efforts concentrate upon developing students’ ability to elicit information from interviewees and cross-validate the information through a variety of interview techniques. Students must complete several papers demonstrating their ability to organize their research finding and present them in understandable form. The research writing elements in this course include development of hypotheses, preparation of a research proposal, development of literature reviews, description of research settings, and preparation of research bibliographies. Finally, this course is designed to serve as a bridge in preparation for a successful internship experience. As such, it must succeed in teaching students how to develop and conduct a research study on their own before graduation. Faculty Members Proposing Course: Lisa Morris and Richard A. Ball

Prerequisite: CRIMJ100

Writing Across the Curriculum

CRIMJ 241: Computer Applications in Public Affairs/Criminal Justice

3 Credits

Introduction to computer applications for criminal justice and public affairs agencies. CRIMJ 241 CRIMJ (PUBPL) 241 Computer Applications in Public Affairs (3) The student will gain a working knowledge of microcomputer and Internet applications to utilize them in course and/or job functions. The class will be treated primarily as a lab. The purpose is to make the student familiar with popular computer applications in current use. Applications covered include: Word Processing (Microsoft Word); Spreadsheet (Microsoft Excel); Presentation Package (Microsoft PowerPoint); Database (Microsoft Access). Internet Applications include: email - Webmail; World Wide Web Browser - Netscape Communicator and Internet Explorer; and creating a Homepage.

Cross-listed with: PUBPL 241

CRIMJ 250W: Research Methods in Criminal Justice

3 Credits

Fundamental concepts of social science research including design, measurement, sampling, and interpretation of the study of crime, law, and justice.

Prerequisite: CRIM 012

Writing Across the Curriculum

CRIMJ 260: Statistical Analysis for the Social Sciences

3 Credits

Methods of collection, presentation, and analysis of quantitative data in the social science; procedures, interpretation, and application. CRIMJ 260 Statistical Analysis for the Social Sciences (3) This course covers the theory and methodology of statistical analysis. This course includes mathematical calculation of Univariate and Bivariate models, including mean, mode median, variance and standard deviation, Crosstabs with Chi-Square, Independent and Paired Samples t-tests, Anova and Tukey’s H.S.D, Correlation and Regression. It also makes use of SPSS and publically available data sets to examine univariate data, and test hypotheses at both the bivariate and multivariate level. Students become familiar with the calculations behind the analysis, and engage in the analysis and reporting of actual data.

Prerequisite: 2 units of High School Algebra, and CRIMJ100 , or permission of the program

General Education: Quantification (GQ)

CRIMJ 290: Introduction to Internship Experience

1-3 Credits

Planning and preparation for field experience in a criminal justice agency setting. This course provides the student learner with an intimate understanding of the academic requirements of the criminal justice internship. Students will engage in practical application of the skills, traits, characteristics and qualities necessary to be successful in the criminal justice internship, as well as their chosen career. Guidance will be provided as to how to conduct themselves in a professional setting and learn to utilize critical thinking and problem-solving in the day-to-day encounters in the field.

Prerequisite: CRIMJ100 ; Prerequisite or concurrent: CRIMJ240W

CRIMJ 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CRIMJ 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CRIMJ 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CRIMJ 300: Honors Seminar: Issues and Trends in Criminal Justice

3-6 Credits/Maximum of 6

Discussion of various, specific criminal justice topics, such as discretionary decision-making, due process, equal protection, violence, and recidivism.
Prerequisite: fifth-semester standing, and admission to Schreyers Honors College

CRIMJ 304: Security Administration

3 Credits

Interdisciplinary analysis of security and loss prevention; its administration, role in crime control and prevention, and relationship to criminal justice.

CRIMJ 310: Forensic Science I

3 Credits

Presentation of the techniques, skills, and limitations of modern crime laboratory. CRIMJ 310 CRIMJ 310 Forensic Science I (3) Presentation of techniques, the principles underlying the techniques, skills and limitations of the modern crime laboratory for student who has no background in the forensic sciences form the basis of the course. The nature of physical evidence is emphasized along with limitations that technology and knowledge impose on its individualization and characterization. Particular attention is paid to the meaning and role of probability in interpreting the individual significance of scientifically evaluated evidence. Major, lecture topics include the following: The Crime Scene; Physical Evidence; Physical Properties of Glass, Soil, and Plastics; Organic Analysis; Inorganic Analysis; the Microscope; Hairs, Fibers, and Paints; Drugs; Forensic Toxicology; Forensic Aspects of Arson and Explosion Investigation; Forensic Serology; Forensic Anthropology; DNA; Finger Prints; Fire Arms; Tool Marks and Other Impressions; Document and Voice Examination; and Forensic Science on the Internet. To understand the techniques used in crime scene analysis hands-on activities as formal experiments in the laboratory setting form part of the course. The specific objectives of the laboratory components of the courses are: 1) To provide a first set of laboratory experiments for criminal justice and general science students who have had little or no previous science laboratory experience. 2) To show beginning students in criminal justice and general science the significance of physical evidence at the scene of a crime. 3) To demonstrate what happens to physical evidence when it is sent to the laboratory so that students will know what is needed, how much is needed, and how to prepare 4) To educate the student in basic laboratory practices so that they can ask and/or answer questions more intelligently in a court of law. And probably most important, to educate students so that they will not unintentionally destroy physical evidence at a crime scene, and will in fact try to preserve it for the trained forensic scientist. The experiments are designed to provide students with an overview of what can be done as a prelude to making them potential professional forensic scientists/criminologists. The proposed courses are meant for students majoring in the Administration of Justice Programs and should augment their knowledge of criminology and reinforce approaches utilized by law enforcement scientists. Students will carry out hands on experiments in biology, chemistry and physics in a dedicated laboratory setting. Use of instrument to analyze specimens and gather/interpret data using computers and statistical techniques form part of the course. Students will be graded based on their understanding of the principles involved in selecting and using specific laboratory techniques and on the quality of results of their laboratory experience. It is anticipated that the course will be offered once a year, first part during fall semester and the second part during the following semester. Since laboratory space and instruments are limited class size will not exceed fifteen.

Prerequisite: CRIMJ100

CRIMJ 345: Criminal Justice and the Community

3 Credits

Justice agencies and the community’s crime prevention and participation strategies; community involvement in policy development.

Prerequisite: CRIMJ100

CRIMJ 389: Gangs and Gang Behavior

3 Credits

The history, structure, and practices of gangs in America as well as societal reaction to them. CRIMJ 389CRIMJ 389 Gangs and Gang Behavior (3) This class takes a look at gangs: their history, structure, activities, and practices as well as law enforcement practices targeting gangs and gang members. This class examines the following types of gangs: Outlaw Motorcycle Gangs, Supremacists and Militias, Skinheads, African-American, Latino, and Asian Gangs. It also addresses relatively recent phenomena in gang involvement: (1) the rise of the independent girl gang; (2) middle class suburban gangs (Goths); and, (3) anti-drug and anti-sex Straight-Edge gangs. Both the positive and negative functions of gangs are examined critically through a comparison of conventional and non-conventional youth activities. It concludes with an examination of emerging trends in gang development and activities, including the link between street gangs and organized crime. This course complements CRIMJ 403-Juvenile Law and Justice and is recommended for students wishing to pursue a career in juvenile intervention. It consists of three examinations (objective and subject measures), three traditional essays (out-of-class), and four directed asynchronous message board essays (using ANGEL course management software). This course will be offered annually with a projected enrollment of 25 students.

CRIMJ 406: Sociology of Deviance

3 Credits
